

CASE 10-18 KEROSENE TRACTOR PLOWING

Reserve Power for Emergencies

The Case 10-18 Kerosene Tractor is noted for its abundant power.

While rated at 10 horsepower on the drawbar it can deliver about 25 per cent more. While rated at 18 horsepower on the belt it can deliver 25 per cent more.

Thus, the owner of the Case Tractor has the assurance that whenever the reserve horsepower is needed for an emergency the task can be met successfully.

Every man who is about to buy a tractor should insist upon knowing the actual capacity of the tractor he is about to buy. And should be well informed as to the amount of reserve power. Under-power means disappointment.

It has always been the Case policy since 1842 to build its power-farming machinery in such a way that it would meet not only normal demands but be able to take care of temporary over-loads.

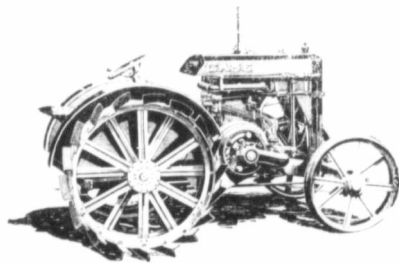

The Case 10-18 pictured above will easily pull two 14-inch plows or drive a Case 20x28 thresher equipped with feeder and windstacker. It will likewise do other drawbar and belt jobs requiring the same amount of power.

This Case 10-18 is the smallest of our kerosene tractors. A booklet describing it, together with our larger sizes, will be sent gladly upon request. If one will study this booklet and become familiar with Case Kerosene Tractors, their construction and materials, he will be able to make judicious comparisons. Write for a copy of the Case Kerosene Tractor booklet today.
