General Aspect of Firmness At Opening Session of Week

Cobalts Display More Activity, But Prices Do Not Move Much—Hollinger Shares Advance to $4.30.

World Office,
Monday Evening, Jan. 23.

There was a general aspect of firmness at the opening session of the week on the local mining exchanges. The market did not display any unusual signs of buoyancy, but there was a substantial buying movement in evidence, and fractional advances were in order in several of the active issues.

Beaver was in steady demand and continued its upward trend. The shares gained a small fraction at 30¼, and held the higher price right to the close, when no stock was on offer under 30 3-8.

Timiskaming was rather irregular, but sold above Saturday's prices at one stage, when the shares touched 77 1-2. Peterson Lake was also slightly firmer, but in the case of Little Nipissing there was an inclination to realize, and a small decline followed.

The dividend paying shares were not much changed. Crown Reserve sold up five points at $2.45, and Kerr Lake maintained at $7.75, the high price of last week, but in neither case was there any activity and the securities were quiet thruout.

There was not much doing in the Porcupine shares, outside of a 5-point advance in Hollinger, a small lot of these shares changing hands at $4.30. Porcupine Central sold at 52.

Trading was more active than usual, the feature being the number of large blocks of stock which changed hands. These, it was felt, were being taken on by strong interests who would take them off the market and await a more pronounced upward trend before seeking to secure any profits which might accrue.

KERR LAKE REPORT

Expert Estimates Company Has Ten Million Ounces Ore Blocked Out.

Robert Livermore, a son of Colonel Thomas L. Livermore, associated with the Calumet and Hecla Mining Co., who recently made an examination of the Kerr Lake Mining Co.'s property at Cobalt, has completed his report. In his final summing up Mr. Livermore says:

"It is apparent that the Kerr Lake property has at present some 10,000,000 ounces of silver in blocked ore; that it is positive ore as nearly as can be ascertained in ground of this nature; that there is still much ground unexplored in what I regard as a very favorable zone, viz., territory lying along and under Kerr Lake from the present east heading to the Drummond west boundaries; that this east drift has already opened bodies of ore, and that there is an area, larger in comparison to that already worked, as yet only slightly explored."

SHAREHOLDER'S OPINION

Peterson Lake Being "Knocked" in Endeavor to Buy up Stock.

Editor World: I was pleased to see your article in your Sunday World, drawing attention to the great possibilities of the Peterson Lake mines. Being what you would term a small shareholder, I am convinced that the knock which has recently been made against the stock is entirely for the purpose of trying to scare out small shareholders. As far as I can glean among the shareholders, none of them are willing to sell at present prices, unless forced to do so. Certainly I am not going to dispose of my shares at anything like the present market price. My advice to the Peterson Lake shareholders is to keep their stock. I think there is an attempt being made to accumulate the shares, and I say refuse to sell until a price much more attractive than at present is offered. Peterson Lake is perhaps one of the best speculations in Cobalt, and it will assert itself within the next few months.

Toronto, Jan. 23, 1911.

STANDARD PORCUPINE MINES

Splendid Samples of Ore—Good Location in Tisdale.

George A. Robinson of the Metropolitan Securities Agency, Limited, Montreal, was in town yesterday, in connection with a Porcupine flotation which will be put on the market in a few days.

To The World Mr. Robinson said that conditions, generally speaking, were favorable to the disposition of Porcupine shares just now. The public were taking an extensive interest in the new gold camp, as it was being demonstrated that Porcupine was even richer than had been anticipated, he thought that there would be no difficulty in getting capital for sound propositions.

Regarding the Standard Porcupine Gold Mining Co., Limited, which his firm are connected with, Mr. Robinson said that their property was showing up remarkably well. The company owns 65 acres, adjoining the Tisdale Mining Co., and the Preston East Dome, in the vicinity of Simpson Lake in South Tisdale. About 12 men are at work at present, and excellent showings have been uncovered.

Mr. Robinson showed The World some splendid samples of ore from the property. These were well scattered with gold and should run into high values under assay.

The directors of the Standard Porcupine Mining Co. are as follows: President, Dr. Guerin, mayor of Montreal; vice-president, T. O. Lyall of Peter Lyall & Sons; secretary-treasurer, C. S. Wallace; directors, W. Carruthers of James Carruthers, Limited, and Wm. Geraghty. The company is capitalized at $1,500,000.

NO ROOM FOR THEORIES IN PORCUPINE DISTRICT

Results the Only Factors That Count—Mineralized Territory is Extensive.

PORCUPINE, Jan. 20.—(From Our Man Up North.)—Theories are no longer laid down here by mine men as to the safe rule to work on. Actual development and the results obtained count only. Men have passed the guessing stage in a country where facts have kicked theories to death long ago. A year's work in Porcupine shows that the gold comes regularly in certain formations, and that it goes down so far as is now known to the extent of the deepest shafts, 400 feet, and that there is every reason to believe the same will carry to great depth. The best engineers agree to that statement.

Blue-colored quartz is a formation one hears of frequently. When the blue quartz is encountered in the mine there is joy in the camp, and the blue quartz, it appears, is found in nearly all the shafts. Finely grained with the sulphides, and rich in character, to one schooled with the quartz running, the value outside of assaying is told very much as a shopper, tests out the value of cloth, by a touch of the fingers.

Just at this stage of development it would appear that blue quartz is a regular feature in the veins found in Southern Tisdale and Northern Deloro, altho the workings in Northern Whitney reveal the same showings. Samples of rock from claims along Tisdale and Deloro line show the blue quartz thoroly impregnated with sulphides, which in mining assays yield an average of $140 to the ton. Only the surface work has been done; the real test is to come another year.

From the work done so far and in view of the vast expanse of mineralized territory which is viewed, the more one is impressed with the very large amount of work yet to be done to open up and trace the veins to a point where intelligent judgment may be passed.

The dykes, in which the big leads have been found, lie very much in the form of an "X" with the base of the "X" covering a large portion of Southern Tisdale. It will be seen that a big "X" is required to mark the gold dyke territory, while the angles formed by the legs of the "X" are interwoven with what mine men are pleased to call cross veins, the intervening sections, where the cappings have been removed, being a net work of quartz strings that run into bodies of quartz as the veins go down.

Men apparently have struck these dykes as they radiate from the centre of the "X" out a distance of about eight or ten miles from the centre. Deloro, Shaw, Whitney, Carman and Langmuir all have their showings, while the south half of Deloro, as the shafts go down, looks especially pleasing to engineers. The one leg of the "X" appears to have extended down thru Shaw, touching Carman, and bounding into Langmuir.

Nature made a big sprawl, as one mine man who spent the summer and fall here, puts it, in reaching out such a large territory, but nevertheless as the country is opened up, the mineralized zone becomes more and more apparent.

Well-generalled mine work on a systematic basis, under the direction of men with a gold digging experience, should remove within the coming six months any uncertainty that now exists as to the gold bearing qualities of the enormous veins in the dykes, which permeate a very large portion of the six townships.

With the advent of cheap power from the Hydro Electric Co. now building on the Mattagami River, proving work in the outlying districts as well as in the centre of the field will proceed rapidly. With veins uncovered and shafts down in every centre of the dyke foundations, the extent of the field will be known at a much earlier date than could be possible under old conditions.

But the cheap power will not be waited for by the companies who are anxious to get thru the experimental stages into actual mining, and several firms, in addition to those that installed compression plants last year, will put in the necessary machinery this winter.

It is simply wonderful the amount of development work accomplished the first year following the discoveries. When men view the primitive conditions, under which work had to be done, only surprise is expressed that there should be such progress.

WIRELESS FOR LAKE STEAMERS.

Local ship owners are considering the installation of wireless telegraphy on the larger steamers for the coming season. The cost is the chief drawback, altho this would be greatly reduced, they say, if the government would erect a central station at the island or on the eastern or western piers.

All of the large freight steamers that ply between Toronto and Montreal and on the upper lakes will be compelled to instal the wireless, as they pass thru American waters from time to time, and the United States Government requires all steamers on the great lakes traversing their waters to be equipped with a wireless outfit.

Her Head Was Severed.

LONDON, Jan. 23.—(C.A.P. Cable.)—The body of Hazel Hamilton Brown, a Canadian, was found on the railway line near Brockenhurt, New Forest. It is not known how she got on the tracks.

The verdict of the jury is that Hazel, the daughter of Francis Fountaine Brown, aged 26, suicided. She was suffering from tuberculosis and was depressed with the fear that she would never get better. She put herself under the train, and her head was severed from her body.

NORTHERN DELORO IS MOST PROMISING

Section of Porcupine Bordering on Tisdale Line Shows up Remarkably Well.

PORCUPINE CITY, Jan. 20.—(From Our Man Up North.)—Watch out for that section of Deloro which borders on the south side of Tisdale, is a warning freely offered here, and from present showings, made under critical handicaps, when lugging food and working material into the camp was considered as a hundred-fold penitence for a past life of indiscretion, the sounding of the tocsin is timely to those who might forget in looking over a district so large.

This section includes the Montreal Standard, the Powell showings, the Imperial Gold Mines, and a half dozen others who have opened veins. The Jowsey-Wood famous group sold to a London company for $150,000, and the Macdonald-Maldens, are slightly further to the south and west.

Two Shafts Down.

On the Standard property, known as the Silver, Engineer Silver is in charge, perhaps one of the deepest shafts and the best opportunity to see what lies below the surface.

Two shafts are down in the dyke, which carries a 20 foot quartz lead in the porphyry. An extremely fine showing in free gold appears in the wall rock all thru the pay streak. The free gold was encountered on the surface, when the work started last spring, and at no time since have the workmen lost sight of the yellow sparklers.

The porphyry carries heavily in sulphides, and altho free gold is visible the prospects of ore in the low ground are most promising.

The dyke on which the company is working extends well thru the Deloro part of the "X", making a most promising district in which mine men are now spending their money apparently with every success.

Active Development.

It should be said, as a part of the credit that properly belongs to this part of Deloro, that only after mature deliberation where showings have been made did the Haileybury Silver Mining Company (C. T. Young, president), decide to cast their future in the lots touched by the same dykes, where the beautiful porphyry shines best.

In this same stretch of country many poor men who have found the burden of prospecting heavy are located, and with an unbounded faith in the district, they continue to work on the dykes, that better showings may be made. They have staked their chances in a district that looked good to them, and work in the future alone can determine the results.

This lead also crosses into Shaw, where good finds have been made, but as no great depth has yet been attained on the Shaw side of its limit, but little is known of the values in the veins from this dyke, which apparently crosses a vast but only partially explored territory. It is here that the show part of the enormous "X" cuts in, and until shafts are down, no one is able to speak of anything beyond surface showings.

All considered the cry of "Watch out for Northern Deloro" may not be so groundless as would appear from the outside, and with results leaning to the good side, where even slight depths have been reached, there is every ground for the prevailing optimism among Deloro holders.

VIPOND WILL INSTAL BIGGER STAMP MILL

Flynn Claims Have Good Prospects—Section of the Camp is Rich.

PORCUPINE CITY, Jan. 20.—(From Our Man Up North.)—The Nissen one-stamp at the Vipond, or, as now organized, the Porcupine Gold Mines Co., owned by the Flynns, is to be replaced by an up-to-date five-stamp plant at once.

During the fall when the trails were almost impassable and boating facilities most inadequate to carry heavy machinery, the little one-stamp was practically "backed" thru the muskeg. This is one of the essences of doing things with the Flynns, who are all in the mining game, and with the vein yielding heavily in free gold, there is no reason why a stamp should not be producing.

But now that the frosts have sealed the surface of the muskeg, a larger mill is to be installed. Work on this property during the summer has about taken it out of the prospect stage, just as consistent work has placed the Hollinger and the Dome in the class of soon-to-be regular producers. Lots in this portion of Tisdale have passed from the purely speculative stages to that of handsome prospects, with deep gold showings which may surprise the world, on systematic development.

Men can only figure from what is now seen, and the showings in the few shafts that are down more than 50 feet are certainly dazzling. The extent of the body, however, must be more fully determined.

The Porcupine Gold Mines, the Hollinger and the Dome lie very much on a line in southern Tisdale, from east to west, where the startling quartz out-capping appears to form the base of the gold zone.

From the Hollinger to the Dome is about four miles, with the Flynns snugly located about half a mile to the east of the Hollinger.

Work on the so-called Feldom properties in Tisdale, near the Vipond, is started, Manager Kuehn, representing the English capitalists who took over the claims last November, arriving here yesterday.

"Twenty men will be engaged at once," said he, "and we shall proceed to uncover our properties. The veins are located, and there will be no difficulty in making good time."

The Feldom claims have often been spoken of in the past as some of the richest in the district. They were taken in before prices soared.

Engineer Milton Flynn of the Vipond has thoroly looked into the surface showings, and has every confidence that good values will be found.

"Plenty of English capital to invest here just as quickly as showings are made," said Mr. Kuehn.

PORCUPINE EQUIPMENT

You'll "hit the trail" for Porcupine with double the assurance of success if you are absolutely certain your equipment is A1 — *an equipment purchased from Simpson's.*

In our large and varied stocks you'll find most things necessary to help make your prospecting campaign a success—certainly everything necessary to make it comfortable, and at prices that will prove economical.

This Store Directory Will Help You — Cut It Out.

Basement: Prospectors' hardware, cooking utensils, etc., and groceries.

Main Floor: Prospectors' clothing. (See our Miners' Shirts at $1.00.)

Second Floor: Prospectors' Boots at prices that will surprise you.

Fourth Floor: Tents; all sizes; all prices.

THE ROBERT **SIMPSON** COMPANY, LIMITED

Gould Shaft Down 121 Feet

A. P. Seymour, late engineer of Cobalt Lake Mining Co., says that the Gould shaft, now down 121 feet, need only be deepened another 50 feet to cross-cut for the valuable veins of Savage, Provincial or Nipissing, one or all of which no doubt extend across the Gould property. These big shippers located their veins at this depth. Three mining engineers have assured us that Gould is the best speculative purchase in the Cobalt camp.

Don't be stampeded into selling. In their opinion, it is better than most of the non-dividend paying Cobalt stocks selling at many times the price of Gould.

C. P. R.'s NEW OFFICES.

The district passenger department of the C. P. R. commenced business in their new quarters at No. 16 East King-street yesterday morning. Altho the company will only occupy the ground floor, the floor space is almost as great as that of the old office.

At an early hour yesterday morning a large sign was placed across the front of the building, announcing to the public the new location of their passenger department. The large window at the front of the office is attractively gotten up with the ensign of the company's fleet and the beaver crest. The location is not so prominent as the corner building at King and Yonge-streets, but it is sufficiently near Yonge-street to compete with the G. T. R. offices in the Manufacturers' Life building. The city ticket office will be moved over on Saturday afternoon.

SYNOPSIS OF CANADIAN NORTH-WEST LAND REGULATIONS.

ANY person who is the sole head of a family, or any male over 18 years old, may homestead a quarter section of available Dominion land in Manitoba, Saskatchewan or Alberta. The applicant must appear in person at the Dominion Lands Agency or Sub-Agency for the district. Entry by proxy may be made at any agency, on certain conditions, by father, mother, son, daughter, brother or sister of intending homesteader.

Duties.—Six months' residence upon and cultivation of the land in each of three years. A homesteader may live within nine miles of his homestead on a farm of at least 80 acres solely owned and occupied by him or by his father, mother, son, daughter, brother or sister.

In certain districts a homesteader in good standing may pre-empt a quarter-section alongside his homestead. Price $3.00 per acre. Duties.—Must reside upon the homestead or pre-emption six months in each of six years from date of homestead entry (including the time required to earn homestead patent) and cultivate fifty acres extra.

A homesteader who has exhausted his homestead right and cannot obtain a pre-emption may enter for a purchased homestead in certain districts. Price $3.00 per acre. Duties.—Must reside six months in each of three years, cultivate fifty acres and erect a house worth $300.00.

W. W. CORY,
Deputy of the Minister of the Interior.

NOTICE OF APPLICATION FOR DIVORCE.

NOTICE is hereby given that Ethel May Hornell of the City of Toronto, in the County of York, and Province of Ontario, married woman, will apply to the Parliament of Canada, at the next session thereof, for a bill of divorce from her husband, David Wyllie Hornell of 198 Milton street, in the City of Montreal, in the Province of Quebec, salesman, on the ground of adultery and desertion.

Dated at the City of Toronto, in the Province of Ontario, the tenth day of October, A.D. 1910.

WILLIAM W. VICKERS,
77 York street, Toronto, Solicitor for Ethel May Hornell. 2tf

Erection of Gas Plant

Tenders will be received by the undersigned up to March 1st, 1911, at the offices of the Company, for the erection of a gas plant to serve the requirements of Monterrey, Mexico, a modern city of 85,000 inhabitants, with first-class railroad facilities.

Plans and Specifications may be seen at the Company's offices. Copies of Plans and Specifications, Form of Tender and other necessary information will be furnished responsible bidders on request.

Separate or Supplemental Tenders will also be received at the same time for the laying of gas mains and curb connections.

All interested parties should communicate with

LEWIS LUKES,
Vice-President and General Manager
Monterrey Railway, Light & Power Co., Limited, Apartado (P.O. Box) 58, Monterrey, N.L., Mexico.
January 12th, 1911.

ESTATE NOTICES.

NOTICE TO CREDITORS.—IN THE Matter of William B. Ball, of the City of Toronto, in the County of York, Merchant, Insolvent.

NOTICE is hereby given that the above named has made an assignment to me under Chapter 64, 10 Edward VII., and Amending Acts, of all his estate and effects for the general benefit of his creditors.

A meeting of creditors will be held at my office, 64 Wellington St. West, in the City of Toronto, on Wednesday, the 25th day of January, 1911, at 3.30 p.m., for the ordering of the estate generally.

And notice is hereby given that after thirty days from this date, the assets will be distributed among the parties entitled thereto, having regard only to the claims of which notice shall then have been given.

N. L. MARTIN,
Assignee.
Dated at Toronto this 17th day of January, 1911.
