GOWGANDA---Freight Traffic to New Camps is Congested---ELK CITY

ENGINE PASSES THRU ELK FOR MINES AT GOWGANDA

Was Largest Seen in New Country and Attracted Much Attention —Visit to the Camp.

"Gowganda, without doubt, is destined to rank with Cobalt as one of the greatest of the world's silver camps," said a gentleman who has just returned from an inspection of the northern silver camps.

"What impresses me most at Gowganda is the area over which the surface outcroppings are to be found. That there are a dozen strong surface leads already uncovered over an area of five miles from north to south is a remarkable fact, indicating an eruptive movement of great force and eliminating the possibility of any of the discoveries being isolated deposits. The extent and character of the veins carries the conviction that there is depth and permanency to the rich discoveries that have already been made in a camp that has as yet been only superficially prospected.

"A careful examination of two silver veins on the Bartlett south group convinces me that the deposits there are eruptive and could not be the result of overflow in view of the geological evidences to be found in that portion of the Gowganda silver belt.

"The silver leads on the Bartlett lie between well defined walls of diabase and the wall rock is shot deeply with the mineral, indicating the tremendous forces that were at work at the time of the upheaval. The congestion of the silver, which is practically pure, is also an indication of great depth. On the Bartlett I saw this pure silver vein and followed it for several hundred feet. A second vein, several hundred yards from the first, contains silver in nugget form, the vein matter having been disintegrated and decomposed near the surface by the action of rain and water, which has run down the natural drain that had been formed between the walls of rock.

"Taking these veins as typical, they are duplicated just north of the Bartlett on the Welsh claims. Again, farther north on the Reeve-Dobie, and farther north again on the Armstrong, Mann-Ryan and Boyd-Gordon. It is said that there are in addition to these 24 less notable silver surface discoveries, many of which will doubtless prove up with development. To the north there are several wide calcite veins, including one on the North Bartlett group, 24 inches wide and traced for 1200 feet. This vein may be said to be the speculative marvel of the camp. On the surface it does not contain, as far as known, a dollar's worth of silver, but one cannot ignore the fact that the vein matter is silver-bearing and may run into values within ten feet of the surface. Such a possibility appeals to anyone who realizes the possibilities of such an ore body if values are encountered.

"The Boyd-Gordon people have 8000 lbs. of high-grade ore bagged and are making good progress in their shaft, which is now down 30 feet.

"At Elk City on coming out I passed the big hoisting engine which is being sunk thru for the Bartlett Mines. This is the finest piece of machinery that had been seen up to this time in this camp. At Charlton the rest of the Bartlett machinery had been unloaded and was being pushed forward. There is a big race against time going on, but it looks as tho the Bartlett people were going to win out.

"Two sleigh loads of dynamite for this company were passed on the road, each having 7500 lbs. of the explosive. On reaching the steep hills both teams would be attached to one sleigh and the load pulled over the incline without further trouble.

"The question of a wagon road is now in the minds of everybody and the decision of the government is being awaited anxiously and with deepest concern.

"Meanwhile the government is doing something to make the sleigh road passable as long as possible. Logs and ties have been cut ready for use in the low places when they become bad early in the spring. These will be thrown on the roadway wherever necessary and covered with snow, thus making the road passable for a few days longer than would ordinarily be the case."

"LUCKY PAULEY."

To Enquirer: We have no copies left of the issue of The Sunday World of Feb. 28, containing the three-quarter illustrated writeup of "Lucky Pauley," the hero of the silver north and his famous silver mines. Write Capt. Pauley at Cobalt, Ontario, for information regarding the "Lucky Pauley" Gowganda Silver Mine.

Theatorium Improvements.

The city architect has recommended a number of improvements in ten moving picture theatoriums for the comfort and safety of patrons. The bulk of the recommendations are for larger letters on exit signs, better door fastenings and the removal of draperies from the doors.

A Sneezing Epidemic

It's Not Influenza—But Catarrh That Comes With Change of Season.

Every second person that you meet seems to have a sneeze and stuffed feeling in the forehead and nostrils. To cure promptly, say, in half an hour, there is nothing worth using except Catarrhozone. You inhale its balsamic vapor, and feel as if you were among the Norway Pines. This is because Catarrhozone contains a healing medicine, light as pine air, which is breathed straight into the lungs and bronchial tubes. Away goes the cold, sneezing and catarrhal cough cease, bronchial irritation stops; in short, you are cured of catarrh by a pleasant, simple remedy, free from sedatives and irritants. Catarrhozone is a good, safe family remedy for coughs, colds, croup, sore throat, that may be taken by young and old with absolute certainty of swift, permanent cure. Try "Catarrhozone," but beware of the substitutor who may try to induce you to take something instead of "Catarrhozone." Large size lasts two months. Price $1.00. Smaller sizes 25c and 50c. Sold by all dealers, or The Catarrhozone Company, Kingston, Ont.

FOOD FOR GOWGANDA DURING THE SUMMER

Representative of O'Kelley Mines Says the Government Should Send Commissioner.

A representative of the O'Kelley Mines has just returned from a week's visit to Gowganda and has given the following interesting information to The World:

He left Toronto on Monday night last and arrived at Gowganda on Wednesday. The roads going in were firm, but a series of low holes, snow on each side of the trail 20 inches deep and the turn out places so far apart made it very difficult for the many teams to pass on the road.

The number of teams going in and coming out is enormous and from the top of one hill forty sleigh loads of freight were seen coming up that same hill. The manner of progress is somewhat after the manner of waiting outside the pay box of a popular theatre; when one man gets in another immediately takes his place; so with the teams: as soon as one moves on to another "turn out," so the one behind takes its place, and should a block occur the confusion is puzzling.

The charges for freight from the railroad at Charlton to Gowganda are enormous, as much as $2.50 a hundred being charged. This, however, does not make any difference to the O'Kelley mines, the managers of this property having provided against any trouble in that line by sensibly having teams of their own, which they are now increasing to twenty, making themselves entirely independent.

The company have five carloads of supplies at Earlton and are in doubt as to whether they will get their full 70 tons of provisions before the break up, as the weather is very mild, and the road passing over morasses, lakes and swamps, will be easily affected by the first signs of the break up. They are running their mining supplies in big convoys, so that in the case of a team getting stuck on the road the others are at hand to help them up hills or be of any other assistance.

The traffic being so heavy by day the company have decided to run their convoys at night and rest during the day, thus avoiding a great many of the difficulties encountered.

Considering the question of food supplies, so much more important at the moment, in view of the rapid approach of the break up, the company is rushing in this class of freight as fast as possible, and will only consider the question of machinery when the most important question of supplies has been dealt with, and they then hope to get some of the machinery thru before the spring thaw.

The difficulty of lumber supply is a serious one, but it is being slowly overcome. It seems absurd to meet, en route from Charlton to Gowganda, large loads of lumber being brought in, when there is a sawmill at Gowganda and plenty of timber ready to cut and use.

An indignation meeting, attended by fifty of the leading citizens, was held last week, and a resolution was passed supporting the mill owner, with the result that the mill started work again last Friday. This, despite the fact that it is a break in the regulations. It was an absolute necessity that lumber be had. The lumber that has been and is being brought in from Charlton has occupied space on the road that should be used for transportation of food.

There are so many people at Gowganda and so few supplies can be got in before the break up that there is bound to be a great deal of hardship, and perhaps famine.

Gowganda is bound to be the advance post of all prospectors for the coming summer, for there is little doubt that important new finds of silver will be made both in Gowganda and new districts farther to the west. Unless arrangements are made at once to facilitate supplies being got thru during the summer the city will be held back for a year.

Few realize the great amount of money that is being spent in development work in this northern country by pioneers of the district. The quantities of groceries, clothing, hardware and machinery that have been bought run into a big amount of money. The question of its trade alone is of vast importance, especially after the bad year wholesale houses have just been thru, and the great demands of the situation should be met by the government. As many as one hundred and forty-seven teams, hauling in supplies, each team hauling from one to two tons, were counted in one morning coming into Gowganda. This gives an idea of the magnitude of the situation.

It is necessary that the government should at once take steps to construct a wagon road from Elk City to Gowganda. If this were done it would help to relieve the situation during the coming summer considerably.

A commissioner should be appointed by the government to go to Gowganda and personally investigate the congested condition of the traffic, see for himself the great value of the finds that have been made up to the present time, and steps should be taken at once to meet the necessary demands of transportation.

MATTER OF GOOD FAITH.

Why Canadian Northern Declined Further Contracts.

At the Canadian Northern offices it was stated yesterday that the sleigh road from Sellwood to Gowganda is in excellent condition and that the reason the announcement was made that no more freight would be accepted was that the Gowganda Transport Co. did not want to break faith with the shippers by any assurances that they might not be able to fulfil.

There is an accumulation of freight at Sellwood, some thirty cars, and more is arriving daily which the company had previously accepted and are bound to deliver. Any further volume of freight might embarrass the company and they prefer to make good on the contracts already made. Of course any shipper may bill goods to Sellwood, but he will do so with the knowledge that he is taking a chance that his shipment will get thru.

Incendiary in Post Office.

TRURO, N.S., March 8.—Last night in Truro postoffice three distinct fires were found in the basement by an employe who smelled smoke, and going to the basement observed the fire among the paper near a stairway.

MACHINERY ON THE ROAD FOR CAMP GOWGANDA

How a Big Mining Enterprise Handles Its Business in Face of Great Natural Difficulties.

What an able executive can accomplish in connection with a large enterprise has never been more clearly exemplified than in the case of the Bartlett Mines, which has discounted fully the handicap imposed by indifferent transportation facilities in connection with the initial development of these properties.

In the face of incredible difficulties the Bartlett management took hold of the situation as they found it. Night and day they have been working for weeks and the results are already apparent.

H. T. Pemberton, general manager, was seen last night by The World just before his departure for Charlton, on the Cobalt special at 10.15.

"There are to-day over 60 men in the employ of the Bartlett Mines," he said. "This number includes teamsters and men at the property building and stripping. We have 26 teams of horses hauling in supplies from Charlton to Gowganda. There are five carloads of supplies at Sellwood, which will be rushed thru by the Gow Ganda Transport Co.

"The big engine passed thru Elk City on Saturday, and is now in all probability on the company's property at Gow Ganda. Our boilers were loaded on Saturday and are now en route. The handling of these ponderous pieces, each of which weighs four and a half tons, is our most serious undertaking, but they are accompanied by a sufficient number of men and horses to overcome any difficulty that may arise."

"How do you get the boilers down the hills?" asked The World. "That is easy enough," said Mr. Pemberton, with a smile, "tho it takes a little time. When the hill is steep we secure the load with a strong block and tackle to the stoutest tree near the top. This is controlled by adozen men, who gradually play out the block until the load reaches the bottom. Then we go ahead merrily until another hill is encountered, and repeat the process."

The unloading of the machinery at Charlton created a great deal of interest among mining men, and the operations were watched by a number of people who admired the ginger and snap which marked the undertaking.

LEOPOLD OFF TO CHINA

First European Ruler to Visit Pekin and Tokio.

BRUSSELS, March 8.—King Leopold, who last fall was at death's door and who had almost been given up by his physicians, has made a recovery altogether marvelous in a man of his advanced years, and has resumed his wanderings, satisfied to get the Congo off his hands on terms that are after all unduly favorable to him.

The other day he paid a state visit to President Fallieres at the Elysee, being received with royal honors, and has now announced his intention of starting at the end of next month for Siberia and Pekin, calling upon the czar at St. Petersburg en route.

Leopold has a considerable amount of private capital invested in various Chinese enterprises and in Belgian concerns that are interested in Chinese and Japanese trade and industry. Aside from his desire to visit Siberia, China and Japan, he believes that by means of stays at Pekin and at Tokio and personal intercourse there with Prince Chun, the Regent of China, with the Mikado, and with the leading men of their respective empires, he will be able to contribute in no small degree to the promotion of his own personal investments and to the trade of Belgium.

Leopold will be the first European sovereign to visit as such the courts of Pekin and of Tokio, and is therefore likely to receive a particularly warm and cordial welcome, and to be treated with the most distinguished honor and consideration, not only by the two governments but likewise by the natives.

Seeing is Believing.

A United States agency that is selling books has a man who ought to write folders. Here is a sample:

"A tour of the world! What a fascinating prospect these magic words conjure up! A tour of the world! The first enchanting glimpse into the lands that lie beyond our doors; the mingling with entirely new peoples, the viewing of strange scenes and customs; the phenomenal mind broadening it effects; the liberal education it conveys. Perhaps you have longed many times to make this marvelous trip yourself, only to be obliged to dispel the idea because of business, health, family ties, or the question of finances. Is this so?"

Our answer to the question is, call upon Mr. Walter Maughan, city passenger agent of the Canadian Pacific Railway, get the tickets and see the things as they are, instead of staying at home and thinking how they may be. One thing is certain, wherever you want to go, whatever part of the continent or of the world no company can take you as far or look after you as well as the C. P. R. 23

Marriage Record Not Altered.

MADRID, March 8.—The criminal action in connection with the claim of Ernest Henri Batiste, West to the Sackville peerage and estates, came to an end to-day with the acquittal of Rolfir and Sanchez. These two men were accused of having altered the church records of the marriage of Josephine Durand de Ortega to a Spaniard named Oliva. This woman was the mother of the present claimant, and her alleged marriage to Oliva was relied on to bar his claim.

Reward of $200.

A reward of $200 is offered for the recovery of the body of Harry Darrell, supposed to have been drowned in the bay.

OPERATORS and PROSPECTORS

OPERATORS

The present opportunities for investing in real mining properties at real values have never been surpassed in the history of the great silver camp. This is but natural under present conditions—every day bringing forth new and valuable discoveries in the great silverland. Our business is to secure these properties direct from the prospectors and men in the field, and our representatives on the ground have enabled us to secure some of these on very favorable terms and at reasonable prices. We have a splendid list of properties ranging in value from $500 per claim to $250,000. The former are usually claims staked during the winter on which calcite leads are found in the diabase around Obuskong, Spawning and Hanging Stone Lakes. These properties are practically undeveloped, and when the snow leaves and real prospecting takes place, may produce some of the wonders in the camp. The higher-priced properties show mineral in place, and range in value according to silver in evidence, location, etc. We endeavor to secure an engineer's report on all silver properties, as well as owners' statement. We also insist on reasonable terms and conditions.

If advertised list does not contain what you want, write or wire us—stating amount you desire to invest, and we will endeavor to satisfy your requirements.

We have the latest maps of Gowganda and Silver Lake districts, as well as all township maps.

We do not confine our efforts to Gowganda and Elk Lake district, but have properties for sale in Coleman, Bucke, South Lorraine, etc.

MAPS

We have the most complete and up-to-date map of Gowganda and the Silver Lake district. This we mail to out-of-town customers upon receipt of price, $1.25. Every owner and prospector should have one.

PROPERTIES FOR SALE

We submit herewith a partial list of properties. In addition to the following we have two or three companies holding large acreage who wish to sell out. One of these has issued 25,000 out of a million shares. The other has issued 150,000 out of a million shares. These can be purchased on reasonable terms. We are also negotiating for control of a shipping mine in Coleman with large bodies of ore blocked out.

1—A magnificent forty-acre claim in diabase and keewatin formation, with one six-inch calcite vein, heavily charged with native silver. Excellent silver samples taken from this vein. Several others of cobalt and bloom, all assaying from 100 to 350 ounces to the ton in silver. This property should make a shipper by spring. A snap at $50,000.

2—Eight forty-acre claims situated near the southeast shore of Gowganda Lake in diabase formation. The owners require money quickly and these properties are on the bargain counter at $500 each. They will not last long and all or part will be sold to first cash purchaser.

3—Splendid forty-acre claim situated among the good ones in James Township. Eight veins from 4 to 12 inches wide uncovered, five of which show native silver. Owner wants $55,000, but will accept part payment in stock, preferring to retain interest in property.

4—Excellent property adjoining Moosehorn, in Township of James. This property has a native silver discovery, but the statutory work on this claim was performed on the adjoining property. It is an excellently-situated property adjoining a producer.

5—Two silver properties in Silver Lake district. These claims are said to have silver in quantity and are among the best in the district. Reasonable terms can be made. Persons desiring a shipper at an early date should look into this at once.

6—Three splendidly-situated claims, joining and in close proximity to Mann, Bartlett and Fairburn properties, right in the heart of Gowganda's famous mines. These should make mines.

7—Forty-acre claim in the rich Gowganda ridge, said to carry eight-inch calcite and silver vein. This is one of the properties that have made Gowganda famous, and will be sold on reasonable terms.

8—Seven forty-acre claims in James and Smyth Townships, one of which adjoins three native silver properties and has passed government inspection. The others are in close proximity to Motherlode and Moosehorn Mines. Twenty-five thousand dollars, spread over six months, buys three-quarter interest. We have a claim in James at $4000 also, which is situated near Downeys.

9—Four claims west of Obuskong Lake; good calcite veins and aplite leads; adjoining claim has silver; no development work, but splendidly situated. First buyer gets these opportunities at $2000.

10—Directly east of Spawning Lake; three claims, all in diabase; discoveries made; silver discoveries close to these properties; one of the best cheap groups in the district. Price, $2000.

11—Two directly south of Beaver Lake; all diabase and keewatin. These claims are directly south of Bartlett. Calcite veins.

Three between N.W. and N.E. arms at south end of peninsula. Native silver adjoins all of these claims. Owner's statement says that one shot will bring silver from one of these veins. They are for sale at very low figure.

PROSPECTORS

We have unexcelled facilities for handling mining properties, and have an extensive clientele, in Canada, the United States and Great Britain. This clientele is daily increasing, and we are desirous that it should. In order, however, to maintain the position of leadership we have established for sale of mining properties, we believe it advisable to state openly so that all claim-holders may understand, the information we have forwarded to many prospectors who have written us to sell their claims.

1—We must have an owner's statement clearly setting forth formation of claim, description and number of veins showing values.

2—Send particulars as to title, giving number of claim and stating number of days' work actually performed. Also if surveyed.

3—Do not have your propositions loaded two or three times their actual value by middlemen and others. We do not and will not offer properties this way.

4—We do not accept for sale all properties offered, and do not demand an option until we have real buyers in sight.

5—We believe you would make more money out of well-located and undeveloped claims by placing the same under working options. These properties at present sell from $500 to $5000. Suppose you place same with real operators who will accept an interest in your property and proceed with continuous development, you reserving an unassessable interest. If it proves to be a mine, you will have an independent fortune—if otherwise, you are only out of pocket cost of staking and recording. We have placed several properties this way, which we consider fair to all parties interested.

MAPS

We are having a map of the Montreal River section, including James, Smyth, Micke, etc., specially prepared for our customers. This we will sell at $1.25. We also have latest township maps at 75c.

Northern Ontario Silver Mines Co., Ltd. 36 Lawlor Building, Cor. King and Yonge Streets. Phone Main 6259. **Toronto**

Ground Floor Syndicate

I have been watching the development of the new silver fields carefully and trying to get some good property that I could ask my friends to join me with. I find it hard to secure at a reasonable price, property with fair showing.

My judgment is that PROSPECTS carefully selected and offered at reasonable prices are the BEST BUYING. If they make mines the profit is enormous. If they turn out no good the loss is small.

I have a well located claim in Gowganda, quite near the good ones, with good veins, good formation, title right, assessment work done and low price. I am forming a small syndicate of 100 shares of $50 each to pay for same, and $1000 of this money will be used to test the claim. If considered worthy after that is expended, a company will be formed and the syndicate holders will be on the ground floor. Write for particulars.

TAFT'S FIRST MISTAKE.

WASHINGTON, March 8.—Simplified spelling is to exist no more in White House correspondence except as an antique and a curiosity. There is to be no more puzzling over sonorous sounds, and President Taft's message to congress and his other correspondence will contain words "spelled out" just as Mr. Taft spelled out his words when he wrote essays at Yale.

President Taft practically began this change in his inaugural address.

Marine Association Protest.

OTTAWA, March 8.—A deputation representing the Dominion Marine Association waited on Sir Wilfrid Laurier and Hon. Messrs. Graham and Pugsley this morning to protest against the proposed scheme of a New York company to dam the Long Sault Rapids in the St. Lawrence River for power purposes.

A Tonic or a Stimulant?

Ayer's Sarsaparilla is a tonic. It does not stimulate. It does not make you feel better one day, then as bad as ever the next. There is not a drop of alcohol in it. You have the steady, even gain that comes from a strong tonic. Ask your doctor all about this. Trust him fully, and always do as he says.

J. C. Ayer Co., Lowell, Mass.

'LUCKY PAULEY'

Gowganda Silver Mines

Now being organized with the low conservative capital of Five Hundred Thousand Dollars at Ten (10) Cents a share. **REMEMBER** "Lucky Pauley" is the Pioneer Captain of Cobalt of 4 1-2 years' standing, and one of the first in Gowganda, and not one who reads this or **ANY OTHER** can say truthfully he or she has ever lost a dollar by buying Cobalt Stocks on Capt. Pauley's advice. Very little of "Lucky Pauley" will probably be offered to the public, but anyone meaning business **quick,** and who has a bona-fide interest in reaping some of the profits to be derived from the rich silver discoveries and development of the rich mines of Gowganda, had better apply at once to Capt. (Lucky) Pauley at Cobalt, and thereby be one of the first to get listed. Quick action is imperative if you wish to participate.

FOR SALE
