## FOURTH SESSION—TENTH PARLIAMENT

### HOUSE OF COMMONS.

MONDAY, March 2, 1908.

The DEPUTY SPEAKER took the Chair at Three o'clock.

LANDS TITLES ACT AMENDMENT.

Hon. FRANK OLIVER (Minister of the Interior) moved for leave to introduce Bill (No. 113) to amend the Land Titles Act. He said : This Bili is intended to provide for the holding of land by the ecclesiastical authorities of the various churches in territories under the immediate jurisdiction of the Dominion government with regard to land.

Motion agreed to, and Bill read the first time.

ASH WEDNESDAY ADJOURNMENT.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). I gave notice last week that on Friday of that week I would move that when this House adjourns on Tuesday next it stands adjourned until Thursday, March 5. Unfortunately, on Friday,the House was otherwise engaged, and I could not move my motion. I will move it to-morrow.

QUESTION OF PRIVILEGE—MR. TALBOT, M.P.

Mr. O. E. TALBOT (Bellechasse.) Mr. Speaker, I rise to a question of privilege. There is a two column editorial article in this morning's 'Citizen' to which I take very strong exception. One paragraph to which I call particular attention is as follows :—

Another feature of this remarkable session demands comment. It was noticeable that most of Hon. Mr. Brodeur's colleagues in the cabinet, with the exception of Hon. Mr. Bureau, maintained a discreet silence, or afforded him but little assistance, in the three days' struggle. With the exception of the ministers told off in relays to 'lead the House,' the others came and went with an ostentatiously detached air, and, except during the regular hours of session the Minister of Marine was only supported by a small but faithful guard of his Quebec colleagues. On several occasions they came to his assistance with vehement charges that the hon. gentleman was being 'persecuted' by the opposition because he was a French-Canadian. Anything more absurd in the face of the facts could not be conceived, and this invocation of the race cry took on all the semblance of a threat. Invoked under such unreasonable conditions, it suggested the attitude that a French-Canadian in public life can do no wrong, and that to attempt to hold a minister from that province accountable, no matter what the circumstances might be, was resented as a reflection upon French Canada.

Mr. DEPUTY SPEAKER. The hon. member (Mr. O. E. Talbot) must remember that a question of privilege refers to himself personally.

Mr. TALBOT. Where I am personally interested is in that I consider myself alluded to in the expression 'small but faithful guard of his Quebec colleagues.' I resent the way the article is written, and, with your kind permission, I will finish it, for there is only one further sentence :

It is only fair to the French Canadian members to say that this ill-advised attitude was only assumed by a minority of Liberal members from that province, headed by Hon. Mr. Bureau.

As I was one of those who thought, and still think, that I was performing my duty as a representative of the province of Quebec, and also as a representative of Canada, I resent this paragraph as meaning that this was an organized affair amongst us, to make a political cry of it, meaning that persecution was directed against the Minister of Marine and Fisheries (Mr. Brodeur) because he is a French Canadian. I am satisfied that if the Minister of Militia (Sir Frederick Borden), probably——

Mr. DEPUTY SPEAKER. The hon. member must confine his remarks to himself personally.

Mr. TALBOT. I take it to myself personally, and I repeat that, so long as this sort of obstruction goes on, I shall stand by the Minister——

Mr. DEPUTY SPEAKER. The hon. member (Mr. Talbot) is out of order.

Mr. SAM. HUGHES. Order.

Mr. TALBOT. In so doing I will be fulfilling my duty.

Some hon. MEMBERS. Order.

Mr. DEPUTY SPEAKER. I think this is not a question of privilege.

Mr. TALBOT. This article is only important as showing the unworthy attitude of hon. gentlemen opposite.

## BOOK-KEEPING IN DEPARTMENT OF MARINE AND FISHERIES—RETURN.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries) laid upon the table copies of order in council and papers in connection with the revised system of book-keeping in the Department of Marine and Fisheries.

He said: I may add that there is a very voluminous final report of the 6th of September, 1907, which we have had no time to copy, therefore I lay the original on the table.

## INQUIRIES FOR RETURNS.

Mr. FOSTER. May I ask the minister if he will also lay on the table the second order of the House with reference to his travelling expenses? I want also to call the attention of the Minister of Agriculture to the fact that in the correspondence on the cold storage an important letter has escaped his notice, a letter from Mr. Harry McKeown, of the city of St. John, to the Minister of Agriculture with reference to the application of Williams and the opposition it met with from certain parties. That letter was written to the Minister of Agriculture, but it is not included in the return.

Mr. FISHER. I have no memory of the letter. I had my officers look two or three times over the papers in consequence of the hon. gentleman's remarks about other letters. They looked over my department and my own office, and they assure me that there is absolutely nothing there but what has been brought down. But now that the hon. gentleman mentions this letter I will have a special search made.

Mr. CLEMENTS. I desire to say to the Minister of the Interior that I would like him to hurry up the return that I am awaiting for regarding immigration.

Mr. OLIVER. I expected to lay the return on the table to-day. I am sure it will be here to-morrow.

## GRAIN COMMISSION REPORT.

Mr. LAKE. I would ask the government whether the evidence which was taken before the Royal Grain Commission has been printed, and if not, whether it will be?

Mr. FISHER. I cannot answer my hon. friend, but I will make inquiries. That evidence was taken under the Minister of Trade and Commerce.

## HAMILTON RADIAL ELECTRIC RAILWAY COMPANY.

House in committee on Bill (No. 25) respecting the Hamilton Radial Electric Railway Company.—Mr. Clarke.

Mr. SPROULE. I have a telegram in my hand from the member for South Toronto (Mr. Macdonell) who desired to be present when this Bill was being further considered. He expected to be present this morning, but owing to the train being snowbound he could not get here. He wants the Bill held over.

Mr. CLARKE. Does he not say for the third reading?

Mr. SPROULE. He says: 'Hold the Bill over, certainly for the third reading.'

Mr. CLARKE. I received a similar telegram from him. He spoke to me about it on Saturday night before leaving, as it had been suggested to him then that it should be held over until another day, but for another reason. He said 'after the way we had been knocked about with this Bill he did not have the conscience to ask that it be held over beyond to-day.' It is understood that it shall go on. He told me of certain amendments, of which notice had been given in the Votes and Proceedings, that he wished to move. I would suggest that we go on with the work in committee and that the third reading be not taken until he can move his amendments. The Railway Committee has discussed very fully the whole Bill, and it does not seem to me there is any reason why we should postpone the committee stage.

Mr. SPROULE. There is the additional reason, that the hon. member for South Simcoe (Mr. Lennox) is unavoidably absent and he would like very much to be here, though he did not feel like asking that the Bill be postponed on account of his absence.

Mr. FOSTER. There has been a great deal of discussion, both in the committee

and in the House, on this Bill. I would not like to ask anything unreasonable in the way of postponment; at the same time we all know what a great interest the hon. member for South Toronto has taken in this Bill. He gave up some very important engagements in Toronto in order to come up last night and be here to-day. He consulted with me before he left. If the chairman could see his way clear to postpone it for another day, I think I can assure him that there will be no undue delay in pressing it through. There is no obstruction so far as I know in reference to this Bill. Certain parties have taken very strong grounds on it and have felt obliged to push their reasons so far as they could. On behalf of the hon. member for South Toronto, I would very much like if the Bill could be held over until another day.

Mr. CLARKE. So far as I am concerned I would be glad to accommodate the hon. gentleman. But I have also put off engagements at different times in consequence of this Bill and I have matters now which may take me away at any day, and when it comes up again I may be away. I know that the member for South Toronto would be satisfied if we reserved the Bill for the third reading, when he can be here and move his amendments.

MR. GRAHAM. I got the same telegram from the hon. member for South Toronto (Mr. Macdonell) and I want to meet every person's wishes. He suggested in the telegram and I think that what he really expects is that we shall not, at least, proceed with the third reading. He has an amendment which he wishes to move, he wishes to offer some reasons for this amendment and I do not want to deprive him or anybody else of the fullest opportunity of doing so. It would meet the suggestion which is implied in the telegram if we deferred the third reading. I am inclined to think that it would be better for the discussion to take place on the third reading than in committee, for he will then have an opportunity of dividing the House.

Mr. FOSTER. The minister is somewhat of a mind reader.

Mr. SPROULE. My hon. friend from South Toronto (Mr. Macdonell) and my hon. friend from South Simcoe (Mr. Lennox) desired to offer their amendments in Committee of the Whole so that they would be entitled, in the event of opposition, to speak more than once on them and state their views. It is their desire to move these amendments and to discuss them, not with the intention of unnecessarily delaying the passage of the Bill, because they have both reached the conclusion that the Bill is going to pass, but to place themselves on record, and I think it would be better to move these amendments in committee than to do it on the third reading.

Mr. PATERSON. I notice that in one of the leading papers, with reference to the French treaty, it is said that the government were not ready with their business. That is rather a reflection. I understand the hon. Minister of Finance (Mr. Fielding) has been anxious to put that Bill through and if I remember aright the hon. member for North Toronto (Mr. Foster) asked that it might stand over on his account and it has stood over. I think that the hon. member for North Toronto, if that is so, should rise and say that he was sorry to see such an article in the newspapers when it was such an unjust reflection upon the government and when the delay was absolutely due to himself. Such a wrong impression should not be allowed to go through the country.

Mr. FOSTER. My hon. friend (Mr. Paterson) is too sweet altogether. The government must always be large enough to take these criticisms from the newspapers, but I think that if I asked that it be left over it was because there was some deficiency in the information—was there not ?

Mr. PATERSON. No.

Mr. FIELDING. The papers are loaded down with information.

Mr. FOSTER. 'Loaded down,' in the mind of my hon. friend the Minister of Finance (Mr. Fielding) and in my own mind, as regards information, are two different things. I think that what my hon. friend from South Toronto (Mr. Macdonell) really wishes is that the discussion in committee be left over, but if the government and my hon. friend (Mr. Clarke) who has charge of the Bill do not think that they can stretch a point, or if they do not think that the full measure of generosity should be given, why, half a bite is better than none and I think that my hon. friends may take the third reading as being the minimum of what he would like, although he is such a lovable member that I should think that possibly he would be willing to meet his desire.

Sir WILFRID LAURIER. This is not a matter with which the government has anything to do. This is the third Monday that this Bill has been on the Order Paper. It has been put off twice already.

Mr. FOSTER. Well, the government has it in its own hands, of course.

Mr. HENDERSON. Last Monday, when this Bill was before the committee, the hon. Minister of Railways and Canals (Mr. Graham) made a statement in regard to an amendment which I had proposed with the view of securing the enforcement of clause 10 of the Bill intended to protect municipal

rights, I have been wondering what he had in his mind. He told me that he thought that a Bill which he was going to introduce would accomplish the same purpose and perhaps in a better way. That is something like the language he employed. I have been waiting anxiously to learn just whether the measure which the hon. minister proposes would really accomplish what I want to accomplish. I wonder if he to-day can give us some more definite statement of what that Bill will contain so that I need not necessarily wait until the third reading to ascertain just whether the municipalities in which I am chiefly concerned are sufficiently protected without my moving the amendment again on the third reading which I proposed in committee. There is this point too and I assume that the government would give us some guarantee by which we could get over the difficulty, assuming that the Bill would go through committee without any amendment—and there is no amendment so far submitted—the Speaker would be in the chair on the third reading and he might take the technical objection to an amendment that there had been no change in committee. I think it is the ordinary practice that unless a Bill had been amended in committee we would have no opportunity to move an amendment on the third reading even if we had given notice. We do not know just what the Speaker would do, and although this Bill may be allowed to stand over for a third reading at some future time we must have some assurance that the technical point will not be taken against an amendment which might be moved on the third reading.

Sir WILFRID LAURIER. Go on with the Bill.

Mr. GRAHAM. Sections 1, 2 and 13 stood.

On section 13,

The company shall not sell, dispose of, or distribute electric power or energy within, or for use within, the limits of any city which owns and operates its own electric lighting or power plant without the consent of the council of such city.

Mr. SPROULE moved :

That section 13 be amended by inserting after the word 'consent' in the thirteenth line the words 'expressed by by-law.'

Where such consent is given it ought to be given by by-law.

Mr. GRAHAM. I do not think there is any objection to that.

Mr. COCKSHUTT. That is a very important clause. It is well known that the Ontario government have inaugurated a power policy and many of these towns and cities on the route of this railway have already passed by-laws and are prepared to enter into arrangements with the Ontario government for supplying power. This clause may conflict with that policy, and if this clause is to apply only to municipalities already operating their own plants, it may happen that a town or village installing a plant say in five years' time, will be excluded from its protection. For instance, the city of Brantford is to-day paying great attention to the power question. We have a local company there and the city may, in the near future, decide to establish a municipal plant and why should it be subjected to this competition because it was not fortunate enough to be in the field as early as some other municipalities ?

Mr. SPROULE. I do not think it would be ; I think that the clause would apply say if Brantford established a plant next year and the following year this company undertook to supply electricity in that city. Brantford would then come under this clause.

Mr. GRAHAM. I would move that where the word 'city' occurs in lines 13 and 14, the word 'municipality' should be substituted.

Amendment to the amendment agreed to.

Mr. HENDERSON. When I spoke before I had reference only to clause 11 of the Bill ; I simply wanted to make sure of an opportunity to move my amendment to clause 11. The difficulty, as I understand, has now been overcome as a change in the Bill has been made in the Committee of the Whole House and therefore any amendment can be moved on the third reading, after notice, and I have given notice. I hope the minister will be able to tell us whether he has provided a way out of the difficulty so that I will not be obliged to press that amendment.

Mr. GRAHAM. I do not wish to discuss a Bill before I have brought it down, but I think my hon. friend will not move his amendment if I get my Bill down before this one goes through.

Mr. HENDERSON. The government are so slow in bringing down their measures that we cannot tell what to do.

Mr. HAGGART. The hon. member for South York (Mr. W F. Maclean) the other day pointed out that the different railway companies empowered to be amalgamated under this Bill have arrangements with several municipalities by which the passenger rate is limited to two cents a mile, and he thought and I think that under this Bill these roads may be allowed to charge what they like. The minister stated that if he would wait until the introduction of a Bill which he intended to bring down, that would be guarded against as he intended to

give to the Railway Commission the power of fixing the passenger rate per mile. If the municipalities have such an arrangement with these companies, I think the arrangement should be protected in this Bill and that the municipalities should not be wholly dependent on the protection to be given by the Railway Commission.

Mr. CLARKE. I think the hon. member (Mr. Haggart) has overlooked setion 10 which expressly provides that all arrangements made with municipalities shall be adhered to and that if there is any conflict between these agreements and the Railway Act the by-laws and agreements shall prevail to the exclusion of the Railway Act.

Mr. FOSTER. That would protect them fully.

Mr. CLARKE. I think so.

Mr. HAGGART I did not look carefully into it and I judged by the remarks of the hon. member for South York (Mr. W. F. Maclean) and the reply of the hon. Minister of Railways (Mr. Graham) that this Bill would not fully protect these agreements.

Mr. GRAHAM. We were not talking particularly of that agreement ; we got a little further afield on the two cent rate. I pointed out that this road would be under the Railway Commission as to its passenger rates as well as other things. I did not mean that any contracts with municipalities would be overridden.

Mr. CLARKE. Besides that the munipalities have approved of this clause.

Mr. COCKSHUTT. I am very much interested in the proposed amendment of the hon. member for Halton (Mr. Henderson) and I agree that this is his opportunity to move an amendment. As I understand the rules that is the customary proceeding, to move an amendment in committee. I wish to see an amendment moved because Brantford is very much concerned in that very matter. They sent down deputations to appear before the Railway Committee on several occasions, before the pace became too warm and there were so many meetings that they could not have representatives at them all. I think the hon. member for Halton (Mr. Henderson) should have a direct assurance from the minister that he will have a proper opportunity to move an amendment if he wishes because there are other municipalities that desire to support such an amendment if it should come before the House.

Mr. CLARKE. The amendment was moved and voted on in the House the other night.

On the preamble.

Mr. SPROULE. There was a motion to be moved that this Bill be referred back to the Railway Committee in order to have the committee give reasons in accordance with the rule why they amended the preamble. The chairman informs me that that question was discussed at a previous meeting and was allowed to pass. Therefore I do not desire to revive it again.

Bill reported.

## MONTREAL, OTTAWA AND GEORGIAN BAY CANAL COMPANY.

House in committee on Bill (No. 47), respecting the Montreal, Ottawa and Georgian Bay Canal Company.—Mr. Stewart.

On section 2,

Mr. SPROULE. I have only this further remark to make in regard to this Bill, that before we were asked to extend the time, I think the company ought to have presented to parliament some approximate statement of the expenditure they have made on the undertaking up to the present time. I think also, that the government should take it up themselves, and not leave it in the hands of any private company, because every additional month or year that it runs, there will be additional expenses piled up that the country ultimately will be obliged to pay.

Mr. STEWART. I may say that I asked the solicitor of the company if he could give me the information the hon. gentlemen desired, and he was unable to do so. The criticism by some hon. members was that the company were going on spending money. I may say that they are not now spending money. Knowing that the government are making surveys, they have no desire to duplicate the work. They ceased spending money on surveys, &c., when the matter was taken up by the government.

Mr. SPROULE. That is different from the information which was given to us the last time the Bill was considered. We were told that they were going on spending money. If they are not piling up expenses, I do not see that the objection to the Bill is so very serious.

Mr. FOSTER. I understand that all that is required is to prolong the life of this company. They do not propose to go into any operations until the government have made up their mind what they propose to do. May I ask if the field work of the survey is finished ?

Sir WILFRID LAURIER. I am not sure, but I understand that it is.

Bill reported, read the third time, and passed.

THE CANADIAN NORTHERN RAILWAY COMPANY.

House in committee on Bill (No. 81) respecting the Canadian Northern Railway Company.—Mr. W. McIntyre.

Mr. SPROULE. There are a number of amendments to this Bill, and it is not reprinted. I understand that the clerk has the power to have Bills reprinted when amended such as this is. This would require reprinting before we can have any intelligent understanding of what we are passing. I move that the committee rise and report progress until the Bill is reprinted.

Mr. GRAHAM. I have no objection. I am at a loss myself until it is reprinted.

Mr. URIAH WILSON. This should be the general rule. We get our file of Bills, the Bills are amended, and we do not know what amendments are made.

Mr. GRAHAM. I agree thoroughly with the hon. gentleman.

Mr. URIAH WILSON. Well, see that it is done.

Progress reported.

DOMINION ATLANTIC RAILWAY COMPANY.

House in committee on Bill (No. 50) respecting the Dominion Atlantic Railway Company.—Mr. Copp.

On section 6,

Mr. SPROULE. Generally we fix the number of directors at from five to nine. In this case the number is fixed at three, with power to increase to five. What is the reason for that?

Mr. COPP. I presume the reason is that this is an old company and an English company, and I think the three directors are all they ever had. They were incorporated in 1860, or thereabouts, and have been acting under the old charter ever since.

Mr. SPROULE. Then some portion of the road is built?

Mr. COPP. Yes; this is the road that runs from Halifax to Yarmouth.

Bill reported, read the third time, and passed.

SASKATOON, SASKATCHEWAN, PEACE RIVER AND DAWSON RAILWAY COMPANY.

House in committee on Bill (No. 70) to incorporate the Saskatoon, Saskatchewan, Peace River and Dawson Railway Company. —Mr. W. McIntyre.

Sir WILFRID LAURIER

On section 14,

Mr. WM. WRIGHT. Mr. Chairman, the company seems to be given the right under this section to carry on every kind of business except a barber shop and a laundry. I think we might as well throw these in.

Mr. SPROULE. This seems a most extraordinary Bill in the powers given to the company.

Mr. FOSTER. This section certainly is a tremendous section for a railway company. I was not in the committee when it went through, but being in the House now these look like very extended powers. What we are doing nominally is to incorporate a railway company. We give that company all the powers in connection with its road, including telephone and telegraph powers as regards the railway—and large powers at that. We give them electric powers with respect to surplus waters or electric power developed but not required for the purposes of the railway. But it also, in effect, makes them a general electric company. Then it goes on and says that they may:

Acquire, lease, hold or operate timber limits, and acquire, lease, construct, maintain, equip, operate or erect sawmills, pulp and other mills, and sell timber, wood products and lumber.

They may do the same with reference to coal, the same with reference to mines and minerals, the same with reference to hotels and restaurants. Hotels and restaurants along the line of the railway would be unobjectionable so long as they were used in connection with the road.

They may acquire, purchase, lease and hold lands required for, and lay out, establish and manage parks and pleasure grounds, and give a lease thereof.

A park along the railway which contributes to its tourist travel is not objectionable. But I think as to these powers with regard to timber lands, coal lands, mines and minerals, it is ridiculous to give them to a railway company. You might as well tell them to go out into the wide world and do as they please.

Mr. W. McINTYRE. The hon. gentleman will notice that the section is qualified by the words 'For the purposes of the railway.' They may do these things for the purpose of their undertaking. It is to be remembered that a great deal of this road, with the exception possibly of 100 miles, is built in an uninhabited country. It may be necessary for them to build saw-mills in order to obtain the timber required. It is only for the purpose of their undertaking. The same may be said of the mineral lands.

Mr. FOSTER. But are they going to make pulp mills for the purpose of building their roads ?

Mr. W. McINTYRE. The Canadian Northern in that country operate their own mines for the purpose of supplying their own coal. What is the meaning of the phrase 'for the purpose of its undertaking' ?

Mr. FOSTER. What is its undertaking ? It is to lay out, construct and operate a railway. I know there are a good many ways in which adjuncts are necessary, and can be well undertaken in connection with the road, and for its purposes. But I think this is altogether too wide. We know that in the United States of America to-day there is a great deal of agitation in regard to the wide powers given to railway corporations, and there is now legislation going on compelling them to loosen their hands upon coal areas, mines and the like of that. It is on the same principle as this. The question is whether it is best for a country to have its carriers also the producers of coal, lumber and so forth, where they have the double interest of being not only producers but carriers to their customers. The coal roads in the United States, the Reading Company in Pennsylvania and other companies are bound, as I understand, to cut the connection within a year or two. You can easily see to what a disadvantage a corporation is put, which is not a railway, when it has to compete against a railway corporation which is in the same business as itself, and which also does the carrying. It is almost impossible to get fair treatment for the transport of its products. This road, it is proposed, is to have its own coal mines, its own timber lands, it is to make pulp, it is to do almost everything under the sun. It will have a great advantage over its competitors. I think we are doing wrong in giving these all embracing powers to a railway company. There are other ways : A company may be formed to make pulp, a company may be formed as a lumber company. But to put all this into an omnibus clause is a serious matter, and I call the attention of the Minister of Railways to it.

Mr. TURRIFF. When this Bill was before the committee this point was discussed at some length, and the view the committee took was somewhat different to the view enunciated by the hon. member for North Toronto (Mr. Foster). This company applied for these powers to acquire timber limits, coal lands and other mineral lands, and it was pointed out that in an unsettled country they needed to establish these undertakings for the purpose of making traffic for their road. There was an amendment made in committee to subsection 'h' of section 14, that prohibited them from disposing of these timber limits or coal lands that they might acquire until they had built and put in operation 500 miles of road. Therefore they cannot get a railway charter to acquire limits, coal mines and other lands for merely speculative purposes, and not dispose of them without having first carried out the intention of the project to the extent of putting into operation at least 500 miles.

Mr. FOSTER. I do not think that makes much difference.

Mr. TURRIFF. I do not think it does.

Mr. FOSTER. You see to what it leads. Here is a corporation going on with one legitimate business, it is brought into being as a public utility, to do work for other people. It has to see that the people get decent travel accommodation and proper carriage for their products, and we have a Railway Commission to control their operations. The prime object of a railway is to serve the public. Now if you divert its attention from that purpose and allow it to develop another set of activities, you throw its energies into another channel and allow it to develop profitable undertakings which are not at all in the line of a public utility. But there is worse than that. You put power into the hands of that wide-awake corporation, stretching out into all parts of the country, to acquire the very best areas of coal or timber lands, water-powers for electricity, and so forth; in fact a wide-awake company like that could take everything within the sweep of its influence for forty or fifty miles each side of the railway. In this way it would become a monopoly, and get hold of vast resources, which would bring them into conflict with the population which is sure to flow in. The vista is a pretty wide one, and I think we are not wise in giving a railroad corporation an immense endowment like this.

Mr. GRAHAM. There is a good deal of force in what my hon. friend says about these wide powers and although the committee did pass the Bill I took occasion to make a few observations along the line of what my hon. friend says to-day. I thought it was about time that we should confine railway companies to the building and operations of railways. Heretofore large powers have been given to some companies, but the country is gradually getting opened up and I feel that we may be placing ourselves in the position in which our neighbours across the line find themselves. For instance, the coal carrying business is controlled by the transportation companies as well as the coal itself. With that state of affairs our transportation facilities and natural products would be interwoven in such a way that one company might control the whole situation.

Mr. SPROULE. Is it not the same with timber and lumber as well ?

Mr. GRAHAM. Well, I am just taking that as an example. I would suggest to the promoter of this Bill that we take up something else and consider this a little further, because I have some strong views on the question myself.

Mr. HENDERSON. Before we consider that point, may I ask whether this Bill was before the Miscellaneous Private Bills Committee ? I see that an important part of the Bill has relation to commercial industries. We have a committee specially charged with the examination of Bills of this kind. They are not supposed to be dealt with by the Railway Committee and if this Bill has not been reported on by the Miscellaneous Private Bills Committee I think it had better be postponed until it has been referred to that committee so that we may have the benefit of the opinions of the experts in commercial transactions, who are supposed to sit on that committee. The Bill is certainly an extraordinary one. It involves commercial transactions, just as much as it does railway building ; in fact, I am not sure but that the clauses not appertaining to the construction of a railway would not be in the end the more important part of the Bill. I submit that so long as we have select committees to consider the various Bills which come before the House they should not be considered in the House until these committees have reported upon them, and if the promoters of railway Bills will persistently insert in railway charters clauses such as reference has been made to, we should refuse the consideration of such Bills until they have been reported upon by other appropriate committees as well as the Railway Committee. Comparatively few members were at the Railway Committee when this Bill was considered, we know very little about it and it would certainly be much better that the Bill should be considered by the other committee as well ; then let them bring down their report and if it is approved by that committee we would have more confidence in passing it even although we had not had the opportunity of getting the details of all its various clauses. I raise that objection to the Bill now, and if it is not referred to the Miscellaneous Private Bills Committee before it is taken up again I shall take a decided stand, raise that objection and ask that it be referred to the committee before we consider it further here. I think a point of order on that line would be well taken.

Mr. FOSTER. I have a dim recollection that somewhere around where the sealed pattern of the Ross rifle is, or somewhere else, there is a model railway Bill. Does the minister know whether there is or not? I would like to have that model trotted out at least once in a decade so that it might stand as an example of what might be avoided.

Mr. W. McINTYRE. The promoters of this Bill drew it on the plan of the various other Bills that have gone through the Railway Committee. The statement of the hon. member for North Toronto (Mr. Foster) is undoubtedly true. I think that railway charters should refer to railways and not to other industries, but if this has been a matter of common practice I cannot see why it should be changed in this particular instance.

Mr. FOSTER. Can the hon. gentleman give us the name of a railway Bill that has as wide powers as this one ?

Mr. W. McINTYRE. I think that if you look at the Grand Trunk branch lines you will find identically the same clause as that which has been referred to by the hon. member for North Toronto.

Mr. FOSTER. That is where the trouble comes ; it was a government Bill.

Mr. W. McINTYRE. There is another Bill which went through last session which is practically the same and that is the Bill incorporating the Dunvegan road. I do not know that I can give the exact title of it. But we will have an opportunity to look at the various Bills which have been passed and make a comparison between them and the provisions contained in this Bill. This Bill is planned on various other Bills and we are not asking for something which has not been granted to other companies. In reference to the point raised by the hon. member for Halton (Mr. Henderson) I will say that other Bills went through in the same way without being referred to the Miscellaneous Private Bills Committee or any other committee but the Railway Committee.

Mr. HENDERSON. Whilst it may have been the case that a goodly number of Bills have gone through this House it has not been the absolute practice because I have a distinct recollection of a Bill of this very character having been referred to both committees, referred to the Railway Committee, certain clauses dealt with there, and referred to the Private Bills Committee for consideration of the commercial clauses. As I said before if the promoters of these mixed Bills persistently present them in this form I think that in future they ought to understand that their Bills must have the approval of both committees before they will be proceeded with in the House. I think that is only reasonable. What do we send a Bill to the committee for ?—to have it investigated with reference to the purpose that is intended to be accomplished by the Bill. The Railway Committee is only intended to deal with a Bill providing for the construction and operation of a railway. The Private Bills Committee has a duty to perform

and that is to examine and report upon all that appertains to the commercial character of the transactions that are authorized to be carried on by the Bill. I submit that even if we have been following a bad precedent it is time we should make a change. To my mind this Bill goes so very far along the line that I have indicated that it would be well to have it referred to the Private Bills Committee to give us their opinion. There are supposed to be men on that committee who are experts in these matters. Men are selected on these committees as I understand by reason of their knowledge of various transactions. A man may be put on the Railway Committee because he has some knowledge of the construction of railways. A man is put on the Committee on Banking and Commerce presumably because he has some technical knowledge of the matters that will come before that committee. It is the same in regard to the Private Bills Committee ; men are put on that committee who have had experience for the last twenty-five years, possibly many of them, or for years and years, in dealing with matters of this kind and their opinion would be of very much more importance than that of a committee that has never been charged with the consideration of transactions of this kind. If we have been making a mistake in the past by all means let us make a change and lay down a new principle. If that Bill is not referred to Miscellaneous Private Bills Committee, and if it comes up in the House again I shall take a decided stand against its progress until a reference has been made and a report brought down from that committee approving of it. That is only reasonable and I am quite sure we will be supported by many members on that line.

Mr. FOSTER. I thought there was some rule of the kind I suggested. I find rule 101 of the House reads :

Before any private Bill is considered by the committee to which it may be referred, a report shall first be submitted to the committee by the examiner, stating that he has examined the same, and has noted, opposite each section, any variations from the provisions contained in the model Bill; and to insure uniformity, the examiner shall revise and certify every private Bill passed by the committees, and the reports thereon, before they are presented to the House.

I believe the Railway Committee is the only committee which has a model Bill, and I would suggest to the Minister of Railways that he should resuscitate that much-abused and may be long-lost article and get his examiner to work on it, and pass these Bills as they come up. I presume that the examiner referred to is Mr. Hartney.

Mr. GRAHAM. He is the clerk of the committee.

Mr. FOSTER. He knows the model Bill and is supposed to examine all Bills that come up. May be this rule is more honoured in the breach than in the observance. In reply to my hon. friend who has the Bill in charge, there always comes a time when you note extravagances that are going on, and we have to make a protest at this time, even although there may be examples of something almost similar. I think it would be well to hold this Bill over.

Mr. COCKSHUTT. The powers granted by clause 14 seem to be very much too wide for any railway Bill. I for one desire to protest against the granting of a large number of the privileges asked for in that clause. It may be said that I should have raised this objection in the Railway Committee. That is certainly the proper place to object, but it must be remembered that the Banking and Commerce Committee has been sitting on the same day as the Railway Committee for the last two or three weeks, and being on that committee I have been attending its meetings when this Bill was before the Railway Committee. Had I been at the Railway Committee I would certainly have protested against this clause. What the minister has said with regard to the coal supply of Pennsylvania should be a lesson to us and a warning never to get into the same box. This is bound to be a great country in the near future, and this railway company, with all its powers, can do immense damage to any person or corporation operating coal fields or carrying on lumbering operations anywhere along its line. The railway company might grant great favours to their own products and discriminate against the products of any company carrying on either the coal or lumbering business. A very unfair advantage might be taken. With all deference to the hon. member for Strathcona (Mr. W. McIntyre), I cannot recall a Bill that approaches what he is asking for in this Bill. It may be there are such Bills, but I doubt if the wide range of powers proposed to be given here can be duplicated by any other Bill. He spoke of the Grand Trunk Pacific Branch Lines Bill, but I do not think it contained anything like this clause, permitting the company to carry on all these operations. I think the Bill should certainly be held up until this is looked into.

Mr. GRAHAM. The difficulty here, as I think I find it in the Railway Committee, and as I found it in the Railway Committee of the Ontario legislature, is that every railway company asking for railway legislation has its solicitor look over all other Railway Acts that have been passed, and put in their Bill all they want themselves ; then they add everything that any person else ever got. That is one of the difficulties. We may as well hold the Bill over for a few days and look into it more thoroughly before we go on with it.

Mr. HENDERSON. As this Bill will come up to-morrow during the hour for private Bills, I shall give notice to-night of an amendment to strike out clause 14, but if we have an assurance from the minister that it will not come up to-morrow, I will consider my amendment more fully.

Sir WILFRID LAURIER. It may come up.

Mr. HENDERSON. If the minister will guarantee that it will not come up, I will defer my notice of amendment.

Mr. GRAHAM. I imagine it will not be taken up, but my hon. friend might as well put in his notice, because a little inconvenience to a private member might serve the convenience of the whole House.

Progress reported.

THE EDMONTON, YUKON AND PACIFIC RAILWAY.

House in committee on Bill (No. 68) respecting the Edmonton, Yukon and Pacific Railway Company.—Mr. Turriff.

On section 1,

Mr. COCKSHUTT. Is it possible for members to obtain copies of these Bills as they are read from the chair? Where amendments are made in this way it is impossible to follow their meaning by one reading from the chair.

Mr. FOSTER. There is a good deal in what my hon. friend says. We cannot all attend the Railway Committee, and therefore we do not know what has taken place. A conscientious member reading over these Bills the night before they come up in the House does not know of the amendments made in committee, and may find when he comes here that several sections have been added to a Bill. The cost of printing the amendments would not be great, and then each member would have in his file of Bills everything that it is proposed to bring before the committee.

Mr GRAHAM My hon. friend is right. I certainly thought that it was the rule that these Bills were reprinted, and I am heartily in sympathy with my hon. friend's view. We cannot discuss the Bill properly unless we have the reprinted Bill before us.

Mr. WM. WRIGHT. I wish to refer to a matter connected with this Bill which might be taken into consideration now or before it is reprinted. The Bill provides for very wide latitude as to where the railway may reach the Pacific coast. Apparently it may find an outlet anywhere. I think that should be specified more particularly and the promoters of the Bill might have that arranged before it comes up again.

Mr. GRAHAM. The promoter of the Bill is not here.

Progress reported.

Mr. GRAHAM.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 51), respecting the Erie, London and Tillsonburg Railway Company.—Mr. Pardee.

Bill (No. 74), respecting the Ottawa, Brockville and St. Lawrence Railway Company —Mr. Grant.

Bill (No. 67), respecting the Canadian Northern Ontario Railway Company—Mr. Pardee.

Bill (No. 76), respecting the Interprovincial Railway and Bridge Company of New Brunswick—Mr. Marcil (Bonaventure).

Bill (No. 83), respecting the Owen Sound and Meaford Railway Company.—Mr. Telford.

Bill (No. 87), to incorporate the Vancouver Island and Eastern Railway Company. —Mr. Sloan.

CONSIDERED IN COMMITTEE.

Bill (No. 73), respecting the Quebec Railway, Light and Power Company.—Mr. Power.

Bill (No. 77) respecting the Canadian Northern Quebec Railway Company.—Mr. Dubeau.

SECOND READINGS.

Bill (No. 98), respecting the St. Clair and Erie Ship Canal Company.—Mr. Blain.

Bill (No. 101), respecting the Fort William Terminal Railway and Bridge Company.—Mr. Macpherson.

Bill (No. 103), respecting the Eastern Trust Company.—Mr. Guthrie.

Bill (No. 108), respecting the Windsor, Chatham and London Railway Company.—Mr. Clarke.

Bill (No. 107), respecting the Trans-Canada Railway Company.—Mr. Girard.

Bill (No 110) respecting a certain Patent of Frederick C. Rehm, Elias Frank and Isidor Frank.—Mr. Béland.

QUESTIONS.

FISH EXPORTS—MANITOBA AND THE NORTHWEST TERRITORIES.

Mr. W. J. ROCHE (Marquette)—by Mr. Foster—asked :

What is the quantity and value of fish exported from Manitoba and Northwest Territories, respectively, for each of the five years ending March 31, 1907?

Hon. WM. PATERSON (Minister of Customs). The quantity and value of fish exported from Manitoba and Northwest Territories during the fiscal year ending June 30, 1903, 1904, 1905, 1906 and 9 months of 1907, were as follows :

MANITOBA.

| | | Fiscal Years. | Quantity. | Value. |
|---|---|---|---|---|
| | | | | $ |
| Mackerel, pickled | brls. | 1906 | 1 | 18 |
| Halibut, fresh | lbs. | 1907 (9 mos.) | 27,985 | 1,189 |
| Herrings, fresh | " | 1903 | 200 | 5 |
| Sea fish, other, preserved | " | 1905 | 190 | 16 |
| Oysters, fresh | brls. | 1903 | 4 | 18 |
| Salmon, fresh | lbs. | 1903 | 154 | 14 |
| Fish, all other, fresh | $ | 1903 | | 315,883 |
| | | 1904 | | 384,083 |
| | | 1905 | | 533,326 |
| | | 1906 | | 450,991 |
| | | 1907 (9 mos.) | | 356,865 |
| Fish, all other, pickled | brls. | 1905 | 10 | 67 |
| | | 1906 | 66 | 416 |
| Total | | | | 2,042,891 |

NORTHWEST TERRITORIES.

| | | | | |
|---|---|---|---|---|
| Halibut, fresh | lbs. | 1907 (9 mos.) | 161,627 | 6,638 |
| Herrings, pickled | brls. | 1903 | 110 | 510 |
| | " | 1905 | 375 | 2,263 |
| | " | 1906 | 461 | 2,387 |
| | " | 1907 (9 mos.) | 1 | 5 |
| Salmon, fresh | lbs. | 1903 | 1,500 | 106 |
| | " | 1905 | 50,545 | 2,696 |
| | " | 1906 | 50 | 4 |
| | " | 1907 (9 mos.) | 52 | 12 |
| Salmon, canned | lbs. | 1907 (9 mos.) | 150 | 9 |
| Salmon, pickled | brls. | 1903 | 185 | 2,945 |
| | " | 1904 | 201 | 3,489 |
| | " | 1907 (9 mos.) | 280 | 4,000 |
| Fish, all other, fresh | $ | 1903 | | 3,063 |
| | | 1904 | | 54 |
| | | 1905 | | 5,125 |
| | | 1906 | | 21,031 |
| | | 1907 (9 mos.) | | 870 |
| Total | | | | 55,207 |

The foregoing represents the exportation of the various kinds of fish exported from ports in Manitoba and Northwest Territories, but cannot be said to represent the whole amount of fish which originated in these territorial divisions which was exported, as it is possible that some fish, the product of Manitoba and Northwest Territories, may have been exported at eastern points and is credited in the statistical returns to the port of exit by which it left Canada.

Mr. FOSTER. What does that reference to eastern points mean ?

Mr. PATERSON. Suppose fish had been sent down and remained in bond and was taken from Montreal or Fort Erie, it would be credited to those ports.

Mr. FOSTER. That would be fairly accurate.

Mr. PATERSON. Yes.

RETURNS—NUMBER OF.

Mr. CRAWFORD asked :

1. How many returns have been brought down on the order of parliament by the Interior Department during the sessions of 1905, 1906 and 1907, respectively, and during the present session to date?

2. How many questions asked after notice have been answered by the Interior Department during the sessions 1905, 1906, 1907, and during the present session to date?

3. How many days of five and a half working hours each were occupied by employees of the Interior Department in preparing these returns and answers to questions during the sessions of 1905, 1906, 1907, and during the present session to date?

4. How many returns have been ordered from the Interior Department but not yet brought down?

5. How many days of five and a half working hours each is it estimated that it will require to complete the returns now ordered from the Interior Department by parliament, but not yet brought down?

6. How many original files or parts of files from the Interior Department have been brought before the House during this session?
7. How many of such files or parts of files have been brought before any committee of the House during this session?

Hon. FRANK OLIVER (Minister of the Interior.) As far as the Department of the Interior is concerned:

1. Twelve returns were brought down during the session of 1905, forty-three during the session 1906, thirty-five during the session of 1906-7, and twenty-six during the session of 1907-8 to date.

2. No record was kept of questions asked by members in 1905. Seventy-one questions were asked in 1906; one hundred and eight in 1906-7, and ninety-three during the present session, to date.

3. No record was kept of time occupied on returns during the session of 1905. Equal to 2,083 days of one man's time were occupied preparing returns and answers to questions in 1906. Equal to 1,050 days of one man's time were given to returns and questions in 1906-7. Equal to 677 days of one man's time were occupied in preparing returns and answers to questions during the present session to date.

4. Forty.
5. Equal to 660 days of one man's time.
6. Twentysix.
7. Two hundred and thirty-six.

Mr. FOSTER. How many hours of one man's time has been used in getting an answer to this question?

Mr. OLIVER. That would be included in a supplementary return which will be brought down later.

JAPANESE IN BRITISH COLUMBIA.

Mr. MACPHERSON asked:

1. How many Japanese have been allowed to enter British Columbia since February 1, 1908?
2. Had all of these passports?
3. How many were Japanese returning to this country?
4. How many were bound for the United States?
5. What was the occupation as shown by their passports?

Hon. FRANK OLIVER (Minister of the Interior):

1. One hundred and fifty-two, including 4 naturalized Canadians and 10 in transit to other countries.
2. All except the 4 naturalized Canadians.
3. Nine Japanese and 4 naturalized Canadians.
4. Nine.
5. Cooks.. .. .. .. .. .. .. .. .. 2
   Farmers.. .. .. .. .. .. .. .. 11
   Students.. .. .. .. .. .. .. .. 8
   Labourers.. .. .. .. .. .. .. 70

LA SOCIETE CANADIENNE D'IMMIGRATION ET DE PLACEMENT.

Mr. MONK—by Mr. Sproule—asked:

1. Has 'La Société Canadienne d'Immigration et de Placement,' the offices of which are in Montreal, made any request for assistance in money or otherwise from the government?
2. Has the government given or does it intend to give assistance to that society and in what manner?

Hon. FRANK OLIVER (Minister of the Interior). Applications have been made for assistance to members of the government, and the matter is under consideration.

OFFICE SPECIALTY COMPANY AND ECLIPSE MANUFACTURING COMPANY.

Mr. BENNETT—by Mr. Sproule—asked:

What amount was paid to the Office Specialty Company for supplies for the fiscal year ending June 30, 1905, sold to the Dominion government of Canada, and also to the Eclipse Maufacturing Company for the same time, for supplies sold by them as aforesaid?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). Office Specialty Company, $50,272.38; Eclipse Manufacturing Company, $24,098.63.

DREDGING—BOONE COMPANY.

Mr. BENNETT—by Mr. Sproule—asked:

What amounts have been paid for dredging or other work done by C. S. Boone or the C. S. Boone Company since 1896, showing the amounts, if any, by years, and places where the work was performed?

Hon. GEORGE P. GRAHAM (Minister of Railways):

1. C. S. Boone was paid on contract No. 15861 for deepening and widening channel-way at upper entrance of the Sault Ste. Marie canal, for the year 1905, $79,573.
For the year 1906, $49,805.
For the year 1907, drawback, $8,000.
For the year 1908, $22,213.47.
Paid on contract No. 16521, 1907, for widening channel-way at the upper entrance Sault Ste. Marie canal, $126,538.
Paid on contract No. 16474 for stone protection to bank backing to new extension, south pier, upper entrance, not completed, $7,799.

IRON AND STEEL BOUNTIES.

Mr. URIAH WILSON asked:

What was the amount paid as bounty on iron and steel each year ending June 30, from 1903 to 1907, both years inclusive?

Hon. W. S. FIELDING (Minister of Finance). 1903, $1,401,804.78; 1904, $908,962.16; 1905, $1,540,203.48; 1906, $2,004,338.02; 1907, $1,899,319.03.

PORT COLBORNE ELEVATOR.

Mr. LANCASTER—by Mr. Sproule—asked:

1. What is the total amount expended to date on the elevator at Port Colborne?
2. What is the total amount estimated as required to complete said elevator?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):
1. $598,700.07.
2. $151,299.93.

WELLAND CANAL.

Mr. LANCASTER—by Mr. Sproule—asked:

1. What has been the total cost of construction of, and improvements to, the Welland canal to date?
2. Has any estimate yet been obtained of the probable cost of enlarging the locks, or deepening the Welland canal to twenty or twenty-two feet? If so, what is such estimate?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):
1. $31,825,856.36.
2. No estimate has yet been obtained with reference to enlarging the locks or deepening the Welland canal to twenty-two feet.

Mr. LANCASTER—by Mr. Sproule—asked:

1. What is the total amount expended to date on the culvert and dock at Welland, on the Welland canal?
2. What is the total amount estimated as required to complete said culvert and dock?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):
1. $93,897.87.
2. $2,882.13.

YUKON PLACER CLAIMS.

Mr. LENNOX—by Mr. Sproule—asked:

1. How many renewals of placer claims were granted by the Gold Commissioner at Dawson on or subsequent to the first of August, 1906,, at $10 each?
2. Why was a fee of $15, as required by 6 Edward VII., chapter 39, not collected in these cases?
3. Were the shortages afterwards collected? If not, why not?

Hon. FRANK OLIVER (Minister of the Interior). I would ask that this be allowed to stand as a notice of motion for return.

Mr. LENNOX—by Mr. Sproule—asked:

1. How many renewals of placer claims were granted by the Assistant Gold Commissioner at Whitehorse on or subsequent to August 1, at $10 each?
2. Why was a fee of $15, as required by 6 Edward VII., chapter 39, not collected in these cases?
3. Have these shortages since been collected? If not, why not?

Hon. FRANK OLIVER (Minister of the Interior). I would ask that that be allowed to stand as notice of motion for return.

INTERNATIONAL RAILWAY.

Mr. DANIEL—by Mr. Foster—asked:

1. Who are now the directors and officers of the International Railwav in New Brunswick?
2. What amount of stock has been subscribed for and paid up?
3. What are the terms with the company under which Thomas Malcolm is building the road?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. The officers, as far as this department is aware of, are as follows: David Richards, president, Campbellton, N.B.; J. Bradshaw MacKenzie, secretary, Campbellton, N.B.; David Brown, chief engineer, Campbellton, N.B.
2. The department has no information in regard to this question.
3. Answered by No. 2.

ST. BONIFACE, MANITOBA, PUBLIC BUILDING.

Mr. W. J. ROCHE—by Mr. Foster—asked:

1. Has the government contracted for the erection of a public building in St. Boniface, Manitoba, with the view of utilizing it as a post office?
2. If so, from whom has the land been purchased, what was the price paid for such land, size of lot, and to whom has such sum been paid?
3. Who was the contractor, when was contract signed, and when will the building be open to the public?

Rt. Hon. Sir WILFRID LAURIER (for Minister of Public Works):

1. Yes.
2. (a) and (d) J.Bourgeaut. (b) $4,500. (c) 120 feet by 66 feet.
3. (a) J. McDiarmid Company, Ltd. (b) March 4, 1907. (c) Date of completion, September 4, 1908. Building can be occupied as soon thereafter as fittings, &c., can be installed.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a copy of (a) an order in council of the 19th May, 1902, and the regulations therein referred to and approved for the disposal of coal lands, the property of the Dominion government, in Manitoba, the Northwest Territories and British Columbia.

(b) A copy of all orders in council altering, amending or cancelling any such regulations for the aforesaid purposes, and the said amended or other regulations.

(c) A copy of all orders in council approving, amending or cancelling regulations as regards the Yukon for the purposes aforesaid, and the said regulations and amended regulations.—Mr. Barker.

For a return showing: 1. How many fishery officers there are at present in Canada having jurisdiction as ex-officio justices of the peace to try offences against the fishery laws or regulations.

2. How many convictions were made during the last fiscal year for offences against fishery laws or regulations, and how many of said convictions were made before fishery officers acting as justices.

3. The gross amount collected in fines for offences against the fishery laws or regulations for each year during the past five years, and what part of same in each year was paid by foreigners.

4. How much of the penalties so collected was awarded to fishery officers under the provisions of section 101 of chapter 45, Revised Statutes of Canada.—Mr. Sinclair.

For a return showing who made the seizures under the Inland Revenue Department in the fiscal years 1906 and 1907, in Cornwall, London, Ottawa, St. Catharines, Toronto, Joliette and Montreal, and what the seizures consisted of; the name of the party or parties from whom the material was seized; the amount realized by the sale of such seized material; and how this seized material was disposed of.—Mr. Barr.

For the production of all the original applications and tenders filed in the Department of the Interior in respect of timber berths 1046, 1047, 1052, 1058, 1068, 1073, 1093, 1094, 1099, 1191, 1192, and that the same be laid upon the table of the House, said papers not to be part of the archives of this House, but to be returned by the clerk to the Department of the Interior after exhibition.—Mr. Ames.

For the production of all original tenders filed in the Department of the Interior in respect of timber limits Nos. 645, 646, 675, 703, 705, and 733 to 737, and that the same be laid upon the table of the House, said papers not to be part of the archives of this House, but to be returned by the clerk to the Department of the Interior after inspection.—Mr. McCraney.

For a return showing the total amounts spent from the first of December, 1904, to the first of February, 1908, on dredging works: (a) at or near the entrance of the Nicolet river; (b) at Port St. François; (c) at River Godfroi; (d) at the wharfs of Ste. Angele, Becanfor each year during the past five years, and court, Gentilly, and of St. Pierre-les-Becquets; how the dredging was done, whether by tender or otherwise, and through what newspapers tenders were called for; if the said work was executed by the lowest tenderer; the name of the dredging contractor in each case and the amount received by each contractor for the work done.—Mr. Monk.

For a return showing what changes have occurred in the House of Commons branches of the clerk of the House and the Sergeant-at-Arms service since July 1, 1907.—Mr. Owen.

Sir WILFRID LAURIER.

## THE BANK ACT.

Mr. R. A. PRINGLE (Stormont) moved:

That in the opinion of this House it is an opportune time to consider the advisability of amending and revising the Bank Act, and that the following, among other amendments, should receive consideration:

1. To provide for government inspection.
2. To provide more stringent regulations as to circulation.
3. To make provisions as to percentage of capital and reserve that may be loaned to any one borrower.
4. To make provision for percentage that a bank may loan to its combined directors.
5. To limit the amount of interest or discount that banks may contract for.
6. To revise the powers of the Bankers' Association.

He said: I am fully aware of the great importance of the subject of this motion. We have been passing through a great financial stringency, a stringency which has not been confined to this continent, but has to some extent been world-wide. There have been many causes leading up to this stringency, and I may mention that one of the causes, to my mind, which has operated in that direction is the enormous loss of money which has been sustained the world over. It has been estimated that there has been a loss of some five billions of money in consequence of the Boer war, the Russo-Japanese war, the Spanish-American war and the San Francisco disaster. That is money which has been absolutely wiped out. While our gold production during the past two or three years has probably been the largest in the history of the world, it has not been sufficient to make up for the enormous losses sustained through these causes. I apprehend that the proper cure for that will be retrenchment.

I was much pleased in reading a day or two ago a very able speech made by my hon. friend the Postmaster General (Mr. Lemieux) in the city of London. He covered very fully the great advance that has been made during the last decade. In pointing out to his audience that we had made a remarkable expansion he gave certain figures. For instance, if I remember correctly, he said that ten years ago the total foreign trade, on the basis of imports for home consumption and domestic exports, amounted to some $234,926,000. In 1907, on the same basis, our total imports for home consumption and domestic exports amounted to the very large sum of $571,783,000. He also gave figures in regard to our population. He stated the population of 1901 at 5,370,000 and the increase by immigration at some 930,000. To that should be added the natural increase, which brings our population, I think, to-day up to about 6,600,000. But he did not tell his audience that the foreign trade balance had been running heavily against us during past years. He did not tell his audience that the excess of

imports over the value of domestic exports during five years from 1902 was no less than $291,850,000. Nor did he tell his audience that during the fiscal year ending June 30, 1907, the excess of imports was somewhere about $187,760,000, the greatest in Canada's history. This is a balance which has got to be liquidated sooner or later by the people of Canada. I think it would have been only fair for the hon. gentleman to have pointed out, not only the bright side of the shield, but the other side, which is not so bright, when we consider that owing to the policy of this government the balance of trade has been running very heavily against us, and during the last year it was the heaviest in the history of Canada.

Now, Sir, our banks have made during the last decade enormous strides forward. We have only to refer to the figures to see that during the last ten years our banks have increased their paid-up capital by some $35,000,000, and they have increased their reserve funds by about $43,000,000. We are all glad that our banks are in that strong and healthy position; and while we are well pleased to see their reserves carried up to the large amount of $69,412,774, while their total paid-up capital is $96,167,889, we must remember that forty odd million dollars has been taken out of the people of this country during the past ten years. That is not all they have taken out of the people. They have paid dividends, some of them, as high as 12 per cent, and all of them, I think, exceeding 6 per cent, that is all who have been in business for some years. Their deposits have increased at a very great rate during the last ten years, showing that the people of Canada are thrifty and have been to a great extent prosperous. But unfortunately, Mr. Speaker, we have had during the past few years certain bank failures which have called attention to the necessity of some amendments to our Bank Act. I say again it is unfortunate that when one discusses any proposed amendment to the banking laws of this country he is immediately attacked by financial journals, he is immediately attacked to a certain extent by bankers. They seem to consider that no one has any right to discuss the banking laws of this country except the bankers themselves. For my part, I believe there are certain principles in regard to banking to which we need to give very serious consideration. I am not attacking the banks of this country. I am glad to know that any bank which has pursued conservative methods has been successful, has made money for its shareholders and depositors have been absolutely safe in placing their money with it. It is only when banks go beyond conservative lines, it is only when they go into gambling, if I may so speak, or where they make loans they should not make, that they have met with disaster. Go back to 1847, look at the banks that were in existence at that time. To-day some six or seven of those banks are in existence yet, and have grown year by year. They have gone through all the financial depressions which have occurred in the interval, and still they have very strong reserves, and are unquestionably in an exceedingly strong financial position.

But, Sir, where the banks have gone wrong they have gone wrong by adopting methods which our conservative banks do not adopt, and it is for that reason that I intend to ask the House to carefully consider whether the time has not come when we can place upon the statute-books of this country, by amendments to our banking laws, such provisions as will prevent a recurrence of what has taken place during the past few years. I think we will all concede that the bank is the most important instrumentality in the modern system of industry and trade. Without it this system would never be developed and without it it could not be maintained. I think we will all concede that the vast expansion and complicity of industrial, commercial and financial relations have compelled the use of credit upon a scale never before imagined and have wrought wonderful changes in the manner of applying it with effect and safety. We will all concede, I am sure, that modern business cannot be carried on without credit and that the latter depends upon confidence. Banks do not receive their powers for their own sake, but for the advantage of the people. It is the representatives of the people that grant these powers. I say that the true principle in regard to banking legislation is that the legislation must be considered in relation to the country at large and not simply in its bearing on the interest of a particular class. We all, I think, agree that there must be, in order that the banks shall be successful, absolute confidence in the banking institutions of our country and while I say, in regard to most of our banks, that I believe there is that absolute confidence, and I believe it is the duty of every representative of the people in this House to endeavour to encourage that confidence in the banking institutions of our country, yet, I say that no man should be prevented from discussing fairly and honestly what he considers to be necessary amendments to the banking laws of our country. Now, Sir, it has been said and it has been wrongly said, that our banks are in a very much better position than the banks of the United States of America. We have to consider the position taken by the United States in regard to their banks. About the year 1830 the United States came to the conclusion that by incorporating banks and permitting them to have branches extending all over the United States they were going to encourage an enormous monopoly in their country which would be to the disadvantage of the United States and, there-

fore, they did not follow the lines laid down in Great Britain, where population is dense, where the business is only spread over a small area, but they carved out for themselves what they consider was the best banking system for the United States and they adopted the system of national and state banks. There are to-day in the United States 6,000 national banks. National banks, as we know, are confined to absolutely commercial business. State banks number at the present time over 12,000, making in all in the United States over 18,000 banks. How would the western states have been developed if it had not been by the national banks going into those states and establishing their agencies. Look at the history of Kansas, Missouri and other western states and you will find that the growth of the national and state banks went hand in hand with the development of the resources of the western states. What do we find in western Canada? We find that the people have been taken by the throat—literally taken by the throat—by the large banks which require their capital in the east and have been told: We have not a dollar to move the produce of the western country. The banks in western Canada, requiring the money for their large schemes in the east, had to shut down on the producers in the west. No such thing could have occurred under the system of banks in the United States where, in each locality, they have a national or state bank. I was reading a short time ago the resolutions passed by the Grain Growers' Association of Saskatchewan, and I was interested when I took up the Manitoba 'Free Press' and read the report of a recent meeting of that association. They passed a very strong resolution in regard to the attitude of the banks towards the western producers and they called the attention of the government to the position the banks are taking in western Canada. A number of these resolutions have been forwarded to my hon. friend for Macdonald (Mr. Staples). Here is a report from the Manitoba 'Free Press' of February 13, 1908. It gives a resolution which refers to the banking system and which is as follows:

> That great loss and inconvenience to farmers having been occasioned through the banks refusing advances on stored wheat and bills of lading, the government be urged to devise some remedy.

Then the report goes on and gives an account of the speeches that were made to this motion. Notwithstanding the government return which shows that our banks have somewhere about a hundred million dollars invested in foreign securities I say that our banks have over $200,000,000 of the savings of the people of this country invested in foreign securities. It is not very difficult to get it. All you have to do is to take the call loans of our banks running up to $60,000,000 odd, and the investments such as are contained in the annual statements of the banks, aggregating some $41,000,000 in stocks and bonds. If you examine these stocks and bonds you will find that ninety per cent of them are the stocks and bonds of American companies. Take the Canadian Annual Register for 1906 and you will find the enormous amounts of money which are invested by the Canadian banks, which do not show in the returns at all, in such securities as Mexican Heat, Light and Power, Rio Cuba, Detroit United Railway, Toledo Electric Railway, San Paulo, Porto Rico Railway The Cuba Light and Power Company, Twin City, and dozens of other companies outside of Canada entirely into which the banks of this country have put an enormous amount of money. These securities are pledged as collateral to our banks and when the slump occurred in 1907 they had to withdraw their money from the west and they said to the producers of that country: We cannot lend you a dollar. Why?—because they needed all this money in the east to look after the investments which they had made in foreign securities. I say that the day has not come in Canada when we can afford to be a lending country. The proper function of a bank in this country is to assist the producers in the development of the country and not to limit credit in a critical time such as we have had during the past year. Now, Sir, while I say that our banks have grown stronger during the past ten years I do not know that it is so much to the benefit of Canada. Let us go back in the history of this country for a short time, see how the banks stood and compare the position there with the position at the present day. We have fewer chartered banks in Canada to-day than we had thirty years ago. During thirty years the paid up capital of our banks has increased only to the extent of between thirty-five and forty millions of dollars, a sum $12,000,000 short of the divided profits for 1906 and 1907 of the banks of this country. In the forty years since confederation the capital of the Canadian banks has increased by about $63,000,000 or a sum short by $40,000,000 of their dividend profits for the last seven years.

Is it wise that we should create in Canada a monopoly greater than the Standard Oil monopoly in the United States? It is time that we considered the advisability of putting our laws in such shape that the public will be interested and will be benefited by our banking institutions. I am told: Oh, you advocate the curtailing of loans to directors. I certainly do. It has been said that that is a most unwise thing to do, that the directors are all great business men, all men in whom the shareholders have absolute confidence, and why should they

not be permitted to borrow money from their banks if they see fit? Even to-day the directors of the banks of Canada have over one-fifth of the total paid up capital of the banks borrowed from the banks. In the old days of Upper and Lower Canada, when there was a difficulty in regard to the chartering of banks in this country and when Downing street had something to say in regard to these charters, what occurred? We had been giving charters by which the banks could loan any sum they saw fit to their directors. In 1830, attention was called to the fact that the Bank of Montreal reported direct loans and discounts to directors of £120,173 and indirect loans, for which directors were liable, of £65,570, making a total liability by the directors to their banks of £161,042.

On February 5, 1831, the Quebec Bank returned discounts to directors of £23,002, and the directors were also liable for £45,713 as endorsers, making a total of £68,715. The directors were liable, either directly or indirectly, for advances of nearly the entire paid up capital and nearly one-half the total amount of debt due to the bank.

As we know, the banks incorporated in Upper Canada were incorporated under charters differing in some details from those of Lower Canada, but as far as concerned the limiting of loans and discounts to directors, their charters were alike, no restrictions being imposed.

The first check given to this questionable privilege enjoyed by the directors of banks in Canada came from the British Colonial Office in Downing street. So prejudicial to the interests of the public had this practice grown and so repugnant had it become to the British authorities that in 1833 they threatened to advise the exercise of the Royal prerogative and disallow several Bills for colonial bank charters unless regulations were inserted to correct this and other abuses. Among the regulations they insisted upon being added to the respective charters we find this one:

> The directors as drawers, acceptors or endorsers not to have more than one-third of the total discounts of the bank.

Thereafter this provision was inserted in the charters.

Further pressure being brought from the same source, the legislature of the province of Canada, in 1855, amended bank charters so that discounts bearing the names of directors were limited to one-tenth of the total discounts. At this time the legislature appears to have been forcibly struck with the propriety of still further curtailing the privileges of the directors. In Acts to amend the charters of the Bank of Montreal, Bank of Upper Canada, Commercial Bank, Quebec Bank and City Bank passed in 1856 the directors were in each case limited to one-twentieth of the total discounts.

We know that men like Lord Sydenham, Lord John Russell and Mr. W. E. Gladstone felt strongly on this point and limited the directors to one-twentieth of the discounts, as I have said. What occurred? That arrangement stood until the amendments to the Bank Act commenced to be made, after confederation. After confederation the bankers controlled the Bank Act and have done so up to the present time. They said to the legislators of this country: We do not like to be hampered and restricted, we do not like to be tied down to one-twentieth of the discounts of our banks. Just put a clause in there by which the shareholders can pass a by-law regulating the amount that can be loaned to the directors and the government of the day, as governments have done ever since, took the suggestions of the bankers and they eliminated those very wise clauses which were insisted upon in the days when Downing street had something to say in regard to our banks.

What is the position to-day? I venture to say that not a by-law has been passed by the shareholders of any bank in this country limiting the amount that can be loaned to directors. It is the law true enough, but we know that in 99 cases out of 100 the directors hold the proxies for the shareholders of their different institutions and the directors have never seen fit to pass by-laws by which the amount of loans to directors is regulated. It is true that after confederation the nervy grasp of Downing street relaxed and the banking institutions were soon able to dictate to parliament and to efface the distasteful limitations imposed on their loose banking methods by watchful Downing street. The lapse of thirteen years sufficed to mellow if not to erase the memories of the many castigations and fierce denunciations administered from the Colonial office. The scathing criticism of Canadian banking methods transmitted by such able statesmen as Lord John Russell, Lord Sydenham and Mr. W. E. Gladstone were quickly enough being forgotten.

Then, following down the intervening years, the Bank Act revision of 1890 left this matter where it was placed ten years before and so on down to the present time until there is no clause in our Banking Act regulating and limiting the amount of money that can be loaned to the directors of our banks.

I have particularly directed attention in my resolution to five amendments which I think are necessary and advisable in the interests of the public of this country. I am not speaking to-day in the interest of the banker, I am speaking in the interest of the public. I recognize that the banking institutions of this country are the strongest institutions we have in Canada. I recognize that to-day the press—and I do not blame

them—do not care about even commenting upon amendments to our banking laws. I recognize that if you take up the financial press of this country we will find them, and this is a great opportunity for them, clamouring in the interests of the banks We find in some of the press some silly utterances. To show what some of these gentlemen think of the legislators of this country I quote from a writer in the 'Monetary Times':

I have noticed some of Mr. Pringle's ebullitions against the banks, as given in the newspapers. They are not worth paying any attention to. The criticism of the average member of parliament of the banks, and his ideas about banking and currency, are usually little better than drivel. The banking system of Canada is probably better than her people deserve. People who have not intelligence enough to see through the barbarism of protection are hardly entitled to possess what is probably the best banking system in the world. It is certain, however, that she does not owe it to her politicians. It would almost seem that nearly the whole intelligence of the country outside of parliament is required to watch the said parliament and see that it does as little mischief as possible. The best thing both the people of the country and its parliament can do, so far as the banks are concerned, is to let them alone and give themselves no concern about them.

This is the style of criticism that appears in one of the leading monetary papers of this country when a humble member of parliament desires to bring forward for consideration amendments which he thinks are necessary and advisable, not only in the interest of the banks, but in the interest of the great public. The banks of this country are unquestionably strong; they have been strong enough to control parliament for many years. There is one body, however, which is stronger, that is, the people of this country; and the people of this country are beginning to consider the manner in which their interests have been taken care of and the manner in which the interests of the banks have been taken care of. In what is to my mind the leading work on banking published in Canada, that of Mr. Falconbridge, appears the following comment on the action of parliament:

In the Bill which he introduced the minister gave effect to the representations of the bankers on all points.

This question arises on the occasion of every revision of our banking laws in this country. Now, the first point to which I desire to call attention is that of government inspection. On that subject the ex-Minister of Finance (Mr. Foster) made a pretty good stand in 1890. He brought down a Bill in which he provided for an independent audit of our banks, and he had the support of such men as the present Lord Strathcona, then Donald A. Smith, an ordinary member of parliament, who said in the debate which took place at that time:

Mr. PRINGLE.

I feel that it is very little indeed to give in order to improve the Banking Act as it at present exists.

You will find that in 'Hansard' of 1890, at page 2249. We all look up to Lord Strathcona as one of Canada's ablest men; we all looked up to him at that time, when he was sitting here as a member of this House; I think he was at the same time a director of the Bank of Montreal. But the bankers were too strong even for the ex-Minister of Finance; they came here in force, and he had to eliminate this provision from his Bill, and bring it down just as the bankers wanted it; and so it continued from that time down to the present. Now, what is the answer of the bankers to the proposal for an independent audit? They say it is not feasible, that it is utterly impracticable, under our system of branch banks. To a certain extent I agree with the bankers; but I say it is perfectly feasible, perfectly practicable, to have an independent audit of the head offices of our banks. Go to every other country under the sun; go, for instance, to Japan, which to-day has modern up-to-date banking laws, and you find there a controller or prefect, as they term him. The Minister of Finance in Japan can say to this official, give me a report on the head office of this bank or that bank. They do not require a monthly return such as we require, which is unsworn-to and absolutely untrue, as it has been proven to be when a bank fails in this country. Take the case of the Ontario Bank—$7,000,000 reserve, $1,500,000 paid up capital, securities galore, a return month after month for sixty consecutive months, deceiving the government of this country. Could that have occurred with an independent audit? I say no. An independent audit has to come in Canada. This country is getting to be a great country and the interests involved are enormous. The people of this country have over $600,000,000 deposited with their banks, and they want some government inspection and some government control; and I am pleased to see that the attitude taken by the very strongest banks in Canada is that the sooner it comes the better.

In 1900 Mr. H. C. McLeod, the general manager of the Bank of Nova Scotia, said that he had urged the government of this country to have an amendment made to the banking laws by which there should be an independent audit of our banks; but the government, sitting quietly by, not seeing what was going on, no independent audit was provided for. But the Bank of Nova Scotia said: We will have an independent audit of our institution; and from that time to the present, every year, two Edinburgh accountants go over the accounts of the bank, so that it gives to its shareholders an absolutely correct statement of every security it holds. That has been followed by the

Bank of New Brunswick. The Bank of British North America always has had an independent audit, because, its head office being in England, it has always followed the English practice. I am not going to discuss the banking laws of the United States; but we know that they have controllers and inspections. Inspections will not make men honest. Failures have occurred in the banks of the United States. But inspections would let the people know whether the returns made from month to month by the banks were correct or not, and no such failure as that of the Ontario bank could occur. I would like to ask the Minister of Finance if he was present at a gathering of the Canadian Bankers' Association held shortly after the failure of the Ontario bank, where they were considering the advisability of amendments to the Bank Act; for I find that Mr. Hopkins, in his Canadian Annual Review, says that the hon. Finance Minister was present at that meeting. I have heard that the hon. the Finance Minister (Mr. Fielding) had pretty strong views with regard to some amendments, but the Canadian Bankers' Association views seem to have prevailed upon him. However, he does not state just what was said or done at this meeting of November 8, What is stated is simply this:

The Canadian Bankers' Association met in Toronto, with Mr. E. S. Clouston, president of the Bank of Montreal, in the chair, and about thirty other representatives of banking institutions were present, together with the Hon. W. S. Fielding, Minister of Finance. It is understood that amendments to the Bank Act, in view of that being dealt with, were under consideration.

I do not know whether that is correct or not, but I do know that at that time there was a strong agitation by the leading Liberal organs in this country in favour of some amendments to the Banking Act which would provide for better government inspection.

At six o'clock, House took recess.

## After Recess.

House resumed at eight o'clock.

Mr. PRINGLE. When the House rose at six o'clock I was dealing with the question of inspection. I do not think I could do better than refer to a statement made by Mr. McLeod, the general manager of the Bank of Nova Scotia, some years ago, in connection with this matter. In the annual report of the Bank of Nova Scotia for 1091, Mr. McLeod advocated government inspection of all chartered banks. His language was as follows:

The oft expressed anticipation of benefit to be derived from supervision by the Canadian Bankers' Association of the circulation of banks have not been realized. And as they appear impossible of realization, we should again urge on the government the propriety of having this work undertaken by the Finance Department, where it properly belongs. The banking system of Canada is one of the best in the world, and with a few added safeguards such as public inspection and fixed cash reserves, would be ideal.

Now, Sir, that is the language of an experienced banker, a gentleman who is at the head of one of our most successful banks, a bank that has been in existence some 76 years; and in 1901 he states:

We should again urge on the government the propriety of having this work undertaken by the Finance Department, where it properly belongs.

So I say we have the authority of a leading banker that government inspection is practicable, that government inspection is feasible, and in 1901 he urged upon the government of this country the advisability of having that government inspection. He goes on to say in his address at that time:

Some argue that government inspection is impracticable in a bank with numerous branches, but in the United Kingdom where banks have more numerous branches than here, chartered accountants are called in to make an examination and to certify to the correctness of statements. What is practicable there is worth a trial here, and in view of the magnitude of the interests involved, that trial should be made under the supervision of the Finance Department.

Notwithstanding that the bankers of this country say that bank inspection in the United States of America has not been successful, it has been in operation for 43 years, and in that 43 years it is conceded by all that it has done an immense deal of good. It is quite true there have been bank failures in the United States, but it is not true that the proportion of bank failures in the United States has reached anything like the proportion that has been reached in the Dominion of Canada. On that point I might also refer to an article which appeared in the Toronto 'Globe' of November 20, 1906. It is a letter of Mr. McLeod, who again, after the failure of the Ontario bank, cried out for government inspection. The letter is undoubtedly familiar to the members of the government, who of course paid no heed to it, as they paid no heed to the request in 1901. While I do not like to detain the House with long quotations, I think this letter is so important that I will read it:

Toronto 'Globe,' November 20, 1906.

To the editor of the 'Globe':

Call for an independent inspection of banks.

Through the press and from the platform the banking system of Canada is lauded as being the best in the world. In many particulars the system is admirable, our elastic

bank currency and the readiness with which the banking requirements of new districts are met by branch extension being its strongest features. However, it is not without defects, some of them of vital importance. Of these the most prominent is the lack of external inspection, which experience in the western hemisphere has demonstrated to be essential. The public have been reminded of this necessity by the recent failure of the Ontario Bank and the leading papers of the country are almost a unit in demanding reform in this particular. The reasonableness of this demand is made clear by a review of Canadian banking history sine 1880 and before, and is confirmed by the experiences of our near neighbours prior to the civil war. In 1880 there were in existence in Canada forty-one banks; since then seven have been incorporated and have commenced business, making a total of forty-eight banks. Of this total, twelve have failed and some others have saved themselves by amalgamation. The failures are, therefore, twenty-five per cent within a period of twenty-six years, the last ten of which were years of unexampled prosperity, with steadily rising deposits, conditions under which even insolvent banks seldom close their doors. Most, if not all, of the above-mentioned failures were fraudulent, and it is now plainly evident that a few hours' examination by a skilled banker would have disclosed an insolvent condition in any one of the banks, years before it collapsed. In each of the two most recent disasters a correct diagnosis could have been made ten or more years ago. Some urge that the government should call for special returns, but what value should attach to special returns from the Bank of Yarmouth? from the Ontario Bank, or from any of the other wrecks gone before? They would simply have enlarged the piles of incorrect and deceptive bank returns in the Finance Department.

There is the language of a banker, the general manager of a very strong banking institution, and he refers to these returns as 'piles of incorrect and deceptive banking returns.' Then he goes on to say:

What is written by one having unusual facilities for observation is eminently true: 'it' is extremely rare to find a bank has failed without some of the officers committing fraudulent or illegal acts to hide it.' There is at least sufficient truth in the above to dispose of the suggestion of special returns and to dispel faith in the returns of badly managed banks.

Some Canadian bankers, including one writer, whose words are entitled to great weight, contend that government inspection has failed in the United States. Under the National Bank Act of that country there has been a somewhat imperfect system of bank examination and a more imperfect system by some of the state bank departments. I say imperfect, for under the national system there were employed last year 78 examiners, whose duties required the making of no less than 11,516 inspections each year. For the forty-three years during which the National Bank Act has been in operation there have been established 7,966 banks. Of these 460 have failed, the failures being equal to 5½ per cent of the whole number for the period.

Mr. PRINGLE.

As for the banks other than national, with a more imperfect system of inspection, or no system at all, the failures reached 17½ per cent. The comparison of the percentages appears as follows:

Failed in 43 years—
National banks, 5½ per cent.
Other United States banks, 17½ per cent.
Failed in 26 years—
Canadian banks, 25 per cent.
National banks, 5 per cent.

External inspection must not be regarded as an unfailing cure; it has its limitations, and the best that can be said of it is that it is a preventative that, if properly applied, will make bank failures almost unknown. An inspector cannot discover an embezzlement until after the act is committed; neither can he avoid a ruinously bad debt made before his visit, but the progress toward failure is generally slow and in the majority of cases a prudent inspector would, by his advice and authority, save the situation and direct the management into safe channels.

The subject of the establishment of an effective bureau of inspection is one of the utmost importance, for unless it is founded on conservative lines, in which the interests of all sound institutions are carefully conserved, much more harm than benefit would ensue. Bank shareholders are the parties with the major interest at stake, and for the present the subject would be better left to them and to their representatives, in the hope that a satisfactory solution of the problem may be reached.

H. C. McLEOD.

Toronto, November 21.

That is a letter from one who is an authority on banking, and he advocates in the very strongest terms some action on the part of the Department of Finance in the direction of government inspection. My own suggestion in regard to that is that there should be an absolutely non-partisan board of commissioners, with full power to inspect the head offices of our banks. If we had had that non-partisan board of commissioners, with power to inspect, we should not have had the bank failures that we have had within the past few years. This question of bank inspection has been a live question in many countries. Some system of bank inspection has been adopted in nearly every country under the sun. I have been much interested in reading the banking laws of China, Japan, Mexico and other countries. I find that in every one of these countries they have a system of inspection, probably a stronger system than that of Great Britain and Australia. As to our Canadian banks, I believe that, of the thirty-four banks doing business to-day, they are in fairly good condition, and, with conservative management, they must of necessity make money. If we had had a bank inspection system, do you suppose we should have had the failure of the Banque Ville Marie? I made the statement the other day that this bank had exceeded its circulation to the extent of $300,000. I find that I was wrong, and that that bank had exceeded its legal

circulation to a very much larger extent. Consequently, the depositors and others interested suffered enormous loss. The Bank of Yarmouth could not have gone down, causing enormous losses to the people of that district, if there had been a system of government inspection. This system has been possible for forty-three years in the United States. And, let it be remembered that, in one city alone, the city of New York, there is a greater banking capital than in the whole Dominion of Canada, and the banks of that city are inspected regularly. We hear of the evidence with regard to the old Ontario Bank. It is common for people to say: Oh, the Ontario Bank was a gambling institution ; it went to pieces through gambling. But, if we had a system of inspection, the Ontario Bank could not have gone on gambling year after year ; it could not have gone on sending to this government, month after month, returns which were absolutely false. But, while we are on that point, is there no other gambling bank in Canada ? Has not the Minister of Finance had the knowledge of one such, has he not had it before him since the publication of the report of the Royal Insurance Commission, that the Bank of Commerce is the biggest gambling bank in the Dominion of Canada ? Yet, has he opened his mouth —has any man opened his mouth in this House, or raised his voice with regard to the Bank of Commerce? It was a matter of gambling. McGill placed his money on the red and lost. Hon. Geo. A. Cox and Mr. B. E. Walker placed their money on the red, and I am inclined to think that they have lost, judging from the report of the Royal Insurance Commission. At any rate, we find, according to that report, that Hon. Geo. A. Cox and Mr. B. E. Walker—we look up to Mr. Walker as a great banking authority in this country, a man who goes about the country lecturing on banking, a man who has written on banking—well, Sir, we find him joining in a pool for the purpose of gambling in the stock markets of this country. We find Mr. B. E. Walker having a five per cent interest in a pool formed to manipulate Dominion Iron and Steel and Dominion Coal. We find it stated on page 16 of the report of the Royal Commission on Life Insurance that Mr. Walker led the Canadian Bank of Commerce to buy 1,000 shares of Dominion Coal because Hon. Geo. A. Cox wanted to buy 1,000 shares. And Mr. Cox bought 1,000 shares of Dominion Coal at 112, and the Bank of Commerce bought 1,000 shares of Dominion Coal around 112 ; and I venture to say they have it to-day. And, if Hon. Geo. A. Cox and the Canadian Bank of Commerce have Dominion Coal to-day, they have made a net loss of $144,000. But that is not all. Hon. Geo. A. Cox saw Twin City disappearing down the toboggan slide, and he jumped in and took 1,000 shares. And he admits in his evidence that he said to the Canadian Bank of Commerce: You support the market and jump in and buy 1,000 shares of Twin City. And the Bank of Commerce, being pulled about by Hon. Geo. A. Cox, jumps in and buys 1,000 shares of Twin City ; and Twin City—an American security—as we know slumping from that day to the present, has never seen the prices at which these men jumped into it. I say the time has come when men in this House, irrespective of the influence of the banks, should speak out, so that we may get an amendment of our banking laws which will prevent great banks like the Canadian Bank of Commerce speculating in the market. It is true the Canadian Bank of Commerce lives to-day and the Ontario Bank has gone down. It is true that McGill, who, if he had followed the market, probably would have been successful, is to-day suffering punishment for what he has done, while these other gentlemen, who are just as guilty as McGill are paraded as great financiers. I am not speaking about something which has not been proved. It has been absolutely proved, and the report of the Royal Commission on Life Insurance, says in clear terms that Hon. Geo. A. Cox was able to use these banking institutions, the Canadian Bank of Commerce and the Dominion Securities Corporation—that the Dominion Securities Corporation borrowed $500,000 at 5 per cent from the Canada Life Assurance Company—and then goes on to say :

> These transactions indicate to your commissioners that the funds of the company were employed with the utmost freedom in transactions with institutions in which Mr. Cox was largely interested. In many of these transactions the conflict of Mr. Cox's interest with his duty is so apparent that the care of the insurance funds could not always have been the sole consideration.

So, they say also :

> In April, 1903, the Canada Life Assurance Company's board authorized the purchase of 1,000 shares of Dominion Coal Company's stock, together with 1,000 shares of another stock (Twin City), and in connection with that purchase Mr. Cox states that the Bank of Commerce, of which he was the president, was acting in concert with the Canada Life Assurance Company, purchasing a like quantity of both stocks.

I ask the Finance Minister if this was not made known to him many months ago, when the report of the Royal Insurance Commission came down? There is no man in this House dare open his mouth and mention the name of Hon. Geo. A. Cox, or find any fault with the Canadian Bank of Commerce for gambling in the stock markets. If he does he is immediately put down by the bankers as attacking the banking institutions of this country. As far as I am concerned, I think it is time we spoke out clearly on these matters, and if we can get a law, if we can so amend our law, as to prevent our banks from using the funds of the people for speculation, then I say let

us get that law, and the sooner we can get it the better for our country. Let me say to you, Mr. Speaker, that there are in this country to-day depositors from the Atlantic to the Pacific who are looking on, who are watching this government to see if this government are ready to act, not only in the interest of the banks, but in the public interest, to secure the depositors of the country. There are sharehoulers to-day from the Atlantic to the Pacific who are not satisfied with the management of the banks and who are anxious to see amendments to our banking law. Let me go further. There are banks to-day — strong banks that have conducted their business on conservative lines—which do not approve of that sort of work, and which would like to see the laws amended so that it will be stopped. There are the smaller banks, and while I mention smaller banks, I will say to the credit of the smaller banks, to the credit of our latest creations, that they are doing good work to-day in Canada, and I was very pleased to see by the annual statement of the infant bank—the Farmers' Bank—that it has a greater percentage of assets to liabilities than the Canadian Bank of Commerce. Let us look for a moment or two at this table giving a percentage of assets to liabilities, and I will show that the Canadian Bank of Commerce has a lesser percentage of assets to liabilities than any other bank doing business in the Dominion of Canada. Is it any wonder that it has been losing deposits by the million during the past few months? Let us just compare these two banks. I am going to take the smallest bank we have. The latest bank, which, for a young bank, seems to be in a fairly strong position, shows a ratio of total assets to liabilities to the public of 152, while the Canadian Bank of Commerce shows a ratio of total assets to the public of 117—the smallest of any chartered bank doing business in the Dominion of Canada, a bank that has had great opportunities, a bank that to-day, if it had followed conservative lines, should have been in as strong a position as any bank in this country They have been gambling with the funds, and I am afraid they did not always place their money on the winning stock. I say we should devise some sort of means to prevent that sort of thing in connection with our banks.

I am not going to say anything more in regard to the first amendment, which, I think, is a proper amendment to our Banking Act, and which is an amendment which will give government inspection ; but I will pass on to the second, and that provides for more stringent laws in regard to circulation. I know the answer that the banks will make when it is suggested that we should provide more stringent regulations as to circulation. They say at once : Oh, leave that to us ; the Canadian Bankers' Association have passed very stringent by-laws in regard to circulation ; we will watch circulation very closely. Now, just while we are discussing that, let me say that I have not yet found any country that deals as liberally with banks as Canada. I personally am finding no fault with permitting the banks to issue circulation for every dollar of paid-up capital. That is what we are doing. Any bank that has a paid-up capital, we will say of $5,000,000, is entitled at once, without any expense, without paying any tax to the country, without any burden imposed on it in any shape, manner or form, to issue notes to the extent of the paid-up capital of $5,000,000. No country under the sun permits it except Canada. Therefore, I say that when we permit it we should regulate it. There is only one method of doing that, and it is the method adopted by all other countries in which the government take the circulation into their own hands. When a bank comes to the government and shows that it has a paid-up capital of whatever it may be—one, two or three million—the government will issue to the bank a circulation. I am not complaining in regard to the security of our note circulation. We all know that the circulation is practically guaranteed by all the banks of this country, and that it is a first lien on the assets of the bank. Therefore, I say that the note holder is perfectly safe. We know that in England there is supervision of circulation. We know that notes issued by the Bank of England are secured by the actual gold, plus the amount due the bank by the British government ; so that notes in Great Britain have practically absolute security. I believe that in this Dominion of ours they have absolute security as well, although, if there were a demand to-day upon any one of the large banks for the redemption of their note circulation, they would have to scurry pretty well to redeem it.

Mr. W. ROCHE (Halifax). Did the Bank of England never fail?

Mr. PRINGLE. Once. But Great Britain passed stringent laws in regard to banking, and from that day to this the Bank of England and other banks are very closely watched and restricted, and we do not see the failures. Oh, the Bank of England did fail once ; at least, that is my recollection from reading the history of that institution. The notes of the United States banks, as we know, are secured by government bonds. That is an important difference between the two countries. A national bank desiring to do business with the United States has to deposit government bonds. When it has deposited these government bonds it is entitled to a circulation up to 90 per cent of their value. It does not get the free use of millions of dollars. These bonds are only bearing 2 per cent, and yet the national banks of the United States of America have been able to make money while paying their depositors 3½ to 4 per cent. They are re-

stricted in the amount of interest they can charge the borrower in the state of New York to 6 per cent, and in the majority of the states to 6 per cent, while in this country they are not restricted. If they have $5,000,000 capital they immediately get another $5,000,000, which is $10,000,000, and they can charge as high as 10, 12 and even 24 per cent on the double amount. There is the difference between the two countries in that respect. We have no government restrictions in regard to circulation. I know what the answer is. The answer is: You do not require it, because the Canadian Bankers' Association will look after that. We do know that the banks of this country have execeeded their circulation to an enormous extent and have brought about disaster. We have in Canada no reserve whatever for deposits. Critics of the American system must remember that when a man goes into a national bank, say in New York city, and deposits $1,000, $250 in gold is immediately put away to protect that $1,000. During the panic of 1907 there was not a bank in the United States that did not show that it had its deposit reserve on hand. Every depositor is protected at the start. I am not advocating that we should have that reserve, because I believe our depositors are fairly well protected by the security they have in the assets of the bank and the double liability of the shareholders.

We are often told that this banking system gives us great elasticity of currency and that the American system does not do so. It is a very strange thing then that the circulation in the United States of America is over $31.39 per head, while the circulation in Canada is $19.62 per head. I believe the day is coming when the government will assume control of the bank notes in this country and see our banks are kept absolutely within their rights. If our laws were so good in regard to these points, it does seem strange that no other country has copied the Canadian banking system either on this continent or in Europe.

I now come to the third suggestion, that is the making of provision as to the percentage of capital and reserve that may be loaned to any one borrower. The banker's answer is that we have a provision in the law by which the shareholders can limit that percentage. I say it is no answer, that the old law as it stood years ago is the best law, that we should have it on the statute book and limit that percentage. What occurred here a short time ago? The Sovereign Bank which was doing a good healthy business and which was reported in 1906 to be in a very flourishing condition, went to the wall, simply because they had loaned their whole capital to two concerns. They made two loans, practically out of the Dominion of Canada and when they came to get their money they could not and were obliged to go into liquidation. What harm would there be in limiting the banks of this country to 10 per cent of their capital and reserve as a loan to any individual or corporation? We saw the little Bank of Yarmouth loan her whole capital and reserve to one institution, and when that institution failed down went the Bank of Yarmouth and the people suffered; the shareholders lost practically everything. We find that for forty-three years the law in the United States has limited this percentage to 10 per cent.

I have been studying the banking laws of Japan, and I believe they are as modern and up-to-date as any in existence; but their Banking Act limits the amount that can be loaned to one borrower to 10 per cent paid up capital and reserve. Mexico, which has gone on gold basis and has taken the precaution to frame very modern banking laws, also limits the amount to be loaned to any one individual or corporation. If a similar amendment were made to our Banking Act, we would not have had the failure of the Sovereign Bank nor some other failures that have occurred in recent years, such as that of the Bank of Yarmouth. This is a point so well known, which has been so thoroughly considered by other countries which have adopted this limitation, that I think it is time we in Canada considered it, and put some limit on the amount a bank can loan to any one individual or corporation. We need only look back a few years to the time when the Ontario Bank got into trouble and had to reduce its capital by 50 per cent. That was caused by their lending all their capital to one concern in Toronto and I might mention other similar instances. We have incorporated a large number of banks in recent years. Many of these have gradually and quietly slipped out of existence. It is said: But the public did not suffer any loss. The public did suffer loss, the depositors suffered a loss of $4,928,096.50, and the shareholders lost every dollar they had invested in these banks. In the last few years we have had a large number of banks go out of existence, some of which would not have failed if we had had this restriction. It is only a year ago that the Canadian Bank of Commerce, probably requiring more capital to speculate in Dominion Coal and Steel, got their eye on the Merchants Bank of Prince Edward Island, with a capital of $350,400 and assets of over $3,000,000, and absorbed it. They treated the shareholders well, giving them 93 per cent profit on their shares. A prominent gentleman from Prince Edward Island, only two or three days ago, told me that it was a sad day for Prince Edward Island when the Bank of Commerce took over the Merchants Bank, that they could not get the accommodation from the Canadian Bank of Commerce that they got from the Merchants Bank. I say the policy of

the banks is a policy of absorption; the large banks are absorbing the smaller ones, and becoming a larger and stronger trust every day. It would be a wise precaution and a wise provision to amend our Banking Act and provide, as is provided by the American Consolidation of 1906, that not more than 10 per cent of the paid up capital and reserve may be loaned to any one individual or corporation. Such an action would be welcomed by the shareholders of the banks and by the depositors as well. I do not think it would be objected to by most of our banks, although those who require money for speculative purposes would no doubt object to it.

We should also have a limitation as to the percentage that may be loaned to the combined directors. In the old days, there was a limitation that only one-twentieth of the discounts should be loaned to directors. I have pointed out that strong ground was taken in England in renewing charters to the banks and that provision was retained until the bankers succeeded in eliminating it some years ago.

I now come to one of the most important suggestions I have to make, that is the limitation of the amount of interest for which banks can contract. We have, as is well known, a clause in our Bank Act which says:

> The bank may stipulate for, take, reserve or exact any rate of interest or discount, not exceeding seven per centum per annum, and may receive and take in advance any such rate, but no higher rate of interest shall be recoverable by the bank.

But we also have in the Revised Statutes of Canada the following provision:

> Except as otherwise provided by this or by any other Act of the parliament of Canada, any person may stipulate, allow and exact on any contract or agreement whatsoever, any rate of interest or discount which is agreed upon.

Now, we are in this position in the Dominion of Canada to-day, that if our banks see fit to create a shortage of money in this country, they can contract for any rate of interest they see fit. How has that come about? We had usury laws pertaining to our banks for many years; but our bankers, not satisfied with the privilege which the people of this country gave them of issuing dollar for dollar to the full amount of their paid-up capital, worked away until they got eliminated from the Bank Act all penalties in regard to usury, and to-day they can charge any rate of interest they see fit. It has been said to me, none of the banks contract for any higher rate of interest than 8 per cent. That is absolutely untrue. The records show that the banks will go into a town in western Canada and fix their rate there at one per cent a month. I venture to say that the hon. member for the Yukon (Mr. Thompson) will tell this House that the banks have charged the men who require money for the purpose of developing the mines in that country as high as 24 per cent. We have the evidence in cases which have gone through our courts, that 24 per cent is a common charge in the western country. Now, should that be permitted in this country? I do not want to go into a long dissertation on usury. We could go back to the old Roman days, when money lenders were permitted to charge high rates of interest, until the people of Rome were almost ruined, when they passed laws limiting the rate to 8 per cent. Coming up, century after century, we find that country after country protected its people with usury laws. Our neighbours to the south have a system of usury laws prevailing from one end of the country to the other. They have a provision in the National Banking Act, prohibiting any bank from charging more than the rate that may be fixed by the state in which it does business and the different states fix reasonable rates of interest. The producer in this country works under a great handicap when he is charged a high rate of interest; he cannot afford to pay eight, ten or twelve per cent on the money he uses in the work of production, and compete with the producers of other countries who get their money at a lower rate. In the United States the question of the rate of interest which can be charged by the national banks has been well settled by the supreme court. I might mention the rates of interest to which the national banks and the state banks are limited in some of the states of the union: Connecticut, 6 per cent; Delaware, 6 per cent; Kentucky, 6 per cent; Maryland, 6 per cent; Missouri, 6 per cent; New Hampshire, 6 per cent; New Jersey, 6 per cent; New Mexico and Indian Territory, 6 per cent; New York, 6 per cent, except on call loans, which are usually for stock purposes, for $5,000 and over, with collateral, on which any rate may be charged; Tennessee, 6 per cent; Vermont, 6 per cent; Virginia, 6 per cent; Washington, 6 per cent; West Virginia, 6 per cent; and so on through the list. Now, Sir, if the banks in the United States, which put up government bonds for 90 per cent of their value for all the notes they put into circulation, are limited to 6 per cent, why should the banks of this country, which have the privilege of issuing notes to the full amount of their paid-up capital, be permitted to charge our people any rate of interest they can squeeze out of them? I say it is unreasonable, and the time has come, notwithstanding what the Bankers' Association says, that we should go back to the old usury laws which we had in this country until the bankers had them eliminated from our banking laws. The subject of usury charged by national banks

received consideration by the United States Supreme Court in the case of the Farmers' and Mechanics' Bank of Buffalo vs. Deering, and the decision was: where a national bank makes a loan at a usurious rate of interest it can recover the principal only, the interest being forfeited. Where a usurious rate of interest has actually been paid double the amount so paid may be recovered in an action brought within two years. Let us look at the records of one or two of the cases in this country. Take, for instance, the case of the Canadian Bank of Commerce vs. Macdonald. In that case the rate of interest charged varied from 18 to 24 per cent, and the court held that the bank had a right to charge it, because the borrower had agreed to it, because it was a voluntary contract, and judgment was entered against Macdonald. In 1905 we passed what was called the Money Lenders' Act, in which we restricted the ordinary Shylock to 12 per cent; but we took good care that that Act did not cover the banks. The banks were afraid that we were going to put them on the same basis as the ordinary Shylock; but that Act left them free to charge by voluntary contract any rate they saw fit. Now, I want to be perfectly fair in regard to this matter. I believe the great majority of our banks in this country do not attempt to do that class of business, but are satisfied to get from their borrowers a reasonable rate of interest; but I do say that we should not leave it in the power of any bank to charge an exorbitant rate of interest to the producers of this country. I might just say so that there will be no question about this, if a bank charges its debtors account with interest in excess of 7 per cent, the debtor is entitled to recover the excess. If, however, the debtor voluntarily pays the excessive interest over 7 per cent, such as by giving his cheque to the bank for such excess as shown by the bank's monthly statement, he cannot recover back the excess.

That was the decision in the Canadian Bank of Commerce vs. McDonald. There were also a number of other cases which went through our courts, but in each the courts followed the decision in the Bank of Commerce vs. McDonald and the Bank of British North America vs. Bossuth in the latter of which 24 per cent was charged a number of years and then 18 per cent.

From 1893 to 1897 we had a depression, the result of which was an increased amount of money. Our banks got loaded down with money and the Finance Minister properly reduced the rate of interest to depositors in the Post Office Savings Bank. Of course we know that the government rate controls the bank rate, but if the rate of interest to depositors was reduced in 1897 owing to the surplus of money, now that money is scarce it would only be fair to put the rate back where it was before the reduction. I hope that the government will give special consideration to this suggestion with regard to usury. I know of my own knowledge many hard working business men who have been held up year in and year out for 9 per cent and 10 per cent for the money they require in their business. No business man in this country can succeed and pay those high rates. No manufacturer can be successful and pay exhorbitant rates of interest in this country when his neighbour to the south cannot be compelled to pay higher than 6 per cent.

There are other suggestions I would like to make, but I have taken up more time than I anticipated. I would ask the Finance Minister to consider the question of branch banks. We have to-day gone ahead at an enormous rate in establishing branch banks. No bank should have the right, the moment it starts business, to establish branches all over the Dominion for the purpose of gathering in money from the different localities and sending it to the head office. Should this system continue, we shall have what occurred in the United States and was there subsequently prevented, namely, an enormous monopoly in the hands of two or three banks. Limit the number of branches of a bank according to its capital. If it has $14,000,000 paid up capital, give it the right to have more branches than a bank which has a capital of perhaps half a million or a million dollars. I do not think it is good policy in this country to have these branch banks spread out all over the Dominion. What occurs under it? Take a small bank to-day—and our small banks are doing good work; I know of small banks in my own community which are giving greater assistance to the people there than the larger institutions—and what occurs? The moment a small bank starts a branch out in a village the big bank puts in a competing branch to prevent the other doing business. There should be a limitation put on the number of branch banks.

There is another suggestion I would make. Our banks are tying up millions of dollars in real estate—in brick and mortar. That is not done in any other country. Take the banking laws of the United States and of every other country under the sun except ours, and you will find that there the banks are looked upon as public utilities for the purpose of taking care of the small savings of the people and distributing them in loans for commercial and business purposes. In the United States for forty-three years they have prevented their banks from tying up their assets in real estate. They have a very stringent provision with regard to investments by banks in real estate. That provision is this:

A National Banking Association may purchase, hold and have real estate for the fol-

lowing and no other purposes. First, such as shall be necessary for its immediate accommodation in the transactions of its business.

And so on. In like manner our banks should be limited absolutely to investments in real estate necessary for their own business. But we see every day one bank putting up a million dollar building in this or that city and another following suit. Only Saturday night I read in the papers that a million dollar building of the Canadian Bank of Commerce in the city of Montreal was just about completed. A few days before I read of a beautiful building for the same bank in Saskatoon and of a magnificent building going up in the city of Toronto. Millions and millions of dollars thus being tied up by the banks in brick and mortar throughout the country. Is it then any wonder that our banks had to come begging to the government for money to assist them in moving the crops?

I may be wrong, but I view this matter as one of great public importance. The thoughts to which I have given expression I venture to say are passing through the brain cells of thousands of people in this country. The people are alive to this situation and are wondering why the government does not act. They want to know whether the government is, as reported, absolutely under the control of the Canadian Bankers' Association. I may be told: Leave this until 1910. But, Mr. Speaker, I may not be here in 1910. I am here to-day, and I believe that, in what I am advocating, I am speaking in the public interest. Why should we leave it until 1910? We are incorporating six new banks this session. Let us amend our laws so that the people who are taking stock in those banks—and it is mighty hard to get anybody to take stock in banks to-day because they do not think our laws are strict enough—may be protected. Our people have seen too many bank failures. They have seen too many banks wiped out of existence.

I say, let us amend our banking law to-day before we launch these six other banks upon the country. At our revision in 1900, there was quite a list of banks. What has become of them? Where have they disappeared to? Many of them are out of business; many have been absorbed by larger banks. This latter process has been going on ever since we incorporated the Canadian Bankers' Association. I have had shareholders in small banks say to me: We are afraid of that Canadian Bankers' Association; it seems to be powerful enough to take over any bank at any time. And it is—there is no question about it. The Act incorporating the Canadian Bankers' Association went through this House without any criticism whatever. That association took to itself powers which, some day, the people of this country may find, are not in the public interest. Now, let us see what has become of some of the banks which were in existence in 1900. The Banque Ville Marie had suspended a short time before that, and was in process of liquidation, but it is still included in the schedule. The Bank of Yarmouth suspended March 6, 1905. The Halifax Banking Company was absorbed. And by whom? By the Canadian Bank of Commerce—probably wanted more money for Dominion Coal and Dominion Steel. The Exchange Bank of Yarmouth was absorbed by the Bank of Montreal; the Commercial Bank of Windsor was absorbed by the Union Bank of Halifax; the Bank of Summerside was absorbed by the Bank of Nova Scotia; the Merchants Bank of Prince Edward Island was absorbed by the Canadian Bank of Commerce; the assets of the Bank of British Columbia were purchased by the Canadian Bank of Commerce. The Ontario Bank is out of existence; the Sovereign Bank is out of existence. What encouragement is there to incorporate a small bank? The small bank has no power to-day to resist the Canadian Bankers' Association. By amending the law, we can give the small banks a chance for existence.

Now, it will be said to-morrow, 'Pringle has attacked the banks' Pringle has not attacked the banks. Pringle believes that public confidence is absolutely necessary for the success of our banks. I am ready to state that a large precentage of our banks are in a splendid position. I believe that the depositors of these banks are as safe as are the noteholders. But I believe we shall create greater confidence in our banks if we show the people that we are not controlled by the Bankers' Association, but that, as public representatives, we are ready to adopt amendments which will protect the shareholders and depositors of our banks and be of advantage to the producers of this country who may require banking accommodation. I hope my hon. friend the Minister of Finance (Mr. Fielding) will see his way clear to accept my suggestions and to allow this matter to go to the Banking and Commerce Committee to be thoroughly threshed out there.

Mr. T. S. SPROULE (East Grey). If one gives heed to what one sees in the daily newspapers and to some of the articles in the financial press, he must reach the conclusion that our bankers regard themselves as a class above criticism either by the people, the press or parliament. No sooner does a member of parliament make any observations on the banks than at once a certain class of the press speak of him in the most uncomplimentary terms as attacking the banks, as doing something shortsighted, improper, something that no public man should be guilty of doing. Now, banks —what are they? They are one of our public utilities, and, no doubt, intended for

a good purpose. But they are liable to do wrong, as other corporations are, and they must submit to the same criticism and to the same control by law as other public utilities. Any man who fears to criticise the banks, just as he would an insurance company, a railway corporation or a loan company, is wanting in moral courage. He should not be intimidated by the criticisms of the press holding him up to contumely and contempt for demanding that these corporations shall serve the public. But the money changers, from the time when they were driven out and scourged with cords at Jerusalem, down to the present, and in every age and every country, appear to think that they own creation, or somehow control it; that they are above criticism, and must be, as they say, left alone and not interfered with. We criticise loan companies and put them under legal restrictions and compel them to be subject to inspection and to make periodical returns under oath. We do the same with regard to railway corporations and with regard to insurance companies and other corporations which serve the public. Why cannot we, with equal propriety, do this with regard to the banks. In my judgment, we ought to. Our banking system is said to be the finest in the world. I frankly confess that my limited examination of it has convinced me that, while it is comparatively good, it is not only not the best but it is very much below the best in the world. Here is a strange commentary on this statement of the perfection of our banking system: In 1880, we had 41 chartered banks in Canada; in the meantime, the country has increased 50 per cent in population; and what increase has there been in our banks ? The number to-day is 36—five less than the number of thirty years ago. What has become of the banks ? Some have failed, some of the smaller ones have been absorbed by the larger. And the result is that these larger banks have been working themselves up to a monopolistic position, so that, to-day, they practically control the smaller banks.

To effect that purpose, a few years ago they formed the Banking Association, that has helped them a great deal. No doubt it was intended for a good purpose, but it has not worked out wholly as it was intended. I say that law tends to make a monopoly of the banking system, and to keep the smaller banks down and absorb them, thereby keeping in the hands of the stronger banks the control of the circulating medium of the country. While the population has increased nearly 50 per cent, the banks have not increased 6 per cent. Twelve of them have failed during the last twenty years, others have had to amalgamate to be kept alive. Although 25 per cent of our banks have failed inside of twenty years, still we say we have the best banking system in the world. In the United States during the same time only 5 per cent of their banks have failed, while 25 per cent of our banks have failed. Does that not suggest that there is something wrong in our banking system as compared with the American banking system ? In my judgment the banking system of Japan is far ahead of ours, and in many respects the banking system of the United States is ahead of ours, though behind it in other respects.

Now, here is a proposal to amend our banking system in some respects. What are banks for ? Banks are public utilities, operated under special charters, which confer upon them certain powers and rights which are denied to all others members of the community, powers and rights out of which they make immense wealth. In consideration of the powers we give them they are supposed to serve the people as public utilities in providing a circulating medium. That is their first duty to the people. We give them power to receive deposits from poor people who are not in a position to invest their money profitably in other channels, and we surround these banks with laws which are to make them a safe depository for the public. Then we give the banks power to loan at a high rate of interest money they have received from the investors at a very low rate of interest. And here I wish to say that the government have joined hands with the banks in making them a financial monopoly to the detriment of the poor people, because the only place where the poor people can invest their money is in the government savings bank. A few years ago, at the instance and upon the pressure of the banks, the rate of interest paid by the government was reduced to three per cent in order to enable the banks to compel the people to invest their money with them at three per cent. Why did the government compel the poor people to lend their money to the banks at three per cent—I say compel them, because these people are not in a position to invest their money with safety anywhere else. On the other hand, the government allow the banks to loan out that same money at a rate of interest, as my hon. friend has said, even as high as 25 per cent in some cases, and there is no law to control them. There are two clauses in the Banking Act under which it is supposed that may be done, and one is entirely misleading. Clause 61 says :

> Banks may stipulate for, take, receive and exact any rate of interest or discount, not exceeding 7 per cent per annum, but no higher rate of interest shall be recoverable by the bank.

Now that would seem to be a law, the violation of which would imply punishment, but does it ? What does clause 52 say :

> No promissory note, bill of exchange or other security shall be void, usurious or tainted with usury as regards such bank.

In other words, on a note, bill of exchange or other security they may charge any rate of interest they like, and it is not tainted with usury.

Mr. WM. ROCHE (Halifax). Do not the provincial laws protect them ?

Mr. SPROULE. No, a province has no right to pass a usury law, that can only be done by the Dominion parliament. I say that the government has joined with the banks to force people to put their money in the banks at 3 per cent, because there is no other safe place where they can put it, and then you allow the bank to loan that same money at 25 per cent. The poor man only receives 3 per cent interest, but what is the rich man allowed to receive who owns stocks in these banks? According to the 'Canada Gazette,' giving a statement of the last dividends distributed by the banks, the Bank of Montreal distributed 10 per cent; the Bank of New Brunswick, 12 per cent; the Bank of Quebec, 7 per cent; the Bank of Nova Scotia, 12 per cent; Molsons' Bank, 10 per cent; the Bank of Toronto, 10 per cent. I might go over the list, and they run all the way from 12 per cent down to 6 per cent, I think one or two below. Now is that fair to the general community? In my judgment it is not. I think it is a great injustice to the poorer people. Then, again, why should the government join with the banks to make them a monopoly in controlling the financial resources of the country? Why should the government not offer the poor man four or five per cent for his money and then they could get all the money they needed to carry on the affairs of the country? Why should not the government pay the poor man 4 or 5 per cent instead, of paying the Bank of England 5 per cent for money on their overdrawn account? Why should that be? If the government paid the poor man 4 or 4½ per cent to-day they would have all the money they required for the needs of the country, even to the renewing of maturing loans, and they would be paying a high rate of interest to the poor man instead of paying to the bankers and capitalists of England 4, 5 and 6 per cent. That is bad policy, and it is an injustice to the poor people of this country. It is bad policy for this government. It is no encouragement to industry, economy and frugality. We give the banks these great powers. We give them power to stamp a piece of paper and sell it for money; to take a piece of paper, four and a-half inches wide and eight inches long, stamp it and sell it for $100, and the day it goes out of their possession, no matter in what part of the world it goes, it is earning interest for them. What other individual in the country do we give such powers to? In my judgment, the government should issue the money themselves, sell it to the banks and receive some return for the money that we give them the power to issue by way of circulation. They put out a hundred-dollar bill which does not cost them five cents, and they get that $100 out at interest as soon as the bill is sold. If the bill is torn up, or destroyed, or lost, it is $100 in their coffers for ever. They have the benefit of it. We give them this power in order that they may serve the people. For every dollar of paid-up capital that they have we give them power to issue another dollar, and they are thus enabled to stamp their bills and extend their circulation for different purposes. Do they supply the needs of the people? I ask, if during last summer, they supplied the needs of the people? Ask anybody in any industrial line operating in Canada if the banks supplied the ordinary commercial needs of the country with the necessary circulating medium to carry on business. Not at all; the best men in the country were crippled and curbed in their operations. I was talking to a man in Winnipeg. The banks begged this man only a short time before to give his account to them. He was a man engaged largely in trade, but he did not use the banks because he was tolerably well off, and he did not choose to do business through them. There were two or three banks running after this man offering to give him any limit of credit that he desired. At last he was induced to do business through one of these banks. He was only there a few months and he had a limit of credit of $40,000 or $50,000. He wanted to extend his business a little more through the Northwest and British Columbia, and he wanted his limit of credit extended some $200,000 more. The company with which he was connected was perefctly sound, engaged in a commercial line and doing a splendid business. When he went to the bank and asked for an extension of his limit of credit the manager said: We cannot extend it; on the contrary, we would like to have it reduced to $50,000 and in a little while to reduce it still further. He said: You have been begging to get my account, and you were willing to give me a limit of credit up to $75,000 or $100,000 if I gave it to you. Now you want to reduce it. Therefore, he took the account out of the bank and went on and did his business in his own way. That is the way commercial people are treated by these corporations that are given these great powers in order that they may provide a circulating medium and have it available for the commerce of the country. See how the grain buyers of the Northwest were treated when they tried to buy the farmers' grain last fall. There was no money available, no matter what kind of security they offered, and for some unknown reason the banks curtailed their business, so that these men as well as the farmers, were hampered in their operations. I was up there for several weeks, and, to say the

least, the outlook was anything but hopeful; it was gloomy, because of the unwise conduct of the banks. Still, I frankly confess that I think they did some good by curtailing the loans which were going into real estate and other unproductive lines. The trade of the country was paralized because the money of the country was not available. It was not for that purpose that we gave the banks power to carry on their operations. They are expected, in duty bound, to serve the people, just as a railway corporation, a telegraph company, a tlephone company or any other of the great utilities of life that we give powers to, are expected to serve the people. They invite and receive capital and then afterwards they loan it out. They are to provide the circulating medium called money and make it available for the needs of the people. Many years ago I had occasion to say something in regard to the banks. I got a rather amusing retort from the hon. Minister of Finance (Mr. Fielding). I said that if we gave a corporation the right to represent one of the utilities of life they should, in the highest sense of the word, do so. If you go to a railway it has to carry your freight or it has to carry yourself. If you go to a telephone company it is obliged to send your message and not to discriminate in favour of one or against the other. All these utilities of life are comparatively on the same line; but if you go to a bank, unless you can give it gilt-edged security, you can do no business with that bank. No utility is a utility that does not serve the great bulk of the people; and if the banks only serve a small percentage of the people, they are not fulfilling the functions for which we gave them their powers. We gave them these powers in order that they might serve the great bulk of the people. They say: We have no right to loan money to any one unless he can give us gilt-edged security. The hon. Minister of Finance said: I am afraid that the hon. member for East Grey, like myself, will always be a little hampered in his operations if he has not means enough behind him to get all the money he wants. I was going to say that it was a very wity retort, but I think, on it was a very witty retort, but I think, on deal in it. I was not speaking from personal experience, but I was speaking of what I know of the service given to the people of the country by one of the utilities to which we have given these powers so that it can serve the people. Whether I am right or whether I am wrong, I have always entertained the view that the banks, so long as we gave them the power to control the financial resources of our country, and not only the power to issue money, but the power to do with people as they like, the power to control the commercial operations of the country and the power to provide the circulating medium, should provide that circulating medium for the great bulk of the people. Why should they be willing to give it to the man who has $500,000 or $1,000,000 in stocks and bonds and refuse it to the farmer who has his hundred acres of land, which is probably worth $4,000, perhaps against which there is not a dollar in the world, and who has his stock and buildings? Yet he cannot go to the bank and borrow $25 to serve his needs, while this other man can get his $10,000 or $50,000 if he likes. A corporation to which we give the power to supply this circulating medium should supply it in some way or other so that it would be available for the needs of the great bulk of the people. Do the banks do so? Taking the people of Canada as a whole, the banks of the country do not serve over ten per cent of them, and in the rural districts they do not serve five per cent. I cited a case in this House only a few days ago which I may repeat here, so that it may be connected with the argument I am making; I spoke of a farmer of my acquaintance who owned 200 acres of land with a good brick house, fine barns and stables, large stock and everything else, who did not owe $200 in the world. He went to the bank and was refused a loan of $25 for two months without an endorser. Is that what the banks are for? In such a case a man has to go to the private banks which are not allowed even to call themselves banks, and pay 8 per cent, 10 per cent, or 12 per cent. But these private banks are of more use to him than the chartered banks because he gets the advance on his own note, which serves his purpose for the time being. He gets it for any reasonable period he likes and it is renewable at the end of that term if needed with out endorsation. The banks in acting in this way are not fiulfilling the purpose for which they were incorporated. Most people have not any large amount of stocks or other gilt-edged securities, but they are honest members of the community, who pay their debts and are as important factors in the life of the nation as the millionaire. They are doing the drudgery of life. If they save money they can get only 3 per cent from the banks, but if they wish to borrow money from the banks, they cannot get it unless they furnish security. The banks should in some way be available to these citizens in at least small amounts so long as they are honest, industrious, frugal and in the habit of paying their way. So long as the banks do not supply a circulating medium to the people of the country they are not fulfilling their purpose, and force many people to go to the private banks, or to usurious brokers or to the individuals loaning money as they do in all our large cities at usurious rates of interest, from 10 per cent to 60 per cent or even 100 per cent per annum.

We give the banks power to stamp notes and circulate them, putting out dollar for dollar for all their capital; but yet

they say you have no right to inspect us. Every public utilitty should be inspected, and surely it should not be impossible to devise some system of inspection of banks that would give a better guarantee than we have to-day. It should not be more difficult than to inspect insurance or railway companies.

Some years ago I joined with the Hon. Peter White in an effort to amend the Banking Act in several lines. One suggestion was to compel the banks to hand over to the state unclaimed balances lying in their hands for more than a certain time. That is, where an account had been kept in a bank, say by a man for his son or daughter to be given to the child on its attaining maturity, and by the accident of life that man should be taken away and no claimants should appear for the money, then it should be escheated to the Crown. Why should the bank have that money? Is it theirs? Members from Ontario will remember the discussion over the Mercer Escheats Bill there. Mr. Mercer died, leaving land, money, and goods and the property was escheated to the Crown because there were no heirs. Should not the same principle apply to money in the bank as to real property? However, the corporations were too strong and we could not get it.

We also desired to compel the banks to publish a statement of the money thus held in their hands unclaimed. They would not do it and we held up the Bill for nearly three weeks. Sir John Macdonald said to us once: You cannot get the House to consent to your proposed amendment, but the banks are willing to go half way and publish every five years a statement of the unclaimed balances in their hands, but they will not give them up. He explained that as they commenced to publish them this system would of necessity bring out a report every year, because the five years would be maturing each year and a new return would be necessary. We accepted this compromise although it was only a half way measure. What was the result? I have in mind a partner of my own who had been doing business for years in one of the banks. His account was closed, but afterwards, starting business for himself, he did business for years and years in that bank, and although visiting the bank every week or two, not a word was said to him about an unclaimed balance standing in his name; he first knew of it when the report of unclaimed balances was published. He then drew out the amount, which it is true was small, only some $27 or $28, but it was his money, not theirs. Why should they keep that from him? They had kept the account and kept it incorrectly; when they audited the account they saw the mistake, but still retained the money although he frequently visited the bank. I contend that these balances if unclaimed for a certain length of time should be turned over to the state periodically because they are not the property of the banks. In that respect we ought to amend the Bank Act. I agree entirely with the hon. member for Cornwall that banks ought to be subject to regular government inspection and scrutiny, and be surrounded by the same safeguards as any other public utility. Parliament ought to pass a law for that purpose, whether the banks like it or dislike it. There ought to be more stringent regulations in regard to circulation. If there were, we would not have had such occurrences as we had in the case of the Ville Marie Bank.

Mr. FIELDING. The law has been amended since that.

Mr. SPROULE. It has been, but it is not respected. We ought to provide that the government shall issue the money stamp and sell it to the banks. I see no reason why the banks should be allowed to stamp paper and call it money and get the full benefit of it. I think provision ought to be made in regard to the percentages of capital reserve which may be loaned to any one borrower. Provision ought to be made to restrict the loans of banks on stocks and other securities of that kind. Provision ought to be made to restrict the amount a bank may loan to its directors, because they can manipulate its resources in such ways as to loan to themselves to almost an unlimited extent, frequently bringing disaster to the bank and to those who invest their money in it or have its bills. We ought to limit the rate of interest on discounts which the banks may contract for, and we ought to revise the powers of the Bankers' Association. All moneys held by banks after a certain time, for which there is no claimant, should be passed over to the state. These moneys are not honestly theirs, and they have no more right to keep them than I would have to keep money loaned to me by another man if he died without any heirs. I would have to give the money up, but the banks can keep what they have. I think we ought to take power to issue bills and supply them to banks; we would then have them under better control than we have at the present time. I make these observations because I regard it as my duty to do so, not because I have any feeling against the banks. It is as pleasant a task for me to criticise the banks as it would be to criticise a loan company, a railway company, a telephone company, a telegraph company or any other great corporation that supply the utilities of life. I regard the one with no more fear than I regard the other, not one whit; and I would consider myself as wanting in moral courage or in regard for my duty

if I refrained from criticising the banks or any other corporations of the country when I thought they did wrong or that the laws should control them to a greater extent than they do at present.

Mr. ALFRED THOMPSON (Yukon). I would like to make a few observations on the question which has been brought up by my hon. friend from Cornwall and Stormont (Mr. Pringle). In common with the other speakers, I have great faith in the banking system of Canada, born of the fact that it has stood the test, first in 1893, when we had a universal panic, and again last year, when we had even a greater panic. But recent happenings in our banking world have shown that banks are very human organizations, after all, and are liable to go wrong as in the Sovereign Bank failure and the Ontario Bank failure. In the case of the Sovereign Bank, I am informed that the shareholders will be called upon to pay a portion at least of the double liability. The history of the Ontario Bank's failure is so recent that it is hardly necessary to go into it; but it was, to say the least, not creditable to ourselves nor to our system. I have every belief that if we had had an independent audit system during these years, some of these failures might have been averted. I do not see why any legitimate banking institution should reasonably object to an independent audit made by a government officer. As my hon. friend from Cornwall has told us, Mr. H. C. McLeod, the general manager of the Bank of Nova Scotia, advocates such a system. We have it for institutions which manage great trust funds, and I think we should have it for our banks. With regard to the investment of funds, I think it is a pretty well accepted canon in banking that a bank to be successful must keep its funds in as nearly a liquid state as possible. The recent failures of some very large banking houses and trust companies in the United States have been due to the fact that they did not discriminate between a mortgage and a bill of exchange. The nearest to a liquid state a bank's assets are kept, the more stable it will be—and the more useful, as my hon. friend from Hamilton suggests. That being the case, I do not think it wise for us to limit the field of investment. If you take up the stock list of the New York stock market, you will observe that there is not a very large list of Canadian stocks listed on the New York stock exchange. That being the case, money advanced on these stocks is not easily realizable in Canada. New York is the nearest place where money can be loaned in large quantities on call loans at a fairly large rate of interest, and that is why our banks send so much of their money there. But in the case of the Sovereign Bank of Canada, they violated that rule by investing a large portion of their funds in a railway in Alaska—a railway I never heard of until I came to Ottawa. No doubt it existed, no doubt a certain portion was built, and no doubt it had an ocean terminus, but what its Yukon inland terminus was, I have not the faintest idea. It would have to cross a mountain range and several long stretches of barren country before it could get into the town of Fairbanks, some 400 or 500 miles, and even when it arrived there, would not have enough freight to support it. I give that as a sample of a bank investing its money in assets, to say the least, not of a liquid nature. In fact they were rather congealed. They were liquid until the railway reached Alaska and suddenly became congealed.

Mr. DUNCAN ROSS. It went into liquidation, did it not?

Mr. THOMPSON. Yes. My hon. friend from Cornwall (Mr. Pringle) has pointed out that in 1880 we had forty-one banks in Canada. According to the returns published by the government, up to December 31, 1907, we had thirty-five. Since then the Sovereign Bank has failed, and there are six new banks applying for incorporation. But according to this statement, there were thirty-five, and one has failed since, leaving thirty-four. So that there were forty-one in 1880 and thirty-four to-day. My hon. friend referred to the fact that in forty-three years, 17½ per cent of the state banks in the United States have failed as against 5 per cent of the inspected banks, which I must say, is a good argument. He also pointed out that 25 per cent of our banks failed. That, I think, is due to the fact that we have encouraged the branch system to such a large extent. There are to-day thirty-four banks in Canada, but they have an enormous number of branches from the Atlantic to the Pacific. The largest of our banks are following out an amalgamation policy which, I do not consider, is for the future welfare of this country. My hon. friend from Cornwall (Mr. Pringle) mentioned the Canadian Bank of Commerce. Let me give you three instances of that bank buying out other banks. It went down to British Columbia and bought the British Columbia Bank; it went to Prince Edward Island and bought out the Merchants Bank, and it went to Halifax and purchased the Halifax Banking Company. What is the accommodation to-day in these three centres? Formerly the people there had their local banks, and the merchants could go to their local banks, where their standing and character were well known, and get loans. But now that is changed. The managers in Prince Edward Island, Halifax and British Columbia are sent from the east. They do not know as much of the local business as did the staff of the old banks, and before they will advance a loan to any local man, they have to telegraph to Toronto and ask the head of the Bank of Commerce there whether they shall advance the money or not.

That is an absolute fact. I have a friend who for years banked with the Halifax Banking Company. His credit was absolutely sound, but in the month of November, when he went to ask for a small loan —a request that would never have been criticised a moment had the old company been doing business at Halifax—the new manager said: Well, I cannot give you this money right now. My friend asked why. Because, said the local manager, I have to telegraph to Toronto and ask the directors there whether I shall advance the money to you or not. That same thing is occurring in these other places I have mentioned. That is where the government should step in and see that this amalgamating process is not carried too far. I have no desire to lessen the stability of our system. Have our banking system as stable as possible, but on the other hand do not let it get into the hands of a few great corporations.

I have just glanced over the monthly bank statement published by the government and have totalled up the banks doing business in Canada, which have a paid-up capital of over $3,000,000 each. There are thirty-four banks in Canada altogether. These banks have paid-up capital of $92,995,482 and a rest account of $70,991,232, making a total of paid-up capital and rest of $163,796,714. Of these there are fourteen banks that control $130,000,000. Fourteen out of the thirty-five control $130,000,000 out of the $163,000,000. Of these fourteen banks the capital is $71,754,347 and the rest $58,310,866, or a total of $130,070,213. And these are the banks which to-day compose the Bankers' Association of Canada—that powerful corporation which my hon. friend mentioned a few moments ago.

My hon. friend referred to the rate of interest and incidentally mentioned the rate in the Yukon. Money is of course dear in all new countries. It is necessary, because of the kind of securities offered in these new countries, that the people there shall pay a large rate of interest, and usually they are willing to do that because of the value of money. But I have yet to know of any country or any section of this country except the Yukon where money costs 2 per cent per month or 24 per cent per annum on absolutely gild-edged security. That for years was the rate in the banks of the Yukon, notably the Canadian Bank of Commerce. To-day, ten or twelve years after that bank was established there, the rate is 18 per cent on ordinary security and 12 per cent on gilt-edged security. Of course it was impossible for the country to progress under the exhorbitant rate of 24 per cent, and the lawsuit to which my hon. friend referred was the outcome of that rate.

My hon. friend referred to the circulation of the banks. The total circulation of the banks of Canada at the end of September—that is their notes in circulation—was $77,504,398. On this amount the banks pay absolutely not one cent for the privilege of stamping the paper and making it money, as my hon. friend from East Grey (Mr. Sproule) has said. I do not think it would be well to restrict this, but I do think that the state should receive from the very valuable privilege they give these banks some return.

In looking up the matter, I found a lawbook in the library, the statutes of Canada, 31 Vict., chapter 11. I find that, in 1867, we taxed the circulation of the banks. The law says with relation to these banks that they shall——

—pay to the Receiver General a duty at the rate of one per centum per annum, on the average amount by which the bank notes therein mentioned as in circulation during the period for which statement is made have exceeded the average amount of the gold and silver coin or bullion which such bank has had on hand during the same period.

So you see taxation of circulation is not a new doctrine. If we were to do what we did in 1867, what amount should this taxation be levied on? The circulation of our banks is $77,504,398. They have deposited with the government against that circulation, as an insurance fund, $4,255,670, leaving $73,248,728. Take off the coin and specie which the bank allows, $25,119,474, and we have left as what might be considered as a legitimate source of revenue, $48,139,254. I do not think it would be wise to tax all that, but I do believe it would be a sound and legitimate proposition that these larger banks, whose circulation reaches into the millions—the Bank of Montreal, for instance, has in circulation $11,961,000, a colossal amount; the Canadian Bank of Commerce, $8,777,000; the Merchants' Bank of Canada, nearly $5,000,000—I say that these larger banks, which the state has fostered, which have prospered because of the banking laws we have passed for them, now that they have reached maturity and are piling up surplus, capital and rest, might reasonably be asked to contribute a share of those profits in the way of taxation on circulation, which is a valuable privilege which the government gives. I would oppose the idea that the circulation of young banks be taxed; for I think that banking is like most other lines of business, and the more competition you have the better, so long as it on a sound business basis. Why should not we interfere with the Bankers' Association? I do not see why we should regard it as a bogey. It is an association of men who are custodians and trustees of this great system of finance. We are having insurance companies before the Banking and Commerce Committee to give an account of their stewardship, and we are going to enact certain laws for the control of that business; we are going to say just when they shall be inspected and by whom. Why should not we do that with the banks,

because they also are custodians of the funds of the people?

I wish to say one more word in closing, which, while not exactly relating to the resolution of my hon. friend, does have a very important bearing on our currency system. The sooner we can make our gold coins in Ottawa, at the Royal Mint, the better for Canada. I hope my hon. friend the Minister of Finance (Mr. Fielding) will, as soon as may be, erect a refinery at the mint, so that the gold shall be minted into coin and the coin circulated throughout the country. I have a feeling that this Bankers' Association is not very desirous that gold shall be minted in Canada, for for every five-dollar gold piece you get circulated there is one five-dollar note retired. It remains to be seen how much of this gold, when it is minted, will be absorbed. But we have the mint, we have the gold; and it seems to me that it is reasonable to ask that coins be made as soon as possible.

Mr. WM. ROCHE (Halifax). I think that the members of the House are indebted to the three professional gentlemen who have taken the pains to study this question and who have given us their matured observations on this very important subject. The few remarks that I shall make are not intended as antagonistic to the observations of my hon. friend from Stormont (Mr. Pringle), many of which were interesting, some novel and some instructive. I rise rather to present the practical side of the case. My hon. friend from Stormont, and I think my hon. friend from East Grey (Mr. Sproule), will not contradict me when I say that they exhibited, very forcibly, as their manner is, the popular side of this question. And sometimes the popular side does not convey the whole truth. Perhaps people who have had practical acquaintance with the banking side of the question may be able to offer observations which would to some extent modify the extreme views expressed the other way. My hon. friend from Stormont gave a category of the causes which had led to the stringency of money. Perhaps he did not give all the causes. He said that wars had taken place in which there was a large expenditure of money. But the main cause of the stringency of money, both in the United States and Canada, was the expansion of commercial enterprise, the construction of material works and the absorption of large amounts of capital in the payment for railways, canals, steamships and other enterprises absorbing the fluctuating and floating capital of the country. It is quite true that money fluctuates—that is, that the apparent quantity of money varies, and that the rates of interest and the ease with which money is transmitted from hand to hand vary at different times. Five or six years ago, I believe, some well instructed bankers thought that money would long continue to be in excess and the rate of interest very low. I believe that some conservative bankers even invested considerable sums of money in consolidated stocks at a low rate of interest, because they could not exactly decide how much the rate of interest should be reduced. But according to circumstances, some of which were related by my hon. friend from Stormont and others, the amount of circulating capital was reduced and the necessity of business exceeded the supply of money. I think my hon. friend from Stormont gave us the complaint of some of the western and smaller banks and their customers, farmers and others, that they did not receive a sufficient quantity of money to carry on their business and meet their notes, because of the larger banks, more to the eastward, I suppose, not giving accommodation to these banks, in consequence of which the smaller banks were not able to give accommodation to their customers. The complaint came, I presume, from the customers of the smaller banks and from the smaller banks themselves. My hon. friend from Stormont (Mr. Pringle) went on to say that the western banks complained in this way, and that there was an advantage in the United States from the fact that the smaller banks were able to contribute more, and that the larger banks did not restrict them so much as in Canada. Mr. Henry Clews, of New York, wrote a letter, in which he stated that the stringency of money did not arise from the loans and business done in large cities, and especially in New York, but it arose from the fact that the smaller banks in the western states, and in the country generally, undertook to do more business than their capital warranted, and their demand was upon the New York banks for accommodation and for money upon the security of their stocks. Now, when we consider, we see that the larger banks in the great cities had responded to the commercial needs and the commercial necessities, and that it was not their fault that the money stringency occurred, but simply as a matter of prudence in restricting the operations of the western banks.

My hon. friend from Stormont went on to show the advantage of state banks over what might be called national or general banks. I think history does not bear him out in that respect as regards the United States. We all know that the banking system of the United States was inaugurated by Alexander Hamilton about the time the constitution was formed, and if we go back to about the term of General Jackson in 1833, we find he took all the money out of the bank of the United States and loaned it to the state banks. Their money was speedily absorbed, principally in western land speculations, and in the increasing commerce of that day, until about 1837 all the banks of the United States, and particularly the state and smaller banks were

involved in bankruptcy, and a great commercial stringency took place in the United States about the year 1837. If anybody cared to refer to it, and if he would refer to a speech made in 1837 in Niblo's Garden, New York, by Daniel Webster, and to the speeches and arguments in Congress about that time over the Sub-treasury Bill and the financial conduct of General Jackson, he would find a complete refutation of the theory advanced by the hon. member for Stormont, and of the history which he gave of money matters in the United States. I have not time at present to give those extracts, but I remember having read them less than forty years ago. They can doubtless be found in the Library.

My hon. friend from Stormont and my hon. friend from Grey (Mr. Sproule) reiterated the opinion that the big banks, so-called, are in the habit of crowding the small banks and taking advantage of the latter's insufficient funds to minimize their business and restrict them in the freedom to make loans and discounts which they otherwise might have. As my hon. friend from Stormont held up the Bank of Nova Scotia as an exemplar bank on several accounts, I will take the liberty of referring him to the fact that no bank in the Dominion of Canada has pursued that course with more tenacity than the Bank of Nova Scotia. The Bank of Nova Scotia also has removed its headquarters from the city of Halifax to Toronto. As bankers naturally follow the trend of the demand for money, and where most interest is obtainable, the Bank of Nova Scotia pursued the demand for money wherever it could be pursued. They have conveyed sums of money from the east to the west. I believe in the account of their assets it will be found that they have advanced as much money to the United States as any other bank in Canada in proportion to its resources. But how did the Bank of Nova Scotia act? When the stringency came on the manager of the bank took great credit to himself for having increased his assets. What does that mean? He has increased his specie, he had diminished his discounts, he had called in some of his loans. Now was that a course of conduct that was commendable? Another bank has been attacked in rather strong terms by my hon. friend, I did not hear that it had pursued the same course. I heard on the contrary that it was rather generous in its discount, I heard that it stood by the commercial men, and had not drawn in its money, nor crippled any of the enterprises in which it was engaged. I may say that the conduct of some of the banks with which I am more familiar was the exact opposite of the conduct of the Bank of Nova Scotia. When that stringency came on, the directors made a resolve that they would take the public into their confidence, they restricted no man who could offer proper security, they stood behind their customers in all their legitimate wants, they charged to old customers no more than six per cent, and to new customers who had been thrown out of the Bank of Commerce and by the Bank of Nova Scotia and other model banks, they charged no more than seven per cent as a maximum. So far as the general argument goes, there is not time on the present occasion, neither do I think, without a prolonged debate could we enter into the minute details of the principles of banking as exemplified by the various institutions which have been paraded and have been denounced. It would require more time than is allowed in this debate to decide on various abstruse principles to debate them, and the course of the government with regard to banks.

As the hon. member for Stormont has suggested some notable improvements in the system of banking and in the Bank Act, let us run over those suggestions in detail and see how they would work. In the first place, the Bank of Nova Scotia has been highly commended, first on the declaration by the manager that he would approve of government inspection, and secondly on the fact that he had imported into the good old realm of Nova Scotia two Scotch experts to examine the assets and business of the Bank of Nova Scotia, and he prided himself expressly upon the fact that these gentlemen had come from Edinburgh. Well, now, there have been Scotch bankers before. There was Mr. Paterson who started the Bank of England; and there was John Law, who embarked in financial undertakings in France, a most eminent Scotch financier, I think. If inspectors of banks are required, there are just as goods accountants in Canada as can be found in Scotland from the Solway Firth to John O'Groat's house. But how would this work? I pity the bank that cannot trust its own officials. I say that if there is a bank who suggests that there should be some other species of inspection than by the appointed and paid inspector of the bank, look out for the manager of that bank. The inspector is paid specially for that purpose, he goes to the branches of the bank, he investigates the details of each one, he goes into their notes, he counts the money in every branch, he inquires into the character of those to whom money is loaned, and he makes a report of that, or ought to do so. He brings it to the bank, he reads that seriatim, confides all the necessary information to the directors, if they perform their duty.

If that is done there is no character of inspection that can take its place in any well managed institution. A man is set apart for that purpose. It is his object and duty to spy upon the officials of the bank and if there is any irregularity on the part of any one he goes to the fountain head and reports it to the president and directors. Then

they will take prompt steps to remedy the difficulty whatever it may be. How would a government inspector act? Would one government inspector have the time to go to every branch bank, count all the money, look at every note, inquire into the circumstances of every customer, look at the endorser as well as at the maker of the note and perform all the other duties that would be connected with his office? If the government inspector were to go to the bank to inquire into its capital what is to prevent funds being telegraphed ahead from some branch bank and thus make the money go around the whole circle? You would have, to make it absolutely secure without the possibility of loss, to have a simultaneous inspection of every agency of each bank. Then there would be no possibility of funds being transferred; then there would be no possibility of assets not being there and there would be no possibility of money not being on hand when required. Unless that were to be accomplished by the appointment of government inspectors the whole thing would be as great a farce as the importation of two Scotch terriers to be put in every bank. What does this involve? It involves the appointment of twenty government inspectors, if not forty, at high salaries, and the work would possibly not be as well accomplished by these gentlemen as by trained experts brought up in the bank with the welfare of the bank at heart and working with the full knowledge and co-operation of those in authority to ferret out any transaction that called for investigation in any branch of the bank.

In the government return which is published, the hon. gentleman said, that there was shown an excess of money sent by the banks to the United States and other foreign countries. In the bank returns are included all the bills of exchange forwarded by the banks to foreign countries. Therefore the belief that a large amount of money is annually sent out of the country to the United States and elsewhere is a fallacy. From the gross amount has to be deducted all foreign bills of exchange which are forwarded by the banks.

The second topic upon which my hon. friend remarked was that of loans to directors. In a well regulated bank—I do not know what they do in Toronto and other centres—there is a regulation that there shall be no more money loaned to any director than to any other customer of the bank and that it shall be loaned in the very same way. Banks are very anxious to get men with large business interests in because they bring business with them. If a director had $100,000 worth of notes, if he were doing business through the bank, he might appear to have loans to that amount when as a matter of fact he would not have one dollar. In the business which a man brings into the bank you have the wealth and status of the individual himself, and the money which is notable in the return of loans to bank directors is, in all likelihood, customers' paper brought from all over the country, so that the amount of money loaned to bank directors is infinitesimal in proportion to their wealth and resources. Again, there may be a limitation upon the loans to directors, but if you have a board of capable, honest men they will limit the amount of loans to themselves. You could not fix any definite amount. A large bank with $12,000,000 of capital might be able to loan ten per cent to a director or to one concern or enterprise. Ten per cent in a small bank would be an insignificant amount and no accommodation at all. The reason why small banks are declining is that they are not adequate to the business enterprises of the country. The expansion of business and the large amounts which are invested in undertakings require banks with large capital. The small banks are not adequate to such business. That has had a tendency towards amalgamation. If the amalgamation is carried out properly, if the original design, intention and methods of business are adhered to, if the larger banks afford accommodation to the community which the smaller banks serve such an amalgamation is desirable. For that reason bankers are approving of such amalgamations even though the number of banks may be less than the number of smaller banks that were crippled in their resources and operations from the fact that they had not enough capital to sustain the operations when they were once embarked upon. When there is a prospect of loss there is considerable difficulty in maintaining the enterprise and nothing is more fatal to a bank, or to the commercial community, or the public at large, than banks with inadequate resources to meet the demands of business. The difficulty with those banks that have been mentioned, the cause of their overthrow, their loss or misfortune, has been that their managers speculated. The managers took the funds. When the manager gets to such dimension that his head outruns the proportion of his body and when he thinks he owns the bank and the public there is grave trouble not far off. Another step is that the manager gets so big that he appoints creatures of his own as directors; he gets them under his control; he dictates to them his policy and they hardly know that their lives are there own. We know how offensive it is to have a magnate who relies simply upon his purse power, who thinks that he is the bank to whom all must bow down and who, when he is supposed to put his watch dogs on as directors, simply puts on those who really are his puppets whom he is able to elect and to control, and when a bank gets into that condition it is on the rocks. The On-

tario bank has been mentioned. It is unfortunate that most all these banks that have succumbed are in Toronto, or in Ontario, and I must confess that the hon. member for Stormont (Mr. Pringle) has a more practical acquaintance with the conduct of banks in that vicinity than I have, because I know very little about them. All he has said about the conduct of the banks of that province, about extorting usurious interest from the farmers, is no doubt due to the fact that from the circumstances they were compelled to adopt these methods. I believe that the Ontario Bank was wrecked by the manager speculating with the funds of the bank in New York. There was not a sufficient or a proper oversight on the part of the president and the directors. I believe that the case is in court. It is disputed whether the president and directors were cognizant of what the manager was doing. But the bank was not wrecked by money loaned to the directors; it was not wrecked by loans which legitimately are made by the management, but it was wrecked because the manager took the funds to New York and speculated with them. That has not always been condemned in Canada. Some years ago a gentleman who is regarded as a great financier took a considerable portion of the funds of the Bank of Montreal, went to New York during a period of financial stringency when money was at a high rate of interest, he succeeded, the bank received a large accession to its reserve by his manipulation and I do not know whether he was knighted soon after or not. In one case the benighted manager of the Ontario Bank was condemned and put in prison and on the other hand I believe the knighted manager of the Bank of Montreal occupies a castle in Scotland or somewhere. Circumstances alter cases.

A great duty also rests on the shareholders and it should be exercised by them. The shareholders go into a meeting of a bank or public institution like a flock of sheep. If the manager or president of a bank frowns on them they hardly dare to open their mouths. A statement is read out or printed and put before them: Take it or leave it—and if any one opens his mouth he feels like Oliver Twist when he asked for more. They tell him that it is not in the interest of the bank that any such disclosures should be made, that they know what is necessary to be published and that the dividend will be paid when the proper time comes. The shareholders should look to their own interest and to the interest of their fellow shareholders and should inquire into everything that seems to need explanation or to be suspicious. If the shareholders of banks did their duty at the annual meeting, there would be fewer failures. It may be popular and fashionable to blame managers and directors and presidents or other officials but the blame in the first

Mr. W. ROCHE.

place lies in the incapacity of the shareholders, and sometimes their cowardice in not backing up those who know where there is some circumstance in which the bank is at fault and assisting them to elicit full information. They allow him to be bull-dozed and put out of court because they do not support him in their inquiries. When I was much younger than I am now, I attended a bank meeting. There were some things that did not please me, and I asked a question. The gentlemen who sat around me began to look at me through their glasses; the manager replied in an off-hand and cavalier way and there was a little controversy. I was a little rash in doing it and probably had I been as old as I am now, I would not have done it. Still it was a misuse of the power of the shareholders and a similar misuse has led the managers of banks into any excesses they may have committed and has put banking on a different foundation from what it was in the good old days.

Another point on which my friend spoke, and spoke very well, was that circulation might be kept within proper legal limitations. He did not say how he would limit that, or what proportion the circulation should bear to the capital. Further on he gave some details on that point but did not decide that proportion. Our bankers wish to know what is the due proportion between circulation and the amount of capital. We know there is a remedy after the over-circulation has been in excess but what would that remedy be? The present system is to fine a bank which is over-circulated. The bank may become over-circulated through inadvertence. When the returns are received from a number of branches it may be found that the total circulation is over the limit. If that is correctly reported to the government the amount is known and the bank is fined in proportion to the amount of excess circulation. I know that managers are most anxious to keep their circulation within the prescribed and legal limit. There is no subject which gives more anxiety to bankers than that, to observe the law and prevent the government imposing any fines. They are anxious not to pass that indication of security and safety, for if a bank does so the fact is promptly pounced on by other banks and held up to show that such and such a bank is outrunning its reserves, that it may be crippled, and before long the bank gets into Queer Street. The hon. member for Stormont (Mr. Pringle) gave some instances of the banking system in England and other general matters. I shall not go on to argue upon his theory of the government issuing currency. In the United States that system was declared to be disastrous and mischievous; it was declared that banks should not be a department of the government. The exercise of the power of is-

suing currency we know was attended by great loss in the United States. In consequence of war, or unforeseen contingencies, great changes may arise, and we know that American currency depreciated 50 per cent during the war. The best financier in the United States declared that the government issue of money should be restricted, that there should not be an unlimited issue of currency to meet all the requirements of the country; but as this is a subject which is extremely recondite and involves many arguments pro and con, I shall not take up any more time in referring to that branch of the subject.

How are you to remedy excessive circulation? The way in which it restores itself is by limitation and by adjustment with some other locality. The first object of the bankers is to place it on a sound foundation. It is to the interest of the bank that as promptly as possible it should secure a favourable balance, that the circulation shall not exceed the legal amount and that is the best security in the world the desire that the government may not trammel them by legal action; and an effort is made in all branches to limit the circulation.

On the other hand the hon. member for Stormont (Mr. Pringle) and the hon. member for Grey (Mr. Sproule) have complained that banks have not enough money for their customers, that their circulation is up to the limit, they have not further license to extend and they must restrict their loans to some old customers and shut out new ones. What remedy can be suggested for that? The only remedy suggested is to suspend the charter of the bank.

Mr. SPROULE. One would be in times like that that they should not have so much of their money out on call loans on Wall Street.

Mr. W. ROCHE. My hon. friend will see that there are the shareholders. The shareholders require interest, they do not put their capital in for fun. They do not establish or conduct Utopian banks such as my friend suggests, where every one who wants to borrow money can get it whether he has any security of his own or not.

Mr. SPROULE. When banks are given charters and power to issue money and provide circulating medium, is it not for the people of this country and not for the investment of foreign countries? When we find in a time of stringency such as last summer, that there is $63,000,000 or $65,000,000 on call in Wall Street, it suggests the thought that that amount circulated in Canada would mean an ample supply for this country.

Mr. W. ROCHE. You know that some years ago capital was in excess; the banks were seeking investment and they will always tend towards the demand centre where the interest is greatest; they will send the money to New York, to the West or wherever it earns most interest. Their shareholders must be paid. The consequence is that money is fluctuating, sometimes there is an excess of money on hand when, as they say, money is a drug, and then cases of stringency arise suddenly. If money were kept for these eventualities, the paying power of money would be very much reduced, and in the places where money was required for circulation and business enterprise, there would be no sufficient quantity of it. It is by adjusting the bare spots to the full spots that banks make money, and by using a circulating medium in the business enterprise of the country.

Mr. PRINGLE. Would the hon. gentleman then say that the banks would be justified in having $63,000,000 on loan in Wall street provided they could get a little higher rate of interest, rather than in using that money for the purpose of moving the crops in Canada?

Mr. W. ROCHE (Halifax). If it were known positively that the $63,000,000 were required for moving the crops of this country at a certain time, and if the amount of interest paid for that would be equal to the amount paid in the other case, I think that any patriotic bank in Canada would lend the money in Canada. But the banks could not know that $63,000,000 would be required to move the crops any more than the American banks knew what would be required in the west. The demands came on them suddenly. The ressources of the smaller banks were absorbed, and they had to draw on the great banks. The great banks have to provide for the demands made on them by the branches, and in order to discriminate with regard to the amount required, a large amount of reserve must be kept. But the difficulty confronting a bank is to know how and when and where the money would be required. For that reason its officers have to use their foresight and their trained faculties, and so reserve and apply the money that it will produce the best results to the customers and to the bank. I do not rise as a defender of the banks, but only to give some counterpart of the statement and some views on the other side. The banks have a patriotic regard to the interests and wants of the country, and are disposed to serve them. The complaint has been made that the banks have a large amount of money invested in banking premises. They must have buildings which will advertise their business, which will afford adequate accommodation for their clerks and for all the apparatus necessary for carrying on the business, which will be commensurate with the wealth and reputation of the cities in which they do business, and which will be creditable in archi-

tectural proportions. I believe the banks have invested more money in buildings than the returns show, because they have all adopted the policy of writing down their real estate. I think the banks in the west have permission to lend money on the security of real estate, under certain restrictions. In the eastern provinces, I believe, no greater rate is asked than 6 or 7 per cent. If usurious rates of interest are charged, that is not the case in the eastern provinces. I yield to the practical knowledge of my hon. friend from East Grey and my hon. friend from Cornwall with regard to the rates exacted from the farmers and others; but in our eastern banks good commercial paper is taken universally at 6 per cent, though new customers in times of stringency are charged 7 per cent, but no higher. My hon. friend from East Grey went a little further afield than the usually restricted area of banking, and took up the public needs, claiming that the public are allowed only 3 per cent on deposits, while they are charged 12 per cent on loans by the western banks, and the banks have paid dividends of 10 or 12 per cent. My hon. friend should remember that it is not from the capital of the bank direct that all the money is made. The money accumulated by the banks is frequently from balances acquired in years long past. A bank has to pay an expensive manager, a large staff of clerks, the cost of expensive buildings, taxes, losses, and legal expenses; so that the difference between 3 per cent and 6 per cent is not all profit. The hon. member for East Grey says that the banks should supply the people of the country with money. I call that a Utopian idea, that a bank should lend to any one that comes in. My hon. friend did not use those words, but his meaning was that a bank should not refuse to loan to any individual.

Mr. SPROULE. Perhaps I was misunderstood by the hon. member. That was not the impression I desired to convey. What I desired to convey was this, that the great bulk of humanity who were known to be honest, industrious, frugal and to pay their way, ought to be able to get some limit of credit, however small, even if they had not the best security in the world, because one of the duties of a bank is to provide a circulating medium for the great bulk of the people. A man's standing and character is very often his capital.

Mr. W. ROCHE. My hon. friend may be conversant with the practice of the banks of the west; but what familiarity I have with the conduct of banks convinces me that the character of an individual who obtains a loan or a discount is scrutinized and the character of his security is examined, and I do not know that a bank which has the resources even refuses to a man of good character, with fair security, such an adequate loan as is proportionate to his circumstances and his legitimate demands.

Mr. SPROULE. My hon. friend can not be familiar with conditions in country places, or he would not reach that conclusion, because I can tell him that the best farmer in our part of the country cannot go into a standard bank and borrow money unless he has a substantial endorser, although the standing of the farmer is as good as that of the Bank of Montreal. His business is stable, his land will not run away, it is not under mortgage, his buildings are up and he has all the guaranty necessary.

Mr. WM. ROCHE. Some banks are sceptical, and they have not the advantage of the advice of my hon. friend, nor do they hold his broad views. They look to the security and to the returns. If a man is honest and has the reputation of paying, I do not know that a banker would not give him what would be an adequate loan. But there are many impecunious fellows who have long names and short credit. They require to be watched. If you go on philanthropic grounds and the rights of man and give money whenever called upon there will be more banks in default. Bankers have to take an honest, business way and look to where they put their money. They must have regard for the interests of their shareholders and the public as well, and have to discountenance impecunious people and sharp practitioners who want to take the resources of others without giving much return.

Mr. SPROULE. I am talking of the honest and industrial man who is out of debt, who is in good circumstances, who has a good farm and buildings and stock. The manager will tell him that the bank does not loan any money except on endorsed notes. But why is it this man can go to a private bank and get any reasonable amount he likes on his own note? That is why private banks spring up everywhere and are found so useful. The individual who is known to be honest and industrious and has some standing, can get at these private banks a small amount on his note without any endorsation.

Mr. WM. ROCHE. The banks are not only the trustees of their shareholders and depositors, but of the dead as well. There are estates which own shares in banks, and the directors and managers have to exercise an excessive amount of care to prevent people who have their living involved in the standing of the bank from being absolutely ruined. If they were too profuse in any way with the resources of the bank, a great deal of misery to these people would result.

Mr. SPROULE. They should not forget the first object for which we give them charters and power.

Mr. W. D. STAPLES (Macdonald). I do not wish to make lengthy remarks on this important subject which has been brought before us by the hon. member for Cornwall (Mr. Pringle), but as it is of peculiar interest to our western people, I feel it my duty to read a resolution which was passed by the Grain Growers' Association of Manitoba. I have listened with a great deal of interest to the able arguments made by my hon. friend. His address has been both interesting and instructive, and no doubt will have a good effect. The resolution I desire to read was passed at the annual convention of the Grain Growers' Association of Manitoba, held in Brandon on the 17th January last:

Whereas during the recent financial stringency the western farmers sustained great loss in the sale of their wheat being compelled to take very much less for it than prices in foreign markets warranted, and

Whereas this condition was caused by the unwillingness or inability of the banks to furnish the usual lines of credit to meet the requirements of exchange, and

Whereas the business of the country is conducted on a system of credit which increases the facility with which manufacture, production and exchange are carried on, many millions beyond the small percentage of money used, and the amount of money upon which our whole business structure is based, and

Whereas the carrying on of manufacture, production and exchange depends on the extension of bank credits to them at certain seasons, and

Whereas these banks themselves acquire the means of granting those credits largely from the money of their depositors, and whereas in loaning their deposits the banks rely on the probability that only a certain part of the deposits will be called for by the depositors at any one time, and whereas any disturbance in financial circles or business enterprises which creates a want of confidence in our business structure or moneyed institutions, results in these institutions calling in their loans and increasing their reserves in order to prepare for the worst, and in depositors withdrawing their money from the banks to hoard it until the trouble is over, thereby withdrawing a large amount of money from circulation at the very time when it is most needed, thus demoralizing industry and causing hardship and inconvenience,

Therefore, as manufacture, production and exchange, the business of our country is largely conducted on credit based on confidence, we, the Manitoba Grain Growers' Association, in convention assembled, would strongly urge the Dominion government to so amend the present Bank Act, as will tend to promote confidence at all times in our moneyed institutions, and consequently in legitimate business enterprises, and would respectfully suggest as a partial means to this end, that provision be made in the Bank Act for a depositors' security fund, to be raised by a small tax paid by the banks upon all deposits, somewhat similar to the bank note redemption fund. The government to stand behind this fund, guaranteeing all deposits. The government would be perfectly safe as it would have the fund, the assets of the banks, and the double liability of the shareholders as security. The fact of the government being behind the banks would prevent a withdrawal and hoarding of deposits, and would enable the banks to keep all available funds in circulation to promote the legitimate business enterprises of the country.

This resolution gives the opinion of the western people. Last year, when we had a rather ticklish crop to handle, a crop that was damaged somewhat by the early frost, our western farmers found great difficulty in obtaining the advances they had been accustomed to get in previous years. In previous years a farmer could go to a bank and get all the money he required for temporary purposes on a warehouse certificate or a bill of lading, but last year the circumstances and conditions were entirely different. I know of farmers who went to a bank and made the propositions they had made in previous years, but could not get a dollar. The resolution I have just read explains the opinion of the farmers who have given this matter much consideration. They have discussed it from every standpoint, and when they met in convention in Brandon the resolution I have read was the outcome of their deliberations on this very important subject. I hope that the Minister of Finance will be able to work out some system that will be in the interest of the western farmers. I am sure that the suggestions that have been made by my hon. friend from Stormont will assist the Minister of Finance in working out improvements in the Bank Act, so that the best interests of the western people may be met in this particular.

Hon. W. S. FIELDING (Minister of Finance). We have established in Canada the practice of revising or reviewing our Bank Act once in ten years. That does not necessarily mean that in no case during the interim should any amendment be made, but I think I may fairly say that it does mean and should mean that we should not make changes during the interim except in cases of emergency. It may be that before the session closes I shall have to invite the attention of the House to some special matter where the Act might need amending. But I certainly would object to enter in this present year upon that wide revision which is suggested by the hon. member for Stormont (Mr. Pringle). The bank charters will all expire in the year 1911, on the 1st of July. Probably in the session two years hence we shall have to revise or review the Act, gathering up whatever we may from the experience from the past ten years, and gathering whatever we may from the suggestions which have been offered by hon. gentlemen to-night, and then amend the Act in the light of all our knowledge. But in the meantime I would suggest that only in some urgent matter should we enter

upon a change. I think the House will agree with me when I say that if there is any part of our legislation as respects which we should be careful to exercise a wholesome conservatism, it is in legislation respecting our banking and currency. These are difficult and intricate questions at all times, and while it is well, especially in a case like this in which there is much public interest, to discuss the matter here and bring out various suggestions, I hope the House will agree with me that it would not be wise to press this motion to a division. I trust my hon. friend from Stormont will feel that he has accomplished his purpose in directing public attention to this interesting and important subject, and that after all the members who may desire have expressed their opinions, he will feel justified in withdrawing his motion. In all matters touching our banking I think we do well to be careful, and not be hasty to adopt changes which even at the first presentation may seem to be in themselves plausible and reasonable.

I desire to approach these questions with an open mind. I do not desire to feel that we have a perfect Bank Act. Our Bank Act is the matured judgment of many wise and able men who have preceded us in this House, and that is one reason why we should treat it with great consideration, and not be in a hurry to change it, or change it at all unless for strong and urgent reasons. I approach the question with an open mind. I do not wish at present to come to any definite conclusion in the matters that have been mentioned. I do not hesitate to say, however, that upon several questions mentioned by my hon. friend, I find myself quite unable to agree with him. Perhaps the most important question which he discussed was that of government inspection. I confess, without pretending to give a final judgment, that my inclination is strongly against the views he has presented on that subject. I am afraid he has confused two subjects which ought to be separate; he has talked in the same sentence, almost, of government inspection and independent audit, and he has treated the two things as one. Without intending to do so, he has conveyed the impression that what he is asking us to do by his resolution as respects government inspection is simply to follow the example of Great Britain, and to provide the system which exists there. In that he is mistaken. He did not wish to convey that impression I am sure. There is no government inspection in Great Britain. If we talk of independent audit, that is an entirely different question. They have a system of audit, and that system is as open to the shareholders of any bank in Canada as it is to the shareholders of any bank in England. The audit that takes place in England is an audit provided by the shareholders; and if any bank in Canada desires to establish that kind of audit there is nothing in our present banking law to prevent it. My hon. friend illustrated that when he mentioned that one of our great banking institutions has of itself adopted the English system, and has brought out chartered accountants from the old country to examine and report upon the affairs of the bank. The fact that one bank has done that shows that there is nothing in our banking law to prevent it. Other banks no doubt will appreciate the value of that example, and they may all have an independent audit, so-called, without any change in the Bank Act.

Now I am disinclined to favour government inspection for several reasons. In the first place, I think it is unnecessary; there is no condition of affairs in Canada that calls for it. In the second place, I do not think it is practicable, for reasons which I shall endeavour to give. In the third place, I think it would be delusive and misleading and would create in the public mind an impression that there had been an audit and examination which could be entirely depended upon; and finally, I think it would impose upon the government of Canada an obligation as respects the character and standing of the banks which it is not desirable that the government should assume.

Now my hon. friend went back for a period of nearly half a century in order to strike averages between the experience of the banking institutions of the United States and those of Canada. I think that is hardly fair. We have made some progress in our bank legislation during that time. If my hon. friend wants to make comparisons, instead of going back 43 years, I think he might take the experience of the past few months when we had a very severe financial stringency, not only in Canada, but still more in the United States, and to a considerable degree throughout the commercial world. There is no government inspection in England, but the English banks came through that period of stringency successfully. I cannot recall any British bank which failed during the recent financial stringency. The banks of Canada have no government inspection, but there was no bank failure in Canada, in the proper sense of the word, during this period of stringency. Across the line they have bank inspection, and in a very large way, and what is the result? Instead of showing that firm standing which Canadian banks have shown, a number of American banks have gone to pieces and depositors have lost heavily. I think a comparison of the experience in the United States and the experience in Canada during the last few months, or the last few years, is a fairer comparison than one going back for half a century. If we look to the history of Can-

adian banking in recent years and to the history of banking in the United States, we shall come to the conclusion that the system of government inspection in the republic fails to bring about the great benefit that my hon. friend is of opinion would follow the adoption of that system by us.

My hon. friend has opened a very large question when he proposes that we abandon the system of Canadian branch banks and adopted the American system of local banks. Undoubtedly there is a local advantage in having a local bank; undoubtedly you may get a local interest. The bank receives the capital of the community, and the bank will be likely to associate itself with the development of that particular locality. We will grant that, but there is another side of the question. My hon. friend has referred particularly to the west. I venture to think that if we had no branch banking system the accommodation in the west during the past few months, insufficient and unsatisfactory as it has been, would have been very much less. In many of the towns of the west to-day where there is a very small population, they have one, or two, even three in some instances, bank branches. They do give in their way as much accommodation as possible. I am not here to apologize for the banks as to whether they gave as much as they ought to have given during the recent period. However, it is possible there is a good reason for the banks not giving accommodation. If they did not have the money they could not give the accommodation. At a time when there was a financial conflagration across the line, it was the part of wisdom in our banks to set their house in order, to look over their accounts, and be ready for emergencies. That means that the banks had to strengthen their reserves, even though they had to deny their customers accommodation which they would gladly have given them. It would be more profitable to the bank to lend its money to customers out west, even at more modest rates than those mentioned, than to keep it locked up in their vaults. They had to keep it locked up thus increasing their reserves, in the interest of safety. It is better by all means that some local interest should suffer, that some good customer, some grain buyer or honest farmer, should be denied a temporary accommodation than that the bank should run beyond reasonable limits; for then, in case of financial storm, our banks would be wrecked as were those across the line. There is something to be said for the course of the banks in that respect. The value of the branch system is that it gathers up money in communities where the demand for money is not great and transfers money to communities where the need is great. The older portions of Canada, probably in ordinary times, have more money than they need. Under the local bank system that money would be largely kept there and would seek employment where perhaps there was no employment for it. Under the branch bank system that money is taken from the community which does not need it, and is transferred to other new and growing communities where the activity is greater and money is more in demand. I think that this system has helped to develop our new lands in the west. The east may possibly have reason to complain that the deposits gathered from the older settlements have been taken out west, but I think that, from that point of view, the west has been the gainer and not the loser. While the branch bank system is not free from defects, I think it has resulted in giving to our new settlements the banking accommodation which they could not possibly have received under any other system.

I have said that inspection has not been a great success in the United States. Yet it might be a success in the United States and not adapted to our conditions in Canada. The branch bank system which we have creates conditions which seem to me to make inspection practically impossible. There are 1,884 branch banks in the Dominion of Canada. One bank, not the largest in its capital, but the largest in the diversity and distribution of its business, has not less than 162 branches. Now, I should be glad if somebody can explain to me how that bank could be inspected by any officer, government or otherwise, under any method which would guarantee the accounts, the resources, the assets of that bank. If we go on the assumption that some bank manager, who wishes to be dishonest, is using the money of the bank for his own ends, gambling in the stock market or anywhere else, it would be easy for him to have the bank inspected in Montreal or Toronto on a given day and the cash and securities counted, and, ten days later, the same cash and securities could be counted again in the bank's office in Winnipeg or Vancouver. Where a bank's business is widely distributed, as in a case of this kind—and while that is a notable case, nearly all our banks have many branches—it seems to me practically impossible to carry out any system of inspection to bring about the results which my hon. friend desires. Realizing that that criticism could be offered, the hon. gentleman says that at least the head office could be inspected. What value would there be in that? If the manager at the head office were desirous of playing pranks with the funds of the bank, and if he knew that the head office was going to be inspected, you may be sure that shady transactions would take place, not at the head office which could be inspected, but at the branch offices which could not be inspected. It seems to me, for these reasons, that bank inspection by the govern-

ment is not so easy as my hon. friend suggests.

There are three interests to be considered in connection with banking affairs. They are all important, but all have not equal claims upon our consideration.

First, there is the interest of the noteholder. If the banks are to be employed to assist in furnishing the circulating medium it is of the utmost importance that the people who receive the notes should have confidence in them, and that, to that end, these notes should be made as secure as possible. Our present banking system seems to secure the notes almost beyond peradventure. We have no loss of notes from the failure of a bank for many years, and practically—though there is no perfection in human affairs—we have security against any noteholder losing a dollar. In fact, the note of a bank that has failed is worth more than the note of a solvent bank. For the notes of a solvent bank do not bear interest, but the moment a bank closes its doors its notes begin to bear interest. Under the revision of the Banking Act, made under my predecessor, I think in 1891, an insurance or guarantee fund was created whereby a percentage of the circulation of every bank is deposited with the government, these deposits becoming a fund for the security of the notes of all the banks. Not a dollar has ever been drawn from that fund, and I trust that ten years hence, when another minister may come to revise the Bank Act, he may have the same story to tell. I think it a wise and excellent provision. It has given great confidence to the circulation of our notes. Practically those notes are secure.

The next interest to be considered is that of the depositor. Now, the depositors are pretty well secured. Experience has shown that under the system of double liability, while shareholders suffer, depositors are well protected. It is many years since a depositor has lost a dollar, and I think the chances are strong that, under the Bank Act, neither noteholders nor depositors can suffer loss. My hon. friend from Stormont said that nearly all our banks were strong and successful. He seemed to make a qualification and made references to one of the banks which I regretted, because I am afraid that those references were calculated to do harm. But I have no hesitation in saying that every bank in Canada to-day gives to the people the most absolute assurance that, as respects its noteholders and depositors, it is sound. I do not think that one need offer any qualification in making that statement.

The third interest is that of the shareholder, and it is the shareholder who in most cases has suffered. Now, I do not say we are not concerned about the shareholders. But I say that his interest is a different one from that of the depositor, and a materially different one from that of the noteholder. The shareholder is the bank; the shareholder is the trader. If he starts up a shop in which to do business, hoping to make a profit, he must take the risks, and if it turns out that in doing business things go wrong, either by his own neglect or by the fault of the managers—that is the directors—why, that is what may happen to a man in any line of business. Surely if he is content to take the profit from the franchise given him, he must face the risk also. I do not say that we should be indifferent to the shareholder's interest. But I point out that he has not the same claim upon our consideration as the noteholder and the depositor. I may repeat that the shareholder is simply the shopkeeper, the trader, the man who does business, and it is for him to see to it that his business is in the hands of competent men, and, as any storekeeper would have to bear the loss from the mismanagement of a foreman, a clerk, a book-keeper or a treasurer, so the man engaged in selling money to the community must take his risk, and if he neglects his business, if he fails to appoint competent men, or if the men he appoints do not do their duty and loss comes to him, we may regret it, but it is only such a misfortune as every man who goes into trade must risk.

Mr. SPROULE. The hon. gentleman (Mr. Fielding) seems to be forgetting one important thing for which the banks were made. How about the user of the bank, the man who requires the circulating medium ?

Mr. FIELDING. The man who uses the notes? I referred to him first. He represents the public at large. Now, with regard to circulation, my hon. friend (Mr. Pringle) mentions that we need better regulations on this subject. My hon. friend from East Grey (Mr. Sproule) referred to that, and mentioned as an instance the case of the Banque Ville Marie where there was a failure and an excess of circulation. I interrupted the hon. gentleman to remind him that that was a number of years ago and that it was in consequence of our experience of that time that the change was made in the Banking Act, so that we now have quite stringent regulations with regard to circulation. These regulations are carried out by the Canadian Bankers' Association and they are carried out most efficiently. I am sorry to find that some hon. gentlemen talk of the Canadian Bankers' Association as if they were a great bugbear, as if there were some great evil. As far as I know the Canadian Bankers' Association have taken a very important place in connection with our banking affairs and I cannot recall any case in which the Canadian Bankers' Association have

taken any step that has not been in accordance with the principles of sound banking and sound business. I know of no grievance whatever against the Bankers' Association. We have penalties and heavy penalties against a bank for over-circulating. We had these in the Act some years ago, but since that time, as a result of our experience, an arrangement has been made with the Bankers' Association by which they appoint an inspector whose duty it is to guard against over-circulation and they have made regulations which I think are as efficient as any regulations which could be made by the government. The officer of the Bankers' Association goes to the establishments in Canada in which bank notes are printed. He takes account of every note that is printed in his establishments. He then goes to every bank and he requires from the manager of that bank an account as to the manner in which these notes have been disposed of. He follows a note from the time it leaves the printing office in Montreal or Ottawa until, the note, having served its day and generation, is destroyed in the presence of officers appointed by the Canadian Bankers' Association. I do not know that any regulation could be made by the government in regard to circulation that would be more efficient than the regulations which have been made by the Canadian Bankers' Association.

Mr. BARKER. They get a monthly statement from every bank.

Mr. FIELDING. Yes. In regard to the matter of loans to directors, that is a question, which, I think, might very well be left to the shareholders themselves. They are the most interested, because they know they are responsible for all of the affairs of the bank. They know that when they put in their hundred dollars or more per share they are assuming a responsibility for another hundred dollars. The hon. member for Stormont (Mr. Pringle) says that he knows that there is a regulation that the shareholders may make by-laws in that respect, but he says that the shareholders will not make by-laws. Well, if the shareholders will not make by-laws the fair presumption is that they do not think that such by-laws are necessary. Therefore, it appears to me that the matter might very properly be left for the banks themselves to deal with as at present. My hon. friend spoke of the banks as favoured institutions which receive a franchise from the government which enable them to make a great deal of money. There is some truth in that. But before he closed he told us that it was very difficult to get people to subscribe for stock in banks now, because of the laws which exist on that subject. I find it difficult to reconcile the two statements of my hon. friend. If the banks have such great advantages everybody should be in a hurry to get in to share the benefits, but if it is true that it is difficult to get people to subscribe for bank shares, I think the proper explanation is that they have regard to the great responsibility which a bank shareholder has to-day, and the greater responsibility and fear that a bank director has, especially after what has happened recently, and that has tended to make bank stock a little less attractive to people than it was a few years ago.

One other question to which my hon. friend referred and one which has received a great deal of attention in the country is the question of call loans in New York. There is no question in connection with banking affairs which has been more discussed, particularly in the last few months, than the one to which I refer. It has been treated in the press widely as an evil. We are told that large sums of money have been sent out of Canada and invested in call loans in New York. The matter has been discussd by the president of the Canadian Bankers' Association, Mr. Clouston, manager of the Bank of Montreal, in a recent address to his shareholders and I would prefer to have him state the matter rather than state it myself. Mr. Clouston says:

I wish to allude briefly to some criticism which has recently been made in the press respecting the practice of Canadian banks in keeping a portion of their reserves in other countries. The aggregate of call and current loans by the banks elsewhere than in Canada, approximating at times $100,000,000 has been cited as evidence that these institutions are not serving the needs of Canadian borrowers as freely as they might were all this money loaned in this country. In the first place let me point out that a year ago, when these loans abroad, in England, the United States and other countries amounted to $96,000,000, the banks had deposits made with their foreign branches of $55,000,000; so that the actual net amount of foreign loans was only some $41,000,000.

That is a very important point of notice, because a great many speakers and writers on this subject take the amount which appears in the returns of loans abroad; they forget to take into account the very considerable sums which the Canadian banks receive from depositors abroad.

Every dollar of this money is loaned on call at short date, upon the most ample security. It constitutes a part of the reserves of Canadian banks. If to-morrow we were to call in the whole of our loans of this class, which are at all times immediately available, the mercantile public of Canada would derive absolutely no benefit from the action. Being a portion of our reserves, the choice given the bank is between retaining the money unproductive in its vaults, or lending it at call upon interest in foreign financial centres. We adopt the latter alternative, as being in the

interest not alone of the shareholders, but of the commercial community of Canada.

Let me illustrate this by a concrete case. A year ago the banks had $96,000,000 loaned abroad; to-day these loans amount to $73,200,000, a reduction of $23,000,000.

In the same period current loans in Canada have been increased upwards of $5,000,000; that is to say, as occasion warranted, the banks have drawn upon their reserves abroad to meet requirements at home, and have carried on the process with as much facility as if the reserves had been stored in their own vaults. Assume that these call loans on readily realizable securities protected by ample margins, had been in the same markets in Canada, and that the money was required for commercial purposes, does any one suppose that the sudden calling in of the loans would not have been attended by most baneful effects? In making such loans here we would probably have enhanced local stock market value unduly, to be followed by a sharp collapse and serious losses upon their sudden withdrawal. The employment by Canadian banks of a portion of their reserves in call loans abroad is not a new policy. It has prevailed from the beginning of our banking, and is in the interest alike of bank shareholders and bank depositors.

Now, the criticism is sometimes offered that that is a mere excuse. It is said that although the bankers state that this money is abroad and that they can bring it home whenever we want it for our own purposes the fact is that we cannot bring it home, it is tied up, we cannot get it and that therefore the argument of the bankers is incorrect. Mr. Clouston deals with that in the concluding paragraph:

I wish also to correct another erroneous impression which appears to have crept into the public mind, and that is, that in consequence of the financial condition in the United States our loans are tied up and the money cannot be brought into Canada. I have no hesitation in saying that there has been no time during the present crisis when we could not realize all our call loans in the United States and transfer the proceeds to England, whence we could easily import gold here if it should be considered advisable. But as we know how liquid and available they are, we continue to retain all that is not needed here, both as part of our reserves and as a valuable aid to our international exchanges.

Mr. SPROULE. I would like to ask the hon. gentleman how that can be reconciled with the statement made in New York that they had arranged to pay call loans, not in cash, but by issuing clearing house receipts.

Mr. FIELDING. Mr. Clouston says that they could arrange to have those loans transferred to England and have the gold brought from England.

Mr. PRINGLE. If it were so easy to get these $73,000,000 back why did the banks come to this government and ask them for an advance to assist in the moving of the crops?

Mr. FIELDING. As a matter of fact, the banks did not come to this government asking us to assist them in the movement of the crop. That will come up later; but since the question has been asked me, I may say that the banks did not come in the way he describes. But Mr. Clouston points out that if the banks had had that money in their vaults in Toronto and Montreal they could not have loaned it to the commercial public in Canada. That point is important. He says that those liquid assets in New York, these call loans, are treated practically as part of their cash reserve. If they were loaned out in Canada and then were suddenly required, and the banks called them in, would it not create a great disturbance to our business affairs? The calling in of that vast sum of money in Canada might be the means of creating financial disturbance. The calling in of that money in New York might cause some financial disturbance, but would not disturb us in Canada. If the statement of the bankers is correct, that these moneys are intended to form part of their reserve, and it is a choice between holding them idle in the vaults in Montreal and Toronto and using them as described, then their use in New York is no damage to the business of Canada. It does not take out money that could be employed, but enables the banks to earn interest on money that would otherwise be locked up in their vaults.

That is the argument of the bankers, and, as a reasonable man, it seems to me to be correct. This attack that is made on the Canadian banks for the business they do abroad leads to but one conclusion, that we should confine the operations of our banks to Canada and say they shall not do any business abroad. It seems to me that every time a Canadian bank establishes a branch in a foreign country and puts up its signboard with the word 'Canada,' that is one of the best advertisements possible for the trade and commerce of Canada; and instead of trying to restrict banks in that respect I should be glad if they would go abroad and to the extent of their resources do business in other countries as well as in Canada. We want the trade of other countries as well as of our own, and I certainly think, in view of the explanation the bankers have given of their position, that very much that has been said in respect to the placing of call loans in New York is the result of misunderstanding, and that when the facts come to be clearly known it will be seen that the investment of these moneys is not in injury to the trade and commerce of Canada but helps the banks while at the same time it does no harm to our business.

I only desire to say in conclusion that I am sure my hon. friend (Mr. Pringle) will feel he has accomplished a purpose in inviting a discussion of this very important subject. The discussion has been full of sug-

gestions to us all. Although I have given my impressions on one or two questions, I can assure my hon. friend that I shall approach all questions of this character with an open mind. We may have to make some change in the banking law, not possibly on the lines of the suggestions made, this year. Be that as it may, the time will come in a couple of years when a general review of the Banking Act must take place, and I hope my friend will wait until then for the further consideration of the suggestions he has offered.

Hon. GEO. E. FOSTER (North Toronto). I am very glad indeed to see the generally reasonable and able manner in which this question has been discussed. I am glad my friend (Mr. Pringle) has brought up the question. It is true we have had a tradition in this country—and on the whole I think the tradition is one that we had better adhere to—that once every decade it is necessary to revise our position with reference to the Banking Act and to the regulations controlling our banks. I would be sorry to see the Banking Act of the country a matter of public discussion or discussion in the House every year or two, with a possible amendment each year. We have taken a conservative and a very wise course in making periodical revisions, but rather settling down to the idea of making these every ten years. My hon. friend (Mr. Pringle) has done a good thing in starting a discussion on this matter for two reasons. In the first place, a good deal of discussion has arisen in the country itself. Men are giving more thought and bestowing more discussion on banking matters from year to year. They will continue to do this as our business increases and as the relations between all these different interests and the banks come to be more diversified and more close and in many respects more pressing. It would be too bad if, after the bestowing of this amount of thought and discussion upon this subject in the country, we, the representatives of the people in a parliament which has the final disposition of the matter of legislation with regard to banks, should not also do our part towards an intelligent discussion and appreciation of many things concerned in the relation of banks to the general business of the country. Banking is in some respects a technical business, in other respects it is something which touches the plain common business of almost every man in the country, and is doing so more and more. By bestowing a little thought and attention on the Banking Act in all its diversified aspects a little before the time we make the decennial revision, we gain. So I am glad we have undertaken in a very temperate manner a discussion of some questions which are troubling the country and which will demand solution at the hands of this House when we come to make the revision a year or two hence.

The Finance Minister and I often agree and often do not altogether agree; I have listened with a great deal of pleasure tonight to his statement on the different points brought up and in the main I agree with the position he has taken and the conclusions he has come to. I would like to see, if possible, a better audit or inspection of the Canadian banks. When we come to think of the basis upon which banks are found, not being separate and single institutions but having diversified interest and extended branches, the problem that arises is how to reconcile two things. First, you must make your inspection or audit, whatever you please to call it, so thorough that it will be actually reliable, for in proportion as a government undertakes to supervise, inspect and audit a public institution, to that extent the people who have dealings with that institution tend to rely more upon the government and less upon other methods of getting at that very desirable end; and it would be nothing less than a disaster if an inefficient result should after all be obtained by what, on the face of it, seems to be a perfect system, or at least the best system, of government inspection. That would be a disaster because it would tend to prevent the people themselves who run the business, who are the shareholders of the banks, from giving as much of their personal attention towards their own business as they ought to give. That is one of the difficult things when you talk of government inspection and of a government undertaking to come to a conclusion and lay it before the people as to the state of the banks of the country which shall be reliable and upon which they shall found their trust. On the other hand, I know the difficulties that are met when we ask to let the shareholders of banks manage their own business. The shareholders of a bank are widely scattered and it is absolutely impossible for them to attend in any large force the annual meetings of the bank.

In practice the shareholders who get together are usually the men in the locality where the head office is and where the meeting is held, and consequently there is not the same intelligent influence exerted upon the directors by their shareholders that there is in a smaller business with less scattered stockholders. But as to a choice between the two, so far as I can see at present, I would press strongly that the shareholders should be left to look after their own business, for the government, unless it can find some thoroughly perfect method of making an inspection which shall be thorough and which shall carry to the people not only the face of security, but the absolute essence of security, would find it a pretty difficult and dangerous thing to undertake. With reference to the reserves and call loans, that is another matter with which I agree very largely with the Minister of Finance. These reserves are to be kept

somewhere. We may keep them in the vaults where they will gain nothing, or we may keep them where they will be equally safe and be producing something for the shareholders of the bank, and, therefore, for the general business interests of the country. There is great force, I think, in what Mr. Clouston says; in fact, I think he puts in an absolutely convincing manner the advantage of keeping a portion of the reserves of the country in a great mart of securities like the city of New York, or if you could be near it, like the city of London, rather than to run the risk of those reserves being engaged in and liable to be withdrawn suddenly from the security mart in this country, where, if they are so withdrawn, disaster is very likely to follow. But these are very large questions, and we cannot follow them very far at this late hour of the evening. When I read the resolution of my hon. friend from Cornwall, 'that in the opinion of this House it is an opportune time to consider the advisability of revising and amending the Bank Act,' with the lines upon which he thinks that consideration should be given, I cannot see very much reason to vote against it or to disagree with it. It is always advisable for the members of this House to fix their minds upon the advisability of amending or revising an Act, especially one that is within a year and a half or two years of the time when, according to our usage and practice, it probably will be revised, when our bank charters expire, and we must have legislation to put them in force for the succeeding term of ten years. For that reason I do not see quite why the Finance Minister should object to the passage of the resolution. The Finance Minister says he is considering the advisability of making some amendments this year. If he does, I hope they will be few, because I think we should have infrequent revisions of the Bank Act, if possible not oftener than every ten years. It would be pedantic to say that no circumstances could arise to make it necessary to make the revision at other periods, but unless some good reason can be given for this, I would like to see the old practice kept up. On the other hand, if the resolution is passed, I do not know that my hon. friend would have attained more than he has attained, which has been to very effectively call the attention of the House to this matter and have these various points discussed, as they have been by himself and others, very thoroughly, very moderately and I believe with good effect both in the House and in the country. The first step in the discussion of a large subject is not by any means the finality of it. It does good to allow the ideas that come out in the first discussion to rest and mellow in our minds for a while and thereby bear a fuller fruit. I do not see any great objection to passing the resolution, neither do I see that those who have it at heart would gain more by passing it, because they have done what they have set out to do—fix the mind of the House and the country on the very important points they have discussed.

Mr. DUNCAN ROSS. I have a large amount of very useful information to impart to the House on the question so ably introduced by the hon. member for Cornwall and Stormont, but as I do not want to encourage the House to get into the habit of having all night sittings, I move the adjournment of the debate.

Motion agreed to, and debate adjourned.

Mr. FIELDING moved the adjournment of the House.

Mr. FOSTER. What is the business for to-morrow?

Mr. FIELDING. The French treaty and several Bills on the Order Paper, and after that Supply.

Mr. FOSTER. Which Supply?

Mr. FIELDING. I think it is expected that the Minister of the Interior will take up some of his estimates.

Motion agreed to, and House adjourned at 12 midnight.

---

## HOUSE OF COMMONS.

TUESDAY, March 3, 1908.

The SPEAKER took the Chair at Three o'clock.

### INSPECTION AND SALE ACT AMENDMENT.

Mr. WILBERT McINTYRE (Strathcona) moved for leave to introduce Bill (No. 114) to amend the Inspection and Sale Act.

Mr. FOSTER. We ought to have a little explanation.

Mr. WILBERT McINTYRE. This Bill proposes to amend section 119 of chapter 85 of the revised statutes of 1906, under the paragraph entitled 'oats.' As most of the members of the House are aware, this last season has entailed on the farmers in certain districts of the west considerable hardship, owing to the peculiar reading of particular sections of the Act. There has been a frost in that country which has injured, to some extent, a great deal of the oats. But as all the grades comprised under this section of the Act are to be sound, when any kernels of the grain are found to be affected by frost they are classified as rejected. Then it is found that in a great many cases carloads of grain have been

called rejected when only a few kernels were affected. The rejected material has been graded a great deal lower than the lower grades of the so-called sound oats, although great quantities of these so-called rejected oats will weigh as high as 40 or 42 pounds to the bushel, whereas the lower grades of oats under this section will weigh as low, according to the standardization given here, as 34 and 32 pounds. An appeal was made, after the rejected material had become depreciated in value, to the standardization board to arrange that the so-called injured grain which was suitable for feed could be graded, and it was found that by section 119 of this Act oats were excluded from a temporary classification by the standard board. I will read the portion referred to, section 119, chapter 85:

Should the climatic or other conditions result in the production of a considerable proportion of grain, other than oats, not capable of being included in the classification provided for in this part, the grain standards board for the division should be convened for the selection of the commercial grades and samples whenever the chairman of the said board is notified by the chief inspector or five members of the said board, that such a course is necessary.

The phrase 'other than oats' precludes the possibility of oats being treated in this way. The Department of Trade and Commerce under which the grading of grain comes, were appealed to, and their reply was that they were unable to act, and that only an amendment to this Act would bring about the desired result. The question then arose whether it was advisable to eliminate the phrase 'other than oats' in section 119, or provide a grading which could be utilized any year in which it would be necessary, that is, have a permanent grade for feed oats, or simply have this phrase eliminated. On that point the advice of various farmers' associations in the new provinces was sought. I have letters in my possession at the present time which will go to show that the farmers do not have the greatest confidence in the standardization of temporary grades by the Grain Standard Board. What the farmers are asking for in that country is a permanent grade for these injured oats. When the Royal Grain Commission was in Alberta the evidence given before it was largely arranged by the Alberta Farmers' Association, and the president of that association asked at that time, in conjunction with others, that there be an amendment eliminating the phrase in section 119. He writes me on February 8 of this year as follows :—

Since writing you before re the grading of oats. I may say that we have had a meeting and I have read a letter from Mr. Horn, the chief inspector, and I am now of the opinion that instead of asking for additional power to be given the Grain Standard Board, we should have asked for a straight amendment to the Act.

I shall discuss this matter further at a later date, but I wish to make a few remarks regarding the Bill as it will appear when it is printed. In addition to what I have stated with reference to providing a grade for feed and injured oats, there has been a special request from Alberta to have the highest grade of oats raised, that in the highest grade of oats the weight be raised as high as 42 pounds to the bushel and that this grade be known as Alberta Extra No. 1. The whole nomenclature with reference to grades, as it appears in section 137 will, under this Bill, be changed. If I insert at the request of the Alberta people, Extra No. 1 Alberta, 42 pounds to the bushel, you will have also Manitoba and Alberta extra grades and various other grades that will be extremely confusing. I have therefore, in the Bill, repealed the whole section and reinserted it under a new nomenclature —reinserted all as western oats with exactly the same grading as you will find in the present Act, but, under a different name and under a different numbering, the first number being Extra No. 1 western oats with a minimum of 42 pounds to the bushel. In addition I have added three grades under the term of feed grades. There is Extra No. 1, 37 pounds to the bushel, No. 1 Feed, 34 pounds to the bushel, both of which are clean and free from other seed, and sound except as to frost. There is also grade No. 3 oats, the minimum being 32 pounds to the bushel. There are in all then submitted eight grades; five of them are sound and three of them are feed grades and sound except as to frost. I will take the matter up more fully later on.

Motion agreed to, and Bill read the first time.

## ASH WEDNESDAY ADJOURNMENT.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) moved :

That when this House adjourns this day it stand adjourned until Thursday, March 5.

Motion agreed to.

## CONSTRUCTION OF DRY DOCKS.

Hon. W. S. FIELDING (Minister of Finance) moved :

That on Thursday next the House go into Committee of the Whole to consider the following proposed resolution:

1. Resolved, that it is expedient to authorize the repeal of chapter 116 of the Revised Statutes, 'An Act to encourage the construction of dry docks,' and that in substitution therefor it be provided that as an aid to the construction of any dry dock, approved as to location and capacity by the Governor in Council, a subsidy of three per centum per annum of the cost of such dry dock be paid out of Consolidated Revenue Fund, for twenty years

after the completion of the work, to any incorporated company, approved by the Governor in Council, which shall enter into an agreement with His Majesty to construct the same with all necessary equipments, machinery and plants, the cost on which subsidy is to be calculated to be determined by the Governor in Council, from the plans and specifications and reports thereon before any agreement for construction is entered into, the Governor in Council being satisfied that such dry dock is needed in the public interest; and the total subsidy payable per annum not to exceed forty-five thousand dollars.

2. Resolved, that for the enlargement and extension of any dry dock subsidized under chapter 17 of the Acts of 1882, 'An Act to encourage the construction of dry docks by granting assistance on certain conditions to companies constructing them,' and any amendment thereof, a subsidy of three per centum per annum of the cost of such enlargement and extension be paid out of the Consolidated Revenue Fund, for twenty years after the completion of such enlargement and extension, to any incorporated company approved by the Governor in Council, which shall enter into an agreement with His Majesty to enlarge and extend any such existing dry dock, and to furnish the same with all necessary equipments, machinery and plants, the cost on which subsidy is to be calculated to be determined by the Governor in Council from the plans and specifications and reports thereon before an agreement for enlargement is entered into, the Governor in Council being satisfied that such enlargement and extension is needed in the public interest; and the total subsidy payable per annum in respect thereof not to exceed fifteen thousand dollars.

3. Resolved, that the work of construction or enlargement be done under the supervision of the Department of Public Works.

4. Resolved, that the Governor in Council be empowered, after a subsidy becomes payable, if such dry dock is not in a state of efficiency and repair, to take possession of the same, and expend out of Consolidated Revenue Fund, a sufficient sum to repair the same, and thereafter operate such dock until the cost of such repairs, after payment of operating expenses and maintenance, is received by the Crown.

5. Resolved, that the tariff of tolls and rates for the use of the dock prescribed by the company, shall be subject to the approval of the Governor in Council, and that the company shall make an annual statement to the Governor in Council of the operations of the company with a statement of receipts and expenditures in detail.

He said: I have to state that the purposes of this resolution have been made known to His Excellency the Governor General and that he recommends it to the favourable consideration of the House.

Motion agreed to.

## REPORT OF CIVIL SERVICE COMMISSION.

On the orders of the day being called:

Mr. FOSTER. I would like to ask the hon. Minister of Finance if he can give the House any information as to when we may expect the Civil Service report.

Mr. FIELDING. Since the last inquiry was made I communicated with Mr. Courtney and I received a note in reply stating that the matter is engaging their close attention. He hoped to have the report ready very shortly although I do not think he mentioned a particular date.

## BUSINESS OF THE HOUSE—BUDGET SPEECH.

Mr. FOSTER. I would like to ask the hon. Minister of Finance whether he has come to any conclusion as to when the budget speech will be delivered.

Mr. FIELDING. I have regarded the French treaty, dealing as it does with fiscal matters, as practically a part of the budget and I intimated to my hon. friend (Mr. Foster) some time ago that as soon as that was disposed of I would make an announcement at an early date respecting the budget. If the final stage of the French treaty is reached to-day, before the end of the week I hope to be able to make an announcement as to the date of the budget. It will probably take place very shortly.

## ROYAL GRAIN COMMISSION.

Mr. LAKE. I would like to ask the hon. Minister of Agriculture (Mr. Fisher) whether he is now able to give an answer to the question I asked yesterday as to the printing of the evidence taken before the Royal Grain Commission.

Mr. FISHER. I have not been able to get an answer to the hon. gentleman's question but I will find out on Thursday.

## YUKON TERRITORY—THE FINNIE-PERRON CASE.

Mr. THOMPSON. I would like to ask the hon. Minister of the Interior if he has any information regarding the Finnie-Perron case.

Hon. FRANK OLIVER (Minister of the Interior). The papers in this case were moved for some time ago, they have been in course of preparation and they will very shortly be brought down. The case grew out of a complaint against Mr. Finnie, a clerk in the Gold Commissioner's office there, the basis of the complaint being that by registering an incomplete document he gave priority to a certain right in regard to a certain property. The complaint was made by a Mr. Perron. It was dealt with by the Gold Commissioner and the Gold Commissioner found there was no ground for the complaint. Mr. Perron repeated his complaint and a Royal Commission was issued to Judge Craig, a very lengthy investigation was held with the result that Judge Craig found that the document was properly

registered, that it was registered by Mr. Finnie after consultation with the assistant Gold Commisioner, that this fact was within the knowledge of the complainant, that the complainant had failed to establish his allegations and that there was no ground of complaint against Mr. Finnie.

## LAND ALIENATED FOR COLONIZATION PURPOSES.

Mr. SPROULE. I asked the Minister of Interior a question the other day in regard to a return which was ordered some time ago as to the amount of land set apart or alienated for colonization purposes. He informed me that he thought he would be able to give the information in a day or two. Has he any further information to give with respect to this matter ?

Mr. OLIVER. I am sorry that I have overlooked the question but I will promise my hon. friend that I will be able to give him the information on the next sitting day.

## THE FRANCO-CANADIAN TRADE TREATY.

Hon. W. S. FIELDING (Minister of Finance) moved the third reading of Bill (No. 57) respecting a certain convention between His Majesty and the President of the French Republic.

Mr. F. D. MONK (Jacques Cartier). I have a few words to say on the motion for the third reading of this Bill. I unfortunately was unavoidably absent when the Bill was previously discussed, and as there are one or two important matters which have not, I think, been mentioned by other speakers, I feel justified in calling attention to them for a few moments. It seems to me that the French treaty submitted to us for approval has been very well received on this side of the House. During the debate on the address at the opening of parliament I commended the action of the government for bringing its influence to bear to establish better commercial relations with France, and I have heard my hon. friend from St. Antoine (Mr. Ames), who represents an important commercial division, also commend the treaty. Now, if a treaty with a friendly nation is laid before us for approval, while we approve the principle of negotiating with that nation, it is, I believe, our duty in reference to that nation and to the proper discharge of our own duties, to offer some remarks upon the treaty and to criticise it in a fair spirit if we should deem criticism necessary. In France this treaty was discussed by the Chamber of Deputies at length. Mr. Pichon, one of the plenipotentiaries charged with the negotiation of the treaty, himself offered some observations upon the treaty which I think one could call criticism. Is it the pretention of hon. gentlemen opposite that we should have allowed such an important act of administration as that to pass through parliament without offering any comments upon it whatever? And yet that seems to be the position taken by some people. I noticed it when at the very beginning of the session I moved for a committee to look into the details of the treaty. The idea seemed to horrify the Minister of Finance ; he seemed to think it was an outrage upon the liberty of the government to announce its fiscal policy in this House, and yet commercial treaties between Great Britain and other countries are examined every session by committees of the House of Commons in England. This very treaty itself will not pass through the French chamber without being submitted to a most crucial examination by a special committee, and in France it is considered a great honour to be chairman of any committee appointed to examine a treaty of this kind. Again, we all know that under the constitution of the United States no treaty passes the Congress without examination by the Senate Committee on Foreign Relations. During the last four or five years the Americans have concluded three conventions of a commercial nature with France, and all of them have had to pass that test. What do we in this parliament know about the details of this treaty with France? I venture to say that nothing has transpired here which would go to show that any member of the House, including the members of the government, has absolute knowledge of the different items mentioned in the treaty, and yet such knowledge could be very easily acquired if we had had an opportunity to examine competent witnesses before a committee. But some people have gone further, and they have contended that there has been an absolute hostility on this side of the House to this treaty ; a sinister plot to defeat the treaty or, at any rate—to quote an expression which has been used—weak revenge on the two gentlemen who largely participated in the negotiation of the treaty.

Sir WILFRID LAURIER. Hear, hear.

Mr. MONK. Does my right hon. friend say 'hear, hear'?

Sir WILFRID LAURIER. I thought so.

Mr. MONK. That seems to me a very extraordinary position to take. In this morning's 'Le Canada' of Montreal, the organ of my right hon. friend in that city, it discusses the incidents of last week—in which, I regret to say, some supporters of the government endeavoured to block the business of this parliament—and 'Le Canada' says :

All the honour of this struggle belongs to honesty and merit; all that is unworthy falls back on the accusers, impudent, mendacious, and clowns of the Tory camp to which Messrs. Monk and Bergeron have not hesitated to ally themselves. And if one were asking

finally what was the object of the opposition in all this unworthy comedy there is but one and that is the one which was murmured on all sides—so satisfactory, so splendid have been the effects produced by the new French treaty that the opposition has endeavoured to spoil the merit which belongs to Hon. Mr. Brodeur. These tactics have totally failed. The hon. Mr. Brodeur preserves with his colleague Mr. Fielding——

I notice that in all these criticisms my hon. friend the Minister of Finance occupies a very secondary position.

—all the honour of this treaty which they concluded alone with a foreign government, establishing thus an historic date in the history of our fiscal liberty and the recent struggle has only increased this honour.

Another gentleman, writing in the organ of my right hon. friend at Quebec——

Sir WILFRID LAURIER. I seem to have a good many organs.

Mr. MONK. This gentleman goes a little further, and in the 'Le Soleil' of last Friday he says:

Hon. Mr. Brodeur has taken a great part in the negotiations of the Franco-Canadian treaty. He brought back from Paris an extremely advantageous and popular measure. He must be crushed. That is why the opposition has so violently attacked him. It will all be in vain, it will destroy itself. The members of the district and of the province formed a hollow square around the hon. Mr. Brodeur and sustained him.

Mr. FOSTER. Very hollow.

Mr. MONK. I quote this to show what kind of stuff is served out to a certain public, and which goes on uncontradicted. I will not refer to the attacks made upon myself, because I do not think my personality is of much importance, but I have been personally very severely attacked, and I don't know why. Is it for having commended the treaty? Is it for having stated that it was most satisfactory to know that the treaty of 1893 was going to be amended in order that we should have perhaps more extended relations with France? In an article again in the organ of my right hon. friend, 'Le Canada' of Montreal, on the 10th of January, I am accused in a very conspicuous way of 'being a traitor to my own province and to France, and of lacking that Latin element in my mental constitution which it is my misfortune to lack, but which makes me most unacceptable to the people of my province.' The article finishes by stating that I am more to be pitied than to be blamed; that it is a mental defect regrettable in anybody who happens to live in the province of Quebec. I must say that I wonder what is the matter with people who thus appreciate, not only my conduct, but the conduct of all those who sit on this side of the House. I am not a doctor nor a zoologist, but it seems to me there is something the matter with the mental condition of those who, in discussing the manner in which we have criticised this treaty, lend themselves to such absurd comments.

In view of these repeated attacks and of these statements which are, I regret to say, uncontradicted and which have been made for months in my own province, I was induced to look up the attitude which my right hon. friend the Prime Minister took when the treaty of 1893 was brought down to the House. I looked up the very extensive printed correspondence preceding the conclusion of that treaty, which as the House will remember, was made in Paris by Sir Charles Tupper in 1893. The correspondence, in my estimation, does the very greatest credit to Sir Charles Tupper. It shows that he was extremely anxious to conclude that treaty on account of the peculiar relations existing between old France and the people of Quebec and it indicates an extreme solicitude as to all the conditions of that treaty. I do not wish to quote from that correspondence as it is too long, but it indicates clearly that in the conclusion of that treaty he was left absolutely free by the British government, that he negotiated it and concluded it himself. But what was the attitude of my hon. friend (Sir Wilfrid Laurier), what was his Latin mental condition when the treaty was brought down to this House. I was surprised to find that he opposed it hammer and tongs from the very beginning. He found it a ridiculous treaty and supported amendments having for their object the defeat of the treaty. I do not wish to quote the speeches of my right hon. friend on that occasion, but certainly if any man who criticises the present treaty can be accused of hostility to France and of lacking mental stamina, my right hon. friend on that occasion was not exempt from that accusation. He pooh-poohed that treaty when it was first brought down and all through the discussion. I shall not quote all that he said on that occasion, but let me just give a sample. At page 5650 of the 'Hansard' of 1894, when the treaty was brought down for ratification, he said:

For twenty years and more, we have been endeavouring to negotiate such a treaty, and after twenty years we are in the presence of this treaty which the hon. gentleman, at one time—I will not say in a moment of weakness, but of expansive frankness—characterized as 'the little French treaty.' After twenty years of effort, the mountain has produced this mouse, and certainly a little treaty it is. If you look at it what do you find? You find that after twenty years of effort on the part of our diplomats to induce the French nation to give us something like reciprocal trade, they have obtained from the French government their consent to sell under certain conditions in this country: wines, soaps, nuts, almonds, plums and prunes. There is nothing else in the treaty on the part of France. After twenty years of effort that is all we have to show, and it took the govern-

ment something like eighteen months to make up their minds as to whether or not they would ratify that 'little French treaty.' The right hon. gentleman has taken exception to the charge that his government has been vacillating in the matter. Well, sir, let us say: they have not been vacillating, but we will say: that for eighteen months they have been considering whether they would ratify that 'little French treaty' or not. One whole session passed away; four months of another session passed away, and after eighteen months of consideration they have at last made up their minds to ask for ratification. The right hon. gentleman said they were not vaccillating but that they were considering. They were considering for instance whether or not the expression:

'Poissons conservés au naturel,' and 'Homards et langoustes conservés au naturel,' have been properly translated into English, and after giving this matter due consideration they have come to the conclusion that indeed the translation was right. But, sir, the right hon. gentleman is mistaken. He does not give to himself or to his government the credit to which they are entitled. It is not this session only that the government found out what is the true meaning of 'Poissons conservés au naturel,' and 'Homards et langoustes conservés au naturel.' We had it last year. We then had the interpretation which the hon. gentleman said we only had this year.

The rest is very much in the same style, not one word from my right hon. friend to say that he considered it an advantage that we were thus negotiating for the first time a treaty with the country of origin of many of us, of most of us in Quebec—not one word to commend the efforts made by Sir Charles Tupper, as shown by his correspondence, to give the treaty the largest scope possible, everything condemnatory of the treaty. There is not one word of that warm feeling in which these gentlemen who write in the papers of my right hon. friend find I was lacking but general condemnation. Finally, after all this condemnation and all the attacks upon the government of the day and upon Sir Charles Tupper in particular, silently and quietly, my right hon. friend voted for the treaty and when the two eminent negotiators who negotiated this treaty were in Paris, the very first demand they made was upon the French plenipotentiaries was what? The continuation of that treaty of 1893, which the French immediately refused. It seems to me fair at this stage, at this third reading of the Bill, to point out the attitude of hon. gentlemen on this side of the House. There have been no amendments, no factious opposition of any kind whatever, but some freedom of speech, some observations. If we had not said a word on this side of the House we would have been attacked as treating unworthily this very instrument which we are asked to ratify. We have offered some comments. I heard what was said by my hon. friend from St. Antoine division of Montreal (Mr. Ames) with respect to some articles, but for my own part, leaving aside the absurd, ridiculous, jingo exaggerations to which I have referred as appearing in certain papers, I would subscribe to the opinion expressed upon this treaty by the Montreal 'Herald.' I do not suppose anybody will suspect that organ of hostility to this government. With some qualifications, I think it spoke properly of the treaty. What did it say?:

The treaty with France represents an honest effort and probably a successful one, to expand the opportunities of men engaged in several branches of Canadian trade—some of them important now, many of them promising to become more important as the years pass. We have everything to gain, nothing to lose, by its operation.

Well, and good. Still one can point out what Mr. Pichon declared, when commenting on the treaty before the French Chamber, namely, that perhaps if we had had a less plentiful list of articles and more concessions of a more solid character we could do more business. Surely there is no harm in quoting such a very high economic authority throughout Europe as Mr. Stephen Pichon. Let me quote his words, and I quote his language in English, but anybody who will read his speech on that subject in French and who knows how supple is the language used by high French diplomatists will readily realize the truth of what I have just said, namely, that Mr. Pichon considers that what is really valuable in the treaty to France is the special list. In other words, he did maintain and experience will show—because in commercial conventions it is only experience which can show their value, experience will show that Mr. Pichon, and I may modestly say myself, on this occasion were right—that the special list was really the valuable one. Speaking of the ninety-eight articles on which the French obtained concessions he said:

If we had limited ourselves to these, the advantages we would have drawn from this new convention would have been very insufficient. Therefore we have made special efforts to obtain certain special favours in order to develope our commerce on special articles of our own production. Canada having consented on twelve articles, the most important of our exportation to notable reductions in its intermediate tariff, it is from the consolidation of these reductions, we have by our third list derived real and substantial advantages.

On the general concessions, which placed a number of French articles in the intermediate tariff, he seems to have placed very little reliance for any great benefit to France. It is on the special list that he relies, and in my opinion though our general list reads well and although it may show to the public something which appears at first sight considerable, it is regrettable that we do not consider the advisability of having less numerous concessions, but concessions which would be of a

more substantial character. In this regard I think our French negotiators acted more wisely than our own.

What finally are the great advantages which we derive from our own list? I have seen it frequently stated in the newspapers in my own province since the return of these gentlemen that this treaty is a great boon to our agriculturists. I shall not take up the time of the House reading these newspaper articles. They are most amusing. They say that from now forward the French people are going to feed on our potatoes and that we are going to furnish them with wheat, flour, vegetables and live and dead meats. Is there anything in this contention? I do not think so. I think the agriculturist has been carefully safeguarded by the French negotiators, and I do not blame them. Mr. Pichon, foreseeing that if he made any serious concessions on agricultural articles, he would be be met with frank opposition in the French Chamber the moment he exposed the French treaty, immediately met the point by saying that as regards agriculture there was no need for any alarm. He stated this beforehand so as to forestall any criticism. France is the greatest agricultural nation in Europe. She exports an immense quantity of agricultural produce. She is a protectionist nation upon agriculture as well as other lines, and the very last concession she would be expected to make would be a concession in her tariff on agriculture. Mr. Pichon, the French plenipotentiary and also a member of the French cabinet, states that in limine, at the very beginning of the discussion :

> We have consented to no alteration of the duties on our minimum tariff, and it is interesting to remind the chamber that for the most part, on agricultural products and particularly cereals, we have but one tariff. On those articles we have taken no engagement to benefit the Dominion. Any reduction in the tariff, as well as these reductions which appear to be granted can only become effective if our own tariff be reduced.

If you take the trouble to look through the list of agricultural products you will find there is very little in that list indeed. Had we had a committee to look in the matter we would have obtained evidence on that point. I do not blame our own representatives. The difficulty was one which could not be overcome. But is there any object in deceiving the people? Are we going to do any business with France in horses with a duty of $30 per horse against us? Take cheese, butter, chickens, live or dead meats, you will find the same difficulty. It would be a mistake, I think, on my part at this stage to take up these articles one by one as hon. members can do it themselves by looking up the tariff. There is no possible commerce that can be developed with France in these products. The idea that the French people will live on our potatoes and vegetables is ludicrous. Why, they export enormous quantities of these products to England and all the neighbouring countries. If you take up grain, the matter is still less doubtful. Wheat, barley, oats and every cereal is on their maximum tariff. There is no minimum tariff with regard to these. It is only in case they should reduce their tariff—an eventuality which is most improbable—that we can benefit in any way. Consult anybody in Montreal who has experience in exportation of agricultural and dairy products and he will tell you without hesitation that there is very little, if any, business to be done with France in these articles.

I will not quote the articles of the government organs in the province of Quebec which have hailed this treaty as an immense boon and a great benefit to our agricultural classes. I say that it is sufficient to look at the tariff and to know something of the conditions prevailing, to arrive at the conclusion that we cannot develop any trade in that line with France. If you look at lumber, it is a somewhat intricate matter and more complicated. There are a number of lumber articles mentioned in the treaty. I could take them up one by one, but I do not wish to do so at this stage of the Bill. But let any man who wishes to investigate that question take this convention as regards lumber and ask any man concerned with the lumber business in the city of Montreal, or in any of our great centres, and he will tell you there is very little in it. We have never done very much business in lumber with France. There was a little business in the more expensive lumber, such, for instance, as oak, when wooden-shipbuilding was carried on in France. But all that has disappeared, and what lumber they have not in France—and they have a great deal of it—they import from the Baltic. We cannot compete with the Baltic lumber with such a tariff and the freight rates. It would only be some accident that would give us opportunity to send lumber to France in any quantity. I was not present when the Bill was read the second time, but I believe it was stated by my hon. friend from Hamilton (Mr. Zimmerman) that we were going to develop a very large business with France in agricultural implements. Is there any justification for that? I do not think there is. Why should the Americans come to Canada, as was said here by my hon. friend, and manufacture agricultural implements to send them to France? I do not look for any such move on the part of our American friends. They have been concluding treaties with France, several of them, within the last four or five years. They had a commercial treaty in 1898; they had one in 1902, and they concluded one in January last. With this facility of concluding treaties with France—I will not go into

the details of these treaties; I do not know, as a matter of fact, I confess, how agricultural implements stand on these three conventions, but that might be investigated—does any hon. member believe that the Americans, if they desire to export agricultural implements to France, will take this roundabout way to develop that trade? Not at all. If they are not in a position to carry on the trade at present, what will they do? They will make a new convention with France and save themselves the trouble of coming through Canada to do business with the French nation. There is no doubt about that. So, I conceive no very great hopes of Canadian trade with France in agricultural implements. A number of the other articles upon this list are absolutely unnecessary. Any member of the House who reads the list must see that there is no business to be done in these things. Are we going to do any business with France in the skins of Asiatic mouflons, for instance, or the furs of certain animals that are not found in this country? Are we going to trade in pineapples with France? And brandy—I find brandy on the list of articles which we may export to France under this treaty. I do not suppose that anybody thinks we are going to carry coals to Newcastle or brandy to France where the article is produced in the first instance. I say—without wish to throw any discredit upon the treaty, but it is only repeating what I said from the first—that, while, particularly under the circumstances, it was a good thing that we should conclude a treaty with France, and I hope we shall make many more, yet we should have aimed at having a shorter list and more substantial advantages. Because I say—and the proof is in Mr. Pichon's speech—that, finding, with regard to the ninety-eight articles he had placed on his list, there was really no substantial advantage, he brought all the force of himself and his colleagues to bear upon the special list where really there are substantial advantages for the French nation. I am glad of it. We could, it seems to me, do a considerable business with wood pulp. They make a great deal of paper in France and consume a very large quantity of wood pulp. I think that if we had a fair opportunity with the article we could produce here and of such a kind as is desired by the French manufacturers, we might develop at once a large trade with France. There are other articles, it seems to me, we might send in large quantities to that country; nickel matte for instance, asbestos; and, it seems to me—though I do not pretend to be specially qualified to speak on the subject—steel and iron in crude form, such as ingots and billets. In some descriptions of ores we could do a good business—cobalt and cobalt oxide and others. Without detaining the House longer on that point particularly, I merely say that I regret we have not aimed more directly at having a special list where the advantages would have been immediate, would have been evident and in which we could have developed a very considerable trade with the French nation.

Now, Sir, one word as regards that part of the treaty which concerns direct shipments. That seems to be involved in some obscurity to which I desire to call the attention of the House for one moment. This is covered by article 8 of the treaty. Speaking generally, I infer from that article, that, in order to benefit by the conditions of the treaty, we must ship directly from one of our own ports to a French port. Let me quote article 8 as regards these shipments:—

To enjoy the benefits of the afore-mentioned tariff advantages. Canadian products shall be conveyed without transhipment from a Canadian port or from a port of a country enjoying the French minimum tariff to a port in France, Algeria, the French colonies and possessions and the territories of the Protectorate of Indo-China.

Why have we placed that restriction? That is my first question. It seems to me that the object of this treaty is to develop and multiply our communications and trade exchanges with France. It seems to me we should have given every facility to the shipper. The object of the treaty is not to increase the importance of our ports so much as to increase the exchange. Why, then, restrict the shipper in his mode of shipment? There will only be one line of steamers and one company conveying our trade to France. We are, therefore, according to the profession of the government, restricted to that line. We must ship directly from Canadian ports to France. This restriction was asked for by our own plenipotentiaries. The French representatives did not ask for that, strange to say, for they, as a rule, are jealous of the direction of trade. In this instance they did not ask it, it was asked for us. But are we by that clause bound to ship directly from Canada? Can we not ship through the United States? As I read the treaty I think we can and if we can, if under the terms of the treaty we can ship by Portland, Boston and New York, what becomes of the argument of the government? That clause says that you must ship 'from a Canadian port or from a port of a country enjoying the French minimum tariff.' The United States enjoys the French minimum tariff, therefore, why can we not ship from a United States port? That is the question to which I have mainly sought a solution, and I hope the government will explain the objection before this discussion closes. The Americans are under the minimum tariff.

Mr. PATERSON. No.

Mr. FOSTER. With reference to certain goods ?

Mr. MONK. In Kelly's Customs Tariffs of the world, the United States are given as being under the French minimum tariff.

Mr. FIELDING. Only for a limited number of things.

Mr. MONK. I do not think there is any country on the French minimum tariff for all things.

Mr. FIELDING. Yes, Great Britain and Germany.

Mr. MONK. I doubt it.

Mr. BRODEUR. They do not enjoy the old French minimum tariff.

Mr. MONK. Neither do we.

Mr. BRODEUR. Then the clause does not apply.

Mr. MONK. Perhaps it does not, but that is a question. As I said, according to Kelly's Customs Tariffs of the World, the United States are enjoying the French minimum tariff.

Mr. FIELDING. That cannot be possible, I mean to say as to the whole minimum tariff. Undoubtedly there are some items. The hon. gentleman stated that the United States had the French minimum tariff.

Mr. MONK. So they have.

Mr. FIELDING. Well, I differ from my hon. friend.

Mr. MONK. I will quote another authority on that point.

Mr. FIELDING. It is not a debatable matter at all, my hon. friend is mistaken.

Mr. MONK. Is Canada on the French minimum tariff ?

Mr. FIELDING. No, we have some items.

Mr. MONK. We are mentioned in this book as being on it.

Mr. FIELDING. That is not correct.

Mr. MONK. I have pointed out the objection. The treaty does not say that we can export through a country that is on the French minimum tariff for all goods ; but it is sufficient to be on the French minimum tariff. The United States, under this French convention of 1898, 1902, and 1908, are on the French minimum tariff for a number of articles. I understand the contention of the government to be that you must be on the French minimum tariff for all articles.

Mr. FIELDING. The words of the treaty are 'enjoying the French minimum tariff' not a part of it. Some one might say that he had the pleasure of enjoying my hon. friend's friendship, and some one else might qualify that by saying, Well, only in a few things. If you are enjoying a minimum tariff, it means enjoying the whole of it.

Mr. MONK. There is no word in that section 8 of shipping through the United States.

Mr. FIELDING. Then if my hon. friend's contention is correct, they have the right to ship through the United States, and there is not that restriction which he is condemning.

Mr. MONK. I desire to be enlightened by my hon. friend on that subject. The article says that you shall ship either directly from here or through a country enjoying the French minimum tariff. I say the United States enjoys the French minimum tariff, not altogether, any more than we do. I say that we enjoy the French minimum tariff, and that is the interpretation which appears to be given in this book.

Mr. FIELDING. If that is correct, then we can ship through that country, and then the criticism of my hon. friend falls. We do not agree with his interpretation, but if it is correct, then it defeats his own argument.

Mr. MONK. If I am wrong I regret it, because I think that at the present stage what we wish is to put the treaty to the very best test, and in order to do that we must facilitate instead of circumscribing our means of communication. As regards shipments from France, as I understand this article, you may ship through England but without transhipment.

Mr. FIELDING. Goods coming into Canada ?

Mr. MONK. Yes.

Mr. FIELDING. You can ship from England without transhipment. You can send French goods to England, tranship there, or store them there, and ultimately send them from England to Canada without transhipment, and if the identity of the goods is proven, they fall within the condition of the treaty.

Mr. MONK. It may be my hon. friend's interpretation is right, but it appears a little doubtful under the terms of the article. However, I think it would have been better, as the French did not demand that restriction, that we should not have insisted upon it. Where it is possible to ship directly, no doubt rates could have been made favourable, but by confining our exporters to direct shipments, you put an entrave in the way of commercial relations which it is the principal object of the treaty to develop.

Now just one word more. There has been another set of contentions put forward in connection with this treaty. It has been claimed that under the terms of this treaty, particularly in the press of my own pro-

vince, that we have taken a great step forward, that we have established our absolute independence and autonomy in treaty making. It was also claimed that this extraordinary liberty which we had obtained and exercised for the first time in the case of this treaty, had been obtained for us by my right hon. friend and his colleagues at the last colonial conference. They went to that conference, and boldly and vigorously claimed for Canada the right to negotiate her treaties in her own name ; they obtained that right and immediately applied it by the conclusion of this French treaty in Paris. It was also claimed that we had by this treaty at last succeeded in establishing our right to have our own consular service abroad, entirely independent of the consular service of Great Britain ; that we had also this year revendicated our right in that respect, and had put them in practice, by the conclusion of this treaty. Now it is evident that in the heat of political controversy extreme pretensions may be put forward in newspapers and at public meetings. We are prepared with our experience in politics to make every allowance for that ; but where these allegations are continually put forward day after day, week after week, and month after month, uncontradicted as they are, necessarily the public to whom they are addressed must finally give a certain amount of belief to them. Is it right and proper to allow the people to be deceived, and in the proper place and at the proper time, is it not right to state things as they really are ? I do not believe in taking up everything that is said in the heat of a political contest, but in circumstances such as these where it is a question of the status of a nation, and where it is claimed that new rights have been acquired, I say it is proper to set things right. Nobody in this House at the present time, not my right hon. friend, not the hon. Minister of Marine and Fisheries, not my hon. friend who is so easily made indignant, the hon. Minister of Finance, would advance these propositions. They would not do so here. Well, it seems to be right at this stage to state matters as they really are. There never has been any foundation whatever for such allegations. When the Minister of Marine and Fisheries returned from France we incurred a very considerable expense in receiving him. We sent down—I said here a flotilla of steamers to meet him. We did. The Minister of Marine and Fisheries contradicted me but it is so. Government steamers went down to meet him far into the gulf and then, when he approached his native heath——

Mr. BRODEUR. Is my hon. friend serious in making that statement ?

Mr. MONK. I will quote authority.

Mr. BRODEUR. I would like to hear it; it is very extraordinary.

Mr. MONK. Since my hon. friend puts what I say in question, I will review some of the things that occurred when he returned merely for the purpose of setting matters right. My hon. friend does not deny that the 'Lady Grey' went down to meet him at Rimouski.

Mr. BRODEUR. I deny it.

Mr. MONK. He is reported in 'Le Canada' of the 2nd of October as coming up the river on that steamer.

Mr. BRODEUR. Yes, from Quebec.

Mr. MONK. Oh, it was from Quebec ?

Mr. BRODEUR. Yes.

Mr. MONK. I must apologize to my hon. friend, I thought it was from Rimouski. It was from Quebec ! Does my hon. friend deny that four steamers went down from Montreal with many people on board who probably of course took their launches with them ?—I think not. Will he deny that these government steamers went down to meet him ? I have their names. The 'Frontenac,' the 'Beloeil' and the 'Shamrock,' laden with a great many friends and admirers went down to meet this great Tallyrand who was arriving from France, and I say that we incurred considerable expense in that connection. The time has arrived when we should not do these things, when we should not use government property, government money and government steamers for that purpose. We are becoming too important a nation for that. We have to expend money in receiving strangers of mark and in that way making an outward show, which at our present stage, we must take the consequences of, but to use government money in banquets, and excursions on steamboats for political purposes should be discouraged. The money of the people must be expended on more serious objects. Why was all this so organized ? The Minister of Marine and Fisheries does not doubt it. Will we say it, must we say it, it is because the deus ex machina in that matter was the Solicitor General (Mr. Bureau) ; he was the one who organized the great demonstration for the Minister of Marine and Fisheries. Why ? I regret to say that there are divisions among hon. gentlemen opposite and that it becomes necessary, in order to assert with some degree of display, the supremacy of one of these hon. ministers from Quebec you must bring down government steamers, hail him upon his arrival here and make a great show to throw other people, not on this side of the House, in the shade. Hence it is that we have to put our hands in our pockets and pay money to make a triumphant exhibition where otherwise that would not be dreamed of. When Mr. Kasson returned from France after concluding the treaty of 1898, when these gentlemen re-

turned from France in 1902 and later in 1907 when these commercial conventions were concluded there were no government steamers because then the underhand necessities had not arisen. Well, Sir, leaving that aside I have shown that there was a display of our fleet on that occasion. I have hinted—merely hinted, and I will go further into that question if necessary, at what occasioned that display. Let us hear what the Minister of Marine said when he returned. I must say first that he was surprised at the reception. He did not know that all this had been organized, but as the addresses multiplied, as from place to place, wharfs were reached, under the skilful superintendence of the Solicitor General, he warmed to the subject. He became like King George who thought he had commanded at the Battle of Waterloo and he claimed all the credit for having made the treaty leaving the hon. Minister of Finance in the shade, for having concluded it not in the name of England, not in the name of the Minister of Finance but in his own name, he having gone over to Paris for that purpose. He is reported in 'Le Canada,' I will quote as frugally as possible. After referring to the colonial conference he says:

> I will only tell you this that faithful to the traditions of the Liberal party Sir Wilfrid Laurier and his colleagues at the conference demanded the more perfect recognition of our autonomy.

Further on, when he got to his own home, feeling emboldened, he used even stronger expressions in answer to the long and mellifluous address which was presented to him by Dr. Choquette. It is worth reading.

Mr. BRODEUR. Read it.

Mr. MONK. Read it? Does the hon. gentleman think that I am an obstructionist like himself? He claimed that the treaty had been concluded under extraordinary circumstances, that he had gone to England and obtained this right to conclude treaties in our own name, that he had put it into execution right away in our own mother country, France. He had not gone anywhere else but he had gone there and using the right which he had wrested from the authorities in England he had obtained the treaty. I do not think that is a fair statement; at any rate it is not the truth. My hon. friend did not say that here? Did my hon. friend say that here? No. He read the order in council passed at the Court of St. James naming him plenipotentiary with his hon. colleague (Mr. Fielding) and he said, it is true, but in very moderate language, that Canada had concluded this treaty in her own name, but when he was down in the country parts he spoke with more audacity and much more fervour. Does my hon. friend believe that there has been any change whatever in the mode by which we make our commercial arrangements and that the speech made here by our hon. friend from the Yukon (Mr. Thompson) the other day is absolutely without foundation? No, no. He knows and my right hon. friend the First Minister knows—oh, he knows very well—but with Mephistophelian policy he allows all these things to be stated around him and in the papers that the French treaty is being made a racial question. He would not state it himself but he allows these things to go on. He should not allow it. There is no object in telling the people anything but the truth. We have concluded this treaty exactly as we have concluded every treaty in the last thirty years. I have brought here the document to give the enumeration. It would be imposing upon the time of the House to read it, but, I may say that the treaty of 1893 and this treaty were concluded exactly under the same procedure in every respect. The order in council was passed naming these two gentlemen plenipotentiaries. Why? Because they had to sign the treaty in company with Sir Francis Bertie. There would have been no occasion to pass this order in council naming him as plenipotentiary because he was a plenipotentiary already and he signed the treaty first and these two gentlemen after him. In whose name? In the same name as all treaties that have been concluded since the Treaty of Washington, some time, I think in the early seventies.

There was the same procedure regarding etiquette and everything else; these gentlemen arrived in Paris with letters from the Foreign Office to Sir Francis Bertie, were introduced by the British ambassador to the French negotiators and they set to work together. In the same way Sir Charles Tupper brought a letter from the Foreign Office to Lord Dufferin through whom he was introduced to the French negotiators and they set to work and concluded a treaty. Sir Charles Tupper in the correspondence points out that the Canadian negotiator was left to do all the business because he knew all about it. The conclusion of this last treaty with France was surrounded by the same conditions which have surrounded the negotiating of such treaties since Canada has become a great autonomous dependency of the British empire. Why does not the government state these facts; why not tell the truth? Why do they say they have obtained extraordinary privileges when such is not the case? At the imperial conference the Minister of Marine spoke a few words on matters connected with his department, but he raised no question as to our status in the negotiation of treaties. And my right hon. friend, neither in the conference of 1902 nor in the last imperial conference, did he raise any question about this matter, but

when he was asked by Mr. Chamberlain or by Lord Elgin, I forget which: Are you perfectly satisfied with the relations existing at present between the mother country and the dependencies, my right hon. friend answered that he was.

Mr. FOSTER. He said so here.

Mr. MONK. Yes, he has said so in this parliament. But now the government tell the people that a great change has taken place and that something extraordinary has occurred. It is even stated, and I could quote authority for it in an address delivered to this new King George, that this was the first treaty we had ever concluded with France. Why deceive the people in this manner? It is the second treaty we have concluded with France, and we on this side of the House hope it will not be the last. From the very first, instead of contending against the treaty we have applauded it, but as representatives in a deliberative assembly and discharging our duty to the people we have offered some criticism. I venture to say that Frenchmen in France would be ashamed of us if we did not fulfil the role assigned to us as independent representatives of the people. I say that this treaty has been better received, that it has been received in a broader and kinder spirit than did my right hon. friend and his friends when in opposition receive the treaty of 1893. We on this side of the House have not modelled ourselves upon their conduct; we offered fair comment. I thought it proper at this stage to call the attention of the House and of the country to our attitude in this matter.

Mr. ADAM ZIMMERMAN (West Hamilton). The hon. gentleman (Mr. Monk) has thrown some doubt on the accuracy of the statement I made in the House on the 21st of February in reference to the development in the Canadian agricultural implement industry which this treaty was likely to bring about. I shall give my hon. friend citations from the Hamilton newspapers which took up the statement I made in the House and interviewed the representatives of the International Harvester Company at Hamilton with reference to them. The 'Spectator,' the Conservative newspaper, publishes the following:

While it may not mean the doubling of the Hamilton plant at once, it will mean big extensions here in some departments. The United States factories ship 9,000 harvesters and 15,000 mowers to France each year. The rough value of these is about $1,500,000. The works here now employ about 1,800 men, and if the treaty is put into effect, the force will be almost doubled.

Speaking of the matter this morning, the superintendent of the Harvester Company said that it was a little early yet to say anything definite. It was quite true that if the treaty as at present framed became an actuality, the Hamilton works would get all the big French trade. It would not mean the doubling of the works here, but large extensions would be necessary. He said that the works here, though now under short hours in some departments, would soon have to get into full swing again. The demand for next season might be a little higher than usual, but he thought the Canadian trade would keep up. A few more treaties like that, as far as agricultural implements are concerned, and the plant here would have to be vastly increased.

The International Harvester people are arranging with the rail and ocean transportation companies for a rate from Hamilton to St. John and thence to France, equal to that now enjoyed on the shipments from United States ports. The International Harvester Company does two-thirds of the total export trade in agricultural implements done from the United States to France.

The Hamilton 'Times' of the same date, in publishing an interview with the officials of the International Harvester Company, says:

We are not in a position to say just now what it will mean to us, 'The Times' was told, but it is working out, and we expect to capture for the Hamilton works a large trade that we have never before enjoyed, and which will necessitate extension of the works and give employment to a largely increased staff. It will take time to work out but the prospects are very bright.

The Hamilton 'Herald,' the independent paper, says:

The announcement made in parliament yesterday by Adam Zimmerman, M. P., that Canada's new treaty with France would result in the International Harvester Company increasing the output of its Hamilton factory, was confirmed this morning by the local office of the company. The United States now exports to France agricultural machinery to the value of nearly $3,000,000 every year. Of this the International Harvester Company ships from $1,500,000 to $2,000,000, or nearly two-thirds of the whole amount.

In future the International company will manufacture in Hamilton all its products for the French market. It not only expects to hold its trade, amounting to $2,000,000, but to capture practically the whole French trade now enjoyed by firms across the border, and to shut out all its American competitors. If its hopes are realized, the local factory will be called upon to turn out $3,000,000 more stuff a year, and it is expected that this amount will soon be largely increased.

By the terms of the treaty, the International company's local branch, like all Canadian factories, will get a preference over the United States in the matter of duty on binders shipped to France of from $7 to $9 a machine. There is also a preference of from $5 to $6 on mowing machines.

The company now employs some 1,800 hands in its factory here, and expects to employ nearly double that number. While the new treaty may lead to immense additions to the plant, it is likely that the principal effect will be to keep the present plant working to its full capacity all the year round, with

probably a good deal of overtime. The company has 135 acres here, and about 40 acres are occupied. The plant has never been worked to its full capacity.

The new arrangements may lead other American concerns to establish Canadian branches.

I think that is all it is necessary for me to say now with regard to this treaty. These quotations from the Hamilton newspapers fortify the statement I made in this House on the 21st of February.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). I intended on the third reading of the Bill to offer a few remarks concerning a feature of this treaty which has raised a good deal of discussion, and I am very glad my hon. friend (Mr. Monk) has thought fit to reopen the question. There seems to be considerable difference of opinion between the two sides of the House as to whether this treaty has been negotiated in the same manner and under the same condition as other similar treaties, and particularly the treaty of 1893 with France. It is probably advisable for me to state the conditions under which treaties affecting Canada alone have been negotiated in the past or the manner in which our negotiations or trade matters with foreign countries have been conducted. Since confederation Canada has been engaged in negotiating eight or nine of these treaties, three of which might be considered to be treaties affecting the political relations between Canada and foreign countries, as for example the treaty of Washington in 1871, which while it concerned our commercial relations was to some extent a political treaty. Then we have the treaty of 1887, negotiated in Washington. I do not know whether we should treat this treaty as being a commercial treaty, but it does not make any difference because the situation is the same. In those two treaties, in the treaty of 1871, as in the treaty of 1888, the treaty negotiated by Mr. Chamberlain, the negotiations were carried on in the first case by three or four British plenipotentiaries and Sir John Macdonald who was also a plenipotentiary appointed by the imperial government. In 1888, Sir Charles Tupper was appointed a plenipotentiary and carried out the negotiations in conjunction with Mr. Chamberlain and Sir Sackville West.

Then we have the negotiations of 1897, associated with the High Joint Commission, which were carried out by a British plenipotentiary and Canadian representatives. We must admit, however, that in this last case, as in the ones of 1871 and 1888, it was not what we might call a commercial treaty alone, because there were also negotiations covering the political relations between Canada and the United States.

Mr. FOSTER. What does my hon. friend mean by political relations?

Mr. ZIMMERMAN

Mr. BRODEUR. I do not know whether the distinction I make is absolutely correct, but I would divide our treaties into two groups; commercial treaties, that is to say treaties affecting exclusively the commercial relations between our country and another as in the case of the treaty with France of 1893, and political treaties, that is, those affecting such matters as the boundaries or political relations of the two countries, in other words treaties which do not relate purely and simply to their commercial relations. This will at least show what I mean by a commercial treaty.

The first negotiations for an exclusive commercial treaty conducted on behalf of Canada after confederation were carried out in 1874 by Hon. George Brown and Sir Edward Thornton, British ambassador at Washington, as plenipotentiary and by a plenipotentiary who was a Canadian. For what reason was that done in this way? We find in the 'Life of George Brown,' that on the 17th of March, 1874, an order in council was passed by the British government appointing Sir Edward Thornton and Mr. George Brown as joint plenipotentiaries to negotiate a treaty of fisheries, commerce and navigation with the government of the United States. The reason for adopting this mode of representation is given in the book from which I have just quoted, at page 226:

> This mode of representation was insisted upon by the Mackenzie government, in view of the unsatisfactory result of the negotiations of 1871, when Sir John Macdonald, as one commissioner out of six, made a gallant but unsuccessful fight for the rights of Canada.

Every one remembers the unhappy situation in which Sir John was placed when he came to negotiate the treaty of 1871. In his biography written by Mr. Joseph Pope, Sir John is quoted at page 94 as saying:

> In our separate caucuses my colleagues were continually pressing me to yield; in fact I had no backer and I was obliged to stand out, and I am afraid, to make myself extremely disagreeable to them.

At page 96 we find:

> The British commissioners had a meeting after the adjournment and I found they were in favour of ceding the fisheries for ten years, with two years' notice, that is to say for twelve years, certain, in exchange for coal, salt, fish and lumber.

At page 105 he is still more definite when he says:

> I must say that I am greatly disappointed at the course taken by the British commissioners. They seem to have only one thing on their minds—that is to go home to England with a treaty in their pockets, settling everything, no matter at what cost to Canada.

So it is no wonder, with these letters which were at that time confidential but which later became public letters, that when

in 1874 the Mackenzie government were discussing the opening of new negotiations with the United States they urged upon the British authorities that the Canadian representatives should be at least on the same footing as the British representatives, and we see that as the result of their representations, Mr. George Brown and Sir Edward Thornton were both appointed as British plenipotentiaries to negotiate that treaty. It was the first time that a commercial treaty was negotiated because, I do not consider the Treaty of Washington of 1871 as being an exclusively commercial treaty as there were also some political questions to be settled in that treaty. Thus the first negotiations for a commercial treaty with the United States occurred in 1874, the British plenipotentiaries being Mr. George Brown and Sir Edward Thornton.

Mr. FOSTER. What were the political questions to be settled in 1871?

Mr. BRODEUR. The Alabama question.

Mr. FOSTER. Any other?

Mr. BRODEUR. And the Fenian raid. It was not absolutely what we might consider a commercial arrangement as was the one made in 1874.

The next step taken in connection with negotiations of our treaties was in 1878, when the Macdonald government undertook to negotiate a treaty with France, sent Sir A. T. Galt to England and asked the British government to appoint him plenipotentiary with the British ambassador to carry out the negotiations for a treaty with France. These papers are to be found in the blue-books and it is not necessary to quote them here; but as it is just as well that these historical questions should be settled definitely I may cite the documents by which the Canadian government represented to the British authorities the advisability of having the negotiations carried out by a Canadian representative and by a British representative.

The answer from the British government was to the effect that the negotiations had to be carried on by the British representative alone.

Mr. MONK. Is it the intention of the hon. gentleman to point out what the difference was between the manner of negotiating the present treaty and the treaty of 1893?

Mr. BRODEUR. Yes. There is no difference of opinion as to what was done in 1879, because the order in council of the Canadian government and the answer which came from the British government are embodied in the speech made the other day by my hon. friend the leader of the opposition. In 1878 we tried to get from England the right to negotiate a treaty in concert with the British ambassador and were refused. We were told that the negotiations would have to be carried on exclusively by the British ambassador. The reference will be found in the documents laid before the House in 1880 and also in the speech delivered the other day by my hon. friend the leader of the opposition. Later on some negotiations were carried on with Spain by Sir A. T. Galt, and Sir A. T. Galt was appointed plenipotentiary to carry on these negotiations—not alone, but with the British ambassador.

Mr. FOSTER. Is the hon. gentleman correct in that? Is that the whole of the matter? Or is there not in that same letter of advice the statement by the foreign office to the colonial office, and through it to Canada, that Sir Charles Tupper, with reference to the Spanish negotiations, would be appointed co-plenipotentiary with Sir Robert Morier, but that he would probably carry on the negotiations himself, and that is what really took place?

Mr. BRODEUR. My hon. friend must remember that these instructions were never carried out. Previously to that, Sir Alexander Galt had gone to Spain to carry on some negotiations. He was not successful, and the reason for his non-success he gave in a letter which he wrote to Sir Charles Tupper and which is quoted by Sir Charles Tupper in 'Hansard' in 1887. In that letter Sir Alexander Galt advised that in the future negotiations should be carried on exclusively by Canadian representatives.

Mr. FOSTER. Which was assented to by Great Britain.

Mr. BRODEUR. No, it was not until the last treaty.

Mr. MONK. How was it assented to in the last treaty?

Mr. BRODEUR. I shall quote the instructions given to the British ambassador on this point.

Mr. MONK. I ask this because Sir Charles Tupper says that the same instructions were given in each case.

Mr. BRODEUR. They were not.

Mr. MONK. He says so.

Mr. BRODEUR. I am trying to give the history of these negotiations, and it is just as well we should proceed step by step or negotiation by negotiation. That will make the case clearer.

Mr. MONK. Provided it is correct.

Mr. BRODEUR. No doubt it is. Coming to the negotiations which took place between the Spanish government and Sir Robert Morier and Sir A. T. Galt, the latter, in a letter which he addressed to Sir Charles Tupper when Sir Charles Tupper took charge of the High Commissioner's

office in London, said he had been seriously handicapped by the fact that negotiations were not carried on exclusively by himself and that the presence of the British ambassador had been a cause of difficulty. That letter is to be found in the debates of 1887 in a speech delivered by Sir Charles Tupper, page 396 of the 'Hansard' of that year.

Coming to the negotiations carried out later on by the hon. member for North Toronto (Mr. Foster) with the Washington authorities. I do not think they were formal negotiations but some negotiations were carried on with the American authorities concerning commercial arrangements, and they were carried on by the British as well as the Canadian representatives. Coming to the treaty of 1893, there is great difference of opinion as to whether that treaty was negotiated exclusively by Sir Charles Tupper, the Canadian representative, or if some British representatives were associated with him. In the discussion some time ago, I asserted that the negotiations had been carried on by the representatives of both Great Britain and Canada, and I think it was asserted by the hon. member for North Toronto (Mr. Foster) that they were carried on by Sir Charles Tupper exclusively, and my hon. friend quoted a letter of Sir Charles Tupper which is to be found on page 47 of the documents laid before the House. Here is what Sir Charles Tupper says:

I cannot conclude this communication without saying that while the negotiations have been carried on entirely by myself on the part of Canada and by M. Gabriel Hanotaux, Minister Plenipotentiary and Director of Consulates and of Commercial Affairs in the Foreign Office, M. G. Pallin, Councillor of State, Director General of Customs and M. E. Roume, Director of Foreign Commerce in the Department of Commerce and Industry, on the part of France, I have received the most cordial support and assistance from the Colonial and Foreign Offices in London and from His Excellency the Marquis of Dufferin and Ava. My obligations are especially great to Sir Joseph Crowe, First Secretary and Special Commercial Attaché of the Embassy, who has given me the benefit of his valuable advice and wide experience in such questions and who has constantly associated with me in my intercourse with the French negotiators.

So we have the assertion made by Sir Charles Tupper that the negotiations were carried on exclusively by himself, but that statement is controverted by a report made by Lord Dufferin himself. Lord Dufferin, in his report to Lord Roseberry, then Minister of Foreign Affairs, says:

I think it is incumbent upon me to call Your Lordship's attention to the skill displayed by Sir Charles Tupper and Sir Joseph Crowe in the long and difficult negotiations which they have carried on with the delegates of the French government.

Mr. BRODEUR.

This statement is confirmed by Sir Edward Grey, who was Under Secretary of State for Foreign Affairs, and also by the Marquis of Ripon, who was Secretary of State for the Colonies.

Mr. FOSTER. Will the hon. minister read these confirmations?

Mr. BRODEUR. Yes. Sir Edward Grey says:

With reference to the previous correspondence on the subject of negotiations with France in regard to Canadian trade, I am directed by the Earl of Roseberry to request that you will inform the Marquis of Ripon that those negotiations have been brought to a successful conclusion, copies in print of the agreement signed and the notes exchanged, on the 6th instant, will shortly be forwarded to you. In the meantime, I transmit a copy of a despatch from Lord Dufferin expressing his sense of the able manner in which the negotiations were conducted by Sir Charles Tupper and Sir Joseph Crowe.

This statement is confirmed in the despatch of the Marquis of Ripon:

I have the honour to transmit to you, for the information of Your Lordship's government, a copy of a letter from the Foreign Office inclosing a despatch from the Marquis of Dufferin and Ava, reporting the successful termination of the negotiations with France in regard to Canadian trade, and expressing his sense of the able manner in which these negotiations were conducted by Sir Charles Tupper and Sir Joseph Crowe.

Mr. MONK. That seems to be contradicted by Sir Charles Tupper himself in his letter of 6th February.

Mr. BRODEUR. I quoted Sir Charles Tupper's letter.

Mr. MONK. The letter of 6th February?

Mr. BRODEUR. Yes.

Mr. MONK. In which Sir Charles Tupper says that he conducted the negotiations entirely by himself?

Mr. BRODEUR. Yes.

Mr. FOSTER. Will the hon. gentleman (Mr. Brodeur) answer this question—who were the plenipotentiaries appointed by the British government to conduct the negotiations for the treaty of 1893?

Mr. BRODEUR. Sir Charles Tupper and the Marquis of Dufferin.

Mr. FOSTER. The point I wanted to make—if the hon. minister will allow me—is to ask why he spends so much time trying to prove from the letters he has read that Sir Joseph Crowe and Sir Charles Tupper carried on these negotiations, when, at the same time, he says that the plenipotentiaries appointed to carry on the negotiations were the Marquis of Dufferin and Sir Charles Tupper. Assistance may have been given by others, but these were the two ne-

gotiators as plenipotentiaries, and the only two. Surely my hon. friend sees that point.

Mr. BRODEUR. In the first place, it is not absolutely necessary for the making of a treaty that the negotiations should be carried on by the plenipotentiaries. Take the treaty of 1893; these negotiations on the part of the French government were not carried on by the ministers or persons who signed the treaty. The treaty was signed by M. Develle, who was Minister of Foreign Affairs, and Mr. Siegfried, who was Minister of Commerce. These gentlemen did not attend to the negotiations, as the hon. gentlemaan will see by reading the different reports of Sir Charles Tupper. The negotiations were carried on by Mr. Hanotaux and the heads of the several departments. In our case most of the negotiations were carried on, not by the plenipotentiaries who signed the treaty, but by the officials of the different departments.

Mr. FOSTER. Yes; but my hon. friend sees that, while that is absolutely so, these are not the plenipotentiaries. What the hon. minister is arguing, if anything, is a change in the status of Canada as to its powers to negotiate and to sign. The only persons so empowered in 1893 were Sir Charles Tupper and the Marquis of Dufferin; and the only persons empowered to negotiate and sign in 1907 were the two representatives of the government from Canada and Sir Francis Bertie. Now, Sir Charles Tupper directly states what he knew to have taken place. These were the plenipotentiaries; no matter how many attachés, clerks or under agents may have taken part in the negotiations, everything is subject to the last word as between the negotiators on each side. Now, if my hon. friend (Mr. Brodeur) will allow me one moment further, I would like to state a fact: I myself was in Paris while the negotiations for the treaty of 1893 were being carried on—I was there for a fortnight or more. Every day I met Sir Charles Tupper, went to the office with him. I went with him to the Marquis of Dufferin; and I know that the Marquis of Dufferin, after the preliminaries were over, busied himself with his own duties, and Sir Charles Tupper met, day after day, the plenipotentiaries and negotiators from the French side and carried on the negotiations. Sir Joseph Crowe was commercial attaché. His knowledge of commercial transactions, but more than all, his perfect knowledge of the French language, which was absolutely necessary to Sir Charles Tupper in the course of the negotiations, made him an invaluable man. But to say that he had anything to do with fixing Canada's status; why, what is the use of the hon. minister chopping words about it? Has the status been changed on the basis that alone it could be changed, as to who represented the countries as plenipotentiaries and what countries authorized them?

Mr. BRODEUR. If my hon. friend (Mr. Foster) will permit me to proceed, he will find that the papers I shall quote prove the statement I have made. I think he will find that the status, so far as commercial negotiations are concerned, have been changed during the negotiations of the last treaty. Now, the hon. gentleman states that, whether Sir Joseph Crowe carried on the negotiations as representative of the British Crown or not, he was not the plenipotentiary. That may be true to a certain extent, but if my hon. friend will be kind enough to listen to the documents I shall read, he will find that Sir Joseph Crowe was, to all intents and purposes, a plenipotentiary for the purpose of carrying on these negotiations.

Mr. FOSTER. Was he appointed plenipotentiary by the British government?

Mr. BRODEUR. Yes.

Mr. FOSTER. Will the hon. gentleman read that appointment?

Mr. BRODEUR. Here are the documents to prove it. I am sorry to find that these documents were not brought down in 1893 with the other papers. I found on examining the papers in the Privy Council office, that documents of great importance and having a bearing on this question had not been brought down. I suppose they were forgotten. I refer to these in order to prove in the most conclusive way that Sir Joseph Crowe was, to all intents and purposes, a negotiator and plenipotentiary to carry on negotiations with the French government. I have here a letter of May 12, 1892, from Sir Charles Tupper to the Under Secretary of State for the Colonial Office, amongst the papers that have been laid on the Table in 1893. This letter has not been brought down, and, as I have no right to refer to a document that has not been brought down without laying it on the table. I will lay this letter on the table. Here are the important parts of the letter of Sir Charles Tupper bearing on the question of issue:

I have the honour to refer the Secretary of State to the report of a Committee of the Privy Council of Canada, approved by His Excellency the Governor General on the 16th instant, with regard to trade between the Dominion of Canada and France.

It is recommended in the minute in question that His Excellency the Governor General should cause a despatch to be sent to the Secretary of State setting forth the facts in connection with the existing commercial arrangements between the two countries, and requesting that I might be appointed a joint plenipotentiary with His Majesty's ambassador at Paris, with a view to discussing the matter fully with the French government in order, if possible, to arrange for an extension of the minimum tariff of France to imports from the

Dominion, having regard to the circumstances mentioned in the order in council.

I beg therefore to suggest that the Secretary of State will be so good as to move the Foreign Office to request the Marquis of Dufferin and Ava to take advantage of a favourable opportunity of inquiring of the French government whether they would be prepared to enter upon negotiations for the purpose I have mentioned, and the time that will be most convenient to them.

If the reply is favourable, I shall arrange to proceed to Paris as soon as the necessary formalities have been completed.

Now that letter of Sir Charles Tupper was referred to Lord Dufferin who was then British ambassador at Paris, and Lord Dufferin was asked to give his opinion on the suggestion made by Sir Charles Tupper. Here is his answer of the 24th of May, 1892:

Paris.

My Lord,—In acknowledging the receipt of Your Lordship's despatch No. 110 commercial of the 19th of May, respecting the proposition of the government of Canada, that the High Commissioner should be empowered with myself to negotiate a commercial arrangement between Canada and France, and asking my opinion on the matter. I have the honour to state that I see no reason why a communication embodying the wishes of the Canadian government should not be submitted to the French Minister for Foreign Affairs, with a fair expectation that the latter would be willing to enter upon an examination of the Canadian proposals. Though I am quite willing myself to assist the High Commissioner in the discharge of his tasks, so far as may be in my power, I would venture to suggest that Sir Joseph Crowe should also take part in the negotiations as he has done on previous occasions.

(Sgd.) DUFFERIN AND AVA.

Now what was the answer to that letter? That despatch of Lord Dufferin was submitted to the foreign office, then to the colonial office, and then to Sir Charles Tupper. Here is what Sir Charles Tupper says in a letter which he wrote to the colonial office on the 1st of June, 1892:

I have the honour to acknowledge receipt of Mr. Wingfield's letter of the 31st ultimo, with reference to the proposed negotiations for a commercial arrangement between Canada and France. I have much pleasure in concurring in the suggestion that Sir Joseph Crowe should be associated with the Marquis of Dufferin and myself in the matter.

(Sgd.) CHARLES TUPPER.

Nothing can be more positive than that. Was not Sir Joseph Crowe, under these instructions of the foreign office, directed to carry out negotiations with France?

Mr. FOSTER. Was he the plenipotentiary?

Mr. BRODEUR. He was not appointed minister plenipotentiary, but was he not plenipotentiary for the purpose of carrying through the negotiations? He was not plenipotentiary to sign the treaty, but he was plenipotentiary to carry out the negotiations. There are two important parts in connection with the making of a treaty, there are the negotiations and there is the signing of the treaty. In this case, what I wish to impress upon the House is that the negotiations for the treaty of 1893 were not carried out exclusively by Canadian representatives. It was in 1907 that for the first time negotiations of a commercial nature were carried out exclusively by Canadian ministers. I lay these papers on the table for the information of members of this House. But that is not all. The question was discussed again, and I think my hon. friend took part in the conference of 1895 which was held in Canada, and in which Lord Jersey was the representative of the British government. A resolution passed at that conference was sent to the imperial government, or a report was made by Lord Jersey to the British government, and the British government sent a long despatch to the various colonies interested in this question. The Marquis of Ripon signed this despatch, which is dated June 20, 1895. Paragraph 7 of the despatch reads as follows:

To give the colonies power of negotiating treaties for themselves without reference to Her Majasety's government would be to give them an international status as separate and sovereign states, and would be equivalent to breaking up the empire into a number of independent states, a result which Her Majesty's government are satisfied would be injurious equally to the colonies and to the mother country, and would be desired by neither.

The negotiations then, being between Her Majesty and the sovereign of the foreign state, must be conducted by Her Majesty's representative, at the court of the foreign power, who would keep Her Majesty's government informed of the progress of the discussion, and seek instructions from them as necessity arose.

It could hardly be expected, however, that he would be sufficiently cognizant of the circumstances and wishes of the colony to enable him to conduct the negotiation satisfactorily alone, and it would be desirable generally, therefor, that he should have the assistance, either as a second plenipotentiary or in a subordinate capacity, as Her Majesty's government thinks the circumstances require, of a delegate appointed by the colonial government.

If, as a result of the negotiations, any arrangement is arrived at it must be approved by Her Majesty's government and by the colonial government, and also by the colonial legislature if it involves legislative action, before the ratifications can be exchanged.

It is enunciated very clearly there that the negotiations should be carried out by the British ambassador. That was the position taken in that despatch of 1895. Now what is the situation to-day? I have in my hand the instructions which were given on

the 4th of July, 1907, by Sir Edward Grey to the British ambassador, or his representative in Paris, concerning the negotiations for this treaty now under discussion. I may say that by command of His Excellency, and with the authorization of the imperial authorities I lay this despatch before parliament. It sets forth in the clearest manner the situation, and shows that now for the first time in Canadian history negotiations for a commercial treaty were carried out exclusively by Canadian representatives. Here is that despatch :

Foreign Office, July 4, 1907.

Sir,—In my telegram No. 10 commercial of the 23rd of May, I informed Sir F. Bertie that Sir Wilfrid Laurier desired to open negotiations for new commercial conventions with the French government, and I requested that His Excellency would endeavour to assist him in the attainment of his object.

You are doubtless cognizant of the Marquis of Ripon's despatch of June 28, 1895, to the Governors of the principal British colonies in which it was laid down that commercial negotiations of this nature being between His Majesty and the sovereign of the foreign state, should be conducted by His Majesty's representative at the court of the foreign power. A copy of this despatch is inclosed herewith.

I do not, however, think it necessary to adhere in the present case to the strict letter of this regulation, the object of which was to secure that negotiations should not be entered into and carried through by a colony unknown to and independently of His Majesty's government.

The selection of the negotiator is principally a matter of convenience and, in the present circumstances, it will obviously be more practical that the negotiations should be left to Sir Wilfrid Laurier and to the Canadian Minister of Finance or the Canadian ministers, who will doubtless keep you informed of their progress.

If the negotiations are brought to a conclusion at Paris, you should sign the agreement jointly with the Canadian negotiator, who would be given full powers for the purpose.

I am, with great truth and regard, sir,
Your most obedient humble servant,
E. GREY.

I think that disposes of the question. They do not want to adhere to the rule which had prevailed in the past that all negotiations should be carried out by the British ambassador and by Canadian representatives, as stated in the despatch of the Marquis of Ripon; but it is stated here that the negotiations are to be carried out by Canadian representatives, the foreign office being satisfied with the names suggested in that connection. That is the difference. I suppose that my hon. friend will not deny it. I am willing to lay on the table of the House this letter which my hon. friend may read as we are authorized by the British authorities to lay it on the table.

Mr. FOSTER. Does my hon. friend argue that that changes the status of the government and gives them the right to conduct commercial negotiations and make treaties independently of Great Britain?

Mr. BRODEUR. I think it is a most important thing that these negotiations are to be carried on exclusively by the Canadian representatives. I have just quoted to my hon. friend a letter signed by Sir John Macdonald in 1871 in which he said that in spite of the fact that these negotiations affected mostly Canadian affairs he was hampered in his negotiations because the British representatives were anxious to make a treaty at no matter what cost to Canada. I was quoting a few moments ago the letter of Sir A. T. Galt, that he was hampered in his relations in 1882. I have the quotation in my hand, although I did not have it when I made my remark a few minutes ago. I will quote it to my hon. friend in order to show him how important it is, where our interests may differ from the interests of Great Britain, that these negotiations should be carried on exclusively by the Canadian representatives. Here is what Sir Charles Tupper said in this House in 1887. Speaking of the negotiations with Spain he said:

That treaty hon. gentlemen know Sir Alexander Galt was not able to carry to completion, and, when I had the honour of succeeding him in the office of High Commissioner, he left for my perusal and information a document in which he said that he found himself greatly hampered in discharging the duties imposed upon him by the government of Canada because he only stood in the position of a commercial commissioner and it was necessary that all his negotiations with the government of Spain should be filled through Her Majesty's minister at Madrid.

That shows in the most conclusive way the importance of carrying out these negotiations through Canadian representatives. Sir Charles Tupper participated in the negotiations of 1887 in Washington. Perhaps it would afford us some information if we were to inquire into the way in which these negotiations were carried out. He might let us know whether it is better that these negotiations should be carried out exclusively by the Canadian representatives rather than through British representatives. I might give an illustration taken from the negotiations of 1880 with France. Why did these negotiations fail ? Is it because the British representative was asking that razors and cutlery should be put on a French minimum tariff ? What was the object of asking for a reduction of duty on razors and cutlery? We had no cutlery establishments in Canada then. Why should we insist upon a reduced rate of duty ? It was done, probably, in the interest of Sheffield cutlery because any reduction which would have been given to Canada would also have been given to Great Britain, Great Britain enjoying the

minimum tariff, or the most reduced rate of duty. I will not say that the negotiations fell through entirely on that account, but that is one of the things which was asked from the French authorities and after that the negotiations fell through. There is nothing in the public records which will show why these negotiations fell through, but I must say that this request that was made of the French authorities was, to say the least, very extraordinary.

Mr. MONK. I see that in answering the address that was presented to him at Three Rivers the hon. Minister of Marine and Fisheries used this language—I am quoting from 'Le Canada' of October 7, 1907:

Sir Wilfrid Laurier obtained from England, thanks to his energy and his revendications, rights which we were entitled to claim, and in 1907 England concluded with Canada a treaty, thanks to which Canada could intervene. It was a considerable step forward towards freedom in negotiating the widest treaties of commerce and gave us the right to treat with France. England gave to us the absolute right to conclude these negotiations.

Mr. BRODEUR. Yes.

Mr. MONK. Will the hon. gentleman explain what he meant by that?

Mr. BRODEUR. I don't know whether the report just read by my hon. friend of the speech which I made at Three Rivers is correct or not, but I see that it mixes up a little the question of the colonial conference and the question of the negotiation of treaties. The question of the negotiation of treaties did not come up in the colonial conference. But, since my hon. friend has called my attention to that, I might perhaps refer for a few minutes to the colonial conference. We obtained in the colonial conference concessions of the most important character. Let me mention this one, for example. My hon. friend knows very well that Canadian ministers with the exception of the Prime Minister, were not admitted to this conference except for the purpose of discussing questions affecting their departments. This conference was called upon the invitation of the Colonial Secretary, and Prime Ministers only were invited. It was a conference of the colonial office with the prime ministers of the different colonies. But there has been a change made. My hon. friend may have read the speech which my right hon. friend the Prime Minister made at the colonial conference.

Mr. MONK. I have read them all.

Mr. BRODEUR. He said that in future this conference should not be a conference of a department of the British government with the prime ministers of the different colonies, but that it should be a conference of governments with governments.

Mr. MONK. I did not see that any where.

Mr. BRODEUR.

Mr. FOSTER. Did Sir Wilfrid Laurier use those words at the colonial or imperial conference first, or were they merely a repetition of words which had been used before in that conference by either Sir Campbell-Bannerman or Lord Elgin?

Mr. BRODEUR. No.

Mr. FOSTER. Absolutely so.

Mr. BRODEUR. Sir Henry Campbell-Bannerman did not go so far as my right hon. friend.

Mr. FOSTER. Yes, that was just his speech.

Mr. BRODEUR. Sir Henry said that the conference was a conference of the British government with the prime ministers of the colonies, but my right hon. leader the Prime Minister of Canada stated that the conference should be a conference of governments with governments, not a conference of the British government or imperial government with the prime ministers of the colonies, but a conference of governments with governments.

Mr. MONK. I would like to see that very much.

Mr. BRODEUR. And that the participants in that conference should not be persons invited to it by the Colonial Office, but that they should be representatives of the different governments.

Mr. MONK. I would like to see all that.

Mr. BRODEUR. Well, my hon. friend could not have read these speeches.

Mr. MONK. Yes, I have read them all.

Mr. BRODEUR. Let him read the speech of the Prime Minister of Great Britain, and the answer of the Canadian Prime Minister and he will find that the latter one asserted the right of Canada to select its own representatives and the right of Canada to be represented as a government, not on the invitation of anybody else, but that it should send representatives on behalf of the Canadian government. In other words, that in all these conferences the autonomous states of the empire should be put upon the same footing as the imperial government. That is the situation and that is the result of the representations which have been made by my right hon. friend the Prime Minister. Let my hon. friend read the resolution which was adopted and he will find that what I say is correct. Perhaps he has not read it very carefully, but as I attended to all the drafting that took place perhaps I may be a little more familiar than my hon. friend is with it and appreciate better the weight which is to be attached to each word. It means for Canada that in future it will not be a conference of the colonial office with the Prime Minister of Canada,

but conferences between governments and governments.

Mr. FOSTER. Will the conferences of the future be any different, so far as we have any information to guide us, from the conference of 1907 ?

Mr. BRODEUR. Yes.

Mr. FOSTER. In what way ?

Mr. BRODEUR. Because the Canadian representatives (the colleagues of the Prime Minister whom he brings with him), who had no status in the former conferences will have a status in future conferences.

Mr. FOSTER. They had no status in the conference of 1907.

Mr. BRODEUR. Yes, we were admitted to the conference and had the right to take part in the discussions affecting our departments.

Mr. MONK. But you could not vote.

Mr. BRODEUR. We could not vote in past conferences and we could not discuss questions affecting other than our departments.

Mr. MONK. You cannot vote in the future.

Mr. FOSTER. Will Canada and the other colonies be in any different position in the next imperial conference, suppose no change is made between that time and this, will they not be in absolutely the same position in the future as they were in the past ?

Mr. MONK. Absolutely.

Mr. BRODEUR. There is the change I have just mentioned. If my hon. friend does not think it a step forward then I am afraid I cannot enlighten my hon. friend further. Probably my hon. friend has not read these reports very carefully.

Mr. FOSTER. I have read them very carefully.

Mr. MONK. I am beginning to think that my hon. friend (Mr. Brodeur) was not at the conference at all, because he is not stating the things as they took place ; I am beginning to think he was travelling around.

Mr. BRODEUR. If my hon. friend will read the reports carefully he will find there are the differences I have just mentioned. However, I am very glad to hear my hon. friend now state that he intends to vote in favour of the treaty.

Mr. MONK. I have not spoken against this treaty, as the right hon. the Prime Minister did against the treaty of 1893.

Mr. BRODEUR. The right hon. gentleman was perfectly justified in opposing the treaty of 1893 because it was a onesided treaty in favour of France and against Canada.

Mr. MONK. Then why did my hon. friend ask a continuation of it in 1907 ?

Mr. BRODEUR. We never asked for a continuation of it.

Mr. MONK. It is written down in your own letter there.

Mr. BRODEUR. Let my hon. friend read the document which is signed by my colleague (Mr. Fielding) and myself, and which we handed to the French authorities. I read :

Translation.

Memorandum of Proposals on behalf of Canada for a new treaty between the French Republic and His Majesty, King Edward VII, as respects commercial relations between France and Canada.

V. The Treaty of 1893 to be terminated and a new treaty to be substituted.

Mr. MONK. Will my hon. friend read the beginning of that communication. What is the first article ?

Mr. BRODEUR. The first article reads :

1. The reduced rates of duty on certain articles of French origin provided by article 1 of the Treaty of the 6th of February, 1893, shall be continued.

Of course, there is no objection to the reduced rate of duty continuing but there were two serious objections to that treaty of 1893 to which I may call attention.

Mr. MONK. Will my hon. friend allow me to quote my authority for what I cited ?

Mr. BRODEUR. Yes.

Mr. MONK. The beginning of that communication, of which you quoted the latter part, reads :

1. The reduced rates of duty on certain articles of French origin provided by Article 1 of the Treaty of the 6th of February, 1903, shall be continued.

Mr. FIELDING. Surely. We did not want to give anything away.

Mr. MONK. And further down it says :

III. The reduced rates of duty on certain articles of Canadian origin provided by Article III of the Treaty of the 6th of February, 1903, shall be continued.

Mr. BRODEUR. Yes. Certainly.

Mr. MONK. If you continued the reduction on both sides, what were you doing ?

Mr. BRODEUR. My hon. friend is forgetting two of the important features of that treaty of 1893. What does he think of the direct shipment clause and the most favoured nation treatment clauses in the treaty of 1893. In that treaty France was granted in Canada most favoured nation treatment, not only upon the few articles embodied in the treaty but upon all favours which Canada granted to any other foreign country.

On the other hand Canada did not receive from France the same treatment. France could give to any foreign nation the most favoured nation treatment and Canada was not allowed to enjoy it. Does the hon. gentleman (Mr. Monk) think it would be right to continue that feature of the treaty of 1893 ?

Mr. MONK. It was not criticised in this House at that time.

Mr. BRODEUR. My hon. friend has not read 'Hansard' carefully.

Mr. FIELDING. Did we ask to continue it ?

Mr. MONK. In a modified form.

Mr. FIELDING. On the contrary we asked to strike it out.

Mr. BRODEUR. Does not my hon. friend think that this change between the treaty of 1893 and the treaty of 1907 is a most important change ?

Mr. MONK. I think the most important change of all was the right of concluding treaties in our own name which you have not explained yet.

Mr. BRODEUR. With regard to the direct shipment, did we ask the French government to continue the treaty in that respect ? Certainly not. In that direct shipment provision in the treaty of 1893 it was a stipulation in favour of France alone and there was no reciprocal privilege given to Canada. Under that clause in the treaty of 1893 in order that Canadian goods might enjoy the benefit of the minimum tariff in France we were obliged to ship them direct to France, whereas French goods imported into Canada were not subject to the same restriction. Will my hon. friend (Mr. Monk) tell me that that was equal treatment to Canada. Then why should we give to France the privilege of the most favoured nation treatment when Canada had not the same privilege. Why should we allow France to restrict the importation of goods through a French port alone, when Canada did not have the same advantage on her side. In these respects, my hon. friends will find in the treaty we have negotiated that Canada and France have been put on terms of equality. Under this treaty the most favoured nation treatment applies to Canada as well as to France, and that is as it should be. Then again the inequality of treatment as regards direct shipments which we find in the treaty of 1893 has disappeared in the treaty of 1897, and Canada and France now stand on an even plane in that respect.

Mr. SPROULE. And when you come to establish a line of steamers to carry on that trade Canada pays all the subsidy.

Mr. BRODEUR. We are subsidizing a line of steamers to open up channels of trade with France. That is our own business and for our own advantage. My hon. friend knows that we are also subsidizing a line of steamers to China and Japan for a trade which is not so important as that which we are conducting with France.

Mr. SPROULE. I thought the minister said that under this treaty Canada and France enjoyed equal privileges in every respect.

Mr. BRODEUR. The subsidy to a line of steamers between Canada and France is not mentioned in the treaty and the treaty has nothing to do with it. That is a matter which is entirely in the discretion of Canada. I will not discuss that question now, but let me ask my hon. friend: Does he not think it advisable that we should have a line of steamers with France in order to promote trade between the two countries?

Mr. SPROULE. I am not objecting to that at all, but I say if it is an advantage to us it must be equally an advantage to France, and for the purpose of carrying on and developing this trade I cannot see any good reason why France should not share the cost of subsidizing that line.

Mr. BRODEUR. This is not in the treaty, it has absolutely nothing to do with the treaty and we have simply to decide whether the treaty as it is is a good one or whether it should be rejected. I have been extremely surprised to hear hon. gentlemen opposite criticise this treaty for several days. They were very willing to support the treaty of 1893, and I would ask if my hon. friend from East Grey, who voted for that treaty would undertake to say that this treaty is not more advantageous than the one of 1893.

Mr. SPROULE. I will frankly say that I have not examined it, nor could I, as it was presented, reach any intelligent conclusion or make any proper analysis of it with the information before the House. I would not speak one way or the other. I have not said anything against the treaty ; I have scarcely criticised it for the simple reason that I could not make an analysis of it that would justify me.

Mr. BRODEUR. I shall try to convert my hon. friend completely. He voted for the French treaty of 1893 which covered only a few articles and which contained some bad clauses, especially the favoured nation clause. Apart from the articles covered by that treaty we have increased considerably the number of articles on which we enjoy the benefit of the minimum tariff. Will my hon. friend object to that ?

Mr. SPROULE. No.

Mr. BRODEUR. I shall quote one figure to my hon. friend to show how important this treaty is. We find in the figures that were before us when we negotiated the

treaty that for 1896 we exported from Canada goods to the value of $235,000,000. Out of this $235,000,000 we have obtained the French minimum tariff on goods which we exported to the extent of $212,000,000. Does my hon. friend think that is a bad feature? We have practically covered all the articles of export from Canada. My hon. friend from Jacques Cartier (Mr. Monk) says that we should not have a long list like that, and suggests that we should have conferred it simply to a small list of articles.

Mr. MONK. I did not say that.

Mr. BRODEUR. A less number of articles.

Mr. MONK. With the certainty that we could deal in those articles.

Mr. BRODEUR. Will my hon. friend cite to me five articles of importance which we export to-day which are not included in this treaty. Our aim was to cover all the articles that we were exporting. My hon. friend says: But we do not export agricultural products to France. He is mistaken; let him examine the reports and he will find that we have exported cattle to France.

Mr. MONK. To a very small extent.

Mr. BRODEUR. At all events, we have exported cattle to France. We exported some years ago a good quantity of dead meat. We were doing a very good business with France in ham. There was not then any minimum tariff on that article and of course the Canadian exporters were on the same footing as the producers in the countries adjoining France, Hungary, Germany, Italy, Switzerland and Belgium. In 1903, a minimum tariff was imposed on ham and the result has been that some of these adjoining countries, which enjoyed the benefit of the minimum tariff, have captured the ham trade there, their hams have supplanted the Canadian hams. This shows conclusively that there is a great advantage in having provided that we will have the minimum tariff or the most reduced rate not only on the articles which are to-day on the minimum list, but also on the articles on which there is only one tariff, such as grain. Suppose that to-morrow a minimum tariff should be imposed on wheat. We have provided in the treaty that any reduction which will be given to any foreign country will have to be given to Canada, whether there is a minimum tariff on the article or not. If, to-morrow, France should impose a minimum tariff or a reduced tariff on wheat coming from Russia, France would have to give us the same treatment. My hon. friend from Jacques Cartier (Mr. Monk) has stated that we do no business in cheese. There he is mistaken. The figures do not show this but I am credibly informed by importers in France that a large quantity of cheese was imported into France as English cheese, although it was Canadian cheese. My hon. friend also tried to poke some fun at us because we had put some fruits, like pineapples, and also brandy on the list. If my hon. friend will read the clauses in which these articles are mentioned, he will find that they are grouped with other articles of importance. Take pineapples for instance. It is true we do not produce pineapples, but this would include preserved pineapples and it must be remembered that by this clause we have the minimum tariff on apples and preserved fruits and we may do a large trade in apples.

Mr. MONK. I do not think we can do much trade with France in apples, preserved or otherwise.

Mr. BRODEUR. My hon. friend is mistaken. Two years ago we exported a large quantity of apples. My hon. friend has not studied the situation carefully.

Mr. MONK. I did not conclude the treaty in the name of Canada as my hon. friend did.

Mr. BRODEUR. If my hon. friend will speak to one of the apple shipping companies in Montreal connected with the French service, he will find that we exported a large quantity of apples last year.

Mr. LEMIEUX. I may say for the information of the House that two years ago I was told in Paris that the whole crop of the village of St. Laurent, represented by my hon. friend, had been bought in Paris, and Canadian apples were sold at one franc.

Mr. MONK. I do not want to create any trouble between these two hon. gentlemen.

Mr. BRODEUR. With regard to brandy, my hon. friend will find that brandy is included in the same item in the French treaties as whisky and we export a great quantity of Canadian Club whisky to France. My hon. friend must have seen advertisements for Club whisky in many places in France. If my hon. friends object to our having included in clauses with articles in which we do a considerable business, articles in which we may not do much, what has he to say of the famous eels included in the treaty of 1893? Eels were then included by themselves.

Mr. FOSTER. Does my hon. friend go back on eels?

Mr. BRODEUR. They were not included with some other article.

Mr. FOSTER. They were not by themselves.

Mr. BRODEUR. They were by themselves, my hon. friend is mistaken. I will show him the treaty.

Mr. MONK. Fresh water fish, eels.

Mr. FOSTER. It took in all fresh water fish.

Mr. BRODEUR. No; only eels. My hon. friend will find that a description such as this in the French tariff means simply eels.

Mr. MONK. Eels are not considered as fish. They belong to the snake family.

Mr. LEMIEUX. They are caught in Lake St. Peter. Is that not fresh water?

Mr. MONK. They are not considered as fish at all.

Mr. FOSTER. They are land animals caught in the water.

Mr. BRODEUR. My hon. friend comes from a country where they do not appreciate some differences. Coming to the question of direct shipment, my hon. friend is entirely mistaken in his interpretation. He claims that goods can be exported to Canada from France via the United States.

Mr. MONK. I understood that by article 8.

Mr. BRODEUR. I suppose that now my hon. friend gives up that argument.

Mr. MONK. We are to understand by that article that the country through which the goods are exported must get the benefit of the whole minimum tariff?

Mr. BRODEUR. Certainly.

Mr. MONK. That is not according to article 8.

Mr. BRODEUR. In the French treaties, what does the minimum tariff mean? Most of the treaties made by France are treaties in which they give the French minimum tariff generally.

Mr. MONK. We are enjoying the benefits of the minimum tariff.

Mr. BRODEUR. No, not entirely. We asked the benefit of the whole minimum tariff, but they could not give it, because, according to their tariff law, only those countries which give them the most reduced tariff can enjoy the full benefit of their minimum tariff. And as Canada gives the British empire a lower tariff than the intermediate, France could not give us the whole benefit of her minimum tariff.

Mr. MONK. That is a question.

Mr. BRODEUR. I do not think so at all. It is well understood that goods could not be shipped through the United States to France and enjoy the advantages of the treaty, and in like manner goods must be shipped to France from Canada direct or via Great Britain or British possessions in order to enjoy the minimum tariff. I do not think it is necessary that I should dwell longer on the treaty. I am glad to hear my hon. friend say that he intends to vote for it. I had some doubts, because his friends were severely criticising the treaty.

Mr. MONK. I stated in the debate on the address that I would vote for it.

Mr. BRODEUR. The treaty was discussed in the French chamber and adopted on the same day. Here it has taken several days, but we have no objection to the discussion, especially as light has come from it to our hon. friends opposite and they are going to vote for the treaty.

Mr. FOSTER. The light has come in a certain way. The latest telegram announces thirty-one Conservatives and thirteen Liberals elected in the province of New Brunswick.

Mr. A. M. BEAUPARLANT (St. Hyacinthe). (Translation.) Mr. Speaker, after the important speech just delivered by the hon. Minister of Marine and Fisheries (Mr. Brodeur), I wish to say but a few words on the question now before the House.

The hon. member for Jacques Cartier (Mr. Monk), who spoke at the beginning of this sitting, first stated that the French treaty which we propose to ratify by this Bill, has been well received by his political friends. I am willing to admit that he was sincere, but, evidently, the hon. member did not look into all that was said by his political friends on this question. Had he done so, or had he taken a more active part in the discussion of this commercial treaty with France, surely he would have refrained from making such a statement. The speech delivered by the hon. leader of the opposition on this question does not show that the treaty has met with a very kind welcome on his part, and what he said, and what several of his followers, for instance, the hon. member for Brantford and the hon. member for Lincoln, also said, is far from corroborating the statement made by the hon. member for Jacques Cartier.

No, our opponents refuse, apparently at least, to believe in the general advantage to be derived by Canada from the French treaty. They claim that France will be more benefited by it than we will. They admit, however, after glancing at the text, that 153 of Canada's products will be privileged in France, whereas only 110 of the French products will, in the same conditions, be privileged in Canada. But we have in our favour the number and the commercial enthusiasm, which an older country has not, at least in the same proportion, and so, according to sound logic and to all unprejudiced people, the chances are on our side. The policy of the United States, a country which naturally should be our market, has hardly encouraged our aspiration or our hopes since a pretty long time, and then the English market is not unlimited and our products do not happen to be the only ones that get there. There-

fore, a country which, as far as commerce is concerned, comes, like France does under the actual circumstances, and holds out to us the olive branch, should not judiciously be looked upon as being a contracting party too exclusively biased by his own interests.

After all, our friends opposite do not consider that they have been sent here especially to cheer at all that which happens to be done by the government or by its representatives. They think it their duty to do quite the reverse, and such being the case, I admit that they stick to their duty unceasingly and beyond all reproach. However, if this question is voted upon they must resign themselves once more to see several of their followers desert them and to remain unable, so do I think, at least, to compensate this loss even by one independent adhesion.

In addition to this, it is difficult to deny that public interest is served, when the interest of so many industries in different parts of the country is undoubtedly favoured by the treaty now under consideration, for, after all, public interest springs from the private interests united together. Let us look first at the agricultural interests. It seems to me impossible not to admit that these interests are favoured by the treaty, as far as the following products are concerned: on horses, according to age, a rebate of 25 to 33⅓ per cent; on other animals, a rebate of 33⅓ per cent; on fresh meats, 30 to 37½ per cent; salt meats, 40 to 50 per cent; on pure condensed milk, 50 per cent; on cheese, eggs, salt butter, 33⅓ per cent; on fodder, including hay, 33⅓ per cent; finally, on what and potatoes, the rebate being even 86⅔ per cent on this last article. In other words, the duty was 58 cents a bushel heretofore, while it is only 8 cents to-day, under the new treaty.

In fine, 153 agricultural or industrial products will be favoured with a rebate.

Several members have also enumerated the particular advantages which the treaty is bound to secure in their respective districts. The treaty has not been ratified yet, and even now, as my hon. friend from West Hamilton (Mr. Zimmerman) tells us, a particular activity is evidenced in the city of Hamilton in the meat canning industry and in the manufacture of farming implements, in order to make exports to France. Shops which had closed their doors are opening them to-day with hope, because of the new market where their products may now be sold.

At six o'clock House took recess.

## After Recess.

House resumed at eight o'clock.

## THE HAMILTON RADIAL ELECTRIC RAILWAY COMPANY.

Mr. A. H. CLARKE (South Essex) moved the third reading of Bill (No. 25) respecting the Hamilton Radial Electric Railway Company.

Mr. A. C. MACDONELL (South Toronto). Mr. Speaker, I move in amendment:

That the said bill be not read the third time, but that it be referred back to the Committee of the Whole House with instructions to amend Section 2 by striking out all of the said section, commencing with the word 'provided' in line 39 thereof, to the end thereof, and by substituting the following words: 'notwithstanding anything contained in the preamble or Section 1 of the Bill, or in the Railway Act, the said company, and its lines of railways shall be subject to the provisions of the Ontario Railway and Municipal Board Act, 1906, and amendments thereto, and to the Ontario Railway Act, 1906, and amendments thereto, and to the jurisdiction of the Ontario Municipal Railway Board and the Ontario Power Commission Act, and the Act respecting the same, Chapter 19 of the Statutes of Ontario and amendments thereto.

It is obvious at a glance what objects are sought to be accomplished by this amendment. In a word that object is to retain in the province of Ontario jurisdiction over this railway, in so far as it is under the Ontario Railway Act, in so far as it is under the Ontario Municipal Railway Board Act, and also in so far as it is under the Power Commission Act. Now, should this Bill pass, the people who are served or are to be served by this road will be deprived of rights which heretofore they have enjoyed under the various Acts I have cited. It is to turn back the hands of the clock, as it were, so that the people may continue to receive these benefits, that I move this amendment. Now the people in the territory through which this road and its branches run, number upwards of one million souls. That district is all the southwestern and much of the central portion of the province of Ontario. The rights of this one million of people are to be considered, according to my opinion, against the demands of the company. It seems to me that the discussion of this Bill in the committee, both during the present session and during last session, was confined largely to the rights of the railway. Hon. gentlemen who promoted and supported this Bill seemed to see with only one eye, and that eye was directed toward the company. The rights of the people, according to my way of thinking, were entirely overlooked. It must be remembered that this is not only a railway company, but also a power company. And, if the jurisdiction over the works of this company be taken from the province of Ontario and vested in the Dominion of Canada, then every company similarly situated in the province of Ontario will be entitled to the same treatment, and, no doubt, the precedent established by giving this company Dominion standing will be pleaded by these other companies whenever it suits their purpose to do so. Every

one who is conversant with the Acts of the province of Ontario to which I have referred —the Railway Act, the Railway Board Act and the Hydro-Electric Commission Act— knows that many valuable rights are preserved to the people under these Acts which they cannot possibly receive from the Dominion government, at least as it is at present constituted. Under the precedent it is proposed here to set, practically every small electric railway company in the province will be free to seek and obtain federal legislation. The very preamble of this Bill invites that, for it recites that by the crossing of this railway by the Grand Trunk Railway some ten years ago, this railway became a work for the general advantage of Canada. You are setting the seal of the Dominion parliament upon every railway that, at any time, has crossed or connected with any Dominion steam railway. Surely, this is unnecessary; it is going beyond the needs of this Bill and is holding out a signal which will attract every company that thinks it can benefit by federal incorporation. We shall have the province of Ontario made practically an incorporating body with no further powers. Under the British North America Act, the province has the power to incorporate railway companies within the province. This will be seen on referring to subsection 10 of section 92 of the British North America Act, which, among other exclusive powers given to the provinces, names 'local works and undertakings other than such as are of the following classes.' Then follows the exceptions. So, after these companies have been incorporated by the province, and, it may be, after they have come before the legislature year after year procuring extensions and favours, whenever it suits their interest, they can ask for Dominion incorporation, and, under the precedent of this measure, that incorporation cannot be denied them without injustice. So, as I say, you will have Ontario simply a charter granting body, a place of organization like the state of New Jersey, a state notorious throughout America generally as being simply an incorporating power. And you will have these companies becoming incorporated by the provincial parliament and thereafter passing under federal control. You will have this anomalous state of things: You will have the provincial Railway Act and the provincial railway commission dealing with these provincial railways, as they should deal with them under the full scope of the British North America Act, and then you will have these companies vanishing from the jurisdiction of the province. Ontario will have simply the power to incorporate and no more, because the companies will pass from local to federal jurisdiction.

Now, Mr. Speaker, this is an unusual application. This company was incorporated fifteen years ago by the province of Ontario.

Mr. MACDONELL.

Since that time it has applied for and received five special Acts of the Ontario legislature, conferring powers and, along with them, burdens and privileges. The time for the building of this road has been extended from time to time. The best evidence of that is the fact that the promoters of this Bill are now asking for the incorporation of a road not yet commenced. The greater part of this road, yes, five-sixths of this road asked for in this Bill, is not even commenced, although this company became incorporated some fifteen years ago.

Now, it has been said that this was not a company undertaking to do local work in that province, but that it intended to go far afield and connect with some other roads, that it would be a great forwarder of freight and passenger traffic, and would also cut the international boundary at two places. Now, my argument in the Railway Committee was this, that it was not sufficient for a company to come to this parliament and simply say: We intend to do so and so; we intend to build an interprovincial railway, or we intend to build a railway crossing the international boundary line; but they must also give some evidence of their bona fides, and their good faith, and their intention to do so, and that until they had given such evidence they should not complain if this parliament declined to recognize them as a railway for the general advantage of Canada. But the promoters of this Bill took the ground, the only ground which they attempted to discuss in the Railway Committee, that this railway was a work for the general advantage of Canada, and in fact had been so declared by the judgment of Mr. Justice Street in the year 1897. Now, it has been pointed out on two or three occasions at least since that time that this very company went to the Ontario legislature and obtained an extension of their powers. They made no pretense to recognize federal legislation as controlling them, they in no way claimed that they were under the Railway Act of Canada, and it is only now that they make this claim under this judgment to which I have referred in the Grand Trunk Railway Company vs. the Hamilton Radial Railway Company, by Mr. Justice Street, reported in 29 Ontario Reports, at page 143. Now, that judgment, which I think I have analyzed fairly, was simply confirming an order of the Railway Committee of the Privy Council, which ordered the Grand Trunk Company to submit to the crossing or intersection by this radial road of its line. Now, the judgment contains this statement:

The defendants then applied to the Railway Committee——

That is speaking of the steps that this company took.

The defendants then applied to the Railway Committee of the Privy Council for an order

allowing them to cross the tracks of the Grand Trunk Railway Company which was opposed by the plaintiffs, but on March 3, 1897, the Commission made an order approving of the place and mode of crossing the plaintiffs railway as indicated by the defendants in their application, and prescribed certain conditions to be fulfilled in so doing, holding that under the provisions of the Railway Act, 51 Victoria, chapter 29 (D) the defendant's company in respect of the crossing were within the legislative authority of the parliament of Canada

That was the language of the order in council ordering the Grand Trunk Company to submit to a crossing or intersection by this Hamilton Radial Company, and declaring that the defendant company, in respect of the crossing, was within the legislative authority of the parliament of Canada; that is, the Railway Committee of the Privy Council said that, in so far as the crossing was concerned, this Hamilton Radial Railway came and was within the legislative authority of the parliament of Canada. Mr. Justice Street, in the first paragraph of his judgment, says:

I am of opinion that the question raised here must be treated as absolutely determined by the order of the Railway Committee of the Privy Council subject to the right of appeal to the Governor in Council.

Here we have the judgment of Mr. Justice Street simply confirming an order of the Railway Committee of the Privy Council, which stated that in so far as the crossing was concerned the defendants, that is the Hamilton Radial Company, were within the legislative authority of the parliament of Canada. I think that is a fair construction to put upon that judgment. Remember that at the very time the judgment was given the Railway Act of 1888 was in force. I will cite section 177 of that Act to prove that there was no intention on the part of Judge Street, or of anybody else connected with this transaction, other than to consider it a crossing, for the purpose of a crossing only. Section 177 of the Railway Act says:

Every railway company incorporated by any Act of the legislature of any province which crosses, intersects, joins or unites with any railway within the legislative authority of the parliament of Canada, or which is crossed, intersected by, or joined or united with any such railway, shall in respect of such crossing, intersection, junction and union, and all matters preliminary or incident thereto be deemed to be, and be within the legislative authority of the parliament of Canada and subject in respect thereof to the provisions of this Act.

Now, that is a clear statement that a railway crossing another main line of railway, and which is a Dominion line of railway, comes within the legislative authority of the parliament of Canada. It is only in respect of such crossing, intersection, junction and union, only for this purpose, that the company is under Dominion jurisdiction. Now, one would think that was abundantly clear. The promoters of this Bill in the committee urged sections 306 and 307, but they relate to other times. This clause 177 is directly in point, it is a provision having special regard to provincial railways crossing Dominion railways, and governs the case. Now, if that were all, something might still be left to the promoters of this Bill. What do we find? We find that the present Railway Act amply governs the case. My argument is this, that even if this railway company ever became a work for the general advantage of Canada because of this crossing which took place in the year 1897, and because of this judgment that was rendered, still the effect of the Railway Act of 1903 is entirely to change the situation. Section 8 of the Act of 1903 is very distinct; its effect is to limit the jurisdiction of the Dominion parliament exclusively to the crossing, and that Act is retroactive. It not only refers to railways in the future, but expressly refers to railways then in existence. Now, section 8 is as follows, omitting those parts not relevant:

Every railway, steam or electric street railway or tramway, the construction or operation of which is authorized by special Act of the legislature of any province, and which connects with or crosses or may hereafter connect with or cross any railway within the legislative authority of the parliament of Canada, shall, although not declared by parliament to be a work for the general advantage of Canada, be subject to the provisions of this Act relating to,——

(a) The connection or crossing of one railway or tramway with or by another, so far as concerns the aforesaid connection or crossing.

So that we have the absurdity of the situation that because a street railway—such as the Toronto railway, the Hamilton railway, the Oshawa railway, the Ottawa railway and others—crosses a railway under Dominion jurisdiction it becomes a work for the general advantage of Canada. That was recognized and the Act of 1903 was passed, the effect of which in its own language is:

Every railway, steam or electric street railway, or tramway, the construction or operation of which is authorized by special Act of the legislature of any province, and which connects with or crosses or may hereafter connect with or cross any railway within the legislative authority of the parliament of Canada——

It applies to railways which had existing connections and crossings and those which might be made hereafter.

—or may hereafter connect with or cross any railway within the legislative authority of the parliament of Canada, shall, although not declared by parliament to be work for the general advantage of Canada, be subject to the provisions of this Act relating to——

Any such crossing. That is so simple and plain that when this Bill was before the House last year, after the Railway Com-

mittee had got through with it, that ground was taken very strongly. The hon. Minister of Justice (Mr. Aylesworth), on that occasion, was in doubt—I think I am not quoting him unfairly when I say that he certainly was in very grave doubt—as to the effect of retroactive legislation upon this particular railway. He said that the Act of 1903 dethroned the prior general Dominion jurisdiction. That is one view that he expressed. He expressed the views pro and con, but that is one legal opinion that he canvassed in his own mind and gave the House the benefit of. I think it is abundantly clear that it dethroned prior legislation and brought this railway as well as other railways under it merely for the purpose of giving the Dominion parliament jurisdiction regarding crossings or intersections.

Mr. GRAHAM. Does my hon. friend really contend that under the British North America Act this parliament can, even by an Act, denude itself of the power once taken when a company or undertaking is declared to be for the general advantage of Canada?

Mr. MACDONELL. That is a point that I will not attempt to answer——

Mr. GRAHAM. Well, that is the whole point.

Mr. MACDONELL. —because the Minister of Justice could not answer it last year and because it in no way affects or relates to the present situation. What do we find? I will afterwards point out a few of the reasons why it is desirable to keep a work of this kind under the jurisdiction of the provincial parliament, but I desire now to say that the most obnoxious feature of this proposed legislation is that it is not one railway company which is asking for these Dominion powers, but that this Bill gives to this company power to amalgamate with half a dozen other electric railways. These railways that form part of this system will be amalgamated with this railway under the terms and conditions of the Railway Act. Every one of them will become vested with the same powers that this Hamilton Radial Railway Company becomes possessed of. So it will extend these conditions not only to the one railway which is asking for this unusual right, but it brings along seven others, brings them under this parliament, and I venture to say that very many of them would not be given Dominion legislation if they came singly and separately before this parliament. One or two of these might at the present time be given Dominion jurisdiction—I am not sure of that, but there are five or six of them that would not be. Yet we find that this company comes here with this group of railways and with this omnibus clause incorporating these seven companies in a work which is declared to be for the general advantage of Canada. There is no reason why the promoters of this Bill should not have their Bill and why they should not have a fair Bill. No one is trying to block or obstruct this measure, but they are asking powers that in no case are they entitled to receive, and they are taking from the people of Ontario powers that the people of Ontario are entitled to retain. Even if this is declared to be a work for the general advantage of Canada, granted that they are given that power, they still should be made subject to the jurisdiction of the Ontario railway legislation to which I have referred. It may be that these hon. gentlemen want, for financial reasons, to have this declared to be a work for the general advantage of Canada. Let that be so, let them have that declaration, but let it be put side by side with a recognition of provincial jurisdiction over this railway. We find that that is not an unusual thing. The Railway Act itself contemplates a divided jurisdiction. There is no doubt or difficulty about that. We find in section 9 of the Railway Act a very simple section 'provincial legislation regarding Sunday,' which I cite for the purpose of showing that it is in contemplation of the Railway Act to have a divided jurisdiction. It is possible under that provision that a work may be declared to be for the general advantage of Canada and at the same time retained under provincial jurisdiction for purely local and provincial purposes. That section says:

Notwithstanding anything in this Act, or any other Act, every railway, steam or electric street railway or tramway, situate wholly within one province of Canada, and declared by the parliament of Canada to be either wholly or in part a work for the general advantage of Canada——

That is what this parliament has been doing. Take for instance the Ottawa Street Railway, the Act in regard to which was passed as far back as 1892; we find that there is divided jurisdiction as shown by section 6 of chapter 53 of the Dominion statutes of 1892 incorporating that company. The undertaking was declared to be a work for the general advantage of Canada, but subject as follows:

But the operation of so much of the company's line of railway as may be within the province of Ontario by any new or additional powers conferred by this Act shall be subject to the statutes of Ontario in force from time to time in relation to street railways, and the operation of so much of the said line of railway as may be within the province of Quebec by any new or additional powers conferred by this Act, shall be subject to the statutes of Quebec in force from time to time in relation to street railways.

Here we have a railway declared to be a work for the general advantage of Canada and yet retained under provincial control,

subject to the statutes of Ontario in so far as it is within the province of Ontario and in like manner subject to the statutes of Quebec in so far as it is in the province of Quebec. So that, we have the Dominion undertaking a work for the general advantage of Canada, declared to be subject not only to Ontario legislation regarding street railways, but also subject to Quebec legislation. We have not only two jurisdictions governing this particular railway, but we have three jurisdictions. Surely that is an example that is worthy of being imitated. No friction has occurred in Ottawa that did not result in a benefit to the people of the city. I am informed, and I believe it to be a fact, that the Ottawa Street Railway Company commenced to run freight cars through the city and that under this very provincial control which was retained over them, a stop was put to that, and the rights of the people of the municipality vindicated. Not only do we find this House granting power to this company under three jurisdictions, but this very session Bills have been passed by which companies have been placed under divided federal and provincial jurisdiction. Let me remind hon. gentlemen that it is not only railways that can be declared to be for the general advantage of Canada, because section 92 of the British North America Act, subsection 10, says that powers are reserved exclusively to the provinces over local works and undertakings except :

(c) Such works as though wholly situated in a province are before or after their execution declared by the parliament of Canada to be for the general advantage of Canada or for advantage of two or more of the provinces.

Therefore any local works and undertakings, and not railways alone, can be declared by this parliament to be for the general advantage of Canada. There are now two Bills before the House in which there are clauses preserving provincial rights. In the Act respecting the Edmonton, Dunvegan, and British Columbia Railway Company, a company possessing very large powers under the Act, subsection 2 of section 3 says :

2. Nothing in this section shall exempt the company from complying with the provisions of any Act now or hereafter passed by the legislature of the province of British Columbia or of the legislature of the province of Alberta and applicable to the company, with respect to the supply, sale or other disposition of any surplus water, electric or other power, or electricity developed or generated and not required for the purposes of the company.

Sections 4 says :

4. Nothing in this Act shall authorize the company to construct or operate any telegraph or telephone lines or any lines for the purpose of distributing electricity for lighting, heating or motor purposes, or disposing surplus power generated by the company's works and not required for the undertaking of the company, upon, along or across any highway or public place, without first obtaining the consent, expressed by by-law, of the municipality having jurisdiction over such highway or public place, and upon terms to be agreed with such municipality.

Here we have clauses inserted in this charter protecting not only provincial rights but municipal rights as well. The company operates both in Alberta and in British Columbia, and although its works are declared to be for the general advantage of Canada they are made subject to legislation by the provinces of British Columbia and Alberta ; and not only that, but the rights of municipalities in which they operate are safeguarded. And yet in this Bill of the Hamilton Radial Railway Company we find that both the province and municipalities are entirely ignored. Then, an Act has been passed by this House this session to incorporate the Dominion Lumbering and Power Development Company, and although the undertakings of the company are declared to be for the general advantage of Canada, section 17 of the Bill says that the undertakings of the company shall be subject to the provisions of any general Act now or hereafter to be passed by the legislatures of the province of Ontario or of Quebec providing, in the interest of public health or safety, for the control and regulation of the transmission, distributing, and supplying of electricity in any form. We therefore find that this parliament is incorporating at the present time a large number of these power development companies and that provision is inserted in their charters that provincial legislation shall apply to them. That is all that my amendment to the Hamilton Radial Bill asks for. I simply ask that the Ontario Railway Act and the Ontario Hydro-Electric Act shall apply to this company. Let me point out one or two respects in which the interests of the people of the province of Ontario are safeguarded by the existing railway legislation of that province, and, if provincial control is retained over this whole system of seven or eight railways which are now included in this Bill, the people of the province will reap the benefits which the existing provincial legislation confers on them. By the Ontario Railway Act, 1906, chapter 60, subsection 1, section 171, the following is provided :—

Fares to be taken by company on a railway operated by electricity for each passenger shall not exceed 5 cents for any distance not exceeding three miles, and in excess 2 cents per mile—under 10 years, 3 cents for three miles, and additional distance one-half fare.

The benefits of that section will be lost to the people of Ontario if this railway is declared to be a work for the general advantage of Canada and if the provincial law does not apply to it. Subsection 2 says:

Section 171, subsection 2. Pupils under 17 years of age actually attending school, 8 tickets for 25 cents.

The above applies not only to street railways but to any railway operated by electricity.

Section 193 reads:

Section 193. No company or municipal corporation operating a street railway, tramway or electric railway shall operate on Sunday except to keep track clear of snow or ice, or works of necessity.

That provision in the Ontario Act is much fuller than the regulation regarding Sunday operations of railways in the Act passed by this parliament. Section 202 of the Ontario Railway Act declares:

Section 202. Any privilege granted by a corporation cannot be longer than 25 years.

The province of Ontario has very wisely legislated to protect municipalities being taken advantage of by railway companies. I think the policy of giving a railway company a perpetual franchise should be discouraged, and the province of Ontario has wisely passed a law that no municipal corporation can grant a franchise for longer than twenty-five years, so that the people in each municipality shall have an opportunity at least once every quarter of a century to reconsider their position if they wish to. In other words, they are not allowed to legislate in perpetuity, they cannot for all time to come bind themselves and those who come after them, by agreements in perpetuity.

Mr. CLARKE. Do you not think the township councils are quite competent to say how they shall deal with their own highways?

Mr. A. C. MACDONELL. I do not; I think that in many cases they are but in many they are not. It is the cases in which they are not competent to look after their interest that this legislation is designed to protect.

Mr. CLARKE. They are all competent to look after their own interest.

Mr. A. C. MACDONELL. I think not. There are many cases where, for obvious reasons, advantage can be taken of them. They are not in the habit of dealing with corporations and a corporation going through 30 or 40 municipalities, has skilled officials who become experts in dealing with municipalities, and in dealing with men who are new in the business, these officials very often induce the municipalities to enter into improvident agreements. The fact that the province of Ontario has crystallized this into legislation proves that at least it was wise in the opinion of the legislature of Ontario, and I think both sides of that legislature agreed to it.

Section 221 provides that all motormen must pass inspection by examiners as to their habits, physical ability, intelligence, &c. This applies to a street railway or a railway operated by electricity. Further provisions are made with regard to guard wires to protect the public from the electrically charged wires and also for protecting the public by fenders, brakes, &c. There are various provisions respecting the guarding of motormen and conductors in the execution of their work.

By section 256, the board may at all times enter on the right of way of any electric railway company and use that right of way for the erection of poles and the placing of wires upon the poles for the transmission of electrical or other power from any plant in Ontario to the works and plant of any municipal corporation.

Mr. CLARKE. Is there any provision for the power company compensating the railway for the use of its right of way?

Mr. A. C. MACDONELL. No doubt that will be done.

Mr. CLARKE. There is nothing in the Act providing for that?

Mr. A. C. MACDONELL. I do not find that.

Mr. CLARKE. Do you think that is fair?

Mr. A. C. MACDONELL. I say that is a safeguard the province of Ontario has adopted.

Mr. CLARKE. It looks to me like confiscation.

Mr. A. C. MACDONELL. The legislature of Ontario has said that where a railway company has a right of way of this kind the board may enter upon it and may string wires upon it for the purpose of the transmission of electricity from any works or plants of the province of Ontario to any municipal corporation. That seems to be a very wise and reasonable power.

Then under the Ontario Railway and Municipal Board Act of 1906 we find this provision, by section 63. This section gives particulars of the power vested in the board to enforce municipal agreements, even to the extent of taking possession of the works and property of the company and directing the management, &c. In this respect municipal boards are given powers not so far extended to the Dominion Board of Railway Commissioners. In connection with that feature I commend to the Minister of Railways the remarks of Mr. Leitch chairman of the Railway Board of the Ontario Railway Commission when this feature of the Bill was being considered.

In a letter to the Prime Minister of the province of Ontario very recently during the time that this Bill was before the Railway Committee, he said in part:

There is no provision in the Dominion Railway Act for the enforcement of an agreement

between a railway and a municipality. There cannot be, because the enforcement of agreements is a civil right which is within the exclusive jurisdiction of the province. The Ontario Railway and Municipal Board Act, 1906, has the provision which the Dominion Railway Act has not and cannot have, giving the board power and jurisdiction to construe agreements between railways and municipalities and enforce them to the extent of taking possession of and running the railway.

With the proposed amendment to the Dominion Railway Act, a municipality will find it is in a position of having an agreement with the railway company, which it cannot enforce and which the company may break with impunity. In fact as soon as such an agreement is made the municipality will be powerless.

Mr. GRAHAM. Does my hon. friend really think that a road chartered by the Dominion is not under the authority of the Dominion to the extent that it can be made keep its contract with a municipality or with anybody else ?

Mr. A. C. MACDONELL. At present the Dominion Railway Commission or the Dominion government has no power such as the Ontario Board of Railway Commissioners has for the summary enforcement of the rights of municipalities. The only power that the Railway Commission has and that the municipality would have would be to apply to the courts and fight it out with the railway through protracted and expensive litigation.

Mr. Leitch continues :

The only remedy for this is for the Dominion parliament to provide that agreements between the railways and the municipalities should be subject to the jurisdiction of the Ontario Railway and Municipal Board. It may be said why not leave the enforcement of these agreements to the high courts? The answer to this is that the courts have no machinery to enforce these agreements. They might give damages, but giving damages is not an effective remedy. The fact is that no electric railway should be declared for the general advantage of Canada and taken away from local jurisdiction.

In conclusion he says :

The declaration of general advantage leads to peculiar results. A railway is incorporated by the provincial legislature. Immediately agreements have been entered into with the municipalities and the road is in operation for some time, on one pretense or another, the company gets a declaration from the Dominion of general advantage. This has not the effect of repealing the local legislation. It prevents further provincial legislation and it removes the road from the jurisdiction of the Ontario Railway Board. The consequence is that we have povincial legislation on the statute-books and agreements with the municipalities in full force but incapable of enforcement for the reason that the Dominion Act provides no machinery and the Ontario Railway Board has no power because the railway has been taken from under their jurisdiction by the declaration of general advantage.

Mr. GRAHAM. If by legislation or by fact it were shown that the Dominion had machinery to make railways keep their agreements, then that contention would fall to the ground.

Mr. A. C. MACDONELL. It would remove that objection very largely.

Mr. SPROULE. The minister's predepart of the Dominion to become a public cessor said last year that it was not the prosecutor, that it was not their duty to enforce the law.

Mr. GRAHAM. They are doing it every day in the commission.

Mr. A. C. MACDONELL. This company is not only a railway but a power company. It has large rights from this country for the generation of power. I understand it has the right to take power or water from the Welland canal or the old Welland canal at almost a nominal cost. The people of this country have built a waterway in the shape of the Welland canal, and this railway company has made an agreement with the government under which it obtains the use of a very large quantity of that water for the purpose of developing power very cheaply. This company is in the power business. By section 17 of its Act of incorporation, it has the right to create power for light, heating and railway purposes and may use that power for the purpose of its railway and sell the excess not required.

Mr. CLARKE. Does the hon. gentleman say that this railway has the use of the waters of the Welland canal ?

Mr. A. C. MACDONELL. Yes.

Mr. CLARKE. Is it not a separate company called the Cataract Power Company ?

Mr. MACDONELL. It is all one company.

Mr. CLARKE. No, it is an entirely different entity.

Mr. MACDONELL. Be that as it may, this company gets abundance of power from the Welland canal. I am not quarrelling with that, but simply mention it to show that it is a power company and should be subject to the regulations of the province of Ontario respecting power companies. It is proposed to amalgamate the Windsor, Chatham and London Railway Company with this company, and the former has also the powers of an electric company, so that the whole section served by these two companies will be free of Ontario jurisdiction. At present the Hydro-Electric Power Commission of Ontario, under the Power Commission Act of 1907, has the power, wherever it finds that a company which is autho-

rized to sell and distribute electric power, is exacting unreasonable rates or in any other way taking advantage of a municipality, to take charge of and expropriate that company. Section 8 of that Act provides as follows:

The Lieutenant Governor in Council on the report of the commission may authorize entry and take the lands, machinery, &c., of any corporation or person developing electrical energy and use the same for the purposes of the Act.

Section 9. It shall proceed to expropriate in the manner provided by the Public Works Act.

Subsection 3 of section 16 provides:

The commission may with the approval of the Lieutenant Governor in Council contract with a railway company or power or transmission company for use of its right of way and property for transmitting electrical power or energy.

There we find that the Hydro-Electric Commission has the power to expropriate and to practically regulate the rates and the treatment which the municipalities shall receive from a power company. But if this legislation be granted, all that right will pass from the province of Ontario, because, as I have pointed out, a work for the general advantage of Canada is not restricted to railways. It has been declared in a very similar case that where a work is declared for the general advantage of Canada, that takes it entirely out of provincial regulation and control. That was decided by the Privy Council in 1905 in the case of the City of Toronto versus the Bell Telephone Company. Because that company was declared to be a work for the general advantage of Canada, it had the right to take possession of the streets of Toronto without the consent of the city and do as it pleased with regard to the erection of poles and the stringing of wires. So that unless this Bill is safeguarded and the provincial legislation regarding power be made to apply to it, this company will be entirely freed from provincial jurisdiction, not only in respect of railways but in respect as well of its being a power company. In my humble judgment, the amendment is one that should commend itself to our best consideration. You are not only, by this Bill, taking away the rights of the province of Ontario but are accumulating an immense amount of work for this parliament which we cannot undertake to do successfully or at all. You will be accumulating a very large amount of detail which it is highly improper a committee of this House should be encumbered with. There are three classes of legislation: First, municipal legislation, consisting of the by-laws and regulations of municipalities; second, provincial legislation; and last of all, the federal legislation. The legislation that is closest to the people is the municipal and provincial legislation, and it is this we want to retain so that the people will have the benefit and the opportunity of controlling it. But if you pass this Bill in its present shape, you will take from the million people served by this railway all the rights preserved to them by the provincial Acts to which I have referred and which were passed designedly, after years of consideration, by the various political parties in the province of Ontario. If you take this railway, with the seven others it brings with it, from the jurisdiction of the province of Ontario, you will leave these companies to operate throughout the whole of that district without provincial control, and every other street railway or power company, no matter how small, will be warranted in coming to this parliament and asking for similar rights.

Mr. DEPUTY SPEAKER. The hour for Private Bills has now expired.

## THE FRANCO-CANADIAN TRADE TREATY.

House resumed consideration of motion for the third reading of Bill (No. 57) respecting a certain convention between His Majesty and the President of the French Republic.

Mr. BEAUPARLANT. (Translation.) When the House rose at six o'clock, Mr. Speaker, I was giving an enumeration of certain industries which would benefit by the new French treaty. On the 21st February last I heard the hon. member for Hamilton make certain statements as to the impetus this treaty would give to several manufactures in the city he represents. I am pleased to find from the extracts he has read to us this afternoon, that several Hamilton newspapers share this opinion. Such a confirmation was not essential, as far as I am concerned, but it may be useful in the case of our friends to your left. I feel sure that similar industries at Smith's Falls and Toronto, and in the province of Quebec, at Terrebonne, and also, I am pleased to say, at St. Hyacinthe, will reap the same benefits.

My hon. friend from Beauce (Mr. Beland) has noted with satisfaction that the rich asbestos mines to be found in his consituency and in the adjoining region, cannot fail to be worked with much greater activity under the operation of the new treaty.

I should add that the manner in which leather, boots and shoes, prepared lumber, organs, musical instruments and their accessories are to be treated in the French market, cannot fail to exercise a most favourable influence on the very important industries of the city of St. Hyacinthe, which I have the honour to represent in this House.

These industries will enjoy a considerable reduction in duty, 37½ per cent in the case of polished leather, 40 per cent on boots and shoes, 23½ per cent in the case

of organs and other musical instruments; 16⅔ per cent on manufactured hard lumber, 30 per cent on unmanufactured soft wood; 20 per cent on doors and sashes, etc.

Such a treaty favouring as it does industrial development in several parts of the country canot be termed anything else but an agreement drafted in the public interest.

Finally, French books will benefit by this agreement. They are now taxed 25 per cent on their entrance into this country. They will in future pay 15 per cent as do English books.

This was an important omission in the treaty of 1893. True the Canadian plenipotentiary of the period, Sir Charles Tupper, undertook to recommend to the Canadian government of which he was a member, a slight reduction of 5 per cent in the tariff on books, but the government of that day—of which certain members are still sitting here, for instance, the member for North Toronto (Mr. Foster) and the member for South Lanark (Mr. Haggart)—rejected the proposal, as will be seen on reference to pages 25, 26 and 37 of the 26th volume of the sessional papers of 1893.

This was an act of justice to the French portion of the population of this country, but the country at large will reap the benefit. It is unnecessary for me to speak here in praise of the French language, that language which, together with the English language, has been the medium through which, in modern times, useful knowledge, has been recorded and diffused.

Our English speaking friends have every right to be proud of their great writers and statesmen. He who is of French origin has an equal right to refer with pride to the great thinkers and philanthropists of France. We have to deal here, however, not with any question of national pride, but with a matter of public utility. The works of such men do not belong to their respective nations alone; mental effort, whether it emanates from France, England or America, is the common property of all men who desire to benefit thereby.

I would not affront members of this House or the men of this country by supposing that there lives any one among them who would not prefer to be able to speak two languages instead of one and three rather than two. French and English are certainly to-day the two languages most commonly used throughout the world. English is more generally spoken in America, but French is the more spoken on the continent of Europe.

The circumstances of the settlement of this country have led to the official recognition of both languages. If there be any amongst us who, from sentimental motives, would incline to reject one or the other, together with the institutions through which any one of them may be preserved, they should yet, for purposes of practical advantage and usefulness, acquiesce in a state of things which certainly produces beneficial results fully counterbalancing any drawbacks.

The same remarks apply to any immigration which the new treaty may attract towards Canada. French and Belgium settlers are in general, hardworking, industrious and thrifty. The success which they achieve here proves that they become desirable citizens.

Certain members have complained also that this new treaty was submitted in such a manner that it must be accepted or rejected in toto. They regret that they cannot amend it in certain details. But, Mr. Speaker, such a state of things is inevitable when one of the parties to an agreement is not represented when the deed is submitted for ratification. The French government is not represented here. Were we to amend the treaty it would have to be again submitted to the authorized representatives of the French government whose approval must of necessity be obtained. In other words, all would have to begin over again. This reminds me of the remarks made by Sir John Macdonald when, in 1865, he presented to the House for approval the resolutions of the Quebec conference, in which each province, through its special representatives, had laid down certain conditions. Sir John Macdonald's remarks are to be found at page 16 of the Confederation Debates of 1865:

In answer to the member for Carleton, the government desired to say that they presented the scheme as a whole, and would exert all the influence they could bring to bear in the way of argument to induce the House to adopt the scheme without alteration, and for the simple reason that the scheme was not one framed by the government of Canada, or by the government of Nova Scotia, but was in the nature of a treaty settled between the different colonies each clause of which had been fully discussed, and which had been agreed to by a system of mutual compromise. Of course it was competent to the House to vote against the Address as a whole, or to adopt amendments to it, but if they did so, it would be then for the government to consider whether they would press the scheme further on the attention of the House. It was obvious that unless the scheme was adopted as it had been settled between the different provinces, if they prosecuted it further they would have to commence *de novo*, and he had no hesitation in expressing his belief that if the scheme was not now adopted, in all its principal details, as presented to the House, we could not expect to get it passed this century. It had been only in consequence of a very happy concurrence of circumstances, which might not easily arise again, that the different provinces had been enabled to arrive at the conclusion now presented, and he should exceedingly regret in the interests of Canada and of the future of British North America, if anything should delay beyond this year the completion and conclusion of this great scheme. The resolutions on their face bore evidence of compromise; perhaps not one of the delegates from any of the provinces would

have propounded this scheme as a whole, but being impressed with a conviction that it was highly desirable, with a view to the maintenance of British power on this continent, that there should be confederation and a junction of all the provinces, the consideration of the details was entered upon in a spirit of compromise.

Another point has struck me in the course of this debate. Both parties in the House claim the honour of having obtained commercial autonomy for Canada. The full powers granted to the Canadian plenipotentiaries in 1907 by the Royal Commission of the 8th August, as well as the fact that the British Ambassador, Sir Francis Bertie, simply introduced them to the French government and only reappeared at the moment when the treaty was to be signed, gives the advantage to the plenipotentiaries of to-day, at least in my opinion, over those of 1893, who were assisted throughout by the British Ambassador. However I do not wish for the present to discuss the matter, but simply to point out an important fact which I am very glad to be able to point out, and it is this: that Canada, evidently gets a high value on commercial autonomy. Several members of the House have made statements on the subject. I will quote one from each side of the House. First of all we have the well supported statement of the hon. the Minister of Marine and Fisheries, which reads as follows:

And this last year, for the first time in the history of Canada, negotiations for a commercial treaty were carried on exclusively by Canadian representatives of the government.

And then the statement of the leader of the opposition, in these words:

It was he (Sir Charles Tupper) who made that new departure which gives us to-day in Canada the right to negotiate our own commercial treaties, although every treaty is signed and must be signed in the name of the British Crown.

In fact Canada has progressed not only materially, but also in respect to diplomatic political conditions; and public opinion, which has certainly hailed with marked approval, the work of the hon. the ministers of Finance and of Marine and Fisheries, far from having been troubled by the debate which we have heard, adheres on the contrary yet more firmly and proudly to the fundamental idea expressed in this work.

House divided on the motion for the third reading of the Bill:

Motion agreed to, and Bill read the third time and passed.

## CANADIAN BATTLEFIELDS AT QUEBEC.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). moved second reading of Bill (No. 111) respecting the Canadian battlefields at Quebec. He said: The object of the Bill to which I have now the honour of calling the attention of the House is to give effect to an idea which of late has impressed itself upon the people of this country, which has been discussed in the press and on the public platform, which has engaged the attention of patriotic clubs and associations and

which, no doubt, has been the subject of conversation at many firesides, and seems to have been everywhere received with unanimous acceptance and favour. This year is the tercentenary of the city of Quebec. In a few weeks three hundred years will have rolled by since Samuel de Champlain broke ground where the city now stands. It seems entirely fitting, under such circumstances, that this anniversary should be duly solemnized. It may be observed that, if the object is to recall and remember the founding of the city of Quebec, the most appropriate way of doing it would be to remember the founder. And there is all the more reason to do so because Samuel de Champlain is one of the most remarkable personages connected with Canadian history. His record is a record of romance, of enterprise, of discovery. He was a navigator, a discoverer, a geographer. His published writings show that he had the far vision of the statesman. And, a fact most important in the eyes of Canadians, he may be said to have been the first person of a class afterwards so famous—the Canadian voyageur. But Champlain has not been without honour in the city he founded. The tourist who today visits the city when, in the morning, he steps out of the Chateau Frontenac, on the broad platform which bears the same name, in order to get a view of what is perhaps one of the most beautiful panoramas in the world, has his attention claimed by a noble pile of bronze and granite which has been erected by the citizens of Quebec to the memory of Champlain. So there is not much more to be done in that direction. But the occasion seems to be proper to recall and to celebrate the baptism of fire through which the city passed in the last stages of the long struggle which was maintained between France and England for supremacy on this continent, and to dedicate and consecrate the ground which has been hallowed by the blood of so many noble men who gave their lives for the respective causes with which they were connected. It is, I believe, an undisputed fact that the battles that took place around Quebec are among the most dramatic in modern history. The perseverance of Wolfe in planting his army under the walls of Quebec · the vigilance of Montcalm to baffle a manœuvre which he knew must be fatal; the determined, undaunted resolution of Lévis to regain the city and the courage of Murray in meeting him—all these are incidents which, at the time, produced a deep impression upon the imagination of mankind; and that impression, instead of being effaced by time, has been deepened. It is our good fortune that we, in this House and in this country, the descendants of those who fought and bled and died there, can review these things in no other spirit than the spirit of fraternity, and that we can all worship the heroes of our respective races in the common pride that all did their duty and did it in the fullest possible measure. Our object is to consecrate that ground, to reclaim it, to redeem, as far as we can, the errors of the past, and to set that ground aside as an object lesson for ourselves and our descendants. And our immediate object is to have a grand ceremony of dedication. Further than this the legislation which I have proposed does not go. While we set forth the idea, we have no intention of carrying it out ourselves, but intend to leave it to a commission to be created for that purpose. The Bill which I have the honour to propose provides, in its first section, that a commission of five members shall be appointed. It is essential that, in this commission, all shades of opinion in this country, all possible views, shall be represented. I may announce at once the names of those whom we propose to form this commission: Mr. George Garneau, the present mayor of Quebec; Hon. Sir George Drummond, of Montreal; Mr. Byron E. Walker, of Toronto; Colonel George T. Denison, of Toronto; and Mr. Adelard Turgeon, of the city of Quebec. There is provision in the Bill that if any province contributes $100,000. it shall be entitled to be represented on the commission. There is also provision that if the government of the United Kingdom, or any of the governments of the colonies, contributes a similar sum, they shall be entitled to be represented on the commission.

Mr. FOSTER. May I ask does the first mentioned commissioner hold office by virtue of being mayor of the city of Quebec?

Sir WILFRID LAURIER. It is not so provided. Mr. Garneau is the present mayor of Quebec. The suggestion of the hon. gentleman (Mr. Foster) is worthy of consideration. The powers of the commission are, first, to make a plan for the reclamation of the ground, and then to carry on the work as they may deem advisable. Such work may be of great magnitude or of smaller magnitude. There is a plan which would involve an expenditure of perhaps $2,000,000, but as to this we have no opinion to offer at this moment; it is to be left to the commission to determine the nature of the work to be carried out.

Mr. FOSTER. And the extent of the expenditure?

Sir WILFRID LAURIER. The extent of the expenditure is simply this. At present we provide that an appropriation of $300,000 shall be placed at the disposal of the commission. I have the authority of the Prime Minister of the province of Quebec (Hon. Lomer Gouin) that the legislature shall appropriate $100,000. I have the verbal assurance of the mayor of Quebec that the city of Quebec will also contribute a reasonable sum. More than this, I have nothing to say as to contributions.

Mr. FOSTER. If my right hon. friend will allow me, I would explain what I mean. Does the government give $300,000 unconditionally, or does it give it on the basis of an estimate of a certain sum to be required, and the $300,000 as the contribution of the Dominion of Canada provided the full amount is raised?

Sir WILFRID LAURIER. When the commission prepare the plans they will be laid before parliament. It will be for parliament to determine at the proper time whether the work as contemplated should be carried out, or whether a more restricted work should be undertaken, and this will depend very much upon the resourecs which we receive. It is expected that we should receive private contributions to a reasonable amount, but at the present time we have not taken these into consideration.

Mr. FOSTER. Is it proposed that $300,000 should be put into the hands of commissioners to be expended forthwith under their direction and before any plans are shown or any estimate has been required?

Sir WILFRID LAURIER. Yes. It is proposed that the sum of $300,000 should be placed in the hands of a commission and that other sums which may come from other sources should also be placed in the hands of this commission. It is proposed that there should be this year in the city of Quebec a grand celebration of the three hundredth anniversary of the founding of the city and of other events in the same connection. If these plans are carried out they will necessarily involve the expenditure of a very large amount of money, perhaps the greater part of the appropriation voted by parliament, perhaps the whole of it. But as to this I have no suggestion to offer. At the present time, however, we propose no more than to create a commission with certain objects in view and to place in their hands $300,000; with the object, first, of having a celebration in the city of Quebec, and, secondly, to undertake the reclamation of the battle-fields on the Plains of Abraham and at St. Foy. I may frankly say to the House that if the commission undertake all the work that has been contemplated, it is likely that the Canadian parliament will be asked at a future date to contribute more money. But we do not ask this at the present time; we leave it altogether to parliament to decide what it chooses to do. I may add that His Excellency the Governor General has been in communication with the authorities in England. It was expected that perhaps His Majesty the King would himself be present in person at the celebration, and it was expected that the British fleet would be present, and that the French fleet, and perhaps the American fleet would also be invited to be present. His Majesty the King has signified that he could not come, but His Excellency the Governor General has received the assurance that the Prince of Wales has expressed his willingness to be present. I have received a letter from His Excellency in this regard which it gives me great pleasure to communicate to the House:

Government House,
Ottawa, March 3, 1908.

My Dear Sir Wilfrid—It gives me great pleasure to inform you that His Royal Highness the Prince of Wales, in response to your invitation, has graciously signified his willingness to attend the tercentenary celebrations of the founding of Quebec by Champlain, provided they can be held during the last week of July.

The prearranged movements of the Atlantic fleet which will accompany the Prince of Wales to Quebec, make it necessary for His Royal Highness to arrive on July 22 and to depart on the morning of July 29.

His Royal Highness regrets that for this reason his stay in the Dominion must be so curtailed as to make it impossible for him to visit places other than Quebec on this occasion.

Lord Elgin who is anxious to do everything in his power to make the tercentenary a success, wishes to congratulate the Dominion on the important announcement which it is my privilege to request you to make to parliament, of His Royal Highness' approaching visit.

Joining most sincerely in those congratulations, I remain,

Yours very sincerely,
GREY.

Mr. Speaker, I have no other remarks to offer to the House, but simply to congratulate the House on the hearty expressions of good will which have come from both sides in regard to this project.

Mr. SPROULE. Before the right hon. gentleman takes his seat—would he be kind enough to tell us what property will have to be acquired, I mean in acreage, and how it is occupied now? How much property do the government own there now and how much will have to be acquired, and from whom, and what vested interests would have to be satisfied?

Sir WILFRID LAURIER. On a future occasion I shall be pleased to give all the information I have.

Hon. GEO. E. FOSTER (North Toronto). I have not seen, neither I think has any member on this side of the House seen the Bill until after my right hon. friend commenced his remarks upon it, that is, we have not read it. This is a matter of great importance; the idea itself in many respects is a very worthy one, and in some respects a very splendid one. At the same time I would like, before voting $300,000 of the people's money, to have some kind of an idea as to what was proposed to be done, the extent of the lands which it is proposed to expropriate in addition to what is owned by the Dominion of Canada, what

is the nature of the improvements and embellishments which it is proposed to make on those properties so as to render them worthy of the idea at present conceived and which we have in our minds in a rather hazy way. I have had the advantage of a little conversation with His Excellency with reference to his idea, but nothing I have heard yet has brought the matter down within the region of practicality, so far as the points I have mentioned are concerned. It would hardly seem to be the best thing in the world to give $300,000 or more to be expended in a great pageant, or something of that kind, and then find that we had not succeeded in getting sufficient to make these historic places really worthy in their improvement and embellishment. I mean that it would seem prudent, when we embark on a scheme like this, that we should have the advantage of the thought and the planning of the commissioners, or of some one who has generated the idea. Everything seems to be in the air. What proportion of the lands do we ourselves hold there? Is it the intention of the government to have those cleared and put in possession of the commission? If that be so, what position does this precious Ross rifle factory occupy, which I understand is situated somewhere in those regions? Is that upon a portion of the lands which have to be expropriated? How was it that the Ross rifle factory came to be placed there? Did the government force this factory to be put upon these lands and are we liable for a large amount of money if we attempt to get rid of it? Is it proposed that the government shall deliver over its own property free from encumberance or that that shall be part of the work of the commission and that the expense shall be defrayed out of the general collections? I believe myself that there will be a generous response in the way of contributions to the idea, but I should think that almost any country which or any people who contribute would like to have some general idea of what was to be done with the money before they made their contributions. My right hon. friend will see that these are what appear to me to be practical questions, and that in so far as we can get something of that kind we ought to do so before we vote the money. The difficulty I find is that everything is nebulous. We do not know what is proposed and men do not like to go into a thing and vote money, even though the idea is a brilliant one, unless they see the ways and means and know the plans upon which it is to be carried out.

Sir WILFRID LAURIER. The request of my hon. friend (Mr. Foster) is a legitimate one. I can only, however, partially satisfy him. There are only two ideas at the present time. One is to have a celebration in the city of Quebec. As I said a moment ago it is the tercentenary of the foundation of the city of Quebec by Champlain. We want to commemorate it. We find, however, that there is nothing more to be done in so far as we can see to do honour to the memory of Champlain. Champlain has a splendid monument in the city of Quebec. But it has been suggested that it would be an eminently proper thing if at this moment we took the opportunity of reclaiming the battlefields at Quebec in which as Canadians we are all interested. We all feel that the spot on which the battle took place in 1759 is sacred ground and I believe that every one also will concede that the battlefield on which the battle of 1760 took place is equally sacred ground. I must say that we have all been very guilty in this country. We have allowed these grounds to remain absolutely as nature made them, or we have allowed them to be invaded by private interests and to become private property. Many years ago the gaol of the city of Quebec was placed almost on the very spot where Wolfe died. Anybody who has visited the place knows that the small monument erected to Wolfe is just within thirty or forty feet of the gaol. Everybody agrees, as I think my hon. friend will agree, that these encroachments should not be allowed. The Ross Rifle factory is located at a certain point between the citadel and what is known as the plains of Abraham.

Mr. FOSTER. What is the tenure of the Ross Rifle factory ?

Sir WILFRID LAURIER. I will come to that by and by. The immediate object to which to-day we want to commit ourselves is that these lands should be reclaimed and that as much of them as can be spared from private interests and private needs should be taken possession of by the public authorities in order that they may be preserved and beautified. The questions which arise are : What are you going to do with the grounds, how can they be secured, in what manner can they be reclaimed, in what manner can they be used in order to justify the idea that you have in your mind ? This is a plan which is susceptible to greater or less development. These grounds can be beautified to almost any degree or they may be beautified in a more restricted way. As to this I have no explanation to offer to my hon. friend at the present time. This must be the work of the commission. The commission must prepare a plan which afterwards must be submitted to parliament.

Mr. FOSTER. Must be submitted to parliament ?

Sir WILFRID LAURIER. Yes, must be submitted to parliament. No expenditure can be made except by authority of order in council, the plans have to be submitted to

us, but at the present time parliament is committed to nothing more than the expenditure of $300,000. It may be that the whole of this money may be absorbed by the celebration which is to take place this summer—I hope it will not be, but it may be—but at all events if the whole of the money which is provided were to be absorbed by the celebration of this year it is possible that parliament will be asked, at no distant day, to provide a further sum to reclaim such land as has to be reclaimed. But parliament will not be committed to anything more. I think that everybody will agree that it is reasonable that we should do this at the earliest possible moment before any more encroachments shall be made upon these battlefields. First of all I think that the gaol ought to be removed. The gaol belongs to the Quebec government. I have no doubt but that the Quebec government would be prepared to do so although they may not be prepared to do it immediately because the gaol is a good building, not very old, and perhaps may last for many years to come. The Ross Rifle factory has been placed between the citadel and what is known as the plains of Abraham. It stands on ground belonging to the government. I think that it is under lease, although I am not quite sure of the tenure under which it is held.

Sir FREDERICK BORDEN. Ninety-nine years.

Mr. R. L. BORDEN. Renewable.

Sir FREDERICK BORDEN. Renewable.

Sir WILFRID LAURIER. It is practically a sale then ?

Sir FREDERICK BORDEN. Yes, a gift.

Sir WILFRID LAURIER. This will have to be removed but we can select our time. There is no necessity that it shall be done immediately. Of course, it will be an eyesore and if we undertake to beautify the place as it ought to be beautified it should be removed but there is no necessity for doing it immediately. Now, in regard to the land that we have ourselves, we have the whole of what is known as the Plains of Abraham, 75 acres in extent, we have the citadel and between the citadel and the Plains of Abraham there is some property, the extent of which I cannot say, which belongs to the Quebec Seminary. That is as to the first battle. As to the second battle, that of 1760, I think that most of the land upon which it was fought is now private property. Part of it has been built upon and probably it could not be obtained but part of it is still vacant and I think that it could be got at no very great price. That is the information which I have at the present moment. One idea is to have a celebration, the second is to have, at the earliest possible moment, this land reclaimed in order to consecrate it as national property forever, that it may be placed in our hands and not be used for anything else. As to the manner in which this land should be beautified nothing has been determined. My hon. friend, if he has talked with His Excellency, knows that His Excellency has certain views upon this point and he has seen in the public press many plans for the beautifying of this land which, if they were carried out would go into the millions, but as to this, there is nothing definite at the present time and we feel that we cannot bring down anything definite until we have the plan of a strong commission such as we propose to organize to deal with this question.

Mr. SPROULE. How much land is occupied by the Ross Rifle factory and how much by the seminary ?

Sir WILFRID LAURIER. The Ross Rifle Company have, I think, about nine acres and the ground occupied by the seminary, is fifty or seventy or perhaps one hundred acres.

Mr. A. C. MACDONELL. Could the right hon. gentleman state to the country what dates have been fixed within the period mentioned by him for the actual celebration in July next ?

Sir WILFRID LAURIER. The Prince of Wales has expressed his willingness to be present if the celebration can take place in the last week in July, from the 22nd to the 27th.

Mr. A. C. MACDONELL. A period within these dates will be selected ?

Sir WILFRID LAURIER. The celebration will take a week possibly.

Mr. FOSTER. Has the government ever contemplated, since this has come up, the joining of the great historic battlefields, forts and the like of that, all in one large scheme of restoration and beautification ? There are some that possibly have been almost obliterated, but there are still battlefields, and forts, that it is a great pity this country should not restore and guard and keep for their historic value, and as lessons to the citizens of this country. Now that the spirit is aroused, it is an opportune time to make an investigation into that subject and to know whether the expenditure of a little more money might not be possible, and a number of these historic marks in our history restored and preserved. There is the old fort in the city of Toronto which is of great historic interest ; there are a number in the maritime provinces as the Minister of Militia will know ; there are others in the province of Ontario. The idea I have suggested is one that might be considered, whether in connection with this proposal or not I do not venture to say. I suppose the tercentenary has to come when it comes, but

if it could be postponed until you have these unsightly encumbrances removed from the battlefield at Quebec it would be much better. However, perhaps they can be covered up in some artistic way so that sightseers would not know but that there are possibly palaces behind.

Mr. A. H. CLARKE (South Essex). There are some most interesting historic sites along the Detroit river extending from Amherstburg to the town of Sandwich and the city of Windsor and the city of Detroit opposite. A few years ago the Ontario Historical Society met there and spent a most interesting day viewing the different objects of interest, and they recommended very strongly that steps be taken to preserve the old fort at the town of Amherstburg. The remains of the old fort are still there; there is a ditch which was used in connection with it, and it was thought that the place might very well be fitted up and preserved to commemorate the very stirring events that in days gone by took place in that neighbourhood. Petitions were sent down to the government and they are, I suppose, in some pigeon hole. I hope this discussion will lead to their being resurrected, because the people in that locality are constantly expecting that something will be done by the government. Now that Mackinaw has passed into the hands of the Americans, this is perhaps the furthest point west at which we can commemorate the old struggle between two nations. Then in this district also, Pontiac in the days of his conspiracy made his field of battle there. Indeed, all along that river front was the scene of the last struggle, because the news of the treaty did not reach there for some years after it was signed, and the fighting was still continued with the Indians, not knowing whether the English or the French were supreme. Later on in the war of 1812 General Brock was there, and it was one of the most important points in that contest. A monument has been erected to Brock at Niagara but nothing has been done to mark his operations here. It was here too that Tecumseh, that brave Shawnee centered his operations, and there is a stone in the old town of Amherstburg on which it is said he stood when exhorting his people to heroism in defence of British supremacy.

Mr. FOSTER. Is it guarded.

Mr. CLARKE. I know where it is and I can point it out to my hon. friend. I may say that there are a number of cannon balls that were taken off the schooner 'Ann,' and, there are also a great many historical relics in the hands of private persons and of public institutions in the town of Amherstburg which could be obtained to decorate any monument which might be erected to perpetuate the memory of these brave deeds. Afterwards, in the rebellion of 1837 this locality was the scene of further struggle, and I believe that the late leader of the Conservatives in the Senate, Sir Mackenzie Bowell, was one of those who stood guard there to protect this country at that time. Later, in 1860 during the Fenian Raid this locality was the very centre of conflict. I would recommend to the government that their serious consideration be given to the petitions that have been sent in from the Ontario Historical Association. Lately there has been some discussion on the matter in the newspapers, and I trust the right hon. the Prime Minister will not forget this locality, should he propound any general scheme to commemorate the historic spots of Canada.

Mr. ADAM ZIMMERMAN (Hamilton). I have received a petition from the Veteran's Association of Wentworth asking for a grant towards the expense of erecting a monument on the scene of the battle of Stoney Creek which is one of the most important events in Canadian history. I may say that the ladies of the Wentworth Historical Association have secured the ground where the battle took place in 1812, and they have prepared plans for a monument and are asking the government at the present time for a small contribution of some thousands of dollars. I hope the government will take this into consideration and that the battle ground of Stoney Creek will be fittingly marked.

Mr. HANCE LOGAN (Cumberland). It is a most commendable idea to mark out the battlefields of our country and restore and preserve the monuments of our historic past. In the province of Nova Scotia we have three places which mark epochs in our history. There has been a good deal done in Annapolis Royal to beautify and to preserve the historic spots there. And something has been done also at Louisburg, although a few years ago the scenes of the great struggle there were in a state of decay. At Fort Beausejour where the last stand on the continent of America was made by the French, the old fort is absolutely unprotected and has gone almost to ruin. I remember once being there at a picnic, and within the crumbling walls of the old fort some one in a speech very appropriately quoted the words of the hymn, so dear to us:

Change and decay in all around I see.

The old magazine was there but the bricks had tumbled down, and souvenir hunters have cut out pieces of the stone and have carried off most of the wood that remained of the construction of the fort. There still are left the great mounds inclosing the space which protected the French army and the old magazine is yet capable of being restored. There is no protection whatever for the remnants of the structures; cattle wander through them at will, and there is nothing to show that Canadians take any pride in this spot where the fate of two

nations was sealed. I trust that this idea suggested by the hon. member (Mr. Foster) will commend itself to the government. It may not be possible to do anything in connection with the particular matter we have before us now, but it may be that a commission of distinguished Canadians should be appointed to deal with this whole question. We have talked about it in parliament year after year and it has been talked about in the country, but time passes and nothing is done. A few years hence it may be too late because at the present rate of decay nothing will then be left for us to restore. These old ruins will soon have absolutely passed away and it is a good idea for us to consider very seriously the question of suitably marking these spots which have a special interest in connection with the history of our country.

Mr. SAM. BARKER (East Hamilton). I wish to add to what has been said by the hon. member for West Hamilton (Mr. Zimmerman), that I think there are special reasons why the battle of Stoney Creek as well as those of Chateauguay and other places should be commemorated and that this should be undertaken on this occasion.

Mr. MORIN. Lundy's Lane, too.

Mr. BARKER. Lundy's Lane, there are several. But at Stoney Creek there are particular reasons why it should be undertaken. In the first place it would cost very little. In the principal park within the city of Hamilton there is the ground on which Col. Harvey, with the British troops encamped. That need not be touched. It was from that camp that the British troops in the dead of night marched seven or eight miles to the field of Stoney Creek where the American troops were encamped. The battle was fought at the field and the property has already been acquired by the Ladies' Wentworth Historical Society. They have also acquired and preserved in good shape the building which was occupied at that time by the general commanding the American troops. Close by the veterans have acquired and paid for the burial ground in which the officers and soldiers on both sides who fell are buried. Altogether it is a most interesting historical spot and it would be a pity if this occasion were not seized to take it over into the care of the Dominion and perhaps of this commission. The cost would be very, very trifling, perhaps nothing at all except an appropriate little monument which might be erected. The property is there, there can be no doubt about its historical features and I think those who have read military accounts of that fight, know that, small as the battle was, it was very important in the history of Canada. I would therefore recommend that subject to the earnest consideration of the Prime Minister.

Mr. LOGAN.

Sir WILFRID LAURIER. Whilst I have no doubt the idea is an excellent one and I think I have remarked that I am prepared to endorse it freely, I do not think that on this occasion we should go further than the purport of this Bill. The commission we propose to appoint is a strong one, composed of men who would give all their heart to these matters and I would rather have suggestions from them as to whether a separate commission should be organized or whether these other battlefields should be placed under the control of the present commission. If the House is satisfied this evening to pass the present Bill, I think that will be quite enough for the present day.

Mr. SPROULE. I do not wish to dissent from the proposed patriotic movement, dealt with by this Bill; but it seems to me it would at least have been prudent to have been able to inform the House and the country to what expense we are likely committing ourselves. While we may look for a reasonable amount of assistance from private subscriptions, I do not think a very large amount will be realized from this source and therefore the expense of acquiring and maintaining these historic grounds will fall back upon the country. I understood the First Minister to say that nothing could be done except by the Act of parliament; but as this commission has power to acquire land by purchase or expropriation the expense may be important. The First Minister has told us that the Ross Rifle Company occupy 9 acres of this ground in which I understand they have erected very extensive buildings which will all have to be expropriated or bought, no doubt at a very considerable sum.

Sir WILFRID LAURIER. They are not expensive buildings.

Mr. SPROULE. So much the better, but I suppose they will not be acquired for nothing. I understood too that the Seminary had about 50 or 75 acres of this ground and as I remember they have quite a number of expensive buildings there. Did the First Minister say that the ground we owned or that we desire to own would amount to about 75 acres?

Sir WILFRID LAURIER. That we own already.

Mr. SPROULE. Is that exclusive of the ground occupied by the Seminary and the Ross Rifle Company or is that included in the 75 acres?

Sir WILFRID LAURIER. The Ross Rifle ground is taken out of what we understood by the Cove Field. It is not the Plains of Abraham, it is quite independent of the 75 acres of which I spoke.

Mr. SPROULE. We would have to acquire the 75 acres of the Seminary.

Sir WILFRID LAURIER. It could be done without that but that would naturally be the consequence.

Mr. SPROULE. I think that if we are to own it at all we should own and preserve the whole of this historic battle ground. It is of course contemplated to make a national park of this ground and this might be expensive, or it might be done in an economical way. I think however it would have been prudent and wise to have been able to submit some outline to the House of what we will probably be committed to in the future.

Mr. D. A. GORDON (East Kent). Tecumseh fell at Moravian-town near Thamesville, and if these sacred spots are to be marked I would ask that Moravian-town be considered along with the others.

Mr. R. L. BORDEN. I think we are all agreed as to the wisdom of the proposal as far as it evidences an intention of commemorating those battle fields upon which were laid the foundations of Canada as it is to-day. His Excellency the Governor General in the advocacy which he has made throughout the country of this measure has done a patriotic work and rendered a patriotic service to the country. I do not at the moment propose to enter into the details of the scheme or the method in which it shall be carried out. In fact we have not very much information from the right hon. gentleman as to that. I presume that is because the information is not available. Speaking of battlefields and other places of historical interest that were the scenes of the great events which led up to the Canada of to-day, there are spots in the province of Nova Scotia, one of which has been mentioned by my hon. friend from Cumberland (Mr. Logan). I have in mind, at this particular moment, the site of the old Fort Royal at Annapolis, and I have an indistinct recollection that within the past ten or twelve years some buildings of great historic interest were removed from there. Perhaps my hon. friend the Minister of Militia (Sir Frederick Borden) would know. Some rumor came to me some six or eight years ago of some change made there.

Sir FREDERICK BORDEN. No, only restoring. We did a great deal of work at Annapolis in this way.

Mr. R. L. BORDEN. Was there not a block house or something of that kind removed?

Sir FREDERICK BORDEN. There was a building burned.

Mr. R. L. BORDEN. Perhaps that is what I had in mind. I know it was considered very unfortunate at that time that it should have been destroyed. My right hon. friend the First Minister mentioned in his opening remarks that plans have to be submitted to parliament. I think that was an inadvertance. They have to be submitted to the Governor in Council. It occurred to me that perhaps what the First Minister expressed in that regard might be very well inserted in the Bill. We are committing ourselves to merely an expenditure of $300,000, a considerable portion of which no doubt will be used in the celebration of the events intended to be commemorated. In preserving and commemorating these battlefields we should give the people a sense of proprietorship, so that they will be able to look at them with pride, and strangers coming to our country will see there—when they observe what has been done by the federal and perhaps by some of the other governments and the people of Canada as a whole, and no doubt with the assistance of people in other portions of the British dominion—a commemoration of the early history of Canada which will show them that we have not forgotten the past and the work of those who did so much for the building up of this country. When we come to that part of it, it seems to me that parliament should have an opportunity to speak its mind with regard to the manner in which this should be done. You cannot very well come to parliament and ask for what possibly may be a considerable expenditure without taking parliament in the first instance into your confidence and submitting what is proposed and getting the ideas of the representatives of the people. Of course this is a mere detail and perhaps it could be better discussed in committee, but I thought it well to mention it just now, and perhaps my right hon. friend might see his way clear to amend the Bill in that regard.

Mr. GEO TAYLOR (Leeds). I am not a lawyer, but from a cursory glance at the Bill which has just now been put into our hands, I think it goes a little further than has already been mentioned. I am quite in favour of voting $300,000 or any other sum to assist in the celebration at Quebec and in giving a fitting reception to His Royal Highness the Prince of Wales should he visit Canada, but this Bill commits the country, judging by its preamble, to a good deal further expenditure. According to the preamble:

> It is desirable in the public interest of Canada to acquire the great historic battlefields at Quebec, restoring so far as possible their principal features, so as to make them a Canadian national park.

That means it is desirable that we should buy out the Ross rifle factory and all the other improvements on these grounds. But if we are to grapple with this question at all, there are other points just as much entitled to be considered. We have right at our doors, within a few miles of the capital, the site of the battle of the Wind-

mill at Prescott, one of the most important battles in the history of Canada. If we are to grapple with this question of preserving our battle-fields we should take them all up together and have a commission deal with the whole of them. I have brought to the attention of the Minister of Militia (Sir Frederick Borden) for a number of years the fact that we have at Kingston Fort Henry and the towers which were built there and which are a credit to the men who built them. These towers are going to decay. A few years ago the tops were blown off some of them; their stones and masonry are crumbling away and all for the want of an expenditure of a few hundred dollars to preserve them. I am quite prepared to vote the $300,000 asked for, but if we look into the Bill we will see that once we vote that $300,000 we commit ourselves to an expenditure in connection with this one battlefield the extent of which we do not know. I think all the battlefields should be included in the same Bill and the country be committed to restore them all at the same time.

Mr. W. F. COCKSHUTT (Brantford). I desire to say a word in commendation of the proposition in this measure. But the main object of the Act seems to be somewhat different from its contents. We are called upon to vote $300,000, but any one who knows the history of great celebrations will admit that there will be very little left of this amount after the celebration this coming summer. It will take fully that amount to entertain properly the Prince of Wales and the other celebrities who will come there to take part in this very important celebration. The matter is one of great national moment. I most heartily approve of the sentiments it will stir in the hearts of all our citizens, regardless of race or origin. The people of Canada, as a whole, feel a hearty inclination to support the proposition which has been so well launched by our esteemed Governor General, His Excellency Lord Grey. The appeal he has made to the public at the meeting held in the city of Ottawa was very inspiring, and I have no doubt the responses which will be given by the people of Canada will be equally strong and commendable. At the same time we cannot shut our eyes to the fact that a great deal more money will be required than the sum mentioned in this Bill. I understand that His Excellency estimates that $1,250,000 will be required for the restoration of the plains and the establishment there of a suitable monument. I have had an experience of the kind the past three or four years, and I know the difficulty of raising funds. Although the people approve of the movement, it will be necessary to inaugurate a campaign that will spread over the whole country and be taken part in by the citizens as a whole so as to induce them to contribute to this great national celebration. It is all very well to ask the government to contribute a large amount, but the people should be prepared to contribute their share, and the only way to get them to do that is to bring the movement home to every one of them. I for one think that the sentiments which this commemoration will call for in the hearts of our people are such as should be encouraged, and every effort should be made to have that commemoration taken part in by the people of Canada as a great national movement.

It is very well to speak of all these great battlefields in other parts of the country, but this deals with one, and one at a time is quite sufficient. A large amount will be needed for this one movement, and until we accomplish this, which I think in the minds of all stands as the most important, the others can wait. There is no battlefield equal to the Plains of Abraham and the ramparts of the city of Quebec. It is well called by Sir Gilbert Parker 'The Seats of the Mighty,' and certainly the historical associations of these fields should stir a much more animated debate than we have had to-night. It may be that the multiplicity of battlefields that present themselves to the various members have diminished the enthusiasm they ought to feel for this one particular spot. I for one would like to see this matter heartily taken hold of. It is to be regretted, as has been said, that even the good acts of this government are mixed up with something that we do not like—there is always a fly in the ointment. I have felt it my duty to cast my first vote with the government a few moments ago, and now I am called upon to endorse a scheme that they propose, which I do with all my heart, though I cannot approve of the position in which this country finds itself in relation to it. We are called upon to buy back the site of the Ross rifle factory, which was almost given away by this government in a way that should never have been done. And I cannot at this time reconcile that alienation of this part of our public domain with what should have been in the minds of the business men who are said to compose this government. It seems that always we have to accept the fly in the ointment, and this is the fly in this ointment in this case. This will militate against the carrying out of this idea more than any other thing. But the idea itself is a grand one, and I desire to see hearty appreciation of the scheme. As a humble citizen of Canada, I am prepared to forward it in every way. I think the members of this House should take that view and should see to it that in every constituency in the Dominion of Canada a movement is carried on, great or small, according to the ability of the people, to respond in noble and generous manner to the appeal made so well by His Excellency the Governor General and now supplemented

in this way by the government's proposal to vote $300,000 to assist in carrying it into effect.

Motion agreed to, Bill read the second time, and House went into committee thereon.

On section 1,

The Governor in Council may appoint five commissioners, who shall hold office during the pleasure of the Governor in Council, and who with any additional commissioners who may be appointed under the authority of this Act, shall be a body politic and corporate, under the name of "

Sir WILFRID LARURIER. I left this blank because I had so many suggestions. I thought I would leave it to the House in case hon. members had other suggestions to make. If there is no objection, I would call it 'The Commission on Quebec Battlefields.'

Mr. FOSTER. I suppose, under the circumstances, it is difficult to give another direction to this movement. It has already taken a certain direction, both inside our own country and outside of it, and it is very difficult to take it up now and give it another direction. But if we were going to take it up from the first, we should most certainly enlarge it. In that case, I would call this Bill 'An Act respecting the Canadian Battlefields,' and I would make the preamble read :

Whereas, it is desirable in the public interest of Canada to acquire and preserve the great historic battlefields of Canada——

And so on. And I would appoint the very best commission that could be appointed. I would give them a year in which to study the whole question and present a report to this parliament taking in the battlefields of this country and giving a plan for their restoration and preservation, not under a system of vast expense, but with a fair idea of proportion, distinguishing between those of great interest and those that are of lesser interest, even though to the locality they may be very dear and precious. Then, with the matured plan, I would have this parliament do something efficient to drag out of the dirt and to put where they ought to have been from the first the historic grounds of our country We have not much history in this country, but what we have is splendid and romantic ; and these object lessons, the battlefields stir the memory and take us back to our beginnings, are better than many school teachers and platform teachers; they are the ever present embodiment and ever present reminders of the great deeds that have been performed, that made our country possible, and an incentive to equally good deeds for the preservation of our liberties and of the country that has been given to us. With a plan before us, we could take it up and discuss it, and could make our appropriation and ask for additional appropriation outside for the benefit of this commission, and a great movement could be made in this country which, feeling as we do at this particular time, could be carried on to a successful issue. Now, would it be impossible for parliament to say : Here is our tercentenary ; we will provide a certain amount for this celebration, and then we will appoint a commission to take up the whole question of the battlefields of Canada and prepare a report and plan, and we will see what we can do to adequately cover what I believe to be a very grand project, yet one of the most useful that we could undertake? Is it impossible simply to devote ourselves at the present time to a contribution to the tercentenary and then put our commission to work, joining it in effort and sympathy with the historical societies, with the Canadian clubs, with every patriotic body, and let the whole movement proceed with the co-operation of all? If this were done, what we could accomplish would astonish ourselves.

Sir WILFRID LAURIER. The idea of my hon. friend (Mr. Foster) is an excellent one, but I would not connect it with this project. And for this reason : If this Bill is to be the basis of the whole thing, and if there is to be a celebration to take place in the last week in July, there is not a moment to lose. The commission must begin at once, and will have not a single moment but needs to be consecrated to the work. For this reason, I think that the excellent idea of my hon. friend must be made a separate matter. There is also the consideration suggested by the hon. member for Brantford (Mr. Cockshutt). There are a number of battlefields. We have few great battlefields in themselves, but, such as they are, they are dear and sacred to us. But, as the hon. member for Brantford says, the battlefields which we all agree in regarding as most important are the battlefields around the city of Quebec. This consideration appeals more to the imagination of people than any other. It is not too much to say that the battles which took place around the citadel of Quebec were the most important perhaps in modern history. They started a new world, a new order of things, they determined the future of a new continent. I think, for these reasons, we must insist upon the legislation as it is.

Mr. SPROULE. I would suggest as an appropriate name 'The Corporation of the Quebec National Battlefields Park Commission.'

Sir WILFRID LAURIER. That is too long. My hon. friend the Minister of Fisheries suggests 'The Quebec Battlefields Commission,' which I think is preferable.

Mr. FOSTER. Why not make it the 'National Battlefields Association . ?

Sir WILFRID LAURIER. I suggest the 'National Battlefields Commission.'

Mr. MONK. We are endeavouring in Montreal to supplement what the governments are doing, by collecting funds for the purpose of advancing this object, making a popular subscription to which both rich and poor may contribute. We have a committee which is actively at work. Many suggestions have been made to me that it would be a great pity to change the name of the battlefield. The impression seems to have gained ground, at any rate in the province of Quebec, that the name of the Plains of Abraham is to be changed, and that the park will be known under another name. I think there is great objection to that. It has been known as the Plains of Abraham long before the battle was fought, it is so described in all the histories. All the romance that attaches to the event itself seems to be associated with that name. I believe that a man named Abraham gave his name to that piece of ground before the foundation of the city.

Mr. LEMIEUX. Abraham Martin.

Mr. MONK. I believe that every morning he used to lead his animals out to pasture over that plain, that I think is the reason why it became known as the Plains of Abraham. I think if my right hon. friend would give some assurance that the name would be preserved, it would help those who are engaged in making collections.

Sir WILFRID LAURIER. So far as I am concerned, I think that to change one syallable of that name would be a desecration and a sacrilege. It is an historic name, well known all over the world.

Mr. SPROULE. Then call it the Plains of Abraham Battlefields Park Commission.'

Sir WILFRID LAURIER. I move that to insert at the end of section 1 'The National Battlefields Commission.'

Motion agreed to.

Mr .SPROULE. Would it not be advisable to put some limit to the number of the commission ? We provide that the commission shall be composed of five members, and additional members that may be named by the provinces.

Sir WILFRID LAURIER. I do not think there is any necessity for that. I do not think that there will be too many commissioners as a consequence of provincial contributions. I would be glad if the commission were composed of fifteen members from all the provinces.

Mr. SPROULE. It has been suggested that contributors to a certain extent might be entitled to membership.

Sir WILFRID LAURIER. There are nine provinces in the Dominion. I have the assurance that the province of Quebec will contribute. The province of Ontario may contribute, but I have no hope that any of the other provinces will contribute. I have a hope that the British government will contribute, but I have not heard so far of any other possible contributions.

Mr. FOSTER. How about General Botha?

Sir WILFRID LAURIER. He might possibly contribute also. The idea is that any province which contributes $100,000 shall have power to appoint a member. Now how many provinces does the hon. gentleman think will contribute ? Does he think that the province of Ontario will contribute ? I think it will, its finances are in a flourishing condition.

Mr. FOSTER. I think it will contribute.

Sir WILFRID LAURIER. Does he believe that any other province will contribute ? I doubt it, on account of their finances. I believe it is quite possible, and I believe even, that the British government will contribute; and I am not without hope that South Africa will contribute. If it does, it will produce a great effect, not only throughout the British Empire but all over the world.

Mr. FOSTER. The new government of New Brunswick might be approached.

Sir WILFRID LAURIER. Well, it is said there is a good side to everything; if it should contribute, it would be to us some consolation. But really there is no need for apprehension that the commission will be too large. There are five members appointed by the Dominion government, one by the Quebec government and one by the Ontario government, that will make seven, and one by the British government will make eight, and perhaps another, which will make nine. If any hon. gentleman thinks there is any necessity of limiting the number, I would be willing to listen to any suggestion.

Mr. SPROULE. I should have a more hopeful aspiration than to imagine that there is no province except Ontario that would contribute to it. It seems to me that if the national pride of this country is what we believe it to be, the provinces would contribute more or less and would desire to have, if for no other purpose than the historic name, some representation on that commemoration. Therefore, it is most likely to be a larger one than the right hon. gentleman has contemplated. I should at least expect so.

Sir WILFRID LAURIER. Well, I am only too glad to hope it also. I am delighted to think that we may expect more than we had anticipated but if we get a contribution from the nine provinces of the Dominion does my hon. friend believe that

every one of these provinces would be entitled to be represented by commissioners, or does he say that that would be too many? If we were to limit it to ten, which are the provinces that should be represented and which are the provinces that should not be represented?

Mr. SPROULE. I would be disposed to adopt a sliding scale so that provinces which are not as willing as others to contribute $100,000 might also be entitled to representation. Prince Edward Island, Nova Scotia, and New Brunswick, might not contribute that amount and yet they might contribute a considerable part of it and it would be only reasonable to give them representation on the commission. It will be an historic commission and I think there should be a little latitude in that regard because all the provinces are not equally strong financially and I would expect that the commission might be a larger one than the right hon. gentleman has anticipated. While saying that I think we would be quite within the mark to provide that the commission shall be composed of not less than five nor more than fifteen commissioners so as to give representation to provinces which may not contribute more than $15,000 or $20,000.

Sir WILFRID LAURIER. If the provinces are to give less and still be represented on the commission I think it would become very unwieldy. I understood the suggestion of my hon. friend was to limit the number of the commission. If any of the provinces were to contribute, say, $10,000 or $20,000 or $50,000 and still be represented on the commission the number of commissioners would be very numerous.

On section 2,

The Governor in Council shall name one of the commissioners appointed by the Governor in Council to be chairman of the commission, and he shall hold office as such chairman during pleasure.

Mr. FOSTER. Why should not the commission choose its own chairman?

On section 3,

The Governor in Council shall appoint a competent person to be secretary of the commission, who shall hold office during pleasure, and receive such salary as is fixed by the Governor in Council and provided by parliament.

Mr. FOSTER. I do not see why the government should appoint the secretary. If the commission do the work it should have the control that the appointment gives to the secretary. He is really the officer of the commission, and the appointing power should be under the control of the commission itself.

Sir WILFRID LAURIER. I admit that the question is not free from difficulty but we thought that on the whole it should be left to the Governor in Council.

Mr. FOSTER. It ought to be an independent commission and the question of patronage should be eliminated altogether. Otherwise you will be bothered to death as to who shall be your secretary then and it becomes a question of patronage. For these reasons the commission should be allowed to say who shall be their secretary.

Sir WILFRID LAURIER. Well, I do not know about that. My hon. friend will agree that in the commission which we have selected we have eliminated altogether the question of patronage. The commissioners are to be quite independent of any political considerations. They are to have control of all expenditure, they are absolutely independent and there is no patronage. In that respect we have been governed by the Improvement Commission here. We have appointed the Improvement Commission and we have appointed the secretary and I think he is a very satisfactory one. I think we can do the same thing in this case.

Mr. FOSTER. The government is making a yearly contribution to the Improvement Commission at Ottawa. There may be that additional reason there.

Mr. HENDERSON. How long will this commission last? Will it be perpetual?

Sir WILFRID LAURIER. Yes.

Mr. HENDERSON. The position of secretary will be one for life almost?

Sir WILFRID LAURIER. During pleasure.

Mr. HENDERSON. Well, that means during good behaviour.

Sir WILFRID LAURIER. If we have the good fortune to find a secretary who is active and intelligent and who will do most of the work for the commission that is the kind of man we want to get. If the commission were to sit in the city of Ottawa I have in my own mind a man who would fill that requirement, but the larger part of the work will be done in the city of Quebec and I do not know who will be the secretary. I have not the slightest idea.

Mr. COCKSHUTT. Does the right hon. gentleman believe that the secretary will spend the whole or only a portion of his time at the work?

Sir WILFRID LAURIER. A portion of his time only.

Section 6,

If the commission is unable to agree with the owner of any lands or immovable property, or any part thereof, or interest therein, so authorized to be purchased or acquired, as to the purchase, acquisition or transfer there-

of, or the price to be paid therefor, the commission may acquire such lands or immoveable property or interest without the consent of the owner, and shall in such cases, for all purposes of taking, acquiring, ascertaining the value of, and making compensation for the said lands or immoveable property, have all the powers of a railway company subject to the Railway Act, relative to the taking and using of lands, and the compensation and damages therefor, and the Railway Act shall, mutatis mutandis and in so far as applicable, apply to the taking and acquiring of, and the ascertaining and payment of the compensation and damages for, such lands or immoveable property by the commission.

Mr. SAM. HUGHES. Would that include leased lands?

Sir WILFRID LAURIER. Any lands.

Section 9,

The Governor in Council is authorized to appropriate for the purposes of the commission all the lands or immoveable property now vested in His Majesty for the military or other public purposes of Canada and forming part of the aforesaid battlefields.

Mr. FOSTER. In the very improbable event of war how would that section affect that property being used for military purposes? Do you alienate these lands?

Sir WILFRID LAURIER. In that event the Governor in Council would reserve the right to take possession.

Mr. SAM. HUGHES. What lands are now reserved for military purposes?

Sir FREDERICK BORDEN. The Cove Fields.

Sir WILFRID LAURIER. The government have the Cove Fields, the Citadel and the Terrace.

Mr. SAM. HUGHES. Would the troops be debarred from manoeuvering there?

Sir WILFRID LAURIER. Surely not.

Section 10,

No land or immoveable property shall be purchased or acquired by the commission except with the previous authority of the Governor in Council, and no expenditure shall be made by the commission until it has been approved by the Governor in Council.

2. The commission shall before entering upon any work of improvement or construction, or any other work involving the expenditure of money, upon the lands taken or acquired under the authority of this Act, cause to be prepared plans of the proposed works, showing locations, and submit the said plans for the aproval of the Governor in Council, and the commission shall furnish such further descriptions or information to the Governor in Council as are required; and no such works shall be proceeded with until approved by the Governor in Council; and in like manner plans of the museum or any building to be erected within the park shall be subject before the commencement of the work of building to the approval of the Governor in Council.

Sir WILFRID LAURIER. My hon. friend (Mr. R. L. Borden) wants to have parliament substituted for the Governor in Council in this clause. I have no objecion to that. My hon. friend can express the idea as he wants to.

Mr. FOSTER. Suppose property were purchased and parliament were not in session?

Sir WILFRID LAURIER. Parliament would have to authorize it.

Mr. R. L. BORDEN. Is it necessary to put this Bill through to-night?

Sir WILFRID LAURIER. We want to proceed as fast as possible with it.

Mr. FOSTER. The Senate will not be in session until the 10th of March.

Mr. R. L. BORDEN. This would require a little consideration. I would not like to put it in such shape as to make it unworkable, but I would like parliament to have some voice in it.

Sir WILFRID LAURIER. I will reserve this section and my hon. friend can think it over and make his suggestion.

Section 11,

The commission shall from time to time, and before making expenditures, under this Act, submit to the Minister of Finance detailed estimates of the expenditures proposed to be made, accompanied by information sufficient to enable the Governor in Council to determine as to the necessity or advisability of the proposed expenditures and every portion thereof.

Mr. FOSTER. That section will apply to the celebration proceedings.

Sir WILFRID LAURIER. To everything.

Mr. SPROULE. Has the money to be provided for that by vote of parliament every year?

Sir WILFRID LAURIER. We are voting the money by this Bill now.

Mr. FOSTER. Suppose you have one million dollars contributed and the commission is going to spend it, according to this section they would have to submit to the Minister of Finance every dollar of this expenditure.

Mr. COCKSHUTT. Would the Minister of Finance have control over the funds contributed by private parties?

Sir WILFRID LAURIER. Yes.

Mr. COCKSHUTT. I would think it should only apply to the funds that are placed in the hands of the commission by the government.

Sir WILFRID LAURIER. There is that objection, but the contributions come from the local legislatures and the municipality and private subscribers, and I believe that after all the best way is to have this money subject to the control of parliament in the last resort.

Mr. FOSTER. The fact that the government has control might give greater confidence to parties contributing outside the country; that is if we have the right kind of government.

Mr. SAM. HUGHES. The object is to have this commission under control of parliament?

Sir WILFRID LAURIER. Yes.

Mr. SAM. HUGHES. That is proper.

Mr. ALCORN. You might get over the difficulty which has been suggested by changing the last words of section 10 so as to read:

All such, together with the estimates and annual statements mentioned in the following sections shall be laid before parliament within the first twenty days of every session of parliament and shall be subject to the approval of parliament.

Sir WILFRID LAURIER. We will let section 10 stand.

Progress reported.

Mr. R. L. BORDEN. What business will be taken up on Thursday?

Sir WILFRID LAURIER. We will take up this same Bill, and the Minister of Railways proposes to make a statement about the Railway Department.

Motion agreed to, and House adjourned at 11.25 p.m.

---

## HOUSE OF COMMONS.

THURSDAY, March 5, 1908.

The SPEAKER took the Chair at Three o'clock.

### QUESTIONS.

### MARINE HOSPITAL, LOUISBURG.

Mr. A. A. McLEAN asked:

1. How many sailors have been received or treated in the marine hospital at Louisburg since its completion?
2. Why are sailors landed at Louisburg treated in a private boarding house by the port physician, instead of being sent to this hospital?
3. If this hospital is not in a condition to receive patients, what reason can the department give for the delay in equipping it?
4. How much land did the department acquire as a site for the hospital and at what price?
5. Did the department call for tenders for the site of the marine hospital at Louisburg?
6. What tenders were received and from whom?
7. When and why was Dr. C. D. Barnaby, port physician at the port of Louisburg, dismissed?
8. Who was appointed as his successor, at what date and at what salary?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. None.
2. Formerly they were received and treated in a private boarding house, but now that the hospital is in operation they will be treated there.
3. Answered by No. 2.
4. Four acres of land and a right of way, $1,000 for the land and $100 for right of way.
5. No.
6. Answered by No. 5.
7. On November 17, 1906, and in the interest of the service.
8. Dr. Freeman O'Neil, January 12, 1907, salary of $200 a year, same as predecessor.

### FOREIGN TOBACCO.

Mr. DUGAS asked:

1. What is the quantity of foreign tobacco employed by Canadian manufacturers during past financial year, upon which a refund of 10 cents per pound was allowed?
2. On how many pounds of foreign tobacco has that refund of ten cents been allowed during the same year?
3. What is the full amount thus refunded on these tobaccos during the same financial years?

Hon. WM. TEMPLEMAN (Minister of Inland Revenue):

The quantity of tobacco exported upon which a refund of duty was paid on the foreign raw leaf contained therein was 112,891 pounds. The amount of the refund was $10,737.70. It is impossible to determine the exact quantity of foreign raw leaf actually contained in the above quantity.

There was, in addition to the above, 363,518 pounds of cigar cuttings exported upon which a refund of $36,351.80 was paid.

### ADULTERATION OF FOOD.

Mr. E. D. SMITH—by Mr. Taylor—asked:

How many firms have been fined for manufacturing and selling adulterated food in 1906 and 1907, and how much was the average fine and the average cost to each person fined?

Hon. WM. TEMPLEMAN (Minister of Inland Revenue). Seventy-nine persons, or firms, paid the cost of collecting and analysing samples at an average cost to each per-

son, or firm, of $10.18. Eight persons, or firms, were fined through the courts. The average fine was $10 and the average cost to each person, or firm fined was, so far as the department can determine, about $18.

ORIGINAL LAND REGISTERS OF LORD SELKIRK'S ESTATE.

Mr. THOS. CHISHOLM asked :

Has the government ever made an effort to secure the custody of the original land registers of Lord Selkirk's estate covering the period from 1812 to 1835?

Rt. Hon. Sir WILFRID LAURIER. I cannot answer for previous administrations, but so far as the present administration is concerned, all such matters have been placed in the hands of Dr. Doughty, the Dominion Archivist and a most competent officer. I do not know whether these land registers can be had, but if my hon. friend (Mr. Chisholm) has any information on the subject it would be most welcome.

IMPROVEMENTS AT PORT COLBORNE.

Mr. LANCASTER—by Mr. Taylor—asked :

1. What is the total amount expended to date on the improvements at Port Colborne, on the Welland canal?
2. What is the total amount of the contract or contracts already made for said improvements?
3. What is the total amount estimated as required to complete such improvements?

Hon. WM. PUGSLEY (Minister of Public Works) :

1. Expended by Department of Public Works up to 31st December, 1907, $892,-008.22.
2. $880,840.
3. $20,000 to complete.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals) :

1. $1,581,178.26.
2. M. J. Hogan's contract at schedule rates. Messrs. Hogan and Macdonald at schedule rates.
3. $80,000.

BURLINGTON CHANNEL.

Mr. E. D. SMITH—by Mr. Taylor—asked:

1. Who has been in charge of the repair work on the Burlington channel on behalf of the government during the last four years?
2. On whose recommendation was the appointment made?
3. What salary did the party in charge receive?
4. When did he commence and when did he finish his work, and how much has he received to date?

Mr. TEMPLEMAN.

Hon. WM. PUGSLEY (Minister of Public Works :

1. George Hart.
2. It would not be in accordance with the practice of the department to give the names of the parties who made the recommendation.
3. $3 per day.
4. (a) April 6, 1903. (b) February 2, 1906. (c) $2,349.

LOBSTER LICENSES.

Mr. A. MARTIN (Queens) asked :

1. Has the government received a petition from fishermen in Savage harbour, P.E.I., asking for a license to fish and pack lobsters in that locality?
2. If so, is it the intention of the government to grant the prayer of the petitioners? If not, why not?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries) :

1. A petition has been received from lobster fishermen on a portion of the north shore of Prince Edward Island, embracing Savage harbour, asking for a lobster canning license.
2. No, as after full inquiry, there appear to be no special conditions in this case calling for a departure from the general policy.

PORT VERNON RIVER BRIDGE, P.E.I.

Mr. A. MARTIN (Queens) asked :

1. Has work on the wharf of Port Vernon river bridge, P.E.I., been completed?
2. If so, (a) at what cost, (b) if by contract or tender, and (c) who was the contractor?
3. Is the work to be extended?
4. Is the government aware that the wharf accommodation at the port is still insufficient?

Hon. WM. PUGSLEY (Minister of Public Works ) :

1. No.
2. (a) Cost to date, $2,607.09. (b) and (c) By day labour.
3. Matter under consideration.
4. Representations have been made that additional accommodation is required.

ROSS RIFLE COMPANY.

Mr. LENNOX asked :

1. Since the execution of the lease of Sir Charles D. Ross of May 27, 1902, has the government by lease or otherwise alienated to Sir Charles D. Ross, or the Ross Rifle Company, or either of them, or to any one for them, any further portion of the Cove fields of the plains of Abraham?
2. If so, when, what portion thereof, and on what terms?
3. Has a request been made for such additional land, has the application been ac-

ceded to, is the question still under consideration, or has the request been definitely and finally refused?

4. If refused, what were the reasons for refusal?

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence):

1. No.
2. Answered by answer to No. 1.
3. Yes; refused.
4. Not considered advisable to do so.

TRAVELLING EXPENSES—COMMANDER SPAIN.

Mr. FOSTER asked:

1. Was there at any time a question raised by the Auditor General as to the largeness of the payment to Commander Spain, of the Department of Marine and Fisheries, on account of his travelling expenses?

2. If so, in what year was the expense complained of paid, and what was the amount?

3. Did the Auditor General examine the attendance book of the Department of Marine and Fisheries, and through its examination prove that Commander Spain had charged expenses as absent from Ottawa while his attendance at the department was established by his siguature in the attendance book?

4. What was the amount so overcharged by Commander Spain?

5. Did Commander Spain refund an amount? If so, where is the refund to be found in the report of the Auditor General, and for what year, and what amount was refunded?

6. Was there any correspondence between the Auditor General and the Minister of Marine and Fisheries or the Deputy Minister of Marine and Fisheries or with Commander Spain, or any other officer of the Department of Marine and Fisheries on this subject?

7. If there was, why was the correspondence not published in the report of the Auditor General in a similar manner to other correspondence of like character?

8. What action did the Minister of Marine and Fisheries take in connection with the matter?

9. Was there an investigation made? If so, by whom, and was a report made?

10. Will the Minister of Marine and Fisheries lay on the table of the House all correspondence, reports and papers on the subjects?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Yes.
2. 1904-5.
3. Yes, but satisfactorily explained.
4. Not overcharge, but refund of balance as indicated, P—252, 1905-6.
5. Answered by above.
6. Yes, five letters between Auditor General and Deputy Minister Marine and Fisheries.
7. Because correspondence belonged to former year and report closed, so I am informed by the Auditor General.
8. No action required.
9. No.
10. Yes.

LOUISBURG BAIT FREEZER.

Mr. STANFIELD—by Mr. Taylor—asked:

1. What amount did the cold storage building at Louisburg, N.S., cost the government, and what amount was contributed by the fishermen in cash and labour?

2. Who is the keeper of the freezer and what remuneration does he receive?

3. What quantity of bait was stored in the freezer in 1907 and what amount was collected for the storage of the bait?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. The government's share of the cost was $1,000. The balance of the cost was $1,290.16, which was paid by the Fishermen's Bait Association in cash and labour.

2. Fishermen's bait associations themselves employ the keepers of freezers and pay the remuneration that may be decided upon.

3. No report yet received from the secretary of the association for 1907; but in any case the government would have nothing to do with the collections for the storage of bait, as the freezers are run by the associations under regulations provided.

CENSUS MAP.

Mr. AMES asked:

In connection with the census of the provinces in 1906 has any map been published showing distribution according to nationalities?

Hon. SYDNEY FISHER (Minister of Agriculture). No.

DISTRICT EXHIBITIONS.

Mr. BEAUPARLANT asked:

1. What district exhibitions, or others, have been subsidized during the course of the past five years?

2. What was the amount of each of such subsidies?

3. Did the Dominion government ever subsidize two exhibitions in the same province for the same year?

4. Has the same government ever subsidized an exhibition, or more than one, during two consecutive years, or more, in the same province?

5. Does the government intend to subsidize successively every district exhibition company?

6. If so, according to what order and in accordance with what principle as regards the amount of such subsidies?

Hon. SYDNEY FISHER (Minister of Agriculture):

1. Province of Ontario, Manitoba, British Columbia, Nova Scotia, Quebec, Prince Edward Island.

2. Fifty thousand dollars each, with the exception of Prince Edward Island, which received ten thousand dollars.

3. No.
4. No.

5 & 6. The government has no fixed policy determined for the future.

COLD STORAGE PAPERS.

Mr. FOSTER. Has the Minister of Agriculture been successful in finding the missing letter I asked him for a few days ago?

Mr. FISHER. There is such a letter on the private files of my office. I look upon it as a private and confidential communication, but in consequence of the hon. gentleman's question I have communicated with the writer of the letter to know whether he would allow it to be put on the file.

INSTRUCTIONS TO MR. BASTEDO.

Mr. FOSTER. Mr. Bastedo has been appointed to negotiate with the different provinces as to the fisheries. Some time ago the Minister of Marine promised to lay on the table of the House the instructions given to him.

Mr. BRODEUR. If there are special instructions, I will bring them down; there is the order in council.

ORIENTAL CONTRACT LABOUR.

Mr. FOSTER. Has the First Minister information to give to the House with reference to the telegram published in the newspapers as to the action of the Asiatic League in reference to the influx of Hindoos? And also with reference to the statements said to have been made by Count Hayashi in Tokio, that Japanese labourers under contract were not forbidden entrance into Canada.

Sir WILFRID LAURIER. I received a telegram yesterday from New Westminster referring to the statement of Count Hayashi I am sorry I have not here the answer which I sent to that telegram, but it was to the effect that we could not credit the report attributed to Count Hayashi; that it was incorrect in some way, because Mr. Lemieux has stated on the floor of the House that contract labour cannot be imported into Canada except by the previous sanction of the Canadian government, and no such sanction has been given.

Hon. R. LEMIEUX (Minister of Labour). I had a visit this morning from the Consul General of Japan in Ottawa, and I called his attention to the statement which had been made in the press. I presume the Asiatic Exclusion League meant the Japanese press of British Columbia, because there are two or three newspapers published in the Japanese language in Vancouver. The Consul General for Japan has authorized me to say that he had been instructed—as I have already stated in the House when I came back from Japan—that in future no contract labourers would be admitted into Canada unless the Canadian government would approve of their importation.

BELLEVILLE HARBOUR.

Mr. PORTER. What is the cause of the delay in bringing down the returns ordered by the House on the 11th of January with regard to the commissions appointed from 1896 down to the present time and their expenses? And also in regard to the expenditures made on Belleville harbour, which was ordered on the 12th of February.

Sir WILFRID LAURIER. Will my hon. friend send me a memo?

Mr. BRODEUR. As to Belleville harbour, we have communicated with the authorities there. We have not the information here.

Mr. PORTER. The newspapers up there are very full of it.

Mr. ARMSTRONG. I wish to ask the Minister of Public Works when I may expect the return relative to the pier at Grand Bend, St. Joseph and Bayfield and if he would be good enough to include any pettions that he has received in regard to these matters?

Mr. PUGSLEY. My hon. friend will have the returns just as soon as possible. They are being prepared in the regular course, and the instructions are to lose no time in getting them ready.

CANADIAN BATTLEFIELDS AT QUEBEC.

House again in committee on Bill (No. 111) respecting the Canadian battlefields at Quebec.—Sir Wilfrid Laurier.

On section 10—powers to be exercised subject to approval of Governor in Council—

Mr. FOSTER. It was agreed, I understand, to substitute the parliament of Canada for the Governor in Council.

Sir WILFRID LAURIER. Yes, but in discussing the matter afterwards with my hon. friend the leader of the opposition we did not think it would be sufficient to put it in that form. If you said that no land or immovable property shall be purchased or acquired by the commission except with the previous authority of the parliament of Canada you would probably make it impossible for the commission to acquire the necessary land. If the land is acquired with the authority of the Governor in Council, that is subject of course to their responsibility to parliament. If my hon. friend would prepare an amendment which would express his views I would have no objection, but for my part I do not think the ground would be covered by substituting the parliament of Canada for the Governor in Council.

Mr. FOSTER. I talked the matter over with the leader of the opposition this morn-

ing. He had carefully gone over the two clauses of this section, and he could see nothing better than to substitute, as was suggested by the right hon. gentleman himself, the parliament of Canada for the Governor in Council. The section as it stands gives carte blanche to the commission to go ahead and purchase whatever land or immovable property they may consider necessary, subject simply to the authority of the Governor in Council. The idea we had the other evening was that the celebration itself, which is imminent, and which no one desires to interfere with, quite the contrary, might very well be left entirely, free and that the expenditure for that might be made under the authority of the Governor in Council, but with reference to the permanent acquirment of properties, great or small, extended or narrow, it was thought better that parliament should see what plan the commission, after full consideration, developed, and then parliament would be in a position to authorize the expenditure. Otherwise you are asking us to vote an indefinite obligation, which may reach half a million dollars or a million dollars, without any plan being mapped out. Would not all things be properly conserved if no attempt were made to put any difficulty at all in the way of the celebration of the tercentenary, while the commission should be asked to give their best thought during the year to the whole matter and then outline their plan, which would afford a definite basis for parliament to come to some conclusion upon? The only objection to that, I understand, is that it may be difficult to secure land unless it is got quickly. How that may be I do not know, but it would strike me that all private lands that will be required will have to be expropriated, and they are not likely to cost more a year from now than they will now. If they are not expropriated, there is nothing to prevent the commission taking options upon them as soon as they please. I think the country at large, while willing to do everything possible in the line of the idea broached, would be much better satisfied if they knew the extent of the obligation before undertaking it. On this side of the House we have not the slightest desire to put anything in the way of the proper and fitting celebration of the tercentenary, but with regard to the purchase of land we would like something in the form of a plan.

Sir WILFRID LAURIER. I am altogether of the same mind as my hon. friend. I wanted to have the whole matter controlled by parliament, but I could not see how it could be done. Of course, no money can be expended unless it is voted by parliament. However, I have no objection to meeting the views of my hon. friend if he will let me have the words he wants substituted for those in the Bill, so that I may have the matter placed before the Department of Justice. Meantime, I move that the committee rise, report progress and ask leave to sit again.

Mr. FOSTER. I would suggest that the clause read as follows:

No land or immovable property shall be purchased or acquired by the commission except with the previous authority of parliament, and no expenditures shall be made by the commission, except for the celebration of the tercentenary, until it has been approved by parliament.

Mr. ARMAND LAVERGNE. If I may be permitted, as I was not able to be here at the second reading, I would like to say something on the principle of the Bill. I hope my remarks will be taken by the House in the best of faith and without any arrière pensée. What I am about to say represents, I think, the views of the majority of the people who are first concerned, the people of Quebec. I am sure no one has any idea of opposing the Bill and I do not rise for that purpose. The Bill has been called an Act respecting the Canadian battlefields at Quebec, and this legislation is asked for in connection with the celebration of the 300th anniversary of the birthday of Canada, of the founding of the city of Quebec. It appears to me that the principle of this festival has been forgotten. It is certain that if the amiable explorer of Saintonge should return he would feel a legitimate pride at the changes that have taken place since his first visit to the St. Lawrence. He would find where he planted a poor wooden cross, a prosperous city. He might perhaps be more surprised at the manner in which this festival is being celebrated. It seems that the hero of the feast has been forgotten, that the name of Champlain is placed entirely in the shade and that another scheme, of an entirely different character, has been brought forward, a scheme which would be quite in its place and which I would favour to the utmost in the year 1959. But we must not forget that we are now in 1908; that Quebec was founded in 1608 and that we are not celebrating the second centenary of the battle of the plains of Abraham, but the third centenary of the founding of the city of Quebec.

I appreciate and approve the movement to consecrate the Plains of Abraham as a national park, but at the same time we must not forget our present object, the celebration of the tercentenary of the founding of Canada.

At the meeting held in the Russell theatre, Ottawa, under the auspices of the Canadian Club, the dominant note was that it was a privilege

To associate one's self with the battlefields of Quebec, which gave the French Canadians good government and a place within the em-

pire, to the British half a continent on this side of the Atlantic and an empire of self-governing dominions, and to the United States their independence.

That may be all very good, but I was under the impression that the French Canadians had won their freedom since the battle of 1759, and I think it is a mere figure of rhetoric, to say that the soldiers of Wolfe fought against the liberties of the French Canadians or that the French Canadians fought to defend their religion and nationality. The soldiers fought for their respective sovereigns, and I do not believe had a thought of the great principles at stake in that battle. Judging by the agitation that has been going on in the country, Champlain, the hero of the feast, is almost entirely forgotten; he is treated as a dead letter, and an effort is made to make the feast entirely an Imperial festival. Surely this feast should be thoroughly Canadian. I am quite sure that Champlain in founding Quebec would never for a moment have thought that the other colonies would be called on to name commissioners to decide how the festivities in connection with the anniversary of the foundation of his city should be arranged. We seem to be going far from the idea which was in the minds of the people of this country in initiating the celebration, if the whole object of this Bill is the nationalization of the Plains of Abraham. It would seem to me that the figures here given as to the probable cost are below the mark, because on one part of the Plains of Abraham that has been mentioned, where the Ross rifle factory is situated, there never was the shadow of the tail of a battle. To expropriate the real Plains of Abraham would cost many millions, for it must be remembered that the plains of Abraham commenced at the St. Lawrence river and went over to the cliff which rises over the valley of the River St. Charles. This is now practically all built up and where the first battle of the Plains of Abraham took place is now one of the most desirable and expensive residential parts of the city of Quebec. I think that Wolfe's right wing rested at what is now the monastery of the Franciscan nuns which is in the very heart of the city. Therefore it seems a physical impossibility to make a park of what was then the Plains of Abraham. Then we would be nationalizing only parts of the Plains of Abraham. There is, for instance, the scene of the battle of St. Foye, where a large number of those who fell met their death, and the Moulin Dumont which was captured and recaptured again and again by the Highlanders and by the French. But there is actually a monument on that spot.

We have also heard that the name of the Plains of Abraham should be changed and many names have been suggested. I think that not even parliament, which is supreme, could change history. The name of the Plains of Abraham is historical and a Bill of this parliament cannot change it. I would like to see provision placed in the Bill restraining the commission from changing these names. I have the greatest respect for the commission, but in glancing over their names I do not see the name of any competent judge of the national idea of the Plains of Abraham or of the celebration of the tercentenary of the founding of Quebec by Champlain. But it seems to me that a strong restriction should be put in the Bill to prevent any change in the name of the Plains of Abraham. It is an ordinary-sounding name, perhaps, but it is a name that is historic, a name that is glorious, a name known throughout the world. We cannot change it without seeking to change history, and that is undesirable even where it is possible.

I learn that it was stated at this meeting of Canadian clubs at the Russell Theatre, that, at the Plains of Abraham took place the birth of the Canadian nation. It seems strange that, at a meeting where it was stated that we were to celebrate the three hundredth birthday of Canada, it should be stated a little later that Canada came into being on the Plains of Abraham. French Canadians was born with the founding of Quebec by Champlain ; English Canadians came with the Plains of Abraham ; but the Canada that we know was born in 1867, when the two elements in this country made peace and joined hands to make one Dominion. If we are going to celebrate the centenary of the birth of Canada, we must wait until 1967. That which we propose to celebrate this year is the three hundredth anniversary of the birthday of Quebec.

Many plans for this celebration have been suggested. The one that seems to have taken most with the people is to erect on the citadel of Quebec a statue to be called the Angel of Peace. It certainly seems a rather strange idea to set up the Angel of Peace on a citadel. We are told that this is to take the place on the Plains of Abraham of the Ross Rifle factory and also of the gaol. I do not know that the Angel of Peace will be a very satisfactory substitute, with the workmen of Quebec, for the Ross Rifle factory and the $5,000 a week of wages that it pays them. We are told that the Angel of Peace would be regarded as giving to the immigrant a welcome on coming to this new land. For my part, I should rather be in favour of leaving the gaol, so far as the immigrants are concerned. I think it would be a salutary thing for them, on coming to this country, to see that there is a gaol, and, if they have come to this country, as some of them seem to have done, because the choice was offered them of going to gaol or going to Canada, it would be well to impress them with a

respect for our laws which, for the last ten years or so, many of them have failed to exhibit. It seems to me there will be a better way to commemorate the foundation of Quebec and even the nationalization of the battlefields of Quebec than by building the Angel of Peace there. Why should we not change the gaol of Quebec—which, by the way, does not look half so bad as the gentlemen who made speeches at the convention of Canadian clubs would have us believe—into a national museum ? There are in the Laval University in Quebec millions of dollars worth of paintings and these are articles of national and historic value, which, at any moment, may be destroyed by fire. It seems to me that we should be doing a much more practical work for Canada, and one quite in keeping with this celebration, by nationalizing what is left of the Plains of Abraham, and building there a museum where could be stored these treasures of Laval University and others that would be gladly contributed by the citizens of this country. I understand that there is to be a park on the Plains of Abraham. Where is it to be? As I have said, there is practically nothing left of the place where the battle was fought. There is a monument there to commemorate General Wolfe, but everybody knows that Wolfe did not die there and was not carried there. The proposal, I understand, is to take the racecourse of Quebec, or whatever it is called, and this little field that is left at the side of the river, and set up there the statue of the Angel of Peace and make a park. What peace would that statute represent?

Now, I hope that my English speaking colleagues in this House will take what I say in the best way, because they may be sure I mean nothing but good. The French Canadians have seen with joy their English-speaking countrymen ready to join them in celebrating the third centenary of Quebec. In that we have seen the same spirit of British fairplay and justice that they displayed when the question of Canada's nationality was in view. What peace, I say, would this Angel of Peace represent ? Would it be the peace that reigned at Warsaw ? The peace we have had in this country since 1867 ? For, we have seen the confederation of Canada, in the province of Quebec, the minority receive, I will not say the most just treatment, I would more truly say the most generous treatment, that any minority has received at the hands of a majority. But the minority in the other provinces—whether it be in Nova Scotia, in New Brunswick, in Prince Edward Island, or let it be in Manitoba, or, more recently in Alberta and Saskatchewan, has seen its privileges and its rights curtailed. Will it be that kind of peace that the Angel of Peace on the Plains of Abraham will represent? If that is the kind of peace that is meant, let me tell this House that we do not want a statue to celebrate it; the peace that we would like to have commemorated is that which was made when the two elements in this country joined in one, and the statement was made that in this country there was no superior race and no inferior race. Let us commemorate the peace which will represent the true idea of this country, the spirit which presided over our affairs in 1867 in the establishment of confederation. And, Mr. Speaker, let us build a monument, not of stone or bronze which must pass away, one which will yield to storms and to the influence of the outer elements, but let us build it of enduring sentiment which should not pass away. Let it be a peace such as was expressed by the words of one whom everybody in this House, on either side, will acclaim as amongst the greatest of Canadians, Sir John Macdonald. And let us establish that monument not upon the Plains of Abraham alone, but in the hearts of our people. Sir John Macdonald told us that in this country there is no superior race and no inferior race; there are no French Canadians and no English Canadians ; but there are Canadians speaking French and Canadians speaking English, but all are Canadians, and to say that one of these elements has more privileges than the other is speaking à propos de rien. to use the very language of Sir John Macdonald, and that all are upon an equal footing. If we give effect to the spirit of our constitution, we shall not build upon the Plains of Abraham a statue to represent a general sentiment however lofty, but we shall build a monument to the Canadian nation, a token of its eternal unity and future prosperity.

I say that, during this next summer, when we are going to celebrate the tercentenary of the city of Quebec and the practical foundation of Canada, it should be in the spirit that would cause the majority to give the minority the treatment to which it is entitled, and to recognize the rights, which, within the last twenty years, have been curtailed. Then may we look for a joyous celebration indeed of the foundation of this country. And it should be remembered that we are not celebrating next summer the tercentenary of the battle of the Plains of Abraham, however glorious that anniversary may be and however worthy of celebration—and I hope the House will understand that I would be one of the first to join in helping to celebrate it—but we are celebrating the tercentenary of the foundation of the city of Quebec and of this country by Champlain. But I hope that the peace established on the Plains of Abraham will not be forgotten but that it will be celebrated in the true spirit of this country. The past is done. We cannot tear out a page of history. There are two

elements in this country, and they are here to stay.

If we do not get into our minds the conviction that the two elements are here to stay we may as well make up our minds that there will be room for none of them. I hope that during this celebration we will forget the past and start with a better idea of the future and put into practice the true spirit of our constitution. I may be told that I am rather narrow in my views, but I might quote the words which General Murray used in 1760 when opposing the policy in the province of Quebec of the imperial government. He said that the loss of the French Canadian element would be a loss, not only to Canada, but to the empire. It had been the privilege of General Murray to incur the hatred of the imperialists because he had defended the French-Canadians and held that they were necessary to the empire. I hope that we will celebrate this tercentenary in a true spirit, not as a celebration of the overthrow and defeat of the French on the Plains of Abraham, but as celebrating the birth of the Canadian nation, and in so doing we should not forget the spirit of our forefathers. In twenty years hence the foreign immigration to this country will be an element not in sympathy with the national spirit which has, since confederation, been developing among Canadians of English as well as of French origin ; and unless these two elements work in harmony and recognize each the value of the other we may, owing to this foreign influx, have to confront a more bitter struggle than that which took place on the Plains of Abraham. It is time now that the majority should join hands with the minority and put into practice the words of the right hon. gentleman who leads the government that in this country there is one nation divided into two elements—French and English speaking—each with the same rights and privileges. Then we may look with confidence to the future of this country and work out our destiny in the spirit given expression to by Champlain when he spoke of the mission of this country as not the establishment of kingdoms, or the enlargement of the empire, or the winning of battles, but the higher and better end of civilization and the salvation of mankind.

Mr. SPROULE. If I properly interpret the hon. gentleman's remarks, he has hardly been seized with the spirit of the occasion. He speaks of it as being the celebration of the birth of a country in which there are two elements. If I understand it properly, it is rather the birth of a country where the people are all British subjects so that there cannot be two elements.

Mr. ARMAND LAVERGNE. There are some British subjects who seem to be considered as British subjects and others who seem to be treated as inferior British subjects.

Mr. SPROULE. What nationality might that imply—the Doukhobors ?

Mr. LAVERGNE. I think it was the hon. gentleman himself, and practically some members of the cabinet, who put the French-Canadians and the Doukhobors of the Northwest on the same footing.

Mr. SPROULE. I think, as a member of the opposition, that we might complain of the treatment which has been meted out to us for some time. But as British subjects we go our way giving our blows and taking them at the same time. The hon. gentleman spoke of the nation as composed of a majority and a minority. I do not know that there is any minority in this nation. It is all one nation. We are all British subjects. We are celebrating the birth of British dominance, and if we are willing to join in that tercentenary with pride and pleasure, it is because we believe that as British subjects it is our right and duty to do so and because we believe there has been an amalgamation which represents neither the majority nor the minority but the British empire. That is what we all desire to stand for, and in doing this we are giving the best evidence that it is not a minority or a majority but all British subjects who desire to honour this occasion.

Mr. FOSTER. There is one point which we should not lose sight of. This celebration will take place in the latter part of July. If the advertisement is large, as no doubt it will be, and the expectations held out are alluring, there will be a tremendous influx of people into the city of Quebec about that time and during the days this celebration will continue, and no doubt great difficulty will be found in caring for all the people who come. If you turn 10,000 extra people into the city of Quebec, that will tax its general accommodations very seriously. But if you turn 50,000 or 100,000 into the vicinity of Quebec for three or four days, where will you put them? The celebration will be al fresco, but you must have some shelter for these people and some means of feeding them, unless they are going to feed on pure patriotism and all that kind of thing my hon. friend (Mr. Lavergne) has been talking about. The lodging of those people is one of the most serious problems connected with the whole thing. The government no doubt will have to face it. It will take the whole fleet of the Marine and Fisheries Department and all the tent accommodation of the Militia Department to shelter even a very small portion of the numbers who will be there.

Sir WILFRID LAURIER. The difficulties my hon. friend has pointed out have certainly presented themselves to other

minds than his own. They have been the subject of frequent conversation between myself and some of the parties interested. I have talked the matter over with Sir Thomas Shaugnessy, the representative of the Canadian Pacific Railway, which has the management of the Chateau Frontenac at Quebec. Of course the hotel accommodation will not be sufficient, but the difficulty is one which we will have to face, and, as my hon. friend knows, necessity is the mother of invention. I do not agree with our young friend from Montmagny (Mr. Lavergne), that there is a superior and an inferior race in this country. I belong to the race of the minority, as he does, and I state that we are on a footing of equality with everybody. Again I want to say to my hon. friend that on that occasion it is probable there will be an equality of misery on the part of many of those who visit the city.

Mr. A. LAVERGNE. My hon. friend belongs to the minority but he has the chance of being the first of the minority and of the majority. If my right hon. friend were living in the province of Quebec he would find that if he wanted to send a telegram, to send a little bit of freight, to take a train, to telephone, to read the laws of this country, to avail himself of any public utility, or public service, or to go to any department of the government of the country, or even to talk to a minister of the Crown, he would find that he was very much in the minority.

Sir WILFRID LAURIER. If I were to go to a restaurant I would find a French menu also.

Mr. SAM HUGHES. Mr. Chairman, I understood that this day would be set apart for the second reading of this Bill. However, we are in committee and anything we have to say upon it will be better said now. I regret that I cannot agree with my hon. friend from Montmagny (Mr. A. Lavergne) about a superior and an inferior race with the interpretation that he puts upon the phrase. If it were in the province of Ontario we would say that the British are the inferior race as far as practice is concerned. We have to do all the bowing and kow-towing to our friends in the province of Quebec and they are the ones—in our opinion, you know—who are the superior race as far as rights and privileges go. When you find the subject viewed from both aspects, when each side feels that it is aggrieved, we are fairly justified in assuming that things are not half bad after all. Reference has been made to the two races in Canada. Let me point out that I take no stock whatever in these race cries. The people in France are identically the same class of people as the British race are. The old Franks—the name means freemen—were a Teutonic race, akin to the Germans and the Anglo-Saxons, who settled in Britain and, with the exception of a very small sprinkling of the Latin race which settled in France, we find the people of France identical with the people of Germany and the people of the British Isles. They have the same aspirations, the same love of liberty and no country in the world —I make no exception—has ever given more striking example of the stern struggle for liberty and freedom than France has. You may search in vain the records of Germany, of Italy, of Spain and of Great Britain and you will not find any country in the world which has placed upon record as stern a determination to be free as the French people have from time to time and at all times in that country.

An hon. MEMBER. What about the Scotch?

Mr. SAM. HUGHES. Next to the French our good friends of Scotland, I should say, rank well up in the line, although if I chose to go into that question I think I could show where the Scotch have not been so self-sacrificing on all occasions as our good friends from France have been. In dealing with this question of races in Canada we need not talk of a superior race and an inferior race or of a race that does not enjoy all the rights and privileges that any other race possesses. As I pointed out upon one occasion in this House, in crossing the continent from Winnipeg to the mountains, I came across twenty-seven different languages—an hon. gentleman says eighty-three, but I am speaking of what I know myself—and if we are going to look upon them from the view point of language and not from the ethnological point of view they are all on the same footing as long as they obey the laws. I am heartily in favour of commemorating the tercentenary of the founding of Quebec and of commemorating the name of that splendid hero, Samuel de Champlain. I want to point out at the outset that his name was Samuel.

Mr. W. F. MACLEAN. A chip off the old block.

Mr. SAM HUGHES. I have not the slightest doubt but at that period he was also called Sam, the same as those who bear that name are to-day called Sam. I want to point out still further that you will search the pages of history in vain to find one bearing that name who was not a lover of liberty.

An hon. MEMBER. Uncle Sam.

Mr. SAM. HUGHES. Uncle Sam was and is a stalwart lover of liberty. Let me point to the movements which were agitating the world immediately previous to the founding of Quebec. We find the struggle for liberty going on throughout the length and breadth of the then civilized world. We find our French friends, led by De Monts,

Champlain, and others—I could give the names of all of them—encouraging settlement in Acadia and in what is now the province of Quebec. These men, although chance threw them later under the control of the fur traders, came in search of that liberty, the thought which was universal in the minds of men all through Europe at that time. The lovers of liberty of Great Britain, France, Germany and Holland united in forming settlements along the shores of the new world so that they might be free from the little petty tyrannies in church and state that had ground down poor old humanity in those lands. In Acadia we find these lovers of liberty laying down their settlements, and in Quebec we find them laying down their settlements headed by Champlain who had fought under the flag of Henri of Navarre, at the battle d'Ivry for liberty. We find men in England seeking to free themselves from the tyranny that was grinding the hearts out of the people. We find the British people founding the New England States, we find our Dutch lovers of liberty settling on Manhattan Island, we find the French people settling along the shores of Georgia, Florida, Carolinas and Brazil, the British also in South Carolina, and we find a splendid French colony seeking the same liberty and under the same captains along the shores of the St. Lawrence. The whole idea actuating these settlements was that mankind might be free. I therefore hold up both hands and join most heartily in any movement, cost what it may, which will perpetuate the memory of Samuel de Champlain on the Plains of Abraham, in the County of Victoria, up the Ottawa, along the shores of Lake Nipissing, along the shores of the Georgian Bay, or wherever that splendid soldier and statesman may have pursued his adventurous way. I hold up both hands in favour of commemorating the memory of a man who has done so much for the civilized world as Samuel de Champlain. In so far as the details of the celebration may be concerned, I have great faith in the Minister of War. In time of war I have great faith in him. Now, that a question has come up in time of peace I want to say that when the South African war broke out and when the right hon. First Minister (Sir Wilfrid Laurier)—I am not saying what his own personal views may have been—was tied up by certain elements in his own party on the question of sending troops to South Africa, I know personally that the Minister of Militia was absolutely in favour of sending the boys to South Africa without any qualification.

However, the Minister of Militia has a capable general officer commanding, he has capable officers around him, and there will be no trouble in handling the troops. As to housing the visitors, I imagine that on the Quebec and Lévis sides accommodation can be found easily for 50,000 to 100,000 people, but as necessity is the mother of invention, if the worst comes to the worst, tents and improvised shelters could be erected so that there need be no fear on that score. When the occasion arises again I shall hold the First Minister and the Postmaster General as well to the promises they have made that other parts of Canada will be remembered in these commemoration services. It is of course highly proper and fitting that we should commemorate the tercentenary at Quebec, but there are other parts of Canada prominently associated with the name and doings of that great soldier and splendid statesman, Samuel De Champlain, and I trust the government will not forget to have a commemoration in these places.

Progress reported.

## SUPPLY—RAILWAYS AND CANALS—TRANSPORTATION.

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into Committee of Supply.

Hon GEORGE P. GRAHAM (Minister of Railways and Canals). In rising to make a few observations on the Department of Railways and Canals I shall state frankly to the House that I make no profession of having mastered the details of that very large department, the work of which is so interwoven with the interests of the people of the whole country. In endeavouring to gain some information as each day's work progresses, the conclusion has been forced on my mind that if I should be able to approach within measurable distance of the ability shown by my predecessors in the management of the affairs of this department, the people of Canada ought to be fairly well satisfied. The staff of the department is, I think, exceptionally efficient, and in consequence the work is made as easy for the minister as the work of that department can be made. But, there are myriads of details which I do not pretend to have grappled with, much less to have mastered. Indeed if any one should pretend that he had been able in a few short months to master all these details, he would to my mind demonstrate that he was incapable of ever mastering them. It is a large part of the business of this department to do something to better the transportation facilities of the country; but were I to-day to discuss the question of transportation in its larger sphere I would get into a realm that would take me very far away from my object this afternoon. I ask the indulgence of the House while for a short time I discuss in a cursory way and very briefly a few of the matters connected with the department. In the first place, speaking of the canals, I shall not discuss them in detail but shall merely try to give the House and the country a little bit of information as

to what has been done and what is being done in connection with our canals. If we include the Rideau canal, which runs from Ottawa to Kingston, I am well within the mark when I say that the expenditure on our canals in Canada has been at least $120,000,000. En passant I may add that on the Rideau canal between Ottawa and Kingston will be found some of the finest scenery in America or in Europe either, and those hon. gentlemen who have not taken the opportunity to enjoy a trip through that canal should do so at the earliest moment and learn something of the beauties of nature with which we are surrounded.

Mr. SAM. HUGHES. Take the steamers up some Saturday.

Mr. GRAHAM. The hon. gentleman might go next Saturday. Now, the business on the St. Lawrence canals is not so great as we had hoped it would be. On the other hand the business done at the Soo canal has increased to nearly two-thirds of the capacity of the canal, or about 12,000,000 tons. The lockages on the Cornwall canal, which will give an idea of the trade up and down the St. Lawrence, amounted last year to 4,417.

Mr. J. D. REID. That means lockages up and down?

Mr. GRAHAM. Yes. While that does not represent as great a traffic as we would like to see on that waterway, yet it is greater than it was last year and it is increasing year after year. But, the number of lockages at the present time cannot be compared with the lockages of past years as indicating the extent of trade, because the canals have been deepened, and larger vessels are used, and larger cargoes are carried, and consequently the tonnage for the same number of lockages would be greater now than before. The following figures give an idea of the traffic through the St. Lawrence canals :—

| | |
|---|---|
| Down river traffic, St. Lawrence canals. | |
| Wheat.. .. .. .. .. .. .. .. | 15,461.600 bushels |
| Corn.. .. .. .. .. .. .. .. | 3,882,800 " |
| Oats.. .. .. .. .. .. .. .. | 3,937,700 " |
| Flax.. .. .. .. .. .. .. .. | 1,950,700 " |
| Barley.. .. .. .. .. .. .. .. | 414,000 " |
| Total grain down river through St. Lawrence canals.. .. .. .. .. .. .. | 25,646,800 " |
| Coal.. .. .. .. .. .. .. .. | 395,200 tons. |
| Other freight.. .. .. .. .. | 31,700 " |
| Passengers.. .. .. .. .. .. | 9,981 |
| Up river traffic, St. Lawrence canals. | |
| Pulp wood.. .. .. .. .. .. | 81,000 cords. |
| Lumber.. .. .. .. .. .. .. | 21,350,000 ft.b.m. |
| Other freight.. .. .. .. .. | 117,500 tons. |
| Passengers.. .. .. .. .. .. | 9,005 |

Mr. W. F. MACLEAN. How many lockages on the Soo?

Mr. GRAHAM. I have not got the number but I have given the tonnage. The traffic on the St. Lawrence cannot be judged by the traffic at the Soo because a great deal of the Soo canal traffic comes down the lakes and finds its way to Buffalo or some other ports; it cannot get through to the St. Lawrence unless we change the size of the vessels or deepen the canals.

Now, we have had considerable discussion as to the deepening of the canals and the building of new canals, and I find that up to date on the Welland canal we have expended about $31,000,000. My hon. friend from Leeds (Mr. Taylor) the other day read a letter the contents of which I had discussed with probably the same gentleman, about the possibilities of Port Colborne for the development of Canadian traffic. At that point the government is building an elevator which will be completed for this season, I think, to the extent of about 800,000 bushels bin capacity; but it can be very much enlarged on the present plan. I am free to confess that I am at a loss to know whether it would be better for the government to control that elevator absolutely or to lease it to some company that would make it a part of a through line of transportation. I think every person will confess that government management of elevators up to the present has not been as successful as we had hoped it would be. It has been reported to me that in order to make the Port Colborne elevator a real success and the benefit which it ought to be to the carrying trade of the country, it would be wise to lease it to some company connected with through trade, because that company would find it advantageous to use the elevator not only for traffic from the west to that point, but from that point to the east.

Mr. KEMP. What elevators does the hon. gentleman refer to that the government own?

Mr. GRAHAM. There are three altogether, I think—one at Halifax, one at St. John and one at Montreal, and so far as I can learn, they are not as busily engaged as I would like to see government elevators engaged. There are reasons why it would be better to keep elevators under government control; but if they are going to be under government control and practically idle, they are not accomplishing the purpose for which they were erected. It has been supposed that the great amount of trade that goes through American channels could be diverted to Canadian channels by way of the Welland canal. An expert on this question has pointed out to me that the cost of transporting wheat from Fort William to Buffalo is 1·50 cents a bushel, and from Buffalo to New York 5·90 cents, making in all 7·40 cents a bushel. That is the rate at the present time.

Mr. SAM. HUGHES. The winter rate?

Mr. J. D. REID. There is no rate from Fort William to Buffalo in the winter time.

Mr. GRAHAM. My hon. friend, of course, understands that the grain is stored at Buffalo, whence it is taken to New York; that is part of the transportation problem. Under the new scheme of deepening and enlarging the Erie canal, this gentleman tells me, it is proposed to make the rate 3·50 cents from Fort William or Duluth to the city of New York; that is, the rate from Buffalo to New York is to be reduced to 2 cents per bushel.

Mr. SAM. HUGHES. Does the minister mean to say that that rate has never prevailed in the Erie canal or even by rail in times gone by?

Mr. GRAHAM. It does not now, and we are trying to deal with the present situation. He also states that if we deepened and enlarged the Welland canal so that enlarged vessels could pass through it and proceed east as far as Kingston, Brockville or Prescott, an extra half-cent a bushel would carry the grain from Port Colborne to the lower port, making the total rate from Fort William to that port 2 cents a bushel; and from there to Montreal it could be carried in vessels of from 60,000 to 75,000 bushels capacity for about 1⅜ cents per bushel; a total rate from Fort William to Montreal of 3⅜ cents a bushel. That would give the Canadian route an advantage over the American route of ⅛ cent per bushel, with only one transhipment, which would be at the river port.

Mr. SAM. HUGHES. Does my hon. friend not know that wheat has been carried from Fort William to Quebec at 4 cents and a fraction per bushel?

Mr. GRAHAM. My hon. friend can make money if he can do that at the present time. Now, if this can be accomplished, it is worth the country thinking about. That is the opinion expressed to me by a large vessel owner as well as a large shipper. To accomplish this would mean a heavy expenditure in addition to what we have already made; but the country has become accustomed to large expenditures in connection with transportation——

Some hon. MEMBERS. Hear, hear.

Mr. GRAHAM—and justifiable expenditures; because anything that makes it easier to carry the products of the people to market enhances the value of those products. I would not express an opinion on this idea, but I do say that it is worthy of investigation by the government.

Mr. BENNETT. What object is to be served by the construction of an elevator or elevators at Port Colborne?

Mr. SAM. HUGHES.

Mr. GRAHAM. It is estimated that last year 14,000,000 bushels of our grain went by way of Buffalo, and 12,000,000 bushels by way of our own ports. The elevator at Port Colborne has been built for the purpose of facilitating the transhipment of grain from larger vessels into smaller vessels which can pass through the Welland canal and down the St. Lawrence.

Mr. BENNETT. A vessel carrying 80,000 bushels can at present pass through the Welland canal and discharge her cargo at Kingston into light barges. Assuming that a vessel carrying 200,000 bushels would come to Port Colborne, and tranship there into barges that passed on to Montreal, what would be the difference in the rate between a 200,000-bushel vessel on the upper lakes and an 80,000-bushel one?—because that is the only advantage possible. At present there is not any difference.

Mr. GRAHAM. I do not think there would be much difference. My information is obtained from the Canadian Marine Association, with whom I discussed the matter the other day. They said they could float 6,250,000 bushels of wheat. They hope next year to be able to float nearly 7,000,000 bushels. That is they hope to have vessels of the capacity to carry that many bushels at one time. If all the vessels belonging to the Canadian fleet were loaded at once, there would then be 6,250,000 bushels of wheat afloat.

Mr. BENNETT. What has that to do with the question of moving the grain more cheaply? The American vessels can still ply in the trade between Port Arthur and Buffalo; that is not against the coasting laws.

Mr. GRAHAM. My argument was, repeating the argument given to me, that if we wanted to secure cheaper transportation of grain we would have to send the grain through the Welland canal without transhipment. At present we have an elevator at Port Colborne and if the canal is enlarged this elevator will not be of so much use as it is now; but until the canal is enlarged it is to the interest of the Canadian trade to have these transhipping facilities at Port Colborne.

Mr. FOSTER. At what time is it hoped to have the elevator at Port Colborne ready for work?

Mr. GRAHAM. We expect to have it ready at the beginning of this season for 850,000 bushels bin capacity. It will require enlarging and we have the plans for enlarging it completed.

With reference to the Trent Valley canal, the government has had in mind that where it is possible to do so without making a

much larger expenditure the water powers along the route should be developed. There are on the Trent Valley canal possibilities for the development of a great deal of water power that hitherto has not been used to its fullest extent. The building of the canal will increase that water power and the government desires, wherever it can do so without too great an expenditure, to assist to develop that water power so that it will be available for the use of people living along the line, and others. Of course, where this development will cost too much money, I imagine the prime object of the canal, that of transportation, will be adhered to; but where power development can be assisted for instance by slight alteration of a plan, I think it is in the interest of the whole people that the water power should be developed.

Mr. SAM. HUGHES. And controlled properly.

Mr. GRAHAM. And controlled properly under a policy I imagine that will have to be enunciated later.

Mr. PORTER. In developing the Trent Valley canal will the rights of municipalities and riparian owners be respected, or will the power be taken over entirely by the government?

Mr. GRAHAM. These cases will all have to be considered; there are so many different cases, we have several before the department to-day. So far as possible, the government must respect the rights of all parties, and I think that in nearly every case it is not impossible to do that.

It may be of interest to the House, in connection with this department, to place on 'Hansard' a few details of the progress of the Grand Trunk Pacific. Much of what I have to say has been published in the report but the statement which I am to present may contain some things of a later date; my information is up to December 1. Although this may not be directly connected with the department as the Intercolonial is, it may be of interest to the House and to the country. In detail my information as to the different sections, starting at Winnipeg where the Grand Trunk Pacific Company's work begins, is this:

Grading, culverts and wooden bridges.

From 0 to 13th mile. No grading has been done; the work is very light, merely surfacing.

From 13th to 650th mile. The grading is practically completed, merely a few narrow cuttings remaining to be widened, and a few embankments not yet fully brought up to grade level, to be completed. The culverts and wooden structures are about completed.

From 650th to 796th mile (Edmonton). Considerable grading has been done in patches, aggregating about 54 miles. There, however, yet remain about 1,750,000 cubic yards of excavation to be done to complete the grading. A large proportion of the culverts are built and the pile foundations of about 75 per cent of the bridges are driven.

Steel bridges.

At 45th mile. The Assiniboine river is to be crossed by a steel bridge 415 feet long, 34 feet high. One span of 255 feet and two spans of 80 feet each. The concrete piers are in course of construction, one having been completed and 3 others being worked upon, but not far advanced beyond the excavation of foundation which is completed.

At 469th mile. The south Saskatchewan river is crossed by a steel bridge 1,497 feet in length and 74 feet high; of 1 span 50 feet, 1 of 127 feet, 1 of 175 feet and 5 of 229 feet. The concrete piers and abutments are completed, and the steel superstructure is delivered at the site of the structure. Two spans are erected and the work of erection is being continued.

At 675th mile. The Battle river is to be crossed by a steel bridge 2,770 feet long and 180 high. The work is in progress on the concrete piers, pedestals and abutments, of which there will be 2 piers, 100 pedestals and 2 abutments. Many of the foundations are excavated, but concreting may be said to have only just been commenced. Work is still in progress, the piers, &c., being housed in and kept warm during the building up of the concrete.

At 787th mile. The North Saskatchewan river is to be crossed by a steel bridge 1,647 feet long 136 feet high; of 4 spans 40 feet, 10 of 50 feet, 2 of 150 feet, 3 of 229 feet. The 28 concrete pedestal, 2 abutments and 2 of the piers are completed. The work of building the last remaining two concrete piers is in progress; they are housed in and kept warm during the progress of the work.

In addition to the steel bridges mentioned, there is the bridge over the Assiniboine river at St. Lazare—at the 203rd mile—250 feet in length, which is being crossed by a temporary timber structure.

Track-laying.

The track is laid from the 45th mile to the 326th mile, and from the 426th mile to the 468th mile, aggregating 310 miles; in addition to which 47 sidings are laid in.

Ballasting.

From the 53rd mile to 140th mile. The road is full ballasted and lifted.

From the 140th mile to 213th mile. It is half ballasted with a first lift.

Station buildings.

At the 43rd mile (Portage la Prairie) a union station-house of brick is in course of erection, and is nearing completion.

At the 141st mile (Rivers) a station-house is in course of erection.

At the 385th mile (Nokomis) a station-house has been erected.

Engine-houses and machine shops.

At the 141st mile (Rivers divisional station) an engine-house and machine shop and boiler-house are in course of erection; the work is advanced to the extent of about 90 per cent.

At the 277th mile (Melville divisional station) an engine-house and machine shop are in course of erection; about 35 per cent of the work is executed.

Water tanks

At the 141st mile (Rivers divisional station) a well and water tank are being provided; about 86 per cent of the work has been executed.

At the 202nd mile a water tank and pump house are erected.

At the 217th mile a water tank is under construction; about 25 per cent of the work is done.

Fencing.

Forty-six miles of fencing has been built west of Portage la Prairie.

Telegraph line.

From the 5th mile to 276th mile the telegraph line is erected, being a length of 271 miles.

Of course there is no construction west of Edmonton except a wharf at Prince Rupert.

The figures in connection with the Yellowhead Pass may prove interesting. The Yellowhead Pass is a better pass in every way than any other except so far as the curvature is concerned. The grades are less but the curvature is a little greater. But the cost is considerably less, and we are interested in the cost of the Grand Trunk Pacific in the mountain section, on account of the guarantee given by the government.

Mr. SAM. HUGHES. The hon. minister speaks of the Yellowhead Pass route?

Mr. GRAHAM. I have spoken of that, but I may mention the others now. The estimated cost of the Yellowhead Pass route, exclusive of terminals, is $42,115,500 being less than the estimated cost of the Pine River Pass route by $4,536,100.

Mr. FOSTER. These estimates are for what mileage?

Mr. SAM. HUGHES. Would the Pine River route be longer or shorter?

Mr. GRAHAM. I think it is a little longer. The estimated cost of the Yellowhead Pass route is less than that of the Wapiti route by $3,490,000, and less than the Peace River route by $6,251,000. So it will be seen that the Yellowhead Pass route appears to be cheaper as well as better.

Mr. HAGGART. Is that the one they have adopted?

Mr. GRAHAM. Practically adopted.

Mr. SAM. HUGHES. Why is it better?

Mr. GRAHAM. I believe it is better in grade. The only thing in which it is inferior is in the degree of curvature necessary, but in other ways it is superior.

Mr. SAM HUGHES. Is it better in grade than the Pine River route?

Mr. GRAHAM. Yes.

Mr. ARMSTRONG. Would the minister be good enough to tell us the mileage from Edmonton to the ocean?

Mr. GRAHAM. From Edmonton to Prince Rupert is 955 miles. Now, I have dealt with the part of the transcontinental highway that is being constructed by the company. The part that we are most immediately interested in is the part that is being constructed under the Transcontinental Railway Commission.

Mr. FOSTER. Can the minister tell us at what time it is expected that the road from Winnipeg to Edmonton will be finished?

Mr. GRAHAM. I have not that information at present. The length of the government section, the Transcontinental, from Moncton to Winnipeg, is 1,807 miles. With the permission of the House, I will read a statement from the commission, giving some later information than is given in the report as to the progress of the work:

The location of the line is practically completed, with the exception of about three or four miles at the entrance to the Winnipeg terminals, and a few points where revision may be made of the present location to reduce grades, distances or work. Contracts for construction have already been awarded covering in all, say, 859 miles as follows: 119 miles in New Brunswick; 150 miles east, and 195 miles west of the St. Lawrence river, and 78 miles easterly from the Ontario boundary in the province of Quebec; 72 miles from the Quebec boundary westerly, and 158 miles from the Manitoba boundary easterly in the province of Ontario; 87 miles in the province of Manitoba.

Mileage of grading done on the contracts already let in the various provinces is approximately as follows:

| | Miles. |
|---|---|
| New Brunswick.. .. .. .. .. .. .. .. .. | 16 |
| Quebec (east of the St. Lawrence river) | 41 |
| Quebec (west of the St. Lawrence river) | 101 |
| In western Ontario and Manitoba.. .. | 171 |

The mileage of track laid is approximately as follows:

| | Miles. |
|---|---|
| In New Brunswick.. .. .. .. .. .. .. .. | ¾ |
| In Quebec (west of the St. Lawrence river).. .. .. .. .. .. .. .. .. .. .. .. .. | 34 |
| In Manitoba.. .. .. .. .. .. .. .. .. .. | 49 |

The necessary rails and fastenings covering the contracts already let have all been contracted for and a large proportion of them delivered. The ties for the 150 miles west of the St. Lawrence river, and 245 miles easterly from near Winnipeg have also been contracted for, and large deliveries have been made on same. The ties for the other contracts already let are included in the contracts for grading.

Contracts for steel bridges required on the 150 miles westerly and 50 miles easterly from the St. Lawrence river and 245 miles easterly from near Winnipeg are all entered into, and considerable progress is being made in their manufacture and erection.

Tenders are now being advertised for the following contracts: New Brunswick, from Chipman to——

These will be receivable in a very few days.

| | Miles. | Miles. |
|---|---|---|
| New Brunswick— | | |
| From Chipman to near Intercolonial Railway.. .. .. .. | 40 | |
| From near Intercolonial Railway crossing to near Tobique river.. .. .. .. .. .. | 67 | |
| From Tobique river to near Grand Falls.. .. .. .. .. | 21 | |
| | | 136 |
| Quebec— | | |
| From the New Brunswick boundary westerly.. .. .. | 52 | |
| | | 52 |
| Ontario— | | |
| From 8 miles west of the Abitibi river crossing westerly.. .. .. .. .. .. .. .. | 100 | |
| From a point 19½ miles westerly from the crossing of Mud river easterly.. .. .. | 75 | |
| | | 175 |
| Total.. .. .. .. .. .. .. .. .. .. | | 365 |

The letting of contracts for the three portions in New Brunswick and the 52 miles in eastern Quebec will make the work continuous from Moncton to Weymontachene, a distance of, say, 654 miles. The total length of the line from Moncton to Winnipeg being about 1,807 miles.

The only lamentable part of the Transcontinental, so far as the government is concerned, was the appalling calamity of the fall of the Quebec bridge. The discussion of that subject will come up later on the report. I mention it so that it cannot be said that I omitted it. The saddest feature of that calamity was the loss of life. Canada is big enough to replace the bridge and rich enough to stand the expenditure if we must; but we cannot replace the lost lives or heal the broken hearts. For these we can but express sorrow. In due course, the policy of the government on the building of the bridge will be brought down. For, whatever our differences may be, this much will be known to the world—that Canada, though a young country, is able to complete what Canada has begun. Whatever our differences may be on the subject, we will all agree that the Quebec bridge must be reconstructed and reconstructed on safe and permanent lines.

Mr. J. D. REID. Has the hon. minister a statement showing the total number of miles under contract east of Winnipeg and the estimated cost when completed ?

Mr GRAHAM. I regret that I have not those figures with me. I will be able to give that detail when we go into the estimates. I had not intended to go more into detail at this time than seems absolutely necessary.

Another very important part of the work of the Department of Railways and Canals is the Railway Commission. We have discussed that in the House recently. In the death of the chairman of that commission, Canada sustains a national loss. The late Hon. A. C. Killam was a man who not only was capable of a great amount of work, but he had the ability to perform that work well; and he had the approachableness that made it easy for every person, even the humblest citizen of the Dominion, to do business with the Railway Commission. It will be very hard to replace Judge Killam as chairman of the Railway Commission. The Railway Commission of Canada has done good work and important work, and we expect that it will continue. In the selection of this commission and giving to it of such wide powers, Canada, I think, took a step in advance of any country in the world. I think I am safe in saying that the powers given to the Board of Railway Commissioners of the Dominion of Canada are wider than those given to any similar board under any government in existence.

We expect to reap great benefit from that commission. Canada has already derived great benefits from its work. Of course, we cannot accomplish the purpose which we set out to accomplish without taking some time. This is something it will take years to fully accomplish. For years we had been without a railway commission, and had been doing business in other ways. A great deal of the business difficulties between the railways and the public came before the courts; some of them were dealt with by the Railway Committee of the Privy Council. We have established a new, a more speedy, a more approachable and practical medium than the courts could possibly give. But, of course, it will take some time for the public and the railway, telephone, telegraph and express companies to adjust themselves to the new conditions. But I am warranted in saying that the Railway Commission has already accomplished a great deal for the people, and I trust that in the future, with the increase of its members and the enlargement of its powers, greater good will be accomplished. With regard to the work accomplished, I might cite a few figures :

During 1904 there were 705 applications.
During 1907 there were 2,600 applications.
During 1904 there we 3,375 communications filed.
During 1907 there were 18,984 communications filed.
During 1904 (11 months) 3,803 communications sent out.
During 1907 there were 18,311 communications sent out.
During 1904 there were 304 orders issued.
During 1907 there were 1,816 orders issued.
During 1904 there were 7 public sittings.
During 1907 there were 66 public sittings.
During 1904 there were 136 applications heard.
During 1907 there were 321 applications heard.

These figures speak for themselves as to the increase of the work and the apprecia-

tion by the public of the work being done. But these figures do not at all give the complete work done by that commission. In scores and scores of what we might call petty grievances, hearings have been given single individuals. These are not put down at all in the record of hearings. There is just a little record of the complaint and of its having been straightened out without any notice being given. And in this connection the loss of Judge Killam will be greatly felt, because he had the capacity, the ability and the suave manner of settling difficulties among people with the least possible friction.

It would not be out of place for me to put on record some concrete examples as given by Dr. Mills, another member of the commission, showing what has been accomplished in dollars and cents. He gives these illustrations in orders delivered in Ottawa during the month of January of reductions in rates consequent upon orders of the commission:

Fruit, reductions from a single station, St. Catharines, Ont., to Montreal, on pears, $45 per car; on staple tender fruits $21 per car; on apples, pears, &c., to Winnipeg, $54 per car; to Brandon, $72 per car; and on pears and standard tender fruits to other points, east and west, in like proportion; glass bottles, Wallaceburg to Toronto, $15 per car, and to Hamilton $18 per car; cooperage stock, Chatham and Wallaceburg to Montreal (local and export), $4 per car; split peas, Toronto to St. John, N.B. (export), $9 per car; cattle, Windsor and Sarnia to Montreal, $4.50 per car; metallic shingles, Toronto to Winnipeg, $30 per car, and to Strathcona, Alberta, $123 per car; grain, shipments between local points (reduced to same rate as flour), say, Thamesville, Ont., to Montreal, $24 per car; grain for export, from Windsor to Montreal, $6 per car, from Owen Sound, $7.50 per car, from Guelph, $9 per car, and from Toronto, $6 per car; beans, Chatham to St. John, $16.50 per car; packing house products, Toronto to Montreal (export), $3 per car; wall paper, Toronto to Montreal, $15 per car; all transcontinental traffic, eastern Canada to British Columbia terminals, $15 per car; also a readjustment of rates from distributing centres west of Montreal, so as to place them on a fair basis, and a general overhauling of the rates from Ontario points eastbound, reducing and readjusting them so as to abolish the discrimination which has hitherto existed in favour of Detroit, Port Huron and other points in Michigan, as compared with Windsor, Sarnia, Chatham, and other points in western Ontario. The order providing for these far-reaching and very important readjustments has made extensive reductions in all rates from points in western Ontario to Montreal, Ottawa and other points east as far as St. John, Halifax and Sydney; for example, Windsor to Montreal. $26 per car; St. Catharines to Montreal, $30 per car; St. Thomas to Quebec, $54 per car, and so on.

I give these as a few examples of some of the practical work done by the commission. Canada has taken a wider departure than any country in the world in the powers she has given this commission. The benefits we have received have been great, and we expect to have still greater benefits in the future. A branch of the department over which I have the honour to preside, which has attracted perhaps as much attention as any other, is that known as the statistical branch. It has been entirely reorganized, and for many days after the issuing of its report I received very flattering communications concerning the contents of that report. And the press of Canada which takes any interest in the question of transportation—as nearly all the papers do—invariably had a kind word to say for the very valuable information contained in the reports. Anybody who desires to study the transportation question and make comparisons has only to study that report and he will get information which has never before been compiled in Canada, and which could only be collated under the system adopted by the Railway Department. The gentleman in charge, Mr. Payne, has done his work well; and when a man performs a work of that kind and the press speaks so highly of it, it is only fair to recognize his work, on an occasion of this kind. I have given a good many figures from that report, and shall not detain the House with many more. Last year the railways of Canada carried 32,137,319 passengers and 63,866,135 tons of freight. The people depending on transportation facilities of the Dominion for a living are at least one-sixth of our population, so that when we are doing anything to enlarge our transportation facilities and extend our railways in a legitimate way, we are doing something that will assist the people in obtaining employment and giving them employment such as they would not have but for these facilities. In discussing what has to be done for the control of rates and transportation generally, while being fair to the public at large, we must not forget that a large proportion of our population is to-day dependent upon the great transportation companies for its livelihood.

The Prince Edward Island Railway is one in which a great deal of interest has been taken in this House. I made a statement the other day concerning the expenditures in that province. I may say to my hon. friends, who discussed this matter so thoroughly the other day, that Prince Edward Island is not at all forgotten in the transportation problem of this country. Governments may be slow. They move by steady, easy stages. This government has moved more rapidly than any other in the expenditure of money on Prince Edward Island. Perhaps, however, more is needed. Perhaps the railway facilities ought to be extended. I am prepared to discuss that with my hon. friend at any time, either privately or publicly, because, after all, what we all aim at, I think, on both sides of this House, is to do everything possible, con-

sistent with the finances of the country, to make Canada a better country to live in and to attract people who do not now live here to our shores.

Mr. LENNOX. What about the tunnel?

Mr. GRAHAM. My hon. friend raises a contentious question in a clear matter of business.

Mr. LENNOX. It is a live question all the same.

Mr. GRAHAM. Now, Sir, my observations to-day lie more directly in connection with the Intercolonial Railway. I want to discuss that problem, not as a maritime question, not as a line of railway, that interests only a few people but as a question which affects the country at large. Every man from Vancouver to Halifax is a part owner of the Intercolonial Railway, and I want to discuss it as a national undertaking or as a national asset, and I will try to do it fairly. I will give a few figures concerning the Intercolonial Railway at the present time.

Last year my predecessor placed before the House a full and exhaustive comparison of the rates, regular and special, passenger and freight, in force on the Intercolonial and Prince Edward Island Railway, as with those in force on the Grand Trunk, Canadian Pacific and Canadian Northern. I do not propose to repeat them. The rates as shown still remain true. The past fiscal year was a short one, nine months, and ended on the 31st March. The comparisons set out in the report of the department are, therefore, not on the old basis of the statistical year. It is, however, the intention of the department to keep up the statistical year comparisons, and they will be reported in the railway statistics in common with all other railways.

During the past fiscal year on the Intercolonial Railway: Freight train miles aggregated 3,036,013, as compared with 3,149,173 in the preceding fiscal year for the like period, a decrease of 113,160 train miles.

Freight car miles, loaded and empty in 1907, 52,698,113; in 1906, they were 58,047,469; a decrease of 5,349,356.

In 1907 the tons one mile were 663,215,240; and in 1906, 617,555,908; an increase of 45,659,332. In other words, with less train miles and less car miles we increased our ton miles; a marked improvement.

In 1907 we had 17·35 cars per freight train, in 1906, 18·43; a decrease of 1·08 cars per train.

The tons per car, all cars, in 1907 were 12·58, in 1906, 10·63; an increase of 1·95.

As every person who has studied this question readily understands, the more tons we can move with the least number of trains and cars the greater chance there is of at least keeping even on a government owned road. In this respect the Intercolonial Railway seems to make a little gain each year. It does not pay to haul over the country empty cars or partially empty cars and the fuller we can make these cars, the greater the number of tons we can get into them the better it is for the railway.

Mr. HAGGART. Has the minister the figures showing what it costs to move a ton per mile now as compared with what it cost last year?

Mr. GRAHAM. I am not sure that I can make that comparison. I will give a little later on what it costs per ton for this year but I am not sure whether I can make the comparison for last year.

Mr. HAGGART. Last year it cost $1.02 per mile to run a locomotive. If the earnings were about equal to the cost, the cost was about $1.02 or $2 per ton mile. There is no comparison of those figures in the statistics.

Mr. GRAHAM. No, I will call attention to that fact because we want to make it an absolute record so that we can compare the figures from year to year without any difficulty.

The tons per car of loaded cars were, in 1907, 14·52, and in 1906, 12·26; or an increase of 2·26 tons per loaded car; a marked improvement. In 1907 we had a passenger train mileage of 2,033,562, and in 1906 of 2,076,444; a decrease of 42,882 miles.

| | Passenger miles. |
|---|---|
| The passengers one mile in 1907.. .. .. .. .. .. .. .. | 111,876,186 |
| The passengers one mile in 1906.. .. .. .. .. .. .. .. | 100,177,932 |
| An increase of.. .. .. .. .. .. | 11,698,254 |

A marked improvement for the better.

The average receipts per ton per mile, all traffic, on the Intercolonial Railway were, for the year, 1907, in cents, ·0059, or approximately six mills per ton mile. For the preceeding year the amount was ·00588, a slight increase: viz: ·00002 cents.

The average receipts per passenger mile for the year 1907 were 1·745 cents, and for the year 1906, 1·768; a slight decrease. On the whole, the average is about 1¾ cents per passenger mile.

Mr. W. F. MACLEAN. What about the other systems of railways?

Mr. GRAHAM. The Intercolonial is a trifle lower than any other road in the Dominion of Canada.

The gross receipts for the fiscal year, nine months, were:

| | |
|---|---|
| Passenger earnings.. .. .. .. | $1,952,438 88 |
| Freight earnings.. .. .. .. .. | 4,032,745 00 |
| Mail and express.. .. .. .. | 235,039 88 |
| Miscellaneous.. .. .. .. .. .. | 28,087 24 |
| Total.. .. .. .. .. .. .. .. .. | 6,248,311 00 |
| Expenditure— | |
| Maintenance of way and structures.. .. .. .. .. .. .. .. .. | $1,111,888 68 |
| Maintenance of equipment .. | 1,180,521 16 |
| Conducting transportation .. | 3,485,224 83 |
| General expenses .. .. .. .. .. | 147,537 16 |
| Rental of leased lines.. .. .. | 105,000 00 |
| | 6,030,171 83 |

Balance, surplus, $218,139.17.

At the end of the statistical year, June 30, 1907:

| | |
|---|---|
| The gross earnings were.. .. | $8,599,119 03 |
| The gross expenses were.. .. | 8,202,064 12 |
| Surplus of earnings over expenses.. .. .. .. .. .. .. .. .. | 397,054 91 |

Gross receipts—

| 1906. | 1907. | Increase. |
|---|---|---|
| $5,586,155 21 | $6,248,311 00 | $662,155 79 |

Working expenses—

| 1906. | 1907. | Increase. |
|---|---|---|
| $5,650,923 90 | $5,925,321 83 | $274,397 93 |

Expenditure on capital account for nine months, $1,506,248.26.

Mr. W. F. MACLEAN. Would my hon. friend allow me to ask him a question in reference to passenger transportation? My hon. friend says that the average is 1¾ cents per mile. Does he make a charge for free transportation or take free transportation into consideration at all?

Mr. GRAHAM. All returns are made on the basis of all passengers carried and all receipts from passengers and the average of 1¾ cents would cover the free transportation. That is the way all the roads make their returns.

Mr. MARTIN (Queens). How does the Intercolonial Railway rate of 1¾ cents compare with the rate on the Prince Edward Island Railway?

Mr. GRAHAM. I regret I have not that information, but if my hon. friend figures it out as this is figured out perhaps there would not be so much difference.

Mr. A. MARTIN (Queens). Will the minister give us later the information with regard to the Prince Edward Island Railway?

Mr. GRAHAM. I think my hon. friend will find it in the statistical report, but if not I will endeavour to get it. Now, I find that at the end of the statistical year, which is June 30, 1907, the gross earnings were $8,599,119.03 and the gross expenses $8,202,-064.12, showing a surplus of earnings over expenses for the 12 months of $397,054.91.

Mr. HAGGART. What is the expenditure on capital account for the whole year?

Mr. GRAHAM. For the 9 months it was $1,506,248.26; I have not got it for the whole year. I might say that I have carried this statement a little later than the 30th June and I find that up to the end of December, 1907, the gross earnings were $7,169,469.36 and the gross expenses $6,790,444.95, leaving a balance of $379,024.44. I want to sound this note. I want to be perfectly candid with the House and I therefore state that December and January have been very bad months on the Intercolonial as on other railways. The financial stringency has interfered with the business of all railroads to quite a large extent, and instead of having other railways using our cars and giving us a return of $12,000 or $15,000 a month a good many of our cars are lying on the sidings unused, just the same as are 350,000 cars in the United States. Then, the adverse conditions have been intensified by reason of the heavy storms necessitating increased expenditure to operate the road. Cold weather makes it more difficult to run a railway, and in severe storms the rolling stock has to be employed fighting snow drifts instead of hauling freight.

Mr. LEFURGEY. This is the mildest winter they have had for years in the maritime provinces.

Mr. SAM HUGHES. There was a snow storm in New Brunswick the day before yesterday.

Mr. GRAHAM. My hon. friend (Mr. Sam. Hughes) is trying to be facetious, but this is a dry subject and I refuse to have anything spicy introduced into it. Now, while we have quite a respectable surplus on the Intercolonial at the present time I frankly state that when the end of the fiscal year comes on March 31, I do not think there will be as large a balance to the credit of the Intercolonial as there was at the end of December, owing to the conditions I have mentioned. But the Intercolonial Railway is not alone in this; all the railways in the United States and in Canada have had the same experience. It is no reflection of course on the Intercolonial or its management that it should be compelled to face the same conditions that every railway in America has to cope with.

I would like to speak with regard to the employees of the Intercolonial Railway. I am not going out of my way to praise them when I say that in whatever transactions I have had with the employees of the Intercolonial Railway, I have come to the conclusion that they are as fine a body of men as will be found in the service of any railway in Canada. I cannot agree with the suggestion that the men who work on the Intercolonial—I care not what their politics may be—are not as good as the men working on any other railway. I believe they give to the Intercolonial Railway as good service as the employees of the Grand Trunk give the Grand Trunk, or as

the employees of the Canadian Pacific Railway give that great corporation. I believe that if you go carefully into the facts you will find that man for man the staff of the Intercolonial gives as good value to the Intercolonial Railway day after day for the remuneration they receive as do the employees of any other railroad to their employers. It may be interesting to the House to know the total number of employees on the Intercolonial Railway is 8,291, distributed as follows:

Number of employees on the Intercolonial Railway.

| | |
|---|---|
| Maintenance of way, structures.. .. | 2,077 |
| Maintenance, equipment.. .. .... | 2,332 |
| Conducting transportation.. .. .. | 3,342 |
| General administration.. .. .. .. .. | 540 |
| Total.. .. .. .. .. .. .. .. .. .. .. | 8,291 |

It has been said that politics enter into the management of the Intercolonial Railway.

Some hon. MEMBERS. Hear, hear.

Mr. GRAHAM. Of course it was only in a joke that was said but it has been said. Let me point out that 63 per cent of the employees of the Intercolonial Railway are members of unions and their advancement is in the hands of the unions and cannot be meddled with by any political party. They are subject to the laws of the union, they get their promotion and their increase of pay as the union laws direct, if the men be competent. And, the manager himself does not interfere with that arrangement with the unions. Every one knows what would happen if that arrangement was not carried out. We have the Brotherhood of Locomotive Engineers, the Brotherhood of Firemen, the Brotherhood of Trainmen, the Brotherhood of Railway Telegraphers, all these men have their organizations, and these matters are regulated under arrangement made by the organizations with the management of the railway, and the promotions of the men are made according to the rules of the union, the men being qualified, and no political influence can interfere with this arrangement by which 63 per cent of the employees are controlled. It may be said: But why do you employ men belonging to these unions. I have been approached on this matter by several men who have said to me: You are allowing the Intercolonial to be run by unions. I say no. This is the age of organization and the employees of the Intercolonial Railway or of any other railway have as much right to form a combination for the protection of their own interests as has the Manufacturers' Association or any other organization.

Mr. SAM. HUGHES. Who disputes that?

Mr. GRAHAM. If my hon. friend had listened to me he would have heard me state that I have been asked why I allow the unions to control the Intercolonial Railway. The unions may make mistakes; they do; sometimes they are unreasonable; sometimes other people are unreasonable as well as trades unions. Sometimes they ask for things that I think they should not have, and they do not get them if I can prevent it if I think they are unreasonable. But take them all in all the labour organizations so far as the Intercolonial Railway is concerned have not been unreasonable. When I have met their officials or representatives in any capacity whatever, they have sat down and reasoned things out with me in a very intelligent manner, and up to date we have been able to come to conclusions with perhaps a little give and take on both sides, and always these conclusions have been in the interests of the proper running of the road. I have come to the conclusion that the presence of labour organizations such as I have mentioned is a benefit to the management of the road rather than a detriment. I think this is an answer to some critics who have suggested that the Intercolonial, being a government road, should not recognize labour unions. While it is a government road it has to be run on these lines like any other road.

For the employees there has been established what is known as a Provident Fund, which I think is better, in the interests of the men, than any of the funds connected with the other roads. The Grand Trunk has adopted a new system, which is a great improvement on the former condition and approximates very closely to that of the Intercolonial. Under this system the employees, at their own request, in order to have the right of assisting in the government and management of the fund, contribute a certain amount per year, and the government contributes a share not exceeding $100,000 a year. This fund has brought about an improved feeling among the employees, and between them and the management of the road. On the cold principle of dollars and cents, the railway does not lose anything by the establishment of this provident fund. A government cannot and a private company ought not to dismiss men, who, after many years of faithful service, have reached an age when they are unfit to take up employment in another walk of life. The establishment of this Provident Fund enables us to do two things—to look after men who have been in the service of the government for many years in a way that is creditable to us, to put in younger men who can perhaps perform the duties with more enthusiasm and zeal than the older men, and also to abolish such positions occupied by older men as can be abolished without injury to the service. The fund is administered by the minister through a board, consisting of five persons; one of whom is the general manager

of government railway, two are appointed from time to time by the minister from among the chief officers of the railways, and the remaining two are elected by the employees contributing to the fund. The present members of the board are: David Pottinger, general manager, government railways, chairman; W. A. Dubé, superintendent, Lévis, appointed by the minister; T. C. Burpee, engineer of maintenance, Moncton, appointed by the minister; J. W. Nairn, locomotive engineer, Truro, elected by the employees; John Stewart, locomotive engineer, Moncton, elected by the employees.

The employees who receive the benefits of this Act are divided into five classes:

Class A.—Those who have attained the age of 70 years after being fifteen years in the service.

Class B.—Those who after being fifteen years in the service become physically or mentally incapacitated from following their usual occupation in the service.

Class C.—Those who have attained the age of sixty years after being fifteen years in the service, and request to be retired from the service.

Class D.—Those who are permanently disabled from following their usual occupation in the service, as the result of injuries received while on duty and actually at work in the service.

Class E.—Those who previous to the coming into force of this Act, entered the service at such an advanced age as to cause them to reach the age of seventy years before being fifteen years in the service; provided that on attaining the age of seventy years they have been at least ten years in the service.

The monthly allowance paid to persons who retire, and are placed upon this fund is 1½ per cent of the average monthly pay received for the eight years immediately preceding their retirement for each year of their service, and the amount so ascertained is paid monthly to the retired employee during the remainder of his life.

Men who lose their employment owing to inability to perform the service are provided for, and there are other provisions for the protection of the men. To show how the system works, let us take the case of a man who for the last eight years, or 96 months previous to his retirement, had earned $5,425, or an average of $56.51 a month. The time of his service is say forty years. At 1½ per cent for each year of service, he would receive 60 per cent of $56.51, which would give him a monthly allowance of $33.90; and under the provisions of this fund no man can receive less than $20 a month. Hon. gentlemen will see that this is a humane method of looking after the older employees of the Intercolonial, and one worthy of the government, and I am surprised that it was not established long before it was.

Mr. GRAHAM.

Mr. W. F. MACLEAN. Is there an age limit at which a man may enter the service and come under the fund?

Mr. GRAHAM. I am informed that the age is 35 years; but the fund is made pretty liberal to men already in the service. I may say that the monthly allowances now amount to $3,292.40, and 128 employees have taken advantage of the terms of the provident fund, and have been retired.

Mr. BLAIN. Did the hon. gentleman give the amounts an employee would have to pay into the fund?

Mr. GRAHAM. If my hon. friend will defer that question, I will answer it at another time.

Mr. FOSTER. Can the minister give figures showing the result of what has been done so far—how many have been retired, how many offices have been saved, and the wages and retiring allowances at present as compared with the wages before? That would be instructive if the minister would make a note of it and give the information later.

Mr. GRAHAM. I shall be glad to hunt that information up. I may say that the average per month paid to those who have been superannuated is at present $26.

Now, I come to a question which is perhaps more difficult to deal with, that is the question of the definition of capital as distinct from revenue or current account. I think it is fair to say that in England, speaking broadly, everything that is for betterment is charged to capital account, while the expenditure to keep the original investment intact is charged to revenue. On this continent, from the investigation which I have been able to make, I have come to the conclusion that there is no cast-iron rule. The directors usually own a great portion of the stock and in a good year, when there might be big dividends for the shareholders, the directors are inclined to expend large portions of the revenue on services which might possibly be charged to capital. This serves two purposes, it greatly improves the road, of which they are the chief owners, and preserves the large revenue for the directors rather than dispersing it in dividends to the shareholders. When the year is leaner, the directors of roads on this continent are inclined to infringe a little on capital account and spend out of it money that might well be taken out of revenue. On the Intercolonial there has been an effort, during the last few years at least, to place the road on a business basis, so far as the balance between revenue and capital account is concerned; and if possible to follow closely the English practice of taking what is for the betterment of the road from capital account and what is for the maintaining of the original investment in the road from the revenue account. The Cana-

dian roads have been fairly successful in their management, but those who have studied the American roads will agree, I think, that owing to many vicissitudes about 70 per cent of the American roads have, at some time in their history, passed through the hands of a receiver.

Mr. FOSTER. A number of years ago.

Mr. GRAHAM. At some time in their history.

Some hon. MEMBERS. And some now.

Mr. SAM. HUGHES. And will again, lots of them.

Mr. GRAHAM. Possibly. We in Canada are going along safer lines, but I am trying to show the consequence of the absence of a fixed principle as to the charging of expenditure to capital or revenue account. The equipment of a road to-day is not what it was even ten years ago. The ex-minister will agree with me in that. The trend to-day in ships is to build them larger so that they can carry more traffic in one trip—fewer trips and more traffic. The trend on the railway is the same; small cars are being displaced as rapidly as possible by large cars; small locomotives are being replaced as quickly as they wear out, and sometimes before that, by locomotives of the Mogul standard, of very large hauling capacity, in order not only to keep up with the traffic of the country but also to keep the haulage rates so that the public will have the advantage of the cheapest transportation. Cars, locomotives and trains are being enlarged. This has necessitated, as a direct result, the improving of road beds, the building of new bridges. Wooden structures that would carry the lighter train loads of a few years ago, have had to be replaced by steel structures and 80 or 90-pound rails have taken the place of light rails. Where the ballasting was not of a sufficiently high standard to make a perfectly solid road it has had to be changed and improved. Grades have been reduced; the Intercolonial if it is to keep up to the standard of other roads will have to invest money in cutting down the grades from Moncton east. The expenditure in the last few years to bring the Intercolonial up to the standard of roads that are being built now has been large; but I believe that expenditure has been warranted because if the people and parliament of Canada, who pretend to be taking such an interest in the transportation question, are not prepared to keep their own railway up to the standard of other roads, they cannot expect to be taken seriously in their attempt to do their share in solving the transportation question on the American continent. There have been large expenditures, but they have been warranted in the improving of the road.

What is the position as regards capital and revenue? Beginning last April, the opening of the financial year, the department have adopted this plan: they lay aside $25,000 per month from revenue account; they charged it to revenue and credit it to what you might call betterment account; and it is hoped that in a few years the revenue account will have placed to the credit of the betterment account a sufficient amount of money to pay each year all that is required for that purpose, so that there will be no more question as to the balance of expenditure between capital and revenue. That has been done this year and it is working out well, but it can be easily seen that it is a difficult task at first because the betterments have had to be so great and they will so continue for a few years—that this fund will not be sufficient to meet the demand for betterments; but it is confidently expected that in a few years these two accounts will balance one another. Then, for all practical purposes, the Intercolonial will be on a better basis than any other railroad on the continent so far as concerns the division of expense as between capital and revenue accounts.

But we are told that the Intercolonial Railway has cost too much per mile. I wish to make a comparison in that respect. The length of the Intercolonial Railway on April 1, 1907, was 1,448·62 miles and the expenditure on capital account $82,744,937.89; this includes all the equipment, making the average cost per mile, including equipment, $57,112.93.

The length of the Prince Edward Island Railway on April 1, 1907, was 261·3 and the expenditure, including equipment, on capital account, that is the total cost of Prince Edward Island equipped, was $7,372,099.26. The cost per mile of the Prince Edward Island Railway was thus $27,965.17. It, of course, is a narrow gauge railway and so the cost per mile is less than that of the Intercolonial Railway.

But the average cost per mile of the railways in the United States is $57,966 or about $850 a mile more than the Intercolonial Railway.

Mr. W. F. MACLEAN. The enormous over-capitalization that occurred in the United States, but which did not occur in this country, must be taken into consideration.

Mr. GRAHAM. That does not affect the cost of the railways.

Mr. W. F. MACLEAN. Oh yes, it does.

Mr. GRAHAM. I am not talking about the capitalization but the actual cost of railways in the United States. The average in the United States is $57,966, while the average cost of the Intercolonial Railway, including equipment, is $57,112.93. This, I think, is very much in favour of the Intercolonial Railway, as far as the comparison of construction and equipment is concerned.

Mr. LANCASTER. Does the minister mean cost of construction after the roadway is acquired ?

Mr. GRAHAM. I mean cost of everything, including the equipment.

Mr. LANCASTER. Including the land purchased to build the road ?

Mr. GRAHAM. Everything, the cost per mile.

Mr. LENNOX. The hon. gentleman (Mr. Graham) gave a comparison between the Intercolonial and certain railways of the United States. Can he give a comparison between the Intercolonial and other Canadian railways as to cost of construction and equipment?

Mr. GRAHAM. I was looking over the figures the other day, and, while I cannot give them, the impression I got in reading them was that the Intercolonial compared very favourably indeed with other Canadian roads.

Now, I come to the question of management of the Intercolonial by a commission. I wish to approach that question in the most open way. It is a question for discussion. It is not a political question but a business question: What is the best way to manage a government railway, by commission or by the government direct? This much I will say; no matter how many commissions you appoint, the people of Canada will not allow the government to escape one iota of responsibility for the management of this government-owned road. So long as it is a government road, under government control, whether that control be direct or through a commission, no matter what government is in power, the government will be held responsible for the management. And, further, if I were going to put the Intercolonial under a commission, I would not put it under a commission of three. (Perhaps I would not put it under a commission at all, but that is another matter). If I were putting it under a commission, I would make it a commission of one man who should be held directly responsible for the management. I think that while a road is under construction, when those in charge need to consult together, perhaps a commission of three, or even of more, may be the best system : but when you come to carry out the details of management of such a road as the Intercolonial, only one man can be boss of the situation and carry on the work properly.

Mr. KEMP. That would be a manager?

Mr. GRAHAM. What's in a name? If I were to appoint a commission, I would appoint a commission of one man, not three. The leader of the opposition (Mr. R. L. Borden) suggested that the Intercolonial should be controlled by a commission, and one reason he gave was that the Ontario government railway was being successfully managed by a commission. Mark you, I would not for the world criticise the management of the Ontario government railway. Every step forward that that government railway makes is something to the credit of the men with whom I was associated for some years, for they conceived the idea of constructing that Timiskaming and Northern Ontario Railway. They were not cheered on at first as they would be now. But whatever may be said by hon. members opposite, whatever they may find it in their hearts to say good, bad or indifferent about the late government of Ontario, this much at least is to the credit of that government —and their opponents themselves admit it —that in spite of the cool support given them, they did build 112 miles of railway in the province of Ontario which is now being pointed to by everybody as a great success. I take great pride in the success of the Ontario government railway, believing that when that portion of the history of the province is written, those with whom I was associated will be given credit for the work they did; and in that credit, as having worked with them, I claim my share.

Mr. TISDALE. According to that argument, the hon. gentleman ought to put the Intercolonial under a commission.

Mr. GRAHAM. I have just said that a commission of three was all right so long as a road was under construction, but that when it came to management if a commission were appointed at all, it should be a commission of one man. The government of Ontario are still conducting the Timiskaming and Northern Ontario Railway. I say in all frankness that the Intercolonial to-day is as well managed as the Toronto and Northern Ontario. I do not think that will be gainsaid, and I think it will be the more cordially assented to the more carefully the facts are studied. That is no reflection on the Timiskaming and Northern Ontario management—quite the contrary, it is a compliment to it. No one will say that the expense of managing a road of 138 miles—a little less than one division of the Intercolonial—in a rich country, with rolling stock absolutely new, with a road absolutely new, can be compared to the expense of running a line such as the Intercolonial, a road of great length, and old enough to require continued renewals and with many old cars. The expense of properly running the Intercolonial is much more than the expense of running the Timiskaming and Northern Ontario Railway. When the Timiskaming and Northern Ontario reaches the Grand Trunk Pacific, or when, if the original idea is carried out, the road reaches Hudson Bay ; after it has been running ten or fifteen years ; when the present rolling stock has lived its life, when the

rails are worn, when the ballasting goes wrong, when the bridges have to be replaced —then, if due allowance be made for the difference in other conditions, a comparison may fairly be made. But let me point out this further to show how misleading a comparison of mere results may be. I admit that the Intercolonial costs more per mile to run than the Timiskaming and Northern Ontario, and it must cost more. But give us the average rates on the Timiskaming and Northern Ontario, and we will not only have a surplus, but will also have a lot of money to put to betterment account and improve the condition of the road. The average net freight rate on the Timiskaming and Northern Ontario is 1:518 cents per ton mile as compared with :584 cents on the Intercolonial. In other words, the freight rate on the Ontario system is 160 per cent higher than that on the Intercolonial. If the people would stand the freight rates over the Intercolonial that are charged on the Timiskaming and Northern Ontario, its earnings would be 160 per cent higher. The passenger rate on the Timiskaming and Northern Ontario is 2·585 cents as against 1·768 on the Intercolonial, or 47 per cent higher. I submit that the Intercolonial is as well managed as the Ontario road. I want it to be distinctly understood that I am not criticising the management of the Ontario road, for I have great pride in its success and progress. Here we have a road 138 miles long, built into, perhaps, the richest mineral country in the world. It has passenger trains laden to their utmost capacity, carrying explorers, capitalists, workmen and tourists into that new country, and over the whole length of the completed road. Supplies are going in and ore is coming out. Anybody who has travelled over the two roads can see the difference between the opportunity that the Timiskaming and Northern Ontario has as a money maker as compared with the Intercolonial.

Then I come to the Intercolonial Railway itself. This railway was never built as a commercial proposition. If it had been, it would have been built straighter to start with and would have come through the state of Maine. It was built as part of the compact of confederation. The people of the maritime provinces had their natural markets elsewhere than in the Dominion, and in order to induce them to enter confederation we agreed to build this road. It was not built as a money-maker but to bring the people of the east nearer the markets of central Canada. It was also constructed to encourage inter-provincial trade by bringing the people nearer together, so that Canada might grow more prosperous and better relations be developed between the extremes of the country and the interior. I do not want to look on that road as the property of the maritime provinces. Neither do I assent to the argument, which we have had advanced, that the canals of Ontario are the property of the west. The canals perform their functions in the transportation service of the country and the Intercolonial Railway perfoms an equally important function in solving the transportation problem. Every pound of freight landed at Halifax and every passenger has to be hauled over the Intercolonial Railway. Go by the Canadian Pacific Railway to St. John if you will, still you have to run over the Intercolonial Railway before you can get out of Halifax coming westward. Every dollar saved in the haulage of freight from east to the west is a benefit to the people of Canada, even those who live as far away as Vancouver and the Yukon. Every dollar saved the people in their passenger traffic from Halifax west over the Intercolonial Railway is an advantage to all the people. We cannot benefit any part of Canada in the transportation problem without benefiting the entire people. I want to claim that I own part of the Intercolonial Railway. Every citizen owns part of it. And we all get our share of benefit from the development of that asset to its utmost capacity. Let me say to the people of the maritime provinces, the canals were not constructed for the people of Ontario but for the development of Canada as a whole, and of the traffic that goes down to St. John and Halifax, a portion goes through the canals of Ontario.

An hon. MEMBER. Very little.

Mr. GRAHAM. And if he does not go through these canals, then the freight rates that are cut down in the summer owing to the canal competition give the advantage of a reduction which would not exist if those canals had not been constructed. In discussing the transportation problem, I refuse to disassociate any part of the Dominion from any other part. We must discuss this question as a whole. What benefits the people of one part benefits the people of all the country. In endeavouring to do anything for the development of transportation, my object would be, not the advantage of the maritime provinces or the people of Ontario or the west, but the benefit of the people of Canada as a whole. That, I believe, is an object worthy of the attention of any government or any parliament, and I believe that Canada is showing itself more alive to this great question than any other country in the world. As to the future of the Intercolonial Railway, I do not want to be prophetic. I look upon it as a great national asset. It has been suggested that we should lease lines in New Brunswick and I have a report submitted to me showing what lines should be leased. Well, if I were going to lease lines in New Brunswick or anywhere else, I

would have a report made by my own officials after they had been instructed to examine into the question with the utmost care. I do not say that these other reports are not correct but they are not those of my officials ; and if I want to construct new lines, which may be necessary, I shall have my own officers report before doing anything. This much I do say, that it is worthy the attention of this government that all these questions should be investigated with the utmost care, and I am free to say that should I come across a road that I think would improve the facilities for transportation of a particular section of the country and be of great advantage, not only to that section, but to the Intercolonial itself and to Canada, I would consider the advisability of leasing or buying that line and adding it to the government system, but I would reserve the right to select lines I wanted and not take over any I did not want.

Mr. HAGGART. Have you heard of any of that kind ?

Mr. GRAHAM. I have an investigation in my possession which I think might convince me that there were some lines of that kind, but would not make up my mind that they were in that particular case until I had them fully examined by competent men responsible to the Canadian government.

Mr. CROCKET. Is my hon. friend referring to a report he received from a commission appointed by the New Brunswick provincial government ?

Mr. GRAHAM. It is probably from that commission but I am not sure. The investigation was undertaken by the New Brunswick government. I do not know the details as to how it was brought about. A problem opens up before us on the Intercolonial Railway. The Grand Trunk Pacific will be at Moncton and it must get to the sea-board. It must have a way to get to St. John and Halifax. How ? I do not attempt fully to answer that. It must have a way to get its traffic to these two ports, because, although I am in Ontario, I am in hearty accord with the idea of developing Canadian ports as much as possible. If the Intercolonial Railway is to take charge of the transcontinental business at Moncton, it will be necessary in the years to come that a double track be built from Moncton to Halifax and arrange for a better service to St. John, either from Moncton or from a point west of that city. If we were to double track from Moncton to Halifax, I am not sure that we would follow altogether the line of the present railroad. We have fulfilled the conditions of confederation in building the Intercolonial Railway. If I were to consider a double track from Moncton to Halifax, it might be advisable to endeavour to get around the Cobequid mountain and get a straighter line to Halifax with less grade than we have at present. It is necessary, in order to carry the traffic that will go east, that we should get the grades as low as possible and, Sir, if we can get around the mountain——

Mr. HAGGART. Get it out of the way.

Mr. GRAHAM. Well we have removed larger mountains than that. For the traffic from the west, or the portion of it that goes to Halifax, the grades will have to be reduced. We cannot afford to have too many pusher grades upon that line. We cannot afford to have grades of one per cent. The highest grade we can have is four-tenths of one per cent in order to carry heavy loads at a profit. To make that line profitable to the people who provide the traffic and to the Dominion of Canada the grades have to be reduced to at least four-tenths of one per cent. If that can be accomplished from Moncton to Halifax by going around the mountain it would be in the interests of the Intercolonial Railway. I have detained the House too long. I have endeavoured to look at this question from a national standpoint rather than from the standpoint of any section. The Intercolonial Railway is a great national asset in the management and results of which every man in Canada is interested. Every man in Canada has an interest in the part which the Intercolonial Railway plays as a regulator in carrying the produce of the east to the west and of the west to the east. If that be an object worthy of the attention of the House I ask it, when matters come up affecting the Intercolonial Railway, to consider it from a double standpoint, first, from the standpoint of carrying out the pledge which was given to the maritime provinces at the time of confederation, not as a commercial venture, and, from the second standpoint, that the Intercolonial Railway is a great part of the transportation service of this country.

At six o'clock, House took recess.

## After Recess.

The House resumed at eight o'clock.

Hon. JOHN HAGGART (South Lanark). The Minister of Railways stated that it was impossible for him to be acquainted with the details of his department during his short term of office, and I can quite understand that he might be there for a number of years before he would be fully cognizant of all the details of that large department. But no one expects him to be. No one expects that the minister of that department should know all the minutiae of its workings, or to be like the celebrated King of Prussia who was said to know the number of buttons on every private soldier's coat. All that is expected from the minister is that he should have a knowledge of the general affairs of his department and that he should be able to see that his instructions are carried out by his

officers. I followed the minister, in what I was going to call his peregrinations over the different subjects he touched on. He first described the beautiful scenery of the Rideau canal, and I agree with him that along its banks is to be found the most delightful scenery in all Canada. I was glad to hear from him that the receipts from the canal were increasing especially as it is connected with that celebrated canal with which the Prime Minister is so well acquainted, the Tay canal, which enters the Rideau canal. The great Corsican wrote in his will: Je veux que mes cendres reposent au milieu du peuple français que j'ai tant aimé, and so, one of the dearest wishes of my heart is that my ashes shall repose on the banks of that canal amidst the people whom I have loved, and who have so long trusted me. The minister spoke of the Trent canal and I believe the Trent canal is an undertaking which will be of immense advantage to the section of the country through which it runs. These little canals as they have been called, traversing different sections of our country are of immense benefit to the people who live near them because they afford them the very cheapest means of transportation. The hon. gentleman dealt lightly with the Sault St. Marie canal, and I would remind him that through that canal passes a traffic greater than passes any waterway in the world. There are more ships going through that canal in a year than enter the great port of London, England. Fancy a traffic of 58,217,214 tons passing eastward and westward through the St. Marie canal and remember that this traffic is increasing every year to the extent of 7,000,000 tons. The traffic of the Soo canal is four times greater than that of the Suez canal and it is greater than it will be possible to send through the Panama canal when it is constructed. The question of transportation is vital to this country. Canada is placed in a geographical position which enables her to take control of the transportation of the American continent, and as the control of the transportation of the continent will enable us to control the destiny of the continent it should be the object of every true Canadian to take advantage of the position which nature has placed us in. I have already treated of what I think is the best way to assure that object. The people of the United States are fully alive to the situation. They are increasing the Sault St. Marie locks so as to give 22-foot navigation, and remember that 22-foot navigation is the standard we must aim at to control the transportation of America. Read the speech of Mr. J. J. Hill and you will see the advantage Canada possesses in this respect, and read the speech of President Roosevelt and you will find he advocates the building of a ship canal from Lake Michigan to the Mississippi, a portion of which is already constructed in the Chicago drainage canal. Then again it is proposed in the United States to deepen the Erie canal. The larger the vessels you can employ to carry your freight the cheaper will be the cost of transportation and the deeper your canals the larger your vessels. The tendency of the day is to build large locomotives with great hauling power, and to increase the depth of waterways so that large vessels may be used. While it may be possible to build a canal to the Mississippi river from the great lakes, the immense expenditure of money necessary and the almost impossibility of keeping that canal clear puts it out of the range of practicability. Therefore, we in Canada control the situation. There are a great many people in Canada who live in the settled portions of Ontario and along the St. Lawrence who advocate the deepening of the Welland canal and the St. Lawrence canals so as to give them a capacity equal to the St. Marie canal. If we are to divert the traffic it must be done in a canal of the same depth and capacity as the American standard for the upper lakes. The minister may be perfectly right, following the recommendation of the deputy head of his department, that a commission should be appointed to inquire whether the rates could be lowered via the Georgian bay canal.

Mr. SAM. HUGHES. Which Georgian bay canal—the Trent or the other?

Mr. HAGGART. I know of only one Georgian Bay canal.

Mr. SAM. HUGHES. There is the Trent canal. The other is in the air yet.

Mr. HAGGART. The question of transportation is not a political question at all; it is a vital question in the interests of this country. If we are to become the great dominating race on the continent of North America, we must take advantage of our geographical position. Geographically nature has given us facilities which the United States does not possess. The hon. minister, speaking of the rates of transportation from Fort William to the seaboard, mentioned the rate of 5·90 cents per bushel from Buffalo to New York. He has been misinformed on that point. The ordinary rate per bushel on wheat from Buffalo to New York seldom rises above 4·5 cents; it is generally as low as 4 cents, and sometimes lower. If the hon. gentleman will look at some of the transportation maps prepared for the government, he will find that 4 cents per bushel will take wheat from Port Arthur to Montreal and deliver it there, plus what would be a reasonable toll on the Georgian Bay canal if it were completed; and the rate to Buffalo is the same. Therefore we have the means of providing transportation from Fort William to the seaboard at as low a rate as can be given from Fort William to Buffalo. That is an immense advantage. I have before pointed out that a difference of one-

half or one-quarter cent per bushel will divert the traffic from one port to another. Thus the means for providing the cheapest transportation from the interior to the ocean are in our possession if we provide facilities for taking advantage of them.

The next question the hon. gentleman dealt with were the facilities at Port Colborne at the mouth of the Welland canal. The minister was perfectly right in saying that if the Welland canal were deepened, elevators at Port Colborne would be entirely useless. He was perfectly right also in saying that government elevators are a bad investment. Not a single bushel of grain has been sent to the government elevator at Halifax. The same is true of the government elevator at St. John.

Mr. PUGSLEY. Oh, no ; it has received a good many hundreds of thousands of bushels this winter.

Mr. HAGGART. There were a couple of hundred thousand bushels, I believe, taken around by Moncton, and dumped into our elevator at St. John. But the whole elevator business at St. John is done by the Canadian Pacific Railway. The same is true of the Quebec elevator. The building of these government elevators was a favourite scheme of the late Minister of Public Works, Mr. Tarte, who was an authority, and took a great deal of trouble to inform himself on the transportation question. He was of the opinion that large vessels, carrying 200,000 bushels of grain, would unload at Port Colborne, and tranship the grain to smaller vessels to be conveyed to Montreal. But this could be done without an elevator at Port Colborne at all. The grain could be taken to Buffalo, and be unloaded there into Canadian vessels, and be carried to Montreal ; the only difference would be that the distance would be five or six miles longer. However, the idea of building the elevator at Port Colborne was to confine the vessels to our own waters and to our own ports ; but I believed at the time that it was a useless expenditure. To accommodate the traffic, the Welland canal would have to be deepened to 22 feet ; but I doubt if that will ever be done, because the whole route to Montreal would have to be deepened as well, not merely the locks, but the river channel, and this would involve an expenditure which would not be at all justifiable.

The next matter the hon. minister dealt with was the Railway Commission, which he stated possessed more power than any other Railway Commission on this continent, which is quite true. He said it was a popular institution, and was absolutely necessary for the control of the railways of this country. Well, to a certain extent it is. Its powers are greater, I think, than ought to have been given to any railway commission. En passant, he paid a compliment to the lately deceased, the head of the Railway Commission. I agree fully with him. I knew the gentleman well, and a brighter, cleverer, abler man we never had in a position of that kind in Canada. He was a credit to the country, and filled his position in the most admirable manner, and the government will have the greatest difficulty in filling his place.

The minister then passed on to the statistical report of his department. We were promised that by the late minister, but the report is not in accordance with the promise he gave. It does not contain the full information that ought to be given in a report of that kind. Let me give one or two instances. I asked the hon. minister what was the cost per train mile last year of a locomotive. He told me nearly $1.02 per mile. I wanted to know what was the cost of carrying material per ton mile, and I cannot find it at all. He can find out the cost per locomotive mile by taking the receipts from freight and passenger traffic on the whole railway and dividing that amount by the number of miles travelled by locomotives, and with a great deal of trouble he could find the cost per ton mile. It is easy to find out in this case because unfortunately on the Intercolonial Railway the receipts are not much more than the expenditure and if you divide $1.02, the cost per locomotive mile, into your receipts, you will find the cost of carriage. That is exactly what it cost last year. The receipts for nine months according to the minister, are $218,000 in excess of the expenditure ; he does not know what the balance will be at the end of the year. I shall show later that his receipts are not at all as great as he states.

The minister referred to the National Transcontinental Railway and gave many details in reference to the contracts that have been let. He did not tell us whether these contracts were in excess of the estimate made by the Finance Minister of the probable cost. They are surely in excess of the estimate of the Prime Minister who stated that the cost to the country would be only $13,000,000. The Finance Minister was not so modest ; he said the expenditure would be largely in excess of that amount. It is time that we had a concise statement compiled from the figures of the contracts that have been let by the government of what the expenditure upon the National Transcontinental Railway would be. We should also be informed whether the work will be completed within the time specified. If I correctly remember the statute, the Grand Trunk Pacific were required by their contract to have that road completed in 1910. What possibility is there of that ? When will the road be completed according to the estimate of the Minister of Railways and his department, in view of the contracts let and the work now under way ?

What does the minister intend to do about the Quebec bridge? The bridge is down and how many years will it take to compete the link between Quebec and the other side of the river? Then what effect will the building of the road from Quebec to Moncton have upon the receipts of the Intercolonial Railway? We are building that road so that it will be in active competition with our own road from Levis to Moncton. In order to facilitate the traffic on the Intercolonial Railway the minister says he will possibly double-track the road from Moncton to Halifax. Is that because an election is coming on soon and he is dangling that before the people of the maritime provinces? He also stated that he was seriously contemplating the taking over of some of those branch railways in New Brunswick and Nova Scotia. What a scheme! What railway in either of those provinces is paying a dividend? What advantage would it be to the people of this country or to the maritime provinces for the government to take over any of these railways? Is this arrangement to be like the bargain that was made for the purchase of the Drummond County Railway, where the government paid $1,500,000 for a railway that was in the market, a bankrupt concern, that had been offered for sale at $500,000? What justification is there for the expenditure of anything like the amount that will be involved in the purchase of these roads? The minister talks about the new way of keeping accounts. He states that in England any betterment of the road which is of permanent advantage is charged to capital account. What would he think of his own manner of book-keeping if I drew his attention to some features of it? The minister's predecessor assured the House that the railway stations were virtually insured by the government, that it was cheaper for them to take the risk of fire than to pay insurance, but when a railway station was burned, he calmly told us that the rebuilding was charged to capital account. The minister has followed his example and has charged the expenditure for rebuilding the shops at Moncton to capital account. We had an assurance from the previous minister that the rebuilding of the shops was to be charged to capital account, but that the installation of machinery was to be charged to the current expenditure of the railway. The present minister has forgotten that promise and is charging all the machinery for these shops to capital account. In other words, to make a show to the people of Canada, he charges to capital account every expenditure he possibly can.

I see that he has purchased twenty-three new locomotives for the Intercolonial Railway and has charged their total cost to capital account; he has hardly charged a car to current expenditure. Why is that done? Is it not in order to make a good showing before the people and parliament of Canada. The life of a car or a locomotive is calculated at twenty years. The minister ought then to put in for renewals chargeable to current expenditure five per cent of the total cost of locomotives and cars on the Intercolonial Railway; but he has not charged one of them. The former head of the Liberal party in this House contended thirty years ago that the capital account of the Intercolonial Railway should be closed, that a road that has been running for a number of years as a government road should not have a capital account at all, and that, if you make an expenditure, that expenditure must be justified by the earnings of the road. The hon. member for Cumberland (Mr. Logan), criticising my remarks about the capital account of the Intercolonial, said that I had advocated that there should be no further capital expenditure made on that road. Of course, I did not say that. What I said was that, in order to have a correct check upon the officers of the road, and in order that the House might have a correct check upon the minister, no expenditure should be made on capital account except when a road was acquired, as in the case of the Southeastern or the Drummond County.

The minister states that he has a surplus of $288,000. Does he forget that, in 1897, when this government came into power, the total capital expenditure on the Intercolonial had been $55,000,000. We had a promise from the Minister of Railways at that time that the capital expenditure he proposed to make would increase the receipts and redound to the benefit of the whole undertaking. In order to make a comparison, then, between net receipts of the Intercolonial of to-day and the net receipts of the Intercolonial Railway of 1897, you must add to the expenditures the interest on the increased capital expenditure. Now, the capital expenditure on the Intercolonial up to the present time has been about $83,000,000, or an increase of about $28,000,000 over what it was in 1897. Add the interest on that at 4 per cent and you have about $1,120,000 of additional expenditure which must be provided for before the minister can claim a surplus.

Now, why is it that the Intercolonial is in the position in which we find it? When I was administering the road, the receipts equalled the expenditure. And those receipts have largely increased, especially the receipts for local traffic, the best paying traffic that a road can carry. I am sorry to say that the through traffic has not increased materially over that of twenty years ago. The increase has been, as I have said, in the local traffic. What I advocated under the hon. gentleman's predecessor, was that, for the information of the House, a statement should be made by experts to show in what respects the rates on the Intercolonial differed from those on

the Canadian Pacific Railway and the Grand Trunk. It ought to be easy to make such a statement, for the classification of all the railways in Canada is the same. It is true that, in some respects, the traffic on the Intercolonial is carried at very low rates. For instance, sugar from Halifax is carried to Moncton at a less than paying rate. For a while, traffic was taken through from Quebec to Halifax at less than it could be carried for. There is none of that at the present time. Formerly the coal rates from the mines to the maritime ports were the lowest possible. But, eliminating these things, or allowing for them, a comparison could be made between the freight rates of the Intercolonial and the freight rates of the Grand Trunk and Canadian Pacific. Why is it that it cost $1.02 per locomotive mile on the Intercolonial and that we get only $1.02 in return for it? The Grand Trunk costs exactly the same, but its receipts are $1.87 per locomotive mile. Most of the American roads cost a little more, but the receipts are much greater. The minister gave the reason for that. The reason is that the Intercolonial is running useless trains, trains that are empty. There must be some such reason. The train mileage has been lessened and the receipts increased. Why is not this policy carried out more generally? Why is it that, with the same freight rates as the Grand Trunk and Canadian Pacific Railway the Intercolonial cannot earn as much per mile? There is something wrong in the management of the road. According to the minister's statement, the management is entirely in the hands of the unions. The minister makes the bald statement that promotion and increases of salary are not made by the minister or officials, but that the unions have absolute control in these matters.

Mr. GRAHAM. I said that 63 per cent of the employees were members of the unions, and that their promotions were under union rules.

Mr. HAGGART. I understood him to say that 63 per cent were under union rules and that the union controlled the increases in wages and the promotion.

Mr. GRAHAM. I did not put it quite so strongly as that, I think.

Mr. HAGGART. My hon. friend denied the charge that his department was subject to political influence. He denied that men were promoted and kept on owing to the recommendations of certain members of parliament, political supporters of the government. He said that the Minister of Railways had no political influence at all over his department in that respect, that all the influence was in the hands of the union, to which 63 per cent of the employees on the Intercolonial Railway belonged. He said that the promotions and the salaries were dictated by the union. That was a most extraordinary statement. Just fancy the absolute control over the employees on the Intercolonial Railway being, not in the department at all, but in the hands of a union which is controlled by these very employees. If that be the case, then the minister has no control over the expenditure or the running of his road. He cannot dismiss or promote a man except with the consent of the union. That is a most extraordinary position. Why, a government railway, under the control of the people of this country, should not have a union on it at all. The employees on the government railway have parliament to look to, if the minister does not do them justice. The absolute control over the Intercolonial Railway should be in the hands of the minister and his officers subject to the authority of parliament. The retention of a man or his dismissal or promotion should be in the hands of the government officers; and until it is, you cannot expect any different results than those you have at present.

Why does not the minister give, in his report, the amount expended per mile on the Intercolonial Railway? Every other railway gives it. Why does he not give us the freight rates and a comparison between the freight rates on the Intercolonial Railway and those on the Grand Trunk and other roads? The hon. gentleman's predecessor (Mr. Emmerson) tried to justify the expenditure by saying that the Intercolonial Railway was a popular road, that it belonged to the people and was not intended to have any receipts above the expenditure. But he was met with this reply: Why then do you charge the same rates per mile on the Intercolonial Railway as any other railway does? He denied that he did, but the statement was reaffirmed. That statement was that the rates on the Intercolonial Railway are as high as on any other road except some railways in the extreme western portion of the Dominion. Why cannot we have the figures in the statistical report? Surely it is essential that we should have them. We ought also to have the expenditure per mile on the Intercolonial Railway. We have that in the returns of the Grand Trunk Railway and the Canadian Pacific Railway. We had the minister saying—which I think was a perfect reply to my hon. friend from York (Mr. W. F. Maclean)—that the average passenger rate per mile on the Intercolonial Railway is 1·75 cents. We ought to be given that information in the statistical report. Leaving out the nine railways which are situated in British Columbia, and which are allowed by local statutes and also by our statutes to charge as high as four cents and five cents per mile per passenger, the average rate per mile which passengers travelling in the Dominion pay is 2·2 cents or two and one-fifth; or more

than one-half the passengers in Canada, who utilize our railways, pay less than 2 cents per mile.

Mr. W. F. MACLEAN. No, they do not.

Mr. HAGGART. Why, that is in the statistical return the hon. minister has furnished us with. That struck me as extraordinary, but I think the returns are perfectly correct. I am with the hon. gentleman when he says that the Intercolonial Railway is a work of which all parties in Canada are proud. We look upon that railway as part of the general transportation scheme of the country. There is no feeling at all of jealousy in the western provinces with regard to the expenditure on this railway in the maritime provinces. We look upon it as a great national work. But even if it were a work confined entirely to these provinces, we would have no feeling of opposition to it. What we want is to give the maritime provinces an equal chance with every other portion of the Dominion as regards the carriage of passengers and freight and other railway facilities from one section of the country to the other. Give the people fair rates and have the road managed as economically as possible. Give all the advantages possible to the maritime provinces and you will have no trouble. Instead of coming here from year to year with an increased expenditure on nominal capital account of $3,000,000 and a deficit besides of $500,000 to $750,000, you could, by practising ordinary economy, make the road a paying one. What the minister should do is take his different officers in charge and say to each one: Certain results are being furnished by every other railway, why cannot you give the same results? You must give these results, or if you do not I will try somebody else in your place. Let there be no political influence allowed to keep parties in positions they are not fitted for. Let there not be a superabundance of employees from one end of the road to the other, a great many of whom are unfit for the work. Have men who are experts, do your duty to the people of the maritime provinces, see that there is economical management, and you will have vastly different results. I think that the hon. gentleman has good inclinations in that direction but he has made one error, and that is the double tracking of the road and a four-tenth grade from Moncton to Halifax. Build that competing line from Lévis to Moncton, lease the couple of roads in New Brunswick, the leasing of which the minister says he is seriously considering, and you will have a drag on the road that will increase the deficit. You will also demoralize your staff. When I had the management of the Intercolonial Railway, we had as a head staff certain parties who took a pride in the road and in seeing it economically administered; but if you load them down with these new undertakings you will take the whole heart and soul and inspiration out of them. The hon. gentleman is making a mistake. There ought to be something in the shape of railways left to private enterprise in the particular provinces. We are not all enamoured with the government ownership of roads. We do not all believe that a government road may be more economically run than any other road because it may be in the interest of the country to have corporations governing these roads and having an interest in them. A great deal of the capital of this country is invested in railways and it is fair that it should be so. But, in my experience in reference to contracts for material and supplies for the Intercolonial Railway, I found that you could get material from contractors for that railway as cheaply as for any other railway in Canada by open competition. We had a fair way of dealing with them. If there was any dispute as to the quality of the material furnished we simply sent a sample of it down to McGill College in Montreal, appointed an arbitrator between the government and the contractor and whatever the report was the contractor never said a word about it and the government was perfectly satisfied. We got better and cheaper material by following that practice. As the hon. Minister of Railways and Canals says, an employee on the Intercolonial Railway belongs to the Anglo-Saxon race, and he can do as much work there as a man can in any other part of the country—if he is properly looked after. If he is not looked after in this or any other section of the country he will not do as much. There are two things that I draw to the attention of the hon. Minister of Railways and ask him to look into. One of these is the train mileage, and I would suggest that he find out what the receipts and what the costs are. I understand that the officers of the department have not made a proper return of them. If you do not get a proper return point out to them what they do on the Grand Trunk, on the Canadian Pacific Railway or on any of the American railways and ask for like results from them. The Minister of Railways says: This is an old railway and it cannot bear comparison as to its roadbed and rolling stock with a new railway. You have paid out enough money in the last ten or fifteen years to have the most complete and best equipped railway on the continent. The older a railway is the better its roadbed is. A new railway or a new roadbed is not comparable to an old railway or an old roadbed. The hon. gentleman's comparisons between the provincial road and the Intercolonial Railway were not of much effect. However, I must say that the tone of the hon. gentleman is different from that of some of his predecessors to a certain extent and I like his tone. I think he is anxious to do the

best he possibly can to make the road a success and a paying concern.

His intentions are right in reference to the transportation feature, but they are misdirected, but I hope that the hon. gentleman will look into the future and do what he can to help to bring about the adoption of a broad system of transportation, and that he will take from the Public Works Department something that they stole from him; that is the building of the Georgian bay canal. They have no right to the building of that canal. That is a work that appertains peculiarly to the Department of Railways and Canals. Inquire, if necessary, by commission, look into the subject thoroughly and whether it is necessary to construct this work, whether it is necessary to deepen the Welland canal, or whether it is necessary to deepen the St. Lawrence to the sea, see that the facilities that nature has provided for us are made available to our uses. I am of opinion, not alone,—I will not venture to join with my own the opinion of a celebrated gentleman whom I mentioned some time ago—that the regulation of freight rates on the continent of America is not the railway. It is to be, in future, the canal. It is a popular regulator of the carrying trade. We can all build boats, or we can get money for the purpose and enter into competition. We cannot all build a railway and have a railway train running upon it. The proper rate regulator is the canal. Some canals that have never carried one ounce of freight from one point to another are to such an extent the regulators and controllers of freights that the country receives more than the interest on the expenditure in the benefit that accrues from lessened freights. Nothing controls freights as the canals do. For the purpose of moving heavy freights, and in fact the bulk of freight that has to be carried from one end of this country to the other, it is necessary and absolutely necessary that we shall have increased canal accommodation. Look at the development that is taking place in the building of canals in Germany and Russia. Look at the ship canal from Liverpool to Manchester. Look at the large canals in different parts of Europe. At one time the general opinion was that we must rely for transportation facilities wholly upon the railways. There is a revolution in that opinion now. Canals are now, in popular estimation, absolutely necessary to develop and control transportation.

Mr. TALBOT. The hon. gentleman has spoken of the canals of Europe. Does he allow anything for the difference of climate between Canada and Europe ?

Mr. HAGGART. There is a distinct difference in climate. The German canals operate pretty nearly the same number of months as do our canals or perhaps two or three weeks in the year longer than ours do. I refer to the Kiel canal, the canals along the Weiser and those parts of Germany. In the southern portions of the country they probably operate nearly the whole year, as they also do in Belgium. The Manchester ship canal, by the use of ice-breakers, is perhaps operated for nearly the whole year. Perhaps the Erie canal is open a week later in the fall and a week earlier in the spring than the St. Lawrence is, but climatic differences do not affect the principle whatever. I do not know that there is anything further for me to say. I have criticised the administration of this railway again and again. I think there is a bright future for the Intercolonial Railway, but I strongly lament the mismanagement and the large expenditure on that road from 1896 up to the present day which were entirely unjustifiable. I hope that in the management of the road the Minister of Railways and Canals will not be controlled in any way by any minor political influences although he may be by the purchase of a railway or the double tracking of the road from Moncton to Halifax which influences have affected the management of the railway in the past.

Mr. H. J. LOGAN (Cumberland). Mr. Speaker, before congratulating my hon. friend the Minister of Railways and Canals (Mr. Graham) upon the splendid presentation of the Intercolonial Railway budget in the present year, I desire to bear my humble testimony to the work of the departed chief of the Railway Commission. He was the right man in the right place. He was honoured by all, respected by all and loved by those who knew him best. Nova Scotia, the native province of the late Judge Killam mourns with the rest of the Dominion the loss of her distinguished son, and looks with pride at the high and distinguished position he occupied on the bench of Canada, and as Chairman of the Railwy Commission.

I desire to congratulate the Minister of Railways upon the presentation of the case for the Intercolonial which he made to us this afternoon. It was filled with hope to those who live along the railway ; it was filled with hope for the people of the whole Dominion who have an interest in this great national asset. It was a speech of the rising sun, compared with which the speech of the ex-minister (Mr. Haggart) was a speech of the setting sun, or the twilight, or even of darkness itself. The ex-minister (Mr. Haggart) tells us that not a dollar is to be spent on the Intercolonial on capital account ; that no improvements are to be made ; that no modern equipment shall be purchased in future, and that no branch lines are to be acquired, because forsooth, it would discourage the officials of the railway. Did any one ever hear of the officials of the Grand Trunk Railway or the Canadian Pacific Railway being dis-

couraged because these two great railways have absorbed the veins that lead into the great arteries of their system. The hon. gentleman (Mr. Haggart) pooh-poohed the idea of double tracking the Intercolonial from Moncton to Halifax. Everything for the betterment of the road has been condemned by him to-night. All I can say is that if it should ever happen in the evolution of events that he again as Minister of Railways should have this great national railroad under his control, then, God save the Intercolonial. The hon. gentleman tells us we shall not increase the capital account, that we shall spend nothing to improve the road unless we can get it out of the pockets of the patrons of the road. But on the other hand the hon. gentleman says that the Intercolonial freight rates are as high as on other roads, and that being so how are we going to get increased revenue?

Mr. HAGGART. I thought I explained that so that the densest would understand. I did not say you should take your capital out of revenue ; I said that the capital account in the Intercolonial book-keeping should cease and that the expenditure should be charged to the ordinary revenue of the road.

Mr. LOGAN. Exactly ; the hon. gentleman says that all improvements and additions should be charged to revenue, and surely none but the densest would use such an argument. My hon. friend is an astute politician and he knows what he is talking about to-night when he says there shall be no further expenditure on the Intercolonial on capital account. Then, if you want improved locomotives and better rolling stock and new permanent structures, and a double track, how are you going to get all these if you do not charge to capital account ? At the present time the revenue and the expenditure very nearly balance each other. In the past there has often been a deficit. Under these conditions where are you going to get money to better the road? I agree with the hon. gentleman that the freight rates of the Intercolonial are in many cases excessive. There is a general impression among certain people in Canada that the Intercolonial Railway carries freight for almost nothing so as to benefit the people of the maritime provinces, but the hon. gentleman (Mr. Haggart) was Minister of Railways and he knows better. He says that the freight rates on the Intercolonial Railway, (and the passenger rates too he might have added) are about as hight as the rates on other railways in Canada. And if that be so, and if the revenue and the expenditure nearly balance, how are you going to get money unless you increase the rates still higher or reduce the wages of the working men on the Intercolonial. Does my hon. friend (Mr. Haggart) advocate that ? I can tell him on the authority of the general manager of that road, that if the same rate of wages as is now paid the workingmen on the Intercolonial had been paid by the hon. gentleman when he was Minister of Railways in 1895, he would have had to provide an extra million dollars on the basis of the same number of men being employed. Will the hon. gentleman tell me what is going to be done with the Intercolonial if no more expenditures are made on capital account?

My hon. friend (Mr. Haggart) condemned government owned railways but as to that I leave him in the hands of his leader and of his confrère—I was going to say his other leader—the member for South York (Mr. W. F. Maclean).

Sir FREDERICK BORDEN. His would-be leader.

Mr. LOGAN. They can wrestle with the hon. member (Mr. Haggart) on the question of government ownership of railways. We on this side of the House have not been advocating government ownership of railways to any considerable extent, but we do claim that when we do own a railway like the Intercolonial Railway we should take care of that road and make it the greatest success we possibly can.

Mr. HAGGART. The hon. gentleman (Mr. Logan) referred me to my leader about government ownership of railways. When did the leader of the opposition ever advocate government ownership of railways ?

Mr. LOGAN. Surely my hon. friend has read the Halifax platform.

Mr. HAGGART. I never heard before that the leader of the opposition advocated such a thing.

Mr. LOGAN. I leave my hon. friend to study the doctrine which was propounded by his leader.

Mr. HAGGART. He never advocated anything of the kind.

Mr. LOGAN. I suppose the hon. gentleman (Mr. Haggart) will not deny that his leader went to the country in 1904 on the plea of building and owning a railway from ocean to ocean.

Mr. HAGGART. What is that you say?

Mr. LOGAN. I will give the hon. gentleman up and pass on.

Mr. HAGGART. The hon. gentleman said that my leader stated he was in favour of government ownership of railways.

Some hon. MEMBERS. Hear, hear.

Mr. HAGGART. I never heard of it before.

Sir WILFRID LAURIER. You were not in Halifax.

Mr. HAGGART. I don't believe that even a Halifax newspaper stated that.

Mr. LOGAN. I have not the precious document known as the Halifax platform with me just now, but if it is still extant I will get a copy and send it to my hon. friend (Mr. Haggart).

Mr. HAGGART. You had better read it yourself.

Mr. LOGAN. I have read it.

Mr. HAGGART. You will find nothing of that kind in it.

Mr. LOGAN. Very well I will leave that subject for the present. The Minister of Railways (Mr. Graham) has referred to the Intercolonial Railway as the great national highway of our country, and he has spoken of it in a spirit of hopefulness which all Canadians should well appreciate. I have been endeavouring in my own humble way to impress a number of people in this country, some of whom sit on this side of the House, that we have at the present time in the Intercolonial a very well equipped railway giving a very efficient service.

I admit that in the old days there was a slow freight service and a miserable passenger service on the Intercolonial. and the grass almost grew between the rails of that road. That was before 1896. At the present time we have magnificent trains, large locomotives, and a fast freight service between the cities of Halifax and St. John and the city of Montreal. Last session I showed to the best of my ability, by quoting from officials and others who were well acquainted with the transportation system, that the freight service on the Intercolonial had been brought up to a standard that enabled it to compete with the lines via Portland, Boston and New York in the markets of Toronto and Hamilton. I may be prejudiced in favour of the Intercolonial Railway, but I am firmly convinced that that road at the present time gives a freight service as good as the freight service of any road in eastern Canada. I do not say that it pays. I do not say that the two fast freight trains running between the cities of Halifax and St. John and the city of Montreal, and going at the rate of thirty or forty miles an hour, stopping only at a few points, pay; but I do claim that they give a quick service. Therefore you can imagine my feelings Mr. Speaker, when, following the speeches delivered last autumn by the hon. leader of the opposition in Ontario, I found him referring to the Intercolonial Railway in the terms which I am about to quote. My hon. friend comes from the maritime provinces—from the city of Halifax—and is well aware of the difficulties under which the Intercolonial Railway has laboured; he is or should be as well aware as I am of the improvements made in the service of the railway, and he should be the last man in the world to represent to the people of Ontario that it is a poor service. Why, Sir, he should have been a missionary to proclaim to the people of Ontario the religion of a government-owned railway in eastern Canada, and to tell them that their ideas about a slow freight service on the Intercolonial Railway were mistaken. But what do I find? Speaking at Owen Sound on the 9th of September last, he used these words—and I desire to commend them to his friends in the maritime provinces. He became very facetious, and applied an old story to the Intercolonial Railway in these words:

> A car of lumber was moved by it; when it at last reached its destination it was found that a bird had built her nest in it, had laid her eggs, had hatched them, and had reared the young ones almost to maturity by the time it had been delivered.

That was the kind of missionary talk the hon. leader of the opposition indulged in last summer in the province of Ontario, where there is needed at the present time a little leaven in regard to this great government work, in spite of the fact that last session I proved by actual figures that the freight service on the Intercolonial Railway had become a fast service. On that occasion I quoted in the presence of the hon. leader of the opposition a letter from Mr. Tiffin, the traffic manager of the Intercolonial Railway, in which he showed that freight from the 'Virginian,' the 'Ionian' and other vessels was carried over the Intercolonial Railway and was delivered in Montreal in about two days. Yet the hon. leader of the opposition, ignoring the improved conditions of the road, as proven by those figures, went to the province of Ontario and told the people that the freight service on the Intercolonial Railroad was so slow that birds could build their nests on a train and hatch their eggs and raise their young before the freight reached its destination. My hon. friend from Toronto (Mr. Kemp) laughs. I do not blame him for laughing. At the same time, to those of us who have more interest than he has in the Intercolonial Railway it is no laughing matter to find statements of this kind made throughout the length and breadth of Canada.

The Minister of Railways this afternoon said some very kind words with reference to the employees on the Intercolonial Railway. They deserve those words and I know that they will appreciate them. The men employed on the Canadian government railways are as loyal, as gentlemanly, as honest and as courageous a lot of men as can be found in the employ of any railway in the world. Outside of the regular employees, my hon. friend has in his employ some men of whom we have a very high opinion. I know his appreciation of the gentleman who occupies the position of deputy Minister of Raialways. My hon.

friend has not been Minister of Railways very long, but the deputy minister has been there for two or three years, and during that time I believe he has displayed the ability which goes to make the very best kind of a deputy minister. The staff that surround my hon. friend are in most cases of a good railway character. While the employees of the road are a good class of men, and while the wages paid to-day are much better than those paid in 1895, I do not suppose that anybody will complain that these men are overpaid, on the contrary a large number of them are seriously underpaid. There are in the offices at Moncton, men who are seriously underpaid. When you find in the offices at Moncton, men who are stenographers or fairly good accountants working for $30 or $35 a month, I do not think you can charge that they are overpaid; you must admit that they are miserably underpaid. These are cases to which I would like to direct the attention of the minister, in order that the services of these employees may be better rewarded. All along the line we have capable men who have been working for 20 or 25 years as baggage masters or freight handlers, and only receiving $40 or $50 a month. These men are certainly underpaid, and the inequality should be rectified. I hope my hon. friend will go further. I believe the time has arrived when the government should establish a shorter day for its employees. I believe the government should lead in this matter, and not follow, and should establish nine hours as a legal working day for men employed by the day on the Intercolonial Railway. That change is bound to come, Mr. Speaker, and if the government would grapple with this question and reduce the hours in the shops at Moncton and to the men on the line who are working by the day, it would be I believe eventually in the interest of the railway and in the interest of the country.

My hon. friend the Minister of Railways has suggested certain things that should be done. One is the acquirement of the branch railways in the maritime provinces. Notwithstanding the objection of the hon. member for South Lanark (Mr. Haggart), I venture to say that is a project which will appeal to all people in Canada. My hon. friend knows that every other great trunk line acquires branch lines as feeders. We who live in that part of Canada know that these branch lines are not feeders to the Intercolonial Railway, but feeders to other railways; they send their freight for the west not by the Intercolonial, but by the Canadian Pacific Railway. Is this good policy for the Intercolonial Railway ? I say it is not. We do not claim that these branch lines should be purchased at an extravagant price. But he said that if the roads could be acquired, not according to what they had cost, but according to what they are paying at the present time, and the prospects of their paying for the future, then the purchase or lease of these roads might be considered. I believe that this is a good policy in connection with the government railway—if we are going to maintain the Intercolonial as a government railway.

In another part of his speech the hon. minister intimated that it was proposed to double track the road from Moncton to Halifax. I think that should appeal to every man who has the interest of this country at heart. We are helping to build a great transcontinental railway for three or four thousand miles down to the city of Moncton with maximum gradients of four-tenths of one per cent on east bound traffic. Yet, when you reach the city of Moncton, you find that on the 200 miles of line to Halifax, there are grades three times as high as that. Now, the weakest link is the strength of the chain. If we are bringing trains of western traffic to Moncton over a four-tenths of one per cent grade, surely we must find some way to strengthen this last link of the chain. In other words we must reduce the grades and better the curves on the Intercolonial from Moncton to Halifax.

For political considerations—I do not think that any one will deny that—the Intercolonial was built over the Cobequid mountains, so-called. The survey made by Sir Sanford Fleming favoured the running of the line around the southern part of the mountains near Parrsboro'. But, because of political pull on the east and on the west, the line was built, as I have said, over the Cobequid mountains. The result is that we have very heavy grades. Also we are confronted with the serious difficulty of the heavy snowfall in those mountains, sometimes making the road impassible for days at a time. I am glad to hear the minister state that he has in mind, when double tracking the road between Moncton and Halifax instead of building along the old line over the mountains, to build around the southern part of Cobequid mountains and so reduce the grade to the standard of a maximum of four-tenths of one per cent as on the Transcontinental. Another advantage of this double-tracking from Moncton to Halifax will be to relieve the congestion that very often exists on that line. The minister has told us that already the double-tracking is going on, at one end of the line from Halifax to Windsor Junction and at the other end from Moncton to Painsec. This is but the beginning of a work that must be carried to completion within the next few years if we are to accommodate the great traffic that will be brought down over the Transcontinental. These hints of what the minister has in mind for the development of the road are hopeful indications for us who live down by the sea. The Intercolonial has often been referred to as the bond of confederation. Yet, it has sometimes occurred to me that the time may

come when we might curse that bond. For, if it must be held as a sacred thing, a thing not to be touched, it might easily become a detriment to the people of the maritime provinces. Many parts of those provinces badly need railway accommodation and many of the branch lines already constructed are poorly run. If the policy of the country be that we are not to acquire branch lines and that we are not to build lines to compete with the Intercolonial, our outlook from a railway standpoint is but a dark one. The policy should be—and, as I understand it, the policy of the government is—that, where railways are needed, they shall be built; and, whether we believe in the principle of government ownership or not, so long as the Intercolonial remains a government road, that policy is the true and proper one.

My hon. friend the Minister of Railways has spoken of making this a great national highway. We desire that that should be the thought in the minds of all the people in this country. The Intercolonial is not for the benefit of the maritime provinces alone. It has been stated and proven in this House beyond all contradiction that the benefits derived from the Intercolonial are divided between the maritime provinces and the provinces of Ontario and Quebec whose producers send their goods to the maritime provinces for sale. I am glad the hon. minister has spoken of this railway as being one in the interests of Canada, and that its benefits are not confined to us who live along the line.

I agree with the hon. member for South Lanark (Mr. Haggart) that the great problem before this country is transportation. I believe that, outside of the problem of the Intercolonial, the hon. gentleman's (Mr. Haggart's) ideas on transportation are good. I still hope that, some day, my hon. friend will come down along the Intercolonial and I am sure that when he sees the improvement that has been made since the time of his regime he will come to the conclusion that this road, of which he seems to have such a small opinion and such slight hopes, has become a great factor in the development of the eastern part of Canada. I agree with my hon. friend that only by improved transportation facilities and cheap freight rates can we thoroughly develop this country. If we cannot bring the east and west closer together, we cannot hope to inculcate the great national idea, and have that idea permeate the whole country. I hope that we in the maritime provinces, though we may have kind thoughts of the Intercolonial, are not provincial and that we will not set our face against other projects for the development of Canada. I am as heartily in favour of building the Georgian Bay canal—and have said so in this House—as my hon. friend (Mr. Haggart), if it can be built at a reasonable cost. I believe that by means of communication between east and west we are cementing this confederation of which we are so proud. I hope to see branch lines of the Intercolonial acquired and built in the maritime provinces. But I hope also that this government line will be extended into the province of Ontario as a regulator of the freight rates in this province. And when this is done, I trust the time will have arrived when it will be considered expedient that the great undertaking of the Georgian Bay canal should be helped along by the government, the government even undertaking it if necessary and if it can be built at a reasonable cost. The Intercolonial is our great national railway and what we do for it is not for the maritime provinces alone, not for the province of Quebes, or the province of Ontario, but for the whole Dominion. It may be that some of us do not, in practice, carry out what we preach in reference to this road. I am sorry to find so many shippers in Ontario who insist on sending their freight to the maritime provinces over the Canadian Pacific Railway. I do not know why this should be so, as they do not get better service. Many travellers between the east and the west, instead of patronizing the people's line, travel by the Canadian Pacific Railway. I have hope in the Intercolonial. We glory in the thought that has been enunciated here this afternoon by the distinguished Minister of Railways. We believe that the future of this road is a bright one, we believe it is bound to go forward and that it will improve from year to year in spite of all the doleful moanings of the hon. tleman, the former Minister of Railways, (Mr. Haggart), who seems to have lost faith in the eastern part of Canada and to have centered all his hope and devotion on the Georgian Bay canal.

Mr. HAGGART. The hon. member made statements in reference to my leader and referred me to the Halifax platform. The only reference to be found in the Halifax platform to this question is:

> The operation and management of our government railways by an independet commission, free from personal control or influence.

Mr. LOGAN. My hon. friend should read his leader's speech on that occasion.

Mr. HAGGART. He said I would find it in the Halifax platform.

Mr. LOGAN. I am not supposed to be so conversant with the platform as hon. gentlemen opposite; but I have been reading the speeches of the leader of the opposition in Ontario and in every speech he made there, it was plain to see that he was advocating not government management but government ownership of railways.

Mr. J. D. REID (Grenville). The hon. gentleman (Mr. Logan) congratulates the hon. Minister of Railways (Mr. Graham) on his great statement upon the Intercolonial Railway. He says it is the speech of the rising sun. So far as I am concerned, I was a little disappointed in the speech of the Minister of Railways; I did not think he was in his usual form. However, I think that after the speech we have just heard, the hon. member for Cumberland (Mr. Logan) will be well qualified for one of the vacancies on the Railway Commission that the minister will soon be filling.

Mr. LOGAN. He is not an applicant, thank you.

Mr. J. D. REID. He also complained of the inadequate salaries being paid to employees of the Intercolonial Railway, referring particularly to the accountants being paid $35 a month and saying that they were good men, well qualified for any accounting position. I hope that when he returns to the maritime provinces he will not tell these accountants what the Minister of Marine and Fisheries (Mr. Brodeur) pays his accountants when he brings them from the American side. He pays $35 per day instead of per month and makes an allowance of $5 per day for board. That is the least he pays; some he pays $70 a day. Why did not the hon. gentleman use his influence to have some of these Intercolonial Railway accountants brought up to the Marine Department and have them given a chance there? They could earn enough in a year to retire on; one year at $35 a day would be about $10,500 instead of $420 now paid them. The hon. gentleman was really unkind to the accountants on the Intercolonial Railway, and I hope that when the Minister of Marine requires any more accounting the hon. gentleman will use his influence to have those accountants brought up from the maritime provinces; if other departments require accounting to be done I hope they will give the men on the Intercolonial Railway a chance.

The Minister of Railways said that the Canadian canals had so far cost about $120,000,000. I believe this money has been well spent, there is no doubt that the canals have been of great advantage to the people of this country. I concur in what he has said as to the scenery along the Rideau and St. Lawrence canals. However, the scenery is not all we care for. We have to consider the great advantage that these canals afford to the people of Canada. The minister stated that last year 25,646,800 bushels of grain were carried through the canals. The saving to the people of Canada owing to the difference in freight rates on these canals was enormous. I remember that years ago, before the Welland and other canals were enlarged, the freight from Chicago east was between 12 and 14 cents a bushel; but immediately the Welland and other canals were enlarged the rates were reduced, simply because the vessels passing through these canals were able to carry much larger cargoes; and to-day the rate between Fort William and Montreal, during the season of navigation, is only 5 cents a bushel. In other words, the vessels now running between Fort William and Montreal will contract from the opening of the season to the end of navigation for a through rate of 5 cents a bushel. That has been done, if not last season certainly the season before last; I know one large forwarding company that contracted for their vessels at that rate. But in addition to the great advantage of this low rate on the grain, coal and other freight carried by water, there is the advantage derived from the cheaper rate on grain and other freight passing via. Midland, Owen Sound and other points on the Georgian Bay, carried partly by rail and partly by water, owing to the competition of these through vessels. If we had not the canals the rate on grain by rail from Fort William to Montreal, instead of being 5 or 5½ cents, would be at least 10 cents a bushel.

Mr. GRAHAM. Would that 5 cents be f.o.b. ocean ship Montreal?

Mr. J. D. REID. That would include f.o.b. vessel in Montreal or delivered in elevator in Montreal. It would include f.o.b. ocean vessel in Montreal if the ocean vessel was ready to receive the grain, because the vessel that comes from Fort William to Montreal must discharge it. The vessel that comes from Fort William to Montreal must discharge into the floating elevator, and that elevator will discharge into a sea-going vessel at the same rate as the vessel would put it into the elevator. So the rate would be 5 cents a bushel from Fort William delivered in the vessel at Montreal, if the vessel is ready to receive it. But the great difficulty is that when the vessel gets to Montreal with a cargo of grain, the steamer in Montreal is not able to receive it and the cargo has to go into an elevator, and that makes a difference of 1 cent per bushel. The reason of that is this, if it is in an elevator in Montreal, it has to be taken out into barges and floated to the sea-going steamer and then elevated in again and that makes 1 cent a bushel added. The elevator in Montreal, which was built by the government, was intended to save that 1 cent per bushel. In addition it was intended to take these cargoes from Fort William and allow the vessels to proceed back without being detained in Montreal. But I understand the difficulty is this that there is some defect in the elevator, owing to which it is not safe to put the grain in. In addition I understand that, for some reason or other, the machinery to take the grain out of the elevator and put it into the vessel is not perfect. There is something wrong with

the elevator. Therefore to say that it is the management of the government which is at fault, I do not think is right. I think the blame should be put on the elevator. There is no reason why that elevator should not be managed as well by a government as by an individual. There is not the slightest difficulty. Simply taking in the grain and putting it out and charging one-half cent a bushel for doing that. The whole trouble is with the elevator. As regards the elevators at St. John and Halifax, the reason they do not get any grain is because the Intercolonial Railway does not make connections with anything that will deliver them grain. The Grand Trunk Railway or the Canadian Pacific Railway will not give them grain, and they have no connections down by vessels so it is impossible for them to get grain, That is the reason these elevators do not pay.

In so far as this canal system is concerned, I remember when the work at Port Colborne was proposed by the then Minister of Public Works (Mr. Tarte). At that time these vessels carrying 200,000 and 300,000 bushels of grain were to go to Port Colborne, and the steamers were to connect at Port Colborne and take the grain to Montreal, and the grain was to get through at three and a half cents a bushel. I opposed the scheme and advocated the enlargement of the Welland canal. I made the statement at the same time that vessels could go to Buffalo and experiment in that way. There was no reason why then, or within the last fifteen years, vessels could not go to Buffalo and take the grain down to Montreal and save the expense of the elevator at Port Colborne. But it was useless, the minister had that idea and the elevator was built, and I venture the prophecy that you will never see a bushel of grain go into the elevator at Port Colborne except in the fall of the year when the freights are up four to six cents a bushel. A vessel carrying 150,000 bushels will then go to Port Colborne and run part of its cargo into the elevator. The elevator will load it on to cars which will cross it over to Port Dalhousie by rail, and there the same vessel will take it to Kingston. But if the freights are low, it will not pay to elevate the grain into the elevator, and there will never be a bushel going into it. It will simply be another useless elevator added to the list at St. John, Halifax and Montreal. The solution of this transportation question is to be found in the enlarging of the Welland canal. Make that canal large enough to accommodate a vessel of 700 or 800 feet long. The time will come when you will see vessels that length. Those vessels can go to Kingston or Prescott. The vessels that go on to Kingston can go just as well to Prescott. If there were twenty feet of water in the Welland canal, they could go right to Prescott, and Prescott is the foot of navigation in so far as the great lake system is concerned. The boats going now down to Montreal are as large as they can possibly be at any future time. The reason is this. Between Montreal and Prescott there are very swift currents. Where there are no canals the river is winding and the channel winding, and these large boats cannot steer themselves. There is not a time now during the season of navigation when some of these vessels do not go ashore on account of their being unable to take care of themselves in the swift water. For that reason you have to consider that Prescott is the foot of navigation. Now the rate from Fort William to Buffalo has been as low as one cent a bushel. One and a half cent is a good rate to Buffalo. You can get vessels at the very outside to bring grain to Prescott for two cents a bushel. I know that even these small sized vessels, if they came to Prescott from the opening of navigation to the end of the season, and were paid two cents a bushel, could come out at the end of the season with ten to fifteen per cent interest on the investment. That is on the present sized Welland canal vessel. But if you could bring down a vessel of 300,000 bushels at one and a half cents or two cents a bushel, you would make a fortune. From Prescott to Montreal the rate is one and a half cent per bushel. The minister knows that in the olden times the capacity of the barges was 15,000 to 25,000 bushels and the rate two cents a bushel. To-day these barges are taking down 70,000 to 100,000 bushels. They are flat bottomed barges, built specially for the river. At one and a half cent a bushel and 70,000 bushels they would have $1,000 freight coming down, whereas in the olden times they would only get $400. And there is only a little more expense for towing, while with one and a half cent freight from Prescott to Montreal and a two cent from Fort William to Montreal, they deliver right into the vessel at Montreal, if the vessel is able to take care of it at that time, and all for 3½ cents per bushel. If not they deliver it into the elevator for same rate.

There is another great trouble with this transportation question and that is at Montreal. I am told that the harbour and other dues and the insurance is a very serious matter, in so far as the freight to Montreal is concerned. If we can get grain for three and a half cents to Montreal I believe that even this disadvantage at Montreal will be overcome. They cannot possibly compete with us going down from Buffalo to New York with so much canal transportation. Then, there is another advantage in so far as the St. Lawrence route is concerned. There are a great many shippers who buy grain and who do not want to ship it to Montreal. They want to keep it as near the vessel as possible so that when there is an advance in price they have the grain ready to load in the vessel. When grain

is in the elevator at Prescott, within twenty-four hours they can have it in the vessel at Montreal. The man who has grain to sell knows that twenty-four hours is quite sufficient to enable them to get the grain to the vessel's side. I only repeat what I said before that I am not in favour of the Port Colborne scheme; I think it will prove a failure and that the only solution is the deepening of the Welland canal. With the present St. Lawrence canal system from Prescott to Montreal I believe there is no doubt at all but that grain will be carried from Fort William to Montreal for three and a half cents a bushel.

The hon. Minister of Railways and Canals stated in his speech that the public have been accustomed to large expenditures and that they are willing to undertake anything that is worthy of consideration. I believe they are. The only difficulty is that the people are finding fault with the way these large expenditures are made. The people know the government are not making them in a fair way. Even in the minister's own department I have seen where tenders have not been awarded to the lowest tenderer. If the minister will go through the books he will find that the expenditures in so far as the canal system is concerned are greatly in excess of what they were in 1896 during the time of my hon. friend from South Lanark (Mr. Haggart). The minister is familiar with the canal system. He was born and raised right along the canals. He knows that the canal system is new and that it should not require any repairs. He knows that there is the same number of locks, and he knows that the operation of these canals should only take the same number of men. Let me give a comparative statement showing what the cost of running these canals is now as compared with what it was in 1896. He will see where the money is going to and he will be able to judge whether the people are satisfied with these large expenditures or not. In 1896 it cost to manage the canals —for staff and repairs—$501,442.65. For nine months of the last fiscal year it cost $947,222.66, and if we add three months more, in order to make comparisons with the previous year, we get an additional expenditure of $315,740.82. So, it took $1,262,-963.48 to manage the canals last year, or an increase of $761,520.83. Let me just refer him to one of the canals he knows well—the Williamsburg canal. That canal should not require any more men to operate it or any larger expenditure for repairs than in 1896, because, as the hon. minister knows, it is a new canal. In 1896 the Williamsburg canal cost, for staff, $9,588.51, and for repairs $9,036, making $18,588 in all. That was as much as it had ever cost. It had averaged $18,000 a year. In 1907 the Williamsburg canal cost $16,222 for staff and $35,542 for repairs, or $50,000 for staff and repairs as compared with $18,000 previously to this government coming into power. It has gone up steadily each year. The minister will ask: Why is that? Why is it that he has doubled the number of men employed? It does not require any more men than it formerly did, and yet he has this large additional number of men on. In addition he buys the supplies and material without tender, without putting them up to public competition and the result is that this canal is now costing $50,000 a year. In 1896 the Cornwall canal cost $15,472 for staff and $25,000 for repairs, or $40,000. In 1907 the Cornwall canal cost $38,253 for repairs and $56,544 for staff, or $85,000 as compared with $40,000 in 1896. That is the way that these canals are being managed. They are costing over double as much as they did in 1896. If the hon. gentleman will look into that and have it put right he will save $700,000 to the people in one year in the management of the canals.

The next subject that the minister referred to was the Railway Commission, and I agree with him that the chairman of that commission was one of the ablest and finest men that we have ever had in Canada, and I deeply regret his death. He was a great friend of mine and I agree that it will be hard to fill his place. He certainly did a great deal of good and if he had been spared I am satisfied that he would have done a great deal more good for this country. He brought the commission up to a state of perfection and his loss is greatly to be regretted. The commission, I believe, is a good institution. I think it was a most commendable thing to establish that commission, and I am satisfied that it will do a great deal of good.

As far as the Grand Trunk Pacific is concerned I do not intend to say much upon that subject. The minister stated this afternoon that 955 miles of the road between Edmonton and Prince Rupert is under contract and that it would cost $42,000,000. At that time I saw the right hon. Prime Minister (Sir Wilfrid Laurier) smile because he had stated that $13,000,000 was all that it was going to cost.

Mr. GRAHAM. My hon. friend, when he speaks of $13,000,000 is referring to the part of the road between Moncton and Winnipeg that the government is building.

Mr. J. D. REID. The hon. gentleman spoke of the portion of the road between Edmonton and Prince Rupert.

Mr. GRAHAM. My hon. friend does not want the House to believe that the right hon. premier said that with reference to the cost to the Dominion of Canada of the piece we will have to build?

Mr. J. D. REID. Will the minister state that the portion between Winnipeg and Moncton, 1,806 miles, is only going to cost $13,000,000? As I understand over $30,-

000,000 have already been voted and paid out by this government in connection with the Grand Trunk Pacific.

Mr. GRAHAM. My hon. friend does not mean to be serious in trying to make himself or any person else believe that my right hon. friend the Prime Minister meant that the piece we have to build will cost $13,000,000.

Mr. J. D. REID. That is what the Prime Minister stated. The Prime Minister said that $13,000,000 was all that the people of this country would have to pay for the building of this road.

Mr. GRAHAM. My hon. friend is mixing up principal and interest.

Mr. J. D. REID. Will the Prime Minister now state what he meant ?

Sir WILFRID LAURIER. It has been thrashed out again and again.

Mr. J. D. REID. I understood the Prime Minister to say that the people of Canada would never pay more than $13,000,000 for that part of the Grand Trunk Pacific which the government were to build. And Mr. Blair resigned and said the road would cost $150,000,000 and not a man supporting the government would agree that Mr. Blair was right. The Grand Trunk Pacific was to be built before 1910 but to-day, five years after the Bill was passed, there is only 85 miles completed. The Intercolonial was an agreement at confederation and the people were and are satisfied with it, and I think on the whole they believe as I do that it should be owned by the government and should never pass to a private corporation. But the Intercolonial should be managed differently; it should be managed economically and run in the interest of the country which it is not now. In 1896 the capital charge against the Intercolonial Railway was $55,267,044 and since then we have bought the Drummond County and the Canada Eastern at a cost respectively of $1,464,000 and $800,000. So that the total charge capital charge against the Intercolonial including these purchases would be $57,531,044. We had 1,145 miles in 1896 and now we have 1,448 or 303 miles more than we had then and the capital charged up to the Intercolonial at the present time is $82,744,937. This gives us an increase on capital account since 1896 of $25,213,893, and if we add to that the deficits amounting to $2,696,300.31 the increased capital account of the Intercolonial Railway since 1896 is $27,910,193.31, for only 303 miles additional. But, as the minister has stated there has not been one cent added for interest and if interest at 3 per cent were added we would have another $18,000,000 to go to the capital account of the Intercolonial Railway. It is strange that the Intercolonial should have been operated for so many years and not be able to make ends meet. Of course it labours under the difficulty that it starts from Montreal where it has no connection with roads that could supply it with freight. I was much amused to-night with the hon. member for Cumberland (Mr. Logan) when he stated the day would come when the Intercolonial would be extended not only into Ontario but over the whole length of Canada.

Mr. LOGAN. I did not say that. I said we would see the day when the government road would be extended into Ontario.

Mr. J. D. REID. But the hon. gentleman (Mr. Logan) opposed that proposal when the Grand Trunk Pacific Bill was being discussed. The Conservative party proposed to purchase the Canada Atlantic and extend the Intercolonial to the Georgian bay but the hon. member was one of those who laughed at that proposal. Now, had the Intercolonial been extended to the Georgian bay, its lake connections would enable it to compete for the grain from Chicago, Duluth, Fort William and all western points. The Canada Atlantic was then carrying 15,000,000 or 20,000,000 bushels of grain per annum and had it been purchased by the Intercolonial Railway, through rates could be quoted from Liverpool or London to Chicago or San Francisco via Deport Harbour and the lake connections with the western roads.

Mr. TALBOT. Was not that proposal to purchase the Canada Atlantic coupled with the proposition that the government should buy the Canadian Pacific Railway from North Bay to Winnipeg ?

Mr. J. D. REID. No. It was proposed to secure running rights over the Canadian Pacific Railway between North Bay and Winnipeg and thus extend the Intercolonial Railway through to the west. Does it not seem reasonable to suppose that if the Canadian Pacific Railway can operate a line from British Columbia to Halifax and pay good dividends, that a government owned railway properly managed and controlled should be able to pay a fair return to the country? In adition to that the fact that we should be able to pay a fair return to the country. In addition to that the fact that we had a government railway extending through Canada would control the freight rates charged by the other railroads. We all know that the Grand Trunk Pacific and the Canadian Pacific Railway and the Canadian Northern will sit down together and fix their rates and the people of Canada will have to pay them.

Mr. TALBOT. That is not argument, it is mere supposition.

Mr. J. D. REID. It is not supposition at all. I understood the Minister of Railways to say that the people along the Intercolonial Railway were getting cheaper rates than the Canadian Pacific Railway charged.

Mr. GRAHAM. I made no comparison. I said the rate per ton per mile on the Intercolonial was less than the rate per ton per mile on any other road.

Mr. J. D. REID. If the minister did not make that statement he will find that his predecessor said last year that the people on the Intercolonial were paying less freight rates than the Canadian Pacific Railway charged through the same territory. Now, the Canadian Pacific Railway is not only paying a dividend of 7 per cent but they are making a net profit of 15 or 16 per cent and I am quite sure that the people of the country will be satisfied if a government owned road met its obligations and returned an interest of 3 per cent. And in addition to that the people of Canada would get the benefit of competition right through from the Atlantic to the Pacific coast. It is my own private opinion that if we had a government railway right through the country managed by a commission like the Temiskaming and Northern Ontario it would be of vast advantage to all people of Canada and would result in cheaper freight rates.

Mr. TURRIFF. Does the hon. gentleman not acknowledge that we have now the control of the rates on the different railways through the Railway Commission ?

Mr. J. D. REID. I admit that the Railway Commission can control the rates ; but at the same time when a railway company, such as the Grand Trunk Pacific, goes before that commission in order to have its rates approved, what is the result ? It says to the commission : There is $50,000,000 of stock which the people of this country have bought, and we have to earn dividends upon it ; you should not put the rates down so that we cannot earn those dividends. As the hon. gentleman knows, not a dollar has been paid for that $50,000,000 of stock, and the people of this country have to pay dividends on $50,000,000 of watered stock which they would not have to pay if the railway were built by the government, and honestly built. Will the hon. gentleman name one road that has not a certain amount of watered stock ? If the Intercolonial Railway was extended to British Columbia, its earnings would not have to pay dividends on watered stock, and the rates could be kept down to a fair basis.

Mr. TALBOT. Has the Canadian Pacific watered stock ?

Mr. J. D. REID. It has a certain amount.

Mr. TALBOT. How much ?

Mr. J. D. REID. $25,000,000.

Mr. GORDON. When the Railway Commission scaled the rates down and fixed them on a basis proportionate to the rates from Chicago to the sea-board, did they take into account watered stock ?

Mr. J. D. REID. I do not know what they did, because I have not seen their report ; but if the hon. gentleman were on that commission and knew that the watered stock was in the hands of the public, as a fair-minded man he would have to figure on the railway earning a dividend on that stock.

Mr. GORDON. The hon. gentleman is entirely wrong in his contention. The rate from Chicago was represented as 100 per cent, and the rates fixed for the different sections were proportionate to that rate, and they were fixed irrespective of any watered stock.

Mr. J. D. REID. They had to figure on a basis that would pay a fair remuneration on the capital as it existed. I am not complaining that the people along the line of the Intercolonial Railway are getting low freight rates. I am glad to see them getting them, and I would be glad if it were possible for them to get lower rates. I do not even want to see the Intercolonial pay any interest on its cost ; I think the people of the maritime provinces are entitled to have an advantage from the Intercolonial Railway, because they have contributed to the canals in the other provinces. But I contend that the Intercolonial Railway does not get its proportionate rate on any freight it gets from the Grand Trunk or the Canadian Pacific Railway ; it has to take whatever these railways choose to give it. This is the way in which the Intercolonial Railway loses money. Then, the operating expenses of all railways last year were 70·7 per cent of their earnings. The operating expenses of the Canadian Pacific Railway were 63·6 per cent ; those of the Grand Trunk were 69 per cent ; but those of the Intercolonial were 95 per cent, or 25 per cent more than the average of all other roads, 32 per cent more than those of the Canadian Pacific Railway and 26 per cent more than those of the Grand Trunk Railway.

Mr. GRAHAM. Does my hon. friend see the weakness of his argument ? That is a comparison between expenses and receipts, and if the comparison does not hold good, on his own argument, it is largely because the receipts from the rates charged are less than those of the other roads, and consequently the charges for management must be proportionately larger.

Mr. J. D. REID. I do not understand the hon. gentleman at all. I also want to say, so far as management by a commission is concerned, that the hon. gentleman knows that the Temiskaming and Northern Ontario Railway is managed by a commission, and has been managed satisfactorily. The government does not interfere with it in any shape or form.

Mr. GRAHAM. Nonsense.

Mr. J. D. REID. The hon. gentleman knows that if there has been any interference, his own friends in Toronto would call attention to it.

Mr. GRAHAM. I am not questioning the wisdom of the management; but if the hon. gentleman says that a commission of that kind is removed from political influence, his judgment is wrong.

Mr. J. D. REID. Unless my hon. friend can give some instances, I must certainly disagree with him. If the Intercolonial Railway were put under a commission, and that commission were allowed to run it as they thought best in the interests of the country, I believe it would show a different result. I certainly feel that it should be. I am glad that a pension fund has been established for the employees on these roads. They are all good men; they must be good men in order to fill the positions they hold; and men who have served in dangerous positions in the train service certainly deserve to be looked after in their old age. That is a principle to which every one will agree and when the pension fund was proposed in this House there was not a man who objected to it. I hope that next year the minister, or if we have an election, his successor, will be able to make a better statement not only with reference to the railway but also with reference to the canals.

Mr. E. M. MACDONALD (Pictou). I should not have spoken this evening had it not been for a rather peculiar position that develops in connection with the speech of the hon. member for Lanark (Mr. Haggart). The country will be surprised to learn that hon. members opposite do not stand for the principle of government ownership of railways. There has been a great misunderstanding on this point, if the hon. member for Lanark is right to-night. If the leader of the Conservative party (Mr. R. L. Borden) has not since the announcement of his Halifax platform, advocated a policy for his party calling for the construction of a transcontinental railway by the government when he attained power, which involved to the fullest extent the principle of government ownership of railways, there has been a great delusion throughout the country. I was surprised to hear the hon. member for Lanark (Mr. Haggart) contradict my hon. friend from Cumberland (Mr. Logan) because surely no hon. gentleman here, who is aware of the events of the last nine months, does not know that the Conservative party have been irrevocably committed to the principle of government ownership of railways and the extension or the construction of a government railroad from the Atlantic to the Pacific. The policy of government ownership and operation of telegraphs and telephones was also propounded expressly and clearly.

Mr. GRAHAM.

Do the Conservative party stand for that policy to-day? I regret that the leader of the opposition is not present to inform the House and the country whether or not we have all been under a delusion in this respect or whether, after the period of incubation has passed, it has been discovered that the platform is one which should be abandoned and which the Conservative party do not wish the people to regard as their policy. Although the hon. member for Lanark (Mr. Haggart) said there were no express words in the Halifax platform stating that the policy of the Conservative party was government ownership of railways and the construction of a government transcontinental railway, surely the hon. member for Lanark (Mr. Haggart) did not know what his leader had said in regard to this subject, because I am sure no one would accuse of him of desiring to deceive the House. He must have been mistaken. No one can seriously believe after the events of the last six months, that the Conservative party has not committed itself to the policy of constructing within the next five, six or ten years, a railway from the Atlantic to the Pacific which would be entirely owned and operated by the government. The leader of the opposition (Mr. R. L. Borden) speaking in Halifax on February 21 last committed his party absolutely to that policy and he has since referred to it frequently at different places throughout Canada. In order that there may be no misunderstanding, I beg to read to the House the words of the leader of the opposition at Halifax. He said:

> Whether or not state ownership and operation of railways can be made a success in Canada remains to be determined. State ownership is repeatedly challenged because of incompetent or corrupt administration, and there does not seem to be much argument against it. Let us not forget that all private enterprises afford instances of failure or incapacity. The denial of our capacity to operate successfully a great public railway from the Atlantic to the Pacific seems no less than the denial of our capacity for self-government. Speaking for myself, I believe that state ownership is no more to be condemned for errors of administration than is the general principle of self-government. The remedy is to amend the methods.

Then he deals with the Intercolonial Railway:

> The Intercolonial Railway has suffered from lack of business management, from lack of discipline, from partisan use and partisan interference. The remedy seems an obvious one. Let us place our government railways under an independent commission and select for that purpose the best available person or persons with the requisite knowledge and experience. The commission should be accorded a status similar to that of the general Railway Commission of Canada. It would demonstrate to our satisfaction in a very few years whether

or not operation of government railways can be carried on honestly, efficiently, with proper discipline and by business methods. Personally I do not doubt the issue.

A Canadian has made state ownership and operation successful in Australia. The Ontario government railway commission has a successful record of good business management and business results. I do not overlook the necessity of safeguarding the interests of the whole country by proper provision for the continuance of any existing rates which may be essential for the development and progress of commerce between the maritime provinces and other portions of Canada.

WE STAND THEREFORE FOR: THE OPERATION AND MANAGEMENT OF OUR GOVERNMENT RAILWAYS BY AN INDEPENDENT COMMISSION, FREE FROM PARTISAN CONTROL OR INTERFERENCE.

These words are put in large letters in this Conservative paper from which I am reading; they are capitalized in order to emphasize the fact that the leader of the opposition stood for the government operation of railways. Mr. Borden continued:

In 1903, and again in 1904, we advocated the extension of the Intercolonial Railway to the shores of the Georgian bay. We believed that policy sound, and that the government of Canada should have acquired and developed the Canada Atlantic Railway as part of the Intercolonial instead of permitting it to pass into the hands of one of the great railway corporations. That opportunity having passed, I believe it better first to demonstrate the possibility of efficient and successful business management in the operation of the 1,700 miles of state railway which Canada now possesses. When that demonstration shall have been successfully made, and when the interests of Canada, and especially our great west, shall render necessary the construction of another great transcontinental railway, I do not doubt that the country will be ready and the Conservative party then in power will be prepared to extend a successful system of government railways to the great provinces of the west.

Some hon. MEMBERS. Hear, hear.

Mr. E. M. MACDONALD. I am glad to hear the 'hear, hear's' come from these gentlemen at last, whether it is from the fact that every little rainbow means that they hope to get back to power some day or whether they are hailing the clear announcement of this policy to which I know at least some gentlemen opposite did not wish their leader to commit them, I do not know, but I am glad to see that some hon. gentlemen have come to life since the astounding announcement made by the hon. member for Lanark (Mr. Haggart) in regard to this important subject.

I rose primarily for the purpose of calling the attention of the House to the peculiar position taken by that hon. gentleman (Mr. Haggart) speaking as chief critic of the opposition in regard to railway matters. Apparently the hon. gentleman was not aware that his leader had gone as far as he has gone upon this question. I doubt whether the hon. member for South Lanark would follow his leader that far. Yet, the leader of the opposition has declared himself in favour of the construction of another transcontinental railway by the government of this country from the Atlantic to the Pacific, the road to be operated as a government road. Let us have no further misunderstanding on that question. Here is a clear issue between the parties; and, so far as I am concerned, I am very glad to follow a leader who does not believe that that is the best policy for the country. On this side, we have regard for the investment which the people of this country and other countries have made on the faith of our possibilities and of our railway development. We believe in the encouragement of private enterprise, not only in regard to railways but in regard to other matters. We believe in the proper regulation and control of these combinations of private capital by means of the Railway Commission instituted by this government. That is our position. The contrary attitude is one which would discourage pluck and industry on the part of the Canadian people. I am glad of the opportunity to point out that the issue has been clearly defined by the leader of the opposition. Whether all the gentlemen who sit behind him agree with him on that subject or not, time alone can tell. From every part of the country there are indications that our people believe in the pluck, industry and self-reliance of Canadians working out these things along individual lines, instead of by a paternalism which would ask the government to inaugurate everything for the advancement of the country. Sometimes the Intercolonial is spoken of as a railway built by the government because of admiration for the principle of government ownership. If the Intercolonial is the property of the government, that fact is due to a pure accident of history; it is not because the fathers of confederation thought that government ownership and control was better than private ownership and control. Everybody who has read the history of confederation knows that. The reason why the government provided this means of communication between the provinces down by the sea and central Canada was that it was deemed necessary to bring these provinces into direct communication. The object was not to declare a conclusion with regard to government ownership but to provide a bond for confederation. Since the present government came into power, we have listened, year after year, to the criticisms of details by hon. gentlemen opposite. We are told that the railway is mismanaged, that there have been partisan dealings in the management and many other complaints. One thing is sure—had it not been for the action of this government in

providing the last link of this railway between Quebec and Montreal, the greatest possible handicap on the maritime provinces would have been continued down to this day. Let me give an illustration: It was easy for those living in the western provinces to send their wares eastward, for the Grand Trunk carried them to Lévis and made connection there with the Intercolonial, and the freight rates given by the Grand Trunk to Lévis in combination with those of the Intercolonial were such as to make it possible for the western shipper to send flour and other products to the maritime provinces. But when it came to the Nova Scotia miner who wanted to send his coal to Montreal during the seven or eight months when he cannot send it by water, he had to send it to Lévis and thence by the Grand Trunk to Montreal. But the rates over the two railways were so excessive that it was impossible for the Nova Scotia coal mines to deal with Montreal. And the same was true of our iron industries and others that are the staples of our industrial life in the maritime provinces. But this extension of the Intercolonial that was made soon after the present government came into power enabled our industries in Nova Scotia to do a substantial business with the central portion of Canada. But for this extension made by the government, these industries would have been stagnant. In Nova Scotia the business people recognize that the government have done more in handling the Intercolonial in the interests of the whole of Canada than was done in the history of the country up to that time. While on my feet, I desire to refer to one other point. I know, from examination of the conditions, that the local rates in the maritime provinces along the line of the Intercolonial are higher than those of the Grand Trunk and Canadian Pacific Railway at least in certain classifications. Of course, the rates vary according to the classification. On some classifications the rates for short hauls are lower on the Intercolonial than on other railways and on others they are higher. But, where we have got results as intimated by the minister, is that the Intercolonial has always given to the staple products of the west a favourable rate to enable them to reach the maritime provinces. Go through the freight rates and you will find that the people of the maritime provinces take from Ontario almost all the articles that are brought in and that are in daily use. In the olden times, these things came from the United States. The reason is not so much the tariff as it is that the Intercolonial, recognizing its position, has favoured the carrying of these articles from Ontario to the maritime provinces. The Intercolonial in that way is playing the part intended by the fathers of confederation. The result is that the freight rates on the long hauls are less than are paid on the other railways. But in most of the short hauls in the maritime provinces, the freight rates are relatively higher.

Mr. SPROULE. It is not so on wheat. I remember a calculation which was made here some years ago—I think in 1904—when it was figured out that the Canadian Pacific Railway was charging a higher rate for carrying grain 400 miles than the Intercolonial was for about 900 miles.

Mr. E. M. MACDONALD. That only proves what I am saying. We do not ship wheat in the maritime provinces. The only wheat that comes there from abroad, comes from the western provinces, and it is these provinces which have the advantage of this rate and the encouragement of interprovincial trade. We hear now and then various panaceas suggested—the extension of the Intercolonial Railway to the wheat fields of the west and all that kind of thing. Speaking for myself, I would rather see the extension of the great transcontinental railways into the province of Nova Scotia. We have the Canadian Pacific Railway at St. John and will have the Grand Trunk Pacific at Moncton in a year or two, but in my province we have only the Intercolonial Railway, and I would rather welcome the extension of these big transcontinental lines down into the province of Nova Scotia, which is the front door of this country, and to which these great lines ought to come. The people of Nova Scotia look forward to an early time when these great transcontinental railways will make use of the ports and harbours in our province for transhipment of the trade of the west across to the old world. I must apologize for taking up the time of the House at this late hour. I congratulate my hon. friend the Minister of Railways on the very able, clear and interesting presentation of facts in connection with his department which he has given us this afternoon.

Mr. W. F. MACLEAN (South York). I am not going into any argument to show how far either party has committed itself to government ownership or that one party is in favour of and the other against it, but what I want to point out is that the whole presentation of the hon. gentleman who has just taken his seat (Mr. Macdonald) was in favour of government ownership. He has maintained that government ownership, as exercised by the extension of the Intercolonial Railway from Quebec to Montreal, has done great things for his province.

Mr. E. M. MACDONALD. My reason for taking that position was that this extension was simply completing the terms of continuous connection between the maritime provinces and the west

Mr. W. F. MACLEAN. And also destroyed the ruinous freight charges which until then prevailed and which the extension of the Intercolonial Railway did away with. Another suggestion he broached was that the great transcontinental lines, which he imagines originated in the west, should be extended to the maritime provinces. But I would adocate the converse of that. Why should not the Intercolonial Railway be extended to the west? Years ago I pointed out that the Rainy River road should have been kept for the Intercolonial and that the Canada Atlantic should have been acquired and linked with the Mackenzie and Mann system as a government system. Had that policy been adopted, the Intercolonial Railway would years ago have been well into the west and accomplished the very things the hon. gentleman wants. The hon. gentleman pointed out how a railway could be a political road and be of great service in binding together the country. In that he suggested that the state should own the railway. The best railway service in the world is a railway service that is national. I shall be able to prove that in a very little time. But before proceeding to do so, I wish to refer for a moment to my venerable friend or perhaps I should say my antediluvian friend from Lanark (Mr. Haggart). I did not like to hear him repudiate government ownership in railways, especially as he at one time administered the Intercolonial Railway. The position he took in that respect is not in accord with his views regarding our canals. He said that our canals were the great regulators of freights and in this way were of great importance in connection with the solution of our transportation problem. But he must know that the improvement of our waterways has been opposed at all times by the private owned railways and the great impediment to the extension and building up of our canal system has been the Grand Trunk Railway and the Canadian Pacific Railway. These companies have been the enemies of our canals, and no man ought to know that better than the hon. member for Lanark (Mr. Haggart). But in those countries where there are state owned systems of railways, the railway system is complementary to the canal system. The hon. member for Lanark spoke about canals being built in Germany. It is true that Germany is building a great canal system. Eight hundred miles of canals are being built in Germany to-day but they are being built in conjunction with a state owned system of railways. The only way Canada will solve the transportation problem will be on the lines of a national ownership of railways. When the hon. member for Lanark said he was in favour of state owned canals, he should, to be logical, have said that he was in favour of state owned railways as well, and the two working together will give the best system of transportation. Many hon. gentlemen in this House to-night have repudiated the nationalization of railways but I did not hear the Minister of Railways do so. He did not propose to abandon the Intercolonial Railway or turn it over to the Grand Trunk Railway or the Canadian Pacific Railway. I have not heard any one propose to do away with the national ownership of the Intercolonial Railway; but if we are not prepared to do away with it, we are justifying the principle. I am not here to justify the principle of the public ownership of the Intercolonial Railway for any political reason but on the ground that it is a great force in the solution of the transportation problem and it ought to be extended and kept alive on that basis. As regards this question of nationalization, which so many hon. gentlemen seem afraid to touch, it was up in the British House of Commons less than three weeks ago. That proposal was made in the British parliament and the Rt. Hon. Lloyd George practically accepted the principle. He agreed that the motion should go through. It was adjourned after debate, but, as a matter of fact, a representative of the government, one of the most progressive men in England and a Liberal at that, practically admitted that the great question in England to-day is the nationalization of railways and that the time has come when a commission must be appointed to investigate that question and to lay all the facts before the country. I am going to read a few of the things that was said in the House of Commons in that debate. My extracts will be short. They are from the 'Times' of February 12. What came out in that debate will throw a lot of light on the transportation problem on this country and on the attitude of hon. gentlemen in this House who not only denounce public ownership but regard it as some kind of a heresy that all honourable men ought to avoid.

Mr. W. ROCHE. Which railway is it proposed to nationalize?

Mr. W. F. MACLEAN. Every line of railway in Great Britain. The gentleman who introduced that motion was Mr. Hardie and this is his motion:

> That in view of the widespread complaints on the part of traders, agriculturists and the general public in regard to railway charges and facilities and particularly with regard to the preferential treatment of foreign goods, the time has come to consider how far these evils can be removed by state ownership of railways as foreshadowed by the Regulation Act of 1844.

I purpose reading just a few sentences from the speeches which were delivered in that debate. Mr. Hardie said:

> A preference was given to foreign producers which handicapped our farmers terribly. Meat, dairy products, fruit and vegetables from France and Denmark were conveyed to our markets at something like a third of the charges made to home producers, and in addition to that, rates generally were higher in

Great Britain than on the state-owned railways of Europe.

That is to say that the rates are immeasurably lower and that a comparison between private and state-owned railways is altogether in favour of the state-owned railways. This applies to the producer and the consumer alike. The prices of food products to consumers have been greatly reduced by reason of the cheap rates which the state-owned system has given.

Mr. W. ROCHE. Are any railways enumerated ?

Mr. W. F. MACLEAN. Yes, I will come to that in a short time. Then Mr. Lloyd George, in discussing this question, said :

Who were the men who had nationalized the railways in Germany? The man who had nationalized the railways hated and fought socialism. Prince Bismark was not a member of the labour party. Prince Bismark considered the question purely from the point of view of the state of Germany. The thirty years of experience of Germany had proved his plan a colossal success.

The President of the Board of Trade, Lloyd George, on the responsibility of his office, speaking in England, where men, had arisen in the House of Commons to protest against the high rates that prevailed there cited the case of Germany where they had nationalized the roads and had made it an immense success. Germany has the cheapest and best system of transportation in the world and it is because it has been nationalized, because it has been made complementary to the water and canal systems of the country. We have here the President of the Board of Trade making the confession in the British House of Commons that Prince Bismarck, who was no socialist, who was the enemy of socialism but who was a far-seeing man had the foresight to regard the transportation question from the national point of view and that Germany, following his leadership, had agreed to make it national in every sense of the word. They have made it the cheapest and best system of transportation in the world and a system of transportation which in practice has been in the highest interest of that country.

Mr. JOHNSTON. Has my hon. friend any of the freight rates which are charged on these German roads?

Mr. W. F. MACLEAN. I am purposing now to give some quotations from this speech.

Mr. JOHNSTON. I would suggest that while the hon. gentleman is doing that he should give some particulars as to the wages paid to the employees.

Mr. W. F. MACLEAN. My hon. friend might let me make my own speech. He can give the facts that he wishes to have brought out. I am going to deal with this question from the point of view that presents itself to me. I do not wish to be uncomplimentary to the hon. gentleman but I wish to present the case in my own way. Lloyd George went on to say :

In Germany the railways have been used as an instrument for the developing of German industry and fighting foreign industry. It is a formidable weapon, much more formidable, in his judgment, than the tariff.

There is another thing that the nationalization of railways has done for Germany. German goods to-day hold the leadership in many foreign markets and it is because the German railways are used to encourage the export of German goods and to give a preference to the raw products of other countries that are necessary for the building up of the industries of Germany. All this has been brought about by this national policy in regard to railways. Germany to-day is the terror of other manufacturing countries and especially of England. Every day the cry in England is the success of German trade in other countries. They have these national railways in Germany, they have the lowest freight rates and the government, controlling railways, use them to hold up, Germany's foreign trade. There is this other consideration which I mentioned in a recent argument I made on state-owned railways and it is that there is no discrimination wherever there is a state-owned railway system. The great evils that are prevalent in the United States to-day in regard to over-capitalization and in regard to monopolies in certain of the great necessaries of life have been created by the discrimination of railways. The nationalization of railways in all these countries of Europe has prevented discrimination. There is no discrimination in these countries. There is no discrimination against some special town or interest or anything of that kind. In the United States railway discrimination has ruined certain industries and certain sections of the country, but where there is nationalization of railways there is absolute equality and there can be no taint of discrimination of any kind whatsoever. Then Mr. Lloyd George went on to say :

Germany and other countries have been mentioned. The Italian railways were a bad example in regard to nationalization. There was room for improvement at the time that these railways were nationalized.

There is an hon. member in this House who came back from a trip to Italy and who said : Maclean, when I was in Italy I was over the national railway system there and I never saw such an abominable system. The fact is that Italy only nationalized her railways quite recently, and the abominable roads that have just been taken over were the roads this gentleman was travelling on. There has been a marked

improvement in the railway system of Italy since the railways were nationalized. Mr. Lloyd George concluded by saying:

It was forty years since the last inquiry and he thought the time had come for another inquiry into the whole question.

And in that statement the President of the British Board of Trade had the support of his party. Mr. Lloyd George has more recently stated that all the arguments are in favour of a reduction of rates and in favour of state owned railways. That has been the experience the world over. European countries are reaping a large income from their railways. When a man gets up in this House and says that state ownership of railways is a heresy, I say the facts are all against him. The solution of the transportation problem in Canada can only come from at least one national railroad competing with the others. I hope the day is not far distant when the Intercolonial will be extended to the west and will reach Toronto, the Niagara river, the Detroit river, and the Georgian bay where freight originates. There are a lot of very clever friends of public ownership who say that they believe in the principle but they always take good care to see that public ownership gets the lean end. In this country we have a certain amount of nationalization of telephones and telegraphs, but it is always at the lean end where there is no business and where the intention is to accommodate shipping or something of that kind. We have aided in the experiment of an imperial cable service across the Pacific, but why don't we have a national cable between Canada and England where it would pay ten times over. We tried the nationalization of railways at the lean end down in the maritime provinces and for a political reason. Let us try it for a commercial reason and you will see how we will succeed. True the Intercolonial Railway was built for a political reason but let us administer it on business principles. There is no reason why we cannot apply business principles to a railway which has been built for political reasons. I hope the Minister of Railways will try that. If the Intercolonial is extended to Toronto or to the Niagara river or the Detroit river or the Georgian bay and gets in touch with the canal system of Canada, it will be a paying proposition and it will be regulative of the other railways. Those who throw stones at the idea of state owned railways have not the facts on their side. The growing idea of the word is the nationalization of railways. Lord Salisbury epitomized the whole question when he said that all diplomacy and all politics to-day centred in the railways because railways were turning the whole world upside down and making all the changes in existing civilization. No country that has adopted state owned railways has abandoned the principle; every country is extending it. And so it is with the nationalization of telegraphs and telephones. The appalling demoralization which exists in the United States to-day is due to the great financial errors committed by men who sought to control the railway systems of that country and not to serve the people. Government ownership of railways is based upon the principle of giving service to the public; private ownership of railways is based on the principle of aggrandizement and of paying dividends on watered stock. Railways should be developed with the idea of giving service to the state and not for the creation of great fortunes and great families and great industrial monoply by the discrimination which railways have been allowed to practise. I tell the Prime Minister and I tell the House that Canada was committed to state ownership of railways in the National Transcontinental system. The Prime Minister is building a railway from Winnipeg to Moncton as a state owned proposition, and while I don't propose confiscation or repudiation I hope to be a member of this House when the Grand Trunk Pacific is made part and parcel of our state owned Interoclonial Railway, and the two linked together. The greatest move in the solution of the transportation problem in Canada would be that the state should acquire, at a low price, the stock of the Grand Trunk Railway that is kicking around the London market to-day. It will never be lower than it is now and for a few million dollars Canada could buy that common stock and own the Grand Trunk Railway. It is not the men in London, it is the Canadian people who use the railroad and who pay the dividends and who furnish the money for the operation of the road. A great national policy for Canada to-day is the acquirement of the common stock of the Grand Trunk Railway and using it not only to control the Grand Trunk but the Grand Trunk Pacific as well, and to consolidate them with our Canadian national system, the Intercolonial Railway. Then we would have a great national system from the Atlantic to the Pacific, one which the people of this country from one ocean to the other would endorse, and which they would gladly pay any taxation that might be imposed upon them to obtain. That is the proposition of the twentieth century. If Canada is the country of the twentieth century, it must adopt twentieth century ideas, and the twentieth century idea in connection with transportation is the nationalization of the Grand Trunk in conjunction with the Intercolonial system and the making of the waterways complementary with a state system of railways. If we had that, we could accomplish what the hon. member for South Lanark spoke of to-night, when he said that the people of the northern half of the continent should control the destinies of

the continent because we had control of the transportation of the continent.

Just for a moment I want to take up another question which has been referred to to-night, that is, the question of passenger rates. The hon. Minister of Railways was good enough to tell us that on the Intercolonial Railway we had 1¾ cents per mile, and on the other railways 2 cents per mile as the average rate. That is a misleading argument, and I will deal with it later on, when the question of passenger rates come up. It is not the average passenger rate that you must consider. I touched the point when I asked him whether that included the free travel. Take an example: A man travels fifty miles and pays 2 cents a mile, while another travels fifty miles and pays nothing; but the average is 1 cent a mile. It is not an average rate of cheap travel that the people of this country want; it is a low maximum rate, which is what the people have in every country in the world where they have state ownership of railways. With a state-owned system of railways the whole object is service and reduced rates. Under that system the unnecessary duplication of railways is avoided. The railways are distributed systematically over the country, and are made a part of the defence of the country. This is the case in Germany. By means of Germany's national system of railways the army can be mobilized, the invader kept out, and the country defended; and at the same time the people get low rates of travel. I do not care who repudiates government ownership in this House. I may be only a single voice on the question or I may not, but I believe I speak for my fellow countrymen from one end of the country to the other when I speak in favour of a new national policy based, not on an immediate nationalization of all the railways, but on keeping the roads we have, extending them when we can, linking them up with the canals of the country when we can, and not being afraid to extend these national roads to the west or to the east. If there are any branch roads in Nova Scotia or New Brunswick that can be linked up to the Intercolonial, I have no objection to that being done. I am bound to accept that principle, especially on the ground laid down by the minister, that it must have a business reason behind it. I am not afraid to increase the amount of capital invested in our national railways. I am ready to expend the money of this country for extending and improving those railways, but they must be administered on business lines, on the principle of giving service. A railway is not to be used to aid a political party or to aid individuals who may be friendly to a political party. Let us use the Intercolonial to improve the service and to give the people of the maritime provinces a better service than any other railway gives. Apparently the evidence is that it does give a better service, and if so, let us extend that service, and extend it across the continent.

Mr. W. F. MACLEAN.

Mr. H. LENNOX (South Simcoe). Mr. Speaker, I do not wish to go into a general discussion of this question, but I wish to bring a few questions to the attention of the minister at this time, in the hope that we may have a remedy this session. The minister has brought in a Bill to enable him to increase the number of railway commissioners, and I understand that he is about to bring in legislation to enlarge to some extent the powers of the board and to amend the Railway Act. I want to call his attention to a few points that particularly require amendment. One difficulty experienced is that the railway board does not seem to have according to its interpretation of the statute, the power to make connections between all of the railways in the country, notably between Dominion railways and provincial railways. Such difficulties sometimes arise on electric railways, but it is the same with all railways under provincial jurisdiction. On the ordinary highway, we can go from township to township, from county to county and from province to province, without obstruction, and we should have the same facility of movement on the highways provided for the people in the shape of railways. Where two railways pass through a town, one a provincial and the other a Dominion railway, there should be connection between the two railways and interchanging facilities should be provided. On the Galt, Preston and Hespeler electric railway there are five towns and through each of these towns either the Grand Trunk Railway or the Canadian Pacific Railway passes and while the citizens have facilities on the Dominion railways they desire to have a complete connection between the electric system and the two trunk lines, the Grand Trunk Railway and the Canadian Pacific Railway. The railway board is doubtful as to their power to order connection between the Grand Trunk or Canadian Pacific Railways and this electric railway system. I want the minister, in amending the Railway Act, to see that efficient provision is made to enable the board, either singly or in conjunction with the provincial railway board, to compel connections between such railways and to afford to the people proper opportunities for shipping their freight. The sections dealing with the question are 228, which provides for action by the railway board in regard to some of these matters, and section 8 which provides what shall be the effect of one railway crossing another. Very slight amendment to these two sections would probably bring about the desired remedy.

Then the railway board does not appear

to have sufficient scope in regard to the prevention of accidents. A great many accidents occur on our railways. The present Act provides that when an accident causing personal injury or loss of life occurs notice shall be given to the board and the board may investigate. It also provides a penalty in case the railway company does not give prompt notice of such matters. But the Act does not provide any means by which the board can compel a remedy. Unless the board have the means of bringing about a remedy or making regulations which will prevent these accidents the present regulations are of very little benefit. Accidents caused by broken rails have been amazingly frequent in the last few years; we constantly read of disastrous consequences from this cause. This may occur through a variety of causes, one being, the greater weight of modern locomotives and trains. Something should be done, either by inspection or regulation to prevent such accidents. I have here the first annual report of the Public Service Commission of the state of New York. This commission refers to accidents caused by broken rails. They say :

An investigation by the former Board of Railway Commissioners in 1897 disclosed a great increase in the number of rail breakages on the main line of the various railroads within the limits of this state. Two recent accidents occurring by reason of such breakage has impressed upon the commission the necessity of continuing the investigation with thoroughness and in great detail. Railway companies will, at an early day, be required to give detailed information regarding their rail specifications, purchase of rails, proposed changes in specifications, and all other matters which will afford information to the commission upon this topic.

I submit that power should be given to the board, upon this among many other matters, in regard to the proper equipment of the railway. Not only should the board have power to compel the railway companies to furnish them with specifications as to the kind of rails used, &c., but provision should also be made for an inspection of rails. This is becoming very serious and unless some very decided action is taken these accidents will continue to occur. On the other hand, if the board was given power to appoint some one to inspect these rails, to require that certain specifications should be complied with as regards certain lines of railway, and generally to exercise a proper supervision of this and other matters that might be referred to, such as the ordinary derailment, we would have fewer accidents. Derailment may occur through broken rails or many other causes. The commissioners, referring to investigations they have made as to derailments, say:

Such investigations as this commission was able to make, in view of the time which had elapsed, indicated defective maintenance of track as a primary cause of these accidents, and correspondence with the railways involved showed that the railway officers had themselves reached the same conclusion. In some cases an increase in the track force had already been made, and in other cases the necessity of greater attention to track maintenance was suggested by this commission, and a higher standard of maintenance has been enforced in the localities where derailments have been reported. The result has been that no derailments of this nature have occurred during the last four months.

They also point out there has been under this commission, a supervision of the rolling stock generally. I suggest to the minister that the time has come, now that we are enlarging this board, when we should have a general revision of the Railway Act; I do not say very extensive alterations, but one that will bring it up to date and put upon the commission the duty of remedying these obvious difficulties in connection with our railways. I hope that the hon. minister in bringing in an amendment of the Railway Act will submit provisions which will have the effect of obviating the difficulties that are shown to have arisen within the last four or five years.

Motion agreed to, and House went into Committee of Supply.

Progress reported.

Mr. FIELDING moved the adjournment of the House.

Mr. HAGGART. What business will be taken up to-morrow ?

Mr. FIELDING. Further consideration of the Bill respecting Quebec battlefields, the Bill respecting co-operative societies and then Supply, taking up the estimates of the Minister of Marine and Fisheries (Mr. Brodeur).

Motion agreed to, and House adjourned at 11.45 p.m.

---

## HOUSE OF COMMONS.

FRIDAY, March 6, 1908.

The SPEAKER took the Chair at Three o'clock.

### REPORT PRESENTED.

Report of the Department of Militia and Defence for the last three months of the financial year ending 31st of March last.—Sir Frederick Borden.

### QUEBEC BRIDGE COMMISSION.

Mr. FOSTER. I wish to ask whether or not the report of the commission appointed on the Quebec bridge has been handed in and when parliament will receive it.

Sir WILFRID LAURIER. Soon; it has been handed in to-day.

CIVIL SERVICE COMMISSION.

Mr. FOSTER. When may we expect the report of the Civil Service Commission; that has now been hanging for a very long time.

Mr. FIELDING. I am assured by the chairman of the commission that the matter is being pushed as rapidly as possible.

MOTION TO ADJOURN THE HOUSE.

Mr. LEFURGEY. I would like to call the attention of the House to an advertisement which I find——

Mr. SPEAKER. A discussion at this stage is not in order.

Mr. LEFURGEY. I move the adjournment——

Mr. SPEAKER. Under the new rule that is not the proper way to bring a matter up.

INQUIRY FOR RETURNS.

Mr. LAKE. When may we expect the returns which were ordered on the 29th of January in regard to the sale of certain lands on some of the Indian reserves. I wish to have the return hastened.

Mr. OLIVER. I was under the impression that this return was already down and I will tell the hon. gentleman on Monday.

Mr. LAKE. When will the return be brought down with regard to the appeal to the Privy Council in the matter of the Canadian Pacific Railway exemption from taxation?

Mr. OLIVER. I will give an answer on Monday.

ORIGINAL DOCUMENTS IN COMMITTEES.

Mr. J. D. REID. I wish to ask the Minister of the Interior what position we are in with regard to some of the papers in his department. We moved that several files of original papers be produced in the Public Accounts Committee as we want to examine these files. If I understood the minister aright the other day, the only time he would allow us to examine the papers is while the Public Accounts Committee is in session. It is impossible for us to examine them during the sitting of the committee, and I want to know if the minister still holds that view.

Mr. OLIVER. The position I have taken is that the files are under my charge subject to any order of the House or of a committee of the House, and any order of the House or of any committee of the House will of course be obeyed by the officers of my department under my instructions. Otherwise, certainly I do not think I am justified in permitting the examination of the files by those who are not properly authorized.

Mr. J. D. REID. It has been the custom to allow an officer of the department to come over with the files to the committee room and to allow these files to be examined by one of the members with the officer present when the committee was not in session. Will the minister allow that custom to continue?

Mr. OLIVER. If the committee so orders, certainly, but not unless.

Mr. FOSTER. Which committee?

Mr. OLIVER. The Public Accounts Committee. If the committee orders the files to be brought to the committee or if it orders the files to be kept away from the committee, any order the committee chooses to give will be respected. But the order of a private member in regard to the files would not be warranted in taking notice of.

Mr. J. D. REID. I want to ask a further question?

Mr. SPEAKER. There cannot be a discussion raised at this stage.

Mr. J. D. REID. I am not going to discuss it; I simply want to understand it. An order was made by the Public Accounts Committee for the production of the original papers in a certain case. Will the minister allow the original papers to be brought over to the Public Accounts Committee at any time whether the committee is in session or not?

Mr. OLIVER. I take it that the order of the Public Accounts Committee for the production of those papers can only be filled by the production of the papers before the committee. If the Public Accounts Committee have any other order to give, it will be respected when they give it; but I do not propose to interpret the order beyond its wording.

Mr. FOSTER. I would like to ask the First Minister whether we are to go through this whole matter again. I for one refuse to be at the order of a majority of the Public Accounts Committee with reference to that matter. I understood that it was entirely disposed of by the First Minister in the case of the Public Works Department.

Sir WILFRID LAURIER. The matter is new to me, and I will have to look into it.

WINTER COMMUNICATION WITH PRINCE EDWARD ISLAND.

Mr. LEFURGEY. I wish to call the attention of the government to an important matter.

Mr. SPEAKER. The matter which I understand the hon. member proposes to

ask leave to move the adjournment in order to discuss is tenders for a new winter boat for Prince Edward Island. I cannot rule that this is a case within the scope of the rule relating to matters of urgent public importance. It is a matter of ordinary departmental consideration.

Mr. LEFURGEY. Mr. Speaker, if you will allow me to explain, I think you will see the force——

Mr. SPEAKER. The only thing the hon. member can do is to appeal from the ruling of the chair.

Sir WILFRID LAURIER. The hon. gentleman will have an opportunity to bring the matter up on the motion for the House to go into Committee of Supply during this day.

## CANADIAN BATTLEFIELDS AT QUEBEC.

House again in committee on Bill (No. 111), respecting the Canadian Battlefields at Quebec.—Sir Wilfrid Laurier.

On section 10—power to be exercised subject to approval of Governor in Council.

Sir WILFRID LAURIER. I move that the words the 'Governor in Council' in the first subsection be replaced by the word 'parliament.'

Amendment agreed to, and section as amended agreed to.

On the preamble,

Mr. FOSTER. Before the preamble is carried, I want to raise the question which I raised before, as to the Ross rifle works. I think we ought to be informed as to the exact position in which we stand with reference to that factory, as to its right on the Plains of Abraham, and as to what is to be done under this Bill with reference to clearing the plains of incumbrance. I stated the several points before, when this Bill was introduced. The first thing I would like to know is how it came to pass that the Ross Rifle Company ever got a place at all on those sacred plains whether there was an application from the Ross Rifle Company for a lease of any portion of those lands, whether the government was in any way interested in having that factory placed there, and used any influence to that end; also as to the quantity of land that was leased, the terms of the lease, and whether the original area has been extended, and, if so, by what authority, to what extent and under what conditions. The reason I think we had better know this now is that the commission appointed under this Bill will take into consideration the expropriation of lands and the clearing of incumbrances from the lands, which will be attended with more or less expense.

Sir FREDERICK BORDEN. I did not expect to be called upon to make a statement of this kind, though the hon. gentleman did refer to the matter the other evening. My recollection of it is this. For the convenience, I think, of the Ross Rifle Company as well as the government, the factory was placed there, because the Dominion Arsenal, in which a great deal of government work, notably the manufacture of cartridges, has been carried on for years, is situated at Quebec, and a part of the work is actually done on land adjacent to the Ross rifle factory. A place where target practice was carried on to test the strength of cartridges is situated there; and it was believed to be desirable that this factory should be located in that section. I think that the interests of the factory and of the government were common in that regard. If I remember correctly, the Ross Rifle Company, or Sir Charles Ross, in reality, had received offers from other parts of the Dominion of a free site and freedom from taxation. As the government had land in the Cove Fields which were in occupation partly by the Dominion Arsenal, it was thought not undesirable that this factory should be located there. It was thought not undesirable that this factory should be established there and very little of the land granted was on the level. It is on the slope towards the bank of the river. How many acres I do not remember. My right hon. friend the First Minister says nine, but I think it is about eighteen. I answered the question yesterday as to whether any increase of land grant had been made. None has been made and there is no intention to increase and no necessity to increase the extent.

Mr. FOSTER. What are the conditions of the lease?

Sir FREDERICK BORDEN. It is a lease for ninety-nine years with renewal—practically a gift.

Mr. FOSTER. It is irrevocable during ninety-nine years?

Sir FREDERICK BORDEN. I think it could be taken over for military purposes, but am not absolutely sure. Any land could be taken for military purposes anywhere. As to what would happen in the event of the Crown wishing to resume possession, that would be a question for the courts to determine.

Mr. FOSTER. Is there nothing at all in the lease which relates to that?

Sir FREDERICK BORDEN. I am not able to tell the hon. gentleman. It is an ordinary lease. The lease has been laid on the table. It is within the power of the Crown, of course, to resume possession of that or any other property. As to the future, I do not think it would be desirable

to make any statement, because the question is one which would probably be determined by the courts. Therefore, it would be undesirable for me or the government to make any statement, particularly as I did not come here prepared to make any statement on that point. I do not know whether any other points were mentioned by the hon. gentleman, but shall be glad to give any information in my power.

Mr. ARMAND LAVERGNE. According to the plan, the Ross rifle factory will have to disappear from the Cove Fields at Quebec, and the Quebec people are entitled to know where the factory is going. They were opposed to the factory being put there. But now that it is there the wage-earners would not like to see it disappear, especially if it is not to be placed somewhere else. It is commonly stated in the city of Quebec that if the Ross factory leaves the Cove Fields it will not be built anywhere else. The public of Quebec city are entitled to some guarantee that if the factory disappears from the Cove Fields it will be established somewhere else in that vicinity. Quite a number of families came to Quebec to work in that factory. A number have built houses and a good many left work elsewhere to come there, and it is only fair that before the factory is removed the government should give these people some guaranty that it will be put up again in that city. Otherwise it will be my duty to oppose the removal of the factory.

Sir FREDERICK BORDEN. So far as the government has the right to exercise any control, the same argument of convenience which existed at the time the work was undertaken exists to-day, and the government would prefer that the operations of the factory should continue at Quebec. We have very large and continually increasing arsenal works, particularly the work done in the cartridge factory in the city of Quebec, and my own idea is that it is very desirable works of that kind should not be carried on in the heart of the city. My view would be that a piece of ground suitable just outside at a safe distance from the city should be taken for these works. That would be my idea, and I think that would be a proper policy to adopt.

Mr. ARMAND LAVERGNE. I understand that the government will not actually commit itself. The Minister of Militia says it is a matter of convenience, and he would prefer personally to have the factory in Quebec or its vicinity.

Sir FREDERICK BORDEN. What more can I say?

Mr. ARMAND LAVERGNE. The government seems to have a sudden access of sentiment. When the Ross rifle factory was put on the Plains of Abraham—if those are the Plains of Abraham—the same sentiment should have existed as prevails to-day. If there were good reasons for putting the factory on the plains then, those reasons still remain against the change. If the government cannot guarantee that the Ross rifle factory is to remain in Quebec, I shall feel it my duty to oppose the Bill on account of the clause authorizing the removal of the factory. There is a practical question involved as well as a sentimental one. It may be all very well to have a park and see the factory disappear from what people call the Plains of Abraham, but which are simply the Cove Fields where no battle took place. But it is now a question of the livelihood of a number of families in the city of Quebec.

Sir WILFRID LAURIER. All this discussion is premature. There is no disposition to remove the Ross rifle factory, but a disposition to create a commission which will devise plans, and these plans will be submitted to parliament before any money can be expended on them. The commission will determine what property is to be bought. My hon. friend from Montmagny (Mr. Armand Lavergne) says that the battle did not take place where this factory stands at all. If it did not, many of us may have to revise our history, but it does not matter at this moment. If that be the case, there will be no necessity for removing the Ross rifle factory. All this will be opportune when the commission makes its report and proposes to do something. If the commission then thinks the Ross rifle factory should be removed, it will be time enough to consider that proposal. Nothing can be done by the commission until they have made the plans and submitted their report.

Mr. ARMAND LAVERGNE. When is the commission to report?

Sir WILFRID LAURIER. I cannot say; it is not even appointed.

Mr. URIAH WILSON. The government should have had this information before asking us to accept this Bill. The government should have sent an engineer to Quebec to survey the ground, so that we might know how many acres we own and whether we would have to purchase other ground, and whether it is desirable to purchase the Ross factory or not. Parliament should be in possession of all these facts before adopting a measure of this kind. We should also know the probable cost of converting the plains into a park and the cost of maintaining the park. We seem to be entering into a large expenditure with very little information, and certainly until we have more information I shall have to vote against any Bill of this kind. It is desirable that the plains should be converted into a park, but I am not prepared to vote for any measure of this kind until the information I have asked for is laid before the House.

Mr. FOSTER. I do not think the question can be shifted as easily as the Prime Minister said, and I am not satisfied with the explanation of the Minister of Militia (Sir Frederick Borden). I would be glad to have my mind cleared of doubt as to whether an unsightly thing like a rifle factory was or was not to be allowed to remain within the limits of the park.

Sir WILFRID LAURIER. Or the gaol.

Mr. FOSTER. The gaol, it is in exactly the same category. I have not heard any doubt expressed in the past that if we were to make a park here, these unsightly buildings would be removed; but the First Minister makes one almost fear that we are going to have a large expense for the making of a national park and to then find that we have in it an unsightly factory with all its accompaniments. I do not think the country would care to incur the expense necessary to convert this into a national park with these unsightly buildings within its borders. I think we may assume that the rifle factory will be removed at some cost to the country. The government has put itself into the position of sticking into a great battlefield, sacred historic ground, an establishment to manufacture rifles. I believe it should never have been placed there and the reason given by the Minister of Militia is the most inadequate that could be thought of. You want to test cartridges and therefore want to have a factory near the Plains of Abraham, in order to test the cartridges.

Sir FREDERICK BORDEN. I said there already existed in the Cove fields a portion of the cartridge factory and that there was a rifle range established nearly thirty years ago, when the Conservative government was in power, carrying on the work of testing cartridges, and that it was a matter of convenience that the rifle factory, which would have to test its rifles should be located at that point and also close to the cartridge factory.

Mr. FOSTER. The reason then was that because a part of the cartridge factory and the testing equipment were there you placed the rifle factory there in order to be near these.

Sir FREDERICK BORDEN. I said it was a matter of convenience to do it.

Mr. FOSTER. The matter of convenience is a small consideration, because if the rifle factory was a mile or two miles away the difference would not be sufficient to justify the erection of an unsightly factory here.

Sir FREDERICK BORDEN. There were already there several buildings more unsightly than the rifle factory.

Mr. FOSTER. Then surely the argument would be not in favour of erecting another unsightly building but of removing these. As it is, a costly factory with costly machinery has been erected and a renewable lease of ninty-nine years has been given; you have created a vested right on the strength of which this factory has been erected and equipped and it will be of course necessary to compensate the rifle factory people for the removal of their factory. I do not know whether power has been taken under the lease to get back the lands. You can of course always take land for military purposes, but I imagine not without compensating the individual who has rights.

Sir FREDERICK BORDEN. No sane man would construct a factory on land of which he might be dispossessed at the will of any government without compensation; so it comes to the same thing, he would have to be compensated. The rifle company will have to be compensated if the removal takes place.

Mr. FOSTER. But there is a great difference between having an arrangement between the company and the government conferring a franchise and a favour and going into a court after years have passed and expropriating. It might have been a wise thing to have guarded the government's position in the contract in that way. It might have been a wise thing for the minister to have put that in the contract, and so far the probably greater cost of expropriation would not have to be met. It is at a time like this that it seems to me to be fully shown what an unwise thing was done by the government in having granted to the company the right to eighteen acres of land on any portion of the Plains of Abraham, being government property, and the site of a great battlefield. Now we are face to face with the necessity of paying for taking away this encumbrance. Is it to be paid by the government? Are they to remove this encumbrance in order to get that portion of land again into their hands for the purpose of a national park? Or is the expense to be taken out of the general fund to be raised by contributions from different governments and from individuals? We are face to face with all these difficulties. It is a situation which does not reflect much credit upon the foresight of the government in getting things into this peculiar condition. To my mind a private company never should have been allowed to put its factory on these government lands.

Mr. BLAIN. I want to draw the attention of the government to the fact that some of the citizens of the city of Quebec protested against the establishment of a factory on this property. In the 'Hansard' of 1903, page 2109, on inquiring for a return, Mr. Casgrain, of Montmorency, said:

I wish to call the attention of the government to the incompleteness of the return made some days since, of the papers in connection with the establishment of the Ross rifle factory at Quebec. The return laid before the House does not contain a petition by some of the prominent citizens of Quebec against granting the site. I would like that petition to be included in the return.

I have no doubt that succeeding pages of the 'Hansard' will show where the petition is referred to here. I wish to direct the attention of the minister and the government to the fact that when they proposed to grant this company a 99 years renewable lease of this land, they had a note of warning from some of the citizens of Quebec who entered a protest.

Sir FREDERICK BORDEN. I remember that very well. I did not mention, however, that all the members of the House of Commons, and the members of the Quebec legislature, the then mayor of the city and all the aldermen favoured the granting of this land to the Ross Company, together with tens of thousands of citizens. The particular gentlemen to whom the hon. member for Peel (Mr. Blain) referred as having petitioned against the establishment of the factory there, were a select few who belonged to a golf club in the city of Quebec, including the Canadian Pacific Railway Company, who owned a large hotel there and whose guests were in the habit of amusing themselves on these grounds by playing golf. These were the important people—and important they certainly were—and these were their reasons, because they feared that their amusement in playing golf might be interfered with. It had not occurred to anybody at that time that the sacredness of these grounds, as mentioned by the hon. member for North Toronto (Mr. Foster) was to be invaded. Of course we have developed a good deal in the last six or seven years in matters of sentiment, and hence the discussion which has taken place to-day. But I want to assure my hon. friend from Peel that there was nothing more serious in that protest than a kick by a disappointed golf club.

Mr. ARMAND LAVERGNE. I do not think the government were as guilty as the hon. member for North Toronto (Mr. Foster) suggests. The people of the city of Quebec who know their city very well—the only thing they do is to study their past history——

Mr. TALBOT. That is very complimentary to the citizens of Quebec.

Mr. ARMAND LAVERGNE. I am not talking of the people of Bellechasse, they are acquainted with modern progress. In the city of Quebec the people know very well that when the Ross rifle factory was established on the Cove field there was no question of sentiment, because it is simply a fact of history that the battle never took place there. The battle took place between what is now the Grande Allée and St. John street. The first battle was between these two places, the whole space could be covered by a five or ten minutes' walk. It did not spread out where the Ross rifle factory is situated and where the French had their entrenchments. I am not quite sure if there was not a small block house there which had been abandoned at the time. There were French troops there, but that is not where the battle took place. The battle took place between the Grande Allée and St. John street and extended as far as Salaberry street going west.

Mr. W. F. MACLEAN. Is that territory now built on?

Mr. ARMAND LAVERGNE. Entirely so; it is the most residential part of the city of Quebec.

Sir FREDERICK BORDEN. Then there was no sacrilege.

Mr. ARMAND LAVERGNE. The sacrilege was committed so long ago that there is a prescription. The only part left of the original Plains of Abraham where the battle took place is what is now Saint Foye on the St. John road. The second battle took place where what is now called the Monument des Braves, where the Moulin Dumont was, and which was captured and recaptured over and over again by the Highlanders and the French Grenadiers. That is left almost intact. There is still a field there, and there is also a monument, which was erected, I think, in 1854. So the plain which it is proposed to make into a national park is just an ordinary plain where there never was any battle. It is therefore no wonder that the people and government of Quebec, and even the mayor and city council, had no objection to the erection of the rifle factory on this locality, because no battle ever occurred there.

Mr. J. D. REID. This question is now reaching the point which I expected it would reach, namely, that in the end the government will have to purchase the Ross rifle factory. Now, every person knows that the Ross rifle has not given satisfaction, the government has not been able to use the rifle.

Sir FREDERICK BORDEN. Order; are we going into a discussion of the Ross rifle?

Mr. J. D. REID. I am not going to discuss that. I mentioned it in passing. The factory is now in a locality which will have to be expropriated, and the government are going to be compelled to pay, probably, a million or a million and a quarter dollars for these buildings. The hon. member for Montmagny wants a guarantee that this Ross rifle factory will be placed at some other point in Quebec. This factory is

owned by the Ross Rifle Company. If it is expropriated who is going to compel the Ross Rifle Company to put it in some other part of Quebec? If this Ross Rifle Company once gets their money they are not likely to go into another scheme to manufacture rifles after the experience they have had of the government.

Sir FREDERICK BORDEN. And the opposition.

Mr. J. D. REID. The opposition deserve credit, I think, for showing up the actions of the government in so far as this is concerned. If it had not been for that probably there would have been more money lost than there has been. The Ross Rifle Company will be paid and paid well for their property. The government must expropriate it and they must pay them for a tract of most valuable land in the city of Quebec that they own for at least 200 years. It is practically owned in fee simple. They will have to pay them for their factory and to say that the Ross Rifle Company will ever build another factory is absurd. If they leave that place another factory will never be built in Quebec or any other part of Canada by the Ross Rifle Company. If it is coming to a question of voting an amount of money to pay for that factory I am strongly opposed to it, but in so far as the celebration is concerned, I am strongly in favour of it. To commit ourselves to buy the Ross Rifle factory or to pay one dollar for it is something that I shall vote against and I hope we will not be asked by the government to do that. That is what I was afraid of when this scheme originated to make a park of the Plains of Abraham.

Mr. SAM. HUGHES. Was His Excellency in the deal?

Mr. J. D. REID. In the end the amount that will be subscribed by the people will be small and the greater part of the money required will have to be provided by this House. I think it is unfair that the government should ask us to pay out this amount for the Ross Rifle factory.

Mr. NORTHRUP. I was very glad to hear the right hon. Prime Minister (Sir Wilfrid Laurier) say that the expropriation of the Ross Rifle factory and the gaol were not necessarily included in this plan. I would like to have him go a step further and say that the expropriation of no properties would be included in this plan if a large outlay is involved thereby. The preamble of the Bill not only lays down the proposition that the Plains of Abraham was the historic battlefield but goes on to point out that 'considerable portions of these grounds are already vested in His Majesty,' therein referring to the Plains of Abraham. It is distinctly declared in the preamble that it is desirable in the public interest to preserve this property. I am one of those who would be glad indeed to see the historic battlefields preserved. I think that every patriotic Canadian would be, but at the same time I think we must have due regard to the ways and means, and if it should turn out to be the case that the expense of purchasing the so-called battlefield would be very, very great, it seems to me, that in view of what has been said by the hon. member for Montmagny (Mr. A. Lavergne) that this is not the real battleground after all, the people would naturally object to spending a couple of millions of dollars in buying the Ross Rifle factory and the gaol in order that a park may be made on the site of an historic battlefield, when, as a matter of fact, it is not the battlefield, according to the hon. member for Montmagny. It seems to me that we would make of ourselves a laughing stock in this House if we were to take such a course. I think that the government might well hesitate before committing the country to this expenditure for this reason: When the Ross Rifle contract was made with the government, the contract itself shows that the government compelled the factory to be located at Quebec. Not having been present at the time the contract was made I cannot speak with certainty on that point, but I think I may speak with about as much certainty as if I had been present because one clause of the contract is that the company is to erect a factory 'at or near Quebec.' It is perfectly certain that Sir Charles Ross did not put that in and I do not know of any one but the other party to the contract who could do so; therefore, it must have been the government which insisted upon that condition. There is no man who would gratuitously ask to be bound down to put a factory at Quebec. If he wished to put it there he could do so without being bound to do so, and if he did not wish to do so he need not. The evidence is conclusive to my mind that the government compelled him to locate his factory at Quebec. The contract was signed and Sir Charles was bound to locate his factory at Quebec. This contract is dated the 27th March.

Mr. W. F. MACLEAN. When did the grant of land take place?

Mr. NORTHRUP. I am coming to that. This contract was signed on the 27th March, 1902. About a month later, on the 23rd April, that same year, a report was handed in by the hon. Minister of Militia and Defence (Sir Frederick Borden) to council, it was received and an order in council passed on the 19th May giving this gentleman 19½ acres of land for the purpose of erecting this rifle factory. I think that the people of the country, whatever they may think of the original contract with the Ross Rifle Company, will say when you made your contract binding Sir Charles Ross to locate his factory at Que-

bec why did you make a present of 19½ acres of land to Sir Charles Ross in fee because I think there are very few who will appreciate any great difference between granting 19½ acres of land in fee and granting that quantity of land for 99 years at a rental of $1 a year renewable on the same terms. Practically it is a lease for ever at a dollar a year which is practically a gift in fee simple. Why should the government have made a present of this most valuable property to Sir Charles Ross? It was bad enough to give our property away for nothing and it was unnecessary that we should give this property away without one single dollar of consideration because the contract had already been signed and if the government had not given Sir Charles the grant of that land he either had to buy land or forfeit his contract. But, if the government, after having made a present of 19½ acres, in a few years come down to parliament with a scheme to buy a battlefield, which an hon. member from the locality says is not the battlefield at all, and if that scheme involves the buying back of the land that they gave as a present, it does seem to me that those who are the true friends of Quebec, those who are really anxious to commemorate the tercentenary, those who would like to see the occasion made a glorious success should not encourage such a project, and I think we may be pardoned if we feel that we are justified in being a little suspicious as to the details of the plan when we find a possibility of the government buying back at an enormous figure their own property which they gratuitously gave away only a few years ago. Therefore, while I am thoroughly in accord with the proposal in regard to the celebration of the tercentenary of the founding of Quebec and in regard to the idea of preserving the battlefields, this is a practical question and I would like to have, before committing myself to this project, some assurance from the right hon. Prime Minister, if the expense is going to be very excessive, as whether we would or would not be compelled to buy back our own property and that too when apparently this is not the battlefield at all.

Mr. LENNOX. I understand that the discussion thus far mainly is as to whether we should or should not vote $300,000 for the celebration of the founding of Quebec. I am quite in sympathy with facilitating the government in obtaining all measures necessary for granting this money but I must say that I am opposed to committing ourselves to the future scheme of acquiring and beautifying a large part of the city of Quebec until such time as the scheme is got well in hand by the government and submitted in an intelligible way for the consideration of parliament. I do not care whether these lands were originally considered parts of the Plains of Abraham or not. I know exactly what was outlined to us a month ago by His Excellency and others who are interested in the scheme and they included all the land upon which this unsightly factory stands as well as what may be called the Plains of Abraham. If it is as certain and can be shown to parliament that this land can be acquired as a national park at a reasonable sum, I am quite prepared to support the measure as I believe it to be very desirable that we should perpetuate the memory of the great events that occurred there. But I do feel that the government should not ask us to commit ourselves in this hasty way to the large scheme they have initiated indirectly by the Bill submitted to us. There has been a good deal of this hasty legislation and of submitting propositions to us without giving us a reasonable time for consideration. You only have to go across the canal here to get an instance of that, when we were asked to deal with the question of alienating part of the public domain for an hotel and at a time when alrealy a fence was erected inclosing the grounds that we were asked to alienate for the west. Again, when we were asked to vote nearly $3,000,000 for a supply of seed grain for the west, the matter was left so late that we had to vote it through in a hurry and it was only a day or two afterwards we ascertained the conditions which were going to surround the distribution of that seed grain. And now we are asked to vote this scheme without practically any information. The Prime Minister is studiously reticent as to what will take place in the future. We are asked to commit ourselves not to the mere matter of voting $300,000 for a celebration in which we are I believe all heartily ready to concur, but we are asked to commit ourselves to the appointment of a commission which will have almost unlimited powers and which can commit the people of this country to a scheme which might be most undesirable in its results. The clause of this Bill which gives the commission power to expropriate lands, says :

> No land or immovable property shall be purchased or acquired by the commission except with the previous authority of the Governor in Council, and no expenditure shall be made by the commission until it has been approved by the Governor in Council.

Mr. FOSTER. That has been amended by substituting 'parliament' for 'order in council.'

Mr. LENNOX. I am very glad that has been changed, but what I want to point out is that we should not now be asked to commit ourselves in advance to any larger scheme than the mere matter of this $300,000, until the scheme itself has been laid before parliament. In reference to the lands granted to the Ross Rifle Company, the Prime Minister thought the other day that we had alienated only 9 acres but I find by a return brought down and which

contains a copy of the lease that the quantity of land alienated to the Ross Rifle Company was 19½ acres. There is no power in this lease for the government to determine it in any way; there is the statement that it may be determined as hereafter mentioned, but there is no power taken in the least for determining it in the hereafter mentioned manner. Let us understand exactly what this lease is. It is practically a complete alienation of 19½ acres of this land. We were told the lease is for 99 years, but there is a right given in the lease for a perpetual renewal for periods of 99 years, and if any hon. gentleman can present a reasonable distinction between a fee-simple and a lease at one dollar a year renewable for ever I would like to hear that distinction pointed out. The lease contains a covenant that at the end of 99 years it will be renewable for a period of another 99 years, and then another 99 years and so to the end of time.

Mr. FOSTER. Was that lease ratified by parliament ?

Mr. LENNOX. Not that I know of. There is nothing in the return to show that it was ever even submitted to parliament. The contract appears to have been made with the Hon. Charles Ross, I do not think it was made with the Ross Rifle Company, but anyhow it was made with the Ross Rifle institution and it provided that the factory should be established in the city of Quebec. Then, within a few weeks after that there was an order in council and this lease was executed and so far as I know, nothing was said by the government about it until the members of parliament began to get anxious and make inquiries. A petition has been mentioned by the hon. member for Peel and I have asked the right hon. gentleman to bring down that petition. It would be very much more satisfactory for us to see it than to hear an account of what is in it as we did to-day. I may say that Mr. Casgrain moved for this return several years ago and the return was brought down without this petition. The right hon. gentleman was then asked to bring it down and he said he would see to it but so far it has not been brought down to my knowledge. I understood there was a similar petition presented to the Senate and I endeavoured to get it but I have not succeeded. It would be interesting to know what this petition says. There is another matter about which we should ascertain the facts, and that is, that the government forced the Ross Rifle Company to build just where they have built. It was not a free act of the Ross Rifle Company, and when we come to expropriate this land we will find that will be an important element in determining the amount we have to pay them. I have here in the return a copy of a letter from Sir Charles Ross portions of which it would be desirable for the House to hear. It was written when the Ross Rifle Company were applying to the government for more land, and to sum it all up, I may say the government was prepared to give more land. An answer was given by the minister to that question yesterday but it was not given fully. The government were prepared to give the land but the mayor or premier of Quebec was not prepared to allow it to be given and so the matter dropped. I quote from a letter written by Sir Charles Ross on the 10th of April, 1906:

Ottawa, April 10, 1906.

Dear Sir Frederick,—I hereby beg to apply for an immediate grant of land contiguous to my present factory. The matter has been before you for a long time and it is a matter now of an immediate necessity that I commence building at once.

In addition to this, the ground asked for is essential to enable me to carry out the policy of practical independence of Canada in the manufacture of rifles, and I trust also of bayonets.

Actual financial loss has been caused to me by the delay in granting building facilities.

I attach eleven reasons to this letter why the government should give me immediate building facilities.

I cannot but feel that a refusal to give proper facilities as working a great injustice on me, since I have invested over a million of dollars in my business and so arranged it that practically every dollar is spent in the employment of skilled and unskilled labour in Canada.

So much so is this the case that with the exception of the interest ($45,000) I remit annually and the costs of material purchased out of Canada, every dollar paid to me by the government has remained in the country.

You will recollect that in the matter of the location of my factory I was given no option.

I was definitely assured by yourself, by the Minister of Justice, and by the late Minister of Public Works, that I should be given all the facilities which I might from time to time require.

So that what the government undertook was to give them not only 19½ acres of land, but practically the whole of the Plains of Abraham, if they desired. The letter goes on :

I was approached by other cities than Quebec and offered inducements to locate there. I was debarred from accepting these offers. My location being fixed, Quebec was in a position to refuse to negotiate, and it did.

Twelve reasons are appended for giving Sir Chas. Ross more land :

1. The contractor was given no option in the location of his factory.
2. Other towns offered him more attractive locations.
3. He was assured every facility would be given him necessary to the fulfilment of his contract.
4. He occupies all the ground by itself available for building purposes.
5. The government itself occupies part of his land with buildings.
6. The government should restore an amount of ground equal at least to that occupied.

7. Extra land is necessary to the proper fulfilment of his contract.

8. Almost the entire working population have asked that the contractor be given more land.

9. The enterprise has substantially benefited the people of Quebec.

10. It has increased the property values in Montcalm ward by 19 per cent in three years.

11. Extensions in the form of one story buildings will not be unsightly or in actual view from the Grand Vallée.

12. The railway to be built to the docks will adjoin the property at present held by the contractor.

Now, I hope that we shall not be put in the position of having our hands tied in the future by anything the government or parliament will do now. It must not be overlooked that Sir Chas. Ross speaks of an investment of $1,000,000, and it must not be overlooked that he did not invest one dollar in these 19½ acres; so that above the value of the 19½ acres we shall probably be called upon to expend $1,000,000. It must not be forgotten that on the very day of the meeting of Canadian clubs in the opera house it was announced in the public press that the Ross rifle people had invested about $1,000,000 in that property. I merely wish to enter my protest, as far as it goes, against committing ourselves to any large scheme. I concur in the voting of $300,000, and I am quite in sympathy with the project of reclaiming the fields of Abraham and St. Foy upon the conditions already indicated and doing whatever is necessary to mark the great event that occurred at the city of Quebec at the time of the battle of the Plains of Abraham and in the following year, and as a tribute to the two great men who led the opposing forces at that time, but far more as an evidence of the happy manner in which the two great nationalities which then contended have become cemented and allied, and are working harmoniously together in the upbuilding of the great Dominion to which we belong.

Mr. SPROULE. On the first evening that this Bill was under consideration I made an effort to get some information. I do not know whether I am likely to be more successful to-day or not, but I would like to try. As I said then, this project contemplates putting the country to considerable expense. We know what the initial expense is; it is $300,000. What the subsequent expense is likely to be we are all interested in knowing. In the first place, the Ross rifle factory is located there. I would like to know what induced the government to give the Ross Rifle Company a lease of that location. The answer which the Minister of Militia and Defence gave was that the cartridge factory was near there. That did not seem to me sufficient to justify him in giving away 19½ acres of government land. It seems to me the relationship between the two cannot be such as to make it important to have one located close to the other. I

presume that cartridges could be carted a few rods or a few miles without very much trouble or inconvenience, and arms, when they leave the factory, have to be transported to various parts of the country. So I think we have not yet been given the whole reason why the company were compelled to put their factory there; but I think the House and the country are entitled to it. Then, why was the lease made an interminable lease, which practicaly meant giving away the land for ever? The trifling return of $1 a year for 19½ acres of land on the Plains of Abraham is no consideration at all, and I presume was inserted merely to make the lease legal. Then, what was the object which induced the government to give away that land for ever? It seems to me that information should be given to the House when this question was discussed at the time. I did not take very much interest in it, not being a military man. I left its discussion to others. This government seems to have the unhappy faculty of giving away land for practically nothing, and then buying it back at a high price. A few years ago it gave leases of timber limits for a mere trifle, and made those leases practically interminable. After a while the government decided to set apart forest reserves, and the lands they selected for that purpose happened to be the very lands for which they gave interminable leases. This proposal involves three things, it involves, first, the voting of $300,000 for a celebration. Whether it be wise or otherwise that we should vote this money, our patriotic aspirations and inclinations would induce us to go a long way towards a celebration of that kind and for that purpose. But I venture to say that a large percentage of the people will think it is an enormous sum. Many farmers in my riding will no doubt ask me: Did you think it wise to vote $300,000 for that celebration? I may say: Yes, we are a patriotic people, and the event was one which seldom comes in the history of our country, and we desired to surround it by as much eclat as possible and infuse patriotic spirit and inspirations into our people. But they may put me a great many questions and it will be impossible to give a justifiable answer why I was prepared to vote this sum. But admitting that I give a good defence and justification, they are apt to go further and ask me another question. They will say that there is involved in this, not only the subsidy of $300,000, but a good deal more. There is involved the cost of expropriation of a large amount of property, part of which belongs to the Ross rifle factory, on which the Ross Company puts a great value, and I would be very likely to have some one indiscreet enough to ask me this question: Is this intended as a means to buy out Sir Charles Ross, who has been struggling along doing something that many people think is absolutely of no value? When the government

want to go to a certain point, they never go directly, but travel around in a zig-zag way to reach it. Is this another effort to reach the point of recouping Sir Charles Ross for what has been to him, I am told, a very unprofitable speculation and a great loss to the country? Is that the aim in view? Is it hoped, through the glamour of this great patriotic celebration, to cover up the deal so that the people's attention will not be attracted to it at the moment? They will only think of it later when asked to vote a large amount for the expropriation. I am told that there is a great deal of other valuable property held there. I am told that, in all probability, if we buy out what some claim ought to be purchased for this park as a portion of the Plains of Abraham, it will cost probably half a million dollars to a million to buy out these other people. Is that the case or not? We ought to know something about it before we commit ourselves to this thing. If we could stop at the initial expense, it would not matter so much, but once we begin we shall have to continue and face greater expenditure in future. I am told that our future expenditure will amount to $2,000,000 to $4,000,000. We ought to know that before we pass the preamble of this Bill by which we will be committed to an expenditure of which we have now but a very vague idea. The preamble reads:

Whereas it is desirable, in the public interest of Canada, to acquire and preserve the great historic battlefields at Quebec, restoring so far as possible their principal features, so as to make them a Canadian National Park.

If any of these lands are owned by different people, it may cost us a lot of money to acquire them. That is something we ought to know more about. Then there is the cost of keeping up this park in the future. We are not told what that will reach. We are told it is intended to make a great national park, and it may be intended to build an extensive museum there, play grounds, monuments and other things that will involve great outlay. We ought to have some intelligent estimate of that outlay before committing ourselves to this undertaking. If it was only a question of $300,000 for the celebration, that would not take long to decide. I am inclined to think the House would not object to voting that amount, but we ought to have some estimate of the future expense before passing this Bill. What will it cost to lay out and keep up this park? What kind of monuments will we erect thereon? We are told that we are to have the volunteers from all over the country assembled there. I hope so, but what will the aggregate cost of that be? That is a feature about which we would like to know something. It seems to me that the conduct of the government has been very improvident all through this matter. First of all, they gave away some nineteen acres which they knew belonged to the Plains of Abraham, and which they knew would increase in value as time went on. We gave that away for ever for nothing, without ever anticipating that there would be a time in the future when we would have to buy it back. That time has come, and it has come quicker than was expected. The government are in this matter following the same policy as they have done with regard to the timber lands in the west. The country will ask the question: Is this a device to recoup the Ross Rifle Company for an unprofitable undertaking? Is that the aim of the government; and by consenting to this measure are we to be told afterwards that we committed ourselves to the future expenditure and therefore are debarred from criticising it?

Mr. ROBITAILLE. I think I can remove to some extent the scruples of the hon. member for South Simcoe (Mr. Lennox) and the others who anticipate that this scheme is broader than it purports to be by the Bill. What we are called on to vote is simply a contribution of $300,000. This is given for a certain work and will not be expended until parliament is given an opportunity to pronounce on the plans. It is just as when in ordinary life several friends make a collection of $2 or $3 each for a present, and the choice of the gift depends on the amount collected. I understand, by the plans of the Governor General that the public contribution raised may be as much as $1,250,000.

It is expected that in addition to the amount to be granted by this parliament, the city of Quebec, the province of Quebec, the province of Ontario, and possibly the French government will contribute, besides private subscriptions which are being solicited by several newspapers in Montreal. After a few months of this propaganda the commission will be in a better position to define the Act and scope of the plan, as its magnitude will depend largly on the amount of money available. The commission cannot bind parliament to any unwarranted expense as it will be seen from the Bill that the commission must before entering upon any work of improvement or construction or any work involving the expenditure of money, submit the plans to parliament.

The title and contents of the Bill do not indicate that the tercentenary feast and the converting of the Canadian battlefields into a national park are to be a joint celebration—the tercentenary has been used as a pretext to boost this park scheme. Why a pretext? Last year it was decided to celebrate the three hundredth anniversary of the founding of the city by Champlain. The appropriation which is about to be granted was then asked for and would have been given had not the Colonial Conference call-

ed away our worthy Premier, so that he was prevented from interesting parliament in this subject. Only within the last few weeks have we heard of this gigantic plan to be termed the Canadian National Park, or as suggested by some zealous persons, King Edward VII Park. Had not this park question mushroomed, the citizens of the Gibraltar of the North would have quietly celebrated their tercentenary. To-day, the scope of the celebration is to be broadened. If so, why not have on the commission about to be constituted to control the joint celebration, a greater number of Quebecers? Quebec city is most directly interested in these two celebrations. Within its walls the first suggestions was made. Why then should we permit the citizens of Quebec to be superseded by parties who shall enjoy the full credit of the ideas, suggestions and humble efforts of my co-citizens? I demand for Quebec city greater representation on this park commission. Have we no archeologists in Quebec? Have we no historic researchers? What about men like Dr. Harper, Earnest Gagnon, Fairchild, Chapais and so many others whom I could name you who are thoroughly familiar with the historical events of our city. Will these men be left in the shade and shall we permit a foreign majority—a majority of outsiders—less qualified for this special purpose, to rule this commission? It is not fair and equitable. Would the city of Toronto permit Quebecers or others than their own to have the last word in the arrangement and planning of a work similar to the one about to be performed in Quebec?

We of the city of Quebec feel a just pride in our origin and are extremely sensitive to any criticism which might arouse racial prejudices. I am most thankful to my honourable friends for their courteous and business-like discussion.

What name will this park bear? I was pleased to hear the right hon. Premier (Sir Wilfrid Laurier) state in introducing the Bill that a change of name would be a national desecration and an act of sacrilege towards Canadian history. That is all very well but as the commission, when appointed, will have practically a free hand, would it not be advisable to place in the Bill before it is read a third time, a condition that the words 'Plains of Abraham' shall be kept in the name to be adopted for this national park.

I stated a few moments ago that the idea of Champlain in this feast has been neglected. I sincerely trust that the commission will give him more prominence than he has had in the preliminary arrangements.

I have used the word 'scheme' in the first portion of my address. This word may not be the proper one to apply to the proposal under discussion, but has it not been used by several speakers? After the disclosures or more properly the charges of Mr. Nesbitt at the Public Accounts Committee public opinion may suspect, that there is under this park celebration a method of doing away with the Ross rifle factory. This suspicion is based on the rumour that the present Canadian government inspector of small arms has been recommended to Canada by the British war office.

Sir WILFRID LAURIER. Order, this is absolutely irrelevant.

Mr. DEPUTY SPEAKER. The hon. gentleman is wandering from the subject; we are on the preamble of the Bill.

Mr. ROBITAILLE. I am simply stating the reason why public opinion thinks that under this proposal of a park there is a scheme; and as the Ross rifle question was brought in and I am trying to make the point that the Ross rifle factory should be preserved, I do not think I am going too far out of order. It is stated that the manufacturers of the Lee-Enfield rifle, in which Mr. Chamberlain's brother is interested, brought their influence to bear in suggesting the name of that inspector.

Sir WILFRID LAURIER. Order.

Mr. DEPUTY SPEAKER That is out of order.

Mr ROBITAILLE. At all events this was shown by a letter brought before the Public Accounts Committee in which the Lee-Enfield was recommended in preference to the Ross rifle. This gentleman, by his demands for constant changes in the rifle, involving a great expenditure of money by the Ross Rifle Company in experimenting

---

Mr. DEPUTY SPEAKER. I do not think the hon. gentleman is at liberty to discuss the merits of the Ross rifle on this item.

Mr. ROBITAILLE. However, this gentleman——

Mr. DEPUTY SPEAKER. The hon. gentleman is clearly out of order.

Mr. ROBITAILLE. I see no objection to the creating of a park on this great battlefield, but I see no reason why the commission now being appointed should, in the near future, consider the purchase of the Ross rifle factory. An industry like this so closely connected with war, will not mar any battefield site any more than a fort or a powder magazine. The purchase of the factory will take a goodly amount of money out of the celebration funds, as I understand the factory is valued at $900,000. Under present conditions, Sir Charles Ross would feel justified in keeping the cash and not investing any more money in the manufacturing of rifles. If the factory is not disturbed, it means the preservation for the city of Quebec and for many of my constituents of an important industry and

the continued advantage of the $5,000 weekly wage list paid by Sir Charles Ross. Not only would this be an advantage to the city of Quebec, but it would also tend to allay the feeling of suspicion among our friends of the opposition in relation to this plan. I can assure them that I was extremely gratified at the friendly spirit they showed in discussing the Bill. This contribution of $300,000 is granted provided the words 'Plains of Abraham' be kept in the name that should be adopted for this park. In conclusion, Mr. Chairman, I wish to emphasize my adhesion to the scheme and to ardently support the present Bill and its intention. I sincerely hope that the Prime Minister will take note of the suggestions I have made, namely, a more numerous representation of the citizens of Quebec on the commission, the deferring for some years of the purchase of the Ross rifle factory, and the maintenance on the pages of history of the name 'Plains of Abraham.' I take great pleasure in recommending these suggestions to the support of my colleagues from the city and district of Quebec.

Mr. HENDERSON. It seems to be a foregone conclusion that the Bill almost in its entirety will become law. To my mind it is a very extraordinary measure. I am not surprised at it, because during my parliamentary experience at least we have had nothing like it to serve as a model. Looking at the preamble, it certainly has a very innocent appearance. On this question I differ from a number of hon. gentlemen on this side of the House, and I assume a great many on the other side, and I note that very few hon. gentlemen behind the treasury benches have expressed any opinion at all. But innocent as the Bill looks, to my mind it is like a serpent, the sting is in the tail. The last clause of the Bill is the one to which I more especially object. I do not think parliament has any mandate from the people of Canada to appropriate $300,000 to be blown up in gunpowder, to make a big blow out to please the citizens of the city of Quebec. I do not believe that the people of Canada really understand this Bill. The right hon. the Prime Minister in introducing it said that it had been discussed in a great many ways, but it seems to me that the question has always been associated with the one expenditure of $300,000, and the people have not yet learned what that money is for. The general impression is that it is probably all the money that will be required to give effect to the provisions of this Bill, whereas we now understand that it will only be a very small portion of it indeed. I am sure I have no mandate from my constituents to support an appropriation of $300,000 for the purpose of the celebration at Quebec. We must bear in mind that the event to be celebrated took place upwards of 150 years before the great battle that was fought on the Plains of Abraham. The two things are entirely separate and distinct. This $300,000 is to celebrate the first event, the founding of the city by Champlain. Now, it is no unusual thing in this country for cities and towns to celebrate their fiftieth or hundredth anniversary, and as a rule I think the money is provided by the citizens of the particular place whose foundation is to be celebrated. I do not know any reason; I have heard none given, and I have listened to all that has been said in this debate, why the people of Vancouver or Victoria, or Winnipeg or Toronto, and other citizens throughout this country should be called upon to contribute to a celebration in the city of Quebec more than in any other city in the Dominion. I think the people of Quebec have just as good a right to furnish the money for their own celebration as the people of any other city in Canada.

Now, the purpose of this Bill seems to be two-fold. First, to acquire and preserve the site of the historic battlefiels of Quebec. I regret that this Bill has been brought forward with so much haste, that the government has not taken more time to mature a Bill which would give satisfaction to the demands of other parts of the country. Why should all this money be appropriated for one particular city, to the neglect of other places where notable battles were fought, some of them perhaps of nearly as much importance as the one that was fought on the Plains of Abraham, and had some of these battles not been fought probably we would not have the Canada we have to-day. These are to be overlooked; these are to be neglected, and this large expenditure, looming up no doubt in the millions, is to be made in and around the city of Quebec, apart from the $300,000 that is to be appropriated during the coming season for celebrating the founding of Quebec by Champlain. The two purposes then are to acquire and preserve these historic battlefields in and around Quebec, and to celebrate the 300th anniversay of the founding of the city. I do not wish to say anything further about it. I may be accused of a lack of loyalty, of a lack of patriotism. But I take this ground, that I have no mandate from my constituents to vote in favour of these appropriations. If the government desires to know the feeling of the country on this question, a wise plan would be to allow the whole matter to go over for one year, during which time no doubt there would be an opportunity for the people to make their opinions known. If they approve of the scheme, the government would then be justified in carrying it into effect. Before this Bill finally passes, if an opportunity is offered me, I shall feel obliged to record my vote against it, with regard to the battlefields as well

as with regard to the appropriation of $300,000.

Mr. TAYLOR. A few years ago the Prime Minister came down to this House with a Bill to build the Grand Trunk Pacific Railway, when he assured the country that $13,000,000 would be the total expenditure in connection with that scheme. According to the best calculations that statisticians could prepare, $13,000,000 was to be all that was required for building the Grand Trunk Pacific. I would like to inquire from the Prime Minister how many millions have already been expended on that road? over $13,000,000, and before the work is completed I have no doubt it will reach $150,000,000 or $200,000,000. In my opinion this scheme will be on a par with that. We are to vote first $300,000 for a celebration. I am in accord with that, because the King, although he cannot come himself, is going to send his son, and I think the country should do everything possible to give him a fitting reception in connection with this tercentenary. The preamble of this Bill commits this country to the expenditure of a couple of million of dollars. The first thing we have to do is to dicker with Sir Charles Ross. This government, after having made a contract, compelled him to put that factory in the city of Quebec gave him what is equivalent to a deed of 19½ acres of land right in the centre of these battlefields. Two or three acres would have been sufficient for the purpose. I understand that he came back last year and that the government were prepared to grant him another 50 acres of land for the purposes of his factory had it not been for the protest of the provincial premier or the mayor of the city of Quebec, in consequence of which the government backed down.

Sir FREDERICK BORDEN. How many acres?

Mr. TAYLOR. He applied for 50 acres.

Sir FREDERICK BORDEN. There are not 50 acres. There is not a word of truth in that statement.

Mr. TAYLOR. I understand that he made that application.

Sir FREDERICK BORDEN. For 50 acres?

Mr. LENNOX. Tell us how many acres.

Sir FREDERICK BORDEN. I do not think it was acres at all; a few square feet certainly not more than an acre—and as to its being in the centre of the battlefield, it is on the slope just above the river and is not near the battlefield.

Mr. TAYLOR. Well, I understand that the scheme proposed took this in. This Sir Charles Ross has a deed for 19½ acres of valuable land and he can do as he pleases with it, whereas the fact is that two or three acres were all that would have been required for the factory. I know of a great many larger institutions than Sir Charles Ross' factory is which have not more than three or four acres of land altogether. Yet he has 19½ acres of land which, as is foreshadowed in the preamble of this Bill, we commit ourselves to repurchase, and which comprises a portion of the original Plains of Abraham. If the intention of the right hon. Prime Minister is carried out, we shall be obliged to recoup Sir Charles Ross for the return of this 19½ acres of land that the government gave him for a dollar a year, for his buildings and the good-will of his business. No doubt it will amount to a million and a half or two millions of dollars, and there may be other property acquired in the same manner. I think that if any scheme of that kind is to launched the country should know what it is committing itself to and what the cost will be.

Mr. SCHAFFNER. It seems to me that once the preamble is passed it does not matter very much about the rest of the Bill. I have had some correspondence with constituents whom I have the honour to represent, and I have been unable to answer the questions that have been put to me. That is the reason why I have anything to say in connection with this Bill to-day. As far as the $300,000 is concerned to assist in the celebration, while some of us who are representing farming districts may have a little difficulty in explaining our vote, I do not hesitate for one moment to record my vote in favour of it. I think I will be able to give a satisfactory reason for the expenditure of $300,000 in connection with this celebration. But I see that the preamble says:

> And whereas it is expedient to provide for the constitution of a commission for the acquisition, management and control, subject to the provisions of this Act, of the said battlefields.

If that commission is appointed by this government and provision is made for the acquisition of this land, to what extent is this parliament obligated?

Sir WILFRID LAURIER. Not one dollar. The commission can make a report, but the commission is not authorized to spend a dollar for the acquisition of property until it has been approved by parliament.

Mr. HENDERSON. Only the $300,000.

Mr. SCHAFFNER. I understand they have no power to pay for any land until a Bill is submitted to and approved by parliament. But, in the nature of things, when it has gone that far, and a commission is appointed for that purpose, I think it very likely that this parliament will be asked to vote whatever sum of money is asked for by this commission. The illustration given

by my young friend from Quebec does not seem to me to have been very happy. He says that the kind of present which they would buy would depend on the amount of money collected. It seems to me in this case to be just the reverse—that the amount of money that is granted by parliament or collected depends on the present we give to the Ross Rifle Company, or to whomever we may give this money. It seems to me that in order to vote intelligently on this matter we should know what it is going to cost us to buy the factory which has been erected by the Ross Rifle Company or any other building that may be erected on that ground. But I have really received the information I wanted, so that I will not have anything more to say. What I wanted to understand was the obligation of this House beyond the $300,000, and I have the word of the First Minister that we have no other obligation. Still, for all that, I think it would have been more of a business proposition if he had laid before parliament some estimate of the amount of money that this parliament would be called upon to pay for the acquisition of the Ross rifle factory or any other building which may be on that ground.

Mr. ARMAND LAVERGNE. I want to offer a few more remarks. While agreeing practically with some of the things said by the hon. member for Halton (Mr. Henderson), and in which there was a good deal of truth and common sense, I think that the country at large is desirous of contributing to the tercentenary of Quebec, because it is practically, as has been said very rightly, the 300th anniversary of the birthday of Canada. We all know that the foundation of Quebec by Samuel de Champlain was an event of more than local significance, and that the celebration is a national event, and I am sure that the electors of my hon. friend from Halton will be only too glad to support him if he gives a vote in favour of this project. At the same time, I think that the Bill could be improved. If it is going to be a national park and if the Ross rifle factory stands in the way, why not leave the Ross rifle factory aside? There is quite enough ground to make a beautiful and immense park without touching the Ross rifle factory at all. It might be in sight from some parts of the park, but I am sure that there is so much ground that from the centre or opposite end of the park the rifle factory would not be in view.

Sir WILFRID LAURIER. Where is there any provision in the Bill that the Ross rifle factory is to be expropriated?

Mr. ARMAND LAVERGNE. I find that especially in the discussion, but I find also that the commission have powers to be exercised subject to the approval of the Governor in Council.

Sir WILFRID LAURIER. No; of parliament.

Mr. ARMAND LAVERGNE. This commission is going to make a report to parliament. We might simplify the work of the commission, help the passing of this Bill and assist the commemoration of the tercentenary by putting in the Bill that the part of the Plains of Abraham where the Ross factory stands will not be in question at all. I think there will be enough ground left to make a national park on the Plains of Abraham aside from the property occupied by the Ross rifle factory.

Sir FREDERICK BORDEN. The Cove fields are not part of the Plains of Abraham. The Ross rifle factory is not on the Plains of Abraham and not near the Plains of Abraham.

Mr. ARMAND LAVERGNE. It may be but it is just as much on the Plains of Abraham as where the battles we speak of are supposed to have taken place.

Mr. SPROULE. We were told in this House that the Ross Rifle factory was to be built on the Plains of Abraham.

Sir FREDERICK BORDEN. No, never.

Mr. SPROULE. That is my recollection.

Sir FREDERICK BORDEN. No, on the Cove Fields.

Mr. ARMAND LAVERGNE. The Plains of Abraham are called after one Abraham Martin, a Scotchman who came over with Champlain. Abraham Martin was surnamed L'Ecossais and he was given that land which was situated outside the walls of the city from the cliffs above the St. Lawrence river down to the cliffs above the St. Charles river. Of course the city has been growing and the Plains of Abraham have been contracting until they have become what is left of them to-day. As a matter of fact the Ross Rifle factory is on what is now called the Cove Fields, but it is on what was originally called the Plains of Abraham. I believe that the commissioners should be instructed, either in the Bill or otherwise, that there is enough ground to make a park of what is left of the Plains of Abraham without touching the Ross Rifle factory at all. Then, I have another objection and that is to the title of the Bill, it is called 'An Act respecting the Canadian battlefields of Quebec.' Why not call it an Act respecting the Tercentenary of Quebec. As it is now, the Bill might apply not only to the Plains of Abraham but to the St. Charles valley where there are battlefields and to that part of Beauport and Montmorency where battles took place,

Mr. W. F. MACLEAN. What about Montgomery's engagement.

Mr. ARMAND LAVERGNE. Exactly, it would apply to the lower town where Montgomery was defeated, and I might

mention that the part of the battlefield where Wolfe ascended the Foulon has been desecrated by a railway. Why not make the title of the Bill more in accordance with the idea which is amongst the people, namely, the celebration of the three hundreth anniversary of the foundation of Canada. There is another part of the Bill in clause 1 which is to my mind the most objectionable.

Mr. DEPUTY SPEAKER. That clause has been adopted.

Mr. ARMAND LAVERGNE. Can I not discuss the principle of the Bill on the preamble.

Mr. DEPUTY SPEAKER. You can discuss the principle of the Bill but not clause by clause.

Mr. ARMAND LAVERGNE. The preamble states the reason the Bill should be passed and I think I have a right to discuss it. In this part of clause 1 I find that if the government of the United States or if the government of any self governing colony of the Empire contributes a certain sum——

Mr. DEPUTY SPEAKER. Unless the commission should decide to reconsider this clause, this discussion is out of order.

Mr. ARMAND LAVERGNE. I am discussing the general principles of the Bill on the preamble.

Mr. DEPUTY SPEAKER. The hon. gentleman cannot refer specially to any particular clause of the Bill.

Mr. ARMAND LAVERGNE. I have the right to state my reasons why I support the Bill or do not support the Bill.

Mr. DEPUTY SPEAKER. You cannot discuss it now clause by clause.

Mr. ARMAND LAVERGNE. If that is your ruling I will submit to it, but it is a new ruling.

Mr. LENNOX. Although the hon. gentleman may not be able to discuss a particular clause of the Bill he can refer to it for the purpose of illustrating his argument.

Mr. DEPUTY SPEAKER. By way of illustration a reference may be made to a clause but the clause may not be discussed.

Mr. ARMAND LAVERGNE. I am showing why the preamble should be amended. The preamble says it is expedient to constitute a commission for certain purposes and it is provided that if the government of the United States or of any self governing colony of the Empire contributes $100,000 to the purposes of the commission such government shall be entitled to appoint a commissioner. Now, to my mind this commission should be composed exclusively of Canadians, because this celebration is going to be exclusively a Canadian celebration. We are not celebrating the anniversary of the birth of the empire, but we are celebrating the anniversary of the birth of Canada. I think it would be against the municipal liberties of the city of Quebec that a commissioner from any other colony should be empowered to say whether such a building or such a monument in the city of Quebec shall appear or disappear. It is the absolute right of the municipality of the city of Quebec to deal with that, and this parliament has no right to interfere. This parliament has the right to do what it pleases with the ground which belongs to the Federal government but it cannot intrude on land which belongs to the city of Quebec, and it cannot name any commissioners, much less commissioners from outside of Canada, and give them votes to interfere with the municipal rights of the city of Quebec. Another thing this parliament cannot do, and that is, that it cannot take away land which the Crown has given for 99 years to a corporation or individual without paying that corporation or individual an indemnity, and without going before the courts. I trust the preamble will be amended as I have indicated and that the title of the Bill will be changed.

Mr. BLAIN. I wish to express my disapproval of the Bill in its present form. I believe it to be hasty legislation on the part of the government. If they had under consideration this celebration at Quebec then they should have given notice of it not later than last session of parliament, and they should have corresponded with the various provincial governments asking their co-operation in making the tercentenary celebration a truly national one. I do not like the clause which says that any provincial government which subscribes $100,000 or more shall be allowed to take part in the celebration and name a commissioner. There may be provincial governments which have $100,000 to afford for this purpose but there may be others equally loyal who cannot spare the money, and they are to be debarred from this Canadian celebration because they are not financially well to do. I am quite willing as a representative of the people that we should contribute towards celebrating the tercentenary of the foundation of Canada and particularly to give a fitting reception to the representative of His Majesty who is coming to take part in it. But to say that we should adopt a measure of this kind is a different proposition entirely. For myself, I am opposed to the Bill, and I wish to express my opposition to it in the most emphatic terms. I say that the government should be condemned for presenting, within a few months of the proposed celebration, a Bill which will entail on the people of Canada very large contributions. I am not going

into the question of purchasing and beautifying the Plains of Abraham; that is a matter for future consideration, under the amended clause as presented to-day. I wish merely to express my disapproval of the Bill. I say the government should have taken all Canada into their confidence befor proceeding with it. Last year they should have entered into correspondence with the local governments with the view of obtaining their co-operation. Instead of that, they practically say to them now: We are going to have a celebration; if you wish to contribute, you can come in; if you do not contribute, you cannot take part. For these reasons I condemn the government for this and some other clauses of the Bill which I need not now discuss.

Mr. BARR. It seems to me that this Bill is a very objectionable one. I presume the promoters of it had a double object in placing it before the House as they have done. In the first place, it asks for a contribution of $300,000 towards a celebration during the coming summer. If that were all, I do not think this House would object to it, although I for one see no valid reason why the Dominion of Canada should contribute towards a celebration which probably is more provincial than federal in character. But that is only the small end of the wedge. The big question behind it, which probably the promoters of this Bill imagine the people of the different provinces would not take cognizance of, is the probability, if this Bill goes through, that as a result of it many millions of dollars will have to be spent in the next few years. Under these circumstances, with the measure sprung upon the House with such short notice, without the different provinces being notified of it, without the free and independent electors having an opportunity to instruct their representatives how they should vote upon it, I feel it to be my duty to vote against it. We have no idea what expenditure it will involve. On former occasions we were told that the Grand Trunk Pacific would be built for $13,000,000, and to-day we know that it will cost $150,000,000. Probably there will be just as much discrepancy between the promised expenditure and the actual expenditure in connection with this Bill. I do not vote against the Bill because it concerns one province more than another; I do so because of the uncertainty behind it. We are willing to vote a small amount to celebrate the event; the $300,000 is not very large; we could accept that. But at this time in the history of our Dominion, when there is a scarcity of money, when factories are closing one after another, when our Finance Minister finds it very difficult to float his loans, I submit that we are not pursuing a wise course in placing upon the country a burden of several millions, the exact amount of which we have no means of determining. I submit that this part of the Bill should be left over for another year, until some estimate can be made of the amount that will be required. At the commencement of this session we heard it whispered around the corridors of this House that the Ross Rifle Company, having been unsuccessful, were going to unload their enterprise upon the country. If this Bill goes through, they will accomplish their object. There is no doubt that they have the government in their grasp, and they can squeeze one or two millions at least out of them, which will probably pay them for the very bad rifle they have produced and the very bad speculation they have got the country into. Under these circumstances, I consider this Bill to be not in the interests of the Dominion, and I intend to vote against it.

Mr. W. F. MACLEAN. Mr. Chairman, I intend to vote for the Bill, and yet I am not voting to interfere with the freedom of any subsequent parliament. We all know it is impossible for a parliament to bind a subsequent parliament; and therefore if this parliament passes the Bill, any subsequent parliament can repeal it, discharge the commission, and refuse to vote any money for the object of the Bill. But I vote for the Bill because it commemorates Samuel Champlain, who to my mind is the real hero of Canada. All the romance connected with the early history of this North American continent surrounds his name and those of the pioneers who founded the first colony in Quebec and the names of those other French-speaking pioneers who settled in the country now known as the province of Ontario. Champlain was Canadian to his finger tips. The visions which he saw have in great measure been realized by the legislation of Sir John Macdonald. Champlain was the precursor of Sir John Macdonald, and these two men, the one French-speaking, the other English-speaking, represent the two races in this country; and what they did went further than what any other men have done to make this a Canadian country and a great country. So I believe the people of Canada will willingly vote this money for the celebration of the tercentenary of Quebec and also to recover the battlefields as proposed in this Bill. But I regard the story of the pioneer and the early settler more than I do the story of the warrior. I do not attach so much importance to the commemoration of battlefields as I do to the commemoration of the early pioneers and founders of this country. What my hon. friend from Montmagny (Mr. Armand Lavergne) said yesterday about there being two kinds of Canadians in this country did not quite commend itself to me. There is only one definition of a Canadian for me, and that is one who is sprung from the Canadian soil, whatever his origin is, whether he speaks the English tongue or the French tongue,

who is proud of having sprung from that soil, and who would have no other birthplace for his children or his descendants. It is because we are sons of Canada, sons of the soil of Canada, that we join together in commemorating the foundation of our country and in commemorating, if we must, any event, even a battle, if it tended to the consolidation of the country and the perpetuation of the ideas we have at heart. I believe that the people of Canada, from one end to the other, will endorse this proposal to commemorate the battle ground and the early foundation of this country and they will do it in a full hearted and generous way and will endorse whatever expenditure may be made in connection with the proposition. On the understanding that any expenditure must be subject to the careful scrutiny of parliament, I most heartily vote for this proposal, and hope that the celebration will be worthy of the occasion and that the commission will see that the work committed to it is discharged in a way that will commend itself to the approval of the country.

Mr. SAM. HUGHES. Before this item passes I wish to say a word. Some years ago, after the Ross Rifle factory was established in the city of Quebec, there was an agitation started for its removal. That was long before this matter was heard of. At that time it was rumoured that the Canadian Pacific Railway wanted the site for an up-town station, and I found no objection among my colleagues at the time to handing it over to that company. That would have removed many of the objectionable features, would have improved the place exceedingly, and have made a very fine up-town station. There is no doubt that the factory is an eyesore. The first time I visited the city of Quebec and the Plains of Abraham I was disgusted to find that that old historic field had been given over to private residences, jails and there was even a fine hen factory surrounded by a picket fence.

An hon. MEMBER. A government factory.

Mr. SAM. HUGHES. I did not inquire. At all events that was years ago. When the Ross rifle factory was spoken of, I again protested but was told there was no other spot around the city where it could be established. At that time I was opposed to the rifle factory going to Quebec. I wanted it established in some place inland. The United States keeps their rifle factories inland and so does the British government, and I considered that the safest place, the place most remote from liability to capture, should be the one selected as the site for the manufacture of our rifles. However, it was established at Quebec, and whether it was established on the Plains of Abraham or elsewhere, as far as this House was concerned, it had nothing to do with it.

Mr. W. F. MACLEAN

I heartily approve of the plan formulated by His Excellency to clear the battlefield of buildings of any description that may be upon it. There should not be a solitary ratepayer in the Dominion who would not endorse such a proposition. The fact that the Ross factory obtained a footing there, before this project was mooted, cannot be allowed to interfere. I do not think it alters the condition a particle whether it costs $100,000 or $2,000,000 to get it out of the way. Figures have been gone into at more or less length, and it is estimated a certain sum will be necessary to expropriate all the buildings and carry out all the improvements.

Mr. FOSTER. How much?

Mr. SAM. HUGHES. My hon. friend must have seen it in the papers as well as I, between $1,000,000 and $2,000,000. The figures were given by His Excellency, and I imagine he knew what he was talking about. If that can be done, I am heartily in accord with the idea, even though the Dominion should have to bear two or three times the cost of $300,000. I do not think that this is the time, at all events, to raise any objection. Under this Bill every act of these commissioners will have to come before parliament and be discussed and debated. If the object be to condemn the government for putting the factory on the Plains of Abraham—and I think we should all join heartily in that—there is a proper time to carry out that part of the programme. I do not see anything to be gained by discussing the matter at greater length on this occasion. The Ross rifle factory or any other buildings, and there are other buildings by the dozen that will have to be expropriated—all that will cost a good deal, but I do not know that the present is the opportune time to discuss it.

As regards the cause of the celebration, I had a few words to say yesterday. I did not then know that an understanding had been reached by the First Minister with the leader of the opposition that the matter would be adjourned until to-day, and I am sorry I did not know of that arrangement or I would have reserved my remarks. But as I have said I heartily agree that no man deserves better to be honoured than Samuel de Champlain. Let me cite an instance in his life which is not generally known. He was the first on record to show that there should be a Panama canal.

Mr. ARMAND LAVERGNE. And a Georgian Bay canal too.

Mr. SAM. HUGHES. He laid the project before the French government in those early days.

Mr. W. F. MACLEAN. He should have been called Theodore.

Mr. SAM. HUGHES. In every sense he was a man of great foresight. He wanted

to lay the foundation deep and strong, all along the shores of the Atlantic ocean, clean from the Canadian borders down to Brazil, of a future composed of the best class of free men that could be obtained from the old world in order that this continent might grow up free from the tyrannies and shackles that were crippling the continental nations of Europe. I shall heartily support the motion.

Mr. LENNOX. I was referring a few moments ago to the tenth section. My attention was called to the fact that before I came in that section had been amended and I assumed it had been amended on the lines suggested by my hon. friend from North Toronto (Mr. Foster) yesterday. I would call the attention of the right hon. gentleman to the advisability of conforming to what was suggested yesterday. I understand that in the fifth line the word 'parliament' was substituted for the words 'the Governor in council,' but the hon. member for North Toronto yesterday also suggested that after the word 'commission,' in the sixth line, some words should be introduced such as 'beyond the said sum of $300,000,' or words to that effect, so that no expenditure shall be made by the commission beyond the said sum of $300,000 until it has been approved of by parliament. That would prevent any misapprehension.

Sir WILFRID LAURIER. I do not think there is necessity for that. The last clause shows conclusively that the $300,000, if it is spent in connection with the Royal visit, is to be expended under an order in council; but every other expenditure is to be voted by parliament.

Mr. LENNOX. It ought to be stated in so many words that there is to be no expenditure beyond that amount until it is approved by parliament.

Sir WILFRID LAURIER. I would ask my hon. friend to look at the last sentence of the last section:

And that the commission may, subject to the sanction and approval of the Governor in Council, expend and lay out, for the purposes of the said celebration, such portion of the sum of three hundred thousand dollars hereinbefore appropriated as is authorized by the commission subject to such sanction and approval.

Mr. LENNOX. Up to the extent of $300,000 parliament does not want to control the matter, but anything beyond that we want to pass on.

Sir WILFRID LAURIER. They cannot make expenditures except for the celebration without the sanction of parliament.

Bill, as amended, reported.

Sir WILFRID LAURIER moved the third reading of the Bill.

Some hon. MEMBERS. Carried.

Mr. LENNOX. Next sitting of the House.

Sr WILFRID LAURIER. No, no; now.

Mr. SPEAKER. The objection is raised.

Mr. LENNOX. I have very strong views on the question of preambles, and I think this should be recast so that it will be more in accordance with the provisions of the Bill. In fact, I think it would be more satisfactory if the whole Bill were recast so as to deal concisely with the one matter of the $300,000.

Sir WILFRID LAURIER. I can see no reason why the Bill should not go on. If the celebration is to be held on July 22nd, the commissioners, who have yet to be appointed, will have not a moment to lose. I do not see why the Bill should be obstructed at all.

Mr. ARMAND LAVERGNE. I have an amendment to propose which I am ready to offer now.

Mr. FOSTER. The fact is, I suppose, if any member objects——

Mr. SPEAKER. That is hardly so. The second reading was passed some days ago, so that, strictly speaking, the Bill can go on unless there is an amendment.

Mr. FOSTER. I have no objection, as far as I am concerned, to taking up the matter, discussing it and passing the Bill now; but I do not think anything will be lost by thinking it over until Monday or Tuesday, as the Senate is not in session.

Sir WILFRID LAURIER. It will have to go to the law clerk and the Senate, and there is not a moment to lose.

Mr. LENNOX. I have no desire to obstruct the Bill. I understood that, as there was an amendment, if any member objected the Bill could not be read a third time now, but I do not want to take any technical objection. Probably if I express just what I feel I will have done my duty, and I recognize that as the Prime Minister has decided that the Bill must go through, my effort to delay it would not be effectual. This preamble, I feel, goes far beyond what we should express in connection with the matter that we are now providing for. What we specifically provide for is a sum of $300,000 towards the celebration. The preamble says:

Whereas it is desirable, in the public interest of Canada, to acquire and preserve the great historic battlefields at Quebec, restoring as far as possible their principal features, so as to make them a Canadian National Park.

Subject to certain qualifications, that may be quite true, but it is not desirable to commit ourselves to that unqualified proposition that the park is to be acquired upon any terms. I am prepared to join the acquisition of these battlefields if it can be done on

reasonable terms, but if we are to be held up, as it were, by an institution such as the Ross Rifle Company, I think we should pause before committing ourselves to the purchase of these battlefields. The preamble further says :

And whereas it is expedient to provide for the constitution of a commission for the acquisition, management and control, subject to the provisions of this Act, of the said battlefields.

That is probably less objectionable, having the phrase 'subject to the provisions of this Act.' But to sum up, I do not think that we should go one step to-day beyond providing a fund for the proper celebration of the founding of Quebec upon the occasion of the visit of the representative of His Majesty the King. To that extent I am in harmony with the Bill, beyond that I am not. As I say, if in the end it appears that a feasible scheme can be laid before parliament by which we can acquire these battlefields and put them in proper condition at a reasonable price, I for one will be in hearty accord with it. In saying that, I do not desire to obstruct the Bill, nor to say anything more about it, but to leave all responsibility with the government.

Sir WILFRID LAURIER. I have no fault to find with the manner in which the hon. gentleman has presented his views. The preamble says that it is desirable to acquire and preserve the great historic battlefields at Quebec, to restore so far as possible their primitive features and to make them a Canadian national park. I understand my hon. friend approves of this idea, but he says that he is only in favour of it provided it can be done on reasonable terms. If the terms are too extravagant, laudable as the object may be, he would not concur in it. So far also I agree with him. But how do we propose to carry out this idea ? We do not propose to act without information. We propose to appoint a commission whose duty it will be to inquire into the subject and report to parliament what ought to be done for the preservation of the battlefields, what ought to be done to carry out the very objects the hon. gentleman has in mind. If the bill provided that the money should be expended, as is usually the case, upon the authority of the Governor in Council, my hon. friend's objection would be well taken. But the moment that objection was made to me by the leader of the opposition to-day, and that it was preferable to have a plan prepared by the commission and sanctioned by parliament, not by government, I agreed at once ; I was satisfied that should be done. Therefore when we have a report of the commission that, in order to preserve the battlefields, we should have to pay so much, or whatever the sum may be, or two millions, or five hundred thousand dollars, or whatever the sum may be, then it will be for us to determine whether the cost is too heavy and whether we should approve of the plan.

Mr. FOSTER. The Prime Minister has rightly said that we should not undertake the responsibility of the acquirement of these lands until parliament has had fuller opportunity to inquire into the question. But is there still a sufficient safeguard ? I am not a lawyer, I do not know what the word 'desirable' means, but I would think that a thing desirable is something that though we may never be able to overtake it on account of its cost, when you decide whether you are to have your desire met, and you find it will cost too much, you have to deny your desire.

Mr. W. F. MACLEAN. All we commit ourselves to is the appointment of a commission and the spending of $300,000

Mr. SPROULE. My understanding has always been that when a Bill was reported without any amendment, it is to be read forthwith, but if there has been an amendment it is not the custom to read it the same day. Our rules are clear enough on that point. Rule 54 says :

All amendments made in committee are reported by the chairman to the House, which shall receive the same forthwith. After report the Bill is open to debate and amendment, before it is ordered for a third reading. But when a Bill is reported without amendment, it is forthwith ordered to be read the third time at such time as may be appointed by the House.

Now this Bill has been reported with amendment, therefore, according to the practice of the House, I do not think it can be read a third time to-day.

Mr. SPEAKER. There is no doubt a Bill can be read a third time at once when there is no amendment. The reason the Chair asks when the Bill shall be read a third time is to test the opinion of the House whether it shall be read immediately or not. If an hon. member asks that it be postponed to a later date, the third reading can be postponed if the House so directs. I think it is quite competent for the House also to order that this Bill be now read a third time, and that is the question now before the House.

Mr. ARMAND LAVERGNE. I desire to move an amendment which I was not able to do in committee, having been prevented by a snowstorm from reaching Ottawa.

Sir WILFRID LAURIER. The question is not that the Bill be read the third time, but whether the Bill be now read the third time.

Mr. SPEAKER. If it is desirable to test the question whether the Bill shall be read the third time, I can put the motion in

that way. I thought the House had come to the conclusion that it should now be read the third time.

Mr. ARMAND LAVERGNE. I move:

That the Bill be not now read the third time, but that it be sent back to Committee of the Whole with instructions to amend by striking out paragraph 3 of clause 1 of said Bill.

I do not make this motion for the purpose of obstructing the Bill, because I am heartily in favour of the principle of the Bill. Clause 3 of section 1 provides that the government of the United Kingdom, or any self-governing colony of the empire which contributes a sum of not less than $100,000, shall be entitled to appoint a commissioner, and such commissioner shall hold office during the pleasure of the government which appoints him. Now if this festivity has any special character, it is going to be a purely Canadian festivity, and I see no reason for the appointment of commissioners from the outside. Of course we shall be pleased to see present any representative that the United Kingdom may choose to send we shall be pleased to see from any of the self-governing colonies any representative to this festivity. At the same time, it is going to be a Canadian festivity, whereas this clause gives it an imperial character, makes it an imperial festivity, or an imperial apotheosis. That is not at all the idea of the gentlemen who started this movement. We are celebrating the anniversary of the foundation of Quebec by Champlain, which is indeed the foundation of Canada, and I see no reason why we should beg the other self-governing colonies or the United Kingdom for money to help us celebrate our own national festivity. This is not a festivity in which Australia is concerned, nor any other colony. I think we should be sufficiently patriotic not to go begging to other colonies or to the United Kingdom to ask them to help us celebrate the tercentenary of the founding of Quebec.

We are infringing on the rights of the people of this country in that this legislation would be ultra vires. How can the government of any other colony appoint a commissioner to act in this country? Which government is going to appoint him? Is it the government of any of the other self-governing colonies? Such an appointment would be perfectly illegal. I do not think that the people of this country can appoint a commissioner from the outside and vest him with rights which belong to a municipality or to the province of Quebec. Suppose all these reasons were not good, and suppose that the government had the right to appoint such commissioners, and suppose that the government of India, South Africa or any colony had also the right to appoint a commissioner, I think that our self-respect, pride and patriotism would deter us from putting a clause in this Bill which practically means that we are going begging to other countries and asking them to come and help with the celebration of our national festival. It is not very long ago that this parliament voted $100,000 in aid of the sufferers by the San Francisco disaster and we all remember that San Francisco, while acknowledging the kindness of the Canadian government, refused the money, stating that they were quite able to take care of their own people. I think that on an occasion of this kind the people of this country who are going to celebrate the 300th anniversary should have sufficient pride and patriotism to spend their own money and not go begging to other colonies for subscriptions in connection with these festivities. This is a festivity which will have to be entirely Canadian and national or it will be a decided failure. Therefore, I think the House should accept my amendment to reconsider the Bill and strike out that clause which is certainly an obnoxious and ill-considered portion of the Bill.

Amendment negatived.

Sir WILFRID LAURIER moved the third reading of the Bill.

Mr. SPROULE. I would like to call your attention, Mr. Speaker, to rule 54 which says that:

All amendments made in committee are reported by the chairman to the House, which shall receive the same forthwith. After report the Bill is open to debate and amendment, before it is ordered for the third reading. But when a Bill is reported without amendment, it is forthwith ordered to be read a third time at such time as may be appointed by the House.

Why do you provide that when it is reported without amendment it is ordered to be read a third time at such time as the House orders and when it is reported with an amendment it is open to debate and amendment? What distinction do you make if it is in the power of the House to order in both cases that it may be read when the House so orders? The general custom that we have always followed has been that if any one objected to the third reading of a Bill which had been reported with amendments it could not be read. It could only be advanced one stage that day and must be left over until another day, while, if there were no amendment, the House could order that it be read forthwith.

Sir WILFRID LAURIER. I think the rule is the reverse of what the hon. gentleman suggests. It says:

But when a Bill is reported without amendment, it is forthwith ordered to be read a third time at such time as may be appointed by the House.

If it is reported with an amendment, as in this case, it is within the power of the House to determine when it shall be read.

Mr. SPROULE. There is no distinction then?

Mr. SPEAKER. Bourinot, at page 668, lays the practice down in this way:

When a Bill is reported without amendment, the Speaker puts the question, 'When shall the Bill be read a third time?'

The Bill is either read immediately, or on a future day, as the House may decide.

But when a Bill is reported with amendments the Speaker will propose the usual question, 'When shall the Bill, as amended in committee, be taken into consideration?' On this question the only regular amendment is as to the time when the consideration should be taken, and the discussion must be relevant thereto.

Once you dispose of that fact, if there is no amendment, you can proceed to the third reading if, in the opinion of the House, it is desirable to so proceed.

Mr. SPROULE. Then rule 54 does not apply when it says that it shall only be advanced one stage a day?

Mr. SPEAKER. That is when the three readings are proposed to be taken upon the same day. The second reading of this Bill took place the other day.

Motion agreed to.

Sir WILFRID LAURIER moved: That the Bill do now pass and that the title be as follows: 'An Act respecting the National Battlefields at Quebec.'

House divided on the motion of (Sir Wilfrid Laurier).

Wilson (Lennox & Addington.)—11.

Motion agreed to, and Bill passed.

Mr. TALBOT. I would like to know if the vote of the hon. member for Dufferin (Mr. Barr) was recorded as often as he stood up to vote.

Mr. BARR. I want to tell the hon. gentleman that I did not stand up at all when my name was called out the first time.

At six o'clock, House took recess.

## After Recess.

House resumed at eight o'clock.

### PRIVATE BILLS.

### HAMILTON RADIAL ELECTRIC RAILWAY.

Mr. CLARKE moved third reading of Bill (No. 25) respecting the Hamilton Radial Electric Railway Company.

Mr. SPROULE. Mr. Speaker, I do not wish to occupy the time of the House at length on this Bill, but I desire to say, before it is read the third time, that I think we are making a very indiscreet move in taking possession of a corporation which has been chartered by provincial law and transferring it to federal jurisdiction. It is clearly an interference with provincial rights. We are taking from the province of Ontario its control over an electric railway company, for the regulation and control of which it has provided ample machinery in the form of a railway commission. I do not think the House fully realizes what is involved in this measure. The first section of this Bill provides:

In this Act the expression 'the company' means the body politic and corporate created by chapter 88 of the statutes of Ontario, 1894, and continued by the said amendments thereof.

Now, I take up chapter 88 of the statutes of Ontario, 1894, and I notice certain things that the company is authorized to do:

The said company is hereby authorized and empowered to survey, lay out, construct, complete, equip, maintain and operate iron or steel railways, to be operated by electricity with double or single iron or steel tracks from the city of Hamilton to the city of Guelph, in the county of Wellington, and from thence to the town of Mount Forest, in the said county of Wellington, passing through the townships of Barton, Ancaster, West Flamborough, East Flamborough, Puslinch, Guelph, Nichol, West Garafraxa and Arthur; and also from the said city of Hamilton to the town of Berlin, in the county of Waterloo, passing through the townships of Barton, Ancaster, West Flamborough, Beverly, Dumfries and Waterloo, and from thence through the townships of Waterloo, Woolwich, Wellesley, and Wilmot in a belt line back to the said town of Berlin; also from the said city of Hamilton to the village of Burlington, in the county of Halton, and thence to the village of Mimico, in the county of York, passing through the townships of Barton, Saltfleet, Nelson, Trafalgar, Toronto and Etobicoke; also from the said city of Hamilton to the town of Niagara Falls or Queenston, in the county of Welland, passing through the townships of Barton, Saltfleet, Grimsby, Clinton, Louth, Grantham, Stamford, Thorold or Niagara; also from the city of Hamilton to the city of Brantford, passing through the townships of Barton, Ancaster and Brantford, and the said railways, or any of them, may be carried along and upon such streets and highways as may be authorized by the by-laws of the respective corporations having jurisdiction over the same.

I am not aware that that Act has been either repealed or amended; so that this company has the right to run its railway along the highway so long as the municipality consents to it. The municipality generally consents to an electric railway running along the highway, provided it is kept under provincial jurisdiction and under the authority of the municipality which the provincial jurisdiction provides for. But when we take the railway from that provincial jurisdiction and from the control of the provincial railway board and place it under the control of the federal railway board, what is the result? Section 3 of that original Act provides:

The company may acquire the right to convey electricity required for the working of the railway and lighting the same or otherwise, over, through or under lands other than the right of way of the railways by this Act authorized to be built and to lay conduits under, or erect poles and wires on or over such lands as may be determined by the company, and along and upon any of the public roads and highways or across any of the waters in this province by the erection of the necessary fixtures, including posts, piers or abutments, for sustaining the cords or wires of such lines, or the conduits for such electricity, upon and subject to such agreement in respect thereof as shall first be made between said company and any municipality in which such works or any part thereof may be situate.

Then the Act sets out the powers which the company may exercise and the control held over it by the province with regard to directors, the common stock and several other matters. A very important difference between the provincial railway board and the federal railway board is this, that when the provincial board makes an order that order, under the Act constituting that board, becomes an order of the High Court of Justice, and is enforcible at once, whereas the federal railway board has no such authority. Its orders cannot be made orders of a provincial court, and there is no federal court to enforce them; consequently, the railway company may obey them or not, as it sees fit. The powers of the provincial board is much more comprehensive. For instance, under the Act it has full jurisdiction to inquire into, hear and determine any application by or on behalf of any party interested:

Complaining that the company, or any person or any municipal corporation, has failed to do any act, matter or thing required to be done by this Act or the said Act or the special Act, or by any regulation, order or direction made thereunder, by the Lieutenant Governor in Council, the board or by any inspecting engineer, or by any agreement entered into by the company with any municipal corporation, or has done or is doing any act, matter or thing contrary to, or in violation of, this Act, or the special Act, or any such regulation, order or direction, or any such agreement.

That is where a company is partially under the municipal control and partially under provincial control:

The board may order and require any company or person or municipal corporation to do any act, matter or thing which such company or person or municipal corporation is or may be required to do under this Act or the said Act or the special Act, or any such regulation, order, direction or agreement, and may forbid the doing or continuing of any act, matter or thing which is contrary to this Act or the said Act or the special Act, &c.

It goes on and specifies what the board may do. It shall:

Have all such powers, rights and privileges as are vested in the High Court of Justice.

That is the Provincial Railway Board. The Federal Railway Board has not such powers. When the Provincial Railway Board makes an order, that order becomes an order of the High Court of Justice and is enforcible right away.

The decision of the board upon any question of fact, and as to whether any company, municipality or person is, or is not, a party interested within the meaning of this section, shall be binding and conclusive upon all companies and persons and municipal corporations and in all courts.

The relationship of this railway to the municipalities makes it necessary for the board that controls the one to control both. The Federal Board has no control over a municipality, but the Provincial Board has, and it is necessary that the authority which controls the railway should have control over the municipal corporations as well so as to make them both do what is necessary in the public interest:

The board shall have exclusive jurisdiction in all cases and in respect of all matters in which jurisdiction is conferred on it by this Act or by special Act or by the said Act, and, save as herein otherwise provided, no order, decision or proceeding of the board shall be questioned or reviewed, restrained or removed by prohibition, injunction, certiorari or any other process or proceeding in any court.

Without thereby limiting the powers and authority of the board unless this Act or the said Act, the board may make orders and regulations:

(a) With respect to the method and means of passing from one car to another, either inside or overhead, and for the safety of employees while passing from one car to another, and for the coupling of cars;

(b) Requiring proper shelter to be provided for employees while on duty;

(c) With respect to the use on any steam engine of nettings, screens, grates and other devices, and the use on any steam engine or car of any appliances and precaution, and, generally in connection with the railway respecting the construction, use and maintenance of any fire guard or works which may be deemed by the board necessary and most suitable to prevent, as far as possible, fires from being started or occurring upon, along or near the right of way of the railway.

Then it goes on to provide for penalties. I understand the Federal Board has no authority to provide penalties. Certain things it can do. For instance the rates on passengers and freights are submitted to that board and the railway commission may agree or refuse its consent to the rate ordered. If the commission refuses, the rate cannot go into force. That is one of the things the Federal Board can compel a railway to do. In many respects it has not the powers of the Provincial Board. The Provincial Board may:

Provide penalties, when not already provided in this Act or the said Act, to which every company or person or municipal corporation who offends against any regulation made under this section shall be liable, which shall not exceed $100 for each offence. The imposition of any such penalty shall not lessen or affect any other liability which any company or person or municipal corporation may have incurred.

Mr. SPROULE.

In case default shall be made in the doing of any act, matter or thing, which the board may direct to be done by the company or persons or municipal corporation who is required to do the same, the board may authorize such person as they may see fit to do the act, matter or thing, and in every such case the person so authorized may do such act, matter or thing, and the expense incurred in the doing of the same may be recovered from the company or person or municipal corporation in default and as money paid for and at the request of such company or person, and the certificate of the board of the amount so expended shall be conclusive evidence thereof.

The existing orders of the railway company or the executive council of both may be made orders of the court. That is one of the important powers which the Provincial Board has and the Federal Board has not.

Mr. CLARKE. My hon. friend is misleading, no doubt unintentionally, the House when he says that under the Dominion Railway Act there is no power to enforce the judgments of the board and that these judgments have not the force of orders of a court. Let me refer my hon. friend to these words in one section: 'This commission shall be a Court of Record' and section 26:

The board shall, as respects the enforcement, attendance and examination of witnesses, the production and inspection of documents, the enforcement of its orders, the entry on and inspection of property, and other matters necessary or proper for the due exercise of its jurisdiction, under this Act; or otherwise for carrying this Act into effect, have all such powers, rights and privileges as are vested in a superior court.

Mr. LENNOX. Does the hon. gentleman find in the Dominion Act any provision which says that the orders of the Federal Board may be made the rules of a court?

Mr. CLARKE. Instead of making them the rules of a court, it makes the commission itself a court. It says the commission shall have all the powers that the Superior Court has. That is more simple and just as effective.

Mr. LENNOX. The powers of the Federal parliament as regards the creation of courts is very limited. They have only the power given by the British North America Act, and that is the power to establish a Supreme Court and an Exchequer Court.

Mr. CLARKE. That is raising a very important question.

Mr. LENNOX. There is that great difficulty.

Mr. CLARKE. If that were the case, we would have heard a great deal about it. Taking the Act as it reads, there is the most ample power given the board. My

hon. friend is mistaken when he says there is not.

Mr. SPROULE. I said in many respects with regard to many of its orders :

Notwithstanding the repeal of this Act or by the said Act of any Act relating thereto, all orders of the Railway Committee of the Executive Council of Ontario in force at the time of the passing hereof, may be made orders of the High Court of Justice, and may be enforced in all respects, as nearly as may be, in the same manner, as provided by this Act and the said Act in the case of similar orders by the board ; and all penalties, forfeitures and liabilities attaching, under this Act or the said Act, to the violation of any regulation or disobedience to any order of the board, shall apply and attach to any violation of, or disobedience to, any regulation or order of the Railway Committee of the Executive Council occurring after the passing of this Act, in all respects as nearly as may be, as if the same were a regulation or order of the board.

While I admit that the Federal Railway Commission could enforce many of its orders, the great bulk it cannot because it has not the power. When we established the Railway Commission at first, it was declared that we could only give publicity because we had not the authority to confer on the board the powers of a court and give it the power to punish people for disobeying its orders.

Mr. CLARKE. But you did confer that power.

Mr. SPROULE. In some respects we did, in many we did not. Suppose a railway company refuse to obey the orders of the board, the board has not power to impose a penalty except as set forth in the Act.

Mr. CLARKE. It can enter upon the property and take possession.

Mr. SPROULE. We might take possession of the road and close it down for some trifling violation, but I do not think the hon. member will say that is a proper thing to do.

Mr. CLARKE. They have power of enforcement under a section of the Act even without taking possession.

Mr. SPROULE. If I understand correctly, they have power to do certain things, but they have not power to enforce the great bulk of their orders as they cannot make them orders of a court. This would have to be done through a provincial court. For instance, they could not compel this railway to connect with a provincial electric railway. How would they enforce such an order ?

Mr. CLARKE. I could not say offhand just what the procedure would be, but certainly the municipal board of the province could not compel a railway under the jurisdiction of this parliament to connect with a provincial railway.

Mr. SPROULE. No, but the railway board of the province can compel the provincial railway to carry out agreements with municipalities or to do what was to their mutual advantage. The provincial Act provides for a maximum passenger rate on electric roads of 2 cents per mile, but under the federal Act there is no such restriction.

Mr. CLARKE. When did the law limiting the rate to 2 cents per mile come into force?

Mr. SPROULE. I understand when the Act establishing the board was passed.

Mr. CLARKE. If this becomes a Dominion road in 1897, then the 2-cent rate would not apply.

Mr. SPROULE. We are endeavouring to keep it a provincial road.

Mr. CLARKE. If it became a federal road before the 2-cent rate was established, it would not be affected.

Mr. SPROULE. It was the intention of the British North America Act that the provinces should control railways within their own borders; and if we persist in interfering with provincial rights in this matter and assume the right to take everything from the provinces, the provinces will undoubtedly rebel against any such interference.

Mr. HENDERSON. I am not a lawyer, but I have read several legal opinions, and I agree with Mr. Clarke that as this railway came under the federal authority ten years ago the 2-cent rate could not apply. The Minister of Railways, a few evenings ago, gave me some assurance that he would bring down a Bill which would relieve any doubt as to the enforcement of agreements between a road under Dominion authority and a municipality. Not having heard from the minister further, and not knowing the merit of his Bill I fear I shall have to persist in moving my amendment.

Mr. GRAHAM. I think the discussion now is on an amendment proposed by the member for Toronto (Mr. Macdonell).

Mr. HENDERSON. I understood there was nothing before the chair except the motion for the third reading.

Mr. SPEAKER. As far as the order paper shows, the third reading is the only motion before the Hosue.

Mr. GRAHAM. I want to be absolutely fair ; the hon. member for Toronto (Mr. Macdonell) closed his address by moving an amendment to the effect that this road should be under the Provincial Railway and

Municipal Board and the provisions of the Ontario Railway Act.

Mr. BRODEUR. I see that on the 3rd of March it was proposed:

That the Bill (No. 25) An Act respecting the Hamilton Radial Electric Railway Company, be now read the third time.

Mr. Macdonell moved in amendment thereto. that the said Bill be not now read the third time, but that it be re-committed to a Committee of the Whole for the purpose of amending section 2 of the said Bill, as follows:

Giving the amendment:

And a debate arising thereon, and the hour devoted to private Bills under rule 25 having expired,

The House went into committee.

Mr. SPEAKER. The Order Paper seems to be inaccurate; that amendment was before the chair when the hour for private Bills expired, and the amendment is now before the House. The question is on the amendment. Shall the amendment be adopted?

Amendment negatived.

Mr. SPEAKER. The question now is upon the third reading of the Bill.

Mr. HENDERSON. I presume then I can resume where I left off. I am extremely anxious that any rights which have been obtained by the municipalities in the county which I represent and in the adjoining county of Peel should be thoroughly protected and guarded, and it is with a view of safeguarding those rights that I propose the amendment of which I have given notice. I therefore beg to move:

That the Bill be not now read a third time, but that it be referred back to the Committee of the Whole with instructions to amend it by adding to section 10 the following:

Provided that in the event of the company at any time failing to conform to, or to carry out any of the provisions contained in any such by-laws or agreements as are herein referred to, or as may be hereafter made between the said company and any municipality, then the powers of operation granted to the company, or vested therein, shall cease and be null and void, so long as said company fails to conform to or carry out such provisions as aforesaid.

When this amendment was presented to the Committee of the Whole it was argued by the promoter of the Bill, or by the Minister of Railways, that I was defeating the purposes I had in view, in as much as the road would cease to run if there should be any lack of conformity to this agreement. I apprehend that with a provision of this kind the company would be extremely careful not to allow any nonconformity to the agreement, knowing that if they did they would be penalized in a way that would deprive them of any use of their road. I know of no better way to accomplish my purpose than the passage of this amendment, which if accepted will I think protect the municipalities I have the honour to represent.

Mr. BLAIN. I wish to endorse the remarks of my hon. friend from Halton (Mr. Henderson) in respect to the agreements that have been made with this road by the various municipalities. The proposed road has a charter in the county I have the honour to represent, and our people are very anxious that any rights they have succeeded in acquiring from the company, some of which have been given freely and others after a contest, should be retained by them, While I listened with interest to the remarks of my hon. friend who is promoting this Bill and have great respect for his opinion, yet in those days of conflict between local legislatures and the Dominion parliament in respect of the powers of railways and of railway charters, it is important that every municipality should take care of its own interests when Bills of this kind are up for consideration. I am in favour of the motion moved by my hon. friend from Halton; I believe it should be embodied in the Bill so that every right the municipalities possess should be retained to the people in those counties, who are so anxious that this road should be constructed, and at the same time that none of their rights which they at present enjoy should be taken from them.

Mr. GRAHAM. It is perhaps out of order to discuss a Bill that is not down, yet I want to say to my hon. friend that I expect to provide in the Railway Bill to be brought down, for what is known as specific performance of contracts, which will, I think, cover the question as fully as it can be covered by legal enactment.

Amendment negatived.

Mr. LENNOX. In the absence of the member for West Algoma (Mr. Boyce) I am requested to move an amendment to the preamble of the Bill, which is as follows:

To strike out all the words after the words 'set forth' in the 7th line thereof down to and including the word 'Canada' in the 14th line thereof.

I think we all admit that we have had a reasonable amount of discussion upon the proper form of the preamble. I have already said nearly all I could say to advantage on this question. I will merely add that it is a principle of law that nothing should be in the preamble of the Bill except a statement of a question of fact, and we should not seek either directly or indirectly to declare what the law is.

Amendment negatived.

Motion agreed to, and Bill read the third time and passed.

## EDMONTON, YUKON AND PACIFIC RAILWAY.

House in committee on Bill (No. 68) respecting the Edmonton, Yukon and Pacific Railway Company.—Mr. Turriff.

On section 2,

Mr. LENNOX. Is that amended?

Mr. DEPUTY SPEAKER. In the 15th line the words 'completes and' are inserted.

Mr. LENNOX. I would not be positive, but I think there was some change made in the 11th line, where it says 'from the point on its authorized line.' The language describing the point of commencement seems to be very indefinite. Is the promoter of the Bill here? He does not seem to be here.

Mr. HENDERSON. I think we will have to go back to the rule we laid down, that if the promoter of a Bill does not feel disposed to attend to his Bill, answer questions and give explanations, we will be obliged to let it stand.

Progress reported.

## CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 73) respecting the Quebec Railway, Light and Power Company.—Mr. Power.

Bill (No. 77) respecting the Canadian Northern Quebec Railway Company.—Mr. Dubeau.

Bill (No. 81) respecting the Canadian Northern Railway Company.—Mr. McIntyre (Strathcona).

## VANCOUVER ISLAND AND EASTERN RAILWAY.

House in committee on Bill (No. 87) to incorporate the Vancouver Island and Eastern Railway Company.—Mr. Sloan.

Mr. SPROULE. This company is empowered to construct, operate and maintain lines for the conveyance of light, heat, power and electricity, and I notice you have omitted the clause, usual in such Bills, providing that an agreement with a municipality or a by-law with a municipality is necessary before the company erects its wires. Of course, there are no municipalities in that territory now, but there may be in the future.

Mr. GRAHAM. We threshed that question out in the committee, and the conclusion was come to that such a provision was not really necessary in this Bill. If there are any municipalities there in the future, it can be amended I suppose.

Mr. SPROULE. It can, but it won't.

Bill reported, read the third time and passed.

## SASKATOON, SASKATCHEWAN, PEACE RIVER AND DAWSON RAILWAY COMPANY.

House in committee on Bill (No. 70) to incorporate the Saskatoon, Saskatchewan, Peace River and Dawson Railway Company.—Mr. W. McIntyre.

Mr. GRAHAM. When this Bill was last considered there was an opinion expressed that clause 14 gave the company too much power. I therefore move that clause 14 be stricken from the Bill and the following substituted therefor:

14. The company may for the purpose of its undertaking:

(a) Build, purchase, lease or otherwise acquire, manage or control hotels, restaurants and other buildings at any place where the railway is authorized to be constructed, and acquire, purchase, lease and hold the land necessary for such purposes, and carry on business in connection therewith, and afford such facilities as tend to the comfort and convenience of the travelling public, and may let any such building for such purposes;

(b) Acquire, purchase, lease and hold lands required for, and lay out, establish and manage parks and pleasure grounds, and give a lease thereof.

The meaning of that is that we do not give the company power to go into lumbering, mining and all that kind of thing, but confine them in this clause to the building of hotels, a power which we give to all such railways.

Mr. LENNOX. I dare say the amendment may be quite satisfactory, but I would like an opportunity to consider it. It is now nine o'clock.

Mr. HENDERSON. I am glad the minister has taken our advice and that he is prepared to meet our views along the lines I indicated when the Bill was last discussed. My objection was to the principle of combining a commercial Bill and a railway Bill all in one without having it referred to the Private Bills Committee as well as to the Railway Committee. When Mr. Blair was Minister of Railways he took very strong grounds against that practice. I presume the minister has well considered his amendment, and personally I am quite willing to accept it.

Mr. LENNOX. No time will be lost if the Bill stands over.

Mr. HENDERSON. In the event of the minister changing his mind, I would ask that my amendment should stand over, too.

Mr. LENNOX. He will never change his mind.

Mr. GRAHAM. It is a little disappointing, after having spent a good deal of time trying to meet the objections of hon. gentlemen, that they should now ask the Bill to stand. However, if there is any objection, I suppose we cannot proceed with it now.

Mr. HENDERSON. I am satisfied that the minister has met us fairly well, but no doubt my hon. friend (Mr. Lennox) wants time for consideration.

Mr. SPROULE. The hon. minister should not be discouraged; we are only asking time to look over the amendment.

Progress reported.

## THE CO-OPERATION ACT.

Hon. RODOLPHE LEMIEUX moved second reading of Bill (No. 5) respecting co-operation. He said: Mr. Speaker, in moving the second reading of this Bill, I have to add only a few words to what has already been said on this subject. I may say that this Bill has been already introduced on three different occasions by the hon. member for Jacques Cartier (Mr. Monk), but it has not yet reached the stage which I hope it will reach this evening. Last session, when the Bill was introduced by the hon. member for Jacques Cartier, it was thought wise by the government to postpone the adoption of the principle of the measure until after it should be reported upon by the special committee to which it was referred. This year the government are of opinion that the Bill should be taken up as a government measure in order that those who believe in co-operation may have an instrument by which the middle as well as the labouring classes may be educated in thrift, prudence and saving. We all know that it is by organized co-operation in the broadest sense of the word that in this country, as in every other country on this continent and on the continent of Europe, the railway system, the telegraph system, the telephone system, and generally speaking all great public utilities, have been created. In a certain sense it is also true that it is by the application of the principle of co-operation that all great enterprises, whether financial or industrial, are able to live. In a more limited sense of the word, our churches, our schools, our clubs, our universities, our fraternal societies and our labour unions are organized on the principle of co-operation. The present piece of legislation is a step forward. It is, so to speak, the blazing or opening of a new pathway to a greater prosperity for the labouring masses of this country. Briefly speaking, the object of this measure is to facilitate, if possible, the formation of societies of citizens to assist each other in agricultural, commercial and financial operations. Canada, I must say, has been left behind in the great co-operative movement which has taken place during the last half century or more. We must not forget that conditions on this side of the Atlantic are not altogether the same as they are on the other side. But as we grow older we learn, and we desire to take advantage of the experience of other countries in this matter. As in every other liberal movement—using the word liberal in a non-political sense—Great Britain has been a leader in the co-operative movement. For fifty years the people of England, Scotland and Ireland have benefited from it. We all know the history of the Rochdale stores, which started sixty or seventy years ago, and which have been a prodigious success. The co-operative movement has spread all over Great Britain, and also to the continent of Europe. In Great Britain to-day there are over 2,402,354 members of co-operative societies, and each co-operator represents at least three members of a family; which means that there are in Great Britain over 9,000,000 people who are deeply interested in this movement, representing one-fifth of the total population of the country. The present annual turn-over of these British co-operative societies amounts to $500,000,000, the yearly profit on which is $50,000,000. Out of this enormous profit of $50,000,000 a year the British people apply yearly 10 per cent for educational purposes; $5,000,000 is taken every year out of the co-operative profits and applied to the education of the people. I have said that Great Britain is the leader of the world in the co-operative movement, and the figures I have given are the best evidence of the truth of that statement. On the continent of Europe the co-operative movement has also been applied with success. In both manufacturing and agriculture, the countries where this movement has been specially aided and successfully applied are chiefly France, Germany, Austria-Hungary, Italy and Denmark. In the banking line, co-operation has been chiefly confined to Germany, Italy and France. In Denmark co-operation in agriculture has been a huge success. When one bears in mind that the total area of Denmark is about two-thirds that of Nova Scotia and its population is about equal to that of Quebec and Ontario combined, we can see that the co-operative system, applied to that small country with a limited population, has achieved wonderful success in agriculture. Since that system has been in operation, the annual exports of Denmark in agricultural products, chiefly cheese and butter, are $100,000,000, $70,000,000 of which are the result of the co-operative system.

In Canada we have been left behind in the co-operative movement. With such a large area, with immense territories sparsely settled, it is not unreasonable that we should expect similar results to those which have been achieved in older countries provided we avail ourselves of the lessons to be derived from their experience. My hon. friend from Jacques Cartier (Mr. Monk) patriotically took charge some years ago of this legislation. I think my hon. friend was elected at the same time as myself, in 1896, and not many years after he became a member of this House. He took up this question, and every succeeding session he did his

best, with his usual force and eloquence, to convince the House that such legislation would be beneficial to the middle classes and the labouring classes generally. It is well known that every new legislation, every new departure, must proceed step by step and be impressed by degrees on the public mind, before it can be put into effect. Parliament is generally slow to accept a new principle or a new departure. My hon. friend, however, was very persistent, and I may add that another gentleman, who has made this question of co-operation the work of his life, Mr. Alphonse Desjardins, of Lévis, has also during the last ten or fifteen years done his best to spread this idea of co-operation in the province of Quebec and even in the far west, where of late he has been asked to introduce the Caisse Populaire which he established in the province of Quebec and which has been such a sucess in that section. Last year when my hon. friend from Jacques Cartier introduced his Bill, the government thought that public opinion was perhaps ripe enough to accept the principle and apply it once for all to some of our industries so as to encourage thrift and saving among our labouring classes. A special committee was formed at the request of the government, composed of the Minister of Justice (Mr. Aylesworth), the Minister of Labour (Mr. Lemieux), Messrs. Monk, Sinclair, Smith (Nanaimo), Verville, White and Bourassa. I do not know how many sittings were held, but I must say that no committee did its work more conscientiously than this special committee on co-operative societies. I hold in my hand a copy of the evidence that was taken before it, and I do not think that any one who reads that evidence can fail to be impressed with the importance of the subject. We had as witnesses, who voluntarily gave their evidence, men of the highest standing in our community. First of all, we had His Excellency the Governor General, Earl Grey. Then we had the benefit of the experience of such men as Professor Shortt, of Queen's University; Mr. Mackenzie King, Deputy Minister of Labour; Mr. Perley, M.P., Mr. J. A. Ruddick, an expert of the Department of Agriculture; Mr. Dugas, M. P., Mr. A. McNeill and Mr. Alphonse Desjardins, himself the founder of the first co-operative societies in the province of Quebec. The last report of the committee will be found on page iv of the blue-book. It reads as follows:

Fourth report.
Thursday, April 11, 1907.

The special committee to whom was referred Bill (No. 2), an Act respecting Industrial and Co-operative Societies, beg leave to present the following as their fourth report:

Your committee have had under consideration Bill (No. 2), an Act respecting Industrial and Co-operative Societies, and have agreed to report the same with amendments.

Your committee have held several sittings and taken the evidence of a number of witnesses as to the possible advantages to Canada of legislation upon the lines indicated in above-mentioned Bill, which authorizes the formation of co-operative associations.

From this evidence, derived from persons who have made a special study of the co-operative movement in Europe, it appears clearly that co-operation offers very great advantage to the farming classes, particularly in certain branches of agricultural pursuits, such as dairying, market gardening and fruit culture. Co-operation has also been proved of great use in the purchase by farmers of agricultural implements and fertilizers.

Your committee found that co-operation offers a means for the labouring classes to purchase, under the most favourable terms, the necessaries of life and the articles required for the exercise of any trade. It also provides a system by which the wage-earners can either build or acquire their own homes, by means of small loans from credit and savings societies.

Your committee have given the credit and savings feature of the Bill their special consideration and have arrived at the conclusion that any general movement to foster co-operations destined to provide small loans and means of investment for people whose situation removes them from the sphere of action of our ordinary banks.

In dealing, however, with this feature of the proposed measure, your committee have provided special clauses destined to surround the exercise of the credit and savings power by these societies with all necessary guarantees to prevent any possible abuse.

I may say, in parenthesis, that the Minister of Finance and the deputy Minister of Finance have been consulted as to what have been called—by what I should term a misnomer—the banking clauses of the Bill. When the members examine the Bill they will see that no banking privileges are given to these societies and I wish to draw the attention of the House to this misnomer. The minister and deputy Minister of Finance see no objection to the Bill being passed in its present form, with the banking privileges here given to the co-operative societies. The report proceeds:

The interesting experiment made by Mr. Alphonse Desjardins with the institution known as 'La Caisse Populaire de Lévis,' establishes clearly that this special form of co-operation is productive of the best results and can be carried out without risk, if under proper control.

This control and supervision your committee have sought to ensure in the Bill.

The witnesses heard by your committee are persons well versed in the co-operative movement since its inception.

I may say that His Excellency the Governor General is one of the leading authorities in Europe on the co-operative movement. For years he was, I believe, presi-

dent of the International Co-operative Alliance. The report proceeds :

Their testimony bears out with singular unanimity the conclusion to which your committee have arrived, that the proposed Bill, as amended by your committee, if enacted, would be productive of the best results, and your committee therefore recommend that the government take charge of the measure and have it passed.

Your committee also report herewith their minutes of proceedings and evidence, and the exhibits filed, and recommend that the same be printed, with the exception of exhibits from Nos. 2 to 10, inclusive.

All of which is respectfully submitted,

R. LEMIEUX,
Chairman.

Reference is made, in this final report, to La Caisse Populaire de Lévis. I take pleasure in mentioning that institution because it illustrates so well the working of such institutions in our country if put under proper control and jurisdiction. La Caisse Populaire de Lévis was the creation of my good friend Mr. Alphonse Desjardins, who is the pioneer in this field in Canada, as a public and very able exponent of co-operation, more particularly as regards savings and credit co-operative associations. He organized La Caisse Populaire in the year 1900, at Lévis, near Quebec, where there are no great fortunes, but where there is a thriving population, willing and anxious to save in order to secure such prosperity as is attainable in the working classes, generally speaking. I shall call this Caisse Populaire a bank, but as I stated a moment ago that is a misnomer, because such co-operative banks do not issue paper and do not carry on operations with persons outside of the membership of the society. I shall call it 'bank,' because in England there are co-operative banks doing business with those who are not members of the sociteies. This bank was organized as I stated, in 1900, with 80 members, and in 1907 the membership stood at 980. It was launched with 80 members and with a very small capital, made up of the $5 shares subscribed by the 'societaires.' The first financial statement showed assets amounting to only $240, while in 1907 they amounted to $66,352.24. In the seven years of its existence this popular bank has made loans amounting to $277,000 in the city of Lévis and the vicinity among its members. The loans have been made at a very low rate of interest, and I must pay Mr. Desjardins the compliment of saying that I hope the other co-operative societies will have at their head men as conscientious and as intelligent as Mr. Desjardins. During the seven years, with that turnover of $277,000, not a red cent has been lost, not a red cent. Therefore it is proven beyond doubt that with the proper safeguards and with proper control co-operative societies can be a success in our country, and by the very fact that they are essentially local in their administration, by the very fact that they do not issue paper, that they confine their loans to those who are members of the society, with the check of three boards, a board of credit, a board of administration and a board of audit—by these checks such societies can be of great benefit and can be organized without the least suspicion that their funds can be lost.

The principle of co-operation from the point of view of mutual credit associations carries with it enormous advantages. First of all it reaches a class of the community which, practically speaking, has no access to the larger financial institutions; secondly, it is local in its character ; third, it encourages small loans and small investments, it stimulates thrift and prudence ; it develops business habits and does away with usury. It provides the labouring classes with the necessaries of life, and even with the luxuries of life, at a cheaper rate and does away in ninety-nine cases out of a hundred with the middleman. Now Mr. Speaker, I will ask hon. gentlemen to peruse in their hours of leisure the blue-book which I hold in my hand, the report of the special committee appointed last year to study this question. I may say that the principle of co-operation has not been confined in this country to the Caisse Populaire de Lévis. Since the establishment of this institution several other popular banks of a like character have been started in different sections of the country. We have also the principle of co-operation applied, at least in my native province, and I think also in Ontario, to the butter and cheese industry. We have it applied in other agricultural pursuits especially in the apple trade. With your permission I will quote a few words of the evidence given by Mr. Ruddick, of the Department of Agriculture on this question. As a matter of fact we find the principle of co-operation permeating, so to speak, several spheres of our daily life. On page 33 of the evidence, Mr. Ruddick, says, being asked by the chairman:

Q. Have we not in our province any established on the co-operative principle?—A. The most of the cheese factories in the province of Quebec.

Q. But speaking generally?—A. They contain the germ of the co-operative idea in as much as the farmers consent to bring their milk to one point to have it manufactured.

Further says :

Q. The farmers do not own the factories?—A. In some cases they do. There are some truly co-operative factories, but there are a great many that are purely joint stock companies. The share capital is held by men who do not send any milk to the factories, and they are not strictly co-operative. If the committee would like, I would be glad to give some information that I have concerning co-operation in Denmark and New Zealand where

I have been and looked into these things to some extent.

Now he speaks of Denmark:

I am more familiar with the results than with the methods, but I think there are a few underlying principles in the co-operative societies of Denmark which are well worthy of being looked into. They started first with co-operative creameries in 1882, and now there are over 1,100 purely co-operative creameries in Denmark. In addition to that there are about 200 privately owned concerns.

Further on:

Q. It has been a success?—A. A tremendous success. So much so that the agricultural exports of Denmark amount in round figures to about £20,000,000 sterling per year, and £14,000,000 sterling of this sum come from co-operative societies.

Then he speaks of the principle of co-operation in agricultural affairs:

Q. You were speaking of cold storage and dairying. Would you explain how it is in Canada that you find co-operative societies identified with these two branches of your own department?—A. Well, the manufacture of butter and cheese is quite frequently carried on purely on a co-operative basis. That is to say, the actual cost of manufacture deducted from the value of the produce goes to the members who supply the milk. Then, in connection with the fruit industry there is a very good chance for the improvement of the apple trade inasmuch as the great defect in the apple trade is the lack of organization. If there were organizations on the co-operative basis we could gain control of the packing of the apples whereby the grading could be kept up to a high standard, and we should be able to sell direct to the British buyer instead of through a commission agent. There are judged to be twenty-five associations already established in Canada, and they have worked very successfully during the last two or three years.

On page 35 he gives the names of all these co-operative societies, which I need not mention. It may be a few years before the people of Canada go very deeply into the co-operative system. I do not believe that the people of Canada will do immediately as the people of Denmark have done, although an agricultural community like Canada would do well to look at the results achieved in Denmark through the co-operative system. In promoting this legislation I am glad to say that I have the help of my hon. friends on the opposite side of the House. I believe this legislation will educate the people to the great benefits to be derived from the principle of co-operation, and will place an instrument in their hands which, with proper control and proper check, will confer great advantages on the public. It will be an instrument which will be of great help to the community at large. Before giving the principal features of the Bill I wish to refer the House to the evidence of His Excellency the Governor General that we were fortunate enough to secure before the committee. The report is in the hands of every hon. member, but I want to call the attention of both sides of the House especially to the evidence given by His Excellency the Governor General and by the other experts who were heard last year before the committee. Mr. Henry W. Wolff is quoted as follows:

Wherever there is a people's bank or a village bank established, sufficiently strong, even if it be not of the best of its kind, the small shopkeeper, the artisan, the workingman, the small cultivator, need not miss an opportunity of earning or saving for want of ready money. Should an artisan want to buy materials for his trade, or a new set of tools, or should he have to tide over a period before he can realize the reward due for his work; should a working woman wish to buy a sewing machine to work with, or to purchase furniture or groceries cheaply for cash, instead of at extravagant price for credit; should a peasant desire to purchase a pig, or fertilizers; should a poor man have the ambition to acquire a house of his own—provided that these people can show that they are in a position to take the liability involved upon themselves, all these wishes, all these ambitions, may be easily gratified. The money is available for them; and it is available in the easiest as well as the cheapest way. If their case be a good one, they may make the purchase repay its cost out of its own production or economy, and so are freed of all care with regard to providing the money. There are thousands of examples of this—of articles bought, remaining the purchaser's own, valuable acquisitions, without the purchaser ever having been required to put his hand in his pocket. What an enormous boon this has proved and is proving in a constantly increasing volume to the large mass of people who have to support their life by working and earning, need not be told.

Mr. Wolff in his valuable book on 'People's Banks,' speaking of England, at page 28, says:

It is quite true, as Dr. Johnston unkindly reminded Goldsmith, that it takes 240 poor men's pence to make one capitalist's sovereign. But once the sovereign is so put together, it is a totally different sovereign from that taken out of the rich man's safe. It has behind it 240 wills, 240 pairs of watchful eyes, 240 thinking brains. It has, so to speak, become an animate sovereign, with prudence, energy, vigilance, diffused through all its parts. Every spring, every wire of the composite machine takes a personal interest in the collective doings, watching the other parts, guarding against loss and waste, correcting the slightest irregularity. And the more completely the distribution is carried out, the lower the 'democratizing' organism descends, so as to gather up from the lowest strata all available and useful elements, the more fully, so we see in the practical application of the principle abroad, does it realize its beneficent aim. Not without reason, accordingly, did Commendatore Luzzatti inscribe upon his banner, when he started on what proved to be a triumphal progress of economic success, the apt motto: Aspirare a discendere.

Now, I will not quote any more authorities, but I will merely say that in the Old World it is recognized that co-operation is an essential principle in the life of the middle and labouring classes. The government would have been remiss in its duty, and especially the Minister of Labour, if this question had not been taken up and embalmed so to speak, in our statute-book so as to give the labouring and the agricultural classes a means of saving and to provide means of educating the people at large in habits of prudence and thrift.

What are the principal features of the Bill? By section 4 of the Bill seven persons may form a society. It is a society or a grouping not so much of capital as of individuals. In fact, as Mr. Wolff, the very celebrated co-operator, has stated, co-operation is the capitalization of honesty. It is not the capitalization of money interests, but it is the capitalization of honesty. By section 3, subsection (a) it is provided that each member has only one vote and no proxy will be allowed except for corporate bodies. The Minister of Labour —section 4—will grant or refuse incorporation and notice has to be given in the Canada 'Gazette' for the creation of the society. The capital is formed of withdrawal shares of not less than $1. By section 6 a reserve fund is provided in the case of savings and loan societies, 20 per cent of the net annual profits to accumulate for that purpose. By section 6, subsection 2 no loan is granted to a non-member. The object of the co-operative system is to give the benefit of the aggregation, if I may so speak of it, to members only. Such a society by section 8 can do business only in one electoral district except in a city like Montreal, Quebec or Ottawa where there is more than one electoral district. In such cases it may be allowed to do business in the whole city.

By section 9 a committee of credit is chosen to supervise and grant loans. The members of this committee are not allowed to borrow from the society. By section 10 the general meeting shall from time to time determine the maximum loan allowance to any one individual shareholder. By section 14 the accounts are to be audited at least once every year. By section 15 a board of supervision is to act as a controlling body over all the business of such saving and loan society, and the members thereof are not allowed to borrow from the society. By section 16 the annual report is to be sent to the Minister of Labour. By section 17 the publicity of the affairs of the society is provided for. By section 18 the minister may call for special reports. By section 20 the minister may order, upon request of ten members, an inquiry into the affairs of a society. By section 21 he may cancel the charter of a society. By section 24 the Governor in Council may make regulations.

Mr. LEMIEUX.

Such are, briefly, the principal features of the Bill, and I think the House will realize that the proper safeguards are provided. I trust hon. gentlemen will give the several clauses of the measure their best attention, and that the principle will be unanimously adopted to-night.

Mr. BLAIN. Have these co-operative stores been a success in the agricultural districts?

Mr. LEMIEUX. The evidence given by my hon. friend from Nanaimo (Mr. Ralph Smith) shows that they have been a great success in Scotland and in England, so much so that those who were most interested in the principle of co-operative were afraid the co-operative stores might become a menace to the principle itself. The member for Nanaimo was one of the leading co-operators when working in a mine in the old country, and if my hon. friend (Mr. Blain) will turn to the evidence of Mr. Ralph Smith he will find some very interesting reading. But even if they had not been a success in the old country, I believe that in Canada, with the present legislation, and the control, and the checks, and the safeguards provided, there need be no fear of their failure.

Mr. BLAIN. As a matter of information, I would like to know from the minister from what parts of Canada requests were made to the government for legislation of this kind.

Mr. LEMIEUX. Representations have been made to the Department of Labour from each province in favour of this scheme. Some of the members from British Columbia and Nova Scotia, where they have had co-operative stores, were in favour of it, and the success achieved in the province of Quebec by the banks started by Mr. Desjardins were an incentive. I would ask my hon. friend to read very carefully the evidence given by His Excellency the Governor General, who is enthusiastic on this question as on many other questions, and it is a god thing we have enthusiasts in this world. His Excellency spoke of the success of the movement in Great Britain and Europe. He is one of the leading co-operators, and we were amazed at the wealth of facts and figures which His Excellency presented before the committee. The paper which is published with his evidence is well worth being read by the members of the House, or by any one who takes an interest in the question. I quite understand that we must be somewhat conservative when we start societies of this kind, but we have framed this legislation with a view to protect the labouring classes against themselves, and this will appear more clearly as the different sections of the Bill are considered.

Mr. SPROULE. Was there much evidence taken from Ontario by that committee?

Mr. LEMIEUX. We had from Ontario Professor Shortt, Mr. Ruddick, Mr. Perley, M.P., a very great authority on the question, Mr. McNeill, Mr. Mackenzie King and Mr. H. C. Ellis. From Quebec we had Mr. Beaudry, who opposed the Bill. The principal witness was Mr. Desjardins, who is the founder of these banking institutions in our province, and who has been asked to start these credit and saving societies in the western provinces. We have also the evidence of Mr. Dugas, M.P., who is specially interested in tobacco growing, the counties of Montcalm and Joliette which are the great tobacco growing districts of this country, together with Essex and some parts of British Columbia. Mr. Dugas explained that if the Bill passed the tobacco growers of the counties of Joliette and Montcalm would greatly benefit from this co-operative system. In all, we had eleven witnesses before the committee.

Mr. SPROULE. I ask that question because we had in Ontario many years ago co-operative societies of grangers which ultimately failed. I resided for a time in the western states, where they were very plentiful.

Mr. LEMIEUX. Are they still in existence in the western states?

Mr. SPROULE. No, they died out. I imagine that these co-operative societies might be more useful and successful amongst the labour classes and the mining classes than amongst the farmers. After the grangers we had the Patrons of Industry, which was more a political society than a business society, but it has passed out of existence also. At present we have some co-operative supply stores in Ontario.

Mr. LEMIEUX. Are they successful?

Mr. SPROULE. No, they have generally been a failure. I think the one in my county burst up not long ago. The cheese and butter factories are carried on by purely co-operative societies operating in one line.

Mr. LEMIEUX. The same as in the apple trade?

Mr. SPROULE. Yes, pretty much the same, and they have been a success, though they are not very numerous in my part of the country.

Mr. LEMIEUX. And they have raised the standard of the product ?

Mr. SPROULE. Yes, because they have carried on an educational work. But in commercial life co-operative societies do not seem to be a success in our province. Where they take the form of investment societies or savings banks, they inculcate habits of thrift, economy and industry on the part of the people, and are more likely to be successful than they are in commercial lines. At any rate, from our past experience, I would be inclined to think they would be somewhat of a failure.

Mr. MONK. Mr. Speaker, after the very complete explanations which have been given by my hon. friend the Minister of Labour, I feel that it is quite unnecessary for me to go at any length into a discussion of the principle of the Bill. I feel it to be my duty, however, to say a word in unreserved commendation of the action of my hon. friend the Minister of Labour in regard to this particular measure. From the time my hon. friend entered upon the duties of his department he lent an attentive ear to the representations made to him on all sides as to the importance of this measure, and I have no hesitation in saying that without his active concurrence we would have had a great deal of difficulty in gathering together, as the committee which investigated this matter last session did, with a great deal of labour and patience, the extremely valuable data that are to be found in the report of that committee. The government, in adopting the Bill, has undoubtedly done a great service to the country, and has responded to a very general demand, increasing daily for some time past, for the passage of some such measure as this. Indeed, as I have informed my hon. friend the Minister of Labour, during the past year, more particularly since the opening of the present session, I have received an average of over ten communications each week, sometimes more than five letters a day, from labour organizations in various parts of the country praying for the enactment of this Bill. I have more than once invited my hon. friend to an inspection of the mass of documents which I have received on the subject, and I suppose the want of time alone has prevented him from taking communication of what is undoubted evidence of a great demand on the part of the labouring classes throughout the country. This Bill is calculated to be of immense use to the labouring classes particularly. My hon. friend from East Grey (Mr. Sproule) seemed to question the utility of such a measure among the agricultural classes. It may be that Grangers and the Patrons of Industry have not proved to be successful organizations. Though I am not familiar with the principles on which these associations were organized, I question very much whether they had the character of co-operative organizations. I think they were formed more for the advancement of agriculture and the agricultural classes. Some objections have been raised to a measure of this kind by retail dealers; but it has been abundantly proved in every country where co-operation has been put into practice that far from being a detriment to retail dealers, it has in the end been a great help to them by advancing the general welfare of the community, by encouraging thrift, in-

dustry and the accumulation of savings. The great detriment to retail dealers has been the creation of bad debts, the stress of circumstances preventing the recovery of their claims from indigent people. It is to put an end to that state of affairs that co-operation has been instituted in all the countries in Europe, and it has been established clearly by statistics that in the end the establishment of co-operative societies, of distribution, of production, and particularly of savings and credit, have promoted rather than impeded the advancement and prosperity of retail dealers. My hon. friend the Minister of Labour (Mr. Lemieux) has stated that the reasons for this Bill are fully set out in the report of the committee which sat last year. Not only was my hon. friend assiduous at the meetings of that committee and rendered great service by affording every facility for procuring the very best evidence and information, but I am bound to say that all the members of the committee gave the matter their most serious attention; and I think the members of the House will find in this blue-book perhaps the most valuable collection of information on the subject of co-operation that has ever been put together by any investigating committee.

In 1901 the Governor General of India instituted a Royal Commission upon the same subject. That commission was composed of the very highest financial authorities to be found at that time in India and indeed in the British world. Their investigation was extremely complete and the conclusions they arrived at were perhaps more extensive than those to be found in this report. After full investigation, that Royal commission arrived at the conclusion that a co-operative measure, such as the one now before us, should be enacted for the people of India. And in the short experience of that country with its immense population, the co-operative measure there introduced has given the most beneficial results. I mention that because many of those who take a great interest in co-operation have questioned, not the utility of co-operation itself, but the opportuneness of introducing it into this country. Well, if it has produced among the people of India, who are certainly not superior to ours in intelligence, such excellent results, why should we not expect similar results in Canada? We had the advantage of having before our committee the men most conversant in this country with the working of such a measure and most capable of estimating its probable results among our agricultural classes. We had before us men of the very highest authority in the Department of Agriculture. My hon. friend the Minister of Labour has given their names. We had Professor Short, a profound student on economic matters in Ontario, and I heartily concur in everything my hon. friend has said with regard to the extreme value to be attached

Mr. MONK.

to the evidence of His Excellency the Governor General, not only his evidence before the committee, but his active assistance in every effort made in this country to start the idea of co-operation. I should not omit to pay, as my hon. friend has done, a compliment to Mr. Desjardins. Mr. Desjardins, in my estimation, is the pioneer of the co-operative movement in this country. He has devoted fifteen years of his life in the most unselfish way to the propagation of this most important idea and valuable system for the improvement of the condition of our middle classes and more particularly our agricultural and labour classes. Mr. Desjardins does not live in the fierce light of public life as many of us do, but he has like many other men in a more modest condition, rendered a service to the country for which the country will be grateful to him in years to come when perhaps those who are to-day advocating the passage of this measure will themselves be forgotten.

A question has arisen as regards our jurisdiction in this matter. The House is no doubt aware that the province of Manitoba has passed a Bill on co-operation. So has the province of Quebec and so I think has the province of British Columbia. But in all these provinces a very serious obstacle met those interested in this movement. It was impossible for a provincial legislature to enact provisions regarding what I might call the credit loan feature of this Bill, or what might be termed its banking feature. It was possible to organize co-operative societies in the provinces for the purposes of distribution or production and perhaps the purposes also of agriculture, but it was impossible to complete a measure of co-operation by introducing the absolutely necessary element giving co-operators the power of co-operating for purposes of credit and loan or banking, even in the restricted sense of banking under this Bill. That is one of the reasons why those interested in the movement came to Ottawa. They came for that legislation without which co-operation is necessarily incomplete—the power of organizing co-operative societies for the purpose of saving or credit and loan. I might also mention that a movement of this character ought necessarily to be a national or general movement. If it is to be successful it ought to be organized under one law applicable to all the provinces, so that one co-operator, going from one province to another, can join the society in the province where he acquires a new domicile, knowing the rules and knowing the law. It is, therefore, important that we should have the same law throughout the entire country. Co-operation is, in a certain sense, new in this country. It requires a certain propaganda, and the provinces are not in a position to give the movement the impulsion it demands. They

have not the means at their disposal to give that propaganda the character it should have. Here, on the contrary, we have the central power which has the means of diffusing all over the country a knowledge of the advantages of co-operation and giving the movement that general and similar impulse throughout the country which it ought to have. The House will also bear in mind that any general measure for the advancement and welfare of the labouring classes would naturally come under the general provisions in the beginning of section 91 of our Confederation Act, which enable our parliament to legislate in a general way for the good government and order and general advantage of Canada. Under this provision, we have legislated with regard to temperance and other matters affecting the general welfare of the people. The jurisprudence of the highest tribunal of the empire, speaking generally—I do not wish to take up time by quoting authorities—is to the effect that legislation for the general good of Canada is properly enacted by the federal legislature. Most of the co-operative societies formed under this Bill will be societies concerning the advancement of agriculture, and that is a subject with regard to which we have concurrent jurisdiction with the provinces.

From all these considerations it was, I believe, the matured opinion of the Department of Justice that this subject was legitimately and properly brought under the consideration of the parliament of Canada. We do not contend that this Bill is a perfect measure; it is an attempt to permit and authorize the formation, in an easy and inexpensive manner, of co-operative societies having for their object the advancement of agriculture and the co-operation of people of limited means, under conditions which assure to them the control of the societies for all kinds of industrial purposes. At the request of the Finance Department, we have excluded from the Bill, life insurance and fire insurance, although these subjects have been the objects of the formation of co-operative societies in all European countries, and although these societies have rendered immense service to the people in this way. But for the moment, in legislation of this kind, which is to a certain extent tentative in its nature, it has been thought more prudent to exclude life insurance and fire insurance.

Mr. LEMIEUR. At the request of the Minister of Finance I thought it better to exclude all insurance.

Mr. MONK. I have no doubt that this movement will prove highly successful, and that it will produce in this country the extraordinarily good results which it has produced in every other country in the world. I have no doubt that as the movement advances, and the excellent results become evident, parliament will extend the scope of the Bill; because in matters of insurance—fire, life, accident and agricultural insurance generally—it has been productive of very excellent results in other countries. I think the House should hasten the enactment of this Bill, in the belief that it will greatly improve the condition of our agricultural and labouring classes.

Mr. ALPHONSE VERVILLE (Maisonneuve). I have only a few words to add to what has been so ably said by the hon. the Minister of Labour (Mr. Lemieux) and the hon. member for Jacques Cartier (Mr. Monk). Much has been said here in respect to the labouring people, and I beg to remind the House that the labouring people throughout Canada have approved of this legislation. At the Labour Congress, held in Winnipeg last year, they passed a formal resolution, which was ordered to be sent to the Minister of Labour, strongly supporting this measure and asking for its enactment.

We should, I think, also consider in connection with this the building of houses for the working people on a co-operative basis. This form of co-operation has been developed to a great degree in England and has proved to be of great advantage to the working people there. In our large cities especially, the question of providing homes for the working people has become an important and difficult one. To-day it is almost impossible for the working people to live in the central portions of our cities, as the manufactories are concentrated in the central districts, and this makes these districts so undesirable to live in that the working people have been obliged to go to the suburbs. A workingman, through small economies, is able to build his own home; but after having invested all his savings in the building of his home, he has almost invariably to borrow a certain amount to complete it, and in many cases it has been shown that the workingman falls into the hands of some note-shaver or usurer, although parliament has legislated against usury. Such laws, however, appear to have but little effect, especially in cases of this kind. To show the extent of this movement in England, I beg to quote from the report of 1906, the statistics in relation to the operations of these societies:

| | |
|---|---|
| Houses owned by co-operative societies.. | 8,530 |
| Houses built and sold by co-operative societies.. .. .. .. .. .. .. .. .. .. .. | 5,377 |
| Houses built by member on advances by societies.. .. .. .. .. .. .. .. .. .. .. | 32,600 |
| Total.. .. .. .. .. .. .. .. .. .. .. .. .. .. | 46,707 |

We cannot, of course, expect to have such a great number in this country; but, at the same time, no member who represents a city and who has many labouring people in his constituency, can fail to see the necessity of such a law for their protection. It is time the labouring people, instead of go-

ing to their next door neighbour or to some business man and saying: Would you be good enough to take care of this $25 for me, because I am not able to take care of it myself, should invest their money in an intelligent way. When labouring men put their money in the bank it is an acknowledgment on their part that they cannot take care of it, and this Bill simply furnishes to the labouring people means to look after their own business. Through the operation of societies formed under this legislation the labouring people in all parts of the country will be enabled to put their savings together and to derive the greatest benefit from them. It is well understood that in the cities there is to-day a great deal of co-operation. The labour unions in Montreal have a membership of 20,000 and those in Toronto of 15,000, and this is really co-operation to some extent. It is important that we should proceed with all possible despatch and care to enact this law. I strongly support it, in the belief that it will do great good, not only to the labouring people of the cities, but also to the farmers of the country. It may, as has been said here, do away with the middleman; but it may be that we have too many middlemen now, and that if we can do away with some few of them it will be better for the community at large. That is why I strongly favour this measure.

Another cause is that the enormous amount of work done by Mr. Alphonse Desjardins, who has sacrificed one-third of his life to that work will bear fruit and better the condition of the labour people of this country.

Mr. M. S. SCHELL (South Oxford). I wish to express my hearty approval of this Bill, which has for its object the promotion of the interests of the labouring and agricultural classes. It is not necessary to discuss the Bill itself. It has been drawn with such care that I do not think it could be improved on. Of course after it has been in operation for some time possible improvements may be discovered. Efforts have been made in Ontario at different times to establish co-operation and while these efforts have not always been eminently successful, I still think there is scope for the successful operation of co-operative societies that will be of benefit not only to the agricultural classes, but also to the labouring classes. At the present time a number of organizations are being formed throughout Canada known as apple associations, which are organized not only for the care of orchards including spraying, but also for the packing and sale of their product. I may say that while efforts in this direction have only been put forth within the last few years, the results already achieved are eminently satisfactory. In fact I think it is established that it is the means of improving the poor classes of fruit that are now being produced in this country. The difficulty of getting a sufficient number of horticulturists to take care of orchards has been very manifest, but where a number of persons unite together with a common object there seems to be a greater incentive to sustained and intelligent action. In connection with our dairying industries there is also a large field for associations of this character. We know that our factory system is organized on the basis of co-operative societies, and the most successful factories in Ontario are operated on this basis. A large number of patrons are organized for a common object, and they produce a better article because they give more attention to their business, they secure better results, both in respect to the output and to the quality of the article, and consequently obtain better prices. I know there is danger of these societies degenerating into retail societies, and in that way failing of the object for which they were organized; but of course difficulties like these will always crop up, and will have to be met. From what we know of the work of these societies in Denmark and other foreign countries, I am satisfied that their introduction into Canada will prove of immense benefit. I am heartily in favour of the legislation proposed in this Bill, and am glad to know that it is being so well supported in this House.

Motion agreed to, Bill read the second time, and House went into committee thereon.

On section 1,

Mr. LEMIEUX. At the request of the Minister of Finance, I move to strike out the words 'life and fire' in the third line, so that insurance business generally shall not come under the provisions of this Act.

Motion agreed to.

On section 46,

Mr. MONK. It has been suggested to me that many retail concerns use the word co-operative, although not organized under this Act or under any provincial Act, and these sometimes become bankrupt and thus throw discredit upon the movement. It has been suggested to me that the Bill be amended by adding to it a clause which has been suggested at the recent co-operative congress in England to the following effect:

No person or body of persons, not being a society registered under this Act or under some Act of a province of Canada, shall be entitled to use the word co-operative as any part of their trade name or designation, and the use of the said word in contravention of the present section shall constitute an offence under this Act.

Mr. M. S. SCHELL. I have not noticed whether there is a provision in the Bill for calling the annual or any general meeting of the society.

Mr. MONK. That is one of the subjects to be provided for by the rules of the society when organized.

Mr. LEMIEUX. I am reminded by the Minister of Finance that there are co-operative establishments already in existence that might be affected by this amendment. Of course, vested rights should be respected.

Mr. FIELDING. I know that in my own province there are quite a number of establishments conducted on the co-operative principle and some of them use the word co-operative. There are societies of that character in connection with the mines and also in the fishing districts. I merely mention that so that my hon. friend may see that he does not penalize any of these societies.

Mr. MONK. I would not like to do that, and I think we might meet the view of the Finance Minister by inserting the words 'from and after the passing of this Act.'

Mr. FIELDING. Does my hon. friend from Cape Breton know of co-operative societies which use the name without charters ?

Mr. JOHNSTON. Quite a number.

Mr. FIELDING. I take the effect of my hon. friend's amendment to be that if a society has a provincial charter its rights would be respected, but if it has not it would come under the penal clause.

Mr. JOHNSTON. I know one or two which are incorporated, but my impression is that there are others which have no provincial charters, but still use the name and conduct a very extensive business.

Mr. FISHER. I do not know how far this amendment will reach, but I wish to point out that there are in the country co-operative butter and cheese associations which are not incorporated and which use that term. It would be very unfortunate if the amendment should shut them out.

Mr. MONK. It certainly would shut our any concern which without provincial authority or without the authority of this Act used that word. It would apply to those societies mentioned by the hon. member from Cape Breton which are not organized under a provincial Act. But does not my hon. friend think it would be well to perfect societies which are organized under this Act or under a provincial Act?

Mr. JOHNSTON. My impression is that there is not a general Act of the province of Nova Scotia, but that a number of these co-operative societies have received individual incorporation from the provincial legislature.

Mr. MONK. This amendment was suggested at the 38th annual Congress of Co-operative Unions, held at Preston in England in 1907, because it was found that people who were not organized under any legislation used the word co-operative as an advertisement, very often as a last resort before going into bankruptcy and thus brought discredit to the co-operative movement. But if the committee does not think the amendment important, I will not insist upon it.

Proposed amendment withdrawn.

Bill reported, read the third time and passed.

On motion of Mr. Fielding, House adjourned at 11.15 p.m.

---

## HOUSE OF COMMONS.

MONDAY, March 9, 1908.

The SPEAKER took the Chair at Three o'clock.

### REPORT PRESENTED.

Report of the Royal Commission appointed to investigate the Quebec Bridge.—Hon. Geo. P. Graham.

On motion of Mr. GRAHAM, the report was ordered to be printed forthwith.

### DOMINION ELECTIONS ACT AMENDMENT.

Hon. A. B. AYLESWORTH moved for leave to introduce Bill (No. 115) to amend the Elections Act. He said : In examining the present election law, with the effort to make improvement where there was room for improvement, I found myself in most instances unable to suggest any substantial betterment. Whatever complaints may have been made with reference to it have been complaints, I think, with reference altogether to the administration of the law, and not to its provisions. It would be difficult to suggest any wider definition of the things which constitute corrupt practices, or to prohibit by any form of language of more general signification than that which is already to be found on the pages of the statute-book, those things which it was the intention of parliament should not be done in connection with elections. The widest and fullest imaginable means for investigating corrupt practices at elections already exist. Not only are there provisions of the Controverted Elections Act under which any elector, by the means there prescribed, may have investigations before the courts of alleged corrupt practices committed in the interest of any particular candidate, whether elected or defeated, but there is also the general law, under which, if no elector chooses to avail himself of the provisions of the Controverted Elections Act or to make complaint in regard to the doings of his opponents at an election, a small number of

electors can have an investigation if in their opinion there has been any general prevalence of improper proceedings at an election, and the results defined by the statute follow. In these circumstances, it has not seemed to me that I could suggest any improvements in the law in these respects, and the amendments which I have framed relate to different minor matters and to some things perhaps of substance. But, speaking generally, they relate to different details in the carrying out of elections under the statute, with regard to which I thought there was some room for improvement. In that connection I gladly acknowledge my great indebtedness to the committee of this House which, the session before last, held an inquiry into this matter. That special committee, consisting of seven members, held a considerable number of sittings during the session of 1906; and although it did not make any formal report, a great quantity of information was gathered together, as the result of which I have framed several amendments which I am now submitting.

I have also had the advantage, within the last few weeks, of examining, not only the Bill introduced in this House by my hon. friend from Prince Edward, (Mr. Alcorn) but also the Bill introduced by the Attorney General of Ontario in the Ontario Legislature. From both these sources I have received more than one suggestion of considerable value. I should say however to my hon. friend from Prince Edward county (Mr. Alcorn) that his mind and mine have been working to some extent on parallel lines. I find in the Bill he introduced provisions with regard to two or three measures—perhaps matters of more importance than the minor details—in regard to which I had some months before prepared amendments, which amendments now figure as clauses in the Bill I am introducing. I have left those clauses untouched as I drew them, but am in no sense wedded to my own phraseology and shall be very glad if in committee the House will consider them along with similar provisions in the Bill of my hon. friend and adopt the language best calculated to attain the purpose we both have in view.

The measure I am now introducing is one I committed to paper some four or five months ago and before the present session; and with the exception of one or two details which remained for further consideration, these provisions had therefore that amount of consideration at my hands and at the hands of the government. One of the features of this Bill is a provision with regard to contributions to election contests. Of late considerable attention has been directed to contributions of that character—contributions which the newspapers, at all events, have found in some instances to reach an unusual size. I am proposing that all contributions from any source to an election contest must be made through the statutory agent and that the agent should be required to make public to the returning officer, in the same way as he now makes public his disbursements of the expenses of a candidate, the amount and the source of all election contributions he has received. To contribute otherwise than to the agent will be illegal, and it will be the duty of the agent to make public the amount and source of every contribution made to him. Connected with that provision of the law, there is a similar or analogous provision prohibiting any company from contributing any amount whatever to an election campaign fund and enforcing that prohibition by heavy penalty upon the officers, directors, shareholders, or legal adviser of the company which trangresses the law. In that connection I may refer to provisions of a possibly minor character but all pointing in the same direction. The circulation of false statements regarding the personal conduct or character of the candidate is something which, is one more or less notable instance in comparatively recent times, has probably worked the defeat of a candidate, necessitating his withdrawal from the contest, although shortly afterwards circumstances seemed to demonstrate that the reports were entirely unfounded. There is a provision in the English Elections Act on the subject; and adapting that provision, I propose to make it illegal to circulate false statements regarding a candidate at an election, and touching his personal character or conduct, if such statements can be shown to have been circulated with a view to affecting his return.

Handbills are sometimes circulated in election contests containing libellous statements and great difficulty is experienced in ascertaining the source of such anonymous handbills or fixing the responsibility for the statements therein contained. As a means of protecting candidates against that form of falsehood I am proposing, in accordance with the provisions of the English statute, that all handbills, advertisements, placards or bills of that character, circulated in connection with an election, should show on their face the name of the printing office where they were prepared.

I am proposing a clause which will forbid the intervention in any of our elections of non-residents of the Dominion unless they are voters in some constituency of the country, thus prohibiting the interference in any capacity—for the purpose of canvassing or otherwise in any regard at an election—of aliens who have no interest in our government or affairs.

The other amendments in this Bill are of possibly minor character altogether. It was stated before the committee to which I have already alluded that in some instances, candidates had difficulties in ascertaining the limits of their polling subdivisions

and what polling subdivisions were established for their riding. To prevent further difficulty on that score, the committee came to the conclusion to recommend such legislation as I am now embodying in this Bill—a provision that a certain number of copies of the proclamation shall be sent by the returning officer or delivered personally to every candidate. And a penalty shall be imposed upon any one who mutilates or tears down a proclamation for an election before the voting has taken place, the reason for that provision being the statement that in some parts of the Dominion, these proclamations had simply been posted up to comply formally with the requirements of the law and had immediately been taken down by the very same person who had posted them up or by some one who had come along immediately afterwards. The clause as drawn, not merely imposes penalties for the tearing down or mutilation of a proclamation so posted up but makes those penalties especially severe if the tearing down or mutilation takes place at the hands of any officer of the law or any person who has a duty imposed upon him in connection with the election. I am also proposing to provide that every nomination paper shall contain an address within Canada for service upon the person nominated, so that any election petition or any paper of any description connected with the election which it might be desirable afterward to serve upon any candidate can be validly served upon him by leaving it at that place.

It is said there has also been difficulty in connection with some recent elections in the province of Ontario—I do not know if a like difficulty has occurred anywhere else—in the form of oath administered to voters—and there has been debate upon that subject in previous sessions in this House. I have examined with all the care I have been able not only the legislation on the subject but the views expressed by different members of this House in the debates I have referred to. I must say I am not able to see a defect, if the provisions of the statute were adhered to and observed. The law as it stands requires the oaths which may be administered to voters at provincial elections to be so modified that they will be appropriate oaths in like cases to be administered in Dominion elections, and then provides that if required any elector may be asked and compelled to take a further oath which is prescribed in form by the Dominion Elections Act. But it has been stated that inasmuch as these oaths have been forwarded to the returning officer and distributed by him to the deputy returning officers on separate sheets of paper, in many cases, in practice, the deputies on being required to administer the oath to any elector, have administered only the one and that one not the form which contained the clauses asserting that the elector had not been guilty of paying or receiving anything in the way of bribery or for corrupt practices, that accordingly electors, after being required to be sworn, had been so sworn without taking any oath upon the subject of bribery. As I have said, I cannot see, if the statute as it stands were observed by the official and by those who require the oaths to be administered, that any amendment to the law is requisite; I think that everything is covered by the statute as it stands at present; but there has been practical difficulty and to prevent the recurrence of any such difficulty I took upon myself the responsibility, prior to the by-elections of last fall, to suggest to the Clerk of the Crown in Chancery that a special form, incorporating not only the clauses of the oath administered in provincial elections but also the special form of bribery oath required by the Dominion Act should be prepared and sent out to the various returning officers for use in those by-elections. Upon my suggestion and advice a form which was prepared in the Department of Justice incorporating these separate forms of oath was sent to the returning officers by the Clerk of the Crown in Chancery and so far as I have ever heard there has been no difficulty raised in consequence, at any of the by-elections which took place last fall. While I do not think it is, strictly speaking, necessary that there should be any amendment of the wording of our present Elections Act in that respect, I have thought it would be the part of prudence so to amend the present legislation that the form of oath which without any special authority had been so sent out and used last year should now be the form authorized by the law and I am proposing to insert an amendment in that regard.

I am proposing also a clause with regard to the preservation of the blank ballot papers in the hands of the officials before polling day, a clause which has been prepared in view of statements which were made to the special election committee two years ago that such legislation was desirable.

A provision also appears that a voter whose name may have been omitted in the transcribed list but who was entitled to vote and whose name does appear upon the general list should be enabled to vote upon a special numbered ballot on taking an oath that he is the person named in the general list and that he believes his name has been omitted by inadvertence. Such a provision is or may possibly be of value.

A great deal has been said in different places, a good deal has been said in this House since the general elections in 1904, in regard to the omission in the special lists for different polling places in Manitoba, and perhaps in other parts of the Dominion as well, of the names of voters who were on the general lists and who were entitled to have voted. I am confident, as

the result of listening to the evidence which was given with special relation to charges of that character before the Special Elections Committee I have mentioned, that the circumstances connected with these alleged offences have been very much misunderstood. I am confident that the omissions of such names were few in number and that there was nothing of intentional wrongdoing. However that may be, it is of interest that provision should be made in the Elections Act which will authorize and permit the officers of the law to make that redistribution of names. Under the present system the voters' lists of the province of Manitoba, of the province of British Columbia and of the unorganized portions of the provinces of Ontario and Quebec, are not prepared from the assessment rolls, are not prepared with reference to the property which the voter owns and they do not show upon their face any particular place as the residence of each voter; the list contains merely the name of the voter and his post office address. In many ridings, for Dominion purposes in these portions of the Dominion there is not coincidence in territory between the riding for the purposes of the provincial election and the purposes of the Dominion elections, or in the individual polling subdivisions. A riding for Dominion purposes may contain portions of a dozen different polling subdivisions established for provincial purposes and the officials conducting the Dominion elections, have of necessity to transcribe from the general list to a special list for the purpose of that poll, the names of the voters who properly ought to be assigned to the particular poll. I am proposing, in the Bill I have prepared, a clause which will authorize that to be done. It is a thing which there is necessity should be done, without which the election cannot be carried on, and in regard to which, unless there is statutory authority for the doing of it, one cannot expect officials to do the necessary election work and incur the risk of prosecutions, which, although they may be without foundation are none the less annoying to the individual.

I am proposing also to adopt an amendment which was, to some extent, discussed before the Elections Committee I have spoken of, and which is, to my mind a very essential one. I was very glad indeed to notice that my hon. friend from Prince Edward (Mr. Alcorn) advocated a like amendment, because it is one of the justices of which I am fully persuaded and which I urge strongly should be adopted by this House. This amendment provides that no number or mark which the deputy returning officer or other official may put upon the back of the ballot shall avoid that vote at the hands of the man who cast it. There have been at least two notable instances in the history of this House in which the absence from the Dominion Elections Act of any such saving clause has affected the election. Some thirty years ago an election in East Hastings resulted in the return of a candidate by a majority of twenty or twenty-five. But, upon a recount of the votes before a county judge, it was found that the deputy returning officer at one of the polls, at which that candidate had a majority of more than his total majority in the riding, had numbered all the ballots after the manner which then obtained in the province of Ontario. The result was the throwing out of these ballots by the judge, a certificate that the other candidate was elected, an election petition on the part of the candidate who had been counted out, and a new election. Precisely the same thing occurred in the county of Wenthworth at the last general election. And although our statute has, ever since it was first passed, thirty-five years ago, been silent in this respect and left such ballots to be rejected by the returning officer and by the courts, it has always seemed to me that that was a defect in the Dominion Elections Act which ought to be remedied. I do not, however, conceal from myself, and I do not seek to conceal from the House the fact that to remedy this, to permit such numbered ballot or ballots containing marks of identification to be counted, is a radical departure from the whole principle of the Dominion Elections Act. It has been said by learned judges, and no doubt correctly said, that the ruling principle of the Dominion Elections Act is secrecy at all costs, secrecy even at the cost of defeating the will of the people by preventing the counting of ballots which are perfectly good when they leave the hands of the electors, but which may afterwards be vitiated by the deputy returning officer or some other official. If it is a question whether that overriding principle of secrecy is or is not to be encroached upon for the sake of preserving the individual vote and securing a true expression of the will of the voter and of the people, then, in my judgment, the principle of secrecy ought to give way, and not the principle of giving to the voter the means of expressing his true wish at the polls and carrying out that wish in the counting of the ballots.

There are one or two minor provisions in the way of increasing the severity of the penalties which the Act already imposes for the infraction of its provisions. I am proposing that the man who pays money as a bribe, or the man who takes money as a bribe shall be subject not merely to the monetary penalty which the law now imposes and to the penalty of imprisonment which is already provided, but shall, for a period of eight years, be disfranchised and disqualified from holding any office under the Crown or in the gift of the Governor General in Council. My object in suggesting

that amendment for consideration is simply to provide one additional penalty and one which perhaps would be felt by the class of man who pays money for a vote or who receives it at the hands of some one willing to bribe him. I am, in the same sense, seeking, not as something new, but as something to increase the penalty, to make more severe the punishment which the law already provides for the man who tampers with the ballot. However lenient public opinion may be in regard to the man, who, in his need, takes a small sum of money for his vote or even toward the man who pays that money to an elector as a bribe, I think there is one thing in regard to which all parties in this country, all citizens of this country, are agreed, and that is that no penalty can be too severe upon the man who deliberately goes about to thwart the will of the electors generally, or of any elector, by intentionally tampering with a ballot which is cast at the election or diverting it from the purpose with which it was cast by the man who marked it. In that view, I am asking the House to provide more severe penalties in the way of heavier imprisonment, and removing altogether the possibility of a monetary penalty only upon the man who, whether an election official or a stranger, interferes with the ballot after it is marked by the voter and deposited in the ballot box.

These, in general outline, are the provisions of the Bill of which I have given notice, and I beg to move that the Bill be now read the first time.

Mr. J. G. H. BERGERON (Beauharnois). I know that it is not customary to discuss a measure of this kind on the first reading, but I was not in the House when the hon. Minister of Justice (Mr. Aylesworth) commenced his remarks and I am not sure whether one point which seems to me important is covered by the Bill. The committee on the election law, a couple of years ago, debated the question of trying to prevent this carting about of voters which now takes place. In the province of Quebec we have a good deal of that. It is very annoying, and I think that hon. members on both sides will agree that if we were to adopt the principle in force in Ontario, one man one vote, it would be a great deal better. Of course, if that is covered by the Bill it will come up for further discussion. As to the form of the oath, I was glad to hear the Minister of Justice say that the Bill would provide that there should be no obscurity about the oath to be administered to the elector. As it is to-day, in every election in which I have taken part for the last five or six years, it has always been a very hard thing to get deputy returning officers to administer the oath as the law provides.

My hon. friend a moment ago said that the law already provided for the oath. That may be true, but it was not accepted in that way by the deputy returning officers. I remember a case in which a deputy returning officer was administering the oath provided by the local election law, which did not amount to anything at all except that the person taking it swore that he was a British subject and 21 years of age. On my reminding the deputy returning officer that that was not the proper way of administering the oath, he told me that the copy he had was the one which he had received from the Clerk of the Crown in Chancery. That statement was perfectly true. The Clerk of the Crown in Chancery had sent a sheet of paper with an oath which was not an oath at all according to the spirit of the law. This question has been brought before the House two or three times, and the predecessor of my hon. friend promised to change this form of oath. We were told that the oath would be changed, or rather that the attention of the deputy returning officers would be called to the fact that they had to administer such and such an oath. It was not done. In the elections in Nicolet and Stanstead, the last two elections in which I took part, the oath as it should be administered was not administered. I am glad to hear my hon. friend say that the law will make provision so that there will be no misunderstanding as to the oath which shall be administered to the electors. We all understand, if we are to carry out the law, as the minister seems to desire, that the oath must be made in such a way that the elector will know what he is swearing at.

Some hon. MEMBERS. Oh, oh.

Mr. BERGERON. Swearing to. The swearing at takes place after the election generally, but that is not in the law. Another thing I would like to call my hon. friend's attention to is the fact that the lists are prepared by the municipalities. Unfortunately, that is about the only pledge given by the present government before they came into power that they have carried out, and I think it is a bad thing. The lists are prepared by the municipalities——

Sir WILFRID LAURIER. And well prepared.

Mr. BERGERON. Not always; and, as to the matter of cost, it is just as costly today as it was before. As my hon. friend said a moment ago, in some counties the delimitations for the Dominion House and for the provincial legislatures are entirely different, and there is a great mixture of names on the electoral lists. But that is not the point to which I wish to call my hon. friend's attention. I desire to call his attention to the fact particularly that the list is prepared by the municipal councils. It is sent

to the registrar and from the registrar it is sent up here to the Printing Bureau. Who is there to see that the lists are printed properly or not? They are sent here, they are printed and there may be mistakes made. I would not insinuate that any printer would do such a thing knowingly, but I repeat there may be mistakes. Whose business is it to revise these lists? How do we know that they are correct when election time comes on? When the lists are sent down from Ottawa as printed, we compare them with the copy that we have at the registrar's office, and they are not the same. There are many names omitted, and there are names on the list that should not be there. They forgot to strike off some names and they forgot to add new names. There should be an officer or a board appointed to go over the list, or to revise the proof, and see beyond doubt that the list that is printed and sent down to us is identically the list that came from the registrar.

Mr. TALBOT. Is it not a fact that the voters are not registered on the lists that are printed, but on the lists that are supplied at every polling place by the returning officer?

Mr. BERGERON. No.

Mr. TALBOT. Yes.

Mr. BERGERON. I do not know if I understand my hon. friend. If my hon. friend means the list which is used for the election, I would say to him that such a list is sent down from the Printing Bureau at Ottawa. That list may be right and it may not be right. If it is right, well and good; but if it is not right, why should the candidates suffer by it? I call the attention of my hon. friend the Minister of Justice to that point. It may be remedied when the Bill comes up for discussion. There is another point, and that is that there is no reason why elections should not take place on the same day. It was a principle of the Liberal party in days gone by that all elections should take place on the same day. We know that when the government last appealed to the country all the elections did not take place on the same day. Provision should be made in the law which would make it impossible for the government to change the date of the election in any county. I make that suggestion again to my hon friend and I hope that he will take this and my other sugestions in good part. I listened to him with a great deal of pleasure, and from what he said I conclude that it is his intention to see that the Election Act is put into such form that elections may be carried out in a more satisfactory manner to all parties than has been the case in the past.

Motion agreed to, and Bill read the first time.

Mr. BERGERON.

## EXCHEQUER COURT ACT AMENDMENT.

Mr. AYLESWORTH introduced Bill (No. 116) to amend the Exchequer Court Act.

Mr. FOSTER. What is the purpose of the Act?

Mr. AYLESWORTH. The provisions of this Bill are very simple. The Bill provides simply for an amendment with respect to a case which unfortunately arose in connection with the Exchequer Court two months ago, when the judge of that court became seriously ill. There is a provision in the existing law for the appointment, under such circumstances, of a substitute judge, and under that provision a substitute judge was appointed. Fortunately, the judge who was so appointed was able to dispose, with one exception, of all the matters that came before him during the time that he held the position. Under the statute his authority comes to an end automatically immediately upon the ending of the illness of the judge in whose place he has been appointed; so that upon the death of Mr. Justice Burbidge all authority on the part of the gentleman who was acting as his substitute came immediately to an end. There was one case, fortunately one only, which he had not disposed of. He was without power to dispose of that case, although ready to do so. That necessarily had to stand for rehearing before his successor. I am proposing to amend the Act so as to admit of a temporary judge concluding any work which he has in hand at the time his temporary authority comes to an end. I am at the same time proposing further to amend the Act by authorizing the judge of the court to confer general authority upon the registrar of the court to transact in the judge's name routine chamber business.

Motion agreed to, and Bill read the first time.

## INTERCOLONIAL AND PRINCE EDWARD RAILWAYS EMPLOYEES' PROVIDENT FUND.

Hon. GEORGE P. GRAHAM (Minister of Railways) moved for leave to introduce Bill (No. 117) to amend the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act.

Some hon. MEMBERS. Explain.

Mr. GRAHAM. In the Bill as formerly introduced and passed by the House there was a clause providing that no person who had been dismissed and not reinstated would be eligible to receive any benefit under this Act. In the English version of the statute that portion is stricken out, I imagine by the Upper Chamber, but it was left in the French version. I want to introduce it again because it is very necessary to a pro-

per carrying out of the Act that that should be in the Bill. Men sometimes are dismissed under a misapprehension and new light comes, on account of which they may be reinstated.

Mr. BERGERON. If it is in the French statute would it not be the law all the same?

Mr. GRAHAM. Then, this will not make it any stronger; the English statute seems to be in the hands of a great many barristers.

Motion agreed to, and Bill read the first time.

## PRIVATE BILLS.

### EDMONTON, YUKON AND PACIFIC RAILWAY COMPANY.

House in Committee on Bill (No. 68) respecting the Edmonton, Yukon and Pacific Railway Company.—Mr. Turiff.

Mr. LENNOX. I mentioned the other evening when the hon. gentleman in charge of the Bill was not present that there is a very vague point of commencement for the line as set out in the Bill. I think it was altered in committee so as to make it more definite, but of that I am not sure. The Bill says it may build from a point on its authorized line, but it does not define the point in any way.

Mr. TURRIFF. This is the way the Bill passed the committee.

Mr. FOSTER. What is the length of the main line?

Mr. TURRIFF. Some 700 or 800 miles.

Mr. FOSTER. It is very indefinite in a line of that length.

Mr. LENNOX. I don't think the committee passed it in that form.

Mr. TISDALE. I cannot understand the committee fixing the point so indefinitely, there must be some misunderstanding.

Mr. TURRIFF. This is one of the Mackenzie and Mann lines, and it is just an extension of time.

Mr. LENNOX. It is more than that, it empowers the construction of a branch from a point on the authorized line, which is 700 or 800 miles long, and therefore the point of commencement might range over that great distance. It has been invariably the custom of the committee to insist on more definiteness.

Mr. WILBERT McINTYRE. The authorized line spoken of is the Canadian Northern from Edmonton to the coast, and it has not been located yet, so that it would be difficult to determine the exact point from which this branch would be built.

Mr. LENNOX. It should be within certain limits.

Mr. MACPHERSON. The committee will readily understand that in building through such a mountainous country every latitude must be given, and it would be impossible for them until their line was surveyed to say which was the more feasible route. The railway must follow one of four or five river valleys, and if you confine them to one valley it might be found a physical impossibility for them to construct there.

Mr. TISDALE. You might at least say that it should be between some range of mountains and some river. The line is 700 miles long.

Mr. MACPHERSON. That is a mistake, it is about 500 miles.

Mr. FOSTER. What is the Pacific terminus of the main road?

Mr. MACPHERSON. I think it is Kitamaat. This is an old charter and they want to construct down to Vancouver. They will have to construct down one of the river valleys and if you confine them to a definite point it might be found impossible to build from that point after they have made their surveys.

Mr. LENNOX. In the first place it is indefinite as to where the main line is to run, and if you cannot define within 500 miles of where the starting point is to be it would not seem to be very necessary to charter it at all. We will say that this main line runs in a general way east and west and the branches north and south. There certainly should be some definite limit—say 200 miles distant from the coast on the west and 200 miles from Edmonton on the east.

Mr. DUNCAN ROSS. The difficulty is that there is no point that could be named between the Yellowhead Pass and the Pacific coast. The country is unsettled and unsurveyed. There is a river and there are one or two valleys down which a railway could run; but nobody has any definite knowledge of the country, and if the committee should limit the area, it might be found, when the line was surveyed, that the road could not be built according to the limit fixed by the committee.

Mr. FOSTER. The promoters could easily come for an amendment, I suppose?

Mr. GALLIHER. The public will be protected by the fact that the plans for any road proposed to be built there will have to be submitted to the Minister of Railways for his approval. As that country is almost unexplored, certainly unsurveyed, it is impossible to tie the railway down to a definite route.

Mr. FOSTER. The main point that occurred to me was that this was a bad precedent; it was very loose legislation. If

you were going to give a company the right to build branch lines, you should have some fairly definite provision as to the points from which those lines should start. I suppose the difficulties surrounding this case are peculiar; but I should think we might adhere to the precedent by fixing a limit within 100 miles of the coast.

Mr. DUNCAN ROSS. I quite agree with the hon. gentleman as to the bad precedent; but we are up against this difficulty, that the committee has not any knowledge enabling it to fix a definite point. It would be absurd to start building a branch line within 100 miles from the coast to the point to which you would wish to build it, without knowing more of the country than we know at present.

Bill reported, read the third time, and passed.

SASKATOON, SASKATCHEWAN, PEACE RIVER AND DAWSON RAILWAY.

House in committee on Bill (No. 70) to incorporate the Saskatoon, Saskatchewan, Peace River and Dawson Railway Company.—Mr. W. McIntyre.

On section 14,

Mr. GRAHAM. I move that section 14 be struck out and that the following be substituted therefor:

14. The company may for the purpose of its undertaking:

(a) Build, purchase, lease or otherwise acquire, manage or control hotels, restaurants and other buildings at any place where the railway is authorized to be constructed, and acquire, purchase lease and hold the land necessary for such purposes, and carry on business in connection therewith, and afford such facilities as tend to the comfort and convenience of the travelling public, and may let any such buildings for such purposes;

(b) Acquire, purchase, lease and hold lands required for, and lay out, establish and manage parks and pleasure grounds, and give a lease thereof.

We had this up the other evening. On going through the clauses of the Bill with the clerk of the committee, we decided to strike out clause 14, leaving the parts that refer to hotels and parks. The balance, referring to mining and lumbering, I have moved to strike out. Many other features of the Bill I find precedents for; besides, a good many are in conformity with the model Bill.

Mr. FOSTER. I have no objection to 'a' and 'b' as being now the constituent parts of the section.

Mr. HAGGART. I understand that these Bills have to pass an examiner, who marks out the clauses which are not according to the model Bill. Do these clauses, which are objected to by the examiner, go before the committee for consideration?

Mr. FOSTER.

Mr. GRAHAM. I am inclined to think that the whole Bill is considered by the committee, with notes on the margin by the examiner.

Mr. LENNOX. We do not hear anything about the report of the examiner. The Bill is printed and there is nothing in it to call attention to the fact that it has been passed upon by the examiner.

Mr. BERGERON. Would it not be well to have the Bill as amended reprinted, showing in brackets the changes made, so that we could see how the amended clauses compare with the original?

Mr. GRAHAM. That matter will be attended to in the future. We decided the other day to have the Bills reprinted.

Mr. GALLIHER. I have had one or two Bills before the examiner, and I think the course followed is this. The draft Bill is inspected by the examiner and he strikes out any clauses which are not in accordance with the model Bill. Then the Bill is printed, and the printed Bill is the one which the examiner has passed upon.

Bill reported, read the third time and passed.

ST. CLAIR AND ERIE SHIP CANAL COMPANY.

House in committee on Bill (No. 98) respecting the St. Clair and Erie Ship Canal Company.—Mr. Blain.

Mr. ARMSTRONG. We should have some explanation why these parties are asking for further extension of time when their charter has been in existence ten years. Is it their intention to go on and construct?

Mr. BLAIN. This Bill was placed in my name at the request of my hon. friend from Norfolk (Mr. Tisdale) who was absent, and he will give the necessary explanation.

Mr. TISDALE. The principal difficulty is want of money. As soon as we can raise it, we will go on as rapidly as possible.

Bill reported, read the third time and passed.

THE BANK OF VANCOUVER.

House in committee on Bill (No. 32) to incorporate the Bank of Vancouver.—Mr. Macpherson.

On section 4,

Mr. GALLIHER. As I understand it, the names in section 1 are struck out and no other names are substituted. This section as originally drafted declares that certain persons should be incorporated under the title of the Bank of Vancouver. Section 4 merely provides that certain persons should be the directors of that bank. If the names are struck out of section 1 and no others are substituted is that sufficient?

Mr. TISDALE. Section 1 is changed to provide for that.

Mr. LENNOX. But it may not cover the point. Section 1 provides for the incorporation and section 4 provides for the provisional directors of that corporation. We strike out the names in section 1, merely leaving certain names in section 4, which section refers to provisional directors.

Mr. TISDALE. Though the names are struck out of section 1 it says 'the persons hereinafter named' shall be the incorporators.

Mr. MACPHERSON. Certain people applied for a charter for the Bank of Vancouver and others for a charter for the Bank of British Columbia. These two parties got together with the result that the Bank of Vancouver promoters withdrew and allowed the Bank of British Columbia people to take the name of the Bank of Vancouver. There had been a Bank of British Columbia which had been absorbed by the Canadian Bank of Commerce and some objection was raised to that name. The result of the arrangement was that the Bank of British Columbia went ahead, but used the Bank of Vancouver Bill as the one to proceed upon.

Mr. BERGERON. That is, the promoters of the Bank of British Columbia dropped out.

Mr. MACPHERSON. No—the very reverse.

Mr. BERGERON. Two Bills were asked for, and only one is proceeded with and that one the Bank of Vancouver. Therefore the Bank of British Columbia must have dropped out before the Committee on Standing Orders.

Mr. MACPHERSON. No, nobody dropped out until the Bills came before the Banking and Commerce Committee.

Mr. BERGERON. I do not see why it was not put in the usual way merely with the change of name.

Mr. MACPHERSON. I quite agree—I do not see any reason for it. But lawyers, at times, have funny ideas, and this seems to be one of those funny ideas.

Mr. BERGERON. The most important point is how the Bill dropped out from the Standing Orders Committee.

Mr. GALLIHER. The Standing Orders Committee could not touch that. Both Bills went before the Standing Orders Committee and were reported to this House. But when they went before the Banking and Commerce Committee it was decided to drop the name of the Bank of British Columbia and drop the names of incorporators of the Bank of Vancouver.

Sir WILFRID LAURIER. If there are any objections to the Bill as reported by the committee I would ask that it be allowed to stand until the Finance Minister (Mr. Fielding) is present.

Mr. HENDERSON. The whole arrangement was thoroughly understood by the Banking and Commerce Committee. The Bill comes before us in a rather peculiar form—the thing might not occur again in twenty years. But there was no objection raised.

Mr. BLAIN. And the whole thing received the endorsation of the Minister of Finance who gave us the explanation.

Sir WILFRID LAURIER. I am satisfied with the Bill, but my point was that if any objection is raised I would like to have the Minister of Finance present before the Bill is proceeded with.

Mr. BERGERON. I did not rise to object to the Bill. It was a mere question as to the form of the measure.

Mr. TISDALE. The counsel of both parties were there and were quite agreed on the subject.

Bill reported, read the third time and passed.

## QUESTIONS.

### INTERCOLONIAL RAILWAY EMPLOYEES' PROVIDENT FUND.

Mr. GAUVREAU—by Mr. Johnston—asked:

1. Is it within the knowledge of the Minister of Railways that the employees of the Intercolonial Railway have been placed on the list of Intercolonial Employees' Provident Fund, although they were no longer in the employment of the railway at the time of the passing of the Act in question, and of its coming into operation?
2. If so, who are they, and for what reasons?
3. Is it his intention to place on the list of pensioners of the Intercolonial Railway, Mr. Joseph Dumas, overseer of the section of St. Eloi, in the county of Témiscouata, who became blind in the service of the Intercolonial Railway a short time before the putting in force of the said Provident Fund Act, and also by reason of an accident for which he nor the railway was to blame?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. All employees who have been retired from the railway service, under the Intercolonial and Prince Edward Island Railways 'Provident Fund Act,' were in the employ of these railways at the time of the passing of the Act in question, and of its coming into operation.
2. Answered by number one.
3. The government cannot place Joseph Dumas on the list of pensioners of the In-

tercolonial Railway; he having retired from the railway service on July 28, 1905, and having applied for and been paid the amount of his total disability allowance, in the Intercolonial Railway Employees Relief and Insurance Association; and also because the Act, section 21, subsection 2, provides that 'No person shall be entitled to receive both a monthly allowance under this Act and the total disability allowance from the association.'

PAYMENT OF BOUNTIES.

Mr. HENDERSON asked:

What was the amount paid as bounty on binder twine, lead and crude oil, respectively, in each year ending June 30, from 1903 to 1907, both years inclusive?

Right Hon. Sir WILFRID LAURIER (Prime Minister):

| | 1903. | 1904. | 1905. | 1906. | 1907. |
|---|---|---|---|---|---|
| | $ cts. | $ cts. | $ cts. | $ cts. | $ cts. |
| Binder twine | ..... | 25,452 04 | 13,789 27 | 15,079 40 | 32,598 86 |
| Lead | 4,380 00 | 195,627 09 | 330,645 12 | 90,196 67 | 1,994 75 |
| Crude Petroleum.; | ..... | ..... | 350,047 17 | 291,157 20 | 385,108 57 |

MATERIALS FOR DETROIT TUNNEL.

Mr. CLEMENTS—by Mr. Blain—asked:

What amount of materials used in the Detroit river tunnel up to March 1, 1908, have been imported from the United States, giving the amounts, separate, if possible, for that portion from the international boundary line to the water's edge, and that portion from the water's edge to entrance of tunnel?

Hon. WM. PATERSON (Minister of Customs):

The value of materials used in the Detroit river tunnel imported from the United States and entered free of duty in Canada up to 1st March, 1908, is $144,527. The customs returns do not specify separately materials for that portion of the tunnel between the international boundary line and the water's edge, from materials in the other portions of the tunnel within Canada.

ICE-BREAKING STEAMERS.

Mr. LEFURGEY—by Mr. Blain—asked:

1. Have the plans for a new winter steamer for the Prince Edward Island service been completed, and has the contract for building the same been let?

2. Is the following report correct?

Studying ice-breaking.

Charlottetown, Prince Edward Island, March 3.—Duguid, the British expert employed by the Dominion government for the building of ice-breakers is now making trips between Georgetown and Pictou on the winter steamers 'Minto' and 'Stanley' to observe ice conditions. Duguid is completing his designs for a new ice-breaking steamer for communication between the Island and the mainland.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Plans have been completed and tenders called for will be received until the 16th March, 1908.

2. No.

IMMIGRATION AGENTS IN ITALY.

Mr. VERVILLE—by Mr. Johnston—asked:

1. Has the government any immigration agents in Italy?

2. In what places do they reside?

3. What are their duties?

4. What salary or commission do they receive?

Hon. FRANK OLIVER (Minister of the Interior):

1. No.

INDIAN DEPARTMENT—PURCHASE OF BLANKETS.

Mr. CLEMENTS—by Mr. Blain—asked:

1. What amount of blankets have been purchased by the Militia Department and the Department of Indian Affairs since 1895?

2. What was the colour and price, from whom were they purchased, and were tenders called for the same?

Hon. FRANK OLIVER (Minister of the Interior). I would ask to have this stand as a notice of motion for a return as it concerns two departments.

Mr. SPEAKER. Stands as a notice of motion for return.

EXPENDITURES ON EXHIBITIONS.

Mr. ARMSTRONG asked:

What is the total amount expended on exhibitions outside of Canada since this government took office, the place at which the money was expended, and the amount in each case?

Hon. L. P. BRODEUR (for Minister of Agriculture):

| | |
|---|---|
| Stockholm | $ 1,122.87 |
| Omaha | 7,773.96 |
| Royal Exchange, London | 7,534.14 |
| Paris, France | 316,337.39 |

| | |
|---|---|
| Glasgow, Scotland | $ 70,379.91 |
| Wolverhampton & Cork | 59,786.13 |
| Pan American, Buffalo | 67,058.83 |
| Pittsburg | 11,200.10 |
| London | 5,725.54 |
| Liverpool | 3,243.95 |
| Osaka, Japan | 55,062.29 |
| St. Louis | 317,335.67 |
| Milan, Italy | 130,201.61 |
| Liege, Belgium | 164,152.98 |
| Dublin | 138,270.08 |
| New Zealand | 55,887.86 |
| Edinburgh, Scotland | 245.66 |
| Melbourne, Australia | 605.71 |
| Exhibitions General | 65,853.22 |
| London (Shepherd's Bush) | 90,363.07 |
| | $1,568,140.97 |

REVENUE AND COST OF EXPERIMENTAL FARMS.

Mr. ARMSTRONG asked:

1. What is the total amount of money received from sales made by each of the experimental farms in 1906, and the name of each?

2. What is the total amount paid for management and operation of each farm, and the goods purchased in 1906?

Hon. L. P. BRODEUR (for Minister of Agriculture):

1. As shown in the report of the Auditor General, page D-71, the following amounts of money have been received from sales made by the several experimental farms during the fiscal year 1906-7, covering the nine months ended March 31, 1907:

| | |
|---|---|
| Agassiz, B.C. | $ 705.04 |
| Brandon, Man. | 1,559.96 |
| Indian Head, Sask. | 1,053.86 |
| Nappan, N.S. | 646.58 |
| Ottawa, for seven months only | 2,733.74 |
| | $6,699.18 |
| Ottawa, not in report of Auditor General for 1906-7 (February and March) | 2,338.86 |
| | $9,038.04 |

In considering the revenue from the experimental farms it should be remembered that most of the grain which is grown on them is distributed free to farmers in the form of samples for the improvement of their seed.

2. The figures for all expenditures in connection with the management and operation of all branches of the work on all the experimental farms for the nine months ended March 31, 1907, are as follows, as given in the report of the Auditor General (Page D-29):

| | |
|---|---|
| Ottawa | $54,286.83 |
| Nappan | 8,515.73 |
| Brandon | 8,198.64 |
| Indian Head | 6,300.73 |
| Agassiz | 5,256.83 |
| New farms | 19,996.36 |
| | $102,555.12 |

In the report of the Auditor General all the general expenditures of the farms, which are not chargeable to any one farm in particular, are included in the accounts of the Central Farm. If these general expenses are deducted, the expenditure in connection with the Central Farm is reduced to $36,441.24.

SALES OF INDIAN LANDS.

Mr. ARMSTRONG asked:

1. How many acres of Indian lands have been sold since 1896?

2. What was the total amount received for the said land?

Hon. FRANK OLIVER (Minister of the Interior):

1. 620,434·60 acres of Indian lands were sold from the 1st of July, 1896, to the 31st of March, 1907.

2. $1,525,567.96 was received from the sale of Indian lands from the 1st of July, 1896, to the 31st of March, 1907.

REVENUE AND COST, GRAIN INSPECTION.

Mr. ARMSTRONG asked:

1. What was the total amount expended in inspecting grain in Winnipeg, Fort William and Port Arthur, in the year 1906?

2. What was the total amount received from the inspection of grain in Winnipeg, Fort William and Port Arthur, in 1906?

Right Hon. Sir WILFRID LAURIER (Prime Minister):

1. $85,655.86 for the calendar year, 1906.

2. $94,603.57 for the calendar year, 1906—grain inspected, weighing, warehouse licenses, samples sold and vessels overtime.

FOREIGN VESSELS IN COASTING TRADE.

Mr. STANFIELD asked:

Have any orders in council been passed granting foreign vessels the right to engage in coasting trade under clause six of an Act respecting the coasting trade of Canada?

Hon. WM. PATERSON (Minister of Customs). No.

LIFE-SAVING STATION AT TORONTO.

Mr. MACDONELL—by Mr. Blain—asked:

1. Has the government decided to establish a modern life-saving station at Toronto harbour?

2. Has the city of Toronto recently asked for the establishment of such a station?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. The government has established a life-saving station at the eastern entrance to Toronto harbour with modern appliances and one of the best crews that can be selected. Each year some improvement is being made.

2. An interview was held by his worship the mayor and members of the Toronto board of control with the Minister of Marine and Fisheries relative to the establishment of another permanent and fully equipped life-saving station at the port of Toronto and this matter is now receiving consideration.

WESTERN ENTRANCE TO TORONTO HARBOUR.

Mr. MACDONELL—by Mr. Blain—asked:

Has the contract for the construction of the new western entrance to Toronto harbour been awarded? If so, when, to whom, and for what amount?

Hon. WM. PUGSLEY (Minister of Public Works). No.

DREDGING AT HUDSON, QUEBEC.

Mr. MONK—by Mr. Blain—asked:

1. What was the total amount expended in dredging during the past season at Hudson, province of Quebec, and was the said dredging executed to improve the channel in the Ottawa river or the approach of the wharf, or for what purpose?
2. Who executed the said dredging at Hudson, and was it done by contract or by day work?
3. Were tenders for the said work called through the newspapers, and was the contract awarded to the lowest tenderer?

Hon. WM. PUGSLEY (Minister of Public Works):

1. (a) $3,596.28.
(b) Widening the channel near the wharf.
2. Dominion Dredging Company, Ltd., by contract.
3. Yes.

DREDGING IN COUNTY OF VAUDREUIL.

Mr. MONK—by Mr. Blain—asked:

1. By whom was the work of dredging at divers points in the county of Vaudreuil superintended during the past dredging season?
2. What was the salary granted to the said superintendent?
3. What is the total amount paid to him to date?

Hon. WM. PUGSLEY (Minister of Public Works):

1, 2 and 3. At Hudson: A. W. Mullan, $3 per day; amount paid him $108. At Vaudreuil: C. M. Besner; $3 per day; $236.85. At Pointe Cavagnale: Paul Denis; $2.50 per day; $135.50.

DREDGING RAQUETTE RIVER.

Mr. MONK—by Mr. Blain—asked:

1. What amount was expended during the past year in dredging Racquette river, county of Vaudreuil, province of Quebec?
2. Who executed the said dredging?
3. Was the said dredging done by contract or by day work?

4. Were the tenders publicly called for the said dredging through the newspapers?
5. Was the contract awarded to the lowest tenderer?

Hon. WM. PUGSLEY (Minister of Public Works):

1. $3,086.40.
2. L. Cohen & Son.
3. By contract.
4 and 5. Yes. The Dominion Dredging Company who were the lowest on first call, declined contract; on second call, by letter, L. Cohen & Son were the lowest tenderers.

DREDGING IN COUNTY OF NICOLET.

Mr. MONK—by Mr. Blain— asked:

1. Who did the dredging work in the channel opposite St. Pierre-les-Becquets, in the county of Nicolet, province of Quebec?
2. Is that work completed?
3. What is the total amount up to date paid for the said work?
4. To whom was such amount paid?

Hon. WM. PUGSLEY (Minister of Public Works):

1. The St. Lawrence & Great Lakes Dredging Company.
2. All the dredging called for by the contract has been completed.
3. $5,865.67.
4. The St. Lawrence & Great Lakes Dredging Company.

MOTIONS AGREED TO WITHOUT DISCUSSION.

For a return showing the number of seizures made by the Customs Department for the fiscal years 1905, 1906 and 1907; the reason for each seizure; the disposition of each case; the amount received by the government, and by the party seizing or giving information in each case; and the names of the ports at which such seizures took place.—Mr. Cockshutt.

For a return showing what amount has been spent up to February 15, 1908, upon the repairs made to the wall protecting the channel at the entrance of the Nicolet river; and if made by day work or by contract; who the contractor was, and the lowest tenderer; how tenders were called for; the amount of the contract, and the amount paid for extras; name of the superintendent appointed by the government; what amount he received per day, and the total amount paid to him.—Mr. Monk.

For a copy of all correspondence, telegrams, petitions with signatures thereto, in possession of the government, or any member or official thereof, respecting the removal of a post office from Angus McDonald's place in Pisquid, Prince Edward Island, to Russell Birt's, of the same place.—Mr. A. Martin.

For a return showing how many renewals of placer claims were granted by the Gold Commissioner at Dawson, on or subsequent to August 1, 1906, at $10 each; why the fee of $15, as required by 6 Edward VII., chapter 39, was not collected in these cases; and what shortages were afterwards collected.—Mr. Lennox.

For a return showing how many renewals of placer claims were granted by the Assistant Gold Commissioner at Whitehorse on or subsequent to August 1, at $10 each; why the fee of $15, as required by 6 Edward VII., chapter 39, was not collected in these cases; and what shortages have been collected.—Mr. Lennox.

For a copy of all applications, recommendation of applications, and replies thereto, instructions regarding advertising, and a copy of all tenders and replies thereto, for timber berths Nos. 652, 657, 677, 679, 681, 683, 684, 721, 722, 730 and 743.—Mr. McCraney.

For a copy of all petitions, letters of recommendation, written requests and correspondence with the government in connection with the opening of a post office savings bank in the post office at St. Gabriel de Brandon, in the province of Quebec.—Mr. Monk.

For a copy of all correspondence, telegrams, reports and recommendations in possession of the government, with respect to the inspection of packing houses, or the Meat Inspection Act, including the appointment of inspectors.—Mr. Armstrong.

## PRINCE EDWARD ISLAND—TUNNEL.

Mr. A. MARTIN (Queens, P.E.I.) moved:

For a copy of all correspondence, telegrams, reports, and all other information, not already brought down, in possession of the government or any member or official thereof, in reference to winter communication, and the construction of a tunnel between Prince Edward Island and the mainland of Canada.

He said: I rise, Mr. Speaker, on behalf of my constituents in Prince Edward Island, on behalf of the people of the whole province, and I may say on behalf of the people of all Canada to draw the attention of the government once more to this really important question. It is not the first time that it has been brought up in the House, and I venture to say that unless justice is done to my province it will not be the last time. It is something like the spirit in Shakespeare's Macbeth: 'It will not be quieted'; it will not be quieted unless justice is done to Prince Edward Island. This question is not of recent date; it has been an issue between the province and the Dominion since confederation. The terms of confederation were clear enough; fortunately for the province they were written down in such language that this government or no government of Canada can evade them if they have the proper sense of honour which a government of the Dominion should have. There may be (but I do not know what they are) reasons why the government of Canada did not implement this solemn compact entered into with a small province thirty-five years ago. What is the reasons why the terms of confederation have not been implemented up to the present date? Is it because the province is small? Is the government of this great country going to go back on its obligations because a province with which it entered into a compact is not a large province? I have heard it said by hon. members on both sides of the House—the most of those who said it are on the government side—that one reason was because the government was doing very well towards Prince Edward Island and that Prince Edward Island was a burden on the rest of the Dominion. We might as well have a heart to heart talk now with regard to that, to see if there is a scintilla of truth in that expression of opinion: that Prince Edward Island is a small province and is not bearing its full share of its obligations, and that it is not a contributor as the rest of the provinces are. I am going first to show that Prince Edward Island as a contributor to the Dominion treasury, is doing its full share as one of the provinces of confederation. Take your estimates of expenditure for this year; take your revenue for this year if you like. What portion does Prince Edward Island bear as a province in regard to that revenue or expenditure? Prince Edward Island is the one-fifty-fifth portion of the population of this Dominion and the expenditure of the Dominion this year is up to $116,000,000 or perhaps more, and Prince Edward Island being one-fifty-fifth part she naturally bears her share of that to the extent of $2,000,000 of money. Part of this expenditure is on capital account and the capital expenditure has to be borne by Prince Edward Island as well as any other province of Canada. Her share therefore is $2,000,000 and how much does the Dominion government return to Prince Edward Island yearly? Take it on an average from confederation to the present day and the Dominion has expended in Prince Edward Island since that time something like $500,000 or $600,000 a year. You take $2,000,000 from us and you give us back about $600,000. And yet we will be told that Prince Edward Island is a burden on this great Dominion. I want to go into this matter because I am compelled to on account of some things I hear around this House, and on the government side of the House. It has been said often and often that Prince Edward Island has been more than fairly treated. Now, I am going to show you how fair Prince Edward Island has been I will quote from one of the speeches that has been made down in Charlottetown when we entered confederation; at that time Sir George E. Cartier said:

> We viewed the British North American Colonies, as a portion of our great family, who owed and were bound to pay common allegiance to our noble Queen. This was not a question of bringing foreign elements together; he regarded it in the light of a family arrangement, in which the island is the youngest and smallest member.'

Prince Edward Island was to be the youngest and smallest member of the family and we know that the youngest and smallest

member of a family is always treated with some consideration. I am going to show how the youngest member of the family was treated in this confederation ; how she was treated some years ago and how she is treated to-day. I will give you modern examples first and then I will give you a few more ancient examples. I am compelled to do this because it appears to me that it is not for a political reason but that there is some other reason lying at the bottom of the inaction of the government in regard to Prince Edward Island. Here is a modern example of how Prince Edward Island is treated. We were called upon a few days ago to vote $300,000 for the celebration in Quebec and I believe that was right, though much money has been sunk at Quebec. The King's representative is to be there and I did not oppose it. But I am going to point out one thing about it—the government provided that every province that contributed $100,000 or more would be empowered to appoint a commissioner and would have a share in the commemoration. The great province of Ontario and the great province of Quebec can contribute $100,000 and they are to have a share in the celebration and to appoint a commissioner, but little Prince Edward Island is not to have a commissioner and is to be debarred if she cannot contribute $100,000. Just wait a minute now and I will show you the reverse of that. A few days before we had a question up about exhibitions in the different provinces of Canada. Every province in Canada got $50,000 ; but when it came to Prince Edward Island, we were told : $10,000 is enough for you. When you are asked to put your hand in your pocket, you are expected to pay just as much as the biggest of us ; but when you want to get something, you will get only something about your size. That is what you say to Prince Edward Island. I think the premier understands that. Another matter that came up not long ago was the granting of land to our valiant soldiers who served in South Africa. The land that was voted was mostly land that had belonged to the Hudson Bay Company for which Prince Edward Island paid its share as well as the other provinces. But nobody from Prince Edward Island will get an acre of that land; it is to be given to volunteers in some provinces and withheld from others. I do not think that is treating a young member of the family fairly. We do not want to be treated as children; we want only fair play, and we here have a modern instance.

There is some other heart-to-heart talk that I must not forget. How were we treated in regard to the first question that came up after we entered the union ? Every one in this House acquainted with the history of Canada knows something of the Halifax fishery award. That award was given to

Mr. MARTIN (Queens, P.E.I.).

the maritime provinces in return for the privileges extended to the Americans of fishing in our waters for a number of years. The fisheries belonging to the maritime provinces, but the amount of award, $5,500,000, was put to the credit of the Dominion at large. My province had a just claim to a part of that award. The treaty was formally signed on the 1st of July, 1873. But previous to that the imperial government and the American government were at loggerheads about these fisheries, and Prince Edward Island was asked by the imperial government two years before that treaty was signed to admit the Americans to its fishing privileges. It did so. The commission sat at Halifax, and the award was based on the use of the fisheries by the Americans not only for twelve years after 1873, but also for the two years previous to 1873. But how did Prince Edward Island stand with regard to the share of that award, which belonged to it on the same basis as the share belonging to Newfoundland ? Because my province entered confederation on the 1st of July, 1873, and the treaty was signed on the same day, Prince Edward Island was left out. If Prince Edward Island had come in a day later, on the 2nd of July, it would have had the same claim as Newfoundland, in addition to its own special claim for fishing privileges for the two years previous to 1873, but neither of those claims were paid to Prince Edward Island.

What was the next question brought up against that small province ? It was the question of representation. When British Columbia was admitted in 1871, you inserted in the Act these words, that its representation should be 'increased' at every decennial census. Why were these words not inserted when Prince Edward Island entered the union two years later ? What words were inserted then ? In place of 'increased' you put in the word 'readjusted.' In the Lieutenant Governor's speech at that time it was predicted that our population would increase to 400,000 ; but from that time you began to cut down our representation year by year until, as the premier said a few years ago, perhaps we would get justice when our representation arrived at the vanishing point.

There is another matter in regard to which Prince Edward Island has not been fairly dealt with. At the time that province entered confederation, it had 200 miles of railway under construction which had cost it $3,144,000. We passed that over as a free gift to Canada. It was a huge mistake, because Prince Edward Island had the railway almost built and had to finish and equip it at its own cost before handing it over to the Dominion as a free gift. There was no expenditure made by British Columbia or even by Ontario or Quebec on railways previous to

confederation. True, the provinces of Ontario and Quebec made a loan to the Grand Trunk, which, if repaid, would amount to-day to over $100,000,000. But the $3,144,000 which Prince Edward Island spent on railways stands against that province from that day to this; otherwise we would have been drawing interest on that amount from the time we entered confederation to the present day. I do not think that was acting very generously towards Prince Edward Island. What we are told is: these were your terms of union, and you must stand by them. I am going to mention a case in which the Dominion government did the reverse. When the terms of union suit the Dominion government, they stick to them; but when they do not suit them, they do not amount to a row of pins; they are made of paper, which you can tear up any minute of the day.

I will come to another modern instance. Take the new Subsidies Bill that was introduced last year, and what do we find? Did you deal fairly by every province in Canada? Did you deal fairly by my province? I submit that you did not. You did not stand by the British North America Act. It went down, because it was going to hurt some of the largest provinces of Canada and was a shield for the smaller ones; and the larger provinces of Canada drove the smaller ones into a net, brought the representatives of these provinces up here and wined and dined them, and what was the result? What is the consequence? You changed the British North America Act to give Ontario an additional subsidy of $629,000 a year and Quebec an additional $429,000 a year. Did the British North America Act authorize you to do that? No; the fathers of confederation knew very well that the expenditure of any province did not altogether depend on its population. Take my own province. Do you suppose it would cost anything more to govern my province if we had 200,000 people than if we had only 100,000 as we have to-day? No; on the contrary, if we had 200,000 instead of 100,000 we could govern it more cheaply, because we would have the taxes of the additional 100,000 people in addition to what we have to-day. The fathers of confederation put a wise clause in the compact. They limited the smaller provinces to 400,000 and they limited the great provinces of Quebec and Ontario to the population of 1861. But you gave to the two great provinces of Quebec and Ontario over $1,000,000 a year. That is, you gave them, capitalized, $35,000,000; and yet you have not got $10,000,000 to fulfil your contract with Prince Edward Island. That is not all. In a few years both of these great provinces will be drawing $2,000,000 of an increase yearly. Then it is not only these increases of $629,000 and $420,000, but they will be drawing $2,000,000, which represents $70,000,000 capital. How much did my province receive? Not one dollar under the per capita arrangement. Thanks to the inaction of this government, thanks to its refusal to carry out the terms of confederation, our people have not increased in the same ratio as they would have otherwise. Had you fulfilled your promise to Prince Edward Island, our population would no doubt to-day be 200,000. But because you have not considered your honour as a country, because you have not kept faith with our province, our population has not increased, and to-day you are trampling us into the dust by making us pay our full share of those large additions which you are giving those two large provinces. Yet these two provinces have surplusses while ours has not. We have been running into debt for years.

You may ask what has that to do with winter navigation. Well, I had to go into this question for this reason. There is no doubt a very strong misunderstanding in the minds of the people. They say to Prince Edward Island: You are getting everything. But I leave it to the House and the premier to say whether my province is receiving the treatment it ought to receive.

Coming to the next part of the question, I am very much pleased to find that the people at large are beginning to open their eyes to the treatment which Prince Edward Island has been getting. I believe that the press of the country is awakening to the fact that we are not getting justice, and from one end of the country to the other there is the cry that justice should be done Prince Edward Island however late. I really think Mr. Speaker that the following papagraph would be in the Governor General's speech this year.

The non-fulfilment of the terms of union with Prince Edward Island, with respect to winter communication is a standing reproach to this great country. It is therefore with much pleasure that I inform you that my government has at last taken steps to fulfil those terms by the construction of a tunnel under the Straits of Northumberland, in order to provide railway car ferriage and connect the province with the Intercolonial Railway and the railway system of Canada as the terms of union between the province and Canada provides.

We were doomed to disappointment, but we are told that the government are doing something, that they are going to build us a new boat. Well, that boat was promised three years ago. My hon. friend from Queens (Mr. A. A. McLean) asked the minister when that boat would be ready, and I see by the Montreal 'Herald' that the minister only called for tenders on the 18th of February and the tenders are to be opened on the 8th of March. Yet this boat, according to the minister, is to be a special boat, and great care will have to be taken in drawing up the specifications. Does the minister mean to tell me that to call for

tenders on the 18th of February, to be opened on the 8th of March, is sufficient notice to those who may want to tender?

Mr. BRODEUR. Does the hon. gentleman want more delay?

Mr. A. MARTIN. No, I do not; but why was not the minister more alive and if that boat is not to be on the route next season, why such a rush for the tenders? The minister admitted that the boat would not be ready for next season. I think he has taken a very good time to call for tenders, because, on account of the depression all over the world, he will no doubt get a steamer of that kind in England twenty per cent cheaper than he would within the last three years.

Mr. SINCLAIR. Is the hon. gentleman in favour of building the boat in England?

Mr. A. MARTIN. The Minister of Marine is sitting next to my hon. friend, why does he not ask him? The minister told us the other day that England was the only place where such a boat could be built. If the minister intended hastening the construction of the boat so that she could be on the route next season, I could understand his rush in getting in tenders, but the country will be rather suspicious. We know that when the 'Minto' was purchased $30,000 had to be expended on her by the government before she was fit for service, and we may expect something similar in the case of another boat. If the minister is going to have his boat ready for next summer, I would say by all means: Be quick about it. But we find that Mr. Duguid is down in Prince Edward Island making an examination to see if something new should not be put in the specifications.

Now, Mr. Speaker, I want to tell you something about the press of this country in reference to this vital question for my province. The statements of the press show that there is a change of feeling all over this country with regard to communication with my province. I should weary the House if I were to read even a tithe of the comments of the press that I have before me dealing with this subject. For instance, here is a quotation from the St. John 'Telegraph' of a very recent date:

The tunnel—that will be Prince Edward Island's politics this year, and next, and until the trains run from the mainland into Charlottetown. Politicians who, in private, make light of the island's claims are at once short-sighted and unjust. If fair play and good faith alone were consulted in this matter the Dominion government before this day would have set about the work required to give the islander's that which they were promised in the confederation compact—continuous steam communication with the mainland.

And here is a quotation from an independent paper in Charlottetown—a Liberal paper I may say—the 'Guardian.' I suppose my hon. friend from Kings (Mr. J. J. Hughes) will say that I am introducing party politics and will be inclined to question the classification of this paper as a Liberal paper. He is a good deal like a certain elder in a Presbyterian Church in Scotland who complained to the minister that the congregation was very unorthodox and said that the church must be purified. The minister told him to purify the church and the elder went at the work and soon had almost everybody read out of the church. He came back to the minister and said: Well, meenister, I hae nearly purified the church. There's naebody left but me and my brither—and I'm no verra sure about my brither.' I believe the hon. gentleman (Mr. J. J. Hughes) regards as a heretic every follower he has in Prince Edward Island because they do not all praise the government and is ready to declare that he himself is the only true Liberal, because he praises it in season and out of season.

Mr. J. J. HUGHES. And expects that there will be no Conservatives here after the next election.

Mr. A. MARTIN (Queens). Well, I am reading the words on this subject of a Liberal journal. A paper which is very ably conducted by a gentleman who was formerly on the 'Globe':

We give the minister fair warning that Prince Edward Island cannot be kept in the Dominion on such terms, especially under the exasperation of promises of better things, such promses being made only to be broken. This is plain speaking but it is so painfully true and so painfully realized here that the government will do well to heed it.

And here is another extract from the same newspaper:

In the meantime vast and costly public works have been undertaken and others are projected—the Transatlantic railway and the Quebec bridge now under construction, the Georgian Bay canal and the opening up of the Hudson Bay route now pressing for construction. Collectively these works involve expenditures of hundreds of millions of dollars, while Prince Edward Island is still waiting for the fulfilment of the union terms by the construction of a work vital to her very existence. Surely this is no time for our provincial government to remain idle spectators of what is going on at Ottawa. We cannot believe that they will do so.

Never before was the tunnel so universally demanded by our people. Never before was this necessity so great, and never before its practicability so clear or so clearly appreciated. It has been demonstrated moreover in these columns that in view of what it will save and what it will earn the tunnel will not cost the Dominion a dollar. Moreover the time to urge it forward is the more propitious from the public utterances of Hon. Wm. Pugsley, the influential and capable Minister of Public Works.

I may explain that this is the same Hon. Wm. Pugsley who attended a meeting not

very long ago and urged this tunnel enterprise. I am sure that his views will have great effect upon his colleagues.

—and from the recent favourable notices of the tunnel enterprise by the leading newspapers of both parties all over Canada.

The matter is urgent commercially and also politically. We are approaching the date of a general provincial election. We have reached the stage when the public man known to be opposed to the tunnel or doubtful in his support to it could not hope for election anywhere within the water boundaries of our province. Conservative members representing the island at Ottawa are urging the tunnel movement forward with all their force. It will not be politic for our Liberal friends to be open to the faintest suspicion of being laggards in the movement.

I am afraid they will. We shall likely hear my hon. friend (Mr. J. J. Hughes) by and by. The 'Guardian' says in another article:

The Dominion must face its obligation in that regard, an obligation signed, sealed and delivered thirty-four years ago with all the solemnity and sacredness of a treaty. The question will not down.

I have said that before—that this is like Banquo's ghost which will not down, and, even though Banquo be killed and his spirit laid, eight other kings will come in succession to fill his place.

This great issue has challenged the attention of Sir John Macdonald, the first premier of Canada, and of Sir Wilfrid Laurier the last who has succeeded him, and more or less all who bore rule in Canada between them.

The hon. gentleman——

I should weary the House if I were to continue quoting from the press. I might quote a very ably written letter from the Toronto 'Globe.' I might quote the opinion of the board of trade of Prince Edward Island. I might quote the opinion of the board of trade of the maritime provinces. I might quote for hours and hours to show that this project is making great progress with the public. The government inertia appears astounding in the face of public opinion concerning this proposal which has been before the public for years and which has commended itself even to our neighbours to the south of us and to such statesmen as the Earl of Granville. I have quoted some of the opinions of the press; I would now quote it some of the opinions of prominent public men. First and foremost I shall quote a letter written by the late Sir John A. Macdonald, then Prime Minister, dated February 6, 1891. Sir John wrote:

I fully appreciate the nature and extent of the obligation incurred by the Dominion to maintain continuous communication between the island and mainland. We have tried to carry this out by the 'Stanley,' but of course, she cannot fight against the elements. So if the cost comes within a reasonable amount, such as parliament feels justified in incurring, I should be prepared to submit the question for their favourable consideration.

(Sgd.) JOHN A. MACDONALD.

The present Prime Minister was then in opposition, but, not to be outdone by Sir John A. Macdonald, he wrote a letter a few days later. He was going to be in the swim. I have here a fac-simile of that letter and I have no doubt the right hon. gentlemen will recognize his own handwritnig when I show it to him, it is so well reproduced. I have no doubt the right hon. gentleman intended every word he then wrote. I shall not enter into a discussion of his motives; it would not be proper for me to do so, and I do not wish to, I think he meant every word of it —but he has taken a little too long to do it. This letter is addressed, not to the governor of Prince Edward Island or to any very important personage in Prince Edward Island, but to the editor of a party paper in Prince Edward Island, no less a person than D. B. Higg, Esq, of the Charlottetown 'Patriot.' His letter reads:

Dear sir,—I have your favour of the 2nd of February, instant. I hardly thought that an expression of opinion as to the construction of a tunnel to connect the Island of Prince Edward with the mainland should be required. Every man who has given any attention to the condition of things and the necessities involved by the island entering into confederation must admit that such a tunnel must be constructed if the thing is reasonably practicable. The first thing to be done is to have an accurate survey and estimates. I am only sorry that it was not done long ago.

Yours very truly,
(Sgd.) WILFRID LAURIER,

I will say this much for Sir John, and I wish from the bottom of my heart that I could say the same thing for the present premier, that he did something to carry out his promise—he undertook a survey. He got one of the most eminent engineers in the world to commence borings for the construction of a tunnel. He secured the services of Sir Douglas Fox who sent his expert here and began the survey. That survey was not carried to completion owing to the season being too short. But why has the premier not moved a hand or a finger to complete that survey? It would not have cost a great deal of money and he has told us, so he was sixteen years ago, sorry it was not done long ago.

I shall quote from other public men, first from one whose name will be a household word in Canada so long as the Dominion lasts. D'Arcy McGee, who said:

I stand here prepared to maintain the allegation of the address that not only as to its substance but as to the mode of its preparation and passage into law, this British North America Act is a glorious and most timely charter for which we all have cause to be

thankful. I stand up to maintain that all its provisions were honestly meant and fairly meant towards every province.

If D'Arcy McGee were here to-day I am sure he would say that every word he then uttered had been filfilled to the letter with respect to most of the provinces. But as far as my province is concerned, what has happened ?

D'Arcy McGee referred to another eminent Canadian whose name is a household word in the maritime provinces, Joseph Howe, of whom McGee said :

He leaves us unabridged our square miles of territory. I trust he will leave us unshaken, what is more essential, the faith of our people in their own future, the faith of every man Canadian in Canada, and of every province in its sister province.

That is that the provinces should look on each other as brothers, and not one of the provinces should have any cause of complaint.

I wish to remind the Prime Minister whose speeches I have always admired, of another incident. I had not the honour of being in the House at that time, but I remember reading with great pleasure his beautiful address in regard to the Northwest rebellion. You, Mr. Speaker, remember that a handful of people in the west were oppressed. It touched the heart of the present Prime Minister who was then in opposition, and I am about to quote the hearty, warm words which he uttered, as he only can, in defence of that handful of half-breeds in the Northwest, and in the effort to protect them in their rights. When I heard him utter these burning words in favour of these oppressed people I felt : Here we have a man who, if he comes to be at the head of affairs in Canada will be sure to come to the rescue of the oppressed and helpless. Here is what the premier said in 1885. I wish to remind him of it to see if it will not warm his heart towards Prince Edward Island :

The hon. gentleman——

Referring to a speech delivered by Sir John Macdonald.

—tells us that the people of Saskatchewan river have no wrongs! . . . They have been denied their just rights and now they are slandered by the same men whose unjust course drove them to the unfortunate proceedings they have adopted since. I say they have been treated by this government with an indifference amounting to undisguised contempt, that they have been goaded into the unfortunate course they have pursued, and if this rebellion be a crime, I say it weighs as much upon the men who, by their conduct caused the rebellion as upon those who engaged in it.

It is because for years and years the government have closed their ears not to hear the complaints, because they have closed their eyes not to see the wrong, because they have acted like the ostrich which buries its head in the sand not to see the danger, this is the reason that we have had an uprising on the Saskatchewan.

Six long years of constant petitioning——

Well, we have been petitioning for thirty-five long years, but six years then was a very long time.

Six long years of constant petitioning had failed to secure justice for these people, but the bullets of Duck lake immediately set the government in motion and immediately brought them to terms. . . . . As soon as they took up their old rusty muskets they brought the government to their knees!

I can understand why these people, goaded as they were by this systematic ignoring of their claims at last resorted to a most unfortunate course. Men have rebelled time and again for less just cause than these people had.

For six long years the people of the Northwest have been petitioning for their rights; for six long years they had used every constitutional means which the law could place at their disposal in order to get justice. They sent petitions; they met in assemblies; they sent delegations.

The petitions remained unanswered; the resolutions adopted in their meetings were ignored.

The delegations were received most courteously——

That is what happened to a delegation from my province not long ago.

The delegations were received most courteously, with sweet smiles and sweeter words, which were put down in writing, but were forgotten as soon as the delegates had turned their backs for home.

That is what happened in regard to Prince Edward Island. A delegation came up here, had a most cordial reception, but the promises which were made to them were forgotten as soon as the delegates had turned their backs for home just the same as the premier said had been done in regard to delegations from Saskatchewan. He also gave them a few sweet words :

All these years they had been petitioning and petitioning, begging and begging, knocking and knocking at the door of the government and the government never lifted a finger to come to their rescue.

Mr. Laurier concluded his impassioned address with these words:

This, I say, and I say it coming from a province where, less than fifty years ago, every man of the race to which I belong was a rebel, and where to-day every man of that race is a true and loyal subject. . . . I say, give these men justice, give them their rights, treat them as for the last forty years you have treated the people of Lower Canada, and by and by throughout those territories you will have contentment, peace and harmony, where to-day discord, hatred and war are ruining the land.

The following year Mr. Laurier, when indicting the government for the execution of Riel, used the memorable exclamation: Too late ! Too late ! Too late !

It is too late ! I am afraid the time will come when it will be too late in Prince

Edward Island. They will never adopt the extreme measures that were taken in Saskatchewan, they are too loyal for that, but nevertheless they have been greviously neglected. The grievances of the white, non-Boer population of the Transvaal were unredressed resulting in the Jameson raid, the Boer war and the loss of thousands of lives and millions of dollars. I wish to take this opportunity of bringing these facts to the House to remind the premier that in days long ago when his heart was warm towards the halfbreeds of Saskatchewan he gave utterance to the words which I have just quoted.

Now, I propose to come down to somethings more practical. I have given the opinions of our public men, of Sir John Macdonald, of our worthy premier and of D'Arcy McGee. If there is any question in regard to the expense of this tunnel I will call the attention of the House to the opinion of such an eminent authority as Sir Douglas Fox. Sir Douglas Fox, a few years ago, made the estimate that the tunnel could be built for $10,000,000. He has written a letter since to the Rev. A. E. Burke, a clergyman who is well known all over Canada, on the subject of the cost of the tunnel. It is as follows :

28 Victoria street,
Westminster, London, S.W.,
November 14, 1906.

The Rev. A. E. Burke,
Charlottetown, Prince Edward Island.

Dear Mr. Burke,—I am in receipt of yours of the 28th ultimo. Since I reported on the proposed tunnel many devices have been introduced for reducing cost and I quite hope, if the matter were again formally submitted to us, we might be able to suggest modes of construction which would considerably reduce cost of the proposed tunnel between the mainland and the island.

Yours faithfully,
(Sgd.) DOUGLAS FOX.

Why was not Sir Douglas Fox again consulted ?

It would not be a very great undertaking. Sir Douglas Fox is one of the most practical engineers and one who has had large experience in the building of tunnels. If the department of railways and canals had applied to Sir Douglas Fox, a man who knows something about tunnels, they would likely have to-day a lower estimate of the cost of the work. But, the government have deferred action. They have done nothing to test the feasibility of the tunnel between my province and the mainland. The hon. Minister of Finance (Mr. Fielding) at the end of last session, promised us that the surveys would be completed. I do not think that anything has been done. There has been no report that I know of and nothing has been done. Why ? Is the promise which the premier made to us in 1891 to remain unfulfilled? This question of continuous connection between Prince Edward Island and the mainland has been a matter of interest to me and to the people of my province for years and years and it is vital to the welfare of my province that it should be accomplished.

At six o'clock, House took recess.

## After Recess.

House resumed at eight o'clock.

Mr. A. MARTIN (Queens). Mr. Speaker, when you left the chair at six o'clock I was trying to show the House that there was no reason why the government of to-day should not take hold of this question in a businesslike way and carry it to a conclusion. I pointed out that the province was a paying partner in the union. I pointed out that the contribution of my province to the Dominion, basing it on population, would be something like $2,000,000 a year, and I made the statement, which I think will not be successfully contradicted, that in return for this we received something like $600,000 a year. I went on to show that on every occasion Prince Edward Island was debited with having received a great deal more than was delivered. I pointed out the unfair treatment accorded to the province in connection with the fisheries award, in regard to its representation and in regard to its railway. When Newfoundland was asked to join the confederation the Dominion government offered to pay for the railways, Newfoundland had constructed to the amounted of $9,000,000, while the province of Prince Edward Island had to pay for the construction of its own railways previous to confederation. I pointed out that on that account since confederation the province had been losing $157,000 a year, and in interest alone had paid to the Dominion government over $5,000,000. That in itself, along with the principal, $3,144,214 would be nearly the total cost of the proposed tunnel. I then went on to show how the province had been treated in regard to the new subsidy Bill of last session, giving the opinions of the press and of public men, including the late lamented Sir John A. Macdonald and the present premier. I spoke of the attitude of the province, which could not be said to be due to party feeling, because the local government is Liberal ; and I suppose my hon. friend from Kings (Mr. Hughes) will allow me to say a few words in regard to the attitude of that government without accusing me, as he usually does, of introducing party politics. Here is an abstract from the minutes of the executive council of the province, dated November 28, 1907, with regard to our claims against the Dominion government. It says :

The council deem it expedient that a memorial be prepared and presented to the Governor General at as early a date as possible, setting out all the claims of this province against the Dominion government, in terms

of certain resolutions of the legislature of this province adopted during the session of 1907, particularly with regard to the claim for damages accrued since the settlement in 1901 between said governments for non-fulfilment of the terms of union with respect to the maintenance of efficient steam communication and freight rates between this island and the mainland, and strongly pressing for payment of said indemnity up to the present time; also urging that immediate steps be taken to establish continuous communication by the best means that can be devised.

The following gentlemen were appointed a special committee to prepare said memorial, namely:

The Hon. Messieurs Peters, Hughes, McNutt, Hazard and Captain Joseph Read, M.L.A., and John Agnew, M.L.A.

As this is a matter of great importance the committee are requested to lose no time in preparing the said memorial.

I presume that memorial has reached the government here. What position do they take in regard to it? Every few years a demand is made upon them for damages for non-fulfilment of the terms of union, which were agreed to some thirty-four years ago. Besides, here is a resolution which was adopted by the legislature on the 20th of April, 1906:

On motion of Premier Peters, seconded by Mr. Matheson, leader of the opposition, it was resolved unanimously:

That an humble address be presented to His Excellency the Governor General in Council, praying that immediate measures may be adopted by the Dominion government to fulfil the terms of confederation with Prince Edward Island with respect to continuous communication.

On motion of the same mover and seconder it was unanimously resolved that five members be appointed to prepare the said address, and it was ordered that Hon. Mr. Peters, Mr. Matheson, Hon. Mr. Simpson, Mr. Morson, and Hon. Mr. Hughes do compose the said committee.

Premier Peters on the same day presented the draft of the address prepared by the committee, consisting of 14 sections and two schedules following, and the same was unanimously adopted by the House.

You will see that the legislature of the province, which is Liberal in politics and consequently in sympathy with the government here, has been urging this government to do something, but as yet practically nothing has been done. When I read the right hon. the First Minister the terms of the union on which our claim is based, he will agree with me that a great deal of time has elapsed and very little done to satisfy the aspirations of the province. The terms of the union are these:

The Dominion government shall assume and defray the charges of an efficient steam service for the conveyance of mails and passengers to be established and maintained between the island and the mainland, winter and summer, thus placing the island in continuous communication with the Intercolonial Railway and the railway system of Canada.

Mr. MARTIN (Queen's, P.E.I.).

I give the First Minister's own interpretation of those terms. This is how he described them:

It is a binding and solemn undertaking that the government of Canada will maintain continuous communication between Prince Edward Island and the Intercolonial. There is no provision there that the Dominion of Canada would try to do it; there is no suggestion that there might be too much ice in certain cases.

Let me now quote the words of the late Sir George Etienne Cartier. When we were invited to enter confederation we were asked how he was going to fulfil the promise of continuous communication. His reply was: 'There is nothing impossible to the Privy Council of Canada; try it.' Well, we did take Sir George Etienne Cartier at his word and entered confederation, and the conditions have not yet been fulfilled. I believe that Sir George Etienne Cartier then fully expected he would implement the promise then made.

I have made reference to what the eminent engineer, Sir Douglas Fox, has said with regard to new devices in tunnelling. I might add that I went to New York to see for myself what was done there in the way of tunnelling. After going over four or five of the largest tunnels and seeing the difficulties that had to be overcome, I came to the conclusion, as also did the engineers whom I consulted there, that our tunnel under the straits of Northumberland would present no difficulties at all compared with those I had visited. I went through tunnels in New York which had buildings twenty stories high over them, with perhaps only ten feet of earth between the two. You can imagine the cost of the labour to keep those immense buildings in position and the quality of the work that had to be done. In every engineer's office I saw charts hanging on the walls showing the progress made in the tunnelling from day to day. The progress of each day was marked off in different colours. I asked the engineer how it was that so much progress was made in one day and so little the next. He said, we are blasting the hardest granite, making scarcely any progress for hours; it sometimes takes us days to get over half a foot of it. Compare that work and those conditions with the conditions in tunnelling under the Straits of Northumberland and you will find a great advantage in favour of the latter. You will find beneath the straits hard impervious clay fit for making brick, so that there is no comparison between those tunnels in New York, which are all paying speculations, and a tunnel through the straits under the straits. There is another point I might mention. Of course the expenditure was very heavy in those American tunnels, but most of them had three tracks whereas our tunnel would have but a single

track. I went over the whole of these tunnels and had the pleasure of meeting a number of eminent engineers there. Two of the engineers are Canadians—Mr. Fraser, in charge of one of the largest, a graduate of McGill College, and Mr. J. Kennard Thomson, one of the foremost consulting engineers in New York. These gentlemen accompanied me through the whole of these tunnels. I have here the blue prints open for the inspection of any one interested, but in order to be brief, I shall simply quote a letter written to me by the engineer who accompanied me through each of those tunnels in which he gives his conclusions, as far as our examination into those works went:

Dear Mr. Martin,—In reference to your recent visit here—you will remember that the engineers of the three East river tunnels which we examined together were unanimous in thinking that your proposed tunnel under the Straits of Northumberland would be much less difficult to construct than any of the tunnels here, and they were of the opinion, judging from our experience here, that your tunnel could be constructed at from $1,000,000 to $1,200,000 per mile.

You obtained a printed description of the Battery tunnel with cost of same, and I inclose sketches of this tunnel furnished by Mr. Noble. While the engineers of the other two tunnels did not care to give the cost of their tunnels for publication, they readily compared the actual cost of the work under their direct supervision with the probable cost of your tunnel, of course allowing for difference in diameter, material, &c., with the results as stated above.

The London tube tunnels in clay cost about $15 per cubic yard, or for a 20-foot outside diameter about $900,000 per mile.

The Glasgow harbour tunnel, 16 feet inside diameter, cost about $750,000 per mile.

The St. Clair river tunnel cost about $1,600,000 per mile, and the Blackwall tunnel under the Thames cost about $2,600,000 per mile, but then this is of the largest diameter, 25 feet, built; and is for a double track subway.

The Boston subway tunnel cost $903,000 per mile per track.

The probabilities are that you would be able to get cheaper and better labour than were obtainable for any of the above tunnels; all of which goes to prove that your tunnel should cost less than your estimated $10,000,000.

Trusting that the above will be of some use to you.

Very sincerely,
J. KENNARD THOMSON.

I believe that an economical government could, without injury to the public service, save enough within a short time to pay for this tunnel. I do not wish to detain the House longer. I leave this matter in the hands of the House and hope that such progress will be made with this much needed improvement that it will not be our duty to stand up in this House year after year and complain that nothing has been done. I thank hon. members for their close attention and will close by moving for those papers, seconded by the hon member for Prince.

Mr. A. A. LEFURGEY (Prince, P.E.I.) This is not the first occasion upon which I have had the honour of addressing this House upon the subject of communication between Prince Edward Island and the mainland. In fact from the time that Prince Edward Island entered the union, this subject has been one the discussion of which was forced upon us. Prince Edward Island entered confederation under promises which led us to believe that immense benefits would result. But the terms of confederation have not been carried out and no earnest effort has been made to give us the measure of protection and support that was promised. We entered the union under a number of promises and cajolements, some six years after the main confederation had been brought about. One of the great hopes held out to us was that communication would be maintained winter and summer, with the railway systems of the mainland. We gave up a great deal from our then position to enter into this compact. I want to compare the situation of another part of the empire that was asked at the same time to enter this confederation but held off and still remains outside the union. I refer to Newfoundland. It is an interesting study to note the situation that Newfoundland holds to-day outside of union as compared with the situation of Prince Edward Island which entered confederation under the terms I have shown. Here we have an island in the Atlantic ocean separated from Canada by Cabot Strait. Newfoundland is a colony entirely on her own resources. Her revenues go into her own exchequer and she pays them out for her own purposes. Prince Edward Island, on coming into confederation, gave up customs and inland revenue, gave up postal revenue, gave up everything except the mere right to raise money by the direct taxation of the people, and handed them all over the Dominion. And what have we received in return? As the hon. member of Queens (Mr. Martin) has just stated, we handed our revenues aggregating from $1,500,000 to $2,000,000 and we receive services representing $600,000, or at the very most $700,000. And what becomes of the balance? Why, Prince Edward Island has been helping to build railways from the Atlantic to the Pacific; she has helped to dig the canals in Ontario—to the tune, as the Minister of Railways (Mr. Graham) reminded us the other night of $120,000,000. We have been helping to subsidize steamers to run from the St. Lawrence to all parts of the world; we have been assisting to pay $5 per head for immigrants to come into the prairie country, two thousand miles away from our own boundaries, although we have lands that might well be filled with agricultural peo-

ple. We have been paying increasing subsides to the larger provinces, and making those provinces more wealthy at the expense of the less numerous population in the little island down by the sea. And, in a number of other ways, our surplus revenue is used to enhance the value of the heritage of the upper and western provinces. The situation in Newfoundland is entirely different. They expend their own revenue, appoint their own judges, run their own services. And, for instance I understand that they have a telegraph system on which they pay only 20 cents for ten words. They have no national debt above their provincial debt, and they have a surplus every year, and all this with a lower taxation than Canada. Their population has increased in forty years from 140,000 to 230,000 while in the same period the provinces of New Brunswick and Prince Edward Island together have increased by barely 50,000 people. Newfoundland, by staying out of confederation has escaped having to come to Ottawa, through her representatives, year after year, begging for the fulfilment of the terms of confederation as Prince Edward Island has had to do. Her Finance Minister stated in a recent speech before the Newfoundland House, that he felt:

> Convinced that the best interests of the colony could be secured by paddling our own canoe and directing the energies of our own people through our own parliament.

This, I think, shows a situation well worthy of consideration by the House. Which is the better position, that of Prince Edward Island, coming here begging for the fulfilment of the terms of the union, having gone behind steadily and continually, year by year for thirty-five years, or that of Newfoundland, which having control of her whole situation, has increased some hundred thousand in population and has sufficient revenue from her customs and other sources to supply her wants and make her prosperous and happy. I think that with these facts before you the case of Prince Edward Island well deserves the attention of this House.

As I have said, we contribute very largely to the Dominion revenue; we are largely a consuming population and our imports are heavy. Confederation took away from us the protection which we might have had and which might have encouraged the building up of our own industries, so that now we obtain our supplies largely from the upper provinces. Thus we are very largely an importing centre. Of course in exchange for these imports we send out our agricultural products and we wish in return to get a certain measure of justice and to have reasonable economy in placing these natural products on our natural markets at all times of the year. We contribute very largely towards the support and development of the other provinces of the Dominion and in the development of their resources, and receive in return only a moiety of what we contribute.

If you consider the whole history of the fulfilment of the bond of confederation it will be seen that we have not received that fair treatment that my friend (Mr. A. Martin) has so well stated was contemplated by the fathers of confederation. In every instance Prince Edward Island has got the short end of the horn. Take the case of our railways, to which my friend has referred. We were charged in the first instance, as the hon. member (Mr. A. Martin) has pointed out, for the whole system of railways at the time of confederation, some $3,144,000.

In the matter of representation, the intention was—and this is not disputed by the hon. gentlemen opposite—that Prince Edward Island should have six members in perpetuity, but because that could not be read legally into the bond by the Supreme Court of Canada or the Privy Council, Prince Edward Island was again left in the background and the leader of this House (Sir Wilfrid Laurier) could not see his way clear to have the British North America Act rectified in this respect. But while the First Minister cannot see his way clear to have the mistake as to our representation rectified, he is very ready to put through a Bill changing the terms of the provincial subsidies and to give to the two great provinces of this Dominion, Ontario and Quebec, large sums of money which were not contemplated by the agreement under which these two provinces came into confederation. Thus it seems that the leader of the House has a mind that is influenced in different ways by similar facts according to the exigencies of the situation. So in regard to the treatment meted out to us in respect to the increased subsidy, the Prime Minister took a position altogether unwarranted and altogether different from the position he took with regard to the other and larger provinces. Ontario receives an increase of some $789,000, and Quebec an increase of some $600,000 and these provinces already with large surpluses each year over provincial requirements, while Prince Edward Island receives a miserable pittance of some $70,000 increase. It was said at the time, that the conference of the premiers at which the island was represented, was satisfied with the $70,000, and therefore this House should not change it. British Columbia, however, was a party to that conference, and not being satisfied, received more, and wants more yet. The right hon. gentleman was very wrathful at the attitude of the leader of the opposition with regard to the claims of British Columbia to an increased subsidy and in claiming that the matter was not a closed book and that British Columbia had a justifiable case to present. The minister stated in the

debate on the address, and it was a poor argument for the hon. gentleman to make, that the conference of premiers had presented their statement to this House and it had been unanimously accepted by both sides of the House. This is another case where the First Minister's memory fails him, because if he looks up the debate of last year on the matter of subsidies he will see that very strenuous opposition was made by myself and the other members from Prince Edward Island to the readjustment of subsidies. Owing to representations from the Prince Edward Island members on this side of the House a change was made in the scheme of readjustment to safeguard the interests of Prince Edward Island with regard to the per capita allowance being given on the maximum population of Prince Edward Island since we entered confederation. We on this side presented an unanswerable case for better treatment and further financial aid from the Dominion treasury when this question of increased subsidies was before the House last year. With regard to the grant to South African veterans the Prime Minister stated that no member on this side of the House objected to the resolution adopted on the motion of Mr. Sam. Hughes, but corrected his mistake on his attention being called to the fact that we had objected. Similarly in this case I would have him remember that very strong objection was raised by the members on this side of the House.

I want to say further that we were never properly represented at that conference of premiers. The men who were sent up here to represent Prince Edward Island at that conference were sent up from their own legislature with a memorandum of what they were to claim and they never even took advantage of the clause in the resolutions of the conference whereby they could put in a special claim for better treatment. When the situation was presented to the legislature, after being passed by this House, the legislature, sitting in Charlottetown, would not, as a body, accept the terms that were given to Prince Edward Island. I could give you instance after instance of indignation meetings being held in different parts of Prince Edward Island showing that the terms that were granted to Prince Edward Island in regard to increased subsidies were not accepted by the people and are not accepted to-day. I venture to state that if the local administration made an appeal to the suffrages of the electors of Prince Edward Island to-day on that one question they would be in the same position as the government of New Brunswick were in the recent elections—hurled out of power. It was acknowledged by the right hon. leader of the House and by others on his own side that the readjustment of the subsidy was brought about for the purpose of doing justice to the provinces under altered conditions, but if our proper situation had been presented to the conference we would have received a fair measure of justice. As I pointed out last year, in discussing this question, $70,000 would not wipe out the annually recurring deficit that we have in Prince Edward Island. The statement of accounts which has just been brought down in the local House shows that with its increased subsidy of $70,000 the island has gone into debt to the tune of $65,000 this last year. What benefit has been derived from that $70,000? We have not been able to implement our services in that country. Our teachers are underpaid, we have no money to spend upon our roads and bridges, and in fact we have not enough money, even resorting to every form of direct taxation, to meet the financial requirements of the province, while every other province of the Dominion almost has an annually recurring surplus to its credit.

Now, in regard to representation, subsidy allowance and railways, we have not had fair treatment since we entered confederation. In regard to representation, I notice that the Australian Commonwealth have a clause in their constitution providing that the smallest of their states shall be represented by at least five members in the federal House. If this parliament will not give us a representation of the six members to which we are entitled under the terms of confederation we ask that the British North America Act shall be ratified and amended so that at no time could Prince Edward Island have less than a certain fixed representation.

Now, there is the fishery award also. As my hon. friend from Queens has pointed out we have a claim there amounting to $1,250,000 in round figures. The Dominion government have had control of that sum of money for a number of years. At four per cent we should be getting $50,000 interest out of that every year. In regard to the fishery bounties we are supposed to be getting a proper proportion of the Halifax award, but while Prince Edward Island has been getting $8,000 a year, New Brunswick $14,000 or $15,000 a year, Nova Scotia has been getting $105,000 or $106,000 a year. Does the right hon. gentleman say that that is fair treatment? Newfoundland got her portion of the award and is drawing interest on it year after year. Prince Edward Island has the right to $1,250,000 of it and therefore she should have the use of the interest on that money amounting to about $50,000, whereas, she is only getting about $8,000 per year.

We had the question of land grants to volunteers up in the House the other day, and here again we found that Prince Edward Island and the maritime provinces came out at the small end of the horn. They have no lands to give away, but they paid their portion of the cost of the lands that were bought from the Hudson's Bay Company and which lands are being given

away to people who happen to be living up in the Northwest. As to exhibitions, we get the small end of it, ten thousand dollars, and the other provinces $50,000 each. As my hon. friend from Queens pointed out, when we are asked to contribute towards any object in other parts of the Dominion we are required to pay our full share otherwise we do not receive equal representation. On the other hand, if anything is to be handed out from the treasury we receive in proportion to our size. We have contributed our fair share towards the construction of the Transcontinental Railway. I have nothing to say against that great project except to ask that we shall be put in connection with such great works. We have no objection to enlarging our canal systems, no objection to building our railways, no objection to subsidizing steamers, no objection to all these great works that are designed to build up this confederacy, but we want a connecting link that will make us part and parcel of this confederation and make us feel that when we contribute towards any of these great objects we shall get our proper and just proportion back. Hundreds of millions of dollars have been expended since confederation and hundreds of millions of expenditure are in contemplation, but we might as well be outside of the confederation as far as any direct advantage we can get out of these works is concerned unless we have this physical link of connection between Prince Edward Island and the mainland. The terms of confederation have not been carried out. My hon. friend from Queens read the statement of the right hon. First Minister who acknowledged absolutely that the terms of confederation had not been carried out. At the time of the increase in the subsidy amounting to $30,000 that we got for non-fulfilment of the agreement in regard to winter communication, the right hon. gentleman, in justifying that payment, acknowledged that the terms of confederation had not been carried out. I do not think that the right hon. gentleman will get up in his place in the House to-night and say that since that adjustment was made the terms of confederation have been carried out. It is true that the government have taken some steps forward. We have had several boats put on, each, I presume, somewhat better than the last. I cannot say that the Conservative party, during their regime, did any better than the Liberal party, but the fact remains that the terms of confederation have not been carried out. It is acknowledged by this side of the House, acknowledged by the government side of the House, and I say that it is up to the government to rectify the wrongs of the past and take some tangible and reasonable step to implement their promises and to see that the terms are properly fulfilled. The $30,000 was given us as full compensation for losses up to 1901, but I want to tell the Prime Minister that $500,000 a year would not compensate the farmers and the merchants of Prince Edward Island for the loss they annually sustain by reason of the non-fulfilment of this term of confederation. Take such years as 1903 and 1905, when for sixty-four days and fifty-nine days, respectively, the province was absolutely cut off from any steam communication with the mainland, and you can imagine what enormous loss there was to the trade and commerce of the island. Not $500,000, not $1,000,000 would compensate the people for such loss as that. This year the conditions have been favourable, and up to the present there has been very little interruption of navigation, but if it were not that Providence favoured us we would have lost the supply of a couple of hundred thousand bushels of seed grain for the west. Prince Edward Island could supply 300,000 or 400,000 bushels of that grain, but if we had a season like last year, or some of the previous years, not a bushel of it could have been shipped, and you can realize what immense loss it would be on that item alone. Take it year in and year out, and half a million dollars would not compensate for the loss the people of the island have sustained, I say the direct and indirect loss to the provinces in matters of transportation is incalculable. But this is not the end of it; the government will never hear the end of this question in parliament until the wrong is righted. At present the provincial legislature at Charlottetown is preparing a memorial to the Dominion government demanding restitution for the loss Prince Edward Island has sustained since 1901, and I earnestly trust that no such puny amount as $30,000 will be accepted as compensation for the loss the province has suffered during that period. We are presenting these grievances to the House to-night so that the Dominion parliament may realize the position in which the island province is. A great many of the grievances which we have pointed out would be rectified if a tunnel were constructed. I believe, Sir, that if a tunnel had been built some years ago, instead of having a population of 100,000 as we have to-day, we would have 250,000 inhabitants in Prince Edward Island and we never would have lost our representation in this House. The area of 2,000 square miles in that province is an area of fertile land, the like of which cannot be duplicated in any part of the world. Last year that fertile province produced, in agricultural products alone, $10,000,000, not counting the fisheries and other sources of revenue, and no similar area in North America can equal that.

Mr. A. MARTIN (Queens). $100 per head of the population.

Mr. LEFURGEY. As my hon. friend points out, the agricultural production repre-

sents $100 per head of the population. Our province is capable of supporting, not 100,000 people, but 400,000 people, and if we had free communication and uninterrupted communication with the mainland and the opportunity to send our products to the markets of the world, as the other provinces of the Dominion have, our population would largely increase. Then, again, the question of our subsidy would have been largely rectified if we had had a tunnel, because our population would have increased and the per capita grant would amount to a much larger sum than it does at present. It has been stated, I believe, that the people of the island are not united on this project, but I want to tell this House that the best thinking people of the province from one end to the other are unanimous in believing that there is nothing else that will satisfy the needs of the island except a tunnel. We have for the past twenty-five years tried steamer after steamer, and we are now told that the government is going to give us a more powerful boat, but if you take the history of delays to navigation in past years you will find that the strongest boat ever built could not get into Pictou harbour at certain seasons, for the ice was absolutely grounded on the bar. Even this year, in the month of March, it may be found that through wind and tide conditions Pictou harbour is liable to be so blocked that no boat could pass either in or out. Some of the people of the island may be pessimistic about the scheme, but that is due to the fact that the government has not implemented the promises of the Prime Minister contained in that famous letter, in which he declared that if he came to power he would at once take up this great question and have it pushed forward to some satisfactory conclusion. The right hon. Sir Wilfrid Laurier has taken no steps to carry out that promise, although every opportunity—through failure of the present service, presentation from this side of the House, memorials from the legislature, delegations and full coffers during his twelve years in power—has been offered; but if Sir John Macdonald had lived, I believe that the promise he made in his letter of 1891 would have been carried out long ago. It is not too late even now for the right hon. gentleman to repent. We know that the general elections will likely come on next fall, and the Prime Minister has yet an opportunity to include a sum of $100,000 in the estimates this year to engage the best engineers in the world to prepare surveys and estimates, which may be submitted to the House. The right hon. gentleman has still time this session to redeem his pledge of 1891. Of course, a great many of the people on the island have lost faith in the right hon. gentleman and his government, but if even at the last hour he submits a vote for preliminary work on the tunnel he may still be able to hold some of his friends down there. Not only are the people of Prince Edward Island unanimous in favour of the tunnel, but we have the support and encouragement of the best business and financial men throughout the maritime provinces, Ontario and Quebec, who are familiar with our situation and who know that the province of Prince Edward Island is a large consumer of the products of Ontario and Quebec. We have also the boards of trade expressing themselves in the same way. The board of trade of the whole maritime provinces is on record as a unit that the tunnel between Prince Edward Island and the mainland should be built. These records are before the government. The tunnel would be a benefit, not merely to Prince Edward Island, not merely to Nova Scotia and New Brunswick, which would be benefited just as much as Prince Edward Island, but to the whole Dominion of Canada. It is a rounding out of confederation. What did the Minister of Railways say, in speaking of the Intercolonial Railway? He said that we could defend the deficits, that the Intercolonial must be looked upon as a national undertaking. Speaking of the Intercolonial as a regulator of rates, he said :

> If that be an object worthy of the attention of the House, I ask it, when matters come up affecting the Intercolonial Railway, to consider it from a double standpoint, first, from the standpoint of carrying out the pledge which was given to the maritime provinces at the time of confederation, not as a commercial venture, and, from the second standpoint, that the Intercolonial Railway is a great part of the transportation service of this country and what we do not get in rates remains in the pockets of the people of the Dominion of Canada.

In the same way we want you to consider first the pledge made to Prince Edward Island when she came into confederation that you would give us continuous communication winter and summer. As the right hon. leader of the government said in one of his speeches : We did not say anything about there being too much ice or too much of this thing or of that thing, but it was a promise made that should be fulfilled. But we have support not only from these public men, including many members of this House, who spoke last session just as strongly in favour of the construction of this tunnel as did the members from Prince Edward Island themselves, but we have also the support of the Hon. Wm. Pugsley, who spoke as follows in New Brunswick last summer.

> Sussex, New Brunswick, October 25.—The banquet tendered Hon. Dr. Pugsley, Minister of Public Works, by Kings county friends tonight was a great success.
>
> In the course of his speech on Canada's development and the means to assist its growth, the minister referred to Prince Edward Island, 'the gem of the gulf and garden of the

Dominion, which by reason of the Straits of Northumberland separating it from the mainland, is shut out from the sound of the throbbing of the commercial and industrial progress and prosperity of the rest of Canada.'

But her people, too, are waking up and they realize that a greater future would be hers if she could be joined to New Brunswick by a tunnel under the straits.

'I have read the reports in my department,' said the minister, 'dealing with this long talked of project with great care and with much interest, and hope that before I give up the portfolio of Public Works I may be the instrument of inaugurating that work which would mean so much to the island and Canada.

The time may not yet be ripe for undertaking this project; its cost may be beyond what the Dominion can at present undertake.

As to this I at present express no opinion, but I am sure that in the aspirations and hopes of the people of Prince Edward Island I stand for connection with Canada by tunnel.

My sympathies go out to them warmly and heartily.

Expressions of this kind justify us in expecting that the hon. Minister of Public Works will speak in favour of the tunnel in this House and use his influence in the councils of the government to have something tangible done in this regard. A great many of the leading papers are strongly in favour of this great work. The hon. member for Queens has quoted several of the leading papers of Canada in favour of it, and I could quote a number of others, but I will not weary the House. I will merely read a brief extract from a strong editorial on the subject in the Montreal 'Herald,' a supporter of the present government:

Hitherto there have been doubts expressed as to the practicability of a tunnel; but recent developments, whether in the Alps or at New York, taken with the known experience in England, are held to remove that element of doubt, and the delegates who have been urging their case at Ottawa were able to present an offer from one of the very ablest construction contractors in Canada to do the work for ten millions. A careful study of the financial aspects of the matter goes to show that if the tunnel is a physical possibility it would be all right from the investment standpoint. Possibly, also, joining the island to the mainland in this way might lead to a political consolidation of the maritime provinces. The project is one that ought to be taken up seriously, principally because the prosperity of the island seems to urgently demand it, and also because in the confederation compact it was definitely promised, and has only been withheld so far because of the doubts as to its feasibility.

I have extracts in the same strain from the St. John 'Sun,' the Charlottetown 'Patriot,' the 'Guardian' and a number of other leading papers. The legislature of Prince Edward Island, which is a Liberal legislature, has repeatedly presented memorials to this government on this subject. In a memorial adopted in 1905, setting out the claims of Prince Edward Island, articles 13 and 14 are as follows:

13. It is not the province of this legislature to dictate the means by which your government shall carry out the terms of union in respect to 'continuous communication,' but we desire to press upon you that by the construction of a tunnel under the Straits of Northumberland between this province and the mainland, the terms and agreement of union between the federal government and this province may be carried out and this province may receive the same consideration with regard to inter-communication as the other provinces of the Dominion.

14. And we further press upon your government that to meet the immediate needs of our people an ice-breaking steamer of much greater power than the present winter boats should be provided with all possible expedition.

To show how unanimous were both sides of the House on that occasion, I may quote the leader of the opposition, Mr. Mathieson, who said that 'the weight of the resolution would be greatly increased by the unanimous support of both sides.' The House went into committee on the resolution, which was carried unanimously. From almost every point of view we can take, the sympathy and the judgment of the people are with us in demanding this government to take some tangible step forward in the construction of this work. The feasibility of the tunnel is beyond dispute. I do not think any one will seriously argue, in face of the pronouncements we have had upon its feasibility, that the project is impracticable. Even fifteen years ago we had its feasibility demonstrated by men like Sir Douglas Fox, and to-day the most eminent engineers in the United States agree that the tunnel is perfectly feasible and that the cost would be well within reasonable limits and not be a burdensome undertaking to this country. It is only a matter of getting soundings and borings before any reliable estimate can be made further than can be made from the data we have. I took occasion to write a number of these experts. Mr. Kennard Thomson says the tunnel could be built for some nine million or ten million dollars. I quoted his statement last year and Mr. Thomson repeated that statement to my hon. colleague (Mr. A. Martin) in New York this winter. I have here a letter from Mr. H. B. Reed, who was the engineer in charge of the work undertaken by Mr. John B. Macdonald, one of the biggest contractors in tunnel work in the United States. From the data and information I was able to give him, Mr. Reed went very carefully into the matter, and while he did not like to make an absolute statement that the tunnel would be built for ten million dollars, he figured it out in round numbers at some thirteen million dollars. He did this from

information I obtained from the department here and sent to him. His letter, I think, will interest the House:

Hon. A. A. Lefurgey,
Member of Parliament, House of Commons, Ottawa, Canada.

Dear Sir,—In accordance with the instruction contained in yours of the 4th and 20th instant, I beg to submit an estimate of the probable cost to construct a single rack tunnel, standard gauge, under the Northumberland straits to connect Prince Edward Island with the mainland of New Brunswick, covering a distance from portal to portal of about seven and one-half miles.

I assume from the data at hand giving the test borings of the geological formations through which the tunnel is planned and the depth at which it is located, that the materials to be encountered in the excavation will be impervious to water, and give a reasonably firm and solid roof.

It seems to me that the safest and most practical way to execute this work, located as it is, nearly 160 feet below mean high water, would be by the shield method, with shields so designed as to be able to cope with the difficulties likely to arise in an undertaking of this nature and magnitude.

I do not mean to say that should the excavations be found to be of such a nature that the full hydrostatic pressure would be encountered at any point under the straits, the shield or any method of timbering would be of much use, for in that event at that depth it would be impossible for men to work in the air pressure required.

The approximate estimate of cost is based therefore, on the assumption that the materials to be excavated will be found practically impermeable to water, and on the use of hydraulic shields, with the cast iron-concrete tube type of construction and is as follows:

| | |
|---|---|
| For seven and one-half (7½) miles of tube, eighteen (18) feet inside diameter, thoroughly waterproofed, including duct banks, drains and track.. .. .. .. .. .. .. .. .. .. .. | $12,950,000 |
| For two (2) permanent shafts with pumps and chambers for ventilation and pumping apparatus.. .. | 650,000 |
| Total for tunnel and shafts complete. | $13,600,000 |

Before the final method of construction is adopted, I would suggest that you take up for consideration the feasibility of building the tunnel on the bed or bottom of the straits in very much the same manner as the Harlem river section of the New York subway was built, and the Detroit river tunnel, now being constructed between Detroit and Windsor.

By this method the tubes are built in sections on shore, floated into position and lowered to their resting place, previously prepared, on the river bottom, after which the sections are bolted together and calked by divers and the final work of the interior finish done under compressed air.

Should it be found that this method could be used, there would be no question as to the success of the project and the work being done for a reasonable price, for the greatest depth at which the tunnel would be placed would probably be not more than ninety (90) feet below mean high water, that being a safe depth at which men can work under pressure.

In order to give you more definite information on this project, I should desire first to visit the site of proposed tunnel, study the conditions and make a thorough examination of the materials secured from the borings.

I return herewith the plans and profile showing location of tunnel, test borings and other data which you sent me.

Yours very truly,
H. B. REED.

It is evident therefore that the best engineers consider the tunnel perfectly feasible, and it only remains to have a complete investigation made in order to put the House in possession of the most reliable data and estimates. Mr. Reed in the letter just read suggests that if proper investigation were made a tunnel could probably be constructed by other methods at much less cost. Let us have these investigations by the best men obtainable and at once.

From the point of view of an investment, I consider that we have a good claim for the construction of this tunnel. In 1895 I presented to this House a statement showing the saving which would be effected by the building of the tunnel as compared with the cost of keeping up the present unsatisfactory system. I think it would be opportune if I could repeat that statement so that hon. members may see what the service now costs them:

| | | |
|---|---|---|
| Subsidies to summer steamers.. .. .. | | $ 12,500 |
| Loss on Prince Edward Island Railway | | 100,000 |
| Maintenance of ss. 'Stanley and Minto,' as per minister's statement.. | | 95,000 |
| Cost of steamer 'Stanley'.. .. | $145,000 | |
| Cost of steamer 'Minto'.. .. .. | 190,000 | |
| Insurance on cost at 10 per cent | 335,000 | 33,500 |
| Depreciation in value and interest, estimated at 10 per cent.. .. .. .. .. .. | | 33,500 |
| New boat.. .. .. .. .. .. .. .. | $500,000 | |
| Insurance at 10 per cent.. .. .. .. .. | | 50,000 |
| Maintenance.. .. .. .. .. .. .. .. .. | | 50,000 |
| Depreciation in value and interest, at 10 per cent.. .. .. .. .. .. .. .. .. | | 50,000 |
| Ice-boat service.. .. .. .. .. .. .. .. | | 10,000 |
| Telegraph service.. .. .. .. .. .. .. | | 7,000 |
| Total.. .. .. .. .. .. .. .. .. .. .. .. | | $441,500 |

So that, without taking into account any further expenses in connection with the machinery or keeping up a large staff here and a large staff at the other end in connection with administration by the department, the expenses amount to $441,500. The people of this country do not realize that there is an indirect loss and a direct expenditure of that amount of money to keep up the present service. So that, even from a financial point of view, the government would be absolutely justified in constructing this great work. Not only would you make this expenditure unnecessary, but you would wipe out the annual deficit of $100,000 on the Prince Edward Island Railway. Not only would you take by the tunnel all the traffic in the winter, but you

would take a great share of the traffic of the summer. You would get the benefit of all the traffic from every part of the Island on the Prince Edward Island Railway to the tunnel and you would get also the benefit of the distribution on the traffic going through the tunnel and routed to different parts of the island. You could use your rolling stock not for a part of the year only, but throughout the year. Then the Intercolonial Railway would benefit easily from $100,000 to $200,000 added profit from distribution on the mainland. These are the results which would accrue immediately on the construction of the tunnel. But, within twenty years after the tunnel was finished, you would have at least 200,000 more people in Prince Edward Island and every producer on the island would be raising twice as much as he does at the present time, for he would be always sure of a market.

I do not think it is necessary to enlarge on these figures. I think the Prime Minister (Sir Wilfrid Laurier) and members of the House can see what an advantage this great work would be to the Dominion and especially to the maritime provinces. We certainly need now some better means of transportation than we have. When the late Minister of Marine and Fisheries, Mr. Préfontaine, was in Prince Edward Island, he promised that he would immediately go to work at the construction of a new boat. And to this day that promise has not been fulfilled. As far back as September, 1905, the government had this man Duguid brought from the old country to design a new boat for the island service. And we were told that, in December, 1905, Mr. Duguid had his design completed. The late premier of Prince Edward Island seemed to think that Mr. Duguid knew very little about the construction of ice-breakers. However, Mr. Duguid was said to have completed the plan of a steamer equal in size, capacity and power to the boat for which tenders are now being asked. But, though this design was completed in 1905—would you believe it, Mr. Speaker?—it was only on the 19th day of last month that tenders were called for. And though tenders have been called for, I see it stated in Prince Edward Island newspapers and also in the Montreal 'Gazette,' that Mr. Duguid is going back and forward in the winter boats to get material for further designs for this boat. It is true the Minister of Marine and Fisheries (Mr. Brodeur) contended that he knew nothing about such a report, but it certainly was published in the newspapers of which I have spoken. The hon. minister told us also on February 11, when the question of this boat was before the House, that tenders had been advertised for, and even told us the names of the four papers used for this advertising. One of them was the Glasgow 'Herald.' I could not find that copy of the 'Herald' in the reading room. Another was the 'Standard.' But there was no advertisement in the 'Standard' of that date, nor was there up to February 25. The only advertisement that I could find in an English paper is one in 'Canada.' But the advertisement was not in the issue of 11th February, and the only issue in which I could find it was that of 25th February. The only other advertisement that I found calling for tenders for this boat was in the Montreal 'Herald' of February 19—tenders to be in on March 9. That is, the minister gave the great shipbuilding concerns just twenty days in which to get in their tenders for this steamer. I believe the minister received some protests about the shortness of time allowed, because he has told us that the time has been extended to March 16. It seems to me the time is still too short, unless we accept the view that the competition will be between two or three concerns and that the minister knows all about it beforehand.

I am grateful to hon. members for the patience with which they have listened to me. I hope to hear, and hear very favourably, from the right hon. leader of the House (Sir Wilfrid Laurier) himself. It is all very well for the Minister of Public Works (Mr. Pugsley) or the Minister of Railways and Canals (Mr. Graham) to rise in this House and say, 'I am a new man in my department; I will look into this.' But we remember that former Minister of Public Works, Mr. Hyman, said, 'I will report this matter to my colleagues, and trust that there will be an estimate next year.' We would like the right hon. leader of the government to take the responsibility on himself and tell us what he intends to do. If there is nothing to be expected from the Liberal side of the House it would be well that the people of Prince Edward Island should not be humbugged as they have been for many years, but that we should be allowed to know just where the government stands.

Mr. A. A. McLEAN (Queens, P.E.I.). This is a matter that should be easy of solution. It is a matter not of political policy but of contract between the Dominion of Canada and Prince Edward Island. In the month of September, 1864, the premiers of the provinces which afterwards became the Dominion of Canada as at first formed, the provinces of Upper and Lower Canada, Nova Scotia and New Brunswick, met in the city of Charlottetown and attempted to reach an agreement for a federation of all the provinces including Prince Edward Island. Certain resolutions were adopted by the conference. Among these resolutions was one which concerned Prince Edward Island, and which was in effect almost identical with the resolution which was finally agreed to in 1873. This conference adjourned to meet in the city of Quebec and

when they met the premier of Prince Edward Island and other prominent men from that province, as well as the leading men from the other provinces in Canada, agreed to form a confederation. The one stumbling block was the terms of confederation for Prince Edward Island. In consequence of the agreement which was then entered into the British North America Act was passed by the imperial parliament, but Prince Edward Island did not come in because she desired to have included in the agreement for consideration a clause that the people of Prince Edward Island should have continuous communication with the railway system of the mainland, particularly with the Intercolonial Railway. A clause was inserted in the British North America Act providing that when any other province wished to come in it could do so by order in council, of the Dominion of Canada and of that province, which would be assented to by the imperial privy council. In 1873 an agreement was entered into between Prince Edward Island and the Dominion of Canada with reference to the confederation and they came in. The part of the agreement to which this resolution refers is very simple. It provides that the Dominion government shall assume and defray all charges of the following services:

Efficient steam service for the conveyance of mails and passengers to be established and maintained between the island and the mainland of the Dominion winter and summer, thus placing the island in continuous communication with the Intercolonial Railway and the railway system of the Dominion.

This was not only a pledge by the Dominion government, but it was a solemn contract, one which the Dominion government was bound to carry out to the letter. That was the idea of the men who represented Prince Edward Island when they agreed with the representatives of the Dominion of Canada that they should have connection with the Intercolonial Railway of Canada. It might be said: How could they have connection with the Intercolonial Railway of Canada? It might be said that they could do so by having steam connection by vessel. But does that fill the Bill? It might in a certain way, if it was possible to have continuous connection, but it has been demonstrated year after year since 1873 that it is impossible to have continuous connection by steam vessel between Prince Edward Island and the mainland. Therefore, the only substitute is that this government shall fulfil the letter of this contract and build a tunnel under the Straits of Northumberland, thereby connecting the railway system of Prince Edward Island with the Intercolonial and the railway system of the mainland. Here is the solution of this agreement.

It has been said here by many members that this is simply a matter of political policy, and that when an election is approaching this matter is hearlded abroad in order to gain votes by one side and by the other, but I do not think that is a proper way of looking at this matter. I think that when the government of Canada enters into a contract of this kind they should fulfil that contract to the letter. There is an obligation upon them which is just as binding as the obligation which was upon them when they entered into an agreement with British Columbia. What was the obligation into which they then entered into? They entered into an obligation, a solemn compact, with the people of British Columbia that they would construct a railway from the Atlantic to the Pacific, and on that understanding, and that understanding alone, the people of British Columbia, in 1873, entered into the confederation of the Dominion of Canada. Did the people of Canada turn around and tell the people of British Columbia after that solemn contract was made that they would not build this railway to connect their province with the east? On the contrary, they entered into obligations with contractors immediately after the contract was made and as soon as it was possible to do so the Dominion of Canada fulfilled the terms of the contract which they had made with British Columbia, so that to-day we find that the agreement made by the Dominion of Canada with British Columbia, so far as that part of it is concerned, has been fulfilled, and they have the Canadian Pacific Railway from Vancouver to Halifax. We in Prince Edward Island contend that we are as much entitled to the fulfilment of our contract as were the people of British Columbia to the fulfilment of theirs. The people of British Columbia, when the construction of the railway was not progressing as speedily as they thought it should, threatened to rebel. They told the Dominion, in no uncertain terms, that if they did not carry out the great work which would be a fulfilment of the terms of union, they would leave the Dominion, and they would have been justified in leaving the union if this contract had not been fulfilled.

It has been said here that it would be improper for the Dominion of Canada to undertake so great an obligation for so small a province. The Dominion government entered into this contract with their eyes wide open, they knew they would have to fulfil some time the obligation which they entered into, that is to connect the railway system of the province with the railway system of the Dominion.

We have had many expressions of opinion from able men in Canada as to the meaning of this contract which was entered into in 1873. We have had an expression of opinion from the right hon. the leader of this House (Sir Wilfrid Laurier) with reference to it. When asked by a prominent Liberal in Charlottetown, in 1891, what his construction of this contract was, he had no hesitation in telling that gentleman that:

Every man who has given attention to the conditions of things and the interests involved by the entering of the island into confederation, must admit that such a tunnel must be constructed if the thing is reasonably practicable.

'Must be constructed if the thing is reasonably practicable.' Did he say that because he was looking for the votes of the people of Prince Edward Island for the party which he then led? No, being a leader of a party he would not stoop to such an ignoble act. He did it because he knew that a contract, a solemn obligation, had been entered into by the Dominion with that province, and for the performance of that obligation he told the people that this tunnel must be built in fulfilment of that contract. There is no other way, there is no other means of fulfilling that contract—and that was the opinion of the leader of this House in 1891. I would like to know if he has changed his opinion since that time. I I do not think the leader of this House is a fickle minded man of that kind; I do not think he is a will-o'-the-wisp, who will change his opinion in that way. I think he is still of the same opinion as he was in 1891.

The probability is that he thinks that because Prince Edward Island is a small province and only returns three or four members it is not entitled to the same consideration as the larger provinces, such as Ontario, Quebec and the Northwest. How did the right hon. gentleman treat the Northwest provinces when they were granted autonomy here two or three years ago? Did he tell them that he would leave the settlement of these great public questions which were agitating the people of those territories until the time when the Dominion of Canada would be in a position to give them better terms? No, although they were in their infancy, although in some instances they were only a few scattered settlements, he put them upon the same footing as that upon which the greater and older provinces stood. He put them into housekeeping right at once. He granted them out of the public chest of Canada large sums of money and he put them in such a position that they would not require to have deficits in the governments of these provinces. I think that probably he did wisely in doing that. He perhaps saw the condition of affairs in Nova Scotia, Prince Edward Island and New Brunswick; he saw that these provinces has not been justly dealt with, and he said: We will put these new provinces in such a position that they will not require to come rapping at the treasury door of the Dominion from time to time as do the older provinces in the east. He gave them what they asked and we find that these provinces to-day have surpluses. Each one of these new provinces last year had a surplus. What is the condition of affairs in the east? The condition of affairs is deplorable in the province of New Brunswick, it is equally deplorable in Prince Edward Island, and Nova Scotia is not very far behind the other two although it has resources which the other maritime provinces have not. This is a condition which at some time must be changed. Something must be done to put these older provinces in the same financial position as the premier and the government of this Dominion put the new provinces when they created them two or three years ago. What are the people of Prince Edward Island asking of the premier, the government and of parliament?—simply the fulfilment of the terms of the union, and, if we were connected with the railway system of Canada, as this agreement with the Dominion justifies us in saying that we should be, I think I can say with confidence that that is all we would require to ask from the people of Canada. Why? Look at the condition of affairs to-day with respect to transportation. We pay three times as much as any other portion of the Dominion of Canada for transportation. I have on my desk a letter which will give you one simple illustration of this fact. From the city of Charlottetown to the town of Pictou in the province of Nova Scotia, a distance of something like 70 miles, it costs 11 cents to transport 100 pounds of freight. For an equal distance on the Intercolonial Railway it would not cost more than between 2½ and 3 cents. Now, that is a state of affairs which should not exist in the Dominion of Canada to-day. What is the solution of it? We have three short hauls, a haul from Charlottetown to Georgetown, then the haul on the winter steamers to Pictou and then, if we want to go on the Intercolonial Railway, we have another haul. If we had this tunnel there would only be one haul. We would be part of the Intercolonial Railway system and we would have a solution of the difficulty which is imposed upon us by reason of the excessive freight rates which are so oppressive to the people of Prince Edward Island and which must greatly interfere with the trade and prosperity of that province. We are getting a new boat this year which they say is going to fill the Bill. But, will it? Will that decrease the freight rates? Will that put us in any better position than that in which we are to-day? When the winter boat came on and when the summer boats were taken off between Pictou and Charlottetown what did the Intercolonial Railway do? They put up rates on that road and to-day the people of Prince Edward Island are paying twice as much for transportation. The rate on the winter steamer is the same, but it has been doubled on the Intercolonial Railway between Pictou and Halifax, or Pictou and Truro, because the competition by water does not exist as it did in the summer time. Here is an unanswerable argument why this government should fulfil

the terms upon which the province entered into confederation. I am not going to argue that it should be the policy of this government to do so. I am going to ask this government simply to fulfil the terms of confederation. We may be told probably that the Liberal-Conservative party were in power for eighteen or nineteen years and that they did not fulfil the terms by building this railway. I do not say that they did rightly at that time, but they took an initial step. They made a survey and they got some data and information for this House and for the government upon which the government should act. Although the right hon. gentleman who leads this House promised in 1891, before he came into power, that as soon as he came into power he would see that proper facilities were provided in fulfilment of the contract with the province, we find him still resting on his oars and doing nothing. Is that fair to the people of Prince Edward Island? The people of Prince Edward Island are not the only people who are affected by this question. The men who are dealing with the people of Prince Edward Island, Nova Scotia, New Brunswick, Quebec and Ontario are affected by it. To-day if you ask me to send from Charlottetown, or any point in Prince Edward Island, a carload of oats what would the freight rate be on these oats?—forty cents per 100 pounds from Charlottetown to the city of Toronto. Just imagine forty cents per 100 pounds or 13⅓ cents per bushel, nearly a third of the price of the oats, and yet, notwithstanding that fact, the right hon. gentleman and the government think that the people of Prince Edward Island have no grievance. It is a very disagreeable duty for the members from that province to be airing this matter from year to year in the House, but it is a serious matter for the farmer who raises his products by hard toil to know that if he were on the mainland he would get his goods carried for one-third of the cost at which the people of Prince Edward Island are able to get theirs carried for. It is a serious matter because it affects their pockets and no matter in what section you meet a native of Prince Edward Island you will find that this is a question which is agitating every farmer, every tradesman, every producer in the province. If you go to the Northwest, Saskatchewan and Alberta, and ask young men—you will meet them from every part of Prince Edward Island—why they left Prince Edward Island—that beautiful little province, so fertile and so productive —they will tell you that it was because they could not make any money there; that all their earnings went for the transportation of their produce. That is what they will tell you and that is what the farmers of Prince Edward Island will tell you today. I venture to say that in ten or fifteeen years there would be saved to the farmers of Prince Edward Island, because of the lessened freight rates they would be charged, almost a sufficient sum to pay three times over the cost for the construction of that public work. When people talk about the tunnel costing too much money let me point to the example of the St. Clair tunnel, completed in 1891, constructed by a Canadian engineer, and which, although about three miles long, cost only $2,500,000. The difficulties to be met with in boring the St. Clair tunnel were greater than would be the case under the Straits of Northumberland, because the strata under the St. Clair river is clay and is difficult material to work, whereas the shale under the Northnmberland Straits is easily worked. Sir Henry Tyler, then president of the Grand Trunk Railway, at a banquet held at St. Clair in September, 1891, said:

> That the St. Clair Tunnel Railway, hardly three miles long, and costing about $2,500,000 was no very gigantic operation, but looked very small as one means of communication between the 14,000 miles of railways in Canada costing $8,000,000,000 and the 165 miles of railway in the United States costing $9,000,000,000.

Now, the province of Prince Edward Island wishes to have connection with the railway system of the Dominion of Canada. I suppose that to-day there must be something like 25,000 miles of railway in Canada, and these railways cost not $800,000,000 but billions of dollars the greater part of which cost came out of the pockets of the people of the country including the people of Prince Edward Island. In view of this I think the terms of the confederation compact of 1873 should be fulfilled and that she should have an opportunity of obtaining access, not only to the railway system of Canada which cost us so much money, but to the railway system of the United States as well. We are entitled to this not only as a matter of politics but as a matter of right and justice and contract. I will ask the right hon. the Prime Minister if he is still of the same opinion as he was when in 1891 he wrote a letter to Mr. D. Higgs, editor of the Charlottetown 'Patriot' declaring that the terms of confederation should be carried out. It was said by Sir George E. Cartier that nothing is impossible to the Privy Council of Canada and although Sir George Cartier was a great man I believe we have a greater man to-day at the head of the Canadian government, especially in the estimation of his own followers, and I think he should go a little further than did Sir George Cartier and carry out that compact of confederation, because nothing is impossible for the Privy Council of Canada. Now Mr. Speaker, if you will consider the situation of Canada to-day and the discontent which exists in a great many quarters you will find that this confederation is not altogether safe even at the present time. We have dissensions in the province of British Columbia leading almost to rebellion against the Dominion. I am not going to

say whether the people of British Columbia are in the right or not and evidently the Prime Minister does not think they are right, but you will find throughout the proince of British Columbia to-day dissatisfaction with the Dominion government in entering into obligations which affect that province injuriously. Then at the other end of the Dominion discontent exists in the province of Prince Edward Island. I can say that notwithstanding that the steamers are running fairly regularly this year there is great discontent at the high tariff rates which prevail in that country and which have the effect of retarding the progress of the province. Not long ago there appeared an editorial in the Charlottetown 'Guardian' which summarizes the discontent prevailing in Prince Edward Island and under the caption 'It is impossible to go on,' it says:

It is said that under fair and just treatment the population of the island would be 142,500 instead of 95,000. But Canada having gained access to our market and fenced it in with tariff walls, has turned her back upon us to exploit the west. . . . Our harbour that was thronged is now vacant; our wharfs that were busy with square-rigged ships thirty-four years ago, are idle or rotting down to-day.

There is a great deal of truth in this editorial. Within the last three or four years about $40,000,000 have been expended in the construction of the Transcontinental railway and probably next year there will be paid out of the treasury something like $30,000,000 on account of that railway. The Dominion of Canada will have paid up to the end of this year $70,000,000 to construct that railway and then hand it over to a private corporation. If this tunnel is built I do not wish it to be handed over to any corporation; I wish it to be controlled by the management of the Intercolonial whether that railway is managed by the government or otherwise. We should have the benefit of the advantages which accrue to the people along the line of railway from Montreal to Halifax because of the lower freight rates they pay than we are called on to pay. Above all, I put the justice of building this tunnel on the ground that it is merely carrying out the contract we have entered into with the Dominion. Without that contract we would not be part of the Dominion to-day, and I think the people of Prince Edward Island will be justified in withdrawing from this Dominion, and I think there is a possibility of such, unless that contract is fulfilled to the letter by the Dominion government. I wish to lay this matter before the right hon. gentleman who leads the House and I would ask his opinion as to whether it is not a binding contract to connect us with the Intercolonial system, and to say if the tunnel is not the only feasible way of carrying out that contract with the province.

Mr. A. A. McLEAN.

Mr. J. J. HUGHES (Kings, P.E.I.). The hon. gentlemen opposite have certainly made long speeches, and the mover and the seconder particularly read a great many extracts, and dwelt on different subjects that could hardly be considered germane to the question before the House. However, that was not a very serious fault. This is a business matter and ought to be approached from a business standpoint, and I question very much the wisdom or propriety of our hon. friends keeping up this continual and eternal fault-finding and simulated indignation which has been given voice to to-night and on other occasions. The question of the construction of a tunnel between Prince Edward Island and the mainland is not new. It is a question that has been before the people of that province for a good many years. It is a question that our Conservative friends have paid considerable attention to and have been pretty warm about on the eve of several elections, but somehow their ardour generally cooled off a little between the elections; but now our friends in opposition manage to keep up the agitation pretty nearly all the time.

There is no doubt that the question of transportation is an exceedingly important one to every province of this Dominion; but it is perhaps still more important to the province of Prince Edward Island because it is an island. The people of this country are pre-eminently a trading people, and therefore anything that hinders or prevents or retards the free ingress and egress of our people and their wares stunts to that extent the individual and national life. Eight provinces of this Dominion can trade freely with one another for twelve months of every year; but one province, the smallest, said to be the fairest, and perhaps the most productive, all things concerned, is debarred from that privilege, partially at least, for three or four months of the year. That is a very great disadvantage, which can only be fully appreciated by the people who have felt it. We have done and are doing great things to overcome the disadvantages of our geographical position in regard to transportation. We have built at great cost to this country the Canadian Pacific Railway; we have constructed a chain of inland waterways, the canals; we have built and are building the Intercolonial Railway, the Canadian Northern and the Transcontinental; we shall, I believe, construct the Georgian Bay canal, and in all probability exploit the Hudson Bay route; at considerable cost we have equipped, are equipping, and will continue to equip, the great national ports on the Atlantic, on the Pacific and at the head of tidewater. From the benefit of these great national undertakings Prince Edward Island, though contributing her quota of the cost, is to some extent shut out, because of her insular position.

Now, can that disadvantage be overcome? Can that province be united physically as

well as politically with the rest of the Dominion by a railway either over or under the Northumberland Straits? Can she be placed in a position to trade as freely and continuously with the other provinces of this Dominion as they can trade with one another and with all other countries of the world? If she can at a reasonable cost and with a reasonable assurance of success, the work should be undertaken. But in my judgment we may just as well understand that no government in this country, Liberal or Conservative, brown, white or black, would undertake a work of that magnitude without the fullest examination and investigation; it would not be justified in doing so. I have tried, as far as my influence goes with the government, to proceed along practical and present lines. I have urged upon the government the advisability of constructing the best and most powerful ice-breaking steamer that can be built, and with some measure of success, I think; because I know that contracts for the building of such a steamer will be let within the next few weeks, and the work will be pushed with all possible expedition, and it is hoped and expected that the steamer will be ready for next winter's service. I have also asked the government to provide all the aid possible for navigation, to enable that steamer to make as frequent trips as possible between the island and the mainland. Now, that is the first and most necessary step. In conjunction with that, I believe the government would be justified in taking measures to secure the best professional information obtainable, to ascertain whether or not a tunnel under the Straits of Northumberland is feasible and practicable, what the cost would be, what the upkeep would be, what the expense would be, and what the saving as compared with the present service would be. I believe that is the proper course to take at present, and if our friends opposite would press that upon the government, I believe it would meet with a fair response. But to imagine that any government would undertake the construction of a work of that magnitude, with the information now available, is I think out of the question. At all events, we can better consider this question when the records that have been asked for to-day are brought down, and all the information available is before us. The hon. gentleman who has moved this resolution is quite right in asking for that information, and if it is not sufficient, all we can do at present is to ask the government to supplement it with the best information obtainable. We must bear in mind that because Prince Edward Island is an island, we have for eight months of the year the cheapest transportation available, that is, water transportation; but for three or four months in the year, when we are shut out from communication with the other provinces, we are certainly at a great disadvantage.

There is a point which I think should be pressed on the government, and which I intend to press still further when I have an opportunity of bringing up a resolution which I have on the Order Paper, that is, that while Prince Edward Island contributes per quota to the cost of the great public works and the great lines of transportation of the Dominion as a whole, it should be placed on an equality with the other provinces, so far as passenger and freight rates are concerned. We have to pay on our outward freight about twice as much as is paid on similar freight carried on the railways in the mainland. We also have to pay heavier freights on our imports because of our insular position. That is hardly fair, and I believe that a request made to the government and the people would be responded to in the spirit in which it would be made. I believe the response would be that the people of Prince Edward Island were not being given fair treatment. Perhaps some additional charge might be made because of the extra handling but the difference should not be so great. I know that the question of making the Prince Edward Island Railway and the Intercolonial pay and of covering the deficits upon the boats is one which presents itself to the officials who are managing these public utilities, and they would find it very difficult, if not backed by a strong public opinion, to reduce the freight rates. Still I believe that if the matter be put fairly and squarely before the people, the representatives of the other provinces would give us a fair show in that direction. With the improved ice-breaking steamer which will be ready in a few months and with the reduction we can fairly ask in our freight rates, we would not have much to complain of, and we could wait until such time as the government can make all necessary and reasonable investigation into the cost of the tunnel and decide whether it can be taken up as a business proposition, or not. If the cost is found to make the scheme impracticable, let it drop. I do not intend to make it a political question. My views are the same as they were a year and two years ago and as they will be on the immediate eve of an election. I would approach this proposition from a purely business standpoint, bearing in mind that the people of Prince Edward Island are entitled to the best transportation facilities they can get and that, above and beyond all things, they are entitled to an equality with the other portions of the Dominion in the matter of passenger and freight rates. That is all I have to say on the subject at present.

Mr. WM. CHISHOLM (Antigonish). The question we are now discussing is a perennial one. It comes up session after session, and the ground that has been travelled today by my hon. friends who have spoken has been covered frequently by every repre-

sentative from Prince Edward Island in years gone by. In fact ever since the admission of the island into confederation, this question of better transportation facilities has been the subject of debate in that province in season and out of season. On the floor of the local legislature, in this House, on the stump and in the press, the cry has been justice for the island. I have heard the hon. member for Queens (Mr. A. Martin) recounting the disadvantages under which the people of Prince Edward Island are labouring, the great injuries inflicted upon them, how they were burdened, when entering confederation with onerous conditions as regards their railway system, how, in the granting of provincial subventions, they were deprived of their just rights how in connection with the fishery award at Halifax they were cheated out of their proper share and how, even in the matter of representation, they have been treated unfairly. To the present date as I understand him, the island is bled to the extent of two (2) millions of dollars annually in customs and excise and nourished only to the extent of $600,000 in grants and allowances of all kinds. Talk about the wrongs of dear old Ireland but the complaints of the 'Emerald Isle' appear to pale into insignificance compared to the alleged injustice and imposition inflicted upon that other isle 'the garden of the gulf of St. Lawrence.' Last session and the session before there was scarcely a week in which there was not a question on the Order Paper or a resolution proposed by some member of Prince Edward Island the purpose of which was to air the wrongs and ventilate the grievances of that province and all having reference, directly or indirectly to the question of communication between the island and the mainland. The representatives of that province have been indefatigable in their zeal and industry in keeping the 'complaints' of that province to the front; and if we are to interpret their language literally, we must come to the conclusion that the people of Prince Edward Island have already merited the crown of martyrdom and now the time has come when their grievances should be redressed. Some hon. gentlemen not acquainted with our situation may think that the language used by some of the island's representatives this afternoon was inspired by party venom or a desire to attack and harass the government. But I am sure such is not the case. Knowing these hon. gentlemen as I do I can venture the statement that their sole disposition is to discuss this question in a calm, judicial, dignified, non-partisan manner, that they have no desire to make party capital against the government or to influence their electorate in any shape or form.

Mr. A. MARTIN. Hear, hear.

Mr. WM. CHISHOLM. When they undertook to discuss this question, I am confident they divested themselves of anything that savored of partisanship and they intended to plead their cause in a most fair, honourable and non-partisan manner. None of the hon. gentlemen opposite would, I am sure, think for a moment, of approaching a subject like this in any party spirit. And if at times they reddened under the collar, you can rest assured, Mr. Speaker, it was because of that intense feeling of sorrow and indignation every patriotic and sympathetic breast feels when one's country's wrongs are meditated upon, and not because they wished to suggest any lethargy or indifference on the part of this government. It is only natural that their souls should be stirred up to such an extent that they could pardonably indulge in language which may seem a little warm. To my mind the people of Prince Edward Island have a grievance. Their complaints are not new and are not brought up for the purpose of making party capital. Whatever may be said for or against the tunnel, we must admit that the people of Prince Edward Island honestly believe they have a legitimate grievance in that connection. Even at the risk of wearying the House, I shall refer to the terms of the union.

But before doing so, I may say that, irrespective of locality, irrespective of politics or any consideration of that kind, the people of Prince Edward Island believe that the terms of union have not been lived up to. And suppose that any of us were for sixty-four days, as happened in 1903, or for fifty-nine days, as happened in 1905, and for shorter periods in other winters, practically isolated from the rest of the world, as the people of Prince Edward Island are, would we not feel that we had a just grievance and one calling for speedy redress? Whether we approve the tunnel project or not, we must all sympathize with the members from Prince Edward Island in the handicap to which they are subjected. Apart from the feeling of isolation, they must experience, under such conditions there is the great commercial loss in the transportation of their products and otherwise to be considered. There may be a disposition on the part of some people to underrate the value of the island. Some may say that the island is not of sufficient importance to occupy so much of the time of the House as has been taken up in the discussion of the evening. I hope that no such sentiment exists in the breast of any member of the House. I trust that no member is so small-spirited as to take that view of the situation. We all recognize that Prince Edward Island is a province of the confederation, and that as such she is entitled to the same consideration and the same treatment as her older and more powerful sisters. Let no one forget the fact that Prince Edward Island has over

five times as many persons per square mile as big, populous and prosperous Ontario has, nearly thirteen times as many people per square mile as much advertised Manitoba has and consider the value of the agricultural products of the tight little island by the sea and her fisheries and compare them with those of the larger provinces and perhaps the contempt (if such exists) for the little girl in the family will quickly vanish. You have heard the story, Mr. Speaker, of the young married couple who expressed themselves to the effect that they would be much happier and better off, if their mothers-in-law had not been born. I hope no one from the newer provinces thinks it would be better for the peace and tranquility of the rest of Canada if the island had never been brought into confederation. The first question is, what is guaranteed by the terms of union ?

Among other things those terms provided:

The Dominion government shall assume and defray the charges of efficient steam service for the conveyance of mails and passengers to be established and maintained between the island and the mainland of Canada, winter and summer, thus placing the island in continuous communication with the Intercolonial Railway and the railway system of Canada.

That would seem to be as clear as English words could make it. The fathers of confederation did not deem it sufficient to declare simply that the government of Canada should establish and maintain communication between the island and the mainland, but they added other words which seems to be tautological because they state that steam communication should be maintained 'winter and summer.' Evidently they had in mind the difficulty that the people of the island had previously experienced, to which I shall refer later on, and they gave ample warning to the rest of Canada as to the obligation that the Dominion was assuming. And, in order that there might be no possible doubt as to the meaning of the language used, they added still further words to make it clear that this communication was to be such that 'thus'—or thereby—'the island' was to be placed in 'continuous communication with the Intercolonial Railway and the railway system of Canada.' You will observe how very carefully the words have been selected. It is interesting to follow the thoughts that must have been in the minds of the fathers of confederation when this condition of the union was framed. These words show the solemn agreement then and there entered into—that there should be, as far as possible, the same facility for communication between the island and the rest of Canada that there was between the various provinces of the mainland. In the case of the maritime provinces it was necessary to place them in close communication with the upper provinces, and this was affected by the Intercolonial Railway. The fathers of confederation insisted that steam communication, winter and summer, was to be of such a continuous character that the people of the island would have the same freedom of communication with the mainland as the people of the other provinces had with one another.

Now, that being the case, what is the duty of the parliament of Canada? Evidently it is to live up to the spirit, at all events, if not to the letter of the agreement. For we must remember that if the rights and privileges assured to any province of this Dominion are not carried out in good faith by the rest of Canada, there is no security for Canada. The foundation stones of our confederation are fair play, good faith and good will towards all. And I say that this is not a question of dollars and cents, it is a question of good faith, and if it costs $10,000,000 or $15,000,000 or $20,000,000 the question of cost should not stand in the way if it becomes absolutely necessary to build this tunnel. The question is: Is it necessary that this tunnel should be constructed? In order to reach a proper conclusion with regard to that, I think we have to look at the conditions that existed previous to the confederation, the facilities that the people of the island then had for the transportation of their products, and the means of communication that existed. We should consider also the terms of union itself and see whether it is necessary, in order to maintain the good faith of Canada, that such an expensive means as the one proposed should be provided.

Now, previous to the union, the only means of communication was ice-boats plying between Cape Traverse on the island side and Cape Tormentine on the New Brunswick or mainland side. The inconveniences and hardship the people endured, the great danger to life and property and the losses that were suffered I need not go into; they will be apparent to any man who considers the primitive methods then used for transporting passengers and property to and from the island. Bearing in mind these conditions which prevailed before the admission of the island into confederation, it seems to me that if a tunnel were required to maintain the communication, something would have been said about it at the time confederation was entered into. But there is no reference to a tunnel or anything of that nature in the discussion that took place. Considering the very great care that the fathers of confederation used, the great precautions they took in making clear what they intended to convey, I say it is reasonable to suppose that if the need of a tunnel had been anticipated by the people of Prince Edward Island at that time there would have been some reference to it. The words

of the Act call for efficient steam communication. They did not say 'steam' (meaning steamboat) or 'other service.' The very fact that the Act of union is silent on this question is, to my mind, abundant evidence that the only service contemplated at that time was a steamboat service.

Mr. R. L. BORDEN. Why does the hon. gentleman (Mr. Wm. Chisholm) say that? I do not observe the word 'steamboat service' in the Act. It is 'steam service.'

Mr. WM. CHISHOLM. Yes. To replace the ice-boats it would be reasonable to suppose that if they had thought a steamboat service insufficient they would have made some mention in their discussion of a tunnel or something of that kind.

Mr. R. L. BORDEN. May I ask why the hon. gentleman deems it necessary to introduce the word 'steamboat' when it is not in the Act?

Mr. WM. CHISHOLM. I did not say that the word 'steamboat' was in the Act. But evidently they referred to a steamboat communication.

Mr. BRODEUR. To replace the ice-boats.

Mr. WM. CHISHOLM. Yes—to replace the ice-boats which, as I have said, were then their only means of winter communication. There was great danger to life and property, great hardship and inconvenience under that system. By the terms of confederation it was expected that all that would be removed if a steamboat service were provided and we find that shortly after the union a steamboat service was provided.

Mr. LEFURGEY. At the time we entered confederation no such steamboat as we have on the route to-day, or such as is contemplated, was in the minds of the parties to confederation; their thought was that some means should be provided to keep up steam communication, winter and summer, and it is reasonable to say that if it could not be done by steamboat communication any other means that came into existence and could be reasonably utilized should be utilized; and so a tunnel may very well be read, by implication, into the terms of union.

Mr. WM. CHISHOLM. If the gentlemen who had to do with the terms of union in 1873 enjoyed such a service as is enjoyed by Prince Edward Island to-day, they would think that the agreement entered into had been fully and literally carried out. But, of course, what suits one age may not suit another; our fathers were content with certain conveniences which we would look on as far from adequate. They had ice-boats previous to 1876. They must have expected that the steamboats to be put on in place of the ice-boats would meet fully all the requirements of the situation. The wording of the Act would seem to indicate that, because it says, 'steam communication winter and summer,' indicating that ice-boats would not be sufficient, but that steamboats should take their place.

Mr. A. MARTIN (Queens). How does the hon. gentleman interpret the Prime Minister's letter of 1891?

Mr. WM. CHISHOLM. I did not happen to be in at the time it was read. I presume the Prime Minister had to say, as every hon. gentleman in this House would say, that if you cannot provide reasonable communication between the island and the mainland by other means than a tunnel, you must have a tunnel; but that if you can provide reasonable communication, taking all the circumstances to-day and previous to the date of union into consideration, by sufficient steamboat communication, the terms of union are satisfied thereby. In an extreme view the most that can be said otherwise is the question a fair subject of debate. We must consider the great importance of the island, which is a very important place. We must take into consideration the fact that the present service is admitted to be as good a service as can be found anywhere for ten or eleven months in the year, and we must take into consideration the further fact that if it is possible to make the steamboat service so efficient as to keep up connection the whole year around without interruption, then the terms of confederation are lived up to literally and fully and so there is no complaint, and a tunnel cannot be demanded on that ground.

In 1876 the first steam communication to replace the old system of ice-boats was established, and I might say here—I hope I will not be accused of partisanship, because that is as foreign to my disposition as to that of the hon. member for Queens (Mr. A. Martin) whom I see smiling—that it was a Liberal government, that of Alexander Mackenzie, that established the first steam communication. The 'Northern Light' was then put on the route. She was superseded by a stronger and better boat, the 'Stanley.' From 1876 to 1897 or 1898 there was only one boat doing duty for the island in winter. In 1897-8 another boat, the 'Minto,' very much more powerful and immeasurably superior to the 'Northern Light,' was put into commission in addition to the 'Stanley,' so that from that date forward there have been two steamboats doing the service that previous to confederation was performed by the ice-boats, and from confederation up to 1897-8 by one steamboat. Again, mark you, this was done under the present Liberal administration.

Listening to the remarks of some hon. members opposite from Prince Edward Island, one would suppose that this government had neglected to do anything in the way of providing facilities for transporta-

tion. But let me say to them that in this as in every other respect, the Liberal party have been in the vanguard of progress and improvement. I say that the boats in use today are staunch, superior boats, rendering excellent service. If there has been a failure to maintain efficient continuous communication, it has not been due to the fault of any government, for each succeeding government for that matter has vied with its predecessor in the effort to meet the wishes of the people of Prince Edward Island and in endeavouring to give them the very best means of access and communication. It is true it has been the rule that for weeks and months at a time there has not been continuous communication between the island and the mainland, but that has not been the fault of the boats. I shall point out later where the trouble lies.

I wish to refer briefly to the history of the service that has been rendered in the past. The route between Capes Traverse and Tormentine was tried at one time. This route was strongly and persistently advocated by an engineer, Mr. Shewen, of St. John. He contended that as it is the shortest route, therefore it is the natural route. He says also that as there is a strong current running northeast and another running southeast along this route near the line between the capes, the drift ice is kept loose and prevented from packing, which makes it the most desirable route. The reasons he advances in support of his contention are most specious and plausible, but investigation and examination show that his conclusions are not borne out by the facts, and that some of his assertions are not facts.

For there is a report on file by Colonel Gourdeau, the Deputy Minister of Marine and Fisheries, to his chief, the minister of that department, dated January 7, 1904. We must assume that as deputy minister Mr. Gourdeau would be in a position to give independent testimony. He has no prejudice in favour of one route or another route. He went down to the island to inquire into the conditions and give the plain, unvarnished facts. He discussed the question with the agents and officers of the Marine and Fisheries Department in Prince Edward Island and Pictou, N.S. He observed, he tells us, the geographical situation of the several harbours on both sides of Northumberland strait, he had the advantage of hearing the representations made with reference to the harbours of Pictou, Charlottetown, Georgetown and Summerside by the boards of trade of these places, he interviewed possibly all the men who were able to give him accurate information in regard to the prevailing winds, tide and ice conditions, and he says :

An hon. MEMBER. When was that?

Mr. W. CHISHOLM. That was on the 7th January, 1904:

It is only possible to keep up communication between Summerside and Cape Tormentine in exceptional winters, but during ordinary winters that route for the 'Stanley' or the 'Minto' is impracticable.

And further he says:

The Summerside route is a political and not a natural one.

I also happened to notice a copy that was brought down of a letter written in reply to a resolution of the Halifax Board of Trade asking that better communication be provided with the island. In that letter it is pointed out that in 1903 the department made an effort to reestablish communication between Summerside and Cape Tormentine and the writer goes on to say:

The result was disastrous. The steamer 'Stanley' was, on the 13th January, 1903, icebound by the usual quantities of ice in that part of the strait and she was not liberated until March 17.

March 17 that year, I think, was St. Patrick's day, but that is only a coincidence. I could cite to you cumulative testimony of the fact that the contention of Mr. Shewen as to the Cape route was not borne out by the facts. The fact of the matter is that that route is now only a route of the past. It is as dead as Julius Caesar and everybody recognizes that.

Mr. LEFURGEY. If the hon. gentleman will look over the reports which have been handed in within several years to the Department of Marine and Fisheries he will find that route was strongly recommended as against the Pictou-Charlottetown route.

Mr. W. CHISHOLM. I have just been referring to the report of Mr. Shewen which, I presume, is one of the reports the hon. gentleman goes upon, but I also referred to the fact that subsequent investigation and examination have shown conclusively that that is a route of the past. Whilst perhaps it is not as old as Julius Caesar for all practical purposes, it is out of the question. What has been the result of the route between Charlottetown and Pictou? I need not ask. The walls of this chamber resound with the wails and lamentations of hon. members from Prince Edward Island for the last number of years—I might truthfully say—ever since that route was tried. It may be said, however, that some of these complaints are not justified, that the species of chronic grumbler is not yet extinct. On that account I propose to show that the complaints that have been made in this House and out of it are not exaggerated, to say nothing of being manufactured, but that they are justified by the facts. In doing so I shall refer to statements that have been made in this House, not only in recent years but in former times. As far back as 1877 we find attention publicly called in

this House to the unsatisfactory service rendered by that route. We find Mr. Sinclair, then representing Kings county, Prince Edward Island, in this House, asking on the 15th day of February, 1877, whether the government had taken any steps to find out and establish the most satisfactory and practicable route for keeping up communication between Prince Edward Island and the mainland during the winter and if not, was it their intention to do so before the opening of navigation? On that occasion several of the islanders spoke and all agreed in stating that the means of communication during the winter were not such as they expected and were not satisfactory. This aspect of the case has, however, been gone into fully over and over again, and I need not go into details. I will refer to a joint address to this parliament of the House of Assembly and Legislative Council of Prince Edward Island in 1884, to a resolution of the Maritime Board of Trade in 1905 and 1906, and to a resolution passed by the legislature of Prince Edward Island in 1905. I refer to these for the purpose of showing that this is not a case of trumped up complaints at all but to show that these complaints were honestly made by the people of Prince Edward Island, and that they must have had some foundation for them. They are not entirely the talk of politicians, if I may say so, who are anxious to say something here for the benefit of their constituents. They are the statements of deliberative bodies and they are statements that we must regard as being founded upon conservative facts. In the resolution of 1905 that I referred to of the legislature of the province of Prince Edward Island the grievances of the island are fully set forth and the attempts that have been made to remedy the situation are there detailed. In studying this question, as I said before, what is impressed upon our minds, next to the grievances themselves, is the earnest effort that has been made by each government, and particularly by this government, to try to meet the wishes of the people, and to try to provide the island with a reasonable means of transportation and a reasonable means of communication between it and the mainland. I commend the present administration for the very generous and magnanimous spirit they have shown in this matter, and I believe that the people of Prince Edward Island do not fully appreciate the efforts that have been made in the past for the purpose of bringing about the desired end. But, the desired end has not yet been reached. Why? As I said before, it is not due to the fault of the boats. The boats are all right, the equipment is all right, the men and officers are efficient and there can be no question on that score. The whole question to my mind is that the mainland terminus is not satisfactory. The proper solution of this question has not yet been adopted by the country. The whole trouble, I submit, is in Pictou harbour.

Some hon. MEMBERS. Hear, hear.

Mr. W. CHISHOLM. This is a fact that no one can get away from—strive as he will. The trouble with the island communication is found in Pictou harbour. You cannot but see it. God and nature never intended Pictou as a winter port and unfortunately the genius of man cannot in this case supply what nature denied. I shall point out why. If you look at a may of the maritime provinces you will see that between the island and the mainland opposite Pictou, Northumberland strait is narrow. The prevailing winds of winter in that part of the country are from the north and northeast and when the winds blow the ice is driven up the Northumberland strait into that narrow defile between Pictou harbour and the mainland and it gets jammed there. Besides that, northward of Pictou is Pictou island and when the wind blows from the east and northeast the ice is driven in between the island and the mainland shore and the result is that there is formed or collected a mass of ice that it is impossible for any steamer to force its way through. Given sufficient depth of water, a sufficiently powerful steamer, and plenty of sea room, no matter how heavy the ice, that steamer could work her way through. We have heavy ice in the Straits of Canso not very far from Pictou harbour and there is no trouble experienced there in maintaining connection between the island of Cape Breton and the mainland of Nova Scotia, because we have deep water and plenty of sea room. The trouble at Pictou harbour is that it is impossible for a steamer to work her way through when the ice is packed in between the island and the mainland. I do not want to say anything against Pictou harbour, I would be sorry to say anything against Pictou because of the hon. gentleman who represents the constituency, but knowing the geographical position of the harbour it is just as well I should state the facts. I will refer the House to the records and we will see what these records tell. In the report of Mr. Charles Duguid, the British naval designer who was consulted by the government in reference to this question and who has no prejudice against Pictou harbour or predeliction in favour of it, he says under date Nov. 6, 1905:

> The position and formation of Pictou harbour in relation to the northeast gales referred to is well known and wholly accounts for the great barrier which forms here in very severe weather. It will thus be seen that the question of investigating some new route, and one presenting less difficulties to navigation will require to be undertaken by a naval commission at an early date.

In describing the inadequacy of the present route between Charlottetown and Pictou Mr. Duguid says, not that it is due to any occasional or any incidental circumstances but that it is due to the physical position of Pictou harbour itself, and he states that to his mind there is only one thing to be done and that is to investigate as soon as possible some other routes and to do so by an independent commission. Mr. Duguid has no interest to serve except to assist the government in providing the best means of comunication for the people of Prince Edward Island and thus discharge the duty assigned to him, and he says that Pictou harbour because of its geographical position and physical formation is such that you cannot make a good harbour out of it for winter purposes. I am not denying the fact that in the summer time Pictou harbour is all right but there is no doubt that in the winter time it is inaccessible under certain conditions. It was said in the House last year or the year before that dredging would help out the situation. Well, I believe considerable dredging has been done there, and still I venture to prophesy that if this season you have a heavy easterly or northeasterly blow and if heavy ice forms in the gulf you will see Pictou harbour packed solid with ice and inaccessible just as in previous years. The whole trouble is that the natural formation is against Pictou harbour and no amount of dredging will help you; you cannot make a silk purse out of a sow's ear. Mr. Duguid in his report further says:

As the bottom is of a sandy nature the possibility arises of the channel refilling owing to the set of the tides and the strong northeasterly winds.

But that is not all; I would also refer to the report of Captain McElhinney, the competent, experienced, and skilful expert who is the nautical adviser of this government, and who says:

The cause of the interruption in 1904-1905 was the jamming of the ice during the east winds between Pictou island and the mainland so as to block the harbour, showing that only during moderate weather can any regular service on the route be maintained. It would appear that the time has come when it is necessary to take action in the direction of providing a more stable and permanent connection between the two shores. The proposed new and more powerful steamers will not solve the problem when the heavy ice is rafting in with an easterly gale, and the entrance to Pictou harbour is sure to fill up and block the steamers in and out.

These gentlemen not only state the faith that is in them but they give their reasons for it. They are not making any conjectural statements or basing their conclusions upon supposititious grounds, but they are telling the actual facts and giving reasons for them. I could quote other opinions to the same effect but it would be supererogation because it cannot be successfully denied that Pictou harbour is in the position these gentlemen represent. Let me quote the report of Mr. Owen and the reasons he gives:

Outside of Pictou the channel is narrow and shallow and in consequence the ice grounded there last winter. I do not believe that any steamer that could be built could force a passage through. The ice grounding was the cause of the 'Minto' being detained in Pictou harbour for several weeks.

My hon. friend from Prince, Prince Edward Island, and every person who is familiar with the situation know such is the case. Now, I have quoted you the opinion of experts; but lawyers differ, doctors disagree, and sometimes the judges do not come to the same conclusion regarding points of law. Perhaps then the opinion of experts and professional men such as I have quoted may be looked upon somewhat askance and therefore I shall give one more authority, this time not the opinion of an expert but of an independent, intelligent, practical man who is in a position to know what he is talking about. I refer to a letter I saw in the 'Daily Patriot' in March last year signed by A. B. Warburton, of Charlottetown, lately Judge Warburton, in which he points out:

Having on several occasions been detained for lengthy periods in Pictou, I have some experience in these matters when there is a continued northeast wind, which is the prevailing winter wind, the ice practically dams the entrance to Pictou harbour and no vessel could make her way through it as when she breaks up the ice it simply collects in front of her and there is no way of getting rid of it. It blocks the ship's progress. If we can judge from recent experiences, it is very doubtful if any vessel could be built that would ensure uninterrupted communication via Pictou throughout the winter.

I could quote a number of other authorities to show that nature never intended Pictou harbour to be a winter harbour, and it is impossible to hope for continuous communication during the winter months by that route.

Is there any other route? There is another, and a very simple and satisfactory route, that is, the route between Georgetown and Cape George in the county of Antigonish. Much as I respect and love the people of Prince Edward Island, I shall be perfectly candid and admit that neither I nor the people of the country I have the honour to represent are so altruistic as to be uninfluenced in this matter by personal motives and considerations. I grant that I am influenced to some extent in the remarks I make by consideration for my constituency. I appreciate the fact that the adoption of the route I suggest would make very much for the material development, progress and prosperity of the thriving dis-

trict of Cape George as well as for the town of Antigonish and the county generally. This is personal and self interest speaking for the county I represent. At the same time, I recognize that the route I propose between Georgetown and Cape George is the only route that will carry out the terms of union and afford the people of the island the regular communication which they are very properly clamouring for. Why is it that this route is superior to the Georgetown-Pictou route? You have only to look at the map to see. Between Georgetown and Cape George, the distance is about 25 miles. As you go up to Northumberland strait the distance between the island and the mainland grows less. It converges as you go up the strait. North of Cape George between Prince Edward Island and Cape Breton Island you have a broad expanse of water. In navigating between Georgetown and Cape George you have ample sea room. This is wanting in the narrower defile between Pictou and Prince Edward Island. There is a current running north and south through the Strait of Canso into the Gulf of St. Lawrence. Another current runs through the Northumberland strait in a southwestwardly direction. The result is that in the vicinity of the proposed route between Georgetown and Cape George the action of the currents is such that the drift ice does not pack as it does in Pictou harbour, but on the contrary is kept loose and mobile. I am informed by sea captains and by residents of Cape George whose testimony is unimpeachable, whose veracity is beyond question, that there is practically open water the whole year round between Cape George and the eastern portion of the island. Why, Sir, last year when the island boats were stuck hard and fast near Pictou, a schooner laden with coal sailed from Port Hastings on the Strait of Canso in the county of Inverness to Georgetown, where the cargo was landed. This was in April last. While the 'Stanley' and the 'Minto' were stuck in the ice for several days on the Pictou route a coal-laden schooner sailed from Hastings to Georgetown. My hon. friend from Pictou must know this. The despatches had it at the time. You will find it in the Halifax papers if you take the trouble of looking up the files for that time. It is true there is drift ice at times between Georgetown and Cape George. But the 'Stanley' or the 'Minto' could easily steam through it, as it is comparatively loose. With the advantage of plenty of sea room the steamers could readily make their way through the ice floes. Frequently has it happened even within my own recollection that mails and passengers were landed at Cape George and in the vicinity thereof, when the steamers were debarred from reaching Pictou. My hon. friend from Pictou in his remarks last year would make it appear that this route I propose is

largely a figment of my own imagination. But let me say to you, Sir, that it is a route that has been recognized since the early days of the union. As far back as 1874 one of the then members of Kings, Prince Edward Island (Mr. McIntyre) recommended the adoption of this route. In the same year, and on the same occasion, Mr. Angus McIsaac, the representative of Antigonish county, remarked that three or four years before then Prince Edward Island mails were landed at Cape George when Pictou could not be approached. My predecessor in the representation of Antigonish county called attention in this House on more than one occasion to this route. It was known to the late Minister of Marine and Fisheries who promised to have it investigated; it is also known to the present minister. What I would call the attention of the government to is the necessity of having this route properly and thoroughly tested. The late Minister of Marine and Fisheries, in a letter which I have here, which I received in answer to one I had written to him, calling his attention to this route, stated that when the opportunity was afforded, the Cape George route would receive consideration, and I am assured by the officers of the department and by the present minister himself that it will be tested. An effort was made last year to have it tested, but owing to the 'Minto' having sustained an injury to her propeller and other injuries, it was impossible for the test to be made at that date. The time to test the Georgetown-Cape George route is when Pictou is unapproachable. It would prove nothing that Ballantyne's Cove had then been made, and that no ice obstruction was encountered. In order that a proper and satisfactory test be made it would be necessary to have a spare boat to make the run by the Cape George route not only when Pictou harbour is blocked but also at such times as it would appear there was heavy ice on the Cape George route itself. My contention is that even when there is heavy drift ice there it will not impede, or rather prevent the progress of the boats to Ballantyne's Cove because of the loose, mobile character of the drift ice there. It may happen there is clear open water between Georgetown and Cape George when Pictou Harbour is blocked with ice, and on the other hand that when Pictou harbour is approachable there appears to be heavy ice on the Cape George route, but with ice which I claim will not obstruct the steamers for the reasons stated. Hence in order to have a proper test a boat should be commissioned for a couple of months, say from the middle of February to the middle of April, to make test trips between Georgetown and Cape George of Ballantyne's Cove until the new boat now proposed to be provided is available this test cannot be reasonably made. It requires the two boats now in the service to

handle the island business, and it would be unreasonable to expect the people of the island to be satisfied to have their freight and traffic delayed in transhipment just to enable a series of tests or experiments to be made by the department of a route that cannot be used immediately for lack of terminal facilities at Cape George. From the assurances I have received the details of which I shall not weary this House with at this late hour. I am satisfied when the opportune time comes, satisfactory tests will be made and then it will be demonstrated beyond question of peradventure that the Georgetown-Cape George route is the proper route for a winter service at all events. And by the way, in this connection, let me call the attention of the hon. Minister of Public Works, to the necessity of an extension of the wharf at Ballantyne's cove to meet present requirements as well as future expectations. When this is shown it will be necessary to build a short spur of railway to connect with the Intercolonial Railway at Antigonish. That is not an expensive matter. It will be a comparatively inexpensive line, as there are no engineering difficulties to be met with, and it will instead of being a burden to the government railway be a source of profit to it. It will be a valuable feeder to the Intercolonial Railway, as it will run through a settled, prosperous section of country. The recent discovery of most promising coal seams at Big Marsh, almost midway between Cape George and Antigonish will necessitate the construction of such railway for the development of those immense coal areas. Further, I venture the prediction that with the development of these coal areas and the iron properties at Doctor's Brook and Arisaig in Antigonish County, a line of railway will extend from Antigonish to Country Harbour in Guysborough county, one of the finest ports in America. This road will run through one of the best sections of Nova Scotia. It will run along the South River valley, than which there is no finer agricultural section in any part of Nova Scotia, through the prosperous and beautiful section of Goshen down to the deep water of Country Harbour. The fisheries and the gold mines of Country Harbour and adjoining districts, the copper deposits of rear Springfield and Copper Lake, and the agricultural products of the excellent farming community through which the road will run will ensure traffic and business for the road that will make it a good paying proposition from the very beginning. Surveys of this proposed road were made in recent years by such engineers as P. S. Archibald, Hiram Donkin, and I think, James J. Taylor, all of whom as I am advised concur in asserting that the road can be built for the ordinary provincial and federal subsidies usually given. If the policy proposed in this House a couple of weeks ago of acquiring branch lines of the Intercolonial Railway as feeders for the road be adopted, then I submit it would be the part of wisdom and sound business sense to extend it and build a road all the way from Country Harbour to Antigonish, a distance of 40 miles, opening up a country of remarkable fertility of soil as well as of rich mineral wealth and on to Cape George affording means of transportation of the valuable coal and iron deposits to which I referred and also providing the means of communication guaranteed by the union to the province of Prince Edward Island. In that country there is an infectious malady prevalent. They have tunnel on the brain, and until they get over that the people will not take hold of the Georgetown and Cape Breton route. If they would take hold of that route and insist upon having it, they would find in it a solution of the difficulties they are now labouring under. When they cease to see visions of great things through subterranean and subaqueous passages the character and cast of which the keenest seer cannot foresee, when they recover from their attack of tumelitis and agitate for and insist upon the route of communication that nature has already provided for them, they will then have solved their transportation problem and the honour of Canada will have been vindicated so far as the terms of the Island union go. I say the honour of Canada, for it is discreditable, aye more, disgraceful, to a pretentious country like Canada that its smallest province should have to run to the foot of the throne in England to ask for justice, and that this parliament should have been reminded of its duty and obligation from Downing street as was the case in 1886 when Earl Grenville asked this government to provide the necessary efficient steam service for that province.

Mr. A. A. WRIGHT (South Renfrew). We have heard for years the voices of those deeply interested in continuous communication between Prince Edward Island and the mainland but no one has lifted up his voice on that question who comes from an entirely different section and has told the people of the island what we think of it. I propose to give a disinterested opinion with reference to the communication between the island and the main shore. I remember distinctly when Prince Edward Island came into confederation and the undertaking we entered into to give that province constant communication with the mainland. I think that undertaking was only right, and I feel sorry for those good people down there. Originally all their interests were with the United States, and when they entered confederation they were deprived of that intercourse. Are we giving them a proper recompense for what they surrendered? True we have constructed very powerful steamers which we thought would do the work but they have not done it satisfactorily. I remember distinctly in 1906 when the poor people down

there were wanting hay for their cattle. They had only recently gone into the work of dairying, and for a whole winter they could not get an ounce of hay to feed their cattle although 400 tons were lying on the shore of the mainland waiting a chance to get across. I know we all felt very sorry for them. There is only one way to solve the difficulty and that is to construct a tunnel. I understand that estimates have been made by expert engineers, according to which a tunnel 16 feet in diameter can be constructed for $10,000,000. If it can, I for one from the province of Ontario, am satisfied to pay my share. We ought to keep our faith with provinces as we keep our faith, as individuals, with one another. What is the good of a man if his word is not good? What is the good of a government if its words is not good? I for one will be perfectly satisfied to have the government undertake a thorough investigation, and if a tunnel can be constructed for $10,000,000 I will vote for it, and I believe every one in Ontario would do the same. I would like to give some figures but it is now half past ten when I think we should close, and shall therefore not take up the time of the House any longer.

Mr. E. M. MACDONALD (Pictou). Lest some remarks that fell from my hon. friend from Antigonish (Mr. Chisholm) might cause some misapprehension, I venture to trespass on your time, Mr. Speaker, a moment or two. Let me congratulate my hon. friend on the able way in which he presented what may be said to be a very poor case. He labours under the disadvantage of coming from an inland county, and his information is naturally imperfect, because those so situated, know little about conditions which apply to the seashore. When we come to consider the fact that the harbour of Pictou, to which my hon. friend referred in a rather unfortunate manner, is the only one with any facilities to be found on the northern shores of Nova Scotia from the Strait of Canso to Point du Chene —and I make that statement with full knowledge—you will realize that my hon. friend was engaged in a task which was almost too stupendous even for him to undertake. When you realize that for the past thirty-two years, as long as winter communication between the island and the mainland has been maintained, seafaring men, whose business it is to navigate back and forth between those two provinces, always went to and from Pictou, you will have some appreciation of what the situation really is. But because in the winter of 1904-5, there was a barrier of ice formed outside the mouth of the Pictou harbour, we are told it is of no importance as a winter port. Well, having lived in the town adjacent to that harbour all my life, I know that that was the only occasion during the past forty years when such a barrier was to be found.

Mr. A. A. WRIGHT.

During all the previous years when winter steamers were going to that harbour, at no time was the entrance to it ever prevented by reason of the existence of an ice barrier. But in that particular year, owing to the various currents to be found in the gulf and the straits—in one year you will find large quantities of ice in one place piled up and in another year large quantities piled up in another place—in that particular year, mainly by reason of the fact that a sandbar had been allowed to reach that point, when the water became over it very low an ice block was formed. Since then, however, the bar has been dredged away and we have a complete channel which will take the largest steamer that is available for the service in the Straits of Northumberland; and a result of the new conditions will be found in the fact that during the winter now drawing to a close there has not been a day in which communication has not been maintained between Nova Scotia and Prince Edward Island, starting from Pictou harbour. I do not think my hon. friend should have found it necessary, in order to make an argument on behalf of a place in his own county, to attack this portion of my constituency in the way he did. Nor do I think that anybody in Nova Scotia pay the slightest attention to the opinion of Mr. Owen of the Marine Department. What does he know about proper harbour or proper winter communication? When we get the opinions of gentlemen who are accountants merely, and have had no experience with conditions put forward seriously here as having some weight with regard to the maintenance of winter communication, you can see that my hon. friend has gone very far afield in trying to make out a case. As regards the Cape George and Georgetown route, which my hon. friend advocates, there is no harbour at Cape George at all. It is, as its name indicates, a cape or a point which runs out into the straits and there is no harbour there at all.

Mr. WM. CHISHOLM. There is Ballantyne's Cove.

Mr. MACDONALD. That is not at Cape George at all, and Antigonish harbour is a long way from Cape George, and it is so shallow that a schooner cannot get into it.

Mr. Wm. CHISHOLM. Ballantyne's Cove is a harbour on the northeast side of Cape George, around the point of the cape, and is admitted to be the best harbour on the Northumberland straits. All my hon. friend has to do is to read what Mr. Mackenzie of Prince Edward Island says about it. There is an excellent breakwater there. And in the summer season you will find more coasting and fishing vessels there than at Pictou except when Pictou has the island trade.

Mr. MACDONALD. I hope this discussion will not degenerate from the lofty plane of the question of maintaining continuous communication between the two provinces into the local one of whether there is any harbour at Cape George or not. At Cape George there is nothing else but a cape; there never has been anything else there. But there is this to be said in favour of my hon. friend's argument, that Cape George is one of the nearest points in Nova Scotia to Prince Edward Island and I have no doubt that there may be occasions when boats will have access from Cape George to points on the island when they cannot cross at other points, and that on occasions they can cross from other points when they cannot cross at Cape George. The point I desired to make was that it was not necessary for my hon. friend, in order to justify himself with his constituents, to attack the facilities which are to be found at the one point which the people of both provinces, by mutual consent, for the last 32 years have utilized as their principal means of communication and which is in a better position as far as facilities are concerned than ever before in its history. Unfortunately for my hon. friend the good people of Prince Edward Island do not seem to regard the position he takes as serious at all.

I have seen some arguments from the island advanced in favour of communication between Charlottetown and Brule, on the Nova Scotia shore. I will not discuss that but will simply say that in my constituency we have facilities for communication with the Intercolonial; we have facilities in connection with the winter boats and we have the best available harbour for shelter and all other advantages that is to be found. Thirty-two years trial of that harbour has shown it to be the best place and the difficulties that have been found in the navigation, except in one year, are not difficulties which are due to anything in connection with that particular harbour. I believe that practical people who know the conditions will agree that Pictou harbour is the best that can be found on the mainland in connection with the Prince Edward Island service. I am not saying anything against Cape George, because I think steam communication might be maintained from various points, and I would not have taken part in this discussion except that I want to point out that the conditions existing in my constituency are such that any complaints the people of the island may have had in the past were not due to any defects that are to be found in connection with the terminal being at Pictou. I think that the new icebreaker which the department is arranging to build can obtain easy access to Pictou harbour at all times of the year and with that additional service the good people of Prince Edward Island, who have nothing to complain of this year, will find that a great many of the grievances of which they have complained will have disappeared.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). Mr. Speaker, as has been stated by the hon. member for Antigonish (Mr. Wm. Chisholm) this subject is not altogether a new one; we have heard of it before. I have no fault to find with the fact that my hon. friends from Prince Edward Island have thought it advisable to bring it again to our attention; on the contrary I may say with perfect candour to the hon. member for Queens (Mr. A. Martin) that I have listened to him with great pleasure, pleasure not altogether unalloyed, however, because I would tell him that in my humble judgment he has not been exactly fair to this government or indeed to any previous government since the island entered confederation. My hon. friend has rather taken the view, and he has maintained it at some length, that there was on the part of the government of Canada a determined hostility to Prince Edward Island. I am sure my hon. friend has no warrant for saying that, and the evidence he sought to adduce did not confirm the view he has advanced. My hon. friend has found fault, for instance, with the fact that the articles under which Prince Edward Island entered confederation did not provide for a fixed minimum representation of Prince Edward Island in this House equal to the representation of the island when it entered the Dominion. On the other hand, he found fault with the fact that the principle of representation by population, which is the cardinal principle under which this confederation was formed, was applied to Prince Edward Island. To-day the representation of Prince Edward Island in this House varies according to population, just as is the case for Ontario and all the other provinces of the Dominion. No exception was made in the case of Prince Edward Island, though subsequently an exception was made in the case of British Columbia because in the articles under which British Columbia entered confederation it is provided that the representation is not to go below the figure it was at in 1872. No such arrangement was made in the case of Prince Edward Island, but it does not lie in the mouth of my hon. friend to reproach us with that and say that there has been hostility to Prince Edward Island. If any one is guilty——

Mr. A. MARTIN (Queens). Will my hon. friend allow me? I do not think my hon. friend will find in anything I said such a word as hostility. What I did say was that I could not see that the province of Prince Edward Island had been treated as Sir George E. Cartier had said as the junior member of a family. I did not mention the word hostility.

Sir WILFRID LAURIER. I would not say that my hon. friend used the word

'hostility,' but I appeal to him if the whole tenor of his remarks was not intended to convey the impression that Prince Edward Island had not been treated with justice by the Dominion government. I do not mean by this administration alone, but by all the administrations since Prince Edward Island entered confederation. I ask him if it lies in his mouth to say that in this matter, if he will not say 'hostility,' any feeling at all on the part of this government towards Prince Edward Island and if an injustice has been done in this respect to the island, he will agree with me that this injustice was not imposed by the Canadian government upon the government of Prince Edward Island. The entrance of Prince Edward Island into confederation was a matter of agreement. The terms were not imposed on the island. The men who then represented Prince Edward Island accepted the terms such as they were, and if there has been a fault by any one, it is a fault shared in by not only the government of Canada but by Prince Edward Island also.

Mr. A. MARTIN (Queens). What I said was that when the terms of confederation were against Prince Edward Island, binding the island down to a certain point, that you observed the terms to the letter, but when you come to another point as in the adjustment of the new subsidies, the terms of confederation were relaxed in order to give your own province and Ontario large sums of money while my province does not get any.

Sir WILFRID LAURIER. My hon. friend has departed altogether from the point we were discussing at the time. I said there was no intention on the part of the Canadian government to inflict any injustice on Prince Edward Island. If the provisions made in the case of British Columbia were not made in the case of Prince Edward Island, it was a mistake, if it was an error, call it by any name he may, it was an error common to all the parties to this agreement and Prince Edward Island has no grievance at all on this point.

Mr. LEFURGEY. The point with regard to representation is, as the right hon. gentleman knows, there was a reasonable doubt as to the interpretation, whether the language was not quite as strong as in the case of British Columbia, and we carried our case to the Privy Council. They decided that we could not go outside the four corners of that bond, and the case was given against us. Nevertheless, it will not be disputed that while the wording of the Act did not give us six members in perpetuity, all the evidence outside the four corners of the Act shows that we expected and that we were intended to have six members in perpetuity. What we complain of is that the right hon. Prime Minister could advocate a change with regard to subsidies and other matters and send the Bill over to the imperial parliament to be ratified, but he did not see justice done to the smallest province in giving it fixed representation as had been intended, but placed it in such a position that it is likely to go down in a few years to one representative—I suppose it cannot have less.

Sir WILFRID LAURIER. Again the hon. gentleman (Mr. Lefurgey) is departing from the point at issue. When we went to the imperial parliament to have the subsidies readjusted, we simply carried out the will of the provinces, as declared by their representatives in convention. All the provinces had come here to Ottawa to have this matter readjusted. And we did not feel at liberty to go outside the record and to attempt reform—if reform there ought to be—in a matter which the convention had not dealt with. If the question of representation is to be readjusted in favour of Prince Edward Island, the principle should be submitted to all the provinces. My hon. friend will agree with me that nothing could be more dangerous than to attempt to change the terms of confederation in the representation given to each province without concurrent action of all the provinces or, at the very least, until all the provinces having had an opportunity of expressing their opinion upon it. But the point I wanted to make was to protest against my hon. friend from Queens (Mr. A. Martin) attempting to show that there had been some feeling on the part of the Canadian government against Prince Edward Island. On the contrary, I think I can say fairly that all parties in this country have no other feeling than that of affection, regard, consideration for Prince Edward Island. Again, I think my hon. friend was very unfair in the manner in which he contended that Prince Edward Island had not received the full consideration to which it was entitled in the readjustment of the subsidy. If he will look at the new subsidies, he will find that the attempt in the convention was to give to the smaller provinces a larger proportion of subsidy than to the larger provinces. Again, I think he was very unfair, against this government in particular, in the point he attempted to make that Prince Edward Island had not received the full consideration to which it was entitled in the matter of allowance for exhibitions, in that we gave only $10,000 to Prince Edward Island, where as to the other provinces we gave $40,000 and $50,000. This was not because we wished to be unfair to Prince Edward Island or that we wished to make her feel that there was any desire to treat her with any lack of consideration—such a thing is not arguable. The reason for the difference was that in the case of the other provinces they were holding Dominion exhibitions, and going deep into their own pockets for that purpose, and came to us for assistance. But Prince Edward Island would not do that; it would not hold a Dominion exhibition; it

would not place itself in the position assumed by the other provinces. Therefore, it is not fair for the hon. gentleman to cite this as an instance of feeling against Prince Edward Island. In fact, would the hon. gentleman like me to tell him how his speech impressed me? If I may do so without offence, I would say that it seemed to me that the hon. gentleman wanted to keep his grievance —that if he were compelled to choose between the grievance and the tunnel, he would sacrifice the tunnel and keep the grievance. He buttered his own argument with grievances picked up here and there. But when those grievances are examined, as I have examined some of them, they are seen to have very little substance. Now, I come to the tunnel. My hon. friend (Mr. A. Martin) has made a demand for a tunnel, followed by my hon. friend from Prince (Mr. A. A. Lefurgey), also by the other member for Queens (Mr. A. A. McLean), on the ground that this is part of the terms of agreement between Prince Edward Island and the Dominion of Canada. Now, of all the reasons these hon. gentlemen could find for this request, the one they have chosen is, in my humble judgment, the weakest of all. If Prince Edward Island is to have a tunnel, she should not, it seems to me, place her demand upon an article of the agreement. It is very questionable—yes it is more than questionable—that, when the articles were signed and it was provided that Canada should furnish Prince Edward Island with efficient steam communication at all times, a tunnel was thought of as that means of communication. All those who took part in the negotiations and framed this instrument had in their minds, so far as my reading on this subject enables me to judge, steam navigation as distinguished from the kind of navigation they had up to that time. But it does not matter what the signers of that agreement had in mind up to that time. I say to my hon. friend that, apart from all other considerations, and simply because Prince Edward Island is in confederation and is entitled to the best that we can give her, we should provide tunnel communication with Prince Edward Island if it can be done with anything like a reasonable expenditure. There is no necessity to go to an article of the agreement or contract; it is sufficient to say that the government and people of Canada, in the spirit shown by my hon. friend from Renfrew (Mr. A. A. Wright), desire to do the best that can reasonably be done for Prince Edward Island. That is the only ground upon which I would place the argument. I do not want to act only as we are bound by contract to act. I prefer to put it on the broader ground, and on the ground that will appeal to my hon. friend (Mr. A. Martin). Now, is this reasonably possible? That is another consideration. Of course, we could spend $10,000,000 or $20,000,000 in this work, but the hon. member knows that we have numerous obligations; we have demands for works in all parts of the country pressing upon us. For many years we have been trying to give Prince Edward Island a reasonable communication by navigation. I think we have succeeded fairly well. In 1876 the government of Mr. Mackenzie first put on the route the 'Northern Light.' Every member from Prince Edward Island at that time agreed that the 'Northern Light' was not a complete success, but that it had done a good deal to improve communication between the island and the mainland. But it was not sufficient, the 'Northern Light' was replaced by a better boat and this by a still better one, and this is to be replaced by another, which, of course, must be to a certain extent an experiment, but which we hope will fill the bill. But, of course, all will agree that no boat will fill the bill as well as a tunnel, which can be used at all times regardless of weather conditions, and through which trains can run on schedule time.

Well, Sir, that is a matter which we have under consideration and to-day I may say to my hon. friend frankly that we are disposed to do the best that it is possible to do under the existing circumstances. We have not yet full information, but information we are always getting and always getting it with the hope of finding it possible, with the resources of Canada, to give to the island what the island wants and what we want to give her also—the full measure of prosperity that it is possible to have with the best possible condition of transportation. All that is needed now, I believe in Prince Edward Island to make it as prosperous as its people think it ought to be is a proper system of transportation.

Mr. R. L. BORDEN (Carleton). Mr. Speaker, I would like to say a word or two before the discussion closes. The right hon. leader of the government (Sir Wilfrid Laurier) suggests that the members from Prince Edward Island on this side of the House who have spoken on this subject are more anxious for a grievance than for a tunnel. I do not think my right hon. friend was perhaps quite fair in that regard because, having some knowledge of their feelings on this subject and of what they are aiming at, I believe that every one of them is sincerely desirous of completing the communication between Prince Edward Island and the mainland in that way and that they place that consideration above every other consideration which would influence their conduct as members of this House. It remains also to say that if they desire a grievance instead of a tunnel my right hon. friend seems very much disposed to satisfy them in that regard, and I did not gather from his words to-night anything more than what he said as far back as 1891, when he was leading the opposition.

Mr. LEFURGEY. Not as much.

Mr. R. L. BORDEN. Not as much, my hon. friend (Mr. Lefurgey) reminds me, because at that time the right hon. gentleman went much beyond what he said here to-night. In a letter of 19th December, 1891, addressed to Mr. D. B. Hogg of Charlottetown, P.E.I., he used these words:

Dear Sir,—I have your favour of 2nd February instant. I hardly thought that an expression of opinion as to the construction of a tunnel to connect the island of Prince Edward Island with the mainland should be required. Every man who has given attention to the condition of things and the interests involved by the entering of the island into confederation must admit that such a tunnel must be constructed if the thing is reasonably practicable.

The first requisite is to have an accurate survey and reliable estimates. I am only sorry that these were not obtained long ago.

Well, Sir, the right hon. gentleman has been in power, with every possible facility, with all the resources of the country at his command, for nearly twelve years, and he seems to know absolutely no more at the present time in regard to the practicability or cost than he did when as leader of the opposition he addressed the words which I have just now quoted to Mr. D. B. Hogg, of Charlottetown. One would think that if the government were serious in regard to an important matter of this kind the information necessary to guide the House and the country on the subject would be in the possession of the government at the present time.

The right hon. gentleman referred to the terms of confederation. I will speak of that later on, but let me say one or two words in regard to his remarks on the question of redistribution. My right hon. friend points out that nothing could be done about a more equitable representation of the province of Prince Edward Island because all the provinces of Canada were not consulted on the subject. Who could consult them if my right hon. friend could not? I do not know how they could be consulted except by some action on the part of the government of the day. When the right hon. gentleman points out that the subsidies to which allusion has also been made were fixed with the consent of all the provinces he surely forgets that one province—the province of British Columbia—did not consent.

Sir WILFRID LAURIER. Pardon me; it consented but asked for special terms.

Mr. R. L. BORDEN. That is a very curious way of putting it, it seems to me. It consented that all the provinces should be entitled to a certain measure of increase in their subsidies, but it stoutly claimed that the province of British Columbia deserved special treatment, and it did not consent to the other subsidies being increased unless British Columbia should receive that special treatment. The premier of that province went to interview the British government for the purpose of enforcing the demand of his province in that regard and, as I can establish by a reference to the debates of the imperial parliament that I have under my hand, he procured an amendment to the Bill, as proposed by this government, in order to safeguard the rights of the province of British Columbia in future in that respect. If you can make a redistribution of subsidies with one province dissenting, and if you can, for that purpose cause an Act to be passed by the imperial parliament in amendment to the British North America Act, the argument of my right hon. friend as to the consent of all the provinces does not seem to carry with it very great weight. However, I am not so much concerned with that particular part of my right hon. friend's argument for the moment.

He has told us that the claim of Prince Edward Island for the construction of a tunnel should not be based upon the terms of confederation between that province and the other provinces of Canada. I am not so sure that I would agree with my right hon. friend in that respect; in fact, my right hon. friend himself made a very strong statement in this House in 1901 in that regard. Speaking of the article of confederation which I am about to read, he said:

It is a direct, binding and solemn understanding that the government of Canada will maintain continuous communication between Prince Edward Island and the Intercolonial. There is no provision there that the Dominion of Canada would try to do it, there is no suggestion that there might be too much ice in certain seasons. True, there might be the case of force majeure. No one would complain if the service were interrupted for a day or two by an act of Providence, because that is a case of force majeure.

The article to which my hon. friend had allusion in making that statement is this:

Efficient steam service for the conveyance of mails and passengers to be established and maintained between the island and the mainland of the Dominion, winter and summer, thus placing the island in continuous communication with the Intercolonial Railway and the railway system of the Dominion.

The hon. member for Antigonish (Mr. W. Chisholm) who addressed this House at some length seemed to read that article as if it read efficient steamboat service for the conveyance of mails and passengers. It is not efficient steamboat service, it is efficient steam service and I would think that the words would be capable of wider construction than that which was placed upon them by the hon. member for Antigonish. What is the reason that we are to-day no wiser than we were in 1891, no wiser than we were in 1896, as to the attitude of the Liberal party in regard to this tunnel?

There has been ample time in the twelve years that these gentlemen have been in power to procure all the necessary information. The subject is of enormous importance to the province of Prince Edward Island. One cannot blame the people of the province if they become impatient year after year by reason, not during the present winter, but in previous years at the inconveniences of a very serious nature to which they are subjected in consequence of the unsatisfactory condition of this service. My right hon. friend himself has given a construction to the provision to which I have alluded to-night. He has said that it does not mean that the government of Canada is to try to give efficient continuous steam service, but that it is bound to do it. I entirely agree with him in that and it seems to me, as my hon. friend from South Renfrew (Mr. Wright) has put it, that it is a subject to which the earnest attention of the people of Canada should be given at once with a view of determining immediately whether or not the project is reasonably practicable having regard to the resources of Canada. That is the whole question. That is a question which seems no nearer solution now than it was when the right hon. gentleman came into power in July 1896. At all events if there is any more information on the subject it has not been brought to the attention of parliament.

I was a little surprised at another argument of the right hon. gentleman which was to the effect that we have to take into consideration the numerous obligations of the country for public works throughout Canada. That is true, but surely the right hon. gentlemen recognizes the distinction between those which naturally attract the attention of the government but which are not matters of interprovincial obligation, and a contract such as that which was made between the province of Prince Edward Island and the rest of Canada when that province entered the Dominion. The two things are not to be placed on the same plane. In the one case the government of the country exercises its discretion as to whether or not the resources of the country will permit certain public works to be constructed in any part of Canada. In the other case the government of Canada has before it a direct contract and obligation between the rest of Canada and Prince Edward Island and it has to see that that contract is carried out in a reasonable and effective way in order that the public credit and honour of this Dominion may be observed. That is the distinction between the two demands on the public treasury. I spoke fully on this question last year and I adhere entirely to what I said then and I would again speak more fully to-night were the hour not so late. It seems to me that the honour of the country is so much involved in the question as to what shall be done, that we cannot afford to have the province of Prince Edward Island resting under the impression or the belief that the articles of confederation have not been fairly and fully carried out, and the very first step that we ought to take, and that ought to have been taken long ago, is to ascertain whether or not this tunnel is reasonably practicable; whether having regard to the resources of the country we can reasonably undertake it. Very strong arguments have been put forward by gentlemen on this side of the House in support of the position that it would be no greater burden on the resources of the country to construct and operate this tunnel than to attempt to keep up communication by means of steamboats. We ought to have had long ago all necessary information upon that subject. I sincerely trust that the government will give to this important subject the attention which it deserves and that within a few months at the outside we shall have in the possession of parliament the necessary information to enable us to say what should be done for the purpose of fulfilling that contract with the province of Prince Edward Island to which the credit and the honour of this country are pledged.

Motion (Mr. Martin, Queens) agreed to.

Sir WILFRID LAURIER moved the adjournment of the House.

Mr. R. L. BORDEN. What business will be taken to-morrow ?

Sir WILFRID LAURIER. The Irrigation Bill of the Minister of the Interior, the two resolutions of the Minister of Finance, and then in Supply the estimates of the Minister of Marine and Fisheries.

Motion agreed to, and House adjourned at 12.05 a.m., Tuesday.

---

## HOUSE OF COMMONS.

TUESDAY, March 10, 1908.

The SPEAKER took the Chair at Three o'clock.

### RAILWAY ACT—AMENDMENT.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals) moved for leave to introduce Bill (No. 118) to amend the Railway Act with respect to telegraphs and telephones and the jurisdiction of the Board of Railway Commissioners. He said: For some time the question of placing telegraphs under the Board of Railway Commissioners has been discussed. This Act provides that telegraph companies, with their poles, connections, &c., shall be placed under the jurisdiction of the Board of Railway Commissioners. I need not go into the details of what that may mean. It means with

telegraph companies just what it means with railway companies. Wireless telegraph companies are also included. In addition, the clauses relating to telephone companies are somewhat readjusted, but there is no material change. One very important clause provides for what is known as specific performance. It will meet, I think, the views of several hon. gentlemen who have discussed this particular question in connection with other Bills. It provides for the enforcement of contracts entered into by companies and municipalities or companies and private individuals and corporations. We are giving the Board of Railway Commissioners power to enforce any agreements that may be made by a railway company with any other person or corporation. The provisions are quite wide for the enforcement of these contracts.

Mr. R. L. BORDEN. Does the Bill provide for machinery in connection with the Railway Commission, or is the machinery in the courts to be used?

Mr. GRAHAM. It provides that the board itself shall be the court and have the power of enforcing these agreements. We have placed under the jurisdiction of the board by this Bill the regulation of sleeping cars, cartage in connection with the transfer of freight and what is known as demurrage. Heretofore the board has had power to make regulations and enforce the payment of certain charges and penalties on shippers who have not loaded or unloaded promptly. We now propose to give the board power to make regulations under which railway companies may be liable to penalty if they do not provide cars promptly or carry freight as promptly as they should.

Mr. COCKSHUTT. Will this Bill apply to telegraph companies which have been in possession of streets for a number of years, and have poles on streets that are now a nuisance? We have in Brantford a case of this kind. The wires are very much in the way of the fire department, as they prevent ladders being raised against high buildings. We gave this company this power some years ago and they planted their poles. Can the board, under this Bill, compel the removal of such poles?

Mr. GRAHAM. That opens up quite a broad question. In some instances, I think the commissioners might do so. But other questions may arise. There may have been contracts or agreements between the companies and the municipalities, and these would have to be considered.

Mr. W. B. NORTHRUP (East Hastings). May I ask the minister if this Bill would cover such a case as that brought before the House some days ago relating to the Belleville and North Hastings Railway?

Mr. GRAHAM. That may possibly be a legal question. I am not able to say now that it will apply to a case as old as that or to one in that position. It certainly gives the board power to deal with cases that may arise hereafter.

Mr. W. F. COCKSHUTT (Brantford). The case I wish to bring to the attention of the minister is one in which a telegraph company, acting under a charter granted by this parliament, placed their poles and strung their wires in one of the main streets of Brantford. They have occupied that street for many years under the authority of that charter, and they refuse now to remove the poles though the municipal authorities think it absolutely necessary in the interests of the city that the poles should be removed. I would like to know if the Bill be retroactive and will cover cases where rights have been given by parliament, but, as we think, wrongly, to take possession of the streets of a city without compensation. I do not think that, in this case, there was any agreement between the municipality and the company, but that the company went there under the authority of their Dominion charter.

Mr. GRAHAM. I imagine that such a case as that can be found in many municipalities throughout the country, telephone or telegraph companies having erected their poles and strung their wires according to their charter, much as a railway company would run its line according to its charter. The question raised is a pretty large one, and I would not care to answer it offhand.

Motion agreed to, and Bill read first time.

## PRIVILEGE—RETENTION OF RETURNS BY MEMBERS.

Mr. R. L. BORDEN (Carleton). I wish to refer, as a matter of privilege, to an editorial article in the Toronto 'Globe', dealing with the returns brought down to this House. I will not read the whole article, but only that portion which specially concerns me:

> It was known that the officers of some of the departments were crusty because original documents which had been brought down either disappeared entirely or were returned in a mutilated state. Mr. Ames, who is the chief deviser of the policy of insinuating suspicion, is himself responsible for the disappearance of five documents entrusted to him. Among those similarly delinquent are Dr. Reid and Messrs. Borden, Foster, Clements, Armstrong, Lake and Kemp.
>
> When, as a protest against these mutilations of the files of departments, the originals were refused there was a great outcry that the refusal had its source in the fear of unpleasant revelations.

So far as that statement affects myself, it is an absolute falsehood. I am pretty careful about documents, and am very particular indeed to return any of the files of

this House which I receive from the officers. I have taken the trouble to examine the returns which have been brought down showing the position in relation to the returns in possession of the House, and I find that this writer has taken particular pains not to call attention to the fact that there are two documents charged to the right hon. Prime Minister (Sir Wilfrid Laurier).

Sir WILFRID LAURIER. To what does the hon. gentleman (Mr. R. L. Borden) refer ?

Mr. R. L. BORDEN. To the return on which this statement is based. In respect of one of these returns, the right hon. gentleman (Sir Wilfrid Laurier) is in exactly the same position as myself—the document charged to him is in possession of an officer of this House. Every one knows that there are two departments of this House which have charge of these documents. One is called the Journal Office, which, as I understand, takes charge of such returns brought down during any particular session for the purposes of that session. Afterwards, they are transferred to what is known as the Records Office. In the return brought down, I am charged at page 7, with return No. 106, taken out by me on October 16th, and said to be not yet returned. But in this editorial not the slightest reference is made to a return taken out by my right hon. friend and mentioned at page 10 of this return as having been taken out on November 16, 1906.

Sir WILFRID LAURIER. What is it ?

Mr. R. L. BORDEN. I have forgotten. As a matter of fact, these returns, though not in the Journal Office, are in their proper place in the Records Office. And there is not a single document that I have received from any officer of this House which has not been returned, except a couple that I have received during the past three or or four days. Therefore, so far as this article charges me with receiving documents from officers of the House and either mislaying them or not returning them I repeat that the statement is an absolute falsehood. And the slightest investigation would have disclosed to the person who wrote it that the facts are not as he claims. There is a further insinuation in this editorial that these were original documents and that they had been mutilated in some way. They were not original documents in any case, but copies of documents brought down in response to orders of this House,—copies made in the proper departments. And when the suggestion is made of mutilation of either the originals or copies brought down to this House once more as a matter of privilege and speaking for myself—and I have no right to speak for any one else on this particular occasion—I say that the statement contained in the 'Globe' is an absolute, utter, complete falsehood.

Every one knows that returns brought down in response to orders of this House are handed on request to members, who are responsible that they shall be returned. They are sometimes retained by members for a considerable time. The same spirit which prevented the person who wrote this editorial from alluding to the fact that one of these returns was charged to the right hon. Prime Minister himself, led him to overlook the fact that the right hon. gentlemen is shown on page 14 of this return to be now in possession of a document which he received on November 20, last. I am not saying that by way of criticism of the right hon. gentleman ; it is a common practice for hon. members of this House—and, in this respect, the right hon. gentleman has the same privilege as any other hon. member and no more—to retain these documents for some weeks being always ready to hand them back when required. I have kept returns for as much as thirty days in some instances, having them in my room, but ready to hand them back to the officer of the House if any hon. gentleman requires them. During the present session, on one occasion, I went to the clerk and found that an hon. member on the other side of the House had had for a long time a return which I desired to see. I made a request that it should be returned, as I wished to examine it, and after a short delay it was returned. The right hon. Prime Minister (Sir Wilfrid Laurier) in the same way has had one of these returns since November last, and it would be as fair to charge him with concealing and withholding and mutilating that return as to charge any hon. gentlemen on this side of the House with such things. I do not often complain of statements in the press with regard to myself, but when there is a deliberate charge in a journal of mutilation, concealment or withholding of public documents, I think it only right that I should take a few minutes of the time of the House to explain the situation. I repeat again that the document charged to me as having been received from the journal office on the date I have mentioned, is now and for months has been in the possession of the keeper of the records of this House and available for the editor of the 'Globe' or any representative of that paper or any hon. member of this House.

Mr. H. B. AMES (Montreal, St. Antoine). I also wish to rise to a similar question of privilege. In this same editorial, which appears in the 'Globe' of March 9, and is headed 'There is nothing to conceal,' are these words :

A very ingenious collateral device was when the copy had been brought down to ask for the production of the original documents. It was known that the officers of some of the departments were crusty because original documents which had been brought down either

disappeared entirely or were returned in a mutilated state. Mr. Ames, who is the chief deviser of the policy of insinuating suspicion, is himself responsible for the disappearance of five documents entrusted to him.

Now, Mr. Speaker, any impartial and uninformed person, reading those remarks, would draw the conclusion that I had purloined, mutilated or caused to disappear certain original documents which belong to this House. That statement is absolutely false, it is a malicious lie and slander. It is perfectly true that I had charged up against me, on the 31st of December, 1907, five returns which at that time were out. Those returns were all copies. Of those five returns, three of them were passed back to the Records Office on the 31st of January last, or six weeks ago. For six weeks they have been in the possession of the Records Department, where they have been open to inspection and study by any member of this House. Had the writer of that article taken the trouble to inquire in the Records Office he would have discovered that these files had been there at least six weeks. The other two returns with which I am debited, Nos. 150 and 167, were drawn out by me at the request of the hon. member for Calgary (Mr. McCarthy), in whose possession they have been since the time they were drawn, and in whose possession they are to-day, as he is prepared to vouch. I have here the certificate of Mr. Colwell, clerk of Routine and Records, in which he says :

Referring to your inquiry regarding sessional papers Nos. 94, 167a and 167b, of 1906-7, I find by my office register that you returned them to me on January 31, 1908.

The 'Montreal Herald' in commenting upon that return, stated the case as follows :

Mr. Ames himself has taken out at least five returns which he has never returned at all.

To that statement I make no objection, it might have been made more accurate by saying, 'which had not returned on the 31st of December, 1907.' But there is no animus in that statement, and I make no objection to it. But I say that this other statement, which endeavours to give the impression throughout the country that I deliberately took public documents that were originals and mutilated them, and caused them to disappear, is a false and malicious lie and slander, and I shall expect to have that withdrawn within twenty-four hours.

Hon. GEO. E. FOSTER (North Toronto). I must rise to a question of privilege with reference to myself. I have been charged by this particularly veracious journal, edited I believe by a particularly veracious and reverend gentleman, with taking out at least five documents, because I am similarly delinquent with Mr. Ames, who I believe is responsible, according to this paper, for the disappearance of five documents entrusted to him. Well, all I can say is that I am not delinquent in that respect. I have never knowingly or wittingly mutilated a journal or any other document. I have had one original document out, and the Minister of the Interior stated some time ago in the early part of this session, that it disappeared under my name, and he should hold me responsible for it. I told him at the time that I would try and look it up for him, as he did not seem to have spirit enough to hunt it up for himself, and I found it was exactly where it should be. The document was ordered by the House, received by the clerk, sent up to the Journals Office, was taken out by myself, used by myself, sent back to the Journals Office, and at the end of the year sent to the Records Office, where I found it when I made inquiry a few days ago. I also beg leave to protest against another statement in the paper that there was no purpose in getting these documents, or in trying to get original documents, except a purpose insincere, and which partook of the nature of simply playing a sort of trick to the gallery in order to influence public opinion against the government. Now that is an insinuation that no man and no journal should make with reference to a member of parliament when he is carrying out his duties as best he can in this House, and I beg leave to make my protest against such an insinuation as that. I do not know that I can make it any stronger than to say that the statement as regards myself is utterly mendacious.

Mr. J. E. ARMSTRONG (East Lambton). Hon. gentlemen on the government benches do not seem to care for this procedure. Mr. Speaker, I also wish to rise to a question of privilege in regard to this matter. I wish to say, as my name is mentioned as one who is delinquent in sending back returns of the House, that the statement is absolutely false. I went to the Journals Office and inquired of the clerks the number of the return that I was blamed for not sending back to the office, and they gave me the number as 128. I then went over to the Clerk of the Routine Office, and Mr. Colwell, after some investigation, found the return in his office. I think that should be a sufficient explanation. Mr. Colwell gave me to understand, with regard to a number of members who were being blamed for not making the returns to the Journals Office, that if they would go to the clerk of the Routine Office they would find these very returns all in his possession. I hope that the 'Globe' will take back these false statements it has made with regard to a number of our members.

Mr. R. S. LAKE (Qu'Appelle). This is the first time my attention has been called

to the article in question. I wish to state that so far as the charge against me is concerned, of mutilating and abstracting documents, it is absolutely false, not a word of truth in the whole statement. I have never seen original documents except in the room of the Public Accounts Committee, where I have seen them occasionally in the presence of the clerk in charge of that room, or the original documents which we fought for so strongly for several weeks, and which I have seen in the office of the clerk of this House, therefore it would be impossible to charge me in any way with such a crime as this paper has brought against my name. With regard to returns which have been brought down to this House, some time ago I took the trouble to go up to the office above, to the officials who have charge of these returns, and ask them what returns were standing against my name and I could not find one single return standing against my name. At the present moment I do not believe there is any such return. I beg to repudiate in the strongest manner any insinuation made against me in this respect, and which seems to create so much amusement on the other side of the House.

Mr. A. E. KEMP (East Toronto). I think I am the only gentleman whose name has been mentioned in the 'Globe' who has not repudiated the insinuations made by that paper. I wish to say that I am not guilty of mutilating or abstracting any of the records of this House. Last year in the month of April I find that a return standing opposite my name was brought down and as it was desirable for the right hon. Prime Minister to go to the colonial conference, and as I understand, the session was cut short on that account I thought I would hold that return over until this session. It is not an original document, it is a copy and it is a return showing the statistical matter which has been omitted from the Canadian Year-book of 1906 which it was customary to include in the Year-book of former years. As it was not a very important matter I took good care of the document until this session and I thought that I might be able to draw the attention of the Minister of Agriculture to it. The document is in a perfectly good state and I repudiate the charges of the 'Globe.'

Mr. H. S. CLEMENTS (West Kent). As my name happens to be mentioned in the 'Globe' report I want also to deny the allegation in so far as original documents are concerned. In so far as one return is concerned it is only a copy relating to the imports and exports and not an original document. Some time last session, as I fully explained to the office upstairs, I could not find the return because it had been taken out of my desk in this House. It was not my return. I want to repudiate the insinuations cast upon me in regard to myself in that article. They are entirely false and untrue.

Mr. J. D. REID (Grenville). I find that my name is also mentioned in the Toronto 'Globe.' All I have to say is that the return referred to is in connection with the Ross rifle. I took that return from the office of the records over to the Public Accounts Committee last session and I asked two or three times to be allowed to take it back again, but as the investigation was not completed and as a motion had been moved that all papers be left in the Public Accounts Committee until the case was was closed I certainly was not able to get the return and take it back to the office from which I had procured it. It never was in my possession any longer than while carrying it from one office to the other, and it has never, in so far as I know, been out of the room of the Public Accounts Committee and has been in charge of the clerk of that committee. There is another return charged up to me which I got about four or five weeks ago and which I handed to another member of this House in order that the matter might be brought up in the Public Accounts Committee. He still has it and when we are through it will be returned to the proper officer. In each case, in so far as I am aware, they were only copies and not originals. I therefore feel that the 'Globe' was not justified in charging me with taking any returns from the office or mutilating any of them and I hope that the 'Globe' will retract the article that it published.

Mr. M. S. McCARTHY (Calgary). Mr. Speaker, my name has not been mentioned by the 'Globe' but I understand that some hon. gentlemen on this side of the House have been charged with obtaining returns two of which have been handed over to me. They were returns Nos. 150 and 167. In regard to No. 150 they are not original documents at all but simply printed copies of orders in council. I moved for a return last session and I received a communication from the hon. Minister of the Interior (Mr. Oliver) saying that my motion would involve months and months of work. At his suggestion I amended the motion and there was simply handed over or brought down printed copies of orders in council in regard to certain land grants to railways in the Northwest. This return came down last session at a time when it was utterly impossible to take the subject up and have a discussion upon it if it were so desired. The other return, which, I understand my hon. friend from Montreal, St. Antoine, (Mr. Ames) has been blamed for retaining in his possession is return No. 167 in regard to certain timber limits in the railway belt of British Columbia. That return did not

come down until the 4th day of March, 1907, when it was too late to investigate the matters referred to and too late to have any discussion. I therefore, last fall, wired to my hon. friend from Montreal, St. Antoine, asking him if, when he was in Ottawa, he would kindly get copies of these returns for me and he did so. They are not originals at all, it is a matter which requires investigation and if they have been retained so long it is due to the lack of promptness with which the motion has been complied with by hon. gentlemen opposite.

Mr. W. H. BENNETT (East Simcoe). I have nothing to say in reference to the question referred to but I want to bring to the attention of the House a personal matter of my own in reference to the 'Globe' newspaper.

Mr. SPEAKER. This is also a question of privilege ?

Mr. BENNETT. A question of privilege. In the Toronto 'Globe' of Wednesday, March 4 appears a leading editorial under the heading of :

A faction not an opposition.

Among other things in the long editorial is the following :

The Bennett-Sproule-Taylor crowd, however, howled Mr. Bergeron down, and declared he had no authority to speak for them. It will be seen, therefore, that all is not harmonious within the opposition fold.

I assume that the first duty of a public journal is to try and report occurrences and happenings particularly from the parliamentary point of view in a way to command not only the respect of its own political supporters but of the public generally and to comment editorially with fairness to those who may be politically opposed to it. As far as the 'Globe' newspaper is concerned, I think it has passed altogether out of that stage of even being respected for common decency.

Mr. SPEAKER. Of course, that is not a question of privilege. If the hon. gentleman (Mr. Bennett) intends to speak on a question of privilege he may do so.

Mr. BENNETT. I am pointing out the utter untruthfulness of the statements contained in this paper and I wish to illustrate by other occurrences how deliberately untrue the statements are that the 'Globe' newspaper has published. I wish to place the blame upon the proper shoulders. If I am not out of order——

Mr. SPEAKER. I do not think the hon. gentleman is in order in conducting a discussion on a question of privilege along the line that he is now taking.

Mr. BENNETT. There are two lines of communication as to what happens as to matters political in this country.

Mr. M. S. McCARTHY.

Mr. SPEAKER. The hon. member has not yet stated his question of privilege and I do not think it is proper for him to make an apparently irrelevant speech and then bring up a question of privilege.

Mr. BENNETT. Perhaps, Mr. Speaker, you missed my reading of it. I shall read again what it is :

The Bennett-Sproule-Taylor crowd, however, howled Mr. Bergeron down, and declared he had no authority to speak for them. It will be seen, therefore, that all is not harmonious within the opposition fold.

That article is deliberately false and untrue. When my hon. friend from Beauharnois (Mr. Bergeron) spoke on that question he was not treated with derision by hon. gentlemen on this side of the House, including myself. The public must expect and they do expect a certain amount of decency in a public journal, especially when that journal is edited as this one is by a reverend gentleman, or at least by one who assumes to be a reverend gentleman. We know that to-day the country are looking for a state of decency in public life. May I quote from a public journal the utterances of a gentleman who, preaching from the pulpit, made this strong declaration as to what the public life of Canada should be.

The compelling power of parliament comes not downward from the Crown, but up from the crown. This is the land and the day of the man in the street. That significant political fact means much for the church. It offers the most splendid opportunity and involves the heaviest obligations. It may be that under monarchy the government of a city or of a country might grow corrupt and sink into decay and yet the church be free from blame, but if in any city or nation where the people rule there flourish crime and unabashed public evil, the church cannot be held guiltless, for under the reign of the people the church has its chance.

Now, these are splendid sentiments and I am bound to say there is not a man inside of the House or outside of the House who will disagree with them. But let me quote some further utterances from the same gentleman who occupied the pulpit on this occasion. Here is the editorial page of the 'Globe' newspaper and there is no question but that this editorial page is controlled by two men, namely, J. A. Macdonald and——

Mr. SPEAKER. The hon. member will understand that the rule is, there shall not be a discussion on a question of privilege. If the hon. member thinks a newspaper has improperly, or falsely, or maliciously represented him to have said or done something, he has a right to rise in the House and deny it and to state that it is inaccurate, or false, or malicious. I think it must end there. A discussion of the matter is not customary nor according to the rules of the House.

Mr. BENNETT. I have dealt with the untruthfulness of the article, and I was proceeding to point out its maliciousness, and with your permission, Mr. Speaker, I will deal with the maliciousness of the article.

Mr. SPEAKER. The hon. member must confine himself to a statement that it is malicious. He is quite within his right when he does that, but if he proposes to enter on a general discussion he is quite without his right.

Mr. BENNETT. All I wish to say then under your ruling, which, of course, I bow to, is that the statement contained there and which I believe is written by either J. A. Macdonald or one John Ewan is deliberately untrue, and in saying that I do not reflect on any of the gentlemen who are in the press gallery representing the 'Globe' newspaper as reporters. I also say that what I quoted from the newspaper was the celebrated sermon preached by the same lying, smug-faced John A. Macdonald, and—

Mr. SPEAKER. Order.

## QUESTION OF PRIVILEGE—Mr. ARMAND LAVERGNE.

Mr. ARMAND LAVERGNE. I rise to a question of privilege. In the report of the proceedings of the House on Thursday last 'Le Canada' of Montreal made me say, in speaking of the Quebec tercentenary, that I suggested that all the commissioners should be French Canadians. I never said anything of the kind and I beg to deny the statement in 'Le Canada.'

## BEHRING SEA COMMISSION—EXPENSES OF SIR C. H. TUPPER.

Mr. R. L. BORDEN (Carleton, Ont.). Before the orders of the day are called I would like to ask the Minister of Marine and Fisheries a question which I put in his absence on the 11th of February. I understood the hon. minister to state to this House that certain expenses of Sir C. H. Tupper in connection with the Behring Sea Commission in Paris had been paid by the British government. Sir Charles has written a letter to me denying that statement and requesting that authority of the Minister of Marine and Fisheries for making the statement.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). Some time ago a question was put with regard to the expenses of Sir Charles Hibbert Tupper, and this question, like all other questions so put to a minister, was referred to the officers of the department, and the accountant, Mr. Owen, prepared the answer. I now see that the answer he handed to me was not correct. I may say that Sir Charles Hibbert Tupper wrote me also on the matter, and the accountant has given me the following letter of explanation which I shall read to the House:

Ottawa, February 13, 1908.

Dear Mr. Brodeur,—I have read Sir Charles Hibbert Tupper's letter in which he takes exception to the statement made in 'Hansard' in connection with his expenses while acting as British agent in the Behring Sea arbitration in 1892-3, and in which he asks on whose authority the statement in the foot note, applicable to his name in the schedule of expenses, was used.

The objectionable statement is that he was also agent of the British government and that his expenses as such were paid by the British government, in addition to those paid by Canada.

The first question asked was 'Who were the Canadian ministers who represented Canada at the Behring Sea Commission in 1891-92?'

In preparing the answer I naturally included his name, he being a Canadian minister at the time, and when copying expenses, I erroneously made the note on insufficient information, but I have since ascertained what I did not at the time know, that an order in council passed at the time of the settlement of the expenses, by which Canada agreed to pay the expenses of the British agent.

I have written a personal note to Sir Charles Hibbert Tupper explaining the error.

I exceedingly regret the misleading statement.

Yours sincerely,
(Sgd.) A. W. OWEN,
Accountant.

## MARINE AND FISHERIES DEPARTMENT PAPERS.

Mr. FOSTER. Before the orders of the day are called I would ask the attention of the Minister of Marine and Fisheries to the Bastedo papers or order in council or whatever there is, and also to certain papers and correspondence in connection with the travelling expenses of Commander Spain unpublished by the Auditor General, but which the minister said he would lay on the table of the House. Would the minister kindly take a note of this?

Mr. BRODEUR. I had before me yesterday the order in council concerning the appointment of Mr. Bastedo and I intended to make a motion to bring it formally before the House. Unfortunately I have not it with me to-day. As to the other papers they are ready and I will bring them down.

## THE BUDGET SPEECH.

Mr. FOSTER. Can the Minister of Finance tell us when we may expect the budget speech?

Mr. FIELDING. I had contemplated arranging for the budget speech on Thursday of this week, but as my hon. friend intimated that he would be absent on that date I will now say that on Tuesday of next week the budget speech will be presented.

## IRRIGATION ACT—AMENDMENT.

Bill (No. 99) to amend the Irrigation Act —Mr. Oliver—read a second time, and the House went into committee thereon.

On section 7—Memorial and plans to be examined and approved—

Mr. FOSTER. What is the meaning of the term commissioner?

Hon. FRANK OLIVER (Minister of Interior). The Irrigation Commissioner.

Mr. FOSTER. Where is his head office?

Mr. OLIVER. At Calgary.

Mr. FOSTER. What is the name of the commissioner at present?

Mr. OLIVER. John Stewart. Under the old Act the commissioner held a dual position, as Commissioner of Public Works for the Northwest Territories and Commissioner of Irrigation for this government. But by the organization of the provinces the dual position was automatically destroyed, and it became necessary to make an amendment to meet the conditions as they exist.

Mr. R. L. BORDEN. The intention is to require the filing of permission by the municipal or other proper authorities?

Mr. OLIVER. Yes. When the Commissioner of Irrigation was the Commissioner of Public Works for the Territories he accepted in that capacity the application for the territorial government; but now the Commissioner acting for this government is to have the permission of the provincial government filed with him.

On section 8,

Mr. M. S. McCARTHY. I find some difficulty in following the Bill. A Bill regarding this matter was introduced the 5th of December, 1907, intituled Bill (No. 10) to amend the Irrigation Act. Then some days later we found on our desks a Bill not numbered, intituled an Act to amend the Irrigation Act, containing certain explanations. On the 18th of February a third Bill was introduced, but upon going to the distribution office this morning I found there are certain explanations regarding the Bill. Before proceeding to pass the different sections, I would like to get from the Minister of the Interior just what changes have been made from the Bill originally introduced on the 5th of December. The reason I ask is that when the Bill was first introduced, I called the attention of the minister to certain recommendations made by the union of municipalities of the province of Alberta, and I would like to know what changes are made in the Bill before us.

Mr. OLIVER. The Bill originally introduced was intended to meet certain conditions in connection with irrigation, with regard to one or two matters which seemed to be of pressing importance. One was the protection of the rights of municipalities, which might be threatened by irrigation companies under the law as it stood. The other was the protection of the interests of people who desire to get water from an irrigation ditch but who had no rights which would enable them to do so. When brought up for discussion, it became evident that, since we were dealing with the question of irrigation, we might as well go somewhat further and not only provide for these immediately pressing conditions but for other conditions. With that end in view, further amendments were drafted and placed before the House informally, and in deference to my hon. friend from Calgary (Mr. M. S. McCarthy) further consideration of those amendments was postponed. Later on, after more fully considering the matter, the Bill originally introduced was withdrawn and a new Bill submitted, which is the Bill now before the House. This Bill covers the points met by the original Bill and a number of other points. The principal change is in the introduction of the authority of the Railway Commission in dealing with certain questions necessarily at issue from time to time between irrigation companies and private owners and municipalities. These seem to be a proper matter to place under the jurisdiction of the commission.

We have, therefore, adopted almost exactly the provisions which are contained in the Railway Act, and which apply to somewhat similar cases where the rights of municipalities are affected by railway companies. We have adopted these provisions of the Railway Act to the establishment of irrigation enterprises in the belief that we have thereby done the best that could be done to meet a very difficult situation. When the matter was up for consideration before; it was pointed out that the provisions we had in the Bill would effectually protect the rights of existing municipalities. It was criticised by my hon. friend from Calgary on the ground that it would not effectively protect the rights of extensions of municipalities or of municipalities to be established thereafter on irrigation enterprises. At the time, it seemed to me that it was well to meet the requirement of the moment and to meet it thoroughly, and to let the future, perhaps, take care of itself. However, in deference to the suggestion of my hon. friend from Kootenay (Mr. Galliher), who advised strongly that we should provide now for future conditions, and having the advantage of consultations with gentlemen who are very deeply interested in irrigation enterprises, and whose legal ability is unquestioned, I thought it well to introduce such provisions in the Bill as would meet not only the present situation but future questions and would be satisfactory to both parties, so far as it may be possible to satisfy two opposing, not to say conflicting, interests.

Mr. R. L. BORDEN. Instead of reserving the absolute right of municipalities to give or withhold consent, you leave that to the commission?

Mr. OLIVER. Yes.

Mr. R. L. BORDEN. In both cases? That is, if the municipality wishes to cross the irrigation ditch, or if the irrigation company wishes to cross a highway, in case of dispute the matter must be referred to the railway commissioners?

Mr. OLIVER. Precisely.

Mr. AMES. I understand that the Board of Railway Commissioners intervene only in case the contracting parties cannot agree?

Mr. OLIVER. Quite so.

Mr. PORTER. I notice that, in connection with these two sections, either party may apply to the board, but I do not notice any provision for notice to the other party. For instance: A municipality applies to cross an irrigation ditch; an order should not be granted without notice to the other party and the right of the other party to show cause. This may be covered by the provisions of the Railway Act which are made applicable. I have not had opportunity to examine these, but I call the attention of the minister to the point.

Mr. R. L. BORDEN. I think the Railway Act provides that in the case of any application such notice as may be deemed proper by the board should be given to any person whose interest is likely to be affected by the proposed order.

On section 9,

Section 20e shall not apply to any company as respects any works for the construction of which it has obtained authorization before this Act comes into force.

Mr. AMES. Is the authorization referred to in this section local or federal; that is, does this section mean that if an irrigation company has already obtained from the federal government permission to construct works, it is exempt from the provisions of section 20e ? Or does it mean only exemption to the extent of the works that have already been locally, so to speak, authorized? Does it exempt a company which has already been granted a charter from the government to construct certain works entirely from the provisions of 20e, or only to the extent of such works as it has already made local arrangements for?

Mr. OLIVER. My hon. friend (Mr. Ames) hardly has in mind the method by which that authorization is given. The provincial authorities do not authorize—they merely consent; all authorization is from the Dominion. But this section 20e purports to apply not to all works that may hereafter be constructed by a company now chartered, but only to those works for which authorization has been given by the Dominion authority. That is to say, an irrigation scheme may cover a very large tract of country, but the works are authorized to be constructed from time to time, and those works the construction of which is already authorized are, by the terms of this section 9 exempted from the operation of section 20e ?

Mr. AMES. Take a concrete case as an example. Suppose that the Robbins Irrigation Company have secured a contract from this government authorizing them to construct certain irrigation works; and supposing that a very small portion of the works have been definitely authorized on plans submited. Am I to understand that the small portion is exempted from the provisions of 20e but that the subsequent works which the Robbins Irrigation Company may construct under contract with this government will come under the provisions of section 20e ?

Mr. OLIVER. That, as I understand it, is the reading, and it certainly is the intent of the section.

Mr. M. S. McCARTHY. Before reporting the Bill, I would like to hear from the minister if the Union of Alberta Municipalities have been in communication with him, and if they are satisfied with the substitution of the Railway Commission. This Bill substitutes the Railway Commission for the consent of the municipalities. Have any further representations been received by the minister from the secretary of the Union of Alberta Municipalities?

Mr. OLIVER. I have not received any such approval from the secretary of the Alberta Union of Municipalities. But I may say that copies of the Bill have been sent to various parties in the west, and while we have not received replies from all to whom we have sent copies, the replies we have received have indicated their satisfaction with these provisions.

Mr. HERRON. Is there anything in this Bill that would allow irrigating corporations to divert water from a stream and leave it dry, that is a stream where there was not otherwise sufficient water for domestic purposes?

Mr. OLIVER. It is provided in the original Bill, and in the Act as it stands, that all usage of water for domestic purposes stands as a first right; the right to the water of the original stream for domestic purposes is not granted away. Section 11 of the original Act makes this clear, assuring to the party 'whatever water he requires for domestic purposes.' The word 'industrial' has been added in the new Bill, so that it will read 'domestic or industrial purposes.' The intention is to preserve existing rights.

Bill reported, read the third time and passed.

## CONSTRUCTION OF DRY DOCKS.

House went into committee to consider the following proposed resolutions:

1. Resolved, that it is expedient to authorize the repeal of chapter 116 of the Revised Statutes, 'An Act to encourage the construction of dry docks,' and that in substitution therefor it be provided that as an aid to the construction of any dry dock, approved as to location and capacity by the Governor in Council, a subsidy of three per centum per annum of the cost of such dry dock be paid out of Consolidated Revenue Fund, for twenty years after the completion of the work, to any incorporated company, approved by the Governor in Council, which shall enter into an agreement with His Majesty to construct the same with all necessary equipments, machinery and plants, the cost on which subsidy is to be calculated to be determined by the Governor in Council, from the plans and specifications and reports thereon before the agreement for construction is entered into, the Governor in Council being satisfied that such dry dock is needed in the public interest; and the total subsidy payable per annum not to exceed forty-five thousand dollars.

2. Resolved, that for the enlargement and extension of any dry dock subsidized under chapter 17 of the Acts of 1882, 'An Act to encourage the construction of dry docks by granting assistance on certain conditions to companies constructing them and any amendmet thereof, a subsidy of three per centum per annum of the cost of such enlargement and extension be paid out of the Consolidated Revenue Fund, for twenty years after the completion of such enlargement and extension, to any incorporated company approved by the Governor in Council, which shall enter into an agreement with His Majesty to enlarge and extend any such existing dry dock, and to furnish the same with all necessary equipments, machinery and plants the cost on which subsidy is to be calculated to be determined by the Governor in Council from the plans and specifications and reports thereon before an agreement for enlargement is entered into, the Governor in Council being satisfied that such enlargement and extension is needed in the public interest; and the total subsidy payable per annum in respect thereof not to exceed fifteen thousand dollars.

3. Resolved, that the work of construction or enlargement be done under the supervision of the Department of Public Works.

4. Resolved, that the Governor in Council be empowered, after a subsidy becomes payable, if such dry dock is not in a state of efficiency and repair, to take possession of the same, and expend out of Consolidated Revenue Fund, a sufficient sum to repair the same, and thereafter operate such dock until the cost of such repairs, after payment of operating expenses and maintenance, is received by the Crown.

5. Resolved, that the tariff of tolls and rates for the use of the dock prescribed by the company, shall be subject to the approval of the Governor in Council, and that the company shall make an annual statement to the Governor in Council of the operations of the company with a statement of receipts and expenditures in detail.—Mr. Fielding.

Mr. OLIVER.

Hon. W. S. FIELDING (Minister of Finance). The object of these resolutions is to make one or two amendments of some importance to the existing legislation for the encouragement of the construction of dry docks. As a matter of convenience, we have thought it best to propose the repeal of the old Act and enact it in an amended form entirely. We have had on the statute-book for some years legislation designed to encourage the construction of dry docks. Two docks have been constructed under the encouragement so given, one many years ago in the city of Halifax and one more recently in the town of Collingwood. The legislation as it now stands for the encouragement of the construction of other docks provides that a subsidy of 3 per cent may be paid on an estimate of a million dollars for a period of twenty years. It is proposed to enlarge the amount, so that instead of paying 3 per cent on a million dollars, or $30,000 per annum, the government shall be authorized to pay a subsidy of 3 per cent, or a sum not exceeding $45,000 per annum, on a million and a half dollars. The enlargement of the subsidy is due to the fact that, with the enlargement of ocean ships, a dock that would have been quite satisfactory a few years ago might now prove insufficient, and it is thought well that we should look ahead and anticipate the need of larger docks in view of the construction of larger ships. $45,000 per annum is the maximum for any one dock. Then provision is made in the existing legislation for similar assistance in the case of the enlargement of any existing dock. It is proposed that that feature shall be continued. The rate of the subsidy in former years was 2 per cent, it was later enlarged to 3 per cent, and it is proposed that this rate of 3 per cent shall apply, either to the construction of a new dock to the extent of $45,000 per annum, or to the enlargement of an existing dock to the extent of $15,000 per annum, being 3 per cent on half a million dollars.

Mr. FOSTER. As a matter of fact, what has been the cost of the Halifax dock?

Mr. FIELDING. I am not sure of the figures, but from memory it is something over a million dollars. It was subsidized by special Act, giving them $10,000 a year for twenty years. That provision has been in operation for some years and will shortly run out. This is one of the chief changes, the enlargement of the subsidy to correspond with the expected need of larger docks in view of the known construction of larger ships. The Halifax dock is the largest one we now have. I believe it is large enough to accommodate any vessel which is now engaged in the Canadian trade; but in view of the constant increase in the size of ships, we have assumed that the promoters or owners of that dock might wish to enlarge it to accommodate larger ships, and under

this legislation we would have power to assist in the enlargement.

There is another feature, however, of considerable importance. In the existing legislation the payment of the subsidy is dependent upon the constant operation of the dock. It has been found in the case of parties who have been endeavouring to finance dock schemes that there is an element of uncertainty in that respect, to which financial people object. People who advance money in these cases are very often people not connected with practical dock operations and who look at the matter entirely from a financial standpoint. They ask that they receive a definite and fixed engagement to pay a specified subsidy; and that as to the question of the operation of the dock, that is a matter which the government should protect in some other way. What is proposed then in this case is that instead of giving the assurance to promoters that they will receive this subsidy as long as the dock is in operation, we shall give an absolute assurance that the subsidy shall be paid for a period of twenty years. The cost of the dock is to be ascertained at the beginning of the movement, upon the proper reports of engineers, after due inquiries, accepted by the Governor in Council; and upon the cost of the dock so to be established the government will undertake to pay a definite subsidy of 3 per cent for a period of twenty years, limiting, of course, the sum to $45,000 per annum.

Mr. BENNETT. Assuming that the dock company became bankrupt, what then?

Mr. FIELDING. It is proposed that the government shall take over the dock if they cease to operate it. The Bill which I will introduce later will contain a clause to the effect that if the company fail to operate the dock, the government shall take possession and may operate it, with the condition that if there is any return over and above the proper charges the dock company may receive it. The hon. gentleman will see that the element of uncertainty which has existed in the legislation hitherto on the statute-book has made the scheme somewhat objectionable to financial people. They asked for a definite and fixed assurance, and in view of the experience of several years and the criticisms which financial people have offered to the scheme in that form, we have concluded that this reasonable provision should be made, and that the government should give them an absolute undertaking to pay this money for a given period after the construction of the dock has been completed to the satisfaction of the government, and then, if any questions should arise as to the operation of the dock, the government should protect themselves by taking possession of the enterprise and operating it for the time being as a government work.

Mr. BENNETT. Will that Bill be retroactive as to docks now in existence?

Mr. FIELDING. No.

Mr. BENNETT. Or in respect to docks being enlarged?

Mr. FIELDING. Of course docks which are already constructed have been constructed under a contract and we could not vary that. We are not able to deal with conditions already established. But if the promoters or proprietors of these docks should desire to enlarge them and take the benefit of the Act they will be allowed to come under the new conditions and put themselves in the same position as the owners of new docks.

Mr. AMES. To the extent of the enlargement?

Mr. FIELDING. I do not see how we could draw a distinction between the enlargement of a dock and the construction of an original dock. If the proprietors desire to enlarge existing docks and participate in the benefit of this new Act they will have to agree that the government shall take possession. I do not see how we could make any distinction between an enlargement and the construction of an original dock.

Mr. AMES. The enlargement would be under the control of the government?

Mr. FIELDING. I would say that the whole undertaking would be under the control of the government. These are the principal clauses in the Bill; in fact these are the only points in regard to which the measure differs from the legislation which has been on the statute-book for several years.

Mr. LENNOX. Under the last Act I think you could grant a percentage on amounts up to $500,000?

Mr. FIELDING. Up to a million. We are now enlarging it to a million and a half. Under the former Act it was three per cent on $1,000,000 or $30,000. We are now proposing to increase that to $45,000, being three per cent on $1,500,000.

Mr. BENNETT. As soon as a dock is enlarged the parties might call on the government to take it over at a valuation?

Mr. FIELDING. No, the government would not take it at a valuation; the government would have to take it for better or for worse and operate it. The great consideration is to have docks constructed in places where they are necessary in the public interest and to have some one to operate them. The government would have to accept the responsibility of taking over a dock in case of default on the part of the company or failure to keep it in operation.

Mr. BENNETT. What will the shareholders receive if it is taken over?

Mr. FIELDING. Unless the dock earns more than its working expenses the share-

holders will receive nothing. That is a risk that they will have to take. The government, if they undertook to operate a dock, would first have to see that they were protected for any costs and charges and if there were any profits beyond that the government would not desire to take them. I presume that if there were any profits the company would desire to continue to operate the dock.

Mr. FOSTER. Could the minister give us any information at all as to projects which are on foot which have been mooted, or brought to the attention of the government? Of course new legislation of this kind usually proceeds on the idea that there is a call for this aid. Is there a call for docks, would it be difficult to have them built unless aid were given and is there a call provided for by the present legislation? What demands for new docks or for increased dockage have reached the government?

Mr. FIELDING. The only company which has made representations on the subject has been the St. John Dock Company. For some time an effort has been made at the city of St. John to construct a dock, aid has been granted in various forms, but the scheme did not materialize, and we have understood that one of the difficulties in the way was the uncertainty of the Dominion contribution. While some conversations have taken place with respect to possible docks in other places the only case which has been brought to our notice in concrete form is that at the city of St. John.

Mr. FOSTER. Have there been any other applications or negotiations?

Mr. FIELDING. I do not think there have been any other applications or negotiations as respects further aid for the building of docks.

Mr. FOSTER. Demands have for many years been made for the construction of a dock in the city of Montreal. Has that been brought to the attention of the minister at all as the foundation for this legislation?

Mr. FIELDING. Well, this would apply of course, to the city of Montreal if they wished to take advantage of it, but it has not been in consequence of any particular representations from Montreal that we have introduced this legislation. I think that in all probability there are several places in the Dominion which would desire to have docks and which might make application. We have no applications yet for this Bill unless it be that of the city of St. John.

Mr. FOSTER. What was the cost of Collingwood dock?

Mr. BENNETT. Half a million.

Mr. FIELDING Yes, they got $10,000 of subsidy.

Mr. FIELDING.

Mr. BENNETT. No, excuse me they got $15,000 a year for ten years. The estimate made for the cost was $500,000.

Mr. FIELDING. Yes, they are receiving $15,000 per annum. They have received four payments of $15,000 each, or $60,000.

Mr. FOSTER. Has the minister any information as to how countries similarly situated get their dry docks built? For instance, take the Australian provinces or any other British country.

Mr. FIELDING. No, but I think that in large communities these docks are generally profitable enterprises and are undertaken by private corporations. I have not gone into the case of Australia. I shall be very happy to look into it before the Bill comes up for its second reading if it is desirable.

Mr. FOSTER. I think it would be desirable because we are blocking out what may be a very large obligation. One great difficulty, as the Finance Minister knows, is that very many projects are brought to our notice not because they are essentially meritorious but because somebody wants a contract to carry out the work. We need not conceal from ourselves that a great many of our pseudo public works have originated in that way. There is a demand for a railway through a section or a public work, not as a commercial undertaking of merit, but because certain interested parties, for the sake of contracts, or for patronage, or for development purposes, conduct an agitation and the work is launched. Therefore the trouble is that you get projects started not because they are necessary or because they are practical commercial undertakings but for the reasons that I have named. This is a piece of legislation which it seems to me would be very prolific in promoting that kind of an operation. These works are let out, bonds are issued, a certain amount is done and may be they are constructed to the point of partial practicability, but that is only a partial operation and then it is found that there is not enough business to keep them up. In that case the government has to come in and take hold of them. I see that the resolution reads:

4. Resolved, that the Governor in Council be empowered, after a subsidy becomes payable, if such dry dock is not in a state of efficiency and repair, to take possession of the same, and expend out of Consolidated Revenue Fund, a sufficient sum to repair the same, and thereafter operate such dock until the cost of such repairs, after payment of operating expenses and maintenance, is received by the Crown.

That, in connection with the idea of having no lapse of payment if it is not in operation, is essential, the minister says, in order to give financial men a sufficient inducement to put their money into it. That

is, in such a case the government would be bound to take hold of such work and to put it into a state of efficiency and repair and carry it on and pay a subsidy to the company at the same time. There is a large possible obligation upon the government in that. Now, when you come to take the other part of it as to the subsidy that is given; if you have a dock that costs one million dollars you are to give $30,000 a year and for twenty years. That is, you contribute considerably more than one half of the cost of the dock whilst participating of course in none of its profits. That is, the government's contribution of a subsidy to the commercial development of a port. In connection with railway subsidies the first idea was to give a railway sufficient to put the steel on its track, and to-day the railway subsidy runs from $2,400 to $5,000 per mile which is not at all so large a per centage of the cost as is now proposed in the case of a dry-dock. The government is here rendering itself liable to more than one half of the cost of the building of a dock. That is a very large subsidy. Then when you extend that to docks that have been already built and which when improved are brought under the Bill, you do the same for that kind of dock as for the other, and in that case I understand you would have to take hold of it and put it in repair and carry it on and at the same time pay a subsidy for the enlargement to the owners. Altogether this is a pretty important piece of legislation, and it opens up pretty large obligations for the government of the country. The main fear I have with reference to it is this: That these matters being under the control of the government and political influence being the main influence that carries them out, you will get these things started not for commercial reasons altogether but for reasons that are not so desirable. If we had some independent body, which, taking a survey of the requirements of the country in dry docks would formulate a plan for gradual improvement and then carry out that plan as the financial conditions of the country would allow, I would have less objection to it. But this will be just simply as it always has been—whichever place has the greatest pull will get the commencement of the dry dock, and it will be undertaken because of considerations, (at least in part and sometimes in very large part), other than its mere commercial necessity. I mean by that, that where a commercial body would not go into the scheme as one which would in the end prove successful in their view, political considerations come in also and the two combined land the government into the erection of dry docks where they are not absolutely necessary and entail on the government very large obligations. The same thing takes place with reference to harbour improvements. That has not been done under any fixed plan by this country; it is the constituency or the politician who has the strongest pull that in nine cases out of ten gets a harbour commenced. This country would have been in an infinitely better position to-day, if 40 years ago or 25 years ago it had had this thing thoroughly studied and put under the supervision of some body which would have carried it out consecutively and from the standpoint of what is necessary for the better development of the country from year to year and from decade to decade. Had that been done we would have had a far greater result from the moneys we have expended and we would have had far fewer failures than we have made in the attempt to establish our public works. This is an important piece of legislation then, and it leads us, I do not quite know where. On the other hand, I would like to give as much encouragement as we can to what are reasonable and necessary dry-docks in the country. Under this proposal we are giving a very large subsidy and I am afraid we may be giving altogether a very indiscriminate subsidy to dry docks at places where there will be no absolute necessity for them, and where there are not the best prospects for their commercial success.

Mr. FIELDING. Whenever we grant a subsidy to a public work it is open to the criticism which my hon. friend has brought to bear upon this resolution. If a subsidy is offered presumably for a public work needed by the public, it is always possible for some person to take it up and to turn it to profitable account. That has occurred in the past and I do not think we can ever prevent it by any system of legislation. Still, with regard to dry docks I am bound to say they have not proved a very attractive speculation to the people heretofore. There is a difference in the present Bill as compared with the Act of previous years, and I am not sure that difference alone is enough to make this a very attractive speculation. We have had legislation of this nature on the statute-books for some years, subject only to that element of uncertainty that if the dry dock had to be operated in order to earn the subsidy, and I think that in that form it offers inducements almost as strong to people who wish to speculate upon the possibilities of enterprises of that character, and yet we know as a matter of fact there has been very little work done under this dry dock legislation. The difficulty has been in reality to find people willing to enter upon the construction of the docks. The main consideration after all is that we shall have at several points in Canada docks of a larger and more satisfactory character. The Halifax dock in its day was one of the best in the world. It is to-day one of the largest docks in the world. Only a few years ago the

United States government discovered they had not a dock in the United States—on the Atlantic coast at any rate and I think on the Pacific as well—that was capable of receiving their large war ships, and one of their great ships had to be sent to Halifax to be docked for repairs. As I have said, we have had this legislation for some years and our chief difficulty has been to induce people to take it up. I frankly admit there is room for possible abuse. My hon friend's criticism is correct, that if you are going to put dry docks everywhere or in too many places that would be an abuse. There are not many places in Canada where the business will be sufficient to make it a reasonably attractive proposition to establish a dry dock. I do not think we need be very much afraid on that account. I quite agree that if the government are going to allow dry docks to be undertaken at a large number of places this will be a very serious measure which we are asking in the House to adopt. The main consideration is, what can we do to encourage the construction of dry docks at the few places in Canada where unquestionably they will be needed for the accommodation of our trade and commerce. The hon. gentleman says it would be better if we could have somebody other than the government to control the public works of Canada. Well, that is a pretty theory, but after all I am afraid there is no other body to control the public works of Canada than the government of the day. Popular government has its misfortunes and evils but it is the government of the people, and I am sure that any measure which would provide that some other body than the government of Canada should determine when and where and how a dock should be constructed, would not be a very wise and satisfactory provision. In offering this measure to the House we simply desire to meet a difficulty which we have encountered and we ask the House to pass it with the belief that the government will administer it wisely so that if there is a large and important community where there is a fair prospect of a dock business being done we shall be able to hold out the helping hand by the instrumentality of this Act. We do not desire to assist in the construction of docks for purely speculative purposes ; but for the administration of the Act the government will be responsible and it must be responsible to public opinion.

Mr. FOSTER. I think the government might find a better method of carrying out popular government. For instance, the government of Great Britain is responsible for all the outlay on the naval and military services and the great departments of government, and yet, as my hon. friend knows, there is a very different method of carrying out popular government in Great Britain than there is in this country. Here it is what one may call all political or all party. There it is made absolutely non-partisan, and is permanent and has the elements of uniformity and thoroughness. They have their permanent boards of experts, recognized experts, and the government would not embark upon a great public work or a great expenditure without the most thorough examination and research and reports on the part of these permanent experts. Here we know the practice is entirely different. Ten or twelve or thirteen men sit around a table; their supporters are behind them, in the House or scattered through the country, and what comes before them is a demand from a constituency or a supporter, backed up by others who are interested, and in nine cases out of ten the whole thing is put through without any evidence or expert examination with reference to it. My hon. friend may say that that is popular government and we have to pay for it, but you could have a much better popular government by having regular permanent experts as buffers between the government and those who desire to promote the speculation or the enterprise. If we had in this country a permanent board of experts, made up out of the departments, if you like, then whenever an application for a public work came before you, instead of the cabinet deciding the matter by counting noses, your board of experts would report upon it, and if that were done by a carefully selected body of men immense expenditures which we have made uselessly in this country would be avoided, and the people's money would have gone for the people's benefit, whereas in many cases it has gone not for the people's benefit, but for the speculators' benefit. I am not speaking thus with reference to this government any more than with reference to any other. I am speaking of what has been the bane of governments in Canada ever since Canada has had a government, under the delusive idea that the method followed was in accordance with popular government.

Mr. PATERSON. Would that be an advisory board, or would their report be adopted ?

Mr. FOSTER. It would be an advisory board in a way, but under the principles of administration that prevail in Great Britain, and with the quality of expert boards they have, it becomes pretty nearly a dead sure thing that if they reported against a project it would not be undertaken. That, I believe, would be the result in nine case out of ten. My hon. friend who administers the customs here knows how the customs is administered in Great Britain. He makes an appointment to office in accordance with this idea of popular government, and he finds out sometimes how popular it is when he makes one man half

happy and twenty others very cross. He knows that in Great Britain the board of customs is a permanent body and that the man in the cabinet at the head of the department has no more to do with making an appointment than I have sitting in this parliament. All that atmosphere of partisanship and favouritism is cut off and popular government is all the better served. I am saying this not with the idea of bringing anything against the present government more than against others. I have been in governments, and I know what has been done, and I say that millions of dollars have been worse than wasted in this country because of political interprises instead of business enterprises being carried on with the people's money. In this case my fear is that the same thing will go on, and this measure opens a very large area of possible obligation and expenditure to the country. If we had some permanent board as I suggest, and if I could be assured that the government would pay reasonable heed to the reports of such a body, I think a great deal of the difficulty I see in this measure would be removed. We can have it in Canada if we wish. It only requires public men on both sides to say so, and Canada is coming to a status where it is very necessary that she should start out on this line. It is time she had her experts whose word would be authoritative. To-day if your man in the department is asked to report on something, and he condemns it, and if the minister has an idea that it should be carried out, what does he do? He sets aside the report of the trusted officer and if necessary appoints another in his place to make a report along the line he wishes to carry out. So long as that is the case no expert feels that he has any standing. There is no incentive to a man to approve himself as a good workman in this field with the idea that the government will pay heed to the report he makes. Have we not wealth and strength enough to have such a board of experts who will stand as a buffer between improvident projects, which are always paid for with the people's money, and provident projects which would be good for the country and be popular government to have carried out, provided the financial conditions were favourable?

Mr. RALPH SMITH. I would like to ask the Finance Minister if he has considered the effect this measure will have on the government dry docks. I do not know how many government dry docks there are in Canada, but under the terms of confederation we have a government dry dock at Esquimalt, which is an important enterprise and is to-day I believe self-sustaining. True it is not large enough to meet the constantly increasing size of the vessels which come into that port, but at this juncture it will be well for the government to consider the effect which a dry dock, constructed by private enterprise, would have on their own dock. The government dock is a revenue producing enterprise. It is a part of the federation contract and has to be maintained, and it is a question to consider whether they could not enlarge that dock and meet the demands of the shipping interests in that way.

Mr. FIELDING. There are several government dry docks throughout the country, and when application is made for another dock, where there is one already, that application has to be considered from every point. In the Bill, I propose to introduce and which is founded on the resolutions—but the resolutions of course do not cover the whole matter—we have provided machinery which will enable us to meet the contingency the hon. member for North Toronto (Mr. Foster) has alluded to. It is provided that such aid shall not be granted unless the Governor in Council is satisfied, from the report of the Minister of Public Works based upon a report of the chief engineer of Public Works, and such other evidence as they may deem necessary, that such dry dock is needed in the public interest, and will be of sufficient capacity to meet the public requirements. That is precisely what my hon. friend suggests, except that he would have perhaps some larger machinery than we now have. But this Bill requires the minister to obtain a report from his chief engineer and also such other evidence as may be deemed necessary to establish the need of a dry dock at the particular point and of the character proposed. I do not see how, with our existing machinery, we can do better than we have in this draft Bill to meet the point the hon. gentleman has suggested.

Mr. DANIEL. Reference was made to the Imperial Dry Dock Company at St. John. That company has been endeavouring for some years to finance the building of a dry dock in that city. One of the principal reasons why they have not so far succeeded is because it is necessary under the Act to provide for continuous operation of the dry dock after it is built, and because, unless that be done, the various subsidies would not be payable from this government and probably also from the provincial government. This Bill will change that arrangement so that once the dry dock is built, its continuous operation will be guaranteed by the fact that the government have power to step in and do the operating themselves should the company fail to do it. The subsidies will therefore be continuous, and those who advance the money need have no fear on that score. We all know that dry docks are necessary. No port is well equipped that has not one, or one in its vicinity, where vessels can be laid up in case of accident or for repairs. We all know too that, in this country at all

events, it is impossible for private enterprise to build, equip and carry on anything like a large and properly equipped dry dock. Take the Halifax dry dock which receives assistance from this government and the city of Halifax and I think also from the province of Nova Scotia and in addition has also received a subsidy from the imperial government. This imperial dry dock in St. John receives subsidies from this government and the provincial government and the city of St. John and the city also gives the site. These dry docks are necessary and important, but like canals they are too expensive to be built unaided by private capital, and in my opinion, in so far as this resolution enables the government to step in and take over any such undertaking, in case of necessity, that will enable such an undertaking, as for instance the imperial dry dock in St. John, to be proceeded with and brought to completion. In so far as that is concerned, I think therefore that the measure is a judicious one and should be passed.

Mr. OSLER. Does the Bill provide for the application of the three per cent to the first security issued on the dock or is it to be a direct payment to the company ?

Mr. FIELDING. The Bill provides for a direct payment, but no doubt the company would arrange to apply the subsidy to its securities in some way.

Mr. OSLER. Might not this occur in case the government took over the dock ? Suppose the dock cost a million dollars and suppose that cost was covered by first mortgage bonds and then second mortgage bonds were issued for $500,000, secured by the government subsidy. This guarantee by the government would make the first mortgage bonds quite good, yet the government would be obliged to assume $500,000 more before they could take over the dock and work it themselves.

Mr. FIELDING. It is not contemplated that the government should buy the dock. All it is contemplated is that, if the dock be not operated, the government will take possession and operate it.

Mr. R. L. BORDEN. The government will be obliged to pay the interest on any outstanding mortgages in addition to the repairs and maintenance.

Mr. FIELDING. The government would not aim at making a profit. They would work the dock. If there should be anything earned over working expenses, that would go to the financial interests concerned, first the bondholders and then the shareholders.

Mr. OSLER. Suppose the dock earned $25,000, that would not go to the government but to the first bondholders, and the government would be paying a subsidy without getting any profit at all. They would either have to hand the dock over to the first bondholders to be operated or operate it themselves. I think there is something more required in the Bill. Of course these dry docks are not profitable private enterprises, and I think it is perfectly right that the government should give a guaranty, but there is a chance here for making a transaction which would not be a benefit to the government.

Mr. FIELDING. All persons who have put any money into such an enterprise, whether on first or second mortgage, or by purchasing shares, make their investment subject to the conditions of this Bill. Consequently when the government take possession of a dock, we do not owe anything to any one. We simply take the earnings ; If there be any surplus there is no reason why that surplus should not go to the various private interests concerned, but we are not under any obligation to pay any bonds in any shape or form. If the company can take this subsidy and arrange to apply it to the issue of bonds, that is entirely their own business ; but any body who puts a dollar into the enterprise must put it in subject to the conditions of the Act, which reserves the right of the government to take over the property without incurring any obligation except the expediency of keeping the dock in operation.

Mr. DANIEL. The minister of course, would understand that, in case the government took over the operation of this dock, the subsidy up to the end of twenty years would be still payable ?

Mr. FIELDING. Yes, the subsidy would have to be payable anyhow.

Mr. R. L. BORDEN. It is not exactly expressed in the resolution, but perhaps it would be understood. But I think the power of the Governor in Council should be made sufficiently plain. I do not know whether, in the Bill, it is made perfectly plain that the government would have the right to take possession of the property irrespective of the lien of a third person. It may be that the language of the Bill goes that far.

Mr. FIELDING. The Bill should clearly indicate that.

Mr. R. L. BORDEN. If it does clearly indicate that, well and good. It would, perhaps, interfere a good deal with the power to raise money by way of a mortgage.

Mr. FIELDING. I think that as to these points my hon. friend would prefer to reserve judgment until he sees the Bill which, I think, to some extent, meets the criticism

Mr. R. L. BORDEN. That is very fair. Is it intended that the work shall be completed to the satisfaction of the Governor in Council ?

Mr. FIELDING. Surely.

Mr. R. L. BORDEN It is probably so expressed in the Bill, and I will reserve my remarks as to that until we see the measure itself. I observe that the work is to be carried on under the supervision of the Public Works Department, but I do not see any express provision that it should be completed to the satisfaction of the Governor in Council, although, no doubt, that will be supplied by the Bill. I would suggest that at the conclusion of the fifth clause words should be introduced to provide that the statements made by the company to the Governor in Council shall be laid before parliament. Would there be any objection to that ?

Mr. FIELDING. When we come to consider the Bill I shall be happy to take up any suggestions made. I may say that the Bill does deal with one point to which the hon. gentleman refers. Of course, the hon. gentleman has not yet seen it, but I may say that section 6 of the Bill covers a point which is not covered by the resolution—the resolution, of course, cannot cover the whole ground :

The work of constructing or of extending and enlarging any dry dock for which a subsidy is authorized under the provisions of this Act, shall be done under the supervision of the Department of Public Works, and shall be completed with the time limited by, and according to the provisions of the agreement in that behalf, unless the time for construction or enlargement is extended by the Governor in Council ; and the subsidy shall be payable during twenty years from the time the Governor in Council, upon a report from the minister, determines that the work required by the agreement has been completed, and that the reception and repairing of vessels as contemplated by this Act may forthwith be proceeded with at the dock.

I think that most of the points are fairly well covered by the Bill, but, when we come to the second reading, any suggestions that may be offered to make it more effective in carrying out the purpose intended I shall be happy to consider.

Resolution reported, read the second time and agreed to.

Mr. FIELDING moved for leave to introduce Bill (No. 119) to encourage the construction of dry docks.

Motion agreed to, and Bill read the first time.

## GOVERMENT ANNUITIES.

House went into committee on the following resolution :

Resolved, that it is expedient to authorize the sale of government annuities, to the end that habits of thrift be promoted, and that thereby opportunity be given to the people of Canada to provide for old age by means of annuities of not less than fifty dollars, nor more than six hundred dollars per year; annuities to be purchasable either by paying a single sum, or by the payment of a stipulated sum periodically at fixed and definite intervals; the Governor in Council, by regulation, to fix the rate of interest to be allowed in the computation of values in tables which are to be the basis of such purchases; such annuities to be payable after the annuitant has reached the age of fifty-five years, or has become disabled; the moneys paid in by an annuitant to be repayable, should the annuitant die before the annuity is payable, to the heirs of the annuitant, with three per cent interest compound yearly; the property and interest of an annuitant in the contract to be unassignable, and to be exempt from legal process except the contract be entered into and consideration therefor paid with intent to delay, hinder or defraud creditors, and upon establishing such intent in a court of competent jurisdiction, creditors to have the right to receive, if the annuity has not become payable, the amount paid in with three per cent simple interest; or if the annuity has become payable the present worth of the same; the moneys received to go into Consolidated Revenue Fund and the moneys payable to be paid thereout; an account, to be known as the Government Annuities Account, to be kept of all moneys received and paid out in connection with annuity contracts, and the assets and liabilities appertaining to the grant of annuities, including among the liabilities the present value of the prospective annuities contracted for up to the end of each fiscal year.—Mr. Fielding.

Hon. W. S. FIELDING (Minister of Finance). The subject of this resolution is one which, as hon. gentlemen may have observed, has engaged the attention of my colleague the Minister of Trade and Commerce, Rt. Hon. Sir Richard Cartwright. At the last session of parliament, that right hon. gentleman discussed the matter in the Senate and presented a draft Bill, not for the purpose of enactment, but by way of illustration of the views which he desired to submit to the public. As the Bill is one which, to be enacted, should properly originate in this House, I have caused this resolution to be placed upon the paper in order to be able to introduce a measure such as that which Sir Richard Cartwright has laid before the public. The Bill itself, founded on this resolution, and to be introduced to the House, is not precisely the same as the Bill which my right hon. colleague presented in the Senate, but it is for the same purpose, and substantially there is very little difference between them. Let me first observe that it is necessary to guard against any confusion of this Bill with the proposals respecting old-age pensions which were discussed in the House several weeks ago, and which have now been referred to the consideration of a committee of this House. Old-age pensions, as commonly understood, imply a contribution wholly or largely from the public treasury. This measure proposes nothing of that sort. It is not contemplated by this Bill that any contribution shall be given by the government, unless it be in

rate of interest to be allowed on the moneys collected. The government, by giving a little higher rate of interest than would otherwise be allowed, may be said, in a sense, to make some contribution to these funds, but, except in that way, it is not contemplated that anything shall be paid by way of contribution out of the public treasury. The ordinary insurance companies usually have power to conduct an annuity business, but that power has not been used to any large extent. If any companies desire to engage in the annuity business on a large scale, we have no desire to interfere with them. The object of this measure is to provide small or moderate annuities at the lowest possible cost and with the greatest possible security. These are the features which it is hoped will commend the Bill to the favourable consideration of the House and the country. It is proposed that no annuity shall be larger than $600 to one person, and not more than $600 to husband and wife jointly. In the proposition submitted by my right hon. colleague in his discussion a year ago, he had fixed upon sixty years of age as the minimum age when an annuity should begin. In the Bill which we intend to submit, the minimum is fixed at fifty-five years. A man may arrange to have his annuity begin at a later age if he wishes to, but we propose that no person shall receive an annuity until he has reached the age of fifty-five years. This is subject to a proviso that, if disability falls upon a man and he needs the annuity at an earlier age, he can receive it, but, of course, a smaller amount than he would have received had he carried the transaction to the full fifty-five years.

Mr. RALPH SMITH. What are the essential changes made by this Bill in the Bill presented in the Senate ?

Mr. FIELDING. I have just referred to one—the resolution of the minimum age of from sixty years to fifty-five years. I do not know that there is any other of any importance.

Mr FOSTER. Who judges of the disability ?

Mr. FIELDING. It would have to be the minister in charge for the time being. The Bill proposes that this system may be administered by any department of government to which it may be assigned, but, in the beginning, it is to attach to the department of my right hon. friend the Minister of Trade and Commerce.

Mr. SPROULE. In case of disability a pension may be paid at an earlier age than fifty-five years ?

Mr. FIELDING. Yes. Of course, the annuitant would receive a smaller amount than he would if the claim were not made until he was fifty-five years of age.

Mr. FIELDING.

Mr. SPROULE. And that is something to be decided by the minister ?

Mr. FIELDING. Under such circumstances, it may be wise to have a little elasticity.

Mr. SPROULE. What board, or body or authority will fix that?

Mr. FIELDING. It will have to be done by general regulation. Many details of this measure will have to be the subjects of regulation rather than of direct legislation. It is proposed that these annuities shall not be transferable, and that they shall not be subject to seizure. A man who puts his money into a fund for the purpose of producing this annuity shall have it secured to him, and it shall not be subject to seizure under any process of law, unless it be established that he has placed his money in the fund with the intention of defrauding his creditors ; otherwise, it is provided that these annuities shall not be subject to seizure. In the case of death before reaching the annuity, it is proposed that all the moneys which have been paid in in a given case shall be returned to the representatives of the annuitant, with interest at 3 per cent compound yearly. The Governor in Council is to make regulations as to the rate of interest to be allowed, as to the preparation of tables for determining the value of annuities, as to the mode of making contracts and the forms of contracts for annuities, as to the selection of agents and the remuneration, if any, as to the mode of proving age and identity, and other matters of detail. The essential elements which it is hoped will commend the system to the public are: First, that the annuity shall be absolutely secure; there shall be no question whatever as to its character, but it shall be secured upon the public credit of Canada. That in itself is a very important consideration, especially to the small investor whose means, though small, are of more importance to him than larger resources are to the rich man. Absolute security then is the first consideration. The second consideration is that there shall be cheapness of administration, and that the charges of administration shall be borne by the Dominion treasury. In that sense it may be said that there is some charge upon the public. It is assumed, however, that this system can be worked out to a considerable extent through the instrumentality of the various public officials, with a very small addition to the cost of the service rendered by the officials in other respects. For example, the postmaster, the collector of customs, or any other official of the government who is a salaried officer engaged as a servant of the government, might, for a small commission, undertake to assist in carrying out this scheme by receiving moneys and by becoming an agent for this purpose. It would be possible also to employ, under proper arrangements, pri-

vate parties, either corporations or individuals, as agents. My own anticipation is that at the beginning this scheme will not be widely taken advantage of. Those of us who know anything about insurance know that in most cases men take insurance policies, not because they are looking around for them, but because some energetic agent comes along and brings a scheme to their attention. So in this case, what is everybody's business is nobody's business, and so we expect that the scheme may make headway slowly. Under the regulations, of course, the minister might pay any reasonable compensation he might think proper to an individual for the purpose of inducing parties to take up the annuity scheme.

Mr. FOSTER. Has the minister or the government considered the advisability of putting it under some other department than that of Trade and Commerce, which has comparatively few affiliations or ramifications throughout the country? For instance, the Post Office Department, where every postmaster in the country could become an advertising medium. I suppose the desire is really to encourage the buying of annuities because they will be of benefit to the people. If it is placed in the Post Office Department, you have the most widely distributed agency that the government possesses, and every postmaster would become, as it were, a medium for the would-be annuitant.

Mr. FIELDING. Yes, that criticism is fairly made. I may say that in the Bill to be presented provision will be made that the system may be assigned to any department which may be deemed proper for dealing with it, and I think the Post Office Department is probably the best department. However, at the beginning we propose to assign it to the Minister of Trade and Commerce.

Mr. FOSTER. He is the father of it, I suppose?

Mr. FIELDING. Yes, because he has taken a very deep interest in it, and I am quite sure that if it is assigned to his department he will devote himself to it with energy, and I trust successfully. But I realize that as a general principle probably the Post Office Department would be the best adapted for its administration. However, the Bill will provide that it shall be a branch of the Department of Trade and Commerce at the beginning, but may be at any moment assigned to any other department. Now, payments may be made in two forms. The annuitant may make periodical payments at stated times, or he may make independent payments to suit his own convenience. Let us take an illustration of what can be obtained under this system by a rather small contribution. I will assume, for the purpose of illustration, that the rate of interest may be 4 per cent, though no rate has yet been fixed. I am inclined to think that perhaps a good argument can be made that the government might pay that rate as an encouragement to thrift. But if it should be determined that a lower rate of interest shall be given, then the figures would be subject to slight modification.

Mr. FOSTER. Does the minister have a different basis as an encouragement to thrift in this case and in the case of the savings banks?

Mr. FIELDING. That is worth considering. I rather think so. If there is a distinction between the two things, it is more important to induce men to make provision for their old age than to put money in the savings banks for present purposes. However, that is a point that might fairly be considered, whether we should treat it in the same light as a savings bank. My object for the present is not to determine that question, but I am making calculations on the assumption of a 4 per cent rate.

Mr. SPROULE. You would come into conflict with the insurance companies.

Mr. FIELDING. Well, for this small class of business I don't mind if we come into conflict with the insurance companies, but I think it is a class of business that will be more likely to become successful if it has the security of the government. As I say, in these calculations I am assuming a rate of 4 per cent. I assume that the contributor begins at the age of 20 and continues until the age of 55. I think it is fair to say that the period during which a man is likely to save money, as a rule, is between these two ages—20 and 55. Probably at the age of 55 a man might still be able to earn enough for his daily wants and yet not be able to lay aside anything. Therefore, we contemplate in this calculation—which is only by way of illustration—that the man begins to pay at the age of 20 and ceases to pay at the age of 55. He can then take his annuity at once or, if he sees fit, let the money stay a little longer in the hands of the government and he will receive a larger annuity, though we contemplate that at the age of 55, for the purpose of this illustration, he will cease to pay.

Mr. SPROULE. Commencing at 20 how much will he pay annually?

Mr. FIELDING. I will give several illustrations. Let us take the case of weekly payments, what are called periodical payments at definite times. If a man at the age of 20 begins to pay 25 cents a week and continues it regularly until he has reached the age of 55, he would then have an annuity for life of $87.25. If he ceases payment at the age of 55, and not desiring to take the annuity at once, his circumstances perhaps enabling him to make himself comfortable for a few years longer, if in that

case he will let the money remain without further payment until he has reached the age of 60, he will then be entitled to an annuity of $126. If he lets the money remain until he is 65, he would receive $189.47 as annuity. If his circumstances enabled him to wait still longer, and let the money remain until he had reached the age of 70 years and then claimed his annuity, his 25 cents a week paid from the age of 20 to 55 would then give him $301.71 annuity.

If you take fifty cents per week you simply double that. It is a mere matter of calculation but I take that as an illustration. Let us take the payment of a dollar. Suppose that at the age of 20 he contributes a dollar a week up to the age of 55; he will then have an annuity of $349.02. If he allows the money to remain in the possession of the government without any further payment until he reaches the age of 60 he will receive an annuity of $504. Now let us take a monthly payment. Suppose that he pays $2 a month beginning at the age of 20 and continuing until the age of 55; his annuity at the age of 55 will be $161.47. If he wishes to let the money remain in the possession of the government without any further payment on his part until he reaches the age of 60 his annuity will be $233.22. If he wishes to let the money remain until he is 65 without any further payment on his part his $2 per month will give him an annuity of $350.83. If his circumstances—and this perhaps will be more unusual—permit him to let the money remain until he has reached the age of 70 his $2 per month will give him an annuity of $559.03. Let us take the case of a man who can afford to pay $5 per month. If he begins the payment of $5 per month at the age of 20 and continues that up to 55 years of age he will be entitled to an annuity of $403.67. If he lets the money remain with the government until he reaches the age of 60 his annuity will be $583.05. We do not carry it beyond that because the next stage will take it beyond the maximum of $600. Suppose a man does not want to be troubled with weekly or monthly payments but he wishes to make his payments quarterly, which, no doubt, will suit the convenience of some people; if he undertakes to pay $5 every quarter beginning at the age of 20, at the age of 55 he will be entitled to an annuity of $135.20. If the money is allowed to remain with the government until he reaches the age of 60 he will get an annuity of $195.37. If it remains until he is 65 years of age he will get an annuity of $294.10. If it remains until he reaches the age of 70 he will receive $469.23, these being the products of a quarterly payment of $5 each quarter until the age of 55.

Of course, it is a mere matter of multiplication, hon. members can see what would be realized by making larger payments. These are what we describe as periodic payments, But it may be that there are those who will not wish to obligate themselves to make these periodic payments. It is comtemplated that if a man undertakes to make periodic payments and he is unable to keep them up regularly he does not forfeit his rights, because it becomes a mere matter of actuarial calculation and he will receive the value of his payments in the form of the annuity which he has chosen. If he does not wish to make periodic payments, but independent payments, then he is free to do so and he can make a payment of $10 or more at any time. He will have assigned to him whatever annuity he will be entitled to receive as the product of the payments which he has made. Let us suppose that he makes a payment of $100 at the age of 20 and never pays anything more; at the age of 55 he will be entitled to an annuity of $36.60. But if he makes a payment every five years, if he makes a payment of $100 at the age of 20, another payment of $100 at the age of 25, another payment of $100 at the age of 30, and so on every five years until he reaches the age of 50 years he will then find that he will be entitled, at the age of 55 years, to receive in return for these seven payments of $100 which were distributed over his life between the ages of 20 and 50, an annuity of $149.28. If he wishes to let the money remain until a later period of course the annuity will be still larger.

Mr. BARR. Suppose that he died shortly after reaching the age of 55 or before he was 60 and had only received two or three payments of his annuity, would his heirs get anything back?

Mr. FIELDING. Not after the annuity period begins. He can only receive the value of his annuity. That is one of the risks and his heirs would lose probably, but that is what cheapens the cost to hundreds of those who remain.

Mr. SPROULE. If he died before the annuity period he would get the money back?

Mr. FIELDING. He would get the money back with compound interest.

Mr. FOSTER. That would be his best plan.

Mr. FIELDING. We cannot always arrange these things in the best way. Another form would be that of the immediate annuity. A man would agree to take an immediate annuity. He may have saved money, but he has reached the time of life when he wants to take his capital sum and convert it into an annuity. By payment at the age of 55 immediate annuities may be purchased. For example, a man may purchase, by depositing $1,000, an annuity, payable quarterly, of the following amounts:

At age 60, $96.14; 65, $112.65; 70, $135,39; 75, $166.97.

Of course all these things are mere matters of calculation according to the experi-

ence of experts. There is nothing new in the scheme, nothing novel, nothing unusual. The two elements which we hope will make this scheme successful and appreciated by the public are those which I have mentioned.

Mr. SPROULE. I suppose that these calculations are based on the mortuary tables, taking 65 as the duration of the ordinary life?

Mr. FIELDING. The minister is authorized to make regulations dealing with all these matters and, of course, he would have to be governed by the experience of experts and by actuarial statistics.

Mr. SPROULE. Are the calculations made on that basis?

Mr. FIELDING. Yes, we have simply taken the rules of the insurance companies in that respect. There are the two points which I think should commend the scheme to the public. First, there is the absolute security which it will have by reason of it being guaranteed by the credit of the Dominion of Canada, and second, the cheapness of administration. The government can, by allowing a rate of interest something better than the ordinary rate, grant a protection and encourage thrift. The cost of administering this scheme is not likely to impose any very extensive burden on the treasury. We think that the more it becomes known the more likely it will commend itself to the public at large, not to the rich man, who will not avail himself of it, but to the man of moderate means whose income is small but who desires at an early stage of life to begin to save his money for the days when he grows old. I have briefly outlined the scheme, but when the Bill is under consideration I will go into it a little more fully. Necessarily there is a good deal that must be left to be worked out by regulation, but I now ask the good will of the House for the purpose.

Mr. R. L. BORDEN. Is this Bill based on the experience of any other country?

Mr. FIELDING. It is substantially the same as the British system of annuities.

Mr. RALPH SMITH. Have there been any representations made by any societies against this Bill?

Mr. FIELDING. I am not aware of any communications against the Bill. The Minister of Trade and Commerce has given it more personal attention than I have, but I think I am correct in saying that no representations have been made against it.

Mr. BLAIN. Has the government considered what effect this proposal will have upon the large number of fraternal societies doing business in Canada?

Mr. FIELDING. The fraternal societies do a life business, not an annuity business. There was a company chartered called the Annuity Company of Canada which contemplated doing the same kind of business, and I understand the parties concerned have recently held a meeting and discussed the question as to whether they would go on. I do not know whether that is due to the government taking up the matter or not. If there are any companies engaged in this business the government would be quite free to employ them as canvassing agents, assuming it could be done at a reasonable cost.

Mr. BLAIN. Will not this government system of insurance have a very serious effect on the large number of fraternal organizations now doing the same kind of business in Canada?

Mr. FIELDING. I do not think the fraternal societies do an annuity business. I frankly admit that there is something to be said in favour of government life insurance for the small policy-holder, but we are not dealing with that for the moment. I do not think this comes in conflict with any organized company in Canada.

Mr. BLAIN. I believe that if this system is adopted it will do away with a large amount of insurance that is now being done by fraternal organizations in Canada.

Mr. FIELDING. The man who goes into a fraternal society does so for life insurance and not to draw an annuity. If he could afford it he would still continue the life insurance to protect his family should he die at an early age, and also to avail of the annuity system to provide for himself if he is favoured by reaching the evening of life.

Mr. BLAIN. There are fraternal societies in Canada which make provision for people when they grow old.

Mr. HENDERSON. I do not apprehend the danger my hon. friend from Peel (Mr. Blain) sees, because to my mind the system outlined by the minister will be too expensive for the people for whom it is designed to take advantage of it.

Mr. SPROULE. When this system was first announced it was to be an old age pension scheme and many imagined that the government were to provide old age pensions for all, the improvident as well as the provident, and the government came in for a share of eulogy on that account. The scheme now announced will be a disappointment to many. A pension system to be valuable ought to apply to all. Most provident people will make provision for their old age and it is the improvident generally who are helpless in the evening of life. I do not know that this scheme is likely to interfere with the fraternal societies for the reason that the contributions provided for in the legislation are higher than the fraternal companies usually charge.

In a certain society which I have in mind the insured member pays his monthly fee until he is 70 years old and after that his contribution ceases and he draws one-tenth of the money coming to him annually until the money is all drawn. Should he live to draw it all then he would have no more annuity coming, but should he die before that the balance goes to the beneficiary mentioned in the policy. It is not exactly an annuity in a sense, but it is a certain kind of annuity providing for a determined amount.

Mr. BLAIN. This is a new departure in Canada and the government should take time to investigate the conditions of our fraternal organizations before this legislation is carried into effect. I believe this legislation will interfere largely with the existing fraternal organizations. A large number of Canadians have been paying into these fraternal societies for years and the government should consider the position these people will be in when they have grown old and are not able to participate in this measure in a way advantageous to them. I will discuss the principle of the legislation further when the proper time comes.

Mr. FIELDING. I will be happy to consider any suggestion the hon. gentleman offers, but I cannot see that the two things are in conflict.

Mr. R. L. BORDEN. In the case of those who die before the age of 55 years this is practically a system of insurance.

Mr. FIELDING. Savings, rather.

Mr. R. L. BORDEN. Call it what you like, the whole system of insurance is based upon the theory that the amount paid in will be sufficient upon reasonable expectation of life to satisfy the amount payable under the policy at the decease of the insured. I understand that in this case there is to be no medical examination.

Mr. FIELDING. There is no risk which calls for medical examination.

Mr. R. L. BORDEN. It seems to me that to some extent there is. The question whether a man will attain the age of 70 materially affects the amount which will be paid by the government If a man dies at the age of 60 he will have enjoyed his pension for five years and if he dies at 70 he will have enjoyed it for 15 years. Therefore I cannot understand how the question of the life risk is not material to be considered. Another curious phase of it is that the heirs of a man who dies at 54 receive everything back with interest at 3 per cent compound, but if a man dies at the age of 56 he will have received one year's annuity and all the rest of his savings will have gone to the public treasury.

Mr. SPROULE.

Mr. FIELDING. The percentage of those who die is calculated, and you are enabled to pay to the others these annuities.

Mr. R. L. BORDEN. That is not much consolation to the man who dies at the age of 56.

Mr. FIELDING. That is the principle of annuities.

Mr. R. L. BORDEN. It may be the principle of annuities, but it does not appear to me to be a very satisfactory principle so far as the great bulk of the population are concerned. However, the details will perhaps be fully discussed when the Bill is before us.

Mr. FOSTER. Is there any provision by which a man may pay in a lump sum for an annuity ?

Mr. FIELDING. Yes.

Mr. BARR. What age would be the oldest at which he could pay in—after sixty or before ?

Mr. FIELDING. The lump sum can be paid in at any age. It is a mere matter of calculation what is the value of the money.

Mr. FOSTER. The minister provides that the payments shall go into the consolidated revenue fund ; that is, they will be treated as a part of the revenue of Canada for the year, and will be expended by the government, I suppose, the same as savings bank deposits are expended ?

Mr. FIELDING. Yes. There will have to be a special account showing how that account stands at the end of the year.

Mr. FOSTER. But at the end of the year, if the government continues to spend at the rate that it has spent, the money might all have been spent and the account might show a liability against the government. Has the minister considered the advisability of making a special fund, and investing these moneys in a way to keep them at the credit of the fund ?

Mr. FIELDING. We give to the annuitant all the credit of Canada as a guarantee of his money. I do not know any better investment that the Dominion of Canada could make of any money that comes to it than to invest it in some way to the credit of the Dominion itself. It is a mere matter of account. To put this money into some fund and borrow money somewhere else would not be good business.

Mr. BERGERON. Is this measure based on the law of the same kind that exists in England ?

Mr. FIELDING. In principle it is the same. They have post office annuities in England.

Mr. BERGERON. Will this be administered in the same way, through the Post Office Department ?

Mr. FIELDING. No. We propose to have it administered by the Minister of Trade and Commerce ; but it may be assigned at any time to the Post Office Department.

Mr. PORTER. I fail to see any provision in the Bill to be introduced under this resolution for anything that is not already provided by the insurance companies authorized to do business in this country. I do not believe it is a correct principle for the government to enter into competition with corporations that have been chartered by parliament to do the same kind of business in this country. It seems to me that there is considerable in the remark made by the hon. member for Peel (Mr. Blain) that this measure will seriously affect fraternal societies. While these societies do not do an annuity business, they do business with a class of people who will be likely to take advantage of this measure. In that way the support of fraternal societies will be removed from them and transferred to the government insurance scheme ; so that it will have the effect of decreasing and perhaps destroying the business of fraternal societies. I also think the government ought not to go into competition in this line of business with insurance companies or other corporations chartered by this parliament to do the same kind of business, and offering no greater inducements or privileges than the insurance companies offer. The hon. minister says there are two things that recommend this measure. The first is absolute security. Does my hon. friend say there is not absolute security now given by the insurance companies transacting this kind of business ? The other recommendation is the cheapness of the administration. I doubt very much whether this business can be managed by the government, judging by the manner in which their departments are managed, as cheaply as the insurance companies manage it. The object of the Insurance Act now is to give insurance at the lowest possible rate at which it can be given by the companies. It seems to me that these considerations are not sufficient to outweigh those which I have mentioned. I think it is a good thing to provide in every way we possibly can for the support of the people when they reach the age limit mentioned in this resolution ; but at the same time we must guard the interests of the persons who engage in that business.

Mr. FOSTER. Will the Minister of Finance give to the House any information as to the pressure put upon the government for this legislation ? Were there any petitions or demands made for it?

Mr. FIELDING. I am not aware of any. Certainly there was no pressure.

Mr. BERGERON. Will canvassers be employed by the government to go through the country ?

Mr. FIELDING. It would be possible. The minister might make regulations to that effect.

Resolution reported, read the first and the second time and agreed to.

Mr. FIELDING moved for leave to introduce Bill (No. 120) to authorize the Issue of Government Annuities for Old Age.

Motion agreed to, and Bill read the first time.

At six o'clock, House took recess.

## After Recess.

House resumed at eight o'clock.

### SUPPLY—ADVERTISEMENTS FOR TENDERS.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. J. D. REID (Grenville). Before you leave the chair, Mr. Speaker, I wish to discuss for a few moments a matter which I think is very important. As we all know, the expenditure of this country has now reached an amount over one hundred million dollars per annum. That expenditure has been steadily growing year by year for the last ten or twelve years. In connection with that extravagant outlay, I wish to draw the attention of the House to the manner in which a great portion of it is being expended in the disposing of our public coal and mining lands, in the payment for dredging, in contracts for railway supplies, in grazing leases, and in the various vicious forms of awarding public contracts. For instance the manner in which the government frequently call for tenders is by writing letters to some of their own friends, instead of advertising for tenders. A great many supplies they purchase without calling for tenders at all; and when they do advertise publicly the advertisements are drafted in such a way as to prevent healthy competition. I claim that no tender should be invited at all by letter. Every contract by the government over a certain sum—I would limit it to $2,000—should be let after publicly advertising for tenders. Therefore, I wish to enter my strong protest against the system which has been going on so many years of asking by letter. I also object to the system, which has been in force since 1902, of examining tenders. The system that prevailed until 1902 was as follows : I have in my hand an advertisement taken from one of the newspapers calling for tenders for the Department of Railways and Canals, and I shall read this to illustrate the point I am about to make :

Sealed tenders addressed to the undersigned and endorsed 'Tender for Trent canal,' will be received until 16 o'clock on Thursday, the 12th of March, 1908, for the works connected with the construction of section No. 3, of the Ontario and Rice Lake division of the canal.

According to that advertisement, the tenders were to be sealed and addressed to L. K. Jones, secretary of the Railway Department. I have also another advertisement which reads as follows :

Sealed tenders addressed to the undersigned and endorsed 'Tender for Chute a Blondin,' Prescott county, will be received at this office until March the 18th, 1908, exclusive, for the construction of the landing at Chute a Blondin, Prescott county.

That is signed by Alfred Gelinas, Secretary of the Department of Public Works. You will see by this tender that no particular hour is given, until which tenders may be received up to March the 18th, 1908. What occurs after these tenders are received by the secretary, is what we are strongly objecting to. Previous to 1902, according to the statement of the hon. member for Lanark, ex-Minister of Railways (Mr. Haggart), the system that existed in the Railway Department was this. The tenders were supposed to be sealed when received. The hour of receipt by the secretary was marked on the envelope, the envelope was put into the safe, and all the envelopes were opened at the same time in the presence of two officials of the department. I understand that that system was in force up to that time, in every department of the government, and we then did not hear any complaints of any of the tenders not having been properly treated. That was the system followed until 1902, both by the late Conservative government and I believe by its successor. But the system in other countries is a little different even from that which was until then carried on in Canada. As I understand, the system which is in force, in the government departments of the United States, and in a great many cities, is simply this. They insert in the advertisement that tenders will be received up to a certain hour, on a certain day, and will be there and then opened in public. In order to explain that more clearly, let me just read one or two of the advertisements taken from some of the American papers. Here is one from the Boston 'Herald,' of Monday, February 17, 1908.

Sealed proposals will be received at the office of the water and sewer commissioners, 13 Highgate street, Medford, Massachusetts, until 8 o'clock p.m., of Wednesday, February 26, 1908, when the same will be opened in public, for furnishing the city of Medford with about 6,500 feet of cast-iron water pipe. Further information for bidders as to contract and specifications will be furnished on application at this office. Proposals should be made, sealed and endorsed 'proposals for water pipe.' The commissioners reserve the right to reject any or all proposals or any part thereof, and to accept the proposal deemed best for the city. Allison M. Stickney, chairman ; Frank G. Grady, Frederick E. Gow, water and sewer commissioners, Medford, Massachusetts. February 14, 1908. Fred. L. Cushing, clerk.

And here is another advertisement :

The penal institutions commissioner of Boston invites bids for 1,000 tons of steaming coal, to be delivered alongside of wharf at Deer island, Boston harbour, and giving bond of a surety company in $1,500. Only bids on forms obtained at the office of the penal institutions commissioner, at 22 Trement street, signed by bidder, and there left before 12 noon of Monday, February 24, with a certified check for $500, payable to and to be the property of, the city if the bid is not carried out will then and there be publicly opened and read——

And so on. I have another advertisement that appears in the Boston 'Herald' of March 7, in which the commonwealth of Massachusetts Board of Harbour and Land Commissioners advertise :

Sealed bids or proposals for dredging opposite Cunard pier Grand Junction wharfs at East Boston, will be received at the office of the Board of Harbour and Land Commissioner, room 131, State House, Boston, Massachussetts, until two o'clock p.m., Friday, March 20, 1908, and then and there will be publicly opened and read.

I have also another from the Chicago 'Record-Herald' :

Sealed proposals in triplicate will be received until twelve o'clock noon, Wednesday, March 11, 1908, and then opened.

I could give many instances besides these to show that this is the system throughout the United States in respect of receiving and opening tenders. I have advertisements here in English newspapers which illustrate the system in use there. For instance, in the 'Daily Telegraph' of February 26 last there is the following advertisement :

Sealed tenders, endorsed with the name of tender, must be delivered at my office not later than two p.m., on Monday, the 9th March, 1908, on which day they will be opened and considered.

Mr. TALBOT. In connection with what?

Mr. J. D. REID. That is the tender of the city of Westminster.

Mr. TALBOT. A municipal tender.

Mr. J. D. REID. Here is another relating to an army contract. I understand from my reading of these advertisements, and from other information I have received, that the system in England is that tenders are received and opened by a board appointed by the government. But the advertisements I have read from American papers will show that, at least in that country, the

tender must be sealed and at a certain hour they are opened, and every man who has tendered, if he wishes to do so, can be present and see his tender opened. Then there is no question in the mind of the public but that everything is fair and right.

As I understand it, under this government, there are several departments in which tenders are opened by one individual. That system was not always in use, but the old system was changed, for what reason I do not know. It seems to me that the old system was much better. But I believe that the system I have to propose will be an improvement even upon our old system. I propose that, in the first place, we must advertise in the public press for all contracts, for dredging, canal work, railway work, sale of lands, and other public matters. Tenders must be sealed and put in a place of safekeeping until the hour when they are to be received. They must then be opened in the presence of 3 officials of the government and those tendering, if those persons desire to attend and in public. I believe the government should accept that proposition; it is not only in the interest of the public, but in the interest of the government as well. What has developed within the past two or three years shows that the present way of handling tenders is one that should not be continued. Improvement is absolutely needed. Of course, I do not suggest that in all the departments the system with which I find fault is in use. It may be that in some departments tenders are opened in the presence of two or more officials. I think that no minister should have changed the system which was in use for a great many years in all the departments. I wish to state, further, that, so far as I am concerned, I believe the time has come when we should advertise publicly for everything we want above a certain amount. For my part, I would place it at about $3,000 or $4,000. Under that amount any government should have the right to purchase without tenders. But when we consider that the amount expended by the government in dredging, railway contracts, supplies and other things runs up to $50,000,000 or $60,000,000 a year, I cannot but think that the public is losing a very large sum annually through our present system of opening tenders. I do not wish to take up time. I simply lay this matter before the House in the following amendment, seconded by my hon. friend from South Simcoe (Mr. Lennox), and ask for it the careful and favourable consideration of hon. members :

That all the words after the word 'that' in the proposed motion be omitted, and the following substituted instead thereof:

That, in the opinion of this House, tenders received in any department of government should be immediately placed in safe custody under seal so as to prevent any possibility or suspicion of tampering and should be opened in public at the time and place mentioned in the advertisement, and in the presence of at least three principal officials of the department; and the persons so tendering or their duly authorized agents, should be at liberty to attend at the said time and place and see such tenders opened and recorded, if they so desire.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). I am free to say to my hon. friend (Mr. J. D. Reid) that, with but one single exception, I would be disposed to agree with him in all the observations he has addressed to the House ; and even upon that exception I cannot say that I have formed an absolute judgment. But the matter is altogether new to me, and I think new to the House, so I would not like to express an opinion at this moment. The hon. gentleman says that we should have public tenders invited for all the contracts which call for an expenditure of money or the granting of lands and other property of the government. With regard to timber limits, as my hon. friend says, for some time the practice has prevailed in the Department of the Interior of opening them only by one official. But my hon. friend is aware that a new policy is now being introduced, and at this moment timber limits in the Northwest are no longer disposed of in the manner they were before, when they were sold by all governments. We have adopted the system which prevails in Ontario and Quebec, namely, that all timber limits are to be disposed of by public auction, which system I am sure will be found satisfactory. It has been found satisfactory in both Ontario and Quebec. In this regard, therefore, the observations of my hon. friend cannot apply, because a different system has now been adopted. I may say to my hon. friend that apart from the Department of the Interior, all tenders are opened by more than one official. The great spending departments are the Department of Public Works and the Department of Railways. In the Department of Public Works tenders are opened by the minister and the deputy minister ; in the Department of Railways they are opened by the secretary and another official, and referred at once to the chief engineer. There are two or three suggestions made by the hon. gentleman which I think we could adopt. First of all, that tenders should be opened immediately they are received. I see no objection to that ; I think the suggestion should be adopted. According to the advertisements my hon. friend read coming from the United States and England, I notice that tenders are to be opened immediately.

Mr. J. D. REID. In public.

Sir WILFRID LAURIER. In the United States, not in England.

Mr. R. L. BORDEN. I understood that a time and place were fixed in the advertisement at which tenders should be opened.

They are to be received before a certain hour and then opened.

Sir WILFRID LAURIER. As I understood the advertisement from the United States, tenders are to be received up to a certain hour and opened in public, when they are all in. The English practice is, they must all be in by a certain hour and disposed of at once. There is no objection to that; it is a good idea. They should be opened before one, two or three officials, certainly not one alone. The only exception I take to the motion of my hon. friend is that tenders should be opened in public. That has never been the practice in this country. With my little information upon this subject, I would admit there might be some security in having them opened in public. I notice that is the case in the United States. But it is not the case in England; according to the advertisement he has read they do not say that tenders are to be opened in public, they simply say that they are to be opened and disposed of. I think that is the language of the advertisement that he read from an English newspaper.

Now, what is the reason that one system prevails in England and another in the United States? I have always understood there was some objection to having tenders opened in public. Our practice has been not to give information with regard to tenders until the contract has been awarded. We know that many times information has been asked as to who the tenderers are on such a contract, and the answer has always been that we could not give the information because the contract had not been awarded. This has been the policy, not only of this administration, but of previous administrations. Now, if that has been the policy adopted, there must be some good reason for it. I would not be disposed, for my part, to condemn our system and adopt the American system in preference. Before forming a conclusion on this point, I would like to consult the old officials of the spending departments, for instance, Mr. Schreiber and Mr. Butler, to ascertain why we have adopted the system of not giving information until the contract has been awarded. Therefore, I am not prepared at this moment to accept this part of the resolution. I do not condemn it either. I might go further, and say without hesitation that if I were to follow my own judgment I would prefer the system of opening tenders in public. But my hon. friend will realize that when a system has been in existence ever since confederation, it would not be wise on the part of the government to accept such a radical change as he proposes until we have had an opportunity of consulting our own experts on the matter. Were it not for this latter portion of my hon. friend's motion, I would be disposed to accept it immediately. But I will say this to my hon. friend, I think it is due to the House that we should at an early date lay before the House a regulation providing that tenders shall be opened by more than one official. I think it would be well to lay on the table of the House some rules and regulations whereby everybody may know what the system is in every department as regards the opening of tenders. While I cannot accept my hon. friend's motion, I accept the sense of it, and in the best spirit. But I do not think it is possible to accept it in its entirety. I regret the manner in which he has brought this matter to the attention of the House, not that I complain of the spirit of his remarks, but because by the rules of the House we cannot amend his motion, we must either accept it in its entirety or reject it in its entirety. Under such circumstances there is nothing for us to do, for the reasons which I have given, but to decline to accept the motion of my hon. friend. But I may say, in concluding that this subject, having been brought to the attention of the House it is one that must engage our attention, and we will place the result of our consideration of it before the House at an early date.

Mr. H. LENNOX (South Simcoe). Mr. Speaker, the right hon. First Minister (Sir Wilfrid Laurier) had notice of the fact that my hon. friend from Grenville (Mr. Reid) would move this motion some days ago. That notice, although it varies to some extent from what is now before the House, calls attention to the same fact and the pre-eminent fact in the motion which is moved to-night; that is that tenders should be opened in public. That seems to be the crucial point as regards the discussion at the present time and I must say that I am very glad that the right hon. gentleman has stated that it is the determination of the government in future to make an improvement as regards the disposal of timber berths by having these berths put up to public auction and sold to the highest bidder. That will indeed be a marked improvement upon the condition of things that has existed for the last few years. There has perhaps been nothing more marked in what I may denominate the mal-administration of this government than the manner in which timber lands have been disposed of in the last seven or eight years or the facility with which a number of speculators have been enabled to grasp large portions of the public domain at a very trifling expenditure of money. It is announced to-night, probably by reason of the efforts the opposition have made, that the government have determined that they shall follow the system prevailing in Ontario of putting public lands up to competition at public auction; yet, that does not at all dispose of the wide range which is covered by the motion which is moved by my hon. friend to-night. We have still a vast number of contracts into

which the government enter and of cases of disposing of property to which this resolution will apply. One of the notable cases where that amendment is so much desired is in the matter of dredging contracts. There is great reason to believe that the system of awarding dredging contracts which has prevailed in the past has not been in the interest of the public. Next to the matter of the disposal of timber lands the question of the contracts for dredging is one that requires immediate attention. The system of purchasing supplies is another matter that has been called to the attention of the House and the public very significantly in the last few years. The system has not resulted in the public getting the supplies that are wanted at reasonable prices; it has resulted in extravagant prices and great public disadvantage. Here again there is a necessity for some remedy. Now, the right hon. gentleman says he understands my hon. friend who moved the motion to say that tenders should be opened immediately they are received. That is not the argument put forward and that is not the purport of the motion. It says that a certain stated hour should be mentioned, that when that time has arrived the tenders shall be opened, but that in the meantime they shall be kept in close and safe custody or, to quote the words of the resolution that 'they shall be immediately placed in safe custody under seal.' This proposal is made in order that all suspicion and all possibility of wrong doing shall be removed. In a word, the object of the motion is that we shall secure publicity in this matter so that there cannot be a system by which the public will be defrauded and certain parties, who are favoured for some reason or other, may have their interests advanced. What is the reason that we propose this? There is a good reason why it should be proposed. One of the reasons is that we have found by investigation, notably in the case of timber lands, but in other cases as well, that the manner in which the tenders have been put in and the manner in which they have been dealt with are such as to invite suspicion and rob the public of the confidence which they ought to have in the administration of the department. Nothing has perhaps more increased the feeling of insecurity that is abroad in the public mind at the present time than the attitude taken by the government when it was proposed that we should further investigate into this matter. We admit that if the government had come down at once without any question and had shown a disposition to furnish us with the proper information instead of taking the attitude they did, and if they had granted us an immediate examination of the original documents instead of waiting until they were practically driven by the opposition to concede our demand and to permit us to examine the public records, that suspicion would not be as great as it is today. When at last the government were compelled to bring down the papers this suspicion we found not to be groundless and every time that public records have been brought down it has been found that a certain suspicion surrounds the tenders that have been put in showing the absolute necessity of an examination of the public records. We have in the last few weeks developed a knowledge of a very peculiar system of tendering in reference to the public lands. First, we have a blank tender; that is, we have a tender put in in which the amount is left in blank to be filled in at a subsequent time for what purpose it is not very hard to surmise and one of the reasons why we ask that the system shall be changed is that it has in the past proved most disadvantageous to the public interest. If these tenders can be opened in a secret place, in a closet if you like, with only one man present and the tender is in blank we have nothing to stand for the rights of the public except the absolute honesty of the official who opens that tender and that, of course, cannot always be guaranteed. The person who opens the tender may be perfectly reliable and honest, but the public has no guarantee of the honesty of the official and therefore has no guarantee of the bona fides of the tender or that the property goes to the proper person. We have elicited also in the last few weeks that there is this system of tender; a letter stating that the person tendering incloses a tender herewith; he mentions no amount whatever, and what is called a tender is a letter not written on any printed form of the government but a simple letter saying: I inclose herewith tender for such a property and accompanying that is cash. That is a very dangerous system of tendering. The cash could be increased or decreased at the will of persons who want to manipulate the tender. There is absolutely no guard. The advertisement is for a tender accompanied by a certified cheque, but as a matter of practice in the department the tender is not accompanied by a certified cheque in all cases but is frequently accompanied by cash which can be raised or lowered to suit the circumstances of the case according to the amount of the tenders which precede it. That is a second class of tender we have found to exist which is in itself suspicious and should not be allowed, or if allowed there should be publicity in the opening of these tenders so that there can be no substitution or varying of the amount. Then, we have a similar letter accompanied by cheques; mark you, Mr. Speaker, not by one cheque but by cheques and the letter says 'tender herewith inclosed.' Now, the tender is two cheques or more than two cheques. What are two cheques for? I do not know why

there should be two cheques but I can very well understand how that could be worked dishonestly if the opening of these tenders is to be a secret transaction. A man tenders at $5,000 and then another tender comes in with one cheque for $4,000 and another cheque for $6,000. The $4,500 cheque can be used if no higher tender comes in, but if a tender higher than $4,500 comes in then the $6,000 cheque can be used. But if a tender comes in of $10,000 then the $4,500 and the $6,000 can be added together and by this alternative method in the one case and cumulative method in the other the tenderer who has the favour of the official can secure the interest for which he tendered. Then, by the system we have at present of not requiring the parties tendering to affix their signatures to their tender, if you can imagine a case of such gross dishonesty, we could have a tender substituted by the official after the other tenders were opened, because the tenderers are not to use a form, no amount may be stated, it can be left in blank until the last moment, the deposit can be in cash, there is nothing in the world to prevent a dishonest official after all the other tenders are in, to himself virtually be a tenderer in the case. An examination of the documents that have been brought down to the Public Works Committee seems to show that all these things could occur and that there is no guarantee to the public that this kind of thing has not occurred in the past. In fact, the developments go to show that there is the very gravest reason for suspecting that dishonesty has occurred in the past, and it is absolutely necessary that we should have these tenders when they are received kept in safe custody until the proper time for opening and that they should be opened then in the broad daylight and before the people who are interested in the result. I have been unable to appreciate the strength of the suggestion of the right hon. gentleman as to the rule which says that until the tenders are awarded no information will be given to the House even about them. The governments are not too hasty in giving results to the House at any time but I venture to say there is no good reason why when tenders are duly advertised for and tenders are put in—guarded if you like by the statement that the tender will not be awarded to the highest or the lowest tenderer—with these provisions inserted in the advertisement there is no good reason why the public should not be made aware at once of what the result of the opening of the tender has been and the result recorded in such a way that it shall be accessible to the public and duly verified for all time to come. Until 1902 the practice set forth in the resolution of my hon. friend (Mr. J. D. Reid) was followed to the extent at all events that the tenders were opened in the presence of at least two principal officials of the department. Why that practice has been departed from it is hard to say. But it happens to be coincident with the time when the bars were taken down and the field was opened very wide for certain speculators to come in and speculate upon the public lands of the country. And it is unfortunate it appears to me for the reputation of the government and of the department to which it particularly refers, that at the very time this occurred and from that time on there seems to have been a prevailing system in the department which has not conduced to the benefit of the public, and which certainly has not been calculated to inspire the public with that confidence which it is desirable the people should have in the administration of the public affairs of the country. I have great pleasure in seconding the resolution moved by my hon. friend.

Mr. SAMUEL BARKER (East Hamilton). I desire to say but a very few words upon this subject and I speak only because from what I have seen and heard in the Public Accounts Committee I am astounded to think that any government, or that any member of the government would tolerate what has been going on in the Department of the Interior. It is so outrageous, so unbusinesslike, that I can hardly believe that it has been fully known to the head of the department. I cannot even understand how any official having any regard for his own character would allow himself to be mixed up with such a procedure. It is simply this: That in the Department of the Interior since 1902 it has become a practice to receive tenders in which the person tendering does not state in his tender any sum whatever that he offers for the property or the interest he is tendering for—not a word, not a figure is stated in his tender as to his bid. But the practice has grown, a practice susceptible of fraud; it is difficult to understand how it ever should be allowed to become a practice without the knowledge that it was open fraud, and I believe, I may even go so far as to say that it was only tolerated because it was open to fraud. With that tender the tenderer, not having said one word in his tender as to the amount of his bid, inclosed a cheque, and we are told by officers of the Interior Department that they assumed that the amount of that cheque was the sum which the bidder intended to offer. The departmental regulations called for a tender, and for the tender to be accompanied by a cheque. He makes no tender according to the practice of the department. He makes a tender in blank, giving no figures, and simply slipping a cheque into the envelope. Everybody can see how open that is to gross fraud. No one can understand how that ever was begun except with a view to fraud, and I cannot understand that it was tolerated except

with the knowledge that it would be likely to lead to fraud. But it does not end there. We find that again and again the people who made tenders in that irregular form have put in, not one cheque, but two. One man will perhaps bid $5,000 by his cheque, another bids perhaps $5,500, and number one manages somehow to get in another cheque, say for $1,000, so that his tender becomes $6,000, $1,000 advance on that. Is it possible to conceive that men who have any knowledge of business and who know how ready people are to take advantage when they can, would tolerate a thing of that kind? In fact there have been cases in which three cheques were put in; if No. 1 was not sufficient to carry, No. 2 was there; and if No. 2 did not carry, No. 3 was there. That has been the system carried on in that department. That has been proved on oath before the Public Accounts Committee, and I say, in the presence of the right hon. the Prime Minister that he ought not to allow that to continue for one hour under his regime. I do not care whether it is the Prime Minister or the head of the department, I say that no man who has any regard for the public rights ought to allow that to continue for a moment.

Mr. R. S. LAKE (Qu'Appelle). Mr. Speaker, I wish to add one word in support of the amendment which has been moved by my hon. friend from Grenville (Mr. Reid). It must be obvious that to get the best results from a system of tendering by public competition, it is a matter of the very first importance to inspire confidence among the tenderers. There should be confidence in the mind of every tenderer that his tender will receive fair play and the fullest consideration, and that the various tenders that come in will be adjudged upon their merits. It must be obvious also that if you fail to inspire confidence among the men who tender for government contracts, you are losing money and doing a great injustice to public service; because naturally men will not go to the trouble and expense of making calculations to find out what bid they can make unless they have every confidence that their tender will receive fair consideration on the part of the officials who open the tenders. If a large proportion of the people who tender do not believe that their tenders will receive fair consideration at the hands of the officials who open them, then the amount of competition is bound to grow less, and the public service will suffer in consequence. It is only fair to the officials themselves that there should be some well understood system in calling for tenders and opening tenders. I have noticed in a small local paper advertisements calling for tenders for two or three different departments of this government, and in all of them there is some difference. In one department the requirement is that the tender shall be made on a certain form to be supplied by the department, and the tenderer shall sign his tender with his own name in his own handwriting. If that had been done in some instances to which public attention has been called in regard to tenders for public lands, it would have been a good thing. I believe that it should be the aim of this government to adopt some such system as that proposed by my hon. friend and make it general for all the departments. Under that system the time occupied by the officials would be a mere trifle—merely to open the tenders, in the presence of any of the tenderers or their representatives who might wish to be present, to record the amounts received, to draw up a schedule of those amounts, and to award the contract, if there is nothing unusual, to the lowest tenderer. Of course, I can well understand that circumstances might arise in which it would be necessary to refer to the head of the department, the minister himself; but it could do no harm to the public service to allow all the men who put in tenders to know exactly what their competitors tendered. I was very glad to hear that the Prime Minister had stated that he could agree with the greater part of the resolution which has been proposed, and I trust that he will later on see his way to agree to the whole resolution and allow the opening of tenders to be made in public. In the speech which he addressed to the House just now, he called attention to the fact that in one of the departments the tenders are opened by the Minister and the deputy. It seems to me that it is a very remarkable system and a very wrong one, to bring the political head of the department into a question of this kind in the first instance. I think it should be left to the permanent officials of the government to open the tenders and to decide them if there is nothing extraordinary in them. Of course, I realize that in every such case it may be necessary, before the award of the contract, to make a reference to the political head of the department, who will have to bear the responsibility of awarding a contract if it is not awarded to the highest tenderer. The hon. member for Leeds has referred to the practice which obtains in some other countries, he has made a reference to the practice which obtains in Great Britain.

I have some personal knowledge of the mode of proceeding in, at any rate, one of the great spending departments in that country. The greatest care is there taken of the tenders. There is a special box into which each tender is placed as it is received and this box has two separate locks. The two keys are kept by two officials in two different branches of that department, and it is impossible to open that box unless both are present. Thus the greatest care is taken to avoid the slightest suspicion of any possible collusion with regard to the opening of tenders. Further, the greatest care is taken to avoid the possibility of any

collusion among the tenderers themselves. If such suspicious circumstances had appeared on the face of any of the tenders received in that department, or in any department of the British service, as have appeared on some of the tenders received in the Department of the Interior and adjudicated upon, I am satisfied the contract would never have been awarded until an inquiry had been made into the circumstances. In making this reference to the Department of the Interior I have in mind the fact that in one particular case—one in which we had the original documents laid on the table—the same person had put in two different tenders under two different names, and the amount in one of the tenders had been inserted after the tender had been sent in and received by the department. It is only in the case of some of the tenders received by the Department of the Interior that I have had the advantage of seeing the original documents. I do not think I need add anything to what my hon. friend from Hamilton (Mr. Barker) has said to emphasize the absolute necessity of a reformation in the system of opening tenders and awarding contracts. As regards the tenders received in that particular department, it will be noticed that the envelopes themselves had, in some cases, pencilled or written figures upon them, stating the date and hour when they were received. In my opinion each envelope containing a tender should receive the stamp of the department immediately, showing the date and hour of its receipt before placing it in the tender box. I noticed further that some of the tenders themselves had no stamp of the department until they reached the branch to which they belonged, several days apparently after the contracts were awarded. The whole thing is most careless and slipshod and open to any amount of suspicion.

I do not know that I need add very much to what has been said. But I would like to point out one procedure which obtains in Great Britain. In the form of tender, which has to be used by all who tender for public contracts, there is a proviso that the contractor shall furnish within seven days after the acceptance of his tender the names of all the persons who are associated with him, or the partners of the contracting firm, or, in the case of a company with limited liability, the names of all the directors. That procedure I would strongly commend to this government. If that practice had been in vogue in our service, in one case, that of the North Atlantic Trading Company we would not have had these terrible threats of suicide should the names of the members of that company be made public. And if this government had insisted on such a proviso in their contracts with the Imperial Pulp Company it would not be necessary for us to call witnesses from different parts of the country in order to find out who the members of that company are.

Mr. LAKE.

Mr. H. B. AMES (Montreal, St. Antoine). The resolution of my hon. friend from Grenville (Mr. J. D. Reid) is one which appeals to my approval and support. The right hon. the First Minister has told us that it is not the practice generally in this country to open tenders in the presence of the interested parties. In reply to that statement I would like to lay before him the experience I have had during eight years in the Montreal city council in matters of this kind. It is our universal custom in every civic department of Montreal to demand that all tenders be delivered to the city clerk on or before noon on a certain day specified in the advertisement. The city clerk, with seal and stamp, places his mark on every envelope as it comes in. When the hour of noon arrives on the day fixed, the entire package, with the hour of receipt written on each envelope, is tied together and placed in a locked safe and there remains until such hour as the committee fix to open the tenders and award the contract. On that afternoon when the committee is sitting and that item is reached, an employee of the department is sent to the city clerk's office and the city clerk himself comes down with the tenders in this large sealed envelope and opens the envelope and takes from it all the tenders that have come in. He then opens each tender in the presence of the committee and of the parties interested, for every contractor who tenders has the privilege of being there. Each tender is passed around the committee so that each of the seven members could see it and a record is made by the clerk of the committee, and the result is read out and laid before the chairman in the presence of all the interested parties. In that way it is absolutely impossible for any collusion to take place, and I would recommend that some such method should be adopted by this government. This system has worked in the Montreal city council very satisfactorily. During the eight years I was there I do not remember an instance of the slightest suspicion being raised that the tenders were not in every case valid and legitimate. The state of affairs which we know to have existed for a considerable period in the Department of the Interior I am precluded from commenting upon at this time, inasmuch as the investigation is now going on in the Public Accounts Committee, but when that committee sees fit to make a report the facts will be laid before this House for adjudication. I know personally of gentlemen who came from a very long distance in order that they might be present when the tenders were being opened in the Department of the Interior, being under the impression that it was customary in this department, as in many other bodies, to allow the interested parties to be present when the tenders were opened. These gentlemen were greatly disappointed when they were told that so long

as they remained there the tenders would not be opened, but that at some future date, when the Land Commissioner might see fit, they would be opened and the contracts awarded. But if those tenders had been opened in the presence of the interested parties there could certainly have been none of the peculiar proceedings which we now find on investigation undoubtedly took place in that department.

A further suggestion has been made, and that is that each tender should be on a printed form of the department. This is exceedingly important. This has been in the main the practice of the Department of the Interior followed by outsiders, who were apparently not in the ring and who thought it was necessary to tender on printed forms. It was only special friends of the government who utilized the short line, blank tender, double cheque method. I have, therefore, much pleasure in supporting this motion in its entirety.

Mr. R. BLAIN (Peel). I wish to express my approval of the resolution moved by my hon. friend from Grenville (Mr. J. D. Reid) and to make a suggestion to the government with respect to the tender system now in vogue. I am sure that it will be a matter of regret to the people of Canada that such a resolution is necessary in parliament at this time in our history. I am of opinion that, when making changes in the system, the government should adopt the plan of duplicate tendering; that is, a man who tenders for any work should be required to send in a duplicate tender, one copy to go to the Auditor General, who is not an employee of any department, but is an employee of this House, and the other, of course, to the department for which the work is to be done. Then, I think, that when the tenders are opened in any department the Auditor General should be present or some one representing him. These are matters that should receive the attention of the government when framing the new system which the Prime Minister has spoken of.

Mr. R. L. BORDEN (Carleton, Ont.). I think the Prime Minister (Sir Wilfrid Laurier) will agree that the utmost possible publicity consistent with the conservation of the public interest should be insisted upon in connection with the opening of tenders, and not only in connection with the opening of tenders, but in connection with the safeguarding of tenders, after they are received by the proper officer of the government. It is not only desirable that every care should be taken to prevent collusion, whether between the tenderer and any offical of the department or between the tenderers themselves, but it is eminently desirable that every precaution should be taken to prevent even the suspicion of any collusion or wrong doing. Under these circumstances, it seems astounding to me that in any department of this government, an official should have seen fit to adopt a system by which tenders were opened by himself alone behind the closed doors of his private office. And it seems still more amazing that any government having regard for its own character or the public interest would have allowed such a system to continue. It is absolutely incomprehensible to me why it should have been tolerated for one moment after it came to the attention of any member of this administration. The resolution of my hon. friend from Grenville (Mr. J. D. Reid) desires to establish by a declaration of this House, certain conditions which, while they may not bring about a perfect system, certainly make a very distinct and desirable advance upon the system which has prevailed in some departments of the government. He invites the House to declare that tenders received by any department of the government should be immediately placed in safe custody under seal so as to prevent any possibility or suspicion of tampering, and should be opened in public at the time and place mentioned in the advertisement, and in the presence of at least three of the principal officials of the department, and that the persons so tendering, or their duly authorized agent, should be at liberty to attend at the said time and place and see such tenders opened and recorded if they so desire. Now, is there anything in that which can militate against the public interest ? The right hon. Prime Minister accepted the idea of the resolution and the spirit of the resolution, and indeed the words of the resolution, with the exception of the declaration that the tenders should be opened in public. Why should not the tenders be opened in public? Why should it not be stated in the advertisement calling for tenders that, in a certain room in the department, in the presence of three officials of the department, and of the tenderers, or their authorized agents, these tenders will be opened ? It would not necessarily follow from the words of the resolution that the amounts of the tenders should be made public. I see no reason, however, why they should not be made public. My hon. friend from St. Antoine (Mr. Ames) has made it abundantly clear that in the city of Montreal that system is carried out with most wholesome results. The right hon. gentleman (Sir Wilfrid Laurier) invokes the custom of the departments. I have as much respect as any man, I trust, for long established custom ; but unless it can be established by some convincing reason, I do not know of any particular ground for rejecting a proposition of this kind which, apart from that, seems to be eminently and absolutely in the public interest. I was in hopes that the amendment would be accepted in its entirety by the Prime Minister. But, at any rate, my

hon. friend from Grenville (Mr. J. D. Reid) is to be congratulated upon bringing this matter to the attention of parliament and the people. He is to be congratulated upon having evoked from the Prime Minister of Canada the statement that a public declaration will be made in parliament at an early day as to regulations very much in line, if not altogether in line, with the proposals set forth in the resolution of my hon. friend. I sincerely trust that the declaration of the government will be given to parliament at an early day, and that we shall have a uniform system carried out in every department of the government which is in the habit of receiving tenders, a system by reason of which suspicions have been rife in this country during the past will be allayed and the people will be sure that the public interest in these respects is safeguarded by the resolutions or regulations to be laid before the House.

Hon. W. S. FIELDING (Minister of Finance). Though we cannot accept the form of this resolution I am glad to know there is not much difference between the two sides of the House as to the manner in which tenders should be dealt with. Our chief differences arise on the last words of my hon. friend's (Mr. J. D. Reid's) motion. Regarding the manner of dealing with timber limits, it was explained some time ago by the Minister of the Interior (Mr. Oliver) that a new system had been adopted and that these limits were to be sold by public auction. Whatever may be said of the past system, this gives the public, I think, every assurance that could be desired. I agree with the suggestion that no one person should open tenders; it is not sound business. I believe it would be the part of wisdom, in every case, to have two officials open tenders, and if it be insisted that there should be three I would not quarrel with that portion of my hon. friend's motion. But when it declares that it is necessary in the interest of justice and fairness to open these tenders publicly, I am bound to say that in the light of present information, I hesitate to accept that, as did my right hon. friend the Prime Minister (Sir Wilfrid Laurier). I can conceive reasons why the public interest would best be served by tenders not being opened and made public immediately. Possibly, two tenders might be put in collusively. And, suppose the tender put in had come from the party who was interested in another tender, and it becomes known at once what the amounts of the several tenders are, there would be a strong inducement for the man with the lowest tender to withdraw and let the work go to the next man. It will be said that there is the deposit to be made and that that is our protection against such collusive action. It is quite possible that the deposit may not be large enough to afford protection in such a case. It is possible that the man who puts in the lowest tender could well afford to forfeit his deposit and let the work go to the next tenderer. I think a moment's reflection will show my hon. friend that it is quite possible that a case may arise in which this publicity will do harm to the public interest which all parties desire to conserve. There are some branches of the public service, I believe, in which tenders for small amounts are not accompanied with deposits. I think that in the Post Office Department, in their smaller contracts, they do not demand deposits. In that case, if the tenders were opened in public and everybody were made aware of the amount of the tenders, just such difficulties as I have suggested in the case of larger transactions, could take place.

Mr. R L BORDEN. But would not the public interest be safeguarded by the usual provision that the government is not obliged to accept any tender?

Mr. FIELDING. No, because the government should not be constantly calling for new tenders. Assuming now that all the tenders were opened by two or more persons—I would not quarrel with the rule that there should be three—it is hardly conceivable that three public officials in any department would enter into a conspiracy to manipulate tenders. If by opening the tenders in the presence of two or three officials you get the assurance that no one man shall be exposed to the temptation of interfering with them, then what gain comes to the public by opening the tenders in the public eye? I think the observations I have made of possible difficulties of that character probably explain the reason why in all past time it has been deemed wise that these tenders should be kept in the departments and should not be made public until after the signing of the contract. Again and again that has been stated in parliament as the reason, and up to this moment the propriety of that reason has never been questioned. I would therefore suggest to my hon friend, whose object in this matter is the same as ours, that they should consider whether any good purpose will be served by insisting on publicity in that way. It seems to me, and I speak subject to correction, that there might be good reasons why the public interest would not be advanced by the opening of tenders in this public way.

Mr. R. L. BORDEN. What is it that the hon. gentleman objects to?

Mr. FIELDING That they must be opened in the presence of the parties tendering.

Mr. R. L. BORDEN. You do not object to the words 'in public'?

Mr. FIELDING. Yes, anything which gives the parties tendering a knowledge of

their competitive tenderers before the matter has been determined and the contract signed.

Mr. FOSTER. Would there be any objection in naming the successful tenderer?

Mr. FIELDING. My hon. friend will see that if that were done the successful tenderer would probably state to his neighbours what was the amount of his tender. Cases have been known where, after the tenders have been put in, these parties communicate with one another, and they are able to get a pretty good idea of the various tenders even before public announcement is made.

Mr. FOSTER. If they communicate in one case they can in another.

Mr. FIELDING. Yes. Even under present conditions there are difficulties in the way. I know of cases where there has been reason to suspect that the tenderers were trying to arrange so that one might retire and another be allowed to do the work. However, I think that is the reason why in the past, under all governments, it has not been thought wise to open these tenders in public.

Mr. AMES. It was often our practice in the Montreal city council when tenders were opened, not to adjudicate and award the contract until a subsequent reading. The tenders were opened, the public were made cognizant of all the facts, and perhaps a week later the contract was awarded.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). So far as the Department of Railways and Canals is concerned, I do not care what rule you make about opening tenders. I have every confidence in the officials of that department. At present they are opened before two officials; you may make it a dozen if you like, you may open them any way you choose, because they will be treated with perfect good faith in that department. What the department wants and what the government wants is the protection of the public interest in the awarding of these contracts. The remarks made by the Finance Minister are very practical. Those who have not gone through the experience will not understand as fully as he does that any department, in asking for and receiving tenders, has to deal with the shrewdest men that live in this country. I am not at all insinuating anything against the honesty of contractors in saying that they are the shrewdest men perhaps that we have to deal with. Now in the interest of the public I am of the opinion, from what experience I have had, that it would not be wise to let these contractors know all the figures of the various tenderers the days the tenders are opened. They should be opened at one time, as they are, they should be kept in a safe place until the day of opening. But to hand out the figures publicly when the tenders are opened, would be a mistake in the public interest, for the reasons given by my hon. friend. Now contractors do sometimes enter into collusion, or are suspected of doing so; they work with each other, and it is easy, after the tenders are opened and the figures are known, for a certain tenderer to drop out, and even lose his deposit, which could easily be paid by the next highest tenderer taking the lower tenderer into partnership perhaps. That can easily be done. There is another point that was not brought out clearly, that in the large spending departments such as the Department of Public Works and the Department of Railways and Canals, the tenders may not be let in bulk at schedule prices for certain classes of work. Now it takes days perhaps for the chief engineer to figure out which tenderer is the cheapest. It is impossible at once to say who will get the contract, and holding them for a week to foot up the schedule prices affords an opportunity for collusion among the contractors. We would have the engineers from various firms of contractors coming to the department, perhaps accompanied by solicitors, trying to convince the department that figuring out at their particular schedule prices would bring about the best results. It would hamper the department in coming to the solution which it would wish to reach, namely, which is the cheapest tender, everything taken into consideration. One tenderer may have a lower price for a certain class of material, and a higher price for another class. It takes the best men in the department to work out who has made the lowest tender, and if the tenderers knew all the details of the various tenders, instead of being in the interest of the public, it would open the door wide to irregularities.

Mr. J. G. H. BERGERON (Beauharnois). On broad lines I think the Minister of Railways is pretty correct. But it is understood to-day by the public that whenever invitations to tender are given out by this government they are sent around to friends of the government not to the public generally. According to law, no contract should be given for any public work costing over $5,000 without the public generally being invited to tender.

Mr. PUGSLEY Does the hon. gentleman say that is not the case at present?

Mr. BERGERON. Certainly, and if my hon. friend, the Minister of Public Works will make an examination in his department he will find that one of his predecessors was the father of this system, by which invitations are sent only to the friends of the government and not to the public at large. We have seen an instance in the case of furniture for these buildings,

where two or three companies are formed composed of friends of the government, and to whom invitations to tender are sent. It is in the public interest that invitations to tender should be sent all over the Dominion, just as a private individual would do, in order to get his work done at the cheapest rate. But that has not been done by this government for the past ten years. Therefore when tenders are sent in only by friends of the government, and opened by one man, it is easy to see how fraud can be practised. The purpose of the motion which is made here to-night is to avoid that. It is put in a very broad sense; no tender should be opened except in public and by certain officials of the department. It goes farther and says that the tenderers themselves should be present. The government are not obliged to give the work to the lowest tenderer but they should exercise their judgment as to who should get the contract, having regard to the best interests of the country. Those who know something about how tenders have been awarded by this government are aware that the system pursued is not that which has been referred to by the hon. Minister of Railways and Canals. I think the government would do well to accept this motion. There is no harm in it. It is a declaration by the House of Commons that for the public good no tender should be opened except before three officers of the department and in a public way so that there will be no more hiding about it. I think it is a good motion and I cannot understand why the government should not accept it.

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, I am surprised at the hon. member for Beauharnois (Mr. Bergeron) saying that the custom of all the departments of the government—I suppose he included the Public Works Department—was simply to invite tenders from their friends. Now, my hon. friend must know that there is no foundation whatever for that statement. The hon. gentleman says when tenders are invited the advertisement should be spread broadcast all over Canada. How absurd that would be! Suppose a post office were to be erected in the city of Charlottetown, P.E.I., would you advertise for tenders in British Columbia, Manitoba, Saskatchewan or Alberta? It would cost very much more than the building.

Mr. J. D. REID. You do that now.

Mr. PUGSLEY. No, we do not.

Mr. BERGERON The other day my hon. friend (Mr. Pugsley) himself read a whole page of advertisements in all the papers of Canada for a small bit of work down in some parish where nobody could tender except those in the place where the work was to be done. In that case the government spent $500 or $600 for advertising in the newspapers.

Mr. PUGSLEY. My hon. friend will see how inconsistent he is. In one breath he says we do not advertise and in the next breath he says that we have advertised too widely. In that particular case to which the hon. gentleman refers the advertisements were all in newspapers which might be said to be in the district in which the public work was built. We have a large number of newspapers upon the list in various sections of the country. We divide Canada into sections and if a public work is to be constructed in one section then the advertisements are given to the newspapers in that particular section. I am sure you are aware, Mr. Speaker, and I am surprised that the hon. gentleman who has just spoken is not aware of the fact, that in the case of all public works where the amount involved is over $5,000 public tenders must be asked for and in every case that I am aware of public tenders are called by advertisement. In the case of supplies and fittings for buildings it is different. In some cases notices are given in the public papers and in other cases a considerable number of those who are engaged in the business are asked to tender for the fittings and supplies. The rule is that in the case of public buildings tenders are invited by public advertisement. My hon friend the Minister of Finance (Mr. Fielding), as well as my hon. friend the Minister of Railways and Canals (Mr. Graham) have, I think, afforded us good reason why the resolution should not carry. I am satisfied that in the Public Works Department there would be very serious objection to allowing the tenders to become public before the contract had been awarded. There would be, in the case of large contracts, opportunities for collusion, opportunities for contractors to put their heads together, to get the lowest tenderer to retire and then the government would be obliged either to invite new tenders or to award the work to another tenderer for a larger amount. The hon. gentleman (Mr. Lennox) who, I believed, seconded the resolution, said that there appeared in the Public Accounts Committee——

Mr. LENNOX. I did not mention the Public Accounts Committee to-night.

Mr. PUGSLEY. Then I understood my hon. friend to say that in the case of all original documents which had been brought down in connection with the various departments there appeared grounds for suspicion.

Mr. LENNOX. Yes, very great grounds.

Mr. PUGSLEY. I have followed the business of the Public Accounts Committee, not very closely, but at all events I have been at a number of meetings, I have seen

the evidence which has been taken and I am not aware that, in so far as the Department of Public Works is concerned, there has been any evidence of any collusion, or anything improper, or any fraud in connection with the receiving of tenders or awarding of contracts. Therefore, my hon. friend can point to no case——

Mr. LENNOX. The hon. gentleman is discussing what took place in the Public Accounts Committee. I understand that is highly improper and I did not refer to the Public Accounts Committee at all. I was referring to documents that have been brought down on the order of the House.

Mr. PUGSLEY. My hon. friend is aware that all original documents, all tenders for public works, all contracts, all vouchers in connection with expenditure may be called for by the Public Accounts Committee and that they are always produced before that committee. I am not aware of any document which has been produced before the House in reference to the Department of Public Works which has shown that there has been anything wrong, any collusion or any fraud in connection with the awarding of contracts or any ground for suspicion. In considering as to whether it is desirable to give publicity to tenders before the contract is awarded, we might well have regard to what has been, I think, the almost universal practice in this country and what appears to be the practice in Great Britain. The hon. gentleman who moved the resolution (Mr. J. D. Reid) read from the advertisement contained in the London 'Daily Telegraph' and these advertisements are practically the same as the advertisements which are being put out by the Department of Public Works. They state that tenders will be received up to a certain date and there is no intimation that they will be opened in the presence of those who tender. Then, if it is true that it has not been the practice in this country, as far as the federal government is concerned, since confederation, that tenders should be opened in the presence of the public, I think I am right in saying also that in respect to the provinces of Canada, whether the governments have been Liberal or Conservative, the practice is the same as it is in the departments of this government, which is that tenders are opened by some of the officials of the department and they are not made public until the contract has been awarded. As far as the Public Works Department is concerned the practice is adopted, as I was informed when I became the minister, of having the tenders opened in the presence of the deputy minister and of the minister. The tenders are received, every precaution is taken, just as the hon. gentleman suggests it should be taken; they are under seal and they are given into the custody of the secretary. They are kept in his custody in a vault in the department, and when the period for receiving tenders expires they are produced by the deputy minister and opened by him or by the minister, both being present and both seeing the envelope which is opened and seeing the tender. The hon. member for Qu'Appelle (Mr. Lake) said he though it was very improper that the minister should be present at the opening of tenders. I entirely disagree with that view. I think it is very desirable that in the case of awarding large contracts the minister, who is responsible to parliament and who is entrusted with the discharge of these important duties, should be present and take part in the opening of all tenders.

It seems to me it is very desirable that this should be the case, and that this important work should not be entrusted solely to the permanent officials of the department. You have, of course, the safeguard that you have one or two of the permanent officials present also at the time of the opening of the tenders. This also, I think, should be borne in mind when considering as to the necessity or otherwise of this resolution, that so far as the Public Works Department is concerned—and I am not sure that it does not apply to other departments—the lowest tenderer must receive the contract, unless for special reasons, which must be set forth in the recommendation to the Privy Council, and which must be passed upon and approved by the Governor in Council. It seems to me that we might very well discuss an important question like this without saying anything unpleasant, and I deeply regret that my hon. friend (Mr. Bergeron) should have made the statement that there is an impression throughout this country that only the friends of the government are invited to tender for these public works. I can assure my hon. friend that so far as the Public Works Department is concerned, I have seen no evidence that any such course was pursued by my predecessors, and I defy my hon. friend to show that in any case—and there have been a good many cases in which contracts have been let since I became minister—I defy him to show that in a single case only friends of the government have been invited to tender, except in the case of some fittings and some supplies. But in respect to all public buildings the public generally are invited to tender, and when the tenders are awarded no distinction is made between political friend or foe. Whoever happens to be the lowest tenderer in all cases (with the exception of one I am able to call to mind) since I became minister the contracts have been awarded to the lowest tenderer.

Mr. J. D. REID. The minister stated that the practice in this country is the same as in England. The citation I made seems to show that in England tenders are received

until a certain hour and then and there opened.

Mr. PUGSLEY. The English advertisement reads :

On which day they will be opened and considered.

In England the advertisement does not say at what hour they shall consider them, but on which day they shall be considered. I know that whenever tenders are called for my deputy comes to me and says : To-day the time will close for tenders for such a public work; and on that day, if it is at all possible to do so, or at the earliest convenient time, the tenders are opened. We follow out what apparently is the practice in England.

Mr. J. D. REID. Here is an advertisement by the Department of Railways which says : 'Tenders will be received until 16 o'clock on Thursday, 12th of March, 1908,' whereas in the Public Works Department the advertisement reads that tenders will be received on a certain day, and you may have until 12 o'clock that night to put in tenders. I myself, during the present session, met a man in Ottawa going to the officers of the department at 11 o'clock at night to put in a tender.

Mr. PUGSLEY. When was that?

Mr. J. D. REID. Within the last two months.

Mr. PUGSLEY. Would the hon. gentleman be good enough to name the work?

Mr. J. D. REID. The hon. gentleman would not wish me to give the contractor away.

Mr. PUGSLEY. I can say to my hon. friend that if he went to the department at 11 o'clock at night, I do not think he would find any one there to receive the tender.

Mr. J. D. REID. I said he was going to the secretary's house, or whoever it was, to hand the tenders to him.

Mr. FOSTER. There is no hour fixed in that advertisement of the Public Works Department, and it is presumed the time would not expire until 12 o'clock of the night of the day mentioned.

Mr. PUGSLEY. I would take it to mean the closing of office hours.

Mr. J. D. REID. It would certainly mean the entire day, and the secretary would have all the tenders opened up to the hour of closing the office——

Mr. PUGSLEY. The secretary who received the tenders would not venture to open them, and he never does open them. He certainly has not done so since I have been minister. If no hour is named in the advertisement, then the following morning after the day mentioned the practice of the deputy minister is to bring the tenders into the minister's office all sealed as they have come from the secretary, and they are opened in the presence of the deputy minister. That is the practice, and I do not see how the public interest could be safeguarded any better by providing that they would be received up to a certain hour. For these reasons, I am unable to see what public good would be served by the passage of the resolution. In fact the only criticism which has been made—it is not necessary for me to say now whether it has been fairly made or unfairly made—against the Department of the Interior has from time to time been dealt with, and the Prime Minister has stated, and so has the Minister of the Interior upon several occasions, that a different practice entirely had been adopted so far as the public lands are concerned ; that now they are disposed of by public auction and given to the highest bidder. There has been no criticism made by any of the other gentlemen who have spoken with regard to the different departments, so far as I have heard. My hon. friend from St. Antoine (Mr. Ames) has cited the practice of the city council of Montreal, which differs from the practice of this government for the past forty years and from the practice of every government in Canada. I do not wish to unduly criticise the city council of Montreal, but this is the first time I have heard that the city council of Montreal could always safely be held up as a model for other governing bodies in this country.

Mr. W. H. BENNETT (East Simcoe). The speech of the Minister of Public Works has amply demonstrated the necessity for three gentlemen being present at the opening of these tenders in his department, because the minister states that himself and his deputy open tenders in his department, and I am sure that a gentleman of his innocence would be so easily imposed upon that it is absolutely necessary to have some one with the deputy minister. The hon. gentleman states, in a most bland manner, that if tenders are called for on the 2nd of July, for instance, that means that they are to be in during office hours, and that if a tenderer were to mail a tender at 4 o'clock to the department, and if the departmental messenger received it from the post office at 5 o'clock, it would be a bad tender. If the minister is so innocent as all that, there is absolute necessity for a second party to assist him and his deputy in opening tenders. Moreover, the minister said that he had been a constant attendant in the Public Accounts Committee when matters were discussed appertaining to his department. We will all agree upon that, but the innocence of the hon. gentleman is very apparent when he says that in all that has transpired he saw nothing of wrong-doing in his department. Could innocence go further?

Let me recall, for the benefit of hon. gentlemen and the House, that last year two men were assigned to do duty looking after two dredges, and one of these men went to the other——

Mr. PUGSLEY. Will my hon. friend pardon me? I did not intend to invite a general discussion as to the department; what I said was that I did not observe that there had been any evidence of wrong-doing, or of any fraud, or any collusion, in connection with the awarding of contracts.

Mr. BENNETT. It is a question of what is wrong-doing, and that is what I propose to deal with. When a witness plainly states that he has stolen from the country $120 odd, the minister says there is nothing wrong in that. It was proved in a certain case in which a contract had been awarded that the tenders of the rival tenderers were in the business envelopes of one concern that was tendering; yet the minister says there is nothing wrong about that or nothing to cause suspicion. When the minister can see nothing wrong about that sort of thing I think he is the most innocent man who ever opened a tender. The minister has been very brave in inviting discussion and investigation of his department. Is he honest and sincere in that? If so will he allow an investigation of his department and not take advantage of any technical rule?

Mr. PUGSLEY. He is doing it every day.

Mr. BENNETT. Will the minister pledge himself that he will not take advantage of any technical defence to prevent the exposure of a case of wrong-doing in his own department? I ask the minister a fair question.

Mr. PUGSLEY. I think the hon. gentleman might assume that we will allow the fullest investigation.

Mr. BENNETT. The minister will not bind himself publicly to do that, for this reason. I can prove that in his own department the tenders of rival tenderers were written out by one party. Will the minister allow an investigation into that?

Mr. PUGSLEY. When did the hon. gentleman say that was?

Mr. BENNETT. If I bring that case into the Public Accounts Committee the minister will be the first man to rise and say: no item of this expenditure is in the Auditor General's Report of this year. The minister has taken a stand here to-night before the House and the country, and he will have to be judged by that stand. He has been judged in his own province lately, and has been found wanting. Does he want to be found wanting here to-night before the country? I tell the Minister of Public Works that I can produce a set of tenders from his department which Liberal members of the committee have admitted to me show fraud on their face, and it will be proved to any man that can read handwriting that it is a fraud—that the two tenders are in the same handwriting.

Mr. PUGSLEY. Will the hon. gentleman pardon me a moment? Let me ask him this question. Does he state that in any case the Public Accounts Committee has failed to have all the original documents, all the tenders, all the accounts, all the contracts brought before them?

Mr. BENNETT. I never said that at all and had it not been that through the innocence of some person in the hon. gentleman's department the papers were brought down, myself or the public would never have seen them. The minister is on trial before the country to-night, and I make this challenge, that if he allows these tenders to be brought before the Public Accounts Committee I will prove it up to the hilt that one man wrote the tenders and filled in the figures.

Mr. PUGSLEY. I do not want to interrupt the hon. gentleman, but he knows perfectly well that the minister cannot prevent the committee having all the tenders, all the accounts and vouchers, and everything else produced before it.

Mr. BENNETT. The minister knows as well as I know that day in and day out he has heard the objection taken in the committee, that an item is not in the Auditor General's Report for this year. The minister makes a display of wanting to be fair and wanting to conduct his department in a way that is above suspicion, and I challenge him now to say yea or nay—will he allow an investigation into that single case of fraud?

Mr. PUGSLEY. I cannot prevent it.

Mr. BENNETT. He can prevent it.

Mr. PUGSLEY. I will say to my hon. friend now, that if he has any charge of fraud to make against my department or against anybody connected with it, and makes it here in the House, he will have the fullest opportunity of investigating it.

Mr. SPEAKER. I think the discussion is wandering from the question before the House.

Mr. BENNETT. Mr. Speaker, if you will allow me to complete, I make the charge now, and the minister has pledged himself before the House that he will order a full investigation into the case. Do I take the minister aright in that?

Mr. SPEAKER. I think that is quite apart from the motion before the House.

Mr. FOSTER. A fair challenge.

Mr. PUGSLEY. The hon. gentleman knows how to make the charge perfectly.

Mr. BENNETT. If you, Mr. Speaker, will allow it, I will make the charge and name the contract and the parties.

Mr. SPEAKER. I have ruled that the matter is not pertinent to the question before the House.

Mr. BENNETT. Then, Mr. Speaker, now that I have pledged the minister that when I introduce the matter again, he will make a full and thorough investigation into it, I will let it go at that.

Mr. SPEAKER. If the hon. gentleman will persist, after a ruling has been made, there will be no other course for the Chair to take than the course which is necessary under these circumstances.

Mr. BENNETT. Now, Mr. Speaker, there has arisen in this country a necessity for having tenders and contracts well looked into. What do we see on the part of contractors who have been exposed in this House? What has been exposed in the case of Bowman-Whalen Company coming and displaying their dual tenders to this Public Works Department where hundreds of thousands of dollars have been swindled out of the country in the past few years on dredging operations, and these swindlings connived at by ministers of the Crown?

Some hon. MEMBERS. Order.

Mr. SPEAKER. The hon. gentleman must see that that is plainly out of order. The hon. member has said that members have connived at swindles in conectinon with contracts. That must be withdrawn.

Mr. BENNETT. Well, I withdraw those words, Sir. What has the public seen? It has seen this firm, called the Great Lakes Dredging Company placing their tenders for dredging at Port Arthur and Fort William at 9 cents per cubic yard, and an individual member of that firm placing his tender at 22 cents per cubic yard. What did that mean? It meant that if no other tenderer had intervened, that firm would have been permitted to withdraw their lower tender and substitute the higher one.

Mr. PUGSLEY. The very best argument against this resolution.

Mr. BENNETT. It proves the estimate that firm had of the hon. Mr. Hyman.

Some hon. MEMBERS. Order.

Mr. BENNETT. Mr. Hyman is not a member of this House, for very good reason, so there is nothing out of order in that. The hon. gentleman who cries order brought Mr. Hyman's trouble upon him to a very great extent, so he had better keep quiet. What do the public think of that? When they see a contractor putting in two sets of tenders on one particular work, what conclusion can they come to? I cannot characterize this as I would like in this House, but the public will estimate it at its true value. They will not hesitate to say that it is anything but fair and square and above board. But so long as we have ministers as innocent as is the Minister of Public Works (Mr. Pugsley), according to his own showing, there will be the greatest possible necessity for some fully grown able-bodied adult, endowed with all his sense and without the innocent confiding disposition of the minister, to open the tenders that from time to time require opening in the department.

Mr. F. D. MONK (Jacques Cartier). I cannot quite agree with my hon. friend from Simcoe as to the innocence of the Minister of Public Works (Mr. Pugsley). True he spoke to us this evening in the tone of a man who has been through a long course of lenten exercises; but in spite of all that, in spite of his sanctimonious countenance I cannot at all agree that things are as regular and proper in the department as he says they are. I have not occupied the position of head of the department, but I have followed this department closely for many years, and there are examples without number of contracts given there without any call for tenders or with calls for tenders in a manner which is absolutely improper and ridiculous and extravagant. Just look at the file I have in my hand. I find here an example on the 17th of February of tenders having been received—that is one of the things we complain of—which were invited only from friends of the government. On page 3341 of Hansard in answer to a question put by the hon. member for St. John (Mr. Daniel) as follows?

1. Were tenders called for the furnishing of hard pine for the Intercolonial Railway for the season of 1908?

Mr. PUGSLEY. That is not in my department.

Mr. MONK. We had this answer from the Minister of Public Works. He said that tenders had been received from the Georgia Pine Company, of Baltimore; Thomas Nagle & Company, St. John; Hirsch Lumber Company, New York; Rose Curry & Company, S. S. Ryan, Eppinger & Russel, W. Hilyard Shaw, Jos. A. Likely, Macon Lumber Company, G. H. Barnes, St. Louis; Mason Gordon & Company, Sumner & Company, St John. The contract was given to S. S. Ryan.

Mr. PUGSLEY. That is a pretty large list on both sides of politics.

Mr. MONK. That is not the information I have.

Mr. PUGSLEY. Mr. Sumner is one of the gentlemen who just ran for the county of Westmoreland.

Mr. FOSTER. But my hon. friend said that was not a party contest.

Mr. PUGSLEY. The newspapers said so but not I.

Mr. BENNETT. And you could not guess the politics of the people down there.

Mr. BERGERON. He can do it now.

Mr. MONK. I am beginning to think there is really an element of innocence in my hon. friend, of which I had no idea before. These tenders were invited from certain parties only, and the contract was given by the government to its own friends. My hon. friend from Beauharnois spoke of the necessity of advertising tenders. Here in the department of my hon. friend is a sample in the case of the post office of Nicolet. It was not a considerable contract there, some $14,000. That one seems to have been advertised very extensively, but strange to say it was advertised only in Liberal newspapers. That was altogether unfair. Why should not everybody be invited to tender, and the tenders be advertised through the public press generally.

Mr. BUREAU. Another innocent man.

Mr. MONK. Will the House bear with me a moment while I show how this contract was advertised? It was advertised in: 'Le Progrès,' Nicolet; 'Le Soleil,' Quebec; 'Telegraph,' Quebec; 'La Semaine Commerciale,' Quebec; 'La Presse,' Montreal; 'La Patrie,' Montreal; 'Herald,' Montreal; 'Le Canada,' Montreal; 'Witness,' Montreal; 'Sunday World,' Montreal; 'Le Bulletin,' Montreal; 'Argus,' Montreal; 'L'Industriel,' Shawinigan Falls; 'L'Union des Cantons de l'Est,' Arthabaskaville; 'Le Courrier,' Drummondville; 'La Revenue d'Acton,' Acton Vale; 'La Tribune,' St. Hyacinthe; 'L'Union,' St. Hyacinthe; 'Le Courrier,' Sorel; 'La Gazette,' Berthier; 'L'Etoile du Nord,' Joliette; 'Le Progrès de l'Est,' Sherbrooke; 'Times,' Richmond; 'L'Album Universel,' Montreal.

For heating apparatus:

'Le Progrès,' Nicolet; 'Le Soleil,' Quebec; Telegraph,' Quebec; 'L'Union des Cantons de l'Est,' Arthabaskaville; 'La Patrie,' Montreal; 'La Presse,' Montreal; 'Le Canada,' Montreal; 'Herald,' Montreal; 'Witness,' Montreal; 'Le Bulletin,' Montreal; 'Shareholder,' Montreal; 'Le Progrès du Golfe,' Rimouski.

Mr. BUREAU. What about 'La Patrie'?

Mr. MONK. My hon. friend must not think that I am as innocent as the Minister of Public Works. What does the House think was paid for advertising that contract of $14,000. I venture to say that the amount paid was a considerable percentage on the amount of the contract. I have often advocated that we should not advertise public contracts through the newspapers because the advertisement takes the form I have just indicated. The advertisements are only put in a certain set of newspapers. A very extravagant amount is paid for the advertising and yet the public in general are not reached. I have advocated time and again that we should adopt another method of advertising for tenders. We have post offices all through the country. Those men who desire to tender should know that tenders are invited by a poster put up in each post office, or some other method should be adopted by which the calling for tenders may be publicly advertised throughout the country. I do not believe that the advertisement should be limited to any particular place. I believe that is done in certain countries. I do not see why we should spend enormous amounts in the distribution of funds to the press of the party in power, when we can obtain the same objects without that expenditure. I do not wish to take up more of the time of the House on this point, but I wish to add another word.

It is well known how tenders for supplies are called for in England, and I believe in most of the countries in Europe. At the beginning of the year a list is made up of the articles the government will need during the year. The government places on that list the prices, beyond which it will not go. That list is circulated among all those who ask for it and are prepared to give the government satisfactory security of their ability to carry out their contracts. The government then gives a contract upon each of those articles to the lowest tenderer. These lists are public property. They are communicated to parliament and are open to public inspection, and I believe that is the way in France and in most other countries. Why does not this government adopt that method in respect of the articles it requires. But we know how things are done, in my province at least, and I believe it is the same in every other province. The government purchases those articles without tender from its own friends. I venture to say that we pay for these articles twenty, thirty, fifty per cent more than we should because we do not wish to adopt a common-sense system. But, Sir, the same principle pervades the whole administration. I have not had occasion this session, though I believe there is a motion on the paper, to refer to the particular point of the public service. In the public service, are we rewarding merit? Are we giving positions in and making promotions in the public service on ground of merit and deserving? We are wandering further and further from the system in regard to the civil service which was adopted in England nearly fifty years ago, and which they are

more and more adopting in the civil service of the United States, which service twenty-five years ago, was polluted by the same abuses which exist here to-day and are being fostered by this government and are increasing every year. Although the reasons for saying and voting that this government has outgrown its utility are very numerous and memorable, the principal reason for a change in the system of administration resides in this very motion, and I cannot see why it is not supported by everybody in this House.

Mr. J. E. ARMSTRONG (East Lambton). I am sure we all appreciate the position taken by the hon. member for Grenville (Mr. J. D. Reid) and the splendid resolution which he has brought before the House. I approve it heartily. And, as we are dealing with different forms of tender, I wish to read a tender that I received from the Montreal 'Herald' within the last day or two:

Montreal, February 29, 1908.

Dear sir,—In canvassing your county before election, did it ever strike you that the quiet 'heart to heart' talk was more effective than the public meeting, though both are necessary. There is another thing more quietly effective, that is a good paper.

Fifty or one hundred dollars spent in sending the Montreal 'Daily Herald' to some of your most important Conservative friends (the kind who call everybody fools unless you think as they do) will do more good than all talking; as it gets at them 320 times a year; they may not like it at first, but it is the constant dropping that wins.

For the next fifteen days I am authorized to offer the 'Herald' in lots of 10 or more at $1 per year each, and will be pleased to hear from you with list and cheque to cover same. Send three or four extra names, as some of the parties may take it, and I will check lists to show there are no names duplicated.

Yours truly,
JOB. W. TAYLOR.

And then in writing I notice the following:

New Brunswick sounds warning. You cannot start a good bunch of 'Heralds' to your county any too soon.

Here is a form of tender which the Minister of Public Works (Mr. Pugsley) might well take into his consideration.

House divided on amendment (Mr. J. D. Reid):

Amendment negatived.

Mr. TAYLOR. The hon. member for London (Mr. Beattie) has not voted.

Mr. BEATTIE. I was paired. Had I voted I would have voted for the amendment.

## JAPANESE IMMIGRATION.

Mr. R. L. BORDEN. Before you leave the Chair I would like to draw the attention of the government to a report of a recent debate in the Japanese Diet, which appears in the Victoria 'Daily Colonist' of the 1st of March. It says:

Japanese newspapers received in yesterday's mails give stenographic reports of the discussion in the Diet at Tokio regarding the question of Japanese immigration to Canada. Count Hayashi, Foreign Minister, in the course of a long speech is reported as having declared that after the Vancouver riots Canada asked Japan to negotiate a treaty differentiating labour immigration from her shores and that the Japanese government had replied that it could not possibly negotiate any treaty differentiating injuriously against its own nationalists, and that all negotiations having that object must be futile.

The speech as reported in this journal, then proceeds as follows:

Nevertheless, Canada has sent Hon. Mr. Lemieux to this country last November, with instructions to negotiate such a convention if possible. In that respect the envoy's mission had failed, but he had received assurances from the Japanese government that it would continue to exercise to the full all the functions delegated to it by law in this matter. Mr. Lemieux had asked for an interchange of documents in that sense, and despatches were given which have already been published. The question then arose as to exactly what immigrants were to be vetoed, and it had been agreed that no restriction whatever should be imposed with regard to the following, namely: first, travellers, merchants and students; secondly, Japanese subjects who, although belonging to the labouring class, had their wives and families in Canada; thirdly, labourers who had returned to Japan from Canada and who contemplated going back to Canada; fourthly, contract labourers, that is to say, men having fixed employment; fifthly, Japanese subjects discharging the duties of domestic servants and accompanying their employers; and, sixthly agricultural labourers. Obviously the only labourers not included in this category were those who drifted to Canada without any resources of their own and on the chance of finding employment. The Japanese government have been frequently urged by its own consuls to check the immigration of such men. As for the prohibition just imposed upon labourers destined for Hawaii, this was to be assigned to a different reason, namely, the state of affairs in Hawaii itself, where Japanese immigrants, their exodus to the United States and Canada being checked, found their number in excess of the local demand and were threatened with much distress. They themselves had petitioned their government to impose a restriction.

If this report of the Minister of Foreign Affairs for Japan be correct, it seems to me there is a material difference in the understanding, because, according to the statement of Viscount Hayashi, the only persons proposed to be restricted are labourers of a roving character who have no fixed employment and who come to Canada without any resources of their own on the chance of finding employment. The six classes who are to be permitted, according to the statement of the Foreign Minister as here reported, to come to Canada, are very comprehensive. I thought it right to bring the matter to the attention of the government. The hon. Minister of Labour is not here to-night, but possibly the Prime Minister would be able to state to the House whether this is the understanding of the present government in respect to the result of Mr. Lemieux's mission to Japan. Another somewhat important statement to which I have alluded is that which declares that after the Vancouver riots, Canada had asked Japan to negotiate a treaty limiting the labour immigration from her shores to Canada.

Sir WILFRID LAURIER. It is not difficult to realize that that report coming from Japan by telegraph, and the speech being delivered in the Japanese language and transmitted over the wires, is very susceptible of being misunderstood or misreported.

Mr. R. L. BORDEN. The right hon. gentleman misunderstood me. That has reference to Japanese mails just received, and the report is a stenographic report of the speech of the Minister of Foreign Affairs in the Japanese Diet.

Sir WILFRID LAURIER. At all events, it is a speech delivered in a foreign language with which few people in this

country are familiar. For my part I do not think the report is correct. I am satisfied of one thing, that any statement in the reported speech of Count Hayashi which in any way would differ from the statement made by my hon. friend here the Postmaster General, is absolutely incorrect. The arrangements are substantially those reported by the Postmaster General. As to the reported demand for the negotiation of a treaty, there has been no demand, as appears in the correspondence brought down some time ago.

SQUATTERS ON FOREST RESERVES.

Mr. F. L. SCHAFFNER (Souris). Before you leave the Chair I would like to call the attention of the Minister of the Interior to a matter of considerable importance to the persons concerned. Last session when the Land Bill was before the House, which was afterwards withdrawn, we discussed the matter of squatters on forest reserves, and I asked what steps would be taken to deal with the so-called squatters. If I remember correctly, the minister assured me that they would be well dealt with. Now the forest reserves to which I refer are situated in the Turtle Mountains, south of the town of Boissevain, in township 1, range 21, west of 1st meridian. These squatters last fall were ordered to leave the reserve, and were guaranteed that they would receive in the place to which they were sent, land, and hay and cattle and anything else which they had on the reserve. There has been considerable dissatisfaction in connection with the matter, and I have received several letters from some of the squatters who have not left the reserve, asking me to bring this matter to the attention of the Minister of the Interior. I hold in my hand the Boissevain 'Globe.' The hon. Minister of the Interior will not for one moment think that this is a Conservative paper, because he is well acquainted with the editor. This is what the Boissevain 'Globe' says in referring to this matter:

The Squatters' Grievances.

It will be remembered that exclusive mention was made in the 'Globe' last September of the removal of some of the squatters from their location in the Turtle Mountain timber reserve to the neighbourhood of Benito, in township 34, range 29 west. At the time of the announcement the terms of agreement entered into by the government with those people was made public, and with arrangements thus made the squatters were satisfied. Information reached the 'Globe' a few days ago that the government has failed to carry out its part of the contract, inasmuch as the squatters removed have not been able to procure the building material promised; neither have they been given the feed for their stock as promised; have not been able to get an entry for land selected, the land agent at Dauphin telling one of them, Mr. Hunter, that the quarter applied for by him was not open for entry, while a letter from Ottawa over the signature of Dr. Cash, M.P., states that the same quarter-section, on investigation was open for entry. Who is to blame for the irregularities? Furthermore, no allowance has been made to the people removed from their holdings. A valuation of the improvements made by the squatters was made and accepted by the government, but as yet no results have accrued from this transaction. When it is known that those who were removed were forced to leave behind them the winter's hay put up for their stock, and none available where they were removed to short of $25 a ton, how was it to be expected that those people could winter their stock, when in most instances they were without the price. The grievances thus cited should be looked into at once.

Another matter has been drawn to the attention of the 'Globe.' When the squatters were removed the buildings occupied by some of them were razed to the ground, while others were left standing. Last Wednesday F. O. Chisholm, one of the 'deported,' visited the Foster estate, on which he was formerly domiciled, with an order to demolish the buildings, but on his arrival there was met by a man who ordered him off at the point of a gun. The occupant proved to be a man from across the line who had taken possession of the buildings, alleging that he had authority to do so by order of an official. Is this the truth? If so, why, after Canadian settlers or squatters have been evicted, are foreigners permitted to occupy the premises thus vacated?

These matters, as cited, have been reported to the 'Globe,' and if correct should, in all justice to the people interested, be righted to their satisfaction.

The Minister of the Interior knows that the editor of this paper is a very strong Liberal. I agree with him that an injustice has been done to these squatters. If it is according to law I am not objecting to the fact that they have been forced to leave that land, but I think they were compelled to leave it at a very inopportune time. This township 121 west of the first meridian will certainly never make a forest reserve. I took the pains last summer to drive over every section of it and I found that the timber is very small, averaging from 2 to 6 inches in diameter, and that all there is could be put very easily in two sections. In that township there is quite a number of settlers who have been living there for some years and the township is grown over with hay some two or three feet high and quite thick. The Minister of the Interior, being a westerner, will know that it is absolutely impossible for hay and trees to grow on the same land. I promised these men that I would bring this matter to the attention of the minister. I am confident that if the minister was there himself or had a suitable man to examine this section, he would be absolutely certain that it could never be made into a forest reserve. The men in this district raise grain and cattle. Many of them have quite a large number

of cattle. After putting their hay up for the winter they were ordered off in November, I think, to this northern country, 100 or 150 miles from the reserve in which they were living, and it seems to me, according to the report of this strong Liberal paper, that these people have not been fairly dealt with. I draw the attention of the minister to it and I would like to have a statement from him if it is convenient to-night; if he has not the information I would like him to procure it so that I may inform these people of the reasons which actuated the department. There is one family in particular which had a large number of cattle and horses last fall and it was absolutely impossible to sell the horses or cattle. They have these horses and cattle still on the reserve, but they have been ordered off finally and notified to go on the 1st of April. That will be a very great hardship and I would ask the minister to at least give those who are still remaining on this reserve until later in the season, say the 1st of June, to remove, because that is as early as cattle will be able to exist without being fed with hay.

Hon. FRANK OLIVER (Minister of the Interior). I am very glad that this matter has been brought to the attention of the House by my hon. friend (Mr. Schaffner). I have had no notice of the condition mentioned by him. There is no doubt that the removal of people from a reserve is necessarily accompanied by a measure of hardship. It is an unfortunate condition and no one sympathizes more strongly with these people than I do. However, I am not here to exercise sympathy, but to carry out the will of parliament. The reserve as it exists is practically as it was set apart many years ago by departmental order, and I presume on what might be supposed to be sufficient information; and the Act of parliament fixing it as a forest reserve which was passed two years ago merely confirmed the boundaries or limits that had already been set.

There is perhaps a misapprehension in regard to the purpose of these forest reserves. The fact that a certain area is set apart as a forest reserve is not intended to be a guarantee that there is upon that area merchantable timber. If the matter is looked into I think it will be found that the reservations which have been made in the prairie part of the west have been made with a view rather of conserving the sources of water supply for the surrounding prairie than for the purpose especially of preserving the large timber growing upon the land. There are certain elevated portions of the prairie country, the Turtle mountains being one. The crest of this elevation is the source of water supply for the surrounding prairie and it was considered to be in the interest of the country that the timber covering these sources of water supply shoud be preserved so that the supply might be protected.

I repeat that the forest reservations are rather for the purpose of conserving the water supply of the surrounding prairie than for the mere purpose of protecting the timber that is growing on them, or even for the purpose of reproducing timber upon them. In regard to the removal of the squatters, it of course will be understood that they are not there by any legal right and that they are subject to ejectment by legal process. However, recognizing the hardship that might be inflicted, instructions given have been to the effect that every means to secure an amicable removal should be exhausted before any legal measures were taken. And if those parties went away from the reserve last fall it was because it suited them to go last fall according to the terms that were proposed to them, rather than remain until spring. The fact that some of the squatters on the reserve are still there and are only subject to go in the spring, is evidence that all might have remained there until spring had it so suited them to do. It may be possible that the offers made to these people in order to secure their removal have not been fully carried out. If they have not, the government is in fault and it will be my business to inquire very carefully into that matter and see that any promises made are fulfilled if they can be fulfilled, and if they cannot then something else that is as good or nearly as good will be provided. I can assure my hon. friend (Mr. Schaffner) that the matter will have my very best attention. And while carrying out the express will of parliament in establishing the reserve and in securing its clearance of settlers every effort will be made that the distasteful work shall be done with as little friction as possible. In regard to the suggestion made that the squatters hitherto there have been removed and other people have been permitted to come in and squat in their place, I do not think my hon. friend will treat that suggestion seriously. There is no foundation for such a suggestion and I am very sorry it should have been made. I can assure my hon. friend and the House that there is certainly no warrant for it. Once the squatters who have been in residence there for some time and who have acquired in some way some right of possession by reason of occupation, once they are dealt with, any one who comes on the reserve after that and undertakes to assume possession will be dealt with according to the letter of the law.

## FLOODS AT CHATHAM.

Mr. H. S. CLEMENTS (West Kent). Before you leave the Chair, Mr. Speaker, I want to draw the attention of the Minister of Public Works to a matter which I have already brought before the House on several occasions and which is a most import

ant matter to my constituents. I refer to the damage done by ice jams and floods on the Thames river and its vicinity and the great loss which is suffered by the people living in the locality. At the mouth of the river the water has risen on occasions to 27 or 28 feet because of the jamming of the ice, and vast damage has occurred. Two years ago I brought the matter to the attention of Mr. Hyman then Minister of Public Works, and he agreed with me that something should be done to avert the loss which annually occurs there. To-night I appeal to the present Minister of Public Works that he should send at once an ice breaker or tug to the mouth of the river to break up the ice for say five miles surrounding, and I believe that if that is done immediately there will be averted the loss of hundreds of thousands of dollars worth of property. I believe that the sending of an ice breaker there is the only possible way to provide a remedy at the present time, although, if I were to enter into the subject at length I might suggest some more permanent remedies. The ice is only 15 or 16 inches thick at the mouth of the river and the minister can procure a tug from Sarnia or from Detroit to run up there in half a day. At a comparatively trifling cost I believe the ice-jam could be broken up and the property of the people of Chatham and its vicinity saved from destruction. I have seen the suggestion made that the ice should be dynamited, but I think the minister who has had considerable experience will agree with me that it would be no use to dynamite ice in the condition that ice is in, and that the only prevention of this loss is by sending an ice breaker there. I ask the Minister of Public Works to give this matter his immediate attention.

Mr. D. A. GORDON (East Kent). I wish to supplement the remarks of the hon. gentleman (Mr. Clements). I know something of the conditions in that neighbourhood and I am satisfied that the best results will be obtained by getting a boat to break up the ice. I believe that at the present time it would be futile to attempt any other means of preventing an ice jam. I sometimes think that in the past the government has been to some extent responsible for these floods by allowing bridges to be erected over the river. In the city of Chatham the bridges have been undoubtedly an obstruction, so much so that far above the city we have seen 2 or 3 feet of water in the streets of the towns and villages along that stream. I do not think it would cost more than $1,000 or $2,000 to make the experiment which has been suggested, and I believe it would be successful. The greatest difficulty would be in getting a tug through lake St. Clair up there, as possibly the ice on the lake is more solid than in the river itself. But if a tug can be got there I think the results would be satisfactory. There have been many suggestions made to remedy this evil, but in my opinion if a cut off were put there to relieve the stream, the result would be much worse than if the stream was left to take care of itself and relief given in the way now suggested.

## FLOODS AT BELLEVILLE.

Mr. GUS. PORTER (West Hastings). Some two or three weeks ago in the absence of the Minister of Public Works I took occasion to call the attention of the government to a similar state of affairs existing in the city of Belleville. The trouble there is caused by anchor ice forming in the river. The ice comes down to a point where it reaches the harbour, and the harbour is so shallow there, that there is not sufficient current to carry the anchor ice out into the harbour. If the ice could float out into the harbour the water is of such depth that no damage would be caused. But when it comes to the shallow part of the harbour, the anchor ice sinks and forms a perfeet dam at the mouth of the river, the result being that the flow of water is entirely stopped, and that very soon freezes over. Once the river is frozen over, the water can find no escape except by flowing over the ice so formed and out over the banks of the river, with the result that the principal business houses in the city of Belleville, which are built along the banks of the River Moira, have their cellars flooded, the fires in their furnaces extinguished and a large amount of merchandise destroyed or damaged annually. Some years ago the government of the day was invited to make an investigation of the conditions existing there, with a view of determining whether or not something could be done to relieve the city from the difficulties which then existed and which continue to exist. An engineer of the department was sent to Belleville at that time, and what was termed an investigation was made; but what the result of that investigation was I have so far been unable to ascertain. Sufficient to say that nothing was done in regard to the matter unless it was upon the recommendation of the engineer that the harbour at that point should be deepened; because since that time some dredging has been done in the harbour. Various opinions have been expressed by those more or less competent to express an opinion as to how relief could be afforded, and it would require a very small expenditure of money to relieve the difficulty if any of the schemes which have been proposed would do it. Various means have been used by the city of Belleville. For instance, they have endeavoured to clear out the dam which is formed by the anchor ice, by using dynamite; but, as the hon. member for Kent has just said, it is utterly useless to attempt any relief in that direction; we have tried that to our perfect satisfaction. I may add that the harbour of

Belleville, being a Dominion harbour controlled by commissioners appointed by this government, the municipal council of Belleville have no jurisdiction, and are not able to do anything; but I have no hesitation in stating that the municipality would be very glad to do anything in their power to assist the government in affording the relief which is so much needed. It is necessary, I think, that an inspection of the harbour and the conditions existing there should be made at this particular time, when the river is very high and the ice is there, and when an expert engineer could better determine what should be done than he could at a season of the year when these conditions were not present. I would therefore urge the hon. Minister of Public Works, as I did the First Minister when I called attention to this matter before, that an expert be sent to make a complete and thorough investigation of the conditions, with a view to seeing whether some remedy could not be applied that would bring permanent relief from these disastrous floods to that section of the country.

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, I sympathize very warmly with the desire expressed by the hon. gentlemen who have spoken that relief should in some way be afforded to the respective towns to which they have referred. But of course, involved in this question is the very important one as to whether or not this is a matter for the federal government to deal with, or whether it should not be dealt with by the municipalities interested or by the province. Under the terms of the British North America Act there are certain fairly well-defined lines as between federal and provincial jurisdiction. As I understand the matter, neither in the case of Chatham nor in that of Belleville is the question of navigation in any way involved; and if the federal government were to assume the burden of breaking the ice by means of ice-breakers or of dynamiting the ice in all cases where there is danger of flooding, its obligations would be vastly increased, because it would be called upon from one end of this Dominion to the other to endeavour to do the same thing in many localities where at the present time the people interested look on the matter as one for the local authorities to deal with.

Mr. PORTER. Would the hon. minister permit me to repeat what I said, that the harbour of Belleville, where the relief is to be worked out, is within the jurisdiction of this government. Neither the municipality nor the local government would have any control or jurisdiction over it.

Mr. PUGSLEY. My hon. friend seeks to draw a distinction between the case of Belleville and the case of Chatham. If this is a matter that belongs to the harbour commissioners, they would of course have the power to borrow money from the government, and whatever they borrowed would become a charge, I presume, under the terms of the Act by virtue of which they have been appointed. But my hon. friend is asking me as Minister of Public Works to undertake this. There is no appropriation made by parliament that I am aware of which would enable me to undertake the work at the present time, and, as I have pointed out, there is the broader question involved as to how far the federal government should undertake this work of local improvement or of guarding different towns and cities from the danger of flooding. In many of the provinces of Canada there are similar dangers which will increase as towns and villages are built up along the banks of rivers, and the demands upon the federal treasury would, I fear, become so large as to prove very burdensome.

Mr. PORTER. But the commissioners are officers under the hon. gentleman's department, are they not?

Mr. PUGSLEY. No, they are appointed by the Department of Marine and Fisheries. It does seem to me that if this flooding can be prevented at a small cost, it would be better for the local authorities of Belleville and Chatham to take hold of the matter; and I am sure, so far as Belleville is concerned, that the harbour commissioners would assist the town council in doing whatever is reasonable and necessary in order to prevent the flooding of the locality. I do not say that I would not feel like recommending to the government that this should be done, but I do not think I ought to hold out hopes which might not be realized. It would be better for the local authorities to take the matter up in earnest, do the work which appears to be urgent and for which there is no appropriation at my disposal, and as regards future operations, the matter might be considered, but I hope the local authorities will not be induced by any words of mine to delay taking the steps necessary for the proper protection of property.

Mr. PORTER. Will the hon. gentleman send an expert from his department to look over the situation and recommend what ought to be done?

Mr. PUGSLEY. I will do that, and will be pleased to do the same with regard to the flooding of the Thames river at Chatham.

Mr. PORTER. And we will be given notice so that we may meet the expert?

Mr. CLEMENTS. I would like to say a word——

Mr. SPEAKER. The only motion is to go in to Supply and the hon. member has already spoken. He has no right to speak again without the permission of the House.

Mr. CLEMENTS. With the permission of the House I would say that the hon. minister hardly realizes the seriousness of the situation. Those who know the vicinity will agree that there is no other position so serious in the Dominion as that particular stream, and that trouble arises eighteen miles from the city of Chatham. You can hardly expect the city to undertake that work. It is beyond doubt a federal matter. The stream is a navigable one and the government spends large sums at its mouth every year. When the Hon. Mr. Hyman had charge of the department he knew the seriousness of this matter as he lived in London, and he undertook to get a tug to break the ice up, but unfortunately he was unable to get a tug. We are in the same position to-day. We fear a very severe flood, and I am satisfied that $300,000 would not pay for the loss of property, let alone the loss of life.

Mr. PUGSLEY. What does the hon. gentleman think the cost would be?

Mr. CLEMENTS. $500.

Mr. PUGSLEY. Is that too large an amount for the town of Chatham to spend for this very important work?

Mr. CLEMENTS. It is a federal matter, and it is hardly fair that Chatham should be put to the expense. When you consider the vast amount spent on ice-breakers throughout the Dominion there ought to be no objection to an expenditure of $500 to $1,000 in that section to avert so serious a calamity.

Motion agreed to, and House went into Committee of Supply.

To provide for the maintenance of vessels employed in patrolling the waters in the northern portion of Canada, also for establishing and maintaining police and customs ports on the mainland or islands as may be deemed necessary from time to time. $50,000.

Mr. FOSTER. We have had considerable discussion over that item, and whether we succeeded in getting much information from the minister I do not know. But I am a trifle curious for another little bit of information. Will the minister tell us what he proposes to do with this steamer on the voyage which is to cost $50,000 ?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). The steamer will start as soon as the ice will permit—probably about the beginning of July. Then it will go north and patrol the islands along Bylot island, Lancaster sound and all those islands around where there are some whalers carrying on their operations. It is proposed to go there specially for the purpose of collecting the licenses and customs duties, also to get a little more west than they went last year. It is proposed to go and reclaim three islands which are lying a little more west than the Magdalen islands. I laid on the table the other day the map. Then if there is some time left they will go a little more north.

Mr. FOSTER. When the hon. gentleman speaks about reclaiming islands does he mean that these are islands which have never been under the jurisdiction of Canada? In what way does he reclaim them?

Mr. BRODEUR. We assert our jurisdiction by doing the same as was done with regard to the islands visited last summer.

Mr. FOSTER. What was that?

Mr. BRODEUR. We put a flag upon the islands to assert our jurisdiction over them and we collected fishing licenses from the whalers.

Mr. FOSTER. How long does a flag stay there? Does it have to be replaced every year?

Mr. BRODEUR. The flag, I understand, is covered. It may stand there a great number of years.

Mr. FOSTER. Then the remaining question is this: We are spending $50,000 to collect something from the sealers and some customs. I had the idea that wherever it was possible to collect customs you had a customs officer taken from the Northwest Mounted Police and established him permanently there. But is it intended every year to send this steamer to collect customs and licenses of whalers? Or is it the idea that we should have certain posts in those waters where you would have a customs officer, say a mounted policeman, as at present? It is a very expensive method of collecting a few whaling licenses and some customs to send out this boat at a cost of $50,000. How long is this thing to go on? Is that $50,000 expenditure every year to be perpetual?

Mr. BRODEUR. The idea will be to establish later on a permanent post at Pond's inlet. The permanent posts now in existence are in the Hudson bay, but we propose to get one further north.

Mr. FOSTER. Does the vessel carry some mounted policemen?

Mr. BRODEUR. Yes, for the station at the entrance to Lancaster Sound.

Mr. FOSTER. How long does the minister think this large expenditure for patrol in these waters will have to be carried on?

Mr. BRODEUR. It is hard to say. If we have one post at the mouth of Lancaster Sound, I suppose it will cover all that territory. But we may be obliged to go further north. It depends altogether upon where the whalers go. It is proposed to go further west than Melville island to see the American whalers, as information reaches the de-

partment that there are American whalers off these western islands.

Mr. FOSTER. I should think that as jurisdiction has been asserted for several years, and there can hardly be any question of the whalers being law-abiding people, the service might be more cheaply performed. If it is understood that the whalers are going into Canadian territory and must pay a license and also their customs dues, I should think there must be points which they must pass where they could be required, by regulation, to call and take out their license, or they could take them out before they start. Arrangements might be made by which whalers going into these northern waters would be supplied with licenses at Bedford or Gloucester, or wherever else they start from.

Mr. BRODEUR. But we shall always require a vessel to go there to provision the other posts. I suppose the posts in the Hudson bay might be provisioned, to a certain extent, by the liners, so to call them, which come from the other side. But some whalers have not been reached yet, and the main object is to reach them. Captain Bernier tells me that there are fifteen whalers that used to go through from the west. It is proposed to go there and collect licenses and customs dues from these whalers, and then start a permanent post at Lancaster Sound.

Mr. FOSTER. Where do they start from, as a rule?

Mr. BRODEUR. San Francisco. And they go through by Behring sea.

Mr. FOSTER. Is there no way of meeting them on the other side?

Mr. BRODEUR. We have no jurisdiction there. They remain in the Pacific ocean and Behring sea until they establish themselves in the islands of the north.

Mr. BLAIN. I understand that the minister has had a new vessel constructed in the shipyards at Sorel. She is called the 'Rouville.' Is it intended to have this vessel engaged in patrolling the northern waters?

Mr. BRODEUR. No; for the time we shall use the 'Arctic.' The 'Rouville' has been used for the purpose of the service in the St. Lawrence, and we shall probably use her this year for the same service.

Mr. BLAIN. I understood the vessel was specially constructed for the purpose of patrolling the northern waters. Can the minister tell us why she was found to be such a dismal failure?

Mr. BRODEUR. She is a very much smaller boat than the 'Arctic.' It was intended to use her between the posts established in Hudson bay. She is not large enough to go into the open ocean.

Mr. FOSTER. The minister might bring down a statement of the licenses issued and the customs dues collected.

Mr. BRODEUR. I think I have that here. The total amount collected for licenses is $500 from ten vessels. The amount of customs is $1,180.

Mr. BLAIN. What is the result of the trial of the 'Rouville'? I understood that she did not turn out the sort of vessel she was supposed to be. The minister might tell us the crew placed upon her, and also whether she was a success in the speed trial or not.

Mr. BRODEUR. She gave a speed of 9½ knots. She has been giving satisfaction so far as speed is concerned.

Mr. BLAIN. What about the crew?

Mr. BRODEUR. It was an ordinary crew, selected mostly from people from Sorel and Quebec.

Mr. TAYLOR. Is she in the service now?

Mr. BRODEUR. Not now during the winter.

Mr. TAYLOR. Where is the 'Arctic' now?

Mr. BRODEUR. She is being overhauled at Quebec. The crew has been discharged, but the captain, the second mate and two watchmen are under pay.

Mr. BENNETT. Under the vote of expenses for schools of navigation—I was at home the other day, and I met Captain Cole of Collingwood, and I understood he was giving instructions to a class of mariners. Does the minister intend to establish a school for mariners at Midland like the one at Collingwood?

Mr. BRODEUR. The matter is under consideration.

Mr. BENNETT. There are a large number of mariners at Midland, and I think that place deserves a school as well as Collingwood.

Mr. ALCORN. Are there any islands or lands in those northern waters which the government has reason to believe are being claimed by the United States?

Mr. BRODEUR. We claim that all that territory forms part of Canada, and we are not aware that the American government is claiming any part of these lands as belonging to them. Many fishing boats are there, but they do not make any claim to the territory as belonging to the United States.

Mr. ALCORN. I understood that Captain Bernier had stated that some of the islands up there were claimed by some other power, I do not know what power.

Mr. BRODEUR. There is no report to that effect in the department.

Mr. BENNETT. I moved for a return in reference to the payment of $3,900 last year to the Marine Towing and Wrecking Company, for removing the dredge 'Tasmania' at Lime Kiln Crossing, and the minister brought down the return to-day. There are two tenders, the Reed Wrecking Company at $6,000, and the Midland Wrecking Company at $3,900. I do not think the work was properly advertised. A few bills were issued which were posted in the customs houses. Any work for the removing of wrecks should be better advertised. I think notice in a Windsor newspaper would have called out more competition. In addition to the notice being placed in these custom houses, a bill was sent to each one of these two concerns as well. I think in future, having knowledge of the foxy character of these mariners, it would be better to advertise the work more publicly.

Mr. BRODEUR. I found the practice in the department was to advertise in this way for the removal of wrecks, that is to say, notices were sent out to the different ports and posters were distributed for the information of the public. I am told this practice has given general satisfaction. However in cases where the contract involves a large sum, it is proposed to advertise in newspapers as well.

Mr. FOSTER. The first item in 210 is contentious, that is, regarding the St. Lawrence ship channel; the minister might take the next one.

Mr. BRODEUR. The hon. member for North Toronto has asked me for a return showing the amount of money which has been spent for the board of each man on these steamers. This report has taken some time to prepare because we had to ascertain how long each of these vessels had been in the service. In the meantime there are the cases of the 'Minto,' the 'Stanley' and the 'Champlain' carrying passengers. I do not know how it would be possible to separate the amounts spent for the crew and the amount spent for passengers. If my hon. friend would be satisfied with the other vessels, without including these passenger vessels, the report might be ready immediately.

Mr. FOSTER. Bring down that part of it and the other later.

Purchase of yard property at Sorel (revote), $30,000.

Mr. BRODEUR. The Public Works Department have made a contract with the McCarthy estate for this property at Sorel. It was in the nature of a lease, while at the same time we had the right to purchase the property. But the matter has never been adjusted, and I am taking this vote to get it adjusted.

Mr. FOSTER. How many acres in the property?

Mr. BRODEUR. About 50 acres, all from the McCarthy estate.

Mr. BLAIN. Are there any middlemen in this purchase?

Mr. BRODEUR. No, the negotiations are carried out directly between the director of the ship yard and the estate.

Amount required for permanent piers in Lake St. Peter, $100,000.

Mr. BRODEUR. The intention is to spend that money in the construction of piers at Grondines and near Cap La Roche. We started the construction of these piers some years ago in Lake St. Peter and vicinity. We have built a large number of piers in Lake St. Peter near Port St. Francis and this year it is proposed to finish the pier at Port St. Francis and to build piers at Grondines, Batiscan and Cap à La Roche.

Mr. FOSTER. What is the purpose of these piers in the middle of Lake St. Peter?

Mr. BRODEUR. There are three piers which serve for the crossing from Nicolet to the middle of Lake St. Peter and then there are piers from the middle of Lake St. Peter to Stone Island.

Mr. FOSTER. For the crossing ?

Mr. BRODEUR. Yes, we put lights upon these piers.

Mr. BENNETT. Where is the expenditure of last year to be found in the Auditor General's Report ?

Mr. BRODEUR. Mr. Fraser informs me that it was not kept separately in the Auditor General's Report last year.

Mr. TAYLOR. Does it appear in any statement of expenditure ?

Mr. BRODEUR. Yes, at page P—87 under 'Nicolet, Que., $26,795.83.'

Mr. TAYLOR. But it is chargeable to 'construction of lights, aids to navigation, &c.' ?

Mr. BRODEUR. The auditor put all these expenditures under this heading. The money is taken out of the vote for 'construction of lights, aids to navigation, &c.' for Isle du Pads, page P—85 and Isle du Moine P—85.

Mr. TAYLOR. But my hon. friend will see that we voted a very large sum for 'construction of lights, aids to navigation, &c.' last year and this is chargeable against that fund.

Mr. BRODEUR. Well, they are piers upon which we put lights.

Mr. TAYLOR. But this is all taken out of the vote for the construction of lights and aids to navigation. My hon. friend is asking for $100,000 when $120,000 was voted last year for the ship channel. There does

not appear to be any statement of the expenditure of that $120,000.

Mr. BRODEUR. The auditor has not kept any special account for that purpose. He put all these expenditures under the heading of 'construction of lights and aids to navigation, &c.'

Mr. BENNETT. How many items of this kind were there last year ?

Mr. BRODEUR. We will start at the beginning and go through the list as follows : Gallia Bay, P—83 ; Gentilly, P—83 ; Isle au Raisins, P—84 ; Isle des Barques, P—84; Isle du Moine, P—85, Isle du Pads, P—85, and Nicolet, P—87. These are all charged against the vote for the construction of piers in Lake St. Peter.

Mr. FOSTER. Are these built by tender and contract ?

Mr. BRODEUR. Most of this work is done by day's labour. Colonel Anderson is strongly of the opinion that it is less expensive for us to do it in that way than by contract. It is in the St. Lawrence and the stone, cement and all the materials have to be carried out from the mainland to these works. This requires boats, we have our own equipment for it and it is considered to be less expensive to do it in that way.

Mr. FOSTER. Is that Colonel Anderson's opinion ?

Mr. BRODEUR. Yes.

Mr. BLAIN. Is the material bought by public tender ?

Mr. BRODEUR. Yes, the cement and stone are bought by tender.

Mr. TAYLOR. If the hon. gentleman will look at the Estimates he will see that $1,360,000 was voted last year for the construction of lighthouses and aids to navigation including apparatus, submarine signals and providing suitable boats for carrying on construction work in the gulf of St. Lawrence and elsewhere in the Dominion. In the Auditor General's Report, at page P—78 and following on to page P—99, will be found the accounts in which are included these wharfs or piers that the hon. gentleman refers to. The expenditure was $1,162,000, so that there was a surplus left from that vote, not interfering with the $120,000 which was voted in the other items.

Mr. BRODEUR. I think my friend has taken the vote for 1908-9. This money was expended during 1906-7 and I do not think he will find it under the heading of 'construction of lighthouses' of that we had a vote of $1,162,000 in 1906-7. We took a vote for these special piers which are mentioned under the 'St. Lawrence ship channel' but I see that the Auditor General has put all the expenditures together in his report.

Mr. TAYLOR. But the whole thing only amounts to $1,162,000 up to the 31st March, 1907.

Mr. BRODEUR. I do not think we had a vote of $1,162,000 for the construction of lights for the year 1906-7.

Mr. TAYLOR. This is for 1907-8.

Mr. BENNETT. You have a tug called the 'Hackett' hired at $25 a day, amounting, for 62 days, to $1,550. What is the size of that tug?

Mr. BRODEUR. I am told she is about 90 feet long.

Mr. BENNETT. That seems an enormous price to pay for a tug. Are tenders invited for furnishing tugs?

Mr. BRODEUR. Mr. Fraser tells me that this is the cheapest tug he could get. She is a very powerful boat, and we have a regular contract with the owners.

Amount required to provide for the completion and construction of dredging plant for the River St. Lawrence from Montreal to Father Point, $213,000.

Mr. BRODEUR. It is proposed with this vote to construct a new dredge to be used at Cap à la Roche, where we have been dredging for some time. This will be a more powerful dredge to cope with the material there, which is shale rock.

Mr. FOSTER. How much will she cost?

Mr. BRODEUR. $150,000. She is being built in our own yards at Sorel.

Mr. BENNETT. We purchased a dredge called the 'Galveston' for $150,000 ; what about the 'Galveston'?

Mr. BRODEUR. The 'Galveston' was built in Europe and sent to Galveston, Texas, but was not suitable for the work on the Mississippi. She was almost new, and we got her for $140,000, which was much less than cost. She was purchased by Mr. Cowie, our chief engineer, who went to Galveston for that purpose. She is a suction dredge, and has been giving the best satisfaction we have ever had from a dredge. I am told she has done as much as 10,000 yards a day in coarse sand.

Mr. BENNETT. You had better get a dredge like that on the Georgian bay.

Mr. FOSTER. The new dredge is to cost $150,000 ; what do you do with the rest of the vote?

Mr. BRODEUR. A stone lifter will be built at Sorel, which will cost about $30,000, and then there is the expense of running the dredge for a portion of the year if she is completed in time.

Mr. TAYLOR. Between last year and this you got a vote for $400,000 for this purpose.

Mr. BRODEUR. We completed a vote last year which is to be used for dredging at Beaujeu Bank, opposite Montmagny. We have been requested by the Canadian Pacific Railway and by the Shipping Federation to dredge this place, which has only 22 feet of water at low tide, and which is the only part of the St. Lawrence below Quebec which has not 30 feet. The dredging will be one mile in length and one thousand feet in width.

Mr. BENNETT. Will the 'Galveston' throw out soft sand?

Mr. BRODEUR. Soft sand and soft clay, but the material at Beaujeu Bank is coarse sand. At this place the salt water meets the fresh water, and a deposit of sand is constantly being made, and it became necessary to dredge there in order to obtain a depth of 30 feet.

Mr. FOSTER. Where do you put the sand that you take out?

Mr. BRODEUR. It is put towards the shore of Montmagny, deposited there by the dredge itself.

Mr. BENNETT. Is this similar material to what is taken out at Port Arthur and Fort William?

Mr. BRODEUR. The officer does not know the material taken out at Port Arthur and Fort William.

Mr. BENNETT. As I understand, it is soft clay and sand, and at 10 cents a yard this boat would do $10,000 worth of work per day.

Mr. BRODEUR. I do not think a dredge like the 'Galveston' could dredge there; it is clay. It could be done perhaps with the 'Tarte,' which has a knife to cut the material and raise it by suction.

Mr. BENNETT. How much will the 'Tarte' lift per day?

Mr. BRODEUR. 30,000 yards.

Lighthouses and coast service—salaries and allowances to light keepers, $300,000.

Mr. BRODEUR. The increase is for the purpose of giving the ordinary increases to the light-keepers. I may say that I have given instructions to have a classification of all the lighthouses in the country. I found that there was no regular system of fixing or increasing salaries. Colonel Anderson is now working on that, and it will soon be completed. We have officers from different parts of the country coming here and conferring as to how that classification should be made.

Mr. TAYLOR. If my hon. friend will look at what this service cost previous to the introduction of this new lighting system, he will find that he is paying much more now. We had the promise from the minister that when the acetylene gas service was established there would be a very large saving, because the lightkeepers would be practically dispensed with altogether. Yet the hon. gentleman has practically the same staff now as he had before. The only lightkeepers in the whole system who have been suspended, so far as I know, have been three or four in the Thousand islands.

Mr. BRODEUR. There must be some misunderstanding on that point, because we cannot dispense with light keepers. There has never been any proposition for getting rid of them. They are an absolute necessity.

Mr. BENNETT. When the matter was discussed both by Mr. Prefontaine and Mr. Sutherland it was plainly held out that where three or four lighthouses were contiguous one man would be able to do the work of three or four men. Now it turns out that all these lightkeepers are going to be kept. I heard that some of these lights in the St. Lawrence went out owing to the fact that the lightkeepers left the lighthouses for weeks at a time. Under the oil system the men had to stay at the lighthouses day and night. The western light, the most important in the whole of Georgian bay, is lighted with carbide.

Mr. BRODEUR. At one time it was proposed to instal that system in some parts of the St. Lawrence between Kingston and Montreal, but in the other parts of the country we are having the same light keepers we have always had. I understand, however, that at certain places between Montreal and Kingston three or four lights have been grouped together and one man has been put in charge of them.

Mr. TAYLOR. The hon gentleman's predecessor promised that the lighthouses would not cost as much as formerly, but we have just as many as ever. On the route between Kingston and Montreal we have the 'Scout' with a big crew and the 'Reserve' with another big crew and a tug with a floating blacksmith shop looking after the same number of lights and the same number of lighthouses. This is simply for the purpose of giving an opportunity to the government to purchase from some of their own ministers who are stockholders in the manufacture of acetylene gas, and put the country to these millions of dollars of expense. And the system is no better than the coal oil system. There are just as many accidents as under the old system. In fact, the mariners say that the acetylene gas is not as good in summer as the coal oil because in some places the men do not pay attention to the lights. They are covered with flies and there is no one to look after them.

Mr. BRODEUR. My hon. friend is certainly labouring under a false impression.

He is referring to the lighthouse keepers on the St. Lawrence.

Mr. TAYLOR. Between Montreal and Kingston.

Mr. BRODEUR. I am informed that the number of lightkeepers has been decreased.

Mr. TAYLOR. Yes, three or four put off.

Mr. BRODEUR. There were 35 stations from Montreal to Kingston in 1895-6 and now there are only 25. On the other hand, there were 44 lights then and now there are 50, while the keepers' salaries were $8,090 in 1896 and now they are only $5,930. In the country generally we have the same lightkeepers and we have been obliged to increase largely, at the request of the marine associations, the number of lighthouses and gas buoys also. The system of acetylene gas buoys has given great satisfaction. My hon. friend may consult the marine association, the shipping federation and the Canadian Pacific Railway and he will find that all mariners without exception, are pressing loudly on the government for the installation of new lights. We have increased very materially the number of lights, and we are carefully studying all the requests made to us for these improvements to navigation. If my hon. friend will read the papers to-night he will find that our system of gas buoys is now being adopted by the British authorities in the Mersey. Canada was the first to adopt that system and now it is being adopted by so high an authority as the Mersey Dock Association. The American government have purchased acetylene gas buoys for New York and some other ports of the United States. Brazil government, the Argentine Republic, and some other countries, have been purchasing these buoys manufactured in Canada. The government should be commended because it has been the first to instal in Canada this automatic gas system.

Mr. GAUVREAU. (Translation.) Must I understand that Colonel Anderson is employed only on the classification of the lighthouses; or is he not also looking after the classification of the salaries which is going on presently in the department?

Mr. BRODEUR. (Translation.) The salaries will necessarily be fixed according to the classification of the lighthouses. The intention of the department is to classify all the lighthouses according to their importance, the locality and the means of access. Once this classification is established the salary of the guardian will be fixed according to the importance of the lighthouses.

Mr. GAUVREAU. (Translation.) I would not like to do anything that would look as obstruction, but the hon. the minister knows the interests I am taking towards these public servants. I would like to know if he really believes that in the near future—say for during the next season of navigation—he will be in a position to increase the salaries of these employees.

Mr. BRODEUR. (Translation.) My hon. friend will see that we have an increase of $15,000 in the estimates of this year. This sum will be employed for the increase of the salaries as soon as the classification will be finished.

Mr. WM. JACKSON. I would draw the attention of the minister to the condition of some of the lights on the north shore of Lake Erie. I have referred to Port Stanley. Up to a few years ago the light filled the bill there all right, but within the last few years the village has installed an electric light plant and since then the electric lights are stronger than the lighthouse lights, and I am informed by captains that it is consequently very difficult to make Port Stanley harbour, as it is very difficult for them to distinguish this navigation light from the other lights. There are hills around Port Stanley and the electric lights are stronger than the old lights. The light at Port Stanley should be made stronger as it is a very difficult harbour to make on a dark night.

Mr. BRODEUR. This has been brought to the attention of the department and will be referred to the lighthouse board for consideration.

Mr. LAW. Is this vote large enough to allow of a general increase to the lighthouse keepers?

Mr. BRODEUR. Yes, it is proposed to give increases of salaries to the lighthouse keepers. Last year there was an amount voted for that purpose, but the classification of the lights was not completed. As soon as it is completed, we will give an increase of salary to a large number of lighthouse keepers.

Mr. LAW. If there is any class in the Dominion in the employ of the government who require an increase in salary it is the lighthouse keepers. Complaints no doubt are sent to the department, as they are made to me by the lighthouse keepers in my county. I know of cases where men are getting $325 a year, living away from the mainland with large families on this mere pittance. It is a disgrace to the government and to the department. One of the most important lights on our coast is at Port Yarmouth. That light requires the services of two skilled engineers besides a helper, and all they get among them is the sum of $800. When it comes to dividing $800 among two men and a helper, that leaves a very small salary to the lighthouse keeper.

Mr. SINCLAIR. If the lighthouse keepers on the coast in my constituency receiv-

ed such princely salaries as $300, they would think themselves fortunate. Some are paid $150 and a great many $200 or $250. It is not creditable to the department or to the country that we have allowed this to go on for so many years. Many of these men are retired sea captains, reliable men, who give all their time to our business. These men are called to task for the slightest neglect of duty, notwithstanding that they are paid such miserable salaries. I have drawn this matter to the attention of the department a number of times. I am glad that my hon. friend from Yarmouth (Mr. Law) has spoken as he has done. I hope another year will not be allowed to pass without something being done to improve the position of these faithful men who are engaged in such important duties. With regard to the progress made in the lighting service, I must bear testimony to what the minister has said. I think we have every reason to be proud of the splendid work of the department in lighting the coast. You need no better illustration of this than to go up the St. Lawrence on our side of the channel from Prescott to Kingston, and then take the American side on the way down. You will be struck with the improvement we have made over our neighbours in lights. The gas buoys along the coast of Nova Scotia, in my constituency and in the constituency of Halifax, are most useful and most acceptable to the mariner.

Mr. TAYLOR. In view of what my hon. friend (Mr. Sinclair) has said about the St. Lawrence, how does he explain the fact that twenty vessels go down the American side for one that goes down our side?

Mr. JOHNSTON. I do not wish to delay the vote, but merely to add my voice to those that have already been heard in favour of at least some increase in the salaries of the lighthouse keepers. At the same time, I would like to warn the minister——

Mr. FOSTER. If this matter is to be discussed, it would be better to adjourn now. Evidently hon. gentlemen are interested in the matter and wish to spend time upon it.

Mr. JOHNSTON. I have very little to say. I do not know what classification of lightkeepers the minister has in his mind, but I understood that it was based on the idea of giving salaries according to the power of the light which is to be kept. I want to impress upon the minister the fact that the keeper of the small light, owing to the location, may have just as important duties as the keeper of the powerful light, and he has to spend his time in our service in just the same way.

Some resolutions reported.

On motion of Mr. Fielding, House adjourned at 12.30 a.m., Wednesday.

Mr. SINCLAIR.

## HOUSE OF COMMONS.

WEDNESDAY, March 11, 1908.

The SPEAKER took the Chair at Two o'clock.

### QUESTIONS.

### COST OF HOUSE OF COMMONS AND SENATE.

Mr. FOSTER—by Mr. Blain—asked :

What was the cost, outside of the indemnity, of the House of Commons and Senate, respectively, for the sessions of 1905 and 1906-7?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) :

No rule, or standard, exists by which the sessional expenses of parliament can be distinguished from the annual.

Speaking generally, it may be said that all the parliamentary expenses of the year are for the purposes of the session.

The following presents an estimate of the cost, outside of the indemnity, of the House of Commons during the sessions 1905 and 1906-7 respectively, based upon a pro rata calculation and a deduction of the charges which are deemed to be of a permanent nature :—

| — | Sessions. | |
|---|---|---|
| | January 11 to July 20, 1905. | November 20 to April 27, 1906-7. |
| | $ | $ |
| Speaker | 4,000 00 | 4,000 00 |
| Deputy Speaker | 2,000 00 | 2,000 00 |
| Permanent Officers' salaries | 41,753 40 | 34,867 33 |
| Indexing Journals | 1,400 00 | |
| Committees, Sessional and Extra Clerks, &c. | 42,099 28 | 36,171 97 |
| Contingencies | 42,922 21 | 31,240 48 |
| Publishing debates | 90,999 50 | 59,644 37 |
| Sergeant at Arms branch (including the permanent messengers and charwomen, sessional and extra charwomen, pages, servants, messengers and attendants and other items | 64,445 02 | 42,967 31 |
| Total | $289,619 41 | $210,891 46 |

The above statement does not include expenditure by the Department of Public Works, nor the printing of parliament.

The inquiry as to cost of Senate will stand as notice of motion.

## SASKATCHEWAN VALLEY LAND COMPANY.

Mr. LAKE asked :

1. Had the Saskatchewan Valley Land Company fulfilled all the conditions on or before the 24th May, 1907, entitling them to purchase 250,000 acres of even-numbered sections in accordance with their contract with the government ?

2. If not, in respect of how many acres were the conditions fulfilled at that date.

3. Have all the lands they were entitled to purchase at that date been selected, and have patents been issued for them? If not, what was the cause of the delay?

4. Have they earned, selected, or been allowed to purchase any even-numbered sections since the 24th May, 1907? If so, how many?

5. Has the whole land grant of 860,000 acres, more or less, acquired from the Qu'Appelle, Long Lake and Saskatchewan Railway Company been selected and patents issued to the company? If not, how much still remains to be patented, and what is the reason of the delay?

Hon. FRANK OLIVER (Minister of the Interior) :

1. Yes.

2. Answered by No. 1.

3. Yes, but patents have not been issued for all lands selected, pending the final adjustment of the account.

4. No.

5. All the lands selected by the Saskatchewan Valley Land Company, Limited, on account of the area assigned to it by the Qu'Appelle, Long Lake and Saskatchewan Railroad and Steamboat Company have been patented except one parcel which is selected. The area yet due the company is 251·19 acres. This small area has been held pending the final adjustment.

## POST OFFICES BUILT SINCE 1904.

Mr. VERVILLE asked :

1. How many post offices have been built since 1904?

2. In what places?

3. What has been the cost of each one of them?

4. (a) How many are now under construction; (b and c) in what places, and at what cost?

Hon. RODOLPHE LEMIEUX (Postmaster General) :

1. Ten.

2 and 3.

| Name. | Expenditure. |
|---|---|
| Antigonish, N.S. | $ 7,915 11 |
| Canso, N.S. | 20,690 50 |
| Souris, P.E.I. | 19,740 07 |
| Hawkesbury, Ont. | 22,230 11 |
| Sandwich, Ont. | 20,043 08 |
| Toronto, Postal Station 'F' | 114,108 46 |
| Wingham, Ont. | 31,860 27 |
| Calgary, Alta. | 106,861 58 |
| Moosejaw, Sask. | 39,859 35 |
| Prince Albert, Sask. | 103,965 74 |

4. (a) Thirty-one.

(b) and (c).

| Name. | Amount of Contract. |
|---|---|
| Chicoutimi, P.Q. | $ 22,472 00 |
| Lévis, P.Q. | 22,000 00 |
| Winnipeg, Man. | 529,485 00 |
| Inverness, N.S. | 14,559 00 |
| Iberville, P.Q. | 8,150 00 |
| Montreal, Postal Station 'B' | 57,500 00 |
| Montmagny, P.Q. | 5,725 00 |
| Nicolet, P.Q. | 14,500 00 |
| St. Johns, P.Q. | 28,000 00 |
| North Bay, Ont. | 33,879 00 |
| St. Marys, Ont. | 22,500 00 |
| Medicine Hat, Alta. | 25,550 00 |
| Regina, Sask. | 162,362 00 |
| Vancouver, B.C. | 434,500 00 |
| Bridgewater, N.S. | 23,500 00 |
| Glace Bay, N.S. | 34,500 00 |
| Shelburne, N.S. | 22,500 00 |
| Westville, N.S. | 12,997 00 |
| Lachute, P.Q. | 14,971 00 |
| Montreal, P.Q. | 487,537 00 |
| Kincardine, Ont. | 17,700 00 |
| Owen Sound, Ont. | 63,424 00 |
| St. Boniface, Man. | 20,255 00 |
| Selkirk, Man | 24,000 00 |
| Winnipeg, Postal Station 'B' | 46,500 00 |
| Saskatoon, Sask. | 64,500 00 |
| Edmonton, Alta. | 214,552 00 |
| Cumberland, B.C. | 25,000 00 |
| Fernie, B.C. | 43,750 00 |
| Simcoe, Ont. | 25,400 00 |
| Maple Creek, Sask | 20,600 00 |

## HOMESTEAD ENTRIES.

Mr. LAKE asked :

In respect of the northwest quarter of section 35, township 31, range 6, west of second meridian, what is the history of this land in regard to homestead entry, applications for cancellation, sales or otherwise, and the names, dates, considerations, &c.?

Hon. FRANK OLIVER (Minister of the Interior) :

The northwest quarter of section 35, township 31, range 6, west of the 2nd meridian was homesteaded by Dimitry Soochochen, a Doukhobor, 27th April, 1903; abandoned by Dimitry Soochochen 27th June, 1905.

Halfbreed scrip located on south half of the quarter by Annie Isabel Sinclair 5th August, 1905. Assigned by her to M. O. Ramsland and patented to him 26th February, 1906.

North half of the quarter homesteaded by M. O. Ramsland 5th August, 1905.

North half abandoned by M. O. Ramsland 29th April, 1907.

Half-breed scrip of Moses Berger located on north half of the quarter 7th June, 1907. Assigned to M. O. Ramsland and patented to him 19th August, 1907.

ROBBINS IRRIGATION COMPANY.

Mr. AMES asked :

1. What amount has been expended to date on works erected and established by the Robbins Irrigation Company under the provisions of the Northwest Irrigation Act?

2. Has the said company completed purchase and taken title of any part of the lands applied for? If so, to what extent?

3. Have letters patent been issued to the said company or to any person on its behalf for any portion of the said lands? If so, to what extent?

Hon. FRANK OLIVER (Minister of the Interior) :

1. The government has not been officially notified as to the expenditures made in construction work by the Robbins Irrigation Company. An inquiry of the Southern Alberta Land Company as to the nature of work done brought the reply that the company had spent $55,000 to date in surveys and other work.

2. No.

3. No.

FRENCH TREATY—SHIPMENTS FROM CANADA.

Mr. MONK asked :

1. Under article viii. of the French Treaty of 1907, will goods, the product of Canada and granted the benefit of the French minimum tariff, shipped from Canada to France via Liverpool or Glasgow, be subject to the 'surtaxes d'entrepot,' provided by the French customs law, against products of a non-European country imported into France from a European country?

2. Will it be possible, under article viii. of said treaty of 1907, for goods the product of Canada, which enjoy the benefit of the French minimum tariff, as provided in the treaty, to conserve the benefit of the said tariff, even if shipped from Canada to France through the port of a country enjoying in part only the benefits of the French minimum tariff?

Hon. W. S. FIELDING (Minister of Finance) :

1. The surtaxes d'entrepôt under the French Customs law apply to Canadian goods shipped from ports in the United Kingdom to France. But such products of Canada as are granted the benefits of the French minimum tariff under the Franco-Canadian Convention of 1907, would not be subject to such surtaxes if carried by ship from a Canadian port to a port in France via a port in the United Kingdom without transhipment in the United Kingdom.

2. In the opinion of the government, the products so shipped would not be entitled to the benefits of the treaty. In the first part of Article viii. respecting the conveyance of French products to Canada by way of a country enjoying the Intermediate Tariff, we hold that the words 'Intermediate Tariff' mean the whole Intermediate Tariff, and not a part of it. The same view would necessarily apply to the second part of the article respecting the conveyance of Canadian products to France by way of a country enjoying the French Minimum Tariff. The words 'French Minimum Tariff' would in this view mean the whole minimum tariff, and not a part of it.

MONTREAL DIRECTORY.

Mr. LEONARD—by Mr. Monk—asked :

Why is not the Montreal Directory for the present year in the Parliamentary Library, as are those of the other cities?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister):

I am informed by the clerk of the House that the Montreal Directory for 1907-8 is to be found in the library.

LAW AGENTS FOR GOVERNMENT, P.E.I.

Mr. A. A. McLEAN—by Mr. Taylor—asked :

1. Who were law agents for the Dominion government in the years 1904, 1905, 1906 and 1907, in Prince Edward Island?

2. Were they paid by salary or fees?

3. How much did each receive for the years 1906 and 1907 for salary or fees?

Hon. A. B. AYLESWORTH (Minister of Justice) :

1. F. L. Haszard, K.C., of Charlottetown. Occasionally other lawyers have been retained in special cases or a special class of cases.

2. By fees.

3. For the fiscal year ending June 30, 1906, $2,503.06 ; for the fiscal year ending March 31, 1907, $109.18. The amounts paid to the other lawyers retained in Prince Edward Island will be found in the Auditor General's Reports collected under the heading of 'Legal expenses and taxed costs.'

DREDGING THE SPANISH RIVER.

Mr. BOYCE—by Mr. Taylor—asked :

1. What amount of money has been expended by the government in taking levels, preparing plans and obtaining information, regarding the dredging at the mouth of and along Spanish river?

2. What is the estimated amount required to complete the work according to plans ?

3. Has the work been commenced? If not, when is it the intention of the government to commence it, and how long will it take to complete it?

4. What representations by public bodies were made to the government as to the necessity for this work, and have any counter representations been made with respect thereto? If so, by whom, when, and how have they been dealt with?

Hon. WM. PUGSLEY (Minister of Public Works) :

1. $752.62.

2. $52,347.50.

3. (a) No.

(b) The matter is receiving the careful attention of the department, but I am un-

able to state when the work will be commenced.

(c) A year at least will be required to complete work according to what is proposed.

4. Several petitions presented in favour of doing the work, but no counter petitions received.

EMBARGO ON CANADIAN HAY AND STRAW.

Mr. ARMSTRONG asked :

1. Is the government aware that the British parliament has placed an embargo on Canadian hay and straw?

2. If the government is advised regarding this embargo, what action has it taken in regard to the matter?

Hon. W. S. FIELDING (for the Minister of Agriculture). No. The Minister of Agriculture cabled the High Commissioner on the 5th instant for information respecting the press report on the subject. An answer was received on the 6th instant stating that the importation of hay and straw from many countries had been prohibited but that Canada was not included in the list of countries scheduled. The High Commissioner was assured of this by the board of agriculture.

JAMES WAUGH, IMMIGRATION AGENT.

Mr. CLEMENTS—by Mr. Taylor—asked:

1. Has James Waugh, immigration agent, refunded to the Interior Department $556 which the government have demanded ?

2. If not, is it the intention of the government to take action for the recovery of the money? If not, what does the government intend doing in the matter?

Hon FRANK OLIVER (Minister of the Interior) :

1. No.

2. If such action becomes necessary, yes.

O. B. SMITH, WINNIPEG.

Mr. STAPLES—by Mr. Taylor—asked :

1. Is Mr. O. B. Smith, of the city of Winnipeg, employed by the government?

2. If so, in what capacity, and what remuneration has he received for his services?

3. What are the several items of the total amount he has received ?

4. How long has he been in the employment of the government?

Hon. FRANK OLIVER (Minister of the Interior). As far as the Department of the Interior is concerned,

No.

As far as the Department of Indian Affairs is concerned,

No.

PROFESSOR SHORTT AND INDUSTRIAL DISPUTES.

Mr. SPROULE—by Mr. Taylor—asked :

1. In what cases has Professor Shortt acted as chairman under the Industrial Disputes Investigation Act?

2. What amount of money has he received for such service?

3. What is his per diem allowance?

4. Is he an employee of the Dominion government?

Hon. RODOLPHE LEMIEUX (Minister of Labour) :

1. (a) Grand Trunk Railway Company of Canada and machinists; (b) Grand Trunk Railway Company of Canada and locomotive engineers; (c) Canadian Pacific Railway and railway telegraphers; (d) Grand Trunk Railway Company of Canada and railway telegraphers; (e) Canadian Northern Railway Company and firemen, enginemen and hostlers; (f) Grand Trunk Railway Company of Canada and carmen; (g) McKinley-Darragh Mining Company of Cobalt, Ont., and employees; (h) Dominion Coal Company of Dominion, C.B., and employees.

2. Fees as chairman, $640; expenses, $248.45.

3. Twenty dollars per day, as provided by section 51 of the Industrial Disputes Act.

4. No.

While the above sums represent the amounts paid Professor Shortt for services and expenses in connection with various boards, there remain yet unpaid a number of accounts relating to recent boards. It should be mentioned also that Prof. Shortt accepted the chairmanship of several of these boards only on the urgent desire either of the parties concerned or of the Minister of Labour, the work imposed on him by successive investigations having proved a serious interference with his normal duties and engagements.

LAND GRANTS TO RAILWAY COMPANIES.

Mr. AMES asked :

1. What railroad companies have been permitted to satisfy their grants by the selection within the area embracing townships 24 to 36, inclusive, ranges 9 to 29, west of the 3rd meridian ?

2. What is the quantity of land granted to each of said railroad companies within this area?

3. Have any other companies, besides railway companies, been permitted to purchase, or otherwise obtain, odd-numbered sections, exclusive of school lands, within said area? If so, what are the names of the companies, and the number of acres granted?

Hon FRANK OLIVER (Minister of the Interior) :

1. Souris branch of the Canadian Pacific Railway permitted to select in townships 35 and 36, ranges 9 to 29 west of the 3rd meridian.

Canadian Northern Railway permitted to select in townships 27 to 34 inclusive, ranges 9 to 29 west of the 3rd meridian.

Manitoba and South Eastern Railway

permitted to select in townships 27 to 34 inclusive, ranges 9 to 29 west of the 3rd meridian; townships 24, 25 and 26, ranges 28 and 29 W. 3rd, and townships 35 and 36, ranges 13 to 28 inclusive, W. 3rd.

2. Souris branch of the Canadian Pacific Railway did not select any land.

Canadian Northern Railway selected 888,479·04 acres.

Manitoba and South Eastern Railway selected 235,371·10 acres.

3. The Grand Trunk Pacific Town and Development Company has been permitted to purchase all 31, township 35, range 14, W. 3rd; S.W.¼ 5, township 36, range 14, W. 3rd; all 1, township 36, range 15, W. 3rd—1,440 acres.

CENTRAL RAILWAY OF CANADA.

Mr. AMES asked:

1. Has parliament granted a charter to a company known as the Central Railway of Canada for a line from Hawkesbury to Ottawa?

2. Did the said company make a deposit with the government at the time when the charter was granted? If so, for what amount?

3. Is this guarantee sum still intact in the hands of the government?

4. Is the government aware that many persons engaged upon survey and other work in connection with said railroad have not yet been paid for services rendered?

5. Is it the intention of the government to use any portion of the guarantee fund for the payment of legitimate claims against the said company?

6. Under what Act has the company secured its rights of construction?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Yes.

2. Yes; $25,000.

3. Yes.

4. Yes, several claims have been sent in.

5. No, there is no way at present by which this money can be retained or dealt with by the government to pay claims against the company.

6. Section 6 of 4 and 5 Edward VII., chapter 79.

DREDGING IN HOLLAND RIVER.

Mr. BENNETT asked:

Who was the divisional engineer, and who was his assistant, by whom dredging operations on the Holland river, Trent Valley Canal, were supervised?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). A. T. Kerr was divisional engineer and his assistant was E. E. Malone. The latter's services were not required very much, as the work in connection with the dredging was looked after by Mr. Kerr himself.

SOREL PAY-ROLLS, &c.

Mr. BENNETT asked:

1. Was an inquiry instituted by the Department of Marine within the past two years as to certain suspected improprieties at Sorel in the years 1905, 1906, 1907, in the matter of bogus or padded pay-rolls and non-delivery of broken stone, cement and other articles by contractors or others?

2. If there was an inquiry, who conducted same, and has a report of findings been made to the department? If such report was made, when was it received by the department?

3. Did counsel appear on such investigation representing any of the parties? If so, who were such persons and whom did they represent?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Yes. An order in council was passed on the 14th February, 1907, ordering an investigation into irregularities complained of respecting pay-rolls and measurement of stone. No irregularity respecting cement or other articles has ever been brought to my attention.

2. Mr. Victor Gaudet, of Montreal, barrister. No report yet made.

3. No.

APPOINTMENT OF MR. JUSTICE DRYSDALE.

Mr. TAYLOR asked:

1. When did the Hon. Arthur Drysdale accept the appointment of Justice of the Supreme Court of Nova Scotia?

2. Was his acceptance orally or by telegram or letter, and what was the date of such letter or telegram?

Hon. A. B. AYLESWORTH (Minister of Justice):

1. When sworn in as such justice.

2. Only by taking the oath of office.

Mr. FOSTER. I did not hear the date given in the answer to this question. Would the minister kindly repeat it?

Mr. AYLESWORTH. It is a matter of public record, but there is no record of it in the Department of Justice.

LAW AGENTS IN MARITIME PROVINCES.

Mr. STANFIELD asked:

1. Who are the law agents of the Dominion government in the provinces of Nova Scotia, New Brunswick and Prince Edward Island?

2. What is the residence of each such agent, and the amount of his salary or remuneration?

Hon. A. B. AYLESWORTH (Minister of Justice):

1. R. T. MacIlreith for Nova Scotia.

There is no standing agent of the Minister of Justice for the province of New Brunswick; lawyers are retained for any legal work there may be, as from time to time occasion may arise.

F. I. Haszard, K.C., for Prince Edward Island, though occasionally other lawyers are retained in special matters.

2. Mr. MacIlreith resides at Halifax and Mr. Haszard at Charlottetown.

All agents of the Minister of Justice are paid entirely by fees, and the amounts so

paid are published annually in the Auditor General's Report under the head of 'Legal expenses and taxed costs.'

## JOHN CAMERON, HOMESTEAD INSPECTOR.

Mr. LAKE asked :

1. Was John Cameron, of Edmonton, homestead inspector, employed during the fall of 1902, upon the work of inspecting timber on the headwaters of the North Saskatchewan river or its tributaries?
2. If so, between what dates was he so employed?
3. What were his instructions, and what was the nature of his report?

Hon. FRANK OLIVER (Minister of the Interior) :

1. Yes.
2. Between the 4th and 21st November.
3. He was instructed by the superintendent of forestry to make a visit to the Upper Saskatchewan, especially in the neighbourhood of the Brazeau river, and to report as to the approximate quantity, quality and size of the timber near the mouth of the Brazeau, with a view to determining whether or not it was mature timber that should be sold. His report was to the effect that he did not see any use of reserving any of the timber in that section of country, as the belt of timber at and near the Brazeau river was completely surrounded by a belt of fire killed and dry timber which would seriously endanger the green timber in case of fire. He suggested that all the timber in that section of country should be put on the market so soon as applications were received for the same.

## CANADIAN AGENT IN JAPAN.

Mr. R. L. BORDEN. Mr. Speaker, as the orders of the day are not likely to be reached to-day, might I be permitted at this stage to inquire whether or not Mr. R. L. Drury, Victoria, B.C., has been appointed as representative of the Canadian government in Japan in connection with the agreement arranged by Hon. R. Lemieux regarding emigration to Canada ; and, if so, whether or not the statement in the press that he will discharge his duties under Sir Claude Macdonald is correct?

Sir WILFRID LAURIER. Mr. Drury has been appointed agent in Japan. I will bring down the order in council.

## IMMIGRATION BONUSES.

Mr. F. D. MONK (Jacques Cartier). Mr. Speaker, may I be allowed to give notice that the first time the House is moved into Committee of Supply, and I can conveniently do so, I will move in amendment a motion having for its object the abolition of the bonus or bounty system in regard to immigration.

## QUESTION OF PRIVILEGE—COMMISSIONERS FOR THE PLAINS OF ABRAHAM.

Mr. A. LAVERGNE (Montmagny). (Translation.) Mr. Speaker, before the orders of the day are called, may I be permitted to raise a question of privilege? An announcement appeared in 'Le Canada,' to the effect that during the debate on the Quebec tercentenary celebration, I had opposed the appointment, or rather that I had expressed a wish to see French Canadians only appointed as commissioners for the reclamation of the Plains of Abraham.

'Le Canada' has since thought fit to correct its statement, but, in my opinion, has made matters rather worse. Here is what I read in its report of our proceedings, issued this morning:

> We also note a protest voiced by Mr. Lavergne against a report published in the Saturday number of 'Le Canada,' wherein he is made to say that the commissioners appointed for the Plains of Abraham should be French Canadians. Our sessional letters are not supposed to give a verbatim report of the speeches delivered; their general purport only is indicated.
>
> Mr. Lavergne having taken exception to the contemplated appointment of Toronto people, as announced by the Prime Minister, it was in harmony with his speech and his theories to write what we have written. It is for Mr. Lavergne and not for us to set matters right, and that is what he has just done.

I had not requested the appointment of French Canadian commissioners only. Neither did I take exception to the appointment of commissioners hailing from Toronto. The statement made by 'Le Canada,' as usual, is incorrect. I do not object in any way to the appointment of commissioners from Toronto or elsewhere, provided they are Canadians.

What I did object to was the appointment in Canada of foreign commissioners, who might come here from the four corners of the earth.

## QUESTION OF PRIVILEGE — MR. PRINGLE, M.P.

Mr. R. A. PRINGLE (Stormont). I beg to bring to the attention of the House, as a question of privilege, an article which I find in 'The Financial Post of Canada' with reference to myself. The article reads in part :

> The 'Post' has been asked why, as a financial and banking paper, it has not devoted more attention to the Bill introduced by Mr. R. A. Pringle, member for Stormont, in the Dominion House of Commons, providing for a revision of the Bank Act. In view of the heavy pressure which has been laid on our space during the past two months we did not consider the matter of sufficient importance to warrant any extended notice and contented ourselves with pointing out that

the decennial period was the proper time for a revision of the Bank Act, and as the charters expire in 1911, any changes in the Bank Act could then be most effectually made after all the miasmata that gather around a panic year had been cleared away and the lessons had been fully conned by the light of time and experience. Hon. W. S. Fielding disposed of the matter by expressing similar views.

Whatever value Mr. Pringle's informing speech may have had was destroyed by a malicious attack on one of our leading banking institutions. In his conclusion Mr. Pringle said : 'It will be stated that Mr. Pringle has attacked the banks. Mr. Pringle has not attacked the banks.

On this point we must take issue with Mr. Pringle, and state the fact that he has been most successful in his 'attacks' on two banks now in process of liquidation. Acting in a fiduciary capacity he 'attacked' the Ontario Bank so successfully that he secured a very large sum of money at the Cornwall branch, and this money (some tens of thousands) has never been repaid. His 'attack' on the Sovereign Bank was also successful. If Mr. Pringle had confined himself to theoretical 'attacks' on the floor of the House, the same exception could not have been taken to his remarks. A proposal to reform the banking system, &c.

Now, in regard to the first portion of this article which says that I made a malicious attack on one of our leading banks, I say it is absolutely false. I did take the language of the report of the Royal Insurance Commission which dealt with the gambling of a certain bank in this country; I did say that the bank was shown by that report to be the biggest gambling institution in Canada. I have nothing to withdraw. It is not my attack ; it is the attack of the gentlemen who composed that commission and who were appointed by this government and whom I presume did their duty well and fearlessly. And if you take up the evidence upon which they based their attack you can come to no other conclusion than that they let the Hon. George A. Cox and the Canadian Bank of Commerce down just as lightly as it was possible for these commissioners to let them down. But, Sir, because I as a member of this House dared to mention what is in evidence, to mention the report of this Royal Insurance Commission, I am subjected to attack by this organ which I have no doubt is controlled largely by these interests.

Now, then, in regard to the other portion of the article I do not intend to take up one minute of the time of the House. That is a matter that I will settle with the publishers of this journal in a civil action, and the moment my attention was called to it I instructed my solicitor to take the proper proceedings to bring that matter into the courts of this land and I will abide by their decision. But I will say that the statement is absolutely untrue. It is false and it is libellous, and I am prepared to take the necessary legal steps to put myself in a proper position before the country in regard to that. I am not thin-skinned, I like criticism, fair criticism, reasonable criticism; I don't care how severe the criticism is, but I will not stand under any such imputation as is found in that paper. The 'Monetary Times,' published on the 7th day of March, again referring to this discussion, says :

Now he falls foul of a particular bank. This is the Canadian Bank of Commerce, which he terms the most speculative bank in Canada. If his purpose be to tickle the ears of the groundlings with this sort of invective, he may succeed in getting some ignorant folk to follow him. But intelligent people have too much confidence in the man who has so long been general manager, and is now president of that institution, to approve of such ill-founded criticism.

Let me say that I said no word against Byron E. Walker except the word that is in the Insurance Report : That Byron E. Walker was handled by the Hon. George A. Cox; that he was directed to buy 1,000 shares of this stock at one time and 1,000 shares of this stock at another time; that he had dipped down into the trust funds of the Bank of Commerce and bought it at the bidding of the Hon. George A. Cox, and it is there in the report of the Insurance Commission, that Byron E. Walker got his bank, the Canadian Bank of Commerce, to join in a pool for the purpose of speculating in these stocks in which nearly $3,000,000 was placed. I will stand absolutely upon the evidence, and if any hon. gentleman takes this volume 2 of the evidence taken before the Royal Insurance Commission he will find what is stated by these commissioners is absolutely true. Now, then, Sir, in another portion of their paper —and they are at least giving me some notoriety by these articles—they say :

Mr. Pringle was at times vitriolic and never uninteresting.

I was not aware that I was vitriolic at any time. I do not think that the Hon. George A. Cox and those high financiers should be so immune from criticism that the moment a man stands up in the House to refer to what are official documents, to declare what has been reported by men appointed by this government to make an investigation, he should be subjected to these attacks. However, Sir, they can go on with their attacks; it will not swerve me from doing what I think is in the interest of the public of this country, and in so far as the article of the 'Financial Post' is concerned my instructions have been given and that matter will be disposed of in the civil courts. I thought, Mr. Speaker, it was only due to myself that I should the first moment my attention was called to this matter bring it before the House. I may say, Sir, that before going into Supply I will very shortly move a resolution which will

probably bring this matter up in such a manner that it will be thoroughly investigated, and we will then see if the report of the Royal Insurance Commission is right or if it is wrong with regard to that particular bank, the Bank of Commerce. I think this House would grant me, if I ask for it, a committee to have that bank and to have this report thoroughly investigated. That is a matter I am considering, and I will decide in a very short time whether I will not move that resolution so that we may have the full light of day in regard to this transaction.

## MOTIONS AGREED TO WITHOUT DISCUSSION.

For a copy of all correspondence between the government or any department thereof, and the Ross Rifle Company, or any representative thereof, or between the government and any bank or other institution which has made advances under the contract between the government and said company, or any representative of such bank or institution, relating to the accounts and financial or other affairs of the Ross Rifle Company, including any letters or correspondence from any official of the Bank of Montreal to the Auditor General.—Mr. Worthington.

For a copy of all orders in council, reports, correspondence, documents, letters and papers, not already brought down, relating to a grant by His Majesty of any Indian reserves in the province of British Columbia to the Grand Trunk Pacific Railway Company, or to any officer of the company, or to any person on behalf of that company.—Mr. R. L. Borden.

For a copy of contract and all correspondence in connection with purchase of cement from E. A. Walberg by the Department of Marine and Fisheries, to heighten Heath Point.—Mr. Staples—by Mr. J. D. Reid.

For a copy of all correspondence, telegrams, reports, applications, surveyors plans and maps, in reference to the homestead entries for the southwest quarter of section 27, township 18, range 10, east, in the province of Manitoba.—Mr. Staples—by Mr. J. D. Reid.

For a copy of all petitions letters and applications, by or on behalf of 'La Société Canadienne d'immigration et de placement,' for assistance from the government, and the answer by the government or its officials to the same.—Mr. Monk.

For a copy of all certificates by A. G. McDonald, immigration agent for Prince Edward county, Ontario, claiming payment for immigrants by him alleged to have been placed with farmers or other employers; also, a copy of all certificates or communications by such farmers or other employers received by the Department of the Interior relating to immigants so claimed as placed by said A. G. McDonald, giving in each case the name and post office address of the immigrant and of the farmer or the employer.—Mr. Alcorn.

For a copy of all letters, petitions, correspondence and other papers in connection with the application to establish a post office at North Grove, in the county of Grenville.—Mr. J. D. Reid.

For a return showing: 1. All lands or interests in lands granted by the government to the Temperance Colonization Society, together with the dates of such grants, description of lands granted, consideration paid, or terms upon which such lands were granted, and all other particulars of sale.

2. Showing the terms of settlement or otherwise upon which such lands were granted, or held by the society and the conditions or regulations in force from time to time regarding such grants, and the holding thereof respectively.

3. Showing wherein or in what respect and with respect to what lands, the said society lived up to, and complied with such conditions and regulations, and wherein the society failed to comply therewith.

4. Showing what lands, if any, have been reclaimed by the government from the society for such non-compliance, with such times and conditions, or for any other cause or reason.

5. Showing what lands the said society still hold, as far as known.

6. Showing whether the said society is still in existence, and if so, who compose the same, as far as known.

7. Also for a copy of all correspondence, reports, memoranda, orders in council, or other documents in possession of the government, relating to the said society or the lands granted thereto.—Mr. Macdonell—by Mr. Blain.

## THE EXPORT OF PULP WOOD.

Mr. E. N. LEWIS (West Huron) moved:

That in the opinion of this House such an export duty should be placed on the export of pulp wood as will be sufficient to induce its manufacture into paper in Canada, and thus save to the labour of Canada the six millions of dollars now lost.

He said: Mr. Speaker, my object in proposing this resolution is to bring to the notice of this House and of the government of Canada the question of the pulp wood industry and of whether or not it is advisable for the government to take such steps as will encourage the manufacture of pulp wood into paper in this country, and thus save to the working people of Canada the many millions of dollars now lost to them.

President Roosevelt said recently in reference to the timber and pulp question:

No other question of equal gravity is now before the nation.

Certainly for the United States this wood question has a dark look; but we in Canada have no desire for our cousins across the border to be without their daily paper. All we wish is that the product of our forests shall be manufactured in Canada and then shipped to them. With our help they must follow the views of a celebrated United States editor, of whom a brother journalist once said: 'To him every cloud has a silver lining; if it has not, he's just the man to climb up and paint one on.'

Earl Grey says :

There are no more melancholy reflections than those suggested by the sight of a country once rich and supplied with all the majesty and panoply of power which has become a waste and stony desert through the reckless improvidence of its own people.

Sir Wilfrid Laurier not long ago said:

We can calculate the number of years and the number is not very great when there will not be another tree of the original forest to be cut upon the limits of the Canadian lumberman.

We are told that the country to the south of us, once covered with a grand majestic forest, one of the main sources of wealth and power of that great nation, is now a dreary waste, a vast void, so to speak, and that such void will soon be duplicated in Canada.

Now, Sir, I am an optimist, and I believe that no government of Canadians will be so lax as to allow such to occur here. I can see no dreary waste, no void for Canada.

Between optimist and pessimist the difference is droll.

The optimist sees the doughnut, the pessimist sees the hole.

Manager Clouston, of the Bank of Montreal, says : 'Canada is fast using up her timber resources. He calls a halt and urges action towards preserving the nation's wealth. The following from the pen of William Banks, jr., the 'Globe' envoy who made a special study of the pulp question on the spot, appeared in the 'Globe' of July 11 :

In other words, Canada is furnishing to Wisconsin, New York and other states of the republic to the south, the raw material to be manufactured into goods which come into competition with the manufactures of this country in the markets of the world. What is Canada getting in return? Practically nothing. True, the land is left; there are also stumps of trees; a comparatively small amount is obtained for labour and transportation, and that is all; while around the American mills, whose hungry maws would have no food, or not enough to satisfy them, at any rate, were it not for the raw material furnished from the Canadian side, there are busy, thriving and expanding communities. The Americans are taking pulp wood, while the sun shines, so to speak, and without being unkindly it would at least seem as though their attitude while they are so doing, is that of the man who smiles at his neighbour's uneasiness and occasionally puts his tongue in his cheek when the situation is made the subject of conversation.

I appear for the people as against the great corporations, both in Canada and across the border ; but I regret to say that generally the people are handicapped, either by the lack of concerted action or the lack of funds from utilizing to the full the great power of the press.

Mr. LEWIS.

The newspaper press is the great dominant and practically irresistible force in all great questions. The corporations realize this and hundreds of thousands of dollars are spent annually in promoting the corporation side of questions which affect them : railways, telephone companies, insurance companies, mining companies, fill to overflowing the advertising space of our prominent daily papers in the United States and Canada, and I ask, at whose expense ?

It is naturally so, human nature is human nature, and papers must live, but again I ask, Mr. Speaker, who pays for the full page advertisements of those fine mining allurements 'The Golden Dog' or the 'Silver Fox' in which half the produce of the stock goes to the promoters and half to the newspapers. The development frequently goes minus and the shareholders ditto.

But, Mr. Speaker, I am glad to say that I have a subject now, a live subject and a vital one in which I feel sure the press will use its great influence solely on the side of the people, partly because it is the right side and partly because there is no other great question in which the press is so closely interested as the pulp wood question.

For years, we have grumbled because England made bad business arrangements for us with the United States. Now we have the opportunity to make our own bargain or laws in a vital issue affecting our national prosperity, and future. Let us do so in a national manner, and in a way befitting a nation not from a political or other point of view. Let us throw aside and reject all advice or pressure which may induce us to do or make a political deal. Joseph Clark, a well known Canadian writer, said : 'Canada has been mentioned in the despatches, the United States high protectionist, as it is, has spoken. President Roosevelt in his message to Congress says : 'We are out of pulp wood, we supply the world with paper. I advise you to, if possible, to make a bargain with Canada. Take off the United States duty on pulp wood, if Canada will agree not to impose an export duty.''

And Mr. Clark further said : 'There is one thing about these neighbours of ours, they always know what they want and why they want it.' They barred out our pulp just as long as they had pulp of their own. Now they say: We are up against a paper famine, we already feel the pressure of it, the price of news paper has doubled. Don't do what we would do in your place. Do not force our paper mills to move to Canada, do not draw this vast industry to yourselves, feed your forests into our mills.'

Statesmen at Washington have laughed until their sides ached when jurists of repute returned and told of the deals they had pulled off.

The United States Wall Street 'Journal'

says the International Paper Company which controls over thirty mills has in a little over a year acquired 1,255,000 acres more of timber limits most of them in Canada. It is apparent that if the export of pulp wood from Canada were cut off, the paper manufacturing of the United States would collapse

You will notice, Sir, that I am not forcing any opinion of my own on the House, I am simply stating facts and conclusions formed from those facts, and giving opinions of gentlemen of experience and knowledge in the premises. Here are two statements, one from prominent political Quebec leaders, the other from a congressman of the United States. Let me quote from the 'Gazette,' March 6, 1908:

The government congratulated themselves, Mr. Leblanc went on, over their Crown land reports. It showed that 100,936 cords of pulp wood had been exported during the year. For this, Canadians received $6 per cord. The speaker asked his hearers to go to the directors of Canadian paper manufacturies and find out that for every cord of pulp wood turned into paper in Canada, Candians received from $48 to $50, most of which meant wages for Canadian workmen.

The premier, Hon. Mr. Gouin, in reply, said:

Hon. Mr. Leblanc had blamed the government for the exporting of the pulp wood, but the government was not to blame for that, as there was only one power that had the right to impose an export duty on pulp wood, and that was the federal adminstration. The premier thought it would be a good idea to have a commission to investigate this question and report whether a duty should be imposed.

Let me now quote what Mr. J. Tirrell said in the Washington House of Representatives:

If there are gentlemen on this floor who wish to see that industry wiped out, who wish to throw out of employment tens of thousands of American wage earners and have them walking and moaning on the streets; if they wish to see the smoke and fires extinguished of the 108 mills now in the State of New York, and the mills of the west, and the industry hampered so that it no longer becomes a factor in the commercial development of the country, then it is only necessary to wipe out the tariff on pulp and paper and give to Canada the power to pass prohibitive export laws and close all the mills of the United States!

While, Sir, pulp wood is a raw material of comparatively low value, it produces manufactured articles of high cost.

Millions upon millions of spruce logs, hundreds of thousands of cords of pulp wood go yearly from Quebec, New Brunswick and Nova Scotia to feed the pulp and paper mills of the eastern, middle and western states.

What does Canada get for this?

1. The government, not $1 a cord.

2. The chopper, the loader, the river driver, the teamster, the peeler, not much more.

3. The railways a low rate on coarse freight. The whole result $6, or $7 per cord left in Canada—I give a maximum figure; $6 is absolute. Why, Sir, they don't even allow us to carry the pulp wood in Canadian vessels. I have here a list of fourteen steamships carrying pulp wood last season from Quebec ports to Wisconsin ports, 12 of which are United States vessels and two Norwegian.

Now, I repeat again—$6, or $7, left in Canada for every cord of pulp wood leaving it. Watch, the value grows afterwards. Every cord of wood ground to pulp has a value of $20. Every cord of wood made into fibre has a value of $30 to $32. Every cord of wood made into paper has a value of $40 to $45 and up. My resolution asks this government to take such action as will save to the labour men of Canada the $6,000,000 lost annually. I firmly believe that $20,000,000 would be nearer the mark. The United States shuts out our finished product paper, but takes our crude product pulp wood, makes it into paper and undersells us in Europe with their surplus dump.

If the facts were properly placed before the farmer who has pulp wood for sale, he would see that he would be helped by an export duty more than any one else. The sale would be just as great and more people would live in his neighbourhood to use his other products and make his farm more valuable. If an export duty were to be put in force, sufficient mills could be removed to or built in Canada in 18 months to supply the world.

The pulp and paper industry gives more healthy and steady day and night employment to a larger number of men and women at higher wages all the year round than any other industry in Canada.

We have no desire to prevent our American cousins having newspapers to read, but let them get our forests in the shape of the manufactured article. What happened when the Liberal government of Ontario restricted the export of saw logs? Saw mills started humming in all directions, factories followed, the United States sawmills men came over here, and we were glad to have them. We will welcome the paper manufacturers also. The leading pulp and paper journal of the United States asked a question of the trade as to the results of an export duty. One answer was:

Would probably mean United States capital would cross the border and build mills, payrolls would go to Canadian labour instead of United States.

Another answer was:

It will simply build up the industry of Canada.

Now, let me give a few statistics on this subject. I would ask hon. members to bear

in mind the difference between the wood pulp referred to in the first of these tables and wood for pulp. The following figures show the value of wood pulp and wood sent to the United States for the year ending June 30, 1907:

| | |
|---|---|
| Canadian wood pulp exported to United States, year ending June 30, 1907.. .. .. .. .. .. .. .. .. .. .. .. | $3,230,272 |
| Wood for pulp, 650,366 cords.. .. .. | 2,792,751 |
| Total.. .. .. .. .. .. .. .. | $6,023,023 |

Now, according to United States Bulletin No. 80, pages 18 and 19, the value of paper per ton ranged in 1906 from $41.61 for heavy wrapping to $348.02 for fine Massachusetts. The tariff of 1887, which places a duty on Canadian pulp, contains this provision:

If any country shall impose an export duty on pulp wood to the United States, the amount of such export duty shall be added as an additional duty to the duties herein imposed upon wood pulp imported from such country.

I say that is an insult to Canada, for that is aimed at us. I read the other day the remarks of a congressman in the United States who prefaced one of his statements by saying 'If we allow Canada to do so.' What right have they to 'allow' Canada to do this or that? We are friendly to our neighbours and they to us, but why should we not look after our own interest? My attention was drawn to this matter by a gentleman living in the United States and well acquainted with this business. He is a Canadian by birth and his feelings incline toward the flag under which he first lived. He told me that they were laughing at us over there.

Here is another object lesson: Japan imports 5,000,000 pounds of British paper and 8,500,000 of American paper—Canada is not mentioned. England imports $28,369,075 worth of paper—principally from the United States—where does she get her wood pulp? From Canada. Yet Canada is not mentioned. It has been stated in some of these documents from the United States that the paper and pulp mills in the United States number 1,200. Now, I have verified every statement I make here. I am not making a speech—I do not make speeches. I am putting in facts and trying to draw to them the attention of this House. Instead of 1,200 paper and pulp mills, there were in the United States, in 1905, the last year for which reliable figures are available, 761 pulp and paper mills. These had an average capital of $364,579. There are 41 paper mills in Wisconsin alone. Where do they get their pulpwood? Why, where do these 12 American vessels and 2 Norwegian vessels of which I have spoken carry their pulpwood?

Now what has Canada? Fifty-eight pulp mills, making 2,361 tons of paper in 1907, and 46 paper mills, making 966 tons per day. The retention of forests is needed to save the water supply, prevent droughts and freshets and save water power for manufactures as well as for the pulp wood and timber. As to forestry, the question is not 'can the trees be replaced as cut and how,' but 'who shall do it?' I think that is quite feasible. I have had correspondence with a gentleman in the state of Carolina, he is engaged in the forestry business and is a millionaire; and his opinion is that it is possible to make trees grow in the open field, but that this can be done much more easily where small trees are left after cutting down the large ones. We often read of statements made on the other side of the line as to the amount of pulp wood that is left, and how many years it is going to last. I have this from a gentleman who has absolute knowledge in the matter: that very little spruce if any is left in New York, Pennsylvania, Massachusetts, Connecticut, Ohio, Michigan, Wisconsin and Illinois, some in Maine and Wyoming. There is none left in Colorado and Dakota. Norway and Sweden are almost denuded. A mill in Herkimer, New York, took a ten years contract to furnish an English company with paper, and they are taking their pulp from Canada by rail.

Now there is the question of retaliation which has been mentioned. I wish to state this to the government and to the House in general, that I have no fear of retaliation. I have questioned gentlemen who have knowledge of the matter, and they say that there are other interests in the United States who would oppose retaliation, even if that were attempted; other interests who are opposed to the paper manufacturers are too strong to permit it. Now here is a fact that may not be known to many in this House. In volume 1, page 736, of Storey on the constitution of the United States, he gives these words from section 9, clause 5, of the constitution:

No tax or duty shall be laid on an article exported from any state.

Now, Sir, with the permission of the House I will proceed to read a few extracts taken from the pulp wood number of the 'Globe' of March 7. I have cut out only those that are pertinent to this question. Here is what Mr. Biggar says:

A few years ago the United States believed, as we do now, that their supply of timber was inexhaustible. When theirs is done they have no place to turn but to Canada. We have the whip hand and control their supply.

Now as to the question whether the farmer would be able to sell his pulpwood if an export duty was put on, I wish to say that his health, his comfort and his interest would be greatly enhanced if such a duty were imposed; besides he would be able to sell his pulp wood in other directions. Here is an example of the benefits following the manufacture of paper in Canada,

which we find in the Laurentides Paper Company at Grand-Mere, Quebec :

The town of Grand-Mere is a striking example of what the paper industry would do for Canada. Five thousand well-to-do, contented people live there.

Before the paper mill came to it, Grand-Mere was a small struggling village with a few score of inhabitants; now it is a hustling, growing town, with over 5,000 inhabitants, and shows all the earmarks of prosperity.

At Batiscan, one of the centres of the wood pulp export business, there are some 300 people, yet at one time this village was a larger place than Grand-Mere. Batiscan is one of the chief shipping centres of the International Paper Company and ships to the United States about as much pulpwood as is used by the Laurentide Paper Company. In one case all is exported and a struggling village of 300 barely holds its own. In the other case, it is manufactured and a town of 5,000 people is prospering and growing.

The Laurentide Paper Company have about 1,200 men on their pay-roll, and have built this thriving town simply 'on paper.' This company take their supplies from the St. Maurice river, which enter one end of their modern plant as logs and come out at the other end as pure white paper of the finest texture.

They consume 100,000 cords of pulp wood every year, and when manufactured this means $3,000,000. On the other hand, there are exported annually from Quebec 600,000 cords of pulp wood. This leaves in the country about $3,000,000. Thus there is as much money left in the country from 100,000 cords manufactured as from 600,000 cords exported.

Or to make another comparison. A cord of pulp wood exported as such yields to Canada and all Canadian interests for cutting, handling, stumpage, transportation, &c., $6, the same cord converted into paper yields $38. Thus there are over six times as much in it for Canada by the conversion of her spruce wood into paper at home as is to be got by letting it be manufactured abroad.

Further, the contention of the Laurentide Paper Company is that the manufacture of paper in Canada means the creation and assistance of many other industries. To the railroads there is a big gain. In one case their cars go in empty and carry out pulp wood. In the other case they carry in coal, marble, machinery and mill supplies, and all the merchandise necessary to feed and clothe a large population. It would assist our coal companies, as every ton of paper manufactured requires half a ton of coal. Thus the Laurentide Paper Company alone consumes over 30,000 tons yearly. It would assist our banks by the circulation of money, would encourage skilled labour and give a chance for our people to earn good wages. Around the mills in the United States large towns and cities have arisen, manned largely by people from the province of Quebec, who were unable to find profitable employment at home.

Let me here suggest that there is no better plan of repatriating our Canadians from Quebec who have gone to the States than by the establishment of paper mills at home. I say this advisedly, because I contend with the hon. member for South York (Mr. W. F. Maclean) that there is only one class of Canadians in this country. These Canadians from the province of Quebec could be brought back to Canada easier by this method than by immigration methods. I am sure the hon. member for Wolfe (Mr. Tobin) will confirm this from his experience. Here is another statement by this gentleman, Mr. Biggar :

The subsequent progress of the pulp and paper industry is recorded in the Pulp and Paper Handbook of Canada in the various editions as follows:

Pulp mills.

| Year. | No. of mills. | Total capacity in tons per 24 hours. |
|---|---|---|
| 1888.. .. .. .. .. .. | 34 | 154 |
| 1892.. .. .. .. .. .. | 37 | 312 |
| 1899.. .. .. .. .. .. | 39 | 1,245 |
| 1907.. .. .. .. .. .. | 58 | 2,361 |

The total capacity of the mills producing chemical pulp by the sulphite and soda processes in 1899 was about 50 tons per day, and in 1907 about 550 tons per day, so that the increase in the last eight years has been almost wholly in mechanical or ground wood pulp.

Paper mills.

| Year. | No. of mills. | Total capacity in tons per 24 hours. |
|---|---|---|
| 1888.. .. .. .. .. .. | 40 | 173 |
| 1892.. .. .. .. .. .. | 38 | 209 |
| 1899.. .. .. .. .. .. | 33 | 328 |
| 1907.. .. .. .. .. .. | 46 | 966 |

The era of manufacturing pulp from wood in Canada began in the decade of 1880-90. The yearly capacity of its pulp mills at the present time is about 700,000 tons of pulp and 290,000 tons of paper. Pulp first figures in the trade and navigation returns of Canada in 1890, when the total export was valued at $168,180, of which $460 went to Great Britain, $147,098 to the United States, and $20,662 to other countries. In 1897 the total export was $741,959.

If this be true—and certainly 'The Paper Mill' can have no object in making matters appear worse than they are—the newspaper publishers of Canada, and the newspaper readers as well—for in this their interests are identical—may well ask themselves a few questions.

There are in the United States seventy mills engaged in the manufacture of white paper, the daily output of which fluctuates between 4,000 and 5,000 tons—say 4,500 daily Should it come about that Canada will be called upon to supply the spruce for all this output, not less than 5,000 cords of wood would be required daily. On a basis of four cords to an acre, which, I believe, is considered a fair estimate, we would see in this country 1,800 acres of standing spruce skinned off every day in the year to keep the pulp and paper mills of the United States running. In every 365 days—the Sunday paper is the greatest gourmand of them all—511,000 acres of Canadian spruce land will have been left bare.

Until within recent months the newspaper publishers of this continent were as indifferent to a prospective famine in their raw ma-

terial as are the grist-millers of the country Nor is this to be greatly wondered at, for from the lips of engineers and explorers, and even from the pages of the government reports, they for years heard of 'the boundless areas,' 'the inexhaustible supplies,' etc., of spruce wood and timber. Thus lulled to sleep, the publishers have given their attention to problems which they knew to be real and which were pressing them at closer range.

But to-day the signs of a sudden awakening are visible in all quarters. The publishers of the large daily papers throughout the United States met in New York last October, and made no effort to conceal the alarm with which they viewed the situation. They declared in no uncertain manner that they were face to face with a problem of the most vital nature, and passed resolutions calling upon president and congress to adopt measures which only a couple of years ago would have been considered rampantly radical.

That the situation in Canada is equally serious no one for a moment suggests, but that it is possible to become so in a comparatively short time, unless prudence is displayed at this critical juncture, few will deny.

Canadians were hardly prepared to read in 'The Paper Mill,' the recognized organ of the paper and pulp makers of the United States, such an astounding admission as the following, taken from a January, 1908, issue of that journal :

The wood situation to-day is a very serious matter. There is not a mill in the United States manufacturing paper and pulp that is not to a very large extent depending on Canada for its wood, and there is no basis to work upon, for the reason that there is no established price for wood either in this country or in Canada, and owing to this fact there is no basis for the paper manufacturer to work upon to establish a price for the finished product.

Now, when the mills in Wisconsin—planted in the midst of what was regarded as a perpetual supply—have had to import pulp wood to the extent of 70,000 cords during the past season, all the way from Quebec by rail, while some of the paper mills of Maine—the state of 'inexhaustible' spruce limits—are getting supplies of wood from New Brunswick and Quebec, the American famine in pulp wood can no longer be denied.

The famine was inevitable, but, like most other famines, it was neither foreseen nor provided against by the average man concerned. In ten years after the introduction of the wood pulp paper process the price of news print was brought down from an average of 9 cents a pound to 4 cents, and since then the improvements in machinery and the increased capacity of the mills have further reduced it, till it recently sold at 2 cents a pound. This cheapening has, in turn, made possible the enormous increase in the size and circulation of the modern daily newspaper—one of the marvels of the age, and as fearful in its power for evil as grand in its possibilities for good to the world. The increased demand for wood to maintain other industries, added to this remarkable development of the paper industry, explains the wood famine which is now giving the statesmen of the United States such concern, and explains why each year the United States is becoming more dependent on Canada for the raw material for its paper mills.

During the year ending June, 1907, the United States imported pulp wood from Canada to the amount of 650,366 cords, or enough to manufacture, say 520,000 tons of news paper, while its imports of ground pulp from Canada were 149,827 tons, valued at $3,230,272.

As the 'Globe' has said in its special pulp wood number, one of the greatest, perhaps the greatest of the problems confronting Canada at the present time is the preservation of her forests. While there have been good laws passed regulating our tariffs, restricting our fisheries, controlling our mines and exploiting our agricultural areas, the forest has been largely neglected.

Sir Wilfrid Laurier, speaking before the Canadian Forestry Association, said :

We can calculate the number of years—and the number is not very great—when there will not be another tree of the original forest to be cut upon the limits of the Canadian lumbermen. But, trees have grown and trees ought to grow again.

I should like to impress upon every Canadian farmer the necessity of covering with trees every rocky hill and the bank of every running stream. It is very easily done. He has only to scatter the seeds on the ground, fence it and nature will do the rest.

It is evident that Sir Wilfrid Laurier at that time appreciated, and he must now more thoroughly appreciate the fact, that a wood famine in Canada is imminent unless proper precautions are taken.

Earl Grey, addressing the same convention, said :

There are no more melancholy reflections than those suggested by the sight of a country once rich and equipped with all the majesty and panoply of power, which has become a waste and a stony desert through the reckless improvidence of its own people.

It is the object of this convention to fix the attention of the people of the Dominion on the warning which these and other countries hold out to us as the practices we should carefully avoid, if Canada is to realize the high destiny which awaits her, or which will be realized if this generation is gifted with sufficient foresight and self-control to husband the resources so abundantly lavished upon the Dominion by a bountiful Providence.

Mr. Gifford Pinchot, chief of the Forest Service of the United States, is a renowned authority on forestry. He is worth millions of money, but owing to the great interest he takes in this subject gives his services to the government of the United States for the small sum of $5,000 a year. Writing in the New York 'Outlook' Mr. Pinchot says :

The most prosperous nation of to-day is the United States. Our unexampled wealth and well-being are directly due to the superb natural resources of our country, and to the use which has been made of them by our citizens, both in the present and in the past. We are prosperous because our forefathers be-

queathed to us a land of marvellous resources still unexhausted. Shall we conserve those resources, and in our turn transmit them, still unexhausted, to our descendants. Till now we have allowed our forests to be depleted, our timber, lumber and pulp wood to be exported, and to-day we have very little to show for our prodigal wastefulness.

Bound up with the question of forest preservation are many national questions of vital importance. A survey of history shows that the decline of many of the great nations of the world can be traced to the destruction of their forests. Mesopotamia among ancient nations and Spain among modern being examples. Again it has been demonstrated that the planting of forests in a treeless country has increased and regulated the rainfall. Many of the floods from which countries suffer are due to the clearing of forests around the sources of rivers. When we consider the growing importance of water-power as a generator of electricity we can readily see the importance of preserving our waterfalls and streams unimpaired. Particularly is this true of a large part of Ontario and Quebec, where there is no coal and where our manufacturers must depend upon water-power.

Assets so vast as these cannot be left at the mercy of 'politics.' Let us have a Forest Commission, independent of party politics, to protect our forests, and thereby save our fish, game and natural scenery.

What will happen when the forests fail? In the first place, the business of lumbering will disappear. It is now the fourth greatest industry in the United States. All forms of building industries will suffer with it, and the occupants of houses, offices, and stores must pay the added cost. Mining will become vastly more expensive; and with the rise in the cost of mining there must follow a corresponding rise in the price of coal, iron and other minerals. The railways, which have as yet failed entirely to develop a satisfactory substitute for the wooden tie (and must, in the opinion of their best engineers, continue to fail), will be profoundly affected, and the cost of transportation will suffer a correspond-increase. Water-power for lighting, manufacturing and transportation and the movement of freight and passengers by inland waterways, will be affected still more directly than the steam railways. The cultivation of the soil, with or without irrigation, will be hampered by the increased cost of agricultural tools, fencing, and the wood needed for other purposes about a farm. Irrigated agriculture will suffer most of all, for the destruction of the forests means the loss of the waters as surely as night follows the day. With the rise in the cost of producing food, the cost of food itself will rise. Commerce in general will necessarily be affected by the difficulties of the primary industries upon which it depends. In a word, when the forests fail, the daily life of the average citizen will inevitably feel the pinch on every side. And the forests have already begun to fail, as the direct result of the suicidal policy of forest destruction which the people of the United States have allowed themselves to pursue.

They stripped the mountain on each side of the river, for miles of its timber. The river, in consequence, was not pouring down its accustomed volume of fresh water regularly. The fish left for new waters; with the fish left the fishermen, and with the fishermen a large revenue. You can't have fish without water; you can't have water, pure, sweet and in full volume, without its natural reservoir—the forest. And it has been conclusively demonstrated that forest-clad slopes do more than most other natural conditions to attract the active as well as the passive moisture of the atmosphere.

Mr. E. W. Stewart, late superintendent of Forestry for Canada, said:

No time should be lost in taking steps to reserve the whole timber area along the east slope of the Rocky Mountains in order to preserve the forest there for the conservation of the water for the great rivers that are supplied from this source. If this area is permitted to be denuded of its timber the North and South Saskatchewan, the Athabasca, the Peace, the Liard and the many smaller streams that receive their supply from this timbered area will be raging torrents for a short period in the spring and almost dry in the hot summer months. The water level in the soil will decrease, and the husbandman of the plains will begin to realize when it is too late why the summer droughts are increasing.

To a greater or lesser degree what is here predicted by Mr. Stewart has happened in the older portions of Ontario and Quebec.

Mr. MacLaren, who was interviewed by the 'Globe,' takes the view that this is a national question, in which the future prosperity and well-being of Canada are bound up. He favours such a measure being taken as would result in preventing the depletion of our raw material for the benefit of foreign industries. He has no doubt that such a measure would quickly result in a great accession of industries to this country, and that with the splendid undeveloped water-powers in Ontario and Quebec there would be no difficulties in the way of establishing such industries.

Mr. MacLaren was equally emphatic in regard to the necessity of a scientific policy of forest preservation. The firm are themselves pursuing such a policy on their own limits. As far as possible they are feeding their mills on the annual growth of the limits. The only remedy is for this government to institute a broad system for the practical training of men whose life duty will be the care of the forests.

The forestation or reforestation of areas unfit for agriculture.

The suppression of that class of 'settler' who is only 'a settler' until he gets all the wood cut off his location, and who then moves on to another well timbered lot.

Obviously the initiative in many of these matters rests with the provinces, and some of them are attempting to deal with them on a broad scale. But the interests of all the provinces, and of the federal government, which likewise controls great stretches of public domain, and of all the forces that work for the country's progress, are so intertwined as to make a united and common basis of action an imperative necessity.

The history of most nations indicates that very little can be expected in a forestry way

from private individuals, even under pretty stringent state control, and it has been found more effective for the state or the community to undertake the work, particularly if it is done on a large scale.

B. E. Fernow, professor of forestry, writes as follows:

To the editor of the 'Globe': In responding to your request for an expression of my opinion as to the forestry situation, I cannot open the discussion better than by the statement that 'the much vaunted virgin timber wealth of Canada would not suffice to supply the annual consumption of the United States for more than twelve years.'

The mills of the gods grind slowly, but still more slowly does a democracy learn the lessons of the world and mend the follies of its happy-go-lucky unconcern of the future.

(Sgd.) B. E. FERNOW.

I wish to read a few more extracts on this subject as quoted in the Toronto 'Globe,' March 7, 1908:

Perhaps in the light of the late utterance of the President of the United States regarding the plight of the American paper manufacturers, Canadians will wake up to the realization that they have something worth keeping not only in their pulp wood, but in other timber supplies. I should not have said 'worth keeping' but worth taking care of and managing for continuity, i.e., applying forestry principles.

Whether this new interest should take shape in the form of tariff legislation or had much better be fostered by regulating the use of Crown timber lands conservatively is a matter for consideration.

The President promised to recommend to Congress the removal of the duty, and 'The Fourth Estate,' a well informed weekly publication of New York, in reporting the interview says:—'He will give as his reasons the necessity for the preservation of the forests rather than the relief of the publishers of cheap newspapers and magazines. . . . One of his arguments will be the recent report of Gifford Pinchot, chief forester for the United States government, who estimates that, at the present rate of consumption, the wood supply of the United States will have disappeared in twelve years.'

According to a special report of the United States Census Bureau the consumption of domestic spruce wood used by the United States pulp mills increased 47 per cent in quantity, and 122 per cent in price in the five years from 1900 to 1905, while the consumption of Canadian spruce wood by United States mills increased 102 per cent in quantity and 150 per cent in price in the same period. The average cost of wood used for mechanical and chemical pulp was more than doubled in the five years named, for every variety of pulp wood except domestic poplar. Canadian poplar had increased 176 per cent. If these percentages could be applied to the conditions in 1907 the increase would be still greater.

To illustrate the nature of the crisis towards which the United States is swiftly tending we may turn to the mills of New York state. This state has 108 mills, largely clustered in the northeastern counties, accessible to the great spruce forests of the Adirondack mountains. Twenty years ago the mills of Watertown, the chief paper making centre, had supplies of pulp wood at their doors, and it was believed the timber would last forever. Now the source of home supply is eighty or a hundred miles away, and an increasing proportion of mills have to get their wood from down the St. Lawrence in Quebec or by rail from that province at a distance of 200 miles or more. The mills of this state have a yearly capacity of 987,000 cords of wood, and on the basis of a growth of ten cords an acre they would strip nearly 100,000 acres a year, and if the lumber cut off this region (estimated in the census at 245,000,000 feet a year) is added, the whole spruce areas of the Adirondacks would be wiped out in seven years were these mills confined to their own state for raw material.

The average man, however, is more accustomed to estimating values in dollars and cents than in acres and cords, so that possibly such a calculation may be found more interesting. Less than twenty years ago the paper on which newspapers are printed cost the publishers eight cents per pound at the mill. That price fell steadily until the bottom was reached about seven years ago, when at least one large contract was made in Canada at 1·87 cents per pound. With that contract the 'dollar daily' had its birth. For about six years the price fluctuated between 1·87 and 2 cents, but about six months ago unmistakeable signs began to appear that even 'two-cent' paper would not likely be secured again for a few years, if ever. The price has gone steadily up in this country to 2·25, and in the United States to 2·60, with a strong possibility that 3 cents will be the prevailing figure there within a year.

It is not pretended that a pulp wood scarcity alone has brought about this sudden and serious increase. Higher wages, low water, increased cost of chemicals and a tendency to concerted action on the part of the manufacturers may each have contributed somewhat; but after making all possible allowance for these contingencies the fact must be admitted that what is almost a pulp famine in the United States and the increasing difficulty with which pulp wood is secured adjacent to railways and good streams in Canada are the principal causes in bringing about this remarkable increase.

Ontario and Quebec are blessed with abundant powers commercially adaptable. No country in the world has such abundance of water-powers capable of development for commercial purposes as Canada. Whether utilized for electrical energy to be transmitted far and wide to the benefit of the industries everywhere springing up or whether used in their respective localities for the manufacture of lumber and pulp wood in the wooded regions where many of them exist, forest conservation is vital to their continuance. The cutting of timber on such a large scale throughout the Ottawa valley has already affected the flow of the magnificent Ottawa river, and more than one project is under consideration with a view to preventing further mischief.

An idea of the vastness of these water-powers in the eastern section of the country may be gathered from the statement that within a radius of 50 miles of the city of Ottawa, according to the statements and calculations of experts, there are water-powers capable of producing over 900,000 horse-power. Some of

these, because of the rivers rising in that province, are under the control of the province of Quebec. It is of interest to note here that the authorities of that province have shown a very commendable desire to take any action needed, such as the creation of forest reserves at the head waters.

The pulp mill has appeared, and by the higher value of its product it makes for the greater prosperity of the province. To quote the estimates of one authority: If 1,000 cubic feet of deals be cut $7 will have been paid in wages, and the product is worth $15. The same amount made into pulp is worth $31.50, and the amount paid in wages is $12. The capital invested in the sawmill is $5, where in the pulp mill it is $41.

In connection with this a strong agitation is now in progress in favour of a prohibitive export duty on pulp wood, for while a cord of pulp wood may be worth $2.50 to $7, made into low grades of paper it is worth $45, and if into the higher grades $50 to $100. It is therefore estimated that if the present export of pulp wood were manufactured into paper at an average value of $50 per cord $30,000,000 would be added to the national wealth of Canada. Considerations such as these are inducing lumbermen, legislators and local boards of trade to favour the imposition of some such duty. The Maritime Board of Trade at its last session in St. John passed a strong resolution in favour of this export duty. The past few years has witnessed the purchase of large tracts of timber lands by syndicates of citizens of the United States. If a federal export duty can be imposed sufficient to compel the paper mills to move into Canada without seriously disturbing any other established industries, immense benefits will acrue to our business interests.

Canada has the largest forest area in the world and has also the greatest amount of water-power in the world. When we consider the relation of forests to water-power and of water-power to electrical energy in a country largely deficient in coal, we can readily see that the conservation of these forests becomes one of the greatest problems of our national life. One phase of our problem is that of the pulp wood industry. At present we export large quantities of pulp wood to the United States, where it is manufactured into paper. At a conservative estimate the same amount of wood would yield from twenty to twenty-five millions of dollars if manufactured into paper on this side.

Thus, if Canada's pulp wood were all manufactured at home, industries would arise whose annual value would be millions of dollars, and at the same time the cutting of our great timber limits would be so regulated as to maintain present rate of reproduction and so conserve the value of our forests forever. Countries like Norway, Germany and France have been able to restore their depleted forests, and thus derive from them a perpetual revenue.

While the creation of a paper and pulp industry in Canada would mean much to Canada, yet it is only part of a greater scheme —that of national self-preservation.

With our forests gone, our water-powers are crippled, our agricultural lands spoiled by flood and drought, and our great national prosperity impaired.

In Ontario's northland the water-power possibilities are almost beyond belief. Some of them are being made use of more or less, many others are as yet not available, others are within easy reach of the Canadian Pacific and Canadian Northern Railways, and the extension of the Temiskaming and Northern Ontario Railway, and the building of the National Transcontinental Railway will hasten for others the time when they will be harnessed for the use of man.

Twelve of the largest rivers in Ontario flow towards James bay, and nearly all of them pass through the great clay belt, where there are approximatetly 300,000,000 cords of pulp wood, from which in the future the province must expect to reap no inconsiderable benefit. Of course this land cannot all be held for ever as pulp wood land; its agricultural values are too great. But there is no doubt that some plan will be devised whereby areas of it will be so held; and that in the not distant future pulp and paper mills will flourish there, and will be fed for many long years from the raw material at hand.

There are millions of horse-power undeveloped in our province, said Mr. Welden, and in almost every instance these water-powers are surrounded with an almost inexhaustible supply of spruce. With judicious cutting and the adoption of reforestation methods, it would be quite possible for any large pulp and paper concern in this way to settle for themselves the perennial worries about wood supply.

Asked as to what he thought of the effect of the proposed prohibitive legislation on the export of pulp wood from Quebec, Mr. Welden stated that he did not think this would prove to be quite so grave a situation as it was thought to be. 'It may,' he said, 'for a while have the effect of increasing the cost of paper to the consumer, but I am thorougly convinced that it will only be a short while when the American mills will adopt the practice of manufacturing their pulp right on the ground and save the heavy transportation and other charges incident to the present method of shipping rossed pulp wood from Quebec.

In 1905 there was invested in Canadian papermaking establishments $21,260,157, with 4,974 employees; a product value at $9,449,842, and wages of $2,208,526. In wood pulp establshments $11,164,768 was invested, 2,456 people employed, $1,023,720 paid in salaries and wages, and material to the value of $3,793,131 was produced.

In Germany a hundred years ago a real timber famine existed, for then wood was the only fuel, rivers the only means of transportation, and the wood along the rivers had been cut away, and the forest devastation, as with us, had wasted much. It was then that the modern forestry systems took their origin, having before that time been only indifferently and locally developed. It was then that the governments instituted such strong organizations to administer the timber lands, and by foregoing present revenue and making present expenditure prepared the results which they are now reaping.

The State forests have now, through a hundred years of patient work, been brought into a condition which compares favourably with the results from agricultural soils; they produce annual revenues of millions of dollars, not by cashing capital, but by using

interest—the amount of annual growth, which the same area can produce forever.

Pulp wood Export Duties.

As the existence of a protective tariff in the Dominion has unquestionably compelled many United States manufactories to erect branch establishments in this country it is a reasonable proposition that similar results would follow the imposition of an export duty on pulp wood. At the present moment the United States paper companies are consuming 4,000,000 cords of pulp wood yearly, about one-fifth being drawn from Canada free of import duty. This is of course due to the care taken to support the home industries and so enable them to compete on the most favourable terms in the paper markets of the world. While little United States paper enters Canada, considerable quantities are exported to Britain, South Africa and Australia.

The northern states that are conveniently situated depend largely on Canadian sprucewood, and any restriction on its export or increase in its cost would certainly entail a reconsideration by the manufacturers of their position at least as regards their foreign trade. Under the present Dingley tariff the import duties into the United States run from 3-10ths of a cent on paper valued at 3 cents a pound to 15 per cent ad valorem on the paper valued at over 5 cents a pound. But the tariff also provides for heavy additional duty in the case of paper coming from a country that imposes export duties on pulp wood. It is doubtful, therefore, whether United States paper companies could supply any part of their home demand from Canada, but it would be even better were the needs of other world markets met by factories established in Canada.

The following article is from the Montreal 'Herald' of August 28, 1907:

Pulp wood and the States.

The Maritime Provinces Board of Trade, in proposing that the export of pulp wood be prohibited, is but voicing a demand that, in one form or another, is yearly being advanced in more insistent terms. Put briefly, the argument is that the consumption of pulp wood is increasing enormously in the States and Canada; that the chief source of supply is Canada; that the States, by keeping a high duty on pulp and paper, and admitting pulp wood free, is draining this country of raw material, while building up its own manufacturing industries; and that an export duty, or the prohibition of export, would force the Americans to come to Canada and make pulp or paper here.

There can be no question that a change is coming over the temper of Canadians in regard to this subject. There has been a widespread disinclination to adopt what might be considered a narrow and liberal policy. There has been a doubt as to whether the destruction of the United States spruce supply was as complete as represented. There has been a fear of the effects of an export duty upon the settler, to whom the market of the States has certainly been a great advantage.

In regard to all three of these matters of contention there has apparently been a steady change in public opinion. For one thing, the experience of Ontario in prohibiting the export of unsawn logs has been so satisfactory that it is not unnaturally taken as an illustration of what may be the results of federal legislation along similar lines.

The result of this legislation is told in the great mills which contribute to the prosperity of almost every port on the Georgian bay.

Evidence has accumulated that the Americans have no great reserves of spruce, and men and papers interested in the paper trade now frankly confess that the States has to look to Canada for the bulk of its supplies of pulp wood. Canadian settlers, with pulp wood to sell, are probably not as numerous as they were. As the lands in the older settlements have now been largely cleared of spruce. But even were this not the case, if it is a fact that the demand from the States would continue, in the shape of imports of the manufactured or partially manufactured product, the Canadian settler's market price would probably be maintained, or suffer only a temporary setback.

The demand for prohibition is based on the argument that an export duty would be met, under the United States law, by the automatic imposition of a countervailing duty on pulp, while there is no such instrument at hand in case the export be prohibited. Of course, it is obvious that if the States must have our spruce, in one form or another, no duty will long be maintained that it will make it impossible or difficult to buy the Canadian product. So an export duty would sooner or later have the same effect as a prohibiting measure.

The subject is a large one, and if it becomes a factor in practical politics, will call for the most exhaustive examination and most careful handling. The outstanding fact that will constitute the chief reason for parliamentary discussion, is that a vast reservoir of natural wealth, peculiar to Canada, is being drained at an ever-increasing rate, into foreign channels, leaving behind it but a fraction of its potentialities for the country's benefit. To this fact is added the other one, that the legislation of the foreign country to which this wealth is flowing, is deliberately devised so as to make it impracticable for Canada to enjoy a greater share of this potential value. In adopting such a policy, the United States has made it impossible for it to consider as unfriendly any Canadian legislation on the subject, however radical. If a foreign country will not, without compulsion, permit us to sell to it our pulp and paper, we are quite justified, in pursuance of a policy of development of our national wealth, in saying to that country, if you will not buy our pulp or paper, we will not sell you our pulpwood.

The Toronto 'Globe' of September 20, 1907:

Newspapers and Pulp wood.

Special despatch to the 'Globe' of yesterday contained the information that the American Newspaper Publishers' Association has requested President Roosevelt and Congress to investigate an alleged combine on

the part of the papermakers to limit the output of paper and to unduly enhance the price of news print. The present import duty on white paper for news print is six dollars a ton, and there is also a duty on wood pulp; the association at its recent New York meeting unanimously requested the repeal of these duties, and appointed a large committee to prosecute the movement as vigorously as possible.

The reason for this action is to be found in a serious scarcity of the paper on which newspapers are printed.

It may be asked why the newspaper publishers do not recoup themselves for the increased cost of white paper by increasing the price of their journals. This is more easily said than done, but some publishers are doing so in the large cities of the United States. In a number of cases the one-cent dailies have been put up to two cents, and many country weeklies have advanced their subscription prices. Some publishers are cutting down the size of their publications, others are reducing the headlines, and still others are using smaller type. All these remedies go but a little way to relieve the present distress, to say nothing of averting the impending danger. It is too late to do much in the way of conserving the supply of pulp wood in the United States, but there is still opportunity to do a great deal in the way of preventing a like situation from arising in Canada. What is urgently needed is a policy of conservation of spruce forests through judicious selection of the trees to be cut, prevention of destruction by fire, and allowing abundant opportunity for reproduction. Whatever the future may have in store in the shape of substitutes for wood pulp, there is nothing yet in sight to displace spruce wood, and in her abundant supply of that timber Canada has a source of wealth that is worthy of the most careful and intelligent treatment.

I have the statement of the manager of the Eddy works in Hull that, in his opinion, nothing will be found to take the place of spruce for making paper. Here is what Professor Fernow says:

In the United States to-day the forestry question is regarded as a critical one, the authoritive assertion having recently been made that the exhaustion of that country's supply of timber is in sight. Is Canada to wait until that can be said of her supply before any adequate action is taken? True, something has been and is being done now, but in the opinion of the men best qualified to speak, these steps are not sufficient to guard Canada against experiencing the conditions that are now causing alarm in the United States. For the most part Canada's timber is being cut with prodigal vigour. A considerable quantity is manufactured in the country, but much more might easily be done here; while, in respect to pulp wood, rapidly increasing quantities are being exported to the United States to build up the pulp and paper making industries of that nation. There is no duty on this raw material; the United States gets it free of duty, handicaps the Canadian pulp and paper industries by putting a duty on their output going into the republic, and tries to under sell them in the British market with pulp and paper made from Canadian wood. The figures cited are, however, sufficiently reliable to make it certain that the United States has already crossed the verge of a timber famine so severe that its blighting effects will be felt in every household in the land. The rise in the price of lumber which marks the opening of the present century is the beginning of a vastly greater and more rapid rise which is to come. We must necessarily begin to suffer from the scarcity of lumber long before our supplies are completely exhausted. It is well to remember that there is no foreign source from which we can draw cheap and abundant supplies of timber to meet a demand per capita so large as to be without parallel in the world, and that the suffering which will result from the progressive failure of our timber was but faintly foreshadowed by the recent temporary scarcity of coal.

The chief wealth of the northern forest region of Quebec is in its spruce, however, where it forms three-fifths of the coniferous forest available for commerce. If, as claimed, it is reasonable to allow two and a half cords of this wood suitable for the making of pulp to the acre these northern forests should furnish no less than 406,874,470 cords of pulp wood. Enormous quantities of white spruce of a very large size are found in the southern Abitibi, capable of supplying large numbers of sawlogs and much pulp wood. Birch and poplar, as well as balsam are also very abundant in many parts of the northern forests of Quebec.

The greatest variety and the richest quality of timber are to be found in the central region of the province, and especially in the new forest reserves of Ottawa and the St. Maurice. This region is situated between the St. Lawrence and the 48th degree of north latitude, and is larger than the combined areas of Nova Scotia and New Brunswick, White, red and banksian pine, white and black spruce, cedar and balsam are the chief varieties of timber in Ontario. There are many fine water-powers. On the Missanabie Mettagami and Abitibi rivers, it has been roughly estimated that as much as 150,000 horse-power each could be developed. The Mississiga, the Onaping, the French and the Montreal rivers all have great capabilities in the way of horse-power development. On the Vermillion, Spanish, Sturgeon, Rainy and other rivers while some powers have been developed, there are many others still undisturbed. For the most part these water-powers are still vested in the Crown. The government has therefore a great inducement to offer pulp or paper manufacturers when it decides as occasion arises from time to time to lease pulp wood areas, good water-powers being a most important factor in the economic essentials of the industries mentioned.

Quebec is no less fortunate in its possession of water-powers, though it would appear that a very considerable number of these have passed from the control of the Crown. The tributaries to the St. Lawrence as well as that great river itself, possess water-powers, some of which are already in commercial use and others that will be as the pulp and paper industries particularly call for their being called into use.

It is significant that in the province of Quebec the utmost importance is attached to the bearing of the forestry question upon the water flow. Mention has been made elsewhere of the emphasis laid upon this by the provincial forester, Mr. W. C. J. Hall.

Here is an advertisement in the Toronto 'World' of October 18, 1907, inserted by the provincial government:

Tenders for Pulp wood Concessions.

Tenders will be received by the undersigned up to and including the 15th of December next, for the right to cut pulp wood on certain areas tributary to the Nepigon river, in the District of Thunder bay and Rainy lake, in the District of Rainy river, and make the same into paper. Tenderers should state the amount they are prepared to pay as bonus in addition to such dues as may from time to time be fixed for the right to operate a paper-making industry on the areas referred to. Separate tenders must be made for each area or territory, and the successful tenderers will be required to erect a mill or mills on each of the territories or in such other localities as may be approved by the government of Ontario.

Parties tendering for the pulp wood rights shall accompany their tenders with a marked cheque for 25 per cent of the amount tendered payable to the treasurer of Ontario, and to be forfeited in the event of their failing to enter into agreements to carry out conditions, &c.

With respect to the Rainy lake pulp concession, tenderers will be required to make a tender for the right to cut pine, tamarack and cedar on the territory offered. Parties making tender for these timbers to state the amount they are prepared to pay per thousand feet B. M. as bonus in addition to Crown dues of $2 per thousand feet B.M. A marked cheque for $5,000 payable to the treasurer of Ontario, must accompany the tender for pine timber, and to be forfeited in the event of their failing to enter into agreements to carry out conditions, &c.

No timber shall be cut on either of the concessions of a less diameter than nine inches, two feet from the ground.

The successful tenderers to enter into agreements with the government for the erection of the mills, expenditure of money, &c.

For full particulars as to the conditions, &c., application should be made to the undersigned.

HON. F. COCHRANE,
Minister of Lands, Forests and Mines.

Toronto, October 16, 1907.

This is a very important measure but it can be outwitted by a clever purchaser on the other side. He can send in a lot of stool pigeons to purchase the land. Even where the lumberman has to take off the timber in two years, the stool pigeons and pulp wood settlers will take the land, and pay the price, which will be put up by the corporation on the other side, and deplete that land of all the timber there is on it. By this means the provinces can be outwitted and our forest wealth taken to the other side of the border.

Mr. LEWIS.

With reference to the help we get in this matter, here is an item from the Toronto 'News':

Fighting the Paper Trust—Local Typographical Union enters Resolution of Protest.

At a meeting of the joint conference board of the Allied Printing Trades, composed of delegates representing the International Typographical Union, International Printing Pressmen and Assistants' Union, International Stereotypers' and Electrotypers' Union, International Photo-Engravers' Union and the International Brotherhood of Bookbinders, held at Indianapolis, Ind., December 17, 1907, a resolution favouring the abolition of the duty on white paper, wood pulp and the various materials used in the manufacture thereof, was unanimously adopted, and also at a recent meeting of the Detroit Tyographical Union, No. 18, the same measure was presented and adopted by a unanimous vote:

'Whereas, we, the workers, employed in the various departments of newspaper and commercial printing offices throughout the United States, i.e., compositors, pressmen, stereotypers and electrotypers, photo-engravers and bookbinders, to the number of more than 100,000, feel that any combination, which produce an artificial scarcity of news print paper, and which unduly stimulates the price of that product, is an oppression that affects alike the employee as well as the employer; and

'Whereas, the almost prohibitive and ruinous price of such paper has curtailed to an alarming extent the number of workers employed in the printing industry, and has further acted as a preventive to the printing trades artisans from securing higher compensation for their services, to which they are justly entitled; therefore, be it

'Resolved, that this joint conference board, in session at Indianapolis, Ind., December 17, 1907, submit a memorial to the President of the United States and the Congress, and appeal for the abolition of the duty on white paper, wood pulp and the materials which are used in the manufacture thereof, and be it

'Resolved, that all local unions affiliated with our international organizations are requested to endorse these resolutions and forward copies to their representatives and United States senators.

I would ask hon. gentlemen to note the significant bearing of that item, namely, that we have behind us a majority of the unions who are opposed to the corporations that control the paper and pulp mills in the United States.

From the Toronto 'News' of February 15, 1907, I take this paragraph:

Recently reference was made to the economically unwise action of this country in giving away its spruce pulp logs to be manufactured into paper in United States mills. Here is the lesson in a nut shell. Canada has the greatest supply of pulp wood in the world; Great Britain is the greatest consumer of paper, and yet Canada has only a share (how much is not thought worth while giving in these figures) in about twelve or fifteen per cent of Great Britain's importations. On the other hand, the United States, which is an

exporter of paper practically only because Canada supplies it with raw material, is up among the first three or four nations which send paper into Britain. Canada depletes her most valuable forests and sells the product in the shape of pulp wood for $6 or $7 per cord. The United States saves her forests and sells our product in the shape of paper for, say, $30 per cord for good British gold. Are not Canadians what the man in the street would call 'dead easy' to let this go on when we could stop it in six months by prohibiting (as Ontario has done) the export of pulp wood from Crown lands?

In one respect that item is wrong. If properly investigated it will be found there are no pulp wood forests in the United States.

The Laurentide Paper Company have millions invested in their plant and limits, and it is to their own best interests to preserve their limits. Many of the American companies cut off their timber regardless of the future supply, and in this way waste immense quantities.

Over 52,000 tons of roll newspaper is made every year by this company, and as the Canadian consumption is only 27,000 tons yearly, it means that outside markets must be sought for much of the produce. The market of the United States is barred owing to the duty, yet Canada furnishes them with their raw material. When this raw material happens to be manufactured in Canada it is shut out of the United States. As we have to import much of our heavy machinery from the United States and pay duties, the Canadian manufacturer of paper is handicapped when he attempts to compete with American manufacturers in foreign markets. The Americans have also a big advantage in the cost of coal, in the supply of skilled labour, in lower traffic rates, in cost of machinery and mill supplies and many other things. Prohibit the exportation of pulp wood from Canada and the American papermakers would be compelled to buy their ground and sulphite pulp from Canada at from $20 to $38. If not, then the American papermakers would have to move their entire plants over here, and would thus build up large, thriving centres of industry around their plants.

An argument is made by some that the farmer and settler would suffer if the exportation of pulp wood should be prohibited. The Laurentide Paper Company are buying to-day a large portion of their wood from farmers The policy of well-conducted paper mills, they say, is to buy all of the pulp wood they possibly can from farmers in order to save their own limits from the demands made upon them by increasing productions. The paper mills of Canada to-day could use a very large proportion of the wood now being exported to the United States and with new mills building in Canada the market for the pulp wood and the price would be maintained.

From the present policy the company says, Canada is getting practically nothing. The stumps are left as mementoes, a small amount is obtained for transportation, &c. On the other hand, thriving cities are growing up around American mills whose supplies come from Canada. The Americans are quite content to have things remain as they are, for the present arrangements give them the long end of the deal; in fact, the United States Congress dictates to Canada, and not only makes its own laws, but presumes to say what Canada shall or shall not do. Canada gives them all the advantages and gets absolutely nothing in return. Americans own in Quebec province 12,000 square miles of pulp wood areas, and this is being rapidly depleted by the hundreds of mills in the United States which are absolutely dependent on Canada for their supplies. It certainly does not seem the part of wisdom for us to continue a policy which has the effect of building up manufacturing centres in the United States when by changing that policy these centres can be developed in Canada. Our present policy of sending our wood to build up a foreign country was just furnishing it with weapons to fight Canada in the commercial world. How well the United States realize the strength of Canada's position on this question was probably never better shown than in the message of President Roosevelt when he practically said, 'It might be well for us to make some concessions to Canada if they will guarantee us free wood.'

Mr. J. H. Biermans, the managing director, holds strong opinions on the questions connected with the pulp and paper trade that have aroused so much interest in the public mind. On the necessity of this country imposing regulations relative to the cutting of timber he was emphatic. About thirty years ago, he said, the Scandinavians were confronted with the same problem. They, too, had believed that their forests were inexhaustible. It required much persistent and long-continued agitation to awaken them to a realization of the fact that their magnificent forests were being rapidly denuded. To their credit, however, it must be said that when once this fact was borne in upon them they took prompt and effective measures to provide a remedy Now for every tree they cut down two are planted in its place.

Mr. Biermans is also a strong believer in the wisdom of keeping our raw material in Canada. He thinks it is foolish and unbusinesslike that we should allow our logs to go free into the United States, especially when the latter country does her best to shut out our pulp and paper by imposing heavy duties. Personally he thinks that prohibition of the export of logs is the best remedy. He considers that the future for the pulp and paper industries in Canada is a dark one unless such action is taken.

Mr. Riordan is strongly in favour of an unconditional prohibition of the export of pulp wood, whether the United States removes the duty on pulp and paper or not. He believes that our natural resources make it possible for the pulp and paper industry to become Canada's greatest industry and greater than that of any other country. The cultivation of this industry, he believes, means as much to Canada as the cultivation of the steel and wheat industries that the government have done so much to foster. The remedy might bring about for a time some dislocation of the Canadian pulp wood business, but he thinks that the end to be gained would justify the government in taking steps to neutralize that dislocation.

The six daily newspapers of Toronto consumed last year about 9,000 tons of paper, and the consumption has been growing by at least

10 per cent annually. To supply these six newspapers required the product of not less than 3,000 acres of spruce. The Toronto newspapers probably represent one-fourth the home consumption for Canada. This country is even to-day exporting five times as much news paper as is consumed at home, and the industry can scarcely be said to have reached more than the infant stage.

Thus, for the present home consumption alone about 12,000 acres must surrender their product every year, and for the combined domestic and export business 72,000 acres are devasted annually. These figures will, beyond any doubt, increase enormously during the next few years, for more and more Canada is being looked to for the world's supply of pulp and paper.

Two of the Toronto dailies just referred to have only recently raised their price to subscribers outside of Toronto from one dollar per year to one dollar and a half per year. The pinch has been felt more forcibly in the United States, where hundreds of daily papers have raised their prices by from fifty to one hundred per cent since the increase in the cost of white paper mentioned above became effective.

It does not require much argument, therefore, to show that in finding a solution for the pulp wood problem the newspaper publisher and reader are equally interested. For too long the question has suffered through indifference on the part of the public, who apparently regarded it as of interest only to the pulp and paper makers and the paper users of the country.

The opposition to the imposition of an export duty on the raw material as a means of stopping the denundation of our forest lands is unpatriotic in its fullest sense. It apparently wishes not only the destruction of the beautiful and the useful, but also to baulk the immense industries which may develop by keeping the manufacture of pulp in this country. The 'Sportsman' says to the government :—'Stop the export of raw material, force the mill owner to manufacture in Canada, and attend to forest culture as you have to agriculture, and I will be satisfied.' Moreover, an export duty and strict supervision leaves a government in a good defensive position when it is called upon (as it will be) to face an angry electorate and to explain why the country is being robbed of two of its finest assets which explanation will be demanded in the very near future.

Let us examine the work of our cousins over the border. Up to a short time ago they supplied the world with lumber and finished paper from pulp wood. This brought them in millions of dollars. To-day both lumber and pulp wood are about exhausted. To-morrow they will have to spend millions annually for both lumber and pulp wood. Until lately sportsmen and tourists came to the United States from all parts of the world to hunt big game, to admire the scenic beauty found in her forest-clothed mountains, east and west, and to angle in her splendid streams and lakes. Those sportmen brought in millions of dollars; five millions of dollars to one state alone, we are told. That simple tool, the axe, has nearly destroyed these two sources of revenue. In justice to the American people, I must say that this destruction was largely the result of ignorance.

Recently we discussed this question in all its bearings with prominent American sportsmen at the Sportsmen's show held in New York. All were unanimous in condemning the wasteful methods of the lumbermen and the weakness of the government in permitting it until too late. Let the Canadian people take this lesson to heart in time; this lesson that the American people are finding so bitter to learn, and difficult to turn to account. To-day the American lumbermen and pulp mill owners look to Canada as the dying Moslem looks to Mecca for salvation.

Ottawa, Oct. 10.—The petition presented to the government yesterday by a delegation of paper and pulp makers, and which the premier has agreed to take under consideration, is as follows :

Whereas, it has been the policy of the federal government to encourage and promote manufacture within the bounds of the Dominion by duties sufficiently high to protect home manufacture, and by bounties to encourage the use of home raw material; and

Whereas, the federal government has expended large amounts to promote agriculture and to encourage immigration from the mother land and foreign countries; and

Whereas, we have within the bounds of Canada, as a natural product, spruce pulp wood capable of providing employment for a large number of our present people, and for many who may come to find homes here; and

Whereas, this wood is being raised in Canada and shipped as pulp wood to the United States to keep pulp and paper mills in that country running; and

Whereas, our present natural advantages should make pulp and paper our greatest industry; and

Whereas, the exporters are stripping the lands of wood while those with permanent interests in the country are striving to conserve the forests; and

Whereas, the crop of pulp wood is of very slow growth, and the supply is already becoming inaccessible; and

Whereas, the free export of pulp wood to the United States, combined with the tariff against our pulp and paper, favours the development of the paper industry in the United States rather than in Canada;

Therefore, your petitioners humbly pray that the exportation of pulp wood be prohibited by the federal government.

This is how the probable prohibition of pulp wood by the Canadian government appeals to at least one American congressman, T. Littlefield:

'Canada has the largest supply of pulp wood in the world. The country has vast timber resources, and there is already an agitation in the Canadas for an export duty on pulp wood. Why are the Canadians asking for this export duty? It is because they want the mills, the millions of capital that would be invested, and the vast sums that would be expended for labour. They want all the returns their forests will give them, and they are right. It is laudable on their part, and it is just as laudable for us. While we stand on the proposition America for the Americans, they shout for Canada for the Canadians. The Canadians have not the same constitutional limitations as embarrass us in this country. Perhaps I should not say embarrass, for I believe that there is not one limitation in the contitution that is not necessary for our welfare and happiness.

But while we are restricted from putting an export duty on any of our products the Canadians are under no such limitations. They already have export duty on some articles. One can see what an export duty on pulp wood would do to the pulp manufacturers of this country in the experience of lumber operators in the province of Ontario.

I shall explain to the House in two words the difference between our constitution and that of the United States. The federal government of the United States which has to do with the question of export and import duties has only the powers which are expressly given to it by the constitution of the United States, whereas the powers exercised by our provincial governments are only those expressly given to them by the British North America Act. The federal government of the United States has no power to impose an export duty on any article.

I wish now to read an extract from 'Pulp and Paper' magazine of February, 1908, which reads:

Instead of trying to break our business down and force the new mills, which represent an investment of $100,000,000, to move to Canada, why do the newspapers not use their columns to build up the business, advocate preservation of the forests, the building of storage reservoirs, for water-power purposes at the head waters of all streams in the country where practicable, and thus preserve their own existence.

The 31st annual meeting of the American Paper and Pulp Association took place in New York on the 6th instant, the attendance being larger than ever before.

I have here an article relating to the 'Watertown Pulp and Wood Supply Company,' which reads:

The above is the name of a company with head offices in Watertown, N.Y., which was incorporated last year under the laws of the State of New York, for the purpose of buying pulp wood in Canada and shipping it to several paper manufacturing companies in the United States. This object is significant, inasmuch as the paper makers in the Republic recognize they cannot much longer hunt for individual supplies of raw material either in their own country or in Canada, but find it expedient to join together and draw from one independent source of supply in Canada, over which they themselves will have control. The officers of the company are as follows: J. A. Otterson, president; J. M. Gamble, vice-president; C. H. Remington, treasurer; F. M. Hugo, secretary; W. C. Campbell; E. B. Sterling, general manager. They represent the following companies: The St. Regis Paper Company; The Remington-Martin Paper Company; The Norwood Paper Company; The Raymondville Paper Company; The Carthage Sulphite Company; The West End Paper Company; The Champion Paper Company; The Brownsville Paper Company; The Dexter Sulphite Company; The Carthage Tissue Mills; The Brownsville Board Company.

The company has an office in Quebec city, managed by E. B. Sterling, who is authorized to buy pulp wood in Canada and ship it to the above companies.

It was understood that it was the company's intention to build pulp mills in Quebec province, but J. A. Otterson of Carthage, N.Y., who is one of those largely interested, informs the Pulp and Paper Magazine that this is not the case. Evidently, while the Canadian government delays in bringing forward measures for restricting or prohibiting the export of pulp wood, the Americans think they may as well get all the wood they can in Canada and ship it to the United States for manufacture.

I have here an interesting paragraph entitled 'Our Forest Wealth,' taken from an American paper, reading:

Seattle papers predict that the timber resources of the Dominion will soon be severely taxed by increased demands. The rate of consumption shows a constant growth. Concrete, brick, stone and steel are more largely used in all structural work than ever before. But, notwithstanding the demand for all classes of structural timber, lumber and wood materials are increasing too. Other parts of the world have been denuded of trees, and are now restocking their forests. In Canada there is still a large virgin area, an apparently inexhaustible forest supply. But rapid settlement of Canada's prairies, the relatively small pine area left in the United States, and the needs of paper manufacturers are making rapid inroads on Dominion spruce and pine, the country's most valuable timber. Europe is looking to Canada now. The United States is buying there too. The Seattle 'Post-Intelligencer' says that it is the northern wilds that should be Canada's future wood lot. It is there Canada should introduce a practical forestry system that will ensure for all time the perpetuation of those forest areas. Growth and reproduction should be continued there indefinitely by scientific forestry methods. If they are, those uninhabited wilds will long be the source of Canada's greatest wealth.

A significant despatch headed 'Big Timber Land Deal' appears in the 'Globe' under date of St. John, N.B., October 5, 1907. It reads:

For the fifth time during the last two years a lumber deal has been completed on the north shore of New Brunswick whereby American capitalists get possession of property valued at nearly half a million.

To-day the International Paper Company purchased from Ernest Hutchinson of Chatham 45 square miles of granted timber lands and 300 square miles Crown lands held under lease from the government, also a large mill. The price is $500,000.

Mr. W. B. Snowball of the J. B. Snowball Company, has been a consistent advocate of an export duty on pulp wood, and has voiced his opinions and arguments at many of the meetings of the provincial and Dominion forestry associations and elsewhere. He said:

I am opposed to an export duty on pulp wood. My idea is that the exportation of pulp wood from Canada should be absolutely prohibited. If a duty is decided upon it

should be high enough to be prohibitive. That is what we should have in this country. I believe that if the governments of the various provinces would follow the example of Ontario and forbid the exportation of pulp wood cut on the Crown lands it would go a long way toward inducing the establishment here of the pulp and paper manufacturing establishments from the United States.

I now come to two interesting extracts from the Montreal 'Herald,' the government organ in Montreal. They are as follows:

The strong movement to which the 'Herald' directed attention some months ago, as growing in force and intensity, in favour of a change in the fiscal conditions that govern the exportation of pulp wood, has found expression in articles that have appeared in other journals as well as in the representations made this week to the Prime Minister, the Minister of Finance and the Minister of Customs by an influential delegation representing the industry.

Hon. Mr. Turgeon favours export duty.

'It is,' said the minister, 'a hard question to deal with, and there are many grave difficulties in the way of a settlement.' As Minister of Lands and Forests and speaking solely from the point of view of my interest, because of that position, in the forests of the province, I think it would be a great boon for the public domain if the federal government put an export duty on pulp wood. On several occasions people have come to this government and asked why we should not put a big tax on pulp wood cut for export. We have had to point out to them that in the first place we have no power to enact an export duty, and that in the second place the provincial tax on pulp wood cut for export applies only to Crown lands. A careful calculation made by some experts shows that for every cord of wood exported from the province there is left here a sum averaging $6 per cord. That covers everything, labour, price to the seller, transportation charges and everything else.

Menace to pulp wood areas.

It is admitted by everybody who has gone into the question that the pulp wood resources of Canada are vast but competent authorities declare that it is a mistake to assume that they are inexhaustible. Vast as these areas are in Quebec, Ontario and some of the other provinces of the Dominion they are as vulnerable as the herds of buffalos that once thundered in hundreds of thousands over the prairies, but are to be seen no more. They are as vulnerable as those of the Adirondacks and of Northern New York, which gave way before the portable mills of the lumbermen until the industry disappeared and only charred dry stumps were left to tell the story of vandalism.

An Export Duty on Pulp Wood.

The deputation of manufacturers of paper and pulp which yesterday waited on the Prime Minister, the Finance Minister and the Minister of Customs, evidently presented strong evidence in support of their contention that an export duty should be placed on pulp wood by Canada, or that the exportation of the wood should be prohibited by federal legislation, as it is now in Ontario by provincial legislation. It appears to be clear that the United States paper manufacturers must have our pulp wood, and it is equally clear that they are coming to Canada in large numbers, securing timber limits of great magnitude and stripping them of their pulp wood without doing more for the development of Canada's resources than is implied in the sums they spend for labour and freight. Further, the present condition of affairs encourages jobbers to place 'fake' settlers on Crown lands, get the available pulp wood swept clear and then move the so-called settlers to new fields of labour, leaving behind them lands uncultivated and denuded of timber.

Were the Canadian paper maker finding a ready market in the States, the situation, from a national standpoint, would not be so absurdly one-sided. As it is, he is debarred by a high tariff from selling his finished product in the country which gives free admission to pulp wood, the raw product of the paper maker. The United States tariff being directly designed to encourage the importation of Canadian raw material and discourage that of Canadian manufactured goods, the question arises: How long are we going to rest content with this situation?

Ontario has shown by its action in prohibiting the export of saw logs that the process of manufacture of Ontario timber into the finished product could be transferred to that province. Why should similar action by the Dominion not have a similar result? The two difficulties that appear most prominently in the way are the effect upon the bona fide settler, by diminishing his market, and the possibility of serious reprisals by the States. It is probable that the settler would not find much difference in the value of his timber, owing to the great demand for it, and to the fact that, before long, the States will have to get our paper if they do not get our pulp wood. As to the danger of reprisals, a self-respecting people must do what seems best with their own natural products. If they desire to manufacture them into finished articles within their own borders they cannot hold their hand for fear of some other people objecting. In fact, it is probable that a firm stand by Canada on this very question would be the most certain means of getting from the United States favourable terms on the importation of pulp and paper. If we could send our paper free into the States, we would not have the same objection to our pulp wood being freely utilized by American paper mills. A fair field is all that Canadians desire. They do not possess it under the existing terms of the United States tariff.

Here is an extract from the 'Globe' of August 31:

At Sturgeon Falls is one of the great pulp and paper mills of the province, located on the river that carries down to its doors the spruce which feeds its ponderous grinders, and also supplies the power which makes the wheels revolve. The mill—it is probably no secret among financial men of the province—has had difficulties in the past, partly due to the condition of the pulp and paper market, and doubtless to other drawbacks incidental to putting a large industry on its feet. A substantial town with modern buildings and public conveniences has grown up about the

mill and within ear shot of the cataract which gave the place its name. The whole aspect of the business has changed with the market conditions of the past fifteen months, and the future of the mills at this point is assured. The output is sold before it is manufactured, and an export business has been worked up.

Here is another article from the 'World' dealing with Wisconsin's paper industry and its moral:

Wisconsin's Paper Industry and Its Moral.

How necessary it is to encourage the development of the paper making industry of Canada is brought home to the Dominion and Provincial governments by a recent article in the Milwaukee 'Sentinel.' Quite naturally the leading Wisconsin newspaper cannot restrain its jubilation over the extraordinary progress made by that state in paper production, in which it declares its manufacturers will soon rival the world. Almost all kinds are made. 'Shiploads are sent to Japan and train loads to all parts of the west. Several train loads of paper steam out of the Fox River valley every evening. It is a small mill which does not make a carload in one day. Some of the machines run a sheet of paper 120 inches wide, 500 feet long, every minute, or a mile of paper every ten minutes, which is rolled into great white rolls and shipped in that manner to the newspapers.'

Only a few of the paper mills prepare their own pulp. Most of the pulp plants are separate enterprises, dependent for their lumber largely on Canadian forests. 'Thousands of carloads of wood pulp,' says 'The Sentinel,' are cut in the northern forests each winter and large rafts brought over the lakes from Canada each season and loaded on the cars at Green bay for distribution to the mills.' Papermaking in Wisconsin flourishes chiefly in the valleys of the Fox and Wisconsin rivers but large works have been placed in other water-powers. New plants are being constantly erected and all the mills are running night and day. But why should Ontario and the other forest areas of Canada content themselves with supplying wood for United States paper mills? Every one of the advantages enjoyed by Wisconsin is possessed by Ontario and bettered—clear water, hydraulic power, proximity to the forests. This province ought to reverberate day and night with the hum of paper factories, just as Wisconsin does. The provincial government should lose no further time in checking the export of pulp wood and in adopting a policy which will not only encourage, but compel the utilization of the raw wood in Ontario.

Mr. Speaker, in detaining you for so long a time with these cuttings, I feel obliged to say that I have taken every precaution to cut out only those parts that are relevant, and with the object of putting the case in regard to pulp wood as clearly as possible. I wish now to quote from a report of the Industrial and Labour Statistics of the State of Maine for 1906:

The immense increase in the volume of this industry during the past two years is a matter of great surprise to us and no doubt will be to a lot who make the matter a study, but we cannot question the correctness of our schedules.

It is evident to all that this industry is developing the natural resources of Maine as perhaps no other industry has ever done. It is constantly adding wealth to our state, both to the operators and wage-earners, as well as to the merchants and other business men in the communities where the mills are situated. It is adding prosperity to many of our old settled towns and building up new towns in the wilderness. It is giving employment to thousands of our young men who otherwise might be obliged to seek a livelihood in distant parts of the country.

I submit that a great many of these young men mentioned here came from the province of Quebec.

It has no doubt been instrumental, to a large degree, in stemming the tide of emigration from Maine, which, in the past has carried such a large percentage of the brain and brawn of our rural communities to other states, much to the detriment of our own.

The farmer and the gardener, as well as the businessman and the workman feel the influence of the industry in the new demand for produce, which adds much to their income, where formerly the most remunerative products of the soil, without a local market, were rendered almost valueless on account of their perishable nature.

The most serious problem in this industry is the question of a wood supply for the pulp mills.

From the closest estimate the writer can make from a compilation of their returns, it appears that after deducting Canadian spruce and the edgings and other mill waste from the total amount used, the Maine forests will soon be depleted. Now, Sir, here is a statement taken from a book prepared by the Toronto 'Globe':

I do not think there is any doubt but that Canadian mills could and would buy all the wood that the Quebec farmers have for sale at as good a price as they are now getting if the Canadian mills had the protection that the prohibition of export would give them, and the new construction that this protection would bring about would soon make the market larger than ever. Our company are at the present time using from 90,000 to 100,000 cords per year, and we buy a considerable portion of it from farmers.

That is from an interview with the general manager of the Riordan Paper Mills Company. I will now quote from a 'Globe' editorial of September 20, 1907:

In a number of cases the one-cent dailies have been put up to two cents, and many country weeklies have advanced their subscription prices. Some publishers are cutting down the size of their publications, others are reducing their head line and still others are using smaller type. All these remedies go but a little way to relieve the present distress, to say nothing of averting the impending danger. It is too late to do much in the way of conserving the supply of pulp wood in the United States, but there is still opportunity

to do a great deal in the way of preventing a like situation from arising in Canada.

Now, Sir, here is the opinion of Mr. Barber, president of the Wm. Barber & Brothers' paper mill at Georgetown:

I believe in putting an export duty on pulp wood, but it should not be larger than the duty now charged by the United States on our wood pulp. The export duty should be retained until the United States removes the duty on Canadian pulp, and then it should be taken off.

In regard to the retaliation cry, Mr. Barber says:

The retaliatory duty which will go into effect in the United States as soon as action is taken by Canada by the putting on of a duty need not alarm either the pulp wood or wood pulp exporters. I venture to predict that if the Canadian parliament puts on an export duty immediately after the opening of the coming session, the United States Congress would within two months thereafter repeal the retaliatory duty and put Canadian pulp on the free list. A sign of the feeling in the United States was given at the meeting of the publishers of newspapers held last month for the purpose of formulating a demand for the free admission of Canadian paper and pulp. They will be supported in part by quite a large number of American papermakers who want Canadian pulp free of duty, but do not want the paper admitted on the same terms. My opinion is that there will be a compromise of the conflicting interests by admiting pulp wood free without any change in the present duty on paper. If the United States does not want our newspaper other nations do, and with our ample supplies of wood and splendid water-powers we can manufacture so as to undersell them in any foreign market.

I freely believe Mr. Speaker that if the whole matter is properly explained the farmers of Canada who have pulp wood to sell (not the manufacturers of the States) will join in the movement to keep Canadian crude products to be manufactured in Canada. At present they hold the dollar so close to their eye they can't see the many dollars beyond. I am reminded of the time the mechanics broke new inventions because they thought they would stop labour; now they realize better pay and shorter hours through same machines. Now, Sir, in concluding the compilation of facts considering this great question, facts which have been added to and are being added to every day, I wish to say, that my attention was first directed to it specifically by a conversation last fall with a gentleman who had been in the United States, who was fully conversant with the ins and outs of the whole business and who said if the United States were in our position they would not wait a day before putting on an export duty. Politics steps to one side over there when the mighty dollar is in danger. I also want to say that I presented this resolution entirely of my own motion, that I consulted no one, advised with no one, and am fully prepared to plough my lonely furrow if facts, reason or other considerations prevent any one from seeing the case as I see it. I also wish to say I consider it a question so great, so vital to the national and private weal, that it should be absolutely kept out of politics. I therefore ask the government to appoint a committee of the House, three or five, to take evidence in and out of session and investigate the whole matter and report at another session. In the light of the facts to be found by this committee I trust the government will take some action which will bring into force an export duty. not immediately, but within a reasonable time, giving everybody due notice, which will have the effect of bringing the mills to Canada and thus having the product of our own country manufactured in our own country.

Mr. HENRI SEVERIN BELAND (Beauce). My hon. friend from West Huron (Mr. Lewis) is an illustration of the difficulties sinners find who enter definitely upon the path of virtue. A few years ago when my hon. friend entered the House he made the reputation of being one of the longest winded speakers amongst us, but if we are to judge by the later speeches he has made during this session he was on a fair way to redeem himself. However, I am sorry to say that to-day he has relapsed worse than ever into the errors of his youthful parliamentary life. Now, Mr. Speaker, coming to the question under discussion, I may say that the subject of imposing an export duty on pulp wood has of late attracted the attention of the people of this country more than at any previous time, and the opinions in regard to it are so varied as to leave one perplexed when he comes to affirm which side of the question meets with the greater favour. I may say at the commencement of the very few remarks which I shall address to the House that there are on in this subject two different opinions which I confess may be shared by men equally animated with a true Canadian spirit. There is in the first place the opinion of the patriotic Canadian who feels that we should impose an export duty on pulpwood because it would conduce to the establishment of a huge industry in this country, the pulp and paper industry. This contention is dependent upon the assumption evidently, that the timber supply of the United States would become exhausted before many years. Then, there is the other contention that the imposition of an export duty on pulp wood would have the effect of preserving and perpetuating our own forest reserves. It is said that at the rate pulp wood is now being cut in this country our supply will soon be destroyed. I might remark here that if this argument is used in favour of an export duty on pulp wood, it scarcely conforms to the law of logic because it is

not to be seen with the naked eye how you are going to consume less pulp wood if all the pulp and paper mills of the United States are removed to Canada. It will be necessary I think to look a little deeper into this contention. Then, on the other hand, there is the contention of the equally patriotic Canadian who believes that no national and public interest can be served by the imposition of this duty, whilst the private interest of a large section of the community in Canada will be prejudicially affected. It has been said in the press, in lectures, in pamphlets, that the people who initiated the movement for an export duty to be imposed by Canada were animated with a narrow and selfish spirit; that the movement must have found its origin in the minds of the pulp and paper manufacturers in Canada with the view of ridding themselves of an active and pressing competitor on the other side of the line. Now, Mr. Speaker, as I want to approach this question in an impartial spirit I must say that I do not believe that this idea, though it may be plausible, is borne out by the facts. We know it is a fact—and every one can discover it for himself—we know it is a fact that the pulp and paper manufacturers of this country have at their disposal large and rich timber limits from which they will be able to feed their own mills. Now, one point about which there is much dispute is as to the timber wealth of the United States, and that question has been recently the subject of heated discussion. It is said that the primeval forests of the United States have long since fallen beneath the axe of the woodsman: it is said that the timber wealth of the United States is practically wiped out. I cannot for my part share that opinion, though I am well disposed to recognize that it is not unlimited and that it is not beyond the possibility of exhaustion. For instance, the state of Maine in the year 1903 had standing spruce timber to the estimated extent of 21,000,000,000 feet, which is considered by Mr. R. S. Hosmer of the United States Forestry Bureau as amply sufficient to meet the requirements of all the mills in that state for an indefinite period. We must not forget that only eleven states have been importing pulp wood from Canada, and we must not overlook the other fact that the United States have a forest reserve of 1,094,000 square miles, which is equivalent to 37 per cent of their total area. The argument is being made by the advocates of an export duty that the American forests are depleted; but I may remark that out of 3,600,000 cords consumed in the United States mills in 1907 they have imported from this country only 628,000 cords. Although I am disposed to recognize that the reserves of the United States are far from being inexhaustible, yet I am of the opinion of those who contend that our neighbours are not at our mercy; and if in America proper and effective regulations regarding the cutting of timber are adopted, as they are adopted, if the rotation system, the system of one section at a time being operated on or exploited in a given district, is enforced, as I understand that it is, and if the policy of reforestation or actual cultivation of trees is resorted to, as it is being resorted to in the United States, it will be found that they have for a much longer period than has been predicted lately sufficient timber to supply their mills.

Coming to what is termed Canada's wealth in timber lands, we may fairly say that we have the richest timber areas in the whole world. According to Dr. Bell of the Geological Survey, our forest areas represent 2,600,000 square miles, which is equivalent to 1,657,000,000 acres. It is idle for me to remind the House that a large proportion of these timber areas are inaccessible at the present time, either by rail or by water. But just for the purpose of demonstrating to the House what an immense asset Canada has in these timber areas, I may be pardoned if I indulge in a little calculation on the subject. According to Dr. Bell, one half of our timber areas is made up of pulp wood; so that we have 828,000,000 acres of pulpwood forests in Canada. If you calculate that each acre supplies five cords of pulp wood, which I believe is quite below the average, you reach the enormous figure of 4,144,000,000 cords; and at the rate at which we are exporting pulp wood to the United States—not 1,000,000 cords a year, but suppose it is—we could continue to ship to the United States at that rate for 4,144 years. If alone we supplied the entire American and Canadian markets at the rate of 4,000,000 cords a year, Canada's pulp forests would exist for 1,000 years.

As I have already said, this is only a speculative calculation, and I do not propose to adhere to it in order to make my point. I would simply come to the forest areas of the province of Quebec, a large proportion of which are within easy reach of lumbermen, and, as you well know, the main source from which American mill owners draw their supply. The forest areas of the province of Quebec amount to 327,000 square miles, equivalent to 209,000,000 acres. I will be content to take as a basis of calculation only 70,000 square miles actually under license in that province; and to make it plain to the House that my argument is not mere fancy, I will take the liberty to quote the testimony of Sir Wm. Van Horne given before the Colonization Commission of the province of Quebec appointed a few years ago. Here is a question that was put to him, and his answer:

Q. At the actual rate of exploitation how long will your spruce limits of the Laurentide Pulp company last?—A. The company has acquired a considerable stretch of tim-

ber lands, some 1,650 square miles. The intention is to purvey for our needs indefinitely by the annual growth of trees; and we believe that with a judicious system of cutting and convenient protection against fire, the Grand-Mere mills will be fed for all time to come.

Now, the reports of the Department of Mines and Forests in the province of Quebec show that the Laurentide Pulp Company cuts 50,000 cords per annum on its limits. This testimony, from the lips of a gentleman who is reputed to strongly favour an export duty on pulp wood, is full of instruction.

We find that 1,650 square miles, divided up into sections and exploited methodically, will supply 50,000 cords annually and indefinitely by the growth of trees simply by natural reforestration. Suppose you apply the same method to the 70,000 square miles under license in the province of Quebec, a yearly supply of 2,120,000 cords of pulp wood will be available for all times to come, or about three times the quantity exported to the United States last year.

I may be told, with much reason, that pulp wood is not the only timber cut on those lands. My answer is that besides the 70,000 square miles under license in the province of Quebec, there is left, making allowance for private and seigneury lands, 200,000 square miles of uncut virgin timber land, the richness of which is unparalleled in the whole world. Apparently therefore the danger is not yet at our doors. Apparently the peril is not approaching and famine is still far away, if only proper methods are adopted.

Much has been said about the progress of the pulp wood and paper industry in Canada. Is it lingering, as is stated by those who advocate an export duty? It will be necessary for me to give some statistics in order to demonstrate what wonderful progress has been achieved in this direction. Take, for instance, the pulp mills. As my hon. friend, who moved the resolution, has quoted, in 1888 we had thirty-four pulp mills in Canada and in 1907 we had fifty-eight. The thirty-four mills in 1888 had a total capacity for 24 hours of 154 tons only, whilst the 58 mills in 1907 have a total capacity for 24 hours of 2,361 tons. Therefore whilst the number of mills has only increased from 34 to 58, the capacity has increased from 154 tons to 2,361 tons daily, or an increase of 1,500 per cent. Take the paper mills. In 1888 we had 40 mills with a capacity of 173 tons in the 24 hours. In 1907 we had 46 mills with a capacity of 966 tons in the 24 hours. Those figures, I submit, show a development in the pulp and paper industry in this country which is most gratifying and encouraging, and that development has taken place without recourse to the extreme measure of an export duty. This industry will keep on increasing and enlarging by great strides owing to our rich timber areas and splendid water-powers.

It is generally claimed, and rightly so, that in legislation as in other matters public interest must take precedence of private interests. But this law scarcely finds an application in the present instance. The private interest, the interest of the individual in this regard, is so large that it comes well nigh being a public interest. It is argued that the national interests of this country would be enhanced by prohibiting the export of pulp wood inasmuch as two things would result. What are these two things? First, that such a course would compel the establishment in this country of huge pulp and paper industries. Second, our immense stretches of timber lands would be preserved and made permanent. Every one will admit that these are the two reasons invoked by the advocates of an export duty. These advocates go even further. They state, as my hon. friend has said this afternoon, that the private interests of those who are engaged in the cutting of pulpwood will in no way be affected because a Canadian market will be substituted for the American market. I shall leave aside the question of the public interest for a moment and deal with the private interests. Assuming that the Americans supply is shortly to be exhausted, as the advocates of an export duty contend, no one will assert that it will not last twenty-five years longer, and it is not to be supposed that the American pulp and paper mills will fall to the ground before our legislation as did the walls of Jericho before the sound of trumpets and drums. It is surely within the bounds of reason to state that fifteen years at least will elapse before any great development of that American industry over here will take place. Now I ask where are the Canadian farmers going to sell their pulp wood in these next fifteen years? It is a fact that the largest proportion of pulp wood exported to the United States is cut in the area comprised between the St. Lawrence and the American boundary line. Assuming that an export duty sufficiently high would have the effect of removing to this country the great American pulp and paper industry, where would that industry seek its field of operation. Certainly not in the area I have described. Why? Because the reserve of spruce and balsam in that area is too limited to warrant the establishment of large pulp and paper mills and because also, although there are a few water-powers still available, they are not very abundant. All lumbermen are unanimous in that opinion. The probabilities are that the new industry would seek its field of operation in the northern region, in the very heart of the richest timber reserves; so that by adopting such a policy as is comprised in the four corners of the resolution of my hon. friend, you would place in a most disadvantageous and

unfair position the farmers situated south of the St. Lawrence and east of the city of Montreal. You would therefore perpetrate a crying injustice upon particularly the population of the counties I am about to name: Rimouski, Temiscouata, Kamouraska, L'Islet, Montmagny, Bellechasse, Lévis, Beauce, Dorchester, Megantic, Lotbinière, Nicolet, Drummond, Arthabaska, Richmond, Wolfe, Shefford, Stanstead, Sherbrooke and Compton.

An hon. MEMBER. And Gaspé.

Mr. BELAND. And Gaspé—and a few other counties also on the north side of the St. Lawrence, aggregating a population of at least 300,000 people actually engaged in the cutting of pulp wood, and entirely cut off from all markets, American and Canadian—for there is no sensible man in this country who would for a moment believe that the owners of pulp and paper mills in the northern region of the province of Quebec would try to feed their mills from the south shore of the St. Lawrence. Furthermore, if, as must appear most probable, ten or fifteen years must elapse before any great migration of the paper industry from the American to the Canadian side takes place, who can say what the conditions of that industry will be at the end of that time? Has science said its last word? Who can assert that in twenty years from now some other device will not be found by which a cheaper material than spruce will be available for the manufacture of paper? Why, twenty years ago the man who would have dared to assert that in twenty years from that time it would be possible to send a despatch 500 miles out to sea without the help of a guiding wire would have been regarded as ripe for a lunatic asylum. I submit that we cannot take any chances in this regard. I submit that if this parliament has the power to prohibit the export of pulp wood it has no right to do so. Our duty, on the contrary, is quite evident; our duty is to open up any new market in order that our exports may balance our imports as far as possible.

Now, one of the arguments brought forward in favour of the imposition of an export duty is the urgent necessity of preserving Canadian timber areas from devastation and utter destruction. The protection and preservation of our forests is a cause that has the sympathy and full support of all men who are concerned in the welfare of this country. It is felt that, holding as we do the richest timber lands of the whole world, the duty is incumbent upon us of preserving our forests in order to make them permanent and perpetuate the large income which we as a Dominion and as provinces derive therefrom annually, and not only for these purposes, but also to maintain the regular flow of our streams and thereby protect our water-powers. But I submit that this noble design does not lie entirely or even principally with this parliament or this government, but, as I shall be able to demonstrate in a little while, with the provincial authorities. Fire regulations and stumpage regulations are about the only means by which to ensure the preservation and perpetuation of timber areas, and an export duty, as my hon. friend will admit, will be of no avail whatever to that end. Much has been made in the press of the opinion of Dr. Fernow concerning the preservation of our timber area. I have and we all have, the greatest respect for Dr. Fernow's opinion. He is a gentleman of the highest culture in these matters, a man whose opinion is prized, and highly prized, in all circles, economic and scientific. I am very glad the opportunity is afforded me to give the opinion of Dr. Fernow. I quote from the 'Globe' of Saturday, February 29 last:

> Personally, I am very doubtful whether tariff regulations can be made effective in securing conservative use of the timber resource. The import tariff imposed by the States has had no effect one way or the other, and I doubt whether export duties would have a very beneficial effect in the long run, so far as conservative forest use is concerned.

Now, it is remarkable that an authority so frequently cited by the advocates, and most sanguine advocates, of an export duty on pulp wood as Dr. Fernow should express such an opinion. The learned gentleman has undoubtedly realized the untenable position in which the promoters of the new policy have placed themselves. In effect, the claim of these gentlemen is that the result of the export duty will be to protect our forests against devastation. But, almost in the same breath, these advocates of the new policy glorify over and call upon all Canadian people to admire the great industry which the new policy will develop on Canadian territory. In fact, it is claimed that before ten years have passed the whole American outfit of pulp and paper manufacturing will be removed to this country. I want to put to the advocates of the export duty this very simple question: If the migration of the American pulp and paper mills takes place, as it is predicted it will, as an inevitable effect of the export duty, how are you going to manage to consume less wood than is being consumed to-day? That is a fair and reasonable question. It needs no argument to show that the same quantity of spruce and balsam will be required, no matter on which side of the line the mills are situated—that proposition is self-evident. And the conclusion is brought home to every keen observer that the protection and preservation of our forests is not dependent in the least degree upon a prohibitive export duty, but upon regulations concerning settlement, concerning dia-

meter of trees to be cut, concerning stumpage duty, and especially concerning fire—for, as has been oftentimes repeated, fire is a worse enemy to the forest than is the axe itself.

Now, my hon. friend (Mr. Lewis), in finishing his remarks, asked for a commission to be appointed to investigate this whole matter and suggest a remedy for a situation which, he claims is fraught with evil and danger to this country. For my part, I have not the least objection to the course adopted by my hon. friend being adopted by the government, that a commission is required to study the question. But if a remedy is necessary, and I believe a remedy is necessary, a commission will show that it lies with the authorities of the different provinces which have the control and administration of their timber lands. Any action taken by this parliament in the way of tariff legislation of the kind now proposed will constitute in my humble opinion, a serious infringement upon provincial rights, and would no doubt be resented by the provinces. On the other hand, the provinces have in their hands the most effective and ideal remedy. They are in possession of the required jurisdiction to issue, as I have just said, and to enforce fire and cutting regulations as well as to fix stumpage dues. A province may practically prohibit the export of pulp wood by enacting, for instance, that all woods cut within the limits of the province on Crown lands shall be manufactured within those limits. They may also prohibit the export of pulp wood by imposing a prohibitive stumpage duty with the necessary rebate in case the wood is manufactured within the limits of the province.

This remedy is all the more acceptable because it does not interfere with the private land owners, because it allows the bona fide settler who has just patented his land after he has performed his settlement duties to reap a little benefit out of the few cords of pulp wood that he can sell wherever he pleases. Colonization is not hampered thereby. No one has ever contended, I hope, that the salvation of our forests was to be found in the protection of private lands; it lies in the protection and reservation of our Crown lands. Let the Crown lands be preserved and then this forest wealth will be perpetuated. Ontario has set an example in this regard and restrictive legislation has been adopted there which has proved very beneficial to the province. In Quebec, during the last few years, forest reserves have been created to the extent of 168,000 square miles, the object being to insure productive timber lands for centuries to come, and also with a view to the maintenance of our water-powers. This action on the part of the two largest provinces which are as we know more exposed to the exploitation of their pulp wood reserves by the Americans may be accentuated and the desired object attained; the other provinces may follow suit as need arises, and by adopting such a course colonization will not be hampered, our forests will be preserved, and the private owners of land will not see their rights trampled upon and their individual liberty interfered with.

Now, Mr. Speaker, Canada, as we know, enjoys friendly relations with our neighbours to the south and any action taken by this parliament towards straining these friendly relations between these two countries would be looked upon with much regret by our people. The export duty policy is an extreme measure. It is very seldom resorted to and the circumstances that would justify its application are very few. It would have its raison d'etre for instance, if a nation holds a practical and complete and undivided monopoly of a certain product. It would also find its application when the price of a given article of daily, common, and indispensible use is forced up to an unreasonable height by an eager foreign demand. But outside of these circumstances I submit that the imposition of an export duty would be looked upon as a provocative measure. Are we in a position to say that we hold a monopoly of pulp wood, or rather of the raw materials that go into the manufacture of paper. I submit not. The United States have still a large supply of pulp wood; they have gone into the cultivation of pulp wood, and we know that half a dozen other materials are used in the manufacture of paper such as cotton stalks and rice straw. It is only last month I read in a magazine article that a German scientist had discovered that paper used for newspaper print could be restored to its original state by a chemical and inexpensive process with a possible waste of only 28 per cent. Should that turn out to be true it will certainly revolutionize the conditions of the pulp and paper industry. Besides, there is no danger of the price of pulp wood in this country being forced so high as to warrant the prohibition of its export. I submit that in the case that is now engaging our attention I would not be far from believing such an extreme measure as calculated to create an ill-feeling in the minds of the American people towards Canada. It might be considered an unfriendly act. Canada does not wish to be entangled in a tariff war with any nation, and certainly still less with the United States. The interests of Canada at large, I have tried to demonstrate, would not be served by the imposition of an export duty, whilst the private interests of a large number of individuals would be seriously injured. But these are insignificant considerations if we compare them to the disastrous results to this country that would follow from measures of retaliation on the part of our neighbours. I quite realize that the American people are precluded by their

constitution from levying an export duty on any article exported from the United States. Were this not so they would hold against us a most dangerous and effective weapon in the matter of raw cotton, as we depend entirely upon them for our supply. That is evidenced by the fact that they hold a practical monopoly of the production of cottton on this continent, and last year we imported from the United States $8,000,000 worth of raw cotton whilst from all other countries we imported only $30,000 worth. My hon. friend (Mr. Lewis) seems to be disposed to take advantage of that position in which the United States are, but there are other ways of retaliating, and as we all know the American people have been ready to take advantage of their customs duties whenever they felt like it. The duties on Canadian pulp could be raised to a level that would mean prohibition for us, and as we know the United States are our natural market for pulp. In 1907, for nine months we exported $3,000,000 worth of pulp and out of that $3,000,000 we sent $2,400,000 worth to the United States, which shows that the United States is our natural market for pulp. Economic wars are as disastrous to industry as ordinary wars are to human life. No two countries can reap any benefit from them, but still they are indulged in sometimes in order to adjust grievances.

Now, Mr. Speaker, I say this motion is inopportune. If the American Congress were to resort to raising their duties upon pulp and paper, I would perhaps be tempted to incline to retaliation by prohibiting the export of the raw material, but that is not the condition to-day. On the contrary, the President of the United States in his message to Congress last December recommended the suppression of these duties altogether. Then, let the American Congress take action before we on our part take action. As I understand that a few of my hon. friends want to speak on this subject, I will sum up my remarks by saying: That the American timber areas are not so depleted as is commonly supposed; that the Canadian forest reserves if they are properly guarded will resist for centuries the strain to which they are submitted ; that public interests of an economic as well as of a diplomatic character can scarcely be served by this proposal, while private interests would be seriously injured; that I realize the duty of the hour is to preserve and to perpetuate our wealth in timber lands; that an export duty cannot give the desired protection; that the remedy lies with the provincial governments which are in possession of their lands, by the issuing and enforcing of regulations concerning fires, timber stumpage dues, diameter of cut, and settlement; that such action on our part as is proposed would be a direct infringement upon provincial rights; that in the event of provincial legislation the small owners would be unmolested and colonization would be unhampered, and lastly, we will have remained on friendly terms with our neighbours, and we will have averted possible international complications.

Mr. J. B. MORIN (Dorchester). Mr. Speaker, while this resolution is in many respects well founded, owing to some circumstances connected with it it is hardly practicable to adopt it. I believe that if the government should adopt this resolution it would raise a war against the people living on the south side of the St. Lawrence river, adjoining the United States. These people for a great many years had a hard time to make a living. About ten years ago this industry was first developed in these counties, and since then the people there have been making a good living out of the timber by selling it to the United States and they are to-day making money. At first they sold the timber for $3 a cord, and then the price rose to $3.50, $4, and $5 until now it is $7 a cord. The people are well satisfied and are pleased to let well enough alone. For my part I could not support the resolution, it would be interfering with the public, especially in my county. Then too, if the government should adopt the principle, I do not see how it could be generally applied. Take the case of people who have owned land for the last 50 or 100 years. They should be allowed to do with the timber on that land just as they please, it is their own. For the government to pass a law interfering with these people would not do at all, and to impose an export duty on timber cut on government land would also be an interference. On the whole I think it is best to let well enough alone and I will stop at that.

Mr. A. B. HUNT (Compton). In rising to address this House for the first time, I feel it to be my duty to protest against any such restriction as is suggested by this resolution being imposed. After listening to the able addresses on both sides of the House I take it for granted that this duty would be levied or the prohibition of export imposed for the purpose of either making the United States pulp manufacturers pay more for the wood they consume or compelling them to move their mills to Canada and to manufacture here.

We must first take into consideration the distribution of the spruce areas of the world and the ability of the United States to obtain supplies from other sources than Canada ; in other words, we must ascertain to what extent they are dependent on Canada for their supply of pulp wood. There is, in the first place, the vast territory of Alaska and the fact is demonstrated that there are in that country immense spruce and fir areas yet untouched by the woodman's axe.

How large these areas are, we are only now just beginning to learn. In Norway, Sweden and Russia, as is well known,

gigantic spruce areas are found. The first of these countries has already been invaded by the United States pulp manufacturers and is being to some extent now successfully exploited by them. From all these countries wood and timber can be shipped to the United States cheaply, by boat, and it is only because of the nearer and cheaper supply in Canada that they continue to draw their wood principally from this country. Nor must it be too hastily supposed that the spruce forests of the United States have been depleted. On the contrary, to say nothing of vast areas held by the government and private holders, it is to be noted that out of some 1,100 paper and pulp mills in the United States, 265 mills own their own extensive limits, which they are holding untouched for future emergencies; and in spite of this statistics show that in 1906, the states of Maine, Vermont, New Hampshire and New York alone produced more than two-thirds of all the pulp used by the United States mills in that year. It is also well known that the price of our pulp wood has steadily increased from year to year and that in consequence the price of paper has as steadily advanced in the United States.

The question therefore arises, if an export duty were imposed upon pulp wood by our government, would it not increase the price to United States consumers to a point where it would be cheaper for them to draw their supply from Alaska, Norway, Sweden, Russia or from their own sources, than to pay us the increased price for our product. It will not do for us to assume that the United States paper makers are depending upon the spruce of Canada as their only available source of supply, as the contrary can be easily proved, and if this be shown the loss of this vast and increasing trade to our people would be nothing short of a national calamity.

As to the total prohibition of the export of pulp wood I do not see how the Dominion government could possibly do this as it would seem to constitute an invasion of public and private rights. To say nothing of the vast timber areas of the Quebec Seignories (owned to a large extent in fee simple, by private parties) as of the forest owned by individuals, who also own the soil, and who are now selling their spruce to the United States. What shall we say of the right of the provincial government to exploit their own timber limits as they please? Would it not be considered an invasion of their rights and priviliges to enact a law that would prevent the natural products of their possession being exploited and thus deprive them of the large revenue obtained from their forests? The wealth of the province of Quebec consists principally in its forests and water-powers, and if the interference of the Dominion government in the sale of some water-powers in that province last year was resented, what would be the effect of interfering with the sale of timber from provincial Crown lands? Under the wise regulations now in force in Quebec limiting the sizes of trees that can be cut, thereby affording the timber time to replenish itself, spruce areas are practically inexhaustible and are, under present conditions, an immense source of revenue to all our people.

It is, I think, the greatest mistake to suppose we could, by legislature enactment force the United States paper and pulp makers to abandon their mills in their own country, in which hundreds of millions are invested, and come into Canada and spend other hundreds of millions to build mills here. Rather than face this contingency they would turn to other sources of supply, some of which have been already mentioned, and thus practically paralyze our pulp wood industry and inflict the greatest financial loss upon this country that we have ever sustained. There is no other industry in Canada the crippling of which would inflict such disastrous results upon our people. Speaking from the standpoint of the individual, it would hit the man who owns the spruce. The man who swings the axe, the jobber who hires him, the man who furnishes the supplies, the farmer who raises them, the merchant who sells them, the man who buys and sells pulpwood, the river driver, the canal boat man, the railroad man—all in fact now depending upon this industry.

If it be said that the prohibition of the exportation of pulp wood cannot be justly claimed to be aimed especially against the United States, it would be answered that this would be its effect as Canada cannot successfully compete with Norway and Sweden in the markets of Europe and the pulp of our product goes to the United States.

It may be said in this country that the President of the United States has just recommended to Congress now sitting, the removal of the existing duties on pulp and fibre products coming into the United States principally on account of the rise in the price of paper and paper products, owing to the increased cost of the pulp wood. Now, in the face of this, to clap on an export duty or to go to the extent of prohibiting its export, might well be looked upon by this great and friendly nation as a slap in the face that would certainly be returned in kind with disastrous results to us. No country on the face of the globe is entirely independent in every respect of every other country. While it is not necessary to go into details, it may yet be said that it is a fairly recognized principle of all governments to leave unhampered by fiscal restrictions all natural products of the soil, or of interfering with the free and untramelled exercise of the rights of private

ownership, and allow the proprietors of the products of their land to send the same to the best market, or of the right of the province to do as they please with their own natural resources. The last analysis of the question after all is one of practical politics of legislatures to give effect to laws that will operate for the greatest good of the greatest number of our people and give at the same time no neighbouring nation cause for offence or retalliation. It is therefore in this light that I consider this question should be viewed, and this parliament, in my opinion, would make a very grave mistake in hampering the export of so great a natural product as pulp wood, by the imposition of an export duty, and a much graver error in prohibiting its export.

Mr. E. W. TOBIN (Richmond and Wolfe). I have listened attentively to hon. members on both sides of the House in discussing the important question whether it would be advisable to prohibit the export of pulp wood. I may mention that some eleven years ago when this government came into power, I formed part of a delegation that came to Ottawa to oppose putting an extra export duty on pulp wood, and since then I have not changed my mind. That is some eleven years ago, and although at that time I was not interested in the manufacture of pulp and paper as I am to-day, I opposed any interference which would take away from the farmers a trade which is a great source of revenue to them, and aids in the settlement of the country, especially in the province of Quebec. There has been a good deal said for and against an export duty on pulp wood. For myself, Mr. Speaker, I do not know and cannot understand why the Canadian pulp and paper mills persist in bringing up this question and keeping it before the public, unless it is that an export duty on pulp wood would cheapen the raw material to their mills.

What was the situation some fifteen years ago? The farmer was receiving for a cord of pulp wood, what we would call peeled pulp wood, sawed in four foot lengths, $2.75 per cord of 128 cubic feet. The Canadian manufacturers would buy nothing else but the body of the tree, and would not take anything less in size than six inches. The farmer had to leave the balance of the tree there to rot, or pick it up and burn it. As you are aware, the pulp wood lands of the province of Quebec average from 30 to 40 per cent of balsam, and the pulp mills would not buy that kind of timber, and the stumpage was not worth anything to the farmers. So after taking the best of his spruce, he had to cut down the balance of his forest and burn it up in clearing his land. What is the state of things to-day in consequence of the farmer having the market of the United States to ship his wood to? We are now shipping wood to the United States which really the manufacturers of this country would not buy ten or fifteen years ago. What was formerly used for firewood is now used for making pulp wood; this has reference to spruce, balsam, hemlock, poplar and basswood. But I will deal generally with spruce and balsam. Pulp wood is divided into rough wood, wood with bark on, peel wood, hand-shaved wood and rossed wood. For rough wood we are getting from $6 to $7 per cord, for peeled and hand-shaved wood, we are getting from $8 to $10, and for rossed wood, from $10 to $11 per cord f.o.b. In the wood we ship to the United States they do not make any difference between spruce and balsam. Instead of only using the body of the tree, we now use for pulp wood as far up the tree as four inches in diameter, after cutting the limbs close.

The hon. member for West Huron (Mr. Lewis), in his remarks, said that pulp wood was selling at $6 a cord, pulp at $20 per ton, fibre at $32, and paper at $50. Now I would like to ask the hon. gentleman if he is aware that it takes close on to two cords of pulp wood to make a ton of fibre? A cord of pulp wood will make about 1,150 pounds of fibre, or it will make about one ton of ground wood pulp. If you take two cords of wood and estimate the price at $8 per cord, which makes $16, you can sell the pulp made from that wood at $32. I would suggest to that hon. gentleman that when he ventures to address the House again on this question, he should give the number of cords it takes to make a ton of fibre pulp.

From the experience I have had in the pulp wood and lumber business, I am of opinion that it would be a hardship to impose upon the farmers of this country and the people who hold lands in fee simple, having purchased them, to say to them: You have no right to ship your wood out of this country without being taxed two or three dollars per cord. I think such a course would retard colonization in the province of Quebec, which I am pleased to state has been growing by leaps and bounds these last ten years. Within the last few years quite a number of our pulp and paper manufacturers have seen fit to go into the pulp wood business themselves and have shipped thousands of cords of pulp wood to the United States. They think it pays better to ship pulp wood than to make it into pulp. Within the last three years pulp has been sold in the province of Quebec, and I may say in the province of Ontario also, for less than $12 per ton, and the wood was selling for $7 and $8 per cord f.o.b. on the cars. You can easily see that a great many mills were not manufacturing pulp at a profit. Now, we have in the province of Quebec over 100,000 miles of limits which are held by the provincial government, and 70,000 are under license. There are about 25,000,000 acres of seigniory land, 15,000,000 acres of lands ceded by the Crown and 6,500,000

acres are surveyed and ready for colonization. Now, what are these farmers going to do who have settled on these lands, if this government puts an export duty on pulp wood, or prohibits the exportation of pulp wood? Of course there is a certain percentage of wood that is made into pulp which is not fit for anything else; you cannot saw it into lumber because it is to knotty or too crooked. Therefore I say it would be a hardship to these farmers if they were prohibited from exporting this wood as pulp wood. They have had the courage to go into the bush, build a small house, cut down the first tree and open up those lands for cultivation. As you are aware, there cannot be pulp and paper mills in every city, town and village of this Dominion. When the farmer clears up his land he gets five cords, six cords and sometimes eight or ten cords of pulp wood to the acre. He goes to the pulp wood dealer and makes a contract for 40 or 50 cords to go out in the following winter. If he needs money so that he may be able to stay at home during the summer months and work on his farm, he can get an advance of $1.50 a cord as soon as the trees are cut down and peeled, and he can get another advance of $1.50 when it is sawed and piled. Therefore I say that the farmers are reaping great benefit from their pulp wood to-day. In clearing up his land the farmer gets $6 or $7 a cord for the pulp wood he sells. This enables him to stay at home to cultivate and improve his farm and to live with his family during the summer months. In this way he will make during twelve months $400 or $500 from a few acres of land. I remember the time, not many years ago, when the farmers in clearing their land used to burn up all the small timber. In that respect things have changed, and I for one would oppose any interference with their vested rights in this matter. In the province of Quebec there is no great outcry for an export duty on pulp wood. Twenty or twenty-five years ago, I well remember, when we were shipping hemlock bark to the United States, there was a great demand for the imposition of an export duty on it. To-day hemlock bark is not worth within $2 a cord what it was 20 years ago. Chemicals have been found to replace hemlock bark for tanning purposes, and we cannot be sure that in the next twenty years something will not be found to replace spruce and balsam for the manufacture of pulp. Some time ago I read the following in a newspaper:—

New Orleans, La., May 20.—It is announced that a large paper mill will be established at an early day in the rice district of Louisiana at Crowley or Jennings, to manufacture paper from rice straw. The enterprise will be backed by northern capital, and the mill it is estimated, will cost $150,000.

Every new factory is welcomed in the south but this paper mill means more than a single new industrial enterprise. If it proves the success hoped for it will revolutionize the paper world and give new wealth and prosperity to a section that has been wonderfully favoured of late years in the development of its resources.—Southwest Louisiana.

Paper manufacturers of the country have been looking for years for a new material convertible into wood pulp, the chief stock of the paper manufactured to-day. The supply of spruce, which has been found the best material, is nearly exhausted, and it is hoped to obtain something nearly as good. The country has been searched far and wide for material, and half a dozen substitutes have been discovered that will do fairly well. The hope still exists that something better may be found, and the manufacturers have turned their eyes toward the south as a section rich in timber and other possible paper stock which has not yet been sufficiently examined.

There have been a dozen different experiments more or less successful. Two have received great consideration, because their success means much to the south's leading agricultural industries—the manufacture of paper from the crushed stalk of the sugar cane, and from rice straw.

There are two bagasse paper mills, one in Texas and one in Louisiana, and they are doing well. That rice straw will make good paper has been well established. The experiment now proposed will show how good and what profit it will yield. There is enough bagasse and rice straw produced in Louisiana and thrown away as a waste product to supply the paper demands of the entire country. The next few years will settle the question whether these materials are destined to play a leading part in the paper industry. If they prove satisfactory it will transfer to the south a new and profitable industry and materially increase the profit of the cane and rice growers.

A gentleman who is a high authority on pulp, who is interested in one of the largest pulp mills in the Dominion of Canada, the Hon. N. Garneau, president of the Chicoutimi Pulp and Paper Company, in a lecture delivered in Quebec on the 3rd of February last, said that there were three remedies: first, the prohibition of the pulp wood; second, to put on an export duty of a few dollars a cord: third, that the provincial government could pass legislation requiring all wood cut on Crown lands belonging to the province of Quebec to be manufactured in the province. This last he said would be the most feasible remedy. This is my opinion also, Mr. Speaker, and when we have to protect our forests, the press and Canadian paper manufacturers, instead of addressing themselves to the Dominion government for relief, should address themselves to the local government.

Regarding the bringing of American capital to this country, I think we have made considerable progress in building up pulp and paper mills. In 1888 we had only twenty-four pulp mills while in 1907 we had fifty-eight. In 1888 the pulp mills turned out 154 tons of pulp in twenty-four hours; in 1907 they turned out 2,361 tons. Our paper mills have made as much pro-

gress or more, and but for the American market I am sure that we would not be able to run our pulp mills, because it is a well known fact that although there is a duty of $1.66 a ton on ground wood pulp going to the United States, 75 per cent of our pulp is shipped to the United States. We cannot depend on shipping pulp to Great Britain or the continent of Europe, because we are met there by Norway and Sweden which can ship their pulp to those countries at less cost than we can. It would be just as reasonable to advocate an export duty on ties and sawn lumber as on pulp wood. I believe there is as much money made by our people in the making of pulp wood as there is in the manufacture of sawn lumber and railway ties. Whether you cut up our forests into pulp wood or sawn lumber, you are shipping the lumber away from the country, and it is not reasonable to say to the farmer and the land owner: You shall not sell your pulp wood in the open market but must sell it to the Canadian manufacturer. Besides there may be in some years a complete change in the industry of papermaking. Some years ago we used to employ basswood and poplar in the manufacture of pulp wood, but to-day spruce is given the preference because it has a better fibre and you cannot get within $2 or $3 a cord for poplar and basswood what you would get for spruce. It is therefore quite possible that our paper manufacturers will discover some other substances to replace the spruce.

In the province of Quebec we have a forest reserve of 108,000,000 acres and besides the government has thousands and thousands of acres for sale, so that I do not see that you need ever expect a shortage. With the laws we now have in the province of Quebec for the preservation of our forests there is not likely to be any shortage of pulp wood. In fact more damage is done by fire than by the axe of the lumberman.

Mr TAYLOR. What business to-morrow?

Sir WILFRID LAURIER. A resolution of the Minister of Railways with regard to the Exchequer Court, the Bill to amend the Railway Act, the Bill to amend the land titles, then Supply for the Minister of Marine and Fisheries Department.

At six o'clock, the House adjourned.

---

## HOUSE OF COMMONS.

THURSDAY, March 12, 1908.

The SPEAKER took the Chair at Three o'clock.

### TRAVELLING EXPENSES OF COMMANDER SPAIN.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). I was asked the other day by the hon. member for North Toronto (Mr. Foster) to lay on the table the correspondence exchanged between the Auditor General and the department. In order to put these papers before the House in a proper way, I move than an order of the House be issued for copies of all correspondence between the Auditor General and the Department of Marine and Fisheries concerning the travelling expenses of Commander Spain in 1905-6.

Motion agreed to.

Mr. BRODEUR. In obedience to the order which has just been granted by the House, I have the honour to lay on the table the correspondence referred to therein.

### SUPREME COURT ACT—AMENDMENT.

Mr. AYLESWORTH moved for leave to introduce a Bill (No. 121) to amend the Supreme Court Act. He said: The whole purpose of this proposed legislation is to enable the court to change the composition of the list of cases for hearing at any sitting of the court. Under the present statute the list of cases for hearing at any sitting of the court is divided into three parts: No. 1, cases coming from the maritime provinces; No. 2, cases from the province of Quebec; No. 3, cases from the rest of Canada; and these appeals are heard ordinarily in that order. The chief justice of the court has informed me that the present system is inconvenient for the lawyers of the province of Quebec especially, and especially at the October sittings of the court, as the order in which the cases are then set for hearing in the Supreme Court conflicts with the sittings of the courts in the province of Quebec, at which frequently some of these gentlemen have business. What is now proposed is that this list should be divided into five parts as follows: No. 1, election cases; No. 2, cases from the provinces west of Ontario; No. 3, maritime province cases; No. 4, Quebec province cases; and No. 5, cases from the province of Ontario. What is for the convenience in that respect of the legal gentlemen concerned in the argument of these appeals will no doubt prove to be for the pecuniary advantage of their clients, and the change is one which is asked for by members of the bar of the province of Quebec and concurred in by the chief justice.

Motion agreed to, and Bill read the first time.

### WEIGHING OF MAILS FOR TRANSPORTATION.

Mr. ARMSTRONG asked:

1. Is the government aware of statements being made in the House of Representatives

of the United States to the effect that the Post Office Department of that country had lost seventy millions of dollars through the fraudulent weighing of mails by the railroads of that country?

2. What means has this government employed to prevent a similar loss in weighing of mails?

3. Has the government any inspectors whose duty it is to investigate the weighing of mails for railway transportation?

4. How much money was paid by the government each year for the past five years for carrying of mails by the railways in Canada?

5. How much money was paid out of Post Office estimates towards carrying mail on steamships in the form of subsidies and rates?

6. Is any money taken from the estimates of the Postmaster General for the erection of post offices, or repairs to post offices, or for the furnishing or equipment of post offices? If so, what amount was so used in 1906?

Hon. RODOLPHE LEMIEUX (Postmaster General) :

1. No. The government has no special knowledge of the matter beyond the statements which have recently appeared in the public press.

2. Railways in Canada are not paid for carrying mail by weight.

3. Answered by No. 2.

| | | |
|---|---|---|
| 4. | 1903 | $1,413,835 28 |
| | 1904 | 1,457,622 55 |

6. No.

## PURCHASE OF STEAMER BY POST OFFICE DEPARTMENT.

Mr. ARMSTRONG asked :

1. Did the government purchase a steamer for the use of the Post Office Department? If so, between what points does it carry mail?

2. What was the price paid for the steamer, where was it purchased, who purchased it, and when was said steamer purchased?

3. What was the cost of bringing the steamer to Canada?

4. Was the boat new, or, if in use previous to purchase, for what length of time, and in what trade was it used, and between what points?

Hon. RODOLPHE LEXIEUX (Postmaster General) :

1. Yes. Between the Atlantic mail steamers and the wharf at Rimouski, Que.

2. £12,500. At Penzance, England. The assistant Deputy Postmaster General. In April, 1907.

3. £760.

4. Not new. Built in 1901. Was used chiefly for the conveyance of mails and passengers between Penzance and the Scilly Isles.

## POST OFFICE SAVINGS BANK AT ST. GABRIEL DE BRANDON, QUEBEC.

Mr. MONK asked :

1. Has the government opened a post office savings bank in the post office of St. Gabriel de Brandon, province of Quebec?

2. Who asked for the opening of the said post office savings bank?

3. Did some person recommend the opening of the said post office savings bank, and by whom was such recommendation made?

Hon. RODOLPHE LEMIEUX (Postmaster General) :

1. Yes.

2 and 3. The postmaster of St. Gabriel de Brandon made application for the establishment of savings bank business at his office, and his application having been favourably reported upon by the post office inspector at Montreal, the office in question was in ordinary official course constituted a savings bank office on the 1st March, 1908.

## MAIL CONTRACT BETWEEN DARNLEY AND KENSINGTON, PRINCE EDWARD ISLAND.

Mr. LEFURGEY—by Mr. A. A. McLean—asked :

1. Who has the contract for the carrying of the mails to and from Kensington, Malpeque and Domley, Prince Edward Island, and when is the contract up?

2. Was contract let by tender, who were the tenderers, and the amount of each tender?

Hon. RODOLPHE LEMIEUX (Postmaster General) :

There is no mail service so designated, nor are there any post offices called Malpeque and Domley, but if question refers to Darnley and Kensington mail service the answers are as follows :—

1. (a) Wm. R. Mann ; (b) 30th June, 1911.

2. (a) Yes.

(b) Wm. R. Mann ..... $465
Arch. Howard ..... 469
Robert T. Moase ..... 490
James F. Semple ..... 673

## DREDGING AT PORT DUFFERIN.

Mr. BLAIN asked :

1. What is the total cost to date of the work done in dredging the harbour of Port Dufferin?

2. What was the remuneration of the government checker per day?

3. Is it the intention of the government to complete the work as shown on the official plan?

4. Have any representations been made to the government for the enlargement of the works as first planned?

Hon. WM. PUGSLEY (Minister of Public Works) :

1. $21,114.58.

2. $2 per working day.
3. Matter under consideration.
4. No.

PRINCE EDWARD ISLAND RAIWAY—EXTENSION TO STANLEY BRIDGE.

Mr. A. A. McLEAN asked :

1. Did the government receive petitions from inhabitants of Clifton, Stanley and Hope River, Prince Edward Island, praying for extension of railway from the main line of the Prince Edward Island Railway to Stanley Bridge or vicinity, and for the placing of a sum sufficient for the purpose in this year's estimates?
2. Is it the intention of the government to grant the prayer of the petitions?
3. Is it the intention of the government to make surveys this year with a view to extend the railway system along the north shore of Prince Edward Island?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals) :

1. Yes.
2. The government has not so decided.
3. No decision has been reached.

POST OFFICE AT SOUTHVALE, COLCHESTER COUNTY, NOVA SCOTIA.

Mr. STANFIELD asked :

1. When was the Southvale, Colchester county, post office, removed to its present location?
2. Did the Post Office Department receive a petition from the inhabitants of Southvale asking that the post office be placed at a convenient position?
3. Why was the prayer of the petition not answered?
4. Has the post office known as Southvale office been removed beyond the bounds of Southvale district?
5. Does the government intend to restore Southvale post office to a location where it will be convenient for the people it is intended to serve?

Hon. RODOLPHE LEMIEUX (Postmaster General) :

1. On the 9th December, 1907.
2. A petition has been received at the department, recommending the removal of the Southvale post office to its former location.
3. Representations had been made to the department that the present location of the office was a convenient one for the residents.
4. The post office has been removed about a mile from its former site.
5. The question of again changing the location of the office is being considered.

SUB-LAND AGENCY AT RANCHVALE, MANITOBA.

Mr. W. J. ROCHE asked :

1. Has the sub-land agency at Ranchvale, Manitoba, been closed? If so, why?
2. Has Mr. Wakefield, sub-land agent, been discharged? If so, why?

Hon. FRANK OLIVER (Minister of the Interior) :

1. Yes. Not considered necessary to keep it open for the present.
2. Yes. Not needed when the office was closed.

LIGHTHOUSE KEEPER ON BELLECHASSE ISLETS.

Mr. A. LAVERGNE asked: (Translation.)

1. What is the salary paid to the lighthouse keeper on the islets of Bellechasse?
2. Has such salary been increased, how often and to what extent?

The Hon. L. P. BRODEUR (Minister of Marine and Fisheries). (Translation).

1. $350 per annum.
2. Yes. May 1st, 1904, increased from $320 to $350.

PURCHASE OF HOSPITAL LOT, BELLEVILLE.

Mr. PORTER asked :

1. What amount was paid for the property known as the hospital lot, Belleville, Ontario, the first site selected for drill hall in Belleville?
2. What amount was received for the same property on its re-sale by the government?
3. What was paid for passing the title and making the transfer to the government and from the government, to whom, and when?
4. When was the purchase made, and when was the property re-sold?
5. Upon whose recommendation was the property purchased, and upon whose was it re-sold?

Hon. WM. PUGSLEY (Minister of Public Works) :

All the papers connected with the subject matter of this question are before the Committee on Public Accounts. If my hon. friend desires further information I would ask that he move for a return.

Mr. PORTER. I have examined these papers and the information that is asked for in this question, is not in them.

Mr. PUGSLEY. Perhaps the hon. gentleman would move for a return.

Mr. SPEAKER. Stands as a notice of motion for a return.

PROSECUTIONS UNDER FRUIT MARKS ACT.

Mr. PORTER asked :

1. Does the department or government employ counsel to prosecute cases of infringement of the Fruit Marks Act in the packing and marking of apples?
2. What prosecutions have been taken place, and what number of convictions made for one year prior to this date in the counties of Hastings, Lennox, Prince Edward, Northumberland East and West, and Peterborough?

3. What are the names of the persons so convicted, and have the fines imposed been paid?

4. If counsel has been employed in such prosecutions, how is he paid (a) for each conviction, or (b) for each case whether conviction follows or not, and how much for each case?

5. What counsel has been employed, if any, to prosecute such cases in the counties above named?

Hon. W. S. FIELDING (for Minister of Agriculture):

1. Counsel has been employed in 22 cases out of 48 in prosecutions under the Fruit Marks Act for the year ended March 11, 1908.

2. There have been 48 prosecutions and 48 convictions in the counties of Hastings, Lennox, Prince Edward, Northumberland, East and West, and Petreborough, during the year ended March 11, 1908.

3. James Coyle, Colborne, (convicted twice); J. and R. Coyle, Colborne; Robert Coyle, Colborne, (convicted six times); M. B. Nichols, Brighton; W. M. Ives, Brighton; H. A. Beech, Brighton; T. H. Cheer, Brighton; Allen Lovett, Brighton; Sam Dudley, Colborne, (convicted three times); Robert Wade, Brighton, (convicted twice); John Royal, Belleville; Blake Cheer Brighton; A. H. Clapp, Brighton; Cormon Baker, Brighton; J. E. McDonald, Colborne; F. C. Morrow, Colborne, (convicted twice); G. W. Davis, Colborne; James Marchen, Belleville; L. Emmerson, Belleville; F. J. Thompson, Belleville; R. J. Graham, Belleville, (convicted three times); F. H. Lazier, Brighton, (convicted twice); Henry Herrington, Brighton, (convicted twice); S. P. Herrington, Brighton, (convicted twice); Harlow Fulford, Brighton; A. D. Fulford, Brighton, (convicted twice); G. W. French, Colborne, (convicted twice); Groff and Onderdonk, Trenton; A. E. Brown, Ameliasburg; W. Miron, Wooler; Geo. E. Alger, Frankford; Alger and Ferguson, Frankford.

The fines imposed have been paid except in the case of Geo. E. Alger, Frankford, who is said to have left the country, and in the case of Alger and Ferguson as Ferguson decided to go to jail instead.

4. Counsel has not yet rendered his bill for his services, when received it will be submitted to the Department of Justice for taxation and will be paid in accordance therewith.

5. Mr. F. E. O'Flynn, barrister, &c., of Belleville was employed in the 22 cases mentioned in No. 1.

## REPAIRING CLIFTON WHARF.

Mr. LEFURGY asked:

1. Was there a contract extended last year for repairing or rebuilding Clifton wharf, in New London, Prince Edward Island?

2. Who was the contractor, and what was he paid?

Mr. PORTER.

3. How much did the work cost, and what was the amount paid to each labourer?

4. Is the work completed?

Hon. WM. PUGSLEY (Minister of Public Works):

1 and 2. No; certain repairs were done there by day's labour.

3. (a) Total cost $991.06.

| | |
|---|---|
| (b) Peter McGuigan | $152 00 |
| Joseph McAleen | 98 00 |
| Harry Coles | 37 50 |
| Ezra Power | 65 00 |
| James Graham | 9 50 |
| Clement Trainor | 102 50 |
| Peter McElmeel | 15 00 |

4. Yes.

## INQUIRIES FOR RETURNS.

On the order of the day being called:

Hon. GEO. E. FOSTER (North Toronto). Mr. Speaker, before the orders of the day are called, I wish to inquire about certain returns for which orders have been passed but which have not been brought down. These are as follows:

| Passed. | Subject. |
|---|---|
| December 18 | Marconi stations and bookkeeping, Marine and Fisheries. |
| January 8 | Newspaper printing. |
| January 18 | Government steamers. |
| January 15 | Services of Mr. Shepley. |
| January 13 | Quantity of supplies, materials and mails. |

The minister spoke about one of these returns and I understand it is under way. I would ask the Minister of Finance if there is any word yet of when we may expect the report of the Civil Service Commission?

Mr. FIELDING. I have heard nothing since my last remark on the subject in the House.

Mr. ARMSTRONG. When may I expect a return passed on December 11 referring to all complaints respecting defects and deficiencies in the postal service?

Hon. RODOLPHE LEMIEUX (Postmaster General). My attention was drawn to this once since my return from Japan. We have now a whole staff working on this return which is quite voluminous. The department is quite willing to do the work but it requires a large staff. I will ask the officers to hasten its preparation.

Mr. GEORGE TAYLOR (Leeds). I wish to draw the attention of the Minister of Public Works to a return moved for by my self on January 22, 1908, showing how many fire extinguishers were purchased by the government in the different departments of the public service, since June 30, 1906, to January 1st, 1908, from whom, at what price and the total amount paid. The return brought down reads:

The following is the information desired by order of the House on inquiry of Mr. Taylor, re fire extinguishers:

(a) Total number of fire extinguishers purchased between date named was 195.

(b) Number purchased from Patton & Crowe, Ottawa, was 95, and number purchased from Chas. Patton, Montreal, was 100.

(c) Price paid was $15 each.

(d) Total amount paid was $2,925.

Nothing could better show how little faith the opposition can place in returns brought down than this return. If the hon. minister has the Auditor General's Report for 1907-1908 he will find in volume 2 :—

Mr. SPEAKER. This is out of order ; if the hon. gentleman wishes to ask a question—

Mr. TAYLOR. I am asking how this comes to be left out of the return.

Mr. SPEAKER. It would not be proper to make remarks on the subject.

Mr. TAYLOR. I am not.

Mr. SPEAKER. Whether the hon. gentleman's making comments now or not, he was a moment ago.

Mr. TAYLOR. I did not mean to violate any rule. If the minister will turn to volume 2 of the Auditor Geenral's Report at P—19 he will find that 8 of the articles were purchased from P. E. Perrault, Quebec, at $14 ; at page P—23 another 8, at page P—36 another 8 ; at page P—56, 16 ; at page P—100, 8 ; and page P—102, 4, making a total of 52 purchased from Parent at $14 apiece a total of $728. This is not in the return at all and I find that a number of others were purchased in other departments. What I wanted was the total number purchased in all the departments, and here I find that one department that I have under my special observation purchased $728 worth that do not appear in the return.

Hon. WM. PUGSLEY (Minister of Public Works). It will of course be necessary for me to look into the items mentioned by my hon. friend. When the order for the return reached my department it went in the ordinary course to the proper official who is charged with making returns and if he has omitted any thing it will, of course, be corrected.

Mr. HAUGHTON LENNOX (South Simcoe). When may we expect the returns dealing with timber berths 413, 414 and 415 ? These were ordered on the 3rd of February last and we would be glad to have them as soon as possible. I would also ask as to an order made for a return concerning grazing leases and the acquisition of property for irrigation purposes in ranges 15 and 21 west of the 4th meridian, townships 12 and 14.

Hon. FRANK OLIVER (Minister of the Interior). I will be able to tell the hon. gentleman to-morrow.

Mr. A. N. WORTHINGTON (Sherbrooke). I beg to direct the attention of the Minister of Public Works to some returns asked for on December 11, 1907, regarding drill sheds. I would like also to draw the attention of the Minister of Militia to returns asked for his department on the same day, December 11, 1907.

Hon. WM. PUGSLEY (Minister of Public Works). Instructions have been given to prepare the returns as speedily as possible. There is no unnecessary delay and I trust that the return will be presented very soon.

Sir FREDERICK BORDEN. One of the returns, I think, is ready and I hope to lay it on the table of the House to-morrow.

## ALLEGED IMMIGRATION FRAUDS.

Mr. F. D. MONK (Jacques Cartier). Before the orders of the day are called, I wish to ask a question of the Minister of the Interior in connection with a matter of some urgency. This arises out of a dispatch which appeared in most of last evening's papers, dated London. I quote from the 'Evening Journal' of yesterday—

Collusion in fraud.

Halifax man works with old country emigrant agent.

London, March 11.—The trial of Mikael Sarkis, Charles Hanson, Arshag Attamian, charged with conspiring to defraud emigrants, began yesterday at Liverpool. N. Cockshutt watched the case on behalf of the Canadian government. When Attamian was arrested a large number of letters were found in his possession. Counsel said the letter showed Attamian to be on terms of very intimate relationship with the authorities who had to pass immigrants on the other side. One letter was from a man from Halifax, describing himself as Hugh L. Dickey, M.D.

Another letter was from W. Dodds, Halifax, in which he said : 'Your eleven people were all passed. Be a little particular next time with Montreal cases. Do not let them make any signs whatever. If you describe something they will wear, that will be enough. I felt nervous when they all made the same signs with hands on tie. In another letter Dodds warns Attamian: 'please be careful, as the other doctor is often with me.'

I would like to ask my hon. friend the minister what steps the government is taking to unearth what appears to be a fraud or blackmailing practice on desirable immigrants, or else money charged to undesirable immigrants for admission to this country ? Who is the Dr. Dickey referred to in this transaction ? Who is W. Dodds ? Has he any position under the government? Has the government taken any steps in regard to this matter ?

Mr. OLIVER. I am not able to give an answer at the moment. I shall be able to do so to-morrow.

## ADMIRALTY JURISDICTION.

House went into committee to consider the following resolution :

Resolved, that it is expedient to make better provision for the exercise of Admiralty jurisdiction within Canada in accordance with the Colonial Courts of Admiralty Act, 1890; and also to provide that, by way of compensation for loss of salary or emoluments of office, there may be granted to each of the present judges in Admiralty of the Exchequer court who held office on the first day of September, 1907, and to the Marshal of the Quebec Admiralty district, an annuity equal to two-thirds of his salary, to the registrar of the Toronto Admiralty district, the sum of $750, to the registrar of the Nova Scotia Admiralty district, the sum of $1,000, to the registrar of the New Brunswick Admiralty district, the sum of $1,500.—Mr. Aylesworth.

Hon. A. B. AYLESWORTH (Minister of Justice). The object of this resolution is not only to declare the expediency of making better provision for the exercise of admiralty jurisdiction in Canada, but to found upon it a measure which I hope may bring about a better condition of things than that which now exists. The present condition of things is, I think, not satisfactory. At any rate, from almost the first day on which I took charge of the Department of Justice, complaints have been continuous from one part of the Dominion and another with reference to the existing state of things in regard to admiralty jurisdiction, and it has been a subject of much and of anxious thought on my part to endeavour to find some improvement. Let me remind the committee of what the existing condition is. We have now the jurisdiction in admiralty conferred upon the Exchequer Court of Canada, with local judges of that court in some, not in all, of the provinces of the Dominion, and with surrogate judges, or practically referees, in several of the provinces, who are, as it were, deputies of the local, or deputy, judges of the court. We have one judge in the Exchequer Court; we have local judges in admiralty in some of the provinces; and again we have the deputies of those local judges in the position of surrogate judges of the court in some localities. This system is the substitute for the ancient Vice-Admiralty Court established in different British possessions. That condition of things, which was endured in this country until 1891, was found to be eminently unsatisfactory. The Vice-Admiralty Court in each British possession was an admiralty court, the judge of which might be appointed by the admiralty of Great Britain. In nearly every instance the judge of that court was in reality a colonial judge, who was vested with authority over admiralty matters in his capacity of judge of the Imperial Vice-Admiralty Court. There was an appeal from the judge in vice-admirality, not to the local or colonial courts, but only to the Privy Council direct. The position of matters therefore was that side by side with colonial courts there existed a court of local jurisdiction territorially, but an Imperial court presided over by either a brother judge of the colonial judges, or possibly by the only colonial judge who in one capacity was an Imperial judge and in the other capacity exercised merely the ordinary jurisdiction of the colonial courts. That condition of things was found to be exceedingly unsatisfactory, and during the latter years of the decade of 1880, correspondence was had by the Colonial Secretary with each of the British possessions, resulting in the Imperial Act of 1890 amending the law respecting the exercise of admiralty jurisdiction throughout the empire. That statute is the foundation of the right of this parliament to legislate upon this subject. That statute abolishes the old Vice-Admiralty Courts throughout the British empire, and substitutes for the jurisdiction which they possessed the right in the parliaments of the British possessions to confer that jurisdiction upon some local or colonial court. Pursuant to the authority conferred on this parliament by this Imperial legislation of 1890, this parliament in the following year passed the statute which I am now proposing to amend.

By that statute of 1891, this parliament conferred jurisdiction in admiralty upon the Canadian Court of Exchequer, which was then recently established, and provided the system which has existed from 1891 to the present and which, it seems to me, has certainly proved in many parts of Canada very far from satisfactory. Whether I have found a remedy or not, what I am proposing is to take away from the Exchequer Court of Canada, this anomalous jurisdiction in admiralty and confer it upon the various courts of civil jurisdiction in the different provinces. I think it will be recognized as desirable that there should be as much uniformity as possible in the administration of justice in the different courts. Certainly the whole trend of legislation in modern times, not only in Great Britain but in this and other English speaking countries, has been towards a simplification of the legal procedure. We have seen within our own time the ancient courts of Chancery, Queen's Bench, and Common Pleas —differing radically, not only in their methods of practice but in the principles of law applied in them to the determination of what apparently might be a similar if not the same case—abolished and the jurisdiction they exercised vested in one tribunal, not only in the old country but in several of the provinces of Canada. That has been a distinct step forward. It has tended to the simplification and cheapening of the ad-

ministration of justice and has been legislation, which—however much it was resisted at the time and however much it was regarded by lawyers, and no doubt by clients, as a radical step subverting the very foundation of things—has turned out to be successful and which therefore we may very well attempt to follow in connection with our admiralty procedure. I need scarcely say to any one who has any acquaintance whatever, even the slight acquaintance I happen to have had, with procedure of this character, that it stands as a thing apart. To the average lawyer—nay to almost all lawyers—the practice of the admiralty court is a hidden mystery. There is not, and there never has been, enough of it to enable a man to devote himself entirely to that branch; and the result has been that but few practitioners make any special study of it, and throughout all the years it has been maintained as a thing separate and apart. I cannot myself see any reason or advantage in that. On the contrary, it seems to me a distinct disadvantage, though I can appreciate to the fullest extent how any lawyer, who has himself become versed in the mysteries of its practice, should feel an inclination to keep those mysteries untouched and the circle of those acquainted with them as narrow as possible. That was the way in which the Judicature Act, with the changes it made in the common law practice, was viewed by practitioners twenty-five years ago in this country. The years. however, have demonstrated that that was a beneficial measure, and, speaking by analogy, any provision which tends to simplify and make more clear the practice of the admiralty court, should be an advantage, not merely to the suitors, but to the lawyers in that court. This measure I hope may be a step in that direction. However I am not proposing any radical change in the practice of that court or the principles which govern its decision. The whole purpose of the legislation I am proposing is to vest in the superior courts of the different provinces the jurisdiction to try a case arising out of the collision of two ships, just as to-day they can try a similar case in respect of the collision between two railway trains or between carriages on the street. To bring that about I am proposing to change the clause of the present Act which gives this jurisdiction to the Exchequer Court and to substitute a clause which will give it to the ordinary civil tribunals. At the outset I should point out this circumstance. It was very plainly contemplated by the British statute in 1890 that this change should take place, because it is there providded, in the second section, that every court of law in a British possession which is, for the time being, declared to be a court of admiralty, shall have the jurisdiction of the ancient vice-admiralty court, and it further provides that if no such declaration be in force in a British possession, then this admiralty jurisdiction shall go automatically to the ordinary civil tribunals of the country. It was plainly, therefore the expectation of the framers of the imperial statute that there would either be, in ordinary circumstances, a declaration of the parliament of a British possession that this jurisdiction should go to the ordinary courts or that it would go there by force of the imperial statute, in default of any legislation whatever taking place on the subject.

Mr. R. L. BORDEN. Is there anything in the language which points more to the courts of the various provinces than to the Exchequer Court of Canada ?

Mr. AYLESWORTH. I do not know if I apprehend the meaning of the hon. gentleman's question. It would seem to me that certainly the courts which are aimed at by the Imperial Act are the ordinary provincial courts of ordinary civil jurisdiction rather that any court of special statutory jurisdiction, such as our Exchequer Court.

Mr. R. L. BORDEN. Is the hon. gentleman referring to section 2 ?

Mr. AYLESWORTH. Yes. The second section of the Imperial Act will show what I mean. It says :

> Every court of law, which may be declared to be a court of admiralty, shall possess this jurisdiction, or, failing any such declaration, every court of law, which has in a British possession original, unlimited civil jurisdiction, shall be a court of admiralty.

So that the imperial legislation provides that failing any special declaration on the subject in a British possession this admiralty jurisdiction shall go automatically, by force of the Imperial Act, to a court of original unlimited civil jurisdiction in that British possession. The only courts which answer that description are the Supreme Courts of the provinces—the High Court, as it is now called, the ancient court of King's Bench, or of Common Pleas, or of Chancery, which, possessing unlimited civil jurisdiction, answer the description of the imperial statute. Upon that legislation being passed in Great Britain in 1890, the matter was taken up in this parliament in the following year, resulting in the passing of our present Act. And I commend to the consideration of hon. gentlemen interested in the subject 'Hansard,' 1891, and especially the remarks of Sir John Thompson in introducing the measure which is now law and which has had sixteen years of trial. It is chapter 29 of the statutes of 1891. After reciting the imperial Act to which I have referred, it declares that the Exchequer Court of Canada is and shall be within Canada a court of admiralty. It is by that form of language that this admiralty juris-

diction is conferred upon the Exchequer Court. Now, an examination of the remarks made by Sir John Thompson in moving the second reading of this measure convinces one that his mind had weighed this very question and that, if one may not say that he hesitated between the advisability of conferring this jurisdiction upon the newly-constituted Exchequer Court and conferring it upon the provincial court, it is correct to say that he certainly had considered that question. Sir John Thompson states two objections to the proposition to confer the jurisdiction upon the provincial courts, objections which seem to have turned the scale in his own mind and to have led him to make the proposition which has since then been law. I find no difficulty in appreciating what seems to me must have been the considerations in his own mind causing him to prefer at that time the Exchequer Court. One consideration which he points out is one that, certainly, does not appeal to my mind. He thought it was better in the interests of this country that power should be centralized in this parliament than in the provincial legislatures, that this parliament should keep on in control of everything that was in its control, and having this view that the interests of the country called for centralization of parliamentary and governmental power rather than distribution of it to the provincial authorities, he acted upon it in the proposition which became law and which since has governed in this matter. I am free to say that I look at that question from a diametrically opposite standpoint. It seems to me that it is to the interest of the body politic in this country that greater power, in every place where it can be given, should be given to the provincial authorities, and that especially in the matter of the constitution and maintenance of the courts of the land which, of course, already by the British North America Act, is vested in the provincial authorities, we are carrying out the principle of the framers of our constitution if we, so far as possible, divest ourselves and the central authority of the control over a matter of this character. Sir John Thompson was also influenced, he argues, very substantially in the conclusion to which he came by the fact that if he had not proposed to vest this jurisdiction in the Court of Exchequer and the various local judges of that court in the different provinces it would have been necessary to establish a heavy pension list in the persons of the numerous vice-admiralty judges who then existed. However much that may have been a deterrent influence at that time, it does not at the present time continue to have so much importance, as I venture to submit to the committee. This resolution proposes to make what it seems to me, will be all the provision necessary in regard to the pensioning or payment of judges or officers. At the present time we have in the province of Nova Scotia and in the province of Prince Edward Island the jurisdiction in admiralty exercised by gentlemen who either are or were at the time this statute of 1891 became law, chief justices of the court, and had been, in virtue of their position as chief justices, judges in vice-admiralty, the judges of the Imperial Courts which the statutes of 1890 and 1991 were abolishing. The chief justice of Nova Scotia has since retired from his position of chief justice of the civil court, but has retained his position as local judge in admiralty. Under the provision which I am proposing he would receive an annuity equal to two-thirds of the salary which he receives at the present time as judge in admiralty. That salary is but $1,000 per annum. In a similar way, the present chief justice of Prince Edward Island, receiving now $800 per annum in addition to his salary as chief justice of the court, for his work in admiralty, would be entitled to his annuity of two-thirds of that amount. In the province of New Brunswick the jurisdiction in admiralty was conferred some years ago upon one of the puisne judges of the court who has since exercised it. He remains in precisely the same position, notwithstanding the passing of this statute. He will still be, as much as before, a judge with jurisdiction in admiralty. Under the arrangement I am proposing he will not be the only judge in New Brunswick possessing that authority, but he will none the less be clothed, under the statute I am proposing, with exactly the same jurisdiction which he now possesses, and no doubt, if he is willing to continue doing all the work in admiralty, his learned brethren will be quite content that he should so continue. There will, in that way, be no practical change in the administration of admiralty business in such provinces as Prince Edward Island, New Brunswick and British Columbia, in which latter province one of the puisne judges of the Supreme Court is the judge in admiralty. The practical change is, as I have said, in the province of Nova Scotia, where the jurisdiction would be conferred on each one of the judges of the Supreme Court of that province, instead of being vested, as it is now, in the former chief justice of the court, who is not otherwise engaged in judicial work. In the province of Quebec there would be a like change. In that province, at the present time, there exists one of the anomalies of the present system. The local judge for the province is a former chief justice of the province who has retired from his position as chief justice and is receiving his annuity under the statute in virtue of his long service as chief justice, but who has not resigned his position as judge in admiralty and continues, in the city of Quebec, to exercise that jurisdiction.

In the city of Montreal there is no local judge. Now, the admiralty business that is transacted in Montreal far exceeds, as I am told, the amount of business of the same character transacted at the city of Quebec. At the city of Quebec there is a local judge of the court, while at the city of Montreal there is a deputy of a deputy, a judge who is in the position of a referee, who receives no salary, but whose remuneration, under the present system, is simply by fees upon each of the admiralty causes he hears and tries, as though he were simply a referee or an official of the court instead of being one of the puisné judges of the Superior Court of the province. That is an anomalous position of affairs. Nobody is satisfied with it, everybody thinks it ought to be changed. My hon. friend from St. James, Montreal (Mr. Gervais), I think, has upon the paper a notice of motion that the present condition of things in that regard is not satisfactory. I am bound to say that I have not yet found one single individual, acquainted with the situation in that respect which exists in Montreal at the present time, who is content with it, and who does not think that some change ought to be made.

It is stated in the words of the present resolution that it is expedient to make better provision for the exercise of this jurisdiction, and the only question is as to what means are the most expedient whereby if possible, to bring that about. Now, the suggestion that has been made from those interested in this matter in Montreal is that a separate court should be created, that a separate judge should be appointed for the discharge of this particular work, and that he should—of course, that would be necessary—receive a proper remuneration for his services. I can only answer that it seems to me that would not be a desirable condition of things. That proposition would involve exactly the maintenance and perpetuation of this separation between the court of admiralty jurisdiction and all other courts, which, to my mind, is an unmixed evil, and which we ought to try and put an end to. But apart from that consideration altogther, the fact remains—and it is this circumstance which I press most strongly upon hon. gentlemen from the Montreal district and the members of this House from the province of Nova Scotia—that in each of the localities there has been the same pressure to establish a separate admiralty court for that locality, or for that city and the surrounding territory. There is not enough business in either place at the present time to keep any reasonably active judge busy one day in the week throughout the year. We pay in one place $1,000 at the present time. That is considered to be, and is accepted as being, an adequate remuneration for the amount of work that is to be done; and I have no hesitation in saying that the whole of the admiralty work of the province of Nova Scotia at the present time could be satisfactorily attended to by one judge sitting one day in the week, or working one day in the week, throughout the fifty-two weeks of the year. The same condition of things we have at Montreal. There is on an average about one case per week during the twelve months, of this special admiralty jurisdiction; and I certainly would not feel myself justified in proposing that a separate judge, with what would have to be a judge's living pay of $6,000, $7,000 or $8,000 per annum, should be appointed for doing that work.

Since this resolution has been put upon the notice paper, now a period of a month, there has been, not unnaturally, a good deal of attention attracted to it by those who are interested in the matter, and representations have been made to me, coming in the first instance, I think, from the local practitioners to whom I previously alluded, who are versed in the special mysteries of this subject, and who naturally deplore the suggestion that there should be any inroad made upon that particular branch of the practice in which they possess special skill, and in which their fellows are not as well qualified to practise or to compete with them. That opposition on the part, as it seems to me, in the first instance, of local practitioners, has been followed up by the passing of resolutions in which I think I can trace the fine Italian hand of these same gentlemen. Local practitioners have clients, clients in these matters may be easily alarmed, and have become, some of them, impressed with the idea that I was so radical in my proposals as to intend to sweep away absolutely all admiralty courts and all admiralty jurisdiction in this country, and to put an end, finally and for ever, without, I presume, substituting anything in place of it, to all power of our courts to deal with admiralty matters. Certain resolutions have been forwarded to me from various bodies, more or less public, in which that idea is very strongly put, and an earnest hope is expressed that in no event will such a thing be thought of as the abolition altogether of the jurisdiction in admiralty of the courts of this country and putting nothing whatever in its place.

Now, I have pointed out that the change I am making in this matter can have no such effect. Take exactly the condition of things which exists to-day in the city of Montreal. The admiralty work, whatever there is in that city, is now done by one of the puisné judges of the Superior Court of the province. He sits, as I have said, as deputy of the deputy, as practically a referee of the Exchequer Court, and receives his pay by fees instead of by salary. That is not a desirable condition of things. If, for the jurisdiction of the admiralty court in this matter, there is substituted the jurisdiction of the ordinary civil courts, it is a practical certainty that, by common consent

of all the judges of the Superior Court, in whom this jurisdiction will be vested, the work in admiralty of the district of Montreal will be assigned to the same gentleman, and his ordinary civil work will be correspondingly lessened. That would be the natural condition of things to expect, and that I venture to say will be the result of this measure if adopted.

Now, as I have indicated already, it is not proposed at all by the legislation which, if this resolution is adopted, I shall ask leave at once to introduce, to interfere in the slightest degree with the present practice of the courts or with their method of doing things. That is now governed by the judges of the court. They prescribe the methods of practice which lawyers practising before them have to learn. I propose that the jurisdiction shall remain with the judges of the courts to lay down their own rules of practice. I propose that jurisdiction be given to the various provincial courts which will be clothed with this admiralty jurisdiction to prescribe their own rules of practice, and I hope that the result will be in time the assimilation of the admiralty practice to the ordinary practice of the courts, so that there may be no longer any mystery about it. I am proposing to leave the jurisdiction, the control of the methods of practice, with the judges of the court, exactly as it now exists. I am not proposing to touch in any degree, by statutory declaration or otherwise, the principles which now prevail in regard to admiralty matters. Those are established by law, and usage, and decisions of the courts, and I am not proposing in the slightest degree to interfere with or to legislate in any degree with respect to them. I have pointed out that in Prince Edward Island, in New Brunswick, in Montreal, as I think likely, and in British Columbia, there would be no change whatever in the personnel of the judges who will continue to administer the admiralty jurisdiction. In Nova Scotia, in Ontario and at the city of Quebec, there will necessarily be a change, because at no one of these three points is the present local judge in admiralty a member of the Superior Court of his province. That is the extent of the change, and with the exception of these three judicial changes which will be worked by this measure, if it becomes law, there is no other change that suggests itself to my mind. I have gone at this length into the subject because it is certainly one of importance, and it was one which I was anxious to present as fully as it was possible to the consideration of the committee. I am proposing, if this resolution is adopted, to introduce at once the Bill which has been prepared. I shall allow it then, if it is the will of the House, to stand for further consideration, or until I have had the advantage of being able to follow in 'Hansard' the observations that may be made on the subject by hon. members.

Mr. AYLESWORTH.

I have to explain this one further detail. It is provided, under the imperial statute which confers this jurisdiction upon us, that we cannot bring into force any legislation of this character until it has first been submitted to the consideration of His Majesty in Council at home. That has been, in this case, done. This measure, having been drafted in the summer months, was sent to England and has received the assent of His Majesty in Council; so that it stands now for the consideration of this parliament. Before sitting down, Mr. Chairman, let me move that, in two respects, the figures mentioned in this resolution be changed. You will see, Sir, that it is proposed, by way of compensation for loss of salary, to grant to each of the present local judges in admiralty, who receive an additional salary and who are six in number, and to the marshal at the court of Quebec, an annuity equal to two-thirds of his salary. The reason for especially mentioning the marshal at the city of Quebec is simply that he is the only marshal of the court who is paid by salary instead of by fees. He was the marshal of the ancient vice-admiralty court prior to 1890. He was receiving his salary as an imperial officer and his position was preserved by the imperial statute and by the Canadian statute. He has continued in office ever since receiving a salary of $333.34 annually. I am proposing accordingly that as to him the same provision shall be made as to the six judges who receive, four of them, $1,000 each, one $800, and one $600, namely an annuity of two-thirds of his salary. Then, in regard to the registrars and clerks of the court; we have one at Toronto, and, in a word, one in each of the provinces in which there is a local judge. With respect to all of them, except the three who are especially mentioned in the proposed resolution, there will be no change in their offices by the proposed change in legislation. They occupy the similar positions in the provincial courts, so that the change will be simply in the position of the registrars at Toronto, Halifax and St. John. With some hesitation, I admit, I have come to the conclusion that we could properly propose the payment to each of these gentlemen of a lump sum by way of compensation for the loss of fees which will result to him if the measure I am proposing becomes law. At the present time these gentlemen are paid by fees according to the amount of work they do. The more work the more pay and they are, in short, in exactly the position in that respect of an ordinary practising lawyer in any province. It seemed to me, I must admit, on considering their position, that they were not, in principle, occupying any different position from the lawyer who may have some excellent client, perhaps a company which gives him all its legal work, not paying him any salary, but paying him just according to the amount of work he does, the proper legal prices

therefor. Such a company, of course, is at perfect liberty to change its mind at any time and appoint a new solicitor and no solicitor would dream of saying that he had a claim against his client for compensation because that client chose to take away from him that particular line of business. It seemed to me that these registrars were exactly in that position. They are gentlemen who are not precluded from engaging in other work. Their fees have not amounted in a year to anything like a living allowance, but after considering the situation as fully as I was able, it seemed to me that if we were erring in proposing compensation to these gentlemen, we were, at all events, erring on the right side and I have therefore framed the resolution as the committee will see. But, I have possibly drawn the line a little closely in regard to the registrar at Toronto, and the registrar at Halifax.

Mr. GERVAIS. I would like to know from the minister if any provision is made for compensation to Mr. Justice Dunlop. I heard him say that compensation is to be granted to the local judges, but the surrogate judge of Montreal, Mr. Justice Dunlop, has been omitted from the list.

Mr. AYLESWORTH. There was no intention on my part to suggest compensation for Mr. Justice Dunlop. He is in the position of being not a local judge of the court but a comparatively recently appointed surrogate or deputy to the local judge, receiving pay for judicial work just as an arbitrator or referee might receive it in proportion to the amount of such work which he performs. I am proposing to take from him with one hand that very work and take, with the other, it is true, the fees that previously he received for doing that work, but it has seemed to me that his judicial position was not changed and that no encroachment was made upon his salary as a judge. Then I should again point out and perhaps a little more distinctly than I have done that in regard to the registrars in the other provinces they are in the corresponding offices of the provincial courts. They are now the registrars, or clerks, of their respective courts. They will continue in the same positions and although this measure may increase the work of the provincial courts or of their officials there will not be a cessation of the work as at present existing, and if the judges of the various provincial courts, chose, by their regulations, to require the payment of similar fees to these gentlemen I assume that it is entirely in the power of the judges of the provincial courts to do so. But, in regard to the registrar at Toronto, the registrar at Halifax and the registrar at St. John, N.B., each one will have no further work of this character to do. None of these three gentlemen are clerks or registrars of provincial courts, and accordingly I have asked each one of them to let me have a memorandum showing the amount he has earned in the way of fees for this work during a period of some years. Averaging the amount per annum of these fees, and taking three years as the basis of calculation, I reached, in round figures, the amounts mentioned in the resolution. Approximately the average income per annum from fees received by the registrar at Toronto was some $250; by the registrar at Halifax, about $325 or $330; and by the registrar of the court in New Brunswick, about $500. In that way the figures in the resolution were reached, but further information which has been sent me during the past few weeks by these gentlemen leads me to think I have been cutting down perhaps rather too closely the amount of their annual earnings; and while the $500 per year or the $1,500 for the three years in the New Brunswick district would, I think, be entirely adequate, the registrar of the Halifax court is probably entitled, upon the footing of three years, more nearly to $1,250 than to $1,000, and the registrar at Toronto to $1,000 instead of $750. I beg, therefore, to move that the sum of $750 in respect to the registrar at Toronto be changed to $1,000 and the sum of $1,000 in respect to the registrar of the Nova Scotia district to $1,250.

Mr. R. L. BORDEN (Carleton, Ont.). I have listened with great interest to the remarks of the Minister of Justice (Mr. Aylesworth). He proposes to abolish a system which has been in force in this country for nearly eighteen years and which, so far as I am aware, has worked very well, at least in the province of Nova Scotia; I do not profess to speak for its operation in any other province of the Dominion. The minister has referred to the fusion of law and equity which was constituted in Great Britain and also in nearly every province in Canada by the Judicature Acts. The Judicature Acts constituted a great reform. They made it possible to apply the rules of equity in all cases without having to resort to the special procedure in the Court of Chancery. Undoubtedly they have created a great reform. The minister did not mention that in Great Britain at least, and I think in some of the Dominions of the empire, the judges assigned to hear chancery cases are men who have been familiar with that particular branch of the law. In Great Britain, and I think in some provinces in Canada, there is a well marked distinction between the chancery bar and the bar of the common law courts.

It is absolutely impossible to fuse admiralty law and the general law of the country. The Minister of Justice has referred to the procedure in admiralty. It is perfectly evident that he has never had much experience in the court of admiralty or he would have known that the practice in admiralty to-day is simpler than any other form of

procedure. At least it is simpler than any form that I know of. The simplest form of procedure of which I am aware in the British dominions to-day is the procedure which prevails in the courts of admiralty in Great Britain, and that is substantially the same as the procedure in the courts of admiralty in this country. So when the minister proposes to create greater simplicity by applying the ordinary procedure of the courts to procedure in admiralty, I beg to assure my hon. friend that so far as my information goes, he will be absolutely mistaken if he anticipates such a result. This is so for many reasons. In the first place you have to provide in admiralty procedure for a great many things not required in common law courts. You have to provide for means of bailing vessels, for fixing the valuation of vessels and for half a dozen things absolutely unknown in common law courts. They are dealt with in a very simple and summary way in the courts of admiralty and the procedure is, in my opinion, as good as it can be. Then there is the action in rem, utterly unknown to the common law. The authorities to which we mostly look in this country not only as to procedure in admiralty but upon the law of admiralty are those in Great Britain itself, in addition, of course, to our own precedents; and if you adopt a different procedure in admiralty to that which prevails in Great Britain it seems to me that instead of rendering the matter more simple you will render it more complicated.

I have spoken of what has taken place in Great Britain under the Judicature Act, namely, that men who are familiar with chancery procedure and chancery law, are appointed to the chancery bench and it is most unusual—I do not know of any such case—that a man who has attached himself exclusively to the chancery bar, should be appointed to the probate, divorce and admiralty division. Every one who recollects the witticisms of Lord Justice Bowen, one of the greatest lawyers who ever adorned the English bench, will recall that having been compelled by the very necessity of one case to sit in the court of admiralty, he murmured as he took his seat upon the bench:

> And may there be no moaning of the bar
> When I put out to sea.

That illustrates exactly what I was about to say, that the rules of admiralty, the law which prevails in respect of admiralty cases, is in very many special respects a law which is constituted by different authorities and in some respects upon different principles to that which prevails in the common law courts. You never can bring about any assimilation between them. My hon. friend does not propose to bring about such an assimilation. The rules of the road which prevail upon the high seas of the world, and which are recognized by the nations of the world will never be brought into line with any rule which governs the operation of railway trains in this country. They are a different set of rules which have been formulated by consent of the nations of the world and which operate as substantive law to control in case of collision or other damage to one vessel or another upon the high seas. That illustrates exactly what has already been brought to the attention of the Minister of Justice. If you select one man, the chief justice or any other judge of a provincial court in Canada appointed as the deputy judge of the Exchequer Court in Canada, you select, in the first place, a man who has had some experience in this particular branch of law and by selecting him give him an opportunity to acquire additional experience and knowledge and skill; whereas if you disperse this jurisdiction between 6, 8, 10 or 12 judges of any particular court, you will not permit any one judge of that court to acquire the knowledge and experience and skill which are absolutely necessary to any man who undertakes to deal with the very difficult problems which sometimes arise in admiralty cases. I am not speaking of the procedure, because the procedure of the admiralty court is the simplest in the world, but of the necessity that a judge of any admiralty court should be a man who has devoted an enormous amount of study to the particular branch of law which he is called upon to deal with in that court.

What have been the difficulties in the past? Are they difficulties which will be remedied by this measure? What does my hon. friend propose, what is his main argument? His main argument, as I understood it, was that this Bill would bring about exactly the condition that prevails to-day. He said that because this Bill would lead to the exercise of admiralty jurisdiction by one judge out of eight or ten or twelve, therefore it was to be commended. Is that not an answer to the whole argument of the hon. gentleman? That ideal condition which he says will be brought about in some indirect way by the measure he proposes, is exactly the condition which we have in Canada to-day, because the local judge of each province deals exclusively with those cases which arise in the province, subject to an appeal to the judge of the Exchequer Court or to the Supreme Court of Canada, as the litigant may prefer. In these circumstances I fail to see any ground whatever for the proposal the hon. gentleman submits to the House.

He seems to think that some question of provincial rights is involved in this matter. I see no question of provincial rights. It is simply a question of what will be the best tribunal—the provincial court, with its eight or ten or twelve judges, none of whom will be able to acquire any special skill or expert

knowledge of this subject, or the single judge, the delegate of the judge of the Exchequer Court of Canada, who will be able to devote his attention to this subject and to acquire a knowledge and a skill in regard to it which will be extremely useful. In what way does the question of provincial rights come in ? As a matter of fact, we find reserved to this parliament the power of legislation with respect to shipping. Does that not seem to be a fairly good argument why the Exchequer Court of Canada should be selected as the tribunal for dealing with questions concerning shipping rather than any provincial court ? The distribution of power between the parliament of Canada and the provincial legislatures with respect to the appointment of judges and the constitution of courts is not in a very satisfactory condition to-day ; at any rate, that was the opinion of the predecessor of the hon. Minister of Justice. The provincial legislatures have the power to constitute civil courts, to say how many judges shall be appointed to those courts, and it remains only for the executive of Canada, without any power to inquire into the necessity of those appointments, to make the appointments and for parliament to provide the salaries. I do not think any argument derived from that source is of very much avail in this discussion.

The hon. gentleman also took the ground that there was some argument in the language of the imperial statute of 1890 to lead us to depart from the system which has prevailed in this country during the past 17 or 18 years. In the first place, if there were any suggestion in that Act, I do not know that we would be bound to pay very earnest regard to it. We are better judges of what is the best for our country in that regard than the men who sit at Westminster. But when you look at the statute, you see no such suggestion there. Section 2 of chapter 27 of the imperial statutes of 1890 is as follows :

> Every court of law in a British possession, which is for the time being declared in pur suance of this Act to be a court of admiralty, or which, if no such declaration is in force in the possession, has therein original unlimited civil jurisdiction, shall be a court of admiralty, with the jurisdiction in this Act mentioned, and may for the purpose of that jurisdiction exercise all the powers which it possesses for the purpose of its other civil jurisdiction, and such court in reference to the jurisdiction conferred by this Act is in this Act referred to as a colonial court of admiralty.

The first portion of that section confers on this parliament the right to declare the Exchequer Court of Canada to be a colonial court of admiralty. The clause which follows was inserted for the purpose of preventing any failure of justice in case the legislature of any British possession did not see fit to make that declaration, in which case the ordinary courts of the country are invested with the jurisdiction of colonial courts of admiralty.

My hon. friend, in what I presume was merely an extravagance of language, referred to the practice in the Court of Admiralty as being a mystery, and he went on to deduce the conclusion that the gentlemen practising in that court were desirous of maintaining themselves as masters of that mystery and utilizing it to their own personal advantage. I have too high an opinion of the members of the bar of this country to attribute to them any such motive. The practice in admiralty is not a mystery ; it is the simplest practice in the country to-day. The men who have devoted their study to admiralty law understand that that law is different from the common law of the country—that it is a special department by itself. But it seems to me that it would not make the slightest difference to any one of these gentlemen, so far as their future prospects in the practice of their profession are concerned, whether the court remains as it is now or becomes what the Minister of Justice proposes, except that in one case litigation could be carried on more in the interest of the whole people than it could be by the proposed change. The men who practise at any bar, whether admiralty, chancery or common law, know perfectly well that it is to their advantage that litigation should be disposed of by thoroughly capable judges, who will give prompt judgments, intelligible judgments, judgments that will commend themselves to the members of the bar. I would be inclined to think that it is solely for that reason, and for no malign or sinister motive, that these gentlemen have interested themselves in opposing the proposal of the Minister of Justice. I have not heard of any difficulties in the province of Nova Scotia, except that I understand that there have been now and again complaints of delay in the delivery of judgments, and I am of course ready to concede the extreme advantage, not only to litigants, but to members of the bar themselves, of having a prompt delivery of judgments on all occasions.

I do not see how the proposal of my hon. friend will affect the question in that regard, one way or the other. For these reasons I regret very much that the government have found it necessary to change a system which has worked well in this country during the past seventeen or eighteen years. This system was established by so eminent a lawyer as the late Sir John Thompson, and established, as my hon. friend has himself observed, after very careful consideration as to whether or not it would be better to impose this jurisdiction upon the Exchequer Court or the ordinary courts of the country. A system which has worked well for seventeen years should not be lightly departed from. And when we have had the

consideration put forward seriously by the Minister of Justice (Mr. Aylesworth) that the new system he proposes will work out exactly in the same way, it seems to me there is absolutely no ground for the change proposed. I have letters from different members of the bar—men whose character and position at the bar are beyond question—declaring that this proposal will be disliked by litigants as well as by the profession, that it will operate injuriously to both for the reasons I have already given; and I can assure my hon. friend that if I gave him the names of the gentlemen to whom I allude, he would agree that they are animated by motives entirely worthy in the public interest.

Mr. E. GUSS PORTER (West Hastings). I have listened with a good deal of attention to the explanations given by the Minister of Justice (Mr. Aylesworth), and I fail to see in them any sufficient reason for the change he proposes. I am not sufficiently versed perhaps in the practice of the courts of admiralty to speak with authority, but it does appear to me that to throw this additional burden upon the ordinary courts of the land, which are already overworked, will tend to the disadvantage rather than to the advantage of litigants. There are other considerations to be borne in mind besides those referred to by the hon. minister. Before determining on changing the jurisdiction and practice of any court, we should consider what effect that will have on the question of expense and delay. I quite agree with my honoured leader (Mr. R. L. Borden) that one of the purposes to be served by a court of admiralty is the obtaining of speedy decisions, because the cases which come before such a court are of a character that require speedy hearing and determination. But if such cases are relegated to courts presided over by judges who are now complaining of overwork, and who are unable to give judgments for months after they have heard the cases, and in some instances for years, how does the minister expect that greater expedition will be obtained? It seems to me that the result will be greater delays. Another point on which I would like the opinion of the hon. minister is this. Has he considered whether the jurisdiction he proposes to give to the ordinary courts will have the effect of increasing or decreasing the cost of litigation? It seems to me that if any change be proposed, it should be along the lines of improving the position of the litigant and enabling him to get a decision as speedily and with as little expense as possible. I did not hear the minister make any reference to that point. If the change is going to increase the delays and also the expense, the measure is not one which ought to receive our support.

Mr. R. L. BORDEN.

Mr. W. M. GERMAN (Welland). It appears to me that the changes proposed by the Minister of Justice should have been made many years ago, in so far as the practice in the admiralty court in Ontario is concerned. I cannot pretend to speak with regard to the practice in any other province. My hon. friend the leader of the opposition (Mr. R. L. Borden) says that the practice in the admiralty courts is exceedingly simple—the most simple of any court in the land. Well, I venture to say that it is not more simple than the practice and procedure in the High Court of Justice in Ontario, than which there can be no more simple procedure and practice. I might go further and say that the practice of the admiralty court in Ontario is practically the same as that in the High Court of Justice. A writ is issued, or a warrant if you desire to arrest the ship, an appearance is entered, a statement of claim is delivered, and a statement of defence.

Mr. R. L. BORDEN. I was not aware that you had pleadings except by order of the judge.

Mr. GERMAN. There is always an order or the judge for the pleadings.

Mr. R. L. BORDEN. Not in my experience.

Mr. GERMAN. Mine is different. There has always been an order in any case I have been engaged in, and I have been engaged in as many admiralty courts cases as perhaps any legal gentleman in this House. There is always a request for an order of the judge for pleadings on one side or the other; the pleadings are delivered, the parties are at issue and the case goes to trial; and that is exactly the practice and procedure in our High Court of Justice. Now, it seems to me there is one reason, so far as Ontario is concerned, why this change should be made, and that is that all admiralty writs have to be issued in the city of Toronto and delivered to the marshal of the court in Toronto. The marshal of the court in Toronto can exercise wide jurisdiction, but he does not travel over the Welland canal or up the St. Clair river or elsewhere to arrest a boat, but sends the writ to the sheriff in the district. And I know from my own experience that it has reached the sheriff in the locality where the boat was at the time the writ was issued, the boat was gone from that section into American territory—being an American bottom—and the claim was lost. Only to-day, without knowing the gist of this resolution, I wrote a letter to the Minister of Justice suggesting that at least there should be a local registrar of the admiralty division of some place on the Welland canal where writs could be issued in admiralty and the

sheriff there be seized at once of jurisdiction to arrest the boat——

Mr. R. L. BORDEN. That would remedy the difficulty, would it not?

Mr. GERMAN. That would, in a measure, remedy the difficulty. But why not give the right to the local registrar in each judicial district to issue the writ? It might just as well be issued there as in Toronto. It is an absolute absurdity that these writs should all be issued in Toronto, but that has been the law. The hon. member for West Hastings (Mr. Porter) has said that this would overburden the judges of the high court with extra work. I do not think so at all. There are not many cases in admiralty to be tried at any rate. A great many are settled and but a few of them tried. I venture to say there is not a judge in the high court of the province of Ontario who does not understand the admiralty law as well as any special judge who might be appointed for that particular purpose. It is usually a question of fact. The leader of the opposition (Mr. R. L. Borden) says it depends upon the rule of the road. It probably does in some cases, as, for instance, in cases of collision. But the others are questions of fact, and the evidence is heard by the trial judge, whoever he may be. He applies the law as it exists in regard to the matter, and he finds the facts one way or the other. But, even as it was, there was always an appeal to the Supreme Court and then the whole matter went to a tribunal that was not particularly seized of expert knowledge in admiralty matters more than the judges of our High Court of Justice might be. So, for the convenience and interest of litigants, it is far better that the procedure as it has existed since 1891 should be changed. Whether this is the best change that could be made or not is another thing, but that some change should be made from what we have had in the past is to my mind most absolutely certain. The admiralty court, as constituted at present, is not constituted in the best interest of litigants. Only a short time ago a vessel on the Welland canal collided with a contractor's plant. The vessel was outside the jurisdiction of the court of that judicial district before we got the writ from Toronto executed, and, before we could get word to Montreal and have a writ issued there, she was on the Atlantic ocean. The consequence was that the party lost his claim of several hundred dollars, for the boat was gone and the owners lived outside the jurisdiction. If the writ could have been issued in the county of Lincoln, the county of Welland, or the office of any local registrar bordering on Lake Ontario, the boat could have been seized and the person injured could have got his claim out of the boat or compelled her to remain tied up. This kind of thing happens frequently. Great injustice has been done to persons injured by collisions with steamers by reason of the slow procedure under the present practice. I am confident that the change proposed will benefit litigants and claimants as well as the owners of vessels themselves.

Mr. HONORE GERVAIS (Montreal, St. James). I would like to express my views as concisely and accurately as possible against this measure. I may say at the very outset, and before dealing with the merits of this resolution, that I am a little surprised to hear that no provision is made for compensation for the surrogate judge at Montreal. That gentleman is one of the very few admiralty judges who have done much work, and as a matter of fact he has done more work than any other admiralty judge in Canada. He tried 42 cases last year and rendered over 100 judgments. In the district of Quebec only two cases were tried by the admiralty judge in that district, who is the ex-chief justice. I am much surprised to find that a man like Mr. Justice Dunlop, who has done such a large amount of work during the last year and the year previous, is not to be allowed any compensation. I know that Mr. Justice Dunlop could not expect to have any salary paid from the consolidated fund of Canada, for the reason that under the Act of 1891 he is appointed merely a surrogate judge, that is, a judge who should not but is just the same to be paid by fees. But I may say that Mr. Justice Dunlop has refused continually to accept any fee paid by law. He did not feel disposed to accept a fee like an ordinary marshal or bailif or other public officer authorized to receive fees. In November, 1907 for the purpose, I suppose, of pleasing the local surrogate judge in admiralty in Montreal, the judge of the Exchequer Court, the late Mr. Justice Burbidge, made the following order, which was published in the Canada 'Gazette' of November 30, 1907:

In pursuance of the provisions of The Colonial Courts of Admiralty Act, 1890, and of The Admiralty Act, 1891, Canada, it is ordered that the following additional rules of court for regulating the practice and procedure (including fees and costs) of the Exchequer Court of Canada, in the exercise of its jurisdiction, powers and authority as a court of admiralty, shall be in force in the said court:

1. Part 2 of the appendix to the general rules and orders relating to the practice and procedure in admiralty cases in the Exchequer Court of Canada is hereby amended by adding thereto the following paragraphs:

13. By a judge or deputy judge in admiralty, to whom no salary is paid as such judge or deputy, to be taken for his own use:

| | |
|---|---|
| On administering any oath or declaration in court or in chambers.. .. .. .. | $ 1 00 |
| On examination before him of any witness before trial.. .. .. .. .. .. .. .. | 5 00 |
| On any application in chambers.. .. .. | 4 00 |
| On any motion in court.. .. .. .. .. .. | 5 00 |

| | |
|---|---|
| On a final decree in an uncontested action... .. .. .. .. .. .. .. .. .. .. .. .. .. | 5 00 |
| On a final decree in a contested action.. | 25 00 |
| Where the trial or hearing of the action occupies more than one day, for each additional day.. .. .. .. .. .. .. .. .. .. .. .. | 15 00 |
| On the assessment of damages, or taking of any account if assessed or taken by the judge according to the case, from $5 to.. .. .. .. .. .. .. .. .. .. .. .. | 25 00 |
| On signing or certifying any document | 2 00 |

Well, the bar of Montreal thought that such a decree was entirely unworthy, and that it would be undignified in a British judge to observe it, and Mr. Justice Dunlop has been refusing, since the passage of this decree, to accept any fee from any lawyer, or asking any lawyer for a cheque, before hearing a case, although it has been the practice in England for centuries to observe the old Latin maxim: Non deliberetur, donec solvantur species. Fortunately, that practice was abolished in the year 1825. Now Mr. Justice Dunlop, who is a good British judge, declared that he did not feel free to ask for $5 or $25 before he went on with the trial of a case. The result is that Mr. Justice Dunlop has been presiding over the admiralty court in Montreal for the last three years without receiving a farthing, although he has tried more cases than any other admiralty judge in all Canada, yes, I may say, although he has tried more cases than all the other admiralty judges put together. Therefore I think the Bill is defective in that it has no provision for making compensation to Mr. Justice Dunlop, the surrogate judge in admiralty at Montreal.

But I am opposed to the Bill for several reasons, I am opposed to it in toto. In the first place, permit me to give a brief history of the admiralty courts in New France and in Canada so far as the province of Quebec is concerned. As far back as 1717 there was an admiralty court established under the French regime in New France, of which the intendant was the presiding judge. Soon after the colony passed under British authority, an imperial vice-admiralty court was established in 1764, and that court tried cases in admiralty as late as the year 1891. In 1890 was passed the Imperial Colonial Admiralty Act, and I venture to call attention to two sections of that Act. Section 3 reads as follows:

The legislature of a British possession may by any colonial law, (a) declare any court of unlimited civil jurisdiction, whether original or appellate, in that possession to be a colonial court of admiralty, and provide for the exercise by such court of its jurisdiction under this Act, and limit territorially, or otherwise, the extent of such jurisdiction; and (b) confer upon any inferior or subordinate court in that possession such partial or limited admiralty jurisdiction under such regulations and with such appeal (if any) as may seem fit.

Mr. GERVAIS.

I quote this article for the purpose of showing that this Bill is unconstitutional and that this parliament has no power to amend the Act of 1891 which was and which is still unconstitutional; at any rate to show that this parliament has no authority to organize a court to try maritime cases within any province of the Dominion. This section 3 does not give power to the parliament of Canada to establish a new admiralty court, a new judicial authority, but that power is given to the legislature. Every one knows that under the British North America Act of 1867 the word 'legislature' has a well defined meaning; it means the legislative power which legislates for any British province, while on the other hand, the parliament of Canada is only authorized to deal with matters of a federal character. Well, under the circumstances, every one can draw the conclusion that under the Act of 1890, according to the construction put upon it by the imperial parliament, it is only a provincial legislature that has authority to legislate upon this subject. Next I will quote article 15 of the Imperial Act of 1890. This is the interpretation clause, and reads as follows:

In the construction of this Act, unless the context otherwise requires, the expression 'representative legislature' means, in relation to a British possession, a legislature comprising a legislative body of which at least one half are elected by inhabitants of the British possession.

So I say the clear import of the Act of 1890 was that the power to create a new admiralty court within a British possession, is confined exclusively to the provincial legislature, not to a British parliament or a colonial parliament. Now if we look up the constitutional Act creating the commonwealth of Australia, or creating the confederation of British colonies in the West Indies, if we look up the constitutional Acts relating to the South African colonies, we discover that a distinction is always made between what is styled a colonial British parliament and a British legislature. If that is the case, we must conclude that by the Act of 1890 it is only a provincial legislature of any one of the provinces of Canada that has power to organize and establish a court; while on the other hand, to the parliament of the Dominion is assigned the duty of appointing the judge. The office is to be created by the provincial authority, and the federal authority has only the power to appoint the official to fill that office. Then the well known clause 14 of section 92 of the British North America Act, is very clear upon that subject. With the permission of the committee I will quote that well known section:

14. The administration of justice in the province, including the constitution maintenance and organization of provincial courts, both of civil and criminal jurisdiction, and

including procedure in civil matters in these courts.

As a matter of fact it cannot be said for a moment that it is within the power of the Canadian parliament to deal with the question of procedure before the admiralty court. The organization of the maritime courts cannot be dealt with by the parliament of Canada. But to-day for the time being, still adhering to my contention that this Bill is unconstitutional I will give other reasons why the present conditions should not be made worse. Then, I say that under the Act of 1867, under the Imperial Act of 1890, and under the Canadian Act of 1891, this parliament cannot organize or reorganize what is called the admiralty court for Canada. But nevertheless in 1891 the court of admiralty was established for Canada. It was made more especially a court of appeal. Then six local courts were established. The whole of the Dominion of Canada was divided up into six districts, namely, Ontario, Quebec, British Columbia, Nova Scotia, New Brunswick and Prince Edward Island. At the head of each local district in admiralty a judge was appointed and a salary was provided for each one of those judges. That salary has ranged from $600 to $1,000 a year. Clever and painstaking men, and men of large experience in maritime matters have been appointed as local judges in admiralty. There is an appeal from the judgment given by each of these judges of the Exchequer Court from the Exchequer Court to the Supreme Court of Canada and from the Supreme Court to the Privy Council in England. For the last fifteen years in the district of Montreal, on account of the large number of maritime cases arising in and about that port, the board of trade, the chambre de commerce and many of the most important corporations and citizens have been asking this government to appoint a local judge in admiralty for the district of Montreal. To give a certain amount of satisfaction to our citizens a deputy admiralty judge has been appointed for the district of Montreal. There were many reasons for the appointment of a deputy admiralty judge. For many years past, on account of there not being an admiralty judge in Montreal, the shipping men of that port, when they had cases to defend, or were obliged to institute actions to enforce maritime contracts, had most of these cases tried before the high court of admiralty in England. I could mention many of these cases. It was a detriment to the traders, merchants and shipping men of Montreal, it was a detriment to my fellow members of the bar and it was a prejudice to everybody. After years of fighting this government appointed a deputy judge in admiralty for the district of Montreal. This judge has been trying cases for three years. Indeed, during the first year over fifteen cases were tried ; last year, forty-two, and some one hundred and twenty decisions were given by him during the year 1907. But, apparently because this admiralty court in Montreal has been serving a good purpose, somebody sees fit now to abolish it. I will declare to this committee that the mere fact of merging the jurisdiction of the admiralty court with that of the superior court means the absolute abolition of all admiralty authority in Montreal. It means that within a few years from now all the admiralty cases arising at Montreal will be tried at Quebec or in England. Some hon. members of the committee may ask me my reason for that. It is very simple. We have in Montreal seventeen judges of the Superior Court, all of whom I must say, are very clever men. But they have been trained to try cases under the civil law, they know the commercial law and they are familiar with a great many of the maritime laws. But as everybody knows the maritime terminology is quite extensive. It includes more than eight hundred special words having a special meaning which no one could hope to familiarize himself with in three months nor yet in six months. Sea-faring men, shipping men and ship owners have a special terminology of their own. Moreover they have habits, customs and usages which are sometimes considered ridiculous by land lubbers but ship owners would not be any more ready to submit their cases to the decision of the land lubbers than land lubbers would be to accept the arbitrament of the sea-faring men. It will be asking a good deal to expect any of the seventeen judges that we now have, to try maritime cases. If this parliament does not provide any additional salary for the judges who will hear these maritime cases I say, Sir, that that means that no civil court judge will be very anxious to try maritime cases or to undertake the extra work which this increased jurisdiction involves. Such is human nature. If you transfer the jurisdiction of the admiralty court to the Superior Court of Quebec which is the equivalent of the high court of Ontario, of the high court of New Brunswick, or the high court of England, and which may be called the common law court dealing with all cases except otherwise provided, the result will be that very few admiralty cases will be tried there. If you abolish the salary which is paid to the admiralty judges and if you force the civil court judges to hear and try maritime cases without any additional compensation you will do something which is to the utter detriment of the port, the citizens and the bar of Montreal. I say that it is unfair. Moreover, this resolution is uncalled for and it is inexpedient. Who has asked for this change ? Perhaps there are some poor officers or poor judges. Are we to abolish our admiralty courts because there are one or two undeserving or inefficient admiralty

judges? Are we to abolish this parliament of Canada because there may be one, two three or five bad members? Should we abolish a public office because there is one poor officer? Should we abolish the Senate because there are a few senators who are more or less deserving? No, we cannot for a moment think that we will abolish a court because sometimes for a few days in the year that court is presided over by a poor judge. I think that under the circumstances, that is a poor argument.

Then I said that this Bill is inexpedient because it is interfering with the terminology, the language, the usages, the habits, the customs of sea-faring men without sufficient reason being assigned for so doing. It has been said also that there has been opposition to this Bill. I ask you, Mr. Chairman, and the members of this committee to pay attention to a few paragraphs from certain resolutions which were sent to the Minister of Justice and to some members of this House at the request, not of lawyers alone, but of all those who know of things maritime. I quote first an extract from the minutes of the council of the bar of Montreal passed on January 10, 1908.

The attention of the Council of the Bar of the District of Montreal having been called to the general order made by his Lordship, Mr. Justice Burbidge, as published in the 'Canada Gazette' of November 16, 1907, in relation to certain fees to be paid to a judge or deputy judge in admiralty, to whom no salary is paid as such judge or deputy, it was unanimously resolved:—

Whereas the port of Montreal is the principal port in Canada; and

Whereas by reason thereof there is more admiralty business done in the district of Montreal than in any other Admiralty district or division in Canada; and

Whereas the judges in admiralty sitting in Halifax, St. John, Charlottetown, Toronto, Vancouver and Victoria receive a fixed salary varying from $1,000 to $800, which salary is payable out of the consolidated revenue fund of Canada; and

Whereas the judge sitting in admiralty in Montreal receives no salary as such judge; and

Whereas the said judge, therefore, is paid by the fees fixed by the general order above mentioned being a certain sum for each proceeding taken before him in the case, thus imposing a direct tax upon the litigants, who appear and plead before the admiralty court established for the district of Montreal; and

Whereas the paying of such tax is an unfair discrimination against said litigants and that the said system can be justified by no consideration of the importance of the port of Montreal, the dignity of the judge, the large number of cases which come up for trial before the said judge in admiralty or of the general method in vogue in modern times of remuneration judges of the superior courts of Canada;

That the matter be immediately and respectfully brought to the attention of the government of Canada and of the Honourable Mr. Justice Burbidge with a view of obtaining during the present session of parliament, for the judge in admiralty appointed and sitting in the district of Montreal a salary commensurate with the duties performed by him and of having the said general order repealed as soon as the said salary is voted and that a copy of the present resolution be addressed to the Right Honourable Sir Wilfrid Laurier, Prime Minister of Canada, to the Honourable A. B. Aylesworth, Minister of Justice, to his Lordship, Mr. Justice Burbidge and to the members representing the city of Montreal in the House of Commons.

Certified a true copy.

Montreal, January 16, 1908.

JAN. PRIMEAU,
Secretary, Bar of Montreal.

I have here a copy of a resolution unanimously adopted by the Dominion Marine Association at their annual general meeting at Ottawa, on Wednesday, February 15, 1908:

Copy of a resolution adopted unanimously by the Dominion Marine Association in annual meeting, at Ottawa, on Wednesday, February 12, 1908.

Be it resolved that the Dominion Marine Association, having considered the resolution submitted to parliament by the Honourable, the Minister of Justice, in relation to admiralty jurisdiction within Canada, strongly disapproves of any change in the jurisdiction, procedure or administration of any Canadian admiralty court, which may in any way, or to any extent, impair the rights, remedies or facilities for relief enjoyed under the present law.

That having regard to the nature of the property in dispute and of the questions placed in issue in admiralty cases, and having regard also to the real necessity for the preservation intact of such peculiar rights and requirements as the action in rem, the right to arrest under warrant by telegram, the release under bond, the preliminary acts in collision cases, and the various other special items of admiralty practice, it is essential for the protection and convenience of litigants that a separate procedure be preserved; while the same special attributes and requirements and the special laws, regulations and maritime customs governing the decision of these cases render specialization urgently desirable on the part of the judges and administrative officers of these courts as well as in the practice and procedure.

That the continuance of a separate judiciary and staff for these courts is requisite for the above reasons and for another important reason also, namely, that only thereby can the speedy and convenient trial of actions at suitable places be provided for, the continuance of these special facilities being in a large majority of cases essential to the collection and preservation of the evidence of crews of vessels.

That this association believes that the rapidly increasing growth of the Canadian merchant marine entitles the above considerations to special attention, and that any steps taken in the matter should be in the way of extension rather than curtailment of the rights now enjoyed.

The Dominion Marine Association.
FRANCIS KING,
Secretary.

One word about procedure in maritime law. One hon. member spoke of the similarity between the common law and the maritime law. There is all the difference in the world between the English common law procedure and the admiralty procedure. For example, under the common law procedure you have no such useful remedy as the 'actio in rem.' Where is your actio in rem in the common law such as you have under the admiralty practice? Then, under the admiralty procedure you have the arrest by wire, by telegraph, of a ship, which is not given under the common law procedure. Then, under the common law, you have nothing like the giving of a bond for obtaining the release of a ship. This remedy is quite useful both to the ship owner and to the claimant. Here are three admirable modes of procedure which cannot be replaced under the common law and I could quote many other useful remedies to which recourse can be had under the admiralty practice, but which cannot be employed under the common law. For these reasons the shipping men of Canada are in a body protesting against the proposed change of the jurisdiction of our admiralty court.

Let us hear another protest. I have here a resolution of the Montreal Board of Trade reading as follows:

Resolved, that in 1897 and again in 1898 the council of the Montreal Board of Trade urged upon the government by resolution the establishment of a maritime court in Montreal such as was provided in Quebec, Toronto and other places, and that the government thereafter acceded to this request,

That the council now learns with alarm and regret that the government contemplates the abolition of the admiralty courts throughout the country,

That the council hereby prays the government not to disturb an arrangement which has given such satisfaction to shipowners and marine underwriters but rather to perfect it by ordering that the Montreal admiralty judge shall be paid a fixed remuneration out of the consolidated fund of Canada, instead of the fees fixed by the general order of the Exchequer court of Canada.

I am, dear Sir,

Yours truly,

GEORGE HADRILL,

Secretary.

Then there is a letter from a maritime law expert, Mr. King, of Kingston, which reads:

I am sending you inclosed herewith a copy of the resolution of the Dominion Marine Association on the subject of the proposals introduced by the Hon. the Minister of Justice on Tuesday last in regard to admiralty jurisdiction in Canada.

The resolution presented to the House by the minister is so delightfully vague and ambiguous that it may mean a great deal or it may mean nothing, while in fact it does not say that any part of the troubles we fear are contemplated, but rather that it is expedient to make better provision for admiralty jurisdiction within Canada. It does say that the judiciary and staff are likely to be superannuated or pensioned off, and the other matters only loom up as a possible or probable consequence.

I note that the Montreal bar 'views with alarm' any changes in The Exchequer Court Act, whereby jurisdiction would be transferred to the Superior Court. I think their resolution reads too much into the minister's resolution. Changes, too, would not be in the Act referred to but rather in the Admiralty Act (chapter 141, Revised Statutes of Canada) which confers certain powers on the Exchequer Court under the Colonial Courts of Admiralty Act, 1890.

In view of the haze which obscures everything and the praise-worthy object aimed at in the opening lines of the minister's resolution, I have been rather explicit in our resolution in order to avoid condemnation of any good thing.

I am interesting members of our local bar, and have also taken the matter up directly with a member of the Toronto bar, who is a bencher of the Law Society of Upper Canada, and interested considerably in admiralty matters, namely, Mr. W. D. McPherson, K.C.

I will be very pleased to try to be of further service to you in any way, for mutual benefit.

Faithfully yours,

FRANCIS KING.

I have here a resolution of the Shipping Federation of Canada which, as every one knows, is composed of the ocean shipping men, who know the ins and outs of the admiralty practice in England as well as in Canada. Their resolution is as follows:

Extract of minutes of a general meeting of the members of the Shipping Federation of Canada held in their board room, Board of Trade building, in the city of Montreal, on Wednesday, the 12th day of February, 1908.

Whereas, it has come to the knowledge of this federation that it is the intention of the government to change the Exchequer Court Act, in such a way as to give jurisdiction in admiralty matters to the Superior Court instead of maintaining the present system.

And whereas, our Canadian admiralty courts, as they are at present constituted, have the confidence of shipowners and underwriters.

Therefore it was unanimously resolved, that the federation respectfully urge the government to maintain the present system in connection with the Montreal admiralty court with the exception that the said admiralty judge be paid out of the Consolidated Fund of Canada, instead of fees fixed by the general order of the Exchequer Court of Canada.

Be it further resolved, that a copy of this resolution bearing the seal of the corporation be forwarded to the Rt. Hon. Sir Wilfrid Laurier, G.C.M.G., P.C., Premier of Canada; to the Hon. A. B. Aylesworth, K.C., Minister of Justice; Hon. L. P. Brodeur, K.C., L.L.D., and the Hon. Rodolphe Lemieux, K.C., L.L.D., and also to the respective members represent-

ing the city of Montreal in the House of Commons.

Certified a true copy.

THOMAS ROBB,
Secretary.

Montreal, February 12, 1908.

The Shipping Federation do not like to have the Montreal admiralty judge paid by fees and they have reason for not wishing that. As you remember during the sixteenth century the court house of Paris was burned down and some malicious litigants of the time published these four verses about it:

Certes, ce fut un triste jeu,
Quand à Paris, Dame Justice
Pour avoir mangé trop d'épices
Mit son palais en feu.

Mr. E. M. MACDONALD. I understood the hon. member in drawing a distinction between the remedies that are available at common law and those which have always been available in the admiralty court, to argue that, as a result of the change proposed by this Bill, it will be impossible for the common law courts to grant these remedies.

Mr. GERVAIS. No. theoretically; but practically, yes. After the passing of that Bill, you say, the same remedies will still continue to exist. If I may be allowed to use an expression well known in the courts, I join issue with that statement; my plea is a general denial. There are several reasons why that change cannot maintain those special remedies. But let me quote, first of all, the English Judicature Act of 1873. For the last four or five centuries the good people of the British Isles had been confronted with about half a dozen of inferior jurdisdictions and an equal number of higher jurisdictions. Many proposed judicial reforms had been before the British parliament during the nineteenth century. At last, in 1873, the great Judicature Act was passed, by which all the inferior courts and all the superior courts of England were abolished and were replaced by one single court—the High Court of Justice of England—having the right to sit in two divisions, one as the trial court and the other as a court of appeal, with the right of ultimate appeal to the House of Lords. By section 16 of the Judicature Act of 1873 the fifteen or sixteen courts of England were abolished, or rather were merged into one court—the High Court of Justice of England. That section 16 provides:

The High Court shall be a Superior Court of Record, and, subject as in this Act mentioned, there shall be transferred to and vested in the High Court the jurisdiction which, at the commencement of this Act, was vested in, or capable of being exercised by, all or any of the courts following.

Then follows the list: The High Court of Chancery, the Master of the Rolls, the Court of King's Bench, the Court of Common Pleas at Westminster, the Court of Exchequer, the High Court of Admiralty, the Prize Court, the Court of Probate, the Court for Divorce and Matrimonial Causes, the London Court of Bankruptcy, the Court of Common Pleas at Lancaster, the Court of Pleas at Durham, the courts created by commissioners of assize, of oyer and terminer and of jail delivery, and so on. All the courts which had been in existence in England for over three centuries were abolished and were replaced by that single court, the High Court of Justice of England; so says section 16 of the Judicature Act of 1873. But there is a rider to it; there is a limitation to that complete and absolute merging of courts. Let me quote another section, section 31. The divisions were still maintained; and so, though the High Court of Admiralty was abolished, and its jurisdiction transferred to the High Court of Justice, still there is the High Court of Admiralty, under the assumed name of the Probate, Divorce and Admiralty division. Let me quote section 31:

For the more convenient despatch of business——

We have no such language in our Acts of parliament. The civil law and civil procedure in each province is governed by the provincial authority. The government of Canada has merely the power of appointing judges; and because it has that power, it now unconstitutionally claims the right of amending, modifying and altering the civil procedure of the province; and it is this tendency which I oppose. But I will quote section 31:

For the more convenient despatch of business in the High Court (but not so as to prevent any judge from sitting whenever required in any Divisional Court, or for any judge of a different division from his own) there shall be in the High Court five divisions consisting of such number of judges respectively as hereinafter mentioned. Such five divisions shall respectively include the several judges following, that is to say——

The section then provides for the division of the High Court into five divisions, called, respectively, the Chancery division, the King's Bench division, the Common Pleas division, the Exchequer division and the Probate, Divorce and Admiralty division. That means that in England, though the High Court of Admiralty has been abolished by the Judicature Act of 1873, still the shipowners, the sea-faring men and the merchants can avail themselves of the ability and capacity of their admiralty judges by means of this admiralty division.

Mr. E. M. MACDONALD. Will my hon. friend tell me whether there is anything in the English Judicature Act that differs in any particular from that proposed by the Minister of Justice? Does not the English

Act assign to one of the divisions of the High Court of Justice the same jurisdiction that the Minister of Justice proposes to assign to the admiralty court?

Mr. GERVAIS. There is a wide difference.

Mr. E. M. MACDONALD. In what way?

Mr. GERVAIS. Because that Act was being passed by a sovereign power—by a power which at the same time can create the law, regulate the procedure, and can provide for the appointment of the judges and the assignment of their work. In Canada the provincial legislatures are sovereign and supreme in the way of amending, modifying, altering or repealing what is styled the civil law. I speak of civil law, not in the narrow sense taken by many lawyers, but in the large sense of private law as contrasted with public law. All that is not public law is private law, and consequently, under the working of the Act of 1867, all that is styled by the jurists private law—that is, civil law, commercial law and maritime law—is under the jurisdiction of the provincial parliament. According to the most modern definition of rights, what we style civil law must include private law, and private law is composed of three elements—civil law, properly speaking, commercial law and criminal law. And therefore it comes within the exclusive jurisdiction of the provincial legislatures to deal with commercial and maritime law.

Under the Act of 1873, passed in England, it was thought that English lawyers and ship owners would be deprived of the admiralty procedure hitherto in force. That expectation was very natural. If the admiralty courts were to be abolished, the procedure in those courts would follow suit. If the admiralty courts were too ancient and were to be abolished, although they embodied the common sense and logic of ages, it was only natural to presume that the procedure followed in those courts would be abolished. But, curious as it may seem, nothing of the kind was done. I might quote you a few articles of the great Judicature Act of 1873 to prove what I say. For example, after the passing of that Act of 1873, one might wonder why the procedure relating to arrests under the old admiralty practice was not abolished. But it was not. In section 35 of the Judicature Act of 1873 you will find that the division of actions of the old admiralty court are incorporated in that Act. They may be found under articles 498, 538, 539 and 167 of the Judicature Act.

Mr. LANCASTER. The old practice observed.

Mr. GERVAIS. Let us follow therefore the English example; let us maintain admiralty practice separate from the common law courts jurisdiction. Yes. If you will look at the procedure you will find that discovery, transfers, appearance, preliminary objections—in fact all the rules of admiralty practice—instead of having being repealed, are purely and simply incorporated into the general Judicature Act of 1873. And they were properly retained and incorporated in that Act, because these rules of admiralty practice were an admirable set of rules of procedure, devised for the best advantage of the shipping interest and of the bar. There is no court in the world which has better rules of practice than those of our court of admiralty. It is idle to think that one may devise some rules of procedure which could replace for a moment the old admiralty rules. In a word, there is more reason in Canada than in England to keep the admiralty jurisdiction separate from the civil law courts jurisdiction.

What has been the result of this merging in England in 1873 of the admiralty practice with the common law practice? The result has been that instead of having the rules of practice before the admiralty Court compiled together in one book, you have now to look through two bulky volumes in order to discover what they are. So that instead of having a clear and concise code of maritime law as well as admiralty procedure you have to look up any number of authorities and begin anew your maritime law education and training.

Mr. LANCASTER. And there are different rules in each province.

Mr. GERVAIS. Not now. I would like to know who are asking for this legislation? All the legal men, all the shipping men, all the ship owners, all those who are interested in maritime matters are, in my province at least, arrayed against the Bill. Who then are asking for the change? We must presume that parliament strives to follow public opinion and that before important measures of this kind are introduced there must be some evidence of their necessity. What are the great interests at the back of this proposed legislation? Who are clamouring for a change? I have been trying to find that out for three weeks, but without success. I have made inquiries of shipping men, judges, lawyers and others in my province, and the only answer I have had is that nobody is asking for the change. Most of the leading newspapers in Canada have written articles against it. The bar of Montreal and the bar of Quebec have put themselves on record in public meetings against it. I cannot, therefore, see why the government should press this measure. Speaking for myself I consider it not only inexpedient and uncalled for, but entirely unconstitutional. Should this Bill become law, that might induce the provinces to accept illegal delegation of constitutional power from this parliament. That accepta-

ance might cause some people to argue that the unconstitutional Act of 1891 has been at any rate approved of by the people of the provinces. They may have before long to organize proper and constitutional courts of admiralty, by virtue of the Colonial Admiralty Courts Act, 1890. This House should not make worse in the meantime the present de facto condition of affairs. Mr. Speaker, I might be allowed to sum up those remarks I had to make to-day within a couple of hours of notice. I beg leave to request this House to remember that the monks of Cambridge and Oxford, while dreaming of universal union, unity and domination, met universal disruption and subserviency.

At six o'clock the committee took recess.

## After Recess.

Committee resumed at eight o'clock.

Hon. Mr. AYLESWORTH. At the beginning of the sitting this afternoon, I stated my proposal to increase the amounts that this resolution proposes to award to the registrar at Toronto and the registrar at Halifax. Of course, I should have spoken of that before the Speaker left the chair. With your permission, I ask to withdraw the motion that I made in committee with the intention of resuming it in another form at a later stage.

Resolution reported, read the second time and agreed to.

Mr. AYLESWORTH moved for leave to introduce Bill (No. 122) to make better provision for the exercise of admiralty jurisdiction within Canada in accordance with the Colonial Courts of Admiralty Act, 1890.

Motion agreed to, and Bill read the first time.

## SUPPLY—INQUIRY FOR RETURNS.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries) moved that the House go in Committee of Supply.

Mr. R. L. BORDEN (Carleton). I desire to call the attention of the Minister of Public Works (Mr. Pugsley) to a motion moved by myself on January 13 last, calling for a return of the revenues from certain wharfs and the expenditures on those wharfs. Or, it may be, that this return relates to the Marine and Fisheries Department.

Hon. WM. PUGSLEY (Minister of Public Works). Yes, I think that relates to the Marine and Fisheries Department.

Mr. R. L. BORDEN. I know that the department have many returns in hand, but I should be glad if the earliest possible attention were given to this.

Mr. BRODEUR. This has to do with the expenditure on construction of wharfs, and I think it is under the Department of Public Works.

Mr. R. L. BORDEN. It calls for a return of the revenues from these wharfs also. It may be that it relates partly to one department and partly to the other.

Mr. BRODEUR. Yes, I think the hon. gentleman is right.

Mr. PUGSLEY. So far as the Department of Public Works is concerned, the hon. gentleman (Mr. R. L. Borden) will see that it covers a very wide range. Another hon. member has moved for a return covering somewhat similar works.

Mr R. L. BORDEN. That is a motion relating to public buildings. This includes nothing but wharfs.

Mr. BRODEUR. I am under the impression that we brought down last year a return showing these revenues.

Mr. R. L. BORDEN. Of course, I do not ask to have brought down again anything that is already before the House.

Mr. BRODEUR. I will look into it.

## EXPENDITURE OF PUBLIC WORKS DEPARTMENT.

Mr. GEO. H. PERLEY (Argenteuil). Before you leave the chair, Mr. Speaker, I would like to make a few remarks regarding certain matters connected with the Public Works Department. We know that Canada has been very prosperous during the last few years, and we all rejoice in that fact. But I find that the Public Works Department has been even more prosperous than Canada. Within the last twelve years the population of Canada has increased from 25 to 50 per cent—we do not know exactly how much. But, during the same period, the Department of Public Works increased nearly seven times. I find that the expenditure of the Department of Public Works has increased according to the following figures:

| | |
|---|---|
| Expenditure, Public Works Department for the year 1895-6: | |
| Consolidated Fund.. .. .. .. | $ 1,299,768 |
| Other items.. .. .. .. .. .. | 114,825 |
| Total.. .. .. .. .. .. .. .. | 1,414,593 |
| Expenditure of the Public Works Department for the year 1905-6: | |
| Consolidated Fund.. .. .. .. | $ 7,484,715 |
| Other items.. .. .. .. .. .. | 2,359,528 |
| Total.. .. .. .. .. .. .. .. | 9,844,243 |
| Expenditure of the Public Works Department for the year 1906-7: | |
| Expenditure for nine months— | |
| Consolidated Fund.. .. .. .. | $ 5,977,385 |
| Other items.. .. .. .. .. .. | 1,178,011 |
| | 7,155,396 |
| Add one-third for remainder of the year.. .. .. .. .. .. .. | 2,385,132 |
| Total.. .. .. .. .. .. .. .. | $ 9,540,528 |

For the year 1907-8, the estimates of the Public Works Department were nearly $15,000,000. The estimates for the year 1908-9 now before the House are for a total of nearly $13,000,000. This will be added to by large supplementary estimates as usual.

Now, Liberals seem to consider this vast expenditure of the Public Works Department something to be proud of, something for which they should get great credit. The present government seems to think this money its own, just as though it had made it and not taken it from the pockets of the people. In election campaigns they speak of this continually, and claim support for the government because they have spent so much in public works without giving consideration to what it is spent for, and whether the works are really needed or not. I find in the report of the Public Works Department for the year ending June 30, 1906, the following statement:

The statement prepared by the accountant shows the great expansion of our branch of the administration inasmuch as the expenditure made by this department during the fiscal year under review has reached the total of nearly $10,000,000, while ten years ago the expenditure was barely $2,000,000.

You will notice, Mr. Speaker, the boastful tone of this statement. It sounds like a pæan of joy. Look at us, they say; we are a great department; ten years ago our expenditure was barely $2,000,000 whereas now we spend $10,000,000. It seems to me that the question whether this expenditure is a subject for congratulation or not depends upon how this money has been spent, depends upon whether the works on which it was spent were needed or not. What has caused this tremendous increase of expenditure? It has not been caused in the main by any large works which were needed; it has been caused chiefly by the frittering away of the money of this country on many unnecessary works, most of them small, perhaps, but representing in the aggregate vast sums. When we point to such a case, the Liberals answer: Oh, well, what does it matter? that is a small thing. We all know that a great deal of the money is spent on necessary works, but the Liberals forget, and I think purposely forget, that these sums which are frittered away are very many in number, that the total amounts to a very large sum of money, and in this case to many millions. Now we say plainly on this side of the House that we want to see all necessary public works constructed. We have always said, when in opposition and in power, that this country was bound to go ahead and become one of the great countries of the world, and we wished to see the expenditure keep progress with the development of the country. When we criticise certain expenditures of the Public Works Department, our friends opposite try to make out that we are opposed to public works. Sir, I want to deny emphatically, not only on my own account, but on account of all my friends on this side of the House, that we are in any wise opposed to a proper expenditure of public money in constructing necessary public works. There is and there must be a reasonable increase in such expenditure. No one would expect that the expenditure of to-day would not be greater than it was twelve years ago. Hon. gentlemen opposite claim that all these works are necessary, whereas we know that a great many are built in a wasteful manner, and a great many are built that are not needed, built for the benefit of private corporations and individuals. But we do not believe in wasting the people's money in that way. To treat this subject properly, we ought to get down to concrete cases and mention items that we object to. I propose to mention a few that have already been exposed, and by these we may judge of the balance which have not been investigated. Besides public works which are necessary, there are a certain number of others which may be of some public service, but upon which the money has been largely wasted. We need not go far from our doors to find one glaring case of this kind. I refer to the wharf at Hull across the river. Questions have been asked in this House about this wharf. In 1905 on 'Hansard' page 2,064, I asked this question:

1. What was the total cost of the public wharf at Hull?
2. How many boats used this wharf, and what was the revenue received from it during last year?
3. Who is in charge of this wharf, and how much did he receive for his services during last year?
4. Was he paid by fees or by salary?

Hon. Charles Hyman, acting Minister of Public Works, answered:

1. $54,049.76.
2. Some ten boats periodically called at that wharf during the season of 1904. No wharfage charged.
3. J. P. Labelle; paid at the rate of 50 cents per day.
4. By salary.

Again on January 28, 1907, another question was asked:

Mr. PERLEY asked:

1. How many steamers used the wharf at Hull, Quebec, during 1906?
2. What was the revenue for 1906?

Hon. SYDNEY FISHER (Acting Minister of Public Works):

1. Steamers carrying freight called 83 times, and the 'Victoria,' a passenger boat, called twice daily from the 30th July to the close of navigation.
2. Nil.

Now I submit that the expenditure of $54,000 on that wharf was absolutely un-

necessary, that a large portion of that sum was an utter waste, and that for the small traffic which is carried on there a much less expensive wharf would answer the purpose just as well. You will notice that although there was no revenue from it during 1906, yet Mr. J. P. Labelle made a revenue out of it at the rate of fifty cents per day. Why should that wharf have been built? I presume it was not built for political purposes, because the county has been strongly Liberal for a long time. It seems to me this government must have thought that it had more money to spend than it knew what to do with when it spent $54,000 on that wharf. During the summer I have crossed the bridge several times every week, and I took notice of this wharf. For months and months I never saw a single steamer there, but at last after about a year I did see one steamer. I submit that the few steamers which called there would have been just as well off with an expenditure of one-fifth that sum of money.

In the same category come wharfs built in the back country. Now the Ottawa river is between two provinces, it is an interprovincial water. Yet this government has undertaken, during the last few years, in sporadic cases, to build wharfs in the back country. I have here a memorandum of certain wharfs built on Lake Nomininingue. Lake Nomininingue is in the county of Labelle, seventy-five miles north of the Ottawa river. It is an inland lake, one of ten thousand such lakes dotted all over the north country. On the 28th of January, 1907, I asked this question:

1. How many wharfs has the government built on the Nomininingue lakes in Labelle county?
2. What was the cost of each?
3. What was the revenue of each in 1906?

Hon. SYDNEY FISHER (Acting Minister of Public Works).

1. Five wharfs have been constructed: Two on the Grand Nomininingue, two on the Petit Nomininingue, and one on Lake Bourget.
2. Cost of these five wharfs: $4,154.42.
3. None.

Now, Sir, the waters of Lake Nomininingue are entirely in the province of Quebec, and as such I do not consider that this government is at all called upon to spend money for wharfs in such localities. As I say, there are ten thousand such lakes in the northern parts of Quebec and Ontario; and if this government is going to spend money on one lake, why not spend it on all these lakes? Wherever there is a small village on these lakes, wharfs are just as necessary as they are on Lake Nomininingue. Is this government going to carry out this system everywhere throughout the back country? It is impossible. How does the government decide where they shall build such wharfs, and on what lakes? The conclusion is inevitable that wharfs at places like these are granted by favouritism or for political purposes.

In the same category comes a public work which has been frequently referred to in this House, I refer to the bridge at D'Israeli. As all the members of this House know, this government went there and built a so-called wharf, which was practically the one-half of a bridge across a stream and then the municipality set to work and bulit the other half themselves.

Mr. PUGSLEY. Will my hon. friend tell me where D'Israeli is?

Mr. PERLEY. In the county of Richmond and Wolfe.

Mr. PUGSLEY. In the eastern townships?

Mr. PERLEY. Yes.

Mr. LENNOX. In Mr. Tobin's constituency.

Mr. PERLEY. The only difference between the half that was built by this government and the half that was built by the municipality is that the municipality built theirs for a great deal less money.

Mr. LENNOX. For less than one-third.

Mr. PERLEY. For less than a third of the cost of the government half. This government cannot say that it had no warning regarding this work. I find in 'Hansard' of 1905, page 9593, that this matter was discussed and that the hon. member for Dorchester (Mr. Morin) made the following remarks relating to this wharf:

Mr. MORIN. Will the minister tell me if this wharf is ever frequented by a boat of any kind, how long will the boat be?

Mr. HYMAN. O am afraid I cannot answer that.

Mr. MORIN. I will bet you cannot. The hon. minister does not know anything about it. Of course, that is admitted. The engineer is the man who recommends that a wharf be built there or that the proposal to erect a wharf be rejected, and he is the one I am aiming at, not the minister. At that place there is a little creek called Black creek, and the member from the county has asked the government for money to build a bridge there. It is not a wharf he wants at all, it is a bridge, and they try to make this House believe it is a wharf. We all know that for a boat 400 or 500 feet long a wharf 300 feet long is not long enough.

Further on he says:

When the water is high in the spring it is all right for floating logs, but at other seasons of the year there is no water to float even a small boat. The people of that place deserve some encouragement. It is a new country; the settlers went there about 30 years ago, and they had a good deal of trouble on account of that bridge. They endeavoured to procure facilities for themselves, but without success, and so I am glad this money is being voted. Now they want the government

to help them to build a pier or a wharf, but it is neither a pier nor a wharf, it is a bridge. Why does not the minister come down straight, and tell us he wants to help the people and he is going to build a bridge for them. That is what he is doing, and I am glad he is doing it, but I do not want the minister to try and make us believe things that are impossible of belief.

That bridge was built there in the face of that protest and this government surely has no justification for spending the money of this country in building bridges within the provinces. If it were on the Ottawa river, or on any other water between provinces it would be a different matter, but to start and build wharfs and bridges in parts of Canada which are entirely within one of the provinces I claim is wrong. What did the hon. the Postmaster General (Mr. Lemieux) say about this when it was brought up at the time the debate regarding this matter took place? He said:

Let me tell my hon. friend that the member for Richmond and Wolfe who at the last election had a majority of nearly 1,300 does not require the building of a small bridge in his county to obtain for him the votes of the electors.

Well, Sir, if it were not needed for political purposes, what in the world was it needed for in so far as this government is concerned, and what possible excuse can this government offer for putting it there?

Then, there is another class of public works which this government has under taken to build in many cases and the worst of it is that these works are built for political purposes or to favour a few individuals or corporations. I know that it is supposed to be unpopular to criticise public works, to say that certain public works should not be built, but, Sir, I claim and I know that when people understand it you can speak against a useless public work right where it is being built and be applauded to the echo. People of any county like to have public works built in their midst if they are wanted and if the money is not wasted, but if they are not wanted, or they are built to benefit certain individuals, then the people of the locality do not object to criticism. There is in my county a wharf at Greece's Point which I have spoken of before and I merely mention it again to show that I am content and ready to criticise similar works no matter where they may be. This wharf was built in my county some years ago, it was built near a bad eddy where it is of no use whatever, hardly any one uses it at all and I believe it was put there simply for the purpose of helping certain Liberals who live in that locality. I asked about it in 1905, 'Hansard,' page 2063:

Mr. PERLEY. 1. What was the total cost of the public wharf at Greece's point, on the Carillon canal?

2. How many boats used this wharf, and what was the revenue received from it during the last year?

3. Who is in charge of this wharf, and how much did he receive for his services during last year?

4. Was he paid by fees or by salary?

Hon. CHARLES HYMAN (acting Minister of Public Works). 1. $5,452.19.

2. The Marine Department have no record of the exact number of boats which used that wharf. The gross revenue last year (1903-4) was $60.93.

3. Telesphore Ranger.

4. Fees, being a commission 25 per cent of the amount collected.

In February 6, 1907 I asked also:

Mr. PERLEY. 1. How many steamers used the wharf at Greece's point during 1906?

2. What was the revenue for 1906?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). 1. The wharfinger's returns for 1906 are all marked 'Nil'.

2. None.

Now, Sir, I have been told myself by people living near there that they prefer to take their freight off at another place several miles away rather than attempt to get it there, and the steamboats themselves refuse to go there except under extreme pressure on account of the position in which the wharf is built. The expenditure upon this wharf, to my mind, has been absolutely lost to the country.

Another wharf of the same kind is one that has been referred to in this House and which is called the St. Joseph wharf on Lake Huron. This wharf was built in an impossible place on the open shore of Lake Huron where it is not at all likely that it can be kept and it was put there to benefit certain speculators. Five thousand dollars was voted for it in 1902, but $15,000 was spent on it altogether, and I notice that in 1905 the gross post office revenue of that place was the large sum of $91.14 and that the net post office revenue was $16.14. This government undertook to build a $15,000 wharf where hardly anybody lives. The building of this wharf was objected to in the strongest possible terms by the gentleman who was the Liberal member for that county before any work was done on it. In 'Hansard' page 3385 Mr. McEwen, the then Liberal member for that constituency, when this matter was up in the House, spoke as follows:

I would have raised my voice against this vote last year. I never dreamt, and no one in that part of the country ever dreamt, that when the Hon. Mr. Tarte went up there and saw the place he would spend the money. The hon. gentleman promised to come my way and we would go out together and see it, but instead of that he went by way of Parkhill and he was there only two hours, and we never saw a sight of him. The great majority of even the French people who were there never asked for this money. It is true that the people who put money into that scheme

have lost their money and will never see a cent of it again. Mr. Cantin has a peculiar way with him and he seems to succeed in making people give their money to put into enterprises that could never produce a cent. What surprises me is that a man of his kind should be able to mislead this government into spending money where there is no need for it at the present time, or for years to come, any more than there is any need of building a wharf on the top of a mountain. If this wharf is built it will be built at the foot of a hill where there is no way to get at it unless you buy land from some one, unless there will be a road built through a gulch that is a very hard place to get at. In the meantime they make the road through somebody's land and they get around to it in that way, but where this dock is being built there is a hill about fifty feet high. It is not quite straight up, but nearly so, and it will be very hard to get at it suppose the dock is built. With all due regard to the engineers, $5,000 is not worth anything to build a wharf there.

Hon. Mr. TARTE. So far as the hill is concerned, my hon. friend (Mr. McEwen) knows that it is an easy thing to have a slanting road there. My hon. friend has reproached me for not having called on him when I went there.

So they went on and built this wharf. Mr. Tarte, the minister at that time, thought it would be an easy thing to have a road down hill so they proceeded promptly to go down hill and to spend $15,000 where it was not wanted. This Mr. Cantin was talking about building a summer hotel at that place. The summer hotel never materialized and this government spent a large amount of money endeavouring to put a wharf there which the people in that vicinity all stated would not stand on account of its being so exposed to Lake Huron.

At page 372 of the 'Hansard' of 1906, Hon. Mr. Hyman, at that time minister, in answer to a question said :

It is true that the results hoped for never materialized.

I should think not. What did the Public Works report say regarding it ? I quote from page 178 of the report of the department for 1906 :

St. Joseph is situated on the east shore of Lake Huron, about 14 miles south of Goderich. The population is about 100.

A very fine place to put a $15,000 wharf.

During the session of parliament, 1902, the sum of $5,000 was appropriated towards building a wharf at this place. The wharf was partly constructed by day labour, when a contract was let in 1903, for the completion of same, to Mr. J. A. Cory, of Ottawa, for the price of $3,950,50.

I think we have heard of this same gentleman in connection with certain elections in London.

At the beginning of the last fiscal year only a portion of the work was built, and on October 16, 1905, a large crib was placed and almost immediately destroyed by a heavy storm, when other damage was also done. Work was then practically suspended until last spring.

Very bad luck has been experienced in the placing of the outer cribs of the work, which partly accounts for the fact that the work is not yet finished.

Considerable difficulty is found in building stone approach, owing to the heavy force of the waves at this point washing off any but stone of very large size.

It is estimated that about one month further will complete this work.

Expenditure during the fiscal year 1905-6, $569.75.

There was a case where the government was warned, where it had full knowledge that the wharf was not required and would not stay and would be of no use but in the face of that the minister had $5,000 voted to build the wharf and it ultimately cost $15,000.

This is by no means an isolated case in that regard because as far as I can see in going through the papers and blue books it is practically never the case that any public work in this country is built for the amount it was originally estimated to cost.

Another piece of work of the same class is the building of certain piers and booms by this government on the Saguenay river above Chicoutimi. It has of course for some years been the well known habit of this government to spend money freely for all kinds of purposes when its friends asked it to do so. This led certain owners of logs and timber limits on the Saguenay to make an extraordinary request to the Minister of Public Works and this request seems to have been promptly granted. I asked for a return regarding this matter two or three years ago and I shall quote some of the letters from that return :

Ottawa, March 18, 1904.

The Hon. James Sutherland,
Minister of Public Works, Ottawa.

Hon. Sir,—I have the honour to include a petition from Mr. Dubuc on behalf of Chicoutimi Pulp Company, and other lumber firms interested on Saguenay river, praying that the government should take up the booming system on this river.

There are six companies interested in the floating of logs on the Saguenay, and the current is so strong, as you know yourself, that the booming is very expensive.

The mixture of the lumber of the different companies causes to each of them heavy troubles to divide their own from others, and it is practically impossible that it shall work well unless the government takes the whole system under its control, as it does on St. Maurice and Ottawa river.

I understand that a sum of $25,000 will cover the expense of building, and that such a small amount will not delay your department from helping on a business foot the important industries growing over on the Saguenay. The capital invested already on those industries deserves consideration of public men.

I believe it my duty to join the requisition and pray that the supplementary budget will include the necessary amount.

Hoping that you will be pleased to do so,

I have the honour to be,

Yours truly,

(Sgd.) JOS. GIRARD, M.P.

Then I find this letter:

Department of Railways and Canals, Canada,
Resident Engineer's Office, Roberval,
April 19, 1904.

E. D. Lafleur, Esq.,
Chief Engineer, Department of Public Works, Ottawa.

Sir,—According to your verbal instructions at Ottawa, I have made an examination for the erection and maintenance of booms in the Saguenay river. The site of the boom is about 4½ miles above Chicoutimi at its starting point, and running about a mile and a half.

The starting point on north shore is located on the property of William Price & Brothers, on the south shore on the property of Messrs. Charles Dallaire, M. Dallaire, Larouche, and Gilbert. Messrs. Price & Brothers have an option of renting the property at any time they want.

The present booms which are kept by the Chicoutimi Pulp Company at their own expense, are used by different companies of pulp wood and sawmills, and all the logs coming into Saguenay river from Lake St. John, or from the two discharges of the lake are passing through that boom.

The present organization is not sufficient for the traffic and does not give the satisfaction it should, and the different companies, the proprietors of sawmills and the Chicoutimi Pulp Company, ask for an establishment of government booms, with collectors on the same principle as those established on the Ottawa river and St. Maurice.

To have a good service, five piers ought to be built. At present they keep their booms with anchors, which is very inconvenient and causes a good deal of maintenance. The length of the boom, as indicated on plan, will have a length of about 7,000 feet.

The construction of the five piers will cost about $10,000. The construction of 7,000 feet of booms will cost $15,000.

The maintenance of the boom, say a foreman and three men, with boats, &c., will cost about $1,500 annually.

The Chicoutimi Pulp Company are willing to let the Department of Public Works have the use of their boom for the first year.

I have not yet had the opportunity to ascertain the present condition of the booms of the company, but at any rate they were sufficient last year for the traffic.

I have the honour to be, sir,

Your obedient servant,

(Sgd.) J. C. TACHE,
Resident Engineer.

You will notice how promptly the department took action on this extraordinary request. The letter was received on March 18, and the other letter was written on April 19, showing that for some reason the government was in a great hurry to grant this request. Thereupon the government went on and undertook to build these booms and piers under an agreement between the Crown and the Chicoutimi Pulp Company, of which I shall read the essential clauses:

Whereas it is the intention of the government, in the public interest, to construct and establish on the Saguenay river, in the district of Saguenay and province of Quebec, piers and booms on a stretch of about one and a half (1½) miles, the starting point of which is about four and a half miles (4½) above Chicoutimi, district and province aforesaid.

Whereas amongst others, the said company will derive a special benefit from the establishment of said bonus.

And whereas it is considered proper to arrange matters so that the government should not be exposed to disburse for the maintenance of said proposed booms a sum larger than the revenues to be derived from the use of said booms, thereby entailing a loss to the government.

Now this indenture witnesseth as follows, that is to say:

1. Should the revenues accruing from the use of the booms above referred to, after they have been constructed, established and maintained by the government, fall short of the amount of expenses chargeable to and paid by the said government, for the management and operation only of said booms then the said company are hereby bound and they hereby bind themselves to recoup to the government immediately after each and every year the excess of such expenses of management and operation only over and above the receipt on revenues derived from the use of said booms by lumber merchants and pulp manufacturers.

2. It is understood and agreed that the rates to be charged for the use of said booms and the rules and regulations to be observed by the said company, as well as other parties interested, shall be the same as are ordinarily paid to, established and determined by the government for and in connection with their booms in other rivers of the Dominion of Canada, or such as shall have been submitted to and approved of by the Governor in Council.

3. It is understood and agreed that the duration of the present agreement and the effect thereof shall be a period of five years to be computed from the date at which the said booms shall have been completed and be ready to be used.

This government entered into this agreement with the Chicoutimi Pulp Company to build these piers and booms, the company undertaking to hold the government harmless and to recoup them for the annual expenditure in keeping up the booms or for whatever the revenue might be short of that sum. The resident engineer estimated that this work would cost $25,000. As a matter of fact, it has cost more than twice that sum, and in the very following year, on April 24, 1905, the deputy minister, Mr. Gobeil, in a memorandum to the minister, stated as follows:

I beg to submit herewith a detailed estimate of the cost of providing the materials necessary for the construction of booms and piers on the Saguenay river for which parliament granted last year an appropiation of $25,000.

By this statement you will kindly see that an additional amount of $18,000 is required.

They found that they had not enough money, and it afterwards turned out, according to the statement of the government, that these piers and booms had cost $50,000. On page 993 of 'Hansard' of 1906, in answer to a question of mine, the Hon. Mr. Aylesworth stated as follows:

1. What is the estimate of the total cost of the piers and booms being built above Chicoutimi, on the Saguenay river?

Answer, $50,000.

2. What is the estimated annual revenue from these works?

Answer, $2,625; however, if the revenue falls short of the maintenance and operation, the Chicoutimi Pulp Company is bound by a written agreement to make good such deficit.

3. Will these works be of service to any one except those engaged in the log and pulp wood business? If so, to what class of persons?

Answer. Though built to retain logs, these works will prevent timber from getting into the river below, where they would be a danger to navigation.

I call the attention of the House to the flimsy excuse given in the third answer. The same thing can be stated with regard to any boom and any river in Canada; and if that were to be a reason, this government ought to build piers and booms for logs on every river in Canada. However, the Hon. Mr. Hyman, when his estimates were up, did not give the same reason. He stated, as will be found on page 7210 of 'Hansard' for 1906:

In this particular instance the situation is complicated, and the government thought that in the interest of the general public it would be better they should operate these booms. The companies could not agree; one company controlled and the others were hampered in their operations to such an extent that there was not that development there should have been when we consider the wealth of the timber resources. These companies came to the government and made out a very strong case. The substance of their complaint was that they could not agree on the formation of a company, and at their request the government undertook these works in the interest of the development of the trade, feeling they were safeguarded.

With reference to the revenue, on page 1379 of 'Hansard' for 1906, in answer to a question of the hon. member for Halton (Mr. Henderson), Hon. Mr. Hyman stated:

1. What is the estimated annual cost for maintenance and operation of the piers and booms being built above Chicoutimi, on the Saguenay river?

Answer—$2,420.

2. Is the Chicoutimi Pulp Company bound to pay interest on the amount expended in building these works, in addition to the cost of their maintenance and operation?

Answer—No.

3. Is $2.625 the estimated annual net or gross revenue from these works?

Answer—The gross revenue.

Mr PERLEY.

Neither this company nor any one else had to pay any interest whatever on the cost of these works. In the report of the Public Works Department for 1907, with reference to these works, it is stated as follows:

On the Saguenay river the increase which has taken place in the lumbering industry, following especially the establishment of large pulp mills at the town of Chicoutimi, has induced the department to construct works to facilitate the passage of timber. An agreement has been made with the Chicoutimi Pulp Company, which was the prime mover in the agitation for the construction of those works, to the effect that should the revenue during the next five years fall short of the maintenance account, the difference will be paid to the government by the company. It is expected, however, that the works in question will ultimately return a good profit on the primary expenditure.

This last sentence is a most extraordinary one. It reads to me as though the department were endeavouring to assure themselves, and when they thought they could make themselves believe that this was a good expenditure, they could perhaps get other people to believe it; because there was not the slightest possible chance of these works returning a good profit on the primary expenditure. The agreement made with the Chicoutimi Pulp Company would absolutely preclude anything of the kind. Under that agreement this government was bound to make the ordinary charges for such work, and the Chicoutimi Pulp Company only agreed to make up to this government any shortage which there might be in the annual maintenance charges. Under no circumstances was anybody to pay any interest whatever, or any money as a sinking fund. The total expenditure for three years from 1904 to 1907 on these works was $47,309.39, according to the Public Accounts, and in answer to my question the Minister of Public Works stated that the total cost would be $50,000. This $50,000 has now been spent, and I am informed by a man who has been there during the past year that these works are not yet by any means completed, and that a further sum of money will be required to complete them. I am informed that one or two of the piers were found to be improperly built, and that it will take a lot more money to put these works into proper shape. It is well known that public works cost this government to build a great deal more than they would private individuals. I think we may take that for granted; and I may say that the pulp and log owners on the Saguenay river would never have wanted this government to build these works if they had expected to pay a proper amount for interest and sinking fund. Instead of doing that they would have preferred to build the works themselves. I will not say whether they should have cost less money or not; but I will

cite one instance, which I find in the Auditor General's Report for 1904-5, on page V—308, where it is shown that this government bought ten-inch round spruce for ten cents per lineal foot, equal to $27.25 per thousand feet board measure; nine-inch round spruce for nine cents per lineal foot, equal to $31.75 per thousand feet board measure, and seven-inch round spruce for seven cents per lineal foot, equal to $46.67 per thousand feet board measure. Even those who are not lumbermen will know that these prices are perfectly absurd for small spruce logs, and if the other parts of these works were paid for on the same basis they must have cost a great deal more than they are worth. I merely mention this to show with what a light heart the Minister of Public Works at that time hurried into this contract. To-day those spruce logs would be worth about $14 a thousand feet.

Mr. BUREAU. What size logs ?

Mr. PERLEY. 7 to 10 inches.

Mr. TOBIN. What length ?

Mr. PERLEY. I cannot give the length, but they were not long ?

Mr. PUGSLEY. How do you know they were not long?

Mr. PERLEY. I speak from recollection. I think the lengths were given in the Auditor General's Report, but we all know you cannot get very long stuff of that size.

Under the present system in vogue in Ontario and Quebec regarding such works, it is usual for them to be built by a company, and there are statutes in both Ontario and Quebec governing them. These statutes are practically the same in both provinces. Let me read section 4975 of the Revised Statutes of Quebec :

> The tolls are so calculated that, after defraying the necessary cost of maintaining and superintending the works and collecting the tolls, the balance of the receipts may as nearly as possible be equal and in no case exceed ten dollars for every hundred expended and invested in the said works.
>
> If in any year the receipts from tolls be such that, after defraying all the current expenses, there remains a clear profit of more than ten dollars upon every hundred of the capital expended, there shall nevertheless be divided amongst the shareholders no greater dividend than at the rate of ten dollars for every hundred, and the remainder shall be carried over to the receipts of the following year.

In other words, the custom of the trade is for the people who build these works to form a company, and the company to cover interest and sinking fund, pays to its shareholders 10 per cent dividend on the amount expended and invested in the works, after defraying expenses of administration and maintenance. But these people evidently wished to get the government to build these works for them. I do not blame them for that, and there does not seem to have been anything wrong or underhand as far as the company is concerned. If they could persuade the government to give them these works without the ordinary charges, so much the better for them, but they evidently wanted to get the work done by the government because they were going to get it done at much less cost than in the ordinary way. But if the government is going to adopt any such policy, it will have to adopt it everywhere. All the lumbermen have to put up such works, and the government should not make an exception and put them up for one and not for another. And when they make an exception, as they did in this case, it must be of course because they want to show favouritism to some one for some purpose or another. Hon. gentlemen opposite will no doubt refer to the works on the St. Maurice and the Ottawa. But these should not establish a precedent, because the circumstances are altogether different. Before confederation the united provinces built works of this kind on both the St. Maurice and the Ottawa, and these works were taken over by the Dominion at confederation, but the instance I am mentioning is the first case, I believe, in which the Dominion government has built such works. In the old days the conditions of the lumber trade were entirely different. At that time timber limits were obtained simply by applying for them. The object of the provincial government was to get men to embark in the lumber trade so as to give work to the people. There was no money in the lumber business at that time, and the government was consequently wise in building some of these works for the benefit of the trade. But things have changed entirely, and there is no reason why all the lumbermen should not now build these works and pay for them themselves. What is the net result of this contract with the Chicoutimi Pulp Company? Instead of building the dams and piers themselves, as other lumber companies have to do, it got the government to do that work, so that this government practically made those interested a free gift of $50,000. These lumbermen are in exactly the same position as if the government had sent them a cheque for $50,000 and told them to build the works themselves. It was in fact equivalent to a bonus of $50,000. The lumbermen have no interest to pay on it. All the government got in return was an agreement for five years with the company by which the company bound itself to recoup to the government any shortage there might be in the annual maintenance. I do not believe that the people of this country will approve of the expenditure of their money on works of this descrip-

tion, which are purely and simply for the benefit of certain individuals and corporations and can by no means be considered as a public benefit.

Further, I wish to say that the Chicoutimi Pulp Company has not even paid the amount which it agreed to pay by its contract. On December 4 last in 'Hansard,' page 195, I asked the question :

1. What companies or individuals made use of the government boom on the Saguenay river above Chicoutimi during the year 1906?
2. What amount did they each pay for the use of the boom?
3. Did the Chicoutimi Pulp Company in accordance with its agreement, recoup to the government the excess of expenses over receipts in connection with this boom for the year 1906?
4. If not, why not?
5. What companies or individuals made use of this boom during the season 1907?
6. Did the Chicoutimi Pulp Company use it in 1907 for all its logs on the Saguenay river?
7. If not, what use did that company make of it ?

In these questions the Minister of Public Works (Mr. Pugsley) replied as follows :—

1. La Compagnie de Pulpe de Chicoutimi and Jos. Vachon.
2. No payment made.
3. No.
4. The company claim that, as the boom was not fully completed till the month of September, they should not be held liable for the dues and the matter is still under discussion.
5. La Compagnie de Pulpe de Chicoutimi only.
6. and 7. Yes, for all logs coming by and below the Grande Décharge.

In other words, this Company has refused to pay even the small sum it agreed to, and I am informed the reason of its refusal is that the work was so badly built and so large a quantity of the company's logs consequently lost that it refused to pay these charges.

Referring to another matter of a similar character I noticed that my hon. friend the Minister of Finance, who is supposed to be the guardian of the public funds, said on February 28, 1907, 'Hansard,' page 3951 :

Mr. FIELDING. That view is too rigid. I am responsible in the first instance for getting the vote and then for not spending the money. The Minister of Finance is supposed to set a good example in the way of economy, and after the vote was taken, when I saw the expenditure was running up into large figures and money not too plentiful, I was anxious to put on the brakes and so let this item stand over. But the work is really needed. All the departments need extra accommodation.

The Minister of Finance is supposed to set a good example in the way of economy. In other words, in his own county, I suppose, the Minister of Finance does a great deal better than others in regard to these useless public works. But I find, on looking into the record in the minister's (Mr. Fielding's) county that there was a lake at Red Head into which a channel was cut at a cost of $2,000. And when the channel was finished, it drained the lake, the bottom of which is on a level with low tide. Also, at another place in the hon. gentleman's county, Clam Point on Cape Sable Island, I am informed, there is a lake there which is above the sea except at flood tide. A canal was cut into that lake which drained it. There is no approach to it except through private property, and when the canal was constructed the lake went dry. The boats of the fishermen could not enter except at flood tide. Now, I find that in the same constituency, there was a very extraordinary thing done at Gunning Cove. There is a post office there, the postmaster being one John Doane. The government set to work and built a wharf in Mr. Doane's back yard. This wharf was inaccessible from the shore except by trespassing upon the private property of Mr. John Doane, postmaster. There was no approach to this wharf from the shore. At low water it was reached by scrambling over the rocks and at high water a boat was necessary in order to get to it. When he was asked if the wharf had ever been used, Mr. Doane said that Mackenzie and Mann had used it to land supplies for a railway. When asked if they had free access to this wharf, his answer was that they had not free access, but had to pay him for the privilege of crossing his land and any damage caused thereby. A petition was circulated asking the council to open up a road to the wharf. Mr. Doane wanted $500 for the right of way, but the council hesitated. I am not informed whether, up to this time, the council has succeeded in putting the road through to Mr. Doane's wharf—I mean the government wharf built on Mr. Doane's property.

Mr. FIELDING. Will the hon. gentleman (Mr. Perley) permit a question ?

Mr. PERLEY. Yes.

Mr. FIELDING. The hon. gentleman has stated, with regard to certain matters, 'I am informed' so and so. These are engineering questions. Will he say who 'informs' him about these things ? A statement with no authority given is hardly good against the reports of engineers.

Mr. J. D. REID. Why, this is in the public press.

Mr. FIELDING. It is not in the public press, except a thousand miles away from the place.

Mr. PERLEY. I am informed of this by a gentleman who says he saw it.

Mr. FIELDING. Will the hon. gentleman give the name ? I would like to know if his informant is equal to an engineer.

Mr LENNOX. It does not take an engineer to know whether the water runs out or not.

Mr. PUGSLEY. Better not take hearsay statements.

Mr. PERLEY. With regard to Gunning Cove, I find that on February 14, 1907, the government practically acknowledged the statement I made with regard to this. I asked this question:

1. Is there a public road or approach leading to Gunning cove wharf, in Shelburne county, Nova Scotia?
2. If so, when was it provided, and from whom was the land purchased?
3. Could the public use this wharf last summer without trespassing on private property?

This was replied to by Hon. Sydney Fisher (Acting Minister of Public Works) as follows:

There is no public road leading to the wharf at Gunning Cove. It was expected that arrangements would be made for securing a road through the municipal authorities but this has not yet been accomplished.

I only mention this because I feel sure that the minister takes better care of his county in regard to these works than almost any other member; and when even one thing of that kind can happen in the county of the Minister of Finance, we naturally wonder what could have happened in the counties represented by ordinary members on the other side.

Mr. TAYLOR. Ask Mr. Nickerson.

Mr. J. D. REID. There's a nigger in the fence.

Mr. FIELDING. The hon. gentleman (Mr. J. D. Reid) makes an allusion which he must see is offensive. I hope he will withdraw it.

Mr. J. D. REID. Oh, no, I don't withdraw it. There must have been a nigger in the fence there.

Mr. PERLEY. In the Liberal platform of 1903, I find the following:—

We cannot but view with alarm the large increase of the public debt and of the controllable annual expenditure of the Dominion and the consequent undue taxation of the people under the governments that have been continuously in power since 1878, and we demand the strictest economy in the administration of the government of the country.

Mr. HENDERSON. Where is that from?

Mr. PERLEY. That is from an ancient document, now out of print, I believe, and long ago forgotten by those who prepared it. Now, legitimate expenditure of the public money is very essential. That is what the Conservatives carried on, I believe, when they were in power. But when the Conservatives were in power the Liberals found fault with an expenditure in the Public Works Department of less than $2,000,000, but now they boast that they have increased that expenditure to $10,000,000. I do not see how this vast expenditure can be said to agree with their former professions, especially as the money has been mainly frittered away in these small works which are really useless.

Before I close, I wish to read a short summary of a speech by Mr. J. M. Courtney, C.M.G., who until recently held the position of deputy Minister of Finance. We all know the distinguished services that this gentleman has rendered to Canada during the many years he occupied his high position, and how, above all others, he should be fitted to comment on the course of the expenditure of this government. He is thus quoted:

Mr. Courtney expressed the opinion that Canada was spending too much. At the present time every effort should be made to save. It was true the debt had not been materially increased of late, but he repeated that every effort should be made to save. 'The Canadian credit ranks high,' remarked the speaker, 'very nearly equal to that of England. There are large maturing liabilities to be met of loans made some twenty-five or thirty years back, and it will require all the wisdom of government to meet the future and preserve our high credit. For these reasons, I think that expenditures should be critically scanned and that a halt should be called in many instances.'

Now, I have tried to bring before this House a few of the cases in which this government has been spending money recklessly on public works, many of which are useless, and with many others of which this government should have nothing to do, as they are built for the benefit of certain corporations or private individuals. This is supposed to be a democratic country. This expenditure may be an example of government of the people. Possibly, it may be an example of government by the people. But I defy any one to say it is government for the people. The government have practically given away large sums of money to companies and individuals. I question very much whether, when this matter is brought before the people at the next election, even in the localities where this money is spent, they will uphold the government in their policy of useless, of wasteful expenditure. I therefore move:

That all the words after the word 'that' in the said motion be left out and the following substituted therefor:

The revenues of Canada belong to the people of this country and should be expended in the public interest; and this House condemns the action of the present government in expending public money on works which are really for the benefit of favoured corporations and private individuals and not for the public benefit.

Mr. GIRARD. In replying to the hon. member for Argenteuil (Mr. Perley) I would like very much to speak English, but as my English is so poor I will not venture to weary hon. members by speaking that language.

Mr. J. GERARD (Chicoutimi).—(Translation). Mr. Speaker, I hope the House will allow me a few remarks after the speech that has just been delivered by my hon. friend for Argenteuil (Mr. Perley). I will not discuss every point he has brought out, but will only deal with the one relating to the works being carried on in the constituency I have the honour to represent. As to the other issues of the question which brought forth such criticism on his part, I am not personally acquainted with, but judging of the government's caution in what it has done in the past and is actually doing in my district, I believe it is easier to criticise without having been on the spot at all than to ascertain the accuracy of one's criticism. A while ago the hon. member read a letter signed by me purporting to show that I had endorsed the request made upon the government by the Chicoutimi Pulp Company ta have booms erected on the Saguenay river. In fact I took the whole responsibility of the matter before the government. I am not at all sorry for what I have done, because, while the issue was still pending before the minister and even before I had time to take upon myself the responsibility of advocating the request, I thought I had better discuss the matter, outside altogether of the pulp company, with the leading lumber operators of the Saguenay river, and every one of them told me that there was no actual need for these booms at that time, but that if the government saw fit to erect them, they would not object, and consequently they advised me to endorse the application. Under the circumstances I thought I would ask the Minister of Public Works and even the Premier to favourably dispose of the application. An appropriation of $25,000 was put in the Supply estimates as the probable cost of establishing that boom system.

My hon. friend contended that the action of the government had for direct object to help political friends. I know the directors and many of the shareholders of the pulp company; I know friends of the government are to be found among them, but I know also that many of them are its opponents, while I am equally aware that the greater number of them are opposed to me. Therefore, the contention that the government was actuated by political motives does not hold, and still less is it the case as far as your humble servant is concerned. My hon. friend alleged, and justly so, that the cost of the work was largely in excess of the original estimates. I believe I can state a very practical and specious reason for that. Those booms are stretched at a point of the Saguenay river where the tides reach a height of 10 or 12 feet, thus affecting the regular currents, which become particularly strong at ebbing tide. That spot is also very much exposed to the winds. When about to start building operations, the engineers had to revise their original plans which had been prepared somewhat hurriedly, owing to the fact that the request of the pulp company was altogether unexpected, and that no one of them had had sufficient time to provide for such a fortuitous case. Thus in order to ensure better protection to the lumber people concerned, in view of these new currents which I have just mentioned and which are not to be met with in other places where the government is providing similar conveniences, the engineers, I say, had to alter their plans and give a much greater strength both to the piers and to the boom timbers, which necessarily entailed a considerably increased expenditure.

My hon. friend thought he could lay the blame for this extra outlay of money on the price paid for certain dimension timber which he designated, for instance, 9 cents for 9 inch square, 8 cents for 8-inch square, 7 cents for 7-inch square, which seemed to him extravagant prices. If he had lived in the district which I have the honour to represent in this House he would find out that those are the regular market quotations, that is, 1 cent per inch in diameter for the required lengths used in works of that kind. Mr. T. L. Willson, of Ottawa, who at that time built a large lock on his own account, some three or four miles above the government booms on the Shipshaw river, paid the same price for timber delivered on the spot as the government paid for this timber. True it is that some of the piers built for the protection of the booms sustained damage in the first year through unforeseen causes, but the damage has been repaired and the piers are stronger than ever now and steady on the foundations laid by the engineers. Of course these repairs added to the estimated cost of the work, but the amount is so small that it is hardly worth while begrudging it. Critics may find there an object for satisfying their hobby, but practically business people have no fault to find. The special conditions surrounding this undertaking, such as the natural formation and the character of the currents confronted the engineers with difficulties such as they had never experienced before, but which they succeeded in mastering with credit to themselves and in the best technical manner. I will observe moreover to my hon. friend that in order to secure at that particular spot where the booms were erected the necessary timber for such construction one had to drive through many difficulties a distance of ten or twelve miles at least.

The hon. member for Argenteuil stated that he has been informed that the company refuse to pay their legitimate dues to the government because those booms are so utterly defective as to render them absolutely useless for the purpose of retaining logs. I may be permitted to say that

his information is altogether devoid of correctness, and if he will only wait a few days till certain documents are laid on the table of this House he will find out that the true reason of the company's default was due to another but that which he stated. I should think that the government ought to grant the company a partial remittance of dues for the first year, since the booms could not be stretched on time, having been built in the winter season at a point six or seven miles away from their intended location, where they had to be brought down when the ice cleared away in the spring. In the meantime the company had to stretch out their own booms in order to retain their supply of logs in the rising waters of the spring. But ever since the government booms were laid in place they have fully and permanently answered the purpose they were intended for and have, moreover, proved of great benefit to the company when their own booms above those built by the government seemed inadequate.

When my hon. friend and the House have taken cognizance of the papers which will enable them to form an accurate opinion on the matter, they will find out that the company must pay and will pay, willingly or not, all its tolls to the government, arrears and all, and that it is ridiculous—and this is where I appeal to my hon. friend, himself a lumberman—to contend that a system of booms built of British Columbia pine, four feet wide by one foot in thickness, held in place and protected by the chains and anchors usually employed by the government in such cases, cannot safely retain pulp logs of five to nine inches in diameter in an unlimited quantity against all currents and eventualities.

Mr. Speaker, there is another object underlying this criticism which is a formal attack upon the government and the engineers who carried out these works. These technical officers are held under a grave imputation which is as utterly unjust as it is unmerited and against which I must raise my voice. The engineers of the Public Works Department from the chief down are fully qualified and anxious to perform their duties. In the execution of the works placed under their supervision, the same as in private contracts, cases are often met with when owing to uncontrollable and unexpected circumstances or accidents extras have to be charged which tend to increase the original estimate, sometimes to a considerable amount, without for that reason calling down reproach upon either the architect or the engineer who drew up the plans and supervised the work.

I believe I have sufficiently answered the criticism of my hon. friend from Argenteuil and satisfied the House and himself of the good intention of the government in connection with this matter, which is not of a personal nature, but of general interest to the district which I represent in this House.

Mr. J. D. REID (Grenville). I thought the Minister of Public Works would have made some answer to these charges, but he does not seem to be in a position to do so. The hon. member for Argenteuil (Mr. Perley) has given the House a good many instances where expenditures of public money have been made which certainly were not in the interest of the country, but were in the interest of the gentlemen representing the constituencies, with the view of helping to elect them when the elections come round again. But there are other matters in connection with the Public Works Department that have not been so open. For instance, there is an item in the Auditor General's Report showing where the government wanted to purchase a small boat. They were offered a steamer which they agreed to purchase in the month of February for some $4,000, and after they passed an order in council and accepted it, they still paid rent for that steamer until the month of September following; they paid $1,440 for the use of a steamer that they had purchased several months before. In regard to wharfs, I may refer to a case in the St. Lawrence river where the Public Works Department voted a sum of $5,000 to build a wharf for a private individual at Stanley island. This island is owned absolutely by a private individual, yet he had influence enough with the government to get them to spend $5,000. The hon. member for Richmond and Wolfe (Mr. Tobin) found fault with me for making a few remarks on this question, yet there is no man in the House of Commons who has been more favoured than the hon. member for Richmond and Wolfe in the matter of wharfs. I believe that the bribery practised in his constituency is the reason why he is sitting here to-day in the House of Commons. Why, Sir, at a place called Garthby they are spending $3,000 for a wharf on a lake where there is not a single steamer running. The man who lives there has a little store and a little gasoline launch twenty-five feet long and that is all the steamer there is. It is an inland lake.

Mr. PUGSLEY. Most lakes are inland, are they not?

Mr. J. D REID. No, except those that run out. There was a case where the Finance Minister tried to make an inland lake into a water lake, and all the water ran out. There is not a man in this House who has made greater use of the Public Works Department for the benefit of his constituency than the Finance Minister. He has done every thing he could in the way of building wharfs, trying to make channels to lakes where he knew the water would

run out, and in that way he has got elected to this House. Now the Finance Minister knew, when he tried to make a channel into this lake what would happen. He sent down engineers, and they reported that if that channel was built the water would run out. Although the Finance Minister knew that, he ordered the channel to be built and the water did run out just as the engineers reported.

Mr. FIELDING. That is just as true as everything else the hon. gentleman says.

Mr. J. D. REID. That is true, and all I am saying is just and true as that. I can refer to another case in the province of Ontario, at Monetville on Lake Nipissing where this government built a wharf. That is a provincial matter, the lake and all the lands are owned by the Ontario government, and I claim that it should be looked after by the Ontario government. But there are other departments. Take the Department of Railways and Canals. This government has spent $800,000 in trying to make a channel through the Galops rapids in my constituency. I pressed from year to year to get them to discontinue it, and finally they did so. The channel is not used by any steamer at all. It was undertaken in order to retain the sympathy of friends of the government in order that they might help when the elections came round. The public and the marine men in particular became so disgusted that in the end the government had to discontinue the work, after having thrown away absolutely $800,000 on it. At another place in my constituency they have spent a million and a half or two million dollars in building the north channel. It is a good channel, but the money was wasted on it. It was shown by engineers that an expenditure of $50,000 to $100,000 to remove a piece of shallow would have afforded a better channel than they have to-day. But the argument was used that if they went that way they would have to go through a part of the American channel, although it was shown to them that boats could not come from Kingston down to Prescott without going twenty or thirty miles through the American channel. Still the government could not be moved and for the sake of their friends they expended a million and a half to two million dollars in making this channel. I might also refer to the Morrisburg canal, where they built piers that were of absolutely no use and had to be replaced with others. But I might also refer to some instances in the Department of Railways and Canals where they are continuing to give contracts to middlemen and are spending much more money than they should. I could instance the case, disclosed by the papers a day or two ago, where a man named Wallberg was paid $1,500 for some girders, or something of that kind, that were required by the Department of Railways and Canals and which the department could have purchased for $900. That goes to show that in so far as that department is concerned it is spending money, not in the interests of the people of this country, but in the interest of contractors and of men who are able to cause the government to do these things in order that they may get work, and who, in the end, use their influence, and subscribe, I believe, to political funds in order to help to keep this government in power.

Then the hon. Minister of Marine and Fisheries (Mr. Brodeur) is here. He is not innocent of these extravagances. We showed two years ago that it was notorious that he had these middlemen, who were grafting in his department, and who were actually robbing this country of thousands of dollars. We proved it in the Public Accounts Committee. He threw the blame on his predecessor, but he continued to give orders to these grafters the same as his predecessor had done. His department has been spending money in a way that is disgraceful. He has kept this man Merwin on the list. He cannot get rid of him. He cannot shake him off. Is he afraid of Merwin disclosing something? Has Merwin any claim upon him? Has Merwin any claim upon this government? Not only that, but when any other grafter wants to get hold of the government he first makes for the Department of Marine and Fisheries, and he has no trouble in getting his clutches on that department and on the minister.

Mr. BENNETT. It is easy.

Mr. J. D. REID. It is an easy task to do this. This man Wallberg, seeing that the minister is easy, strikes for his department and now he has a lot of contracts, and the first thing we know we will be able to show up exactly the same kind of grafting that has been going on in the Department of Railways. This is a very serious thing in so far as the Department of Marine and Fisheries is concerned, but it is not the only case. We have this man Falconer. He goes into the Marine Department. He has no trouble at all about charging these exorbitant prices; he can add a great deal more for his board bill than he actually pays, and everything is lovely. That shows that in so far as this department is concerned, it is badly managed, that the man in charge of it does not understand his business or he would never allow such rascality to go on. We had also the case in the Department of Marine and Fisheries of this man Strubbe. That was a small matter. We have it where he purchased these files and charged almost double for them. Did the minister get rid of Strubbe? Why Strubbe goes up to the minister's office again, and is not only received like a gentleman, but he gets orders three times as great as he had when the minister's pre-

decessor was in office. Then we had this exposure of the 'Arctic.' It was all done by the predecessor of the present minister, but yet the same old crowd are going along in the same old way. The same quantities of goods are purchased to-day without tenders as were purchased formerly. Of course, the minister does not do probably what his predecessor did; he does not telegraph to his subordinates that they must buy from this man and that man, but these people come to him and the department get the same goods and pay the same prices. We had the 'Arctic' supplied for three years, but when she went out again on the following year a new lot of supplies were put on board for her voyage. I know of one case in my own county where there was a carload of abestos lumber purchased by the Department of Marine and Fisheries, and no one knew what it was for. It cost $13,000, and it was purchased when it was absolutely not needed. It was piled up there, and I do not know whether they have done anything with it or not. That shows how money is spent in that department. When the Conservative party were in power the expenditure was about $1,400,000 per annum. Now the minister is spending over $6,000,000 per annum.

An hon. MEMBER. You were not doing anything in those days.

Mr. J. D. REID. We were doing as much as is being done now, but we were not doing the grafting that is being done now. We were not purchasing these buoys and other supplies for three times what they were worth.

Mr. FIELDING. Did my hon. friend ever hear of a derrick for which a double charge was made for working on Sunday?

Mr. J. D. REID. I beg my hon. friend's pardon.

Mr. FIELDING. Did my hon. friend ever hear of a derrick for which double pay was charged because it had to work on Sunday?

Mr. J. D. REID. When was that? That was done under the administration of the Minister of Marine and Fisheries. But I will tell the minister what he has not heard of, that some derricks were purchased at Quebec by this government through middlemen, and the result was that they paid $5,000 more for them than they otherwise would have paid. These are the only derricks that I have heard of, and if they have been working double time on Sundays they certainly should get double payment, but the hon. the Minister of Finance should not allow them to work on Sunday. I do not think the people of the country want derricks to work on Sundays. But here is the Militia Department. It is not free either. I remember when the hon. the Minister of Militia and Defence (Sir Frederick Borden) came before the House and showed us what a great thing it was to build this Ross rifle factory at Quebec. He was willing to give very, very many acres of most valuable land to the Ross Rifle Company for nothing. To-day he is willing to pay the Ross Rifle Company for this land that he gave away. He is willing to spend $1,000,000 or $2,000,000 on rifles that are absolutely useless and will never be used in this country.

Sir FREDERICK BORDEN. The hon. gentleman knows better than that.

Mr. J. D. REID. I know that is the fact.

Sir FREDERICK BORDEN. The hon. gentleman has no business to make such a statement. It is absolutely untrue.

Some hon. MEMBERS. Order.

Sir FREDERICK BORDEN. I withdraw that, and say that the hon. gentleman's statement is without the slightest foundation.

Mr. J. D. REID. The minister has not been able to show where any of the Ross rifles that have been made are used in this country. They have never been used, and he cannot show where they have been used.

Sir FREDERICK BORDEN. I have shown that 8,000 are distributed and are being used.

Mr. J. D. REID. The minister has shown that 8,000 have been distributed, but they are not in actual use.

Sir FREDERICK BORDEN. They are in actual use. The hon. gentleman absolutely does not know what he is talking about.

Mr. J. D. REID. I do, I am stating exactly what has been proved.

Sir FREDERICK BORDEN. It has not been proved that the hon. gentleman knows it.

Mr. J. D. REID. I also wish to refer to the expenditure by the minister of $100,000 for sub-targets and his boasting of the propriety of that purchase at that price because the Ontario government had paid $250 apiece for them.

Sir FREDERICK BORDEN. I never said that.

Mr. J. D. REID. It was absolutely right because the Ontario government paid $250.

Sir FREDERICK BORDEN. I never said that.

Mr. J. D. REID. If you did not your followers did at your instigation. It was shown on investigation that this contract was made by the Ross government and not by the Whitney government.

Mr. BENNETT. Where is the Ross government now.

Sir FREDERICK BORDEN. What I said was that the contract for the machine guns was made at the same rate as that gun was supplied to the government of the United States and that a clause was inserted in the contract by which, in the event of any reduction being made in the United States (this being a patented machine), the government of Canada is to get the benefit of that reduction. As to the Ontario government, all I can say is that it was the present Ontario government that accepted and paid for this sub-target gun.

Mr. BENNETT. Who ordered them ?

Sir FREDERICK BORDEN. I do not know.

Mr. BENNETT. It was the Ross government.

Mr. BLAIN. Here is the contract signed by Hon. Richard Harcourt, Minister of Education.

Sir FREDERICK BORDEN. I say that the present government of Ontario accepted the gun and paid for it, and more than that the present government of Ontario corresponded with me and asked me to hand them rifles to be used on this machine. I never heard of them disapproving of it in any way.

Mr. BLAIN. The contract was made by the Ross government and signed by Hon. Richard Harcourt, Minister of Education, and the government was bound for two years from December, 1904.

Mr. J. D. REID. The minister knows it is a very small way to get out of it.

Sir FREDERICK BORDEN. There is nothing to get out of.

Mr. J. D. REID. Here is a contract made just previous to the election and if the minister had not baulked an inquiry it would have been shown that money was probably used for the election campaign by these parties. The Whitney government was forced to carry out the contract made by their predecessors. Had it not been that the Ross government made the contract, no subtarget guns would have been purchased by the present government of Ontario.

Sir FREDERICK BORDEN. It did not require any forcing.

Mr. J. D. REID. The Minister of Railways (Mr. Graham) was one of those who agreed to accept that rifle. He was a member of the Ross government at the time the contract was made ; he was one of those who actually made the contract, and he knows that the Whitney government was compelled to accept these machines although it had not been a party to making the contract.

Sir FREDERICK BORDEN. It was a perfectly good contract ; a contract to be proud of.

Mr. J. D. REID. Of course it is, in so far as the Minister of Militia is concerned ; he is proud of any contract that gives graft to the hon. gentlemen opposite.

Sir FREDERICK BORDEN. Well, I am very much obliged to the hon. gentleman.

Mr. J. D. REID. I am telling facts.

Sir FREDERICK BORDEN. I feel a good deal like the man who was kicked by a donkey ; I take it whence it came.

Mr. BENNETT. But the man felt sore after the donkey.

Mr. J. D. REID. I shall not take up any more time of the House. I wanted to refer to these different departments in which I have myself seen graft has been going on—and the people of this country know it. It has been going on in all the large spending departments. The Minister of Militia knows it. The Minister of Militia knows it ; he has investigated his department and if he does not know it, if he will go to the Public Accounts Committee he will know it. The Minister of Public Works knows it ; he has been at the committee and seen proof of it. The Minister of Militia knows it ; he has seen proof of it, and unless something is done the people of this country will continue to be robbed of millions of dollars every year. As I have said, I think the hon. member for Argenteuil (Mr. Perley) is to be congratulated for bringing this resolution before the House, and I hope it will be realized from one end of the country to the other exactly what is being done. If the people can only be led to know what is going on in Ottawa the result will be that the gentlemen now occupying the treasury benches will occupy them but a short time longer.

Hon. WM. PUGSLEY. (Minister of Public Works). As I understand the resolution of my hon. friend from Argenteuil (Mr. Perley) it is directed against some expenditures in connection with Public Works. I think that is a fair reading of it. The resolution says :

> The revenues of Canada belong to the people of this country and should be expended in the public interest; and that this House condemns the action of the present government in expending public moneys on works which are really for the benefit of favoured corporations and private individuals and not for the public benefit.

I think it is perhaps better that the resolution should be discussed along the lines

laid down by the hon. gentleman who moved it rather than——

Mr. TAYLOR. The Marine Department and the Railways and Canals Department are conducting some works in this country.

Mr. PUGSLEY. That is true, but the public works constructed by the Department of Marine have, as I remember, not been referred to by the hon. gentleman and I would not call the Ross rifle or sub-targets public works.

Mr. BENNETT. They are not for the benefit of Canada.

Sir FREDERICK BORDEN. I was about to say that although they are not public works they are for the benefit of Canada.

Mr. PUGSLEY. It is somewhat inconvenient to discuss on a resolution relating to the Public Works Department subjects relating to other departments. I am very glad to have had an opportunity of hearing my hon. friend from Grenville (Mr. J. D. Reid) before I addressed any observations to the House, because the hon. gentleman is very industrious; he is a constant attendant in the Committee of Public Accounts, and I think we might rely on him and on the hon. member who moved the resolution (Mr. Perley) to have unearthed anything that might be wrong in connection with the Public Works Department. When I listened to the cases to which these gentlemen referred and which apparently were the only cases to which they were able to refer after very exhaustive research, I felt that they were bearing silent testimony, silent because it was testimony based on what they did not say, as to the proper administration of the Department of Public Works during the eleven years which have passed since this government came into power. From the statement of the mover of the resolution it would appear that in those years probably $30,000,000 have been expended by the Public Works Department and the only works either of these hon. gentlemen was able to point out in relation to the Public Works Department as deserving of criticism would not amount to over $200,000 or $250,000 in all—a very small amount compared with a total expenditure as I have said of about $30,000,000.

Mr. PERLEY. Does the minister suppose for a moment that we have looked over all the transactions of the Public Works Department? Does he assume that we have nothing else to do?

Mr. PUGSLEY. I would assume that the hon. gentleman, with his industry, with his very great research and his opportunities for research, must have been able after going through the report of the Auditor General and having investigated matters before the Public Accounts Committee, to form a pretty good idea of what there is in the expenditure of the Public Works Department that is open to criticism. It might be well to bear in mind the fact that public works are being carried on all over this country, extending from the eastern shores of Prince Edward Island to the western shores of British Columbia and up into the Yukon. There are employed by the department probably 3,000 people, upon whom we have to rely for its honest administration. We have our resident engineers and our inspectors in the various sections of the country. It may be that mistakes will sometimes be made; it may be that minor officials will sometimes be guilty of wrong doing; but it is a striking testimony to the way in which the affairs of the department on the whole have been administered that such a comparatively small criticism has been directed against its administration by the hon. gentlemen who have preceded me. Now, let me take the different public works which the hon. gentleman who has moved this resolution has made a ground of criticism. To begin with, he made a general criticism with regard to the expenditure. He said: This government boasts of the large amount which it has expended upon public work, and rather assumes that the money belongs to the government and not to the people. Mr. Speaker, the best evidence that we take for granted that the money belongs to the people, that it is their money and ought to be expended in their interest, is that in all parts of this country, wherever public works are necessary, we seek to expend the people's money on those public works, and for the benefit of the people. It must be borne in mind that this country is growing, and growing rapidly. There has been a marvellous railway development in the last ten years. The country is being opened up in every direction, and the wants of the people, so far as wharfs and the dredging of harbours and the erection of public buildings are concerned, are constantly increasing. No one knows that better than the hon. gentlemen who have addressed the House in support of this resolution. In the Northwest alone, since 1902, there has been a new country born. That country in the last five years has developed to a greater extent than it did in all the years that preceded. Saskatchewan is rapidly increasing in population; so is Alberta, also Manitoba. The people are calling out in all the towns and cities which have come into existence in the last few years for the custom-houses, post offices and other public buildings which they require, and they are as much entitled to them as the people who live in the older provinces; and I would say to my hon. friends that when they are criticising the public expenditure, let them take any one of the 31 post offices which were given to the House yesterday, in response

to an inquiry, as being now under construction in the various parts of Canada, and let them put their finger on one of these buildings and say that it ought not to be constructed in the public interest. It is all very well for the hon. gentlemen to speak of the largeness of the expenditure; it is all very well for them to speak of the extravagance of the government; but statements of that kind will have no weight with the people of this country unless these hon. gentlemen have the judgment and the courage and the industry to search out any building in any part of this country which is under construction to-day, and say that it is against the public interest that public money should be expended in its construction. That is a challenge which I throw out to my hon. friends opposite. They have the statement of the Postmaster General of all the post offices which are under construction, and if there is one of them upon the construction of which in their judgment the public money of this country is wasted, surely this House and the people of this country have the right to ask that they will indicate it. The same remark will apply to the dredging of harbours. Everything is changing so far as the sea ports of this country are concerned. The old sailing vessels have gone out. They drew a comparatively small number of feet of water, they could rest on the mud flats when they came into any of the harbours along the coasts of the maritime provinces. Steamers cannot do that; they require to float at all times of tide, and they are becoming larger and of greater tonnage year by year; and if the people of the provinces bordering on the sea are to be accommodated, and if the reasonable demands of trade and commerce are to be met, the harbours must be dredged and greater accommodation given to shipping. All this costs money, and a great deal of money. So with regard to the works going on upon the Great Lakes. There is to-day and has been for a number of years a strong feeling among the people of this country that a determined effort should be made to direct the trade of Canada away from the American ports of Buffalo, New York, Boston, Baltimore and Portland, and bring it through Canadian lake ports and on to Canadian seaports, and thus carry on the trade of the country through Canadian channels. Involved in the carrying out of that idea is the improvement of the harbours of the Great Lakes, and hundreds of thousands of dollars, or perhaps I should say millions of dollars, have been expended by this government for that purpose. Will anybody say that that money has been wasted—that these great public improvements are not necessary for the transportation interests of this country and not in the general interest of Canada? It does seem to me that before hon. gentlemen can expect to make any impression on the people of the country, they must be able to point to some of those works that are going on and say that they are unnecessary. Let them begin at Halifax, if they like—will it be said that the large amount spent there to create terminal facilities in connection with the Intercolonial Railway ought not to have been spent or is not necessary? Go to the city of St. John, which has become one of the great winter ports of Canada, to which now the largest steamers of the Canadian Pacific Railway Company, the Allan Company and other lines can go in the winter season. Will it be said that that port ought not to be improved—that the great steamers of those lines ought not to be permitted to go to St. John, but ought to be encouraged to go to Portland in the state of Maine, as the mail steamers did up to the time this government came into power? The cost of that great improvement will necessarily run up into a large amount of money. I might go all over this country from the Atlantic to the Pacific and show that the expenditures which have been made in British Columbia, the large dredging operations which have been carried on have been for the advancement and improvement of the transportation interests of the country and the benefit of the people.

While all these things have been done and are being done to-day in the general interests of the country, let us see what my hon. friend, the industrious and intelligent member who represents Argenteuil (Mr. Perley), and who moved this resolution, pointed out, and what criticism he has been able to make against the department which I now preside over. In the first place, he speaks of the wharf at Hull. Does he deny that that wharf is necessary? Not at all. That wharf, if I remember rightly, was built immediately after the great fire which destroyed almost the entire city of Hull. I presume that at that time there would be a great demand for lumber for the building of the town, and that lumber would cost more than it does under ordinary circumstances. But it must be borne in mind that the wharf built there is one of a most substantial charaacter.

The wharf is built of the best timber, the upper part is built of concrete, so that it is a very substantial work which will last for generations. Does my hon. friend say that it cost too much, considering the character of the structure? Not at all, but he says a cheaper wharf, which would go to decay perhaps in fifteen or twenty years, ought to have been constructed. That is all the hon. gentleman says Hull was entitled to have. He says that is good enough for Hull. Then he criticises it because, he says, only 83 freight steamers went there during the season to which he refers and only two passenger steamers call there twice daily. Well, I am inclined to think that is a pretty good traffic and shows that the wharf is

being used pretty freely. But, he says, no revenue is collected. I suppose he puts that forward as a strong argument against its construction. But there are many wharfs in Canada from which no revenue is being collected and at which a very good business is being done. That has been the case ever since confederation, under both Conservative and Liberal administrations. It is one of the anomalies which have existed in this connection. It has existed ever since the country undertook the construction of wharfs immediately after confederation, and this government is simply moving along the lines they found laid down by their predecessors. The rule is that so long as a wharf remains under the control of the Public Works Department, no revenue is collected, but when it passes to the Department of Marine and Fisheries, that department proceeds to collect tolls. I had a remarkable instance brought to my notice not long ago. It was urged that a certain wharf in the province of Quebec should be passed over by the Public Works Department to the Department of Marine and Fisheries. I found that the wharf had been built some twenty years ago. It was never transferred to the Marine Department and the people consequently never paid toll; and when informed that it was about to be transferred to the Marine Department and tolls collected, they made the most urgent representations that it should be allowed to remain in the Department of Public Works as it had for the last twenty years. There are many places where it would be considered a very great hardship if the people, who use these wharfs for the purposes of small shipments and getting supplies, should be obliged to pay top wharfage. That would be considered burdensome, and I may say frankly that, in numerous instances, my predecessors have hesitated to pass such wharfs over to the Department of Marine and Fisheries, just because these burdens would be imposed on the people. There are about 600 wharfs and breakwaters in Canada and only about 200 have been passed over to the Marine Department. It happens that in the province from which I come, the government wharfs are paying in tolls an undue proportion of the entire revenues which are collected throughout the Dominion. We do not complain of that because they happen to be in a place where there is considerable business and the business is able to stand the burden of the tolls. But in the smaller districts throughout the Dominion, it would be regarded as quite a hardship to impose tolls. Therefore the fact that no revenue is collected from a wharf is no indication that it is not of very considerable public benefit. While on this subject, I may say that this anomaly, which has existed ever since confederation, has been engaging the serious attention of the Minister of Marine and Fisheries and myself and it is not unlikely that a plan will be evolved which will meet the public view and remove from the people certain burdens they have to bear in respect of tolls upon certain wharfs in the country.

The next criticism is that a wharf was built on lake Nominingue. My hon. friend said that this is an inland lake. I take it for granted that all the lakes are inland lakes.

Mr. R. L. BORDEN. The Bras D'Or lakes in Cape Breton are not inland.

Mr. PUGSLEY. They are not lakes at all. Why they were called lakes I am not able to understand. The question raised by my hon. friend's resolution is one of great importance, and that is as to whether or not all the wharfs upon the inland waters of the various provinces should be constructed by the provinces or by the Dominion. I am not prepared to draw any distinction between the Ottawa and other inland waters. It may be said that the Ottawa is an interprovincial stream, but there is nothing in the Act of confederation which makes that a ground for building wharfs along a river. It is different from building a bridge. A bridge connects the two provinces but a wharf must be wholly in Ontario or wholly in Quebec. There is therefore no reason to warrant the building of a wharf along the Ottawa river which would not equally apply to a wharf built on the banks of the St. John in New Brunswick or on the shores of the Grand lake or Kennebecasis in New Brunswick or on any of the large navigable lakes in any of the other provinces. Yet it has been recognized ever since confederation that it is quite proper for the federal government to build wharfs along the Ottawa. I can well remember when my hon. friend from North Toronto (Mr. Foster), who was then Finance Minister and representative from New Brunswick in the late Conservative government, took the ground very strongly that the federal government should not build any wharfs in the inland waters of his own province. He was urged to build wharfs and took the ground that that was against the terms of the British North America Act. But his attention was called to the fact that the government was constantly building along the Ottawa, and the people of New Brunswick could not see any distinction between the two. At last my hon. friend from North Toronto (Mr. Foster) saw the force of that reasoning and agreed to contribute one-half the cost of a few wharfs, at least so far as the St. John river and its tributaries were concerned. I am prepared to go this far, that either the government must recognize the reasonable demands of the people living along the shores of the inland waters of the Dominion or refuse to build wharfs even along the shores of waters which divide any

two provinces. There is just as much reason for building in the one case as in the other. Take Lake Nomininguе, there is no railway accommodation for the people in that country, that country is being rapidly settled, and in order to supply transportation facilities the building of wharfs was necessary, and I am not prepared to say that the building of wharfs was not entirely justifiable in the public interest. I understand the only criticism my hon. friend makes is that these wharfs should have been built by the province of Queebc. Well, I think I am right in saying that it has never been the habit of governments of Ontario and Quebec to build wharfs, but they have allowed that work to be borne entirely, or alomst entirely, by the federal government. Therefore if the federal government had not undertaken to furnish these accommodations, these wharfs would not have been built, and the people would have been deprived of transportation facilities.

Mr. BENNETT. In the great city of Toronto there is not a government owned dock. Every dock is owned by a navigation company or private individuals.

Mr. PUGSLEY. That may very well be. In St. John, up to comparatively recent years, the wharfs were owned by private individuals; but with the development of the idea of transportation and the increase in the wealth of the country, a different policy prevailed, and the people are recognizing that the building of wharfs is intimately connected with the transportation question. And as navigation belongs peculiarly to the federal government and parliament, the federal government might fairly, in the discharge of its duties, undertake to build wharfs on the inland navigable waters of Canada.

The next item in the hon. gentleman's criticism was the work built at Disraeli. The only criticism of the hon. gentleman with regard to that was that the work was not a wharf in reality, but served the purpose of a bridge, because the municipal council had built a bridge from the end of the structure created by the Dominion government to the opposite side and it was really used as a bridge. The hon. gentleman did not say it was not a work of public benefit; he did not criticise it from that standpoint, but only that it could not be regarded as being for the purpose intended.

Then, he spoke of a wharf in his own county which cost $5,000. His only criticism of that was that the wharf was not situated in the best place. That may be a mistake on the part of the engineers.

The hon. gentleman spoke also of the wharf at St. Joseph. I am prepared to admit that with the knowledge I have with regard to that wharf, if the matter came before me to-day I might not enter upon its construction. But, in justice to Mr. Tarte, who has now passed away, and whose reputation as a wise statesman and man of excellent judgment certainly did not suffer by reason of any remarks made by hon. gentlemen opposite, it should be said that when Mr. Tarte was Minister of Public Works he went to St. Joseph. He went at the request of certain gentlemen who were attempting to create a popular resort there, who had a scheme for engaging largely in agricultural pursuits, and proposed to build a railway to connect St. Joseph with Goderich. In that scheme, Chicago capitalists were largely interested. Apparently, Mr. Tarte became captivated with the development that might take place there. Now, I am informed that it is not correct to say that the place where this wharf is built is an exposed place. It is at the mouth of a river, and my information is that, if you could get the business there, it would not be too bad a place for the building of a wharf or the establishing of a town. And this must be borne in mind that, if Mr. Tarte erred in judgment in expending $15,000 or so in building a government wharf there, others erred also. I have seen photographs of buildings there, among others a hotel which cost $150,000, and many others. And my information is that the capitalists engaged in the scheme have expended in the vicinity of $600,000 in erecting buildings and in the effort to develop the place and to make it what they expected it would be. No doubt, they have been disappointed. Still, the fact that shrewd business men made a mistake with regard to the opportunities for business may perhaps be some justification for Mr. Tarte having also formed wrong expectations in this matter. However, it is a matter for which I am in no way responsible. The wharf was built some years ago. As I have said, I am not prepared to say that if under the circumstances to-day, the matter were presented to me as it was to Mr. Tarte, I would take the same course as he took. Still, I am not prepared to quarrel with the exercise of his judgment at that time.

Then, the hon. gentleman speaks of the construction of piers and booms on the Saguenay river at Chicoutimi. If I understand him, he does not criticise very strongly the cost of these works, although he rather intimated that they might have been built for less. The only evidence he has given the House as a basis for that opinion is that the spruce sticks used in the construction of these booms cost at the rate of $27 to $30 a thousand. Well, there are sticks and sticks. I can understand that a long spruce tree, such as would be in one of these booms, might cost at the rate of $27 or $30 a thousand, where shorter sticks would not cost anything like the same amount. When the hon. gentleman (Mr. Perley) was asked the length, he said they would not be very

long, because it would be difficult to get long sticks. The very fact that it was difficult to get long sticks, I suppose made those sticks more expensive than short ones would be.

Mr. PERLEY. If the hon. gentleman will allow me, the timber to which I refer was not used to make booms. The boom timber, I think, was brought from the west or south.

Mr. PUGSLEY. What was the timber used for then ?

Mr. PERLEY. I do not know. This timber to which I referred is used in the round—small round stuff.

Mr. PUGSLEY. If the hon. gentleman (Mr. Perley) does not know what it was used for, surely he will agree with me that his information as to whether it cost too much or not would hardly carry weight. He did complain—and I think this is his strongest criticism on this subject—that the government should have allowed these individuals to construct these booms and piers themselves and have not taken hold of this work as a government work. I am disposed to agree with my hon. friend (Mr. Perley) that in undertaking these works, the government should be very careful, and should undertake such works only under exceptional circumstances. But the very fact that it was found necessary and desirable in the public interest, years ago, to undertake this system of slides and booms on the Ottawa, the St. Maurice and elsewhere, shows that public men of a former time thought there were circumstances which justified the government in entering upon this work. May it not be that there are similar circumstances at Chicoutimi which would justify the government in constructing these works to assist the operators there to develop a great industry which has resulted in the building up of a prosperous town and the giving of employment, if I am correctly informed, to thousands of people ? May not the government be justified in saying : We will undertake the expenditure of $50,000, which, at four per cent, will represent only $2,000 a year, to encourage these companies in the development of the great industry on the Saguenay river at Chicoutimi ? That may have influenced the government. These companies were just starting out on a great enterprise which would have involved the expenditure of millions of money. It may be that they approached the government and said : There are the various lumber interests and we cannot agree as to the management of these booms. We think that you might well, in the public interest, take charge of these works, as you do now everywhere on the Ottawa and on the St. Maurice. Not having been in the government at that time, I am not aware of the arguments which led the government to undertake these works, but I can understand that this might have appealed to my predecessor's judgment and led him to introduce the measure. The hon. gentleman says : We have not collected the tolls from the Chicoutimi Pulp Company. I admit that. And I might explain to the House that there has been an unfortunate difference between the government and the Chicoutimi Pulp Company. When the government undertook the construction of these booms, the company had certain booms themselves, and were desirous that the government should acquire these and make them a part of the new works that the government was about constructing. They wanted, if I remember well, about $30,000 for their booms. The government did not think it in the public interest to acquire these works, but deemed it better to construct entirely new works. And I believe this has been regarded as a grievance by the company from that time to the present day. The company has declined to pay the tolls on the ground that the works are not entirely complete. The engineering staff of the department takes a different view. We have rendered bills for the tolls, and I have instructed the deputy minister to place the matter in the hands of the Department of Justice to enforce the tolls, and we will see whether the government or the company is right in the matter.

Now, I wondered that my hon. friend, in speaking of Chicoutimi and the Saguenay river, did not avail himself of those photographs which have been brought to Ottawa and distributed, showing a pier which was built out by the Department of Public Works into the river, as resting on dry ground. I have been told there has been some gossip with regard to that. In case the matter should be brought to his notice, let me say to him that in connection with the dredging works on the Saguenay river, the government did what it was advised to do, it built an entraining pier for the purpose of preventing the silt flowing down the Saguenay and getting into the portion the government was dredging. This had the effect intended, and while the photograph shows dry land on the upper side of the pier, on the lower side there is water. The pier has been of material benefit to the dredged portion of the river down below the pier. I mention this because I shall be surprised if some hon. gentleman does not refer to it before the debate is through.

Now the next ground for criticism is with reference to two works in Nova Scotia where channels were excavated between the ocean and two lakes. I am not familiar with the subject, but possibly the Minister of Finance may think it worth while to refer to the matter. I do not know whether it is true that the water flows out to the ocean at low tide. But even if it were, I can understand that it would be justifiable to make a moderate expenditure for the pur-

pose of providing a complete shelter for those small fishing vessels so that they may go into this basin at high water and lie there in safety when the tide is out. That might be justifiable on public grounds, because hon. gentlemen must remember that along the coasts of the maritime provinces there are thousands of people engaged in fishing. Their boats are comparatively small and it is an enormous benefit to them for the saving of life and property that at different points along the coast there should be these small harbours of refuge, these places of shelter where they can go and be safe from the storm. Therefore, even upon the statement of my hon. friend, I would not be prepared to admit that the small expenditure which was devoted to this purpose would be money wasted. Now, Mr. Speaker, those are all the public works in respect to which my hon. friend had any criticism to make, and I ask whether, upon that statement in view of the vast expenditures which have been made by the Public Works Department during the last eleven years, there are any statements he has made which would warrant the House in condemning the government in respect to its expenditures upon public works.

But it remained for my hon. friend who represents Grenville (Mr. J. D. Reid) to add his testimony to the ground for attack against the government, by stating that a wharf had been built upon Stanley Island in the River St. Lawrence. Now, I do not know just where the wharf is, but my information is that although the island may be private, it is an island to which the public resort in vast numbers and this is a wharf which is greatly used by the public. It would be difficult to find any wharf which has been constructed at an expenditure of this moderate amount, which affords greater accommodation to the travelling public than is afforded by this wharf on Stanley Island. I think if my hon. friend were to tell what he knows with regard to it, he would admit the correctness of my statement in this particular. He says there is a wharf on Lake Nipissing. Well, I admit there are wharfs that the government have built on Lake Nipissing. I think they have built a wharf at North Bay, and at another place down some miles west of North Bay; and I am prepared as Minister of Public Works to undertake expenditures of this character upon great lakes like Lake Nipissing and other large inland waters, in all cases where I think the matter is of large importance, and where the construction of wharfs would be of great advantage in encouraging the transportation interests of this country. I think with regard to works of this character, as well as with regard to post offices and other public buildings, we ought to have regard to the fact that there are people in other places in this country than in the cities and larger towns. There are people in villages and in remote districts who are doing their part well in building up a great Canadian nation, and the federal government can be engaged in no better work than in giving them here and there public buildings, and wharfs, and other works of a like character, which are necessary to add to their comfort and increase their opportunities for travelling and getting their products to market.

Mr. PUGSLEY.

Mr. E. B. OSLER (West Toronto). Mr. Speaker——

Some hon. MEMBERS. Now we are going to get it.

Mr. OSLER. Yes, you are going to get it, and that is what has been said so often to the electors of New Brunswick, because the man who held the public purse said to them, I will give you a wharf here and a wharf there, and I will defend it as being in the interest of the public. Now, Sir, there is no man in this House more absolutely in favour of spending the public money for the benefit of this country, than myself.

An hon. MEMBER. For instance, the Canadian Pacific Railway.

Mr. OSLER. Now I wish to ask the hon. gentleman who said that, if there is any institution in this country that has done so much good for the country as the Canadian Pacific Railway? Had it not been for the fact that the Canadian Pacific Railway Company had $20,000,000 in the Canadian banks during the past crisis, where would this government have been ? When they needed money to meet unpaid debts to all these contractors, the money of the Canadian Pacific Railway was the only thing that rescued them.

Mr. FIELDING. What does the hon. gentleman mean by saying that the money of the Canadian Pacific Railway came to this government?

Mr. OSLER. I say it helped the banks to carry on the business of this country.

Mr. FIELDING. That is not what he said. Do not mix the country with the government.

Mr. OSLER. I said the government owed money to this country.

Mr. FIELDING. The government owed nobody.

Mr. OSLER. The government, through the Quebec Bridge Company, had borrowed $7,000,000.

Mr. FIELDING. The hon. gentleman knows that is not correct. The government did not borrow it, it was borrowed by a corporation.

Mr. OSLER. The bonds were guaranteed by the government.

Mr. FIELDING. I will correct the hon. gentleman at once. Loans were obtained by the Quebec Bridge Company covering a period of years, with the guaranteed bonds of the government pledged as collateral. The government never engaged to give the Quebec Bridge Company money, and never owed money to the Quebec Bridge Company at all. It was a matter of convenience between the Quebec Bridge Company and its creditors, and was ultimately a public advantage, to the satisfaction of everybody.

Mr. OSLER. The Finance Minister has made a statement which is quite correct. Yet I say to his face that were it not for the credit of the Dominion government that was at the back of that borrowing, the Quebec Bridge Company could never have got the money, and by borrowing that six or seven million dollars from the Dominion government, so much more money was kept out of circulation in this country.

Mr. CONMEE. Will the hon. gentleman allow me to ask him a question?

Some hon. MEMBERS. Order.

Mr. SPEAKER. Order.

Mr. CONMEE. I do not think the hon. gentleman heard me.

Mr. SPEAKER. The hon. gentleman (Mr. Osler) who is speaking has possession of the floor.

Mr. OSLER. I have never——

Mr. CONMEE. Will the hon. gentleman allow me?

Mr. SPEAKER. The rule is that the hon. member who has the floor is entitled to keep it, and another hon. member can only ask a question by his permission.

Mr. CONMEE. I understand——

Mr. OSLER. The taunt has been thrown across the floor of my connection with the Canadian Pacific Railway Company. I appeal to you, Mr. Speaker, or to any hon. member, to say if, since I have been a member of this House, I have ever referred to the Canadian Pacific Railway. I have never advocated any interest or Bill that happened to be before the House, and I have never spoken on any Canadian Pacific Railway interest under discussion. If my example had been followed by the majority of the back benchers on the government side of the House, it would have been much more to the credit of this country. There is no man in this House but will endorse the expenditure of public money for public works if they are for the benefit of this country and if the money is honestly expended. I recognize that down the St. Lawrence and in New Brunswick and Nova Scotia there is a long coast line that must be supplied with wharfs by this government, and that there must be a very large amount of money spent by the public to build wharfs and to provide accommodation for the people living along the river and the sea-coast. These people are not wealthy. They are probably the finest class of people we have in Canada. They battle against the elements, and they are entitled to be protected and to have money spent to provide them with wharfs and every facility that is possible. But with all that, I say that no man can go down the St. Lawrence and go along the coast of Nova Scotia and New Brunswick and not come to the conclusion that at least half the money that has been expended there has been expended, not for the benefit of the people, but for political purposes and to buy the votes of the people.

Mr. PUGSLEY. Will my hon. friend be good enough to name a single wharf in the province of New Brunswick that is not in the interest of the public?

Mr. OSLER. That is not what I said.

Mr. PUGSLEY. Yes, you did.

Mr. SPEAKER. Order.

Mr. PUGSLEY. Will the hon. gentleman pardon me?

Some hon. MEMBERS. Order.

Mr. PUGSLEY. Let me ask my hon. friend this question——

Mr. SPEAKER. Order. If the hon. member for Toronto (Mr. Osler) will let the hon. the Minister of Public Works have the floor to ask a question, he is quite at liberty to do so.

Mr. PUGSLEY. I may have misunderstood my hon. friend, but did he not say that you could not go down to the provinces without coming to the conclusion that about half the wharfs constructed there were not in the public interest?

Mr. OSLER. I said nothing of the kind.

Mr. PUGSLEY. Well, then, I am hard of hearing.

Mr. OSLER. If I said that, I was mistaken. What I said was——

Mr. PUGSLEY. I accept the explanation.

Mr. OSLER. What I said was that half of the expenditure on these wharfs was absolutely unnecessary. I say that the expenditure on these wharfs, to the extent of at least half of it, has not been in the interest of the people, but has been in the interest of the political party that built them. I have driven down year after year from Metis to Matane, and it was not necessary for me to have my driver point these things out, because all that a man requires is his own eye-sight to see wharf after wharf that is not approachable by any ship.

Mr. TALBOT. How many wharfs are there between Metis and Matane?

Mr. OSLER. I did not count them, because it would be a very difficult job. I am referring to the wharfs that I have also seen myself in New Brunswick and Nova Scotia, but only in a general way. From my own observation, I have come to the conclusion—and any man who has any knowledge of business will come to the same conclusion—that more than half of the money that has been expended has been expended uselessly. Wharfs that a few hundred dollars would have built, and that would have accommodated all the shipping that had to be taken care of, have been constructed at the cost of thousands of dollars. I will endorse any expenditure of money that is necessary to give the fullest possible facilities to the people living along the St. Lawrence and upon the Nova Scotia and New Brunswick coast. I think they are entitled to it and they need it, but I say the money should be expended only as it is needed. We have seen the hon. Minister of Finance (Mr. Fielding) bringing in session after session fifty, sixty and seventy votes for wharfs in his own province. The money is not expended. One year after another it is voted and revoted, simply to keep it dangling before the people for political purposes.

Mr. M. MARTIN. (Montreal, St. Mary's). Will the hon. gentleman allow me to ask him a question? Did he see a wharf in Montreal previous to 1896?

Mr. OSLER. No.

Mr. M. MARTIN. Has he seen the wharf that is there to-day?

Mr. OSLER. No.

Mr. M. MARTIN. Then we had nothing at all, but now we have wharf accommodation.

Mr. SPEAKER. Order.

Mr. OSLER. I have been speaking of what I have been able to judge from visiting here and there from year to year. Now, I will give an instance from what I know.

Mr. PUGSLEY. Will my hon. friend pardon me again, because I have great respect for the judgment of my hon. friend? Let us get down to a concrete case. The hon. gentleman says that in New Brunswick he saw wharfs where they ought not to have been built, and that more than half of the expenditure upon them was useless. Will my hon. friend name one single wharf to which that remark refers? He cannot do so.

Mr. FOWLER. We will give the hon. gentleman (Mr. Pugsley) the information a little later.

Mr. PUGSLEY. That is all right.

Mr. OSLER. I am sorry if I have raised this little hornet's nest amongst hon. gentlemen opposite. I am telling my impression from what I have seen in my visits to the lower St. Lawrence and the coast of New Brunswick. My judgment may be wrong, but I think it is right and I think it is the judgment of any man who is not biased. It is the judgment of many men who are strong supporters of this government and who have been down there. Now, let me come to a case that I can speak of with absolute knowledge. Two or three years ago in this House there was an appropriation made in connection with a branch of the Trent Valley canal to Newmarket. I forget the amount, but it was some hundreds of thousands of dollars. I made the statement then and I repeat it that there is not enough water in the stream which feeds the high level canal to keep the locks full, and if the locks were as full as possible, there would not be sufficient revenue from the one or two rowboats which would pass up and down the canal to pay the lockkeepers. In the estimates of this year, there is a revote of $3,200 for a wharf at Roche's Point. I may speak with some authority on that point as for 20 years I have lived at Roche's Point for months during the summers. I had a steamboat on Lake Simcoe and had a wharf. That wharf is now in front of my own place and cost, I think, $400. It is in the open, right on the open lake. All the steamers that ever run on Lake Simcoe can tie up at that wharf. There is also a little landing at Roche's Point bay, which is a few hundred yards from my house. For years a ferry ran from Belle Ewart to that point. It was commanded by a captain who sometimes had a boy as engineer, but very often acted as both captain and engineer. This is a very sheltered cove with a smooth, sandy bottom, shelving easily down. The boat comes to this landing, the captain catches the side of the wharf and holds the boat alongside while passengers land. That wharf was taken down each year and rebuilt at a cost of $15. A railway was built two years ago running from Newmarket to Roche's Point, and the ferry has been taken off. It received a small subsidy, but now the mail is carried by train and there is not a single boat that comes to that wharf. There is only one boat on Lake Simcoe which carries excursions. They have already built piers at Roche's Point into eight feet of water and the present plan is to extend the pier into twelve feet of water. The government propose to spend $3,200 and will probably spend $10,000 before it is finished. There is no boat on Lake Simcoe that draws more than five feet of water; the piers are already in eight feet of water and there are still more piers being extended out into the lake. I make that statement from ab-

solute personal knowledge; the others I make from observation, but if I have this knowledge of one pier I can infer very much more than my observation shows me in connection with these other wharfs.

Mr. PERLEY. In what constituency was that?

Mr. OSLER. I hardly like to say, but it was in the constituency of North York. I cannot accuse the present Minister of Justice of being guilty of that; it was the late lamented and respected Postmaster General, the most economical, cheese-paring man who was ever in the House, for whom I must say that when he came to expend government money he did so without reserve.

The Minister of Public Works said we had unearthed nothing. Good Heavens! there is no need to unearth anything, there is no earth over them.

Some hon. MEMBERS. They are bare.

Mr. OSLER. The hon. gentlemen are like ostriches and think that no one sees them if they cover up their heads. The government has such a zeal for spending money. They are now looking forward; they have had a great wave of prosperity and they fancy that this is to continue. They are spending public money in millions and they think because they are taking in millions and have been successful that the public, when it comes to a question of tens or hundreds of thousands look on these amounts as being so small as compared with the millions of which they talk that they do not count, but the people are beginning to find that ten times ten thousand make a hundred thousand and ten times a hundred thousand make a million and that these tens and hundreds of thousands mount up at an enormous rate. There can be only one end to this, and that is disaster. The government is very much in the condition of a supply house for a great mercantile firm. A supply house, as we know, must buy the goods from the parent house at the price the parent house chooses to charge for them. There is a great parent house of middlemen in this country who are the supply house for the government. The government have to buy their small supplies at whatever price their parent house chooses to charge. They cannot kick and so far they have not done so, because they are not the men who are paying the charges; these terrible charges are being paid by the country. It shows how absolutely without knowledge of what they are doing the members of the government or the back benchers supporting the government are. Any serious charge they answer by a guffaw and a laugh and they think they have met the charge because they laugh. It is a cheap laugh, a very cheap laugh, but let me tell the members who sit on the back benches opposite and do the laughing that the five or six members of the government who sit on the front seats are not doing any laughing. They would be very much happier if the members who are so ready to laugh—I suppose it is the only means of expression they have—did not do quite so much laughing.

Now, there was a reference made to something that I do not know about, because it was before I was in politics. It was about some dredge having charged double for work on Sunday. I think that is quite proper. I can illustrate it by an incident that occurred some years ago when I was staying at an inn in a very poor Scotch village on the Clyde. I wanted to have a drive on a Sunday. The Scotch lassie in charge said, 'we do not let out our horses on the Sabbath.' I said, 'I must have a drive.' Then she said, 'If you have it on the Sabbath, it will be double price.' There is another illustration about somebody being damaged by a kick from an ass. There is still another illustration about the dog that went mad and bit a man; but it was not the man that died, but the dog, because the poison came from the man and not the dog.

Mr. J. CONMEE (Rainy River). Mr. Speaker, in the course of the hon. gentleman's remarks I desired to ask him a question, but he did not see fit to extend to me the courtesy which is usually extended under such circumstances. I wish to call the attention of the hon. gentleman and the attention of the House to some of the remarks he has made. He has told us that this is the first time that he has spoken here of the Canadian Pacific Railway. Well, I believe that some of the Canadian Pacific Railway people would have thought it better if he had not spoken on this occasion. The hon. member thought the government were very blamable because they had guaranteed the bonds of some company engaged in building a bridge at Quebec. I wished to ask the hon. gentleman if he had forgotten that the Canadian Pacific Railway Company had asked the government for a guarantee not only of their bonds, but also of their stock.

Mr. OSLER. I did not object to the government guaranteeing those bonds at all. I made no reference to that. I said it was a government liability.

Mr. CONMEE. I understood the hon. gentleman to say that the government of this country would have been bankrupt, that it would have been unable to meet its obligations to the public, if it had not been for the Canadian Pacific Railway, which was the only solvent concern of this country. Then, when he was challenged for that statement by the minister stating that the government had not been obliged to call on the Canadian Pacific Railway Company or its resources, he retreated. What I understood him to say then was that the guarantee to the company was as unjustifiable under

the circumstances as if the government had advanced the money. Am I putting the hon. gentleman in the right position now? If I am not, perhaps he will rise and tell us what he did say. If he does not know what he did say, he will have to allow me to draw my conclusions. The hon. gentleman did try to leave the impression that this government would be swamped if it were not for certain conditions of the Canadian Pacific Railway, and he assumed to himself and his party great credit for the Canadian Pacific Railway. I deny that hon. gentlemen opposite are entitled to any credit for the existence of the Canadian Pacific Railway. They never did anything for the Canadian Pacific Railway; it was the people of Canada who did it. It was the subject of a compact at confederation, and the Liberals have done as much if not more to carry that into effect as hon. gentlemen opposite. This is not the occasion to discuss the Canadian Pacific Railway; but I know some of the history of hon. gentlemen opposite in connection with it, and it is not such as to commend them to the people of this country—they made a most improvident bargain. The Canadian Pacific Railway was bound to come, and it had to come to the government and get a guarantee of $30,000,000. I do not want to discuss how that was paid back. The Canadian Pacific Railway is a great institution and it has done a great deal for Canada; but it does not lie in the mouths of hon. gentlemen opposite to claim any special credit for that. This is all I wished to say to the hon. gentleman at the time he did not extend to me the courtesy of answering a question. My hon. friend tells us that there is a good deal of hilarity on the part of gentlemen occupying the back benches on this side of the House. I suppose my hon. friend considers himself right in the front. He considers that some of the gentlemen in front of us here would be very much pleased if the hon. gentlemen on the back benches, as he terms them, were less demonstrative. I am rather inclined to think that some of the gentlemen in front of him would be better pleased if he were relegated to the back benches himself. The hon. gentleman has made an attack, a very weak attack, upon this government for expenditures on certain public works; but he has sat down without making one single point—without saying, here is a work that should not have been built, or here is an expenditure that was wrong. Perhaps I am wrong in that. The hon. gentleman did find fault with the construction of a pier on Lake Simcoe, and he said, 'No boat drawing more than five feet of water can navigate Lake Simcoe. I am prepared to contradict the hon. gentleman. A boat drawing ten or twelve feet of water can navigate Lake Simcoe. My hon. friend said: 'There is only one boat on Lake Simcoe.' That is not true; there is more than one. I do not live on the shores of Lake Simcoe, but I know something about it. There is a large excursion boat on Lake Simcoe, which probably is the one that my hon. friend has reference to. But would it be justifiable to build a dock which would only accommodate boats drawing five feet of water, in view of the fact that in a short time there might be boats drawing a good deal more water? I do not know about the particular item the hon. gentleman found fault with; but it is a small one, and I do not think it was in the mind of the hon. gentleman who moved the resolution. That hon. gentleman made a general attack on the government for having spent money on public works; but nobody has had the courage to point out a public work which ought not to have been built or on which there has been an over expenditure. The hon. gentleman found fault with some canal that did not do much business. I would ask the hon. gentleman how that canal would compare with the Tay canal, it does accommodate some boats because the hon. gentleman said so, while the Tay canal merely forms a tail-race for a mill belonging to a certain gentleman on that side of the House. If we wanted to contrast the expenditure made under the administration of hon. gentlemen opposite, of which the Tay canal is a sample, with expenditure under this government, I do not think the comparison would be to the credit of gentlemen opposite. I did not rise to make a speech but only to call my hon. friend's attention to the fact that the Canadian Pacific Railway got a good deal in the early days. I do not think they got too much. I would be sorry to say one word against the Canadian Pacific Railway, but I deny that the hon. gentleman has any right to special credit in that connection. The Canadian Pacific Railway got the aid of the people of Canada, not only for their railway but for wharfs as well. There is one in the city in which I happen to live which they got without a dollar of expenditure on their part and which they are using to-day, so that as far as the representative of the Canadian Pacific Railway in this House is concerned (Mr. Osler) it does not lie in his mouth to make any insinuations in this connection.

Mr. O. S. CROCKET (York, N.B.). I quite agree with the hon member for Rainy River (Mr. Conmee) that this is not the occasion for discussing the Canadian Pacific Railway and therefore shall not attempt to follow him on that question but shall confine myself to the matter raised by the resolution before the House. My hon. friend the Minister of Public Works (Mr. Pugsley) is quite mistaken in the assumption he has made tonight. With his characteristic suavity and smoothness, he says that the hon. member for Argenteuil (Mr. Perley) has given all the

instances that can be cited of the expenditure of public moneys in useless and unnecessary public works and in the construction of works, nominally public, but which are really for the benefit of private individuals. But those useless expenditures are not confined to the constituencies of Shelbourne and Queens or Richmond and Wolfe or to the other instances mentioned to-night. My hon. friend from West Toronto (Mr. Osler) has shown that there are other cases than those mentioned by the hon. member for Argenteuil (Mr. Perley). He instanced the expenditure of a very large sum for a work at Lake Simcoe which is practically useless. The Minister of Public Works (Mr. Pugsley) has been very anxious to hear if there are any cases in the province of New Brunswick—that province in which he professes to have such confidence but which unfortunately for him does not reciprocate that confidence. Well, I have in my mind an expenditure of a very large sum in that province for a work which, I am advised, is absolutely useless. The case to which I refer is the Caraquet wharf, which cost the people in the vicinity of $80,000. I find in the report of the Public Works Department for the year ending June 30, 1896, a reference to this work as follows: That in March, 1902 a contract for a deep water wharf for the shipment of lumber was entered into with Messrs Simpson & Burpee of Gibson, N.B. The work was begun that year and completed the 31st October, 1905, and the contract price was $59,990. The report states:

In spring the ice from the upper part of Caraquet harbour, carried by the ebb tide and northwesterly winds, strikes the wharf with great force. Considerable damage and delay was caused by this during construction. Therefore in March and April, 1906, two blocks were built by day labour, about 200 feet from the western side of the wharf, to act as ice-breakers for the protection of the blocks of the approach.

The report continues:

These were built through the ice and were of good service when it moved early in May. The ice, however, carried away the corner fenders at the northwest corner of the pier head, and the fenders and sheathing for about seventeen feet to each side of the corner, and tore out the double-faced timber from the ends and sides and three longitudinal timbers. About 45 cubic yards of ballast were washed out of the works. This damage was repaired in June, 1906. The total expenditure for the fiscal year 1905-6, was $16,971.24.

That wharf, which has cost the people of Canada some $80,000, is practically useless. That is well known in the county of Gloucester. I have here a communication from one of the leading residents of that county, in which he makes these remarks:

A wharf which is wholly useless and which since it was built has not been used except to dry fishing nets upon until the past season when a small vessel running to Miscou made use of it for landing. It was built beneath a hill or bank so high and steep that teams could not possibly get down to the wharf from the village or up to the village from the wharf, so that a slanting or winding road had to be built down to it for about half a mile at a cost of $2,500. Yet it has not been used except to the extent above stated. Thousands of dollars would have to be spent in dredging both at the wharf and in the channel below to make it of any practical value to the shipping interests of the place. There is no prospect of the wharf being used in the next decade. The cost of this wharf and the dredging to it is money thrown away. The wharf will rot without any use being made of it.

Mr. TURGEON. Will the hon. gentleman give the name of the writer of that letter?

Mr. CROCKET. I do not think I can fairly be asked to give the name. The information I have is from one of the leading residents of Gloucester county and furthermore I have other communications to corroborate this in every particular. What caused me to communicate with this gentleman in Gloucester was a statement made to me, during the progress of the work, by one of the men engaged on it, to the effect that this wharf was being built in a place where it could not possibly be of any service. In fact the man was actually laughing at so much public money being spent on a work of this kind. The statement I have read shows that after the completion of the wharf it was necessary to build a road down the hill at a cost of $2,500. Let me now refer to what took place in this House in the session of 1902 when the first vote for this work was asked for. The first vote seems to have been for $20,000. The following discussion took place.

Mr. FOWLER. We would like some explanation of this.

The MINISTER OF PUBLIC WORKS. That work is practically under contract now. We have asked for tenders and have accepted the tender of Simmons and Burpee as the lowest That work is of great importance. I may say that since it became known that we were going to do this work at that point, several lumber industries have been established there.

Mr. FOWLER. Is the land on which this wharf is to be erected the property of the government, or of private individuals?

The MINISTER OF PUBLIC WORKS. The engineer informs me we have not bought any land yet, but the work is on land belonging to the government.

Mr. FOWLER. Who owns the land at the inland end of the wharf?

The MINISTER OF PUBLIC WORKS. I am thankful for the suggestion of my hon. friend. I have given most positive instructions to all my officers not to begin any works without having made arrangements with the owners of the land.

And further on:

Mr. FOWLER. Is the site located yet?

The MINISTER OF PUBLIC WORKS. Yes, the work is located, but there will not be any

trouble about the land, because the work is just on the shore.

Mr. FOWLER. The minister says there have been some verbal negotiations going on; what is the price?

The MINISTER OF PUBLIC WORKS. I understand the price is about $20 for the right of landing there. I suppose the insignificance of the price is the reason why a written deed has not been made.

Mr. FOWLER. Perhaps the price will be raised now that the site is taken.

The House will observe that, notwithstanding the Minister of Public Works at that time represented to this House that the right of way had been secured by verbal negotiation for $20, the prediction of the hon. member for Kings and Albert (Mr. Fowler), that the price would be raised when the wharf was actually located at the site, has been fully verified. This government has been obliged to pay $2,500 for the right of way to and from that wharf. At V—150 of the Auditor General's Report of this year appear the following items :

Purchase price of site and right of way : G. A. Albert, $200; J. A. Albert, $50; J. G. Blackhall, $300; W. P. Foley, $550, total $1,100.

And then there are a number of items in connection with the building of this roadway, the whole representing an expenditure of $2,500. So the hon. minister will see that the instances given by the hon. member for Argenteuil (Mr. Perley) and others who have spoken are not the only instances of worse than useless expenditure of public money. I venture to say there is hardly a member of this House who could not give similar instances of the wasteful expenditure of money in his section of the country. The case I referred to struck me as one that might well be brought to the attention of the House. There is another case, also in the county of Gloucester. This is the case of another wharf at Tracadie. There was a wharf at Tracadie, built some years ago by the Conservative government, at a moderate cost, for the accommodation of small vessels. There was no trade for large vessels, and the accommodation provided by the old wharf was all that was needed. A political friend, however, who had got hold of a drift block belonging to the present Snowball property, succeeded in impressing the member for the county with the importance of the government purchasing this asset and using it in connection with the old wharf. The result was that the government bought the drift block at $300 or $400. And it is interesting to note that, in connection with that transfer of the drift block, a legal gentleman in an adjoining constituency was feed to the extent of $75. After the drift block was bought it was discovered that it could not be placed properly to suit the old wharf, and accordingly an appropriation was asked for an extension to connect with the drift block. The extension was made at a cost of thousands of dollars. But not one vessel has been accommodated by the new structure, that could not have been as well accommodated by the old one. There is no trade for large vessels and, in any event, no vessel of any size could get up to the new wharf in consequence of the shallow water in the gully above or below the site of the wharf.

There was a breakwater at Stonehaven, in the same county, built by the Conservative government for the protection of small fishing vessels, which has been converted into a sort of wharf by this government at a cost of upwards of $20,000. It is practically of no use, I am informed, except to Messrs. J. D. Reid & Company, grindstone manufacturers at that place. At Petit Rocher there is a wharf that is said to be of no use to anybody. If the different constituencies were canvassed the amount of money wasted in works of this kind would be found to run up, not only to hundreds of thousands, as has been said, but to millions. I, as one member of this House, feel that there has been enough evidence adduced to justify the adoption of this resolution, and I deem it my duty, therefore, to give the resolution my support.

Mr. ONESIPHORE TURGEON (Gloucester). I have often listened with a certain pleasure to the hon. member for York (Mr. Crocket) discussing matters of his own constituency, or his own part of the province, concerning which I thought he probably knew something. But this evening he has taken the liberty of going upon foreign ground, with the result that he has displayed ignorance of the geography of the localities and the resources and possibilities of the places he has mentioned, which have caused me to greatly lose confidence in him as a guide in such matters. He has made allusion to three public wharfs built in the constituency of Gloucester, which constituency I have the honour to represent. He has talked a great deal of the wharf built at Caraquet, a wharf which has been four or five years under construction, and which was delivered to the government only about a year ago, and which, for the purpose for which it is intended, can hardly yet be said to be completed. He seems to think that Caraquet is a place of very little importance and very small resources. But let me tell the hon. gentleman that it is one of the most prosperous places in New Brunswick, a place with immense resources at its back. It is the chief centre of the fishing industry in the province of New Brunswick. The fishing industry of Gloucester, Caraquet and Shippegan yields a product of about $2,250,000. There are over 200 fishing schooners registered. These go to the fishing banks on the coast of Prince Edward Island and bring back the products of the sea to an amount which claims the admiration of the people of New Brunswick generally. Back

of Caraquet we have immense forests, with millions upon millions of feet of timber awaiting exportation, but which, for its exportation, requires better facilities of shipment. The time has not yet come to demonstrate the full usefulness of the Caraquet wharf. It will require another year or two for that. But for the building of the wharf Caraquet would not be what it is, one of the greatest fishing ports of the maritime provinces, and one of considerable export. And notwithstanding that my hon. friend and colleague from York (Mr. Crocket) seems willing to join with hon. members from Ontario, who are not so well acquainted with the conditions along the Atlantic coast, in decrying it. I would suggest to the hon. gentleman that he should acquaint himself with the locality, its circumstances, resources and possibilities. If he will come to Caraquet I will welcome him and will escort him to the wharf and explain to him its relation to the resources of the district.

Mr. CROCKET. I understood him practically to admit the statement I had made, when he said that the time had not come yet for the use of that wharf.

Mr. TURGEON. Has not the hon. gentleman known of public works which were at first condemned as useless, but which became very useful in a year or two? The hon. gentleman has often criticised the expenditures made when the late Mr. Blair was Minister of Railways, for a grain elevator at the terminus of the Intercolonial Railway in St. John, which is now used both by the Intercolonial Railway and the Canadian Pacific Railway Company, to the great advantage of St. John. The same thing will happen, I believe, in regard to the Caraquet wharf. It will be used next year ten times more than it was last year. We must not ignore the necessities of the large population along the coast of the Gulf of St. Lawrence. We admit the need in the west of railway facilities for transportation, we also want railways in the maritime provinces, and we want wharfs and means of transportation along the coast of the Atlantic. The hon. gentleman has spoken of a wharf at Tracadie, which he turns into ridicule. Is he not aware that an immense lumber trade is carried on at Tracadie? This trade is greatly hampered on account of insufficient wharf facilities. The people of Northumberland county as well as of Gloucester are requesting further improvements. When that wharf was purchased by this department, a wharf built by our predecessors, it was necessary that a dock should be built in order to make the extension asked by the lumber dealers, who export over 15,000,000 feet of lumber from Tracadie every year. There is a request to-day for further accommodation at that very wharf by these lumber dealers in Tracadie, and if the Minister of Public Works was as charitable to me as he ought to be, he would place in his estimates an amount for a further extension of that wharf in order to accommodate the trade of that locality. There is also the Snowball Company who export seven or eight million feet of lumber; and there is an exportation of lumber from other points to a very large extent. Not only are large numbers of men engaged in winter in getting out the lumber, but in summer 50 or 60 men are engaged around the mills and as many more in the work of shipping. The hon. gentleman has also mentioned the wharf at Stonehaven. Now, if there is one wharf in all the maritime provinces whose usefulness has been established it is this wharf. The hon. gentleman says the Conservative party had commenced the wharf for the accommodation of fishermen along the coast near Stonehaven. Why, Mr. Speaker, there are no fishermen at Stonehaven. There are in the neighbourhood not only vast grind stone quarries, operated by the J. D. Reid Company, who happen to be relatives of the ex-Minister of Railways and Canals, but there are other interests. Besides the firm to which the hon. gentleman has alluded, there are other large companies operating these quarries. Every year there are immense shipments of freestone to the American markets, which could not be shipped were it not for the accommodation afforded by that wharf. The Conservative government had spent some $15,000 in commencing these works, and this government has continued them on the plan suggested by Mr. Shewin. I know they have cost $35,000, but they are for the purpose of maintaining these large industries, and facilitating the operation of these immense quarries which are the envy of every county in the maritime provinces. I say that the trade of that port in the freestone business alone is more than ten times sufficient to warrant the expenditure. If there has been one expenditure made anywhere in the Dominion of Canada which is justified by its utility, it is this wharf at Stonehaven. I need not say anything more on this question, except to invite the hon. gentleman to make himself more familiar with the topography of our province and of its resources, and especially to give us the name of the writer of that letter, because I attach no importance whatever to that letter until I know the name of the author.

Mr. E. B. DEVLIN (Wright). I was not present when the hon. member for Argenteuil (Mr. Perley) spoke in the early part of the evening, but I understand that he mentioned the Hull wharf, and complained that it had been a practically useless work. Unfortunately I have not in my possession certain data which I asked the manager of the International Portland Cement Company

to furnish me. But I hope to have the documents, and they will prove conclusively that this wharf has been of great use to several large corporations in the city of Hull and the county I have the honour to represent. When I get that information I will be glad to supply the hon. gentleman with it. I may say that the International Portland Cement Company, which has its head office in the city of Hull, is one of the most important cement companies in the Dominion of Canada.

It is shipping from the city of Hull immense quantities of cement and most of that cement is shipped by water from the Hull wharf. The exact quantity I cannot say, but the wharf was in constant use all last summer for the shipping of this cement. Hardly a day would go by but you would see hundreds of packages of cement piled upon the wharf. I do not want to give exact figures, because I have not got them, but the manager will give them to me and I will be happy to supply them to the House. Not only does the International Portland Cement Company use that wharf, but other corporations use it for shipping lumber and other commodities. There may have been other uses for the wharf in former years, but the new wharf is of immense benefit to the commercial interests of that part of the country. I am very glad that the hon. member for Argenteuil mentioned this particular work in the county of Wright. I am sorry that he should complain of what the Department of Public Works has done for the county of Wright. I have, at the present moment, before the hon. Minister of Public Works demands for several very important works in that county. I have laid before the minister a request for the building of a wharf at the town of Aylmer, and while Aylmer is not nearly the size of Hull I think it will be of immense advantage to Aylmer to have a wharf built by the Department of Public Works. I hope the Department of Public Works will see its way clear to give us this wharf, and even if it is attacked by hon. gentlemen on the opposite side, as I have no doubt it will be attacked, as they are in the habit of attacking every work that comes to be built by this government, I expect to be in a position to point out the benefit which this work is to the town of Aylmer as well as to the surrounding country. I have also asked the minister to put in his estimates an item for certain works at Maniwaki in the same county and I hope he will be in a position to grant that request as well. The minister has granted an item for building a wharf at East Templeton. I cannot say, not having been here at the time that the hon. member for Argenteuil spoke, whether he mentioned that particular wharf at East Templeton or not. It is also, I might remind him, in the county of Wright and it will be of immense service to the people of that county and the people of Canada generally. I am sorry that this poor little wharf at Hull should be singled out repeatedly as a cause of attack by hon. gentlemen opposite. Last session the hon. member for North Toronto (Mr. Foster) took charge of the Hull wharf and attacked it. Now, we find the hon. member for Argenteuil attacking it, and I am glad to have this occasion of pointing out to the House the great utility of the Hull wharf. As Hull is becoming commercially more important every year and promises to be one of the great cities of the Dominion, the wharf will be of still greater advantage as the city grows.

Mr. G. W. FOWLER (Kings and Albert, N.B.). I might say for the benefit of the hon. member for Wright (Mr. Devlin) that he need have no diffidence whatever about preferring his requests to the hon. Minister of Public Works (Mr. Pugsley) because the Minister of Public Works has already told us that all that hon. gentlemen have to do —that is hon. gentlemen opposite of course —is to ask for wharfs all over the country and they will be immediately granted.

Mr. PUGSLEY. If in the public interest.

Mr. FOWLER. I know the hon. Minister of Public Works well; I have the honour to come from the same province as the hon. gentleman does and I know that he is ready to promise anything in sight.

Mr. PUGSLEY. You used to be a very warm supporter.

Mr. FOWLER. Never of yours.

Mr. PUGSLEY. Yes.

Mr. FOWLER. Never, except when you were a Conservative and were running as our candidate.

Mr. PUGSLEY. For the local House.

Mr. FOWLER. I had the honour to be about the county of Kings with the hon. gentleman assisting him with his campaign when he was making an effort on behalf of honest government previous to that famous letter which he sent to the secretary of the Liberal-Conservative association regretting that his candidature had not met with the support that he expected in a certain locality, and proclaiming himself a member of the grand old party that had done so much for Canada.

Mr. PUGSLEY. What has that to do with wharfs?

Mr. FOWLER. My hon. friend must not object because he brought it on himself by his interjection. Now, Mr. Speaker, I think the hon. member for York (Mr. Crocket) deserves the thanks of the House for having brought forth such an eloquent speech from the hon. member for Gloucester (Mr. Turgeon), but, unfortunately, the hon. member for Gloucester was obliged to admit the

truth of the charges which the hon. member for York had made with respect to the expenditure on wharf after wharf. He had to admit that the wharf at Caraquet that had cost a large amount of money, not only to build in the first place, but to repair in the next year, was absolutely useless, because there was no trade for it, although he hoped that in time—I suppose when the Quebec bridge is finished, which will be some time during the present century—the wharf may be of some use. By that time whatever remains of the wharf, what has not been swept away by the winds or carried away by the tides, will be rotted away so that this expenditure will be perfectly useless. The hon. Minister of Public Works in his remarks seemed to try to convey the idea that the opposition want to oppose all public works throughout Canada. That is a perfectly absurd contention for the hon. gentleman to make and he knows it to be absurd. The opposition do not object to the expenditure of public money in this country. The opposition recognize as every right thinking man recognizes, that it is necessary to have large public expenditures, but what the opposition do object to, what they find fault with, is the manner in which these expenditures are made. They object to the wasting of public money in connection with these expenditures on account of the rascally way in which these works are carried on. The hon. gentleman criticised my hon. friend from Argenteuil (Mr. Perley) and said that he only mentioned half a dozen instances. If we were to mention all the instances which are within the minds of members of the opposition we would require as long a session as the famous session of a week or two ago. Each member who has spoken has referred to the instances which are within his own knowledge. We are only giving samples. The hon. minister has said that the item to which my hon. friend from Argenteuil referred only amounted to some $200,000 or $300,000. To an hon. gentleman whose ideas are as large as those of the Minister of Public Works this is a mere bagatelle, but to the opposition, and to the business men of the country $200,000 or $300,000 is a matter of some moment. But, as I said, we are only giving samples. There are these expenditures over the whole width of this country, 4,000 miles in extent, hundreds and thousands of them going on everywhere and if we are to judge of the whole mass of the expenditures by the samples that we have given here to-night and which are within our own knowledge the waste of public money must be very great indeed and we must conclude that the statement of an hon. member that at least one-third of the public money that is expended on different public works is absolutely wasted is not far astray.

In the county of Kings there have been expenditures of the most outrageous character. For instance, there was an armoury built at Sussex. I have spoken of that matter before, but perhaps the Minister of Public Works is not acquainted with it. It was necessary to have a clerk of works to look after that building. The substructure, being built of stone and brick and the superstructure of wood, one would have supposed that a mason or a carpenter would have been engaged to supervise the erection of that building. But, no, a tailor was employed. He used to go up at noon when his shop was closed for lunch. He would take a hasty lunch and go up and look over this building. The contract price for the building was $4,700 and how much do you suppose the clerk of works drew from the public treasury for inspecting that building?—over $1,900. All you have to do is to turn up the Auditor General's Report to see a statement of that expenditure. It is also contained in the answer to a question that I asked in the House. The answer was brought down to the effect that something over $1,900 was paid to this gentleman for acting as inspector of this building, although the contract price was only $4,700. The time employed in carrying out the contract was only four or five months, and yet this gentleman drew $3 or $3.40 a day—I forget which—for somewhere near eighteen months. They forgot that he was employed there and he went on and drew his pay and got his check monthly. That is one way in which public money is being wasted. In the county of Albert there are a couple of wharfs lying very close together, there is not half a mile between them. One was all that was necessary, but there would not have been quite so much graft in one as there would be in two and therefore they had two. The sheriff of that county is a very strong supporter of the present administration. He had a leaky old scow that had to be constantly bailed. Some repairs were being made to the wharf and this gentleman's scow was engaged at $8 a day. They only required to use her about a day a week to convey materials but they would take the material all off the scow except a couple of barrels and then leave that on her for the days in which she was not required, so that she drew $8 a day for the storage of a few barrels of gravel. The people in these different communities know these things. These are samples that I would commend to the attention of the Minister of Public Works.

Some difficulty occurred to-night between the Minister of Finance and the hon. member for West Toronto (Mr. Osler) with respect to the Canadian Pacific Railway. As I understand this was the position: The government found it necessary to come to the rescue of this Quebec Bridge Company. There now, is a public work that I would commend to the attention of the Minister

of Public Works if he wants to do the right thing for this country. This Quebec bridge is one of the worst things that ever occurred in connection with public works in Canada, not alone on account of the awful waste of public money but also owing to the appalling loss of life caused by somebody's blunder—and it seems to me that even with the partisan report of the commission appointed by themselves, the responsibility for this must lie at the door of this government. It was necessary for the Quebec Bridge Company to have money, the company was formed in the first place without money; they relied on the subsidies they were to receive from the city of Quebec, the province of Quebec and the Dominion government and the bonds which they might float to build this bridge. It was just as in St. John, where a cold storage warehouse has been built, as I understand, out of the subsidies provided by the local government and the Dominion government; the parties who own the warehouse have not found it necessary to put any of their own money into it. It was necessary for the Quebec Bridge Company to have a large amount of money. They could not get it without a guarantee of bonds from the government because they could not float bonds notwithstanding all their subsidies. They came to this government asking them to guarantee the bonds and I am informed, and I think correctly informed, that the government found it necessary to borrow from the Bank of Montreal a very large amount of money for this Quebec Bridge Company and that they had to pay for this money a very considerable rate of interest.

Mr. FIELDING. The hon. gentleman is absolutely incorrect. The Quebec Bridge Company borrowed its money, of course they had the government guarantee of their bonds behind it, but the government of Canada did not borrow a dollar for them.

Mr. FOWLER. It is immaterial whether the Quebec Bridge Company borrowed the money or the government borrowed it, so long as it was borrowed on the credit of the government of Canada.

Mr. FIELDING. There was no dispute about the borrowing of the money. The hon. member for West Toronto (Mr. Osler) said that the government was in debt to the Bank of Montreal and that was the cause of the trouble. The question of the guarantee was never at issue.

Mr. FOWLER. Some one interjected something about the Canadian Pacific Railway and the hon. member for West Toronto (Mr. Osler) said if it had not been for the fact that when the crisis came the Canadian Pacific Railway had several million dollars, I think $20,000,000, lying in the various banks of Canada, if the banks of Canada had not been indebted to the Canadian Pacific Railway, the crisis would have been very much worse; and the government, instead of coming to the rescue of the banks, were large borrowers from the banks and in that way added to the financial insecurity.

Mr. FIELDING. If the hon. gentleman for Toronto (Mr. Osler) said that it was incorrect; but I will do him the justice to say he did not say that.

Mr. FOWLER. Does he say it is incorrect that the Canadian Pacific Railway had a large amount, several millions?

Mr. FIELDING. I do not know if they had or not, but what has that to do with the government? If the hon. member for Toronto (Mr. Osler) said that the banks could not have paid their debts unless the Canadian Pacific Railway helped them, it is a reflection on the banks but it is none of my business.

Mr. FOWLER. The point is that the hon gentleman is squirming away; he has a peculiar facility in squirming away. The fact is the money was borrowed from the Canadian banks by the Bridge Company.

Mr. FIELDING. All right, yes.

Mr. FOWLER. They were enabled to do that by being able to give the government as security for the money and I say it is immaterial, so far as the withdrawal of that money from the use of the ordinary industrial occupations of the people is concerned, whether it was withdrawn by the government or the Quebec Bridge Company. That is the point made by the hon. member for West Toronto (Mr. Osler). That was considered a sufficient ground for hon. gentlemen opposite to get up and make a wanton attack on the Canadian Pacific Railway.

Mr. PUGSLEY. No one made any attack on the Canadian Pacific Railway.

Mr. FOWLER. The minister must have been out at the time.

Mr. PUGSLEY. I was here.

Mr. FOWLER. I heard the hon. member for Rainy River (Mr. Conmee) make a most bitter attack on the Canadian Pacific Railway.

Some hon. MEMBERS. No.

Mr. PUGSLEY. I did not so understand it.

Mr. FOWLER. My hon. friends opposite say: Oh, no. It sounded much like that to us. I am not here to advocate the claims of the Canadian Pacific Railway or to come to their defence but if it is true that when this great financial crisis came on this country, a crisis which has operated so disastrously for the people to the south, the Canadian Pacific Railway had $20,000,000 lying in the banks of this country which the banks were enabled to use in order to assist in carrying on the industrial business

of Canada, I say they have in some measure paid the debt which they owed to this country. It ill becomes hon. gentlemen opposite to make that a basis of attack on the Canadian Pacific Railway.

Mr. PUGSLEY. My hon. friend will pardon me. Was he here during the whole discussion, or was he informed that an attack was made? I deny emphatically that anybody on this side of the House made an attack on the Canadian Pacific Railway.

Mr. FOWLER. I was present when the hon. member for Rainy River (Mr. Conmee) spoke, and he seemed to be in a very bitter, very savage, very fierce and vindictive mood. What he said was bad enough, but the manner in which he said it was infinitely worse. If he had made the statements in the suave manner that my hon. friend the Minister of Public Works always adopts no matter with what bitter venom his words may be charged and which is a sort of antidote for the wound he inflicts it would have been very different. But the hon. member for Rainy River got up in a very malignant and vindictive way, and made a very bitter attack on the Canadian Pacific Railway.

Mr. GALLIHER. I think I remember very distinctly the words of the hon. member for Rainy River. He said the Canadian Pacific Railway had received large aid from the people of Canada in the way of money grants and land grants, that he was not going to say that it had received too much, that the Canadian Pacific Railway had done a great deal of good to this country, but that it did not lie in the mouth of the hon. member for West Toronto, in the face of that, to complain of the expenditures of this government.

Mr. FOWLER. He said a great deal more than that. If he had made only the kindly remarks my hon. friend from Kootenay says he made, why was it necessary for him to make that insinuation with respect to the $30,000,000 loan, with the remark that he did not know how they had paid it back. They paid back the loan with land which is worth infinitely more to-day than the loan, interest included. They paid it back, part in land, and part in money. The whole loan is paid. There are many things in regard to which the management of the Canadian Pacific Railway might be attacked, and properly attacked; but what the hon. gentleman said had no basis whatever. Now, hon. gentlemen on this side of the House do not complain of the expenditure by itself; they simply complain of the manner in which it has been made; and the numberless instances which they have cited are only a few samples among many thousands that might be cited, in the Public Works Department and in every other department of this government, including the Department of Militia, which above all others should have been kept clear of graft, partisanship, and everything wrong and bad. We find graft everywhere. Take the matter of this Ross rifle, this weapon which is more dangerous to the man who uses it than to the man against whom it is used; the Ross rifle, which has never killed a man except the man who fired it. What sort of favourite is this Sir Charles Ross, who has been able to come out here and hypnotize this government to give him everything in sight? Is it because he is a baronet of the United Kingdom, or why is it? Why was he given 19½ acres of that old historic property, the Plains of Abraham, as a site for his factory, which it is now proposed to buy back for a cool million or million and a half of dollars? Take the Department of Marine and Fisheries; look at the oufitting of the Arctic—Paris plumes for the dusky belles among the Esquimaux, champagne, Laurier cigars, songs, all the delicacies of the season. Look at the outfitting of the 'Montcalm.' Look at the fact that it cost as much to supply the raw material for the food of the individual sailors on board the 'Montcalm' as it does for a guest at the Waldorf-Astoria. This is the way the public money of this country is wasted. My hon. friend the Minister of Public Works looks astounded at this statement. The hon. gentleman is accustomed to a smaller sphere, to the restricted area of New Brunswick, where there is not much to steal, if you stole the whole of it. He is not accustomed to the wider sphere of this great Dominion, extending for 4,000 miles from east to west and 800 or 900 miles from north to south. But wait till he gets accustomed to it; wait till he gets his sea legs; and if we do not have an election until next year, if in view of what has occurred in the province of New Brunswick hon. gentlemen opposite think it better to hang on to a sure thing than to venture upon an uncertainty, and decide to postpone the election for another year, the hon. gentleman will show what he can do in the larger field. He has done well in the smaller field; he has lived fully up to his limitations, only restricted by the size of the field. When he has an opportunity to display himself over a country with 4,000 miles of frontier, he will be equal to the occasion. So I say to hon. gentlemen who want appropriations for their constituents, don't be afraid to go to the minister, even for a wharf like that at Caraquet, for which there is no traffic and which can be of no possible use unless possibly in the dim and distant future; but if you can catch a few votes, my hon. friend, in that pleasant, smiling way of his, washing his hands in invisible water, will say to you, 'I am surprised, my dear fellow, that you ask for so little; don't you want a larger appropriation?' I say, in view of what takes place day by day in this House and in the Public

Accounts Committee, when we are allowed to show it, by the grace of the obstruction club that takes its post in that chamber, and in view of the fact that we are here as trustees for the people of this country, I am compelled to vote for the amendment of the hon. member for Argenteuil.

Mr. H. S. CLEMENTS (West Kent). I regret very much the lateness of the hour, but I consider this discussion too important to allow it to pass without putting myself on record. I am not going to travel into foreign lands as my hon. friend from New Brunswick did, but I want to refer to three or four expenditures in the riding I have the honour to represent. I wish to be fair, and therefore I admit that the present Minister of Public Works (Mr. Pugsley) is not responsible for these expenditures, as the works were built before he had charge of the department. Now, I would be the last man in this House to criticise proper expenditure, and should be very glad to see money spent in my riding, provided it is spent in the public interest. But the expenditures I am about to refer to were certainly not of that character. In the first place, I shall refer to the wharf built at Rondeau at an expense of about $5,000. Had that wharf been built as it should have been, it would be of some use to the public. It was begun just as soon as the general elections were announced, and has never given the public any benefit. If it was worth while building a wharf at all, one should have been built to the proper depth of water. I now come to the wharf at Jeannett's creek, on the river Thames, which was built two years ago, and to the manner of building which I drew the attention of the ex-Minister of Public Works (Mr. Hyman). Had that wharf been properly built, it would no doubt have been of great benefit to the farmers and the village of Tilbury, but it is practically useless, although it cost some $5,000. It was a cement wharf, built upon piles, and built under the charge of inexperienced men. The result has been that the cement practically split in about twenty places. The department had the wharf built on the edge of the channel, intending to dredge away from the face of it and fill in the back, but when they came to do that the wharf split in about fifteen or twenty places. No boat can land there. The 'City of Chatham,' a passenger boat, has landed a few times, but can only run in head first. She cannot run in sideways, and no boat drawing any reasonable draught can use the wharf. After the wharf was built it was simply useless to the public. When that wharf was completed the department undertook to build a wharf at the River Thames lighthouse, just a mile and a half below. I drew attention to this former wharf in order that the department might be advised and take precautions so that the new wharf might be properly constructed.

Mr. FOWLER.

I was informed that Mr. Lefebvre would have charge, and that there would be no ground for complaint. Well, that wharf was completed last year, and so far no boat has ever stopped there. It is practically in the same position as the former one. The cement has split and no boat can land at it, because they are afraid it will fall to pieces. I now come to the fourth public works expenditure in my riding. I refer to the Tecumseh park breakwater. I recommended that a wharf should be built where the old wharf now is, situated upon the site of that park, and such a wharf would be of great benefit to the citizens and boat-owners. However, some gentlemen—I presume the then government candidate, or the ex-member, or the present government candidate—recommended that the breakwater should be built at Point Tecumseh park, which is a beautiful point that every resident is proud of. But the breakwater built there, upon the plans submitted to the government, simply spoils the whole view. It is a large cement breakwater, built up six or seven feet from the level of the water. Had a proper cement breakwater been built there, a few feet high and properly built, the expenditure would have been perfectly justifiable instead of being money thrown away. Let me quote from the 'Planet' of January 22 of this year:

> The new breakwater on Tecumseh park point is slowly toppling over. The new government work will soon be a mass of ruins unless something is done immediately. The whole bank is gradually sliding into the creek —a bungled job.

I am not protesting against the expenditure made in the public benefit, but against expenditure which is utterly useless. Then there is this breakwater. I do not know the cost, but I am satisfied that it could not be less than between $4,000 and $5,000. A short time ago, when I was at home, I saw this whole massive structure, which is in 20-foot spans, all out of line like a broken down rail fence. The thing is a complete failure. Only one thing can be done with it, and that is to take dynamite and blow it up. It is nothing but an eyesore; it should never have been built as it was built. Now, these are only a few examples in my own constituency. I shall not, as the hon. member for Gloucester (Mr. Turgeon) said, travel to foreign ground.

Mr. PUGSLEY. Is there nothing done in the hon. gentleman's constituency which is to the public benefit?

Mr. CLEMENTS. Had these been properly built, and built in the right places, I would have been the first to give the government credit for its work. As I have stated, I recommended both these wharfs on the River Thames, but I did not recommend the breakwater in that beautiful park, though I did recommend a small expenditure on the side of the park in es-

tablishing a wharf. The minister (Mr. Pugsley) has been in charge of the department since January last, so he can bear out what I say, that his engineers went up there to look into this breakwater, and we had the spectacle of these gentlemen asking the city council of Chatham to bear part of the cost of repairing this bungled job which had practically tumbled down. Some talk of jacking these immense abutments of cement and repiling it. But the minister knows something of cement work and knows that this cannot be repaired. If the department had taken $5,000 and thrown it into the river, the public would have got just as much benefit from it as they get from this expenditure. As to the expenditure at Rondeau harbour, if you want to make that useful, you must build a wharf out to a depth of water that will enable it to be reached by vessels drawing at least five or six feet, so that the structure can be used for shipping in coal or shipping out small produce. I hope the minister will look into this matter and see if the public cannot be given some use of the wharf.

Mr. R. N. WALSH (Huntingdon). I had not intended to take part in this debate, and would not have done so, but for a remark of the Minister of Public Works (Mr. Pugsley). That hon. gentleman said he was willing to spend money where it could be spent in the interest of Canada. Would he consider an expenditure in the interests of Canada if it would reclaim 20,000 acres of land worth $400,000 for an expenditure of $80,000 ? The hon. minister does not answer, so I suppose he thinks this is not worth while. Well, if I tell him that the damage done to this land is due to work done by this government, would that be any additional reason why he should undertake this expenditure ? Let me explain the case, which is an old one and well known in that section of country. This land lies in the county which I have the honour to represent. My predecessor in the representation of the county urged this matter upon the government, and an engineer was sent to make a report in the year 1902. His report was to the effect that 20,000 acres of land was flooded as a result of work carried on by this government which raised the level of the river St. Lawrence. The engineer reported that, at an expense of some $80,000, this land could be reclaimed, and that the land was valued at $20 an acre which would represent $400,000.

Mr. PUGSLEY. The hon. gentleman (Mr. R. N. Walsh) asks me a question, and I desire to give him the courtesy of an answer. I would say it all depends on what may be called the national character of the work. If by a public work, a vast quantity of land could be prevented from flooding and a large number of people can be benefited, I think that would be a work fairly within the purview of the federal government.

Mr. R. N. WALSH. I think it would be as much benefit to Canada as to build a wharf where there is no water.

Mr. PUGSLEY. There is no such wharf. A remark of that kind was made about D'Israeli wharf, but I find from the report that there is twelve feet of water there.

Mr. R. N. WALSH. The report of the engineer showed that the work was feasible and also that the damage had been caused by the government. The government recognized their liability, for they have spent money in building a breakwater alongside the St. Lawrence below that. In the session of 1903, $15,000 was put in the estimates for this work. But nothing was done until the following year, when the matter assumed considerable importance. The following is a telegram sent to the engineer :

Ottawa, October 11, 1904.

To J. L. Michaud, Resident Engineer,
Merchant's Bank building, St. James street, Montreal.

You are hereby authorized to proceed by day labour with improvements in River Laguerre, for which sum fifteen thousand dollars granted by parliament during last session.

(Sgd.) EUGENE D. LAFLEUR,
Acting Chief Engineer.

That looked very well. But, unfortunately, on April 18, 1905, the following was sent :

April 18, 1905.

Sir,—I have to inform you that the hon, the minister, has requested that no further action be taken with regard to improvement between St. Anicet and Ste. Barbe. You will, therefore, kindly govern yourself accordingly.

Yours obediently,
EUGENE D. LAFLEUR,
Chief Engineer.

J. L. Michaud, Esq., Resident Engineer,
Merchants' Bank building, Montreal, Quebec.

That is as far as the work got. In the estimates of 1905 there appeared the sum of $10,000 for this work. I made inquiry at the time to find out what had become of the other $5,000. It was said that it had been expected that $5,000 would have been spent up to that time. But only $600 had been spent. Some of that was for surveying. Well, I had the curiosity to look up the Auditor General's Report, and I find that the men who drew the money were not surveyors. But, what is more, getting the return, I find that the plans, surveys, maps, &c., were made in 1902, consequently the money could not have been used for that. Now, I ask the minister if this is not a case which should receive some consideration ? Does not he think that this is a case in which money could be spent to the advantage of the people of Canada ? I at least. do. I think that the action of the

government in bringing down these estimates and having them voted, and in doing the work, acknowledge their liability to carry out the work.

Mr. G. W. GANONG (Charlotte). I rise principally to warn hon. gentlemen on the other side of the House. The hon. member for King's and Albert (Mr. Fowler), from his personal acquaintance and long experience with the present Minister of Public Works warned the people of New Brunswick just before the election that they would probably have splendid promises. I want to read one of these promises, because I think it is worth going on 'Hansard':

Office of the Minister of Public Works for Canada,

St. Johns, February 15, 1908.

H. H. McLean, Esq., K.C., city.

Dear Colonel McLean,—In answer to your inquiry of this date as to my decision regarding the building of wharfs on the St. John river, to the necessity of which you have several times called my attention, I have to inform you that from the report of the resident engineer of my department it appears that the work required on a number of the wharfs would be in the nature of repairing or rebuilding existing whafs, which might properly be attended to by the provincial government.

This is the nice part:

As to the following wharfs, however, namely, at Maugerville, Sheffield, Oromocto and Burton, in respect of which the engineer has made surveys and reports, I have decided to build these, and have given directions for the preparation of the necessary plans and specifications so that tenders may be called for their construction.

I am yours faithfully,
WM. PUGSLEY.

Mr. PUGSLEY. What is there wrong about that?

Mr. GANONG. The election took place on March 3, and this was written to the gentleman who is selected as the candidate for that district for the Dominion parliament by the present Minister of Public Works himself. To follow that out, let us see what action Colonel McLean has taken, who is to be the Dominion candidate. The gentlemen referred to in this letter were candidates in the county of Sunbury, the county which had the honour to return Mr. J. Douglas Hazen, who is leader of the new government in New Brunswick:

St. John, N.B., February 22, 1908.

Dear Sir,—Enclosed please find copy of letter from the Hon. Wm. Pugsley. I am sure you will be glad to know that the government have decided on building the wharfs named therein. Without Dr. Peake's and Mr. Thurrott's assistance, I am satisfied I would not have been successful in impressing on Mr. Pugsley the necessity for these works.

Yours very truly,
HUGH. H. McLEAN.

This was sent broadcast to every elector in the county. This is the class of campaign stuff that we had in the last local election in New Brunswick, and I warn hon. gentlemen that if they ever receive such letters as that, to pay no attention to them, or they will be snowed under. The hon. gentleman knows what it is to be snowed under.

Mr. PUGSLEY. This is not the first time he has been snowed under.

Mr. GANONG. But there never was such a snowstorm as that in the history of the province. At one time he stood very high in the councils of the province, but to-day he is simply a wandering Willie, and he will find that out when he again attempts to influence the constituencies of New Brunswick. Now my hon. friend suggested a coalition government. And here is a little point that has not been brought out by the Minister of Public Works, no doubt he has forgotten it. The member for King's and Albert spoke about a letter being written after the hon. gentleman concluded that the sledding was very poor in King's county in 1896. He went to St. John. At that time the hon. gentleman contended that Sir Charles Tupper was too Catholic for him, he could not support him on the Manitoba school question; and Sir Wilfrid Laurier was more Catholic, so he could not support him. The hon. gentleman at that time was dreaming dreams and seeing visions. He ran as an Orange candidate in the city of St. John and claimed the support of Orangemen. He was also, I believe, the candidate for Grand Master.

Mr. PUGSLEY. My hon. friend will pardon me. I beg to assure him that the Orangemen had no candidate in that contest.

Mr. GANONG. Oh no, the Orangeman had not, but my hon. friend was canvassing all over for the Orange vote, and he was understood at that time to be a candidate for Grand Master in the province of New Brunswick.

Mr. PUGSLEY. I say again that my hon. friend is entirely misinformed. I never was a candidate and never thought of being a candidate.

Mr. GANONG. I believe the people who tell me that belonged to the Orange order just the same.

Mr. BENNETT. Did he ride the white horse?

Mr. GANONG. No, but his visions ran that way, he hoped to be the leader of some great party.

Mr. PUGSLEY. It is no disgrace to be an Orangeman.

Mr. GANONG. I have not said it was. We have some very respectable men among

the Orangemen. But apparently the hon. gentleman did not get the position he was after.

Hon. W. S. FIELDING (Minister of Finance). I do not rise to take part in the general debate, but only to refer to some allusions made by several hon. gentlemen in regard to Nova Scotia, and particularly to my own constituency, which call for one or two remarks. No one would be surprised at the rather reckless statements made by the hon. member for Grenville (Mr. J. D. Reid) who was kind enough to say that all the expenditures of public money in the counties of Shelburne and Queen's were bribes to the electors. But I am bound to say that I expected a little more serious consideration from my hon. friend from Argenteuil (Mr. Perley) than I think he has given to this matter; and I would make the same remark with regard to my hon. friend from Toronto West (Mr. Osler). He was very free in his criticisms of public works in Nova Scotia. Will my hon. friend tell me, did he make a trip along the coast of Nova Scotia, and from personal observation obtain the information he has given to the House tonight?

Mr. OSLER. I think I stated frankly that my statements were made from observation, going down from Quebec to New Brunswick and Nova Scotia.

Mr. FIELDING. Did he go along the coast of Nova Scotia and see these wharfs himself, or what wharfs did he see on the coast of Nova Scotia? I am not unreasonable in asking him to give me the names of these wharfs, if there is that discreditable condition he describes. He must have some information. Is it fair in the hon. gentleman to come into the House and make these scandalous statements of mismanagement of the Public Works Department, without giving us a single fact to sustain them.

Mr. OSLER. I said that I made my statements from observation, I gave them as of my own knowledge. All you have to do is to take up the estimates and examine them. I think that in last year's or this year's estimates for Nova Scotia—I have not the estimates before me—there are votes of $327,000 of which $227,000 are revotes kept dangling before the electors for no other than election purposes.

Mr. E. M. MACDONALD. Would the hon. member say what particular places he visited in Nova Scotia?

Mr. OSLER. I could not say what they were.

Mr. FIELDING. I do not understand whether my hon. friend definitely stated that he personally visited the province or coast of Nova Scotia and saw these wharfs. Did he say so? I want him to say yes or no.

Mr. OSLER. I said that I had personally visited the St. Lawrence and the coast of New Brunswick and Nova Scotia.

Mr. FIELDING. I am speaking particularly of my own province of Nova Scotia and I ask him in all fairness to say if his observation extended to Nova Scotia?

Mr. OSLER. Yes.

Mr. FIELDING. Then the hon. gentleman did visit Nova Scotia and saw these wharfs themselves? Is that correct?

Mr. OSLER. Part of it.

Mr. FIELDING. Will the hon. gentleman give us some information as to what part? It might not be fair to the hon. gentleman to ask him to give any extended list, but what part of Nova Scotia did he visit?

Mr. OSLER. I have made my statement. Does the hon. gentleman say that it is not true?

Mr. FIELDING. I do not wish to say things that are unparliamentary. I believe the hon. gentleman to have made a statement that is scandalously untrue.

Some hon. MEMBERS. Order.

Mr. FIELDING. I have given the hon. gentleman a chance——

Some hon. MEMBERS. Order.

Mr. FIELDING. I have given the hon. gentleman a chance——

Mr. TAYLOR. Order. 'Scandalously untrue' is unparliamentary.

Mr. FIELDING. The hon. gentleman challenged me to say that his statement was untrue. I stated that I did not like to use language of that kind because it was improper and then went on to say that I believed that his statement was scandalously untrue. He forced me to say it.

Mr. OSLER. I have no objection to the statement of the hon. gentleman.

Mr. FIELDING. I withdraw it in deference to the parliamentary rule. I am giving him an opportunity of showing some ground for that statement that he has made. He will not even say what part of Nova Scotia he visited.

Mr. OSLER. I have made my statement.

Mr. FIELDING. Yes, but the hon. gentleman will not state what part of Nova Scotia he visited, or in what county he made these observations. Surely my hon. friend is not going to allow himself to remain in that position. If he does—well, I am sorry for him. I think it is a mistake, I think he is not doing himself justice to

make a statement of that character, and, when challenged, refuse to state even the county in Nova Scotia where he made these observations.

Mr. HENDERSON. Mr. Speaker——

Some hon. MEMBERS. Order.

Mr. HENDERSON. I do not think the hon. Minister of Finance has any reason to show so much temper in this discussion nor do I think that the language that the hon. gentleman used——

Mr. FIELDING. Is my hon. friend (Mr. Henderson) raising a point of order or asking a question ?

Mr. DEPUTY SPEAKER. Order.

Mr. FIELDING. If my hon. friend wishes to ask a question I will yield at once.

Mr. HENDERSON. I thought the hon. gentleman was through.

Mr. FIELDING. No, I am only beginning.

Mr. HENDERSON. Then I rise to a point of order. Now, I have the floor and I think it is only fair that the hon. Minister of Finance should take back or apologize in some way for the expression that he used when he said that the statement of my hon. friend from West Toronto (Mr. Osler) was 'scandalously untrue.'

Mr. DEPUTY SPEAKER. He did take it back.

Mr. FIELDING. In the first place I did not use it in that way, and in the second place the language which I did use was forced by his own statement, and I stated that it was unparliamentary, and that I did not wish to use it and I did withdraw it and do now. Now, the only excuse that the hon. member from Toronto has for this or these statements which are unjust, which are absolutely unwarranted—the hon. gentleman has not given us the ground on which they were based and has not even stated the name of the county in Nova Scotia that he visited or in which he made these so-called observations——

Mr. OSLER. I do not believe that I could state the name of a county in Nova Scotia.

Mr. FIELDING. If the hon. gentleman could not even name a county in Nova Scotia does he not think that he might have been a little less rash in plunging in with a statement that there is mismanagement of the public works in that province? If my hon. friend knows as little as he professes to of Nova Scotia he might at all events pay himself the compliment of making no observations about that province at all. But my hon. friend says that the pages of the estimates will prove that there is something wrong in connection with these public works. He says: Look at this list of estimates which are revoted and are kept there simply dangling before the eyes of the electors. What right has the hon. gentleman to say what motive is in the minds of hon. members on this side of the House ? Why should he attribute motives to them ? How can he say what is in their minds ?

Mr. OSLER. By their actions.

Mr. FIELDING. The hon. gentleman can point to no action which justifies his remark. It has long been the practice to take a vote for a public work and then to discover, as the year rolls on, that you have not the machinery which enables you to put the expenditure into operation. You have to get the amount voted even if you are never able to go on with the work. Then the end of the season comes and you are obliged to revote it. Session after session, ever since we have had the estimates, that has been done and there is nothing wrong, nothing unparliamentary in it ; yet, hon. gentlemen see fit to repeat that in this matter there is something unfair, something unjust and something that has in it a political purpose. I am sorry that the hon. member for Toronto has taken that position, because we have a right to expect more consideration from him. He does not visit us in this House as often as we should like to find him, but when he comes so seldom he might at least conduct himself in regard to attacks upon the government with a little more fairness and consideration.

Now, in regard to the hon. member for Argenteuil (Mr. Perley) I may say that I would expect the serious discussion of public questions by him. The hon. gentleman made reference to two or three works in the constituency of Shelburne-Queens. I did not catch the name of one of them, but one was a work at Gunning Cove and another was a work at Red Head. Let me say generally of these works in the counties of Shelburne and Queens that I cannot speak of them personally, or from personal knowledge or personal observation as my hon. friend from Toronto seems to think that he can speak for them, even although he never goes near them. It is a misfortune that the exacting public duties of a minister prevent him, especially if it is in a remote part of the country, from visiting his constituency as frequently as he would desire, and I therefore would not undertake to speak from personal observation of these things. But I know that there is no public work undertaken in the counties of Shelburne and Queens that has not been undertaken under either one of two forms ; it was either undertaken as the result of the application of the people themselves by their petition, or it was undertaken upon the recommendation

of the district engineer in consequence of his own observation and knowledge. I make that statement generally. If the people of a given district petition for a work and that work is constructed surely it is quite improper for an hon. gentleman to come into this House and say that you have given them that work as a bribe. Mention has been made of a little wharf that was constructed at Gunning Cove. What is the accusation? I have not all the facts under my hand—this discussion has come on at a moment when the public works offices are closed and I could not turn up the files—but my recollection is that this wharf was applied for, it was represented that arrangements were being made by the municipality to secure a right of way, and as we desired to please the people proceedings were taken and a wharf was constructed. I forget the cost of this small work. It turned out afterwards that there was a difficulty about getting the right of way. That was not a very serious matter. It would only show that the desire of the government was to meet the wishes of the people. My hon. friends would imply that there could be nothing but what is political in all these things. It is my misfortune not to have a great many friends in the district of Gunning Cove. If the view the hon. gentleman thinks we hold in these matters prevailed there would be no wharf at Gunning Cove. Ever since I have had the honour of representing that constituency, I have had to admit that I had not the support of that district. It voted three or four to one against me in every election and will continue to do so. But the people in that district, although they voted three or four to one against me, sent in a petition to the department, I have no doubt, to have a little wharf constructed there, and regardless of political consequences, and simply and solely with a view of accommodating the people, that little wharf was constructed.

Reference was made by the hon. member for Argenteuil (Mr. Perley) to a work at Red Head. I think I am correct in the reference? The hon. gentleman says, yes. Here he says a work was constructed which was absolutely useless, and in fact its only purpose apparently to drain a lake. That was a grave, a serious accusation and I asked the hon. gentleman for his authority. He could not give me any, he could only say: I am informed. I put it to him as a fair man, is it reasonable, right or decent for any man to stand up in this House and make an accusation of that character and say: I am informed by some one else?

Some hon. MEMBERS. No.

Mr. FIELDING—and when asked by whom he was informed he declined to say. I put it to the sense of fairness of my hon. friend that this is not fair politics, I would expect better things from him. But what are the facts? This is an old fiction, a thing which was brought into this House years ago, a miserable pitiful fabrication, the life of which was crushed out six years ago, and which has never been mentioned here from that day to this. Six years ago the hon. leader of the opposition (Mr. R. L. Borden) stated in this House that he was informed—he went no further—that this was a useless, wasteful work. He was informed that its only effect was to allow the water to run out of the lake. I need not quote at length but I have the quotation here. The locality was not identified, but later in the discussion it was identified, as Red Head. He said:

> Take the expenditure for the purpose of cutting a canal between a lake at Black Point in the County of Shelburne or Queens—I do not know which—and tidal water. The information given me by a gentleman, who has personal knowledge, is that the project was to cut a canal between tide water and the lake for the purpose of affording shelter to fishermen. The project had been reported on years ago adversely by the engineer in charge, Mr. Dodwell.

I want that point emphasized, because Mr. Dodwell was an engineer who had been in the employ of the government many years, a gentleman of eminence in his profession, appointed by our predecessors, continued in office by us and still one of the engineers of the government in Nova Scotia. He went on:

> Mr. Dodwell has said it was no use undertaking the work because the bottom of the lake was higher than tide water, and the construction of the work could not possibly result in any advantage to the fishermen; but under Mr. Locke's report——

Mr. Locke was the engineer under whom the work was constructed.

> —the canal was cut at considerable expense, and it was found that the bottom of the lake was above tide water so that the water simply ran out of the lake and the expenditure was absolutely thrown away. This is worse than waste of public money, and the Minister of Public Works should inform the House whether or not the statement I have made is correct.

It will be observed that the statement then made, six years ago, by the leader of the opposition (Mr. R. L. Borden) in consequence of information that he said was given him, was substantially the same statement that my hon. friend (Mr. Perley) has repeated here to-night. The fact that these gentlemen, who profess to have such a fund of information with which to attack the government, come here again and again, warming over the old issues of by-gone years, telling the same old stories that they told in by-gone years—surely that must be taken by the country as an indication that they do not feel any of the confidence which they profess in their ability to assail this government on that class of questions.

What are the facts? You will observe that the statement was made by an irresponsible person to the leader of the opposition (Mr. R. L. Borden) and the name was never given. We are able to draw inferences. I have reason to believe the information was given to the leader of the opposition by a gentleman whom he personally did not know and could not know but who was simply a disappointed office seeker who wanted a job on the work and did not get it and sought by that means to make trouble. However that may be, the hon. gentleman himself could have no means of knowing. I suppose he got a letter and he made inquiry. We sent a communication to the engineer in charge. Whose opinion is to be taken in this matter, that of the irresponsible people whose names nobody will mention, or that of the engineer who has a reputation to uphold in the country? Here is the report made at that time by the engineer in charge, Mr. Thos. J. Locke.

At Redhead, Shelburne county, we expended about $2,100 to convert a pond on inside of beach into a boat harbour in the spring of 1900.

I said this was six years ago. It is worse, it is eight years ago; the thing was almost before the flood.

And built cribwork protection walls to low water about 300 feet in length. On November 10, 1897, Mr. Dodwell reported on examination of this place. The work is substantial and the boat harbour is now and has been used as a shelter successfully. The class of boats used are skiff boats about 18 foot keel. The channel, from low water to pond is 20 feet wide and at low tide the boats seek its mouth as shelter, and as the tide rises go into the pond at about approximated half tide.

For additional particulars Mr. Locke refers to his report in the Public Works records. Turning to that fuller and more detailed report, we have a description of the whole operation, and then:

I may mention that the estimated cost of this work was $2,360, and although we constructed more work than was at first estimated to be necessary, yet the total cost was slightly under $2,100. The credit for this apparent saving is due to no engineering skill, but to the earnest and honest manner in which every labourer engaged in the work performed his duties. Too often in employing labour upon government works are the employees inclined to shirk responsibility, thinking in their ignorance that the money to the credit of the work is inexhaustible, but in this case each and every man knew that the building of the work meant a great deal to himself personally and in consequence we received more than just recompense for the wages paid to labourers. The work is strong and substantial and I have much pleasure in informing you that this work is satisfactory in every respect.

That is not the report of an irresponsible man, that is not the report of somebody who refuses to give his name—that is the

Mr. FIELDING.

report of a well known young engineer in the province of good reputation, who has his reputation to maintain. What does my hon. friend from Argenteuil (Mr. Perley) think to-day when he says: I am informed that this thing is wrong. He has not a name or authority to give against that young man's report. It will be remembered that in the statement made by the leader of the opposition (Mr. R. L. Borden) some years ago he told us he was informed that Mr. Dodwell the old engineer had reported against this work. That was almost the essence of the complaint, that Mr. Dodwell, the capable engineer, had reported against the work and that notwithstanding that the government had taken up this work and built it. That is a very important, a very material point. But what do we find in the public records? We find that in 1897 this very Mr. Dodwell, who we were informed had reported against this work, was the first engineer to report on it, and he reported in its favour.

November 10, 1897.

L. Coste, Esq.,
Chief Engineer, Public Works Department,
Ottawa.

Sir,—In accordance with instructions contained in your letter No. 2866, of August 6, 1897, I made a survey and examination early in September at Red Head, Shelburne county, and I now beg to submit the inclosed plan and the following report:

Red Head is a small promontory or headland on the west side of the mouth of Shelburne harbour, twelve miles due south of the county town. The settlement on and near the head comprises some two or three hundred people dependent for a living almost exclusively upon fishing.

A fresh water pond of ten or twelve acres in extent, separated from the ocean by shingle beaches, through which was a narrow channel used many many years ago to afford a safe and convenient harbour for the fishing fleet, but it gradually filled up owing to the drift of the gravel until it was with difficulty that a boat could be forced through even at high water. Some few years before confederation, therefore, an attempt was made to re-open the channel and a grant of $100 was made by the provincial government. With this sum together with labour and materials furnished by the inhabitants, a piece of crib and pile work about 200 feet long was built on the south side of the channel. The north side of the channel being unprotected, it soon filled up and the work gradually became buried in gravel. At the present time, and for some years past, the fishermen of the neighbourhood, on the approach of a storm, and also for winter quarters are obliged in order to save their boats from destruction to haul them on the beach, and often before this can be done they are dashed on the shore and injured or broken to pieces.

To enable the fishermen to carry on their operations under somewhat more favourable conditions it is desirable that the boat channel be permanently re-opened. This can probably be accomplished by the construction of the two-winged walls of cribwork, and the digging

of the channel between them as shown on the accompanying plan, which would give a protected channel having about six feet of water at H.W.O.S.T., spring tides rise 7 feet, neaps 5½ feet. That would probably remain open for some years and prove a great boon to the inhabitants.

I estimate the cost of this proposed work at $2,360.

Yours obediently,
(Sgd.) C. E. W. DODWELL,
Resident Engineer.

Now, Sir, I say that every point intended to be made in connection with this work was absolutely false and unfounded. In the first place, the hon. gentleman tried to make it appear that it was an utterly useless and wasteful work. We have the evidence as far back as before confederation that the government of the day granted money, and the people gave their own time and their own labour, to make a harbour there. We have the evidence of Mr. Dodwell, who the hon. gentleman said had reported against it, and he puts on record his statement that it would be a useful work, and that it would cost $2,360; and we have the evidence of Mr. Locke, the engineer under whom it was constructed, that they were able to complete the work for $2,100, because the people, realizing the value of the work to themselves, in saving their property and perhaps their lives, worked unusually hard and gave more than value for what they received, with the result that for an expenditure of $2,100 we have a work there of the utmost value to the people. And that is one of the class of cases my hon. friend from Argenteuil has taken up to-night, and on which he bases the motion which he has made.

Mr. R. L BORDEN (Carleton, Ont.). Mr. Speaker, I regret exceedingly that the Minister of Finance, who is attempting to lead the House in the absence of the Prime Minister, should have given such an exhibition to the members who are present as that which he has just given. The fact that he used unparliamentary language, with the knowledge that it was unparliamentary, is a curious example for him to offer to hon. gentlemen on either side or the House.

Mr. FIELDING. 'Hansard' will answer that.

Mr. R. L. BORDEN. I dare say it will, and it will prove exactly what I have stated.

Mr. FIELDING. No.

Mr. R. L. BORDEN. If I am incorrect in that, why was it that the Minister of Finance, two minutes after he made the statement, saw fit to withdraw it?

Mr. FIELDING. That is only part of the story, and the hon. gentleman knows it.

Mr. R. L. BORDEN. I know exactly what I am stating. The petulant fit of temper in which he rose to-night does not do him any credit, and will not enhance his prestige or standing in this House.

Mr. FIELDING. I do not think my hon. friend is a judge of that question.

Mr. R. L. BORDEN. The hon. gentleman is giving an exhibition now—an exhibition of dignity and leadership in this House which I am sure must delight all those who sit behind him.

I am not going very fully, Mr. Speaker, into the matters which have been discussed. The very statement the Minister of Finance has read to the House amply justifies my hon. friend from Argenteuil in bringing this matter to the attention of this House. What is the statement of the Minister of Finance on which he relies for the defence of this particular work? That it is useful to the fishermen after half tide. That is the best he could get from the engineer who has superseded Mr. Dodwell in Nova Scotia in order that some of those works might be carried on. That is generally known and recognized in the province of Nova Scotia. For my part, I would like very much to have Mr. Locke examined before a committee of this House, or before some competent tribunal, before I would be inclined to accept every statement in that report as being absolutely unqualified in respect to the condition of this work and the character of its usefulness to the people at large. It is idle for the hon. gentleman to fly into a temper and endeavour to persuade the people of Nova Scotia or the people of Canada that no public money has ben wasted in the county of Queens and Shelburne. It is universally recognized in the county itself, even by the hon. gentleman's own supporters, that public money has been wasted there, and wilfully wasted. I have no doubt that many of the works constructed there are useful works; I am making no wholesale condemnation; but I heard it stated by the hon. gentleman's opponent in the last election, Mr. James J. Ritchie, with respect to one of these works, that he went to a supporter of the Minister of Finance and asked his opinion of a public work which could be seen from that man's window, and the man said: 'It is absolutely of no use whatever; if Mr. Fielding desired to benefit us in this way, why did he not take the money this has cost and divide it up among the people in this neighbourhood?'

Mr. FIELDING. Will my hon. friend give us the name?

Mr. R. L. BORDEN. I have given the name of Mr. J. J. Ritchie, and if the hon. gentleman wants to inquire into this, I will have the man brought before a committee of this House. I want to tell him also that Mr. M. H. Richardson, the local Liberal member for the county of Shelburne, regarded one of these works as absolutely useless, and, in a

little poem which he published, he designated it as Fielding's Folly, and it is known as such throughout the length and breadth of Nova Scotia to-day. I do not say that all of these works are useless; I dare say many of them are useful and would be supported by hon. gentlemen on this side of the House; but when the hon. Minister of Finance attempts to drive it down the throats of the members of this House that there has been no waste of public money in Queen's and Shelburne, he is undertaking a task that is too large even for his eminent abilities. The hon. the Minister of Finance might as well have devoted his attention to some other matters to-night. Why did he not give his attention to the payment of $1,900, as stated by my hon. friend from Kings (Mr. Fowler), to a tailor for supervising the work upon a public building which cost $4,-200? What does the hon. gentleman think of that?

Mr. FIELDING. I do not know anything about it.

Mr. R. L. BORDEN. Who does ?

Mr. FIELDING. As I did not, I did not speak of it.

Mr. R. L. BORDEN. The hon. gentleman very conveniently does not know anything about some of these things very much to the detriment of the government.

Mr. PUGSLEY. Rather ancient.

Mr. R. L. BORDEN. How so ?

Mr. PUGSLEY. It occurred five or six years ago.

Mr. R. L. BORDEN. My hon. friend endeavours to create a sort of statute of limitation for these things. I do not know at what term he would wish to consign to forgetfulness the lesson he has lately received in the province of New Brunswick ? Without attempting any detailed criticism, it is apparent to every one who pays any attention to the matter, that there is absolutely no system governing the appropriations of public money for public works in this country. My hon. friend from Argenteuil (Mr. Perley) brought that out very well when he pointed to the construction of certain wharfs in small lakes. If you are going to undertake works of that kind, where are you to stop? And on what principle do you construct them? I can well understand the principle upon which the late Alexander Mackenzie and his government are said to have proceeded, namely, that where these works are of a federal character, they would be provided for out of the federal funds; where they were partly of a federal and partly of a provincial character, they would be left entirely to the provincial treasury. I can understand such a principle as that, but I cannot understand, at least I cannot appreciate, the principle under which these works are constructed throughout the country by this government—solely according to the political expediency of the moment and the amount of political advantage which hon. gentlemen in office for the time being may think they can derive from them. Surely that is no principle, yet I challenge any man to state any other on which the expenditure of public money for public works has been carried on. The illustrations given by my hon. friend from Argenteuil were but samples. There are many others in my mind, which I would give if the hour were not so late. Take, for instance, the wharf at Grande Vallée, in the province of Quebec, where $60,000 of the public money was expended.

Mr. PUGSLEY. Is that Seven Islands ?

Mr. R. L. BORDEN. No, it is an expenditure which has been pretty well discussed in this House within the past three or four years and for which there was absolutely no defence. The Minister of Finance (Mr. Fielding) does not seem to realize that in these matters he has very great responsibility. He seems rather inclined to give the lead in his own county and furnish an example to his colleagues on the treasury benches and their supporters to show how appropriations for public works may be obtained and used. Let me point out to him the language of a man whose opinion he will respect—the language of William Ewart Gladstone—with regard to the duty of the Chancellor of the Exchequer in Great Britain, and these duties are precisely of the same character as those my hon. friend has to carry out in this country :—

> No chancellor of the exchequer is worth his salt who makes his own popularity either his first consideration, or any consideration at all in administering the public purse. In my opinion the Chancellor of the Exchequer is the trusted and confidential steward of the public. He is under a sacred obligation with regard to all that he consents to spend.

Then Mr. Morley, from whose work I take this quotation, continues himself :—

> This tone of thinking and feeling about the service of the state spread under his majesterial influence from chancellors and the permanent officers that bear unobtrusive but effective sway in Whitehall, down to tide-waiters and distributors of stamps. As Burke put the old latin saw, he endeavoured to give us his system of economy, which is itself a great revenue.

On another occasion Mr. Gladstone said :

> I mean this, that together with the so-called increase of expenditure there grows up what may be termed a spirit of expenditure, a desire, a tendency prevailing in the country which, insensibly and unconsciously perhaps, but really, effects the spirit of the people, the spirit of parliament, the spirit of the public departments, and perhaps even the spirit of those whose duty it is to submit the estimates to parliament.

On another occasion he said :

The Chancellor of the Exchequer should boldly uphold economy in detail; and it is the mark of a chicken-hearted chancellor when he shrinks from upholding economy in detail, when because it is a question of only two or three thousand pounds, he says that is no matter.

And as Mr. Morley remarks in another passage, democracy is apt to be spendthrift and any Chancellor of the Exchequer should endeavour to put the brakes on. But instead of doing that, our Minister of Finance (Mr. Fielding) sets the example to every one of his colleagues and supporters by lavish, extravagant and absurd expenditures in his own constituency. At this hour I will not trespass further, and only regret that the hon. the Minister of Finance should have seen fit to give way to the temper he has exhibited this evening.

Mr. A. JOHNSTON (South Cape Breton). Our hon. friends opposite are in the habit of discussing from day to day at great length matters of importance only from a party point of view, but here is a question of importance to the people, and therefore I propose to detain the House for a short while, even at this late hour, in putting myself on record with regard to it. The hon. leader of the opposition opened his remarks by asserting that the Finance Minister had given an exhibition and proceeded to lecture him. Well, if the signs of the time point correctly, it will be many a long day before the hon. gentleman has any license to lecture the Minister of Finance or any other hon. member on this side as regards making an exhibition of himself. But what I want to deal with particularly is the remarks made by the leader of the opposition regarding certain works in Queens and Shelburne. With regard to those the hon. gentleman said that the best that could be said of them was that they are useful to the fishermen only at half tide.

If the hon. gentleman had any appreciation of the needs of the fishermen of Nova Scotia and on the sea-coasts of Canada generally, and the conditions under which they labour, he would not quarrel with an expenditure which would benefit them even at half tide. It is because he has no knowledge of conditions among the fishermen that he has made his criticisms of this evening. If he had the interest of the people of this country at heart he would familiarize himself with the conditions that obtain among the fishermen; and if he had enough interest in their welfare to go among them and learn how their work is done, he would not quarrel in this House with an expenditure that would benefit them. The hon. gentleman says that the universal opinion in the counties of Queens and Shelburne is that the public works in that county are useless. The hon. gentleman has no knowledge of the situation. But let me say, with some knowledge of the situation, that that statement is not correct—and that, I believe, is as strongly as I am allowed to put it. I have been in Queens and Shelburne. The hon. gentleman had his opportunity to go there not very long ago, but he took mighty good care not to go. Had he gone into those counties he would have ascertained the facts, and he would know that this statement concerning the opinions of the people of Queens and Shelburne is wholly wrong. The hon. gentleman (Mr. R. L. Borden) does not relish being told the truth. But, so far as I am concerned, the truth he shall hear.

An hon. MEMBER. The hon. member for Toronto (Mr. Osler) is going away.

Mr. JOHNSTON. I would like to have the graveyard statesman remain, for I have some observations to address to him also. I should have liked it much if the hon. leader of the opposition (Mr. R. L. Borden) had remained in his seat. But I know that his reason for not remaining is that he does not care to be confronted with the facts of the case.

Mr. GAUVREAU. He can't stand it.

Mr. JOHNSTON. No, he can't stand it. But it is time that the country understood that the statements made by the leader of the opposition and the gentlemen who support him are wide of the mark. It will be our duty to educate the hon. gentleman as to what is going on in this country, for he has been asleep for ten years.

Now, I come to an observation of my hon. friend from West Toronto (Mr. Osler). He is not in the House just now. He is not very often in this House. I want the people of this country to know that the gentleman who comes into this House and undertakes to lecture 'back benchers' on the government side is rarely in his seat. If his constituents have their own interests and the interests of the country at heart, they will take the hon. gentleman to task for absenting himself so much from this House. I would not call attention to this but for the fact that the hon. gentleman rarely comes into this House without making himself offensive to gentlemen who sit on this side —gentlemen who do not propose henceforth to take lectures from him or anybody else. I call attention to the matter for the reason that when the hon. gentleman comes into this House, which he does only on occasion, he seems utterly incapable of conducting himself as he ought to do. When the hon. gentleman says that he makes his comments as the result of observation in Nova Scotia, New Brunswick and Quebec, I say, at least so far as Nova Scotia is concerned, he is speaking incorrectly. I do not know how far you will permit me to go, Mr. Speaker, in emphasizing that statement. I read a statement by the hon. member for West Toronto made outside this House and during the recess. I suppose I should be within my right in characterizing that statement

correctly, it having been made outside. Very well, Mr. Speaker, I understand I have not the right to characterize that statement correctly. The hon. gentleman (Mr. Osler) made a statement that this government, during all the years it has been in power, had never made an honest contract. Well, that statement was exactly on a par with the statement made by the hon. gentleman in regard to having personally observed wharfs in the province of Nova Scotia. The hon. gentleman was obliged to admit that he had absolutely no foundation for the statement he has made. I want to call the attention of the people of this country, both inside and outside this House, and ask them what they think of a man who, placing himself in the forefront of a great political party, would come to the House of Commons and make a statement for which he has absolutely no foundation in fact. I am sure the people will measure these statements at their correct worth, and will judge the hon. gentleman accordingly. The hon. gentleman talks about 'back benchers.' 'Back benchers,' indeed. There was an occasion when the hon. gentleman was brought to the front. Those who were present will live long before they forget it. A more humiliating spectacle was never presented in this House of Commons than that we witnessed that afternoon when our hon. friend was selected to reply to the financial statement delivered by the Minister of Finance. The hon. gentleman was a 'front bencher' just for once. But have you seen, or has any other hon. gentleman seen, the hon. member for West Toronto trotted to the front since that? Never. While the hon. member for West Toronto may, in his own estimation, believe that he is a very important statesman, hon. gentlemen who sit on the other side have sized him up correctly. I make the prediction that you will never again see him in the front bench, no matter what he may think of himself.

So far as the expenditure in Nova Scotia is concerned, I challenge any hon. gentleman in this House to indicate one particular work which they would declare useless in the presence of the people of the constituency in which it is placed. It was so in the counties of Queens and Shelburne. The Conservative candidate in the last election, far from criticising the public works constructed in those counties, indicated his willingness to support further extensions of public works. Yet the hon. member for Argenteuil, entirely ignorant of conditions in those counties, without a knowledge of the facts, has placed this motion in your hands upon information which he is either ashamed or afraid to place before the people of this country. Knowing the source from which he got his information, I do not wonder that he declined to place it before this House. So far as we in Nova Scotia are concerned, we are prepared to stand

behind any Minister of Public Works who will follow in the lines laid down by his predecessors since 1896, and construct those works which the people petition for and which can be shown to be needed in the public interest. The hon. member for Argenteuil neglected to inform himself of the facts in regard to these expenditures. I am afraid he was animated with a desire not to render a service to the country, but to make political capital for his party, and under those circumstances he cannot hope for any support from this side of the House for his resolution.

Mr. R. BLAIN (Peel). I am sure the House is disappointed that this debate was not allowed to be closed by the Minister of Finance and by the leader of the opposition. I would not have spoken had not the hon. member for Cape Breton (Mr. Johnston) felt it his duty to do so. If there is any man in this House who should stand up and make an apology it is that hon. gentleman. It is not for him to attempt to lecture so important a representative as the hon. member for West Toronto (Mr. Osler). There is no member in this House who commands a wider measure of respect in the country generally and who has more fully the confidence of his constituents, than the hon. member for West Toronto, and I am sure the hon. member for Cape Breton, on reflection, and when he reads his remarks in the 'Hansard,' will feel it to be his duty to apologize, not only to the member for West Toronto, but to the people of Canada. In looking over expenditures for public works I find that my hon. friend himself does not appear to much advantage. I have a return in my hand in which he figures conspicuously at a place called Glace Bay. In this correspondence I find a letter dated Ottawa, March 17, 1903:

Hon. J. I. Tarte,
Minister of Public Works,
Ottawa.

Dear Sir,—We beg to recommend that provision be made in the supplementary estimates for the following works in our county. They are all important and we trust will receive your attention.

A. JOHNSTON,
A. KENDALL,

The first request is for Glace Bay harbour improvements, $10,000; Piper's cove protection, $500; Main-à-Dieu, $2,000. Then they mention two other places for which no particular sum is asked; I suppose they were willing to trust to the generosity of the Minister of Public Works in regard to them. I presume the request was in response to the circular sent out by this government some years ago. If there is any hon. gentleman who should take special notice of this circular, it is the Finance Minister who guards the treasury. This was a circular sent out by the government themselves, dated, Ottawa, March 13, 1900:

My Dear Sir,—During Mr. Tarte's absence I have been requested to take charge of his department for him, and it would be of great service in enabling me to take up his work if you kindly write me at your earliest convenience with reference to the following subjects :

1. For what works in your constituency has there been a parliamentary vote?
2. Have these works been begun? If so, in what state of progress are they?
3. If not begun, what is your advice as to whether or not they should be begun?
4. Are you asking for provision being made in supplementary estimates for :
(a) New works;
(b) Carrying on or completion of works already authorized or begun; If so, what are your views?
(a) As to sum required;
(b) As to what work should be performed?
5. In case of any work not now under contract, but authorized by vote of parliament, please state whether you advise its being carried out by contract or by day's labour.

Here is a circular sent out to Liberal members and defeated candidates. May I ask the hon. Minister of Finance if it is a circular that the government is proud of ? It is not a circular, in general terms, representing that hon. gentlemen are prepared to devote a part of the public money to construct works wherever they are required, but it is a political circular asking for information which ought to be found within the limits of the hon. gentleman's own department. This is the first request contained in this circular :

For what works in your constituency has there been a parliamentary vote.

The government, in sending out that circular——

Mr. FIELDING. Who sent out the circular ?

Mr. BLAIN. It is signed 'Wm. Mulock'.

Mr. SAM. HUGHES. Do you repudiate it.

Mr. FIELDING. No, what is the date.

Mr. BLAIN. March 13, 1900.

Mr. FIELDING. There seems to have been two general elections since then.

Mr. BLAIN. This was issued just a few months before a general election.

Mr. FIELDING. The hon. gentleman asked me if I repudiated it. I do not want to repudiate it, but it seems as if the people had approved of something like that.

Mr. BLAIN. Approved of that ?

Mr. FIELDING. Approved of the general results.

Mr. BLAIN. There has been an election in New Brunswick since then.

Mr. FIELDING. The new premier of New Brunswick says that it was not on party lines but that it is a coalition government.

Mr. BLAIN. If it is not on party lines I would suggest to my hon. friend that the people who have been supporting his party rose up and condemned the policy of the government.

Mr. FIELDING. You must not go back on Mr. Hazen.

Mr. SAM. HUGHES. Was not the hon. Minister of Public Works (Mr. Pugsley) down there doing something ?

Mr. FIELDING : You must not go back on Mr. Hazen.

Mr. BLAIN. My hon. friend is very anxious to know the date. I have given the hon. gentleman the date and this is the point that I want to direct the attention of the House to. It says :

For what works in your constituency has there been a parliamentary vote?

What public good would be served by sending out a letter of that kind to Liberal members and defeated candidates asking them in what constituency there has been a parliamentary vote ? Does not the fact of a minister of the Crown sending out a letter of this kind to people suggest political corruption ?

Some hon. MEMBERS. No.

Mr. BLAIN. My hon. friend smiles. Could he take any other suggestion ? If it were a public document and the government were seeking to obtain information as to the parts of Canada in which money should be expended in the interest of the public, it would have been sent to every representative of the people, but this was a circular sent out to their own political supporters and suggesting that if they had not asked for votes of money they should ask for votes of money. That circular was used in the political campaign in November, 1900. It was taken around by the Liberal candidates in the different constituencies and it contained a suggestion from this government that they were prepared to do any thing that was required in order that their party should be sustained at the polls. That letter was not repudiated and the Minister of Finance does not repudiate it to-night but rather suggests that it was a very good letter.

Mr. FIELDING. I said that the results seemed to be approved by the people.

Mr. BLAIN. The hon. gentleman contends that since that time it has been endorsed by the people of Canada.

Mr. FIELDING. Yes, but that is a little ancient.

Mr. BLAIN. Then I would direct the hon. gentleman's attention to something that is a little modern. A few days ago his party were defeated in New Brunswick on federal issues because the hon. Minister of Finance sent his colleague the Minister of Public Works down to take charge of the campaign. When we were asking the other day for some information about the Department of Public Works we were informed that the head of that department was down in New Brunswick taking care of the election. Of course, he has come back with his answer.

Mr. D. ROSS. How would it do for you to win some elections yourselves ?

Mr. BLAIN. What does the hon. gentleman say ?

Mr. D. ROSS. You might get a little more encouragement if you would win some elections as a federal party and not take so much credit for provincial elections.

Mr. BLAIN. The hon. gentleman might take heed of the people of his own province because he has been asked to resign because of the policy of this government. A resolution was passed in the hon. gentleman's own province and I am sure that the hon. gentleman has a copy of the letter in his pocket or in his office asking the hon. gentleman and every colleague supporting this government to resign because the policy of this government is not in accordance with the wishes of the people of that province.

Mr. D. ROSS. I wish to tell the hon. gentleman that———

Some hon. MEMBERS. Order, order.

Mr. SPEAKER. Order. The hon. gentleman (Mr. Blain) has the floor.

Mr. D. ROSS. The hon. gentleman made a statement in reference to myself and I want to give the explanation. I never received such a resolution and the only resolution which was passed was passed by the Asiatic Exclusion League of Vancouver and I do not represent the constituency of Vancouver in this House.

Mr. BLAIN. Does my hon. friend deny that in the city of Vancouver there was a resolution passed calling upon every member supporting this government from British Columbia to send in his resignation ? The hon. gentleman does not deny that.

Mr. D. ROSS. I tell the hon. gentleman that the Asiatic Exclusion League of the city of Vancouver passed such a resolution. The Asiatic Exclusion League does not represent the majority of public opinion in Vancouver and has nothing to do with the constituency I represent.

Mr. BLAIN. The Asiatic Exclusion League could say the same thing of the hon. gentleman. He does not represent the whole of the people of British Columbia. He only represents a portion of them. However, I will leave the hon. gentleman to settle that with the Asiatic Exclusion League.

Mr. D. ROSS. I think you had better.

Mr. BLAIN. I want to deal a moment or two with the hon. member for Cape Breton (Mr. Johnston). The hon. gentleman is very anxious to enter into a discussion with some of the members on this side of the House and I want to point out that he used his influence with this government to get them to spend $25,000 on private property. I direct my hon. friend's attention to the fact that when the government proposed $10,000 to be expended at Glace Bay the hon. gentleman dropped in at that moment and wrote this very interesting letter.

Sydney, N.S., Canada, January 22, 1903.

Hon. James Sutherland,
Minister of Public Works,
Ottawa, Ont.

My Dear Sir,—Following up my conversation with you while in Ottawa recently, I desire to emphasize the importance of making provision during the coming year for providing suitable harbour accommodation at Glace Bay. There is growing up there a very large community, and you can readily understand it is of the utmost importance to them that some steps be taken looking to the re-opening of the harbour. This matter was up for consideration during the last session of parliament, and a start was made by placing in the estimates a sum of $10,000. It was not intended at the outset that this amount would be sufficient. I understand that the matter was reported upon, and an estimate made indicating that about $60,000 would be required for this work. The Dominion Coal Company have, however, submitted a proposition by which, I think, the necessary accommodation can be provided for the sum of $25,000. Dr. Kendall and myself beg therefore to request that provision shall be made for this amount during the approaching session of parliament.

In the meantime, I remain,

Yours very truly,
A. JOHNSTON.

Some hon. MEMBERS. Hear, hear, he is all right.

Mr. BLAIN. My hon. friends applaud not my statement but the hon. gentleman's letter. What does the letter say ? It calls upon the government of Canada to spend $25,000. Where ? In the interests of the public at Glace Bay ? No, but on the private property of the Dominion Coal Company at Glace Bay. That is the statement and I ask the minister's attention to it.

Mr. FIELDING. I know all about it.

Mr. BLAIN. Would my hon. friend deny it ?

Mr. FIELDING. No, I do not deny it, I prefer to have my hon. friend continue.

Mr. BLAIN. My hon. friend endorses it. He allows $25,000 of public money to be expended, and rather applauds its expenditure, not upon public property for public purposes but upon private property for the Dominion Coal Company and a toll is charged by the Dominion Coal Company for every resident of that district who attempts to cross over the threshold of that harbour. Is that in the public interest? Worse than that is the fact that the government entered into an agreement, a copy of which I have here, allowing the Dominion Coal Company to take $25,000 of the people's money which was handed over by the Finance Minister—to be expended by the government? Oh no, to be expended by the Dominion Coal Company themselves. With what result? With the result that after this agreement is entered into the company sent a bill to the government for about $16,000 for money expended by them prior to the agreement being entered into, and the minister allowed a portion of the $25,000 to go to pay the Dominion Coal Company for money expended upon the harbour before the agreement was entered into. What does that mean? The hon. gentleman who represents the county came to the rescue by telegrams and letters pleading with the government that they should allow this amount out of the $25,000 to be used in this way.

The Auditor General entered his protest against this expenditure and pointed out that it was a wrong expenditure. He stated that this was the first time in the hisory of Canada that public money had been expended upon a private wharf and the people who owned the private wharf were permitted to charge the public wharfage. He entered his protest against it and in this correspondence I find a letter written by my hon. friend who has just taken his seat, pleading with the Finance Minister and with the government to find out if there was not some way by which they could get the Auditor General to pay this money over to the Coal Company, asking the government to interfere with the duty of the Auditor General. He writes this over his own signature, asking if some pressure cannot be brought to bear upon the Auditor General to allow a wrong account to be passed through in this way. I wish to express my approval of the resolution and I shall of course record my vote in favour of it. I would point out to the Minister of Finance (Mr. Fielding) that the government has never laid down any policy with respect to the expenditure of money upon wharfs. They have no policy in that respect except to make expenditures where they will most assist them in elections. I would also point out that notwithstanding the enormous public expenditures the revenue from wharfage in Nova Scotia is less than it was ten years ago.

Mr. FIELDING. The hon. member will also find that the revenues from canals in the province of Ontario, notwithstanding the enormous expenditures upon the canals, are less than they were at that time.

Mr. BLAIN. That may be.

Mr. SAM. HUGHES. Have you free wharfs down there now?

Mr. FIELDING. In some cases; you have free canals up here.

Mr. SAM. HUGHES. We ought to have.

Mr. FIELDING. I do not find any fault with them that is the difference.

Mr. BLAIN. My hon. friend answers that we have free canals. They were made free by this parliament and endorsed by every member. The government are constantly telling the people that wherever they expend money it is in the interest of the people, and they are making efforts to get revenue from these expenditures; but as I have pointed out the revenue from wharfs in Nova Scotia is less than it was ten years ago.

Mr. J. W. DANIEL (St. John City). I thought I heard a reference to the New Brunswick election, and the statement that federal politics did not enter into that election. That is hardly correct, at least so far as one party to the election is concerned, for while the Conservative party did not appeal directly for support on that point, the Liberal party certainly did. I hold in my hand a circular which was sent to every elector in the city of St. John.

Mr. SPEAKER. Of course, the hon. member will see that while there may have been some incidental reference to that, if he is proposing to direct his remarks solely to that, it has no relevancy to the question under consideration.

Mr. DANIEL. My point has reference to the offering of public works as a claim for votes, and to the corrupt use of public works for that purpose, and I mention this as an instance in point. The circular that I refer to is as follows:

St. John, N.B., February 28, 1908.

Dear Sir,—We trust that your vote on March 3rd will be for us, and we respectfully solicit it.

Mr. TALBOT. Mr. Speaker, I rise to a point of order. Is that pertinent to the question before the Chair?

Mr. SPEAKER. If the point of order is taken I shall have to rule that it is not pertinent.

Mr. DANIEL. Of course, Mr. Speaker, I bow to your decision; I cannot do other-

wise. But the point has been made, I think, several times to-night, that public works have been offered to constituencies in a corrupt way in order to influence voters in those constituencies to vote for the government ticket. I believe that no point of order has been raised in regard to any statement of that kind that has been made up to the present, and I do not see why this reference is any more out of order than previous ones which have been made. If you say it is not in order, Mr. Speaker, of course I cannot read it; but it is a plain intimation to the electors of St. John that they should vote for the Liberal ticket in order that public expenditures may be made in that constituency. That is the appeal that was made by the Liberal party, and it was, I take it, fully and wholly a corrupt appeal. In the same way, I have copies of posters that were put up with the same object in view—such a poster as the following:

Mr. SPEAKER. Of course, this is really not relevant to the question before the House. The motion indicates that the spending of public moneys is for the benefit of favoured corporations and private individuals. There is no suggestion that it is for political purposes. Under the circumstances, I cannot see that the hon. gentleman's remarks are at all pertinent to the question before the House. I must rule that they are not.

Mr. DANIEL. If I am not in order, Mr. Speaker, I will of course not continue. I shall probably have another opportunity of bringing the matter before the House. At the same time it gives me an opportunity to contradict the statement that was made the other night that there was no federal politics brought into that election.

House divided on amendment of Mr. Perley.

Barker, Bennett, Ward, Lancaster, Leonard, Martin (Queens, P.E.I.), Clare, Worthington, Chisholm (Huron), Lalor, Forget, Beattie, White, Lewis, Thompson.

Amendment negatived.

Mr. CALVERT. The hon. member for Bellechasse has not voted.

Mr. TALBOT. I am paired with the hon. member for Jacques Cartier or I would have voted twice against the amendment.

Mr. LEFURGEY. I am paired with the hon. member for Cumberland (Mr. Logan) or I would have voted three times for it.

Motion agreed to and House went into Committee of Supply.

Progress reported.

Mr. FIELDING moved the adjournment of the House.

Mr. R. L. BORDEN. What business tomorrow ?

Mr. FIELDING. Items 14 and 18 on the Order Paper and resolution of the Minister of Inland Revenue respecting patent medicines. Then Supply for the Marine and Fisheries Department.

Motion agreed to, and House adjourned at 2.17 a.m. Friday.

---

## HOUSE OF COMMONS.

FRIDAY, March 13, 1908.

The SPEAKER took the Chair at Three o'clock.

### QUESTION OF PRIVILEGE.

Hon. Sir FREDERICK W. BORDEN (Minister of Militia and Defence). Mr. Speaker, I desire to bring up a matter of privilege. In the 'Citizen' newspaper of this morning there is an article entitled 'The Ross Rifle Scandal,' and in the course of that article the following language is used :

The difficulty of getting at the truth in connection with this remarkable deal was illustrated in parliament only a few weeks ago. Colonel Worthington put a series of questions to the Minister of Militia, with the purpose of eliciting the fact that the Ross rifle had been tested in 1902 by the British government, and found 'markedly inferior' to the Lee-Metford, and that the government of Canada, had been specially warned of this before it entered into the Ross contract. The reply of the minister to Colonel Worthington was a denial that there had been any 'official' test. Now, notwithstanding this denial, the following is alleged to have occurred: In 1902, Hon. St. John Brodrick, then Secretary for War, communicated with Lord Minto, then Governor General of Canada, and pointed out that though the Ross rifle would use the same cartridge as the Lee-Metford, the parts of the rifle were different, and would not be interchangeable. This would be a serious matter in the event of a war in which Canadian troops were co-operating with the British army in the field. About this time a test of two Ross rifles and two Lee-Metford rifles was made by the commandant of the School of Musketry at Hythe, with the result that he reported the Ross rifle 'markedly inferior' to the Lee-Metford rifle, which is the arm of the British service. This information was also forwarded to Canada, and should have been sufficient to at least cause the Canadian government to act with caution; but, notwithstanding all this, the extraordinary agreement with the Ross Rifle Company was closed.

Now comes the curious part of it—

This is the part that I wish to call your attention to Mr. Speaker.

This correspondence, which took place in 1902, was published in a report of the British War Office for 1906, and it was only when this report was added to the collection of volumes in the library of parliament that the existence of this correspondence was discovered.

Now, in large type the following words :

Since the discovery the volume has disappeared from the shelves of the parliamentary library, and there is no record in the books to show who took it away. In other words, it has been clandestinely abstracted.

I thought it proper to call the attention of the Librarian of Parliament to this matter, and I have just received this communication. A portion of the article that I have read from the 'Citizen' is cut out and pinned on the paper from which I am reading :

With regard to the foregoing you may care to have the following report :

1. No report of the nature indicated appears in the imperial parliamentary papers for 1906; see index herewith.

2. No report of the kind has ever been received in this library from any quarter whatever.

3. All the army volumes of 1906 that have been received up to date are on our shelves at this moment; not one has been taken away by anybody.

(Sgd.) MARTIN J. GRIFFIN,
Parliamentary Librarian.

## PROPRIETARY AND PATENT MEDICINES.

Hon. WM. TEMPLEMAN (Minister of Inland Revenue) moved that the House go into committee on Tuesday to consider the following proposed resolution :

Resolved, that it is expedient to bring in a measure providing for the inspection and the regulation of the sale of proprietary and patent medicines.

Motion agreed to.

## CIVIL SERVICE COMMISSION.

Mr. R. L. BORDEN. When may we expect the report of the Civil Service Commission and what is the reason of the delay ? I understand the committee ceased its active labours some two months ago.

Mr. FIELDING. In consequence of the representations made in the House I communicated with the chairman of the commission who informed me the commission expected to have the report ready shortly, but he did not fix a date.

## MR. R. L. DRURY, OF BRITISH COLUMBIA.

Mr. R. L. BORDEN. The Prime Minister promised to lay on the table of the House the order in council appointing Mr. R. L. Drury, of British Columbia, to represent Canada in Japan in connection with the arrangement made with the Postmaster General. I hope that will not be overlooked.

Mr. FIELDING. The Prime Minister is not present to-day, but I will see that it is brought down on Monday.

## ALLEGED IMMIGRATION FRAUDS.

Mr. R. L. BORDEN. The Minister of the Interior promised to make a statement with regard to certain reports that have appeared in the public press relative to the immigration service at Halifax. Is the minister prepared to do so to-day ?

Hon. FRANK OLIVER (Minister of the Interior). The hon. member for Jacques Cartier (Mr. Monk) asked certain questions yesterday and I may read the answer prepared : It does not appear advisable that a public statement should be made as to the means taken by the government to discover the improper practices mentioned, as they are necessarily of a confidential character. The Dr. Dickey referred to is H. L. Dickey, M.D., of Halifax, who has been medical inspector for the Department of Immigration at the port of Halifax for some years. The department has no knowledge as to the identity of W. Dodd ; he has no position under the government. The government has dispensed with the services of Mr. Dickey.

Mr. R. L. BORDEN. I would like to know whether the government has heard of the belief entertained in certain quarters at least, that the name 'W. Dodds' is an assumed name, and whether they are taking any steps to ascertain the identity of the person who has evidently addressed communications under that name to persons in Great Britain for the purpose of carrying on work which certainly is not in the public interest. I should imagine that a telegram sent to the offices of the department in Great Britain would easily bring about an examination of the papers sent and in that way it could be ascertained whether or not any person in the public service is the author of these letters, and used this assumed name to sign them.

Mr. OLIVER. The matter is not closed so far as the government is concerned and I will probably be able to give the House information later.

## INQUIRY FOR RETURN.

Mr. A. A. McLEAN (Queens). When will the return ordered on the 12th of February in relation to breaches of the Inland Revenue regulations. be brought down ?

Mr. TEMPLEMAN. The return was laid on the table of the House a couple of weeks ago.

Mr. A. A. McLEAN. I could not find it in the office up stairs.

## THE RAILWAY COMMISSION.

Bill (No. 112) to amend the Railway Act as respects the constitution of the Board of Railway Commissioners.—Mr. Graham—read a second time, and House went into committee thereon.

Section 1.

1. Subsection 1 of section 10 of the Railway Act, chapter 37 of the Revised Statutes, 1906, is repealed and the following subsection is substituted therefor :—

2. There shall be a commission known as the Board of Railway Commissioners for Canada, consisting of six members appointed by the Governor in Council.

Mr. LENNOX. The figure '2' seems to be a clerical error there. It probably is not necessary to have any figures at all, but if it were it should be the figure '1.'

Mr. GRAHAM. We will strike out the figure altogether.

On section 2,

2. Subsection 5 of the said section 10 is repealed and the following is substituted therefor :—

5. One of such commissioners shall be appointed by the Governor in Council, chief

commissioner, and another of them assistant chief commissioner of the board.

(a) Any person may be appointed chief commissioner or assistant chief commissioner who is or has been a judge of a Superior Court of Canada or any province of Canada, or who is a barrister or advocate of at least ten years' standing at the bar of any such province.

(b) The chief commissioner shall be entitled to hold the office of chief commissioner, and the assistant chief comissioner the office of assistant chief commissioner or that of chief commissioner, so long as they respectively continue to be members of the board.

(c) The assistant chief commissioner shall have all the powers of the chief commissioner.

Mr. BERGERON. What is the effect of this section ?

Mr. GRAHAM. It appoints an assistant chief commissioner and two commissioners.

Mr. BERGERON. It is practically creating a new board.

Mr. GRAHAM. Yes.

Mr. LENNOX. Has the minister considered the effect of subsection (c). It may be quite proper but I have a little doubt about it.

(c) The assistant chief commissioner should have all the powers of the chief commissioner.

There must be some one who has supreme power in a body of this kind. I apprehend that that only is intended to mean that the assistant chief commissioner shall have all the powers of the chief commissioner in the absence of the chief commissioner. It may work out all right as worded but it seems to be a little inconsistent to say that the assistant chief commissioner shall have all the power of the chief commissioner. I call the attention of the minister to that.

Mr. GRAHAM. If that clause were alone in the Bill it might be as my hon. friend says but at page 2, section 4, it will be seen that the duties are outlined as follows :

The chief commissioner, when present, shall preside, and the assistant chief commissioner, when present, in the absence of the chief commissioner, shall preside, and the opinion of either of them upon any question arising when he is presiding, which in the opinion of the commissioner is a question of law, shall prevail.

Mr. R. L. BORDEN. If that regulates the whole matter what is the use of subsection (c) ?

Mr. GRAHAM. Subsection (c) does not refer at all to the position he will occupy when the board is meeting but to the powers which he shall possess.

Mr. R. L. BORDEN. What powers are you intending to confer by subsection (c) ? I cannot quite understand it, it seems to give two co-ordinate authorities exactly the same power.

Mr. GRAHAM. Section (c) gives the assistant chief commissioner power to sign orders, because under a section of this Bill two of the commissioners may constitute the board.

Mr. R. L. BORDEN. Cannot any one of the commissioners sign orders ? I am asking for information.

Mr. AYLESWORTH. The position is exactly analogous to the present position as to the powers of the deputy chief. Under the present law, in the absence of the chief or his inability to act, the deputy shall exercise the powers of the chief commissioner in his stead and in such cases all regulations, orders and other documents signed by the deputy chief commissioner shall have the like force and effect as if signed by the chief commissioner. This is an analogous provision.

Mr. R. L. BORDEN. This is an analogous provision except that it goes a good deal further. In that case it is said that the deputy shall exercise certain powers in the absence of the chief commissioner. That is perfectly plain and perfectly proper but it is not this provision, which is as follows :

The assistant chief commissioner shall have all the powers of the chief commissioner.

If this were a provision that in the absence of the chief commissioner, the assistant chief commissioner should have all his powers, it would be an exactly analogous case to that which the Minister of Justice has just mentioned. I do not quite see the analogy however, having regard to the difference in the language.

Mr. LENNOX. I noticed section 4 which corresponds to section 12 of the old Act and provides for a case where we have a larger number of commissioners to deal with. But the difficulty I find in this is that when you say the assistant chief commissioner shall have all the powers of the chief commissioner, without saying under any special circumstances, it amounts to this that if the whole six were sitting together, as they might sit on some occasion, the assistant chief commissioner would have just as much power and could assert his power as effectually as the chief commissioner. That is not intended and it conflicts with section 4.

Mr. GRAHAM. The Minister of Justice (Mr. Aylesworth) is firmly of the opinion that the clause should stand as it is, owing to the fact that this board will sit probably many times in two sections. We want it made clear that the assistant chief commissioner shall have full powers to do every-

thing that the chief could do, and with the other part of section 4, on page 2, the matter seems to be fully defined and made clear. He is strongly of the opinion that section (c) should stand as it is.

Mr. LENNOX. I do not want to persist too much but I think that state of things is adequately provided for in section 4, which says :

2. The chief commissioner, when present, shall preside, and the assistant chief commissioner, when present, in the absence of the chief commissioner, shall preside, and the opinion of either of them upon any question arising when he is presiding, which in the opinion of the commissioners is a question of law, shall prevail.

If they are sitting as a divided court we have the provision there in section 4, but you have on the other hand in this preceding section, the broad, unqualified statement that the powers of the assistant chief commissioner shall be equal to the powers of the chief commissioner.

Mr. GALLIHER. Surely the explanation of that is this : In the first place, in order to give the assistant chief commissioner the same powers as the chief commissioner in the absence of the chief commissioner, you have first to put in a clause that clothes him with that power. Subsection (c) clothes him with that power, then section 4 states under what circumstances he shall exercise that power.

Mr. LANCASTER. I quite agree that the explanation of the hon. member for Kootenay (Mr. Galliher) makes it reasonable. The trouble is that the explanation is not in the Act and I think we should in some way qualify subsection (c) so as to make it not contradictory and not in conflict with section 4 of the Bill now before us, because certainly on their face the two sections do conflict. I understand the intention to be just as the hon. member for Kootenay (Mr. Galliher) says, but the trouble is that that is not in the Act, and I would suggest in the absence of anything better that you should say in subsection (c) :

Subject only to section 4 of this Act.

And then go on to say that the assistant chief commissioner shall have all the powers of the chief commissioner. If you do not do something like this then a case might arise where the board would consist of the chief commissioner and the assistant chief commissioner only as the Act provides that only two commissioners may form a quorum. In such a case, as they would have exactly the same power they might disagree upon a point of law and come to an absolute deadlock. With such a provision as I have suggested the opinion of the chief commissioner would prevail and there would be no possibility of a deadlock. If the chief commissioner and the assistant chief commissioner have exactly the same powers then when they are sitting together, either with or without other commissioners, they may disagree on points of law and a deadlock ensue.

The Bill I think is also a little defective in that it does not permit of the board sitting without the chief commissioner or the assistant chief commissioner.

Mr. GRAHAM. The deputy can sit.

Mr. LANCASTER. If it is mentioned that any two commissioners can sit you must give more power to some of these commissioners than has been given. A case is actually pending to-day in which two commissioners other than Judge Killam sat, but as the chief commissioner had not decided a point of law the decision is held up owing to the regrettable death of the chief commissioner although this is a case on which he did not sit. If we are to allow two commissioners to sit, we must give them absolute power to decide the case, points of law as well as other matters ; and unless you provide that when they do sit either the chief or the assistant chief must be one of the two, you may have an ineffectual hearing, a case that cannot be decided because of the absence of any body competent to decide a point of law.

Mr. GRAHAM. We have left in the Act the clause which gives the deputy chief the power and the assistant chief. We have three divisions sitting, with the head of each one competent to give rulings and decide points of law, so that each division, if it sits in a section of two, will be a complete board in itself.

Mr. BERGERON. It will be one commission which can be divided into two or three if necessary.

Mr. GRAHAM. Yes. With reference to the other contention, I see the objection that might possibly be raised, and to remove all doubt, I would suggest this as an addition to 'c.' :

Such power shall not be exercised by him except in the absence of the chief commissioner.

Mr. R. L. BORDEN. You might express it more simply by saying : In the absence of the chief commissioner, the assistant commissioner may act.

Mr. AYLESWORTH. It seems to me that this clause 'c,' as it is worded, is absolutely essential. It confers upon this official certain powers. How is he to be given those powers, let alone exercise them, unless by some distinct enactment of this parliament. When conferred, as they will be by the passing of clause 'c,' then he is vested

with them and may exercise them or not as occasion may require. Even though the the powers be not exercised, he is vested with them, and this clause means the conferring of those powers by special enactment. The assistant chief shall have those powers but is not to exercise them when the chief is present.

Mr. R. L. BORDEN. That is what I desire to see expressed but it is not at present. I agree that the assistant is not to exercise those powers when the chief is present, but you ought to express that in the statute.

Mr. GRAHAM. I think this wording of mine is the best, even if it be layman's law. Let me read the clause as I have it, and see if it will not meet the point:

The assistant chief shall have all the powers of the chief commissioner, but such powers shall not be exercised by him except in the absence of the chief.

Mr. R. L. BORDEN. I am perfectly willing to accept that.

Mr. LENNOX. The only objection is this, that you will have in the one Act of parliament two different modes of expressing the same thing. By section 12, what was contended for by my hon. leader is exactly the system as carried out in the old Act: In the case of the absence of the chief commissioner, or his inability to act, his deputy shall exercise the powers in his stead. However I am quite satisfied with the sugestion: But such powers shall not be exercised by him except in the absence of the chief commissioner.

Mr. R. L. BORDEN Eventually it will give some court the opportunity to decide why you use one form in one section and another in another section for expressing the same thing. It will be a nice academic discussion.

Mr. ARMSTRONG. Has the hon. minister considered the advisability of placing a few words in the Act regarding the political complexion of the commission. In the United States Civil Service Act, it is distinctly provided that not more than two out of the three commissioners shall be adherents of the one political party; and judging from the complexion of the old commission—not saying a word against the chairman—we cannot help but think that possibly this government are going to appoint these six men from the ranks of the one political party. I notice in the votes and proceedings that my hon. friend from West Huron (Mr. Lewis) has given notice of an amendment, on the third reading of this Bill, to the effect I am suggesting. I have given a good deal of attention to this matter in the way of investigating the composition of different commissions in different countries, and I find there is no government which has the same power as is granted to the ministers of the Crown in this government. Not only in appointments to the Post Office Department but in the appointment of senators and judges, they seem to have absolute control. In other countries the very opposite is the case. Take the Civil Service Act of the United States, it distinctly says that there must be only two commissioners out of the three adherents of the one political party. You can follow it all the way down through the Post Office Department, and you find that even in the case of applicants to positions of mail carriers on the rural mail delivery, of the three examiners two only can be appointed from the one political party.

Mr. G. H. McINTYRE. Does the hon. gentleman know whether the Interstate Commission is composed wholly of members of one political party?

Mr. ARMSTRONG. I understand that only a majority are of one party. Mr. Black, a commissioner in the Post Office Department, was one of the most prominent Democrats in the United States previous to his appointment to that position. Some measure of civil service reform should be adopted in this country without any further delay, and I believe that this is a good time to commence it, when we have before us a measure providing for the appointment of a commission which is supposed to be an independent commission, dealing with the interests of the people in general. I believe that some means should be instituted whereby no political party could have the power of making all the appointments to that commission from their own ranks. I quite agree that it might be possible for a political party to select from its own ranks men of ability and integrity to fill those positions, but is it fair or reasonable towards the people at large? This is supposed to be a business institution, but if it is run like all the other departments of the government, we may be sure that no man will be appointed to it unless he is an adherent of the party in power. Consider the control the Postmaster General has over the civil servants in that department; consider the control the Minister of Marine and Fisheries has over the civil servants in his department, or consider the absolute control the ministers of the Crown have over members of parliament and senators. Then you can appreciate the importance of having placed upon our statute-book a drastic measure of civil service reform. When you consider what the civil service have been doing in many of the departments of this government in the last few years, you must admit that it is time for us to take active steps in this direction.

Mr. GORDON. Has that policy been adopted at Toronto?

Mr. ARMSTRONG. I do not know that we are running provincial institutions here.

We are here for the purpose of devising the best possible legislation in the interest of the country, and it is our duty to see not only that the best men are appointed, but that the people of Canada will not be able to point to the commission as they pointed to the last commission and say, 'look at the political appointments this government has made on that commission?' The hon. gentleman is well aware that the Premier of Ontario has already appointed many Liberals magistrates throughout the province, I might say hundreds; but this is an entirely different matter. Here is a government about to appoint six men, who are supposed to be independent men, looking at matters from a non-partisan standpoint. Would it not be wise for them to consider the advisability of appointing say two men from the opposition party? I may call the minister's attention to the fact that the Prime Minister of Ontario appointed the editor of the 'Globe' on an important commission. My hon. friend from South Kent (Mr. Gordon) has forgotten some of these things.

Mr. GRAHAM. What commission was that? Was it not on the Board of Toronto University?

Mr. ARMSTRONG. Is that not an important board?

Mr. GRAHAM. My hon. friend misunderstands me. He did not say a board; he said commission.

Mr. ARMSTRONG. It is practically the same thing. In the United States in the last few years the President has taken up the question of civil service reform in an enthusiastic manner and he has been able to revolutionize the whole civil service of the country in a way that is entirely satisfactory to the people. By the application of civil service reform to the different departments he has saved to the people something like $10,000,000. I hope the minister will take this matter into his consideration, and that, when the time comes for making these appointments, he will decide not to look only at one part of the country or at one political party, because I do not think I am far astray when I say that the bulk of the voters in the Dominion of Canada to-day are in favour of the Conservative party, and let the election come when it may, I feel confident that hon. gentlemen opposite will be transferred to the opposition side of the House. For these reasons I hope the minister will investigate this matter and see if it is not possible to provide in this Bill for the suggestion I make.

Mr. CONMEE. I rise to say a word or two in regard to the very important matter which the hon. member has brought to the attention of the House, that is, civil service reform. As I understand his proposition, it is that this commission should be clothed with authority to appoint the civil servants of the country. I cannot agree with that proposition.

Mr. ARMSTRONG. The hon. gentleman misunderstood me. I do not wish to take away from the government the power of appointing these men, but I have suggested that in appointing them they do not look merely to one political party.

Mr. CONMEE. I would like to understand the hon. gentleman if I can, but his explanation has not made clear to me what the object of his remarks was. Did the hon. gentleman not wish to suggest that this commission should be clothed with authority to make the civil service appointments?

Mr. ARMSTRONG. I made no reference whatever to that Bill.

Mr. CONMEE. Then am I to understand that the hon. gentleman's remarks had reference only to this particular board of commissioners?
