COBALT--- Important Strike Announced on the Hargrave ---COBALT

Local Mining Market Strong Business on the Increase

Temiskaming Has Quick Up and Down Movement—Strike on Hargrave Causes Rise in the Stock—Beaver Very Active.

World Office,
Tuesday Evening, May 18.

Business was still good at the local mining markets to-day and brokers report no falling off in the volume of outside orders. The market opened strong and after a slight reaction closed very firm with a strong upward tendency.

Temiskaming had a sensational rise in the early morning, selling up to 1.40, but a sharp downward turn took place later and it lost most of its gain. Short covering was given for the reason of this jump, tho on enquiry it was found that some good buying orders were in the market. Someone closely connected with the interests of the company told a holder of these shares the other day that he expected to see this stock on the $2 mark before the end of June. The stock closed firm.

Beaver was again the most active issue, selling up to 43 at one time during the afternoon board and closing strong round 40. Advices from the property still show that the recent find is a most important one.

Hargrave, amongst the unlisted stocks, was strong both locally and at New York. It sold as high as 58 1-2 on the Standard and closed in good demand at 57 1-2 bid. A good strike has been made on the company's eastern property.

Peterson Lake was very firm and in the opinion of many will sell higher in the near future.

La Rose was steady to firm and in good demand. The rest of the list closed on the strong side. Brokers are of the opinion that an active and better market will be seen in the future. The outlook is certainly bright.

MYSTERY OF MINING DEAL

Remarkable Recovery of Papers Concerning Mining Properties.

J. Millar Neil, chemical and mining engineer, yesterday received a batch of papers to which an interesting story is attached. In February Mr. Neil made a report upon some mining properties near Port Arthur in which were diagrams, photographs, etc. These were handed to Mr. Robinson, the owner of the properties, in Toronto. He had a deal on with New York capitalists, and the papers were forwarded to New York. Nothing was heard of them until yesterday, when the papers were forwarded thru a Buffalo lawyer to Mr. Neil, stating that they had been recovered from a body found floating near Bermuda, in the West Indies.

Atlantic City interests are waiting anxiously for this man to return, so that they can give Mr. Robinson an answer to his proposition.

The Atlantic City interests will now be much surprised in again receiving these original papers from Toronto.

GATEWAY TO SILVERLAND

Anson A. Gard's New Book a Splendid Reference.

"The Gateway to Silverland," Mr. Anson A. Gard's new publication, on the silver camps of New Ontario, has just been published by the Emerson Press, Toronto. It is an excellent book, reflecting the life and spirit of the country, and a mine of information concerning the mines of Cobalt, Gowganda, Montreal River and auxiliary districts. Mr. Gard writes with the authority of one who knows the north from long experience, and his book is indispensable to mining men in any part of the American continent. The literary department of The Sunday World will make a more extended reference to this valuable book.

Machinery at Moose Horn.

ELK LAKE, May 15.—(From the Man Up There.)—The machinery at the Moose Horn is again running, after having been closed down for about ten days on account of the sinking of the foundation of one of the boilers, and the consequent breaking of one of the flanges. The contractors are working three eight-hour shifts per day. At the bottom of the shaft, which is now down 125 feet, a new apelite vein was opened up. This vein is about six inches wide and looks very promising. Drifting has been commenced in the direction of the large apelite vein known to exist on the property.

CONSULTING ENGINEER EXPLAINS BEAVER FIND

Vein Found Only Confirms the Opinion Held and is As Told by Wire.

R. A. Bryce, consulting engineer of the Beaver and superintendent of the Silver Queen, was in Toronto yesterday. He was seen at the offices of the Beaver company by The World man and expressed himself as highly satisfied with the way in which this property is developing.

Asked about the recent rich strike, Mr. Bryce said: "It's hardly a surprise to me, as I have always had faith in the ultimate success of the mine. The strike is all that it is said to be; why, even since Friday we have discovered that the vein widens from 10 to 12 inches in a very sort distance, and values are as good if not better."

Mr. Bryce also gave the following information about the property:

The strike was made at the 200-foot level of the main shaft, 50 feet on the east drift. This drift has been extended 130 feet in a northerly direction. The property shows some seven veins, all carrying calcite and quartz.

Drifting on the Temiskaming property has been done on their rich vein, which carries 3000 to 4000 ounces to the ton, at the 250 foot level, to within 70 feet of the Beaver border line. Diamond drilling is being done at the Beaver at the point it is thought this vein strikes their property, and it is expected that it will be struck shortly.

At the 75-foot level the company are drifting on two calcite veins, which are expected to give good silver values. The other shaft is sunk on a calcite vein some inches wide.

Vein Widens Out.

A special wire to Messrs. Wallace & Eastwood yesterday morning announced that the vein found on the Beaver property last Friday had widened out considerably under increased development, and that the ore is now running as high as 4000 to 5000 ounces to the ton. The wire also stated that the Beaver vein is now regarded as one of the finest discoveries in the whole camp.

Ready For First Blow.

ELK LAKE, May 14.—(From the Man Up There.)—The last mail to be packed out over the trail will go out to Earlton in the morning, the contract for carrying the mail to and from Earlton ending to-morrow, the 15th of the month. On Monday the postal authorities expect to get their first mail boat via Latchford. The river is open in both directions from here as far as the eye can see, and boats are expected here at any minute. Boats have been running on Elk Lake for the past week or more, and now that the snow has about all disappeared the town is taking on the appearance of spring. We are now having the calm before the storm, and everything is in readiness for the first blow.

ELK LAKE NEWS

First Boat Will Have to Be a Leviathan to Carry All the Stuff.

ELK LAKE, May 15.—(From the Man Up There.)—The first boat that leaves Latchford for Elk Lake will have to be about twice the size of a leviathan of the ocean, such as the Lusitania, if it is to carry everything promised for delivery by the "first boat."

Tons of mail parcels are to be delivered by the first boat; carloads of supplies of every description, including groceries, meats, clothing, etc.; hundreds of canoes, and everyone in town has a friend coming on the "first boat."

But the boats on the Montreal River are not as large as even a small ocean liner, and many will be doomed to disappointment when the first boat arrives. Merchants who are expecting goods will have to wait; those expecting prospective purchasers of mining properties will have to wait, and those expecting friends will have to wait. But the waiting will not be for long, for with the improved boat service we will have this summer passengers and freight will be moved from one point to another with rapidity.

JACOBS VEIN FOUND

On East Hargrave Property—Stock Has Sharp Rise.

The Standard Exchange was thrown into a furore this afternoon by the news that the Kerr Lake vein had been uncovered in East Hargrave. The following telegram was received from Cobalt:

Cobalt, May 17.

W. N. Ferguson,
Arlington Hotel, Toronto:

Uncovered Kerr Lake vein, six inches wide, in east lot to-day.

(Signed) Moorhead.

The news also came over Wallace & Eastwood's private wires.

Active bidding set in shortly after 2 p.m. and in the hour session the stock rapidly rose from 53 to 58.

The presence of the Kerr Lake vein in the East Hargrave is regarded as of great importance. The company has uncovered 400 feet of it in the South Hargrave, and it is now uncovering more of it in the East Hargrave. Kerr Lake has got 320 feet of it across the southeast corner of its property.

Receipt That Cures Weak Men---Free

Send Name and Address To-Day You Can Have It Free and Be Strong and Vigorous

I have in my possession a prescription for nervous debility, lack of vigor, weakened manhood, failing memory and lame back, brought on by excesses, unnatural drains or the follies of youth, that has cured so many worn and nervous men right in their own homes—without any additional help or medicine—that I think every man who wishes to regain his manly power and virility, quickly and quietly, should have a copy. So I have determined to send a copy of the prescription, **free of charge**, in a plain, ordinary sealed envelope, to any man who will write me for it.

This prescription comes from a physician who has made a special study of men, and I am convinced it is the surest-acting combination for the cure of deficient manhood and vigor-failure ever put to-gether.

I thing I owe it to my fellow men to send them a copy in confidence, so that any man anywhere, who is weak and discouraged with repeated failures may stop drugging himself with harmful patent medicines, secure what, I believe, is the quickest-acting restorative, upbuilding, SPOT-TOUCHING remedy even devised, and so, cure himself at home quietly and quickly. Just drop me a line like this: Dr. A. E. Robinson, 3931 Luck Building, Detroit, Mich., and I will send you a copy of this splendid receipt, in a plain, ordinary sealed envelope, free of charge.

CAUSE OF POWER STOPS VIEW OF ELECTRICIANS

Transmission Line Claimed to Be Standard, But Lightning Can't Be Prevented.

Owing to the frequent disturbances recently and stoppages of power in the transmission equipment of the Toronto Niagara Power Co., a World reporter visited the Davenport terminal station yesterday to be enlightened as to the cause.

Supt. W. B. Boyd stated that there had been no interruption to the supply of power between Oct. 30 last and March 10. Since then there had been several. On that date the flow of electricity was stopped for twenty minutes by an icestorm breaking a wire. The windstorm of April 8 caused another break. On April 30 the service was out of commission for six minutes on account of lightning. Then there were several disturbances on May 6, 7 and 15, which have already been reported.

A minute inspection of the equipment revealed a system of devices for the arrest of lightning shock, which, according to the engineer, represents the most recent discoveries in engineering science. Not all lightning bolts which strike the transmission line affect the supply of power. "But," said Supt. Boyd, "no man who ever lived has been able to account for lightning or measure its force, so it is beyond the possibilities of scientists to-day to devise means that are infallible."

A lightning bolt which strikes the transmission lines, in the first place, must be over 60,000 voltage. It must then arc over a 4 1-2 inch gap before reaching the station, and if it is of sufficient strength to reach the station, specially constructed switching with copper coated paint, immersed in oil, operates and there is a cut-out which renders the transformer "dead."

Getting Up the Load.

Owing to the rotary converters which are used a stoppage of one second in the flow of the electric current involves a delay of some minutes. There is a standing arrangement with the power station at Niagara Falls that after any stoppage the current is not switched on again for five minutes, as this time is required for the switches to be set and the conventors stopped. When the current is again fed thru the transformers, which are in banks of three, to the various sub-stations of the Toronto Railway Co., a further period of five minutes elapses before they are able to give power to all parts of the system simultaneously, in order that the schedule may not be disarranged. In addition the three wire cables, heavily insulated, are laid in 300 foot sections, so that an individual shock can quickly be located and repairs made.

In this connection Supt. Boyd stated that the best insulating material known would only resist a current of 25,000 volts. The voltage of lightning is often as high as 100,000; so a break occurs. This prevents the arc of underground conduits.

An automatic voltage chart records the flow of current, and the interruptions which have been mentioned are clearly indicated.

Precautions.

In addition, every precaution is taken against fire, and outside enquiries among competent engineers elicit the information that this transmission line is the standard on the continent, and no expense has been spared to adopt every instrument known to science to overcome the forces of the air.

CANADIAN UNION SPREADING

Provincial Workmen's Association May Get Foothold in the West.

SYDNEY, N.S., May 18.—(Special.)—Prominent P. W. A. officials are in receipt of applications for information about the association from labor centres in western Canada, and it is planned to establish branches of the order there.

In the Alberta and Crow's Nest Pass coal regions, the local leaders of the United Mine Workers have become dissatisfied with regulations regarding assessments, and favor joining the Western Federation, but most of the workers favor affiliation with the Nova Scotia union and developing this into an all-Canadian organization. Many Cape Bretoners and Nova Scotians are employed in the western Canadian coal districts.

Miles of Blossoms.

Can you imagine anything more delightful at this season of the year than a trip through the "Garden of Canada" with orchards in full bloom, spreading out in panoramic view on either side of a fast-moving train. The Grand Trunk passes through the heart of this beautiful district en route to Niagara Falls, Buffalo and New York; moreover, it is the only double track route. Trains leave Toronto 9 a.m., 4.05 p.m., and 6.10 p.m. Secure tickets and make reservations at city ticket office, northwest corner King and Yonge streets. Phone Main 4209.

Newfoundland is Icebound.

ST. JOHN'S, Nfld., May 18.—Unyielding before the warming climate of advancing spring, great fields of ice extend out from the shore of nearly every section of the Newfoundland coast, constituting in some places an impenetrable barrier and an active menace to ocean navigation. Within ten days nearly a dozen ocean liners have put in here or at nearby ports, badly damaged, and reporting narrow escaps from more serious imperiling of the lives of thousands of passengers.

COBALTS ON MARGIN

We carry the listed Cobalt Stocks on margin deposits; also New York Stocks, grain, produce, etc., bought and sold. Consult us before investing. We always have the latest news from the mining camps. All stock deliveries made promptly. Write, telephone, or wire us your orders at our expense.

COBALT DIVIDENDS.

DIVIDEND NO. 15.

KERR LAKE MINING COMPANY.

New York, April 13th, 1909.

The Board of Directors have this day declared a regular quarterly dividend of FOUR PER CENT. (4 per cent.), and an extra dividend of TWO PER CENT. (2 per cent.), upon the Capital Stock of the Company, payable June 15th, 1909, to all stockholders of record at the close of business on June 1st, 1909.

J. H. SUSMANN,
Secretary and Treasurer.

BRAIN AFFECTED BY THE MOON.

WINDSOR, May 18.—(Special.)—Richard Kraft, who shot and wounded three men at the police station on May 7, was to-day remanded until Saturday.

His mother was in court and stated her son was subject to "spells" at every change of the moon.

She will try to get the prisoner off on a plea of irresponsibility and mental incapacity.

FEWER CANNED LOBSTERS.

SYDNEY, N. S., May 18.—(Special.)—The government has taken a hand in the dispute between the lobster fishermen and factory owners in the matter of prices. John G. Morrison, M.L.A., of Inverness, at the request of the department of marine and fisheries, has enquired into the difficulty, but was unable to bring about any settlement. The lobster packing establishments in eastern Nova Scotia closed to-day.
