Compass Points in Different Directions

COMPASS INVENTOR UNKNOWN.

The invention of the compass is lost in the dawn of history. It is first found mentioned in a quaint Chinese legend which relates that the Emperor Ho-ang-ti in 2634 B.C. led forth his army and attacked the rebel Khiang on the plains of Tchoulou. But Khiang, getting the worst of the conflict, called the wizards, magicians and sorcerers to his aid who raised a great fog to hide Khiang, and his army. Then the Emperor, not to be outdone, in his turn used the greater magic of the compass, which led his army through the great fog so that he was able to overcome Khiang and capture him.

The compass appears to have been brought to Europe in the twelfth century, most probably by the Arabians, as it is known that the Arabian and Chinese traders met in the Persian Gulf; and on account of its very great practical value as a guide in all weathers, it rapidly came into general use and enabled Christopher Columbus to sail straight west from Spain, by day and by night, through fair and stormy weather, to the discovery of the New World.

But contrary to story book report, the compass does not point north, but more or less to the east or west at different places. Scientists state that this is because the magnetic poles of the earth are not situated at the geographical poles as shown on our maps of the world; that in fact the north magnetic pole is near Boothia Felix on the Arctic coast of Canada, and the south magnetic pole in South Victoria Land south from New Zealand.

It might be thought that the compass would be satisfied to call it a day's work after pointing in a different direction at each place, but such is not the case, for it is all the time changing its direction and never stays put. It marches to the west for many years, then turns back and marches to the east, then reverses again and marches to the west, and in fact changes its mind more oft than any maiden fair, and carries on in a different way in each place. Whether this fickleness is caused by a wandering of the earth's magnetic poles, or by something happening inside the earth, or by the sun or planets, scientists have not yet been able to find out.

Importance of the March of the Compass.

It is very important to know this march of the compass, especially in Eastern Canada, because all the old land surveys in Ontario, Quebec, New Brunswick, Nova Scotia and Prince Edward Island were made by compass, and now-a-days when it is desired to retrace one of the old lost boundary lines it is necessary to know beforehand what the march of the compass has been since the time when the old survey was made.

In order that the compass may be used with reliance, therefore the different countries of the world carry out magnetic surveys to measure its direction, and picture the information on magnetic charts for compass users.

Early Investigation In Canada.

Compass information is particularly valuable in such a large new country as Canada, and it is interesting to note that Champlain measured its direction at Halifax about 1604, John Davis in Davis Strait, 1585, and Capt. Baffin in Baffin Land, 1616, Capt. Middleton at Churchill, at York Factory, 1725; while Capt. Cook in 1778 and Capt. Vancouver in 1792 measured it along the Pacific coast. Later Sir John Franklin, 1819-26, and Sir John Lefroy, 1843-46, made some measurements, but comparatively little was done in Canada before 1880.

Since 1880, however, the Topographical Survey, Department of the Interior, has carried on a most extensive magnetic survey in this country in conjunction with its other work, at practically no expense, because the compass direction can be measured in a few minutes when the survey parties are already on the ground; until it now possesses more than 20,000 measurements, and regularly publishes magnetic maps which picture all this information for compass users.

More Widely Employed Than Ever.

In spite of the fact that the compass has been known for so long, it is to-day more widely employed than ever before: it is the sure-fire pathfinder, the cloud by day and the pillar by night to the sailor afloat on the heaving main; the airman above the hiding clouds; the miner far underground in the deepest shaft; and explorers, surveyors, hunters, trappers, prospectors, pioneers and travellers penetrating the trackless forest, the jumbled mountains, the virgin wilderness and the Far North.

But the compass still has hidden secrets. Elusive earth currents and stubborn static still act the part of highwaymen and hold up our friends the telegraph and wireless and radio. We know these highway men are in the nature of first cousins to the dancing northern lights and magnetic storms that torture the compass, and black cyclonic sunspots that try to rob us of our light and heat, but all these things are still seen through a glass, darkly, and scientists believe they never probably can be forced to take the stand and lay bare their inmost secrets until the direction of pointing of the compass has been properly mapped all over the world.

The Beautiful Woman

takes the greatest care to protect and nourish her skin and not to give the fatal wrinkles a chance to form. After cleansing her face she rubs in with an upward and outward motion a generous amount of Three Flowers skin and Tissue Cream. The pure oils it contains are quickly absorbed by the tissues. The lady whose skin is inclined to be dry finds in this splendid cosmetic the means to replace the natural oil her skin lacks, while the woman whose skin is inclined to be too oily finds that a thorough cleansing with Three Flowers Skin and Tissue Cream opens the overloaded pores and helps them throw off the excessive oils. Thus does this beautiful cream benefit every woman's skin.—oct22,th,m,tf

British Immigration Scheme

WINNIPEG, Man., Oct. 30.—Prospects of the 3,000 family scheme for next year are exceedingly bright and Canada should have no difficulty in securing the proposed quota of 1,200 families in 1926, according to Major R. W. Gyles, liason officer of the department of immigration and colonization, who has charge of the scheme as far as Western Canada is concerned.

"If the number per family averages the same as during the past season and we obtain 1,200, it will mean the settlement throughout Canada in 1926 of 6,000 or 7,000 Britishers on farm lands," Major Gyles said.

Up to the present time, he declared that between 200 and 300 families had been approved for next season. This was particularly gratifying considering that the 1926 quota will not sail for Canada for another six months.

Major Gyles stated that 365 families had been located during 1925 in the West out of the 600 families which had come to Canada under the scheme. Manitoba had taken 75, Saskatchewan 90, Alberta, 135 and British Columbia, 65, he said.

"I think," Major Gyles continued, "that as a whole the scheme has proved most satisfactory. The majority of the families have during the past summer written letters home to their near relatives and friends expressing high appreciation of the manner in which they have been treated. In most cases the letters state they have received more than they anticipated. A large number of letters too have been received by the department direct. These letters to my mind are the best boost the 3000-family scheme could receive. It speaks for itself, and will have a material effect in securing families for next year."

Some came to criticize last night but went away with sore sides from laughing at Dave Delaney and Jim Malone. Another performance at the Casino tonight with changed specialties. Tickets at Huttons.—nov5,1i

Charming turbans are made of velvet and satin—sometimes combined.

The sraight gathered flounce often starts low and climbs to hip height.

WHEN DO YOU _____

most enjoy a cup of

LUXURA TEA?

THREE PRIZES. For the three best answers to the above question we offer THREE PRIZES. THREE PRIZES.

Empire Food Supplies

Two years ago our cheap loaf was produced at the expense of the Canadian farmers. Last year, though the loaf became dear, Canada was unable to profit as producers on account of her light crop. This year the price of wheat is still relatively high, and Canada stands to gain as the possessor of one of the largest available exportable surpluses of wheat. Already it is estimated that from the greater yield of field crops in the Dominion every Canadian farm on the average, will earn $500 more than a year ago.—Empire Food Supplies.

MINARD'S LINIMENT FOR SORE BACK.

KIELLEY'S DRUG STORE

Why Gray Hair?

Thanks to the discovery by a famous French Dermatologist Gray Hair may now be restored to its original color. Also hair that is on the verge of turning can readily be prevented and given new life and vitality by the use of PARISIAN HAIR RESTORER.

Is Not a Dye.

By simply rubbing into the roots of the Hair night and morning it stimulates the follicles, prevents the hair from falling and restores to its natural color. Makes an ideal Hair Dressing.

Price 90c. per bottle.

For Sale only at
