D. BRADLEY.

St. Andrews, Sept. 26, 1838.

To Trustees, Directors of Turnpikes, and others, interested in the construction of Bridges.

WITTY'S NEW PATENT BRIDGE.

Mr. WITTY offers to the public his New Patent Bridge. Its superiority over others may justly entitle it to a national consideration.—For crossing deep rivers, rapids or falls, it is unequalled; since it can be placed across any of them, without Piers, and at a much less expense than on any other system at present used. It reaches from bank to bank in a right line, and *cannot be affected in the least by freshetts or ice, or change of temperature.* At the same time, there is a durability and safety which cannot be warranted by any other bridge now in use.

Several of them have been erected in the State of Missouri, one of which upwards of 100 feet in length, and others are in progress

Advantages Offered.

1. Mr. WITTY offers to build Bridges over the most difficult Falls or Rapids, deep Rivers or Ravins.

2. His Bridges cannot be swept away by freshets or large masses of ice.

3. They are more safe, and possess a much greater durability than those in pressant use.

4. The expence can be reduced, *in many instances*, to less than one half that of any other bridge whatever.

5. A Bridge upon Mr. WITTY's plan can be put across a river, in many cases, in a few days, and will not cost so much as the expense of the Piers, upon the old system of bridge-building.

6. This is now being extensively adopted in Europe, both for bridges and roofs, since it is equally calculated to support heavy roofs of warehouse floors, or for making wharves or jetties. In one instance, Mr. Witty, sen'r, has suspended an iron roof of upwards of twenty tons, with one beam; the span of the roof is fifty feet.

Any communication, post paid, can be addressed to Mr. R. J. L. WHITTY, Civil Engineer, City of Lowell, and will meet with attention
