### Statement by the Company

For the information of Investors

For the past 21 years Mr. John I. Lloyd has carried on a successful business at Kentville in the manufacture of Saw Mill and Gasoline Engine Outfits, and in order to provide additional capital to meet the increasing demands of his business he recently converted his establishment into a Joint Stock Company. The Company has made an advantageous arrangement with Mr. Lloyd, whereby his exclusive services and the benefit of his experience and inventive genius are secured for the new Company.

In order to provide the funds required to enable it to enlarge and improve the Plant and Appurtenances; to meet the steadily growing demand for its manufactures; and to extend its operations and develop its business for which there is a wide and promising field, the Company now offers for subscription this issue of \$25,000 First Preferred Six per cent. Cumulative Stock carrying a bonus of 30 per cent. in fully paid Common Stock. The dates of payment have been arranged with a view to meet the convenience of subscribers. Holders of this stock are accorded the privilege of electing one of their number to represent them on the Board. It is confidently submitted that this small, select and attractive stock is well worth the attention of prudent investors who are looking for a safe and sound investment, and desire to avoid speculative risks and entanglements. For the following reasons:

FIRST—There being no bond issue, the principal sum invested constitutes an absolute first charge and ranks prior to \$75,000 of Second Preferred and Common Stock, which have been issued and are fully paid up.

SECOND—The Cumulative Dividend constitutes a first lien of only \$1500 a year on the net earnings, which last year amounted to \$5,270, as certified by Mr. Leverman, C. A.

THIRD—The Bonus Shares are entitled to participate equally in all dividends declared on the Common Stock. The net profits of last year were equal to 4 1/2 per cent. on the Common Stock, so that obviously this is a valuable concession, which may be reasonably expected to yield good returns.

FOURTH—The proceeds of the issue will be invested, not in a new and untried enterprise, but in an old established, prosperous and well-known business, which is capable of being largely extended.

The Subscription List will close on May 15th, 1913.

Applications, with remittances of \$25.00 per share, for the number of shares applied for, may be made to the Royal Bank of Canada, Kentville, N. S., agency, or direct to the Head Office of the Company. In the event of no allotment being made the remittance will be promptly returned to the applicant.

Any further information will be cheerfully furnished on application to the

## FERTILIZER.

Our mixed fertilizer has the record of growing the largest crops of any fertilizer that was ever sold or used in U. S. So why do you use a cheap grade of fertilizer when you can buy the best grade at the same price you have been paying for the low grade.

We can also supply you with all kinds of chemicals to be shipped upon the arrival of our vessel at Canning, from Boston, which is due in a few days now. Ask for prices for prompt shipment on arrival of vessel. Our prices are the lowest Yours very truly

C. O. COOK & SON  
WATERVILLE, N. S.

P.S.—For sale, some extra good dry pine lumber

### Spray This Week

Fruit growers who have not already put the dormant spray on, (that is 4 gals. Lime-Sulphur to a 40 gals. bbls.) should not fail to do so within the present week.

In case some few people might fear the buds are too far advanced, we would like to cite the cases where last year quite a few people put on the dormant strength when the end of the leaves were away out like the top of half of a mouse's ear. In fact several orchardists made this spraying from the 10th, to 18th, of May and did not injure the tips of the leaves. A peculiar thing about it is that the younger the leaf the more it will resist burning, which is contrary to what would naturally be expected.

Only those who have previously made this dormant spray know of its great benefit in the cleaning up of the trees. Recent investigations have proven that it destroys a large quantity of eggs of the Aphis, which was so destructive a couple of years ago.

While there is an advantage in delaying putting on the dormant spray until the ends of the leaves are well out, so as to add 3 lbs. of Arsenate of Lead, in order to poison that most destructive bud moth, it now looks as if this spraying cannot be delayed beyond a week, or possibly 10 days if the weather turns cold again.

Do not hesitate to put on the full strength 1 to 10 and you will not be sorry for it.

If anyone has set out young trees within the last 5 years they should be careful and thoroughly spray them with even a stronger solution than 1 to 10, half Lime-Sulphur and half water will not injure the bark of the trees. Give them a good wetting and you will be sure to catch any San Jose Scale that might be lurking about.

—Com.

A new issue of debenture stock of the Nova Scotia Steel & Coal Company is offered to the public today and full particulars of this issue will be found in another column.

Any company based on the vital industrial essentials of coal and steel is in a very strong economic position, for these articles, which are the basis of all modern commercial progress are commercial necessities. The Nova Scotia Steel & Coal Company, or "Scotia" as it is generally known, not only combines in it, the companies which mined the first coal and smelted the first steel in Canada, but it is the only self contained company operating in these industries and has the unique distinction of having for some years past earned and paid higher returns on its securities than any other company engaged in either of these industries on the American Continent.

The "Scotia" company is engaged in the three-fold business of mining and selling iron ore, mining and selling coal and producing iron, steel and finished steel products of all descriptions. Its iron ore mines are at Wabana, Newfoundland, where it has proved deposits of high grade ore sufficient to supply many times the present output for centuries. At Sydney Mines, Cape Breton, it has six collieries operating coal areas containing hundreds of millions of tons, coke ovens, blast furnaces and open hearth steel making furnaces. The rolling mills, forges and finishing departments of the company, are located at New Glasgow, N. S.

The Scotia Company has been engaged in the steel trade for forty years and thirteen years ago it purchased the General Mining Association which began the development of Canadian Coal Mining in 1825. Its securities have been thoroughly matured by years of successful business and in the location of its plants, the extent of its resources of undeveloped raw materials and the personal of its staff, developed by years of pioneering in these important industrial fields, it is in an absolutely unique position.
