\*\*\*\*\*\*\*\* The man who would a wooing go had better think over what Lorado Taft, Chicago's celebrated sculptor, has just intimated that the expression of a wo-man's lips, even when she keeps them discreetly closed, tells to observers the discreetly closed, tens to observers the story of her character and disposition. "Beautiful eyes," says he, "a woman may have by way of inheritance, but the mouth she makes herself." In declaring that the mouth is the

most delicate register of human emo-tion and of character, Mr. Taft agrees with Paolo Mantegazza, the Florentine with Paolo Mantegazza, the Florentine professor, who is the greates living authority on love. "The soul," declares the latter "dwells in the expression of the mouth. Here converge, as their natural centre, the yearnings of love and of desire. As the eye expresses thought, so the mouth reveals feeling." Compare, suggests this expert, the emotion which is awakened in you by a pair of beautiful eyes with that which a beautiful mouth inspires. The first may strike you dumb with admiration, but at sight of the second you fall dead in love. The eye is the azure heav-

dead in love. The eye is the azure heavens, the mouth is the earth with its

The mouth interprets both mind and heart. He says. In its silence even it is eloquent. Its upper lip carries a message. Its lower lip has a story to tell. Its delicate curves in response speak as effectively as do its rounded curves in laughter.

And now for specific instructions: The best way to study a woman's mouth, it seems, is to get a view of it in profile, in a dim light, where a slight chadow will be thrown upon the upper lip. The mouth whose upper lip pro-jects over the lower one shows a good heart and a tendency toward sentiment. The loyal girl has lips which advance equally. When the lower lip projects beyond the upper one its owner has an arritible disposition.

Arritible disposition.

There you are; now go ahead, you who had your salary raised at New Year's and think that you can afford the luxury of a wife. Whatever other attractions a maiden fair may have—soulful eyes, soft hair, bewitching girlishness—disregard all these inviting charms, and as you walk beside her in the moonlight on some warmer night

ture gave it, is not so sweet as it might be if its corners do not curve upward. If you are discontented or vain or sel-

Men are attracted by women. Mante-Men are attracted by women. Marine gazza says, whose mouths fascinate them. Your mouth will never be fascinating unless your personality has that quality; and fascination is largely a matter of reserve force, of self-control, a suggestion of something desirable withheld.

MESSRS. C. C. RICHARDS & CO.: Gentlemen.-My daughter, 13 years

old, was thrown from a sleigh and in-fured her elbow so badly it remained tiff and very painful for three years. Four bottles of MINARD'S LINIMENT completely cured her, and she has not been troubled for two years, Yours truly,

J. B. LIVESQUE. St. Joseph P. O,. 18th Aug. 1900.

#### MACHINES FOR GERMANY.

A Great Revival in the Shipments of Labor-Saving Devices.

Labor-Saving Devices.

For several obvious reasons, which have been cited from time to time in these reports, the exports of American machinery and macaine tools, which reached their highest development in 1899-1900, declined in 1902 to about one-third of their greatest volume. The causes of this falling of were mainly three: The general prostration of manufacturing industries in Germany at that time: the fact that German machine time; the fact that German machine shops equipped with American machinery had learned to duplicate most of such machines and many other articles at less than the cost of the imported originals, and that many American manufacturers had established branch factories in Germany, the products of which competed directly with the output parent manufactories in the

United States. now apparent that the period of It is now apparent that the period of lowest depression is definitely past, and that, notwithstanding all adverse influences, the export of American machinery to Germany is increasing in due proportion to the general recovery of industrial activity in this country.

Two reasons are ascribed for this ra-

CUTELY TASTE IS

ther unexpected increase in the machin imports which compete most directly with home-made products, namely, the conviction which prevails in many ouar-ters that the original machine, made in country where it was invented, i superior to any copy or reproduction of alien origin, and, secondly, the fact that since the demands of the American bome market have relaxed, with the diminished activity of the past fifteen months, our manufacturers and exporters have given more attention and effort to their foreign trade.

REAL FUN OF SKATING.

The Park Well Enough, but the Greatest Joy Found on Canal or River.

"That is all right," said a man who was skating in the park, "any skating is good, but for the real joy of gliding on steel shod feet you want to skate on a river or a canal.

but for the real joy of gliding on steel shod feet you want to skate on a river or a canal.

We if a man wanted to get all the you have a should be you have a should be you have a should be reservoir, would he? Why, certainly not. He'd get there, sure 'mough, the accreise, which is a good thing, a fine thing; but if he wanted all the pleasure that walking could give him, he'd start off through the country, up and down hill, and over winding roads, where he'd have nature to look at, and scenes constantly changing—novelty all the time, and everything beautiful. And it's just the same with skating.

"Canal a pretty tame sort of water to skate on: Far from it. I've skated on canals that were delightfully picturesque, in some regions, anyway, the canal, to keep its level, must wind and twist in all directions, as twisty as any river, and you may look from it up hills in one place and down into valleys in another, the views from it varying all the time Mighty pleasant scenes you view from some canals sailing through them in canalboats in summer, or, for that matter, as you walk the towpath; you get these all in a new, strange, snow covered beauty skating on the condition of the shores on either side, the strange and interesting or maybe grand or beautiful things that the eye falls upon when you round the bend and opens up new reaches in the river's length, and everywhere the spaciousness and the distance, the limities freedom of it all.

"This is all right, skating in the park, a good deal better than none; but for the real joy of skating give me a canal or a river."

More Rays for the Brain.

Following the experiments of Profes-tor Charpentier, of Paris, with the muchdiscussed N-rays, in which he claimed that this form of energy was emitted by that this form of energy was emitted by the human body and in particular by the brain, comes the announcement of the discovery of a new, yet somewhat simi-lar, form of radiation, M. di Brazza, a student at Liege, claims to have demonstrated that the brain is the seat of active radiation in the form of rays which charms, and as you walk beside her in the moonlight on some warmer night than this concentrate your attention upon the expression of her mouth.

And you, pretty girl, who likes to be liked, who desires to be beautiful, you had beeter keep in mind that your lips are telltale indeed, that they "give you away" every time if you are not really what you are pretending to be. Your mouth, in spite of its beauty of youth and health and the good shape that nature gave it, is not so sweet as it might the patient's head and then illuminate it faintly by means of a radiographic tube which is enclosed in a wooden box. When or habitually cross to your mother the subject concentrates his will the lufish or habitually cross to your mother your own lips proclaim it, and a thousand words of denial would prove less convincing.

For the expression of your mouth tells what your soul is. If you are womanly, the fact will be written there for every man who looks at you to see. And men like womanly girls—at least those men do who are worth your loving. graphic observations refinements and precautions are essential to secure uniform length of exposure, sensitiveness of plate, conditions of development, etc.

—Harper's Weekly.

The Big Boy and His Little Mother. I think that one of the most peculiar-ly sweet affections is that existing be-

en a big, sturdy boy and his mother Did you ever notice it? See with what pride the little woman seems to regard her boy. Apparently she feels as safe under his care as if he were a giant-

And see with what tenderness, though awkwardly (and in the presence of others, timidly, he caresses her.

She seems to say: "Here is my joy,

and may be my protector and suppor in years to come."

And he: "This is my darling little mother. I am going to great things for her when I get to be a man. The boys may tease me for kissing her, and really I'd rather they didn't see me do it, but I love her—a heap better than she

thinks. He is always prompt in obedience to her commands but she doesn't worry, for she knows that she only has to convince him that she is trusting him, and

her wishes will be complied with.

She is patient and considerate; he is tender and strong.
Such a boy will never break his
mother's heart. She seems to feel sure
of this. Only such a boy can have such

mother. Only such a mother can have such a son.

I take off my hat in respect, love nd admiration for them both. In them lies the hope of the nations.

-Dallas News. Putting Charity to the Usual Use.

(Cleveland Leader.) Dad-Now, Reginald, your college expens ecount is not altogether clear. I find an tem here. "Charity, \$50." What is that? Reggie-Wby, sir, I-well, I couldn't go nto particulars on that point, you knowthat is—
Dad—Exactly. I suppose this is one of the instances where "charity covers a multi-

Impoverished soil, like impoverished blood, needs a proper fertilizer. A chemist by analyzing the soil can tell you what fertilizer to use for different products.

If your blood is impoverished your doctor will tell you what you need to fertilize it and give it the rich, red corpuscles that are lacking in it. It may be you need a tonic, but more likely you need a concentrated fat food, and fat is the element lacking in your system.

There is no fat food that is so easily digested and assimilated as

## Scott's Emulsion of Cod Liver Oil

It will nourish and strengthen the body when milk and cream fail to do it. Scott's Emulsion is always the same; always palatable and always beneficial where the body is wasting from any cause, either in children or adults.

A DANCING DUEL.

Relays of Partners for a Twenty-four Hour Waltz.

Mr. Helps, a young London dancing a Liverpool professor of dancing to "dance to a finish."

A Frenchman at present holds the

world's dancing record, having danced without a break for eighteen consecutive hours; and the two competing dancing-masters hope to establish an English-record by dancing twice around the clock. W. F. Hurndall, the well-known dance ing instructor, has all the arrangements in hand for the extraordinary duel.

The contest, provided the Liverpool challenger accepts the conditions, will begin at noon on March 6, he explained

"The time throughout will be sixty bars a minute, and the waltz will be the dance selected. The competitors will dance in an inner track in the ballroom and dancing couples in the outer ring to a band. Whenever the band stops an automatic piano will immediately begin

"From noon on the 6th to the hour on the 7th when the dancers finish, the competitors twill be on the move. Relays of lady partners will be provided, and food and drink will be taken while danc-

Mr, Helps will train for the dance by taking long walks and by dancing. At first he will dance for half an hour without a break, and then the time will be increased by slow stages until he can dance hours together."—London Express.

## Firemen and Whiskey.

At a fire a few nights ago a half frozen reporter asked a battalion chief to take a drink to warm him up.

"I will have some whiskey," replied the fireman, "but I won't drink it."

The reporter led the way to the back room of a saloon and ordered whiskey. The fireman never made an attempt to

The fireman never made an actumpe to raise his glass to his lips.

"I'll hold my coat collar back and you pour that down the back of my neck," he said. "It soaks into my flannels and does me more good than if I was to put it in my stomach, and its' a heap sight less dangerous.'

"Oh, this isn't a new wrinkle," said he fire chief. "Some firemen pour the fire chief. "Some firemen pour whiskey down the back of their neck and some put it in their rubber boots. Both ways are good, but I like mine on my back. It's an old trick of firemen when they get very cold. Of course, all firemen don't take their whiskey this way. It would be a good thing if they did."—Toronto World.

#### Worry That Brings Death.

A publication devoted to suggestive therapeutics, telepathy and kindred in-terests maintains that thousands of people actually think themselves to death. It is not thinking, to think would be to fortify the mind against morbid ity. There seems to be no doubt that unreasoning and unreasonable worry has a distinct and pernicious effect on the mind and body. That it is practicable to overcome this cause of trouble is o firmed by special students of paychology. overcome this cause of trouble is 6 him ed by special students of psychology but there is an attraction to some minds in morbid melancholy and a dispositior to shun whatever is cheerful and whole some.—Philadelphia Ledger.

BANK OF ENGLAND'S ORIGIN. Conceived by William Paterson

in Year 1694.

lering the world-wide rep the Bank of England, it is remarkable ho little is generally known as to its internative morkings. Standing in the very heart of the largest city in the world—a central landmar of the great metropolis—even the busy Lor doners around it have, as a rule, only the vaguest possible knowledge of what goes owithin its walls. In truth, its functions as on many, its staff so enormous and their duties so varied that many even of those whave spent their lives in its service will te you that, beyond their own immediate departments, they know but little of its innellife.

The Bank of England originated in the brain of William Paterson, a Scotchman,

life.

The Bank of England originated in the brain of William Paterson, a Scotchman, better known, perhaps, as the organiser and leader of the ill-fated Darien expedition. It commenced business in 1894, its charter-which was in the first instance granted for eleven years only—bearing date July 27 of that year. This charter has been from time to time renewed, the last renewal having taken place in 1844.

The original capital of the bank was but \$8,000,000, and it carried on its business in a single room in Mercer's hall, with a staff of fifty-four clerks. From so small a beginning has grown the present gigantic establishment, which covers nearly three acres. In the banking department is transacted the ordinary business of bankers. Here other banks keep their "reserve," and hence draw their supplies as they require them. The issue department is intrusted with the circulation of the notes of the bank, which is regulated as follows: The bank in 1844 was a creditor of the government to the extent of \$55,000,000 and to this amount and \$20,000,000 beyond, for which there is in other ways stificient security, the bank is allowed to issue notes without having any gold reserve to meet them. Beyond these \$75,000,000 every not issued represents gold actually in the coffers of the bank.

All Bank of England notes are printed in the bank itself. Six printing presses are in constant operation, the same machine printing first the particulars of value, signature, etc., and then the number of the note in consecutive order. The paper, torms one of the water-mark, which is distributed over the whole surface of the paper, forms one of the principal guarantees against imitation. The paper, which is manufactured exclusively at one particular mill, is made in oblong and crisp, and the combination of these paper, which is manufactured exclusively at one particular mill, is made in oblong silps, allowing just enough space for the principal guarantees against imitation. The paper, which is manufactured exclusively canceled, and the reade

case the paying-in bank is debited with the amount.

The notes come in from various banks in parcels, each parcel containing a memorandum, stating the number and amount of the notes contained in it. The memorandum is marked with a certain number and then each note in the parcel is stamped to correspond, the stamping machine automatically registering how many are stamped and consequently drawing attention to any deficiency in the number of notes as compared with that stated in the memorandum. This done, the notes are sorted according to number and date, and after being defaced by punching out the letters indicating value and tearing off the corner bearing the signature, are passed to the bank note library, where they are packed in boxes and preserved for possible future reference during a period of five years.

Minard's Liniment Relieves Neuralgia.

Cemeteries as Death Traps. (St. Louis Post-Dispatch.)

A great deal of unnecessary suffering is caused by the present method of conducting funerals. During the intense cold that frequently prevails in our winters the mournquently prevalls in our winters the mourners, the officiating clergyman and the friends of the family are compelled to stand sometimes bareheaded, exposed to the bitter cold and biting wind. With their vitality already lowered by grief, the relatives of the deceased person especially are in no condition to endure this exposure with impunity. Physicians say that much sickness and sometimes death have resulted from funerals conducted in the open air in winter.

Results from common soaps: eczema, coarse hands, ragged clothes, shrunken flannels.

LGHT REDUCES

Lifting by Magnets.

Electro-magnets are becoming more and more common for lifting purposes, and are made to do the work formerly accomplished by means of a chain and hook. When hot iron plates have to be handled the serviceability of the electro-magnet method is pronounced. In a large English foundry a number of electro-magnets capable of carrying a load of 4,000 pounds are used. The magnets consume five and one-half amperes of current at a pressure of 110 volts. At the Woolwich Arsenal the greater part of the moving of large projectiles is done by electro-magnets. Many large works in this country use them for lifting heavy weights, transporting them rapidly from one point to another by electric motor. Magnets of from one to five horse power are the usual sizes. five horse power are the usual sizes.
