MOLASSES! In Store-Just Received:

Cough-Cures Are abundant; but the one best known for its extraordinary anodyne and expectorant qualities is Ayer's Cherry Fectoral. For nearly half a century this preparation has been in greater demand than any other remedy for colds, coughs, bronchitis, and pulmonary complaints in general.

"I suffered for more than eight months from a severe cough accompanied with hemorrhage of the lungs and the expectoration of matter. The physicians gave me up, but my druggist prevailed on me to try school.

Ayer's Cherry Pectoral.

I did so, and soon began to improve; my lungs healed, the cough ceased, and I became stouter and healthier than I have ever been before. I would suggest that the name of Ayer's Cherry Fectoral be changed to Elixir of Life, for it certainly saved my life."—F. J. Oliden, Saito, Buenos Ayres.

""A few years ago I took a very bad cold, which settled on my lungs. I had night sweats, a racking cough, and great soreness. My doctor's medicine did me no good. I tried many remedies, but received no benefit; everybody despaired of my recovery. I was advised to use Ayer's Cherry Fectoral, and, as a last resort, did so. From the first dose I obtained relief, and, after using two bottles of it, was completely restored to health."—F. Adams, New Gretna, N. J.

He is tired of this world, and warm climates, whether in battle or in lost by churning together cream from —Joe Nuttal, of Manchester, last week wants to make a millionairre of his peace, whether in sea or land, the folly different vessels, and of different degrees of drinking alcohol and the advantages of sources. This loss arises from the off the English in the Language in the Language in the English in the Language in the English in the Language in the English in the Language i perature, sour cream gives up its butter in less time and much more completely

than sweet cream. CHURNING The temperature at which cream should be churned varies from 57 to 60 degrees in summer, and from 61 to 65 in winter. When the particles of butter in the churn are nearly as large as clove seed, some cold water (about one tenti temperature of 50 to 55 degrees) may

There is a singular unamity of opinion as much as the milk in the churn, and at mong physicians with regard to the be added, after which the churning human brain. Dr. Kate Mitchell says. should be continued till the particles of 'the brain, the most important organ of outter are about half the size of grains of wheat. Then the buttermilk should oi all human desires and feelings, of the be drawn off, pure water at a tempera-ture of 50 to 55 degrees put in its place, highest as well as of the basest of our propensities, is the organ the earliest and the churning continued for a short and the most profoundly attacked by time loner. This may be repeated once or twice, till the water drawn from the hurn is free or nearly free from milk. The Calcutta Medical Record says, 'Society's use of alcohol is the secret of Then the butter in the granular stat half the jaundiced, haggard, dried up should be left in the churn for twent rematurely aged Europeans we find in ainutes or half an hour to drain, and

which it may be taken out and salted. Experiments seem to prove that the pest temperature for churning sweet cream is 51 to 55 degrees Fahrenheit. When churned by itself within this range of temperature it gives up nearly malady was alcoholic /excess as this all its butter-fat; but the butter from sweet cream is generally considered de

icient in flavor. It is a mistake to continue churning until the butter is gathered into lumps, mitted suicide at the Osburn House, because in that way a good deal of but Rochester. Upon the table in his termilk is taken up in the butter, which, room was found the following letter. It if left in the butter, destroys its keeping preaches a good temperance sermon: "Rather than have opium and rum nove this buttermilk greatly injures

the texture of the butter, often making kill me. I prefer to do it myself. I feel SALTING AND WORKING BUTTER Pure salt, of medium and uniform fine friends: have lost my position with my used-from three quarters of an ounce house, have overdrawn my account several hundred dollars, and, in fact cannot to one ounce in every pound of butter. see a ray of light ahead. If I thought The buttermilk having been washed out my friends would put me in an asylum in the churn, the butter should not be somewhere. I would not do the cowardly worked any more than is necessary to thing I am about to do, but they have mix the salt fairly well with it always used me kindly, and I have so in- should be kept cool during the working, variably abused their trust, that I neith- and set in a cool place for ten or twelv er ask, nor expect, any more mercy at hours to let the salt disolve, after which their hands. You can notify my house it may be worked slightly for a second and they will inform my friends where time, and then packed away for use.

When butter is not made into rolls or prints and sold at once, it should, if possible, be packed in clean, sweet, and clean looking tin-lined tubs. Where this cannot be conveniently done, it should be packed in crocks, or some other thoroughly clean and neat looking packages. When put into the package, the butter should be covered with a piece of thin white cotton, which has been washed in warm water and soaked

MILK AND BUTTER ROOMS It is a matter of much importance that all milk, cream and butter rooms be clean, cool (as near 45 degrees as possible) well ventilated and free from foul air. It is impossible to keep either milk, cream, or butter without injury in any cellar or room which is close, musty or full of tainted air, such as comes from decaying records. omes from decaying vegetables an arious other causes.

A good diary thermometer can be bought for 25 cents, and no handler of milk and or maker of butter or cheese should ever be without one. Such an instrument is constantly needed to test the temperature of milk at the time of setting, of the water in which the cans are placed, of the cream before churning, the cream in the churn and the water used to wash the butter, etc.

CLEANLINESS.

We cannot emphasize too strongly the importance of cleanliness in everything connected with "dairying. The stables in which cows are kept should be clean, the food and drink of the cows should be pure the place of the milking should be free from foul obors, the milk pails, the cream cans, and the hands, nails, and persons of the milkers and butter makers, should all be scrupulously clean.

James Mills. CLEANLINESS.
