LABATT'S PORTER!

Undoubtedly the BEST brewed on the continent. PROVED to be so by Analyses of four Chemists, and by awards of the World's Great Exhibitions, especially Chicago, 1893, where it received 96 points out of a hundred—much higher than any other Porter in United States or Canada.

MINES IN GREENWOOD CAMP

World Man Visits the Brooklyn and Stemwinder, Old Ironsides and Knob Hill.

BIG LOW-GRADE ORE BODIES.

These Are the Chief Features of the Camp—Character and Value of the Deposits—Other Properties—Phoenix.

Pacific Mining Letter No. 14—Relating to Greenwood Camp, B.C.

Greenwood, B.C., Sept. 14.—Of all the mining camps in the Boundary Creek country Greenwood Camp is perhaps best known to eastern readers of The World, and it is at present the scene of the greatest activity hereabouts. Here are situated the Brooklyn-Stemwinder group, owned by the Mackenzie-Mann-Cox-Jaffray combination of Toronto, and the well-known Knob Hill and Old Ironsides consolidation, operated by the Graves-Miner people.

Greenwood Camp, which lies miles up in the air from the town of the same name, is situated near the summit of the divide between Boundary and Fourth of July creeks.

The most important properties in the camp lie in a bunch upon two side hills which face each other and are only separated by a narrow gully. The land has been well wooded and a heavy "wash" of sand and gravel buries the face of the claims several feet deep. The country rock may be said to consist of limestone, broken up by dykes of an eruptive rock classed locally as belonging to the diorite family. The trend of the formation is nearly north and south, as in the rest of the boundary Creek country, and the mineral deposits are found in the contacts of lime and diorite.

Extensive Low-Grade Deposits.

The chief feature of the camp is found in the immensity of its mineralized zones. These lodes vary from 50 to 200 feet and upwards in width and extend indefinitely lengthwise. But readers when they hear of these huge ore bodies should not run away with the idea that the entire deposits are constituted of ore of a commercial value. As a matter of fact, while the whole 200 feet of one of these zones carries more or less visible mineral, it is to be remembered that a comparatively small portion of the whole deposit appears to carry shipping values. Assay tests, however, systematically extended over a long period, show that the camp has sufficient ore running from 3 to 5 and 6 per cent. copper and small gold values in addition to make a name for itself. Such ore would run from $9 to $24 to the ton and much of it would yield a good return to the owners. In fact it is upon this class of ore the bodies already opened up on such properties as the Brooklyn, Stemwinder, Knob Hill and Old Ironsides proves to be shipping ore, Greenwood Camp will jump readily into world-wide fame.

The extent of the camp's ore values in any event will soon be known to the general public, for the C.P.R. is building a special spur to every dump in the camp, and within two or three months locomotives will be hauling the trains of ore away to the Trail, Northport and Nelson smelters, and probably a little later to the reduction plant at Grand Forks and Greenwood. This construction work on the part of the railway is said to be unprecedented in mining camps, and it is certainly indicative of the company's confidence in the properties there situated.

Brooklyn-Stemwinder Group.

On reaching the camp by wagon road from Greenwood town I first visited the properties owned by the Dominion Copper Company, Limited, with which are identified Messrs. William Mackenzie, Donald Mann, George A. Cox, Robert Jaffray, Byron E. Walker and others. The company's general manager, Mr. Frank Robbins, a mining expert of experience in United States, Mexican and Central American camps, kindly showed me over the surface and sent his superintendent, Mr. C. S. Brown, below ground with me.

The Dominion Copper Company's properties include the Brooklyn, Idaho, Standard, Stemwinder, Montezuma and Raw Hide. As far as the company at present knows, it has upon these claims three distinct and exceedingly extensive lodes of mineralization. One runs through the Brooklyn and Idaho locations, another through the Stemwinder and Montezuma and a third is found upon the Raw Hide, which is situated about a mile distant from the other claims.

The Brooklyn-Idaho lode lies between a lime foot wall and a diorite hanging wall, the width between the two being about 200 feet. Upon the foot wall of this big zone, which is clearly defined, an incline shaft has been sunk nearly 300 feet, with crosscuts at the 150 foot and 250 foot levels. The journey through the crosscut at the 150 foot level is an interesting one. On getting out of the ore bucket one finds that the crosscut runs for a distance of 12 or 13 feet in vein matter, carrying heavy mineralization, the ore consisting largely of copper pyrites. This 12 feet of ore, I am given to understand, runs from 3 to 5 or 6 per cent. in copper, with some gold value besides, and is of shipping grade. After leaving this pay chute, as it may be called, the crosscut continues for 150 feet through the main portion of the lode, which is only slightly mineralized, until within about 35 feet of the hanging wall. Here again the working cuts into good-looking vein matter filled with rich stringers of copper pyrites which give evidence of leading to a high grade chute. There is 30 feet of this copper-impregnated ledge mater, and between it and the hanging wall again lie five feet of barren rock. It will thus be seen that this crosscut at the 150 foot level shows up a mineralized zone 200 feet across containing two veins, aggregating 42 feet in width of more promising ore. The 250 foot crosscut shows up somewhat similar conditions at that level, though the work at that depth is not as extensive.

The extension of the same ledge upon the Idaho, where it appears 90 feet in width on the surface, is being prospected in order to ascertain a favorable place for sinking a shaft.

Stemwinder—Montezuma.

To come to the Stemwinder-Montezuma lode, which runs parallel with the Brooklyn-Idaho deposit, with several hundred feet of lime and diorite in between, an incline shaft has been sunk for 200 feet upon the foot wall. Here is found a mineralized zone, the real width of which has not yet been ascertained.

At the 115-foot level a crosscut has been run for 78 feet towards the hanging wall. The first 18 feet of the working is in a pay chute of shipping ore. Next to this comes 40 feet of barren rock, and then 40 feet of a fairly mineralized portion of the deposit, succeeded again by barren rock. The crosscut is in this barren portion of the lode with the hanging wall yet to be found.

The Standard claim will be explored from the Brooklyn underground workings, and the Montezuma from the Stemwinder workings.

On the Raw Hide.

The Raw Hide, which, as before stated, lies a mile away from the others, has a surface showing 80 feet wide, lying in diorite. This deposit has been opened up by several surface crosscuts, and also recently by a rock cut made by the railway. A series of assay tests would indicate that most of this large body averages on the surface over 6 per cent. in copper. To develop this a tunnel 400 feet long is now being driven in the face of the hill to cut the lode at a vertical depth of 300 feet.

The company's property is equipped with quite a village of camp buildings. As far as the operating plant is concerned, the Brooklyn is being developed with a 5-drill air compressor, and the other claims by hand drill. Both the Brooklyn and the Stemwinder have small steam hoisting plants. The Brooklyn hoist will shortly be transferred to the Idaho, being replaced on the Brooklyn with a plant capable of sinking 1000 feet and of handling 500 tons of ore a day. A similar hoisting plant will be installed on the Stemwinder. Besides this the small compressor plant on the Brooklyn is to be transferred to the Raw Hide, and the main group of claims, which lie in a bunch, will be developed by power furnished from an air compressor to be located on the creek which runs through the gully in the midst. This compressor will have a capacity of 40 drills, and will furnish motive power on an economic basis.

It is impossible to obtain at present from the company's management anything like an exact statement as regards their probable output of shipping ore, but as the railway will shortly be running to their dumps, this information will come to the public ears in the natural course of events.

Knob Hill and Ironsides.

After visiting the Dominion Copper Company's properties, I crossed the gully to the opposite side of the hill for an inspection of the celebrated Ironsides and Knob Hill group. These consist of six claims, namely, Knob Hill, Old Ironsides, Etna, Victoria, Phoenix and Fourth of July. The Knob Hill is owned and operated by the Knob Hill Gold Mining Company, the Old Ironsides by the Old Ironsides Mining Company, and the other four claims by the Granby Mining and Smelting Company. All these companies are constituted by practically the same men, at the head of the corporations being Jay P. Graves, the Grand Forks smelting man, and S. H. Miner, a well-known capitalist of Granby, Que.

These properties are all being worked under one management, on an extremely large scale. Extensive camp buildings have been erected, and the company has built a number of smart-looking cottages, which are to be let out to their employes at a nominal rental.

The mineral deposits upon these locations are extremely extensive. One of the great lodes runs from end to end of both the Ironsides and Knob Hill claims, being at least 200 feet wide on the surface, and lying in diorite and limestone. Parallel with this main lode two other extensive leads occur on the Victoria location, which lies alongside of the Old Ironsides.

By working in accord, and using the same shafts and tunnels to prospect their ore bodies, the companies owning these claims have adopted an economical way of operating.

Extensive Systematic Development.

On the Old Ironsides claim a shaft has been sunk for 300 feet upon the lode, being in ore all the way down, and at the 200-foot level a crosscut has been run for 130 feet to the east in compact mater. After reaching the wall this crosscut proceeds for some distance through country rock on to the Victoria claim, where it cuts a second 30-foot ore body. This last has been cut through, and the working is now being driven to intersect a third parallel ledge, which outcrops on the surface. A shaft is now being sunk on the Victoria claim to connect with this crosscut from the Old Ironsides at the 200-foot level.

The south end line of the Old Ironsides and the north end line of the Knob Hill are one, and from this juncture of the two claims a tunnel has been run in for over 600 feet on the hanging wall, on the same ledge upon which the Old Ironsides shaft was sunk. At a point 360 feet from the mouth of the tunnel a crosscut has been driven across the ore body, reaching the foot wall of the deposit exactly 200 feet away. From the end of this crosscut a drift has been run along the said foot wall for a distance of 180 feet, from which point a crosscut has been driven back through the 200 feet of ore to the main tunnel on the hanging wall.

I walked around this big 200 square feet of ore which has thus been blocked out. After getting back to the tunnel, I followed it for 200 feet further, and found its face where the miners are working still in mineralized ledge matter. Roughly speaking, this tunnel, with its crosscuts on the Knob Hill, may be said to have practically proven the existence of a body of ore 600 feet long by 200 feet wide.

A Drift 1200 Feet Long.

About 360 feet from the mouth of the Knob Hill tunnel a shaft is being sunk to the 200-foot level. At this depth a drift will be run to connect with a drift from the shaft of the Old Ironsides. This connection will give a drift 1200 feet in length on the lode.

Values Found in the Ore.

The management was reticent in speaking of its ore values, but I understand that the best mineralized portions of the big lode run from three to six per cent. in copper. If this is so (and the approaching shipments to the smelter will shortly prove whether it is or not) the owners of the Knob Hill-Old Ironsides group will do well even if one-tenth of their ore body turns out to be so classable.

May Use Sorting Tables.

I am informed that in handling their low-grade ores, which are not very amenable to concentration, the Old Ironsides and Knob Hill people may resort to the use of sorting tables. In this method of selection, by means of a kind of endless belt, the ore, after being washed, is passed before two lines of men or boys, who pick out the higher-grade vein matter, the waste being carried to the refuse pile.

The three companies between them employ about 110 men. The owners of this group will probably send their ores to the smelter at Grand Forks, being constructed by Mr. J. P. Graves, the president of the three corporations, and owned by the Granby Company.

The officers in charge of the group are W. Y. Williams, superintendent; O. B. Smith, engineer and assayer; F. H. Hemmingway, assistant treasurer, and P. J. Dermody, foreman.

The Snowshoe.

The Snowshoe, a well-known property in Greenwood Camp, lies a mile or so from this main group. This property is under bond to the British Columbia, Rossland and Slocan Syndicate, Limited, with headquarters at London, Eng., the figure named being $70,000. Mr. A. J. McMillan of Rossland is general manager, and Mr. B. C. Murray, mine manager.

The Snowshoe has good surface indications of copper and iron pyrites, and a railway cutting on the C.P.R. line recently opened up an ore body 11 feet wide, most of it apparently of shipping grade. A prospecting shaft is down 200 feet on the property.

The Bank of England.

A property of which something should yet be heard is the Bank of England claim, which lies next to the Dominion Copper Company's Rawhide, and near to the Snowshoe. This location is controlled by Mr. Robert Wood, the father of Greenwood town, and owner of extensive mining interests in the Boundary Creek country. It is now under bond to the Vancouver and Boundary Creek Mining and Development Company, which controls about 30 locations, and may be shortly brought to the attention of eastern investors. This claim boasts a big surface showing, on which a shaft has been sunk for 40 feet in ore, giving good values all the way down.

The Gold Drop is another claim in the Greenwood Camp which shows good surface indications. I understand it is owned by, or under option to, Spokane parties. A tunnel, now in 150 feet, is being run to crosscut a deposit on the claim.

The Village of Phoenix.

Right in the middle of Greenwood Camp Mr. George Rumberger and others are promoting a townsite. Mr. Rumberger calls his incipient community Phoenix, and judging from present appearances it has a future.

Some 300 men are employed on the Brooklyn, Stemwinder, Knob Hill, Old Ironsides, Snowshoe and Gold Drop properties, adjacent to it, and on the railway construction in the neighborhood, and a number of buildings are being erected. The place already has two hotels and two others are being built. There are two general stores on the townsite and a number of private houses.

Phoenix lies on the main stage line, between Greenwood town and Columbia and Grand Forks, being five miles from the former and 10 from the two latter places, and at it the Columbia and Western Railway will establish a station.

Frank K. D. L. Smith.

On the Exchanges.

On the Standard Exchange yesterday, Fairview Corporation was active at 7¼, and Rathmullen at 6½. Van Anda sold at 8¼. Golden Star closed at 38 bid, after sales at 39½. Winnipeg sold at 31. Some J.O. 41 sold at 3, and Gold Quartz at 6.

On the Toronto Mining Exchange, Rambler Cariboo were active, closing at 47 bid. Deer Park sold at 3, and Van Anda at 8. Waterloo at 10¾. Rathmullen closed at 8¼ bid and 9 asked. Deer Trail sold at 22¾, and Golden Star at 48¼.

Rathmullen sold at 8 in Montreal at the morning board, and at 8¼ in the afternoon. Rambler Cariboo sold at 47, and Deer Trail No. 2 was strong at 22½. The market was very dull.

Belleville Notes.

Belleville, Ont., Sept. 27.—Thomas McKee Martins, one of the oldest Orangemen in this county, died to-day at his home in Thurlo. He was 83 years of age, and is survived by three daughters and five sons.

Miss Hannah Robinson, daughter of William Robinson of this city, was married last night in St. John's Church, to Mr. George Brown of the Grand Trunk. Rural Dean Bogart, rector of the church, officiated.

BISHOP POTTER ON DIVORCE

He Advises That Divorced Persons Be Prevented by Legislation From Re-Marriage.

CHURCH SHOULD TAKE SAME LINE.

Complaint of Laxity in Observing Sunday—A Good Word for Result of Hague Conference.

New York, Sept. 27.—The annual convention of the Protestant Episcopal Church of the Diocese of New York began here to-day in the Church of the Incarnation. There were 175 clergymen present, besides a number of laymen.

The convention comprises some very interesting features, notably that of the election of the standing committee. This committee recommends the applicants for ordination into the Protestant Episcopal ministry. The present committee is that which recommended the ordination of the Rev. Dr. Charles A. Briggs, over which ordination there was so much discussion. The morning session was given over to routine business.

Bishop Potter on Divorce.

Bishop Potter spoke of the divorce questions, saying that the church would doubtless always be divided as to the author of the words relating to this subject in the Holy Scriptures.

"But, meantime," he said, "the whole subject gained a new aspect from events to which I need not particularly refer here, which have undoubtedly awakened in all sober-minded Christian people a profound sense of alarm, and the consensus of opinion among them as to the necessity of legislation which shall prohibit the re-marriage of divorced persons under any circumstances whatever has greatly widened and deepened.

Do Not Allow Re-Marriages.

"It must be owned, that in the face of such a danger as threatens us the only safe course must be to prevent legislation that which, while it might be permissible if we could always be sure that we had a scriptural justification for it, is only wrong and evil when that justification is existing in fact, exists only because it has been fraudulently obtained. Here the judgment of eminent publicists and legal authorities concur, and some of them are the foremost rank as jurists and churchmen have agreed in the opinion that the only safe canon, in view of the tendencies painfully evident among us, is one in which the church refuses re-marriage to persons divorced for any cause arising after marriage, absolutely and universally."

Social Relations of Our Time.

Bishop Potter then said that the social relations of our time have been affected by a spirit of individualism. He said that the great movement that led the American colonies to revolt from the mother country affected also France, Germany and later Italy, and is now working in Russia. He said it had resulted in almost the complete abrogation of some of the earliest forms of authority and most venerable and sacred traditions of the community and the state and nothing was affected more seriously than the family, and especially the institutions and obligations of marriage.

"These, at least," he went on, "have come to be so lightly regarded that now at length the least thoughtful among us are beginning to realize the vicious tendencies in some 40 or 50 different commonwealths of a composite nation of contradictory legislation, and to recognize that the facility with which the marriage relation may be taken on and put off is a menace to the foundations of society and the jest of the civilized world."

Laxity in Observing Sunday.

Bishop Potter also made some complaint of laxity in the observing of Sunday, and he spoke in conclusion of The Hague Peace Conference, saying: "What was proposed and hoped for has not, at any rate in the form proposed, come to pass. But something even greater has come of it. We are prepared the way for greater things to follow. The constitution by The Hague Conference of an International Board of Arbitration is a step tremendous in scope and incalculable. It has, by that one act, altered forever the relations of all civilized people. Such an achievement alone is great enough to redeem the century from literal insignificance and to lift it for all time to a great place in the progress of mankind."

George MacCullough Miller offered a resolution that the portions of Bishop Potter's address which referred to marriage, divorce and the observance of Sunday be referred to a large and representative committee for consideration.

A RALLY AT OTTAWA.

Conservatives Propose to Have a Big Gathering With Sir Charles and Mr. Foster as Speakers.

Ottawa, Sept. 27.—A movement is on foot for the holding of a monster Conservative rally here next month. The affair will take all day, and the City of Ottawa and the Counties of Carleton, Russell, Prescott, Lanark, Wright and others will be represented. The speakers will be Sir Charles Tupper and Hon. George E. Foster.

DEATH OF JUDGE REYNOLDS.

One of Brockville's Most Prominent Men Has Passed Away.

Brockville, Ont., Sept. 27.—Judge Reynolds died at the hospital here last night, where he had been under treatment during the past month. In his death Brockville loses one of her most prominent men. He was called to the bar in 1859, and practised both in Brockville and Prescott until he was appointed judge, in 1886. He was connected with many fraternal societies and carried a large life insurance. He was 62 years of age.

Buy and sell all mining stocks on commission.

Our confidential letter of 9th September said that the crushing capacity of the Republic mill must be increased. A gentleman in St. Catharines forwarded same to the company in Montreal. They appear to have taken it very seriously, for White, O'Halloran & Buchanan promptly sent us a lawyer's letter, of course denying everything in the most unmeasured terms. But on the 22nd, the directors met and decided to increase the crushings from 30 to 100 ons per day. To be threatened with legal proceedings, when, after careful study, we give sound advice, and then to get nothing when it is accepted, makes the life of a mining broker not a happy one.

In addition to several new mines our next confidential will discuss the stock market and the various causes of fluctuations or changes in values, temporary or permanent. Those who have not heretofore done business with us are requested to send in their names as soon as possible. The demand for our last letter was so great, a number of applicants could not be supplied and of course actual customers always have the preference. 24

NOTICE.

The Annual Meeting of The Snake River Mining Co. will be held in the office of the company, Confederation Life, Toronto, on Tuesday, the 10th October next, at the hour of 2 o'clock in the afternoon.

J. McADAM, Sec.-Treasurer. W. W. OGDEN, M.D., President.

SIX NATIONS' JUBILEE.

Procession, Music, Present - Day Sports and Indian Games Made Up the Program.

Onondaga, Ont., Sept. 27.—A very large crowd assembled at Opsweeken to-day to witness the jubilee celebration of Six Nations Indians. The procession left the council house at 10 o'clock, headed by brass bands, and proceeded to the fair grounds, where a program of sports and Indian games were held. The Stars of Brantford defeated a team of picked players from the reserve at baseball. Afterwards an exhibition of the old-time method of playing lacrosse was very much enjoyed. All felt well pleased with the day's sports. Yesterday's program was cancelled on account of the storm.

WEDDING AT PETERBORO.

Miss Ethel C. Moore Became the Wife of Mr. William Allen.

Peterboro, Sept. 27.—A very quiet wedding took place this afternoon at the residence of Mr. W. H. Moore, when his second daughter, Miss Ethel C., was united in marriage to Mr. William Allen, formerly of this town, who is now residing in Cobourg. The bride was assisted by Miss Carolyn Allen of Bowmanville, sister of the groom, and the groomsman was Mr. H. Ritchie of town. The ceremony was performed by Rev. Dr. Torrance of St. Paul's Church, and, after an inviting wedding breakfast had been served, Mr. and Mrs. Allen left for New York, Boston and other American cities.

S. Ackerman, commercial traveler, Belleville, writes: "Some years ago I used Dr. Thomas' Eclectric Oil for Inflammatory Rheumatism, and three bottles effected a complete cure. I was the whole of one summer unable to move without crutches, and every movement caused excruciating pains. I am now out on the road and exposed to all kinds of weather, but have never been troubled with rheumatism since. I, however, keep a bottle of Dr. Thomas' Oil on hand, and I always recommend it to others, as it did so much for me. ed

Gay Bros', Creamery Burned.

Belleville, Sept. 27.—Gay Bros.' creamery and D. Strachan's chair factory in Thurlow, a short distance east of this city, were destroyed by fire at midnight last night. The loss is about $1000, with no insurance. The cause of the fire is unknown.

Italian Laborer Drowned.

Iroquois, Ont., Sept. 27.—An Italian laborer named Carl Sawson was drowned here to-day by falling off a dump car, which was thrown off the trestle by the collapse of the same. The coroner considered an inquest unnecessary.
