THE RIGHTS OF WOMAN.

Sung at the Anniversary Dinner of the St. Andrew's Society, New York, Nov. 30th, 1852

AIR—"A man's a man for a' that."

Though man "creation's lord" we call,
King—President—and a' that.
By woman's rights his power shall fall
His pride of place, and a' that;
For a' that, and a' that,
For woman's rights and a' that,
The sex, though weak, can sharply speak,
A tongue's is a tongue for a' that.

Men long have wanton'd at their will,
In Congress—camp, and a' that,
But when their posts brave women fill,
A curse will come for a' that.
For a' that, and a' that,
King Solomon foresaw that,
And in his book, whoe'er will look,
Will find a note of a' that.

Men have too long usurped the sway,
Ta'en lion's share, and a' that,
There's not a goose in Syracuse,
But tells the ganders a' that,
For a' that, and a' that,
"Strong mental light," and a' that,
Shall pilot woman on her way,
To wondrous spheres, and a' that.

O, what a world will open when
Fair ladies vote, and a' that,
And female Generals lead their men
Through showers of shot, and a' that;
Their minds so high while bullets fly,
No thoughts of home, or a' that,
Where husband wild, rocks screaming child,
Sweeps up the hearth, and a' that.

Or when in hospitals they clip,
Nerves, sinews, veins, and a' that,
Invade the pulpit—guide the ship,
Preach doctrine—law—and a' that.
For a' that, and a' that,
"High destiny," and a' that,
In which poor man, since time began,
Has toil'd and moil'd, and a' that.

O, could they change, for one short year,
And take a spell at a' that,
No more of "lofty types" we'd hear,
Of "world's applause," and a' that,
For a' that, and a that,
Fond sighs for home, and a' that,
Where ne'er again should rise the strain,
Of woman's rights, and a' that.

The bloomer guise, in exile laid,
The pants—the kilts, and a' that,
To be in after years survey'd,
As moonstruck mad, and a' that.
For a' that, and a' that,
The monster hat, and a' that,
Might still deserve, a use to serve,
In masque or farce, and a' that.

But women's rights, and rapping sprites,
Fox—Davis—Fish—and a' that,
E'en washing darkies into whites,
Has had its day, and a' that,
The cry is still for something new,
More wild and strange, than a' that,
And soon—be sure—'twill meet the view,
New York's the place for a' that.

EXPRESSION OF THE EYE.

One of the most mysterious living things, is the expression of the eye. It is this which gives the character to the whole face; you look in the eye and recognize the conscious being. Not until the eye is opened does the face seem to have any expression of meaning. This is the case even with any considerable animal; whilst its eyes are shut, it seems not to be completely with us; but open one of its eyes, and what a striking feeling is instantaneously produced. The being is now made present as it looks through the exposed organ. The late John Foster seems to have been much struck by this remarkable expression of the eye, and made several entries respecting it in his journal. In one place he thus writes:—"I observed a long time, through a small opening in a completely built and closed shed, a cow and calf. The cow advanced her head to the opening to observe me, too; we looked in each other's face, at a very short distance, a long time, and I indulged a kind of wondering about the nature of our mutual consciousness and thought of each other. I observed the great difference between the degree of intelligence expressed in the eyes and looks of the cow, and in those of the calf Yet vastly less difference than betwen the looks of a human infant and mature person." This expression of the eye depends on something more than organization. You may observe the eyes of two persons, which, in their structure and color, are apparently quite the same, and yet the occular expression of each individual is entirely different. The eye seems more than any other feature to express the intellectual character, as the mouth and lips express feelings and appetites. Imaginative geniuses have always expressive eyes; they seem to be bright, "with something like an angel light." How the eyes flash in anger and melt in love.

THE DEW.

The theory of the dew is interesting to all the admirers of nature, and illustrates in a striking manner the beautiful economy of the operations of her system. Professor Johnson, in his agricultural chemistry, remarks, that:—The dew is celebrated at all times, and in every tongue, for its sweet influence, presents the most beautiful and striking illustration of the agency in the economy of nature, and exhibits one of the wise and bountiful adaptations, by which the whole system of things, animate and inanimate, is fitted and bound together. All bodies on the surface of the earth radiate or throw out rays of heat, in straight lines—every warmer body to every colder—and the entire surface inself is continually sending rays upward through the clear air into free space. Thus on the earth's surface all bodies strive, as it were, after equal temperature, (an equilibrium of heat,) while the surface as a whole tends generally towards a cooler state. But while the sun shines this cooling will not take place, for the earth then receives in general more heat than it gives off: and if the clear sky be shut out by a canopy of clouds, these will arrest and again prevent it from being speedily dissipated. At night, then, when the sun is absent, the earth will cool the most: on clear nights also, more than when cloudy, and when clouds only partially obscure the sky, those parts will become the coolest which look towards the clearest portions of the heavens.

Now when the surface cools, the air in contact must cool also, and like the warm currents on the mountain side, must forsake a portion of the watery vapor it has hitherto retained. This water like that floating mist on the hills, descends in particles almost infinitely minute. These particles collect upon every leaflet, and suspend themselves from every blade of grass, in drops of "pearly dew." And mark here a beautiful adaptation. Differerent substances are endowed with the property of radiating their own heat, and thus becoming cool with different degrees of rapidity; and these substances, which, in the air, become cool at first, also attract first, and most abudantly, the particles of falling dew.

STUCCO WHITE-WASH.

Having had numerous reqests to republish the recipe for the celebrated *Stucco White-Wash*, which elicited such admiration at the President's House at Washington, we herewith present it again to our good housewives—

Take half a bushel of nice, unslacked lime, slack it with boiling water, covering it during the process to keep in the steam. Strain the liquor through a fine sieve or strainer, and add to it a peck of clean salt, previously well dissolved in warm water: three pounds of ground rice, ground to a thin paste, and stirred and boiled hot; half a pound of powdered Spanish whiting, and a pound of clean glue, which has been previously dissolved by first soaking it well, and then hanging it over a slow fire, in a small kettle, within a larger one filled with water. Add five gallons of hot water to the whole mixture; stir it well and let it stand a few days covered from the dirt. It should be put on quite hot; for this purpose it can be kept in a kettle on a portable furnace.

Where the colors are desired, Spanish brown stirred in will make a red or pink, more or less deep according to quantity. Finely pulverized common clay, well mixed up with Spanish-brown, before it is stirred into the mixture, makes it a lilac color. Lamb black in moderate quantities makes a slate color, very suitable for the outside of buildings. Yellow ochre stirred in makes a yellow wash, but chrome goes father, and makes a color generally esteemed prettier.

STATISTICS OF MUSCULAR POWER.

MAN has the power of imitating every motion but that of flight. To effect these he has, in maturity and health, sixty bones in his head, sixty in his thighs and legs, sixty-two in his arms and hands, and sixty-seven in his trunk. He has also four hundred and thirty-four muscles. His heart makes sixty-four pulsations in a mihute: and therefore three thousand, eight hundred and forty in an hour, ninety-two thousand, one hundred and sixty in a day. There are also three complete circulations of his blood in the short space of an hour. In respect to the comparative speed of animated beings and of impelled bodies, it may be remarked that size and construction seem to have little influence, nor has comparative strength, though one body giving any quantity of motion to another is said to lose so much of its own. The sloth is by no means a small animal, and yet it can travel only fifty paces in a day; a worm crawls only five inches in fifty seconds; but a lady bird can fly twenty million times its own length in less than an hour. An elk can run a mile and a half in seven minutes; an antelope a mile in a minute; the wild mule of Tartary has a speed even greater than that; an eagle can fly eighteen leagues in an hour; and a Canary falcon can even reach two hundred and fifty leagues in the short space of sixteen hours. A violent wind travels sixty miles in an hour; sound, eleven hundred and forty-two English feet in a second.—*Backe.*

A MAN OF BUSINESS.

AT the Green County, New-York, Agricultural Fair, an address was made by Col. Zadock Pratt, from which we take the following passage:—

"And I now will show you the advantage those dreary hemlocks have been to the framers of our mountain towns. Since I first engaged in farming it has been my lot to employ over fifteen thousand years of other men's labor: an army of thirty thousand men have I employed, and I have paid those men, for their labor alone, over two million five hundred thousand dollars. I have cleared over ten thousand acres of land, used over two hundred thousand cords of hemlock bark, and paid over half a million of dollars for it. Used and worn out five hundred horses, and one thousyoke of oxen. Used two hundred thousand tons of hay; thirty thousand barrels of beef and pork, and nearly one hundred thousand barrels of flour, and potatoes without number or measure. I have tanned one million two hundred and fifty sides of leather; my usual disbursement is over fifty thousand dollars per day, and I have used in my business here over ten millions. Every laborer received his money, yea, every man his penny, in peace; and to the credit of this community be it said, that I never had a hide of leather stolen, and never was chosen defendant in law on account of my business transactions, during my residence among you. The great object of my living is to be useful. Live with your neighbour, not on him. Allow me, gentlemen and ladies, to conclude by congratulating you upon the rich blessings of health, power and prosperity, which surround you, aud may succeeding generations do as much as you have done toward national wealth and industry, which are the safeguards to our independence.

MRS. MARINDA HINES, who has been a subscriber for twenty years to a Greenfied paper without giving the proprieter any trouble about pay, shows herself, in the following extract, a most notable dairy woman:—

"I have five cows, and have sold the past season 1300 lbs. of butter, besides milk, cream and butter for family use. Our family will average eight. I raised seven calves last spring, and some late; two of them I got of my neighbors. I have fattened 768 lbs. of pork, mostly on sour milk. Now let us leave one of the cows for family use, and set the credit to the other four: say 1390 divided by 4, makes 325 lbs. to each cow; the butter sold averaging 16½ cents, 325 lbs. at 16½ cents. makes $53.62 to each cow. The seven calves were worth $30, say $25 to four cows; and five huudred of the pork at $6 will be $30; and the $25 for the calves makes $55, divided by four, leaves $13.75 to each cow; this added to $53.62 will make $67.37 to each cow.

"My cows are about middling size, and of the native breed. They have a good pasture in summer and good hay in winter, and that is all, except in winter I sometimes give old Brindle a few small apples and potatoes, pearings and the like, to make her hole out her milk until some of the others come in. When I see anything in the butter line in your paper that beats the above, I will try again.

GOOD BREAD.—Mr. Weed writes to the *Albany Evening Journal*.—"We could learn one lesson from Austria with great advantage to our people. This the art of making good bread, which, being as it is here, universal, is really a great national blessing. We were struck first at Trieste with the fine quality of bread at our hotel. At all the eating-houses between Trieste and Vienna we remarked the excellence of the bread. Here we enjoy the same luxury. Nor is it a luxury for the rich alone. The same light, sweet bread is in all the bake-shops at prices which enable all classes to purchase. England has contrived humanely to give 'cheap bread' to her people: but Austria affords it still cheaper and of an excellent quality. I do not know as this secret for making good bread can be communicated. Perhaps it is owing to some peculiarity in the flour. or in the water; but I do know that the art of making for the American people such bread as is eaten throughout Austria, would be of incalculable value, A Vienna baker who should go to the city of New York and vend such bread as we get here, would be able to ride in his coach and reside on the Fifth Avenue in two years. That is providing Yankee bakers do not find out his secret."

WASHINGTON CAKE, No. 1.—One pound of butter, one pound of flour, one pound of sugar, six eggs, one wine-glass of brandy, one grated nutmeg, one table spoonful of cinnamon, two pounds of dried currants, one table spoonful of *dissolved* salæratus, half a pint of rich milk. Stir the butter and sugar to a cream. Beat the eggs very light and stir into it, then add the liquor, spice, and milk, then stir in the flour, lastly the salæratus. Butter a pan and bake it.

WASHINGTON CAKE, No. 2.—One pound of sugar, three-quarters of a pound of butter, four eggs, one pound of flour, one tea cupful of milk, two tea spoonsful of *dissolved* salæratus, three table spoonsful of brandy, half a tea spoonful of cinnamon, half a nutmeg, one pound of dried currants washed, picked, and wiped dry. Beat the butter and sugar until it is smooth and light. Whisk the eggs till they are thick and add them to the butter and sugar. Stir in the flour brandy and spice. Flour the fruit and stir it in. Beat the whole very hard for fifteen minutes. Then stir in the salæratus. Line the sides and bottom of your pan with paper, butter it well, pour in the mixture and bake in a moderate oven. For those who object to the use of brandy, two table spoonsful of rose water may be substituted in its place.—*National Cook Book.*

SHREWSBURY CAKE.—One pound of flour, three-quarters of a pound of sugar, half a pound of butter, five eggs, half a nutmeg. Beat the butter and sugar together. Whisk the eggs add to it, with the nutmeg. Stir in the flour, roll out the dough and cut it in cakes. Bake in a quick oven.

DOVER BISCUITS.—Half a pound of butter, half a pound of sugar, three-quarters of a pound of flour, two eggs, one table spoonful of rose-water, half a tea spoonful of nutmeg. Stir the butter and sugar together. Beat the eggs light and stir it, with the rose-water; add the spice and flour.—Roll out thin and cut into small cakes.

POMMADE DE SEVILLE.—This is a simple but efficacious preparation much in request among Spanish ladies, for removing from the effects of the sun. The following is the recipe:—Take equal parts of lemon juice and white of eggs. Beat the whole together in a varnished earthen pipkin, and set on a slow fire. Stir the fluid with a wooden spoon till it has acquired the consistence of soft pomatum. Perfume it with sweet essence, and before you apply it, carefully wash the face with rice water.

EVE'S PUDDING.—Six eggs, six apples, six ounces of bread crumbs, six ounces of currants, six ounces of sugar, nutmeg to taste, half-a-salt spoonful of salt. Beat the eggs very light, add to them the apples, which must be finely chopped, the currants, sugar, and bread crumbs, nutmeg and salt. If the mixture should be too thick, add a little milk. Pour the batter into a pan leaving a space at the top, tie a cloth tightly over the pan so as to exclude all the water, and let it boil three hours. Serve it with sweet sauce.

MORRISON & CO.

PRINCE WILLIAM STREET,

Are receiving per "Devon," another

EXTENSIVE ADDITION

TO THEIR

SPLENDID STOCK

OF

Fancy and Staple Dry Goods,

To which they respectfully solicit the attention of both Wholesale and Retail buyers.

The Road to Health.

Holloway's PILLS.

CURE OF A DISORDERED LIVER AND BAD DIGESTION.

Copy of a Letter from Mr. R. W. Kirkus, Chemist, 7 Present Street, Liverpool, dated 6th June, 1851.

To Professor HOLLOWAY.

SIR,—YOUR Pills and Ointment have stood the highest on our sale list of Proprietary Medicines for some years. A customer, to whom I can refer for any enquiries, desires me to let you know the particulars of her case. She had been troubled for years with a disordered liver, and bad digestion. On the last occasion, however, the violence of the attack was so alarming, and the inflamation set in so severely, that doubts were entertained of her not being able to bear up under it; fortunately she was induced to try your Pills, and she informs me that after the first, and each succeeding dose, she had great relief. She continued to take them, and although she used only three Boxes, she is now in the enjoyment of perfect health. I could have sent you many more cases, but the above, from the *severity of the attack*, and the *speedy* cure, I think, speaks much in favor of your astonishing Pills. (Signed) R. W. KIRKUS.

AN EXTRAORDINARY CURE OF RHEUMATIC FEVER, IN VAN DIEMEN'S LAND.

Copy of a Letter inserted in the Hobart-Town Courier, of the 1st March, 1851, by Major J. Walch.

Margaret M'Connigan, nineteen years of age, residing a New Town, had been suffering from a violent rheumatic fever for upwards of two months, which had entirely deprived her of the use of her limbs; during this period she was under the care of the most eminent medical men in Hobart Town, and by them her case was considered hopeless. A friend prevailed upon her to try Holloway's celebrated Pills, which she consented to do, and in an incredible hort space of time they effected perfect cure.

CURE OF A PAIN AND TIGHTNESS IN THE CHEST AND STOMACH OF A PERSON 84 YEARS OF AGE.

From Messrs. Thew & Son, Proprietors of the Lynn Advertiser, who can vouch for the following statement.—August 2nd, 1851.

To Professor HOLLOWAY,

SIR,—I desire to bear testimony to the good effects of Holloway's Pills. For some years I suffered severely from a pain and tightness in the stomach which was also accompanied by a shortness of breath, that prevented me from walking about. I am 84 years of age, and notwithstanding my advanced state of life, these Pills have so relieved me, that I am desirous that others should be made acquainted with their virtues. I am now rendered, by their means, comparatively active, and can take exercise without inconvenience or pain, which I could not do before.

(Signed) HENRY COE.
North Street, Lynn, Norfolk.

AN EXTRAORDINARY CURE OF THE GRAVEL, AND A MOST DANGEROUS FEVER COMPLAINT.

Copy of a Letter addressed to J. K. Hayden, Esq., Sydney, New South Wales dated Feb. 25th, 1851.

SIR—A Mr. Thomas Clark, a Settler at Lake George, was for a considerable time seriously afflicted with a Complaint of the Liver, together with the Gravel. His medical attendants, after trying all their skill, candidly told him that his case was hopeless, and any further efforts useless. In this situation, and when expecting every day would terminate his existence, a friend recommended him to try Holloway's Pills, and as a forlorn hope he did so, the first gave him considerable relief, he therefore persevered in taking them according to the directions, and is now restored to health. He will feel great pleasure in confirming this statement, or even make an affidavit to the same effect, should it be required.

(Signed) WILLIAM JONES, Proprietor of the Goulburn Herald, New South Wales.

WONDERFUL EFFICACY OF HOLLOWAY'S PILLS, IN CASES OF DROPSY.

Persons suffering from Dropsy, either about the turn of life, or at other times, should immediately have recourse to these Pills, as hundreds of persons are annually cured, by their use, of this direful complaint in its different stages, when all other means had failed.

These celebrated Pills are wonderfully efficacious in the following complaints.

Ague, Asthma, Bilious Complaints, Blotches on the Skin, Bowel Complaints, Colics, Constipation of the Bowels, Consumption, Debility, Dropsy, Dysentery, Erysipelas, Female Irregularities, Fevers of all kinds, Fits, Gout, Head-ache, Indigestion, Inflammation, Jaundice, Liver Complaints, Lumbago, Piles, Rheumatism, Retention of Urine, Scrofula or King's Evil, Sore Throats, Stone and Gravel, Secondary Symptoms, Tic Douloureux, Tumours, Ulcers, Venereal Affections, Worms of all kinds, Weakness from whatever cause, &c. &c.

Sold by the Proprietor, 244, Strand, (near Temple Bar), London; and by S. L. TILLEY, *Provincial Agent*, No. 15, King Street, St. John, N. B.; A. Coy & Son, Fredericton; W. T. Baird, Woodstock: Alexander Lockhart, Quaco; James Beck, Bend of Petitcodiac; O. K. Sayre, Dorchester; John Bell, Shediac; Jol a Lewis, Hillsborough; John Curry, Canning, and James G. White, Belleisle.—In Pots and Boxes, at 1s. 9d., 4s. 6d. and 7s. each. There is a very considerable saving in taking the larger sizes.
