BUICK THIRD MEMBER.

Buick cars drive through a third member, not the springs. The springs only support the body and assure easy riding. A Buick rear spring accidentally broken can not misalign the axle and prevent driving the car. The Buick axle remains in fixed position. Consequently the adjustment of Buick four 1 wheel brakes is not affected by the deflection of the springs.

Only two other American cars have this excellent type of rear axle, one costs around Four Thousand Dollars, the other is the highest priced car built in America.
