"German Syrup"

Asthma. "I have been a great sufferer from Asthma and severe Colds every Winter, and last Fall my friends as well as myself thought because of my feeble condition, and great distress from constant coughing, and inability to raise any of the accumulated matter from my lungs, that my time was close at hand. When nearly worn out for want of sleep and rest, a friend recommended me to try thy valuable medicine, Boschee's German Syrup. I am confident it saved my life. Almost the first dose gave me great relief and a gentle refreshing sleep, such as I had not had for weeks. My cough began immediately to loosen and pass away, and I found myself rapidly gaining in health and weight. I am pleased to inform thee—unsolicited—that I am in excellent health and do certainly attribute it to thy Boschee's German Syrup. C. B. STICKNEY, Picton, Ontario."

Gentle, Refreshing Sleep.

LITERARY NOTES.

Mark Twains Latest Romance of an Esquimau Maiden.

A magazine is usually satisfied with one strong feature for the month. Cosmopolitan, however presents for November no less than five very unusual ones. William Dean Howells gives the first of the letters of the traveller who has been visiting this country, from Altruria. The second feature of The Cosmopolitan is the portion of the magazine given up to color work, no less than ten superb color illustrations being presented for the first time in magazine history, accompanying an article by Mrs. Roger A. Pryor on "Changes in Women's Costumes." The third feature is "American Notes," by Walter Besant, who was recently in America and is doing the United States for The Cosmopolitan a la Dickens. The fourth feature is an article by General Badeau on "The Forms of Invitations used by the English Nobility." The article is illustrated by the facsimile of cards to the Queen's drawing room, to dinner at the Princess of Wales, and to many leading houses of England. Finally we have a new and very curious story by Mark Twain, called "The Esquimau Maiden's Romance." It is in his happiest vein and is illustrated by Dan Beard. The November number presents the work of many artists, among whom are: C S Reinhart, Otto Guillonnet, J H Harper, G Hudson, Franz von Lenbach, George Wharton Edwards, F Schuyler Matthews, Dan Beard, W L Sontag, Jr., F G Attwood, C Hirschberg, J Habert-Dys, August Franzen, Louis J. Read, J N Hutchins and Hamilton Gibson.

A new and cheap Bible Dictionary, spoken of as extremely compact and rich in recent topographical and archeological information, has been added to the catalogue of the HARPER publications. The author is Rev. M. G. Easton, M. A., D. D. The attitude of the work towards matters in which the "higher criticism" is interest is characterized as strictly orthodox.

The Christmas number of HARPER'S MAGAZINE will be noteworthy even in the history of that periodical. It will be profusely illustrated. A sympathetic study of "The Old Dominion," by Thomas Nelson Page, and a contemporary view of "The House of Commons," by Thomas Power O'Connor are among the attractions of the number. It will contain nine short stories.

HARPER'S BAZAR, published November 4th, will contain a short story by Bret Harte, called "An Episode of West Woodlands."

Mr. E. F. Benson, the author of Dodo, the novel which is the latest London success, is the son of the Archbishop of Canterbury, and his opportunities of a thorough knowledge of society have presumable been exceptional. Mr. Benson's American publishers are D. Appleton & Co.

Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts gently yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever produced, pleasing to the taste and acceptable to the stomach, prompt in its action and truly beneficial in its effects, prepared only from the most healthy and agreeable substances, its many excellent qualities commend it to all and have made it the most popular remedy known.

Syrup of Figs is for sale in 75c bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Manufactured only by the

GENERAL NEWS.

—The pulp industry has come to the front in Maine. One company is now exporting largely to England.

—The Italian Minister of Public Works was stricken with apoplexy yesterday.

—Peru has rejected the boundary treaty with Ecuador, and a rupture between the two Governments is threatened.

—The stockholders of the World's Fair will have at least $1,000,000 to divide amongst themselves.

—It is asserted in Washington that Queen Liliokalani will be restored to power in Hayti, the United States withdrawing its support from the provisional Government.

—Hooper has been indicted to stand his trial before the court of Queen's bench at Joliette, Que., for poisoning his wife on the 18th of September last.

—The other day a farmer living at Enfield, N. S. killed a large ox. The animal was hoisted up to a beam to be dressed, but the beam being weak it gave way and the carcass and the beam fell on the unfortunate man injuring him so badly that his recovery is doubtful.

—Lord Elgin, who has just been appointed viceroy of India, will receive a a salary of $300,000 a year. The former incumbents of the office were so rich that they refused either salary or allowance from the national treasury.

—Wm. W. Black has sold his valuable timber lands near Parrsboro to Messrs. Epps & Huntley, the price said to be $23,500. The teams and other goods on the property are included in the above sum. It is understood that the purchasers are being backed up by W. Malcolm Mackay, of St. John.

—There is grief among the twenty-five thousand women who registered as voters in New York lately, two justices of the Supreme Court having decided that the law permitting women to vote for school commissioners is unconstitutional An exchange cruelly says that probably a suspicion of its unconstitutionality crossed the minds of many legislators who voted for it at the time and made them much more ready to vote for it than they otherwise would have been.

—Mrs. Wiggins, who accompanied the Hon. and Mrs. G. E. Foster to the coast, is the wife of the well-known Canadian weather prophet, E. Stone Wiggins, an attache of the finance department. Mrs. Wiggins is herself widely known as a champion of the Deceased Wife's Sister bill, in the advocacy of which she wrote a series of widely read and most clever articles for the press under the nom de plume of Gunhilda.

—London Society is stirred by the news that the engagement of the Hon. Nellie Bass to Keith Fraser has been broken. The young woman is an only daughter. Her father, Lord Burton, got his fortune and title by brewing ale. He settled upon her $10,000,000 as a marriage portion. She will inherit probably $30,000,000 more after his death. It is reported that Lord Burton broke the engagement because he thought his fortune sufficient to warrant his getting a duke for a son-in-law.

—A Japan paper gives the following peculiar advertisement, which has been hung out on the beard by a rich man at Matsuragata, Nagusaki. The notice explains itself: "When my daughter was sick I prayed the Kompira of Sanuki providence for her recovery, pledging to let her pay a thanksgiving visit to the temple by creeping on her hands and feet all the way through, in imitation of cattle, if she recovered. The prayer was heard, and she recovered by the miraculous influence of the Almighty Deity. But after all it is impossible for a tender girl to creep several hundreds of miles to Sanuki. I should, therefore, like to find a substitute for her, and if anyone offering himself or herself be found suitable for the task I will offer such a person £200."

—The single tax system has taken a decided advance in Australasia, deriving its support from all classes in the community except those favoring monopoly in land. Recently the single tax men scored a great victory in the Legislature of South Australia. The Lower House on four successive occasions passed a bill giving municipalities the option of raising their revenues by a single tax on land values if they saw fit. Three times the Upper House threw out the measure. When it reached the chamber a fourth time the Upper House yielded and the bill is now law.

—The Dutch police have on hand the solution of one of the most mysterous alleged murder cases of the decade. A young Dutchman, a stewart on board one of the steamers plying between Amsterdam and English ports is charged with having made away with two girls, one English and the other Dutch, whom he married, and who soon afterwards suddenly disappeared. There are many people both in England and Holland who believe that the young Dutchman is the Whitechapel villain ycleept "Jack the Ripper." But in his case no traces of the victims can be discovered, though much of their belongings—their dresses and part of the wedding trousseau of the English girl—have been found. He is in prison.

THE LEAST OF THESE.

She had little of earthly beauty;
She had less of earthly lore;
She climbed by a path so narrow,
Such wearisome burdens bore!
And she came with heart a-tremble
To the warder at heaven's door.

And said, 'There were hearts of heroes,
She said, 'There were hands of might;
I had only my little children,
That called me day and night,
I could only soothe their sorrows,
Their childish hearts make light.

And she bowed her head in silence,
She hid her face in shame;
When, out from a blaze of glory,
A form majestic came,
And, sweeter than all heaven's music,
Lo, some one called her name!

'Dear heart, that has self forgotten,
That never its own has sought,
Who keepeth the weak from falling,
To the king hath jewels brought.
Lo, what thou hast done for the children,
For the Lord himself hath wrought!'
—'Woman's Journal.'

COLONEL BLAIR'S ADDRESS AT PT. DE BUTE.

An Interesting Meeting.

Col. Blair's "talk," as we called it to the people here Monday evening, on his experimental work at Nappan was very interesting and full of information. He began by giving a short history of the starting of the work in Canada. It's object was to do for the farmers what they had not the time or the means or the knowledge to do for themselves. Experimental work was expensive, and it required great care and thoroughness to be of value. Farmers paid largely towards the revenue, and it was only fair that a part of this money should be used in furthering their interests. He found the farm at Nappan when he took charge of it required underdraining to make its cultivation profitable. You might be surprised to hear that, as there is a good deal of high land on it, but it turned out that the higher the land the wetter it was. This too might surprise some people as water is not supposed to run up hill. It had been said to him by farmers that they could not afford to underdrain their land, his reply was, if your land is wet you can't afford to farm it without draining. The drainage on the Nappan farm cost about fifty dollars per acre. There was a noticable improvement in the land at once, and it continued to improved for five years, becoming more friable and easily cultivated. On a piece of land that required two horses to plow when he first took the farm, one horse is plowing this fall and doing the work as easily as two did then. With good handling and ordinary success in cropping, land ought to pay the cost of underdraining in three seasons. An acre of land that cost him $68 for draining, paid him for the draining and half the cost of the manure in one season, putting the turnips at 10 cents a bushel. The roots of plants will not go lower than the water level. Clover roots will go down 18 inches in one summer in a drained soil.

They had grown this year 127 different kinds of grain. Our object is to find the varieties best suited to this climate. 500 bags of 3 lbs each of the best kinds were given to the farmers of the maritime provinces last year. Any farmer applying for this amount will have it forwarded to him free of charge. All that is asked in return is that the grain shall be kept separate and a report of the measure sent to the farm the first year. Considerable attention has been given to the grasses, 13 out of 30 varieties with which they had been experimenting he thought would succeed well here for pasture. They did not expect to do any better for hay than timothy and clover and the watered grasses that we now cut for hay. Timothy for pasture was one of the poorest of the grass family. Their aim was to mix early and late maturing grasses together so as to have both early and late pasture, and he thought they were going to succeed. He would advise farmers to raise their own grass seed or if they could not do this—do as the seeds men do—get some one in their locality to do it for them. Fresh seeds grown near home are very much the best. 49 kinds of potatoes were grown on the farm this year, and we are anxious to send out samples of the potatoes for the farms to test themselves. There are some very excellent varieties and they will be forwarded to anyone on application the same as the grai The Bordeau mixture was used this year as a wash to prevent the disease and where it was used there was scarcely a decayed potatoe. I believe it was not so successful at the Central Experimental Station. We have 12 acres in fruit, principally apples, and expect to plant (put out) 5 acres more next spring. The impression has been that the larger fruits cannot be profitably grown in this locality but so far as the experiment had gone it was most encouraging, and Prof. Saunders who was in Nappan last week told me he had never seen an orchard in Canada this side of British Columbia that looked healthier than the Nappan one did at present. They had succeeded in ripening grapes in the open air this summer, they had one vine with 12 bunches of ripe grapes. They had a large quantity of small fruits, such as strawberries, raspberries, gooseberries, currants, black caps, all of which were doing well. Any one wanting seeds or plants will be cheerfully supplied at the right season. Corn has not grown so well with us this year as last, that is the general experience. The corn did not do as well planted with beans as when grown alone, but the beans grew better with the corn than when grown by itself. While not wishing to discourage the growing of corn I still am of the opinion that as two tons of roots can be grown for one of corn, it is more profitable to grow roots than corn in this part of the maritime provinces. At the Central Experimental Farm, Ottawa, their experience is the other way, they can grow corn better than roots. It is probably better for dairymen to grow some of each. From five acres this year we took 4620 bushels of turnips by weight. We feed 14 lbs. of hay and 40 lbs. roots to our animals per day. This is one ration. Of course the ration must depend somewhat upon the size of the animal and whether you are feeding for milk or beef. For three months in the winter when the horses were doing about work enough for exercise their daily ration has been the last two winters 14 lbs of cut hay and 7 lbs of carrots, costing about 7 cents. 12 lbs. of hay and 12 lbs. of smashed feed, a mixture of oats, wheat and barley, is a good ration for a horse doing heavy work. We are dealing pretty largely in hogs on the farm this year for the first, and expect to have a number of young hogs for sale in the spring, of the different kinds at a moderate price. It has been fairly shown by experiment at the different stations that hogs do quite as well on uncooked food as cooked food. They will eat more of the cooked food and fat faster. Keep them a little longer, give them the same quantity of food uncooked, and they will be quite as good. Mr. Hopkins of the dairy station could not be here tonight. We commenced making cheese the 1st July, and made 500 60 lbs cheese, a part of them have been sold here. The balance will be shipped to England with the Island cheese which Prof. Robinson is making arrangements now to ship. Butter making commenced at the factory Nov. 1st, and 125 lbs. is being made per day. Orders are coming in every day, and the selling price at present is 24c. Cheese making in the summer, and butter in the winter is what we are aiming to demonstrate to the farmers as the best course for them to pursue in dairying leaving their cows to milk ten months in the year. The patrons of the factory so far express themselves as well pleased with the seasons work. They are paid 50 cents on the dollar each week, and the balance when the cheese and butter is sold.

Young men are learning the dairy business at this station, so that in this respect it is a school as well.

The above is an imperfect report of a very interesting address. W. C. Milner, Esq., of Sackville, who was present, was called upon and made a few remarks, appreciative of the address, and also in reference to the importance of agriculture. A vote of thanks was given to the Col. who, after thanking the audience gave an invitation to the farmers to visit the farm and see for themselves what was being done. He also made the statement that but two members of parliament had visited the farm since it was started. He also invited and urged others to come, but for some reason he did not know why they did not seem to take any interest in it, or interest enough to come and see what was being done.

The leading feature of the *Review of Reviews* for November is its presentation of the "Possibilities of the Great Northwest" in an article by Mr. S. A. Thompson, and in a supplementary article by Dr. Emory R. Johnson, upon "Inland Water-ways for the Northwest." Mr Thompson, as secretary of the Duluth Chamber of Commerce has for several years been actively engaged in searching out and applying effective means for bringing the great states northwest of the Upper Mississippi, and the great Canadian provinces belonging geographically to the same region, into closer communication with the rest of the North American continent. He is therefore able to write with an enthusiasm born of intimate knowledge of the subject and supported by very important and surprising statistics. Dr. Johnson is lecturer on Transportation in the Wharton School of Finance and Economics, University of Pennsylvania, and has recently published a monograph upon "Inland Waterways" Dr. Johnson particularly emphasizes the importance of canal and river transportation as a means of lowering railway rates, and he finds a very large social as well as economic influence resulting from this extension of facilities for shipping and for personal travel. These two articles suggest a future of almost unimaginable growth for the great Northwest. Each article is fittingly illustrated.

THERE is no secret or patent in the production of "Myrtle Navy" tobacco. It could be produced by any manufacturer, but no manufacturer could make it pay at that price, unless he could purchase on a large scale and sell on a large scale, He could not sell below the present price without a loss even if he could purchase on the lowest advantageous terms. To get a large market therefore, without which he would have no inducements to go on, would be the work of many years That is the reason why Messrs. Tuckett & Son have the command of the market, and they are wise enough to know that they can retain it only by keeping the price down to hard pan figures.

Is an exclamation heard every hour in the day. Toothache is the most common ailment of young and old, and in the aggregate inflicts more suffering than perhaps any other simple complaint. A one minute cure is just what every one desires to possess. Nerviline—nerve pain cure—acts most instantly in relieving the agony, and a sample box affords a quantity sufficient for 100 applications. 10 cents fills the bill. Polson's Nerviline is the only positive remedy for toothache and all nerve pains. Sold by all dealers in medicine.

AGRICULTURE.

—Cranberries are very plentiful on the farm of Augustus F. Johnson of Shemogue over a hundred bushels having been picked.

—Mr. Jordan Crandall of Petitcodiac raised this year 4½ bushels of Banner oats from 3 pints sowing and 60 lbs duck bill barley from 3 pounds sowing. The seed was obtained from the C. P. R. car last spring.

—Jeremiah Mahoney and Richard Joice, two neighbors at Melrose, have each over a thousand bushels of potatoes in their cellar. George Burton has thrashed 180 bushels of oats and 60 bushels of wheat, the latter averaging 10 bushels to one bushel sowed.

—A man once said to me: "I hate a hog; I would go as far to kick a hog as John Randolph said he would to kick a sheep." While the hog is a sure mortgage lifter, he never lifts it for a kicker of hogs. Such a man better leave hogs out of his farm economy. —*Theodore Louis.*

—Guanos, at one time, were eagerly purchased in the countries of the old world, more especially in Great Britain. The imports into that country at one time were in the neighborhood of half a million tons a year. But the chief sources of supply began to fail some twenty years ago. Since that time, the trade in guano has of necessity declined. It can never assume very large dimensions again, as though the deposits will continue to be formed, they are likely to be removed about as fast as they are made.

—In view of the many cases of tuberculosis in cattle which are being brought to light in various countries, it is comforting to find that experiments show that there is little, if any, danger of tuberculosis being induced in persons through eating the flesh of animals affected by it, unless a portion of the actually diseased glands or organs has been consumed. Among those who have experimented on this subject is Professor Galtier, of the Lyons Veterinary College, France, who has fed large quantities of flesh of diseased animals seized at the slaughter houses to pigs, dogs, cats, guinea-pigs, and fowls, and in not a single instance was any trace of the disease found in these animals when killed. From this he concludes that it is unnecessary to condemn the whole carcass of an animal in which the symptoms are but slight, and that it is sufficient merely to seize the organs affected.

—The invention which this season is attracting the greatest attention is the self-hiver. That this attention is bound to attract still more attention in the future, no one need doubt. By means of it bees will hive themselves, and as swarming they will need no more attention. In the next place, the use of separators in the production of comb honey is attracting attention. No one who has used these separators ever dreams of going back to the old system. Thanks to our agricultural writers, they are coming into very general use. We can produce a better article, and storekeepers and retailers generally can handle the sections with less difficulty. At Montreal the display of honey was large, but the crop was not nearly so good. In Quebec a wider section is used than in Ontario, and also far more of the old-fashioned box hiver. There are, however, plenty of the keen, wide-awake beekeepers who see the advantage of the movable frame hive, the honey extractor and sections, and the next ten years will witness a great change in the methods of beekeeping in that province.—The Apiary.

Horse Notes.

—The 2.10 list has received nineteen additions so far this year.

—Red Wilkes is the sire of one 2.10 performer, the pacer, Blanche Louise, 2.10.

—Geers has won more money than any other driver this year, and the Tennessee pacer has landed the most of it for him.

—The stallion Greenlander trotted two miles in 4.32, at Terre Haute, Ind, on Nov. 4th, beating the world's stallion record 1½ seconds.

—The matched race between Directum and Mascot was trotted at Fleetwood, New York, on Thursday. Directum won an easy victory in three straight heats. Time; 2.10¼, 2.07¾, 2.08¾.

—Bellfounder Morgan, sire of Lord Nelson, was a small chestnut horse with a blood red mane and tail. While most of Lord Nelson's get were a solid bay with black points, one would occasionally be foaled of the exact color and markings of Bellfounder Morgan.—M. H. Clarke in Spirit of the Hub.

—The dam of Lady Sheridan, 2:15¼, is still living and owned by C. R. Bill, Jr., of Billtown, N. S. She is by Brother's Pride, one of the three surviving stallions sired by Lord Nelson, and though she was never by any means a fast trotter, she was a remarkably good roadster. Lady Sheridan was sired by Confidence, the game little stallion that got first money in every race in which he ever started—eight in all.
