AGRICULTURAL NOTES.

—It is expected the English wheat crop will be one-third below that of last year.

—A Kansas ranchman predicts that the cheap beef and mutton of the future will come from the immense grassy plains of Brazil and the Argentine Republic.

—According to the Bureau of Statistics, the export of wheat and flour from the United States for the past crop year was equivalent to 116,000,000 bushels of wheat.

—The first creamery in Iowa was started 14 years ago. Now there are 495 creameries in the State, besides 56 cheese factories, and 85,000,000 pounds of butter are exported yearly.

—The Toronto Agricultural and Industrial exhibition will be held from the 10th to the 20th of September. The exhibition will be formally opened on the 11th by the Governor-General.

—The Calgary *Tribune* records the largest carload of wool ever shipped from that place. It contained 22,000 pounds, and the car was not then full. Instead of packing in the ordinary way the wool was pressed with a horse-power press.

—Here is a nut for vegetarians to crack. An Indian runner lives almost entirely on dried meat and he can stand more fatigue than any other man in the world. The Blackfoot runners, do 300 miles over the roughest country in four days and in the race a horse stands no chance against them.

—The Canadian Colonization Company, of London, is sending to Alberta a fine shipment of nine hundred rams to be mated, the ewes being purchased in Montana. The number of pedigree animals contained in the shipment is said to never have been equalled in the annals of the export trade.

—It is reported that thousands of acres of wheat in North Dakota are uncut and a large proportion never will be cut on account of damage by frost. The yield will be largely reduced according to the estimates of farmers and dealers, and not more than twenty per cent. of the crop will be saved.

—The great improvements by careful breeding and selection which have been made during the past twenty-five years in the Shropshire breed of sheep are shown in the *American Agriculturist* for September which has a fine illustration of a modern Shropshire buck, contrasting with an old-type Shropshire ram, the first-named being an animal which has won many grand sweepstake prizes within the present decade, and the other a model Shropshire of the standard of 1864. Both are perfect portraits of typical animals.

—The Island of Jersey makes a specialty of early vegetables and fruits for the London market, which is found more profitable by many than dairying. There were 2744 occupiers of land on the island last year, whose holdings averaged about seven and three-fourths acres. Grapes are extensively grown under glass, one hundred and twelve tons having been shipped last year; they are preserved in houses lined with sawdust to keep out the frost, and their freshness is maintained by keeping the stems of the bunches inserted in bottles of water. Tomatoes are another great crop, of which fifty thousand dollars' worth are annually sold. Early potatoes, however, are the principal crop, the Jersey tubers being usually the first in market. Nearly one-fifth of the whole island is devoted to potatoes, which yield from eight to ten tons per acre. The average cost of production in 1887 was $237 per acre, the average return being $360, or a profit of $123 per acre. The usual profit is between forty and fifty dollars per acre. Myatts planted in January are ready to dig in May, and are followed by Early Royal Jersey Fluke and Prince of Wales. The land is prodigously manured, sea-weed and stable manure being much used, and guano is applied four or five times as liberally as on the Continent.—*American Agriculturist* for September.

—The Chicago *Herald*, commenting on the assertion that Mr. Blaine "proved" that England under free trade is plastered over with trusts, says: "Mr. Blaine did not prove that England is plastered over with trusts. He merely said that it is, which probably proves that it is not." It appears that Mr. Blaine is very thoroughly qualified for the editorship of a Grit journal.—*Empire.*

—*New York Sun*: Commercial union with Canada? Oh, no! Political union, annexation, incorporation together—that is the only kind of union that suits the case, and there is no hurry about it. When the apple is ripe, let it decend gently from the bough into the basket where it properly belongs.

Consumptive Tendencies

are often inherited, but the disease itself may gain a foothold through impure blood, bad diet, unventilated rooms, etc., keep the blood pure and the circulation perfect by means of Burdock Blood Bitters, and thus ward off consumption, which is simply scrofula of the lungs.

Children Cry for Pitcher's Castoria.

GENERAL NEWS.

—Estimates place the annual egg product of the United States at 457,000,000.

—A steamer to ply between Halifax and Boston has just been launched at Govan, Scotland. She is about 1,600 tons gross register, has accommodation for 350 first-class passengers and will have a guaranteed speed of 15 knots an hour.

—Merchants and tradesmen of Spring Hill, N. S., have formed a combine with a view of adopting the cash system in their business. They intend to give it a fair trial which means a complete success, as miners, being regularly paid, should not ask for nor expect credit.

—Gloucester fishing firms have formed a combine under which they control the prices of fish and regulate the wages of the fishermen. "These," says a New York paper, "are the chaps who have been howling for war with England because they are not allowed to do as they please in Canadian waters."

—A great deal of smuggling is said to be carried on between the French island of St. Pierre and Miquelon and Canada. The illicit business is done mainly by captains of coasting vessels, in connection with manufacturers of tobacco in Quebec, who, in this way, manage to evade the payment of revenue duty.

—Three Limerick shopkeepers, who have been in prison four months already, under a sentence of six months for boycotting, have refused an offer of release on condition that they should sign an agreement undertaking to abstain from boycotting in future. This offer was due to the intervention of a clergyman with Mr. Balfour.

—Rev. A. H. Parsons, of Clay Centre, Kansas, has located at South Rawdon, N. S., under the direction of the general conference of the United States of the Church of Jesus Christ, Latter Day Saints. This is the only church of that sect in the Maritime Provinces. The membership in Nova Scotia is thirty, of which South Rawdon contributes twenty.

—Advices have been received at Cape Town from Durban, announcing the Boers of the Transvaal have captured Dinizulu who had crossed the border into their territory. With him were taken two Zulu chiefs and five hundred head of cattle. All were handed over to the British authorities, and Dinizulu is now a prisoner in their hands.

—Robert Hardinge, a young English Socialist, when he wants to make a speech on the streets or public square padlocks himself with a chain to an iron fence or similar fixture. Then when the police come to take him they have to spend a long time in getting him unfastened, and he can make a pretty long speech before he is carried off.

—There are now in the United States, it is computed, 80,000 salesmen on the road, with an annual average expense account of not less than $1,625 each. This shows an outlay of $130,000,000 a year, and putting the average salary at the modest figure of $1,000 per annum, there is a total expenditure on this account of $210,000,000 yearly.

—Two magnificent White Star vessels, the Majestic and the Olympic, are rapidly rising on the stocks in Wolff & Harland's yard at Belfast. The Majestic will be larger than the City of New York, with the same improved machinery and twin screws, and possibly some added wrinkles. Sir Edward Harland says they will both cross the ocean in nearer five than six days.

—The shad fisheries in the Basin of Minas, which have been growing less and less profitable for several years, have this season proved an almost total failure. Most of the boats in the business have abandoned the work as the catches have been so small. For the last three weeks no boat has caught more than fifteen fish at a "drift," but very often, as did the fishermen of old, they "toil all night and catch nothing."—*Ex.*

—The popular petitions presented to the British House of Commons this session include 6,116 in favor of woman's suffrage, 21,944 in favor of marriage with a deceased wife's sister, 252,608 against the Sunday closing of public houses, 5,027 in favor of Sunday closing and 65,178 in favor of the release of Mr. John Dillon, M. P., and others. The effect of some of the petitions is marred by a number of names being in the same handwriting, for variety is the spice and essence of the writing in a public petition.

—Letters which have passed between the Archbishop of Canterbury and Lord Carnarvon on the subject of keeping open the churches on week days for private devotion have been published in England. It is said that a demand has sprung up for the opening of the churches for this purpose, and a London correspondent says: The Church of England has long been a marvel to our foreign visitors, who are accustomed to freely enter, on all days of the week, the churches belonging to the Roman communion. They are always surprised to find that the Church of England, save in rare instances, only opens its doors during the hours of divine service."

How Mr. Davidson got Rid of his Dog.

E. R. Davidson of Shin Creek, N. Y., says the *Sun*, had a dog that he was very anxious to get rid of. He did not have the heart to shoot the poor brute, and the idea of poisoning was repulsive to him. Davidson couldn't bear to see the dog die, and he did not want to see him after he was dead. At last he hit upon a plan which he thought would do the business and relieve it of all its complications. Davidson remembered how, when he was a boy, dogs used to lift up their voices and run away from everybody when somebody tied a teakettle, a tin can, or any foreign appendage to their tails. Davidson resolved to utilize that trait in the canine character to remove his dog absolutely and completely out of the way of trouble, without having to resort to methods that carried with them more or less unpleasantness to himself.

He procured from a quarryman a good sized dynamite cartridge. It had a long and secure fuse. Davidson attached this cartridge firmly to his dog's tail, lit the fuse, and then released the dog, expecting to see him go ki-yi-ing for the woods until it fulminated, and the necessary dissemination of the dog had followed. But the dog did not run. On the contrary he followed his master more closely than ever. Davidson fled into the house. The dog sat down on the doorstep, and eyed curiously, but without demonstration, the slow but sure advance of the fire up the snake-like fuse. Davidson tried to poke the dog away with a mop handle, but the dog only looked pleased, and tried to wag his tail. Davidson knew that if the catastrophe came while the dog sat on the doorstep the house and its inmates would more than likely go with the dog, so he ran to get his gun to shoot the dog. Then he happened to think that killing the dog wouldn't stop the progress of the spark on the fuse, and so the only thing left for him to do was to go out and run and let the dog fellow him, trusting that he might be able to so far outrun the dog that when the cartridge went off he would be beyond danger.

He ran, the dog followed. The faster Davidson fled the more fun the handicapped dog seemed to think it was, and the closer he kept by his master's side. In fact, he occasionally spurted ahead of his master, and Davidson could see that the fire would reach the explosive in a very short time. He was to much scared to take the cartridge off, or to put out the spark, so he sought safety from the approaching crisis by climbing a tree and getting as near the top as he could. The dog stood at the foot of the tree, with his fore feet up against the trunk, looking wistfully at his master on the tree-top. The fuse kept on burning. Davidson tried to "sick" his dog away, and threw his knife and his pocketbook, and everything else he had in his pocket, as far away from the tree as he could, and begged his dog to "go and fetch 'em:" but the dog clung to the tree. By and by he lay down. All this did not occupy one fifth the time it takes to tell it. Davidson, in the tree, give up despair. Suddenly there came a dull report. The air was filled with flying dirt, sticks, and stones. Davidson was bombarded by a cloud of debris that rose up even to his lofty perch. He heard one prolonged wail of agony, and knew it was the dog.

It was some time before Davidson ventured to uncover his face, he having cowered down and bound himself with leaves and boughs. He looked down and saw a big hole in the ground at the foot of the tree. No dog, nor any part of it was anywhere to be seen. Davidson let himself down from the tree and proceeded homeward, well pleased with the success his little plan had met with after all, and was congratulating himself on it as he entered his yard. Then he turned cold and had to grab the gate post to keep from falling. On the doorstep sat the dog, trembling and looking queer. His tail and a piece out of one leg were gone, but otherwise he seemed to be robust and healthy. Davidson is now doctoring the dog and giving him the greatest care. He says $500 wouldn't buy him.

For Rickets, Marasmus, and all Wasting Disorders of Children

Scott's Emulsion of Pure Cod Liver Oil, with Hypophosphites, is unequalled. The rapidity with which children gain flesh and strength upon it is very wonderful. "I have used Scott's Emulsion in cases of Rickets and Marasmus of long standing. In every case the improvement was marked."—J. M. MAIN M. D., New York. Put up in 50c. and $1 size.

A Dozen Years.

"Dear Sirs,—For twelve years I suffered from dyspepsia and liver complaint and was so weak I could not leave my bed for eight months, and had little hope of ever being cured. Three years ago I tried Burdock Blood Bitters, and am thankful to say I now enjoy good health, and I advise all who are afflicted to try B. B. B." Mrs. Harriett Hobbs, Muir Avenue, Brockton, Ont.

ADVICE TO MOTHERS.—Are you disturbed at night and broken of your rest by a sick child suffering and crying with pain of Cutting Teeth? If so send at once and get a bottle of "Mrs. Winslow's Soothing Syrup" for Children Teething. Its value is incalculable. It will relieve the poor little sufferer immediately. Depend upon it, mothers; there is no mistake about it. It cures Dysentery and Diarrhœa, regulates the Stomach and Bowels, cures Wind Colic, softens the Gums, reduces Inflammation, and gives tone and energy to the whole system. "Mrs. Winslow's Soothing Syrup" for children teething is pleasant to the taste and is the prescription of one of the oldest and best female physicians and nurses in the United States, and is for sale by all druggists throughout the world. Price twenty-five cents a bottle. Be sure and ask for "MRS. WINSLOW'S SOOTHING SYRUP," and take no other kind.

Medical Virtues of Onions.

A mother writes: "Once a week invariably, and it was generally when we had cold meat minced, I gave the children a dinner which was hailed with delight and looked forward to; this was a dish of boiled onions. The little things knew not that they were taking the best of medicines for expelling what most children suffer from—worms. Mine were kept free by this remedy alone. Not only boiled onions for dinner, but chives also were they encouraged to eat with their bread and butter, and for this purpose they had tufts of chives in their little gardens. It was a medical man who taught me to eat boiled onions as a specific for a cold in the chest. He did not know at the time, till I told him, that they were good for anything else."

The above having fallen under the eye of an experienced physician, he writes as follows:

"The above ought to be published in letters of gold and hung up beside the table, so that the children could reed it and remind their parents that no family ought to be without onions the whole year round. Plant old onions in the fall and they will come up at least three weeks earlier in the spring than by spring planting. Give children of all ages a few of them raw as soon as they are fit to be eaten. Do not miss treating them to raw onions three or four times a week. When they get too large or too strong to be eaten raw, then boil or roast them. During unhealthy seasons, when diptheria or like contagious diseases prevail, onions ought to be eaten in the spring of the year at least once a week. Onions are invigorating and prophylactic be yond description. Further, I challenge the medical fraternity, or any other, to point out a place where children have died of diptheria or scarletina, anginosa, etc., where onions were freely used."

The Popular Science Monthly for September, 1888.

The September number of "The Popular Science Monthly" fully maintains the well-earned reputation of this standard magazine. The opening article is by Prof. W. K. Brooks, of Johns Hopkins University, on "The Growth of Jelly-Fishes." Miss Adele M. Fielde contributes "Some Chinese Mortuary Customs," describing burial and mourning rites among this curious people; Mr. Benjamin Ferr gives some of his observations of "Mental Traits at the Poultry Yard." In "Animal and Plant Lore" Mrs. Fanny D. Bergen records some curious beliefs in the healing virtues of various repulsive substances, and in the power for harm of snakes and other reptiles. "How the Opium-Habit is acquired," by Virgil G. Eaton, shows that physicians often prescribe opium for trifling ailments, and the prescriptions are taken to druggists to be refilled again and again, till the patient becomes a slave to the drug. Rev. Richard Wheatly explains "Stigmatization," or the appearance of wounds like those of Jesus Christ, as being due to the well established influence of the mind on the body. "A Fossil Continent" is a very happy comparison of the animals of Australia with the forms which the rest of the world left behind in the secondary geological period. In a more thoughtful vein are "Eye-Mindedness and Ear-Mindedness," by Prof. Joseph Jastrow, showing that some persons learn most from what they see, others from what they hear; and "Antagonism," by Sir William R. Grove, who maintains that all progress results from the conflict of opposing forces. A paper by Prof. G. A. Daubree, on "Underground Waters and Mineral Veins," describes the making of many interesting rock-formations. There is an illustrated article by Arthur Good on "Writing-Machines for the Blind." Prof. F. W. Clarke briefly discusses the abuses of "Expert Testimony," and recommends that in lawsuits involving scientific matters experts should be employed by the court in addition to or instead of those employed by the contending parties. In "Heliotropism: the Turning Motions of Plants," Conway McMillan explains the revolutions of twining stems, of tendrils, flowers, etc. Gauss, the eminent mathematician, is the subject of the "Sketch" and potrait. The "Editor's Table," "Correspondence," and other departments, show a pleasing variety.

New York: D. Appleton & Company. Fifty cents a number, $5 a year.

"In Union is Strength."

Particularly in this the case in the union or combination of the vegetable oils which blended together compose SIMSON'S LINIMENT. Its penetrating powers in cases of Rheumatism, Lame back, Neuralgia, Sore Throat, &c., have been thoroughly proven. Mr. James Averv, Mallorytown, Leeds Co., Ontario, writes: "Shortly after your agent was here last winter, my son unfortunately strained the cords of his back, and, not paying attention to it at once, caught cold, which settled there. He was laid up for about a week and suffered considerably. I, as an experiment, gave your Simson's Liniment a trial, and it brought him around in twenty-four hours. I heartily recommend it." Sold everywhere for 25c. Manufactured by BROWN BROS. & Co., Chemists, Halifax.

Mothers!

Castoria is recommended by physicians for children teething. It is a purely vegetable preparation, its ingredients are published around each bottle. It is pleasant to the taste absolutely harmless. It relieves constipation, regulates the bowels, quiets pain, cures diarrhœa and wind colic, allays feverishness, destroys worms, and prevents convulsions, soothes the child and gives it refreshing and natural sleep. Castoria is the children's panacea—the mothers friend. 35 doses, 35 cents.

An Undoubted Proof

of the beneficial qualities of Burdock Blood Bitters found in the household of authentic testimonials published by the proprietors. The original letters being in their procession, they can furnish proof positive as to their genuineness at any time.

From Manitoba.

"I have been cured of chronic diarrhœa by the use of Dr. Fowler's Extract of Wild Strawberry. I have used twelve bottles of it and am now entirely free from the disease. William McLaren, Clearwater, Man.

THOS. ESTABROOKS.

NOTICE.

ON MY PREMISES, at Westmorland Point, one Yearling Heifer. The owner can have it by paying expenses.

Aug.27,1888. MRS. R. FOWLER.

Don't Kill Old Hens.

When hens are shedding feathers they often stop laying and grow fat. Most people consider fat, a sign of health. The fattening of moulting hens however as with some people products debiliey rather than health. Many of the worst cases of roup are contracted, while the hens are moulting.

The food of moulting hens, if largely vegetable is fat forming, and not required for growing feathers. Therefore corn-fed hens get very fat. They need more nitrogen and phosphate elements in their food when moulting which if not supplied they stop laying, because the growing feathers have used all, and left no nitrogenous matter to form eggs. At this season, killing old hens and relying on young pullets is a great mistake; where people have a few hens and late pullets. Because, if properly fed the hens will have their new plumage and lay well all winter; while the pullets unless specially treated may not commence laying until spring, when high prices for eggs have fallen one-half. Again an old hen's egg will hatch a more vigorous chicken than a pullets egg.

John R. Jones, Suffield, Conn., a breeder of prize winning mottled Javas, says: "I find Sheridan's Condition Powder fed once daily in the food, very valuable for moulting hens. I have used it two years for exhibition birds. It assists in growing new feathers, makes the combs a bright red, and gives a rich gloss to the plumage It will also make the hens lay and the eggs hatch well. I find when the other egg-foods are used in quantities to force egg production the eggs do not hatch."

The above is the experience of many people in using Sheridan's Powder. If fed to young pullets new as directed, they will begin to lay before six months old. Commence at once using Sheridan's Powder. It helps old hens through moulting, and gets the pullets in laying trim before the season of high prices. Eggs will sell very high this fall and winter. Therefore be ready to get all you can.

L. S. Johnson & Co., 22 Custom House St., Boston Mass, sole makers of Sheridan's Condition Powder to make hens lay, will send to any address for one two cent stamp, testimonials with full information how to make a few hens pay well; also how to obtain Sheridan's powder.

Sault Ste. Marie Canal.

Notice to Contractors.

SEALED TENDERS addressed to the undersigned and endorsed "Tenders for the Sault Ste. Marie Canal," will be received at this office until the arrival of the eastern and western mails on TUESDAY, the 23rd day of October, next, for the formation and construction of a Canal on the Canadian side of the river, through the Island of St. Mary.

The works will be let in two sections, one of which will embrace the formation of the canal through the island; the construction of locks, &c. The other, the deepening and widening of the channel-way at both ends of the canal; construction of piers, &c.

A map of the locality, together with plans and specifications of the works, can be seen at this office on and after TUESDAY, the 9th day of October, next, where printed forms of tender can also be obtained. A like class of information, relative to the works, can be seen at the office of the Local Officer in the Town of Sault Ste. Marie, Ont.

Intending contractors are requested to bear in mind that tenders will not be considered unless made strictly in accordance with the printed forms and be accompanied by a letter stating that the person or persons tendering have carefully examined the locality and the nature of the material found in the trial pits.

In the case of firms, there must be attached the actual signatures of the full name, the nature of the occupation and residence of each member of the same; and further, a *bank deposit receipt* for the sum of $20,000 must accompany the tender for the canal and locks; and a *bank deposit receipt* for the sum of $7,500 must accompany the tender for the deepening and widening of the channel-way at both ends, piers, &c.

The respective *deposit receipts*—cheques will not be accepted—must be endorsed over to the Minister of Railways and Canals, and will be forfeited if the party tendering declines entering into contract for the works, at the rates and on the terms stated in the offer submitted.

The deposit receipt thus sent in will be returned to the respective parties whose tenders are not accepted.

This Department does not, however, bind itself to accept the lowest or any tenders.

By order,
A. P. BRADLEY,
Secretary.
Department of Railways and Canals,
Ottawa, 8th August, 1888. aug15-81
