OFFICIAL REPORT

OF THE

DEBATES

Mc.G.

OF THE

HOUSE OF COMMONS

OF THE

DOMINION OF CANADA

FOURTH SESSION—TENTH PARLIAMENT

7-8 EDWARD VII., 1907-8

VOL. LXXXVIII

COMPRISING THE PERIOD FROM THE SIXTH DAY OF JULY TO THE TWENTIETH DAY OF JULY, INCLUSIVE.

OTTAWA
PRINTED BY S. E. DAWSON, PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1907-8

House of Commons Debates

FOURTH SESSION—TENTH PARLIAMENT

HOUSE OF COMMONS.

MONDAY, July 6, 1908.

The SPEAKER took the Chair at Eleven o'clock.

GOVERNMENT BUSINESS.

Sir WILFRID LAURIER. I promised the House the other day that I would state to-day the remaining programme for the session. I expected at that time that we should have an opportunity for conference on Saturday evening, when I should be able to arrange with my colleagues as to the programme. But the House was in the humour to work on Saturday evening, so there was not the opportunity for that conference. I will make a statement on the subject this afternoon.

COST OF THE TRANSCONTINENTAL RAILWAY.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). I desire to submit certain information respecting the Transcontinental and Grand Trunk Pacific Railways.

Mr. R. L. BORDEN (Carleton). As this information is in response to no motion made in the House, I would suggest to the Minister of Railways and Canals, that he might move for leave to lay it on the table so that it can be formally before us and be made part of the records of this House.

Mr. GRAHAM. I move for leave accordingly, Mr. Speaker.

Hon. GEO. E. FOSTER (North Toronto). May I ask if there is any probability of our getting a later report of the commission. The minister has laid on the table the printed report of the commission which covers down to March 31, 1907. It seems to me the commission has not harmed itself by over-exertion in getting out its reports, considering that it is one year and several months behind time. Cannot it make up by getting out last year's report before parliament rises ? Is it nearly ready now, or wholly ready ?

Mr. GRAHAM. I have not heard anything about the report being made. Of course, conditions this year are peculiar. The House is in session away beyond the ordinary time of closing, and the report we were supposed to discuss this session is the one already before the House. I am trying to get information down to date as nearly as possible. I have not heard as to the position in relation to the report, but I will make inquiries.

Mr. R. L. BORDEN. When the report does come down, it might be so framed as to give a good deal more information than does the report which has been laid on the table. There is a remarkable lack of information on many points in the commission's report ; and I should think the leisure at their command would enable them to make a report much more satisfactory.

Motion agreed to.

QUESTIONS.

YUKON—PUBLIC ADMINISTRATOR.

Mr. FOSTER asked :

1. What, if any, steps have been taken to have an investigation into an audit of the account involved in the estates and trusts that came into the hands of F. T. Congdon, as public administrator in the Yukon?

2. Will the government lay on the table of the House a list of these estates and trusts with the disposition made of the same?

Hon. FRANK OLIVER (Minister of the Interior) :

1. The matter of the audit of the account involved in the settlement of estates and trusts by the Public Administrator is one which under the law comes within the jurisdiction of the Yukon Territorial Court. There is no information here as to any steps having been taken by the commissioner to have such an audit made.

2. Yes. To the courts of the Yukon territory, where they are of record, will furnish them.

NATIONAL TRANSCONTINENTAL RAILWAY—CLASSIFICATION, DISTRICTS 'B' AND 'F.'

Mr. LENNOX asked:

Referring to letters of October 7, 1907, and April 28, 1908, from Mr. H. A. Woods, assistant chief engineer of the Grand Trunk Pacific Railway Company, to Mr. Lumsden, chief engineer of the eastern division of the National Transcontinental Railway, in the latter of which Mr. Woods says:

'Dear Sir,—This is to acknowledge receipt of your letter of April 24, in regard to classifications given on districts "B" and "F," wherein you say you could confer with me, either in Ottawa or Montreal, so as to arrange dates for arbitrating the points in dispute and for the appointment of a third arbitrator, &c.

'In reply thereto, will say that the action you propose cannot be taken until after you have complied with my request of October 7, which, as you will recall, has been several times repeated, that you and I personally make an inspection of those portions of the work on districts "B" and "F" where it is claimed improper classifiation has been made.

'Kindly let me know when it will be convenient for you to make this inspection, and I will place myself at your disposal.'

Have Mr. Lumsden and Mr. Woods personally inspected the portions of the railway referred to since April 28 last? If so, when and with what result? If not, why not?

Mr. LENNOX asked

1. Have the matters and questions respecting alleged over-classification on portions of the eastern division of the National Transcontinental Railway complained of in a letter of October 7, 1907, and subsequent letters, from Mr. H. A. Woods, assistant chief engineer of the Grand Trunk Pacific Railway Company, to Mr. H. D. Lumsden, chief engineer of the eastern division. been referred to arbitration under the provisions of paragraphs 7 and 4 of the agreement, a copy of which forms the schedule to the National Transcontinental Railway Act If so, who are the three arbitrators?

2. When and how was the third arbitrator chosen or appointed?

3. When did the arbitrators enter upon their duties, and what progress have they made?

4. Where are the proceedings being carried on?

Hon. G. P. GRAHAM (Minister of Railways and Canals). The answer will cover both these questions: Mr. Lumsden, chief engineer of the Transcontinental Railway Commission and Mr. Woods, assistant chief engineer of the Grand Trunk Pacific Railway Company have made an inspection of disputed cuttings in district 'F,' and are now engaged in inspecting similar disputed classification in district 'B,' as provided by paragraph 7 of the agreement, being the schedule to the National Transcontinental Railway Act. Their inspection not being yet completed they have made no report and matters have not yet reached the stage where the appointment of a third arbitrator is necessary.

INTERCOLONIAL RAILWAY—TIES.

Mr. STANFIELD asked:

1. Have new orders been issued respecting the delivery of ties upon the Intercolonial Railway?

2. What time limit has been set for delivery of ties for this year?

3. Has any change been made in inspection making two classes of ties as to quality?

4. What prices are being paid for the several classes of ties?

Hon. G. P. GRAHAM (Minister of Railways and Canals):

1. The time named in specification for delivery of ties was June 30, 1908, and notice was issued on June 16, 1908, that hemlock ties would not be accepted after that date.

2. The time limit set for the delivery of ties this year is June 30, 1908, as per classification.

3. No.

4. Prices paid for ties for the government railways are as follows: 30 cents each for hemlock, 36 cents each for cedar, Princess pine, tamarack and juniper. The railway also paid 30 cents each for hardwood ties in Cape Breton and 30 cents each for some white pine and black spruce ties in the northern part of New Brunswick.

CANADIAN ASSOCIATED PRESS.

Hon. W. S. FIELDING (Minister of Finance moved that the House go into Committee of the Whole to-morrow to consider the following proposed resolution:

Resolved, that it is expedient to continue for a further period the granting of aid towards the maintenance of an independent and efficient service of telegraphic news from Great Britain for publication in the Canadian press, and that for such purpose it is expedient to provide for the payment of a sum not exceeding $9,000 for the period from July 1, 1908, to March 31, 1909, both days inclusive; for the payment of a sum not exceeding $12,000 for the fiscal year terminating March 31, 1910; and for the payment of a sum not exceeding three thousand dollars for the period from April 1, 1910, to June 30, 1910, both days inclusive.

He said: His Excellency the Governor General, having been acquainted with the subject matter of this resolution recommends it to the consideration of the House.

Motion agreed to.

PRINCE EDWARD ISLAND RAILWAY—HARMONY-ELMIRA BRANCH.

Hon. G. P. GRAHAM (Minister of Railways and Canals) moved that the House go into Committee of the Whole to-morrow to consider the following proposed resolution:

Resolved, that it is expedient to provide that the Minister of Railways and Canals may, with the authority of the Governor in Council, construct a branch line railway from Harmony, on the Souris branch of the Prince Edward Island Railway, to Elmira, in Kings county.

He said: His Excellency the Governor General having been appraised of the subject matter of this resolution gives his assent thereto.

Motion agreed to.

GEORGIAN BAY CANAL—REPORT.

Hon. WM. PUGSLEY (Minister of Public Works). While perhaps I may be out of order, the House will allow me, pending the completion of the Georgian bay canal report, now to report a complete detailed estimate of the cost of the proposed undertaking, accompanied by the plans illustrative of the project in its main features, prepared by Mr. A. St. Laurent, who has had direction of the survey; also of certain additional plans of the proposed work.

GOVERNMENT ANNUITIES.

Hon. W. S. FIELDING (Minister of Finance) moved the third reading of Bill (No. 120) to authorize the issue of government annuities for old age.

Mr. RALPH SMITH. I move that the Bill be not now read the third time, but that it be recommitted to a Committee of the Whole House with instructions to insert the following as new section 6, and to renumber the later sections accordingly:

6. Any such person who has moneys sufficient for the purpose deposited in any post office savings bank, may, upon making demand in such form as is prescribed in that behalf by the Postmaster General, authorize the Postmaster General to transfer to the minister any sum which such person may desire to apply to the purchase of an annuity under this Act.

2. Any society or association of persons, being a body corporate for fraternal, benevolent, religious or other lawful purposes, may contract with His Majesty, on behalf of such of its members as are domiciled in Canada, for the sale to such members of annuities, otherwise purchaseable by them as individuals under this Act; and any sums of money necessary to the carrying out of the aforesaid object may be paid by such society or association direct to the minister, or may be deposited in any post office savings bank, to be transferred by the Postmaster General to the minister.

2. Employers of labour may, pursuant to agreement entered into with their employees in that behalf, such agreement to be of a form approved by the minister, contract with His Majesty for the sale to such of their said employees as are domiciled in Canada, of annuities otherwise purchasable by such employees as individuals under this Act; and any sum of money necessary to the carrying out of the aforesaid object, whether such sums be derived from the wages of the employees solely, or partly from the wages of the employees and partly from contributions of the employers or from contributions of the employers solely, may be paid by such employers direct to the minister, or may be deposited in any post office savings bank to be transferred by the Postmaster General to the minister: provided that any sums so paid shall in any event be held for the exclusive account of the persons in whose names they were deposited, respectively.

I may say in explanation, that the object of this amendment is, first, to make it possible for depositors in the post office savings bank to transfer their accounts, or any amount of their accounts, to the minister for the purchase of annuities. The second provision is to make a provision whereby friendly and fraternal associations and religious organizations may make arrangements for the purchase of annuities for the benefit of any of their members. The third provision is to make it possible for employers of labour and their employees to enter into a contract for the purchase of annuities for the employees, such annuities of course to be taken out in favour of the working men themselves. I think the House will agree, when we get into committee, to the insertion of these provisions in the Act, which I think will be of great benefit to the classes of people mentioned.

Amendment agreed to, and Bill considered in committee and reported with amendment.

Mr. FIELDING. The law clerk may be relied upon to make the necessary changes in the renumbering of the sections. I move that the Bill be now read a third time.

Mr. SPROULE. I would ask whether the provision allowing fraternal societies to take advantage of the Bill, means incorporated or unincorporated bodies. There are certain societies under letters patent of corporation, and others are not. Would it apply equally to both?

Mr. FIELDING. The section says 'any society or association of persons being a body corporate.' They require to be incorporated bodies.

Motion agreed to, and Bill read the third time and passed.

LEAD BOUNTIES.

Mr. FIELDING moved the third reading of Bill (No. 191) respecting the payment of bounties on lead contained in lead-carrying ores mined in Canada.

Mr. FOSTER. Before the Bill is read the third time I desire to make a short statement. When the Bill was in committee I asked the minister for certain information.

What I wanted to get at was briefly this: A large sum of money has been paid out in the shape of bounties for the production of lead, almost entirely in the province of British Columbia pursuant to a policy adopted some years ago and still adhered to. I wanted to get the amount of lead production by the several producers in British Columbia for each year during which the bounty has been effective and also the amount of lead on which they have been paid the bounty, and the amount of the bounty paid to each of these producers each year. The information which has been brought down does not give the amount of lead produced by these producers each year, it simply gives the amount upon which they were paid bounty, but of course the House sees in a moment that this is very different from the amount they produced. My object in asking for the amount paid each year by each of these producers was that we might see whether the policy had had the effect of stimulating the industry, whether it had grown under the application of the bounty. Inasmuch as these figures are not given, the lesson cannot be deduced. All that the House knows is simply that these producers in British Columbia, and to a small extent in Ontario, were paid so much each year but as there were years during which they were paid no bounty and may have been parts of each year for several years in which they were paid no bounty, the information as I said is not given which would enable us to make any inference as to the effect on the production of ore of the payment of the bounty.

I should have thought that the government when they started on a policy of stimulating the production of lead in British Columbia would have been anxious to have had all the elements of information necessary to prove to them whether their policy had resulted in doing what it was aimed to do and had really helped the industry to a further development. I would suggest to the minister now that from this time on he should require from every lead producer in British Columbia a return as to the total amount of lead produced by him during each year. Then at the end of the period which is set by this Act we may have the elements which are lacking now.

However, we glean something from the statement which has been brought down. We find that there were 147 producers who received a greater or less payment. But 112 of these received a very small amount indeed, an amount so small that one can scarcely believe that it had any effect whatever in helping the industry. When you also take into account that these payments, small as they were were in a great majority of cases for only one year and commonly the first year, 1903-4, it will be seen still more plainly how slight an effect the bounty must have had with reference to production so far as these producers were concerned. For instance the Sandon Sovereign was paid a bounty in the whole five years of only $260.57 and that entirely in the first year, 1903-4. The 'Province' received only $539 during those five years and that also in the first year. The Echo received only $129; the Netty L. $391; the Florida $137; the Mohican $36.70; the Gold Bug $1.71; the Horseshoe $34.44; the Bosun $528.66. All of these received this whole payment in the first year 1903-4 and received nothing thereafter, indicating I should think, inasmuch as other producers are paid bounty during the other years, that these had ceased producing after the year 1903-4. Then we have the Wilcox which received about $500 in the five years, the first year receiving $584, the second year $19.88 and none thereafter, indicating that it had ceased producing after 1904-5. The Bonnie Bell received $27.38 in 1904-5, and none in any other year. The Bounty received $5.46 in 1904-5 and none in any other year; the Baltimore received $22 in all during the two years 1904-5, 1905-6; the Helen received only $45 in all; the Evening Star received only $21.74 in all; the California received $367.41; the Rambler received $11.82; the Revenue received $37.06; the Highlander $93.62; the Montezuma $84.14; the Queen $22.48; the E. P. U. $72.58; the Arlington $163.27; the British Columbia and Tilbury $50.30; the Krao $348.69, and that in one single year; the Neepawa received very small amounts, about $100 in all; the Pontiac received about $180 in all; the No. 1 Mine received $29 in all; the Daniel received $28.82 in all; the Silver Bell received $39.88 in all; the Wonderful Group received $86 and $79 in two different years and none thereafter; the Blue Bell received $95.52, all in 1905-6; the Coronado received $14.36; the I. X. L. received about $78; the Delphine received about $350; the Noble Five received $6.93 in five years; the Lorna Doon received about $200 in the five years; the Whitewater Deep received $95.44 in the first year and none thereafter, until in the last year it received $1,022.54; the Waverley received $11.74 in all; the Eva, $7.96; the Elkhorn No. 2, $26.84 and so on with a large number of others, making in all a total of 112 of these producers which received these very small amounts, and commonly in the first and second years that the bounty was in effect.

Then we come to twenty-nine producers which received sums of money for bounty irregularly through the different years to a larger amount, producing 100,000 pounds and upwards of ore. Then we come to the six large producers, the Highland Kootenay which produced in the first year 4,941,075 pounds and received a subsidy or bounty of $37,058.05 and in the second year produced 720,561 pounds, receiving a bounty of $5,-

404.21 and thereafter in 1905-6,1906-7 and 1907-8 seems to have produced nothing, at least nothing is down here in these years whilst other mines producing have received bounties.

Then there is the Ivanhoe and Elgin which produced 1,240,834 pounds in 1903-4, and received $9,306.23 bounty; 1,081,677 pounds in 1904-5 and received $7,630.01 in bounty, but thereafter seems to have produced nothing for bounty purposes, and by inference not to have produced, as other mines in the succeeding three years received bounties on ore produced.

The North Star produced 2,349,647 pounds in 1903-4, and received a bounty of $17,-622.35; 2,394,432 pounds in 1904-5 and received a bounty of $17,363.21. The production then went down to 471,691 pounds in 1905 with a bounty of $368.36, none in 1906-7 and 523,102 pounds in 1907-8 on which a bounty of $1,927.29 was received.

The Payne produced in 1903-4 1,430,819 pounds on which it received a bounty of $10,731.14; in 1904-5 764,448 pounds, on which $5,559.52 bounty was received; in 1905-6 176,472 pounds on which a bounty of $634.66 was received, thereafter showing no return for bounties.

Another large producer was the Slocan Star which produced in 1903-4 1,407,269 pounds, receiving a bounty of $10,629.52; in 1904-5 1,722,581 pounds, receiving a bounty of $12,352.29; in 1905-6 553,825 pounds, receiving a bounty of $2,399.63; in 1906-7 no production and no bounty and in 1907-8 73,546 pounds on which a bounty of $59.40 was received.

The last and greatest producer was the St. Eugene which produced in 1903-4 3,429,-608 pounds, on which it received a bounty of $25,722.06; in 1904-5 16,449,431 on which it received a bounty of $117,039.70; in 1905-6 16,038,487 pounds on which it received a bounty of $48,450.37; in 1906-7 there was no production for bounty, and in 1907-8 8,927,-864, on which a bounty of $29,425.41 was received. The St. Eugene exported in 1903-4 2,267,614 pounds of lead on which it received a bounty of $11,328.07; in 1904-5 it exported 21,972,998 pounds of lead on which it received a bounty of $96,800.59. There have been no exports of lead from that mine since on which bounty was paid. That lead seems to have gone from the mine at first hand instead of going to the smelters. What method the government had of testing that I do not know.

Therefore it will be seen as a short resume of the information we have in this return, that it is altogether illusory to say that 147 producers were in the field during that time and benefited by the bounty, illusory I mean as far as showing any permanent or general results of the bounty. Twenty-nine mines did fairly well being small producers, but, according to the figures here, showing no distinct increase in production whilst six of the largest producers and notably amongst them the St. Eugene, appear to have absorbed nearly all of the bounty and to have produced, of course, nearly all of the lead. It is unfortunate that we have not had before us the actual production of these different producers for each year because there is a flaw in the argument and in the contention since that information is not given. However it does not seem to me that the peddling out of little sums from $6 to $500 for a period of five years to small producers does very much towards developing the lead industry or goes very far towards proving that this policy has been or is to-day advantageous. It would seem that such little dribbling payments have only the effect of taking the money out of the treasury but very little effect indeed in stimulating a great industry.

As to the imports and exports, I find that in 1904 there were imported into this country 9,512,400 pounds of lead, pig, scrap and block, of a value of $122,790, against a production of lead in that year of 26,-748,000 pounds. In that year there was exported of lead, pig, scrap and block, 42,410 pounds according to these figures, at a value of $997. If that be correct, it would seem that our production was twenty-seven million pounds, that our imports were nine and a half million pounds, and that the total exports were only 42,000 pounds. I have not here the information which I asked for of the importation of products of lead. In 1905 the imports of lead were 5,691,000 pounds, valued at $133,-340; the exports were 1,090,462 pounds, valued at $28,523; whilst the production of lead was 56,489,523 pounds, valued at $331,274. In 1906 the total imports were 8,272,900 pounds, valued at $271,105; the exports were 3,477,898 pounds, valued at $118,972; and the total production of lead upon which bounty was paid was 28,708,-428 pounds, valued at $90,196. In 1907, in the nine months, the imports were 8,404,600 pounds, valued at $293,453; the exports were 153,580 pounds, valued at $5,886; whilst the total production upon which bounty was paid was 21,479 pounds. In 1908 the quantity imported was 6,400,700 pounds, valued at $284,642, and the amount exported was 9,089,752 pounds, valued at $362,428. These figures are very unsatisfactory, because, in the first place, they give the amount of lead only, not the ore, upon which the bounty was paid. They do not give the total production of lead, whilst in the imports and the exports we have the amount of lead in pig, scrap and block. I thought it was well to put these figures where they would become ready for reference, in 'Hansard,' and to call the attention of the Finance Minister to the gap in the information, which I think he will admit the desirability of having filled during

the succeeding years, so that we may have the statistics of the whole production as well as those of that part of the production which applied for bounty and on which the bounty was paid. After reading these figures, I desire to emphasize the opinion which I expressed before, that the proper way to develop lead production in this country is to develop the lead industry; and I do not think that can be developed unless we give it an adequate and thorough protection, as we have tried to do in the case of the iron of the country; and that can be done, I think, only by the imposition of a proper and adequate customs duty on the products of lead. Then an impetus will be given which will be longer than simply for the year in which the bounty is given. It will secure a market for the lead producers of the country and in a permanent and, therefore, satisfactory form. The minister has come to the rescue of this industry, because he believes that it is proper to do so—that the industry requires it. The woollen industry has been before the Finance Minister, and is to-day before the Finance Minister, practically a ruined industry in this country—certainly an industry which will be ruined if some adequate help is not given to it. But neither the Finance Minister nor the government has raised a finger to enable the woollen industry to resuscitate itself and bring itself back to its former position of larger development—an industry which is of vital importance to this country, and in which, not only the manufacturers, but the consumers, including the farmers, are interested.

Mr. GALLIHER. Mr. Speaker, the hon. member for North Toronto has just said that the figures of the amount of lead produced in each of the years in which bounty has been paid have not been given. If my recollection serves me rightly, I quoted those figures in discussing this question in committee, and I think they are in 'Hansard,' starting with a production of some 6,000 tons in 1903 and increasing to 26,000 or 27,000 tons in 1905, 1906 and 1907.

Mr. FOSTER. That was the number of tons in gross—not from each producer.

Mr. GALLIHER. Of course, I have not the number of tons produced by each producer. Considerable stress has been laid by the hon. gentleman on the fact that some of these 147 producing mines spoken of have drawn very little bounty. That is quite true and to a person unacquainted with the vagaries, if I may say so, of mining, it would appear that the hon. gentleman might very well make the remark he did. I am not an expert in mining, but from some years residence in the mining country, I have acquired some knowledge of the nature of mining there; and so far as my knowledge extends, many of these properties which have received small sums of money were mere prospects. A prospect, as we all know, is an undeveloped mine—a mine that has not yet been proved; and a number of these, after a certain amount of work, proved not to contain mineral in sufficient value to warrant the owners in working them and were consequently dropped. I have no doubt that among these 147 mines some were of that nature. If we had 147 producing mines of the calibre of the Slocan, Star or the St. Eugene or the Highland, our little $500,000 a year would not last very long. Everything that tends to bring about better knowledge of the existing conditions of properties taken up as mining properties, helps to develop that particular mining industry. When I prove beyond question that it is useless to go on spending money on what we term a prospect, we cast that to one side and no longer depend on it. As regards the mines which are large producers, such as some of the older ones mentioned by my hon. friend, they maintain a considerable community of people. Take one instance which my hon. friend has given, the Blue Bell mine. That is a very old mine, it was worked a number of years, and a smelter was built in connection with it at Pilot bay. But for many years it was not worked at all, one reason being that there was a great deal of zinc in its contents. That Blue Bell mine has only drawn $95 bounty in the five years, but let me point out that since this bounty was brought into force and since we have had the assurance that it will be continued, something like a quarter of a million dollars has been expended by the company in the erection of reduction works and machinery for development. Although the mine has only received a very small grant because it was not producing, the fact that the owners knew they could depend on the bounty when they did produce was sufficient to induce them to spend a quarter of a million dollars in developing it. I did not wish to go into this matter at any length further than to point out that while probably a comparatively small number of mines, when we take them all into consideration, are shown as having received bounties to any considerable extent, yet the industry itself, and the people who are operating it, the boards of trade throughout the country and the community in general, are unanimous in the belief that the bounty has been a great advantage to that industry and that its continuance will prove further advantage to the development of lead mining in British Columbia.

Bill read the third time and passed.

GRAND TRUNK RAILWAY HOTEL SITE, OTTAWA.

Bill (No. 89) to authorize the sale to the Grand Trunk Railway of Canada of a por-

tion of Major's Hill Park in the city of Ottawa as a hotel site—Mr. Pugsley—read the second time, and House went into committee thereon.

Mr. PUGSLEY. It was understood that when the Bill came up for consideration in committee, I would produce the plans of the proposed hotel, and I now lay them on the table. The Bill ratifies the order in council which was passed containing the agreement between the government and the company. It provides also that the price of the land, which is $100,000, shall be paid over by the government to the Ottawa Improvement Commission, to be expended upon improvements under the direction of the Governor in Council. Before the Bill passes, I beg to propose the following amendment:

That the following section be added:
Provided, however, that if the Grand Trunk Railway Company so requests, the conveyance of the said land may be made to the Ottawa Terminals Railway Company.

The Grand Trunk Railway proposes to place the property, consisting of railway station and hotel, in the name of a subordinate company, which was incorporated by Act of this House for the purpose of holding these properties. The matter was fully discussed on the first reading, and I do not know that I need explain the plans further than to say it is intended to erect a six story building.

Mr. FOSTER. What is the total height?

Mr. PUGSLEY. Apart from the towers, the height will be about 100 feet. There are to be five floors above ground, in addition to the attic floor, and also a basement and sub-basement.

Mr. FOSTER. What are the dimensions?

Mr. PUGSLEY. I presume it is pretty nearly the size of the lot of land that has been arranged for. The land extends 285 feet on the canal basin and 135 feet on Rideau street. The basement plan which is here shows the shape of the building. Extending from the side of the canal, at the rear, the land is 66 feet in width. Then it extends parallel to the canal basin 205 feet 3 inches, and then running parallel to Rideau street 86 feet 6 inches. My information is that there is to be a subway running from the station into the basement of the hotel, and of course, elevators to the higher floors.

Mr. FOSTER. And an entrance to the hotel from Rideau street on the ground floor?

Mr. PUGSLEY. Yes.

Mr. FOSTER. Is that entrance on their own ground?

Mr. PUGSLEY. Yes. There is also an entrance on the side facing the canal basin. On the side facing Mackenzie avenue there is a terrace and entrance direct from the terrace.

Mr. HAGGART. There is no entrance on the side next Mackenzie avenue?

Mr. PUGSLEY. No entrance from the avenue itself.

Mr. LENNOX. Is there no entrance from the park to the hotel?

Mr. PUGSLEY. This being a public park, I presume there will be an opportunity for guests of the hotel to reach the park and for the people from the park to enter the hotel.

Mr. BENNETT. That is only a question of not having a fence.

Mr. ARMSTRONG. Can the minister tell us the total amount the Grand Trunk will spend upon the hotel?

Mr. PUGSLEY. I cannot tell, except from statements I have seen in the newspapers. I have seen, as, no doubt, members generally have seen, that lengthy negotiations have been going on between the City Council of Ottawa and the Grand Trunk Railway Company over the plans of the hotel and station. Plans have been approved by the City Council, and a few days ago I was informed by his worship the mayor that an agreement had been entered into in accordance with the resolutions of the city council. I have seen it stated that the hotel is to cost somewhere in the neighbourhood of $1,500,000.

Mr. ARMSTRONG. Has the government no definite knowledge before entering into this arrangement with the Grand Trunk?

Mr. PUGSLEY. This Bill ratifies the order in council, and the plans and specifications are to be approved by the Governor in Council. So that, passing this Bill will not conclude the matter, but the plans will then come formally before the government for approval.

Mr. LENNOX. What clause of the order in council is that?

Mr. PUGSLEY. On page 2 of the order in council, the hon. gentleman will find this:

The minister also recommends one condition of the grant to the railway, that the hotel shall be constructed within two years from the date of said grant, such construction to be in accordance with plans approved by the government of Canada.

Mr. BENNETT. Is not a minimum expenditure guaranteed?

Mr. PUGSLEY. I am not aware as to that.

Mr. BENNETT. Then, so long as it suits the city and the government the contract

will go, even though the cost is only $100,000.

Mr. PUGSLEY. My hon. friend may rely upon it that the government will not approve these plans unless they provide for a first-class hotel.

Mr. BENNETT. At what expenditure?

Mr. PUGSLEY. The plans show a splendid structure, one which will be an ornament and a credit to the city.

Mr. ARMSTRONG. Has the minister any knowledge of what the government intend to exact from the Grand Trunk in the way of an expenditure on this hotel?

Mr. PUGSLEY. I cannot say further than this: I believe that the plans which have been approved by the city will also be approved by the Governor in Council, although I am not able to speak definitely on that point. If, on examination, it was thought by the government that there were any changes necessary, those changes would be insisted upon. But I have looked the plans over, and, speaking only for myself, I believe that if these plans are carried out the hotel as I have said will be such as will be a credit and an ornament to the city.

Mr. ARMSTRONG. Does the government guarantee to carry out the plans?

Mr. PUGSLEY. These are the plans.

Mr. ARMSTRONG. They guarantee to carry them out?

Mr. PUGSLEY. Of course. That is the agreement with the city; and, when it comes to council, we would make that a stipulation—that the building should be in accordance with these plans.

Mr. ARMSTRONG. And that will necessitate the expenditure of a million and a half?

Mr. PUGSLEY. That is what I have understood.

Mr. FOSTER. Before the Bill is passed, does not the minister think that he ought to tell the committee what is the view of the government as to the expenditure that will be necessary? Surely he does not think that he will get his Bill through unless he pledges the government in some way to a minimum expenditure, that it should not be below a minimum expenditure. As it is, the minister has nothing but hearsay, what he saw in the newspapers, and what he believes will be the case. But his order in council gives absolute power to the government to say whether it shall be a hundred thousand building or a million building. We must have some statement of the policy of the government with reference to it.

Mr. PUGSLEY. I think it would be extremely foolish on our part to insist that there shall be an expenditure of a million and a half, or a million, or four hundred thousand. If we get a building of this design, upon these plans which have been approved by the city council of Ottawa, which has devoted a great deal of consideration to the subject, would it not be an absurd thing for us to say to them: Although the building is erected upon these designs, although these plans are fully carried out, yet unless it actually costs $1,500,000 the grant shall lapse. What we will stipulate is that the Grand Trunk Railway shall erect a building according to these plans and according to the specifications, and as at present advised, I would assume that the government is likely to approve of the plans and specifications which have been agreed upon by the city. My information is that this building will cost in the vicinity of $1,500,000. If any member of the committee will look at these plans he will see that they provide for a very expensive and a very handsome building, which will give a large hotel accommodation. That being so, it seems to me it would be absurd for us to put in a provision that the building must cost exactly a certain sum of money, and that if it costs one dollar less, or $5,000 less, the grant shall become void. It is our duty to stipulate for a handsome building, for a first-class hotel which will give first-class accommodation to the travelling public and will be an ornament to Canada and to the capital. When they do that, I think we will have done our full duty.

Mr. FOSTER. The minister might have a first-class hotel and built in first-class style that might cost $250,000 or $150,000.

Mr. PUGSLEY. My information is that a building erected according to these plans will cost in the vicinity of $1,500,000. We must remember that two parties have to be consulted in regard to this matter. There is the city of Ottawa, which is vitally interested in this matter, because it has been making certain arrangements with the company I believe with regard to taxation, and after very lengthy deliberations and submission of plans from time to time, the present plans have been agreed upon as those which the city are satisfied will give a first-class hotel. Unless there is some very good reason, I assume that the government would not insist upon departing from those plans.

Mr. LENNOX. The minister is not meeting the point raised as regards the amount to be expended. It is customary in transactions of this kind to have a stated amount of expenditure. When the minister says that if a dollar less is expended we would be disposed to claim the forfeiture of the right granted to the company, that is not meeting the point at all. The company represent that they are going to put up a

building costing a certain amount, say a million and a half. What the government should insist upon is that the company shall substantially expend that amount; therefore, there should be a limit below which they shall not fall, say a million, or a million and a quarter, but at all events, the government should insist that substantially they shall fulfil the representations they make. When the minister talks about a difference of a dollar, or two dollars, or five dollars, or a thousand dollars, that does not meet the point at all. I would expect that before the government passed an order in council they would ascertain from the company exactly what the company proposes to do. They should say: We want to know something of the character of the building you are going to put up.

Mr. PUGSLEY. And nothing can show more clearly than the plans which are submitted.

Mr. LENNOX. We want to know something about the cost of the building. What the minister has done is this: He has passed this order in council without knowing anything at all, without having the first tittle of information as regards the cost. He lets these negotiations all go on with the city; he says the city is vitally interested, but it is not nearly so much interested as the people of Canada, as we who represent the people of Canada. I can think of no greater outrage perpetrated upon a people than this very transaction—going right into the centre of the property of the people, the beauty spot of the city of Ottawa, the place of which we are so proud, Major's Hill park, to plant in the centre of that park a commercial edifice, a money-making institution—that is surely an absolute outrage upon the rights of the people. Therefore, the least we should insist upon—because the government seem to be determined to carry the thing through—is that they should proceed upon some business basis. Now, I asked the minister if there were outlets from this hotel direct to the park. The minister does not know. So little attention has been paid to this matter, so little interest has the minister taken in the preservation of the public rights, that he does not know to-day whether there are one or a dozen outlets from that hotel to the public park. He does not know whether that is to be the backyard of a hotel where baby carriages shall be trundled at will——

Mr. PUGSLEY. They do not trundle baby carriages in backyards, usually.

Mr. LENNOX. It will virtually become the backyard, because it is at the back of the hotel. My hon. friend may know a good deal more about baby carriages than I do, but what I say will prove substantially to be the case, that this will be the sporting ground for that hotel, and that the hotel might just as well own the whole park. That is the position of the case, and for a paltry $100,000 we are invading this park belonging to the people. There could be no greater outrage perpetrated upon the people of Canada—unless it were the erection of the Ross rifle factory upon the Plains of Abraham at Quebec, and I doubt even whether that is a greater outrage. Now, I want to ask the minister a few questions. We are devoting this $100,000 to this Improvement Commission in Ottawa. I understand from looking at the statute that ordinarily it would go to consolidated fund. Why is it that the minister proposes to give this over to the Ottawa Improvement Commission?

Mr. PUGSLEY. I can very well understand the reasons which influenced the government at the time. These negotiations were entered upon before I became minister, and therefore I am not able to give in detail the actual reasons which influenced the government. But I would assume that these are the reasons, and I have understood that the reasons which I am about to give are those which did influence the government. Hon. gentlemen are aware that Major's Hill Park is a large park, it extends down to Nepean Point. There is a considerable part of that which is unimproved. The situation is very beautiful and with the expenditure of a reasonable amount of money it could be made an ideal park. The building of a first-class hotel there, magnificent in proportion and beautiful in design, if the improvements are continued to Nepean Point, so far from being any detriment will be a distinct improvement to the city. I assume it is intended, and this has been my information, that either the whole or a large part of this money shall be expended by the Ottawa Improvement Commission in the beautifying and improving of the remainder of Major's Hill Park right down to Nepean Point.

Mr. FOSTER. Where do you find that authorization?

Mr. PUGSLEY. It is authorized by the order in council.

Mr. FOSTER. I do not think so.

Mr. PUGSLEY. It does not say so in express words, but it says the money shall be paid to the Ottawa Improvement Commission to be used by them under the direction of the Governor in Council.

Mr. FOSTER. It does not say for what.

Mr. PUGSLEY. That is true, but that is one reason why the money is to be given to the Ottawa Improvement Commission. The Prime Minister will be able to state

this more positively than I am. But I think I am safe in saying that it is intended that the Ottawa Improvement Commission shall devote this money to the further improvement of Major's Hill Park right down to Nepean Point. The reason it is given to the Ottawa Improvement Commission is that that commission, composed of public-spirited citizens of Ottawa, have been devoting a great deal of their time and attention to the beautifying of the city, and this is just the kind of work that ought to be done by the proceeds of this sale. I do not think it would be proper that we should let this money go into the consolidated revenue. As we are selling, for the purposes of this hotel, a portion of a park to which the public have resorted for a great many years, I think it is only right that the money should be used for the purpose of beautifying that park, and I know of nobody under whose direction it can be better expended than the Ottawa Improvement Commission.

Mr. LENNOX. These are ordnance lands.

Mr. PUGSLEY. Yes.

Mr. LENNOX. We have a statute which provides that ordnance lands shall be divided into two classes and shall be dealt with in a special way. These particular lands would come under class 2 and the statute says that unless they are handed over for provincial purposes these lands shall be sold by auction. I admit it would be practically impossible to sell them by auction because it could never have been sold at all, but I venture to say that if this land had been put up at auction it would have realized a far larger sum than has been obtained for it from the Grand Trunk Railway.

Mr. PUGSLEY. Surely my hon. friend must be mistaken. This land has only a frontage of 135 feet on Rideau street. My hon. friend must know that $100,000 is a good price for that quantity of land, and if it were put up to auction I doubt if it would realize that much.

Mr. LENNOX. I fully believe that with the easements and advantages that will be given, it is worth far more money as an hotel site by reason of its unlimited connection with the park.

Mr. PUGSLEY. It is $800 a foot frontage.

Mr. LENNOX. I do not care if it is $800,000, that is not the point I am dealing with. I venture to say that for an hotel site that property is worth five times as much as you are getting for it.

Mr. PUGSLEY. What do you base that on ?

Mr. LENNOX. On the fact that you are not only selling that little patch of land, but that you are practically giving the company the use of a large park which is the most beautiful in the city of Ottawa. It is idle to talk of $100,000 for so many feet of land under the circumstances. I get angry when I talk about this ; I get so indignant at this proposal that I find it hard to keep my temper. But if we are going to dispose of this property I would point out that there are special provisions which have to be met before we sell ordnance land and not only that but there are special provisions in the statute as to the disposal of the money. The statute now says that moneys arising from the sale of ordnance land shall form part of the consolidated revenue of Canada and a separate account shall be kept thereof.

Mr. PUGSLEY. That is why the legislation is necessary.

Mr. LENNOX. I know that. When the statute says it is to be kept in a separate fund and as a separate account there is good reason why we should preserve that money in a separate account. But the question of what price we get for this land is comparatively trifling as compared with the disastrous scheme of selling the land at all. I presume this means that the conveyance shall be signed concurrently and that the minister will see that is done.

Mr. PUGSLEY. The plans are to be approved.

Mr. LENNOX. I do hope that when this outrage is consumated it shall be nullified as far as possible by making some provision to protect the people's rights in the balance of the park.

Mr. PUGSLEY. The people's rights can be in no way interfered with.

Mr. LENNO. The people's rights could be interfered with if there is not a fence placed between the hotel property and the park. I have enough experience of this government to believe that there may be easements granted to that company which would be inconsistent with the rights and interests of the public, and I want to warn the minister now that we will expect that the people's rights in that respect shall be safeguarded. The minister does not appear to have gone very deeply into this question, but I would like to know from him what about the rights we have secured as regards exemption from taxation for Major's Hill park and the free supply of water and things of that kind. Will the company stand in the same position as the government in that regard ? Will they get free water from the city for that hotel ?

Mr. PUGSLEY. There is nothing in the agreement which will give any exemption to the Ottawa Terminal Company in respect to the hotel. They will have to pay

the ordinary charges for water and the taxes to the city under an agreement they have made with the city. That is a matter between the company and the city with which the government has nothing to do. We do not profess to give—we do not give any right of exemption so far as the company is concerned.

Mr. LENNOX. That is all right if it is all right, but there is nothing in this order in council which defines the matter one way or the other.

Mr. PUGSLEY. Does not the hon. gentleman know that the moment we part with the land it becomes private property and is subject to ordinary civic liabilities ?

Mr. LENNOX. I do not know that and I am not sure the minister knows it, and I would like him to explain the contract between the government and the city with reference to Major's Hill park.

Mr. PUGSLEY. In what way?

Mr. LENNOX. The government undertook to pay certain moneys to the city for improvements and they got certain water and other rights in return. Is the minister prepared to say that the condition with regard to the hotel site on Major's Hill park being watered free by the city will go out of force as soon as this property is passed to the railway company.

Mr. PUGSLEY. I have no doubt whatever about it. The moment this piece of property is sold it ceases to be Major's Hill park and the title passes to the railway company who have to put up an hotel upon it, and that property would be subject to the ordinary civic liabilities and any water they use must be paid for. The city is not bound to supply water to private individuals and the company must make arrangements with the city in regard to that matter. The company will become liable for the civic taxation the same as ordinary individuals and ordinary companies.

Mr. LENNOX. I have great respect for the opinion of the minister as an able counsel but I am not quite prepared to agree——

Mr. PUGSLEY. You would not like to deny that proposition.

Mr. LENNOX. I am not going to admit or deny but I am not prepared to agree that the moment that property passes over to the company it ceases to be a portion of Major's Hill park any more than I am prepared to admit that if the city undertook to supply water free for No. 12 on Bank street when it belonged to the government, if sold by the government it would cease to be No. 12 Bank street. I call the attention of the minister to section 15, chapter 10 of the Act of 1899, which deals with this matter of supplying water free by the city among other things, and I think it would be very desirable to have some understanding as to that.

Mr. STEWART. I may say that the rights of the corporation of the city of Ottawa to exact taxation and water rates have already been recognized as between the Grand Trunk Railway Company and the city. After some considerable discussion an agreement has been drawn up under which the city agrees to give the Grand Trunk Company exemption from taxation for a certain number of years in consideration of the company expending a certain amount of money on the erection of the hotel and central station. The first arrangement made was for an expenditure of $3,000,000 by the Grand Trunk on the two buildings. There were suggestions made regarding the construction of the building which might have reduced the cost below $3,000,000, and there was some discussion as to that, but there is now a distinct agreement signed between the city and the Grand Trunk Railway Company as to the amount of money that shall be expended on the hotel. Among the conditions ceded to the company by the city were exemption from taxation for a certain number of years and the purchase of certain property on Nicholas street so as to widen the street leading to the station and make easier access. The recognition of the rights of the city to exact taxes is all settled in the agreement that has been signed by both parties.

Mr. LENNOX. That probably changes the situation, but the minister did not seem to know anything about it.

Mr. R. L. BORDEN. The order in council in connection with this matter was passed on the 26th of September; parliament opened on the 28th of November, and some time afterwards this proposal was submitted to it. It has stood on the Order Paper for five and a half months without any attempt on the part of the government to advance this legislation, which demonstrates in the most unmistakable manner the absence of necessity for the haste with which the government rushed into this proposal without consulting parliament. Judging from the long delay which has elapsed between the introduction of this measure and its present stage I was in hopes that the government had receded from their position and that they had made up their minds not to perpetrate this most outrageous piece of vandalism that was ever perpetrated against public property. This proposal to thrust an hotel into the grounds of parliament is so incongruous and unnecessary that I cannot understand how the government ever came to accede to it. I have already said, and I repeat it, that it would be just as well for the government to have authorized the building of that hotel on one of the lawns in front of this building. There are to be large

departmental buildings erected on Mackenzie avenue and when they are erected this hotel will be thrust into the midst of the government buildings and parliament grounds. The government that would approve a scheme of that kind may be expected to do almost anything. Next session we may find that the new departmental block has been leased for a dance hall or that the library of parliament has been devoted to the purposes of a permanent circus. Either proposal would be little less shocking than the proposal which the government now submits to this parliament. This is national property. In 1898 the Minister of Public Works of the day justified the expenditure of a very large sum to erect a fence around this park on the grounds that this was a national property.

We take this national property immediately contiguous to and indeed forming part of the grounds of this parliament, and we propose to build an hotel upon it. If there were no other place in Ottawa suitable for the purpose, I would not protest so strongly; but there are places without number which would be just as suitable as this for an hotel. I admit that the city of Ottawa ought to have a good hotel; but it may be a question how far parliament should intervene for the purpose of supplying the deficiency. If the Grand Trunk Railway Company build an hotel there, I have no doubt that it will be a good one, and will be operated in an efficient and creditable manner. But when you say all that, you afford no justification for placing that hotel on one of the lawns of parliament or appropriating Major's Hill Park for the purpose. I regret very much that the government has seen fit to adopt this course. I had hoped, from their long delay in proceeding, that they had receded from the proposal. They might at least have come to parliament in the first instance—because it is now plain that there was no need of any haste—and have obtained the views of the representatives of the people from the Atlantic to the Pacific before undertaking to appropriate a portion of the national domain for the purpose of building an hotel at the very doors of parliament, and on grounds which have been regarded with pride by all the people of the country as forming part of the beautiful lawns on which these parliament buildings are erected, and on which they ought to be extended in the future.

Sir WILFRID LAURIER. There are two sides to this question, as to every other. But before I proceed any further, I must say that for my part I cannot find fault with the fastidious aestheticism of my hon. friends on the other side of the House. It is very creditable to them in one sense. The people of Ottawa want the hotel, and they are not likely to suffer because a portion of the park is to be taken for the purpose, especially in view of the fact that the money which is to come from the transaction is to be devoted to extending Major's Hill Park to Nepean Point.

Mr. FOSTER. What is the authority for that?

Sir WILFRID LAURIER. The authority will be given by parliament.

Mr. FOSTER. What is the authority for saying that the park is to be extended to Nepean Point?

Sir WILFRID LAURIER. That is a part of the exchange.

Mr. FOSTER. Not at all.

Sir WILFRID LAURIER. At all events, the money is to go to the Ottawa Improvement Commission, and if that is not provided for, it may be yet provided for. Everybody will agree with me that that is a most laudable provision. Now that we have public buildings erected in that direction, the time has come when we should make that extension, and I think we could not do a better thing with the proceeds of this transaction than to use the money for such a purpose. While a good deal of objection has been taken to the action of the government, everybody realizes that we must have an hotel, but people have not been very ready to come forward with offers to build an hotel. The Grand Trunk Railway Company selected the proposed site, and the government, after considering the matter, came to the conclusion that it would be advisable to agree to it. Does anybody believe that an hotel placed there will not be an ornament to the city? On the one hand you have the post office, on the other the station, and opposite the hotel. The two bridges, the Dufferin and the Wellington, should in my opinion be united and extended to the hotel, and this I understand is in contemplation. When all this is done, I believe that many gentlemen who now criticise the action of the government will change their minds, and will say that after all the city of Ottawa has not been disgraced but rather improved by the construction of these buildings.

Mr. R. L. BORDEN. The right hon. gentleman seems to be looking at this matter purely from the standpoint of the city of Ottawa. I am looking at it from the standpoint of this park as a portion of the national domain, and a portion of the grounds of parliament.

Mr. FOWLER. Which way is this hotel going to front?

Sir WILFRID LAURIER. It will front on Wellington street.

Mr. FOWLER. I might point out that there will be a fine view from the parlia-

ment grounds of the back premises of the hotel.

Sir WILFRID LAURIER. Of course, nature unadorned has its own beauty; but I do not know that fine buildings are an offence to the eye, but quite the contrary.

Mr. FOWLER. I am speaking of the rear of the hotel.

Mr. SAM. HUGHES. Where will the hotel offices be?

Sir WILFRID LAURIER. The plan provides for a terrace extending over the canal. The offices are to be below that.

Mr. SAM. HUGHES. How are the people to get into the park—through the bar of the hotel?

Sir WILFRID LAURIER. There will be a space of 120 feet from the hotel to the other side of Mackenzie avenue.

Mr. PERLEY. The right hon. gentleman said that the people of Ottawa had decided that they wanted the hotel there. I do not understand that the people of Ottawa had anything to say about the situation at all. The people of Ottawa want a good hotel in the city; but if a vote of the people of Ottawa were taken to-morrow as to whether they would prefer to have the hotel in Major's Hill Park or in another place, they would vote to have it in another place. The great majority of the people of Ottawa want an hotel, and when the government offered this land to the Grand Trunk Railway Company for the purpose, the people of Ottawa were willing to have it there, but would have preferred to have it somewhere else. This hotel is going to get the benefit of the whole of Major's Hill Park. Even if there is a space left as an entrance, the park really will become a back garden for the hotel. The hotel may be built in such a way that its front will really be on Major's Hill Park; so that the guests of the hotel will practically have the use of the whole park, while the people of the city of Ottawa will not make very much use of it at all. If the government have made up their mind to put this Bill through, I suppose they will put it through. At the same time, I think it was a very wrong and improper thing for the government, without consulting parliament, to have made an agreement with the Grand Trunk Pacific Company, which they ask their followers to put through, whether they think it right or not, in order to put in this place an hotel which will entirely cut off the view of the new buildings which it is proposed to erect on Mackenzie avenue, and which this hotel will certainly make it very hard for any one to see.

Mr. PUGSLEY. Not at all.

Mr. PERLEY. I would ask the minister whether it is possible for a person standing on Dufferin or Sappers' bridge to see the new buildings on Mackenzie avenue when the hotel is between the two.

Mr. PUGSLEY. If he goes and plants himself in one spot where he cannot see the new building, of course his view will be blocked.

Mr. PERLEY. Well, he might go to Sussex street and see them, I suppose.

Mr. R. L. BORDEN. Or he could take a balloon.

Mr. PERLEY. This hotel will cut the government property in two, and there are plenty of places just as good for the purpose as that particular spot.

An hon. MEMBER. Where ?

Mr. PERLEY. I would think just above the Supreme court is as good a site as can be found in the world for a hotel, and there are other places. I do not see that the hon. gentleman is warranted in putting a hotel there on the plea that the city of Ottawa wants it. The people of Ottawa need a hotel but they do not want it in that particular place.

Mr. BENNETT. Have these plans been ear-marked and before the Bill passes, will there be an agreement between the government and the company to put up a hotel according to them ?

Mr. PUGSLEY. They are ear-marked in this sense. They are in the custody of the city. The mayor allowed me to have them for the purpose of showing them here. They will be returned to him and we will see that these identical plans are submitted to the Governor in Council for approval.

Mr. BENNETT. As far as the city of Ottawa is concerned, they have practically nothing to do with the giving of the land or the construction of the hotel beyond their arrangement with the company regarding taxes. On the passage of this Bill, this land will rest in the company.

Mr. PUGSLEY. Before giving a conveyance, we must have the plans submitted to us and approved by the government.

Mr. BENNETT. What is there to prevent the Grand Trunk Railway coming back in a couple of months and saying : We will not build on these plans. They will then be free to exact new plans.

Mr. PUGSLEY. Clearly not because the city has acted in good faith and entered into a written agreement with the company by which the company have bound themselves to build according to these plans. The Governor in Council will not allow any departure from these plans unless, on the advice of our chief architect, we think they should be altered. But we will allow no

plan which will provide for a less expensive or less commodious building, though we might require a larger building.

Mr. BENNETT. The city of Ottawa is no party at all to the agreement between the company and the government, and both the railway company and the government can ignore the city altogether.

Mr. PUGSLEY. But we shall not.

Mr. BENNETT Where is the proof? Supposing that in three months the Grand Trunk Railway come to Ottawa and say: We will build such a hotel as provided for in the plans but will construct one costing only half a million dollars, under this arrangement, the government could agree to that.

Mr. PUGSLEY. Does the hon. gentleman not see the absurdity of his contention? The city was anxious to have a first-class hotel and the Grand Trunk Railway expressed its willingness to build if it could secure a certain site. This is the site it selected, and it said: if we cannot build there, we will not build at all. The city negotiated with the company regarding what concessions it should give the company in the matter of taxation and came to an agreement with the company.

Mr. BENNETT. Simply for the purpose of assessment.

Mr. PUGSLEY. Even so, the city and the company have come to an agreement, under which the hotel and the station are to be built according to these plans and specifications. As at present advised, I am prepared to recommend to the Governor in Council the acceptance of these plans and I do not propose recommending the acceptance of any other. Surely the committee can trust the government to insist upon these plans being carried out.

Mr. BENNETT. And no other plans?

Mr. PUGSLEY. No other.

Mr. FOSTER. Section 2 ought to be left out entirely. It applies to something apart altogether from the object of this measure. It provides that:

2. The proceeds of the sale of the said parcel of land shall be placed to the credit of the Ottawa Improvement Commission, to be applied by them for the purposes of the commission under the instructions and directions of the Governor in Council.

That has nothing at all to do with the sale of this property to the Grand Trunk Railway for the purpose of erecting a hotel. If we want to give the money to the Ottawa Improvement Commission, we should do so by voting an appropriation for that purpose, and in the meantime let this money go into the consolidated fund and become part of the revenue of Canada.

Mr. PUGSLEY.

Mr. PUGSLEY. This has been agreed to by a resolution of the House.

Mr. FOSTER. I know that, but you are not obliged to go to the full extent of the resolution.

Mr. PUGSLEY. Where is the objection?

Mr. FOSTER. The objection is this that you are proposing a new expenditure which is alien altogether to the agreement between the Grand Trunk Railway and the government. We have an Ottawa Improvement Commission to which the government has given certain money and may decide to give more, but that is a matter which ought to be dealt with separately. If it be made part of this Bill, we shall have to inquire into the necessity for the application of this additional $100,000 to the credit of the Ottawa Improvement Commission. That commission has been already provided with a considerable sum from the Dominion treasury and it has gone into a wide and ambitious system of improvement. I believe it has gone to the limit of its means, and you are now proposing to give it another $100,000. Before we give that money, we must have information as to the policy of the government as to how this money is to be expended and so on. The government here are taking up two different matters. There is the public appropriation and the power to sell lands for entirely different purposes from those to which they are now devoted.

Mr. PUGSLEY. This matter was carefully considered before. After consultation with the minister this Bill was decided upon. We thought it better that the Bill to provide for the sale of the property should also provide that the money should not go for ordinary purposes but should be used for further improvements to be made in the park. And, as my right hon. friend the Prime Minister says, this is regarded by the government as a sacred trust and the money is to be used for the further improvement and development of the park down to Nepean Point.

At one o'clock, committee took recess.

Committee resumed at three o'clock.

On section 1,

Mr. PUGSLEY moved:

Provided, however, that if the Grand Trunk Railway Company so requests, the conveyance of the said land may be made to the Ottawa Terminal Railway Company, incorporated by Act 67, Edward VII., chaper 117.

Mr. LANCASTER. In regard to this matter I wish to reiterate what I said earlier in the session, that I think the whole thing is wrong in principle, and I have heard nothing since to change my opinion about it. I am more than ever of the opinion that this is a bad bargain, and one that should not have

been made with this railway or with any other railway company, under all the circumstances. It is a wrong principle to take the land of the country for this purpose. I am not going to elaborate that now, as I have done so on a previous occasion. But in regard to what the Prime Minister said this morning, I wish to say a word. He said that we must have a hotel in Ottawa, and this was the only way to get it. I do not wish to say anything disrespectful to the Prime Minister, but I must say that it seems to me his first duty is to protect the public interest of Canada and not bother his head so much about what the city of Ottawa wants. I ask myself whether any other city in Canada, looking at it from a municipal standpoint, if it felt the need of a hotel, could come to this government and get the government to allot a portion of the public lands of the Dominion for a hotel site. I am satisfied it would never be done for any other city; and I do not see on what principle Ottawa has a right to come to the Dominion parliament and ask us to make a bargain like this, and hand over to a railway company lands that belong to the Canadian public. I do not know upon what principle we are to make an exception in favour of the city of Ottawa and assist it to build a hotel. I think the Minister of Public Works let the cat out of the bag in answer to my hon. friend from East Simcoe, when he said that it was this way, that the Grand Trunk Railway Company wanted this site and would not agree to take any other, and so this site had to be given them. The whole matter is wrong. If the Grand Trunk Pacific would not be satisfied with any other site in Ottawa, that is a question for the Grand Trunk and the city to settle between them. But why should this Dominion government step in and sell or barter away to the company a portion of the public lands for a hotel building, simply because the Grand Trunk Pacific demand it? I think the principle is entirely wrong, and I cannot accede to it. I do not know whether a vote is going to be taken on the matter, but if there is, I am prepared to vote against the whole proposition.

Mr. BOYCE. It sems to me that this proposition is an extraordinary one, especially as it has been put before us by the Minister of Public Works. I understand that in 1884 or 1887 this park was created by the government of Canada and became ordnance land.

Mr. PUGSLEY. It became ordnance land long before that.

Mr. BOYCE. It was ordnance land, and by virtue of an Act of parliament it was created a park for public purposes, and has remained so down to this day. I do not know whether the minister is able to inform the committee at this time of the amount of money that has been expended upon it, first, by turning the waste land into a park, and next, for annual maintenance since that time. But the minister at any rate will concede that a very large amount of money has been expended on that park for public purposes, and it does seem to me an extraordinary proposition, and possibly something more than extraordinary, that the government should, under these circumstances, expropriate or give away to a hotel company, or for the purpose of a hotel, a part of the public domain situated just where this land is situated, especially in view of the fact that immediately adjoining it are lands of very great value which this government has expropriated, and for which it will have to pay a tremendous amount of money. If the government was so much in need of land that it had to expropriate at the cost of a million dollars——

Mr. PUGSLEY. What!

Mr. BOYCE. If the government was so much in need of land for the purposes of public buildings that it had to expropriate lands between Mackenzie avenue and Sussex street——

Mr. PUGSLEY. At a cost of a million dollars you say?

Mr. BENNETT. Yes, when you buy the Lindsay block out.

Mr. SAM. HUGHES. The Lindsay block alone will cost $750,000.

Mr. PUGSLEY. The government have no intention of buying the Lindsay block.

Mr. BOYCE. I may be beyond the mark, but I will let it go at a million dollars that it will cost the government to expropriate lands in the immediate vicinity for public buildings.

Mr. PUGSLEY. Will my hon. friend pardon me?—because it might go out to the country as if there were some shadow of truth in the remarks of my hon. friend, although I take it for granted he does not intend to make a misstatement. The total expenditure for this land is very far from being a million dollars. The land alone will not amount to very much more than half a milion dollars, I think about $600,000.

Mr. BOYCE. Does that include the Lindsay block?

Mr. PUGSLEY. Not at all. We do not propose to buy the Lindsay block.

Mr. BOYCE. The hon. gentleman will admit that if it does include the Lindsay block, it will exceed a million dollars by the time the expropriation is completed.

Mr. PUGSLEY. It does not include the Lindsay block.

Mr. BOYCE. Then we will say at a cost of about a million dollars for expropriating land on which to erect public buildings in the immediate vicinity of this park; and the government is giving away for far less than

its value a portion of that park, defeating the purposes for which that park was originally intended, and for which it has been maintained for a great many years at a great cost to the country, and allowing an hotel to be erected there, with a bar for the purpose of the sale of intoxicating liquors right amongst the government buildings, as they will exist on Mackenzie avenue and Sussex street. Does not that seem to the Minister of Public Works somewhat of a shocking proposition? Would it not be more economical, if that park has to be taken away from the use of the public, that the government should use it for the erection of its own buildings, and thereby get them much nearer to the main parliament buildings on parliament hill? I am astonished that the government should be so lost to all sense of decency so far as the recognition of public rights is concerned, that it should consent to a proposition at once so monstrous and so wanting in economic features. Now I have made some inquiries, and I understand that $100,000 for that site is a very small percentage of the value of the land for the purposes for which it was intended.

Mr. PUGSLEY. Has the person who informed the hon. gentleman the slightest idea of the value of the real estate in that vicinity or does he know the frontage on Rideau street ?

Mr. BOYCE. Yes, I think he does.

Mr. PUGSLEY. Does he not think $800 per foot frontage is a good price ?

Mr. BOYCE. It might be for lands across the street but having regard to the purpose for which the land is to be generously given by this government it is not. The planting of a hotel right in the middle of the parliament buildings on land from the public domain of Canada is not I think a proposition that will appeal to the people of Canada who have such an interest in the maintenance of that park.

Mr. PUGSLEY. We do not propose planting it in the middle of the parliament buildings.

Mr. BOYCE. I am looking forward to the time when the new buildings shall have been erected, this hotel shall have been completed and the park which has been for the benefit of the people of Canada will be the back garden of the hotel for its benefit and improvement.

On section 2,

2. The proceeds of the sale of the said parcel of land shall be placed to the credit of the Ottawa Improvement Commission, to be applied by them for the purposes of the commission, under the instructions and directions of the Governor in Council.

Mr. FOSTER. Does the minister mean that the money which is paid by the Grand Trunk shall not be paid into the Receiver General and become a part of the consolidated revenue fund ?

Mr. PUGSLEY. Yes, it is intended that this should be placed specially to the credit of the Ottawa Improvement Commission to be drawn from time to time and expended under the direction of the Governor General.

Mr. FOSTER. But all moneys that may come in for any purpose whatever must go to the consolidated revenue. It must first be paid into the fund and then you can vote it from the fund or appropriate from it. But in what way will you keep accounts if you are to sell off portions of the public lands of the country and instead of placing the proceeds in the consolidated revenue, pass the money over to the credit of some appropriations?

Mr. PUGSLEY. This section was brought to the notice of the Minister of Finance. It was drawn by the Minister of Justice. I do not myself see any reason why if it is intended to keep this as a special fund for the purposes of the work of the Ottawa Improvement Commission it should not be placed by the Minister of Finance to the credit of that commission.

Mr. FOSTER. I suppose the government could do anything it chose if parliament authorized it, but is that the proper way ?

Mr. PUGSLEY. I do not see any objection.

Mr. FOSTER. I do not suppose the hon. gentleman sees objection to anything.

Mr. PUGSLEY. It is to be a special fund to be applied for a special purpose under the direction of the Ottawa Improvement Commission and with the approval of the Governor in Council. It is intended, as the Prime Minister informed the House, that the whole of this money shall be devoted by the Ottawa Improvement Commission to the improvement and extension of the Major's Hill park so as to carry the improvements right down to Nepean point.

Mr. FOSTER. I think my hon. friend had better not increase that system in this country. That seemed to be a principle introduced into provincial finance in New Brunswick but I do not think we should do it here, that you can take money out of the country's resources in any way other than by cheque from the consolidated fund. Surely you are not going to commence that game now with the funds of this country.

Mr SAM. HUGHES. What possibility would there be of this government obtaining any record ? If it is turned over to the commission the government have no record or means of enforcing the payment of it in any sense.

Mr. LENNOX. It does not matter at all I think; this matter has developed in this way. Nominally the Grand Trunk Railway pay $100,000; actually they do not pay anything of the kind. This money is not to go to the benefit of Canada generally but to a specific purpose, the improvement of the land adjoining this hotel property, the hotel garden; it is an extension of the benefits they will get. Virtually the money remains in the hands of the Grand Trunk Railway for the improvement and enhancement of their property. There is a great measure of consistency in the hon. gentleman's action in not passing it over to the credit of the consolidated fund but letting it go gradually as a reversion to the Grand Trunk Railway Company.

Mr. PUGSLEY. Carried.

Mr. FOSTER. I protest against that kind of finance. I am certain the Minister of Finance has never looked that through or he would not allow it. How are you to credit that to the commission account, is it a donation from the Grand Trunk Railway Company? It will not get into the public revenues of this country, neither will it be checked out from the public revenues. Here is a transaction where public lands are sold, $100,000 received, and neither put into nor checked from the consolidated revenue.

Mr. PUGSLEY. I presume it will be placed pursuant to the authority of the statute by the Finance Minister to the credit of the Ottawa Improvement Commission, to be expended by them under direction of the Governor in Council. When the hon. gentleman says it has not come to the attention of the Finance Minister, he is entirely in error. The Finance Minister thought it would be the better way because if it went into the consolidated revenue in the ordinary course it might be devoted to other purposes. It is intended to keep this as a sacred trust to be handled only by the Ottawa Improvement Commission.

Mr. DANIEL. The minister states it will be paid over from time to time to the Ottawa Improvement Commission. I presume it will be paid in bulk by the Grand Trunk people but to whom? To the Department of Public Works?

Mr. PUGSLEY. To the Minister of Finance and Receiver General.

Mr. DANIEL. But it does not go into the funds of the country. Does the Minister of Finance propose to keep it in his own private safe, and hand it out from time to time to the Ottawa Improvement Commission? This is very loosely drawn up, nobody can tell what becomes of the money. The funds of the country apparently will get no credit from this amount, there is nothing to say when it will be paid over, nothing is said as to what will become of the money in the meanwhile and I certainly think the matter ought to be dealt with in a more definite manner than it is going to be, because it allows this $100,000 to be placed nobody knows where for an indefinite length of time.

Mr. FOSTER. I must again protest against that. When that money is paid, to whom will it be handed over?

Mr. PUGSLEY. I presume to the Minister of Finance.

Mr. FOSTER. To his private account?

Mr. PUGSLEY. No. It would be his duty, I presume, to put it to the credit of the Ottawa Improvement Commission, and that commission would cheque it out from time to time under the direction of the Governor in Council, without whose approval they cannot spend one dollar of the amount.

Mr. FOSTER. How will the debit and credit account of the country show that as being done? Will the Improvement Commission be chequeing against Dominion funds or against what?

Mr. PUGSLEY. They will be chequeing against this money, which is a special fund placed to their credit under authority of statute.

Mr. FOSTER. The more the minister looks into it the more he will see it is absolutely irregular. I do not think you can find in the history of Canada an example of money being used in that way.

Mr. PUGSLEY. The government thought that when it was proposed to sell a part of Major's Hill park the money should be devoted specially to the purposes of the Ottawa Improvement Commission and not credited to the consolidated revenue fund, where it might be used for other public purposes. The object the government had in mind is the extension and beautifying of the remainder of Major's Hill park right down to Nepean Point. I think it would be a proper exercise of the power of this parliament to require that the money should be placed to the credit of the Ottawa Improvement Commission, who will receive it clothed with the trust that it is to be devoted to the purposes of the commission and subject at all times to the control of the Governor in Council.

Mr. DANIEL. Does not the government give an annual grant to the Ottawa Improvement Commission?

Mr. PUGSLEY. Yes. I think it is $60,000.

Mr. DANIEL. Then what is the objection to placing this money to the credit of the consolidated revenue fund and handing it over to the commission in annual instalments in addition to the $60,000?

Mr. PUGSLEY. If it went to the consolidated fund it might be devoted to such purposes as parliament should decide from time to time, but this being money received for a part of this park which has been dedicated, if not by deed, by user, to the people of Ottawa, we felt that this money should be devoted to the one purpose and the one purpose only. If it went into the consolidated fund it would have to be voted out from year to year as parliament might determine.

Mr. LANCASTER. Why not?

Mr. PUGSLEY. The country has every confidence in the Ottawa Improvement Commission, which is composed of certain members nominated by the city and certain members nominated by the government. It does seem to me that parliament can safely allow this money to be at once placed to their credit and drawn out by them, subject always to the direction of the Governor in Council.

Mr. FOSTER. A company may be organized to build a railway and the government may make a loan for the purposes of the construction of that railway, but the loan goes into the consolidated fund, and is not placed to the credit of the railway company. Why should $100,000 be placed at the credit of the Ottawa Improvement Commission when it may not use that money for several years?

Mr. PUGSLEY. It would draw interest in the meantime. There is a broad distinction between a railway company and a public body like the Ottawa Improvement Commission. It does seem to me that this money might be placed to the credit of the Ottawa Improvement Commission clothed with the trust to which it is to be devoted. It cannot be expended without the approval of the Governor in Council, and I can see no objection to it.

Mr. BENNETT. Is it intended that this $100,000 shall be paid out in addition to the $60,000 a year?

Mr. PUGSLEY. Yes. I would assume that the regular course would be that the proceeds of the sale of this property are to be handed over to the commission, and it may be that the identical cheque that comes from the Grand Trunk Railway Company may be placed to their credit.

Mr. FOSTER. How will that appear in the Public Accounts?

Mr. PUGSLEY. The Governor in Council will make a record of it, and the Ottawa Improvement Commission will make a return of it in their report.

Mr. FOSTER. Then it will not appear in the Public Accounts?

Mr. PUGSLEY. There will be a record of it.

Mr. DANIEL.

Mr. FOSTER. That money will not come into the possession of Canada, and therefore it will not appear in the Public Accounts of the country. The fact remains that we have disposed of the property of the country for $100,000 and that there is no entry in our books with reference to it.

Mr. BENNETT. I suppose the minister anticipates that a large portion of this money will be the nucleus of a campaign fund in the elections which will take place next fall, and it is to be supposed that some of it will be devoted to the city of Ottawa in that way?

Bill reported; read the third time (on division), and passed.

SUPPLY—CANADIAN NATURALIZATION.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. SAM. HUGHES (Victoria and Haliburton). Mr. Speaker, I have taken the following clipping from an American newspaper:

Since our republic set up for itself there never has been until very recently an emigration of Americans from the United States that was worth noticing, says a recent 'Harper's Weekly.' Some of our women have married Europeans and become subjects of kings, but until lately exceedingly few United States voters have ever given up their citizenship. Within ten years, however, a good many thousands of our Northwesterners have gone over the border into the Saskatchewan country, and taken up wheat lands, and these emigrants from Uncle Sam's domain have usually, as part of the process of getting their land, taken out papers to be Canadian voters. This involves finally swearing allegiance to King Edward, so that these adventurers give up their citizenship in the United States. And what do they get in return? Almost all of them expect that they become British citizens, with all the rights as well as the obligation of that condition. But it seems not. We learn from the Winnipeg 'Telegram' that they become merely citizens of Canada, with the right to vote and hold office in the Dominion governed from Ottawa, but that as soon as they go outside they become citizens of no country. By British law it seems a naturalized Canadian is not a British citizen. He cannot take out naturalization papers in England until he has lived there five years. 'Not a single British colony,' says the Winnipeg 'Telegram,' has, as the law stands to-day, the slightest power to grant to an alien rights of British citizenship that can be enforced outside its own boundaries. . . . There is not the slightest doubt about the law.'

This, Sir, brings up for consideration the whole question of Canadian citizenship—the question of what classes should be admitted into the Dominion of Canada. During the war between Japan and Russia thousands of Japanese who had lived for years in the Hawaiian islands returned to

their native land to do service for it. One officer, who had married a lady of the Caucasian race in the city of Honolulu and had raised a family, parted from his family and went back to serve the land of his nativity—it was understood at the time by an order from the Japanese government. Men of Japanese extraction in Canada who had taken out their naturalization papers in order that they might become citizens of the Dominion, also obeyed the mandate of the Japanese government and returned to do service for their native country. More recently, when the governments of the United States and Japan were disturbed over the question of Japanese colonization on the western coast of North America, it was charged by newspapers and officials in the United States that numbers of Japanese were returning to their native land in order to serve it in the event of trouble between the two countries. This suggests what is to my mind a point worthy of the consideration of the Dominion government. At the very time that question was agitating the world, the American people found that every transcontinental railway in the United States, every pass, every tunnel, every strategic point, if I may use the term, was mapped out and was in the possession of Japan. Had war broken out between Japan and the United States, ten Japanese soldiers, properly placed, with dynamite cartridges in their hands, could have prevented the transfer of any United States soldiers from the east to the west for six months. The people of the United States were aware of this. In the United States there is a tableland varying in width from 500 miles to 1,000 miles, separating the eastern part of the continent from the Pacific slope. That tableland is difficult of access for railway purposes, and unless the railways were kept open it would be impossible to transport troops from the east to the west. Should war break out between the United States and Japan, the Japanese would immediately control the whole of the western coast of North America, and by blowing up a few railway bridges and tunnels they could prevent for months the transfer of one solitary soldier over the mountains. In Canada we have but one railway across the Rocky mountains. Any one who has traversed that region knows that there are a hundred places where a charge of dynamite would prevent the passage of trains for weeks, aye, for months, and that being accomplished it would be impossible to transfer soldiers from the eastern parts of this country to the western coast. Should Great Britain chance to be engaged in a war with any power on the Pacific ocean and wish to utilize the great transcontinental Canadian route for the transportation of troops or munitions of war from the home land to the Orient, a few men could very readily render such transport nugatory by destroying these passes. The United States people have taken into very serious consideration what class of citizens they shall naturalize on the western coast. A very few thousand people planted properly on this western coast could readily control the situation there. The Japanese have been coming into the western part of Canada in large numbers. The Chinese have also been coming in, but their coming has been more or less checked by the poll tax. Our field of settlement on the western coast is limited, and I have no hesitation in saying that the government should be very careful indeed what class of citizens are given naturalization papers and allowed to settle within our borders. The first requirement on which they should insist is that the incoming settler should be absolutely loyal to the empire, should be in every sense a British citizen, and above all be ready to defend the British empire against every enemy and in every circumstance. Do the Japanese and the Chinese fulfill the latter condition? Would they be ready at all times, at the drop of the hat, to fulfill that obligation and do active service for the British empire even against their own country? It has been pointed out by our American friends that at the time, when the little agitation was going on between the United States and Japan some years ago, colonies of Japanese were found convenient to every mountain pass. We know that application was made to Canada to plant a large Japanese colony convenient to the posts traversed by our railways in our own Rocky mountains. It may possibly be that they desired to become British subjects and accommodate themselves to our institutions and laws. If so, other things being equal, I have no hesitation in saying that they would make a very eligible lot of people. But if their intention was to live in colonies, as they always do, if they had no desire to subject themselves to our laws, or accommodate themselves to our language and institutions, if their design was to grow up in this land but not of it, the settlement of such people in our midst is not one that should be encouraged or even permitted. There are other classes of immigrants which require to be carefully looked after. There is the transient labour class, whose admission we should carefully control and supervise. At present in almost every county in the eastern part of Ontario, especially in the lumber counties, you will find hundreds and thousands of men out of employment, and whoever lives to see next winter will see that number more than doubled. You can go around to any part of this community, and you will see imported farm labourers, by the hundreds and the thousands, driving our own men out of employment. I happened to be in the post office one day last winter when scores of Italians were taking out post office money orders, many of them for large sums, and send-

ing them home to their native country. That certainly is something which is not to our advantage. It is something which ought to be checked. In every municipality in Canada, before even a pedlar of any description can ply his trade, he has to pay a license. In like manner every transient labourer coming into Canada should be required to pay a certain tax so as to indemnify slightly our own people for the loss of employment that they have to suffer through this foreign competition; and certainly it is our own people, who are trying to bring up their families in this country and build up our institutions, whose interests we should specially safeguard. Those alien labourers who come here without any intention of becoming British subjects, who have not the slightest intention of living and growing up amongst us, should be made to pay a tax on coming in. There is another class which should not be permitted to come in unrestricted. I refer to the ticket-of-leave men, the hooligans and the hoodlums who have been taken hold of by charitable societies and sent to this country in large numbers, and who make the people of the old land, the honest British born people residing in this country, blush at the thought of having to recognize these degenerates as hailing from the same land. These people should not be allowed to come into this country. We should insist on every man we admit having a clean bill of health and character. There is another class to which I wish to refer, and in doing so I shall quote an advertisement which has been given me and which is eing largely circulated in eastern Assiniboia. This circular was sent me by one of the constituents of the hon. member for East Assiniboia (Mr. Turriff), and I am told that thousands of them have been scattered throughout that constituency. I understand also they are soon to be published generally throughout the Northwest. Many years ago, when I was still in my teens, I heard Barnum say that he would rather be condemned by his opponents than praised by them; and throughout my life I have heard numerous evidences of the truth of that saying. I take therefore this circular as a complimentary advertisement. It gives a quotation from some remarks I made during the present session. It is headed: 'Col. Sam. Hughes, the Conservative member for Victoria and Haliburton, occupies one of the front benches in the House of Commons,' and then goes on as follows:

Speaking in the House of Commons on April 8, 1908 (see 'Hansard,' page 6438), on a Bill to amend the Immigration Act, Col. Hughes said:

Mr. SAM. HUGHES. Take the case of a Hindu who comes here from Hong Kong, you may send him back on the steamer and he may not be allowed to land at Hong Kong. I do not think this will help the matter. Why does the hon. minister not bring in a law covering that aspect of the case? This will exclude any man coming from any country other than that of his birth or adoption. Personally I would much prefer a Hindu who has served the empire in the armies of Great Britain to a galvanized Yankee who has been an anarchist in his own land and has come to the United States where he has done his best to disrupt that republic, and who, if he crosses over to Canada, seeks in many instances to disrupt the established laws of the Dominion. I must say that a Hindu who has served in the British army and has had the discipline of a soldier is much more likely to make a good citizen of Canada, much more likely to upbuild the welfare, morality and dignity of this country than many of the class of animals who are imported——

An hon. MEMBER. Order.

Mr. SAM. HUGHES. No 'order' about it. Many of these are not worthy the name of human beings. But these people are admitted, while soldiers who have served in the British army are excluded, not allowed to land and turned adrift.

I was about to say that I am surprised, but on reflection I am not surprised at anything some of these gentlemen would do. In one sense, however, I am surprised that even the hon. member for East Assiniboia (Mr. Turriff) would have the hardihood to stand up, even in the remote parts of his own constituency, and there cast the stigma on the honest intelligent American settler of suggesting that there could be possibly, or that any one could dream there could possibly, be any relationship or connection between him and the class of American anarchists or galvanized Yankees, as they are termed in their own country. But after the prominence which these gentlemen of the Liberal party have given the Jacksons and the Wagners and others of that class—criminals and fugitives from justice—who were proven guilty of all sorts of offences in the calendar—after the prominence these men have received at the hands of certain members of the Liberal party, I am not surprised at anything our hon. friends opposite might do. But these gentlemen will find that they have shot wide of the mark in endeavouring to show the honest sturdy American citizen of our west that he is a galvanized Yankee and an anarchist. The attempt of these gentlemen to convince the enterprising American citizen that he is an anarchist or that any one in his senses could suspect of him of being one, will only recoil on themselves. The class I had reference to is that class of men who invaded the Dominion and never contributed to the revenue except in the way of excise on whisky and tobacco, who never turned a hand for the benefit of one honest law in the Dominion —men who were driven out of the United States largely for the benefit of that country. These were the men of whom I was speaking, men whose hand is against everybody, and who recognize no law. These are the class we do not want.

But these gentlemen, forsooth, will admit the 'galvanized Yankee' freely—and let me tell these hon. gentlemen that that term 'galvanized Yankee' is well understood on the other side of the line; it is used to describe the man who would disrupt the republic and destroy law and order. We had a wing of them come into Medicine Hat only a few months ago, and they indulged in all kinds of performances, even to committing murder. These are the men we object to; these are the men that the honest American citizen objects to. And I want to tell the hon. member for East Assiniboia that he will fall far short of his object in seeking to impress the honest American citizen by suggesting that he is a 'galvanized Yankee'. The honest American repudiates this class, for the honest American citizen upholds law and order when he comes to our side of the line as he has been accustomed to uphold it where he lived before. On more than one occasion I have pointed out that the Americans are the most law-abiding people in the world—I speak of the genuine American. I can take you to counties in the United States—towns of 2,000 inhabitants in Pennsylvania, Maryland, Ohio, Illinois and elsewhere where, for over thirty years, they have not had a single arrest, where hotels cannot be maintained—not merely because they cannot be licensed, but because the people will not drink the liquor. I can show you whole counties where they have not had a criminal case in twenty-five years.

Mr. DUNCAN ROSS. I rise to a point of order, Mr. Speaker. I would ask you whether the hon. gentleman can continue a discussion that arose in connection with another matter that was before this House some months ago.

Mr. SPEAKER. At the moment I cannot recall anything the hon. gentleman (Mr. Sam. Hughes) said that was out of order.

Mr. SAM. HUGHES. I know this is not congenial to the distinguished statesman and constitutional lawyer from Yale-Cariboo, the gentleman, who I suppose has been associating with and possibly owes his election to, the very class of men that I am condemning.

Mr. DUNCAN ROSS. You will be making more apologies in a short time.

Mr. SAM. HUGHES. No. I never made an apology in my life. What I stand to is the word I utter. And I want to tell my hon. friend and his friends that when the time comes, they will find themselves in a very serious position for attempting to fasten upon the honest people of the North-west or of British Columbia who have come to us from the United States the term 'galvanized Yankee'.

Motion agreed to, and House went into Committee of Supply.

Hon. WM. PUGSLEY (Minister of Public Works. I would ask the committee to take up harbours and rivers, Ontario.

Mr. BENNETT. Will the minister please place on the table the tenders of which he spoke when the House was last in Committee of Supply?

Mr. PUGSLEY. The tenders for dredging are on their way over, and will be here in a few moments.

Public Works, chargeable to income—harbours and rivers, Ontario—Belle river dredging, close piling, &c., $1,000.

Mr. PUGSLEY. This is a revote of $1,000. It represents the cost of carrying on works at the mouth of the Belle river in the county of Essex.

Mr. CLEMENTS. What is the nature of the work?

Mr. PUGSLEY. There is forty feet lineal of sheet piling on the west side of the harbour, dredging and driving of some piles 24 feet long.

Mr. CLEMENTS. What is the depth of the water?

Mr. PUGSLEY. Nine feet at low water.

Mr. SAM. HUGHES. What has been expended on this work previously?

Mr. PUGSLEY. About $14,000. This is supposed to complete what is now in view.

Mr. BLAIN. Is it under contract?

Mr. PUGSLEY. No, it is done by days' labour. There is such a variety of work that it cannot be done under contract.

Mr. CLEMENTS. Who is the foreman?

Mr. PUGSLEY. We have not yet appointed a foreman.

Beaverton—harbour improvement, $3,500.

Mr. SAM. HUGHES. I want this to go through, but I want the minister to explain what is the total cost of the work, who is doing it, on what terms and when it will be completed.

Mr. PUGSLEY. This work represents sheet piling and dredging. The total expenditure is estimated at $2,000 for the dredging and $1,500 for the other work.

Mr. SAM. HUGHES. Is this all in connection with it?

Mr. PUGSLEY. There was an expenditure last year of the same amount.

Blanche river—improvement, $5,000.

Mr. PUGSLEY. This is in Nipissing. The work is the removal of snags and other obstructions to navigation.

Mr. SAM. HUGHES. What is the policy of the government in relation to these in-

land lakes that are not taken under the control of the federal government ?

Mr. PUGSLEY. By the terms of the British North America Act the federal government has control of navigation. It is quite within the power of the federal government to exercise control over matters relating to navigation in any lake. There is no such a thing as taking over control of navigable waters.

Mr. SAM. HUGHES. What towns are on this river ?

Mr. PUGSLEY. It is a newly developing country. The country along the shores of Lake Nipissing is rapidly developing, principally owing to the rich mineral discoveries being made.

Mr. SAM. HUGHES. What minerals have been discovered along the Blanche river?

Mr. PUGSLEY. Quite a number. The people are coming in there, and require this improvement.

Blanche river—improvements of navigation on south branch, $3,000.

Mr. PUGSLEY. This also is for the purpose of removing obstructions to navigation caused by trees, roots and snags.

Mr. SAM. HUGHES. In what riding is it?

Mr. PUGSLEY. In the county of Nipissing. I may say that Nipissing is improving very rapidly. The population of Nipissing county to-day, I believe, is about 70,000. Hon. gentlemen will see how rapidly that northern country is developing.

Mr. BLAIN. This work was commenced in 1904, and why does it take so long?

Mr. PUGSLEY. This work is being done from year to year with the plant which is provided by the government for work in all those rivers. Last year the total expenditure was about $4,000.

Blind river wharf—dredging, &c., $6,000.

Mr. PUGSLEY. This is in the county of Algoma. It is to complete the extension of an L to the present wharf, 100 x 30 feet, at a cost of $1,250. It will cost $1,050 to clean up the slip around the pier at the mouth of the river. It is also for the purpose of enlarging the channel at the mouth of Blind river. We propose to expend this year $3,700.

Bronte harbour—repairs to piers, &c., $1,000.

Mr. HENDERSON. Would the minister say what damage has been done to the pier at Bronte which requires $1,000 for repair? I would like at the same time that the minister should tell the committee how much money has been spent on the pier and approach at Bronte?

Mr. SAM. HUGHES.

Mr. PUGSLEY. From 1900 up to the 31st of March, 1907, the total expenditure in Bronte harbour has been $30,923. This vote of $1,000 is not required entirely for repairs, but it is to complete a new crib to connect the same with the northern pier, and also some repairs to the old crib work.

Mr. HENDERSON. Is any portion of this to be applied to further dredging?

Mr. PUGSLEY. No.

Mr. HENDERSON. Is it the intention of the minister to do any more dredging in Bronte harbour?

Mr. PUGSLEY. I have not considered that.

Mr. HENDERSON. We will see when the supplementary estimates come down. From the wording of the motion 'repairs to piers, &c.,' I was wondering how much was for repairs, and how much for the &c., and I thought perhaps the minister intended to do some more dredging. I would say to him that I think it would be a mistake to extend the dredging. I do not think at the present time any more dredging is required.

Mr. PUGSLEY. It is for the repair of the pier, and connecting the pier with the northern pier.

Mr. ALCORN. Will there be an item in the supplementary estimates for dredging Picton harbour?

Mr. PUGSLEY. I am unable to inform the hon. gentleman what will be in the supplementary estimates.

Burlington channel piers—head block at east end of south pier, $6,000.

Mr. PUGSLEY. This is a revote. The work is under contract. The total probable cost is $10,500.

Chute à Blondeau (county of Prescott)—wharf, $4,000.

Mr. PUGSLEY. This is for the purpose of constructing a public wharf on the south side. The work is under contract. The object of the wharf is to afford proper landing and shipping facilities for the river traffic in the locality.

Mr. J. D. REID. Is there any recommendation by the engineers that the government should undertake this work?

Mr. PUGSLEY. There was a numerously signed petition presented by forwarders on the river, by merchants and others doing business along the Ottawa river, which was transmitted to me by my hon. friend representing that county (Mr. Proulx).

Mr. SAM. HUGHES. How far is this from L'Orignal?

Mr. PUGSLEY. I do not know; it is in the same county. It is sufficiently far

away to have warranted the construction of a wharf at this place twenty years ago. That was a private wharf, and it has become dilapidated. A public wharf is very much required.

Mr. J. D. REID. This is a sample of what I object to, and that is, the points where the government build public wharfs. The policy which the government are carrying out is hardly in accordance with the public interest. I could mention one case where a wharf was built at an expenditure of thousands of dollars, and there was no reason for it except that a petition was sent in from the residents of that locality. The government never sent an engineer to look into it, made no inquiries at all, but as soon as the petition came in the government said: All right, here is a petition, go ahead and build this wharf. I am afraid this is a similar case. From what the minister has just said, there was only a petition sent in to the member for the county, and forwarded by him, I suppose, to the government. On that petition the government decided to expend, when it started, I suppose, $5,000 or $6,000, and by the time they get through with it they will have expended $60,000 or $70,000. When a petition is sent in by residents of any locality, the first thing the government should do is to send an engineer to the spot and see what is really required, and also get a report from the chief engineer of the department as to what is actually needed.

Mr. PUGSLEY. The hon. gentleman will be gratified to know that that is exactly what the government does. When a petition comes in for the construction of a wharf it is referred to the engineer, and he is instructed to make a report as to the necessity of the work and as to the probable cost. This course has been followed in every case since I have been minister, and I am informed it was the previous custom. I can give my hon. friend a little more information with regard to this wharf. It is five miles west of Point Fortune and seven miles east of Hawkesbury; that will give him an idea of where it is located. The old wharf to which I referred was built by James McAllister some years ago. It has been vested in the Crown so the Crown now owns the property, and this is for rebuilding it and making an extension to it to give very much needed accommodation.

Mr. J. D. REID. I am bound to accept the minister's statement that this is the policy of the department, but we have had evidence under oath to the contrary in the Public Accounts Committee in the case of the Pointe aux Trembles wharf. No engineer went there, the chief engineer knew nothing, there was no recommendation by him, the wharf was simply put there because a petition was put in. I have no doubt we could get other cases.

Mr. PUGSLEY. Since I became minister my directions have been when petitions are presented to have reports made as to the necessity and cost of the proposed works.

Mr. J. D. REID. I referred to the general policy of the department.

Mr. PROULX. The private owner of this wharf did not want to repair it; it is in very bad condition and the transportation companies made strong representations to the Department of Public Works for a new wharf. The private owner asked $2,500 for the wharf, but received only $800.

Mr. J. D. REID. What did the government want to buy it for?

Mr. PROULX. Because they wanted a site; this wharf serves as an approach and there is a good shed on it which can be used. The contract for the extension and rebuilding is $6,000.

Mr. J. D. REID. Along the St. Lawrence the transportation companies build these wharfs, and I do not see why the same rule cannot be applied on the Ottawa.

Mr. PROULX. I do not see why the transportation company should build it. There is no railway communication and there is heavy traffic from this point especially in butter, cheese and other agricultural produce.

Mr. J. D. REID. What is the population?

Mr. PROULX. The population is about 300 or 400, but there is a large farming section around it who use the wharf. It serves the whole township of East Hawkesbury, which has a population of 5,000 or 6,000.

Mr. SAM. HUGHES. Is the private owner to continue to manage the wharf?

Mr. PROULX. I am not decided as to that; after it is built that must be arranged.

Mr. SAM. HUGHES. I wish to correct my hon. friend Mr. Reid for saying that the wharfs on the St. Lawrence are built by the transportation companies. The late member for Prince Albert, now a senator, said only a few sessions ago that the government had piled wharfs along the St. Lawrence so thick they had not room for them on the banks and had to hang them in the trees to get the money expended.

Mr. J. D. REID. I think the forwarding companies and those interested in the wharfs should keep them up. Are there to be dues charged and will they allow a man to collect and retain the dues?

Mr. PUGSLEY. The wharf apparently was built some 20 years ago and was owned by Mr. McAllister. Evidently it was affording a great deal of accommodation to the people of this district, and as I understand there was not sufficient profit in its operation to justify Mr. McAllister in putting it into thorough repair. The forwarders, the merchants and the farmers were all anxious for this accommodation, and finally it was determined that the Crown should purchase from Mr. McAllister for $800; it had cost him $2,500. In addition to the wharf the purchase includes a two-story shed in good condition, and the government is building a wharf of a substantial character at a reasonable cost. As to the revenue I do not know what it would be, but in the ordinary course I presume it would be transferred to the Department of Marine and Fisheries. The practice is not uniform in that respect, as many wharfs remain under the control of my department while a large number are transferred to the Marine Department. That has been the practice since confederation. The revenue will not be large, but I presume that whatever it is it will be devoted to keeping the wharf in repair.

Mr. PRINGLE. The upper wharf in the town of Cornwall is used, I believe, only by the Cornwall and Montreal Navigation Company, and was built for their accommodation. The wharf was constructed at considerable expense and is a great convenience to the community. I would like to know if that wharf is free or whether the steamers using it pay dues?

Mr. PUGSLEY. I will get the information to-morrow.

Cobourg—extension of breakwater, dredging, &c., $45,000.

Mr. PUGSLEY. This work includes the extension of a breakwater.

Mr. SAM. HUGHES. That is in connection with the Grand Trunk?

Mr. PUGSLEY. The Grand Trunk is establishing a car ferry there. This is an important work, and will be done by contract.

Colborne—wharf, $15,700.

Mr. SAM. HUGHES. Is this the work that was promised during the election?

Mr. PUGSLEY. I have no knowledge of any such promise. How many years ago would that be?

Mr. J. D. REID. There was a by-election in the county not long ago, and one of the ministers went up there and promised this work to the people.

Mr. PUGSLEY. It cannot be the same; this vote was in the estimates last year.

Mr. J. D. REID. They purchased the timber when the election was going on and promised to build the wharf if the Liberal candidate was returned.

Mr. PUGSLEY. The money was voted last session of parliament, so that the hon. gentleman must be wrong.

Mr. LANCASTER. But the work was not done.

Mr. PUGSLEY. Yes. The contract was entered into on the 5th of July, 1907.

Mr. SAM. HUGHES. Just previous to the election.

Mr. LANCASTER. Then all I have to say is that this minister pretended to the electors that the vote had not been acted on, and that if the people elected a Liberal it would be.

Mr. PUGSLEY. The hon. gentleman should not believe all he hears.

Mr. LANCASTER. It is true I should not believe all that a minister of this cabinet says.

Mr. SAM. HUGHES. Mr. Cochrane, who represented the county, died last year, and in the by-election the Liberals promised this wharf would be built if the people returned a Liberal. The dock is a necessary work and should be built at once. The good people of East Northumberland proved to the government that they would not sell their votes, and they turned down the Grit candidate and elected Mr. Owen. Independent electors of that sort deserve to be encouraged, and I am glad this wharf is going to be built.

Collingwood harbour improvements, $15,000.

Mr. PUGSLEY. This is to complete this very important work.

Mr. LANCASTER. How long has this work been going on?

Mr. SAM. HUGHES. From time immemorial.

Mr. PUGSLEY. It is under contract.

Mr. LANCASTER. When will this work be completed? This item is a very old friend in the estimates, and I would like to know when we are to see the end of it. Collingwood seems to be getting a great deal of attention lately.

Mr. PUGSLEY. There is a very large shipping business done at Collingwood.

Mr. SAM. HUGHES. This is a very necessary work if the money is properly expended, but it has not been properly expended always.

Mr. PUGSLEY. I have no information of that kind. The harbour is of rock foundation, and I should think it would be at least two or three years before the work necessary in Collingwood harbour would be completed. If the work in contempla-

tion is done it would take perhaps upwards of $100,000.

Mr. LANCASTER. What is the depth of the channel?

Mr. PUGSLEY. The ideal depth would be 22 feet, but we are dredging to 19 feet at low water.

Mr. BARR. Were tenders called for this year?

Mr. PUGSLEY. Yes.

Mr. BARR. Who has the contract?

Mr. PUGSLEY. The C. S. Boone Dredging and Construction Company.

Mr. SAM. HUGHES. How much a yard?

Mr. PUGSLEY. I have not the figures here, but last year the prices were: For rock, $2.30; hard pan, $1.40; other materials, 35 cents. I think there is a slight increase at Collingwood this year.

Mr. BARR. How many tenders were put in?

Mr. PUGSLEY. I think two.

Mr. BARR. Did the lowest get the contract?

Mr. PUGSLEY. Yes.

Mr. LANCASTTR. Is the work done under government inspectors, and who is the government inspector at Collingwood?

Mr. PUGSLEY. W. A. Clarke was the inspector last year and we are continuing him this year.

Mr. MONK. I was not here on Saturday night late when most of the estimates for wharfs in the province of Quebec were passed. I would like to call the attention of the minister and of the government to the necessity—if it is their policy to go on building wharfs in so many places—to the necessity of establishing a wharf at the town of Lachine. On many occasions since I have been a member of the House I have called the attention of the government to the importance of having a public wharf there. Lachine has a population of 12,000; it is situated at the head of the Lachine canal, and many important industries are located in the town, amongst others, the Dominion Bridge Company and the Dominion Wire Company; and just at the place where a wharf should be erected they are now building great locomotive works which will employ some 5,000 men. If the government is to adopt the policy of building wharfs at different places rather than give effect to the report of the Transportation Commission, provision should be made for Lachine. There are several sites which may be obtained. There is the old wharf which belongs, I think, to the St. Stephen's Church Boating Club, and which can be had for a mere bagatelle. That old wharf might be improved in such a way as to serve the purposes of trade. There is also a private wharf which could be purchased at a moderate cost, and which could be repaired so as to be useful. If neither of these sites is available, then the government could easily secure another site. At the present moment the most vital question is the question of carrying out the suggestions of the Transportation Commission. If you do that, speaking of the province of Quebec alone, you will render a far greater service to my province than you will by building small wharfs here and there throughout the province; and if you will build the Georgian Bay canal and make Montreal and Quebec free ports, you will benefit the whole province in a way that these isolated works cannot possibly do.

Mr. PUGSLEY. Some time ago I was urged very strongly to construct a wharf at Lachine and I may say that the matter is under my very favourable consideration, and I think that very likely I may be able to make provision for it in the supplementary estimates this session. My hon. friend from Jacques Cartier (Mr. Monk) has referred to a very important matter, namely, the recommendation of the Transportation Commission. I am quite sure that the government as a whole are thoroughly impressed with the very great importance of those recommendations; but I am not prepared to admit that if those recommendations are fully carried out, and the great ports of Montreal and Quebec, and the ports of St. John and Halifax, and other ports of the St. Lawrence and the maritime provinces, and the great ports on the western coast and on the great lakes, are made free, that is going to meet all the requirements of the people of this country. The people of the smaller localities along the St. Lawrence and other rivers, on the seacoasts of the maritime provinces, on the great lakes, and on the coast of British Columbia, are entitled to a reasonable measure of accommodation, and they will not be satisfied to see these great cities having large sums of money expended upon them and the requirements of the smaller localities in the matter of transportation neglected. As far as the larger question of transportation is concerned, the government are alive to it. We are to-day spending large amounts of money in improving the port of Halifax in connection with the Intercolonial Railway; we are spending large amounts on the port of St. John; and these ports are rapidly drawing away from Portland the Canadian business that has hitherto been done there during the winter season. We are spending large sums of money in Montreal in addition the money spent by Harbour Commissioners. We have just erected a magnificent wharf at Maisonneuve. This could not have been better done if Montreal had been made a

free port. We are building a magnificent pier at Quebec to afford accommodation for large ocean steamers. On the great lakes also, in conjunction with the Canadian Pacific Railway and the Grand Trunk Pacific Railway, we are developing the harbours of Victoria and Tiffin, so as to afford accommodation for large steamers ; and I am happy to say that we are dredging those harbours so rapidly that we expect by the 1st of October to make it possible for large steamers to come right up to the elevators which those two railway companies are building. I believe the result of this will be to build up a new Buffalo at each of these places, and thus to draw away from Buffalo, New York, Baltimore and Portland millions of bushels of grain that now find their outlet by these American ports. At Port Arthur and Fort William we are carrying out the same large national idea, deepening the harbours in order to give ample accommodation for the large lake vessels that go there. This is our policy from the Atlantic to the Pacific, and if we have not in words carried out the policy enunciated by the Transportation Commission, we are in fact carrying it out as rapidly as we can, consistently with the resources of the country.

Mr. MONK. I do not like to allow the statement of my hon. friend to go entirely unchallenged. I for my part am impressed with the idea that he has not recently read the report of the Transportation Commission, for its suggestions are not being carried out in the spirit any more than in the letter. We were advised by the Transportation Commission to do something without delay to establish national ports on the Pacific coast, at Victoria, Vancouver and even Prince Rupert, if I remember rightly.

Mr. PUGSLEY. Do national ports necessarily mean free ports ?

Mr. MONK. Unquestionably. If there was any doubt about that, that doubt was set at rest by the Transportation Commission stating in so many words that they should be free ports. What have we done at Fort William and Port Arthur ? We were advised to set aside without a moment's delay a certain space along the waterfront and construct shipping facilities in that space ; but we have not done so. We have instead instituted a Harbour Commission there, which was exactly what the Transportation Commission did not suggest. What we have done at this end of the great lakes I will not take time to dilate upon. But take the port of Montreal. At present we have arriving there large steamers laden with grain. It is the beginning of an immense grain trade at Montreal, which we have not had so far because of the lack of facilities. A steamer carrying 90,000 bushels of grain arriving in Montreal takes nine hours to discharge its cargo, while other vessels are waiting, because our grain elevator there has only one leg. It ought to have at least eight or ten additional legs, which could be built at a cost of from $30,000 to $60,000 each. Go to Duluth and Superior, and see how the discharging of vessels is done there. Although this matter has been referred to time and again, the government has continued deaf to this necessity in the port of Montreal, while they squander money on wharfs which in many cases are not asked for, or are asked for by members simply for some private reason. What are the government doing in regard to constructing the Georgian Bay canal ? Mr. Reford deemed that work to be of such importance that he supplemented the report of the Transportation Commission with another report in which he said that the developments recently taking place in the United States rendered it absolutely imperative that we should without any further delay proceed with the construction of the Georgian Bay canal.

My hon. friend speaks of obliging certain localities. Well, there is a public work twice recommended by that commission which will benefit many localities. It will benefit not only Montreal but the whole country ; and if the money we are spending uselessly on works, with the sole object of gaining political advantage, were not spent, there would be enough to pay the annual interest on the cost of the Georgian Bay canal. It is high time that we should leave out politics in the selection of public works to be done and master this transportation problem, instead of squandering money on works that may be of some use here and there but that are by no means urgent.

Mr. PUGSLEY. With regard to the port of Montreal, my hon. friend does not do justice to the Harbour Commissioners who are carrying on so successfully the great work of developing that port.

Mr. MONK. They are doing it very well.

Mr. PUGSLEY. They are doing it so well that not long ago, quite a note of alarm was sounded from New York at the way the port of Montreal is drawing trade from that city. I believe the commission will continue to do good work, and the government can be reasonably generous in furnishing the necessary funds. It is all very well to accuse this government of squandering money on wharfs ; but instead of making a general statement, it would be better to point out on what particular wharfs the money is being squandered.

Mr. MONK. I know that is a very disagreeable task and exposes one to very unfair attack. But I have no hesitation to point them out if forced into that position. Take my own province, there are very extensive works going on at St. Johns. I believe that the government are there doing works which largely, if not entirely, should

be done by private interest, which are the cause of the flooding of the country. Why should we come to the assistance of parties who, by developing water-powers, are flooding the country.

Mr. PUGSLEY. Was the Chambly canal not built by the government ?

Mr. MONK. My hon. friend is not familiar with the locality or he would know that the dam works which are the cause of the flooding were put up by electric companies in Montreal, and it is these companies which should repair the damage, and not the government.

Mr. DUNCAN ROSS. The hon. gentleman is out of order. We are discussing Ontario items.

Mr. MONK. I have been asked to give details ; and when I do so, I am called to order.

Goderich harbour—improvements, $75,000.

Mr. PUGSLEY. This is for building a breakwater, some 500 feet long, for the protection of the harbour and the safety of vessels. I need not speak of the importance of this harbour. It is one of the most important on the eastern shores of Lake Huron.

Gore's landing—wharf, $1,000.

Mr. ARMSTRONG. I would call attention to the wharf at Grand Bend in my riding. Will the government not have some dredging done at the mouth of the river ? It has become so choked up with sand that even small boats cannot go up. I would like to ask the minister if he intends to take this matter into consideration. I understood that it was estimated that $1,125 would do the work. Will he do it this summer ?

Mr. PUGSLEY. One of my hon. friends from Huron county (Mr. McLean) has urged very strongly these improvements. The matter is under consideration. I think that there is very little doubt that this session provision will be made for the work.

Mr. ARMSTRONG. Does the hon. gentleman intend to put it in the supplementary estimates ?

Mr. PUGSLEY. Until His Excellency submits the estimates my mouth is closed.

Mr. LANCASTER. What the hon. gentleman (Mr. Armstrong) wants is that the minister might take it into his 'most favourable' consideration. I think the minister did not put in the adverb.

Ontario—harbours, rivers and bridges—general repairs and improvements, $25,000.

Mr. BLAIN. I would ask the attention of the minister to Port Credit harbour in the county of Peel. For several years the occupant of the position of Minister of Public Works has promised to have some dredging done at the entrance of that harbour. As far back as 1903, I made this statement :

Port Credit is very close to Toronto where the hon. gentleman has a dredge working all the time; and perhaps the minister could allow that dredge to go to Port Credit and dredge out some of the sand that is continually drifting in there.

To which the Minister of Public Works answered :

I think no one would object to that, and I will see that it is attended to if there is a dredge in that locality.

Since that time, petition after petition has been sent to the government, and we have had promises from the department from time to time that something would be done. But, up to this moment, the government has failed to fulfil its promises. I believe the minister has before him a further petition from the residents of Port Credit asking that something be done. Port Credit is a rather important point between Toronto and Hamilton, which accommodates a great deal of shipping. It is looked upon also as a harbour of refuge. I believe it deserves the attention of the minister, and I do not see why it has not received that attention. I hope he will see that something is done. If we are not making requests strong enough, I would ask the hon. gentleman what he requires. Petitions have been sent in, resolutions carried, and I have directed the attention of the government, in my own humble way, to the condition of affairs there. Now, since the new minister has come in, with large amounts of money at his disposal, now that we are voting estimates freely, I hope he will see that Port Credit is not forgotten.

Mr. PUGSLEY. My sympathies are strongly with the people of Port Credit. But the difficulty is that the harbour is a private harbour. A great many years ago the Ontario legislature did what strikes us from the lower provinces as a very peculiar thing—it vested the whole Port Credit harbour in a private company. That company owns the wharfs, the water and the bed of the harbour. I suppose that has been one difficulty in the way of getting federal money expended in the harbour. Some time ago a petition was sent to me asking if I would not buy out the Port Credit harbour company at a cost of $20,000 or $25,000. I did not think I could do that ; for it seemed to me that, if it were a private harbour before confederation, it had not in any way passed under the control of the federal government. I suggested that it might be a matter for the provincial authorities to attend to. I would suggest now to my hon. friend (Mr. Blain) that, as his influence would be very powerful with the provincial government of Ontario, if he could get that government to agree to buy out this private company and to contribute half the cost,

I think I would recommend to my colleagues the contributing of the other half. I do that because it is a private harbour, and might very well be taken hold of in that way and made a public harbour. I may say further that I have requested my chief engineer to see if he could send a dredge there and do a reasonable amount of dredging to give further facilities to vessels to reach the wharfs.

McGregor's creek—renewal of bank protection works at Chatham, $15,000.

Mr. PUGSLEY. This is under contract.

Mr. CLEMENTS. Is that intended for the piling alone ?

Mr. PUGSLEY. This is to renew a section of the bank protection, 88 feet long on the south side of the creek and another section 65 feet long about 400 feet above the bridge. There is also a second contract for sheet piling. On the south side of the creek in the city of Chatham. There is other work the details of which I need not give.

Mr. CLEMENTS. What is the total estimated cost ?

Mr. PUGSLEY. $16,000.

Meaford harbour—improvements, $30,000.

Mr. PUGSLEY. This is under contract.

Mr. BENNETT. Who are the contractors ?

Mr. PUGSLEY. Joseph Battle, of Thorold.

Mr. BENNETT. What is the nature of the work ?

Mr. PUGSLEY. It consists of three different classes of work, first, extending the breakwater fifty feet in an easterly direction ; second removal of fifty of the L on the east side ; third, building a revetment wall of 300 feet in length, and dredging twenty feet below low water level. The estimated cost is $43,700. There were four tenders received, and the lowest was accepted. This amount I think will complete the work.

Midland and Tiffin harbours—improvements, $75,000.

Mr. BENNETT. I want to make a few remarks about this work at Midland and Tiffin. Generally, dredging operations in the province of Ontario, and particularly as conducted on the Georgian Bay, have been the scene of the greatest swindling operations that have been carried on in Canada for a number of years and I think I shall be able to prove that by the record. For several years prior to 1906 there was a concern known as the Owen Sound Dredging Company, the stock of which is held practically one-half by A. G. Mackay, local member for North Grey in the legislature of Ontario, the other half being held by Mrs. Horsey, widow of a gentleman who at one time occupied a seat in this House as representative for North Grey. Now, having had a contract at Midland for several years prior to 1907, and having two dredges standing in the harbour at Midland at the time tenders were invited in the year 1907 it is rather odd as will be seen by reference to the documents now before the House, that Mr. A. G. MacKay, as representing the Owen Sound Dredging Company, did not tender for the work at Midland. I have in my hand a memorandum from the advertisement which appeared in the Toronto 'Globe' on April 27 and other dates, in which will be seen invitations to tender at a number of different points, and among others at Midland. Now I take the tenders that were received for that year at the town of Midland, and I find that no tender was placed before the Department of Public Works in 1907 by the firm known as the Owen Sound Dredging Company. In the foll of 1906 a dredge was brought to Midland harbour owned by a company known as the Canadian Dredging Company —I think the Canadian Dredging Company is the corporate name. Of that company a gentleman named F. W. Grant, of the town of Midland, a barrister, is the secretary and treasurer. This dredge was there in 1906, and I believe was in the employ of Mr. Mackay engaged on a work which he then had under contract. But it goes without saying according to the public documents before the House, that the Owen Sound Dredging Company, or the Mackay Company as I will call it after this placed no tender before the department for the work at Midland in 1907. But there were two different tenders placed before the department for that work to which I will refer, these were the tenders of the Grant company, and what is known as the Spohn company or the Penetanguishene Company. There was also another work to be performed at Waubaushene and for the work at Waubaushene the Grant company and the Spohn company placed tenders before the department. The figures are these : The Grant company, fifty-three cents for the general material ; and the Spohn company, fifty-seven cents for the general material. As betwen these it will be seen that the Grant company was lower by four cents than the Spohn company for the Midland work. For the Waubaushene work, the tender of the Grant company was eighteen cents for what is known as otner material, while the tender of the Spohn Company, or the Penetanguishene Company, was sixteen cents. So that between these two companies, had there been no other tender, the Grant company would have had the work at Midland, and the Spohn company would have had the work at Waubashene. Now I have here in my hands the original tenders brought down by the minister. I may say just here that it is regrettable that year after year we have to witness the same spectacle and I

trust that next year a new minister will occuply the place now held by the Minister of Public Works, but a new minister from this side of the House. There have been several different gentlemen occupying that position recently, and as a result the hon. gentleman who now occupies the position had nothing to do with the matters I am going to deal with. But I do say that when a gentleman occupying the responsible position of Minister of Public Works for Canada has a staff under him such as the Minister of Public Works has in this country, it is regrettable that men who are tendering on public works involving the expenditure of thousands of dollars, can openly and in the most barefaced manner enter into collusion, and, whether by ignorance or design such collusion is not noticed by the minister. I hold in my hand first, the tender of the so-called Grant company on the work at Waubaushene, I also have the tenders of the Grant company on the work at Midland; I also have the two tenders of the Spohn company on the Midland work and on the Waubaushene work, and I challenge the Minister of Public Works to say that he is not driven to admit that the tenders of the Grant company for these two works and the tenders of the Spohn company for these works, are in the selfsame handwriting. It is indisputable, and no man who looks at the tenders can say otherwise.

Mr. PUGSLEY. I may say to my hon. friend that after he made his previous statement to the House, I looked at the figures, and although I am not an expert in handwriting, I would say that they bear every appearance of having been written by different hands. I say the figures giving the price of the material have every evidence of being written by a different hand. I examined with great care, and that would be the judgment I would form.

Mr. BENNETT. Well, I am glad the minister has practically admitted that the body of the tenders is written by the same hand.

Mr. PUGSLEY. No, I do not admit that at all, because I am not sufficient of an expert in handwriting to know, but I think I am sufficient of an expert to know that the figures giving the price of the different materials bear not the slightest resemblance o each other, and do not afford the slightest indication that they were written by the same person.

Mr. BENNETT. Well, before the discussion closes I shall show these documents to other hon. gentlemen, and I think they will verify my contention, and will say that it is indisputably correct. Not only are the tenders of the Grant company and, as I allege of the Spohn company, written in the same handwriting but the figures are also the same.

Another proof lies in the fact that the envelopes are distinctly the same and are addressed in the same handwriting. The signatures to the tenders put in by the Penetanguishene Company are in the handwriting of a man named Kastner who was connected with the Penetanguishene Company, and any man who looks at the handwriting of Kastner which is irregular and ragged, and compares it with the figures will see that they were never written by the same man. More than that the envelopes which inclose the tenders—for the two tenders of the Grant Company were in one envelope and the two tenders of the Spohn Company were in one envelope—were, according to the postmark, both mailed in Ottawa on the same day proving that the two representatives of this company, admitting that they each mailed his own envelope, were in the city. More than that, there are two marks on these envelopes which denote that they were received at the department consecutively. I shall pass these over to my hon. friend from Jacques Cartier (Mr. Monk) who can see that what I say is correct.

Mr. PUGSLEY. I do not think he is a Sherlock Holmes.

Mr. BENNETT. But he is able to detect a palpable fraud and anybody can detect that this is one.

Mr. PUGSLEY. Was there not another tender ?

Mr. BENNETT. I am coming to that. Apart from these two tenders of the Grant and the Spohn Company there was a third tender for the Midland work, that was the tender of the Stewart Company, of Ottawa, which was at 30 cents and perhaps when the minister comes to make his explanation he will explain to the House how it was that the Stewart Company did not proceed with the work, their tender on the Midland work being the lowest. The Minister of Justice (Mr. Aylesworth) was at that time acting as Minister of Public Works. For some reason best known to himself, whether it was due the fact that the Mackay Company had done the work there at figures ranging from 15 cents to 18 cents in prior years and that then the lowest tender was 53 cents, or whether it was due to the fact that Stewart refused to go on with the work at 30 cents, I do not know, but the tender of the Stewart Company was not acted upon and although the Grant Company were the next lowest tenderers at 53 cents, the acting Minister of Public Works (Mr. Aylesworth) did not award the contract to them. I make the charge that Mr. A. G. Mackay was a party to this tendering by the Grant Company and that he was thoroughly conversant with it.

Mr. PARDEE. What have you to prove that ?

Mr. BENNETT. I will read a document of A. G. Mackay. Some correspondence was brought down in the House during this session in reference to the extension of these contracts and among others there is a letter written on the 9th of September by Mr. Grant, representing the company that I have termed the Grant Company, addressed to the hon. the Minister of Public Works (Mr. Pugsley) in reference to the extension of the work at Midland and in that letter, among other things, he says :

As you are aware, the Owen Sound Dredge Company and this company have been working under contracts from your department at Midland harbour, Tiffin harbour and Victoria harbour—the contracts for Midland being in our name, and those for Tiffin and Victoria harbour in the name of the Owen Sound Company. Altogether both companies have three dredges—two large steel dredges and one smaller one—and these dredges have been working on all the above contract works as circumstances required.

Mr. PUGSLEY. Is either of these the Penetanguishene Company ?

Mr. BENNETT. No, this is the Mackay Company and the Grant Company working together, and I have before stated that although Mackay's Company had had the work at Midland for several years prior to that time they did not tender on the work for that year.

Mr. PUGSLEY. I understood my hon. friend to say he would show that the same man was interested in these two companies that tendered first at Midland, one being the Penetanguishene Company. That is why I asked if there was any evidence that Mackay was interested in that.

Mr. BENNETT. I hardly know the refenence the hon. gentleman makes, but I say the two tenders were the result of collusion between the Spohn Company and the Grant Company and the documents bear that out. As to the alleged fraud that was being attempted to be perpetrated on the country by obtaining 53 cents a yard for work at Midland for which Mackay had before been employed at prices from 15 cents to 17 cents, I say that Mackay was a party to that attempted fraud by not tendering himself and thereby hoping, by the placing of these two fraudulent tenders before the department, to get the benefit of it. I have quoted that clause from Grant's letter which goes without saying——

Mr. PUGSLEY. Did not Mackay tender for the work at Victoria harbour ?

Mr. BENNETT. That was later on and was altogether apart from Midland. I shall quote one more statement to show that Mackay and the Grant Company were closely identified, Mackay having the work at a point in Midland harbour which is called Tiffin and where the two dredges of the Mackay Company and the Grant Company were working together. In proof that they were united in a business arrangement there is this further clause in the Grant letter :

There is another matter which is disturbing us considerably. At the present time, there is a large balance of money due the Owen Sound Company under the Tiffin contract, and when the December account goes in, it will probably amount to over $60,000. Ordinarily we could wait until next spring for this money, but financial conditions are so strained this year that the pressure is very heavy. It is not a question of security with us, or our bankers, but simply a necessity for ready cash. The work at Tiffin this year, because of its importance had to be rushed ahead whether there was available money to pay or not and we would appreciate very much if you could have money provided for payments of our accounts by the first of the year.

I submit that so far as this letter of Grant's is concerned, the Mackay and Grant Companies were the one acting concern. But I do not want to rely on the Grant letter alone, I shall have recourse to another letter written by the same Mr. Grant under date of January 14, addressed to the minister. Among other things he says :

I have the honour to further write you along the lines of my letter of December 9 last, and also our conversation on Friday last regarding the contracts for dredging at Midland and Tiffin harbours.

The contract for the latter stands in the name of the Owen Sound Company, with whom we are associated. The former is in our name.

Further on in the same letter Grant says :

With your early approval for the extension of the contracts as they exist, we will undertake along with the Owen Sound Company to have the harbour in such condition that the moment the elevator is completed the largest freight boats on the lakes will be able to dock and discharge their cargo. But to do this we would have to know at the earliest possible moment.

The other points which were taken up in my previous letter it is not necessary to repeat, but I might again say that our combined plants, we feel sure would meet the approval of any capable engineer as the most efficient plant on the lakes available for this work, and the only plants which can insure its rapid completion.

Those are the letters of Grant which demonstrate beyond the shadow of a doubt that Mackay's Company was associated with Grant's Company in that contract. But here is a letter of Mackay himself which is addressed to the minister, dated January 25, 1903 :

Dear Sir,—As you are doubtless aware, the Owen Sound Dredge and Construction Company, Limited, have the contract for the dredging of Midland harbour at Tiffin.

But the Mackay Company had not the contract at all for dredging. The contract stood in the name of the Grant Company. I am referring to the contract at Tiffin; I am not referring to the contract at Victoria harbour at all.

We think that by using the two dredging plants our company own and by continuing to employ the dredging plant of the Canadian Dredge and Construction Company, of Midland, we can have the harbour ready for the grain trade in the fall.

If these three dredging plants are not sufficient to expedite the work, and if it is absolutely necessary, our company has a new dredging plant in the course of construction.

What are the facts. Here are a set of tenders placed before the department by Mackay through Grant, and Mackay and Grant, and the letters of Grant and Mackay are by really the same person. What was the end sought by Grant and Mackay? Mackay before had contracts at 15 and 16 cents a yard. There is an arrangement among these dredging concerns by which they collude to place higher figures on work they do not wish to get.

Mr. PUGSLEY. Among which dredging concerns?

Mr. BENNETT. Here are two, Mackay's and Grant's to commence with, and there are more. Now what was the position? Mackay expected—having two dredges there on the ground and having a third one in course of construction as he said in his letter—by the fraud that was being perpetrated by the Spohn Company and by the Grant Company not to be driven to do the work as he had done it in former years at 15 and 16 cents a yard, but to be able to steal from the people of this country 53 cents a yard. And every man who knows Mackay and who has heard this matter discussed as it was discussed during the local campaign took Mackay at his own estimate when he made statements that were inconsistent with the facts.

Mr. PUGSLEY. The people of Owen Sound do not seem to agree with the hon. gentleman (Mr. Bennett).

Mr. BENNETT. His majority in Owen Sound of 450 was reduced to a miserable 43, and it may be a matter of exposure in the election courts how that was brought about.

Mr. TELFORD. The hon. member is wrong with respect to the figures.

Mr. BENNETT. What were the figures?

Mr. TELFORD. About 178 in Owen Sound.

Mr. BENNETT. In the last election?

Mr. TELFORD. In the one before.

Mr. BENNETT. If the hon. gentleman gets any comfort in Mackay's majority being reduced from 270 to 43 he can have it. But anyway it is more of a majority than the hon. gentleman (Mr. Telford) will have in Owen Sound next election.

Mr. TELFORD. Is the hon. member aware that Owen Sound is a Conservative town and that the Conservatives generally give a majority?

Mr. BENNETT. And they will give a majority again, and I hope they will have an opportunity to do so next fall. Here is this man Mackay, according to his own letter associated with this Grant Company; here is the precious Mr. A. G. Mackay of unsavory reputation and memory with the people of Ontario. Here is this same Mr. A. G. Mackay with two dredges lying in the harbour and a third one coming in as he says, having had the work in Midland harbour at 15 and 16 cents a yard, entering into a scheme or a contract or an agreement with this so called Grant Company that they were to share the work between themselves. Now, Sir, what remained to be done by Grant? Grant comes down to the city of Ottawa accompanied by a man named Kastner from Wiarton who had a record in one of the North Grey election trials when these blackguards were brought over from Buffalo, and these men together sat down and as the tenders prove Grant writes the two tenders to which Kastner signs his name and the tenders went to the Department of Public Works. Mr. Aylesworth was acting Minister of Public Works, and in view of the fact that their tender is 53 cents a yard and that a lower one of 30 cents a yard is not acted upon, the acting minister (Mr. Aylesworth) refused to give the work to Mackay at 53 cents. There was fraud perpetrated by Kastner and by Grant, and the parties participating in the prospective fraud were Mackay and Grant as was shown right on the face of the documents, and it cannot be gainsaid. Why did not Mr. Aylesworth give the contract at 53 cents?

Mr. PUGSLEY. I do not like to interrupt my hon. friend, but he will remember that under the terms of the advertisement tenderers were allowed to tender for the various works in each province. The Dominion Dredging Company tendered for other work. I do not know that they tendered for other work in Ontario, but they certainly tendered for other work in the province of Quebec, and they had no more dredging plant than was absolutely necessary to enable them to perform the work that was awarded to them, and so the Dominion Dredging Company could not undertake this work. Consequently the acting minister was obliged to call for new tenders. My information is that had the Dominion Dredging Company been prepared to do this work the contract would have been given to them as the lowest tenderers.

Dredge Company been prepared to do this work the contract would have been given to them as the lowest tenderers.

Mr. BENNETT. What a childlike explanation from the Minister of Public Works. Did Mr. Aylesworth believe that the Grant Company was tendering honestly when they tendered prior to the 6th of May and their tender was 53 cents? That is why he called for new tenders.

Mr. PUGSLEY. Does not my hon. friend know there was a lower tender than that, namely for 30 cents, and that the Dominion Dredging Company having declined to do the work at that price, that it was the exercise of the best judgment on the part of the acting minister that he should make a second call for tenders?

Mr. BENNETT. I am quite willing to give credit to Mr. Aylesworth for dealing honestly with the matter and I believe he acted honestly. I believe that when he looked at these documents he saw fraud on the face of them and said: Although you are the next lowest tenderer at 53 cents I will not award it to you. And so he called for new tenders and Mackay instead of tendering at 53 cents tendered at 26 cents. What has the Minister of Public Works got to say to that, along the line of common honesty?

Mr. PUGSLEY. As I understand it, Mr. Mackay never tendered at 53 cents.

Mr. BENNETT. Why, I have read the letters of Mackay and Grant in which they say they are associated together in the work. Is the minister going to have the temerity to say that Mackay had nothing to do with that contract at all?

Mr. PUGSLEY. Was it not in 1907 that he says they were associated?

Mr. BENNETT. The tenders were invited in 1907.

Mr. PUGSLEY. And after the work had been undertaken they might easily make arrangement for the use of each other's plant.

Mr. BENNETT. Can the minister give any sensible explanation of why with two dredges lying in the harbour and Mackay having the contract for several years before he did not tender?

Mr. PUGSLEY. I have not all the facts in my memory now, but my impression is that the tender with which Mr. Mackay was connected was for the work at Victoria harbour, and it was then understood that the work was going to be a very important work and might very properly require the services of the dredging plant which his company was possessed of.

Mr. BENNETT. Now, we will take that part of it.

Mr PUGSLEY.

Mr. PUGSLEY. The hon. gentleman will be able to say whether that is correct or not.

Mr. BENNETT. It is not correct. The only tender for the work at Midland——

Mr. PUGSLEY. Take Victoria harbour.

Mr. BENNETT. There were no tenders invited for Victoria harbour until some time after Mackay, for some reason or other, was awarded the contract at this part of Midland harbour called Tiffin. Why didn't Mackay tender? The reason Mackay did not tender was this: That the year before Mackay had sent his manager down here to tender on a prior work and the result was that, as appeared by these tenders, there was collusion and fraud between this Mackay Company, represented by his agent Wilkinson, and the Penetanguishene Company. The tenders of the Penetanguishene Company are in Mackay's own private envelopes. Mackay was attempting to obtain some prominence in the province of Ontario and he did not want to come down here to Ottawa and be engaged in these games. He knew, as any sensible man must have known, that probably this thing would leak out, and for that reason Mackay did not come near the scene of the operations at all, but instead of that in the first place Wilkinson, his foreman, came down, and Wilkinson according to the evidence in the tenders was in palpable collusion and fraud with Spohn of the Penetanguishene Company. It went so far that the envelopes containing Spohn's tenders were in Mackay's own office envelopes.

Mr. PARDEE. That was fully explained in the committee.

Mr. BENNETT. Certainly it was explained when this fellow Spohn stood up and swore on his solemn oath that he did not know where he got the envelopes and Wilkinson did the same thing, and I think people who know them both in their own localities will have their opinion of the oath of either one of them.

Mr. CARVELL. Will the hon. gentleman say whether these were the lowest tenderers and whether either of them got the contract?

Mr. BENNETT. The hon. member (Mr. Carvell) is always ready where there is anything nasty or dishonest to defend it; all he wants to do is to rely on quibbles.

Mr. CARVELL. If the hon. gentleman (Mr. Bennett) will not answer I cannot make him, but it is only fair he should answer the question.

Mr. BENNETT. Let me tell the hon. member who acts as an understudy for the Minister of Public Works, so that when the avalanche overtakes the present minister which he is hoping for, he will be ready to take his place.

Mr. CARVELL. I have a right to an answer to my question. Were either of these tenders accepted by the government? The hon. gentleman (Mr. Bennett) dare not answer; he is simply attempting to deceive this House.

Mr. BENNETT. The understudy is getting very violent.

Mr. PUGSLEY. He would have to answer 'no' to your question and that is what he does not want to do.

Mr. CARVELL. I think the hon. gentleman should in all decency answer the question.

Mr. BENNETT. Let us hear your question.

Mr. CARVELL. Were any of these tenders accepted by the department? Was there not a lower tender at a very much lower price, and was not that contract given to the lower tender?

Mr. BENNETT. I will come to that. Mr. Aylesworth, by reason of the fraud that had been practised on the department, and not believing in the genuineness of the supposed rival tender——

Mr. CARVELL. Answer the question.

Mr. PARDEE. If he does he will show there was no fraud.

Mr. BENNETT. My hon. friend from Lambton (Mr. Pardee) thinks there is no fraud. As a follower of the muddy Ross administration he was thrown out of the local House. He would stand up for anything whether it was right or wrong.

Mr. PARDEE. The hon. gentleman has not yet answered the question.

Mr. BENNETT. The hon. gentleman was defeated for the local House, and very properly so.

Mr. PARDEE. I am not ashamed of having been defeated, but in the meantime you might tell the facts and answer the question.

Mr. BENNETT. I have told the facts as to the dredging. No one can deny that the tenders of the two supposedly rival firms are in the same hand writing.

Mr. PARDEE. Was the contract awarded on these tenders? That is the question.

Mr. BENNETT. When Mr. Aylesworth saw that the tender of the Mackay and Grant Companies was for 53 cents and that Mackay had done the work in prior years for 16 and 17 cents, he would not give the contract at all, though they were the lowest, at 53 cents.

Mr. PUGSLEY. They were not the lowest.

Mr. CARVELL. They were not the lowest.

Mr. BENNETT. They were, outside the tender of the Dominion Dredging Company which the minister says was withdrawn.

Mr. SPROULE. An old trick.

Mr. BENNETT. As a sample of the common honesty of Mackay and the Mackay and Grant companies what did they do? They then came in with a tender for exactly the same work at 26 cents.

Mr. CARVELL. And they got the contract.

Mr. BENNETT. Yes.

Mr. CARVELL. Did the country suffer anything?

Mr. J. D. REID. It would have if they succeeded.

Mr. CARVELL. We will get the true story after a while.

Mr. BENNETT. The country did not suffer, of course it didn't.

Mr. CARVELL. Well that is all right then.

Mr. BENNETT. Had Mackay and Grant been permitted to carry out their game of fraud as they expected, they would have got the contract at 53 cents a yard.

Mr. CARVELL. Which shows we have a good honest government.

Mr. LANCASTER. Have you just found it out?

Mr. BENNETT. I quite agree that the hon. gentleman (Mr. Carvell) coming from New Brunswick has a very hazy idea of what public morality and public honesty in this country should be.

Some hon. MEMBERS. Order.

Mr. BENNETT. And the people of New Brunswick made it pretty plain to him the other day and they will make it plainer still when they get a chance at him.

Mr. CARVELL. I must apologize for interrupting my hon. friend (Mr. Bennett) but it seemed necessary that some one should interrupt him and try and set him right.

Mr. BENNETT. And when anything of that kind is required somebody can always be relied on in the person of the understudy from New Brunswick because what other gentlemen would scorn to do that hon. gentleman is willing and anxious to do. Let him play out his part, it suits him admirably.

Mr. DUNCAN ROSS. Well, push along.

Mr. BENNETT. This is a fair sample of the dredging operations as they are conducted in Ontario and the manner in which tenderers approach the foot of the throne when they are tendering. There were some tenders called for Thunder Bay and Fort

William. There is a company up there called the Great Lakes Dredging Company, one-half of the stock in which is owned by C. F. Bowman (a member of the local House) and one C. A. Bowman, and the other half is owned by Mr. James Whalen of Port Arthur. What is the modus operandi of this company in tendering for contracts? The company puts in a tender at 9 cents a yard and Mr. A. F. Bowman puts in a tender at 16 or 17 cents a yard. The idea that they have is that the gentleman who is a one-fourth holder of the stock of the company puts in a tender at 16 or 17 cents while his own company puts in a tender at 9 cents. What explanation has the minister to give of that?

Mr. PUGSLEY. I had no conversation with these gentlemen.

Mr. BENNETT. Mr. Bowman was examined under oath.

Mr. CARVELL. Were they public tenders?

Mr. BENNETT. Yes, and fortunately for the country a couple of tenders intervened between the 9 cents and the 16 cents. The idea of this company was that there would be no tender lower than the 16 cents except their own of 9 cents and that the department would be so complacent that they would pull out the 9 cents tender and substitute the 16 cent tender.

Mr. CARVELL. Did the government get the work done for 9 cents?

Mr. BENNETT. Yes.

Mr. CARVELL. Where is the harm then?

Mr. BENNETT. My honest opinion is that they would never have got the work done for 9 cents were it not that two tenders for 11 cents and 12 cents intervened. Mr. Bowman was examined under oath.

Mr. CARVELL. It is fortunate we had these gentlemen examined because their evidence spoils your argument.

Mr. BENNETT. Will that perpetual parrot please pause for a while? I know the hon. gentleman is anxious to make an exhibition of himself before the Prime Minister in anticipation of his advent to the cabinet, but that is very far away. Now what happens next?

Mr. DUNCAN ROSS. You might tell us the truth about it.

Mr. BENNETT. Listen to my hon. friend from Kootenay; a gentleman who in cold blood murdered a minister by an interruption which he made in this House. I am surprised that he of all men in the House should open his mouth, he, the murderer of a former minister, he who drove that minister outside the cabinet.

Mr. DUNCAN ROSS. Personally I am not concerned very much about what the hon. gentleman (Mr. Bennett) says or does not say, but I fancy that language is out of order and is not such as should be used in parliament.

Mr. DEPUTY SPEAKER. Such language had better not be used.

Mr. GALLIHER. I have also to enter an objection to his reference to the member for Kootenay. I happen to be the member for Kootenay.

Mr. BENNETT. Well, I will withdraw the expression political murderer and I will call him the gentleman who precipitated the terrible descent of a minister of the Crown. I think that is in order.

Mr. DUNCAN ROSS. You ought to withdraw the other expression.

Mr. GALLIHER. You should withdraw the reference to Kootenay also

Mr. BENNETT. All right, I meant to refer to the member for Yale (Mr. Duncan Ross). Where the expenditure runs up into hundreds of thousands of dollars, because these dredging operations run into the millions, the tenderers come down and flaunt themselves before the department, confident that they are going to be able to perpetrate their frauds, and the most wonderful thing is that the government go on dealing with the self same men. When these tenders of the Grant Company were not acted upon by the department, for reasons best known to Mr. Aylesworth, what next happened? Tenders were invited and placed before the department on the 20th May, the former ones having been cancelled immediately. These tenders were invited by telegram, and a number of well known contracting firms either telegraphed or sent down their tenders. There was one from the Wilson Company of Toronto, one from Randolph McNally, one from the Sarnia Company and another from the Goderich Company. They were all willing to tender either by telegram or memo. Mr. Mackay, however, thought something better might be done, and he came right down to the field of operations and placed his tender with the department personally. That is proved by the fact that the envelope bears no postmark in which he placed his tender. Neither did the envelope in which the Grant Company placed their tender bear any postmark. And by a strange coincidence, although these two tenders are for different parts of Midland harbour, Mackay's envelope and Grant's envelope were together, showing how close these contractors are to each other. May I ask where the tenders are for the work to be performed at Victoria harbour?

Mr. PUGSLEY. It must be there.

Mr. BENNETT. The Owen Sound Company have a tender in and the Windsor Dredging Company. That is another of

these political associations. It has W. J. McKee at its head, a well known politician. There was another tender put in by this so-called Grant Company afterwards, on the 20th May. I am not going to deal with the question of the frauds perpetrated by the unloading of the scows. The evidence given in the committee is so clear that the dishonesty cannot be doubted. Wilkinson, the master of the Mackay dredge, when confronted with the statement which shows that his dredge was employed sixteen hours frankly said that he did not believe the inspector was there, and that the inspector did not know how many scow loads were taken out and whether the scows were full. In the locality it is well known the inspector was not there. I am glad the minister is now taking some precaution by compelling the inspectors to sign a form of declaration. The minister and the Liberal press took great credit from the fact that by refusing to renew the contract and inviting new tenders the country had lost money. What has been the result? In the work at Midland the price paid is 2 cents a yard more. But that is no fault of mine. If the minister thought that the former price was fair, why did he pay a higher price? He could have got the work done at the same rate.

Mr. PUGSLEY. After asking for tenders we let the contract to the lowest.

Mr. BENNETT. The minister knew that they had done the work the previous year at 26 cents, and he has himself to blame if anything more was paid.

Mr. PUGSLEY. I do not throw the responsibility of accepting the lowest tender on any one.

Mr. BENNETT. If he has succeeded in making the country pay a couple of hundred thousands of dollars more for dredging this year, that is no fault of mine. Parliament voted a certain amount of money for dredging operations; yet in the face of the direct appropriation by parliament the Mackay-Grant Company did work that amounts to $75,000 more than the appropriation, and the minister had to come down with a vote for that amount. Does he propose to do that this year again? Is he going to ask for an appropriation and then let the contractors exceed it to the extent of $75,000 or $100,000? I quite agree that the Grand Trunk Railway and the Canadian Pacific Railway are both doing a large mount of work at Victoria harbour and Clifton and that dredging is required at both these points, but I want to see the country get good value. I do not object to the expenditure; but when contractors put in tenders which are fraudulent on their face, the department should act with them in a summary manner.

Mr. PUGSLEY. Last year it was found that the approrpiation was exceeded before the close of the season. There was very important work being done by both the Grand Trunk Railway and the Canadian Pacific Railway with a view of getting the harbour ready by the time their railway tracks reached these ports; and I thought it would be a public misfortune if I were obliged to close down the dredging work before the end of the season. And while, under the contracts, I might have done so, I said they might go on with the work, they taking the risk of the appropriation being made by parliament. I am happy to say that when parliament was asked to make an appropriation in the supplementary estimates of the last fiscal year there was a ready response, no objection being raised. With regard to this year's work, I think that in the supplementary estimates there will be found a sufficient vote to enable the dredges to work during the whole of the present season. It may be that some work will be done beyond the appropriation, but I have reason to believe that the appropriation will be quite sufficient.

Now, with regard to the company with which Mr. Mackay was connected, I do not know why it was that that company did not tender for the work of Tiffin and Midland.

Mr. BENNETT. Let me set the minister right at the outset, for I am sure he does not wish to misstate the case. No tenders were called at the commencement of the year for Tiffin. I have the advertisement and the hon. gentleman will see that the dredging was at Midland.

Mr. PUGSLEY. At present, we distinguish between Midland and Tiffin, but we did not at that time. The reason why Tiffin was included in Midland last year was that it forms part of Midland Bay, or even Midland harbour, although the new terminals of the railway company are being made in a very different place from the terminals at Midland. Now, my hon. friend, I think, would have achieved great eminence if he had adopted a different profession. His abilities, certainly, would have adorned the profession which was made famous by the celebrated Sherlock Holmes. Even in the matter of the comparison of handwriting, my hon. friend is able to see with absolute certainty resemblances in the handwriting of different documents which nobody else is able to discover. Take the tenders for Penetanguishene and Owen Sound and my hon. friend can see resemblances in the figures written in these two tenders, which, I am positive, no other hon. member of this House or anybody else will be able to see. I have looked at the two, and while I admit that there is some

resemblance in the handwriting in some parts, yet in the figures, which are the essential thing to show collusion, there is not the slightest resemblance. Yet the hon. gentleman is able to say without a moment's hesitation that they were written by the same hand.

Mr. BENNETT. Is there any resemblance in the handwriting?

Mr. PUGSLEY. I said that in some parts there was some resemblance. But I have had a large experience in court and my experience tells me that if a man has a vivid imagination he can see resemblances in handwriting specimens that one less gifted would fail to discover. When experts in handwriting desire to find resemblances, it seems the easiest thing in the world for them to do so. The result of my experience is that I do not place great reliance on the tests of experts in handwriting. With regard to the figures which, as I have said, are the crucial thing, I venture to say that the figures in the two tenders do not bear the slightest resemblance, nor is there anything else to indicate that they were prepared by the same person. Now, when these tenders came to the attention of the minister he found that there were three tenders, one from the Owen Sound Company, one from the Penetanguishene Company, and one from the Dominion Dredging Company, the prices being 57 cents, 53 cents and 30 cents. It was obviously the minister's duty to accept the lowest tender. He accepted the Dominion Dredging Company's tender, and advised the company of that fact. They had tendered for other works on the St. Lawrence and other rivers; and they informed the minister that with the other contracts which they had accepted and the work they had to do, they would not be able to perform this work, not having a sufficient dredging plant. And so they declined to do the work at 30 cents. What better evidence does the hon. gentleman want that there is nothing in his statement—which, if not unparliamentary, I would call a reckless statement—that it is the practice of these companies to combine and secure whatever prices they desire from the government, than the fact that the Dominion Dredging Company which he likes to call the 'Stewart Company,' because Mr. Stewart happens to be the son of a member of this House—what better evidence could he desire of the lack of foundation of his statement than the fact that when the Dominion Dredging Company could not do the work, and, in a perfectly proper manner the minister called for new tenders, the company with which Mr. Mackay is connected, which, for some reason that I am not aware of, probably a perfectly good reason had not tendered before, tendered for 27 cents a cubic yard? So the country got the work done at 3 cents a cubic yard less than the lowest tender, that of the Dominion Dredging Company, which he has so frequently mentioned in this House in terms, certainly, not of the greatest respect. Can any fault be found with the minister?——

Some hon. MEMBERS. Six o'clock.

Mr. PUGSLEY. I would suggest that this item be passed——

Some hon. MEMBERS. No, no.

Mr. PUGSLEY. Then, I shall have some remarks to make after recess.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight o'clock.

Mr. PUGSLEY. Just before recess I was making some observations in reply to my hon. friend from Simcoe (Mr. Bennett). I shall not pursue the matter along the same lines beyond saying this, for I want to be as brief as possible. My hon. friend has failed to point out that in any single case the department has accepted any other but the lowest tender; in every case the contract for dredging work has been given to the lowest tenderer. There have been a few cases, very few indeed, in which there has been a failure to perform the contract satisfactorily on the part of certain companies, in these cases the contracts have been given to the next lowest tenderer, provided he has brought his price down to the price of the lowest tenderer. But with those exceptions, which have occurred very rarely the contract has always been awarded by competition to the lowest tenderer. I may also say that in some cases where the work is urgent, exceptions have been made, in cases where it was necessary that work should be done immediately.

Now my hon. friend referred to the fact that something had been said in the newspapers regarding the objection which he made to the extension of the dredging contracts. I do not know what has been said, but I do know that after the matter had been raised in the House by the hon. gentleman, when I decided to extend the dredging contracts, there were in the newspapers supporting hon. gentlemen opposite, strong expressions of triumph at what was supposed to be some great act performed in the public interest and which would redound to the party benefit. Now I want to say a word or two with regard to the extension of the dredging contracts. When the question of how to deal with the various dredging works came before us, I looked into the existing contracts, looked into the prices, and I found they provided that the dredging should be completed during the then current season, or at such other date as might be fixed by the minister. It seemed very

clear that under the terms of the contracts, I had power, if I thought it in the public interest so to do, to fix a later date for the completion of the work. I asked for a report from the chief engineer of my department with reference to the prices which were being paid for the various dredging work that was being done under the different contracts. His report was that in all cases the prices were fair and reasonable. In many cases they seemed to me very low, and I am free to say to the committee that I thought that it would unquestionably be in the public interest if I could extend those contracts and give until the end of the present year for their completion, where that time was necessary in order to complete them. But the hon. gentleman voicing the sentiments of the opposition raised an objection to that. Well, I felt that the views of the opposition were entitled to respect. They represent a large and important section of the people of this country, although numerically a considerable minority of the people. Still, they represent an important section, and their opinions are entitled to respect. I felt that if there could be any ground of criticism levelled against me and levelled against those with whom I have the honour to be associated, not only my colleagues in the government but our supporters in this House and throughout this country—I felt that I ought not to subject them to that criticism. So in looking into the matter more closely, I found that the advertisements for tenders which were issued last year called for dredging during the then present season. My hon. friend had not called the attention of the committee, and had not called my attention to that. But in consequence of the matter coming up, and as I felt that if there were any ground of criticism it was my duty to remove it, I looked back to see what were the advertisements which called for tenders on which these contracts had been let, and finding that the advertisements were limited in the way I have mentioned, I came to the conclusion that, even although the contracts upon their face gave me power to fix a later date for the completion of the work, yet upon the whole there might be a question as to whether the contracts were not broader than was warranted by the advertisements. In view, therefore, of the objection which was raised by the opposition, and in view of the criticism which I knew would be levelled against me and against the government if I were to extend the contracts, I thought it would be better for me to yield to the objection which had been raised, and to issue an advertisement for new tenders. I did so, Mr. Chairman, and I did so reluctantly, because I felt that the extension of the contracts would be in the public interest. I felt it would be a saving of money to the country to extend the contracts. However, as I say, I yielded to the objection which had been made, and in view of the circumstances regarding the advertisements for tenders. Well, the result of calling for new tenders has been that in the great majority of cases, although the widest possible publicity was given to the advertisements, and although in many cases a large number of tenders were received, the total result has been that the price at which the lowest tenderer in each case tendered, is, with few exceptions, considerably higher than the price at which the work was being done last year. I will give some examples. In the case of Owen Sound, the contract was being done last year for materials, outside of rock, at 20 cents per cubic yard; the lowest tender this year was 25 cents per cubic yard.

Mr. BENNETT. Who is the tenderer?

Mr. PUGSEY. Mr. Bowman. And Mr. Boone also tendered. Mr. Boone's tender was 28 cents per cubic yard, 8 cents higher than the price given last year. The lowest tenderer this year was 5 cents per cubic yard higher than the price last year. In the case of the Hamilton work it was done last year at 12 cents per cubic yard, the lowest tender this year is 15 cents.

Mr. BENNETT. Who is the tenderer?

Mr. PUGSLEY. Mr. Phinn. Mr. Healey, the next tenderer, 23 cents. At Cobourg there were five tenderers: Phinn at 18 cents, Morgan at 22 cents, Healy at 23, Randolph & Macdonald at 23, and Manley at 30. Last year the work was being done at the low price of 11 cents per cubic yard, 7 cents per cubic yard lower than the lowest tender of this year, and 19 cents per cubic yard lower than the highest tender of this year. In that case there were five tenderers for the work. In the case of Goderich there were three tenderers: Horton at 35 cents, Manley & Co. at 35 cents, and J. B. Bertram, of Toronto, at 42 cents. Mr. Bertram is a dredging contractor. He is doing work at Port Burwell at present. The price of the work last year, 25 cents per cubic yard, was one cent per cubic yard less than the lowest tender this year and 17 cents lower than the highest of this year. In the case of Midland this year there was only one tender at 28 cents, while last year it was 26 cents, a difference of 2 cents. The Canadian Dredging and Construction Company has the contract. At Little Current the price this year is a little less than last year. Last year it was 30 cents and this year it is 25 cents. The same contractor, Mr. Boone, has the work.

Mr. BENNETT. How many tenders were there at Little Current?

Mr. PUGSLEY. Two.

Mr. BENNETT. Who was the second?

Mr. PUGSLEY. Mr. Bowman. At Wingfield basin, Boone tendered last year and

had the work at 65 cents. This year he was the only tenderer and he has it at 78 cents. At Blind river the tenders this year were 23 cents, the lowest, and 26 cents, the highest. Last year the work was being done at 18½ cents. At Port Elgin there were four tenders, the lowest 22 cents, the highest 42 cents. Last year the work was done at 25 cents, so there is a saving of 3 cents a cubic yard there. At Trenton harbour there is a marked difference. The lowest tender this year was 26 cents a cubic yard and there were three tenders, the Morgan Company, the Weddell Company and the Randolph Macdonald Company. The Morgan's tender was 26 cents, Weddell's 39 cents and Macdonald's 43 cents. Last year the work was done under contract at 14 cents per cubic yard. The contract has been given to Weddell at the price of Morgan's tender. Morgan has been doing work in Quebec and without wishing to say anything to injure him there was a great deal of dissatisfaction with his work last year.

Mr. J. D. REID. Who had it last year?

Mr. PUGSLEY. Prendergast, of Montreal. He lost a great deal of money on it. In Toronto last year the work was being done at 13½ cents, but this year it is 19½ cents. The work is being done by Healy who is the only tenderer. At Penetang, Bowman who had it last year at 14 cents was the only tenderer this year at 19 cents.

Mr. BENNETT. Did the minister of his own accord raise the dredging there from 14 cents to 19½ cents?

Mr. PUGSLEY. Not of my own accord. We advertised publicly for tenders and the lowest tender was 19 cents. It was a question of accepting that tender or not proceeding with the work. My hon. friend seems to think it would be a proper thing for the minister when he advertised publicly for tenders for dredging work and did not get any which according to the judgment of the chief engineer were reasonable, to refuse to accept tenders and not go on with the work.

Mr. BENNETT. Did the chief engineer certify when the price was 14 cents that it was reasonable and also when it was 19 cents?

Mr. PUGSLEY. Yes, and my chief engineer was of opinion and so advised me that in a large number of these contracts last year the work was being done not only at a reasonable price, but at a lower price than we could ever expect to get contractors to tender for the work at.

Mr. BENNETT. Rot.

Mr. PUGSLEY. Another remarkable instance was at Port Burwell, where there were four tenders this year. Bertram and Company tendered at 39 cents, Finn at 43 cents, Horton at 44 cents and Manley at 45 cents, all most reliable contractors, men of large experience and of the highest reputation.

Mr. BENNETT. Horton included?

Mr. PUGSLEY. Horton included.

Mr. BENNETT. You should read the evidence in the East Elgin trial to a man of that name who took part in marking ballots.

Mr. PUGSLEY. I feel very sorry that my hon. friend has this unfortunate disposition to find fault.

Mr. BENNETT. I say truthful things about men of the stamp of Horton whose reputation is known in Ontario.

Mr. PUGSLEY. I cannot help thinking that when my hon. friend retires from the House and gets home in the silence of his bedroom he must regret the disagreeable things he has said because there is no lasting pleasure in that sort of thing.

Mr. BENNETT. The minister may hear some things of himself if he does not keep a little bridle on his unruly tongue.

Mr. PUGSLEY. I have heard a great many things about myself and very nasty things in my lifetime, and there is no man living who can say anything against me that I should be ashamed or afraid to hear, no man living.

I was explaining that at Port Burwell there were four tenders, and the lowest tender this year was 39 cents, while last year the work was done at 15½ cents. Our information is that the contractor was losing money upon that contract last year. I need not go through all the others, but I will take the case of the Thames. There there were four tenders, the Bertram Company at 24 cents, Horton at 22 cents Healy at 23 cents and Manley at 20 cents. Last year that work was done at 13 cents.

The total result, as near as I am able to figure it out, taking in Ontario and Quebec, of the calling for new tenders—and I regret that this should be the case—has been to cost the Dominion somewhere between $175,000 and $200,000 more than it would have if I had extended the contracts and insisted on the work going on at the same price as that in force last year.

Mr. BENNETT. Why did you not extend it?

Mr. PUGSLEY. I have already explained the reason. I take, of course, the full responsibility, but I have been obliged to assume that responsibility under the circumstances I have mentioned. I felt as I have said, that the contracts gave me full power to extend them, and I felt in view of the low price at which the work was being done that it would have been the part of wisdom for my hon. friend who has been

commissioned by our hon. friends opposite to take charge of the criticism of dredging contracts and who speaks for the opposition, to have acquiesced in what I proposed to do, but, as I said, under the circumstances that it was due to myself and to the government and to the friends supporting us to ask for new tenders and then, having called for new tenders, I felt that as the prices were certified to be reasonable by the chief engineer it was my duty to accept the lowest tenders.

Mr. J. D. REID. The minister finds fault with the hon. member for Simcoe (Mr. Bennett) for complaining because tenders were not advertised for in the usual way during the present year and he tries to show that the country has lost money by having to pay larger prices than what were paid last year. If these contractors were willing to do this work at the same prices that they were paid last year, it reflects seriously on the hon. minister that he gave them a renewal of the contract at the advanced prices he has stated.

Mr. PUGSLEY. I did not renew a single contract. I asked for public tenders, and gave the contract to the lowest tenderer.

Mr. J. D. REID. And they are going to be paid $175,000 more this year than they were paid last year for the same work. I would think that the hon. minister, when he received a tender of 26 cents for work that was done last year for 14 cents per cubic yard, while the contractor was willing to do it this year at the same price, would have hesitated before making a contract at nearly double the price paid before. We learned in the Public Accounts Committee that on all these dredging works the government appointed as inspectors men who had really never had any experience in dredging work.

Mr. PARDEE. All of them ?

Mr. J. D. REID. Nearly all of them. I defy the hon. member to name one who had any previous experience of dredging work.

Mr. PARDEE. The man at Penetang said he had been doing it for three years.

Mr. J. D. REID. What was he before he went into the dredging business ? One inspector swore that the engineer in charge, I think Mr. Sing from Toronto, only visited the works once or twice during the whole season. This same inspector had charge of two dredges, and he farmed out one part of the work to another man. Any one can see at a glance that in that way the government must necessarily lose. The contractors have everything in their own hands. The chief engineer of the Public Works Department and all of the staff will swear that the only honest way to pay for this work is by scow measurement ; and yet these inspectors swear that they cannot come within from ten to thirty yards of the actual measurement in a scow. On the other hand, the Department of Railways and Canals will tell you that to pay by scow measurement is almost sure to result in a loss to the government, and in their contracts they specify that the work must be measured in situ. The officers of the government swore that the scow measurement made a difference of about one-third.

Mr. PUGSLEY. It was stated that the price given per cubic yard in situ is always different from the price by scow measurement. It is understood that there is an expansion of from 30 to 40 per cent, which is always figured on.

Mr. J. D. REID. There is no doubt there is an expansion. By the scow measurement there is no way of telling whether you get the right quantity or not. The scow may or may not be filled.

Mr. PUGSLEY. The scows are filled.

Mr. J. D. REID. How can the minister say that when the inspectors admitted that they did not see all the scows going out ?

Mr. PARDEE. In the great majority of cases they did. All the inspectors swore that.

Mr. PUGSLEY. It is the duty of the inspector to see every scow that goes out, and in the forms that I have prescribed he must swear that he was personally present and saw every scow go out.

Mr. J. D. REID. I admit that that is his duty, but he has not been doing it. I believe the government has not been getting the actual measurement in a single contract by this scow measurement. That is the reason I find fault with this method of paying the contractors. When any dredging is to be done, a profile of the work is made before it is commenced, so that the government know exactly the quantity of stuff to be dredged out when it is in situ ; but with the scow measurement, there is no check at all, especially with the kind of inspectors the government have been employing on these works. I claim that on every dredging contract work involving hundreds of thousands of dollars, there should be an engineer. But we have an engineer located in Toronto, and perhaps a tailor or a shoemaker acting as an inspector of the work, and not even keeping track of the number of scows that go out.

Mr. J. T. SCHELL. Will the hon. member tell me what the inspector's duties are on the scow ?

Mr. J. D. REID. According to the minister, his duty is to tell the quantity of material in each scow as it goes away from the dredge.

Mr. DUNCAN ROSS. Could not a shoemaker tell whether a scow was full or not ?

Mr. J. D. REID. He might possibly, but I should think he would be better engaged in making shoes. What I claim is that there should be an engineer stationed on the work to see that the contract is properly carried out; and he should have an assistant under him capable of estimating the quantity of material in the scow.

Mr. PUGSLEY. The inspector is not to estimate the quantity in the scow. The contents of the scow are given him by the engineer, and it is his duty to see that no scow goes out unless it is filled.

Mr. J. D. REID. If that is the case, the hon. minister, if he was at the Public Accounts Committee, knows that hundreds of scows went out only half filled.

Mr. PARDEE. And the inspector swore that when they were only half filled he charged them as being only half filled.

Mr. J. D. REID. When a scow was only half filled, the inspector, who never had any experience in measuring scows, stated that he had simply to guess the quantity in the scow.

Mr. PUGSLEY. Was not that an exceptional case, in which, owing to low water, the scow could not go out fully loaded ?

Mr. BENNETT. I challenge the hon. member for West Lambton (Mr. Pardee) to produce a return in which it was sworn that there was less than the full amount in the scow.

Mr. PARDEE. The inspector swore that half scows went out. The hon. member for East Simcoe asked how it was that full scow loads were charged. He said that the two halves were added together, and he made his return accordingly.

Mr. J. D. REID. There was a case, as the minister stated, in which a scow went out only partially loaded on account of the low water. But in every contract it is left solely and entirely to the inspector to estimate the quantity the government are paying for. I claim that if the Public Works Department are going to continue this dredging work by contract, they should have an engineer on each work every day. It is not in the interest of the public or in the interest of the Public Works Department or in the interest of the minister, to let a large dredging contract involving hundreds of thousands of dollars, and to leave it entirely to the kind of men the government have been appointing as inspectors to decide the amount the government has to pay under these contracts.

Mr. PARDEE. Would the hon. gentleman advocate the policy of having a civil engineer continuously on every dredging job ?

Mr. J. D. REID. The amount the government is paying engineers in charge of these

works is, I think, not more than $150 a month, and the inspectors receive something like $3 a day. I would ask the hon. member for Lambton, if he had a work involving the expenditure of several hundreds of thousands of dollars, whether as a business man he would not pay the difference and have an experienced engineer qualified to measure the work and go into it thoroughly and know exactly the quantity in each scow ?

Mr. PARDEE. All I can say in answer to my hon. friend's question is that throughout the whole investigation in the Public Accounts Committee this year into the dredging contracts, it has not been shown by any evidence that any inspector made any false return, or that the country was injured in the very least. If it was shown that the returns were honestly made, why add to the expense, when hon. gentlemen opposite are always complaining of the expenses of the government ?

Mr. J. D. REID. I am surprised at the hon. gentleman making the statement that it has not been shown that the government have lost anything. He knows that one inspector inspected for two dredges.

Mr. PARDEE. It was not shown that anything was lost. It was shown that one inspector had been guilty of malfeasance in office by farming out his job, but the moment the government found that out he was dismissed. But it was not shown that the returns were untrue.

Mr. J. D. REID. How could we show anything else ?

Mr. PARDEE. Why draw a conclusion if there is no evidence from which to draw it ?

Mr. J. D. REID. We had the evidence of the government engineers that the scows varied to the extent of from ten to twenty yards.

Mr. PARDEE. And you have the further evidence that just what was in the scow was returned.

Mr. MONK. I would like to call the attention of the committee to the point raised by the hon. member for East Simcoe (Mr. Bennett) at the beginning of the discussion on this question, which the minister has not yet elucidated; that is, the resemblance of the handwriting in two rival tenders for this dredging work at Midland and Waubaushene. The hon. member for East Simcoe asked me to have a look into the handwriting of these two tenders, and I have done so, and there is no doubt that the addresses on the two envelopes are in the same handwriting.

Mr. PUGSLEY. Has the hon. gentleman looked at the figures setting down the prices?

Mr. MONK. I will come to those in a moment. There is no doubt that both ten-

ders are addressed in the same handwriting——

Mr. PUGSLEY. Neither of which was accepted by the minister.

Mr. BENNETT. That does not matter.

Mr. MONK. I have not followed the discussion enough to draw conclusions; I am only pointing out the fact. The minister states that the tenders are in different handwriting; but, strange to say, if you compare the body of the writing in the Grant company tender for Midland harbour with the body of the writing in the Spohn company tender for the same work, it is exactly the same; so that although there is something in the contention of the minister that in the two first tenders, which are presumably rival tenders, there is some difference in the body of the tenders though none in the addresses, still if you take another pair of tenders and compare the Grant tender with the Spohn tender, you find them in exactly the same handwriting, whatever conclusion you may draw from the fact. I would like to say, with reference to the dredging in the province of Quebec, that it is considered the greatest windfall possible to obtain a dredging contract from the government. There has been a regular scramble for them for years, and you find people who have had no experience at all going into the dredging business. Those who have been successful in obtaining such contracts in the province of Quebec live very well. I know these men. They were in rather penurious circumstances before they went into this business, but now they dazzle us with the luxury of their living. Some are lawyers. My hon. friend mentioned Mr. Morgan. Mr. Morgan has gone into the dredging business and I remember when Mr. Morgan was practising law.

Mr. PUGSLEY. Has he made a fortune out of it?

Mr. MONK. It is very difficult to say of any man that he has made a fortune, but the indications are that he found the dredging business more profitable than the practice of law.

Mr. LEMIEUX. It cannot be contended that Mr. Morgan is a political friend of the government.

Mr. MONK. He is a very strong political friend, a friend of the deepest dye. He is like many so called Conservatives, who have cleaved to the present government, ready to support it under any circumstances.

Mr. LEMIEUX. I know personally that Mr. Morgan was three times the Conservative candidate in the county of Richelieu.

Mr. MONK. And I remember a very hotly contested campaign we had in the city of Montreal in which Mr. Prefontaine, a friend of the Postmaster General, was a candidate, and in that contest the Conservative Mr. Morgan was working for him for all he was worth. At that time Mr. Morgan had gone into the dredging business. I am speaking of facts that are admitted. In the province of Quebec when you find a man suddenly prosperous, you ask: has he got a dredging contract? It is notorious. We have Mr. Prendergast.

Mr. PUGSLEY. Has he made a fortune?

Mr. MONK. I do not know, but he lives well—much better than people who work harder.

Mr. PUGSLEY. Mr. Prendergast will tell you that there is not much money in dredging unless you have considerable experience.

Mr. MONK. They all say that, but the facts are there. They all seem to prosper. And outside of lawyers, whose occupation and technical knowledge would not lead them to dredging, there are coal merchants. It is extraordinary how coal merchants go in for dredging. In the province of Quebec we have Mr. Cowan and Moore & Company. My hon. friend the Postmaster General knows these people. They are coal merchants and they have found it advantageous to leave their occupation and go in for dredging; and although they always pretend there is nothing in it, they still tender and try to obtain the work, and having obtained it they seem to thrive considerably on the profits. As a rule—and I assert this on my responsibility as a member—the dredging is pooled in the province of Quebec. Tenders are sent in and it looks very regular, but when the work comes to be divided, some find they cannot attend to it here and others that they cannot attend to it there, and as a matter of fact the contract is divided up among them so that each is satisfied. We should abandon that old system of giving out dredging in order to distribute patronage, and have a policy dictated by the urgency of solving our transportation problem.

Mr. PUGSLEY. Hear, hear.

Mr. MONK. I am glad to have my hon. friend's approval. I expected when he came into office that he would find somewhere, wherever it is to be found—I had a great deal of difficulty in finding it in the Department of Public Works—the valuable report of the transportation commission, and that he would see if it was not possible to put into execution the suggestion so well and so urgently made by that commission, and cast aside this system of doing odd-jobs here and there just to please political friends. Go to the province of Quebec, and you will find dredging done in the most impossible places at the greatest expense. It is a race among the friends of the gov-

ernment as to who will have the most influence and get dredging done in his county. Whether the dredging is really necessary is a matter of very secondary importance. Whether it will enter into the scheme of transportation, is not considered at all. The only thing thought of is who can exert the greatest influence to have it done in his own county. You will find one place in the St. Lawrence where last year the government spent between $28,000 and $30,000 dredging a channel across the river, through the soil under the river, and on account of the current the channel fills up as quickly as it is dredged. Ask the people on either side: What about this channel that is being dredged? They smile and they will tell you it is being dredged, but it fills up just as fast again. Everybody knows that a channel across the St. Lawrence in the vicinity of Lake St. Peter, where the soil is extremely soft, must fill up at once, but the government will go on dredging there as long as people have influence to get it done.

Mr. PUGSLEY. Will my hon. friend state where that is?

Mr. MONK. No, but I will tell it privately to my hon. friend. I do not want my criticism to be taken down into that county and be tortured into an opposition by me to public works in the province of Quebec. But I would be glad to inform the minister privately of the circumstances connected with that political piece of waste and extravagance.

Mr. PUGSLEY. I am sincerely desirous of finding out whether any work is going on which is not required in the public interest. If I can find any evidence of that, I will stop the work. When my hon. friend refers to an important matter like that, done in the channel of the St. Lawrence, he ought not to have the slightest objection to making it known.

Mr. MONK. No objection whatever, and I will give my hon. friend the information with pleasure. In other parts of the country, you will find dredging done in small rivers, where there is really no call for it. You will find dredging done around some island belonging to an influential proprietor, in order to make his island larger, and fill up the space around it. You will find dredging done at considerable cost to the country in order to facilitate the approach to the private ice house of an ice dealer in a favoured locality.

Mr. PUGSLEY. Where is that being done?

Mr. MONK. I shall give the information with pleasure, and my hon. friend can verify it. You find dredging done in these localities by these contractors who are on the most friendly basis with the sitting member, who have obtained the contracts for them. They make the sitting member presents and treat him well and they are always together. I mention these facts—why? Because if my hon. friend is sincere, if we are to go back to the suggestions of the transportation commission, there is most important dredging to be done which cannot wait, if we are going to compete with our neighbours to the south. It is often alleged that we have a thirty foot channel from Montreal to Quebec. A thirty foot channel is one of the improvements most impressed on the government by the transportation commission. If we are going to solve the problem of transportation from Montreal to the sea, the commissioners consider it very important that we should at once have a thirty-foot channel. I have heard it alleged by the Minister of Marine and Fisheries that we have that at present. I doubt that statement. I do not say that it was not made candidly, but from what information I have gained from experienced men, pilots and others interested in shipping, there are several points between Montreal and Quebec where it is by no means certain that we have that depth at low water. Therefore, I say that, with the increasing size of ships, it is most necessary for us to carry out the suggestions, and, if we have dredging to do, it must not be done to advance private interests, it must be done at the points where it is so urgently needed. There are two points between Montreal and Quebec where the channel is very narrow, as is pointed out in the report of the commission. Large ships sailing through these parts of the river, even if a fog supervenes, cannot cast anchor, for, if they do that, the ship will turn and there is no room to allow it to turn in safety. Consequently they must go on and trust to luck and the signals. And accidents have occurred there on that account. It seems to me that the suggestions of the Transportation Commission ought to be heeded first and foremost. Why? Because the rates of insurance are against us as compared with those of American ports, and this is precisely on account of the difficulties which, I say, we can eliminate promptly if we reserve for these expenditures the money which we spend uselessly elsewhere.

In the same way, if my hon. friend will take the trouble to ascertain, he will find out that we are paying a great deal for dredging in the Ottawa river, which, I think, could be done in a better way if we keep in mind that the Georgian Bay canal has been investigated and recommended as a work of national importance, and dredge where it will be useful for that channel, instead of dredging to suit the convenience of political favourites and members of parliament who do not take the trouble to investigate these large ques-

tions, but are satisfied simply to have the work done in their own counties.

Mr. J. T. SCHELL. Where is dredging done of that kind?

Mr. MONK. I mentioned a moment ago that, to my knowledge, dredging was done in the Ottawa river, last summer or the summer before, to facilitate the approach to a private ice-house. That is somewhere in the county of Vaudreuil. If my hon. friend will take the trouble to investigate he will find that that is absolutely correct.

Peterborough steamboat landing, $$2,500.

Mr. PUGSLEY. That may be dropped.

Mr. SAM. HUGHES. Why?

Mr. PUGSLEY. Because the work has been completed and paid for.

Petewawa—extension of wharf, $11,500.

Mr. PUGSLEY. Of that $8,500 is a revote. We have added $3,000 more on further investigation, because of the larger amount of cribwork which must be built.

Mr. J. D. REID. Has the contract been let?

Mr. PUGSLEY. No.

Mr. J. D .REID. Is it to be put up by public tender?

Mr. PUGSLEY. If built, it will be by public tender. I am not absolutely sure as to whether I will go on with that work at the present time or not. I am looking into the question of the public necessity for it.

Mr. OWEN. While we are on the subject of wharfs, I would ask the minister the nature of the report made by the engineer of his department sent to inspect a wharf at Brighton.

Mr. PUGSLEY. I am under the impression that I gave the hon. gentleman (Mr. Owen) that information. We have not had a report yet. There was a report some years ago. Owing to my having received information that the owner of the wharf declined to sell, I have taken no further proceedings.

Mr. OWEN. The hon. minister will remember that the chief engineer, Mr. Glass, was down there a few weeks before the deputation came to Ottawa.

Mr. PUGSLEY. There is no Mr. Glass an engineer in my department.

Mr. BLAIN. If an engineer was sent from the Department of Public Works to Brighton, will the minister bring down a report to the committee at some future meeting?

Mr. PUGSLEY. Certainly.

Mr. J. D. REID. Which department would have charge of this wharf—Public Works or Railways?

Mr. PUGSLEY. This is a private wharf.

Mr. OWEN. There are two private wharfs there, and both are in a dilapidated condition. Brighton is a thriving town of 1,800 people, yet the wharf there is a disgrace to the Dominion of Canada. Some months ago a deputation came down and the minister was going to do something, for it was clearly shown then that something was needed. I hope he is not going to wait until the general election.

Mr. PUGSLEY. My hon. friend will remember that a delegation waited upon me. and I think he accompanied that delegation. It was stated that there was a private wharf which it was desirable the department should purchase, making the necessary repairs, and make it a public wharf. I said I was not prepared to undertake the expropriation of a private wharf at Brighton at present, but if they could obtain from the owner a statement that he was willing to sell at what was regarded as a reasonable price, I would take the matter into consideration. Some little time afterwards I received word from one of the most prominent members of the delegation——

Mr. OWEN. What name?

Mr. PUGSLEY. I have forgotten the name—that the owner of the wharf refused to put a price on it. So I have done nothing further in the matter.

Mr. J. D. REID. I would like to know if the Department of Public Works had an engineer there at all. The member for East Northumberland (Mr. Owen) says that the government sent an engineer to look over the wharf, and the Minister of Public Works said they did not.

Mr. PUGSLEY. The chief engineer informs me that he has given no instructions to any engineer of the department to make an examination.

Mr. WHITE. I am surprised to hear the Minister of Public Works say that he does not know that there is a necessity for this work in connection with the Petawawa wharf. Last session I brought the matter to the attention of the acting Minister of Public Works, and an appropriation was made in the supplementaries. During the summer I took the matter up with the department, and they assured me that the work would be commenced last August, but up to the present time nothing has been done. I have here a letter from the manager of the Pembroke Navigation Company which I would like to read to the House:

Dear Sir,—Some time ago I brought to your attention the matter of the extension of the Petewawa wharf. At that time I pointed out the urgent necessity of the carrying out of this work. I understand that there was an amount in the estimates passed last session for this purpose. Up to the present nothing

has been done although you informed me that according to a conversation you had with the engineer of the Public Works Department, this work would have been commenced last August. As you are aware during the low water season, we are unable to land our boats there without danger of going on the shoals or reefs which are in close proximity to the dock in its present condition. We have also had trouble with the government booms swinging out beyond the end of the wharf and blocking the channel so that we were prevented from landing. I trust you will bring this matter to the attention of the government and endeavour to have the work completed at the earliest moment possible as this is an important point for landing supplies and men for the military camp, the settlers and the lumbering interests on the Petewawa river.

Yours truly,
GEORGE SCHMIDT,
Manager and Secretary Treasurer.

I would like to impress upon the minister the necessity of undertaking this work as soon as possible. During the season of low water it is almost impossible to get up to this dock with boats. It is a very important point on the Ottawa river at the present time.

Mr. PUGSLEY. Of course, nothing could be done until parliament voted the money. We are getting along pretty late in the season and not much can be done this year. But my attention has been called to the wharf at Petawawa, and it has been intimated to me that the wharf really is not necessary in the public interest. I have directed an inquiry to be made, and I can say to my hon. friend that the matter is still under consideration.

Mr. WHITE. The wharf in its present condition is practically useless at low water.

Mr. PUGSLEY. It is not positively decided that this large amount of money will be expended there. I am not sure it is in the public interest.

Port Burwell—improvement to harbour, $90,000.

Mr. PUGSLEY. Up to the 31st of December there was $8,769 expended. Then there was an estimate for a further expenditure up the 31st of March. The dredging work is under contract.

Port Hope—repairs to pier and dredging, $15,000.

Mr. WARD. What has been done at Port Hope this year ?

Mr. PUGSLEY. We propose to do some dredging at Port Hope. It was commenced in the fall of 1907, by Mr. Phin of Welland. We hope to do quite a little dredging work this year.

Mr. WARD. Will there be any repairs to the piers ?

Mr. PUGSLEY. Yes, we propose to make repairs to the pier, also to do some dredging.

Mr. WHITE.

Port Stanley—harbour improvements, $38,000.

Mr. WM. JACKSON. Is this all for the outside breakwater in Port Stanley ?

Mr. PUGSLEY. This is for the outside breakwater, and for dredging. The work is under contract.

Mr. WM. JACKSON. When will that work for the outside breakwater be completed ?

Mr. PUGSLEY. I think it will take another year.

Mr. WM. JACKSON. Who is the inspector ?

Mr. PUGSLEY. My memorandum does not say, but I can get the name.

Mr. WM. JACKSON. I know the inspector has been changed, and I wanted to know the reason. I wrote the minister in connection with the inside breakwater six weeks or two months ago. I called his attention to the condition of the inside breakwater on the east side of the east pier. Unless that breakwater is extended 150 feet to the northeast, practically the work that has been done in Port Stanley will be useless. The lake is breaking in on the north side of the breakwater, and is cutting into the harbour.

Mr. PUGSLEY. I will have the matter looked into at once.

Rainy river—improvements at Long Sault rapids, $50,000.

Mr. PUGSLEY. In reference to that, we were obliged to get the consent of the United States government, because it might be a matter for the Waterways Commission to settle. At their suggestion we have referred the matter to the American government.

Mr. BENNETT. In connection with a similar matter, is any expenditure being incurred by the department in keeping a patrol tug or tugs at a point called the Lime Kilns, near Windsor ?

Mr. PUGSLEY. My engineer tells me no.

Roche's point wharf, $3,200.

Mr. BENNETT. What is that dock costing at Roche's Point ?

Mr. PUGSLEY. The total cost is $3,212. That has been paid for.

Mr. J. D. REID. I understand the people in that vicinity never wanted that wharf, and they are now asking the government to take it away.

Mr. PUGSLEY. Well, they have not come to the right source to get it done, because they have not communicated with me on the subject.

Mr. J. D. REID. Was there not some complaint about this wharf not being required ?

Mr. PUGSLEY. The chief engineer says there has been some complaint, but it has not come to my notice.

Mr. J. D. REID. The wharf was never required, the people petitioned against the wharf being built, it was forced on them and now they want it taken away.

Mr. PUGSLEY. I was mistaken. I saw the chief engineer bow his head when you were speaking, but he says there has been no complaint to the department in regard to the work not being necessary.

Rondeau harbour—improvements, $50,000.

Mr. PUGSLEY. The total probable cost of the works is about $130,000. The works consist of the construction of two breakwaters each 500 feet long, dredging of the site of the breakwaters to a depth of 23 feet, dredging and approach to the depth of 22 feet, dredging the turning basin in the inner harbour, repairs to piers, &c. The dredging is under contract to the Canadian Construction and Dredging Company whose headquarters are at Toronto. I think Mr. Bertram is president or manager.

Rossport—wharf on north shore Lake Superior, $5,000.

Mr. PUGSLEY. This is a coal dock or wharf in connection with the Canadian Pacific. It is in Thunder Bay and Rainy River district.

Sault Ste Marie wharf—dredging approaches, $30,000.

Mr. PUGSLEY. The dredging contract has been given to the Great Lakes Dredging Company.

Severn river—improvement of waterway at McDonald's chute No. 1, $1,000.

Mr. PUGSLEY. This may be dropped.

Mr. DEPUTY SPEAKER. Item dropped.

Southampton—repairs to Chantry island breakwater, $3,500.

Mr. PUGSLEY. This will finish the work. It is by day labour.

Toronto harbour improvements, $90,000.

Mr. PUGSLEY. This is a revote.

Mr. TAYLOR. Is it under contract?

Mr. PUGSLEY. The dredging is under contract to the Western Dredging Company and the protection work is also under contract.

Victoria harbour—improvements, $56,200.

Mr. PUGSLEY. Prior to 31st March, 1908, we expended here $10,331.33. We contemplated much more work this year. This is under contract to the Canadian Dredging and Contracting Company.

Mr. OWEN. Reverting to the item of which I spoke I have found the newspaper clipping. It says :

Mr. J. G. Sing, chief engineer, from the Public Works, Toronto, and Frank L. Wood, Liberal candidate for the House of Commons for East Northumberland, were here (Brighton) on Tuesday when the chief engineer made an inspection of the wharf for the purpose of making a report to the government as to the advisability of taking over the same. Our wharf should be repaired and extended, and we sincerely hope the government will grant the prayer of the large petition recently presented to them.

I asked the minister the contents of that report. This is dated May 27. I gave the name of Glass instead of Sing in speaking before.

Mr. PUGSLEY. Mr. Sing is the resident engineer in Toronto. I have no doubt he has made an inspection of the wharf, probably when visiting at Colborne, but I will take occasion to see if there is a report from him and if not to get the result of his examination.

Mr. J. D. REID. Did Mr. Sing go there on instructions from the department or on his own responsibility?

Mr. PUGSLEY. I will have the files looked up to ascertain.

Mr. J. D. REID. Surely the chief engineer will understand something of the matter?

Mr. PUGSLEY. The chief engineer says he has no recollection of sending Mr. Sing tnere.

Winnipeg river—improvements, $10,000.

Mr. SAM. HUGHES. What is the nature of these improvements?

Mr. PUGSLEY. These are at Miller's rapids, north of Kenora, and Throat rapids to improve a stretch of navigation of 16 miles to the crossing of the Grand Trunk Pacific Railway.

Mr. MORIN. I wish for some information about the wharf which is to cost $13,000 on Lake François in the county of Beauce.

Mr. PUGSLEY. What does my hon. friend want to know?

Mr. MORIN. I will give the minister some information, because he is new in his office and I don't think I should blame everything on him for that reason. There was money voted two years ago for a wharf there and the wharf was built, and like the other public works throughout the country I presume it was left to the member for the county to look after the building of it. I do not know whether the government sent an engineer there or not, but if they did they might as well send an old grandmother. Do you hear that,

Mr. Minister? Your engineers do not amount to a row of pins. Here is an example where the engineer recommended a wharf to be built and the wharf was built, and there was no stone put into it, and away went the wharf with the ice last spring. Now, this is a small lake, about twenty-five miles long by two or three miles wide, and there is no current in it.

Mr. J. D. REID. Are there any boats on the lake?

Mr. MORIN. Yes, but they belong to the lumber company and the lumber company uses its own wharf. There was $7,000 wasted on this wharf before, and I would like the minister to explain why he wants to waste $13,000 more now.

Mr. PUGSLEY. I think my hon. friend is in error with regard to the importance of the matter, because my information is there was a large petition in favour of this work, and upon investigation it was decided to be in the public interest to build the wharf. It would appear there are several steamboats plying on the lake.

Mr. MORIN. There are, but they belong to the lumber company, and they use their own wharf.

Mr. PUGSLEY. I am glad to get the information from my hon. friend in regard to the alleged defects in the wharf, and I will have the matter looked into. The work is under contract, and the contractor will have to complete the work properly before he is paid.

Mr. MORIN. Who is the contractor?

Mr. PUGSLEY. John Lowry, of Ottawa.

Mr. MORIN. How long is the wharf to be?

Mr. PUGSLEY. The Lambton wharf will have a total length of 350 feet extending out to 6 feet at low water. The Coleraine wharf will have a total length of 300 feet.

Mr. MORIN. The minister says there are boats plying on that lake; where do they start from and where do they go to?

Mr. PUGSLEY. I am sorry to say I do not know.

Mr. MORIN. I believe you know very well.

Mr. J. D. REID. This is another case where the member for the county apparently got up a petition and the government immediately proceeded to spend thousands of dollars on a wharf without inquiring whether it was necessary or not. The facts stated by the hon. member for Dorchester (Mr. Morin) prove that this money is squandered for political purposes.

Mr. MORIN. I can tell the minister that I will get no thanks for what I have said in the House to-night. Well, I want none. Every time I condemn unnecessary expenditure here, next day the Grits on the other side go for me, and say: Why did you say anything against that work being done in the province of Quebec; Ontario gets so much and the other provinces get so much, and we want to get our share. Well, the government is just squandering the money, and it would seem that all the Liberal member for a county needs to do is to ask for an expenditure, whether it is necessary or not, and he gets it. That was the policy of the previous Minister of Public Works; I don't accuse the present minister, because he is new in the office, and I shall not hang him before giving him a trial. I have here estimates for the last seven years, and what do they show? Every year there is expenditure in the Island of Orleans, at St. François, at St. Laurent and Ste. Famille. At St. François the population is about 500; it is situated at the lower end of the island, and they have a wharf there and another one about half a mile distant. At St. Jean de Orleans and St. Laurent it is the same thing. The thing is getting ridiculous. The member for the county asks for the money and he gets it, right or wrong. Is that what Sir Wilfrid Laurier promised before he came to power? In my county, in 1895, he told the people that if he came to power his government would be a government of example. He just omitted that little word 'bad,' for since he has come to power his government has been a government of bad example. He found fault with the Conservatives spending $36,000,000 a year, but immediately on his coming to power in 1896 we voted $52,000,000 at the special session of that year; the next year the estimates were $58,000,000, the next year $62,000,000, the next year $70,000,000, the next year $78,000,000, the next year $82,000,000, the next year $105,000,000 and this year we have $119,000,000 in the main estimates and $9,000,000 more in supplementaries already brought down, and the minister tells us there are more to come, and God only knows how many supplementary estimates he will have. The man who found fault with the late government for spending $35,000,000 or $40,000,000 is going to spend this year $140,000,000 or $150,000,000. What does that look like?

Mr. JOHNSTON. It looks good to me.

Mr. MORIN. But you are a Grit like the rest.

Manitoba—Grand Marais harbour, Lake Winnipeg—improvement of entrance, $1,500.

Mr. STAPLES. What is the nature of this work?

Mr. PUGSLEY. It is to remove the sandbar to improve the entrance to the harbour.

Mr. STAPLES. What navigation is there ?

Mr. PUGSLEY. Both sailing vessels and quite a large number of steamers. The navigation on Lake Winnipeg is getting to be quite important.

Lake Dauphin—lowering lake by removing obstructions from bed of Mossy river, $7,000.

Mr. STAPLES. What is the nature of that ?

Mr. PUGSLEY. This is a revote towards the construction and equipment and installation of the plant required for removing these obstructions. It is expected to carry on the work during the present year.

Mr. STAPLES. How much has been spent there ?

Mr. PUGSLEY. Nothing has been expended yet.

Mr. J. D. REID. Does the government intend building a plant and doing the work itself, or is it to be by contract ?

Mr. PUGSLEY. The government will do the work itself.

Mr. STAPLES. Who is going to do the work at Grand Marais Harbour ?

Mr. PUGSLEY. We have not decided yet.

Winnipegosis lake—dredging channel at mouth of Mossy river, $5,000.

Mr. PUGSLEY. This work will be done by the government dredge.

Mr. STAPLES. Where is that dredge working at the present time ?

Mr. PUGSLEY. The dredge has been removed two or three times since the spring opened. I am not able to tell my hon. friend where it is working just at the moment.

Mr. STAPLES. I notice once more that there is no appropriation in the main estimates for the completion of the work that was begun on the harbour of St. Laurent on Lake Manitoba. Previous to the last election a wharf was built there and a dredge was sent up and for a time there was great activity ; but the moment the election was over, the work ceased, the dredge was taken away, and nothing has been done since. The work that has been done is of utterly no value to the district until it is completed. The council of the municipality has sent a petition asking the government to make the necessary appropriation to complete the work. If the minister has not that petition, I have a copy of it. I have brought this matter up at every session of this parliament, and I have always been stood off with the promise that an item would be brought down in the supplementary estimates, but that has never been done. The work, if completed, would be of great value to the people of that district. They could send wood and other products by boat to Winnipeg, but boats cannot get to the wharf until some further dredging is done. There will also have to be a road made to the wharf. At present produce cannot be taken to or away from the wharf. I would ask the minister if it is his intention to make any provision in the supplementary estimates for the completion of that work.

Mr. PUGSLEY. Is Lake Manitoba in the hon. gentleman's constituency ?

Mr. STAPLES. Yes, in the northern part.

Mr. PUGSLEY. I had some information that the work was not regarded as very necessary, because there was not a very large population there. I may have been mininformed as to that, and I will look very carefully into the matter.

Mr. STAPLES. It must be of some importance when the reeve and council went to the trouble of drafting a petition and sending it down here. It is of the utmost importance to the people of that district. I think I know the riding and what is required there as well as the people who may have advised the minister. There is another place up there—Delta and Lake Manitoba. Is anything being done there?

Mr. PUGSLEY. There has been some dredging done at the Delta. If further dredging is required, it will be done, but I cannot say just now what will be done.

Old Man's river—diversion of stream into its original bed at McLeod (revote) $8,000.

Mr. HERRON. Has the minister any information with reference to the damage done by the recent flood? I asked him that question the other evening.

Mr. PUGSLEY. I inquired in my department and find that we have no breakwater there.

Mr. HERRON. There was an appropriation of $8,000 for the work

Mr. PUGSLEY. There was, but nothing is done, and we are now revoting that amount.

Mr. HERRON. Do the government propose spending sufficient money to protect the banks at that point?

Mr. PUGSLEY. The intention of the department is to make the work complete. If it should cost more than $8,000, we shall do what is necessary.

Mr. HERRON. It is very important that some protection should be given.

New dredging plant—maritime provinces, $100,000.

Mr. SPROULE. Are you building new dredges for the maritime provinces?

Mr. PUGSLEY. Not as yet, but new dredging plant is very urgently required. This is to build or acquire one or more dredges and some tugs.

Mr. SPROULE. You have no plan in view ?

Mr. PUGSLEY. I have discussed the matter with the chief engineer and superintendent of dredging. They think we ought to have at least three additional dredges—one for work in the Bay of Fundy, one for work in the Baie des Chaleurs, and the other on the north shore. Then we want a number of tugs. In the operation of the dredge 'Fielding' we ought to have four tugs, and have none available. We have to hire tugs.

Mr. SPROULE. Is this $100,000 going to build three dredges and four tugs?

Mr. PUGSLEY. No, that will not begin to do it.

Roads and bridges—Shellmouth bridge over Assiniboine river, $20,000.

Mr. W. J. ROCHE (Marquette). Will the minister explain what has been done in connection with the Shellmouth bridge ?

Mr. PUGSLEY. That is under contract. The piers have been completed, and work on the steel superstructure is being carried on as rapidly as possible. The material I think is all on the ground. I hope the bridge will be completed during the present year. The contract was let for the steel work on the 23rd of October, 1907, to be completed a year from date.

Mr. W. J. ROCHE (Marquette). There has been a vote in the estimates for the last four years.

Mr. PUGSLEY. Yes, the work was commenced in 1906.

Mr. W. J. ROCHE (Marquette). The old bridge has been condemned for the last four years, and the people are much dissatisfied with the slow progress.

Mr. PUGSLEY. It is impossible to expedite the work any more. Our latest information is that the work is proceeding quite satisfactorily, and we expect it will be completed within the time mentioned.

Land and cable telegraph lines, lower St. Lawrence and maritime provinces, including working expenses of vessels required for cable service and Marconi wireless telegraph system at Belle Isle, &c., $120,000.

Mr. SPROULE. How is the Marconi system working ?

Mr. PUGSLEY. I think it is giving pretty good satisfaction. But this is a matter coming within the Marine Department.

Mr. BLAIN. Has the minister got a statement of the revenue and expenditure in this connection ?

Mr. SPROULE.

Mr. PUGSLEY. The hon. gentleman will find that in the Auditor General's Report.

Harbours and rivers—Quebec harbour improvements, $500,000.

Mr. J. D. REID. Who has the contract there ?

Mr. PUGSLEY. Dussault & Co.

Mr. J. D. REID. What is the total estimated amount this work is to cost when completed ?

Mr. PUGSLEY. The work that is going on there is of very great importance. If my hon. friend will come over here I will show him the plans. It will give altogether about 3,000 feet frontage.

Port Arthur and Fort William—harbour and river improvements, $500,000.

Mr. BENNETT. What is going to be done there this year ?

Mr. PUGSLEY. Just the dredging work. We are doing it as rapidly as possible There will be something done probably in the way of building a revetment wall as well. There is also a breakwater being built at Port Arthur. I may say that for several months, ever since I have been at the head of the department, and I think before that, there has been a strong pressure upon the part of business men of Winnipeg and Port Arthur, also of ship owners, and I think of the boards of trades of those cities, to build a new breakwater out further from the wharf in order to give more sea room to the large steamers which are now frequenting the port. I have decided to accede to the wishes of the people in this respect. The breakwater, when completed, will give more sea room, because further from the existing wharfs. In the meantime we are leaving a portion of the old breakwater and doing some work of a temporary character. The dredging done will give accommodation to the largest steamers on the lake.

Mr. BENNETT. Will the cost of the breakwater come out of this vote?

Mr. PUGSLEY. Yes, part of it.

Mr. BENNETT. What portion of this vote will go to the breakwater?

Mr. PUGSLEY. When the breakwater is finally completed it will cost a great deal more than this vote. For the present year we expect the breakwater expenditure to be about $100,000.

Mr. BENNETT. How much will the revetment wall cost?

Mr. PUGSLEY. We have not determined upon that yet. I think perhaps we will have to extend that work over a couple or three years as it will be eoo expensive to be all done in one year. By building the revetment wall as designed by the chief

engineer we shall save large expense for building the breakwater opposite the entrance to the Mission river.

Mr. BENNETT. Is it intended to spend more in these works ?

Mr. PUGSLEY. I think we shall have to make further provision before parliament rises.

Mr. BENNETT. That will be in the supplementary estimates?

Mr. PUGSLEY. Yes. Dredging is going on night and day in order to hurry the work. The Grand Trunk Pacific are laying out their works on a large scale and so is the Canadian Pacific Railway, and both are eager to be able to effectively handle the grain trade this fall. We are rushing our work, believing that what we are doing will be a great national benefit.

Mr. BENNETT. Is the dredging done under contract? And who is the contractor ?

Mr. PUGSLEY. Yes. The Great Lakes Dredging Company.

Mr. BENNETT. How many dredges have they employed?

Mr. PUGSLEY. I think five.

Mr. BENNETT. Who is the engineer in charge?

Mr. PUGSLEY. Mr. Merrick.

Mr. BENNETT. Is any other dredging being done besides that by the Great Lakes Dredging Company?

Mr. PUGSLEY. At Port Arthur, Mr. Weddell. I think he has about completed his work.

Mr. BENNETT. How much of this is for Mr. Weddell's work?

Mr. PUGSLEY. Only about 30,000 yards remains to be done at 9 cents a yard.

Red Deer—improvements at St. Andrews Rapids, $300,000.

Mr. J. D. REID. When will this work be completed?

Mr. PUGSLEY. I hope this year. We made arrangements with the contractors to expedite the work. They carried it on all winter. We hope that this season it will be completed.

Mr. J. D. REID. Who are the contractors?

Mr. PUGSLEY. Messrs. Quinlan & Robertson.

Transportation facilities, Georgian bay to Montreal—survey for waterway via French and Ottawa rivers, including payments authorized notwithstanding anything in the Civil Service Act, $40,000.

Mr. BENNETT. How much has been expended on this survey so far?

Mr. PUGSLEY. According to my notes the total expenditure to 31st March, 1907, was $597,838.48. But the chief engineer tells me that the memo. must be wrong and that the date should be 31st March, 1908. It will require $40,000 more. It is expected that this vote will entirely complete the work of the survey. The survey is completed and only some verification work is being done.

Mr. J. D. REID. What is the intention of the government as to going on with this work?

Mr. PUGSLEY. My hon. friend will understand that it is a matter of great importance and of great interest to the country, one which will involve the expenditure of a very large sum of money. It is one, therefore, which the government will have to consider after having carefully studied the report submitted. In due course and in proper season the Prime Minister will, no doubt, announce the policy of the government.

Mr. J. D. REID. Has it been considered by the government?

Mr. PUGSLEY. Not since the report came in.

Port Colborne—harbour improvements, $20,000.

Mr. BENNETT. What has the elevator there cost to date?

Mr. PUGSLEY. It is being built by the Department of Railways and Canals, so I cannot give the information. We are building the breakwater.

Mr. BENNETT. How much has the Department of Public Works spent there?

Mr. PUGSLEY. The total expenditure of my department is in the vicinity of $850,000, probably pretty close to $900,000.

Mr. BENNETT. Has the minister any idea of what the Department of Railways has spent there?

Mr. PUGSLEY. I cannot tell.

Mr. BENNETT. I guess you have made it four millions there.

Mr. J. D. REID. Is this vote for no other purpose than breakwaters?

Mr. PUGSLEY. No.

Mr. J. D. REID. Who has the contract for the breakwater?

Mr. PUGSLEY. M. J. Hogan has one contract and Hogan & Macdonald have another.

Mr. BENNETT. Is the minister aware whether the elevator is finished or not?

Mr. PUGSLEY. I do not know.

Mr. BENNETT. It was stated in the newspapers some time ago that it is all

finished. It does not matter much in any case. It will never do anything.

Militia Department—pay and allowances, $1,500,000.

Hon. Sir FREDERICK BORDEN (Minister of Militia and Defence). I suggest that item 71 be allowed to stand as I wish to make a statement upon it which will take some time and other members will probably wish to speak upon it.

Mr. TAYLOR. I am quite sure that the hon. member for North Toronto (Mr. Foster) will want to discuss several items, but he is not present and will wish to be present when the minister makes his statement.

Sir FREDERICK BORDEN. That is one reason I did not wish to make it to-night. It will be understood that any militia item may be discussed on the item we are leaving, No. 71. Item No. 72, pay and allowances, is for the permanent force. The full vote is $1,500,000. The total number of the permanent force at present is about 3,000.

Mr. WARD. What is the increase of $100,000.

Sir FREDERICK BORDEN. There has been an increase of about 300 in the force since last year.

Salaries and wages, $85,000.

Mr. TAYLOR. There is an increase of $15,000.

Sir FREDERICK BORDEN. Last year $15,000 was included in the supplementary estimates.

Mr. BENNETT. I would ask the minister if he has seen the following item in the Toronto 'Globe ?'

If there is any part of the provincial expenditure upon which the pruning-knife can properly be used, it is the militia estimates. We are not at war, nor likely to become so. We are threatened with bankruptcy—the only way of averting it is to reduce the expenditure—and there are comparatively few items upon which economy can be used, without injury to the public interests. If the whole militia service was suspended for one, two or three years, the injury done to the country would be so infinitesimal as to be unworthy of notice.

Sir FREDERICK BORDEN. I had not seen it, I will look it up. I did not suppose the Toronto 'Globe' would publish anything so nonsensical as that. Is it an editorial ?

Mr. BENNETT. It is quoted in the 'Globe' newspaper of July 2nd. It is a reproduction from the 'Globe' of 1858, 50 years ago, but it is strongly ominous, it is a case of history repeating itself and I think the public will think so.

Mr. WHITE. At page Q—52 of the Auditor General's Report I find an item under Petawawa camp, Savage, W. J., painting $900. Was that work done by tender and were there any other tenders received?

Sir FREDERICK BORDEN. By tender called by public advertisement. In all the work at Petawawa tenders were asked by public advertisements in the newspapers.

Military properties—construction and repairs, $258,750.

Mr. TAYLOR. There is an increase of $45,000 there.

Sir FREDERICK BORDEN. This includes repairs and rifle ranges, barracks and ordnance stores, &c., and these requirements are annually increasing. The number of rifle ranges is increasing each year and the outlay is increasing somewhat.

Mr. J. D. REID. The permanent force is now about 3,000. How many were there eight or nine years ago ?

Sir FREDERICK BORDEN. About 800 or 900.

Mr. J. D. REID It has increased about fourfold.

Sir FREDERICK BORDEN (Between three and fourfold. There is an increase for Halifax and Esquimalt alone of 1,500. That is the principal increase.

Repairs to Quebec cliffs and walls, $40,000.

Sir FREDERICK BORDEN. This is done by day labour. It is the usual vote.

Mr. TAYLOR. I trust the minister will put in an appropriation to enable him to repair the military buildings at Kingston. There is a good deal of money spent at Quebec in one way and another, but the Kingston fortifications are allowed to go to ruin. A few years ago a comparatively small expenditure would have put the military property there in good shape.

Sir FREDERICK BORDEN. That is a matter which must be taken up very soon unless we are to allow the whole of that property to go. I found it out of repair and almost abandoned when I came to office. An unsuccessful attempt was made by General Herbert to utilize some of the rooms at Fort Henry. I have had an examination made by engineers within the last year, but I have not yet had an opportunity of looking into the report. I think there will be some small items in the supplementary estimates for some of the works at Kingston to which my hon. friend refers, particularly for the wall bordering the military property.

Mr. WHITE. I would like to know whether the lowest tender was accepted for the painting of these buildings to which I have referred. I understand that several firms in the town of Pembroke tendered, but the Kingston firm got the contract.

Sir FREDERICK BORDEN. I am quite sure the lowest tender was accepted, but I will have the matter looked up.

Warlike and other stores, $350,000.

Sir FREDERICK BORDEN. This is the usual vote.

Mr. TAYLOR. There is an increase of $37,000. What does this include?

Sir FREDERICK BORDEN. Accoutrements, camp equipment, general stores, engineer's stores and medical stores.

Mr. DANIEL. What is meant by the upkeep of armament?

Sir FREDERICK BORDEN. Ammunition both for practice and reserve supply, field and garrison artillery, ordnance stores, transport vehicles, extra parts of outfit for big guns, &c.; artillery stores of which there is a great variety.

Mr. J. D. REID. In these different items for the militia department there is an increase in the total vote of about $342,000.

Mr. TAYLOR. And then there are the supplementaries.

Sir FREDERICK BORDEN. There will be no supplementaries except for the militia annual drill.

Mr. J. D. REID. This vote for clothing and necessaries in stores amounts altogether to $800,000 and that seems a very large amount to expend in one year. One would think that the stores and clothing would not have to go on increasing year after year. Why is there this increase?

Sir FREDERICK BORDEN. The increase in the number of the militia is the principal reason. New corps are being formed in the new provinces of the west to take the place largely of the Northwest Mounted Police. I have a comparative statement here which may be interesting:

	1903-4	1908-9.
Total number of militia..	47,423	57,718
Total number of horses..	7,892	11,798
Number of men trained..	32,000	*46,000

*Estimated.

The very great increase of the growth of the militia between the two periods will account for a considerable increased portion of the increased cost. The men must have clothing, arms, and ammunition.

Mr. DANIEL. How often is new clothing issued?

Sir FREDERICK BORDEN. Once in three years. There is an attempt being made to be more economical, and I think the overcoats are now issued for nine years.

Mr. DANIEL. You do not issue boots?

Sir FREDERICK BORDEN. Not except to the permanent force.

Mr. J. D. REID. $300,000 a year for clothing seems a large amount.

Sir FREDERICK BORDEN. It is only an average of about $6 per year for each man.

Provisions and supplies, $430,000.

Mr. DANIEL. Why the increase in this vote?

Sir FREDERICK BORDEN. That is principally for the permanent force.

Mr. J. D. REID. I have seen complaints that the goods furnished have not been up to standard in some cases.

Sir FREDERICK BORDEN. These supplies for the permanent force are purchased by tenders called for in the newspapers.

Mr. DANIEL. Open to everybody?

Sir FREDERICK BORDEN. Open to everybody. As to complaints, there was a complant from Halifax by a man who did not get the contract, as his tender was not low enough. He was very much annoyed because the bacon was brought somewhere from Ontario, and endeavoured to make all the trouble he could. As a matter of fact, the food is inspected every day, and every soldier has an opportunity to make a complaint if he chooses. There is absolutely nothing in that story.

Mr. J. D. REID. I have heard of other cases; but in that particular case I understand that it was rolled bacon that was supplied. I am not in the militia, but I understand that if a militiaman were to make a complaint to the officer in charge, he would be liable to get into trouble. If the officer in charge stands in with these parties in any way, it would be useless to make a charge to him.

Sir FREDERICK BORDEN. I can assure my hon. friend that we are not running the militia in that way. If I knew that an officer refused to take cognizance of a complaint of that kind, I should dismiss him at once. Our object is to get the very best food we can, and we always accept the lowest tender. Sometimes, when there is keen competition, and a man is foolish enough to tender below the value of the goods supplied, there may be an attempt to skimp, and deliver food which is not up to the mark; but our inspectors will detect and punish such conduct at once.

Mr. DANIEL. Has the supply officer any control over the purchase of goods?

Sir FREDERICK BORDEN. Not over the purchasing. That is all done by tender, and is determined by the director of contracts here. But the supply officer has absolute control over the quality of the food. That is his business, and he inspects everything that is delivered every morning.

Mr. DANIEL. He is not the only one. There is another officer who goes around every morning with the supply officer and the medical officer, so that I do not think there is much chance of inferior food being provided.

Sir FREDERICK BORDEN. If any inferior food should have been delivered, the supply officer has the authority to refuse it and purchase good food and charge it up to the contractor.

Mr. BEATTIE. If the food is bad, the officer of the day is to blame, because he inspects it at six o'clock in the morning, and has a right to report it to the commanding officer. So that I do not see how improper food could be supplied. I would like to ask the minister, did the report that the bacon was bad come from the men?

Sir FREDERICK BORDEN. No, it came from the disappointed contractor.

Mr. J. D. REID. I do not mean to say that the food supplied was bad food; but the contract called for rolled bacon, which had been supplied for years before, and the man at Halifax who tendered supposed that he would have to supply rolled bacon. The man who got the contract quoted a lower price than rolled bacon could be supplied for. The result was that rolled bacon was not supplied. I have not seen any statement in any newspaper either by the department at Ottawa or by the officer in command at Halifax, denying the statement that was in the Halifax paper. That convinces me that rolled bacon was not supplied by the contractor. There was no investigation by the department to find out whether the statement in the newspaper was true or not. Therefore until I have further evidence, I am perfectly satisfied that the contractor did not carry out the contract, and that the men did not get the quality of food which the government intended to supply them. They were deceived and the government was defrauded so far as that contract was concerned.

Sir FREDERICK BORDEN. My hon. friend reverses the good old rule of holding a man innocent until he is proven guilty. If I were to occupy my time in answering all the false statements that are made in regard to the department and the way it is administered, it would take all my time. I do not propose to do that. We have a regular means, as hon. gentlemen know, by which every complaint from the humblest man in the force can reach me or his superior officer. In this case I did not think that I was called on to make an investigation, because no charge was made except one in an utterly unreliable newspaper, coming from a disappointed contractor.

Mr. WARD. Was there ever any charge made by the commander of that regiment as to the quality of the food?

Sir FREDERICK BORDEN. None whatever.

Mr. SAM. HUGHES. Did the officer of the day for inspecting the rations make any reports?

Sir FREDERICK BORDEN. His reports were all favourable. There has never been any question or challenge of this particular article. My hon. friend says there has been no contradiction. I have no doubt whatever that the bacon which was tendered for was delivered.

Grants to rifle and artillery associations and bands, $55,000.

Mr. W. J. ROCHE (Marquette). What is the basis upon which these grants are made? Does every rifle company get a grant?

Sir FREDERICK BORDEN. The basis is $1 per head up to forty and fifty cents for every additional member up to eighty, so that $60 would be the maximum. This is for civilian rifle associations.

Royal Military College, $95,000.

Sir FREDERICK BORDEN. There are slight increases in the professors' salaries and the general expenses are greater.

Mr. DANIEL. What salaries are increased?

Sir FREDERICK BORDEN. The adjutant of the college gets an increase of $500; the professor of mathematics $300.

Mr. DANIEL. Is this a special increase for the adjutant?

Sir FREDERICK BORDEN. It will be paid to his successor. It is for the adjutant of the college.

Mr. SAM. HUGHES. I see the caterer has resigned. What system is now followed? The system in vogue should be condemned.

Sir FREDERICK BORDEN. The caterer used to receive 50 cents a head. He wanted 60 cents. I thought that was rather a large increase and sent an officer to investigate. I am satisfied we can do very much better by taking charge of the food ourselves within the college as at the different depots. The officers are anxious for the change.

Mr. SAM. HUGHES. I have heard various yarns about the officers being surprised at the stuff the boys had to eat.

Sir FREDERICK BORDEN. So I believe.

Mr. DANIEL. There are several military officers there, are they entitled to rations? Are any of these rations turned over to the caterer

Sir FREDERICK BORDEN. That has never been done.

Mr. WARD. Is this vote of $95,000 over and above any fees received ?

Sir FREDERICK BORDEN. We get the fees back and that reduces the cost very considerably.

Mr. J. D. REID. With reference to this case at Halifax which the minister said was an impossible one, I have heard other men in charge of different companies out at drill complain about the food served at the camps. They are afraid, however, to kick, because these goods were supplied by friends of the government and they would get into trouble themselves. I have heard those stories and believe them to be true. In a case like that at Halifax, although the minister states that the paper which published it is not reliable, I think that he or some of his officers would not have been doing any too much if they had at once written to the man in charge of the regiment and found out what truth there was in the statement, if any. The minister and his deputy did not do their duty when they paid no attention to that. A matter of that kind affecting all those men is a very serious matter. We shall not have time this session to find out the truth in the Public Accounts but we will next session. But outside of that case altogether, there are other cases ; and I am perfectly satisfied that the minister would, if he would state what he knows to be true, tell us that he has had complaints of the food furnished the men in the camps at different places.

Mr. SAM. HUGHES. If any of these complaints are justifiable and if I were in the minister's place, the head would go off every officer in the force who had anything to do with inspecting the rations. Perhaps the hon. member does not know the routine. I have seen where quartermasters would stand in with the supply officers ; but in addition to the quartermasters, there is the field officer of the day, who has the rank of colonel or major, who has to inspect the rations every morning. Then for every regiment there is a regimental officer, and for every company, a company officer, so that the food has to go through a series of inspections. Besides there is the field medical officer and also the regimental medical officer. Unless the officers are absolutely crooked or stupid, it is impossible that stuff not fit to eat could reach the men. If the hon. member had ever been in camp, he would know that the soldiers would kick in a second if they did not get good rations. That is the reason why, when I read this thing about Halifax, I thought the officers and men must be insane to pass such rations, or else they did not know the quality of the goods. The medical officer should detect anything of that kind in a moment. I was going to speak of the Royal Military College. I give the minister notice that at another sitting I intend to discuss the commandant of that college and the system of discipline pursued there, what they used to term the commission of inquiry into conduct, but what I call the sweat-box system. It is no way to train young men to be manly and straightforward. So far as I am concerned, my vote will go against any man who maintains such a system and against the voting of any money to maintain it.

Mr. WARD. In following what the hon. member for Victoria and Haliburton (Mr. Sam. Hughes) has said, I wish to relieve the mind of my hon. friend from Grenville (Mr. J. D. Reid). What this committee has been told is exactly right--the men will not stand bad rations. I have had a great deal of experience in camp in the last forty years, both under this administration and under former administrations. As a rule, the rations were good. I can recall one instance several years ago when sour bread was furnished.

Mr. SAM. HUGHES. In 1872.

Mr. WARD. Yes, under Conservative administration. The men had no fear of the contractor. They formed a line of three or four hundred feet long, and the bakers' apprentices who brought the bread had to run the gauntlet, the men pelting them with the bread. The next day the bread supplied was sweet. The food goes through a series of inspection, and there is very little danger that the men do not receive what is being paid for and what they are entitled to get.

Dominion Arsenal, $350,000.

Mr. J. D. REID. Where is that?

Sir FREDERICK BORDEN. At Quebec.

Mr. SAM. HUGHES. Why the increase?

Sir FREDERICK BORDEN. That is not really an increase. In other years there has been a vote in the supplementary estimates, but this year there will be none.

Mr. SAM. HUGHES. I ought to know, but I fear I do not. Is it the intention to continue the manufacture of the cartridge 303 as made to-day, or to adopt a modern cartridge, the sharp-pointed bullet? The United States have adopted this form, and the British government will probably adopt it, too, before the end of the century. The Canadian government should be in line and adopt the new pointed bullet. It has much greater initial velocity, lower trajectory and less windage. It is capable of much greater accuracy in firing.

Sir FREDERICK BORDEN. I have not lost sight of the subject. We have the report of an officer who has been in England and investigated the matter.

Mr. SAM. HUGHES. Did he make inquiry as to what has been done in England by private parties? Private companies in England have adopted this bullet.

Sir FREDERICK BORDEN. This officer has seen the manufacturers there.

Mr. SAM. HUGHES. I would recommend him to look into what the American manufacturers are doing. If he looks into the matter, he will find in the United States a record that will surprise him.

Mr. DANIEL. I desire to call attention to a statement that was made in the public press, that at a recent camp at Niagara it was found out, just in time, that a lot of ammunition supposed to be blank was found to be loaded with slugs, and that the discovery was made just in time to prevent serious casualties.

Sir FREDERICK BORDEN. The report in the newspapers was contradicted by General Cotton at once. There is no truth in it. As usual, before going into the sham fight, all the men were searched for cartridges of every kind, and these few were found. They would have been found in any case. They were in possession of the men for target firing. They were improperly kept, no doubt.

Mr. DANIEL. But I suppose there are no such cartridges manufactured, those loaded with slugs?

Sir FREDERICK BORDEN. No.

Mr. J. D. REID. How much is it estimated will be paid to the Ross Rifle Company for rifles out of the estimates this year?

Sir FREDERICK BORDEN. The item out of which the rifles will be paid for is the one reserved. The price is $25, and the annual number to be delivered under the contract is 10,000.

Mr. J. D. REID. That means a maximum payment of $25,000.

Sir FREDERICK BORDEN. You cannot tell exactly. A certain amount is paid as advance and a certain amount of the last instalment on the finished gun.

Mr. J. D. REID. When we reach that item perhaps the minister could have a statement showing the estimate of what will be paid to the Ross Rifle Company during the year.

Sir FREDERICK BORDEN. The amount estimated is $250,000 in advance, with final payments of $85,500, and cost of inspection, $20,000.

Mr. J. D. REID. That is about $250,000 that is expected to be paid this year?

Sir FREDERICK BORDEN. Yes, if they are delivered.

Customs dues, $200,000.

Mr. J. D. REID. Why such a great increase in this item?

Mr. SAM. HUGHES.

Sir FREDERICK BORDEN. We are bringing in a great deal of stuff from England, large orders of guns, and everything that comes from the outside is charged duty. That comes out of our pockets and goes into the customs.

Mr. WARD. Could not the minister reconsider this regulation and allow officers' uniforms to come in free of duty? Officers purchasing uniforms in England have to pay duty.

Sir FREDERICK BORDEN. I am afraid we cannot treat officers differently from others. The only thing that can be done is to buy our uniforms in Canada. I stated in this House a year ago that I could see no reason why officers should not get their clothing made in Canada. I think that is the proper thing to do, and I do not believe it would cost them as much as it does in England.

Mr. SAM. HUGHES. I have always maintained for the last forty years that the officers should get an allowance, that they should be furnished a certain amount for their uniform. As soon as an officer is qualified he should get a certain amount for the purchase of a proper uniform.

Civil government—Department of Labour—salaries, $21,750; contingencies, $1,450.

Mr. BOYCE. Under this item I wish to draw the attention of the Minister of Labour to some matters in connection with the importation of foreign labour from the United States and other foreign countries. It is said, and I believe with truth, that the working of our Alien Labour law is by no means satisfactory. In the constituency which I have the honour to represent, and in every other riding where there is a coast line, the same difficulty has been found to exist, namely, that the administration of our present Alien Labour law is very lax indeed; it lacks that rigidity and that honesty of enforcement which will alone carry out the letter as well as the spirit of the Act. With regard to the condition of things in the riding of Sault Ste. Marie, I can best illustrate it by reading a copy of a petition which is now, I believe, in the hands of the minister:

To the Honourable the Minister of Labour, Ottawa.

The petition of the undersigned citizens of the town of Sault Ste. Marie in the province of Ontario, most respectfully showeth:

1. That by reason of close proximity to the international boundary, your petitioners are more than usually alive to the fact that there is no rigid enforcement of the provisions of any law in force in Canada to restrict the importation and employment of aliens, and that in consequence industries here suffer by the employment of foreign labour.

2. That your petitioners are aware of, and will draw to your attention, the fact that

across the border the law is rigidly enforced, and that on that side of the line drastic and prompt measures are taken to immediately deport any Canadian citizen who goes across to look for work, and that in that respect your petitioners believe that the powers of the United States Customs and immigration officers are exceeded.

3. That in the opinion of your petitioners, the present Act is not capable of giving prompt and adequate remedy which will meet the conditions which your petitioners know to exist, and your petitioners believe that more drastic and less cumbrous legislation should be enacted so as to enable prompt action to be taken by way of deportation of any aliens or foreigners seeking to enter Canada to work therein under contracts made out in Canada, and so as to meet the condition of the things and the method in which the law in the United States is enforced against Canadians.

4. Your petitioners further would draw to your attention that there is no immigration inspector or other officers located here, whose duty it is to see that the provisions of the Act in force are enforced, and the consequence is both from the nature of the Act itself and from its non-enforcement, that the Canadian workmen are not adequately protected against foreign labour.

5. Your petitioners therefore pray:

(1) That the present law may be so changed as to secure efficient and drastic measures to be taken for the protection of Canadians against importation of foreign labour; and

(2) That an immigration inspector or immigration officers may be appointed for this port, whose duty it will be to see that the provisions of such Act be rigidly and effectively enforced so as to obtain the results in the way of protection to which your petitioners claim to be entitled as Canadian citizens; and

(3) That such further measures may be taken for the protection of Canadian citizens as are equivalent to the measures used against them on the other side of the line.

And your petitioners as in duty bound will ever pray.

Now, the present law will not meet the evil from which the labouring classes of Canada are suffering, it does not give them the protection to which they are entitled. It is altogether too cumbrous and unworkable. For instance, the spirit of alien labour legislation is either reciprocal or retaliatory, and must be from its very nature. Now, the Alien Labour law that we have at present is neither reciprocal nor retaliatory. When our workingmen try to go over from Canada to the United States they are met with the drastic enforcement of a very strong law which forbids them to cross the boundary line, and unless they can give a satisfactory account of themselves they are forthwith deported. There is an immediate remedy for the protection of the labouring classes of the United States. The converse is the case as respects our own Alien Labour law. When aliens come across from the United States they are not met by any inspector, there is no tax upon them, there is no law, the enforcement of which will permit of these men being immediately deported. The only remedy we have in our hands to protect the labouring classes of our own country lies in our ability to do one of two things, both of which can only be done after the damage has been inflicted. In the first place, if you want to sue for a penalty, you can go before a judge of the court of record and get from him a fiat to entitle you to sue, and then proceed with a cumbrous and expensive litigation, not to procure the deportation of the alien, but to get a penalty against him, or against the person who brings him in, if you can find him. You may get a penalty with costs from the man who brings the alien in, as a sort of exemplary damage for the injury that is done by bringing him in. Or if you want to proceed by prosecution, you have to go through a more cumbrous procedure still, that of obtaining a fiat of the Attorney General of the province in which you are situated, in order to prosecute. If you are successful in getting a conviction, the informer gets a certain sum to indemnify him against loss and expense, a sum not exceeding one-half the penalty. I trust the Minister of Labour is fully alive to the necessity for some more drastic and more easily enforced law than we have at present. On the other side of the border, there is a very drastic law being enforced against us, and that should justify some more rigorous legislation being taken for the protection of Canadian workingmen.

Take the situation, for instance, at Sault Ste Marie. During last November and earlier when there was a slump in the labour market men came over by hundreds, possibly thousands without the slightest restriction into Canada and took the places or underbid the places which properly belonged to Canadian workmen. How can that remedy be effected? Surely by providing for a labour inspector at the port of entry who will exercise for the protection of Canadian labouring men just the same functions that the labour inspector of the United States exercises with regard to importations of Canadian labour. There you have in the true sense and spirit of the word a reciprocal or retaliatory law. It is worked by one country against the other. I know that in my own district very earnest efforts have been made to enforce the Alien Labour law and to secure the punishment of offenders. It has been to my knowledge found to be absolutely unworkable, and this petition is the result of the discovery by the labour classes there that they cannot get relief through the existing law, and they therefore are very earnest in their indeavours to satisfy the minister that more immediate remedy should be given and the law should be so amended that these matters can be dealt with immediately in the same manner as they

are on the other side of the border. I feel sure that the minister will approach the consideration of the matter in that sense of fairness which characterizes his treatment of such questions.

Mr. LEMIEUX. I thank my hon. friend for bringing this matter up this evening. His remarks as they appear in 'Hansard' will serve me to-morrow as a brief for the Minister of Justice. It is true that practically the administration of the labour law is in the hands of the Minister of Labour, but when these cases are taken to the Attorney General of Canada, that is the Minister of Justice, he acts jointly with me. My hon. friend says we should have a law similar in its effects to the law in the neighbouring republic. I believe in retaliatory measures, we should favour the doctrine of an eye for an eye, a tooth for a tooth. The Alien Labour law, we must all admit was less workable a few years ago than it appears to be to-day. Some years ago, as my hon. friend knows from his professional experience, the only remedy that the parties had was to address themselves to the Attorney General for Canada, the Minister of Justice, and obtain his good pleasure for the fiat. Since then, under the administration of the Department of Labour by Sir William Mulock, and of the Justice Department by Sir Charles Fitzpatrick, the present Chief Justice of Canada, the law has been so amended as to give the parties the right to obtain a fiat from the Attorney General of each province or from a judge of the Superior Court or a county court judge. The penalty also has been modified in degree. Some years ago the only penalty which could be imposed was a fine of $1,000, and in the application of the law, as the penalty was so severe and the law by its nature so drastic, the judges were inclined to be conservative in its application and in 99 cases out of 100 would give the benefit of the doubt to the defendant. An amendment to the law has been adopted by which the judges are at liberty to impose a penalty ranging from $50 to $1,000. I admit with my hon. friend that we might go a step farther and make the penalty more severe in this sense, that if the penalty is not paid and if the deportation does not take place we might be more drastic and severe. However, as this is something of an international character, for in fact our law applies only to the United States and such United States possessions as are near our boundary, I will not say what other more drastic penalty we will impose, but my hon. friend can surmise what it is. I know that from his district the department has been notified on two occasions, first by the Sault Ste. Marie labour element and then by the Port Arthur people, of trouble under the existing law. We received a message in April, I think, from the mayor of Port Arthur complaining that labourers were imported from Duluth whilst there were plenty of people in Port Arthur to do the work. We immediately put ourselves into communication with the parties and since then the matter has been dropped. At all events the department will be always disposed to help those who will invoke the law. I may say it has not been a dead letter on the statute-book. If my hon. friend will read the report of the Department of Labour for this year he will find a series of cases reported there. This Alien Labour law, as he stated a moment ago, being retaliatory in its nature, has been subjected to many checks by the courts. For instance we all remember the famous judgment of Mr. Justice Anglin. During the period between the judgment of Mr. Justice Anglin and the final judgment of the Privy Council reversing his decision, nearly all cases were stopped. However, since that time the law has been applied and judgments have been rendered which show the law is not ineffective and has been applied in many instances. I have no doubt the remarks of my hon. friend which have been made in a fair spirit will have weight. I shall communicate with the Minister of Justice and see what better provision can be made to render the law more pliable and more effective in protecting our own people against the alien labour.

Charges of management—offices of the Assistant Receivers General—

Toronto	$7,800
Montreal	5,700
Halifax	8,800
St. John	7,700
Winnipeg	7,000
Victoria	5,900
Charlottetown	6,000

Mr. FIELDING. It will be noticed that there are a few decreases which are largely due to readjustments of the offices, as where an old officer passes away and in the rearrangement of the office the expense is somewhat less. The only item of increase of any importance is in regard to the expense of printing Dominion notes. That will probably increase every year with the increased volume of business and with the desire that has been expressed by members on both sides for cleaner currency.

Superintendent of Insurance, to meet expenses in connection with this service, $23,450.

Mr. FIELDING. The salary of the superintendent is fixed by statute and we are proposing a resolution concerning it. This is for the ordinary expense of the department which is enlarging all the time in a small degree.

Some resolutions reported.

RELIGIOUS FANATICS IN MANITOBA.

Mr. FIELDING moved the adjournment of the House.

Mr. J. D. REID. I wish to draw the attention of the hon. Minister of Finance to

an article which appeared in the papers to-day, which reads as follows:

Pierson, Manitoba, July 6.—A horde of religious fanatics struck town on Saturday. They were all armed with Winchester rifles and revolvers, and knives, and declared they would not abide by the laws of sinful man, and would shoot anybody that interfered with them. The leader of the gang, a grizzly-faced looking veteran, claimed he was 'Jesus Christ,' and that he was going to Yorkton to look after the Doukhobors there, who were wandering without a leader. They were a very tattered looking outfit, as if they had tramped a long distance, and claimed to have come from Missouri, where they were persecuted by the United States authorities.

Constable Macfarlane, of the Manitoba Mounted Police, who happened to be here, had rather a warm time. On his demanding from them where they were going, and advancing towards them, they pointed their rifles at him, and told him if he made another step they would fire.

After a harangue from the leader, to which the rest joined in with loud 'Amen,' they proceeded west. It was not thought wise to interfere with them.

I would like to ask the hon. minister if this matter has been drawn to the attention of the government, and if they are allowing these people to come into our country from the United States without taking any action?

Mr. FIELDING. I have no information on the subject. Possibly some of my colleagues may have received some information, but I think we might trust matters of that kind to the tender mercies of the Attorney General of Manitoba.

Mr. SAM. HUGHES. I think these men will be found not to be of the better class of American citizens, but what I call galvanized Yankee anarchists, like the men who were cutting each others' throats a short time ago in the neighbourhood of Medicine Hat. The United States immigrants who come into the country will not be found to be of that type at all.

Mr. J. D. REID. In a case of that kind does the Dominion government not interfere, but leave it entirely in the hands of the local government?

Mr. FIELDING. I speak on the general principle that the preservation of law and order is in the hands of the local authorities.

ACCIDENT TO THE CORNWALL CANAL.

Hon. G. P. GRAHAM. It will be of interest to the House to know that in all probability the Cornwall canal will be open for navigation on Saturday next.

BUSINESS OF THE HOUSE.

Mr. TAYLOR. What business will be taken up to-morrow?

Mr. FIELDING. The Prime Minister intimated to me early in the evening that it had been arranged that what is called the Hodgins matter would be taken up in the morning, but I have been informed quite recently that some hon. gentlemen who are anxious to discuss that matter had arranged that it would not come on until the afternoon. We may assume that either that or the Civil Service Bill will be taken up in the morning and both during the day, and, if we reach Supply, we will take up the estimates of the Minister of Railways and Canals.

Motion agreed to, and House adjourned at 11.40 p.m.

HOUSE OF COMMONS.

TUESDAY, July 7, 1908.

The SPEAKER took the Chair at Eleven o'clock.

SALARY OF SUPERINTENDENT OF INSURANCE.

Sir WILFRID LAURIER moved that the House go into Committee of the Whole to-morrow to consider the following proposed resolution:

Resolved, that it is expedient to provide that the Superintendent of Insurance be paid such salary, not exceeding five thousand dollars per annum, as the Governor in Council may from time to time fix and determine.

He said: His Excellency having been informed of the subject matter of this resolution recommends it to the favourable consideration of the House.

Motion agreed to.

BOUNTY ON CRUDE PETROLEUM.

Sir WILFRID LAURIER moved that the House go into Committee of the Whole to-morrow to consider the following proposed resolution:

Resolved, that it is expedient to provide that the bounty of one-half cent per imperial gallon payable on crude petroleum from Canadian wells authorized by chapter 28 of the Act of 1904 shall apply also to crude petroleum produced from shales or other substances mined in Canada.

He said: His Excellency having been informed of the subject matter of this resolution recommends it to the favourable consideration of the House.

Motion agreed to.

THE ALL-RED LINE.

Sir WILFRID LAURIER. I intended to move this morning the resolutions of which notice has been given, but other arrangements have been made. I will move them to-morrow.

GOVERNMENT BUSINESS.

Sir WILFRID LAURIER. I have to inform the House that the measures the government intend to introduce are the following. The Supplementary Estimates are ready, and will be brought down in a day or two. There will be railway subsidies, the Quebec Bridge legislation, some legislation necessitated by the creation of new courts in Northern Ontario, and some resolutions for extending the boundaries for the provinces of Manitoba, Ontario and Quebec. These resolutions will be brought down to-day, it is expected.

Mr. R. L. BORDEN. Of course any early date in the present stage of the session is a pretty late date. I trust all these measures will be brought down at the earliest possible moment.

Sir WILFRID LAURIER. I stated that. The estimates which I said would be brought down at a very early date, are ready.

CIVIL SERVICE ACT—AMENDMENT.

House again in committee on Bill (No. 189) to amend the Civil Service Act.—Mr. Fisher.

Hon. SYDNEY FISHER (Minister of Agriculture). The third section in the reprinted Bill requires to be changed. The amendment proposed has been printed, and I think is in the hands of members. The proposal is to strike out section 3 in the reprinted Bill and substitute the following:

3. The Civil Service shall be divided into two divisions, namely, the inside service which shall consist of that part of the public service in or under the several departments of the executive government of Canada and in the offices of the Auditor General, the clerk of the Privy Council and the Governor General's Secretary, employed at the city of Ottawa, or at the experimental farm station or the Dominion astronomical observatory, near Ottawa, but not including the officers, clerks and employees employed at Ottawa in the second or outside departmental division as defined by paragraph (b) of section 4 of the Civil Service Act or in any office of a purely local character; and

The outside service which shall consist of the rest of the public service.

2. So much of this Act and of the Civil Service Act as relates to appointment, classification, salaries and promotions shall apply to the permanent officers, clerks and employees of both Houses of parliament and of the library of parliament.

This amendment is in line with what I think was the consensus of opinion in the general discussion upon this clause. The practical difference is that the general Act does not apply to the permanent officers, the clerks and employees of both Houses of parliament, and of the library of parliament, but only such parts of it apply to them as relate to appointments, classification, salary and promotion. There are other slight changes which were suggested by the Department of Justice to make it clear that the inside service does not include the outside service under the old Act in Ottawa.

Mr. FOSTER. What is subsection b of section 4?

Mr. FISHER. That is the definition of the outside service.

Mr. R. L. BORDEN. What is the reason for changing the word 'civil' to the word 'public' where public service is used?

Mr. FISHER. I found in discussing the matter, what I did not realize before, that the words 'civil service,' are used in a restricted sense, and only include those under the old Act who are defined to be civil servants.

Mr. R. L. BORDEN. There is provision, is there not, that the operative sections of the statute shall not apply to the outside service?

Mr. FISHER. Yes.

Mr. R. L. BORDEN. Then there is this special provision that a certain portion of the Civil Service Act shall apply to the permanent officers, clerks and employees of parliament?

Mr. FISHER. Yes.

Mr. R. L. BORDEN. The minister intends then that section 2 shall operate as concerns all exceptions to the rest of the Act which declares that the outside service shall not be included in the operation of the sections of this statute?

Mr. FISHER. That is what I should say.

Mr. FOSTER. Should the word be 'or' or 'and' after 'the city of Ottawa,' in the fifth line of the amendment? It seems to me that it should be 'and.'

Mr. FISHER. I think the word 'or' includes them all.

Mr. FOSTER. 'At the city of Ottawa' or at the 'Experimental Farm.'

Mr. FISHER. They are not in the city of Ottawa.

Mr. CLEMENTS. While there is provision made for the deputy ministers, what provision was made for the classification, for instance, of the Superintendent of Immigration? I know that personally he has a very heavy department and a great deal of work.

Mr. FISHER. Of course, I could not state positively because he is in the Department of the Interior, but I should consider that he would come under subdivision (a) of the first division, in which subdivision the salary ranges from $2,800 to $4,000. I know, as a matter of fact, that he is getting

$3,000 at present. He would be eligible to rise to $4,000.

Section, as amended, agreed to.

Mr. FISHER. I have also an amendment to section 13.

Mr. FOSTER. Before going to section 13 would the minister look at sections 6 and 7? You will remember that the question was raised as to the method of classification. Here the classification seems to be entirely mechanical. It is based on what the present salary is, but it would seem to me that a better rule would be that the classification should be according to the duties rather than to the accidental range of salaries. The duties of the office and the capabilities of the clerk to perform those duties ought to be the proper basis of classification and to make it simply a matter of salary works a great deal of injustice. Practical injustice will be done to a great many in this regard. The government found a civil service in 1896, when it came into power and it has been administering affairs from that time up to this. A great many new clerks have been put in and it is well known that in the matter of salary many have been advanced away over and above the older clerks. These older clerks have been doing efficient work from 1896 up to the present and they have been passed over, while many new men have been brought in and inordinately advanced, as it might be contended. The older clerks are left entirely out whilst the newcomer, by having, from one circumstance or another, his salary advanced largely from time to time will be graded under the new Civil Service Act above the older officers. I think there is a considerable portion of the civil service which may be unjustly dealt with in that respect.

Mr. FISHER. I appreciate what my hon. friend is aiming at, but I do not really see how it can be avoided in any way. Section 8 provides for an organization declaring the standing and classes of the officers in the service and their standing in the classification. This gives an opportunity, where a man is doing a high class of work, to put him in the clasification which that work would entitle him to be in. I do not see how we can very well declare by the Act that a certain work that a man may be doing shall entitle him to be put in a certain division.

Mr. FOSTER. You could not declare that by the Act, but you could declare by the Act that the classification should be made according to the duties of the office and then the grading authority would have a basis of principle upon which to work. Here, you lay it down as the salary.

Mr. FISHER. Section 6 provides for really a transference of the present staff into new divisions, and I do not see how my hon. friend's suggestion could be adopted unless every individual piece of work were specified. I do not see how that would avail unless every individual piece of work was specified. I had supposed that section 8 would provide for that. Section 8 provides for an order in council being passed defining the organization of the department and my own interpretation of that was that in that order in council certain work would be declared to be done by such an officer in such and such a subdivision of such and such a division of the general classification. Then if that work was being done today by a certain officer I take it that that individual would continue to do that work, and that that work would be put into that classification and that place. I do not see how it could be done in any other way The passage of the present clerks into the new classifications seems to be necessarily a matter of their salaries for the time being, that is their class. My hon. friend is aware that as a general rule important work ought to be done by clerks of a class which is receiving pay commensurate to the importance of the work. That does not always occur, I grant you. I have in my own mind an instance where a young man who has been in the service only a short time and who is only a junior second class clerk is doing far more important work than a first class clerk in my department. It is wrong but the first class clerk was a junior and crept up until he is now a first class clerk. Really his work could be done by a junior clerk, he is not capable of doing important work. If I gave him responsible work to do he would simply fall down and the work would not be done. There are instances of that but I do not think they are common and I do not see how we could accomplish what my hon. friend suggests.

Mr. BLAIN. The outside service is defined in the Bill as introduced in these words:

The outside service shall consist of the rest of the civil service.

The amendment proposed is:

The outside service shall consist of the rest of the public service.

I have heard the minister's explanation of this change which I understand was suggested by the Justice Department. It is a matter which should receive some consideration by the minister before its adoption. There will be a great deal of trouble in the classification of the civil service under this Bill. There is some disappointment that the outside service has not been taken in. There is provision of course for taking in the outside service at some future time by order in council and I rather think there will be some trouble about classification, there must be a pronouncement upon it by the new Board of Commissioners who are necessarily new men at this work. It may

cause trouble and inflict hardship on good officials in this House. I rather think it would be better for the minister to give it further consideration before asking the committee to adopt it.

Mr. FISHER. I cannot conceive of any such trouble as my hon. friend alludes to. This change has not been made without consideration and it applies to the public service. The civil service has been a restricted term and the intention is to include all employees of the government, whether in the inside or outside service, for the purposes of this Act, I do not see where any danger can occur.

Mr. CONMEE. In the classification of the civil servants who are being brought under this Act the minister has said that the determining factor will be their present salaries, what consideration will be given to the merits and abilities of the several clerks in their classification and promotion ?

Mr. FISHER. Section 6 provides for the present clerks being put in the new classification according to their standing to-day.

Mr. CONMEE. I asked whether in that regard salary alone or record and ability will be considered in making the classification. I understand it is not to be a competitive test.

Mr. FISHER. As a matter of fact if a clerk is to-day a first class clerk, whatever he is doing, he will go into a certain subdivision. If he is a second class clerk he will go into another subdivision. It is not a question of his work or anything but his position in the service.

Mr. FOSTER. I would call attention to subdivision 4 of section 6. You will remember my contention was that a large number of temporary clerks who had not passed any examination at all would be by that section drafted into the civil service, because whilst it is a rule that civil government contingencies should only be used for those who have passed the examination it is also a fact that quite a large number are being paid out of civil government contingencies who have not passed the civil service examination.

Mr. FISHER. I asked the Auditor General that question and his answer is :

With reference to those charged to civil government contingencies who have not passed the examination I find there are four in the Finance Department and one in the Governor General's Secretary's, five in all.

Mr. FOSTER. Is that all ?

Mr. FISHER. That is what the Auditor General informs me.

Mr. FOSTER. My information goes a good deal farther than that.

Mr. FISHER. I asked the Auditor General to refer to the hon. gentleman's questions in the House and send me the facts.

Mr. BLAIN.

Mr. FOSTER. I think it would be an injustice to place any who have not passed the examination, by the mere fact that they have been employed contrary to the Act as we might say, into the civil service permanently. Any such clerks should pass the civil service examination before they are allowed to enter the permanent service.

Mr. FISHER. In view of the fact that we have been pretty constantly for many years admitting people into the service contrary to the Civil Service Act, I do not think it is worth while for the sake of these five to make any amendment to the Act.

Mr. R. L. BORDEN. Coming back to section 3, I am not very well satisfied, so far as my personal opinion goes, with the present form of it. The expression 'civil service' was defined by the Civil Service Act and therefore had a definite meaning. The expression 'public service' is not defined either by this Act or by the Civil Service Act. The exact meaning will have to be determined by some proper authority at some time if any question arises respecting that meaning and it seems to me that questions might very readily arise. Then, so far the employees of the Senate, the House of Commons and the Libary are concerned, I am no more in favour of placing them in the outside service than I was in favour of placing them in the inside service. The Governor in Council could at any time include them by order in council in the inside service, and make every section of the Act apply to them.

Mr. FISHER. I would like to interrupt my hon. friend to say that by another amendment later on I propose to provide that whenever the Governor in Council may do anything, the Senate as to the officers of the Senate, the House as to the officers of the House, and both Houses as to the officers of the Library, would have to act.

Mr. R. L. BORDEN. That would perhaps answer that objection, although I think we shall be obliged to pay a little attention to section 47 as proposed to be amended. Then I would like to express once more my own personal opinion that the best way to deal with the officials of both Houses and the officials of the Library would be to provide in the statutes that each House could bring them in when it saw fit to the extent it saw fit.

Mr. FISHER. I think the amendment I am proposing does that.

Mr. R. L. BORDEN. If it does, then my criticism falls to the ground.

Mr. FISHER. I think practically I am carrying out the suggestion of the hon. gentleman.

Mr. R. L. BORDEN. If it carries that out, I ought to be fully satisfied, and I will say no more about it until we come to section 47.

Mr. FOSTER. The minister will remember that on section 10 I proposed that there should be some extension of (b), and I thought the minister was favourably inclined to that. The suggestion I made was to add these words

Of its own motion to investigate and report upon all matters relating to the enforcement and effects of the Civil Service Act or of any regulations made thereunder.

That would cover subjects on which the commission, with their constant working and familiarity with them, should be at full liberty to look into and express their opinion upon at any time; so that the government, and especially the House, might have the benefit of their experience and recommendations.

Mr. FISHER. I do not know the whole bearings of what my hon. friend suggests. I would rather be disposed to suggest that the clause be left as it is, and if we find that there is any restriction on the work of the commission such as my hon. friend seems to fear, it will be very easy to amend that so as to give them power, which may be more clearly in our mind when they make their report. We shall probably appoint the commission immediately after the Act comes into force, and if they indicate in their report in any way that they want further power, it will be very easy on their suggestion to make the necessary amendments.

Mr. FOSTER. I do not think they would make any suggestion unless they had the power given them here. I do not think they would go outside of their legal power. What I wanted to give them was a basis for exercising that power. Under this section they would have power to look into any violation of the Act which might be brought to their notice or which they might notice themselves, but they could not go any further. We ought to give them the right to express their views on that matter.

Mr. FISHER. We might go on with another section in the meantime, and I will consider that.

Mr. CONMEE. Is it intended that the commission shall have power to regulate discipline?

Mr. FISHER. No. I think the question of discipline in the departments would have to be left to the officers of the departments. I do not think it would be a good thing for an outside body to go in and discipline a department. For instance, the authority of a deputy minister over the clerks under him would not be complete if the commission, who could not know the personnel or the duties of the officers as well as the deputy minister, could exercise discipline in the department. I think it would be very detrimental indeed.

Mr. CONMEE. There is the other view, that there might be partiality in the department in the assignment of work. The English commission has power to regulate discipline. One of the objects of appointing a commission is to improve the service in the departments. Otherwise the head of the department might, in the interest of his friends, do many things not in the public interest. If my information be right, that sort of thing has often been done in times gone by.

Mr. FOSTER. I would be very doubtful about authorizing the commission to discipline any branch of the service. The commission should be given full powers to make suggestions and to make any examination they consider necessary before making suggestions, and then throw the responsibility for action on the minister and parliament. That is as far as we could go, and I have been labouring with the minister to let us go that far. We have gained a little step. The commission can look into any violation of the rules and duties and report, and it will be for the minister to act, subject to his responsibility to this House. But for the commission to go into a department and attempt to discipline A, B or C would derogate entirely from the control and foremanship of the deputy minister who ought to be a vital force. I agree with my hon. friend that under most human conditions there will be occasions of favouritism probably, but those will have to be watched by the minister. If they are gross, they can be pointed out by the commission and the minister held responsible.

Mr. CONMEE. If my information be correct, there may be a good deal more onerous duties imposed on one officer than another who may receive less pay.

Mr. FOSTER. That is true.

Mr. CONMEE. Of course the commission have the power to report, but considering the hon. gentleman's amendment as far as I can grasp it, I do not think it goes as far as the proposition he submits.

Mr. FOSTER. My trouble is I cannot get the minister to go any further. If I could get him to go that far, I would be satisfied for the present.

Mr. FISHER. In any case such as the hon. gentleman speaks of, the head of the department might ask the commission to make a report.

Mr. CONMEE. My object is not to leave it to the head of the department. I think the head of the department requires discipline just as much as some of the officers under him.

Mr. FOSTER. A good deal more.

Mr. FISHER. He is amenable to parliament.

Mr. CONMEE. It is a pretty long road to drag him through the operation of parliament.

Mr. FOSTER. It would not be if the members supporting the government did their duty.

Mr. CONMEE. I was assuming, when I made my reply to the minister, that the members of the government were doing their whole duty. But even then it is impossible to reach the deputy head.

On section 13—competitive admission examination.

Mr. FISHER. I want to move an amendment that after the word 'to' in line 10 the words 'position in' be added; and after the word 'service' in line 11, the words 'under that of the deputy head' shall be added. There seems to be a doubt as to whether the entrance to the position of deputy head will not be by competitive examination. I wish to make it clear that it will not.

Mr. FOSTER I do not know whether it is practicable or not, but I would almost like to have seen the whole service open to a deserving person.

Mr. FISHER. My hon. friend would not suggest that the appointment of deputy minister should be opened to competitive examination.

Mr. FOSTER. Perhaps not.

Section as amended agreed to.

Mr. FISHER moved that section 24 and 25 be struck out.

Mr. FOSTER. I would like to have a word to say about sections 21 and 22. I was not here when they were discussed. Section 21 reads:

If the deputy head reports that the knowledge and ability requisite for the position are wholly or in part professional, technical or otherwise peculiar, the Governor in Council, upon the recommendation of the head of the department, based on the report of the deputy head, may appoint a person to the position without examination and without reference to the age limit, provided the said person obtains from the commission a certificate, given upon evidence satisfactory to it, that he possesses the requisite knowledge and ability and is duly qualified as to health, character and habits.

Mr. DEPUTY SPEAKER. It is moved that section 21 be amended by inserting after the word 'report' in line 29 the words 'in writing.'

Mr. FISHER. It was understood that wherever the deputy minister was required to make a report, the words 'in writing' would be put into the Act all through. In the reprint that has not always been done. I suggest that the same words should be added in sections 23 and 28.

Mr. FISHER.

Mr. FOSTER. We have a large number of persons in the department who might be called technical or professional. In fact the definition of the first three divisions is technical or professional or executive officers. This opens a very wide door. If a deputy head reports that the knowledge and ability requisite for the position are 'wholly or in part professional, technical or otherwise peculiar.' What meaning might be given to that I do not know. I should think that technical or professional ought to be sufficiently wide. To add to that 'or otherwise peculiar' opens up a very wide debatable field. Suppose it is brought down to professional or technical, that gives a very large power of nomination and patronage to the government and you have a great many men in the service whose qualifications are partly or wholly technical or professional, and you may thus nullify to a considerable extent the Civil Service Act. Whenever the departmental head wants to get in a certain person, if he has at all professional or technical abilities, it will be quite easy to bring him in under this report without any examination or intervention by the commission. I should think in the first place that the words 'or otherwise peculiar' might be left out and the discretion given by the section limited to the cases of professional and technical. In the second place it is worth while considering whether you should not insert there the qualifying clause 'and which, in the opinion of the commission, cannot be provided for under the preceding sections of this Act.' There is really no case which cannot be met under the preceding sections of the Act. If you want a packer, the commission can examine on packers, duties. If you want a professional man, the commission can examine on professional qualifications. In such cases, the patronage is eliminated, and this is the object of the Civil Service Act. If you allow this to go in, the patronage is not eliminated, and there is full power of nomination given to the Crown and to the minister who represents the department. But there might be, occasionally, some cases in which the commissioners themselves might prefer that an examination should not be held. Let that be left to the good sense of the commissioners and not with the whim or caprice, or it may be, even well founded opinion, of the minister. If the opinion is reasonable, the commissioners can be depended upon to agree with it. But if it is a case of patronage and ought not, in good reason, to be adopted, the commissioners will say so. But when you do not interpose the commission, it becomes mere nomination and patronage. When you have the competitive examination, it is not nomination nor is it patronage, because the list is there, prepared, not by the minister or his deputy but by the commission under

its method of operation, and from that list the appointee is to be selected. I venture to say that in nine hundred and ninety-nine cases out of a thousand, under these conditions, the commissioners would be able to supply the man the department requires, and abuses would be avoided.

Mr. FISHER. All the Civil Service Acts have had a clause of this kind. The English civil service regulations have such a clause; not exactly in the same words :

Mr FOSTER. No the commission have power.

Mr. FISHER. The word 'peculiar' is in the provision of the English law and I took this right out of the English Act.

Mr. FOSTER. That may be with regard to 'peculiar.'

Mr. FISHER. That is what I am talking about. With regard to the word 'peculiar' it is there and the clause is taken verbatim. In the American regulations exactly the same power is given. In the English regulations the appointing power may take a person of these qualincations from outside, and my hon. friend, I am satisfied, is absolutely wrong in saying that the commission regulates it. I am certain I speak correctly of the English system. In regard to the American system, numberless appointments have been made under an exactly similar provision. In this clause we go further than either the English or Americans do, for we provide that the appointee must have a certificate of qualification from the commission. Now, the hon. gentleman (Mr. Foster) would limit 'peculiar' qualifications to professional and technical. But there are officers whose qualifications are 'peculiar' and yet could hardly be called either 'technical' or 'professional.' For instance, take one to be employed in a library. There is a regular system of training librarians, and some of our universities have courses of study in that line. But the qualifications so acquired could hardly be designated as technical or profession, because there is no profession of librarians yet. Take another case : My hon. friend the Minister of Customs may require an appraiser, a man peculiarly versed—and I used the words advisedly 'peculiarly versed'—in a particular class of goods. The qualifications of such a man would not be professional or technical——

Mr. FOSTER. I think they would be technical.

Mr. FISHER. It seems to me that in the interpretation of the word they would not be technical. I am satisfied—I know— that in the English service such words are used to meet such cases as I have indicated, and I have no hesitation in saying that it is necessary that a provision of this kind must be inserted in any Civil Service Act. It is especially wise when we find that, as in this clause, it is provided that the commission must give a certificate of qualification on grounds which they think best, whether by examination or otherwise, before an appointment is made. I think we have safeguarded it as much as possible, consistent with the successful working of the provision.

Mr. FOSTER. In the British service it works this way : Where a case of this kind arises there is a request for the kind of officer required ; then the Civil Service Commission may, if it thinks proper, wholly or partially dispense with the written examination and give their certificate on qualification.

Mr. FISHER. That is what we do.

Mr. FOSTER. There it is left to the Civil Service Commission to say whether they shall wholly or partially dispense with the examination.

Mr. FISHER. That is the case here ; we leave it with the commission to give its certificate 'upon evidence satisfactory to it.'

Mr. FOSTER. But it does not leave it to the commission to examine partially or wholly ; it is prohibited from examining, but still is asked to give a certificate.

Mr. FISHER. Yes—'upon evidence satisfactory to it.' It is absolutely within its own control how it shall get its evidence.

Mr. FOSTER. I do not think you can force the language that way. It does not mean that they can examine the person.

Mr. FISHER. I think so.

Mr. FOSTER. I would have no objection to it if it were simply to leave the matter to the commission to dispense with the examination where they think reasonable.

Mr. FISHER. I am willing that this should be made to read the same as section 26. I would move that the words 'given upon evidence satisfactory to it' be struck out and these words substituted : 'to be given with or without examination as is determined by the regulations of the commission.'

Section, as amended, agreed to.

On section 22—appointment of messengers, porters, sorters and packers.

Mr. FOSTER. I consider this section is a very faulty portion of the Act. Appointments to these positions, and to such other positions in the lower grades as are determined by the Governor in Council, may be made by the Governor in Council on the recommendation of the head of the department. That absolutely gives to the government the power of nomination.

Mr. FISHER. With the condition that the appointees have to have a certificate of qualification from the commission.

Mr. FOSTER. But with that condition it gives absolute power of nomination to the government. That is a power that the English civil service reformers in 1855 started out to fight against and to put down. That was the dominant evil, and the basis of the proposed legislation to-day is to do away, as far as possible, with nomination by the Crown, that is, nomination by the minister, or by members of parliament supporting the minister. Now, take this large class of appointees, including messengers, porters, sorters, packers and such other positions in the lower grades as are determined by the Governor in Council. That is a very important part of the public service, and you absolutely shut out from it the beneficent features of this legislation. You fill these positions entirely at the nomination of the party, and you exclude the Canadian citizen from the free right of entrance into that part of the service. I think that is a great blemish in the minister's Act, as well as a great trouble to everybody who hates the power of patronage, and believes that in the end it is not beneficial, even from a party point of view. Take my hon. friend the member for Ottawa, does he look upon the patronage power as he finds it developed in his daily life as a desirable thing? Are his hours his own? Is he not pestered almost unbearably by applicants of every kind for office? Is not nine-tenths of his public time taken up with looking after, or pretending to look after, matters of patronage. Now, if he proposes to sit after the next election for Ottawa, does he not see what he is storing up for himself by supporting the minister in passing this section? And does he not see what great trouble he would avoid if he supported me in inducing the minister to give up this power of patronage? There are hundreds and hundreds of this class, and with every one of them it will simply be pitching upon the representative, the representative pitching upon the minister, and the minister and the representative fighting it out so as to get the best results they can from the party point of view. In Great Britain it is not so, in the United States it is not so; they have put these positions entirely out of the power of nomination and patronage, and it can be done here in some such way as I will suggest. I will read what I have drawn up:

After the words 'deputy head' insert 'and such appointments shall be made in order of merit from a list of successful applicants determined by the commission through examination and inquiry, to be provided for under regulations made by the commission and approved by the Governor in Council.

That allows the commissioners to proceed upon proper businesslike plans and, after competition and examination, to prepare a list, and the applicants in their order of merit shall be placed upon that list. Then when the minister requires such an one all he has to do is to apply to the commissioners, and from that list they select the person who is fitted for the kind of work the minister requires, according to his order of merit in that particular line. Then the member for Ottawa has nothing to do but to say to the applicant: That is all in the hands of the commissioners. Show your capability to go on that list, and you will get fair and equal treatment.

Mr. BERGERON. But how can he get votes?

Mr. FOSTER. I venture to say that the experience of every member is that he has lost more votes than he has gained.

Mr. FISHER. I do not think I can accept that proposition. I agree that the idea of competitive examination must be extended to all entrants to the civil service. But at the same time such a proposition as my hon. friend outlines there is one which would have to be worked out with the greatest care, because it does not mean an ordinary competitive examination.

Mr. FOSTER. I did not say it did, and I would not have it so.

Mr. FISHER. He would not have it so; in other words, he wishes to provide a machinery which I should think, from his description of it, would be a very unworkable one. My hon. friend wants to put that into the statute now so that in future the commission shall do such a thing whether they think they can make regulations to accomplish it or not. It is a continuation of the reform which, if the commission recommends it, may be adopted. But until it is in a complete form before the House, and before those who are responsible for the working of this Act, I do not think it would be advisable to accept it. I take direct issue with my hon. friend on that point. I am as desirous as he is of taking away from the government and from members of parliament this class of patronage. I appreciate it perhaps more than my hon. friend does, because my experience has been much more recent than his. The whole object of this Bill is in that direction, but at the same time I do not want to undertake to do something the successful working out of which I cannot perceive. What my hon. friend proposes would require a great deal more consideration than can be given to it here on the reading of the amendment before the committee, and until the commission has been consulted, have discussed it and have outlined some scheme after their experience and observation of the working of the Act, I would not undertake to accept it.

Mr. FOSTER. I cannot follow the minister in his reasoning. What he proposes

as a possibility is just exactly what is indicated in this amendment. It will be for the commission, in consultation with the Governor in Council, to work out a proper scheme. If the commission are able to do it for third-class clerks and for the writer class——

Mr. FISHER. They have a clear cut way of doing that by competitive examination.

Mr. FOSTER. But it is infinitely more difficult for the commissioners to prepare the right kind of examination, to make it practical and effective and to keep it from being academic for the other grades of clerks than it is to prepare forms of examination for a messenger, packer or sorter. This is of the most elementary description. What Great Britain and the United States have carried out without the least trouble my hon. friend could work out through the commission here. The difficulty with the minister is that he does not want to give up the patronage.

Mr. FISHER. No, it is not.

Mr. FOSTER. And he is putting a blot upon his whole Civil Service Act when he takes hundreds of public positions on one hand and says to the people: You shall not have your entrance into this part of the public service without a competitive examination, and then says: We shall keep the nomination and patronage in respect to another large branch of the public service in our own hands. Why not cut it off when the minister is at the process and has his knife already into the evil which he has so strongly denounced? Why not go to the whole length especially as it is the easiest portion of the length to go? The minister says that there is no time to consider it now. No, because legislation is chucked into the House in the seventh month of the session, we have not time to do anything. We are worn out any way. However, I will move the amendment.

Mr. BERGERON. I would like to ask my hon. friend from North Toronto (Mr. Foster) if the nomination of a page would have to be made by the Governor in Council?

Mr. FOSTER. If the proposed resolution is adopted the House shall exercise just the same authority it now exercises in connection with its officers. There will be no change at all.

Mr. BERGERON. I understand that it says that the nomination of an officer of the House of Commons shall be through the clerk, or the deputy head or the Speaker, and that it will have to be done by the Governor in Council. Where is the difference?

Mr. FISHER. We are coming to a clause which I am proposing to insert in the Act to define that everything that is done under this Act where it relates to the House of Commons shall be done by the House. In a department the Governor in Council can make appointments, but it is provided that appointments to the staff of the House of Commons or the Senate shall be outside of the Governor in Council.

Mr. BERGERON. Then there will be no change?

Mr. FISHER. No. With regard to what my hon. friend (Mr. Foster) says about my desire to retain the patronage, I think that is an entirely unfair statement. I do not wish to accept this amendment because I do not think it is feasible to carry out such a competitive examination as applies to the rest of the service. Where it is cut and dried work it can be carried out with definite results, but in such a case as this it would necessarily be very loose and I do not consider that it would work. Therefore, I am not prepared to accept the amendment. The statement of the hon. gentleman that my reason for not accepting it is that I want to keep the patronage, is not correct.

Amendment (Mr. Foster) negatived.

On section 21—professional and specially qualified officers.

Mr. R. L. BORDEN. It seems to me that the word 'competitive' should be placed before the word 'examination' in the 30th line. You have 'without examination' in one place and 'with or without' in the other.

Mr. FISHER. I will accept that amendment.

Mr. R. L. BORDEN. That is evidently the intention.

Mr. FISHER. Yes.

Section as amended agreed to.

On section 22—messengers, packers, &c.

Mr. FISHER. I would also suggest in section 22 that we make the same change as was made in section 21 as to the way in which the certificate of the commission should be given. In lines 41 and 42, I would move that the words 'given upon evidence satisfactory to it' be stricken out and that the words 'to be given with or without examination as is determined by the regulations of the commission' be substituted.

Section as amended agreed to.

On section 23—temporary clerks.

Mr. FOSTER. Then, may I suggest to my hon. friend that he also carry that out in section 23?

Mr. FISHER. Yes. I propose that in subsection 2 of section 23 we shall also strike out the words 'given upon evidence satisfactory to it' and substitute the words 'to be given with or without examination as

is determined by the regulations of the commission.'

Section as amended agreed to.

Sections 24 and 25 reconsidered.

Mr. FISHER. I propose that sections 24 and 25 be struck out altogether.

Motion agreed to.

On section 29—salary of deputy head.

Mr. FISHER. I would ask the committee to now take up section 29. I propose to strike out the words from 'deputy head' down to the word 'parliament,' these words being 'administering a department, and of the clerks of the Senate and House of Commons, and of each of the librarians of parliament.' I find, on the statement of the law clerks, that these words are not needed with the definition of 'deputy head' in the second section of the Act.

Mr. BERGERON. Does this increase the salary of the Speaker too ?

Mr. FISHER. No, the Speaker's salary has nothing to do with the civil service.

Mr. FOSTER. What is the present salary of the clerk of the Senate ?

Mr. FISHER. I think $4,000.

Mr. BERGERON. In the Senate they have a clerk, a deputy clerk and a second deputy clerk, have they not ?

Mr. FISHER. I do not know.

Mr. BERGERON. Mr. Evanturel has been appointed second deputy clerk.

Mr. LEMIEUX. Mr. Evanturel succeeds a previous clerk.

Mr. BERGERON. They have more employees there than we have, but they have not the work or the long hours. We used to have two clerks here but now there is only one. I do not think even if the Senate do appoint them we are called upon to vote the money to pay them.

Mr. FISHER. I think my hon. friend should bring that up in Supply on the items for the Senate legislation.

On section 37—status preserved.

Mr. FISHER. I move to amend this section by adding the following subclause ?

2. Any person (whether permanent or temporary) who is in receipt of the maximum salary, as heretofore established, of the class (permanent or temporary), in which he is then serving shall, on the expiry of one year from his having first been in receipt of such salary, be eligible for the increase of salary provided by this Act.

This clause is taken from the Act of 1903 and simply provides that a clerk who is today at the maximum of his class and consequently could not get an increase, but the maximum of the corresponding subdivision being raised is eligible for an increase, may be paid that increase on the expiry of a year.

Mr. FOSTER. That is the annual increase ?

Mr. FISHER. The maximum being raised he ought to get a statutory increase, but he cannot get it until a year after his last increase.

Mr. R. L. BORDEN. I confess I do not understand the verbiage of this amendment. What have we here to do with 'salaries as heretofore established' ?

Mr. FISHER. I have explained the condition to which this applies. This provides that a civil servant situated as I said shall not be eligible for an increase until a year from the time he received his last increase, to the salary he is now drawing.

Mr. R. L. BORDEN. If that is the intention why does not the amendment say so ? It confuses the matter and I confess I am unable to understand it. I appreciate the intention and I agree with it, but the verbiage is open to objection. I cannot make out whether the word 'then' refers to the past or the future.

Mr. FISHER. I asked the clerk whether that ought not to be 'now,' but he said that the word 'then' was the usual form, meaning at the time when the last increase took place.

Mr. R. L. BORDEN. Then it should read: 'was then receiving.'

Mr. FISHER. The next amendment I propose is to insert the following as section 38, to meet the change in section 3 :

38. Except as herein otherwise provided, the salary of any person placed in the inside service by or under this Act or to whom the provisions thereof are made applicable, shall be that which he is then receiving, and the said salary shall determine his classification, provided that where the amount of the salary is common to two subdivisions or positions, the classification shall be determined by the Governor in Council.

Mr. R. L. BORDEN. I admit that the work of regrading and reclassification is a difficult one in so large a service, with so many interests to be considered, and I presume from the remarks of the minister this morning that it is intended to accomplish something of the reclassification under section 8 of the Bill. I am not clear as to how it can be effectively worked out under the provisions of the Bill as they are presented to the committee. That, however, is more a subject for the consideration of the government, who will have to put the Act into practical working. My own views with regard to it have already been expressed and I need not dwell upon them again. Summarized in a few words they are these : When you do come to re-

classify the service, you must necessarily of course have some regard for the salaries and positions of the various members of the service, but any reclassification or regrading which will be worthy of the name, which will tend to increase the efficiency of the service, must be based on the ability of the different members of the service and their fitness for the particular work to which they are to be assigned. If some regard is not had to these considerations, the reclassification or regrading will be entirely mechanical, and will leave the service, so far as efficiency is concerned, in very much the same position as it is in to-day. In saying this, I do not for one moment desire to minimize the difficulties which lie before any government which will undertake to deal effectively with this question, but if the service is to be increased in efficiency and if the reclassification is to have any beneficial effect, something will have to be done along these lines.

Mr. CONMEE. It seem to me that the board should have some jurisdiction over grading, promotion and regulating discipline. The grading should not be based entirely on existing salaries. In his book on the 'Civil Service in Great Britain,' Dorman B. Eaton in the chapter on 'The Merit System in the Great Departments' says :

The board has the right of promotion and authority for discipline without interference from any other quarter, but cannot increase salaries or expenses. Promotions are for merit. In certain parts of the service they are based on examinations, and in other parts on official records kept in the offices, and almost without exception all the higher places are filled from those below. Personal records of the conduct of all officers are kept by the board. . . . The circumstances of all promotions stand recorded in the official books, and may be referred to in the event of any complaint or inquiry being made into the matter.

As I understand it, the English system recognizes that the public has an interest not only in the efficiency of the service and in the discipline maintained, but in the justice that may be meted out to the various individuals in the service. Not only is the evil of political patronage, so far as it is an evil, to be done away with, but social influence, clerical influence and a great many other kinds of influence, which in my humble opinion are as vicious in principle as the so-called political influence, under the British system the heads of departments are unable to advance by favouritism any person who may be a relative or a friend. The man in the service relies on his ability and his record. Surely it is an injustice that a man should do departments are unable to advance by fadrawing a higher salary. I think the commission ought to have some power to regulate these matters. It would be in the public interest, in the interest of elevating the public service and be simple justice to those who have entered the service on the competitive basis.

Mr. FISHER. This clause only applies to people who are at present in the service. These people have attained the positions they occupy under the present law, and I do not think we should undertake to alter their conditions, even at the recommendation of the commission. When there is a question of promotion these people will have to undergo the necessary examination, but I do not think it would be right to undertake to degrade them now.

Mr. CONMEE. I have no idea whatever that any one should be degraded in the service, but I do think there should be some examination as to whether a man is fit at all to occupy a position in the service. That was done in England when the English Act was brought into force. A large number were discarded there on the ground that they had not sufficient general knowledge or ability to fill any position in the service in the rank in which they were. Men who have been long in the service and who have acquired a certain efficiency should not be disturbed ; but if there are any who are absolutely useless, they should make room for others. I do not say they should be turned on the street. It would be better for the government to give them an annuity now than retain them in the service when they are utterly incompetent. If you are going to introduce the competitive principle, you should start, as the hon. member for Nanaimo (Mr. Ralph Smith) has said, with some regard to that principle in the case of those now in the service.

On section 39—annual increase.

Mr. FOSTER. I would call attention to subsection 4. Is it meant that the increase of $100 annually in the first paragraph is to be conditioned by subsection 4?

Mr. FISHER. No, I think that applies to subsection 3.

Mr. FOSTER. As it reads, it would apply to all.

Mr. FISHER. My hon. friend will notice the thirty-third line, 'and in the case of officers, clerks and other employees of the second and third division to whom a further increase is recommended, accompanied by a certificate of merit from the commission.'

Mr. FOSTER. What you do is omit the first division from the clause requiring that certificate.

Mr. FISHER. The intention is that the usual increase shall be given without a certificate from the commission. It is only the exceptional or merit increase,

and that does not apply to the first division.

Mr. FOSTER. When there is an extraordinary increase in the first division——

Mr. FISHER. There is no provision for that.

Mr. FOSTER. Does the hon. gentleman still persist in the $100 increase for the higher division instead of $50?

Mr. FISHER. I think so.

On section 44,

Mr. FISHER. My hon. friend from North Toronto proposes an amendment which he handed me across the floor. I examined the wording and it did not strike me as satisfactory. I have here an amendment which is more in the form of enactment. His was more in the form of a resolution or declaration. This is the amendment which has been drafted by the Justice Department, and of which I think my hon. friend will approve:

No officer, clerk or employee in the service shall be debarred from voting at any Dominion or provincial election if, under the laws governing the same, he has the right to vote, But every such officer or clerk is prohibited from engaging otherwise in partisan work in connection with such election.

Mr. BLAIN. Under that can an employee take the position of a deputy returning officer?

Mr. FISHER. I do not consider that a partisan position.

Mr. DANIEL. What is the object of the words 'or otherwise'?

Mr. FISHER. Because he is already authorized to vote.

Mr. LENNOX. That is not partisan.

Mr. FISHER. It might be so construed.

Mr. LENNOX. Would the hon. gentleman not consider a returning officer partisan?

Mr. FISHER. No, the work of the deputy returning officer is strictly judicial, and he takes an oath to discharge the duties without partisanship.

Mr. DANIEL. Would it not be an improvement to strike out the words 'or otherwise'?

Mr. FISHER. There would be a doubt as to whether he was allowed to vote?

Mr. DANIEL. It plainly states that he is allowed to vote.

Mr. COCKSHUTT. Is there any penalty in connection with this?

Mr. FISHER. The Criminal Code provides a penalty.

Mr. BLAIN. I understand the minister to state that the position of deputy returning officer is non-partisan.

Mr. FISHER. I do.

Mr. BLAIN. The hon. gentleman emphasizes it. But, if he would read the history of politics in the province of Ontario and especially the history of the party with which he himself is identified, he would learn that it is a strictly partisan position in many respects and in a great many counties in that province. But I am not going to debate that or enter into a discussion about it; I want to express my opinion that it is a serious blunder to regard the position of deputy returning officer as a non-partisan position. I am very much surprised that the minister, when he is making provision to remove the civil service from political influence, should think it his duty to allow these men to occupy the position of deputy returning officer.

Mr. SPROULE. I agree with every word that the hon. member (Mr. Blain) has said. We have had an experience of deputy returning officers for many years past that justifies the strongest suspicion that you cannot put a government employee in that position without the danger that he will act as a partisan. I regard it as a great impropriety to have such a provision in the law.

Mr. CONMEE. It seems to me that an officer of the civil service would be a proper person to appoint as a deputy returning officer. The position is more or less that of a judge, for the deputy returning officer may have to rule upon questions affecting the rights of a voter. If you appoint a responsible officer, for instance, a customs officer or in the provincial field, a deputy sheriff or clerk of the court, in my humble opinion you have the best material to make a deputy returning officer. The hon. gentleman shakes his head. But I have had some experience, and my experience is that that class of men are more apt to discharge fairly the duties of such an office than others of less experience and ability.

Mr. SPROULE. The civil service are under the government; is it in the nature of things that they should act with strict impartiality as between a government candidate and a candidate opposed to the government? It is not human nature and it is unreasonable to expect it. Therefore, a civil servant is by no means the man who would be most likely to act impartially when employed in such a case. The appointment of such men to positions of deputy returning officer by the government that regularly employs them in their official capacity must create a grave suspicion that it is most unlikely that impartiality will be shown in the work of the deputy returning officer.

Mr. TAYLOR. I would ask the minister or the hon. member for Rainy River (Mr. Conmee) to tell me the name of a deputy

returning officer who served in the last election who was not a political friend of the government. He cannot name one. They are all partisans appointed——

Mr. FISHER. There is one in my county, Mr. Nelson Emmerson, deputy returning officer in North Sutton, who is a well known Conservative.

Mr. FIELDING. I do not pretend to recall the names now, but, if a little time were given me, I am sure I could name fifty in Nova Scotia.

Mr. BLAIN. In the discussion the other day the Minister of Finance stated that, in his opinion, 95 per cent of the deputy returning officers appointed belonged to one political party——

Mr. FIELDING. I did not say that.

Mr. BLAIN. The hon. gentleman endorsed the position that I took in making that statement to the House.

Mr. FIELDING. The hon. gentleman is mistaken ; I did not say that.

Mr. FISHER. I think the hon. gentleman is attributing to the Finance Minister (Mr. Fielding) his recollection of something that I said.

Mr. BLAIN. Then, we have it from the Minister of Agriculture (Mr. Fisher). But may I ask the Minister of Finance (Mr. Fielding) if he does not think that 95 per cent of the deputy returning officers in the federal election were of the same stripe of politics?

Mr. FIELDING. In Nova Scotia, emphatically, it is not so.

Mr. BLAIN. What percentage, then ?

Mr. FIELDING. I do not know. In the county of Halifax, which I represented for some years, and I think the same is true of my present constituency, the practice was to appoint gentlemen on both sides of politics. I think that the position taken by the sheriff of the county of Halifax, a gentleman whom I had the honour to appoint, invariably appointed men irrespective of party. And I am confident that the same was true of Nova Scotia generally. I do not speak of the other provinces. We have little or no complaint with us about the deputy returning officers.

Mr. BLAIN. The sheriff is appointed returning officer, and one would gather from what the hon. gentleman says that the sheriff makes the appointments. But it is well known that the deputy returning officers are appointed on the recommendation of the candidate.

Mr. JOHNSTON. That is by your crowd.

Mr. FIELDING. In my own province it is not so. I do not recommend or make nominations of deputy returning officers.

Mr. JOHNSTON. My hon. friend has reference to what transpired in Ottawa lately.

At one o'clock, committee took recess.

Committee resumed at three o'clock.

Mr. BLAIN. In regard to clause 44, I wish to add a few words to what I said before one o'clock. I think that on due consideration the minister will feel that he made a mistake if he allows this Bill to go through with the permission to civil servants to accept positions as deputy returning officers in political elections. I have under my hand several cases with reference to the deputy returning officers taking part in certain elections in the province of Ontario. If my hon. friend will read the history of provincial elections in the province of Ontario, he will come to the conclusion that at this time, when he is trying to reform the civil service, he should add a clause to this Bill that will prohibit civil servants from acting as deputy returning officers. We have had a case in the province of Ontario where a deputy returning officer, at the close of the poll, took the ballot box to his house and kept it there over night, and that ballot box was opened in his house and the ballots tampered with. When the election trial came on they made an effort to subpœna the deputy returning officer to give evidence in that trial, and he could not be found, he had gone to the United States, and I am not sure that he has returned to his home yet. That was in the county of North Grey. I have under my hand a statement showing that a returning officer appointed a deputy in an election in the province of Ontario, who did not reside in Canada at all, he came in and gave another name.

Mr. FISHER. Was he a civil servant ?

Mr. BLAIN. No, he was not, but I am pointing out that under this condition of things the people of Ontario are naturally suspicious of the conduct of deputy returning officers. I am not going into the question very fully, because this is not an opportune time. But I wish to say to my hon. friend, and to say it with all possible emphasis, that when he is endeavouring to frame a Bill that will receive the approval of both sides of this House, he should endeavour to remove the civil service entirely from political partisanship, and to that end he should insert a clause providing that no civil servant shall accept the position of deputy returning officer in any political election. If my hon. friend permits this Bill to go through without such a clause as that, it will not receive the respect that he wishes it to receive, because it will be open to some suspicion, and he himself will be open to suspicion if the allows this Bill to go through without a provision of that kind.

Mr. FISHER. I hold that the position of deputy returning officer is not a partisan

position, whether the deputy is a civil servant or not. But if a civil servant shows partisanship while acting as deputy returning officer, he is violating his oath of office when he accepted the position, and so far as I am concerned, if a civil servant should do that he would be removed from the service, if I had the power. But that is a question that should be dealt with in the Election Act rather than in a Civil Service Act. The suggestion that the civil servant should not be allowed to act as deputy returning officer is one that I cannot accept.

On section 47,

47. Wherever under sections 5, 8, 10 (b), 21, 22, 23, 26, 28 (2), 34, 35, 38 and 39 (4), any action is authorized or directed to be taken by the Governor in Council or by order in council such action with respect to the officers, clerks and employees of the House of Commons or the Senate, shall be taken upon a resolution of the House of Commons or a resolution of the Senate as the case may be, and with respect to the officers, clerks and employees of the library of parliament, and to such other officers, clerks and employees as are under the joint control of both Houses of parliament, shall be taken upon a joint resolution of both Houses of parliament.

Mr. FISHER. I wish to add to the original Bill this new section, as No. 47, which refers to employees of the Senate and House of Commons, and of the library of parliament.

Mr. R. L. BORDEN. I think this is a step in the right direction, but I would suggest that as this amendment is drawn, it will still be the Governor in Council who will take the action with regard to the officers, clerks and employees of the Houses of parliament; although he will do it upon resolution of the House, it will still be the Governor in Council who will do it. The difficulty in that case would be that the House could never make any change without going to the Governor in Council, who will control the situation. I think the language bears out what I say :

Whenever under sections (those enumerated) any action is authorized or directed to be taken by the Governor in Council or by order in council, such action with respect to the officers, clerks and employees of the House of Commons or the Senate shall be taken upon a resolution of the House of Commons or of the Senate.

That is to say, the order in council shall be passed upon a resolution of the House of Commons ; that is obviously what it means. Instead of that, I suggest tha the section should read this way :

Whenever (under the sections enumerated) action is authorized or directed to be taken by the Governor in Council or by order in council, such action with respect to the officers, clerks and employees of the House of Commons and of the Senate, shall be taken by the House of Commons or by the Senate, as the case may be, by resolution, and with respect to the officers, clerks and employees of the library of parliament, and to such others as are under the joint control of both Houses shall be taken by both Houses of parliament by joint resolution.

Mr. FISHER. I think my hon. friend is right, and that the words should be : 'Governor in Council upon a resolution of the House.' That was the intention. There is another point with regard to the employees of the House of Commons which was brought up and which I promised to take into consideration. I proposed to provide for that by the following amendment :

48. Nothing in this Act or the Civil Service Act shall be held to curtail the privileges now enjoyed by the officers, clerks and employees of the House of Commons or of the Senate or of the library of parliament with respect to attendance, office hours, leave of absence or with respect to engaging in such employment during parliamentary recess as may entitle them to receive extra salary or remuneration.

I think this will conserve to the employees of the House of Commons all privileges and rights they now have outside of the session of parliament.

Mr. R. L. BORDEN. Are the words 'extra salary or remuneration' intended to refer to salary outside of the salary or remuneration which they receive from the government ?

Mr. FISHER. To anything ; to any employment. They include that. This provision is intended to meet the case of 'Hansard' reporters especially who often work for commissions which work would probably be under the government.

Mr. R. L. BORDEN. The words 'in any other employment during the parliamentary recess,' it seems to me, would meet the case.

Mr. FISHER. I do not think that would do, if they were employed by the government and had to be paid by the government, because there is another section which would prevent them from getting paid by the government for any work of that kind. These words were put in to cover that.

Mr. BERGERON. As it is now can they work for some other department of the government and get paid for it ?

Mr. FISHER. Yes, and this conserves that.

Motion agreed to.

Section 10 reconsidered.

Mr. FISHER. Section 10 was asked to be allowed to stand so that I might consider a suggestion of the hon. member for North Toronto. I have examined the wording of his proposed amendment which I do not think fits in very well. I would be will-

ing, which is largely on the line of what he proposed, to put in the words 'the operation of the Civil Service Act or of this Act.' I therefore move to insert after the word 'upon' in the eighteenth line, the words 'the operation of the Civil Service Act or of this Act and upon.' That puts it in their power to take action upon the operation of the Civil Service Act.

Section as amended agreed to.

Mr. STEWART. There is a matter which was referred to this morning, having reference to a section already adopted, which has given rise to considerable discussion and which I would like to bring to the attention of the committee before the Bill is reported. We have arranged by this Bill that the clerks of the House of Commons shall be subject to the commission on the question of promotion. I do not know how it strikes other hon. members of the House, but it seems to me that the clerks of the committees are splendidly qualified to fill the positions which they have been occupying by reason of their many years of service and experience, and that the clerk, the Speaker and the committee on internal economy are the best judges as to the question of which of these clerks deserve promotion. It should be left in their hands. The amendment which has been suggested is this:

26a. No certificate of qualification from the commission shall be necessary in the case of a promotion to any vacancy in the staff of either House of parliament, when the recommendation of the clerk of the House and the approval of the Speaker have been given.

This is the unanimous desire of the clerks of the House.

Mr. BERGERON Is the Commission on Internal Economy abolished by this Bill?

Mr. FISHER. No. I think we have pretty well threshed this out. We simply subject the employees of the House of Commons, the Senate and the library to the same requirements that other clerks must submit to of receiving a certificate of qualification from the commission when they are promoted. That certificate may be based on information which the commission can get in any way they see fit, and I think there will be no danger with regard to the promotion of any official. I think it would be unfortunate if we were to change this provision and adopt a rule with regard to the clerks of the Houses of parliament different from that which is applied to the rest of the service.

Amendment (Mr. Stewart) negatived.

Bill reported, read the third time and passed.

SUPPLY—APPOINTMENT OF JUDGES IN QUEBEC.

Sir WILFRID LAURIER moved that the House go into Committee of Supply.

Mr. BERGERON. The right hon. first minister (Sir Wilfrid Laurier) promised me the other day that he would tell me whether there would be any appointments by the Dominion government of judges in the province of Quebec in accordance with the legislation adopted by the legislature of Quebec.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). We have come to the conclusion that we will not bring down any legislation this year for the purpose of appointing more judges in Quebec. The legislature has passed one Bill to authorize the appointment of a new judge in the district of Quebec and three new judges in the district of Montreal. We have received a communication from Hon. Lomer Gouin, the Attorney General of the province, who has sent us some statistics, and we think it is our duty rather than pass this legislation to invite the attention of the local legislature not only of Quebec but of other provinces also, with a view to, if possible, so amend their system as to take advantage of the present judicial force and concentrate it in certain districts so as to avoid the necessity of more appointments. The Minister of Justice is of opinion, and that opinion is shared by a good many, that there is at the present time in Quebec a sufficient judicial force to satisfy the wants of the province if they were distributed otherwise than at present, if all the judges, for instance, who have very little to do in the outside districts were called upon by legislation to discharge the duties of their office in Montreal and Quebec, we would thereby avoid the necessity of making new appointments. Therefore we have come to the conclusion to make this representation to the Attorney General and for this session not to bring in legislation such as was contemplated.

Mr. BERGERON. I believe that my hon. friend is right, but I would remind him that such a reform was tried before by a Bill known as the Casgrain Bill, but it did not carry. Of course we have here practically to follow the dicta of those legislatures in this matter. I have heard my right hon. friend (Sir Wilfrid Laurier) under other circumstances say that we could not discuss it but that we had to act. There is no doubt that something might be done along the lines suggested by the Prime Minister. I believe there are enough judges in the province of Quebec, if the system was changed, but if the local legislature does not desire to change the system what position are we in? Suppose they pass a law, as they have authority to do, we here can only act and appoint judges.

Sir WILFRID LAURIER. The present system under the British North America Act is absolutely unsatisfactory and it cannot continue much longer, we shall have to do something in that respect. In the meantime

it is quite true that in Quebec an attempt at reform was made and failed, but it is I think proper that we should call the attention of the Attorney General of the province to the fact that at the present time another effort should be made to see if the condition cannot be improved. I think the consensus of opinion exists everywhere that if the judicial forces, instead of being scattered as at present, some being overburdened in Montreal for instance and to some extent in Quebec, while in other districts they have absolute sinecures, if it were possible to concentrate the judicial forces we would obviate the necessity of making new appointments. I appreciate the difficulties of the Prime Minister and Attorney General of Quebec and that he may not be able to make the arrangements we suggest. Then it shall be our duty to consider our own position. I have taken the position formerly and it is a position we cannot avoid, that the Dominion parliament has no opinion of its own, that is, no alternative of acting or not acting; but my hon. friend will agree that if we are reduced to the position of not being able to secure reform in a province of what we consider to be an evil it may be that we will have to reconsider the whole system of judicial appointments and assign that work to the provinces or adopt some other device whereby such a condition as we have at present might be avoided. For my part I think it might be possible to avoid the necessity of more judicial appointments—no one wants to have more judges appointed than are necessary for the proper discharge of the business of the country. In the meantime we think it only right and proper that we should call the attention of the Attorney General to what we consider to be a very serious condition.

RAILWAY ACT—AMENDMENT.

Mr. E. A. LANCASTER (Lincoln and Niagara) moved :

That all the words after the word 'that' in the proposed motion be struck out and the following inserted in lieu thereof:

Order No. 36 in public Bills and orders, being consideration of the amendment made by the Senate to Bill (No. 3) to amend the Railway Act.—Mr. Lancaster—be now called and proceeded with.

He said : I desire to move this amendment to the motion for Supply, although I know it is not altogether usual, I placed in the hands of the Minister of Railways a copy of the proposed amendment. I am sorry to say the minister does not see his way to consent to it. This is the Bill commonly known as the Bill for the protection of the people at level crossings. It was passed unanimously by this House and was sent to the Senate on December 12 last. The Senate did not deal with it until nearly four months later, on March 31, with an amendment which I cannot discuss now, but which, in my opinion, destroys the principle of the Bill. My contention is that we should consider that amendment to this important piece of legislation before we grant any more Supply. When the Bill came back from the Senate on March 31, all days but Mondays had been taken by the government for government business, the very next Monday was taken for government business and the Bill has not been reached since it came from the Senate. Of course I do not criticise the government for taking these days, but had the Senate dealt with the Bill earlier in the session it would have been called as a public Bill. Owing to their delay it has never been reached or I am sure the House would have rejected the amendment and insisted on a conference with the Senate to try to induce them to agree to what we considered in December proper legislation.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). I think it would be unwise at the present stage of the session to open up the public Bills and Orders. There are several Bills on the Order Paper which it had been hoped to proceed with this session but they will all of necessity be dropped and I think it would be unwise to make an exception for this particular Bill. Therefore I ask the House not to accept the motion.

House divided on amendment (Mr. Lancaster).

Amendment negatived.

THE RAILWAY ACT.

Mr. A. C. BOYCE. Mr. Speaker, before you leave the chair I wish to ask the Minister of Railways if it is his intention to carry out the promise he gave to me on the 30th of June last in reply to some remarks which I made in regard to section 415 of the Railway Act, that before the close of this session an amendment would be introduced along the lines I suggested?

Mr. GRAHAM. The Minister of Justice has the matter in hand, and a Bill will be brought in to cover that point.

THE RECENT CANADIAN LOAN.

Mr. FOSTER. I wish to ask the Minister of Finance if he can give any information to the House as to the loan which he has lately placed upon the London market. I have seen some reports in the newspapers about it, and I think we should have a statement from the Minister of Finance himself.

Mr. FIELDING. The information contained in the public press is substantially correct, and I shall be glad to give any further details that are desired. On what particular point does my hon. friend desire information?

Mr. FOSTER. I want to get the rates at which the loan has been placed, and by whom it has been taken up. I do not mean any individual details, but such information as is generally given.

Mr. FIELDING. The loan was a short loan, to run between four and five years, and it was underwritten at par at 3¾ per cent. It is designed chiefly, though not wholly, to refund a loan maturing in November next, though some portion of it is for other purposes. The loan was underwritten by the usual circle of people in London who do business of this kind, and, so far as the government are concerned, it was entirely successful. The papers have stated, I believe correctly, that the public at large did not subscribe very fully to the loan. That, however, is not remarkable, because, as was stated in a telegram which I saw in the Montreal 'Star,' having regard to the reception recently accorded to other loans in the London market, the reception of the Canadian loan was very satisfactory. The circle of finance for Canadian loans, by municipal corporations and others, has been of late pretty well filled up with securities, and the difficulties of floating any securities are considerable. However, that is the statement: we placed a short term loan of £5,000,000, or $25,000,000 in round numbers, at par at 3¾ per cent.

Motion agreed to and House went into Committee of Supply.

Canals, chargeable to capital—Welland canal—electric lighting and power plant, $50,000.

Mr. BERGERON. I suppose this would be a good time to ask my hon. friend if a report published the other day in the papers is correct, that in a speech delivered somewhere in Ontario he stated that the government intended to deepen the Welland canal to 25 feet and to build the Georgian Bay canal and the Hudson Bay Railway.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). What I said was that these were three projects that would need and would deserve the attention of the public of Canada at no distant date. I was dealing with the transportation problem, and placed those three portions of the problem before the public. I did say that the Hudson Bay Railway would be constructed without delay, and I repeat that. I discussed the other two projects in a general way, pointing out that if Canada was to compete with a deepened Erie canal it would be necessary to deepen the Welland canal to 25 feet.

Mr. LANCASTER. Did the hon. gentleman say anything at St. Catharines about the Hudson Bay Railway?

Mr. GRAHAM. My hon. friend was asking me about a later speech, and possibly a better one.

Mr. LANCASTER. I agree that the speech made at St. Catharines by the hon. gentleman was not a very good one in respect of getting his candidate elected.

Mr. GRAHAM. We cannot tell that yet.

Mr. LANCASTER. The Reform papers reported the hon. minister as saying at St. Catharines that the government were going to deepen the Welland canal. That is where the Welland canal is, and he may have had some other reason for saying that at that particular place. If the minister states that the government are only considering the three projects, that is one thing; but the people of the county of Lincoln understood the minister to say that the government was going to deepen the Welland canal.

Mr. FOSTER. What is proposed to be done with this vote?

Mr. GRAHAM. It is for the purpose of lighting as well as handling the locks by electricity.

Mr. FOSTER. Is this an amount in addition to other amounts heretofore voted in order to finish the work of electric lighting the canal, and I suppose instituting a plant necessary to do it?

Mr. GRAHAM. This vote is really to complete the plant.

Mr. FOSTER. What the minister is doing is making his own plant for the electric lighting and working of the whole canal.

Mr. GRAHAM. What is being done is we purchase the electricity and are using it for the purpose of opening the locks and lighting the canal.

Mr. FOSTER. You are not producing your own power?

Mr. GRAHAM. No.

Mr. FOSTER. Where does the hon. gentleman get that?

Mr. GRAHAM. From the Cataract Power Company.

Mr. FOSTER. In what way?

Mr. GRAHAM. $14 per horse-power.

Mr. FOSTER. By ten year contract?

Mr. GRAHAM. A ten year contract.

Mr. FOSTER. What power plant does the minister refer to?

Mr. GRAHAM. That is what is known as the distributing plant.

Mr. FOSTER. Why not say so in your estimates? You speak of it as power plant. Is the whole canal lighted by electricity now?

Mr. GRAHAM. Yes.

Mr. FOSTER. What will be the cost?

Mr. GRAHAM. The entire cost is estimated at $450,000.

Mr. FOSTER. For erecting the plant necessary to distribute and light the canal?

Mr. GRAHAM. No, we operate all the gates and bridges with electricity. This covers the opening and shutting of all the lock gates and bridges.

Mr. FOSTER. But this does not include anything for operating. It is on capital account and is for installation.

Mr. GRAHAM. Yes, but we install the machinery for opening the gates. It is not merely a transmission plant for lighting.

Mr. FOSTER. Then all the plant necessary to light the canal and operate the different gates and bridges is to cost $450,000. From whom has the plant been obtained and in what way?

Mr. GRAHAM. From different companies and all by tender and contract.

Mr. FOSTER. What will be the cost of maintenance when the whole installation is completed?

Mr. GRAHAM. About $15,000 will cover the operation.

Mr. HAGGART. Will that be any saving on the old plan?

Mr. GRAHAM. It ought to be some saving when we do all the work by electricity.

Mr. BERGERON. How many men were employed before?

Mr. GRAHAM. We paid $20,000 a year for gas to start with.

Mr. LANCASTER. No, the gas was supplied at $10,000 a year for the whole canal without any expenditure on capital account.

Mr. BERGERON. Now that you are running the canal by electricity, you do not want so many men. How many are employed now and how many were employed before?

Mr. GRAHAM. Practically the same number of men—two men at a lock. It is impossible to get along with any less. It may not be any great saving, but it is a great advantage to the shipping.

Mr. BERGERON. The first time the question of using electricity came up before parliament, one of the arguments in its favour was that it would require many less men. On the Welland canal you used to have eight men per lock.

Mr. GRAHAM. No, two day men and two at night.

Mr. BERGERON. Besides the lockmaster.

Mr. GRAHAM. That includes the lockmaster.

Mr. BERGERON. If these three men and the lockmaster were doing the work formerly and now it is done by electricity, what are these men doing?

Mr. GRAHAM. We cannot very well run a lock without a man on each side, even if they do not open them by manual labour. You could not do without two men in the day and two at night.

Mr. J. D. REID. How many locks are there on the Welland?

Mr. GRAHAM. Twenty-six locks and a guard gate.

Mr. J. D. REID. How many on the Cornwall canal?

Mr. GRAHAM. Six or seven.

Mr. J. D. REID. Do I understand that after this plant is completed it will cost $15,000 per annum to operate and maintain it?

Mr. GRAHAM. That would include the cost of the electric power as well.

Mr. J. D. REID. There would not be any other expenditure necessary to supply the light and maintain this plant and furnish the power?

Mr. GRAHAM. That would only include the men directly connected with the electric working. It does not include the lockmen.

Mr. J. D. REID. Will that include everyone connected with the electric plant, and will the government have to pay in addition the same number of men as are now on the plant?

Mr. GRAHAM. Practically the same.

Mr. J. D. REID. The government will be paying $15,000 per year extra over and above what they are doing now. In addition there will be the annual outlay of interest on this $450,000 permanently. Even at 3 per cent that would be another $13,500 per annum. So that we will be paying on the Welland canal an addition annual expenditure of $28,500. How does that compare with the Cornwall canal? There are only six or seven locks on the Cornwall canal and the government have guaranteed for 89 years to pay about $50,000 for light and power on that canal. Judging by the Welland, there must be something wrong on the Cornwall canal. If the Welland canal cost only $30,000 a year more than they have been paying, why does not the minister try to save something for the people on the Cornwall canal? With only six or seven locks it should not cost more than $10,000 or $12,000.

Mr. GRAHAM. I understand that the lighting on the Cornwall canal has been under contract for years.

Mr. J. D. REID. A contract for eighty-nine years.

Mr. GRAHAM. Well, it is under contract. That is the reason why I cannot make the same arrangement for the Cornwall canal as for the Welland canal. The hon. gentleman says that we pay $15,000 for the Cornwall canal. But this was $10,000 for gas for lighting, and that did not handle the locks.

Mr. J. D. REID. But the minister is keeping the same number of men, and he spends this $15,000 more, besides $13,000 or $14,000 of interest, making a total of $28,000 or $30,000. Put against that the $10,000 for gas, and it will still be seen that the government is spending $18,000 per annum for all time to come beyond the old expenditure on the Welland canal.

Mr. J. T. SCHELL. I understand the hon. gentleman (Mr. J. D. Reid) to say that we are paying on the Cornwall canal over $50,000 a year. Was not that amount a little more than 50 per cent beyond the truth?

Mr. J. D. REID. That is a fair question. I have here the Auditor General's Report for the nine months ending March 31, 1907. If the hon. gentleman will turn to page W—83 of that report, he will see payments there—account of the Cornwall canal staff: St. Lawrence Power Company of $15,493.20 for electric light, being at the rate of 30 cents a light per night; also 400 horsepower at $63 per annum, $18,847.92, or a total of $34,541.12. Will the hon. gentleman dispute that statement? Well, if this is the

payment for nine months, add one-quarter to make up the whole year, and you have a total of close up to the amount I have stated.

Mr. J. T. SCHELL. The hon. gentleman (Mr. J. D. Reid) will recollect that, some years ago, when this matter was up for discussion, it was shown that there was a contract for something over $52,000 a year with the Davis Company—they call it now the St. Lawrence Power Company. That contract had been conditionally entered into by the former government and was carried over. But the Minister of Railways and Canals of this administration reduced that to about $28,000. Since that time, they have put up the workshops and done some extra work in Cornwall which may have made some extra expenditures by the government necessary—I am not informed as to that. But there is the fact as stated in this House at the time, that there was a contract for $52,000 which was reduced under this administration to $28,000.

Mr. J. D. REID. The original contract was entered into years ago, before the art and science of electricity had developed as they have now. But that contract was for twenty years only. It would have been expiring about now. But the present government made a contract for eighty-nine years, and they are expending about $45,000 per annum, as I have said, for these six or seven locks, which is only about one-quarter the number on the Welland canal. The government can pay the running expenses and the interest for four times as many locks and do it for about half what they are paying on the Cornwall canal. Judging by the Welland canal, they are paying altogether too much on the Cornwall canal.

Mr. J. T. SCHELL. The hon. gentleman is comparing the present advanced state of electrical development with a period when there was but little such development. But if he will compare what was done by this government with what was done by their predecessors, he will find that there has been the saving that I spoke of, and I do not think there is in that much to complain about.

Mr. J. D. REID. But the hon. gentleman (Mr. J. T. Schell) leaves out of account the fact that the contract under this government was made for eighty-nine years. I can understand why the hon. member for Glengarry is so anxious about the Cornwall canal. We have had a break in the Cornwall canal, and I claim that the hon. member for Glengarry (Mr. Schell) is almost responsible for that break, and I will tell the House why. Through the influence of the hon. member for Glengarry a man was put there as superintendent over that canal, who was a school teacher, who was a clerk getting $30 a month in the Canadian Pacific Railway shops. They had a man there in charge of that canal, and over all these canals, that never had any experience on canals at all, and he was put over all the men who did have long experience.

An hon. MEMBER. Who recommended him ?

Mr. J. D. REID. The hon. member for Glengarry recommended him. He was organizer in the hon. member's county, and the hon. member cannot deny it.

Mr. J. T. SCHELL. I tell the hon. gentleman that is not so.

Mr. J. D. REID. Yes, and the hon. member went to the Minister of Railways and recommended him.

Mr. J. T. SCHELL. He happened to teach school there for a short time, but he was neither born in the county, nor resided there, except one term as teacher.

Mr. J. D. REID. I claim that it was neglecting the marine interest of this country to put over the works of that kind a school teacher, a man who never saw a canal until he was put there, and they gave him a steamboat to run up and down the canal.

Mr. GRAHAM. Will the hon. gentleman tell the House who his predecessor was ?

Mr. J. D. REID. The hon. gentleman knows that he was supposed to be one of the best engineers in Canada, the late Mr. Rubidge.

Mr. GRAHAM. My hon. friend will pardon me. Dr. C. E. Hickey, ex-M.P., was superintendent, occupying the same position for quite a long time, and a good man he was, too. He occupied the same position as Mr. Stewart.

Mr. J. D. REID. Now the minister knows that is not a fact, and I will tell him why. The late Mr. Rubidge was the engineer in charge of all the canals from Cornwall to the Murray canal. Is not Mr. Stewart in that position to-day ? Has not Mr. Stewart charge from Cornwall to the Murray canal ?

Mr. GRAHAM. The hon. gentleman is quite mistaken. There is at the present time, and has been, an engineer equal in ability to any engineer I care to name ; he is in charge under Mr. Stewart of the Cornwall and other canals.

Mr. J. D. REID. As I understand the position, it is this : Mr. Stewart is occupying the position that Mr. Rubidge did, and Mr. Rubidge was the engineer in charge of the canals from Cornwall to the Murray canal, and to-day there is no other man but Mr. Stewart in that position. He is the only man now that has charge from Cornwall to the Murray canal, except the men who are called overseers.

Mr. GRAHAM. No, my hon. friend is wrong. I want to explain to him again

that there is a competent engineer under Mr. Stewart, having jurisdiction over the canals from Cornwall up to the Murray canal, just as Mr. Rubidge had. I refer to Mr. Sargent. He is in Cornwall assisting in this work, and was up at the Murray canal overseeing some other work when the accident happened. My hon. friend speaks as if there never was a break in the Cornwall canal before. When the hon. gentleman tells the House that there is no engineer in charge from Cornwall to the Murray canal, I tell him there is, and has been.

Mr. J. D. REID. The minister states that Mr. Sargent is an engineer under Mr. Stewart. Now the minister knows that Mr. Sargent was the engineer in charge of the work at Cardinal, in charge of Murray and Cleveland's work, and has been living there for the last ten years. He knows that Mr. Sargent has only been placed in the position he speaks of within the last three weeks.

Mr. GRAHAM. My hon. friend is stating what is absolutely without foundation. Mr. Ross was the engineer under Mr. Stewart on that canal. He was transferred to the Sault, and a gentleman came from the Sault to take the place as overseer. Mr. Sargent is there, and has been acting for months as engineer.

Mr. J. D. REID. Mr. Ross's position was only that of overseer.

Mr. GRAHAM. He was an engineer.

Mr. J. D. REID. Mr. Ross is not an engineer. I have known Mr. Ross for the last twenty years, and I make the statement that he is not an engineer. Mr. Ross was sent out from this department to oversee the works at Cardinal, and has been working there for the last 15 or 20 years. I never heard of Mr. Ross passing any examinations or qualifying himself for engineer.

Mr. DEPUTY SPEAKER. I call attention of the committee that the item before us is the Welland canal. There is another for the Cornwall canal.

Mr. PRINGLE. I do not intend to resurrect the old lighting contract on the Cornwall canal. But I want to say that I agree with the hon. member for Grenville (Mr. Reid) that Mr. Stewart was not the man who should have charge of the canal, and I am pleased to see that the government has come to that conclusion, and have placed Mr. Sargent in charge of the Cornwall canal, not only of the Cornwall canal, but of all the canals up to the Murray canal. Mr. Sargent has been located in Cornwall for some months, and is residing there, and is a thoroughly competent engineer. Now, to come back to the subject under discussion, the lighting of the Welland canal by electricity, so far as I am concerned, I want to see the money spent where it can be spent in the best interest of navigation. The expenditure of a few thousands for electricity on the Cornwall canal has come up here time and time again, it is brought up nearly every year. It may cost a good deal of money, but it is the greatest advantage to navigation we can possibly have. Large vessels are coming down the Cornwall canal carrying 65,000 bushels of grain, and they do not now use lamps as they did in the old time, when vessels had to tie-up and suffer delays for hours. They go right through now, in the night time as well as in the day time. I do not want to discuss the terms of the contract, that has been discussed over and over again in this House. The government have made a contract that I imagine they will have to stand by. This is what I want to get at. Is this increased cost justifiable, and in what way does it aid navigation? I understand that these vessels can go through much more quickly to-day, with these modern electrical appliances to operate the locks, than they could some years ago. I do not know whether I am right or wrong, but I think the Soulanges canal was the first one on which the locks were operated by electricity, and I think the plan has been a great success, that a great deal of time has been saved. Now, the minister has with him an engineer who has had a great deal of experience in these matters, and he can tell us whether this plan is going to aid navigation in the Welland canal. Can a vessel go through more quickly, once these electrical appliances are put into effect? If it can, then it is a decided advantage. We know that late in the fall of the year these vessels are crowding down, every minute is important to them, we have to, in the fall, open our canals on Sunday, so they are operated every day in the week. Now I want to say a word with regard to that break. That is not the first break that has occurred in the Cornwall canal. We must remember that the Cornwall canal was originally built with a depth of 10 feet, and that has been increased to 14 feet. That extra 4 feet has increased the danger to the banks of the canal. There is a long stretch from lock 20 down to the lock at the mouth of the Cornwall canal that is dangerous, and always will remain dangerous. Six or seven years ago in this House I advocated with the then Minister of Railways and Canals the putting in at lock No. 20 another lock to the river. I understand that when the deputy minister, Mr .Butler, came into the department he saw the advantage of it, and that plans have been prepared, and that this will probably become an accomplished fact. If it had been done a few years ago the whole navigation of the country would not have been tied up as it is to-day. In so far as that break is concerned, it was a most unfortunate occurrence. It probably could have

occurred at a worse season of the year but it is an enormous loss to this country. I say with all the credit to those who are doing the work of repair that it has been rushed as expeditiously as it was possible to rush it. I was on the ground. The next day after the accident work was begun, within nine days water was in the canal and I understand that within three days vessels will be passing up and down. The work has been expeditiously and well done. But, I want to call the minister's attention to lock No. 20. If what I suggest is done it will save an enormous amount to the people interested in navigation and it will prevent a recurrence of navigation being tied up for two or three weeks owing to a break in the canal.

Mr. J. D. REID. I would like to ask the minister——

Some hon. MEMBERS. Oh, oh.

Mr. J. D. REID. I am going to take my time until I obtain this information even if the hon. member for Yale-Cariboo (Mr. Ross) continues interrupting as he did last night. I think that we are entitled to some consideration.

Mr. DUNCAN ROSS. I also think that the other members of the House are entitled to some consideration.

Mr. J. D. REID. I do not think it is fair of the hon. gentleman to interrupt. I would like to ask if it is a fact that a competent engineer like Mr. Sargent is on that work under Mr. Stewart.

Mr. GRAHAM. Mr. Stewart occupies the position of superintendent and Mr. Sargent is engineer of the canals from Cornwall to the Murray canal.

Mr. J. D. REID. I understood that the minister stated that Mr. Stewart is in charge of the canals from Cornwall to the Murray canal and that Mr. Sargent is the engineer acting under Mr. Stewart. Is that right?

Mr. GRAHAM. My hon. friend is not going to put words in my mouth.

Mr. J. D. REID. No.

Mr. GRAHAM. My hon. friend knows what 'superintendent' means. I say that Mr. Stewart is the superintendent of the canals from Cornwall to the Murray canal and that Mr. Sargent is the engineer.

Mr. R. L. BORDEN. I do not understand what the expression means. Is the engineer under the superintendent or the superintendent under the engineer?

Mr. GRAHAM. The superintendent is the officer responsible to the department and the engineer is responsible for everything appertaining to engineering. The superintendent is the chief officer. I do not mind explaining to the hon. leader of the opposition (Mr. R. L. Borden) because he is not conversant with the facts, but the hon. member for Grenville (Mr. Reid) knows all about it. He lives on the canal. He is playing upon words.

Mr. J. D. REID. No, I am not.

Mr. GRAHAM. The superintendent is the man in charge of the canal and the staff is under him.

Mr. LANCASTER. The hon. gentleman told us three times that Mr. Ross was under Mr. Stewart. Did he mean that or not?

Mr. GRAHAM. Mr. Ross bore the title of overseer and was on the Williamsburg canal. I have always understood that he was an engineer, but he was known as the overseer and was subject to the superintendent.

Mr. LANCASTER. The hon. gentleman disputed the statement of my hon. friend from Grenville and said that he as an engineer.

Mr. GRAHAM. I say so still.

Mr. LANCASTER. And he said that Mr. Ross was the engineer in charge.

Mr. GRAHAM. My hon. friend must admit that a superintendent may be an engineer and that an overseer may be an engineer.

Mr. J. D. REID. The only thing I contend for is that a person occupying the position of chief should be an engineer of the qualifications of Mr. Sargent or of the gentleman in charge of the Welland canal. I think it is hardly fair to put a man with the qualifications of Mr. Sargent or any other engineer—I only mention his name because he happens to be the gentleman there—under the instructions and subject to the orders of a man with the qualifications of Mr. Stewart, who was a school teacher down in Glengarry before he got that position. I think that the minister, if he stated his own opinion, would agree that this is hardly fair. If the minister wants to prevent accidents of this kind he should put a man like Mr. Sargent over the whole canal. Mr. Sargent has to take his orders from Mr. Stewart; therefore he does not feel that he is responsible and the matter is not looked after as well as if we had Mr. Sargent or some other man of equal qualifications in charge of the Cornwall and Murray canals. The accident is to a large extent due to not having a competent man in the position that Mr. Stewart occupies.

Mr. BERGERON. I should like the minister to explain why it is that we are paying $14 per horse-power on the Welland canal and $63 per horse-power on the Cornwall canal. Why is there such a difference between the two? If $14 is sufficient for the Welland canal which has twenty-six locks why should we pay $63 for the Cornwall canal which has only six locks?

Mr. GRAHAM I am not an expert in electricity and I do not know anything about the contract. There is this difference, however, that electrical science is in a more advanced state to-day than it was when the contract was made. On the Welland canal we merely get the power delivered to us over our own lines of transmission. I imagine that the power on the Cornwall canal is transmitted in a different way.

Mr. BRODER. While the question of the lighting of the canals is under consideration I would like to ask the minister whether he has considered the advisability of lighting the Williamsburg and Edwardsburg canals with electricity ? The power is available and if it is such a benefit to navigation as my hon. friend from Stormont (Mr. Pringle) suggests, the minister is very derelict in his duty in not taking steps to have these canals lighted by electricity. I can understand that the Welland canal might be lighted a little cheaper than the Cornwall canal from the fact that it is alongside of the great originator of electricity, Niagara Falls. But I think that the prices on the Cornwall canal are beyond all reasonable calculation. I am sure that the Williamsburg canal and the Iroquois canal will be lighted at very much less cost per horse-power if the minister sees fit to recommend that it be done.

Mr. PRINGLE. Just one word in connection with the positions of Mr. Stewart and Mr. Sargent. I have objected for some years to Mr. Stewart having absolute charge of the canal. I have nothing to say against Mr. Stewart as a citizen. He is a good citizen, but I do not think that a man of his experience should have been placed in charge of such an important link in the navigation of the St. Lawrence, and I was very much pleased when I learned from the department that they had made a change. As I understand Mr. Stewart has to-day simply got control of the men, and sees that they do their work properly. Mr. Sargent has absolute control with regard to the maintenance of the canals from Cornwall to the Murray canal. I think that is proper. I have always thought they should be in charge of an experienced man such as Mr. Sargent is. There are doubtless many in the House who will remember that I before brought up the question of Mr. Stewart whom I was bound to speak highly of as a citizen but who, I feel has not the experience necessary to enable him to fill the requirements of this position, a feeling shared by those interested in navigation. I have heard men at the head of our large companies speak in that way in regard to Mr. Stewart. We should have a man with a large experience like Mr. Sargent who has charge of the canal system. As I understand the position Mr. Sargent has absolute charge in so far as repairs, maintenance and works connected with the canal are concerned while Mr. Stewart simply has charge of the men, of the operation of the canal.

Mr. FOSTER. When this installation comes into operation it will cost $15,000 per year to operate it including the price of the current and the wages of the men on the canal.

Mr GRAHAM. No, I said in answer to my hon. friend from Grenville (Mr. J. D. Reid) that that did not include the wages of the lock men. We had that information here when we were on the votes for maintenance.

Mr. BERGERON. In other words, this is an extra expenditure. It will be over and above what we paid for the management of the canal except the $10,000.

Mr. GRAHAM. The question resolves itself into this : Is it in the interests of navigation to light the canal ? Everybody says yes. Under the old scheme we had it lighted for about seven miles by gas at a cost of $10,000. Under this we have lighted by electricity twenty-seven miles of the new canal and six of the old for the guidance of the men in regulating the water, &c., over thirty miles in all that are well lighted by electricity. If it had been all lighted by gas before it would have cost as much but we get twenty-six extra miles lighted, we get all the lock gates and bridges opened and closed for an extra $5,000. It seems to me it is a remarkable investment, to say nothing about the improvement to navigation and I am told that vessels save two hours in every twelve by this system.

Mr. BERGERON I am not criticising the lighting of the canal and the working of the locks by electricity, but as a matter of fact the Welland canal will cost $18,000 a year more than it cost before, that is $28,000 less $10,000 for the gas, leaving $18,000 a year more than before.

Mr. GRAHAM. For which we get all the extra lighting and the working of the canal.

Mr. J. D. REID. At page 36 of the report this appears :

The cost of repairs, &c., for nine months, ordinary repairs under the head of staff and repairs, $53,247.50.

As I understand the minister that will not be reduced, that will be paid as before and in addition there will be $15,000 more for the operation of this electric plant and the interest on the $450,000.

Mr. GRAHAM. I think so.

Mr. FOSTER. By this system we will have better lighting and better operation, the saving of time in operating the canal now that you have this improved lighting and the operation of the locks by electricity instead of manual power.

Mr. GRAHAM. I think there will be no decrease in manual power. The benefit will result in improved lighting and operation, but we must continue to have two men night and day at each lock gate, one on each side.

Mr. LANCASTER. To make it clear, I would say that the canal has been lighted by electricity for several years so that is not included in the new vote, the electric operation of the gates is the only new feature this year.

Mr. GRAHAM. This is to complete payments on the whole system.

To remove centre piers and rebuild bridges at Queenston street and Homer road crossing, $30,000.

Mr. GRAHAM. This is taking out a pier and making one wide passage instead of two narrow passages.

Mr. FOSTER. Will this complete it ?

Mr. GRAHAM. No, a year ago there was an appropriation of $70,000. This year we will spend only $30,000 but it will take $70,000 eventually, I think.

To make survey of the canal, $15,000.

Mr. GRAHAM. This has been going on for some time. There was no complete survey or plan of the canal lands but it was necessary to have a plan showing the boundaries which should be properly marked. The survey was more extensive than it was thought it would be and more work had to be done. There are four parties at work. The survey had never been completed.

Mr. FOSTER. What has been spent on it so far ?

Mr. GRAHAM. About $27,000. The estimate for the whole work is about $47,000.

Mr. HAGGART. How long have you been at it ? Since about 1870 thirty years ago I think.

Mr. GRAHAM. This work has beeen going on about two years. With the old canal there is about seventy miles of length. You have to mark the boundaries and there are many questions of water power, &c., in reference to the old canal.

Mr. HAGGART. There was a vote for it in my time.

Mr. GERMAN. If there was a vote many years ago to do the work the money must have been uselessly expended because there was no delimitation of the boundary limits of the Welland canal that any one could discover and there was great difficulty continually between the owners of adjacent lands and the government officials in regard to the true boundaries of the land as they should and did exist. It was thought necessary to define exactly the true boundary lines along the whole government property and this is being done.

Mr. LANCASTER. I agree that there was that difficulty, but I do not think it is yet cured. Hardly a week goes by without somebody wanting to know where their land ends and the canal property begins. There are not fences or lines of demarcation that ought to be there.

Mr. FOSTER. Do I understand that this vote is simply to pay the cost of marking the boundary lines between the government property and individual private property on each side ?

Mr. GRAHAM. That is a great part of the work.

Mr. FOSTER. Who is doing that work ?

Mr. GRAHAM. It is being done under Mr. Weller, the chief engineer of the canal.

Mr. FOSTER. That canal is about 27 miles in length.

Mr. GRAHAM. The new canal and the old canal together are about 70 miles.

Mr. FOSTER. Does it require $47,000 to run lines for 70 miles to show the boundaries between government property and private property ? It seems a most expensive survey.

Mr. GRAHAM. It does seem expensive ; but, as my hon. friend from Lincoln said, it is not simply a question of running a line ; it is more difficult than that. The chief engineer says there is no time being lost in the work.

Mr. FOSTER. Does Mr. Weller employ outside engineers ?

Mr. GRAHAM. Yes, he has a surveyor and a staff of several men under him.

Mr. BERGERON. There must be in the registry office certain papers showing the land that was transferred to the government when the canal was built, and from these there should be no difficulty in finding where the lines should run. I do not understand that parties of surveyors should be engaged for that purpose. Have these parties anything to do with finding out whether the old canal or the new canal should be deepened ?

Mr. GRAHAM. I do not know what has been done in the last couple of years. I only know that I have asked Mr. Weller, in his work of marking out these lines, to get any information he can as he goes along.

Mr. FOSTER. It is almost incredible that such an amount of money as this could be spent in delimiting the boundaries of this canal. It is not a new country ; we have been in possession of the land for a great

many years ; and what can be found for engineers or surveyors to do there at a cost of $47,000 I cannot see. It seems to me that the engineers who are on the canal might very easily do the work of delimiting these boundaries in their odd times.

Mr. HAGGART. Is the permanent engineering staff paid anything out of this ?

Mr. GRAHAM. No.

Mr. KEMP. Do I understand the minister to say that the money we are now voting is not to be used in making surveys for the new canal of 25 feet ?

Mr. GRAHAM. No.

Mr. KEMP. The reason I ask the question is that I read the following in the 'Globe' the other day :

St. Catharines, June 12.—The announcement of the Minister of Railways and Canals, looking to the possibility of a new 25-foot canal to replace the present Welland canal, is hailed with delight throughout this vicinity, as the need for the new waterway has been seen for some little time.

No less than four surveying parties are already at work taking the levels of the whole locality. Five men are in each party, and they have now been engaged for some time. Notes of the field men are transferred to the staff at the local canal office, who reduce them to designs, which, when completed, will show all the different routes available between Lakes Erie and Ontario. Several routes are now contemplated, one being near the present canal, one from 'The Fifteen,' three miles from Port Dalhousie, and one from Jordan harbour.

The 'Globe' is evidently under the impression that the Minister of Railways and Canals has several survey parties out making surveys for the 25-foot canal.

Mr. GRAHAM. I suppose that is the impression of some enthusiastic correspondent. If there have been four or five parties out surveying for a new canal, they have been doing so without my instructions.

Mr. BERGERON. Then what my hon. friend read is not correct ?

Mr. GRAHAM. These surveying parties are not doing the work the 'Globe' mentions. They are not surveying with the idea of making a report as to whether the old canal should be deepened or a new canal built. The engineer has been getting all the information he could with these survey parties, but there is no idea of starting a survey for a new canal so far as I know.

Mr. FOSTER. If that is being done, it is absolutely unauthorized by the vote. The vote taken was for delimiting the boundaries, and there is no authority for the minister to use any part of that money for sending parties out to survey new territory with a view of finding a better route for the canal. If the minister wants that information there is a way of getting it ; he has to come to the House to get a vote for the purpose. But I cannot understand how it is possible to spend this amount of money in delimiting simple boundaries. I find that one surveyor last year was in charge of a party which cost $4,604 for nine months, and another with a party which cost $1,461 for nine months. There was another surveyor, Hughson and party, $866 ; Surveyor Hill and party, $2,261 ; Surveyor Ross and party, $777. And there were sundry expenses amounting to $1,000, or a total of $10,825 spent in nine months on this simple delimitation of the boundaries along the canal through the Welland country. The statement that $47,000 is to be paid upon that demands more explanation. The minister may not have the information, but there should be some investigation to know how that money was spent. We ought to delimit nearly half the boundary between the United States and Canada for that sum.

Mr. KEMP. It would be far more in the interests of the country to make surveys for the new canal than to carry out the work in respect to the old canal. I am not criticising the minister if he sees fit to make a survey with regard to a twenty-five foot Welland canal, because that is about the only sensible plan with regard to transportation from the upper lakes that we have had. I have a clipping here from the Toronto 'World,' the purport of which is about the same as the one which appeared in the Toronto 'Globe.'

Mr. SPROULE. The statement was made by the minister that the government had decided, as a matter of policy, to deepen the Welland canal or build a new one. Is that authoritative or intended to be final and conclusive?

Mr. GRAHAM. My hon. friend was not here or he would have heard me twice declare that I did not say that. In discussing the transportation problem, the only positive statement I made was that the Hudson Bay Railway would be built. The other schemes were problems which will have to be faced before many years if we are to compete with our rivals in transportation facilities.

Mr. BENNETT. The minister promised the Trent Valley canal. He is a good promiser.

Mr. GRAHAM. That is under construction now.

To widen canal near Welland, $55,000.

Mr. GRAHAM. When the contract was let for the building of turning basins it became necessary to widen the canal by removing the slopes on the face of the banks. About a mile below Welland the

canal was not made to the full width at the bottom.

Mr. FOSTER. What will be the total cost?

Mr. GRAHAM. Between $71,000 and $72,000. The estimates have been made up

Mr. J. D. REID. Is it under contract?

Mr. GRAHAM. Yes.

Mr. J. D. REID. Who is the contractor?

Mr. GRAHAM. W. Flint. He was the lowest of three tenderers.

Mr. J. D. REID. How long ago was the contract given and what length of time was allowed for the completion of the work?

Mr. GRAHAM. The contract was let about a year ago. It was to have been completed by the 1st of August of this year.

Mr. J. D. REID. How much has been done and how much has been paid the contractor on account?

Mr. BERGERON. What was the amount of the contract?

Mr. GRAHAM. The contract price was $72,000. The estimates have been made up several months and the statement is months behind.

Mr. FOSTER. As an older man than my hon. friend I would give him a piece of advice. At this stage, when so much depends on the despatch of business, if he would take an hour or two and go over these estimates with his officials before coming to the House he would have the answers ready to these questions, which must be put on every estimate, and we would get through much faster. It seems to take him a lot of consultation with men who do not know much about it before he can give any answer.

Mr. GRAHAM. My deputy is not here and has not been here for weeks, and I am getting the estimates through without him.

Mr. FOSTER. That makes it all the more necessary that the hon. gentleman should have a consultation with his other officials before bringing on his estimates.

Port Colborne improvement, $115,000.
Port Colborne elevator, $172,000.

Mr. BENNETT. Will the minister state how much has been expended, first, on the so-called improvements and then on the elevator, and the condition of the elevator to-day and the amount he intends spending next year?

Mr. GRAHAM. Port Colborne improvements, total estimate, $1,000,000. Expended up to 30th September, $1,537,510. Estimated cost of elevator, machinery and foundation, $750,000. Total expended up to 30th September, $420,750. The elevator is nearing completion. We extended the time for finishing the contract. It will be ready in a very few weeks.

Mr. BENNETT. How much will it cost to complete the improvements, apart from the elevator?

Mr. GRAHAM. This vote is expected to finish the entire thing.

Mr. BERGERON. What was the original price of the contract?

Mr. GRAHAM. The contract was for $637,000 made in 1906. It will cost to complete about $750,000.

Mr. FOSTER. Will the hon. minister tell us what assets we shall have after this expenditure?

Mr. GERMAN. I think I can answer the question of the hon. member for North Toronto (Mr. Foster). In the first place, we have one of the best harbours on Lake Erie. We have 22-foot navigation where, formerly, there was practically no harbour—at any rate, no harbour of refuge. We have not merely one of the best, but the best elevator in America. That is acknowledged by elevator men who have come to see it, and it has been visited by many of them. It has a capacity of 800,000 bushels, with the machinery sufficient to operate an elevator of a capacity of 2,000,000 bushels. The additions to this elevator which will bring it up to the capacity of 2,000,000 bushels will cost, perhaps, one-third of the expenditure already made on the elevator. The intention is to tranship grain at Port Colborne on full canal-sized boats and create a channel of grain transportation from the west to the seaboard. I believe that if the scheme is carried out effectively, intelligently and energetically, it will afford means of transport of all the grain that will be grown in the Northwest Territories as well as a considerable part of that grown in the United States for a great many years to come—at least for the time it will take to build new canals between the upper lakes and Montreal.

Mr. KEMP. What remains to be done in order to carry out this scheme?

Mr. GERMAN. Very little remains to be done to carry out the scheme as originally intended. The minister has said that the vote he is proposing will complete all the improvements in the harbour at Port Colborne. It will complete all the improvements for which the vote is asked. There will be other improvements, not of any great extent, which will be necessary in order to make the harbour such as was originally intended. The elevator is completed. I have said before, and have not changed my opinion, that it was a mistake not to make it a two mil-

lion-bushel elevator at first. However, the cost of increasing the size will not be very great. If the electric power were provided—and it will be provided in a very short time—the elevator could begin handling grain now.

Mr. BENNETT. With the public debt of Canada approaching $300,000,000 and with an annual expenditure of upwards of $150,000,000, it is no wonder that sober-minded business men, when they consult together without taking politics into consideration, propound to one another the question, 'Whither are we drifting?' A few years ago the government came down with proposals of expenditure at Port Colborne. The idea was laughed at when it was said that they would spend $1,000,000 before they got through. We are told now that the amount spent is about $3,500,000. And what shall we have in return for this expenditure? The hon. member for Welland (Mr. German) tells us that boats carrying upwards of 400,000 bushels will come to Port Colborne, and that there will be smaller boats there carrying 80,000 bushels that will carry the grain to Montreal. But I would ask the hon. member: What difference is there in the rate on a boat going to Buffalo whether she carries 400,000 bushels or 80,000 bushels?

Mr. GERMAN. Of course, there can be no difference in the rate, or the smaller vessel would not get anything to carry. But the smaller vessel carries at a smaller profit.

Mr. BENNETT. So we have it acknowledged that a vessel carrying 400,000 bushels into Buffalo gets the same rate as a boat carrying 80,000. And what is the proposition of the government in this scheme? They say these large vessels will discharge into the grain elevator and the grain will be transferred into boats of 60,000 or 70,000 bushels carrying capacity and taken to Montreal. And we have spent $3,500,000 on that scheme. And to-day we find the Minister of Railways and Canals (Mr. Graham) going from end to end of the country foreshadowing the schemes of the government—$120,000,000 to $140,000,000 on the so-called Georgian Bay canal; a bagatelle of $40,000,000 or $50,000,000 to deepen the Welland canal. And yet, despite the fact that the government are threatening to expend millions on these schemes, private capital is quietly going about its own business providing transportation facilities immeasurably ahead of what the government propose. According to my hon. friend from Welland (Mr. German), since these works at Port Colborne have been completed nothing more remains to be done—no Georgian Bay canal, no Hudson Bay Railway—none of these things——

Mr. GERMAN. I did not say that.

Mr. BENNETT. I am willing to admit that the hon. gentleman's scheme is ahead of many others that are being put forward by different members of the government. Look at what the Canadian Pacific Railway are doing to-day. It is doing just what American railway and shipping companies have done for the last twenty years in the United States. These American interests have placed on the Great Lakes the largest possible vessels to carry grain to Buffalo, where it is placed on the best systems of railways that money can produce that carry it at rates that beat the Welland canal. The Canadian Pacific Railway is undertaking an expenditure probably running to $10,000,000 to secure a lake port on Georgian bay at Victoria harbour, a few miles below Midland. They are constructing their line from that point to Peterborough. This will give them an all-rail route from Victoria harbour to Montreal, which is their Atlantic shipping point. The Grand Trunk are spending as much at Midland. They are building extensive docks and also an elevator that will make this little elevator at Port Colborne a mere trifling affair. And the Canadian Pacific Railway are constructing one of about equal importance at Victoria harbour. The public wonder, when they hear the ministers of this government put forward their schemes, how these railway companies, having immense interests behind them, and headed by men of such eminent ability as Sir Thomas Shaugnessy and Mr. Hays, can ask of their stockholders to provide these millions upon millions of dollars to construct their transportation schemes. And the general public are simply laughing at the government.

But they are laughing in rather a serious way when they consider the proposals the government are putting forth. Nothing need be said about the Port Colborne scheme, where three and a half million dollars have gone, and that is all going to be an experiment. Even if it were finished, vessels carrying 70,000 bushels of grain would go right past there to Kingston—I have heard that opinion expressed by capable vessel men. My hon. friend admits that a vessel carrying 80,000 bushels gets as much per bushel as a vessel carrying 400,000 bushels. I am free to admit that a 400,000 bushel vessel makes more money for her proprietors; but there is the fact that the smaller vessels of 70,000 or 80,000 bushels get the same rates as the larger vessels of 400,000 bushels. Vessel men claim that they have been making 20 per cent in this business.

But look at the superiority of the Georgian Bay plan over the Buffalo plan. Buffalo to-day controls the trade, reaching to 300,000,000 bushels of grain every year. Where is your Welland canal service com-

pared with that? A mere bagatelle is that which goes down the Welland canal compared with that which goes via Buffalo. But let the minister and the House remember this, that once the Canadian Pacific Railroad and the Grand Trunk Pacific Railway have all their terminal facilities completed at Midland and Victoria Harbour, and have their lines of railway running to Peterborough and Port Hope where they will strike their main lines, when they will be able to run 50 cars per train instead of 17, they will be able to beat the Buffalo trade out. And why? Because they will make three trips to Midland or to Victoria as against two to Buffalo from the upper lake ports. Ask any vessel men if these figures are correct, and they will tell you they are. To-day you can, with the same vessel, make three trips to Midland as against two to Buffalo. That is an enormous advantage, when you consider that these vessels can carry 400,000 bushels of grain, and that the rate in the fall of the year sometimes runs up to three cents a bushel. When the Canadian Pacific Railway works are built at Midland and Victoria Harbour, the same vessel going to those ports will make $12,000 on three trips, more than if she was employed in the trade to Buffalo. Now I would advise the minister to go slow, and let the country have a chance to breathe for a while and see whether the projects of the Canadian Pacific Railway and the Grand Trunk Pacific are going to be a success, and whether this Port Colborne proposal is going to aid the Welland canal. Let the Minister of Railways and Canals take the advice of his former colleague, Mr. A. G. Mackay, who characterized the government of Mr. Whitney as spending the money of the province like a lot of drunken sailors. The phrase was expressive, if not elegant. But think of the few thousands being spent in the province of Ontario compared with the threatened expenditure of millions coming on top of that. Here is this terrible expenditure, this awful expenditure, that is going to drag down Canada for years to come, the Grand Trunk Pacific Railway, that is going to cost the country—every man sees it—not a hundred millions, but it will never be completed for $200,000,000. And coming on top of that huge expenditure, what do we see? The government threatens now to plunge Canada into an expenditure for building a Hudson Bay Railway, and a canal from the Georgian Bay. In the name of all that is good let the country have a rest for a little while, and let the private enterprise of the Canadian Pacific Railway and the Grand Trunk Pacific Railway who are to-day expending millions of dollars, in conjunction with the projects that the government has now undertaken at Port Colborne, have a chance to develop themselves, and don't drive the people of Canada into a state of consternation by threatening to unsettle the financial conditions of the country.

Mr. BENNETT

Mr. J. D. REID. So far as I am concerned, I have every session advocated the enlargement of the Welland canal, and I think that is one of the most important public works that this government could undertake. When the Welland canal was first enlarged to 14 feet it was supposed that would be sufficient depth for many years to come. But what is the case to-day? We all see that vessels carrying 300,000 bushels and over are navigating the lakes. My idea is that these large vessels will seek the very nearest point on the sea-board. To-day the minister admits that the amount of money the government are expending for the Port Colborne elevator, $732,000, is to be practically wiped out, and will be absolutely useless, if he goes on and constructs the Welland canal as he has been telling the people he proposes to do. Of course he understands that these large vessels will never stop to unload at Port Colborne, so that port will practically be abandoned. Now at the present time grain is being carried, I may say, for 3½ cents a bushel from Port Arthur right through to Montreal, that is the present rate, the summer rate; but in the fall it is 5 cents a bushel. Now I claim that when that Welland canal is deepened to 25 feet, as the minister states, these large vessels carrying 300,000 or 400,000 bushels will go either to Kingston or to Prescott. I say Prescott, because it is at the foot of navigation, and grain will be taken from either Kingston or Prescott to Montreal for one cent a bushel. That can be done, these large vessels will bring that grain from Port Arthur to Prescott for a cent and a half a bushel. If these vessels carrying 65,000 bushels will take grain from Port Arthur to Montreal for 3½ cents, which means practically 2½ to Prescott, there is no reason that I can see why they would not bring grain for 1½ cents to Prescott or to Kingston.

Mr. BENNETT. How long does it take an ordinary vessel carrying 70,000 bushels to lock through the Welland canal at present? It takes fully 18 hours.

Mr. GRAHAM. It takes 16 hours.

Mr. J. D. REID. Admitting it takes 18 hours to do the locking now, and the present rate of grain is 3½ cents a bushel from Port Arthur delivered into the ocean steamers at Montreal, if the ocean steamers are in a position to take it out of the vessel, then, even if the Welland canal is enlarged, they will bring it down to Prescott for 1½ cents a bushel. I claim that if the government, instead of undertaking that Port Colborne elevator, had undertaken the enlargement of the Welland canal, as they propose now, that money would have been put into a work that would have been of

use for all time to come. I hope that the enlargement of the Welland canal will be proceeded with at the earliest possible moment. I believe that it is in the interest of the country that it should be done, and commenced at once, and I shall continue to advocate it, whether I am in the House or out of it.

Mr. FOSTER. Is it the purpose of the government to bring power there to run the elevator, and if so how much would it cost?

Mr. GRAHAM. That deals with something I do not know much about. We made a contract for power to run the elevator at half a cent per kilowatt hour.

Mr. FOSTER. That is a contract entered into by the government?

Mr. GRAHAM. Yes.

Mr. FOSTER. What is the estimate of the cost of running that elevator for the season?

Mr. GERMAN. The cost of running the elevator for the season will depend on the volume of grain passing through the elevator.

Mr. FOSTER. Suppose it runs up to its 800,000 bushels capacity?

Mr. GERMAN. That would simply be the capacity per day.

Mr. FOSTER. Suppose it keeps going to its full capacity what will the cost of running the elevator be.

Mr. GERMAN. I could not say. Half a cent per kilowatt hour is something that an electrical engineer has to figure out, but I can say that every electrical engineer with whom I have talked on this matter—and I have talked with many—said that it was the best contract for electrical power as far as the government is concerned that has ever been made. It was made with the Ontario Power Company. In operating an elevator of that kind the power has to be kept at what is always called the peak load. That means that there must always be sufficient power to run the elevator at its full capacity, whereas there may be days and days when the elevator would only be running at half its capacity. The electrical company is required to keep the power at a sufficient volume to run the elevator at its full capacity and it will only get paid for the actual amount of electrical power that is being used at any one time.

Mr. SPROULE. Convert that into ordinary horse-power, let us know what it costs and we will understand it.

Mr. GERMAN. It will be $11 or $12 per horse-power.

Mr. FOSTER. If you can let us know what it will cost to elevate 100,000 bushels of grain you will come down to the understanding of ordinary mortals.

Mr. GRAHAM. It is above me. The estimates made for the running of the elevator for seven months from the 1st of September to the 31st March next is $8,000, of which $1,600 will, we expect, be for power.

Mr. FOSTER. The government will be prepared to run the elevator and take in whatever grain comes?

Mr. GRAHAM. Yes, beginning on the 1st September.

Mr. FOSTER. Is the government going to carry the grain?

Mr. GRAHAM. That opens up a pretty big question to which I referred some months ago in this House. It is a debatable question whether the elevator should not be leased to a company that will fill and empty it for the benefit of the trade.

Mr. KEMP. As has been stated by my hon. friend from East Simcoe (Mr. Bennett), this plant at Port Colborne has cost $3,500,000. It is almost ready for operation. My own opinion is that the best policy that the government could have pursued would have been to have deepened the Welland canal to 25 feet. However, this scheme was conceived at a time when a very large amount of wheat from the Canadian Northwest was going out by way of Buffalo, when large boats from the head of the lakes were delivering this grain at Buffalo and some people, amongst them Mr. George Bertram, thought that we could divert that grain to the St. Lawrence by building this elevator at Port Colborne. I did not agree with him, but I believed that the best thing that could have been done was to have deepened the Welland canal, but the scheme was to try and encourage some of the vessel owners to carry out the system which was proposed at that time, that large barges should be employed to go as far as Port Colborne for cargo through this elevator—perhaps one steam barge towing two ordinary steel barges. It was thought that these barges could be towed down Lake Ontario and through the St. Lawrence canals. I think that is a scheme which should commend itself to the Montreal shipping firms. They have barges which go through the St. Lawrence canals and I think we ought to try and see if they will not send them as far as Port Colborne. The cost of elevating grain in such an elevator as this is very little indeed, and I am not sure but what this scheme of transporting grain from the head of the lakes to Montreal would be as economical a scheme as any we have at the present time. I do not think it would be as cheap as to transport grain from the head of the lakes to Prescott and Kingston, by the Welland canal route, if the Welland canal were deepened,

but it would be as cheap as any in existance at the present time. We have always contended in Canada that our canal systems have been regulators of freight rates, as they have contended in New York state that the Erie canal has been a regulator of freight rates. The Erie canal does not have the capacity of the St. Lawrence canals for carrying a large volume of traffic, but it has always been the regulator of freight rates, and they never would have got such a low rate on the New York Central for grain going to the sea-board if it had not been for the Erie canal. I have very much the same criticism to make in regard to our transportation schemes as my hon. friend from East Simcoe made. It has been demonstrated that east of the lakes there is very little profit in carrying grain. Whatever profit there is in carrying grain is west of the lakes where the railway companies have more of a monopoly and they can regulate their rates to suit themselves to a greater extent. But once you land the grain at the head of the lakes, competition is very keen and there is very little money in carrying from that point.

Mr. SAM. HUGHES. You are speaking of through grain?

Mr. KEMP. I am speaking of grain for export.

Mr. SAM. HUGHES. The rate on grain from points in my constituency to Montreal is greater than it is from Fort William to Montreal.

Mr. KEMP. I know that local rates are very much higher than through rates. That is another question that I do not intend to dwell upon just now, but I would like to invite the attention of the minister to the number of routes east of the lakes that we have in working order at the present time. First, I will refer to the American system of railways and transportation which routes are very numerous, which we all know about and which are an important factor with respect to competition. Then we have the Canadian Pacific Railway from Owen Sound to the sea-board and the Canadian Pacific Railway from Victoria harbour to the sea-board, which has been referred to by my hon. friend from East Simcoe. We have the Grand Trunk Railway from Depot Harbour, Parry Sound, Midland, Collingwood, Wiarton, Goderich, Sarnia and Windsor. We have the St. Lawrence canal system and we will have, I suppose, the Trent canal system. Then we have the system that we are referring to at the present time, and which is part of the St. Lawrence canals system—the scheme of transferring grain at Port Colborne, taking it from large boats and putting it through the elevator. We have before us the Hudson Bay Railway. We have the Georgian Bay canal scheme and we have the Grand Trunk Pacific scheme. Hon. gentlemen will remember that in the debate upon that scheme in this House we were told that the Grand Trunk Pacific would carry grain to the sea-board at a cheaper rate than it could be carried by any canal or railway in existence. It is on record in 'Hansard' that ministers of the Crown made that statement when the Grand Trunk Pacific Bill was going through this House. We have also the Erie canal and the American transportation system. It seems to me that the time has come when we should call a halt. If we have money to spend and if money can be saved to the benefit of the farmers in the Northwest it seems to me that the very first thing that we should ascertain is whether or not we can save sufficient to warrant us in spending what will be required to deepen the Welland canal. That seems to be a feasible project, because if we can load these large vessels to carry half a million bushels of wheat as far as Kingston and Prescott, where it can be transferred to barges which would float down the river to Montreal—it would be as cheap to store the wheat in those barges as to put it into the elevator at Montreal—and if the wheat could then be transferred through floating elevators to the steamships at Montreal, it strikes me that it would have the effect of reducing the cost of carriage and of diverting a large amount of the grain trade to the St. Lawrence route. That, it seems to me, would be an inexpensive way by which the produce not only of the northwestern states, but of our own Northwest could be transported to the sea-board. We should not invest another dollar in any of these schemes before we have ascertained from experts what is the cheapest way of transporting a bushel of wheat from the head of the lakes to the sea-board.

These engineers' reports go for nothing in my mind. They gave us information as to what can be done and in these days of advanced engineering almost anything can be accomplished if you are willing to spend the money. If after the work is done you can carry a bushel of wheat a fraction of a cent cheaper by one route than by another, you can divert the traffic by that route. Although I am greatly in favour of the Welland canal route for many reasons, even in reference to it, I think that the only proper way to proceed is to have the opinion of experts as to whether grain can be carried to the sea-board by that route cheaper than by any other. I am thoroughly opposed to going into so many half digested schemes of transportation and talking big to the people all over the country, trying to make them believe we are to deepen the Welland canal and the St. Lawrence canals and to have the Georgian Bay canal, when it is impracticable to do all these things, when we cannot afford them. Let us devote our attention to one scheme. A 25-foot Welland canal would be efficient to carry all the grain of the Northwest. But while doing

that we must not discourage private enterprise. I agree with the hon. member for Simcoe that the railways have done a great work. Let us improve the harbours on the Georgian bay and assist the railways, but we must remember that the Welland canal system is the regulator of freight rates to the sea-board.

Mr. GERMAN. The hon. gentlemen are developing a proposition that might have been much better discussed in the earlier days of the session when we had nothing to do. The policy of constructing an elevator and the deepening or practically building a harbour at Port Colborne was adopted by reason of the fact that the Welland canal as a portion of our transportation system was practically useless without the elevator and harbour. I supported the building of the elevator and the enlargement of the harbour because those two things were both necessary and will be necessary even after the Welland and St. Lawrence canals are deepened and the Georgian Bay canal is constructed. The hon. member for East Simcoe (Mr. Bennett) has made the assertion that I was opposed to the deepening of the Welland canal.

Mr. BENNETT. I did not say that.

Mr. GERMAN. I understood my hon. friend to make that statement and I think I am quite correct in my assumption. I think he made it. However, he is liable to develop erratic theories and to endeavour to square the facts to the theories. I am not opposed to the deepening of the Welland canal by any means. I think the Welland canal in the future will need to be deepened and enlarged to meet the future growth and development of this country, but at present we are dealing with a vote in connection with the completion of certain improvements at Port Colborne authorized by parliament. These improvements are necessary as a step towards the solution of the transportation problem of this country, they have been approved of in the past and I am sure will be found in the future to have been necessary and to justify the expenditure of this money.

Mr. LANCASTER. I am glad to hear from the hon. member for Welland (Mr. German) now that he is in favour of deepening the Welland canal, but in view of what he says as to not speaking earlier in the session I would call attention to the fact that when the Georgian Bay canal scheme was under discussion I had the temerity to advocate the deepening of the Welland canal rather than the construction of the Georgian Bay canal and had not his support then.

Mr. J. T. SCHELL. Some remarks I had occasion to make in this House two or three years ago have been amply verified. I went into the matter of general transportation quite extensively and at that time I agreed that the building of the elevator at Port Colborne would probably be of benefit. The idea seems to be to deepen the Welland canal very quickly. I do not think that we need be in a hurry about deepening the Welland canal for some years to come. We are only now getting the improved elevator system ready to work and we have had no demonstration as to what benefit we will derive from it. Then, again, suppose you deepen that Welland canal, is it going to be to the interest of Canadian trade or American trade? Will it draw away trade from Canadian channels? That is a matter that should be well considered. As soon as you deepen the Welland canal to 25 to 30 feet you open a clear waterway to all American corn, wheat and grain of any kind to Ogdensburg or to any of the ports on Lake Ontario and that means that grain which under the present arrangement will probably come largely to the elevator at Port Colborne would go down through the deepened Welland canal to American ports. For what reason? Suppose the large lake vessels could come down to-day from Duluth or Chicago and go through the Welland canal. They certainly would not go beyond Prescott. They would go where they could get a return cargo. As soon as they passed Port Colborne they would have to go to the American side for their return cargo, so they would carry their eastbound cargo there and take their return cargo back. Let us have a trial of the benefit that we have been expecting to derive from the elevator and improvements at Port Colborne before we undertake or put the country looking towards the deepening of the Welland canal. Let us have a trial of one, two, three or four years. That was the argument I made two or three years ago, but at the same time I advocated the postponement of the building of or agitation for the Georgian Bay canal until this route had become developed and we could see what it would do. Then you could put on a commission and ascertain what benefit you would receive from the building of the Georgian Bay canal system. In the meantime our railways would be developed just as they are being developed to-day, from Midland or from Tiffin or Depot Harbour or any of these ports. By that time probably we will have also the Grand Trunk Pacific which road with a 4-10 grade can at the same rate as is charged by any other large grain carrying road of the northwest haul their grain from Winnipeg into Quebec a good deal cheaper or quite as cheaply as it can be carried by the rail and lake route. These are matters on which I hope the government will not lose their heads. When the time comes for the Georgian Bay canal then build it. I do not believe the time has come for it. When the time comes to enlarge the Welland canal, do it. In the meantime I hope the government will give the improvements and the elevator and storage facilities at Port Col-

borne a thorough, complete trial so they will be able to demonstrate not only the cost but the question as to whether the grain will tend to come by way of Montreal or by way of Buffalo. We know well that the American shippers would prefer to ship by Montreal during summer the grain stored in Chicago. They will pay larger prices for shipment by Montreal than by the southern route. There is a large traffic which probably would not go through Montreal and neither would any of the other grain come through Montreal. We would not hope to develop a traffic from the United States by deepening the Welland canal, for then you would open the way to the New York terminus at cheaper rates probably than could possibly be given to Montreal. You must stop at either Port Colborne or Prescott. It will cost too much for many generations to deepen the St. Lawrence canals.

Mr. R. L. BORDEN. On the 11th June I asked for certain information with regard to the cost of the Mountain division of the National Transcontinental Railway A return has been brought down which is absolutely unsatisfactory, because I cannot understand what is intended. It is said that the length of the whole road from Winnipeg to the coast is 1,755 miles, of which 916 miles are included in the prairie section and 839 miles in the mountain section. Further down I find this language :

The estimated cost of construction is set down at the present date at $61,520,000, which includes terminals at Prince Rupert, $3,000,000.

Does that refer to the mountain section or to the whole road from Winnipeg to the coast ?

Mr. GRAHAM. That is the Mountain section.

Mr. R. L. BORDEN. Might I suggest to the minister that when his clerks prepare returns they make a matter of that kind plain, so that I need not take up the time of the House in asking questions which would be unnecessary if the return were brought down in proper form ?

Sault Ste Marie canal—construction, $105,000.

Mr. GRAHAM. That is the amount expended in deepening and widening the chanel at the upper end. Mr. Boone has the contract, amounting to $256,657.

Mr. J. D. REID. How much has been paid on it?

Mr. GRAHAM. $234,102 up to September of last year.

Mr. J. D. REID. Has the contractor been paid the amount estimated, or does the government expect that the work will cost more than the amount of the contract ?

Mr. GRAHAM. This vote is expected to cover the whole amount.

Mr. J. T. SCHELL.

Mr. J. D. REID. It is going to cost the country $50,000 more than the amount of the contract.

Mr. GRAHAM. Although these contracts are made on an estimate of a lump sum, the payments are at schedule rates of so much a yard.

Mr. BENNETT. Has the minister's department had any expense in connection with the work at present being done by the American government at Lime Kiln crossing near Windsor ?

Mr. GRAHAM. I think I am safe in saying no, but I will make inquiry.

Mr. BENNETT. Will the minister inquire whether his department has in its employ a couple of agents superintending the operations of the American government ?

Mr. J. D. REID. Has the minister ever gone along the Rideau canal to see how it is lighted ?

Mr. GRAHAM. The Rideau canal seems to be under double jurisdiction. Part of the work is done by one department and part by another.

Mr. J. D. REID. In going through that canal this summer I noticed that it is lighted by lanterns hanging from sticks.

Mr. GRAHAM. That would be in the lake section.

Mr. J. D. REID. Although the canal is supposed to be lighted every night, it seems to be lighted only about two nights in the week. Although there are not many boats navigating the Rideau canal, I think in the interests of navigation it should be lighted every night.

Mr. FOSTER. Does the minister propose to make his statement to-night ?

Mr. GRAHAM. I am not quite ready to make my statement to-night.

Mr. FOSTER. Can he say when he will make it ?

Mr. GRAHAM. I will be prepared to take it up to-morrow.

Mr. FOSTER. I would also like to know when the Minister of Militia (Sir Frederick Borden) proposes to make his statement. Will that be to-morrow ?

Sir WILFRID LAURIER. I cannot say.

Mr. J. D. REID. He said he was ready.

Sir WILFRID LAURIER. Then, I will ask him to be here to-morrow.

Mr. FOSTER. Then, we will take the Transcontinental first ?

Sir WILFRID LAURIER. Yes.

At six o'clock, committee took recess.

After Recess.

Committee resumed at eight oclock.

Quebec canals—steam road roller and stone crusher, $7,000.

Mr. TAYLOR. What is this required for?

Mr. GRAHAM. To macadamize the tow path. They do a great deal of travelling on the canal bank.

Soulanges canal—improvements, $15,000.

Mr. TAYLOR. What are the improvements there ?

Mr. GRAHAM. Fire protection, electric motors, machine shop, timber and lumber shop, cast-iron and concrete posts.

St. Lawrence canal—district office, $7,000.

Mr. GRAHAM. This is really finishing up the expenditures for work in that district. We have our engineer and staff there.

Trent canal—construction, $1,000,000.

Mr. TAYLOR. Is this work all under contract ?

Mr. GRAHAM. Yes, all let to the lowest tenderers.

Mr. LENNOX. Has the southern outlet been determined upon yet ?

Mr. GRAHAM. No.

Mr. LENNOX. I want to ask the minister with reference to that Devil's Elbow he has been talking about, that is, the work at Bradford. The minister explained the other day that the chief engineer is not able to attend to it now. Could not the minister send some one else up there in the meantime ?

Mr. GRAHAM. I had a little conversation with the secretary of the chief engineer this morning, and I understood him that some time before the session closed he thought he could give me an idea of what that work was going to cost. I think he said some engineer was there looking at it.

Mr. LENNOX. I think the chief engineer is quite familiar with the general character of the situation. It is absolutely level land, it is called a marsh. I was at Bradford the other day, and talking with a gentleman who knows a great deal about it in a non-professional way, he said the distance was about three-quarters of a mile. The soil is mucky on top for about three feet, then you get to solid earth. I would be glad if the minister, before the session closes, would give me an idea as to whether he will undertake the work.

Mr. GRAHAM. I will try and get that.

Mr. LENNOX. It is a place where there will be a good deal of traffic, which comes up to the point of the Devil's Elbow. It is a small matter, and will give an additional outlet to the people of Bradford and of the neighbourhood.

Mr. OWEN. Could the minister tell me when the contract was let for the section passing through the town of Campbellford ?

Mr. GRAHAM. I cannot say that. When the work of the session is over and my chief engineer comes back, I intend to go with him to see the place.

Mr. OWEN. Will this complete the Trent canal ?

Mr. GRAHAM. The Trent canal will not be completed until it has got away up into the waters of Lake Simcoe. There are some sections of it for which an estimate has not yet been made. I have sent out for information on those sections which are under contract.

Mr. KEMP. How many years will it take to complete the canal, and how much will it cost ?

Mr. GRAHAM. If we base an estimate for the future on the number of years it has been going on, some of us will be pretty old men when it is completed.

Mr. KEMP. Then it won't be any benefit to this generation ?

Mr. GRAHAM. I think it is a great accommodation now.

Lachine canal—wall north side basin No. 2, $98,000; wall side basin No. 2, $49,000; workshops, $15,000.

Mr. HAGGART. Does that finish the wall on basin No. 2?

Mr. GRAHAM. Yes.

Mr. HAGGART. How much does the whole wall cost?

Mr. GRAHAM. $147,000. It is under contract.

Chambly canal—to macadamize towpath, to complete, $10,000.

Mr. HAGGART. What do those macadamized roads cost altogether?

Mr. GRAHAM. $3,500 a mile, and there are four or five miles.

Mr. TAYLOR. Will the stone crusher and roller be utilized here ?

Mr. GRAHAM. Yes.

Cornwall canal—to build a gate lifter, $10,000.

Mr. HAGGART. What does that gate lifter cost altogether?

Mr. GRAHAM. $12,000.

Murray canal—to provide houses for bridgemen, $5,000.

Mr. TAYLOR. What kind of houses, and how many?

Mr. GRAHAM. There are eight men and only two houses, and the whole length of the canal is several miles away from any town. We propose to build two houses one and a half stories each, at $2,500 each.

Rideau canal improvements, $4,500.

Mr. TAYLOR. What are the improvements?

Mr. GRAHAM. Building a platform and rebuilding the swing bridge across the upper lake.

Trent canal improvements, $45,000.

Mr. HAGGART. What are those improvements?

Mr. GRAHAM. Dredging between Bobcaygeon and Peterborough, Peterborough and Fenelon, and Balsam lake and Lake Simcoe. We do that with our own dredge.

Mr. TAYLOR. Are you getting a dredge built for that?

Mr. GRAHAM. We propose to get one built. $15,000 is the estimate.

Trent canal—new lock and dam, Lindsay, $80,000.

Mr. GRAHAM. We are replacing the old wooden locks which the Ontario government built there some fifty years ago.

Mr. HAGGART. Will that be used in the navigation of the Trent?

Mr. GRAHAM. Yes.

Trent canal—dam at Buckhorn, $25,000.

Mr. GRAHAM. This work is being done by Conroy, of Peterborough, and was let by tender. The amount is $55,119.

Mr. BENNETT. Is it intended to place the section under contract between Lake Simcoe and the Georgian bay this coming year?

Mr. GRAHAM. Not this season.

Mr. OWEN. Where is the dam at Buckhorn being built, and what is it for?

Mr. GRAHAM. It is for navigation purposes practically, and we may develop power as well.

Intercolonial Railway—increased accommodation at Halifax, $500,000.

Mr. CROCKET. The departmental report says that three contracts were let at Halifax during the year. Who are the contractors and what is the contract price in each case?

Mr. GRAHAM. The contract for grading on the west side of water street is not a lump sum contract but is a contract at schedule prices.

Mr. CROCKET. Who is the contractor ?

Mr. GRAHAM. Kitchen & Co.

Mr. CROCKET. Has the minister a statement of the estimated value of the contract ?

Mr. GRAHAM. I do not seem to have it here. The estimated expenditure is about $520,000 for the year. The expenditure to the 31st March last was $3,233,158.01.

Mr. CROCKET. Has the minister a list of the amounts paid under each of the contracts ?

Mr. GRAHAM. No, I will try and get a statement of the different contracts.

Mr. CROCKET. The report states that the Cunard property was secured by the railway. I would like to know what was paid for that.

Mr. GRAHAM. $187,366.66.

Mr. CROCKET. Through whom was the purchase negotiated ?

Mr. GRAHAM. There was an offer made, arbitrators were appointed and it was settled by the officers of the department.

Mr. CROCKET. Did Mr. McIlreith get a fee ?

Mr. GRAHAM. Mr. McIlreith searched the title or did some legal work of that kind.

Mr. CROCKET. What was the amount of his fee for that service ?

Mr. GRAHAM. Has my hon friend a copy of the Public Accounts ?

Mr. CROCKET. There does not seem to be anything in the Public Accounts. All I find in the Auditor General's Report is the amount paid to Kitchen & Co. for excavation. There seems to have been $54,217.51 paid out during the last fiscal year on account of the Halifax works.

Mr. HAGGART. Would the minister state what he intends this $500,000 shall be applied to, whether it will meet the object he has in view, and what is the total amount that has been expended for increased accommodation at Halifax ?

Mr. GRAHAM. The amount expended to the end of March is $3,233,000 in round numbers. This amount is required for additional facilities on the west side of Water street, engine house, heating and turntable, freight and car repair shop and planing mill, store house, oil house and sand house, chimney and foundation, coal pockets, water tank and supply, cinder pits, grading, ballasting and tracks, double tracking Richmond to new yard, heating of buildings, &c., tracks and turnouts in Richmond yard, building for car inspectors and wharf. These improvements which I am speaking of now will cost $1,019.80.

Mr. HAGGART. Which, added to $3,200,000 will be $4,200,000 ?

Mr. GRAHAM. $4,255,000. But the $3,200,000 includes the $500,000 already expended.

Mr. DANIEL. I notice, at page W—19 of the Auditor General's Report that Mr. R. T. McIlreith, for legal services and expenses, received $1,861.30. Was that in connection with the purchase of property in Halifax ?

Mr. GRAHAM. This was in connection with the purchase of property required for these improvements.

Mr. DANIEL. Did this include the properties in connection with which Mr. Pearson got $14,000 ?

Mr. GRAHAM. The last item, in connection with the roundhouse, I think is the only one.

Mr. HAGGART. Is any of this expenditure for increased accommodation at Halifax charged to revenue account besides what is charged to capital ?

Mr. GRAHAM. No, I think not, this is revolutionary.

Sydney Mines—extension to, $14,625.

Mr. GRAHAM. This is from North Sydney to Sydney Mines, not quite three miles, 2·7 I think. It is an extension of the line. The expenditure up to March 31, 1907, was $88,043. That includes the land and a very large yard to accommodate the traffic we receive from the Nova Scotia Coal Company.

Improvements at North Sydney, $4,000.

Mr. GRAHAM. That is an addition to the engine house.

Mr. HAGGART. Why is that charged to capital account ?

Mr. GRAHAM. It is really a new thing, to provide accommodation for more engines, we might have built it by itself and it would then have been absolutely new but we attached it to the other one.

Sydney—increased accommodation, $14,000.

Mr. GRAHAM. This is in connection with the bridge at Sydney yard. The bridge itself will cost about $14,000.

Improvements at Mulgrave, $46,800.

Mr. GRAHAM. This is to provide an extension of the wharf, additional sidings, extension of the freight shed, land, coaling pockets, improvements at the station and water tank. The total cost will be $78,800. This vote finishes the work.

Antigonish—increased accommodation, $4,500.

Mr. GRAHAM. We are building a concrete platform, providing drainage and completing the water service ; the work is practically finished. I received a telegram today asking me to extend the work to the amount of $400 in order to have our walk meet the town walk. If we decide to do that we will require $400 more. We have expended there $21,354.57. It is under contract to Mr. Sutherland.

New Glasgow—increased accommodation, $7,500.

Mr. GRAHAM. This is to complete the work of providing two undercrossings. The expenditure to March 31, 1907, was $46,677.22.

Stellarton—increased accommodation, $6,500.

Mr. GRAHAM. This is for a sand house and electric lighting plant. It will take about $9,000 more to complete this work. It is under contract. The General Electric Company are putting in the lighting plant.

Pictou—increased accommodation, $8,600.

Mr. CROCKET. Is any of this sum for Pictou to be applied to the contract for the engine house ?

Mr. GRAHAM. There is nothing in this. It is for coaling pockets, water service, loading platform and a building for our car cleaners.

Mr. CROCKET. In connection with the contract for the Pictou engine house I was informed some time ago by the minister that the contract was $13,950, that there were some schedule prices, and that the contractor had been paid to that date $100,221 and that there was a final estimate amounting to $10,719 remaining to be paid, so that the total amount payable to the contractor would be about 111,000. How is it that such a large sum has been paid under that contract ? The department estimated the value of the contract at $62,000. The contractor Mr. Walberg, has received nearly double that amount.

Mr. GRAHAM. It includes more than the engine house, there is the crib-work, filling in, &c., which was not for the contract for the engine house proper. It is hard for me, of course, to explain how far—I am not referring to this particular—the execution of the contract varies from the estimate. I went into it with an engineer one day, and he convinced me that it is likely to be the case quite often. Contracts are taken at a named sum, but the payments are made on schedule prices, and the details vary. The estimates for some of the largest railway works on this continent are not approximately near to the final cost, although the estimates serve as a basis for the amount of the contract.

Mr. HAGGART. What is the estimate upon which the contract was made, what is the amount expended, and what do you require to finish the work ?

Mr. GRAHAM. This work is all finished and paid for.

Mr. CROCKET. It is true that the contract for the building proper was $13,950, but the department estimated the contract upon Mr. Walberg's tender of schedule prices and including the bulk sum as worth $62,000. Notwithstanding that, we find that he received over $110,000 on that contract. It seems that in this case, as in all other cases in which contracts were awarded to Mr. Walberg, he was the lowest tenderer, but he managed to come out at the completion of this contract as in the case of all his other contracts with an amount far in excess of the highest tender. I can understand that there might be some slight variation between the department's estimate and the actual working out of the contract; but it does seem to me that it is not very complimentary to the engineering staff of the Department of Railways and Canals that they should be out to such an immense extent as in this case. There were additional amounts in connection with the Pictou engine house outside of Mr. Walberg's contract which made the total value of this work $129,111. It is an immense amount of money to spend for such an engine house as that at Pictou.

Mr. GRAHAM. My hon. friend is wrong. This item has nothing at all to do with the item he is discussing. The details of this contract will appear in the Auditor General's Report for the year just past. The contract was for an engine house, cribwork, and several other things; but as it is not a matter germane to this item, I did not bring the details.

Mr. CROCKET. Can the minister say when Mr. Walberg received his last payment? He was paid $100,221.91, up to the date of my asking the above question, and there was still outstanding a progress estimate amounting to $10,719. I would like to know when that was paid?

Mr. GRAHAM. I will have to get that information at another time for my hon. friend.

To increase accommodation at Truro, $105,000.

Mr. STANFIELD. What is this for?

Mr. GRAHAM. The estimate is as follows: Station, $85,000; yard, $168,000; water service, $5,000; coal pocket, $3,000; ballast, $30,000; store, $12,000; office, $25,000; small items, $30,000; grading, $51,000; freight house, $25,000.

Mr. HAGGART. What is the total cost and what is the total amount expended?

Mr. GRAHAM. The total amount expended at Truro, including everything, is $271,366.77. That is not on the work I have outlined, which will cost over $400,000.

Mr. HAGGART. How much of this vote will it take to complete it?

Mr. GRAHAM. About $250,000.

Mr. HAGGART. Is the work under contract, let by tender, and, if so, who are the contractors?

Mr. GRAHAM. We are doing the yard work ourselves, and the coal pits have been let. The balance of the work has not yet been let.

Mr. HAGGART. What part of the work is done?

Mr. GRAHAM. Part of the yard north of the main line of the Pictou branch is done by ourselves. The water service is done by contract.

Mr. TAYLOR. Is the new station to be let by tender?

Mr. GRAHAM. It has not been tendered for yet, but it will certainly be let by tender.

Mr. STANFIELD. Is it the intention of the minister to start the new station this year?

Mr. GRAHAM. The plans are being considered now. I do not know just what we shall be able to do this year, as the season is so late; but it is not the intention to make a difference between places.

Mr. STANFIELD. The reason I ask the hon. minister this question is that in 1904 I think it was, the government started to build a new engine house. The work was left until the eve of a general election. They did not know what site they were going to select. You did not know what site you were going to take and were forced to take a certain site which cost the country a considerable sum. In turning up the Auditor General's Report, I find that upwards of $220,000 was spent on that engine house. Of that amount over $80,000 was spent in excavating. What I would like to impress on the minister is that it would be far better to provide this new station before the general elections. He would get just as many votes out of it and so will I, if fortunate enough to run. While on my feet, I would like to impress on the minister the absolute necessity for better precautions on the crossings in Truro. I have a copy of a letter sent by a lawyer to the department claiming damages on account of an accident at a crossing there, in which two horses were killed but fortunately without any loss of human life. The cause of the accident was this. It was a dark and stormy night and there were no lights on the crossing. The town of Truro had written the department several times begging it to put two lights on this crossing, but the department neglected to do so. From what I understand, the lawyer for the department wrote the Truro people that the government will not pay this claim. I would like the minister to look into the question.

There are no gates any way down there and it is a miracle that no lives have been lost.

Intercolonial Railway—increased accommodation at Springhill junction, $2,900.

Mr. GRAHAM. This is for coal plant and hot water pumps.

Improvements at Amherst, $47,000.

Mr. GRAHAM. This is for a station, $38,000, a concrete platform and an engine house. Estimated cost $59,500. The contract was given to Leblanc & Company, the lowest tenderers, after newspaper advertisements.

Mr. HAGGART. Why build an engine house at Amherst? It is not a division point.

Mr. GRAHAM. We have two engines there, used for shunting in the yard.

Mr. ANGUS McLENNAN (Inverness). Before you leave the Nova Scotia items, I desire to call attention to the fact that while I am pleased to see so many votes for increased accommodation along various sections of the Intercolonial Railway passing through that province, I regret that the good old county of Inverness, through which thirty-five miles of the road runs, is left out. My regret is that the minister, on his tour of inspection, did not have time to see that fine county in daylight, and most of all to see its requirements. There is a private company owned railway running along the county of Inverness, a distance of 61 miles. There are three thriving coal mining towns tributary to that road, together with about two-thirds of the area of the county of Inverness and its people. All the freight emanating from these mining towns and other parts of that county, together with the passenger traffic, passes, almost all of it, over the Intercolonial Railway. That other railway forms a junction with the Intercolonial Railway about a mile and a half or so from the Strait of Canso, or about a mile and a half from Point Tupper, one of the Intercolonial railway terminals. Every passenger—and this is what I desire to call attention to particularly—who leaves the county of Inverness by that road has to land in a swamp along the track of the Intercolonial Railway. The government, it would appear, took excellent care to make accommodation for the freight coming off the Inverness and Richmond Railway, but it left the passengers to shift for themselves, and they have to land, as I have said, about a mile and a half from the government station at Point Tupper. The attention of the late Minister of Railways (Mr. Blair) was brought to this matter by myself, and he claimed that it was the duty of the private company to provide a shelter there for its passengers. The company, on the other hand, contend that they have their station in the town of Hawkesbury, about one-quarter of a mile from this junction, and that the moment they land their passengers on the Intercolonial track they are Intercolonial passengers, and consequently they back their train right to their station in the town of Hawkesbury. I have been time and again on board the Intercolonial and taken the Inverness train to my home, and in the spring and winter I have seen twenty-five to thirty passengers, of both sexes, having to walk the whole length of the train in snow and slush to their knees and get to the Intercolonial as best they could. This has been going on some six or seven years, so that it is a case, as far as the people of Inverness are concerned, of being between the de'il and the deep sea. What I contend is that the passenger earnings which the Intercolonial derives from this traffic amply warrant a station being built at that junction by the government for their accommodation. The passenger earnings on this 61 miles of the Inverness railroad this last calendar year were $20,000, and no doubt that would be at least duplicated on the Intercolonial, because the run on that road is longer. With its freight traffic and passenger traffic that 61 miles of railway cleared $75,000 last year, as is shown by the government returns. These earnings, I say again, have been more than duplicated in the case of the Intercolonial, because the greater amount of that freight and traffic would go over the Intercolonial sometimes twice or three times the distance that it goes over the Inverness road. I listened to a question asked and answered in this House the other day as to the amount paid by the Sydney and Louisburg Company to the government for the use of the government terminals at Sydney. It is evident from that question and its answer that the Sydney and Louisburg road is compelled to make use of the government terminals at Sydney, for which they pay a certain amount. What I claim is then that it is the duty of the government either to erect a modest station for the shelter of the passengers here or compel the running of the Inverness trains into the government terminals at Point Tupper. The people of Inverness would be perfectly satisfied with either.

Mr. HAGGART. What is the distance to Point Tupper?

Mr. McLENNAN. About a mile and a half. I think that the request I make of the government is perfectly reasonable. To show the absurdity of the present arrangement let me state the position as it is. A freight train to-day leaves Inverness town, goes to the junction and then right on into the government terminals at Point Tupper, where it transfers its freight comfortably. But a train loaded with passengers leaves soon after and is treated very differently.

The passengers are dumped in a swamp, the most hideous looking place along the Intercolonial Railway.

I was determined, before these votes went through, to call the attention of the Minister of Railways to this matter, in order that at least, he should give the matter attention when the Supplementary Estimates are being prepared, or arrange with the company, as I have indicated, that they might use the government terminals at Point Tupper. I certainly refuse to hold a seat in this House quietly and silently while this abuse of the people I represent goes on.

Mr. HENDERSON. What do you think of that, Mr. Minister?

Mr. GRAHAM. As I understand the hon. member (Mr. McLennan) the Canadian Northern, or Inverness road, put the passengers off at a place other than the station, landing them on the Intercolonial tracks. That is a matter well worth looking into; and, if my hon. friend will drop me a line putting the matter in concrete shape, I will take it up with the railway. Perhaps the Railway Commission might induce them to do something, or we might make some arrangement with them.

Mr. McLENNAN. There is an excellent way for the minister to arrange this matter perhaps better than in any other, and that is to make this excellent piece of railway a branch of the Intercolonial—to take it over and experiment with it as an excellent feeder of the road. I am introducing this subject to the attention of the minister with the hopeful assurance that the road cleared $75,000 in its working for the last calendar year.

Mr. STANFIELD. I notice in the newspapers a statement that the Minister of Railways is expected to spend a month or two in inspecting the Intercolonial. While he is on that tour of inspection, I would like him to spend a few days in my county. The reason I ask is that we are sadly in need of branch railways. I will not weary the House or take up its time with a long discussion of these matters, but I would merely say that the branch railways particularly needed are from Brookfield to Lansdowne, Brule to Truro, and from Parrsboro' to Truro. The minister need not laugh at this. If he had seen, as I saw last fall, the farmers and the merchants of that country having their stuff hauled over muddy roads—it was a muddy season—at a cost of $3 to $5 a ton, he would have seen the need of these branch roads. And I believe it can be shown that the roads I have mentioned are a paying proposition. If the minister will spend a day or two with me, we will look it over.

Improvements at Sackville, $27,000.

Mr. CROCKET. What are these improvements?

Mr. McLENNAN.

Mr. GRAHAM. Station, freight sheds, grading of track, water service and so on—total, $66,000.

Mr. CROCKET. Have the contracts been let?

Mr. GRAHAM. The contract has been let for the station. Calls are out for the freight sheds, but tenders have not yet been received.

Mr. CROCKET. What was the contract for the water system?

Mr. GRAHAM. It was $32,000.

Mr. CROCKET. Who was the contractor?

Mr. GRAHAM. Willard, Kitchen & Co., Limited.

Mr. CROCKET. How much for the station?

Mr. GRAHAM. The contractor is Thomas R. Anderson, at $20,000.

Mr. CROCKET. Speaking of stations, I do not want to repeat at length what I have already said in this House and privately to the minister, in regard to the need for a new station of the Intercolonial at Fredericton. The Finance Minister (Mr. Fielding) who was acting Minister of Railways last session, admitted that Fredericton was entitled to a better station than we have now. The Minister of Railways has himself visited Fredericton and seen the station, and both he and his deputy have admitted that the station is neither creditable to the railway nor to Fredericton, as the capital of the province. I will simply say that the Fredericton people are looking to the Supplementary Estimates this year to find provision for a new building and that they will be grievously disappointed if no provision is made.

Mr. HAGGART. What is the total amount of these improvements? What will be required after this vote to complete them?

Mr. GRAHAM. It is expected that this vote will complete the work. There is a revote here of $20,000. The total cost will be $66,000.

Mr. CROCKET. I would like to hear from the Minister of Railways as to the proposition to erect a new station at Fredericton.

Mr. GRAHAM. They are not in these estimates.

Mr. CROCKET. I have noticed that.

Mr. GRAHAM. I can say nothing further, except to recommend faith and hope for a few days.

Towards double tracking parts of line, $200,000.

Mr. DANIEL. What parts of the line are to be doubled track?

Mr. GRAHAM. From Moncton to Painsec Junction.

Mr. HAGGART. What is your plan for double tracking the road? Has the minister looked over the southern road from Moncton to Halifax that he did not know whether he would adopt or not?

Mr. GRAHAM. The double track is absolutely necessary on this piece to accommodate the traffic. This double track goes toward Prince Edward Island. The other question is a large one. If the trade of Canada is to come from the west and to be exported from Canadian ports, and the goods imported into Canadian ports at Halifax and St. John, they will have to be provided for. The Grand Trunk Pacific is near Moncton, the Canadian Pacific Railway is now at St. John, the Canadian Northern is at Quebec, and some way will have to be found to get this traffic from Moncton to St. John and Halifax, and somebody will have to provide more railway communication between Moncton and St. John and between Moncton and Halifax.

Mr. HAGGART. The Grand Trunk Pacific will not be finished until 1911, and it will require a couple of years to develop the traffic at least, so it will be thirteen years before the minister will have to take into consideration either the double tracking from Moncton or building this new line.

Mr. EMMERSON. This question was discussed two or three years ago in this House. The policy was then laid down that the Intercolonial should be doubled tracked between St. John and Halifax, as early as circumstances would permit, and there were certain portions of the line which, if it were to meet present requirements, must necessarily be double tracked at once. For instaance, a double track was absolutely necessary between Halifax and Windsor Junction. That work was done, and also a double track was put down between Stellarton and New Glasgow. At the same time there was a location made between Hampton and the city of St. John. That work I believe has not been commenced, although the surveys have been made. Within the very near future a double track will have to be extended on to Springhill. Between Moncton and Springhill the traffic to-day is very heavy indeed. One of the great difficulties in proceeding with the double track must necessarily be the grade between Dorchester and Sackville. Pursuant to that policy, the Department of Railways and Canals, as I understand, have been conducting surveys in order to obviate some of these difficulties. Therefore, this is not a new question, it is one which has been practically settled. In the very near future, and indeed before the Grand Trunk Pacific Railway reaches Moncton and seeks an outlet at Halifax, the necessities of the traffic between Moncton and Truro and Truro and Halifax will make it absolutely necessary for the government to double track that portion of the Intercolonial.

Mr. TAYLOR. Perhaps the minister would allow the balance of this item to stand and let us go back to item 102, on which the leader of the opposition wants to make some remarks.

National Transcontinental Railway, $30,000,000.

Mr. R. L. BORDEN. Has the minister made any estimate of what the total cost will be from Winnipeg to Moncton ?

Mr. GRAHAM. My hon. friend will see that he is taking me unawares. The member for North Toronto (Mr. Foster) drew a pledge from me at six o'clock that I would not bring this matter up and I left all my papers in the office.

Mr. R. L. BORDEN, Then I had better leave the mattetr until the minister makes his speech. Will it include any statement of the cost of the road?

Mr. GRAHAM. I will have to prepare my statement after I get through with the House to-night. I will give all the information I possibly can.

Mr. R. L. BORDEN. Then perhaps I had better go on and give the minister the benefit of some little researches I have made into the cost of construction, and they will be subject to any subsequent criticism the minister may see fit to make. It is well for the purpose of convenience to place upon the records of the House the purport of the returns that have been brought down touching the cost of the eastern division of the Transcontinental Railway. In answer to a question put by myself, the minister in the month of May last brought down a statement, Sessional Return 39f, which is as follows :

The Commissioners of the National Transcontinental Railway, Ottawa, April 4, 1908.

Dear Sir,—I have the honour to give below the answers to the inquiry of the ministry to be made by Hon. R. L. Borden as follows, viz.:

1 (a) The estimated length of the Transcontinental Railway from Winnipeg to north end of the St. Lawrence river bridge near Quebec is 1,344·92 miles.

(b) From north abutment of the St. Lawrence river bridge near Quebec to Moncton is 459·74 miles, which includes 1·11 miles of Quebec bridge link.

2. The estimated average cost per mile (not including Quebec bridge link) is $63,427.

3. This estimate is based on quantities as estimated by district engineers and contract prices so far as contracts have been let; remaining prices estimated by the commissioners' chief engineer. Distances are those of actual survey, and the total, from which the average cost per mile of completed main line

track is arrived at, includes the cost of 326 miles of sidings.

I have the honour to be,
Your obedient servant,
(Sgd.) P. E. RYAN,
Secretary.

On a subsequent date I addressed to the minister this question:

Mr. R. L. BORDEN asked:

Referring to the return, sessional paper No. 39f, touching the estimated cost of the eastern division of the National Transcontinental Railway, which shows the total length, less the Quebec bridge, to be 1,803.55 miles, the average cost per mile to be $63,427, and the total estimated cost not including the Quebec bridge, to be $114,393,765.85, does this estimate include the cost of station houses, terminals, engine houses, round houses, turn tables, water tanks and all other buildings and structures necessary or usual for the effective operation of the road? If not, what will be the additional cost for all such purposes?

Hon. G. P. GRAHAM (Minister of Railways and Canals). The estimate referred to in this question, of the average cost per mile of the eastern division of the National Transcontinental Railway, of $63,427, includes the cost of terminal yards, station houses, engine houses, turntables, water tanks and all buildings and structures, necessary or usual for the effective operation of the road; but does not include terminals at Winnipeg (in regard to which an agreement between the Grand Trunk Pacific Railway, the Canadian Northern Railway and the commission was ratified, by Act of parliament during the session of 1907-8) or shops east of Winnipeg, or terminals at Quebec or connection therewith, plans of which have not yet been made and of which accordingly, no estimate of cost can yet be furnished.

At a subsequent date I asked the minister for some further information and, in response to my request, he was good enough to bring down another return which is sessional paper 39k and as it is of considerable importance and is not very long, I will read this also:

Memorandum *re* Trancontinental Railway.

The length of the road from Moncton to Winnipeg is 1,803·55 miles, or including the Quebec bridge 1·11 miles, 1,804·66 miles.

The estimate of $63,437 a mile did not include any allowance for interest.

For the terminals at Moncton, the sum of $97,000 was included in the above for a terminal yard. With regard to shop accommodation, it is assumed that an arrangement will be made for the joint use of the new shops of the Intercolonial. If so, the Transcontinental share of the capital expenditure on them is estimated at $750,000, or, at 4 per cent interest, $30,000 a year.

The terminals at Quebec would include the cost of the line from the Quebec bridge to Champlain market, Quebec, say six miles and terminals at the market, at a cost of, say $2,000,000.

It is not practicable, at the present time, to state the extent of the liability in connection with the Quebec bridge, nor to furnish any estimate of the cost of building it.

For the shops east of Winnipeg the estimate is $1,500,000.

With regard to terminals at Winnipeg, by the agreement of March 1, 1907, confirmed by the Act of that year, chapter 52, between the Canadian Northern, the Grand Trunk Pacific and the government, the value of the Canadian Northern lands is fixed at $2,625,000, upon which sum the Grand Trunk Pacific and the government, under clause 13, are to pay, in equal shares, one half of 4 per cent, or $26,250 a year each. This includes grading, levelling and filling, as at the date of the agreement; but does not include buildings, fixtures, tracks and other improvements and facilities. For these—which the Canadian Northern undertakes to construct and supply—the Grand Trunk Pacific and the government are to pay, in equal shares, one half of 4½ per cent. The assumed cost is set down by the chief engineer of the Trancontinental Railway at $2,000,000, making the amount payable by the government yearly $22,500, or a total for the Winnipeg terminals of $48,750.

The whole of the lands of the Canadian Northern Railway on the Winnipeg side of the Red river, together with the buildings, fixtures, improvements, tracks and facilities will be jointly used by the Canadian Northern, the Grand Trunk Pacific and the Transcontinental Railways, with equal rights for passenger and local freight business.

As to the question of the probable date for the completion of the railway between Moncton and Winnipeg, the department is advised by the chief engineer of the Trancontinental Railway that in his opinion if contracts for the remaining portions of the line are awarded before the middle of September next; and the labour market remains anything like it is at present, there should be no difficulty in fully completing the line by December 1, 1911.

Re Grand Trunk Pacific Railway.

The length of the road is approximately 1,755 miles, comprising the Prairie section extending from Winnipeg to the east bank of Wolfe creek, a distance of 916 miles, of which the whole has been finally located, and the Mountain section from Wolfe creek to Prince Rupert, 839 miles, of which 278½ miles have been finally located.

Wolfe creek is 119½ miles west from Edmonton. The grade elevation there is 665 feet above the grade elevation at Edmonton, and the grade elevation at Yellow Head Pass is 840 feet above that at Wolfe creek.

The estimated cost of construction is set down, at the present date, at $61,520,000, which includes for terminals at Prince Rupert, $3,000,000.

With regard to the question of the date of completion of the road, the president of the Grand Trunk Pacific has telegraphed, in reply to an inquiry from the department, that they expect to carry out their obligations to complete the railway to Prince Rupert by December 1, 1911, and it is possible will be able to anticipate that date to some extent. This is the extended date fixed by the Act of 1904, chapter 80.

Memorandum for the Hon. Mr. Graham respecting Mr. Borden's inquiries, page 10,694, 'Hansard,' in regard to the National Transcontinental Railway, in so far as the same affect the Finance Department.

Mr. Borden, after discussing the cost per mile and inquiring the present estimate as to the length of time to be occupied in the construction of the road, concludes: 'I would like to know also the approximate rate of interest to be paid upon money which will have to be borrowed for that purpose. My hon. friend the Minister of Railways may be obliged to seek the assistance of the Finance Minister, but I think that the information I ask is reasonably required for the purpose of the discussion which will take place when the minister makes his statement. I would like the minister to give me the estimated rate of interest which we would have to pay on the cost of the road during the period of seven years after its completion, in which period the Grand Trunk Pacific will pay no rental.'

The issue of 3 per cent government guaranteed bonds to the amount of £3,200,000 already made by the Grand Trunk Pacific Company, netted about 92½, approximately an interest charge of about 3:24 per cent on net proceeds. There has been thus far no loan negotiated by the government exclusively for the National Transcontinental Railway. What the cost of money will be when future issues of the Grand Trunk Pacific guaranteed bonds are made, or at what rate the government will be able to borrow money for the purposes of the construction of the eastern division, it is impossible to hazard a forecast which would be a present guide. That will necessarily depend on the fluctuations of the money market.

Mr. Borden asks in the same connection 'the exact amount of the liabilities of the country in connection with the Quebec bridge up to this date, as well as the approximate estimate of the cost necessary for the building of that bridge.'

The government's liability for the Quebec Bridge Company was limited by chapter 54 of the Acts of 1903 to a guarantee of the payment of the principal and interest on an authorized bond issue by the company to the amount of $6,678,200. This guarantee was given and the bonds were issued and pledged by the company to the Bank of Montreal for the raising of the money. Of these guaranteed bonds £478,700, approximately $2,330,000, have since been returned to the government and are held as collateral for an advance of $2,000,000 made by the government to the bridge company under the provisions of chapter 35, Acts of 1907. The remaining bonds to the amount of the sterling equivalent of $4,348,200, are outstanding in the hands of the Bank of Montreal. The bank's claim against the bridge company on April 30, 1908, for general advances and interest was $3,773,223.71, and for further special advances the bank claimed on May 31, 1908, $174,431.36.

No estimate, so far as the Finance Department is advised, have been made of the cost of rebuilding the Quebec bridge, or of what part of it would be a charge against the Transcontinental Railway.

Mr. Borden further says: 'Then the minister, of course, remembers that for a period of seven years the country is to pay interest on those bonds so guaranteed without recourse. I would like a statement which will follow from the information already asked of the estimated amount which the country will pay over without recourse in respect of the Mountain division.

Uncertainty as to the rate of interest at which money can be obtained during the next few years makes it impossible to submit anything like an accurate calculation in reply to this question.

(Sgd.)N. T. R.

Finance Department, June 30, 1908.

For the purpose of estimating the liability of the country in connection with the road it might be proper to refer for a moment to the provisions of the agreements of 1903 and 1904 between the government and the Grand Trunk Pacific Railway Company and to the Acts of this parliament which ratified these agreements. By section 28 of the agreement of 1903 it was provided that the government should guarantee the bonds, with respect to the construction of the prairie section, to an amount not exceeding $13,000 per mile and, with respect to the Mountain section, to an amount not exceeding $30,000 per mile. By section 4 of the agreement of 1904, the latter provision was modified so far as the Mountain section is concerned, so that in respect of the Mountain section the country is under obligation to guarantee bonds to the amount of three-fourths of the cost of construction, whatever that cost of construction may be.

It may also be proper to refer to the leasing provisions of the agreement of 1903. By these leasing provisions it was provided that after the completion of the road from Winnipeg to Moncton it shall be leased to the Grand Trunk Pacific under certain conditions for a period of fifty years. During the first seven years the Grand Trunk Pacific is to pay no rental whatever, and during the balance of forty-three years it is to pay a rental of three per cent upon the cost of construction as ascertained under the agreement; provided, however, that if during the first three years of the period of forty-three years just alluded to, the net earnings of the road shall be insufficient to pay the rental of three per cent, then to the extent to which they are insufficient the Grand Trunk Pacific shall not be obliged to pay rental but the rental so unpaid shall be added to the cost of construction. I think I have fairly stated the provisions of the agreement reciting them at length. I should add that the cost of terminals under sections 15 and 18 of the agreement of 1903 are to be included in the cost of construction for the purpose of any estimate made under those agreements.

It is not necessary or advisable for me at this juncture to go very exhaustively into the estimates made in 1903 as to what the road would cost the country. The Minister of Finance (Mr. Fielding) at page 8,583 of 'Hansard' of 1903, estimated that the New Brunswick section of the eastern division, from Moncton to Quebec, the length being estimated by him at 400 miles, would cost $25,000 per mile, or $10,000,000, and from Quebec to Winnipeg, he estimated the length as 1,475 miles, at $28,000 per mile;

making $41,300,000, or a total cost of construction from Winnipeg to Moncton of $51,300,000.

The right hon. the Prime Minister (Sir Wilfrid Laurier) at page 7691 of 'Hansard' used these words :

> The sum total of the money to be paid by the government for the construction of the line from Moncton to the Pacific will be in the neighbourhood of twelve or thirteen million dollars.

And to the same effect was the language of the then Postmaster General (Sir William Mulock) at page 7711 of 'Hansard.' The hon. the Minister of Customs (Mr. Paterson) at page 10304 of 'Hansard' confirmed the above statement of the Prime Minister as to the probable cost of the road.

I estimated the road from Winnipeg to Moncton at $40,000 per mile for 1,875 miles or a total of $75,000,000 and the estimate which I made at that time was regarded by hon. gentlemen opposite as excessive to the point of absurdity. Let us look a little at the actual cost of the road as borne out by the figures brought down by the government.

I shall read a statement which I have prepared in order that the figures may appear in consecutive order upon the pages of 'Hansard.' Let me say to my hon. friend the Minister of Railways that so far as data were available from official returns brought down by the government this session I have used those data and where I have been obliged through the absence of information to make any estimate of my own, I have endeavoured to be conservative and thoroughly within the mark. The estimate which I have made as to the eastern division is as follows :

Statement of cost to Canada of National Transcontinental Railway.
Eastern division.

Construction of railway from Moncton to Winnipeg, 1,803.55 miles, at estimated cost of $63,427 per mile.	$114,393,765
Allowing five years for period of construction there will be an average of 2½ years' simple interest at 3½ per cent per year during construction, or $4,003,781.67 per year for 2½ years..	10,009,454
Cost of eastern division at completion will thus be	124,403,219
To this must be added 7 years' interest at 3 per cent (not compounded) after completion during which Grand Trunk Pacific is to pay no rent..	26,124,676
Also interest at 3 per cent for three years additional during which no rent is collectable unless earnings are sufficient..	11,196,290
	$161,724,185

Quebec bridge.

Cost of Quebec bridge up to March 1, 1907..	*$5,422,238	
Estimated cost of completion..	9,000,000	
		14,422,238

* 'Hansard,' 1907, p. 7960.

Terminals.

Estimated cost of our share of terminals at Quebec, Winnipeg and Moncton, and shops east of Winnipeg..	5,470,000
	$181,616,423

Mountain section.

Cost of mountain section (839 miles) as stated in return brought down, $61,520,000.	
Seventy-five per cent of the above, $46,140,000, to be guaranteed by the government for construction of mountain section.	
And the government agrees to pay without recourse the interest on bonds so guaranteed for 7 years which at 3½ per cent amounts to..	$ 11,304,300

Recapitulation of cash expenditure.

Total cash expenditure and interest in respect of eastern division as above..	$124,403,219
To this must be added 7 years' interest at 3 per cent (not compounded) after completion during which G. T. P. is to pay no rent..	26,124,676
Also interest at 3 per cent for three years additional during which no rent is collectable unless earnings are sufficient..	11,196,290
Cost of Quebec bridge as estimated	14,422,238
Interest to be paid by government without recourse on mountain section..	11,304,300
Cost of terminals at Moncton, Quebec and Winnipeg, including shops east of Winnipeg..	5,470,000
Total cash expenditure	$192,920,723

Bond guarantee.

In addition to the above cash expenditure the government incurs the following obligations on its guarantee of bonds—	
Guarantee on bonds issue on mountain section as above..	46,140,000
Guarantee of bond issue on prairie section, 916 miles, at $13,000 per mile..	11,908,000
	$ 58,048,000

Cash expenditure	$192,820,723
Bond guarantee..	58,048,000
Total..	$250,968,723

In order to explain the basis of some of these estimates I would like to say a word or two, and that is really the only comment I have to make, because the figures which I have brought to the attention of the House, and which I submit for the comment and criticism of my hon. friend the Minister of Railways and Canals, speak for

themselves. I have allowed five years for the period of construction. I base that on the statement in the return brought down that the road will be completed about December, 1911, and on the information contained in the report of the commissioners of the Transcontinental Railway, dated October 9, 1906, in which they point out at page 16 that in the spring of that year contracts were awarded for a considerable portion of the road—150 miles in one contract and 244 miles in another contract—and the report proceeds to state that the work had been commenced and was in progress. Therefore the estimate of five years for the period of construction is somewhat less than I would have been justified in taking if I had adhered strictly to the official returns on which my information is based.

I have taken two and a half years as the period for which interest would be charged. That I think is the usual practice. During the period of five years the interest charges will continually increase. During the first year they will be very small. During the last year they will be very large. The custom, as I understand, is to take one-half of the period of construction and estimate interest, at whatever the rate may be, for that period. So far as the rate is concerned I have taken the reply of my hon. friend the Minister of Finance in the House today in which he says that a recent loan has been floated bearing interest at 3¾ per cent. That loan was underwritten at par. I have taken 3½ per cent or ¼ per cent below the rate on the loan, as a fair interest charge during the period of construction.

With respect to the interest during the seven years during which the Grand Trunk Pacific Company pay no rental, I have endeavoured to be very conservative in my estimate. The Grand Trunk Pacific agree to pay a rental of 3 per cent after seven years. It is highly probable that during that period of seven years the interest which the country will have to pay will be at least 3½ per cent, and I think I would have been justified in making up the loss to the country during that period at that rate, but I have given the government and the transaction the benefit of the doubt, and I have made my estimate during that period at only 3 per cent, which is the rate of rental the Grand Trunk Pacific Company will eventually pay to the government.

I have observed the same course in making an estimate for the three years additional, computing the interest during those three years at 3 per cent and not at 3½ per cent. The comment and criticism may of course be made that during those three years it is possible that the Grand Trunk Pacific Railway Company, by means of the operation of the road, may show such net earnings that some portion of this $11,000,000 will be reimbursed to the country. I would hardly think that very probable; therefore, I have taken the liberty of including the whole of that as an amount which the country will have to bear in the end. If the Minister of Railways and Canals has any data or argument to show that this is not a fair way of dealing with that particular part of the transaction, he will of course submit his arguments and considerations to the House when he comes to examine the statement I have made. Looking at the character of the country through which the road runs, looking at the enormous difficulties which will confront the Grand Trunk Pacific Railway Company in operating that road during the winter, looking at the almost entire absence of local traffic during the first ten years at least, I would think it a reasonable assumption that there would be no net earnings of the road available for the purpose of paying any rental during those three years. That of course must be a matter of opinion and of argument, and to a certain extent of conjecture. However, I have taken the view that we shall be responsible for the whole of that $11,000,000, and will not be reimbursed in respect of any part of it, and, therefore, I have added it to the other amounts included in the total cash outlay which this road will entail upon the country.

A word or two of explanation may be added as to my basis of estimate for the cost of the Quebec bridge. In 1907 my hon. friend the Minister of Finance, at page 7960 of 'Hansard,' informed an hon. gentleman on this side of the House—I think it was my hon. friend from Simcoe—that the cost of the Quebec bridge up to the 1st of March, 1907, had amounted to the sum of $5,422,258. The details of the position of the country with regard to the construction of that bridge are pretty well set out in the return which has been brought down and in the Acts of parliament alluded to in that return. I need not go at any length into the subject at the present time. It is sufficient to say that the Quebec bridge is recognized by all parties in this House as an essential and integral part of the National Transcontinental Railway which must be pushed to a completion at as early a date as possible in order that there may be in effective operation a through line from Winnipeg to Moncton. Therefore we come to the question as to what would be a fair amount to estimate as the cost of completing the Quebec bridge. The greater part of that work has become a wreck. I do not know how far completed it was—perhaps one-half or more than one-half at the time of its collapse. I have been able to get no assistance whatever from the government in this regard, and I think I might reasonably have expected some assistance; in the absence of official information I have estimated the sum of $9,000,000 as a fair and reasonable

amount for the cost of completing that bridge so as to make that through line from Winnipeg to Moncton a through line in every sense of the word. If my hon. friend the Minister of Railways and Canals has any grounds upon which he would reasonably think that that sum of $9,000,000 ought to be cut down, I shall be ready to give every fair consideration to anything he can bring forward for that purpose.

So far as the cost of the terminals is concerned, a word of explanation is perhaps also due. I have taken the cost of terminals at Moncton, as stated in the return brought down, at $750,000; I have taken the cost of the terminals and approaches at Quebec, as stated in the return brought down, at $2,000,000; I have taken the cost of the shops east of Winnipeg, as stated in the return brought down, at $1,500,000, and I have capitalized the annual sums which we shall be obliged to pay, according to this return, for the use of terminals at Winnipeg. The way in which I have done that cannot, I think, be criticised as unfair. The statement in the return is as follows:

With regard to terminals at Winnipeg, by agreement of March 1, 1907, confirmed by the Act of that year, chapter 52, between the Canadian Northern, the Grand Trunk Pacific and the government, the value of the Canadian Northern land is fixed at $2,625,000, upon which sum the Grand Trunk Pacific and the government, under clause 13, are to pay, in equal shares, one-half of four per cent, or $26,250 a year each. This includes grading, levelling and filling, as at the date of the agreement; but does not include building, fixtures, tracks and other improvements and facilities. For these—which the Canadian Northern undertakes to construct and supply—the Grand Trunk Pacific and the government are to pay, in equal shares, one-half of 4½ per cent. The assumed cost is set down by the chief engineer of the Transcontinental Railway at $2,000,000, making the amount payable by the government yearly $22,500, or a total for the Winnipeg terminals of $48,750.

Capitalizing an annual payment of $48,750 at 4 per cent would make approximately $1,220,000 which I have estimated. If I had taken it at 3½ or 3 per cent, the amount would have been much greater. I have taken 4 per cent as the agreement seems to be to some extent based on that rate. And the total of these sums is in all $5,470,000 which I have taken as the cost of the terminals in my calculation.

So far as the Mountain section is concerned—

Mr. GRAHAM. Would my hon. friend allow me. I want to read this clause of the agreement between the Canadian Pacific Railway, the Canadian Northern and the government:

With regard to the compensation payable by the Grand Trunk Pacific and the government 'in equal shares' to the Canadian Northern

for the joint terminals (namely one-half of four per cent on $2,625,000 and one-half of four and a half per cent on the buildings, tracks, and facilities under clauses 5, 8, 10 and 13 (a) and (b)—clause 49 goes on to provide that, prior to the execution of the lease of the eastern division to the Grand Trunk Pacific, this compensation shall be paid by the Transcontinental Railway commissioners and form part of the 'cost of construction' of the eastern division, and for the first seven years of the lease such compensation shall be wholly born by the government; the Grand Trunk Pacific for the next forty-three years, repaying annually to the government, by way of rental, the amount of the said compensation.

Mr. R. L. BORDEN. I have not taken anything except what is in the return brought down. If there be any modification by reason of the provision just mentioned, we will find that out when the hon. gentleman comments on my statement. I take the payment of $48,750 anually—and I capitalize that at a rate which I think could not reasonably be complained of.

Mr. GRAHAM. I may be wrong but I think that eventually goes into the cost of construction.

Mr. R. L. BORDEN. Perhaps it does and if so I shall stand corrected to that extent. I cannot say that I have thought that particular matter out and speak subject to any observation of my hon. friend in that regard.

In this conection, I should say further that I think I have omitted some charges that I might very reasonably have included. My statement had to be made up hurriedly, after getting information from my hon. friend this afternoon, and I have not included in it—but my hon. friend may and I think should include in it—the interest charges on the cost of these terminals. I did include interest on the cost of the construction of the road but had not the time to work out the interest charges on the $5,000,000 and upwards, which are estimated as the cost of the terminals. If that is charged, my hon. friend will probably find that it will more than offset any little criticism of the character to which he has just now alluded.

So far as the Mountain section is concerned, I inquired of the minister this afternoon whether or not the sum of $61,520,000, set forth in the return, was the cost of the whole line from Winnipeg to the coast or the cost of the Mountain section only. My hon. friend assured me that it was the cost of the Mountain section only, and I have made my statement on that basis. Seventy-five per cent of that sum amounts to $46,140,000. As regards the interest charged in that connection, I have adopted the same basis as that to which I have already alluded. I have taken 3½ per cent in the absence of any information from the department of Finance or the Department of Railways, as

a reasonable rate and I have computed the interest charged for seven years in that $11,304,300.

I desire to give a plain statement of what I conceive to be the cost of this road as based on the official information which I have been able to obtain. It is subject to any correction or observation on the part of my hon. friend the Minister of Railways ; but if you subject it to the most searching criticism, I do not think you can find that it will be brought materially below the amount I have estimated, namely, $192,920,723, which is rather a staggering amount for the country to face, especially under present conditions. Because going on as we are, it would seem exceedingly probable that, by the time this road is completed, the debt of this country will have reached the figure of about $450,000,000. I would venture to think that such a consideration might well give us pause, especially when contemplating some of the very large expenditures which have been promised, both in this House and out of it, by hon. gentlemen on the treasury benches.

The public debt of Canada at present is, I suppose, from $265,000,000 to $268,000,000. The cost of this road will amount to at least $190,000,000 before we are through with it ; and unless some considerable portion of that amount can be paid out of revenue—which does not seem very probable under present conditions—the total debt of this country, by the time this road is completed, without our spending a dollar for the development of our ports and inland waterways or in the construction of railways or for any other of the enormous calls that will be made on the treasury within the early future—without taking into consideration a single one of these demands on the public treasury, the public debt of Canada is likely to reach $450,000,000 before we pay for the building of this National Transcontinental Railway. For this reason, I thought it important at this time to invite the attention of the House and the country, and especially of my hon. friend the Minister of Railways, to the estimate I have made and the data upon which it is founded, and to ask from him his criticism and comment. And if he finds my statement not according to his judgment, I sincerely trust we shall have from him some statement as to what, in his opnion, the total cost to the country will be by the time the railway is completed.

Item allowed to stand.

Mr. HAGGART. Will the minister be kind enough, in making his statement tomorrow, to tell us whether, in the estimate of $63,437 a mile, he includes the terminals at Quebec or the shops at Winnipeg because it is not clear, under this statement, whether these are included or not.

Mr. GRAHAM. I think I answered that question when it was asked by the leader of the opposition some time ago.

Mr. DANIEL. Last year, when this item of double-tracking was up, I asked the then Minister of Railways what parts of the line were to be double-tracked out of the vote. He mentioned, amongst others, that part of the Intercolonial between St. John and Hampton. I see by the report of the Minister of Railways and Canals that the survey was made and plans and specifications prepared for double-tracking that part. But I think that no start has been made in the matter, and I suppose the money voted last year must have been deflected to some other purpose. Is it the intention to go on with double-tracking that part of the road at an early day?

Mr. GRAHAM. We are not asking for any vote for that work. This is for double tracking between Moncton and Painsec Junction.

Mr. DANIEL. What was done with the vote for that purpose?

Mr. GRAHAM. Was it a vote or a statement of the minister?

Mr. DANIEL. I only know that the minister said it was for that purpose.

Mr. E. M. MACDONALD. It was not so stated in the estimate?

Mr. DANIEL. It was so stated by the minister.

Mr. CROCKET. Does the minister say that this whole vote of $200,000 is for double-tracking the Intercolonial between Moncton and Painsec Junction?

Mr. GRAHAM. Yes.

Mr. CROCKET. How many miles is that?

Mr. GRAHAM. Less than eight miles.

Mr. CROCKET. How far has the work advanced now?

Mr. GRAHAM. About half way.

Locomotive and car shops with equipment, $570,000.

Mr. GRAHAM. This is for the new locomotive and car shops with equipment, also grading and providing additional yard accommodation.

Mr. J. D. REID. There is a contract that we have been trying to get some information about in connection with these Moncton car shops. The engineer, Mr. Mackenzie, it appears, has given a verbal contract for the amount of $50,000 or $60,000 under which work has been done but concerning which the government do not seem to have any information.

Mr. E. M. MACDONALD. It was given at schedule rates.

Mr. J. D. REID. No.

Mr. E. M. MACDONALD. Yes, if the hon. gentleman will read the evidence be-

fore the Public Accounts Committee he will see that.

Mr. J. D. REID. As I understand it, the chief engineer has made a contract, as he claims, partly under schedule rate, and the other part is to be done by the contractor at whatever it costs plus 15 per cent. But the contractor himself states that the whole work is to be done by him and he is to get 15 per cent profit on his work.

Mr. CROCKET. And the deputy minister says that the contract is entirely independent of the contract for the building.

Mr. J. D. REID. Here are these two statements, one of the chief engineer and one of the contractor.

Mr. E. M. MACDONALD. The chief engineer is to come before the committee on Friday.

Mr. J. D. REID. He has already made that statement. Here is a work involving a large amount of money about which neither the deputy minister nor anybody else on behalf of the government seems to have learned anything until it was brought up at the Public Accounts Committee and, up to this day, we are not able to find out what has been done. The contractor swears that he cannot tell what amount has been paid out. Neither did Mr. Mackenzie, the engineer, know. That is a strange way of doing business. If the minister has any information, we would like to know what has been expended on that contract.

Mr. GRAHAM. We have paid nothing to Mr. Walberg for that as yet. This is a large building. And, as often occurs in these cases, it is more convenient to have such a work as this sewer done by the man who already has the large contract, for he work to the best advantage. This sewer is 2,880 feet long. At the shops and for 800 feet it is 20 to 24 feet in depth, and the balance is of 20 feet. So, this is not a small work. It is done in a way that is quite usual in railways, on what is called force account. That is, if you have confidence in the contractor, you give him the contract for his actual cost, plus so much. That is practically what is done with Mr. Wallberg. He has all the appliances for the work, and the engineer at Moncton thought this the most practicable way to get it done. The contractor is to be paid cost price—for which he must show actual progress for every dollar—plus 15 per cent, he supplying all the tools and that sort of thing. Up to date we have not paid him anything on his work, because he has not asked for anything.

Mr. J. D. REID. That statement does not agree with the statement of the hon. member for Pictou (Mr. Macdonald), who said that the work was being done at schedule rates.

Mr. J. D. REID.

Mr. CROCKET. The deputy minister stated distinctly that the schedule under the contract did not apply to that work, that it was an entirely independent contract, which the engineer made without any authority from the department. The job has been in progress now for over a year ,and I think Mr. Walberg himself stated that it would probably cost upwards of $20,000.

Mr. MACDONALD. Does the hon. gentleman mean to say that Mr. Mackenzie, the engineer, did wrong in providing for the work to be done in this way?

Mr. CROCKET. I certainly do. I say it is an extraordinary thing for an engineer of the railway to assume the responsibility of entering into a contract of that magnitude without any instructions from the department. I doubt whether the department itself, until this House authorized an appropriation for the purpose, would have been warranted in entering into any contract. Much less was a subordinate official of the Intercolonial at Moncton authorized to prepare plans for this work, and enter into a contract, and set the contractor at work, under a verbal agreement, without having received any instructions from any official of the department, or even reporting the matter to the department down to the time that the deputy minister was examined a few weeks ago. I was somewhat surprised at the statement of the deputy minister when his attention was called to the matter and he was made conversant with all the facts. He did not even seem to have reprimanded Mr. Mackenzie for having assumed such a responsibility. He said that he simply asked him the question, and expressed the opinion that there should have been a written contract. The member for Pictou asked me if I saw anything wrong in this matter. I say that if the people of this country are to be rendered liable for contracts of this kind entered into by subordinate officials of the railway, without any instructions from the department, not to say without any appropriations being voted by parliament, I do see something decidedly wrong in it.

Mr. E. M. MACDONALD. Of course, the version of my hon. friend from York (Mr. Crocket) as to what was said in the Public Accounts Committee is entirely out of order. I understand my hon. friend from York has asked Mr. Mackenzie to appear before that committee on Friday, when we will hear that matter discussed, and I assume we will have a report to this House, on which the whole question can be considered. My hon. friend from York says that because this was not contained in the original contract, therefore it was an enormous thing to do. Now, if it was con-

tained in the original contract there would be no question about it, because it would form part of the work that was to be done under the arrangement that was made with the contractor. But my hon. friend knows too much about these matters not to know that when there are subsidiary propositions to be dealt with in a very large contract, there are various ways of dealing with them. As a matter of policy, the thing can be advertised and left open to new contractors, who cannot work so expeditiously as the original contractor could do the larger work. Then it can be done on schedule rates.

Mr. HAGGART. How can you do that on schedule rates?

Mr. E. M. MACDONALD. In that contract a large amount of excavation is provided for, and it was tendered for at schedule rates. The construction of a sewer is naturally a question of excavation that could be dealt with along the same line as the excavation for the original work. I only mention that as one of the methods by which it could be dealt with. There is a third method of dealing with it, and that is by force account. Any one acquainted with railway business knows that it is a method which is resorted to invariably by railway companies, because it is a fair method. Take the amount actually expended by the contractor, and 15 per cent is a reasonable amount of profit, and is so recognized by railway companies everywhere in dealing with works of that kind. I do not understand that my hon. friend takes any objection to the method of dealing with it by force account, but merely that Mr. Mackenzie should not have done what he did. I would like to hear Mr. Mackenzie's explanation of that matter when he comes before the committee. I agree with my hon. friend that Mr. Mackenzie should not assume too much responsibility. But let us remember that Mr. Mackenzie is an old official of the Intercolonial Railway, he was in the Intercolonial under my hon. friend from Lanark (Mr. Haggart), and I do not think my hon. friend from Lanark would say that Mr. Mackenzie was not a perfectly responsible man. There is no politics in this question, it is simply a question whether Mr. Mackenzie exercised an accurate judgment. For myself, I await his explanation before deciding whether he assumed a responsibility which he ought not to have assumed. I am inclined to agree with my hon. friend that if he did assume an unwarranted responsibility for expenditure, it is a matter that the minister should deal with, and no doubt he will do so. But Mr. Mackenzie's record in the Intercolonial, his reputation as an engineer and his whole course, are such that I do not think that my hon. friend ought to impute any wrong-doing to him until he has some better grounds for it.

Mr. BLACK. He is a good Tory.

Mr. E. M. MACDONALD. I am not discussing this matter from a political standpoint. I think I have fairly stated the facts, and I submit that we can fairly trust the minister to deal with the matter as his judgment shall dictate.

Mr. HAGGART. The hon. gentleman talks about the contractor being paid by schedule rates. Who ever heard of a contractor being paid by schedule rates for the building of locomotive and car shops with equipment? He is paid on progress estimates. Schedule rates only come in on earth works or stone excavation, or anything of that kind.

Mr. E. M. MACDONALD. This work was of that description.

Mr. HAGGART. The principle is this: When a contractor enters into a contract, if contracts are drawn up now as they used to be, he accepts responsibility for all the quantities made out by the department. If there is an error committed by the department there is a provision in the contract that before the contractor commences his work he has to get a written order from the chief engineer, and the chief engineer generally allows him, as the hon. member has stated, what has been the actual amount expended on the work plus 15 per cent. There can be but very little of that kind of work in the contract for the building of the car shops, the locomotives and equipment.

Mr. E. M. MACDONALD. The point is as to whether or not this sewer, which was necessary in consequence of the erection of the shops, should have been included in the original contract.

Mr. HAGGART. If this large expenditure is not included in the contract the engineer in chief, or the engineer in charge, has no right to let that work to the contractor. The proper way is to call for new tenders for the work. The contractor assumes the responsibility of the engineering and of the architecture of the building and the schedule price has only reference to the work under contract. If there has been a mistake made by the architect or the party who drew the plans for these buildings that must be corrected by the engineer and before the contractor does a cent's worth of work, or is entitled to anything, he must get an order from the engineer in his own hand writing. If there have been large sums of money expended outside of the contract there is no justification at all for it.

Mr. J. D. REID. What makes this thing look rather bad, in so far as the engineer is concerned, is this: Here is an expenditure which is started. If there had been any payment on account of the work at all we would have been able to have had the matter brought up and properly investigated in the Public Accounts Committee.

Mr. E. M. MACDONALD. Does my hon. friend blame the department or Mr. Mackenzie?

Mr. J. D. REID. Mr. Mackenzie is an officer of the department and it was Mr. Mackenzie who made the mistake if a mistake was made. If moneys had been paid on it we would have been able to have investigated it in the Public Accounts Committee. When does the hon. member for Pictou (Mr. Macdonald) expect that the matter can be brought up in the Public Accounts Committee according to the rules of this House?

Mr. E. M. MACDONALD. You have brought it up now.

Mr. J. D. REID. I admit it is practically out of order.

Mr. HAGGART. Not out of order at all.

Mr. J. D. REID. To bring it up in the Public Accounts Committee.

Mr. E. M. MACDONALD. We have been very liberal in giving you the opportunity of going into all these matters.

Mr. DEPUTY SPEAKER. As this is before the Public Accounts Committee perhaps it would be better to leave it there.

Mr. HAGGART. When we are discussing an item in the estimates, because that item is under consideration by the Public Accounts Committee, surely we are not to be prevented from discussing in the fullest possible manner any evidence which may have been adduced concerning it.

Mr. DEPUTY SPEAKER. I believe you can discuss everything in connection with the item but hardly what is going on before the Public Accounts Committee.

Mr. HAGGART. Why not? Can the evidence that is given in reference to this item not be discussed?

Mr. DEPUTY SPEAKER. Because the committee has not reported on that point.

Mr. HAGGART. It reports the evidence every day.

Mr. DEPUTY SPEAKER. I understand from the statements made that Mr. Mackenzie is still to be called before the committee. I just want to shorten the debate. You can discuss the item, but not what is going before the committee.

Mr. J. D. REID. I never heard of a case in which a department had a contract going on, but what there were progress estimates made on account of the contract. The result of the way this is manipulated will be that it will be two years before that item will appear in the Auditor General's Report, so that it can come up in the regular way in the Public Accounts Committee. Next session we will only be able to investigate what appears in the Auditor General's Report up to March 31, 1908. It is hardly fair in the interest of the public that the matter should be staved off so long. It is a very strange proceeding that the Department of Railways and Canals should allow an official of the department to give a contract outside of the original contract they gave, which will amount to anywhere from $20,000 to $50,000. The position, as I understand it, is that the officials can make contracts verbally without even advising the department. If the department undertake the erection of a building—take the Moncton car shops for instance—and if there are to be any extras or changes the minister should be made aware of what these changes are and what they are going to cost so that he can give orders as to how they are to be carried out. There is not a solitary contract on the Intercolonial Railway that has been carried out but what the amount has exceeded the contract price by a very large sum. I do not think that is the right way of doing business. If a man gives a contract to a private individual for a building he generally gets a statement of what the cost is to be and that is all he has to pay, but in so far as these works on the Intercolonial Railway are concerned, they exceed very much the amount of the estimate. If it is going on in this case how do we know that it is not going on in other cases?

Mr. CROCKET. When does the minister expect these works will be completed?

Mr. GRAHAM. The contractor says in four months. If they are completed in six or eight months I will be satisfied.

Mr. J. D. REID. We have not had an answer yet as to the total amount that has been spent.

Mr. GRAHAM. I told the hon. gentleman in my first statement, that I had no statement from the contractor and had not paid him anything. With reference to that work and the position of the department and the chief engineer, my hon. friend must remember that the chief engineer is an old employee. Hs is not in the position of a subordinate, as you call him, although he is subordinate to the department. He is chief engineer of the Intercolonial Railway. He is a man of great experience, and when the contract was let for that building it was found necessary to have a very large drain constructed. At some places it runs to a depth of 24 feet. It was necessary for drainage purposes and in his wisdom he made this arrangement with the contractor who had all the appliances on hand. My hon. friend will see that we do not pay the contractor anything on account of the work because there has never been any money voted up to the present time. The chief engineer thought it was wise to do this work immediately before the buildings were constructed and he started the construction

of this very large sewer for drainage purposes. If the accounts are kept properly and honestly I am prepared to say that this is as cheap a way as any of getting work of this kind done, and if it were my own I would be prepared to do it in that way.

New machinery for locomotive and car shops, $155,000.

Mr. GRAHAM. Some of this goes into the new shops at Moncton and some into the other shops at Halifax, Rivière du Loup and other places.

Mr. CROCKET. Is this by public advertisement and tender ?

Mr. GRAHAM. All the machinery is purchased by tender. We generally purchase from the large firms dealing in this.

Mr. CROCKETT. Is any of it purchased in the United States ?

Mr. GRAHAM. That has not been purchased yet. Sometimes we buy in the United States, but my object is to buy everything possible from our own Canadian people.

Rolling stock, $1,550,000.

Mr. GRAHAM. This is for additional rolling stock, ten passenger and twenty-two freight locomotives, three shunting locomotives, 300 box cars and so on.

Mr. BLAIN. What firms are supplying the new locomotives ?

Mr. GRAHAM. The passenger locomotives are purchased from the Montreal Company and the freights from the Canadian Company.

Mr. HAGGART. What is the price ?

Mr. GRAHAM. The passenger engines cost $24,000, and the freight engines $21,-950.

Increased accommodation at St. John, $120,-000.

Mr. GRAHAM. This is for ballasting, grading tracks, car repair shops, coal pockets, &c.

Mr. J. D. REID. How much grain has passed through the government elevator there in the past year ?

Mr. GRAHAM. I have not the figures, but I understand that a greater amount of grain has passed through this year than in any previous year.

Mr. DANIEL. Does the hon. gentleman intend to build a spur from the Intercolonial Railway near the wharf to Robertson's coal pockets at Robertson's wharf ?

Mr. GRAHAM. I think we have not an amount in this year.

Mr. PUGSLEY. I think the coal company propose to build that themselves. They get the permission of the Intercolonial Railway.

Mr. DANIEL. I understood the Intercolonial Railway would build it there and I presume expropriate the property to build it on.

Mr. GRAHAM. There is a basis on which all such things are done. Unless there is some special reason the private individual does the grading and tie laying and the railway lays down the tracks and takes a certain amount on the cars handled in order to repay the expenditure. No special arrangement has been made with the coal company.

Mr. HAGGART. The minister has given the cost of increased accommodation at Halifax at about $4,000,000. What has the increased accommodation at St. John cost ?

Mr. GRAHAM. We have spent at St. John up to March 31, 1907, $2,582,616.30.

Mr. DANIEL. Since when was that?

Mr. GRAHAM. A good many years back. I will not say really from the beginning, but this is the amount given to me as the total expenditure at St. John.

To put railway between Indiantown and Blackville into condition for operation, $80,000.

Mr. CROCKET. Why was nothing done with this matter last year?

Mr. GRAHAM. We could not get any contract to build the bridge there and the work was stopped. It was almost impossible in the early part of the year to get contracts.

Mr. CROCKET. When that is completed is it intended to make a connection with Fredericton by Newcastle and the Indiantown branch?

Mr. GRAHAM. I would not like to say what the intention is.

Improvements at Campbellton, $25,000.

Mr. J. D. REID. I would like to know what the policy of the department is in regard to purchasing coal cranes ; is it to be through a middleman or by contract? As I understand, you cannot buy in Canada the kind of cranes required for the Intercolonial Railway, and they have to be purchased from firms which the Intercolonial have been dealing with every year for the last ten or fifteen years. If we can buy other kinds of cranes from these firms, there is no reason why we cannot buy cranes for the coal business from them at less cost than he can buy them from a middleman.

Mr. A. JOHNSTON. They are bought by tender.

Mr. E. M. MACDONALD. Does not the hon. gentleman know that the people from

whom they are bought are Canadian agents of the American manufacturers who alone make them? He calls them middlemen, because they happen to live in Canada.

Mr. J. D. REID. The man from whom they were bought swore that he was not the agent of the firm that manufactured them.

Mr. E. M. MACDONALD. That is one instance.

Mr. J. D. REID. The government formerly always before purchased these cranes directly from the manufacturers except in one instance. I claim that if they do that they will save a lot of money.

Mr. GRAHAM. It is not fair to call the agent of a manufacturing establishment a middleman, as if you were making some reflection upon him. If a letter were sent to the agent's firm in the United States they would probably send it back to him so as not to do him an injustice. I do not think it is at all disgraceful to be a representative of one of these large firms. In some instances the firm themselves have asked us 10 per cent more than they have allowed their agents to quote us. What my hon. friend would call a middleman is a respectable agent of the firm, and the firm stands by him and allows him to do the business.

Mr. J. D. REID. I would like my hon. friend to show the case he mentions, for I never heard of such a case.

Ste. Rosalie,—Improvement at, $85,900.

Mr. GRAHAM. We are making arrangements for a water supply, for an engine house, a building for stores, a turntable, grading, masonry, tracks, and ballasting. The engine house and the tanks are under contract and the building for stores. The engine house $20,000, building for stores $3,500.

Increased accommodation and facilities along the line, $169,000.

Mr. HAGGART. That is a large sum and the House should insist on a specific statement of how the money is spent.

Mr. GRAHAM. A good deal is for additional sidings at different stations.

Mr. HAGGART. Hitherto these have been voted specifically. This is an exemplification of the absurdity of charging to capital account all these little expenditures.

To strengthen bridges, $190,000.

Mr. HAGGART. When is this work to be finished ? We have this item every year.

Mr. GRAHAM. It is work that has to be done. The strengthening of bridges is one of the most important things for the safety of the road and public. We did not spend anything last year.

Mr. MACDONALD. This vote is for changing bridges which were not up to the standard. You changed your locomotives and got much heavier ones and then have to change your bridges so as to make them capable of bearing them. When will this be finished ?

Mr. GRAHAM. We have really to go over the whole line, and there are one or two sections on the road that have not been really commenced.

Mr. HAGGART. We have had statements from every other minister of the amounts required to finish this particular kind of work and we ought to know specifically what is required to finish. Your bridges ought to be strengthened before you built heavier locomotives. The idea of buying heavy locomotives and then coming to the House for a vote for the purpose of strengthening the bridges. I must protest, as I have done again and again, that none of these expenditures should be charged to capital account. Fancy in Great Britain an expenditure of this kind being charged to capital account. They never charge items of that kind to capital account. No matter what the system of keeping books may be in the case of a railway company, in the case of a government-owned road, none of these items should be charged to capital account. Let me not be misunderstood. I have been represented by an hon. gentleman opposite as opposed to expenditure on capital account. Nothing of the kind, but what may be capital account on a private railway is not capital account on a railway owned by the government. None of these items should appear in the capital account of the Intercolonial Railway at all. When charged against capital, they do not go into the ordinary expenditure during the year. They are in the position of lead bounties charged to capital account for the purpose of enabling the Finance Minister to make a good financial showing. As the late Mr. Mackenzie held, when at the head of the Department of Public Works, and when in opposition, the capital of the Intercolonial Railway should be closed. Not that there should not be expenditure for useful work, which on other railways may be charged to capital account, but the simple fact of charging items of this kind to capital account is wrong and I protest against it.

Mines and Geological survey—Geological survey branch'—for engraving, lithographing, &c., of maps, plans and illustrations; and for copying and compiling of survey plans, maps and utilizing field notes, $20,000.

Mr. DANIEL. Are these maps made in the Geological Survey branch or in the same branch as the map making of the Interior department ?

Mr. TEMPLEMAN. The map making of the Interior Department is separate alto-

gether from the Geological Survey. We have draughtsmen and map makers in the Geological Survey, and they do the work. In some of our work, we have the assistance of the photographers branch of which Mr. White is the head.

Mr. DANIEL. Who is the head of this department ?

Mr. TEMPLEMAN. Mr. Senecal is the chief draughtsman.

To pay for specimens for Victoria Memorial Museum, $5,000.

Mr. DANIEL. Where are these specimens kept ?

Mr. TEMPLEMAN. In the Geological Survey on Sussex street.

Mr. LAKE. When is the new museum likely to be finished ?

Mr. TEMPLEMAN. I understand that the work is progressing rapidly and hope it will be completed within two years.

Department of Labour—printing and stationery, including printing of 'Labour Gazette, allowances to correspondents, administration of Conciliation Act, Railway Labour Disputes Act, travelling expenses, &c., &c., and $500 for an accountant, which sum may be paid to any one in the civil service, notwithstanding anything in the Civil Service Act, $30,700.

Mr. DANIEL. What is the amount of the allowance to correspondents of the 'Labour Gazette' ?

Mr. LEMIEUX. There are forty-five correspondents and each is paid at the rate of $100 per annum.

Mr. TAYLOR. There is an increase in this vote of $2,350. What is the explanation of that ?

Mr. LEMIEUX. As the hon. gentleman knows we passed last year the Act providing for investigation into labour disputes. We had about forty cases last year, and happily, they were all settled under the new law. We have had to send Mr. King and other representatives of the department to preside over these boards of inquiry and that entailed some expenditure. But I trust that the country approves of the work of the department in that direction, as we were very successful in all our investigations.

Fisheries—salaries and disbursements of fishery inspectors, overseers and guardians, $137,600.

Mr. BRODEUR. There is an increase of $10,000 in that vote. It is to provide for some new appointments in the Northwest and British Columbia and also some small increases in salaries to the officers.

Mr. TAYLOR. We are willing to allow these items to run through without very much discussion, reserving one, but with the right to discuss the whole vote.

Mr. BRODEUR. All right, which one does the hon. gentleman wish to have reserved ?

Mr. TAYLOR. The first one.

Lighthouse and coast service—construction of lighthouses and aids to navigation, including apparatus, submarine signals and providing suitable boats for carrying on construction work in the Gulf of St. Lawrence and elsewhere in the Dominion, $260,000.

Mr. BRODEUR. This item was left over out of the general lighthouse and coast service.

Mr. DANIEL. I think the minister ought to give some idea of what is to be done under this vote.

Mr. BRODEUR. We discussed this item several times, and I gave the information concerning it. The hon. member for Leeds (Mr. Taylor) will remember that he asked that this item should stand, and that was agreed to, but we discussed it before.

Department of Marine and Fisheries—Magnetic observatory, $3,200; Meterological service, $122,000; Montreal observatory, $500; Kingston observatory, $500; Hydrographic surveys, $170,000.

Mr. TAYLOR. I presume it is under this item that observatories are being erected throughout the country. Is it the Department of Marine and Fisheries who are erecting these towers throughout the country?

Mr. BRODEUR. That is not under the Meteorological service of my department.

Steamboat inspection, $43,000.

Mr. TAYLOR. When does the minister intend to go with the Bill from the Senate in reference to steamboat inspection? There is a good deal of dissatisfaction on the lakes because the customs officers cannot deal with gasoline launches. Some of the customs officers say that they cannot do anything until it becomes law.

Mr. BRODEUR. The Bill provides for that. In the meantime we do not enforce it.

Mr. PERLEY. When does the minister intend to bring up that Bill that has been on the Order Paper so long?

Mr. BRODEUR. As soon as the more pressing work which is now demanding our attention has been disposed of. We want to send as much work as we can to the Senate.

Mail subsidies and steamship subventions, $1,291,550.

Mr. FIELDING. I would like to explain with regard to all these items that

in consequence of suggestions which were offered the previous session, the Minister of Trade and Commerce has published a supplement to his report which gives particulars of each one of these services and full explanations. This supplement has been in possession of hon. gentleman for some time, and those who feel an interest in the matter have given it their consideration. Information concerning each one of these services is fully set forth in this blue-book entitled 'Supplement to the Report of the Department of Trade and Commerce.'

Mr. BLAIN. Are these subsidies all the same as last year?

Mr. FIELDING. Except in one case—the British ocean mail service—where there is an increase. That is due to the fact that the contract fixes a price that each vessel gets, and as we get more trips from the better vessels we necessarily have to pay them more. With the exception of that item, I think they are all the same as last year.

Mr. TAYLOR. I would suggest that one item be reserved for discussion by the leader of the opposition or any other member.

Mr. FIELDING. That is a reasonable proposition.

Mr. NORTHRUP. Will the minister agree that some time shall be fixed when the various supplementaries will come up?

Mr. FIELDING. I hope to bring the supplementary estimates down to-morrow or the following day, at the latest, and from then to the end of the session I fancy that all business will receive expeditious treatment, so that it will hardly be necessary to fix a day.

Mr. NORTHRUP. A great many items are allowed to ship through on which there would naturally be some discusion if the members interested in them were present. But we do not want to sit here all the time waiting for some particular estimate to come up, and we would like to know when the supplementaries will be taken up.

Mr. FIELDING. After the supplementaries come down, if any particular subject interests the hon. gentleman and he will notify us, we will either take up that item or fix a time for doing so.

Mr. DANIEL. Will the minister look at item 190: 'Steam communication between St. John and ports in Cumberland basin, $3,000.' Is that subsidy paid to a steamer called the 'Harbinger?'

Mr. FIELDING. No contract has been entered into for this service. The subsidy was offered, but not taken up.

Mr. TAYLOR. I beg to suggest that item 153 be reserved for discussion.

Mr. FIELDING. Very well. I wish to strike out item 169: 'Steam communication between a port or ports in Prince Edward Island and a port or ports in Great Britain, $7,000. A quarter of this sum has been voted, but we have no expectation that the service will be required, and practically the sum already voted will lapse. I move that we strike out the remainder, and in the supplementaries we will utilize the money for some other service suitable for Prince Edward Island.

Mr. TAYLOR. Item 153: Ocean and mail service between Great Britain and Canada, $550,000,' will stand, and any member of the opposition who wants to discuss any of the subsidies will have an opportunity of doing so under this item?

Mr. FIELDING. I quite agree with what my hon. friend suggests.

Department of Trade and Commerce, $91,600.

Mr. BLAIN. How much money was paid to each of the provinces under the Chinese Immigration Act?

Mr. FIELDING. It is practically all paid to British Columbia, but I will be able, when the matter comes up again, to give my hon. friend a more exact statement.

Mr. TAYLOR. I think we had better let item 276 stand, as I see that it includes bounties on steel and iron.

Mr. FIELDING. It does not take in the bounties, but only covers the administrative expenses.

Mr. TAYLOR. I know.

Mr. FIELDING. All right. Let 276 stand.

Item allowed to stand.

Inspection of staples, $130,000.

Mr. LAKE. Is it expected that other inspectors will be required in consequence of the amendments to the Grain and Inspection Acts; and, if so, will provision for these be made in the supplementary estimates?

Mr. FIELDING. The officer of the department says that the supplementaries will have to contain a further sum to cover that.

Mr. TAYLOR. Will there be an item in the supplementary estimates for this?

Mr. FIELDING. There will be some items, although I do not remember for what particular purpose.

Mr. TAYLOR. And if we want to discuss anything in connection with the Department of Justice it may be discussed upon the supplementary estimates?

Mr. FIELDING. Yes.

Penitentiaries, $559,050.

Mr. TAYLOR. Will there be an item in the supplemenary estimates for this?

Mr. FIELDING. Yes.

Some resolutions reported.

ADJOURNMENT—BUSINESS OF THE HOUSE.

Mr. FIELDING moved the adjournment of the House.

Mr. TAYLOR. What business will be taken up to-morrow?

Mr. FIELDING. I understand that on motions the matter of the Hodgins Committee comes up. After that the various government orders, Bills and resolutons might be taken up, and later in the day the balance of Supply.

Mr. TAYLOR. The Minister of Militia said he had a statement to make.

Mr. FIELDING. That would come in Supply, I presume. The Hodgins matter was arranged for the morning; it would come on the motions.

Mr. TAYLOR. Then Bills and Supply?

Mr. FIELDING. Yes.

Mr. TAYLOR. It would be the Minister of Militia?

Mr. FIELDING. Yes. I understood it was arranged that he shall make a statement.

Mr. TAYLOR. Either he or the Minister of Railways, who has also a statement to make.

Mr. FIELDING. I do not know whether the Minister of Railways will be ready on the Transcontinental matter.

Mr. TAYLOR. Then it will be militia?

Mr. FIELDING. We take Militia and the balance of any items that may remain.

Motion agreed to, and House adjourned at 11.38 p.m.

HOUSE OF COMMONS.

WEDNESDAY, July 8, 1908.

The SPEAKER took the chair at Eleven o'clock.

NATIONAL TRANSCONTINENTAL RAILWAY—MAJOR HODGINS' CHARGES.

Mr. VICTOR GEOFFRION (Chambly and Verchères). Mr. Speaker, in asking that the report of the committee appointed to inquire into the charges of Major Hodgins with respect to the National Transcontinental Railway be concurred in, I wish to place before the House as briefly as I can some of the reasons which induced the committee to adopt this report. It will be useless for me, I suppose, to state very minutely the circumstances which led to the appointment of this committee of investigation. I think they are known by every hon. member of this House, and I simply wish to recall that Major Hodgins, who now resides in the city of Victoria, B.C., who had been for some time previously in the employ of the Transcontinental Railway Commisison and who had either left his position or been dismissed by the commission on the 16th April last, wrote a letter which he signed and caused to be published in the 'Daily Colonist' newspaper, published in the city of Victoria, B.C., charging the Transcontinental Railway Commission with undue influence over their engineers, charging them also with undue influence over some members of the government and making other charges which are set forth in the letter, which letter is quoted in the report now before the House. This letter was followed by two alleged interviews in the same paper with Major Hodgins enlarging and repeating in other words the charges that had been made by him in the previous letter. The Transcontinental Railway Commissioners thought it their duty to send a memorandum to the right hon. Prime Minister (Sir Wilfrid Laurier) denying all the charges made by Major Hodgins in his letter and these interviews, and asking that a committee of this House be appointed to inquire into these charges, to give an opportunity to Major Hodgins to prove his charges and an opportunity to themselves to disprove them. That committee was appointed on April 29, and commenced its proceedings about that date. Major Hodgins was put on the stand and was subjected to a long examination by his own counsel and by the counsel of the Transcontinental Railway Commission. During the course of this examination, after it had proceeded for some time, on June 3 last Major Hodgins practically repudiated the two interviews which had been attributed to him by the 'Colonist.' I shall quote his exact words to the House to show how emphatic his repudiation was. They are to be found at page 248 of the evidence. He was then being examined by Mr. Murphy, counsel for the Transcontinental Railway Commission, and his examination reads:

Q. Well, it is of importance to know, major, how much or how little of this interview you are now prepared to stand by, because it affects the cross-examination?—A. I am not prepared to be responsible for the interview at all. As I say, if a reporter interviews you and takes down half a dozen sentences, and his notes certainly were not that long (illus-

trating by a gesture) and writes up two columns you cannot hold me responsible for it. Part of the interview, I might tell you, the reporter was trying to find out what an engineer has to do, why he does this, that and the other—in fact I was giving him more or less of a lecture on engineering. There was a whole lot of questions he was working up and he got hoplessly mixed up in the thing.

Q. From your answers this morning you would not like to be responsible for other articles that are written nearer home?—A. No.

Q. On the same subject?—A. No.

After this repudiation by the Major of his two interviews in the 'Colonist.' I think about June 16, Major Hodgins repudiated or withdrew all charges he had made previously in his letter to the 'Colonist' with which we had to deal during the investigation. The question of the classification of materials in district F where he was working, had been the subject of a great deal of correspondence and discussion between the engineers for the Grand Trunk Pacific and for the Transcontinental Railway. The engineers, the commission and the contractors also had obtained from eminent jurisconsults in different parts of the country opinions as to the proper interpretation to give to the specification on that very question which was the basis for Major Hodgins' charges. It was given in evidence that these opinions were all adverse to the contention held by the Major. In the face of this evidence the Major on June 16, withdrew these charges and imputations which he had made in his letter. His withdrawal is to be found at page 386 of the evidence. Major Hodgins was examined by Mr. Macdonald, a member of the committee :

2. You regard that as practically the only question left now?

That is the question of the interpretation of the specification for the classification.

Q. You regard that as practically the only question left now, the question of whether your view of the classification is correct?—A. That is all.

Q. That is all. I understand you to say, from the information that you have gathered since coming into this matter, Major, that you feel that you can not say that you have any imputations to make upon the commissioners in regard to any improper interference, with the engineers for instance?—A. With those legal and engineers' opinions there I do not see that I have.

Q. And you are not in a position to offer any evidence to show that they exercised any improper interference with the engineers?—A. No.

Q. In regard to that matter in which the statement was made here that Sir Wilfrid Laurier refused investigation on account of the influence exercised on him by Mr. Parent; I understand you are not in a position to say, or to offer any evidence that would show that Mr. Parent attempted to influence Sir Wilfrid in any way, or are you?—A. No, not unless Mr. Parent came up to say he did.

Q. You have no evidence of that?—A. I have none.

Q. And in regard to the question of engineering you apparently as an engineer, with your experience, took a certain view as to how the wording of these specfications should be interpreted?—A. Yes.

Q. Now you find that since you put in the statement here, Mr. Lumsden, on January 10 laid down certain instructions for the engineers to follow, which may be said to be an interpretation from his standpoint of what the specifications mean?—A. Yes.

Q. You were not aware of this being in existence at the time you wrote to the 'Colonist' on April 15, were you?—A. No.

Q. I suppose in regard to these opinions of counsel on the meaning of the specifications you had no intimation of them at the time you wrote the letter?—A. Another man's opinion is just as good as mine, as a matter of fact every engineer's opinion is valuable to himself.

Q. And it is a question upon which men may differ quite honestly?—A. Certainly.

Q. You do not impute to these gentlemen any improper motives in their ideas?—A. Not after reading Mr. Lumsden's letter.

Q. You made use of the expression the other day that you did not regard this committee as the proper tribunal to determine the question at issue?—A. With all due deference to the committee, I do not; it is an engineering dispute and as far as I am concerned I quite believe that the arbitrators who are appointed for the purpose should deal with this question of classification and I think that the board of arbitrators is the only right and proper tribunal to determine it.

Q. And any evidence you have to offer in regard to this matter, to this question at all, whatever is left of it now, is evidence that you would prefer to give to this tribunal of arbitrators that has been appointed under the statute?—A. Exactly.

Q. They are people in whom you have confidence that they can settle this question in the interest of this country fairly?—A. Absolutely.

Q. And you are prepared to accept their judgment on this question of classification as absolutely fair from your standpoint and in the interest of the country?—A. Certainly; I would not put myself in the way at all; they have to look after the interest of the country.

Q. And you regard this board of arbitration as being the proper tribunal to determine whatever there is in issue in this matter?—A. They are the proper tribunal.

Q. Personally, Major, it does not seem to me —or have you any desire to go on before this committee through your counsel offering evidence and taking up the time of this committee, or wouln't you prefer to give it all before the aribtrators?

Mr. Lennox.—Would it not be better to hear counsel?

By Mr. Macdonald:

Q. What do you say to that, Major?—A. What is that again?

Q. Have you any desire to go on giving evidence here in view of what you have said now, or do you not think that the proper tribunal

to determine this question is the board of arbitrators composed of Mr. Woods, Mr. Lumsden and a third arbitrator?—A. I do not think it is for me to answer that. I think it is for the committee to decide that.

I shall pass over some of the evidence which is very long as I want to give only answers bearing on the withdrawal of the charges. The examination continued:

By Mr. Macdonald:

Q. I understand you to say you do not desire to press before this committee any charge of wrong-doing on the part of the commission as far as their interference with the engineers is concerned, is that a fair statement?—A. That is right.

Q. And as far as that phase of the inquiry is concerned, you do not offer any evidence for our consideration?—A. It is simply this, that I do not see why I should stand the expense of finding out whether the specification is right or wrong.

Q. Or whether the academic question between engineers should be settled at your expense, that is the position you take?—A. Yes.

This was a withdrawal by the Major of all imputations and charges made in his letter. The question came up afterwards in the committee whether it was proper to continue the investigation. A long argument followed between members of the committee and the majority of the committee thought that it was no use continuing the investigation after the withdrawal of the letter. I submit that the proper guide for us in this investigation was the order of reference which reads as follows:

Order of reference.
House of Commons,
Tuesday, April 28, 1908.

Resolved, that the memorandum of the chairman of the Transcontinental Railway Commissioners to the Prime Minister, of date the 23rd April, and laid on the table of this House on the 24th instant, and the papers accompanying the same, together with the letter of Major Hodgins to the public press therein referred to, be referred to a special committee of five members, with instructions to investigate the matters and charges therein mentioned, and that the said committee be composed of Messrs. Carvell, Macdonald (Pictou), Geoffrion, Barker, and Lennox; and that they have power to send for persons, papers and records, to examine persons on oath or affirmation, and to report from time to time.

Attest.

(Sgd.) THOS. B. FLINT,
Clerk of the House.

What was referred to that committee for investigation? I submit it was properly the charges of Major Hodgins. It could not be the memorandum by the Transcontinental Railway Commissioners to the Prime Minister denying the charges he had to investigate, it must have been the letter, and the charges in the letter in respect to the question of classification having been withdrawn, we thought that the proper tribunal to continue the investigation was not the committee but the Board of Arbitration which had been created by statute pursuant to agreement between the Grand Trunk Pacific and the commissioners for the Transcontinental Railway. It is for that arbitration board to decide all questions according to the agreement. The agreement says that all difficulties and especially difficulties which appertain to the classification of materials which is probably the most important part to be decided by this tribunal are to be decided by a tribunal composed of Mr. Woods, chief engineer for the Grand Trunk Pacific and Mr. Lumsden, chief engineer for the National Transcontinental Railway. If these two chief engineers cannot agree on the disputed question, they are to choose a third arbitrator and this tribunal is to adjudicate on the question. All these questions of classification are to come up before these gentlemen. They had agreed after having discussed the question a long time to adopt a certain standard of classification which has been adopted in the work and is being used now. I admit that some complaints as to over classification or under classification have been made by the Grand Trunk Pacific, but the fact that one of the parties to that agreement claims that there has been over classification or under classification does not prove this to be the case until that tribunal has adjudicated on it. That clause providing for arbitration in a contract is not an unusual one. We find very often such a clause in contracts where works of special importance have to be performed, and the fact that it is claimed by one of the parties to the contract that the work has not been properly classified, as I said, does not establish that fact until after the board of arbitration has adjudicated upon it. The very important question of classification was not one to be discussed before the committee. A board has been properly appointed by statute for this very purpose, and all those questions, as Major Hodgins said himself, ought to be brought before that board to be adjudicated upon. After having discussed the matter we came to the conclusion that there was nothing left to be inquired into by your committee. Supposing that Major Hodgins, before the appointment of that committee, after the publication of his letter had withdrawn his letter, no one would pretend that this House would have appointed a committee to investigate. Suppose also he had withdrawn all charges and put in another letter charging that there had been over classification by some engineers, would a single member pretend that a committee should have been appointed to inquire and decide whether that question of classification, which by agreement is to be entrusted to the arbitrators, ought to be discussed any further? I think Sir, that the course adopted by the committee was logical, fair

and just, and I move, seconded by Mr. Carvell, that the report which I laid on the table of the House a few days ago be now concurred in.

Mr. HAUGHTON LENNOX (South Simcoe). Mr. Speaker, I recognize that in appointing a small committee the House expected us to occupy a somewhat judicial position and to endeavour, regardless of what our preconceived opinions politically might be, to arrive at a conclusion which would be in the interest of the country. I am sorry that I cannot concur in the motion of the chairman of our committee for the adoption of the report to which reference has just been made. The order of reference to that committee was made on April 28th last. The hon. gentleman who has just moved the adoption of the report has stated that certain matters were known to the House, certain matters were of public notoriety at the time the order of reference was made. That is true. At the time the order of reference was made it was known to the House and to the country that Major Hodgins had made certain charges which reflected very seriously upon the conduct of public business by the Transcontinental Railway Commission and, not only that, but that his statements had been followed up by comments and editorials in the newspapers which carried the matter even further than Major Hodgins' statements went. There was abundant reason why the investigation should take place. It was the motion of the government and not of the opposition. It was a position taken by the government which the government thought was justified by the circumstances. But whilst the charges of Major Hodgins and the editorial and other comments in the press were known to the country, it was not known to the country or the House, but known to the government and the government alone, that statements had been made by the Grand Trunk Pacific engineers which were far more damaging and far-reaching than any charge made by Major Hodgins or the public press. The Grand Trunk Pacific in fact was up in arms against the classification which prevailed, not upon any special section of the eastern division, but from one end of the line to the other. The charge was made by that company—as the government knew, but as the country did not know at that time—that this was not the result of ignorance on the part of the government, but was due to malice aforethought. At the time the right hon. gentleman (Sir Wilfrid Laurier) made the motion it was not known, but it became known in the committee afterwards, that there were attached to the memo. of the Chairman of the Transcontinental Commission the letters which constitute Exhibit No. 38, as filed before the committee, and which contained the damaging statement I am about to refer to. It is alleged and reiterated by Mr. Parent that attached to the memo. laid on the table, and upon which the right hon. gentleman moved, were not only clippings from newspapers, but the bundle of papers which form Exhibit No. 38 filed in the committee as well, and which contained the charges I am about to refer to. In other words, the right hon. gentleman, for reasons unexplained, saw fit to detach from that memo. a portion of the documents which had been transmitted to him with it. I do not wish to read any more of this correspondence than is absolutely essential, but I believe it is essential that this House should know exactly the class of material and how it was classified, in order to be in a position to decide whether the motion I am about to make, namely, that the matter be referred back to the committee for further investigation, should be adopted, or whether the inquiry should be burked at this stage. Before reading the letter of Mr. Wood, Chief Engineer of the Grand Trunk Pacific, I wish to make an explanation in order to elucidate certain statements in it. In the specifications in the various contracts on the eastern division we have it defined that earth excavations have a slope of one and a-half foot to a foot; that loose rock excavations have a slope of one foot to a foot, and that solid rock excavations have a slope of only one-quarter of a foot to a foot. Therefore, when we find in these letters reference to the fact that a slope is one and a-half to one, that means that the engineer is calling attention to the fact that whereas the slope is a slope of common earth the percentage returned for the work is a large percentage of solid and loose rock.

Having said that, I want to read the first letter of Mr. H. A. Wood to the chief engineer:

Montreal, October 7, 1907.

H. D. Lumsden,
Chief Engineer,
Eastern division of the National Transcontinental.

Dear Sir,—At the request of District Engineer Armstrong, he was furnished recently with a statement of classification for the heavier work on the above section, which were, when given in detail, so different from his expectations that he requested the writer to visit the work.

During the past week we passed over portions of the work from the Batiscan river west for fifteen or twenty miles, and later from mile 115 to 132.

With reference to the former portion, the classification was given in distances of from three to five miles, and as we did not have total quantities of graduation, could not judge with reference to any particular cutting, although percentages for entire distance seemed excessively heavy in both loose and solid rock.

With the latter portion we had detailed percentage for each cut, and were greatly sur-

prised at the allowances made for solid and loose rock. In nearly every case where the cuttings were not entirely all ledge the estimate given for solid rock is double, or more than double, what it should be.

In fact, the specifications had been entirely ignored and an excessive allowance made, not by reason of an error in judgment, but, as I understand, by special instructions from the assistant district engineer.

Let me give you some illustrations:

Take the cutting from stations 5818 to 5826, estimated 71 per cent solid rock and 29 per cent loose rock, slopes taken out 1½ to 1. Very little ledge in this cut. Some large boulders, but a very large percentage is common excavation.

Station 5842 to 5860.—Classified 94 per cent solid rock, 6 per cent loose rock. Slopes taken out 1½ to 1. Solid rock over-classified at least 100 per cent.

Station 5866 to 5875.—Estimated 80 per cent solid rock, 20 per cent loose rock. No rock in place in this cut. Many large boulders, but a large amount of earth.

Station 5882 to 5901.—Estimated 78 per cent solid rock, 22 per cent loose rock. A large amount of this cut wasted with slip scrapers, and ploughing being done with two horses. There are hundreds of yards of earth here without a stone, large or small.

And yet there is not a foot of common excavation in that. They plough with two horses, and where it can be ploughed even with six horses it is common excavation. But it is all classified as solid rock and loose rock.

Station 6030 to 6046.—Estimated 40 per cent solid rock, 10 per cent loose rock. This is the large sand cut west of O'Brien's camp. Of the 95,000 yards moved to August 31 in this cut, at least 80,000 yards was pure sand.

Station 6071 to 6078.—Estimated 99 per cent solid rock, 1 per cent loose rock. Very little solid rock in place. Slopes taken out 1½ to 1.

So that the solid rock might crumble down.

West of St. Maurice river.

Station 6391 to 6394.—Estimated 46 per cent solid rock, 33 per cent loose rock. Sand cut with few boulders, and possibly 1,500 yards ledge in bottom of cut not yet taken out.

Station 6493 to 6504.—Estimated 20 per cent solid rock, 49 per cent loose rock. No evidence of ledge and very few large boulders; nearly all sand.

Station 6506 to 6512.—Estimated 16 per cent solid rock, 44 per cent loose rock. This is purely a sand cut, with very few boulders. Upper slope nearly 100 feet high, material wasted into river. Certainly not 10 per cent of this should be classified.

I may say that it is only 'classified' when it is solid rock or loose rock. Ordinary excavation is not 'classified.'

Mr. HAGGART. Do the specifications declare what is loose rock ?

Mr. LENNOX. Yes, they state the nature of each class of material.

Mr. J. T. SCHELL. May I ask is that an estimate of the quantities taken out, or an estimate of what they were before the work was begun ?

Mr. LENNOX. This has reference to the returns actually made by the engineers upon the work to the Transcontinental Railway Commission. The engineer of the Grand Trunk Pacific Company is pointing out how ruinous and absolutely unjustifiable this classification is. And I am reading for the purpose of showing what these men propose the country shall pay for.

Station 6522 to 6548.—Estimated 26 per cent solid rock, 49 per cent loose rock. This is borrowed material from the side. Very little solid rock shown, except what was used for blind drains, but some large boulders not placed in embankment.

On account of heavy rains we were not able to go west of station 6600, but we understand that classification is made about as noted above.

In every case where cuttings were not entirely in ledge we find the material over classified very largely. Mr. Armstrong has been over this work at different times, perhaps quite as often as the assistant district engineer. His estimate and my own are not very different as to the amount of classified material, and until he received detailed quantities he had no intimation that such heavey classification had been given. In many cases, particularly in sand and gravel cuts, he had supposed that no classification would be given, except perhaps for a few boulders as loose rock.

I am informed also that on the work east of the St. Lawrence river heavy classification is being made in borrowed material where ploughing is done with one team and material moved in slip scrapers.

As before stated, these over-classifications are made through error in judgment, not upon the decision of the resident or division engineers, who are fully acquainted with the character of the work, but by arbitrary orders from their superior. To such classification as mentioned above, increasing the cost of the work to such alarming extent, we most seriously protest, and respectfully request that either yourself or the assistant chief engineer visit the work and pass judgment upon the classification as made. Please note that the percentages given above indicate the work done to August 31. We are not advised what the September estimate will show.

Yours truly,

(Sgd.) H. A. WOODS,

Assistant chief engineer.

Now that letter, I thought it well to read in full, because every word of it is important. But I can economize time in relation to the others. Mr. Lumsden took action. He wrote a letter on October 18 which will be found in the printed evidence at page 395. I need not read the letter but merely refer to it for the purpose of showing that at that time it appeared to Mr. Lumsden, from statements made by District Engineer

Doucet, that Mr. Doucet at that time admitted and recognized that his assistant engineers were over-classifying. It is important to bear in mind that, at that time, Mr. Doucet, to some extent, stood by the country and against the contractors. But Mr. Doucet does not maintain that position afterwards. I need only read from this letter what Mr. Lumsden says to the commissioners. He says: It would appear to me some material may be classified as rock which should be classified otherwise.' He had learned that upon a verbal statement of Mr. Doucet on the 12th instant. More anxiety seems to have been felt about points of etiquette than about the interests of the country. Mr. Ryan, secretary of the Transcontinental Commission says:

Although the procedure——

Referring to the letter of Mr. H. A. W. Woods complaining of these matters:

—was distinctly irregular, the commission have taken full cognizance of Mr. Woods' complaint and have given directions that the matter be fully investigated.

This committee, although they do not approve of the manners exhibited by Mr. Wood, have been gracious enough to say that they will take the matter into their full consideration and have it investigated. I regret to say that that promise has not been carried out. Mr. Doucet thinks this was not as politely done as it ought to be, and he says in his letter to Mr. Lumsden on October 21:

I may state that such accusations are not only uncalled for, but most unprofessional, as we in Canada understand professional etiquette.

I am more concerned about this investigation and about some gentlemen stepping out than I am concerned about the order of their going. Now, I refer on page 399 of this evidence to the letter of Mr. Doucet to the chief engineer of the Railway Commission. That I need not read in full, but I want to call attention to one or two sentences. A moment ago I mentioned the fact that Mr. Doucet did not propose to stand in harmony with his subordinates as to the higher classification, but in some way he gets over there, and like the chief engineer he chooses his attitude as time advances, and as soon as the 26th of October we find that Mr. Doucet is prepared to state to the chief engineer that they stand shoulder to shoulder as one man for the Quebec classification. The effect of that upon the chief engineer, upon the fortunes of Canada and upon the amount that Canada will have to pay for this work will be evident to every member of this House before we conclude. Now, he says to Mr. Lumsden:

Dear Sir,—I have already had occasion to state to you verbally that the interpretation the engineers in district 'B' have placed on the classification of solid and loose rock, and in accordance with which the progress estimates have been returned since the inception of the work.

I want hon. gentleman to take note of that, that the engineer here announces that from the very beginning of the work the classification which he has contended for as made by these subordinate engineers, and which at first was resisted by Mr. Doucet, and definitely resisted by the chief engineer, that classification has prevailed from the very inception of the work, and prevails to the present time.

Mr. E. M. MACDONALD. Would my hon. friend be good enough to indicate where he finds this theory of his that Mr. Doucet in his conversation with Mr. Lumsden, as referred to in Mr. Lumsden's letter, took any different position from that which he took in his letter of October 26?

Mr. LENNOX. I have given the evidence and the references. I had some little experience of my hon. friend in the committee, where I had not as much support as I hope to have here, and I will endeavour to make this clear. My hon. friend can point out a distinction if he sees any between the letters to which I have referred. I have read a portion of this letter, and I have referred to the position which Mr. Doucet is said to have taken, as reported in the letter of 18th of October, and now I wish to add a sentence:

I have never had occasion to force my views on my assistants, all, to a man, have taken the same interpretation of the classification as I have.

So, as I intimated a moment ago, between the 12th and the 26th, for reasons which I cannot explain, Mr. Doucet seems to have advanced along the line on which the contractors were travelling. On the 24th of October there was an examination into this matter. Mr. Lumsden went down, and in the letter of the 30th October, page 403, he points out what was done; he tells who was there. There were a number of contractors, among others. He points out what they did; he refers to an interview with them after they had examined the work, and he points out that after this interview he requested Mr. Doucet, the district engineer, to procure statements as to the interpretation of the specifications from the various engineers under charge of Mr. Doucet and to send these and his own interpretation of the specifications to Mr. Lumsden, the chief engineer. This is a significant letter, the letter of the 30th of October; it shows the position in which Mr. Lumsden stood on the 30th of October when he communicated with the Railway Commission, and it shows this fact, that at that time, notwithstanding his subsequent attitude, he stood in comdemnation of Que-

bec classification. After referring to these various matters, and having had these letters from the various engineers on the Quebec section, including the statement of Mr. Doucet, he says :

I can only say that I do not concur with the interpretation placed on clauses 34, 35 and 36 of the general specifications, by Mr. Doucet or the engineers under him. In my opinion solid rock excavation, clause 34, covers all material that should be classified as solid rock, etc.

He goes on to define for the purpose of pointing out that he does and will not agree with the classification prevailing in Quebec. What are you to say to the members of the committee? What are the members of this House to say to the members of the committee as to staying their hand now when we find that subsequently the chief engineer of this work, for reasons not appearing, now says that that kind of classification is to prevail, and that kind of classification is prevailing from one end of the eastern division of the Transcontinental Railway to the other at the present time? After pointing out what he regards as proper classification, he says :

Such being my views and as stated to you in my letter of the 18th instant, I must decide to certify to any future estimates, except upon classification in accordance with my interpretation of the specifications above mentioned, unless both parties to the contract agree to amend the contract formally, with due concurrence of the government, or until the estimates are corrected and conform with my interpretation. In any event, I ask that this correspondence be at once submitted to the government.

So the matter stands on the 30th October. The chief engineer, the gentleman by whose decision we are bound, the gentleman whose word is final, as has been said by a majority of this committee, the gentleman who is the sole arbitrator on the question of classification, stands firm with his back to the wall defying all the subordinate engineers of the eastern division of the Transcontinental Railway. Yet strange to say, he changes his opinion later on. How does he do it? Well, he does it at the instance of an honourable class of men, but not the best class of men to invoke in a case of this kind. He has the engineers on the one hand, he holds them down ; he seems for the time being to be the strong man. Then a greater influence comes in, and lawyer after lawyer is introduced to argue this question—in the interest of the Grand Trunk Pacific who are complaining? Not at all. In the interest of the people whose money is being paid out? Not at all. But the ex-parte argument of the contractors who are clamouring for more is introduced to shape and guide the judgment of the chief engineer of the Transcontinental Railway Commission.

Mr. FOSTER. Before whom did the lawyers argue?

Mr. LENNOX. They are asked for opinions for which they are paid $500 each. That is all right.

Mr. E. M. MACDONALD. Paid by whom ?

Mr. LENNOX. By the contractors, I presume, but I am not going to swear to that

Mr. E. M. MACDONALD. Who asked for that opinion?

Mr. LENNOX. I presume the contractors asked for that opinion and the opinions rendered should have been to the contractors and should have been reserved by the contractors, but when these opinions were used as an argument ex parte, behind the backs of the people—and the Grand Trunk Pacific who were, incidentally, protecting the people —to shape and warp the judgment of the chief engineer, who was to have been independent judge in this matter, a great wrong was done to the people of Canada. Here we have Mr. Lafleur—all right; Charles H. Ritchie—all right; Mr. Lacoste—all right ; all good lawyers, all prominent men——

Mr. E. M. MACDONALD. Not Mr. Lacoste; Sir Alexander Lacoste.

Mr. LENNOX. It is A. Lacoste here. I did not know that he had a title—Sir Alexander Lacoste, K.C. He is no better lawyer on that account. You see etiquette in it all the way through. I do not think the people are so much concerned in that matter as in the question whether or not they are, through fraud or otherwise, paying too much for the construction of this railway. Mr. Donald McMaster, Mr. George F. Shepley—we have heard of him before—and Messrs. Aylesworth & Company, inclosing the opinion of Mr. Wallace Nesbitt. What happens? We had the opinion of the chief engineer on the 18th October, a pretty strong opinion; we had the deliberate, considered opinion of the chief engineer, on the 30th October, sure, firm and defiant; we had a subsequent reiteration of that opinion slightly emphasized on the 16th December, which is found at page 426, and we have his opinion on the 9th January.

Mr. HAGGART. Did the Department of Justice give an opinion?

Mr. LENNOX. That is what I am coming to. Before referring to that I may say that the matter was referred to the Justice Department and that Mr. Newcombe was asked for an opinion but Mr. Newcombe did not give one. I want that to be clearly borne in mind. It is alleged that Mr. Newcombe gave an opinion, but Mr. Newcombe appears to have recognized this fact——

Mr. E. M. MACDONALD. What about his letter on page 429?

Mr. LENNOX. Page 429 is what I have here.

Mr. E. M. MACDONALD. What is it if it is not an opinion?

Mr. LENNOX. My hon. friend can read it to the House.

Mr. E. M. MACDONALD. You had better read it to show that it is an opinion and in that way contradict yourself.

Mr. LENNOX. Mr. Newcombe writes a letter which I say is not an opinion except in this that he tells the engineer: You are the party appointed to decide, you should decide and you should decide without outside interference. We know the position, and my hon. friend knows it as well as any one, of an architect or engineer who is made the sole referee with regard to a question of this kind; he is not to yield to outside influence. He has to decide by reason of his professional knowledge and no outside or extraneous influences are to guide his judgment. I am glad that I have the concurrence of my hon. friend. On the 6th January, Mr. Newcombe writes and in the first paragraph of his letter he puts the matter alternatively. His letter will be found at page 429. He says if so-and-so is the case then so-and-so results.

Mr. CARVELL. Read what so-and-so is.

Mr. LENNOX. I will allow my hon. friend to read it if he sees fit.

Mr. CARVELL. Well, I will.

Mr. LENNOX. All right, I will read a portion of it just to satisfy my hon. friend. I do not want to be too long over this.

Mr. CARVELL. Just take the middle portion.

Mr. LENNOX. This is what I will take:

I do not understand upon what principle the chief engineer limits the size to pieces extending one cubic foot.

Mr. CARVELL. Commence a little earlier in the letter.

Mr. LENNOX (reading):

The specification speaks of rock found in ledges or masses of more than one cubic yard which in the judgment of the engineer may be best removed by blasting. If 'rock assembled' may be regarded as a mass of rock, and if it may be best removed by blasting, I do not see why under the specification it is material whether the individual pieces exceed or are less than one cubic foot in size—

Putting it alternatively.

—if 'rock assembled' is not regarded as a mass the minimum limit of size which can be classified as solid rock exceeds one cubic yard.

Mr. LENNOX.

That is by the specification. So that he says you have in the specification the means of determining and I determine nothing. Then he says:

It seems to me, however, that these questions are largely engineering questions, the solution of which depends principally upon the judgment of the engineer having regard to the terms used in the specifications.

Mr. E. M. MACDONALD. Hear, hear.

Mr. LENNOX. I am glad that the hon. gentleman says 'hear, hear,' because I want to emphasize that point.

I must call your attention to clause 15 of the contract, which provides that the engineer (this term to be construed as defined to clause 2 of the contract) shall be the sole judge of work and material, and that his decision on all questions in dispute with regard to work and material shall be final, thus expressly stipulating that such questions as these shall be submitted to the decision of the chief engineer.

I say 'hear, hear.'

Mr. E. M. MACDONALD. Hear, hear.

Mr. LENNOX. I say that we have by this contract placed one man in charge to stand firmly between the people and contractors and that it is infamous, unheard of and something that would never be sanctioned in a court of justice that a man standing in the position of an architect or engineer should be assailed by one party in interest and his judgment warped and perverted. I say further that this committee should have been sitting for the last ten or fifteen days, this committee should be sitting now, to investigate and probe this fact that we have an engineer who, however honest he may be, has permitted himself to be dragged and turned about at the instance of parties whose interests are involved. We should be investigating whether or not it is necessary, assuming all honesty if you like, that there should be a change made and some one else placed in charge of this enormous work in order that the interests of the people should be protected. Now, is it pretty clear that Mr. Newcombe declined to give an opinion and did not give an opinion? I think it is. What do you think then when you find it stated that our chief engineer receded from the definite position he took on the 30th October in deference to the opinion of Mr. Newcombe when Mr. Newcombe never gave an opinion? The chief engineer says, on January 9:

I have concluded in deference to his remarks these bracketted words might be omitted.

Referring to the remarks of Mr. Newcombe. And so, from the position he definitely took and for which he gave us reasons on the 30th October, he recedes and takes an entirely different position as to the

classification that shall prevail upon the work.

One more matter in connection with this branch of the case only, but it is a very significant one. Going back to the correspondence you will find that one of the points Mr. Parent makes emphatically is that there must be uniformity of classification among the engineers, and he says significantly to the chief engineer: You must take steps to bring that about. He does not say what the steps are to be. I have said more than once—and I have had the hearty applause of my hon. friend from Pictou—I have said more than once that Mr. Lumsden is to be the arbiter in this matter and that he is to be left alone, and that he is to go on his own judgment and on his own judgment alone. What will you think of it when you find that in his letter of January the 9th he refers the question of classification practically to the commissioners to gentlemen who are not engineers, gentlemen who were appointed I presume for political reasons. On the 14th October, 1908, you will find this letter from Mr. P. E. Ryan, written to Mr. Lumsden:

Dear Sir,—I beg to advise you that your letter of the 9th instant, giving your interpretation of clauses 33, 34, 35, 36, of the general specifications for construction modified so as to conform with the opinion expressed by the Deputy Minister of Justice, was considered by the board on the 10th instant and approved.

So that we have this point which I want to be kept clearly in mind: that ultimately it has to be submitted to the board as to whether they will adopt the classification of the chief engineer and so constitute themselves the final court of appeal. We therefore have the Board of Transcontinental Commissioners, not one of whom is an engineer, really deciding on the classification that shall prevail upon this railway. I want to point out that this difficulty has not been remedied and that for that purpose I would refer to a few of the letters to be found in the printed evidence. I refer to the letter of Mr. Woods, on page 46, and I shall just read a sentence:

From reports received from our district engineers 'B' and 'F' we understand that, in their judgment, the work in places is largely over classified, particularly in borrowed material and in cuttings of mixed materials where no ledges exist.

Then he goes on to ask that certain things should be done. Again, in a letter of the 20th of February (page 469) he points out that the classification is still as objectionable as it was before. There is a mistake in the printing of that letter, and I have got a correct copy this morning from the commission and I will read from that:

I do not know the date of these instructions or when they are supposed to become effective, but, from reports from my assistants at Winnipeg and Quebec, there does not seem to have been any change in classifiation of work previously reported, the percentage of classified material being steadily increased.

We are satisfied that on some parts of the line the work previously estimated was not classified according to your recent instructions, being over-estimated in both loose and solid rock. The attention of your district engineers has been called to this fact, but apparently without effect. If your instructions were effective when the January estimates were made we certainly will have to object to the classification as rendered on certain parts of the work.

So that we have these two facts: We have the resident and district engineers asserting their right to control the chief engineer, and the chief engineer ultimately surrendering to these men and to the opinion of the lawyers—the ex parte arguments of the gentlemen employed on behalf of the contractors—and we have the further fact that when these classifications are made these gentlemen are ignoring them and going beyond the limit finally fixed by the chief engineer. In a letter of the 24th of March, a few sentences of which are material (page 470) he says:

District 'F.'—Mr. J. D. McArthur, mile 0 to 245, completing returns for February.

In examining these estimates, I find no apparent change in classification since your instructions to district engineers of January 28, 1908. On the contrary, the percentages of classified material seem to be constantly increasing and are even higher than when we made our objections in September last.

I am quite aware that during the winter season it is natural that classified material shall run higher than at other times, as little earth work is opened, but I had hoped to see a reduction in classified material so reported prior to January last.

I have before me a detailed sheet showing classification as made on district 'B' and am surprised to find material classified as solid rock, which, if I am correctly informed, under your instructions could only be classified as loose rock. I also find very large quantities returned both as loose and solid rock in borrowed embankment. On the work east of the Quebec bridge a large amount was done with teams, side borrowed material, and yet the entire contract for the 150 miles only shows 25 per cent of the work done as common excavation.

Then on April 21 coming down to about the time this reference was made to the committee, the same engineer says:

There are few exceptions to be taken to these estimates, so far as I am advised, except to the classified material, which is constantly increasing, and the very large amount of over-break in solid rock cuttings, also increasing and representing in all a very large amount.

And in this same letter there are three or four subsequent paragraphs which I shall read:

From the inclosed list you will note that Mr. Mann makes objections not only to classification in cuttings, but also to borrowed material. On mile 25, stations 1267 to 1280, there appears in this estimate a considerable amount of loose rock for the first time. Of the 25,000 cubic yards returned, 44 per cent is classified. Both Mr. Mann and Mr. Heaman claim that no classification should be given in this material.

And as I have already said no classification means common earth excavation:

We find that this question of over-classification must be settled in the near future. Many of the sub-contractors will soon be completing their work and undoubtedly will receive final payment for same, and if they are paid upon estimates as returned at present, general contractors will naturally object to any change in their estimates.

Pointing out, as we have endeavoured to point out in the committee that great danger exists of these people being paid and absolute loss resulting to the country, whereas the majority of the committee seems to pretend that no loss could result to the country:

While I have no list like the inclosed from district 'B,' reports from my assistant indicate there that east of the river objections lie to the classification generally as returned. A very large amount of borrowed material through farming country has been returned as loose rock. Of the entire work done to date on this section 77·6 per cent is classified material, nearly evenly divided between loose and solid rock.

That brings us down to the 21st of April, and on the 28th of April we have a deadlock between the Grand Trunk Pacific Railway Company and the commissioners. And the very day on which this matter was referred to the committee (April 28) Mr. Woods writes to the chief engineer and says that no arbitration can go on by reason of the position that has been maintained by the chief engineer. He writes:

Montreal, Quebec, April 28, 1908.

Mr. Hugh Lumsden,
Chief Engineer, eastern division,
National Transcontinental Railway,
Ottawa, Ontario.

Dear Sirs,—This is to acknowledge receipt of your letter of April 24, in regard to classifications given on districts 'B' and 'F,' wherein you say you could confer with me, either in Ottawa or Montreal, so as to arrange dates for arbitrating the points in dispute and for the appointment of a third arbitrator, &c.

In reply thereto will say that the action you propose cannot be taken until after you have complied with my request of October 7, which, as you will recall, has been several times repeated, that you and I personally make an inspection of those portions of the work on districts 'B' and 'F' where it is claimed improper classification has been made.

Kindly let me know when it will be convenient for you to make this inspection, and I will place myself at your disposal.

Yours truly,
(Sgd) H. A. WOODS,
Assistant Chief Engineer.

So that you will see that at the time when the right hon. gentleman referred this matter to the committee it had got to the position, although months and months had elapsed, that nothing had been done. Although the Grand Trunk Pacific assistant engineer had been insisting on something being done nothing had been done, and in the meantime the moneys were being paid out by the Transcontinental Commission to the contractors. I have referred to these matters as matters which were not known at the time that this committee was appointed but certain matter were known and certain matters were expressly dealt with. Major Hodgins had made his statement; the press had made wider statements—but bear in mind not so wide and not so damaging and not so damning as the statement made by the Grand Trunk Pacific Railway Company through their engineers. I will not take time to read the comments and statements of the press, but I want to say that the press, and particularly the Ottawa 'Citizen' took upon itself the responsibility to make certain specific charges, and charges which went beyond Major Hodgins. Major Hodgins made charges which he was prepared to assume were errors which were made not by fraud or as the result of dishonesty; the Ottawa 'Citizen' puts it on the basis of boodling and dishonesty.

Some hon. MEMBERS. Read it.

Mr. LENNOX. I will. It says:

Troubles are coming fast and thick upon the Laurier administration.

You don't want a commission to find that out; every one knows that.

Mr. TALBOT. That is just your opinion.

Mr. LENNOX. The country will care little about the hon. gentleman's opinion. I continue to read:

The latest are the public charges made by Major Hodgins, late district engineer for 400 miles of the government end of the National Transcontinental Railway.

I want to point out, and I hope hon. gentlemen will note it that these are pretty strong charges, but the majority of the committee say they should not be investigated:

The essence of his statement is that millions of dollars are being boodled in connection with the construction of this government work.

Names and figures are given and the allegation is made that he was forced out of his position because he refused to be the tool of the boodlers.

There has been no explanation of why he was forced out; nothing has come to light.

His professional record and admitted ability give due weight to the assertions which he boldly makes. The charges cover not only his former division but apply to the construction of the whole line through Quebec. At the time of his dismissal, Major Hodgins says that he applied to Sir Wilfrid Laurier for an investigation into the scandalous condition which he alleges to prevail and that the investigation was refused. In the face of such charges made by a responsible professional man, who is apparently prepared to furnish the evidence to substantiate them, it will be very difficult for the government to inconsistently refuse to have the matter thoroughly probed.

If that is true and I think it is reasonable, to assume it is; if then difficult for the government to refuse investigation, it ought to be more difficult for the right hon. gentleman who moved for the appointment of this commission to now say that this committee shall stay its hand in the face of the damaging disclosures that have so far cropped up during the investigation of the committee. But it may be possible—history does repeat itself most disastrously and disgracefully in some instances of this kind. We may have a repetition of what occurred in the case of the Royal Commission on the Civil Service which, when it began to do things found it was not required any longer. I do not know whether this committee will be further required or not. The 'Colonist' newspaper also makes statements. Mark you the 'Colonist' publishes Major Hodgins' letter. But the 'Colonist' makes statements of its own and it made them on the basis that Major Hodgins gave them the information. Major Hodgins says he will not stand for all these charges, and when he got into the hands of my hon. friend opposite he did not seem to stand at all so far as I could see. But the 'Colonist' says that Major Hodgins made the statements. The 'Free Press' also made very important and very serious charges, but I shall not trouble the House with reading these. However, I want to refer to a letter of Mr. Parent in which he sends forward the various letters, or almost all the letters, I have referred to this morning and the clippings from the press and his own request for an investigation. I need not read all this letter of Mr. Parent, dated the 23rd of April, he speaks of the insinuations and statements, and he speaks of the various items in the press and various other matters and he winds up in this way:

You will find attached newspaper clippings in reference to Major Hodgins' letter, and all correspondence relating to the circumstances of his dismissal; also a letter from our chief engineer, Mr. Lumsden, on the same subject.

In conclusion, the commissioners would respectfully request, as they do not wish to remain under the aspersion which such reports cast on them, that the whole matter be referred to and looked into by a committee of the House and that Major Hodgins be assigned to appear before the same to repeat his charges in a specific manner in order to substantiate them if he can.

His request is touching the letters and touching the clippings from the newspapers, and he asks that the whole matter shall be referred to the committee to investigate. I am prepared to say that if the right hon. the Prime Minister did not adopt that letter that letter is not binding, but I am prepared to argue that he did adopt it in whole and that he referred to us to investigate the whole of the matters which appeared not only in Major Hodgins' letter but in the several editorials and comments of the press. I shall read, in order that we may be clear upon this matter, the order of reference:

House of Commons,
Tuesday, April 28, 1908.

On motion of Sir Wilfrid Laurier, it was resolved, that the memorandum of the Chairman of the Transcontinental Railway Commissioners to the Prime Minister, of date the 23rd April, and laid on the table of this House on the 24th instant, and the papers accompanying the same, together with the letter of Major Hodgins to the public press, therein referred to, be referred to a special committee of five members, with instructions to investigate the matters and charges therein mentioned, and that the said committee be composed of :—Messrs. Carvell, Macdonald (Pictou), Geoffrion, Barker and Lennox, and that they have power to send for persons, papers and records, to examine persons on oath or affirmation, and to report from time to time.

Does that make any distinction between the charges in the newspapers and those made by Major Hodgins? Does that refer to the committee merely what Major Hodgins mentioned or does it refer to the committee the matters and charges specified in the several documents attached to the memo.? I understand that what was referred to the committee is this: The memorandum of the chairman of the Railway Commission, the papers attached to it and the letter of Major Hodgins. What then was the purpose of the reference? It was to investigate—what? Was it to investigate the question whether there was or was not an arbitration pending to determine the meaning of the contract between the government and the Grand Trunk Pacific? No, but to investigate the matters and charges mentioned in those several documents attached to the memo. of the chairman of the Transcontinental Commission and the letter of Major Hodgins, and the purpose was to

find out whether the people are paying too much money or not for that railway.

Some hon. MEMBERS. Hear, hear.

Mr. LENNOX. Was the letter of Major Hodgins made more significant or important than the statements in the Ottawa 'Citizen' or the 'Colonist' or the 'Free Press?' I submit it was not. As a matter of history, when the right hon. gentleman first moved there was no letter of Major Hodgins' on hand. The order of reference was at first in this form: 'That the memo. of the chairman of the Railway Commission, with the papers accompanying the same, be referred to a special committee.' And it was only when the leader of the opposition (Mr. R. L. Borden) said he thought it was not broad enough, and when the hon. member for Hamilton (Mr. Barker) and myself asked to have the letter of Major Hodgins specifically incorporated, that that letter was specifically enumerated. So that it is absolutely idle for the majority on the special committee to claim that we are to be controlled by the attitude or position taken by Major Hodgins. I care nothing for the position Major Hodgins takes. There are larger interests involved. There are the interests of the country at stake. What the right hon. gentleman (Sir Wilfrid Laurier) pretended when he made this reference was that we should have a full inquiry as to whether this railway was costing the people an extravagant sum or not. How did the committee understood the reference? They understood that every charge in the 'Citizen,' the 'Free Press' and the 'Colonist' should be investigated. They understood that Major Hodgins had absolutely no voice, pro or con, as to the scope or direction of the inquiry. And they understood that, with or without Major Hodgins, we were to find out whether the people's money was being wasted or stolen or not; and that such was the unaminous understanding of the committee at the opening of the investigation is shown by the Record.

But what did the majority of the committee do? They induced Major Hodgins to retire on the understanding that there was constituted at that time and then at work a special board of arbitration to investigate this matter, consisting of trained experts for whom Major Hodgins, as an engineer, had the greatest respect. I wish to say here and now that that was an absolute mis-representation. I do not say that it was intentionally a mis-representation, because I have too much respect for the other gentlemen on the committee to suggest anything of the kind; but as a matter of fact, it was an absolute mis-representation of the true circumstances. Up to this day there has been no arbitration board in existence investigating that matter under the terms of the contract we have with the Grand Trunk Pacific.

I have said that although the scope of the inquiry was as wide as I have indicated, the majority of the committee led Major Hodgins to believe that the matter was then pending before an arbitration of experts, for whom he had the greatest respect, and by this means induced him to retire from the field of inquiry before the committee. But after Mr. Hodgins had been induced in that adroit way, by the questions so adroitly put to him, to take that position, the majority of the committee absolutely refused to go a step further. When we entered upon our labours, we did not so understand our duty. We understood that no attitude which Major Hodgins might take could influence the committee, that it was immaterial what attitude he took. I shall read a few sentences for the purpose of proving that statement and to show that the majority of the committee went absolutely against the order of the House when they took the position that the committee should be guided by Major Hodgins and by him alone. At page 55 you will find the following:

Mr. Hodgins.—I think I read one of the cuttings some days ago.

Mr. Carvel.—I presume you would admit, in case the formal charges which you may make here as representing Major Hodgins did not include everything in the reference to this committee that the committee would still have the right to go on and inquire into the foundation of the charges in the newspapers and in the reference?

Mr. Hodgins.—I did not quite catch your question.

Mr. Carvell.—In case the formal charges you will prefer do not include everything mentioned, you will admit the committee have the power to go further and investigate everything that is in the reference?

Mr. Hodgins intimated that he did not know that his view of the matter would affect the question. And so it was dropped for the time. At page 56:

Mr. Macdonald (Pictou).—It being understood—I think Mr. Parent has so understood and I understand Mr. Hodgins, K.C., to say so—that the memorandum he proposes to submit to us does not relate to anything outside of what has been already referred to the committee, in the papers, but is only a summarization of the allegations contained in the newspapers.

Mr. Carvell.—And does not necessarily curtail our rights.

Then, on the same page:

Mr. Carvell.—I think it is in the minds of every member of the committee that we will not allow Mr. Hodgins to enlarge the charges as contained in the newspaper reports.

Mr. Barker.—Nor reduce them.

Mr. Carvell.—If he proposes to reduce them, then so far as I am concerned, speaking for my own part, I would say we ought to stand by the reference to the committee and after Major Hodgins makes his charges then we will know what further course to pursue.

Then, further on :

Mr. Lennox.—The charges made by Major Hodgins will be to some extent, perhaps, of assistance to us; but we have to travel exactly upon the lines of what has been referred to us, neither enlarging nor circumscribing them. The fact does not relieve us from the duty of pursuing the matter just as it has been referred to us nor from investigating all the questions referred. I think every member of the committee understands that.

Mr. Carvell.—Yes.

However, I think you will find practically the whole matter at page 59. The point I am endeavouring to make clear is that at that time we were unanimous in the opinion —and I think it was the only logical position to take—that even if Major Hodgins refused to do anything, if Major Hodgins had died—nothing but impossibility should prevent us from going on and doing the work submitted to us. So I will submit to the House a few sentences from page 59 and leave it there, whether I have established the matter or not.

Mr. Parent.—We have been accused in the newspapers—

The Chairman.—Yes, it has been spread all over the country.

Mr. Parent.—If the gentleman is allowed to limit his charges, I suppose the evidence will be confined to that ?

Mr. Carvell.—Oh, no.

Mr. Macdonald. (Pictou).—Do not worry about that.

The Chairman.—We will have the right to examine Major Hodgins on the rest of the charges he may drop, even if he does not prefer them.

Mr. Parent.—As far as we are concerned we would like to go through the whole of the charges contained in these newspapers.

Mr. Hodgins.—Let me say that I have not asked to drop any charges.

Mr. Lennox.—It may happen that when Major Hodgins prefers his charges, there may be omitted, matters which have been referred to us. Nevertheless although he may not claim to be able to establish it, we can investigate the matter, as it has been referred to us.

The Chairman.—I understand the fear entertained by Mr. Parent to be this : these charges having been printed in the newspapers and circulated all over the Dominion it would not be fair that any of the charges or points dealt with in the newspaper articles should be dropped altogether.

Mr. Parker.—Oh, no.

The Chairman.—I understand it to be the feeling of the committee that they should not be dropped.

Mr. Lennox.—We will allow nothing to be dropped.

And that was the conclusion of the whole matter, that was the definite position we took before the investigation had begun.

Now, what was the result ? After we had sat for many days, and after wearisome days had been spent in a cross-examination which I do not care to characterize beyond saying that it was an absolute waste of time, after it had been impressed upon Major Hodgins time and again that this so-called arbitration was proceeding, and after he had been tired out by the expense he was being put to by being kept there day after day undergoing a useless and senseless cross examination, it was then that the neat little scene which the chairman of the committee read this morning was enacted and the examination of my hon. friend from Pictou (Mr. Macdonald) took place, the matter was amicably settled, and we were told to go home and not investigate any further. I do not think that was right. I am not anxious to spend my time there; but I think we had a duty to perform. Everything that was known the day we ended our labours was known on April 28, when the Prime Minister moved the reference to the committee. On April 28 we had the same statute, the same contract, the same provisions as to reference to arbitration, and we had the subsequent contract which was referred to in the committee. That being so, I fail to see why, after we had elicited a certain amount of information, and after it had abundantly appeared that a vast amount of information material to the country's interest could be elicited, we should be told that we should not proceed.

Now, just one more point, as I wish to close before one o'clock. I wish now to refer to the statute, and the point I want to make clear is that it was a misrepresentation to say to Major Hodgins that we had a board of arbitrators investigating this matter. The other day the Minister of Railways answered a question that I asked by saying that, under section 7 of the agreement between the country and the Grand Trunk Pacific Railway the reference was taking place. What I want to submit is, that, as a matter of fact, that inquiry, which is progressing now, has absolutely nothing whatever to do with this question of the cost of construction of the railway or with the question of classification or over classification—that is not a matter that can be investigated under the terms of section 7. Section 7 is a provision that the chief engineer of the railway company and the chief engineer of the Transcontinental Railway Commission shall determine two things, two things only, and they shall determine them as experts. First, the kind of specifications that shall be adopted in reference to the building of this road, in other words, defining what class of road shall be built. Paragraph 7 of the agreement provides that before any work is done these two chief engineers shall determine the kind of road and the kind of specifications that shall be adopted. They provide, in addition, that when these specifications have been adopted by joint action of these two ex-

perts, the question whether the road is being built according to the terms of these specifications, in other words, whether the contractors are living up to the contract, shall also be determined by these two men, and in case they differ, the question shall be referred to the party selected by them, or if they do not agree, the third one shall be appointed by the court. But there is not one word in that clause 7 which justifies the argument that these men can determine the question of classification, or the cost of construction. That matter is defined by paragraph 15 of the contract, where the meaning of cost of construction is defined, and by paragraph 47, which deals with the question of cost of construction. Paragraph 47 I will read, because it covers exactly a difficulty of the kind which has arisen between the Transcontinental Railway Commission and the railway company:

Any dispute which may arise as to the meaning or construction of this agreement, or as to the performance of any of the obligations of either of the parties to this agreement, or as to working expense or cost of construction, should, if not herein otherwise provided for, be determined by the award of a single arbitrator, if the parties concur in his appointment, or if not, by the award of three arbitrators, one of whom shall be appointed by the government, one by the company, and a third by the two so appointed, or, in the case of their being unable to agree, by the chief justice of the Supreme Court of Canada, and the award of a majority of such three arbitrators shall be final.

I wish to point out that no action has been taken, and only by action under section 47 can the question in dispute between the railway company and the commission be determined. This is important, because in this case they are not necessarily experts, and it was in view of the pretense that there was a pending arbitration that Major Hodgins was compelled—I might almost use the word compelled—to retire. Now I argue this, because I think it is important to the country, because I think that inevitably an enormous loss will result to the country by the action taken by the majority of this commission. It is idle to say that the determination of this body, if it did determine it, would protect us from loss. In the meantime money is being paid out, and must be paid out, and an arbitration between the Grand Trunk Pacific and the Transcontinental Railway Commission cannot decide the matter of the contract. The matter has to be decided by the chief engineer. Once the money is paid, if it is improperly paid, it is lost to the country. Therefore it is all important that this matter should be investigated now. I therefore move:

That the report now used be not adopted, but that the following be accepted in lieu thereof:

The special committee to whom was referred the memorandum of the chairman of the Transcontinental Railway Commission of date April 23, 1908, and laid on the Table of the House on April 24, 1908, and the papers accompanying the same, together with the letter of Major Hodgins to the public press therein referred to, with instructions to your committee to investigate the matters and charges therein mentioned, and with power to send for persons, papers and records, and to examine persons on oath or affirmation and to report from time to time, beg leave to report as follows:

Your committee met for organization on April 29, 1908, when Mr. Geoffrion was appointed chairman; it was resolved that Major Hodgins be notified to appear before the committee on May 8, 1908, for the purpose of preferring his charges and to bring with him all papers, correspondence and memoranda in his possession relative to the matters mentioned in the order or reference; and that the Board of Commissioners of the Transcontinental Railway be notified that the committee would meet on the said 8th day of May for the purpose of beginning the investigation; and that the said commissioners be requested to submit any papers or information which they desired to lay before the committee for their consideration; and that the said commissioners be notified to produce for the information of the committee all papers and correspondence (if any) relevant to the subject of inquiry, which may be in their possession or under their control, and which have not already been laid before the House, also all maps, plans, profiles, progress and other estimates, specifications, memoranda or other information regarding the classification of materials in cuttings and fillings and any alterations made therein, and also regarding any charges made in the location of the line within districts 'B' and 'F' of the railway subsequent to the final location thereof.

Your committee met on May 12, 1908, and on that day there was submitted to them in writting a statement of such of the charges made by Major Hodgins as he proposed to substantiate, reproduced and made by him more specific at the request of the committee.

On May 13, 1908, your committee resolved:

That the Transcontinental Railway Commissioners be required to produce to this committee all papers and records in the custody or control of the said commissioners relating to or affecting the matters referred to this committee.

That the First Minister, the Minister of Railways and Canals, and the Minister of Finance and any other ministers of departments, including the Auditor General, having papers or records in their custody or control relating to, or affecting the matters referred to this committee be requested to produce the same before this committee.

Thereupon the taking of evidence was proceeded with, and was continued from time to time until June 18, 1908, and papers, records and documents relating to and affecting the subject matters under investigation were produced and submitted to the consideration of the committee; which proceedings, evidence, papers, records and documents are set forth in the printed minutes and proceedings of the committee up to and inclusive of the said 18th day of June herewith reported and submitted.

As shown by the papers and documents produced by the said commissioners to your committee and set forth in the printed minutes of the proceedings of your committee now reported, many charges of over-classification, of excessive allowances, and undue payments by the said commissioners to the contractors, of a like description to those charged by Major Hodgins, have formally been made by and on behalf of the Grand Trunk Pacific Railway Company, which charges involve and are examples of enormous overpayments out of the public funds, and are of serious concern to this Dominion. They cover and include not only the charges made by Major Hodgins, but other specific and more serious complaints of the like nature and description; and not merely for the period dealt with by Major Hodgins but are continuous up to the time of the order of reference to your committee.

Such complaints and charges are within the scope of the order under which your committee have been conducting this inquiry and should be investigated by them.

On June 16, 1908, certain statements and opinions having been elicited from Major Hodgins as to the attitude he then assumed and his wishes in the premises as appears of record in the said printed evidence a majority of your committee despite the protest of the minority ruled and thereafter maintained that the matters and charges referred to your committee for investigation should not be further proceeded with by your committee.

Your committee, therefore, humbly make this interim report and recommend that the subject matter of the investigation be remitted to the committee with instructions to proceed therein until completion.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. F. B. CARVELL (Carleton, N.B.). Mr. Speaker, I am very sorry that I find it necessary to take up any portion of the time of the House at this late stage of the session in discussing a question which, I may say, was dead and buried something like three or four weeks ago, but as our hon. friends on the other side have decided to discuss it we find it necessary, in order to place the case fairly before the country, to take up some of the time and I will proceed to do so as speedily as possible. This question arises entirely on account of a letter which Major Hodgins, at one time district engineer in the employ of the Transcontinental Railway Commission, wrote to the Victoria 'Colonist,' somewhere about the 16th April last, followed by two interviews, I think, on the 17th and 19th April. When this letter and these interviews were brought to the attention of the chairman of the Transcontinental Railway Commission he immediately sent a note to the right hon. the Premier (Sir Wilfrid Laurier) accompanied by all the correspondence bearing upon Major Hodgins' dismissal and asked that a parliamentary committee be appointed in order to have the matter thoroughly investigated. That was done and even before the full text of Major Hodgins' letter had had time to come from Victoria here, a meeting of the committee was held, we took evidence for two or three weeks, interspersed with a good many adjournments and finally we were able to bring down a majority report with which I am very sorry to say two members of the committee were unable to agree. My hon. friend from South Simcoe (Mr. Lennox) discussed this matter for an hour and a half and in the main, as far as he discussed it, he was very unfair. There were one or two instances, which I might almost call glaring instances, of unfairness to which I will be compelled to refer and then I will proceed, as I feel it to be my duty to do, to discuss this matter to some extent upon different lines from those followed by my hon. friend, or rather on lines in regard to which my hon. friend conveniently forgot to discuss it. My hon. friend forgot to discuss the charges made by Major Hodgins, and I do not wonder, because I would think that if there is a man in Christendom whom the Conservative party in Canada to-day want to forget and to imagine never existed it is Major Hodgins. We know the glee with which they looked forward to the investigation of these charges and we can appreciate to some extent their disappointment at the outcome. However, rather than let him die—I mean figuratively—or let his charges die, they have decided to bring the matter up in the House and they have devoted their whole attention to the question of classification and have attempted to make out the charge that a grave fraud is being committed upon the country by means of the classification in the construction of this railway. I must insist and I think I am logical when I do insist, that Major Hodgins' statements are the foundation of the whole case, and that but for this letter and these interviews, we never would have heard of the matter. The press comments upon the letter are only carrying out the same ideas as those which are embodied in the letter itself. The letter, as I understand it, practically charged four things. It did not raise the question of classification in any distinct instance excepting in district 'F' which I will take occasion to refer to a little later on. The first portion of the letter charged that there was trouble in connection with the work in district 'F' and that Mr. Young, one of the commissioners, suggested to Major Hodgins that he should go down to Quebec, take an object lesson and see how matters are run there. The second statement is that Major Hodgins went to Quebec, went to a certain cutting called La Tuque, a cutting originally intended to be a tunnel, but a cutting which they afterwards changed to an open cut, and he there saw that they classified material as 86 per cent solid rock which, in his judgment, should only have been classified as 40 per cent. He at once came to the conclusion that all

the work in the province of Quebec was being classified upon that basis, or that there was about twice as much solid rock as there ought to be. When I point out to the House that under the contract of Mr. McArthur he was paid $1.70 per cubic yard for the removal of solid rock, 60 cents per cubic yard for loose rock and 30 cents per cubic yard for common excavation, it is not necessary to be an engineer to see what a huge fraud would be perpetrated upon the country if the facts alleged by Major Hodgins were true, and if the classification of material in Quebec was as Major Hodgins claimed it was. The third statement is that if he had gone back to his district and had classified the work according to the Quebec classification it would have amounted to a difference of about $4,000,000 on the 400 miles of district 'F' and if applied to the whole line it would have amounted to a difference of $28,000,000 in the cost. The fourth statement in the letter is that because he would not adopt the Quebec classification his services were dispensed with, and that Mr. Poulin, a friend of Mr. Parent, was appointed in his stead. If any person will take this letter, and these interviews and will read them over carefully he will agree with me that these are the salient points, in fact, that they are the only points contained in the letter and the interviews. They are the only things therefore which any ordinary man ought to consider or take up as being the substance of the letter. They are the very things which the Ottawa 'Citizen,' picked out as being the substance and they are the things which any newspaper or individual would pick out.

Mr. TALBOT. There was also the statement about Mr. Poulin being a Frenchman.

Mr. CARVEL. Yes, there was something said about Mr. Poulin being a Frenchman. I do not propose to discuss that. I do not see why a Frenchman should not be as good an engineer as an Englishman. We had before the committee two gentlemen of the French nationality, Mr. Doucet and Mr. Poulin, who, while I am not picking them out and placing them over other engineers, will, I think, compare favourably with any engineers in the Dominion of Canada. However, that is beside the subject. There is no doubt that there had been considerable difficulty in the management of the work in district 'F.' District 'F' covers a distance of 400 miles, extending from Winnipeg eastward, but at that particular time the most important part of that work extended 250 miles from Winnipeg eastward to the junction between the main line of the Grand Trunk Pacific Railway and the Lake Superior branch, and we all know that it was the object of the government, of the commission, of the Grand Trunk Pacific Railway Company and of everybody and in the interest of everybody that this branch should be pushed forward to completion as rapidly as possible in order that the crop of the west of 1910, might, if possible, be handled in some degree over this line; in fact it was confidently hoped at the time this Bill became law that the crop of 1909 would be handled over this line. In the year 1907 the commissioners, without doubt, saw that the work was not progressing as rapidly as it ought to, and I think it is very likely—and if so it is to their credit—that they were looking around to see if there was not some way in which they could hurry up this work and get it completed more expeditiously than it would be according to the indications at that time.

I am not going into details further than to say that the trouble was entirely a matter between Major Hodgins and his subordinate engineers. Let us look at the facts. There has been no time in my day when labour was as high as in the summer of 1907, and it appears from the evidence that when the contractors made the agreement with the commission they expected to get labour for 15 cents an hour, or $1.50 for a day of 10 hours, whereas it actually cost them from 20 cents to 25 cents an hour. We also know that when labour is scare and wages high it is almost impossible to get as much value from men's labour in 10 hours as when the conditions are reversed. There was no doubt that there was great difficulty in getting labour and carrying on the work as rapidly as was hoped for, and there is no doubt that Mr. Young and other members of the commission took every honourable means in their power to hurry up the work, and no doubt they questioned Major Hodgins as to why greater progress was not being made. I defy any one to point a single instance in the pages of this evidence in which Mr. Young or any other member of the commission even intimated or suggested any improper conduct on Major Hodgins' part. I have gone carefully over the evidence of Major Hodgins on this subject (pages 105, 106, 107), and I submit you cannot find even an insinuation by Mr. Young or any member of the commission against Major Hodgins. I have nothing to say against Major Hodgins; he is a man for whom, in some ways, I have quite an admiration. I believe he is an honourable man, but unfortunately he did not seem to know how to get along with the engineers under him, and I do not think he knew much more about getting along with the contractors. So great was the trouble—it was practically altogether on District 'F'—that the commission found it necessary to appoint an inspecting engineer so that this particular work might have more supervision than it had been receiving. You must remember that the chief engineer has multitudinous duties to perform, and while he might go over a portion of the work he

could not be expected to go over all the work as thoroughly and as frequently as would be necessary. It seems unfortunate that neither Major Hodgins nor his assistant, Mr. Heaman, had ever been over the work except on some small portion of it. Major Hodgins deposed he had only been on the work in one instance for a few miles up to that time, and he also declares his assistant engineer had only been over a small portion of it. Then Mr. Grant was appointed, and Mr. Grant is an engineer of repute, and not one word has been stated against him, either in his personal or professional capacity. I have no hesitation in saying that the appointment of Mr. Grant is the real cause of all the trouble with Major Hodgins. It became simply a question of unreasoning jealousy on the part of Major Hodgins, and we all know that when the green-eyed monster takes possession of a man he ceases to be a reasonable being. Any one who reads the evidence must come to the conclusion that from the time Mr. Grant was appointed inspecting engineer Major Hodgins saw nothing but trouble in everything done by the engineers or by the commission. It is true that Major Hodgins went to Quebec. I will take the liberty of stating something which appears from the documents, although I do not know that it appears in the printed evidence. However, from a letter produced by the commissioners it appears that away back in 1906 the district engineer at St. John, Mr. Dunn, suggested a meeting of all the district engineers on the work in company with the chief engineer and the commissioners, in order that they might satisfy themselves how each was doing his work and, so far as possible, arrive at a uniform system. That suggestion was discussed, and it was not until the month of June, 1907, they were able to carry out this suggestion. Now, in the month of June of that year, instead of Major Hodgins having been sent to Quebec, as he would lead us to believe, for the purpose of taking these object lessons, every district engineer on the whole line from St. John to Winnipeg was sent to Quebec, the chief engineer went to Quebec and every commissioner went to Quebec, and they met the assistant chief engineer of the Grand Trunk Pacific and all the engineers on the work in District 'B,' there being twenty-five or thirty officials present. We find that from the time this party left Ottawa until they separated at Quebec there never was an hour of the time when Major Hodgins was not finding fault with some one over the appointment of Mr. Grant.

Mr. BARKER. There is not a word of evidence as to that.

Mr. CARVELL. I will not take up hours reading the evidence, but I will make this submission to the House, and the House will take my word.

Mr. BARKER. I have to contradict the hon. gentleman.

Mr. CARVELL. The hon. gentleman has his right to contradict, but I will make no statement which I cannot back up by the evidence, and I will make no statement that my hon. friend (Mr. Barker) can contradict by the evidence. It is in evidence, and the hon. gentleman knows it, that on the boat going to Quebec Mr. Hodgins was grumbling and Mr. Commissioner Reid, in the presence of others, remarked: Well, Mr. Grant is appointed and you cannot help it, or words to that effect. I repeat that the whole cause of Major Hodgins' trouble was jealousy over the appointment of Mr. Grant, and that at every opportunity Major Hodgins was finding fault with the appointment of Mr. Grant. Now, all these engineers met on the ground, and they discussed the question, and they tried to get benefit from the inspection, and I believe every man in the party did get some benefit from it except, possibly, Major Hodgins. Major Hodgins, when he was there, in company with Mr. Doucet, visited a certain cutting, and Major Hodgins swears before the committee that Mr. Doucet told him that cutting was classified 86 per cent solid rock. There was an Italian contractor present and he described this cutting very minutely, and there cannot be any question that it was the same cutting to which Major Hodgins refers. Now, I do not mean to say that Major Hodgins is stating what is not true; but I believe that Major Hodgins' mind was so warped at that time by jealousy that I do not think he was in a position to intelligently understand what was going on. The fact is that no matter what Major Hodgins may have believed, there is no possibility of getting away from the fact that while he himself would have classified that cutting at 40 per cent solid rock, at that very time that particular cutting was being classified only 32 per cent solid rock, and 10 per cent loose rock, and the balance common excavation. That was in the month of June, and there is no possible doubt that for the preceding month of May that particular cutting was classified only 29 per cent solid rock, 3 per cent loose rock and 61 per cent common excavation. It would be the month of May which this gentleman would be discussing because the estimates are not made up until the end of the month and therefore any discussion of classification of any particular material in June would be with reference to May classification. I do not care how honest Major Hodgins may have been in his opinion, I do not care whether he was honest or dishonest, the fact remains he was wrong in his recollection of what happened, wrong in

his statement of what actually happened and wrong in the conclusion which he arrived at; that cut instead of being classified at 86 per cent as he said or 40 per cent as he would have been willing to classify it, was classified at 29 per cent in those two months. Major Hodgins also says that at this time he had a conversation with Mr. Armstrong who was assistant chief engineer of the Grand Trunk Pacific. From the beginning of this work the Grand Trunk Pacific have had engineers to go over the work, they have had plenty of them and no one can say that they are not doing their duty, going over the work day by day in order to see that the commission's engineers are properly carying out the work and doing their classifying. Mr. Armstrong was the assistant chief engineer in the province of Quebec at that time, he was a gentleman who had had very wide experience in railway construction in Canada, who had been in the employ of the Canadian Northern for many years and had had large experience not only in the west but also in the eastern portion of Canada. Major Hodgins says that in a conversation which he had with Mr. Armstrong, at Latugne, or the next day at Quebec, Mr. Armstrong told him they were classifying this work to such an extent that it would cost $2,000,000 more to build this portion of the road than it should cost or would cost if properly classified. I shall give Armstrong's evidence on this later on. Unfortunately, on account of Major Hodgins withdrawing the charges, there are many points which should be cleared up that were not, but it was thought unwise to take up the time to clear up points that could be cleared in another way. However, I may say Mr. Armstrong would, if given a chance, have positively denied this statement and will in another way deny absolutely that he ever made such a charge. Prior to this Mr. Grant had been over the work and had made a report which was any thing but complimentary to Major Hodgins and his assistant chief engineer, Mr. Heaman. Things went on from bad to worse and finally Major Hodgins realized that the work was progressing so slowly that he must do something to hurry things along. Major Hodgins claimed in the letter and the interview that they wanted him to introduce in his work what he calls the Quebec classification, and that if he had introduced the Quebec classification in this work it would have increased the cost to the country. Yet Major Hodgins himself is on record as recommending that a portion of this work be done not by the terms of the contract but by what he calls and what is called by the engineers force account. I shall explain that term. He suggested that all classified material or all material as to the classification of which there was a question, should be paid for not by the terms of the contract but by keeping an account of the actual cost of the work and adding to that 10 per cent. He suggested this because he claimed the contractors could not under the then existing conditions as to the labour market, do the work for the amount they were receiving from the commission and come out of it alive and in order to put them in a position to do the work, he suggested that they should depart from the terms of the contract and do this work by force account, although, according to his own interpretation, this must have meant an increased cost to the country. This suggestion was made to the commission and the commission at once did what reasonable business men would have done, they sent their chief engineer, old as he was, busy as he was, up to the work in order to look it over; and while I have no comments to make on the duties or acts of the chief engineer, because he is an official appointed by the government who is not responsible to the commission, who is practically an autocrat as far as his work is concerned and can do as he has a mind to do, I do say that it was a matter of regret that the chief engineer at this time did not find time to go over the whole work instead of only four miles of it. The facts are that he went over about four miles and made an arrangement that he would come back to Ottawa, submit the question to the commissioners, and immediately wire him to Winnipeg the results of the interview. He came to Ottawa and while I have no knowledge of what took place between him and the commissioners, because there is no record of it, I do know that there was a letter written to the chairman of the commission which to my mind is one of the ablest documents placed before the committee although there are many hundreds of them. That document, I think, reflects infinite credit upon the commission and shows that the government have appointed men who intend to carry out the law and to carry on this work according to the law if it is possible to do so. I wish to refer to that letter. It is found on pages 28 and 29 of the case and is written by the commission through its chairman to Mr. Parent. It is dated August 24, 1907, and was written either the very day or the day after the chief engineer returned from an inspection of the western district. I shall not read the first part of the letter which simply refers to going to district 'F' with Mr. Grant's report and a few things like that, but I shall quote the concluding portions. It reads :

> There is a letter from Mr. Hodgins, dated the 6th instant, addresed to you, which should have been submitted to the board, together with document No. 4, attached, so as to give every available information on the subject. They came to our notice incidentally.

That is, the commissioners evidently are finding fault with the chief engineer because certain documents from Major Hodgins were not placed before them earlier but in-

cidently the commission got hold of them. The letter continues :

It would appear from its contents that after certain items had been classified a change was deemed necessary and other classifications made, which it would seem received his approval. Such a state of affairs shows that there has surely been negligence somewhere in the management of this district, and, from a consideration of these facts, the natural inference would be that the district engineer is not competent to handle properly such work as he is now entrusted with. Under the circumstances, it is the duty of the chief engineer to take whatever means are required to put a stop to conditions which have already existed too long. Among the points of first importance requiring your attention is to find and suggest a way to the different district engineers and others to ensure, as much as possible, a uniform classification according to the plans and specifications on which the contracts are made with the contractors. It is essential that there be no misunderstanding on the subject. In this connection I might point out that the commission never authorized any one, nor can it do so, to disregard in any respect the letter of our contracts and specifications, which must be the only guide to go by, and that for no reason can anything be paid to the contractors or their sub-contractors which is not provided for in the same. At the same time, it must be borne in mind that contractors are entitled to a fair and reasonable classification, based as already stated. We cannot deprive them of what is rightfully their own under the contracts and specifications.

It was mentioned by you that Major Hodgins had stated that he had changed the classifications of certain items of work in order to meet our wishes. In that case, he should be informed at once that no such changes should be effected, as any instructions to that effect must come direct from you; and, moreover, inasmuch as the commissioners never instructed him yet in that sense, nor did they express the desire to Mr. Hodgins to make any such changes interfering in any way with his right to make classifications just and reasonable, based upon the specifications.

Furthermore, in order to avoid the risk of any difficulty later on, it should be made a rule as far as possible that the classifications receive the approval of the engineer representing the Grand Trunk Pacific Railway at the various points where there is work going on.

In conclusion, as documents explaining changes made in certain estimates of district 'F' were added to the same after they had gone through and without our seeing them, I must decline the responsibility of certifying to the said estimates before being furnished with a full explanation of the matter.

Awaiting a reply at your earliest convenience.

Yours truly,

(Sgd.) S. N. PARENT,
Chairman.

I submit that if any evidence were required to prove that the commission were doing as good work as possible, you have all you want in that letter. When the chief engineer came down with the suggestion to depart from the conditions of the contract, the moment the suggestion was made we have a letter here—the ablest document produced before the commission—to show that the commission were anxious to have the work done according to the contract and as honestly as possible. Notification was sent Major Hodgins that the commission would not agree to his proposal and he was compelled to submit, but he sent a letter arguing that if the commissioners would allow him to have his way, that would please the contractors, it would amount to very little, and it would be better for the country in the end. Major Hodgins may have been right on the question of expediency, but under the terms of the contract the commissioners could not consent. And because of his proposition to disregard the contract and specifications, Major Hodgins was notified that his services were no longer required.

I have tried to give a summary of the transaction from the time the trouble arose early in June down to the time when Major Hodgins was dismissed from the service. In one of the interviews which Major Hodgins gave the 'Colonist,' there are a few specific instances of over-classification, and these were heralded all over the country in every Conservative newspaper as showing the manner in which the engineers were evading the law, and they were made the foundation for the statement that the commission were paying padded accounts. Now let me point out how this term 'padded accounts,' which has been so much exploited by these papers, came to be used and all the facts in that connection. There were a few instances in district 'F' where there was a quarrel, you might say, between the engineers and the contractors. The engineers had classified these few items as one thing, we will say, as loose rock or common excavation. The contractors said that in these instances the material should have been classified higher—as loose rock instead of common excavation and as solid rock instead of loose rock. These items altogether, will you believe me, only amount to $6,400. All these charges which we have been hearing all over Canada are reduced to the fact that changes were made amounting to between $6,000 and $7,000. These changes were made in the July estimates, they were made in the division over which was placed Mr. McIntosh, and when Mr. McIntosh sent in his July estimates he informed Major Hodgins that these changes had been made. There is nothing concealed about it at all. He reported to Mr. Hodgins in every instance that he had set up these items from common excavation to loose rock or from loose rock to solid rock. He gives the cutting, the station, the amount and everything. That will be found at page 121 of the evidence. I am taking the trouble

to refer to this particularly, because, while it is a very small matter in itself it has given food for a good deal of exaggerated political gossip all over Canada. The letter accompanying that changed estimate from Mr. McIntosh to Major Hodgins will be found at page 132 of the evidence :

Wabigoon Falls, July 27, 1907.

Major A. E. Hodgins,
District Engineer, N.T.C. Ry.,
Kenora, Ontario.

Dear Sir,—Inclosed herewith please find estimates for the month of July. I have made some changes in the classification, changing certain amounts which were returned as loose rock into solid, and common excavation into loose rock on residencies 25 and 26. A statement is attached to the estimates showing the amounts transferred. The amount transferred on residency 26 is 2,300 cubic yards, from loose rock to solid, station 4,240.

Then, Sir, to make it even worse from the Conservative standpoint, Major Hodgins, by a letter dated August 6, reported the same thing to Mr. Lumsden. Therefore, not only Major Hodgins but Mr. Lumsden knew from the beginning that these little changes were made amounting to between $6,000 and $7,000.

I come now to what I consider the next important point in these letters and that is that Major Hodgins concluded that if the Quebec classification, as he chose to call it, were introduced into district 'F' it would mean that it would increase the cost of the work about $4,000,000. It seems that Mr. McArthur, some month or two before this, in an interview published in the Toronto 'World,' stated that the cost of district 'F,' instead of being between $11,000,000 and $12,000,000, at which Major Hodgins had estimated it, probably would be $16,000,000. Major Hodgins and the Conservative press at once came to the conclusion and heralded it all over the country that because they had introduced the Quebec classification the price had jumped from $11,000,0000 to $16,000,000. I want to give some figures upon this question which, I think, pretty thoroughly answer that assertion. Mr. Poulin, the present district engineer, made a detailed statement of the cost of this work immediately after taking charge in September or October, 1907. He stated that he found that there had been about $6,000,000 of the cost of this part of the road actually omitted in the estimate made by Major Hodgins and which has been put forth to the world as being the true cost of this work. Major Hodgins told us his first estimate of cost was between $12,000,000 and $13,000,000, but that on account of changes in the plan and of revising his estimate by going over the work as he ought to—and I give him full credit for doing so, and on account of his good engineering he had reduced the cost down to between $11,000,000 and $12,000,000. We will put it at $12,000,000. I am going to read to the House the actual items which Major Hodgins had omitted in making his calculations of from $12,000,000 to $13,000,000. These items are as follows :

Right of Way..	$175,000
Ties....	672,798
Switch ties..	27,787
Tunnels..	189,750
Drainage tunnels....	16,700
Steel in concrete..	3,708
Steel bridges....	160,000
Rails..	1,336,608

Mr. BARKER. None of these items were in Mr. McArthur's contract.

Mr. CARVELL. I am aware of that and I am aware that these items are included in the work that Mr. McArthur is talking about. He is not talking about his own work.

Mr. BARKER. Yes he is.

Mr. CARVELL. I know this is the thing that pinches my hon. friend, but it is a fact just the same.

Angle bars..	106,172
Bolts..	22,776
Water stations..	103,500
Extra work..	76,500
Frogs and switches...	40,500
Track spikes..	58,820

Then, there is another thing; in all rock cuttings they have to go one foot below the grade in order to give a chance to place the ballast under the sleepers. That one foot below grade amounts to $495,000. Extra width for sidings not estimated amounts to $850,000. Then these figures are only with respect to the actual cuts as figured out from the cross-sections on the plans. My hon. friend referred to the question of slopes. Any man who knows anything about rock work of any kind knows that there is no man who can take out a cut for a railway or for anything in the world and make the sides perfectly smooth as they will be figured out on paper. There must be a certain amount allowed for jagged edges. There must be certain places where you go in further than you ought to go. That is called the overbreak. I am told that this would increase the amount of the cutting by between 20 and 25 per cent. I am told that on the Canadian Pacific Railway work which has been completed between Toronto and North Bay in many cases it exceeds 25 per cent. But, taking it at 20 per cent it amounts to $1,857,080. If you add these items together you find a total amount, not included in Major Hodgins estimate, of $6,192,699.

Mr. LENNOX. Good !

Mr. CARVELL. My hon. friend did not refer to this.

Mr. LENNOX. No.

Mr. CARVELL. No, he would not. The newspapers of hon. gentlemen opposite would not refer to it and my hon. friend and his friends would try to make the people believe that this work is going to cost $16,000,000 or $17,000,000 because of the increased classification. They are not fair enough to admit that this is not the case and that the reason that it is going to cost more than Major Hodgins' estimate is simply because unfortunately he had not included in his estimate certain items which he should have included. I have another statement here which will bear out my contention. When Major Hodgins made his estimates, of course, he made them by divisions. Now one division, No. 9, is practically completed, and therefore I am able to give the House some actual figures to show whether Major Hodgins was correct in his estimate or not. He estimated that in that division there would be removed 132,067 cubic yards of solid rock and 681,752 cubic yards of common excavation, and that there would be no loose rock whatever. He left the works in October, and we have the figures up to 30th September, which was his last estimate. Up to that date there had been actually removed 126,224 cubic yards of solid rock or about 4,000 more than he had estimated altogether. Up to April 30, 1908, there had been removed 180,948 cubic yards, and it will take 4,000 more to complete the work. Therefore, instead of the proper estimate being 132,000 cubic yards of solid rock, it should have been 185,000. And this is not guesswork ; the work has been completed and measured, and the returns have been sent in to the commission. As I said, Major Hodgins estimated that there would be no loose rock. But the loose rock excavated up to April 30 amounted to 20,975 cubic yards. His estimate of the common excavation was 681,752 cubic yards. When he left, the actual quantity was 796,206 cubic yards, or a little over 100,000 cubic yards more than he estimated altogether. Up to April 30, the common excavation removed amounted to 899,040 cubic yards. When Mr. Poulin went on the work, as I said, he made a most careful estimate of what it would cost to complete. His estimate was $17,534,175. To show you how correct his estimate was, I say that he estimated that in section 9 it would be necessary to remove 190,230 cubic yards of solid rock,—the actual quantity was 185,000. He estimated 20,332 yards of loose rock,—the actual quantity was 20,975. He estimated 970,000 cubic yards of common excavation—there was actually 899,040 yards. Therefore, the figures are practically the same. This is, to my mind, the best evidence of the value of Mr. Poulin's estimate of the cost of this work. Now, if you take Major Hodgins' revised estimate of $12,000,000 and add the $6,000,000 of which I have spoken, you have $18,000,000 as the actual cost of the work, whereas Mr. Poulin's estimate was $17,534,000—only half a million dollars between them. This, I submit, is why the work is costing more than Major Hodgins estimated—it is because they are removing more material and because in their estimate they include everything to make a completed railroad fit to run trains upon. Think of estimating the cost of a railroad without rails and ties. When you take everything into account, you find that the estimate is about $17,000,000, and that without changing the mode of classification or giving any contractor a dollar more for the work than he is entitled to. I think that in the face of this surely my hon. friend should have been fair enough to discuss this side of the question. He should have told the country and his political friends to whom he will send copies of his remarks that Major Hodgins was wrong in his estimate, that the 'Quebec classification' was not introduced into district 'F' because there was no such thing as 'Quebec classification.' I hope the people to whom the hon. gentleman is presenting his remarks will find out the facts. And I think they will. For, as I have said, if there ever was an issue dead and buried it is this Hodgins question. However, now that the hon. gentleman has seen fit to exhume it, we should have the facts.

Now, I come to the next question, on which the hon. gentleman spent an hour and a half, the question of classification. I am compelled to discuss this question ; not that I think it should enter into our consideration, not that I think there is anything wrong ; but my hon. friends have been driven from the main question they have been compelled to admit—by silence if in no other way—that Major Hodgins was not sent to Quebec for the purpose of taking object lessons in classification, that there was nothing wrong with the classification in Quebec, that there was no attempt to introduce what they call the 'Quebec classification' in district 'F' and that Major Hodgins was not dismissed because he would not do something contrary to the law that the commissioners wanted him to. They are compelled to admit all this, and they are driven to the only thing that any person could bring forward, and that is to say : Oh, the Grand Trunk Pacific engineers have stated that you over-classified this work. For that reason, it is said, we should have brought these engineers before us; we should have constituted ourselves a court of engineers to make a pronouncement as to whether the classification was according to specifications or not. The hon. gentleman has read a letter of 7th October from Mr. H. A. Woods, assistant chief engineer of the Grand Trunk Pacific. I am glad he has done this ; for it has the effect of pointing out to the people of Canada the fact that the Grand Trunk Pacific Company are doing everything in their power—I think I can al-

most go so far as to say everything in their power, whether fair or unfair—to keep down the cost of this work. If the people of this country had suspicions that it would cost more than it should, the conduct of the Grand Trunk Pacific engineers should dispel all doubt. Hon. members of this House can go home perfectly satisfied that, whatever scandal may have arisen in Canada, there is no scandal over the construction of the Grand Trunk Pacific Railway. Mr. Woods sends a letter to the chief engineer on October 7, 1907, which was read by my hon. friend from Simcoe in full. There is also another letter of April 21, which my hon. friend referred to but did not read in full, which will be found at page 407 of the evidence. But before I take that up, I want to give the statement made by Mr. Armstrong. I said some time ago that Mr. Armstrong was assistant district engineer for the Grand Trunk Pacific, whose duty it was to go over the work in district 'B' and report to his chief what he found, and, if he found anything to his mind contrary to the contract, to say so. He was the man who did the reporting, the man who made the reports of the specific places where there was over-classification. We heard a great deal this forenoon of the amount of this over-classification. One would think from the remarks of my hon. friend from South Simcoe that there must have been millions of dollars involved in this question. I am satisfied that the Conservative newspapers to-morrow will herald all over Canada that Mr. H. A. Woods had called the attention of the chief engineer of the Grand Trunk Pacific to the facts that millions of dollars of improper classification had taken place on this work.

Mr. LENNOX. I want to call your attention to the fact, Mr. Speaker, that the inquiry is not completed, that Major Hodgins' counsel retired on the understanding that nothing further was to be done, and the question came before the committee——

Mr. CARVELL. I have no objection to my hon. friend asking a question, but I object to his making a speech.

Mr. LENNOX. I am only asking it by permission of the hon. gentleman. Was it not ruled in the committee that we would not hear Mr. Armstrong as a witness owing to the condition in which the case stood? Is it fair now to read that statement

Mr. CARVELL. It was not so ruled—my hon. friend wants an answer.

Mr. LENNOX. Well, I say it was.

Mr. BARKER. That statement never was before the committee.

Mr. CARVELL. I admit it was not before the committee. But this is a statement of Mr. Armstrong under oath, and in this statement Mr. Armstrong says that all the work in dispute up to the 7th day of October did not amount to $50,000. My hon. friend does not want this read; I will not read it, but I will state here again that Mr. Armstrong said under oath that up to the 7th of October there was not $50,000 involved in the whole question.

Mr. LENNOX. I have no objection to the hon. gentleman reading the statement if he wishes.

Mr. CARVELL. (reading):

Dominion of Canada, Province of Ontario, County of Carleton, to wit:

I, John Armstrong, of the city of Quebec, in the province of Quebec, civil engineer, do solemnly declare:

1o. That if I had been permitted to testify as a witness before the Special Parliamentary Committee investigating Major Hodgins' charges I would have given the following evidence:

(a) That I was district engineer in district 'B' (Quebec) for the Grand Trunk Pacific Railway Company from August 1906 to April 1908;

(b) That I never told Major Hodgins or any other person that the over classification in the Quebec district would amount to $2,000,000, and that I informed Major Hodgins before he submitted his synopsis of charges to the special committee that I would not corroborate his statement in this regard;

(c) That when Major Hodgins visited the work in the Quebec district in June, 1907, there had been no objection to classification on the part of the Grand Trunk Pacific Railway Company, and in my opinion there was no ground at that time to justify any objection to classification;

(d) That in my opinion there were not more than $50,000 involved in the classification objected to by Mr. H. A. Woods in his letter to Mr. Hugh L. Lumsden, dated October 7, 1907, and referring to the work inspected by Mr. Woods and myself a short time prior to the writing of the said letter;

2o. That after receiving a copy of Chief Engineer Lumsden's interpretation of the specifications I wrote to my superior, Mr. Woods, stating that according to Mr. Lumsden's interpretation the classification in district 'B' could not be objected to and in some cases might be increased. This condition prevailed up to the time I left the work in April, 1908.

And I make this solemn declaration conscientiously believing it to be true and knowing that it is of the same force and effect as if made under oath and by virtue of the Canada Evidence Act.

Declared before me at the city of Ottawa, in the County of Carleton, this 19th day of June, A.D., 1908.

(Sgd.) JOHN ARMSTRONG.

(Sgd.) Charles Murphy,
A Notary Public.

Now, Mr. Speaker, he states that had he known of Mr. Lumsden's interpretation at that time, in his opinion there would have been no question about classification, and in many instances the classification would be increased. I want to submit what

Mr. Woods said about the classification and about Mr. Lumsden's interpretation of it. His letter is dated the 20th of February, 1908.

Mr. BARKER. Is that paper before the committee?

Mr. CARVELL. That letter was before the committee.

I beg to acknowledge receipt of your favour of the 17th instant, giving your interpretation of clauses 34, 35 and 36 of our specifications, with blue prints and explanations of same, also copy of your instructions to your engineers.

We are quite satisfied with your interpretation of the specifications and with your instructions, which are explicit.

Mr. LENNOX. I read that this morning.

Mr. CARVELL. I do not think my hon. friend did ; however, I have read it again. Now, I say in the first place, that Mr. Woods admits that Mr. Lumsden's interpretation of the specifications is correct, that is, his interpretation of the 10th of January, to which I will refer later on. In the second place, Mr. Armstrong says that had he known of Mr. Lumsden's interpretation there would not have been anything to discuss in regard to the classification in district 'B,' and in some cases it should have been higher.

Mr. BARKER. Does that letter refer to the interpretation of the specification after it was altered by the commissioners ?

Mr. CARVELL. I object to the hon. gentleman, under the guise of asking questions, making that statement. I tell him that the interpretation never was altered by the commissioners, and I am surprised that he stands up in this House and says so.

Mr. BARKER. The hon. gentleman will find a letter from Mr. Ryan, secretary of the commissioners, informing Mr. Lumsden that his modified interpretation had been approved.

Mr. CARVELL. But did the commissioners make the interpretation? My hon. friend from South Simcoe (Mr. Lennox) was unfair enough to refer to that, he said that the commission made this interpretation. My hon. friends know they did not.

Mr. LENNOX. I did not say anything of the kind ; I read the letter.

Mr. CARVELL. My hon. friend read the letter, and the only inference to be drawn from his statements was that the commission made this interpretation.

Mr. LENNOX. I did not say so.

Mr. CARVELL. My hon. friend seeks to get away from it, and I do not blame him ; I would if I were in his place. I was surprised this morning when he made the statement, and I thought that we would see him try to crawl away from it before this debate was through. All the commissioners did was to accept the interpretation put upon these clauses by the chief engineer, and under the contract he had a right to make an interpretation for the commission. Who, under the statute and under the contract, is the man who decides all questions of classification? Is it not the chief engineer? Of course it is, and my hon. friends know it. My hon. friends know that under this law and under this contract, no matter what interpretation of the chief engineer decides to put upon any clause of this contract and of the specifications, the commission are bound by it. Therefore, when the commission state that they accepted it, they did what the law compelled them to do, and my hon. friends know it.

Now, to go on. After the receipt of this letter of the 7th of October, the question naturally arose among the commissioners, the chief engineer, the assistant chief engineer, the Grand Trunk Pacific engineers, the contractors and everybody concerned as to what was the proper interpretation of this clause for classification. I suppose it would be considered elementary if I were to tell this House that railroads are not built by a lump sum contract. Railroads are built by a contractor agreeing to do certain work for certain prices. In these contracts there are something like a hundred different items on which a price is placed. The contractor agrees that he will furnish lumber for so much a thousand, no matter how much it takes ; that he will furnish concrete for so much a yard, no matter how much it requires ; that he will remove solid rock for so much a yard and loose rock and common excavation for so much a yard. That is the way in which railway contracts are drawn. I am going to refer to three items, solid rock, loose rock and common excavation, because they form the greater part of the value of the work done. When this letter of the 7th of October was received, the question naturally came up : What is the true interpretation of the specifications laid down by the commission under which the contract was signed? Remember, the contractors agreed to build this road at so much per cubic yard, and a cubic yard of solid rock meant just what the specification says it meant. Before you could tell what this work ought to cost you had to ascertain what it took to excavate a yard of solid rock or loose rock or common excavation. Everything in these specifications is incorporated in the contract and the definition of 'solid rock' in the contract is as follows :

Solid rock excavation will include all rock found in ledges or masses of more than one

cubic yard, which in the judgment of the engineer may be best removed by blasting.

I want to call the attention of hon. gentlemen to the fact that in the punctuation of that, the comma is placed after the word 'yard.' Section 35 says:

Loose rock.

35. All large stones and boulders measuring more than one cubic foot and less than one cubic yard, and all loose rock whether in situ or otherwise, that may be removed by hand, pick or bar, all cemented gravel, indurated clay and other materials that cannot, in the judgment of the engineer, be ploughed with a 10-inch grading plough, behind a team of six good horses, properly handled; and without the necessity of blasting, although blasting may be occasionally resorted to, shall be classified as loose rock.

Hon. gentlemen opposite say there is no trouble in arriving at what solid rock is, and certainly if in this contract it meant absolute rock in ledges there would be no question about it. But, it does not say that solid rock only means what is found in ledges and Mr. Lumsden's first interpretation was that solid rock only included rock actually found in ledges or in boulders of one cubic yard or upwards. Mr. Lumsden then started out to see what other people thought about it, although he had the absolute right to say what was the proper interpretation of these terms. I think any one who reads the contract, engineer or layman, cannot help but come to the conclusion that solid rock means a little more than rock in ledges or boulders measuring one cubic yard or upwards, because the contract uses the expression: Masses of more than one cubic yard. If it would occur in the shape of a mass greater than one cubic yard which in the judgment of the engineers could best be removed by blasting then you would have solid rock although you might have a mixture of all sorts of material. Mr. Lumsden started out to find what other people thought about it and he wrote to all his district engineers for their interpretation of this clause in the specification. The first letter he received in reply was from Mr. Doucet, district engineer, and it is as follows:

Quebec, October 26, 1907.

Hugh D. Lumsden, Esq.,
Chief Engineer, Ottawa.

Dear Sir,—I have already had occasion to state to you verbally the interpretation the engineers in district 'B' have placed on the classification of solid and loose rock, and in accordance with which the progress estimates have been returned since the inception of the work.

So that our viws of this interpretation may be put before you concisely and clearly, I beg now to state: 1. That we have classified as solid rock all ledge work, all boulders measuring more than one cubic yard, all masses of small boulders and cemented material which, in our judgment, were best removed by the continual use of explosives. 2. We have classified as loose rock all detachable boulders of more than one cubic foot and less than one cubic yard, and all material which, in our judgment, could not possibly be ploughed in the practical sense of the term.

I have never had occasion to force my views on my assistants as all, to a man, have taken the same interpretation of the classification as I have. We have all used the precautions possible to arrive at a fair classification of materials, and our returns of explosives certainly show that the solid rock has not been over-classified. I have repeatedly conferred with my assistant district engineers on this matter, and they in their turn have gone over the work with the division and resident engineers and classified according to their convictions as to the interpretation of the classification. I attach herewith reports from my assistants on this important question.

Yours very truly,
(Sgd.) A. E. DOUCET,
District Engineer.

Then there is another letter from H. F. Huestis, assistant district engineer, another from C. L. Hervey, assistant district engineer, another from Benjamin Bourgeois, divisional engineer, another from Allan R. Matthews, resident engineer, all to the same effect as Mr. Doucet's letter. Then, we have the legal opinion of some of the most eminent lawyers in Canada. The question was put to these legal gentlemen how they would interpret these words in the specification, and we have printed in the evidence, first, a joint opinion from George F. Shepley and E. Lafleur, then the opinion of Mr. C. H. Ritchie, of Toronto, then the opinion of Sir Alexander Lacoste, then the opinion of Donald Macmaster, and also the opinion of Wallace Nesbitt. I do not think my hon. friend (Mr. Lennox) would seriously dispute the legal opinion put forth by that array of counsel. I think we surely can put the opinions of these gentleman forward as at least equal to the opinion of any similar number of men in Canada, and they all agree in saying that 'solid rock' does not mean what Mr. Lumsden said it meant. Thus we have every district engineer, every divisional engineer, every resident engineer, and we have the opinion of these legal gentlemen to say that 'solid rock' means rock in ledges, rock in masses and boulders of one cubic yard or upwards, or any conglomeration or mass of rock no matter how small it might be so long as it is in masses and in the opinion of the engineer could best be removed by blasting. These opinions were all submitted to Mr. Lumsden and Mr. Lumsden then submitted them to the Deputy Minister of Justice. I shall read what the Deputy Minister of Justice says. My hon. friend, after a good deal of barter, this morning read a portion of the letter. I was surprised that he did not read it with a little better grace because he might as well have admitted the facts as I would assume he would wish the people reading his re-

marks to get the whole story. After Mr. Lumsden received these opinions he made a second declaration of how he construed these clauses. The second declaration was broader than the first. He said that he would construe solid rock to be rock found in ledges or masses as specified, first, rock, second in ledge, conglomerate, boulders or ledge rock displaced in pieces exceeding one cubic yard in size, rock assembled, the individual pieces of such assembled rock exceeding one foot in size, also shale rock.

Then he said he construed solid rock to include rock in ledges, boulders of one yard and upwards, masses joined together, provided the individual pieces composing those masses were of one cubic foot up to one yard in size. That was handed to the Deputy Minister of Justice, and the Deputy Minister of Justice said:

I do not understand upon what principal the chief engineer limits the size to pieces exceeding one cubic foot. The specification speaks of rock found in ledges or masses of more than one cubic yard which in the judgment of the engineer may be best removed by blasting. If 'rock assembled' may be regarded as a mass of rock, and if it may be best removed by blasting, I do not see why under the specification it is material whether the individual pieces exceed or are less than one cubic foot in size, and if 'rock assembled' is not regarded as a mass, the minimum limit of size which can be classified as solid rock exceeds one cubic yard.

After receiving this letter Mr. Lumsden again changes his opinion and sends out a third interpretation of this clause in the specification, and the third is practically the same as the second, excepting that he tells his engineers if they find rock in masses joined together, no matter what the sizes of the individual pieces may be, if, in the opinion of the engineers, it may be best to remove it by blasting, he classifies it as solid rock.

This brings us down to the 10th of January, when that is finally decided as being the proper construction of these clauses in the contract, and from that forward every engineer was told to classify according to that interpretation. He even sent a blue print picturing out how the different things could be formed together in order to make solid rock, and from that down all this work has been classified according to that interpretation.

I want to go back just for a moment to what took place as to the amounts. We have in evidence, on page 415, a letter by Mr. Doucet written to Mr. Parent, discussing the question of the over-classification alleged by Mr. Wood in his letter of October 7th, and he says that he and Mr. Armstrong went over the matter and they found that not more than 14 per cent of the classification was in question at all, and they figured out that if this 14 per cent had been classified entirely as the Grand Trunk Pacific claims it should have been it would amount to a difference of only $25,982. But later, at page 417, he says:

But on going over Mr. Armstrong's figures with him yesterday we found that several errors had crept into his calculations, so that the difference in the percentage is not 14 per cent but only 3 per cent.

And then he figures out that taking only 3 per cent, the only difference in dispute between July and August, would be $3,457, and it is upon this statement of affairs that these complaints of the Grand Trunk Pacific were made to the commission.

I wish now to direct your attention to District 'F.' We must remember that there was trouble all the time in District 'F' between the district engineer, Major Hodgins, and his assistant Mr. Heaman, and the other engineers. I think it necessary to point this out particularly in order that there may be no question about it, because I consider that this question of trouble between the assistant district engineer, Heaman, and the other engineers is a very important element in this discussion. It is stated here that Mr. Grant went out there as inspecting engineer and made a report on the work which was not very complimentary to Major Hodgins. Major Hodgins was brought down to Ottawa on the last day of July, 1907, and he made a counter report, or reply, to Mr. Grant's report. In this reply to Mr. Grant, which will be found at page 25 of the evidence, we find:

Mr. Heaman spent a good deal of his time on the work, but not as much as he wished because some of the divisional engineers did not consider that he should have got the appointment. I visited three divisions myself. I am perfectly satisfied with Mr. Heaman, and have every confidence in his ability and judgment, and, if I find there is still any friction, I must ask for authority to discharge any division engineer who is inclined to make trouble.

I do not know what better evidence we could want of friction and difficulty between Mr. Heaman and those under him than we have in this report of Major Hodgins in reply to Mr. Grant's report on his work. At the time Major Hodgins was dismissed from the service Heaman was sent to another portion of the work further inland. In a few weeks he resigned and accepted a position with the Grand Trunk Pacific, and while I am not here to find fault with the Grand Trunk Pacific, I think if we want another evidence of the fact that the Grand Trunk Pacific is not in collusion with the commission in order to make this work cost more than it ought to, we have this absolute evidence in their conduct with regard to Heaman. Here is a man who had quarrelled with all the en-

gineers under him, who had become so obnoxious that his chief, Major Hodgins, had reported to the chief engineer that if these divisional engineers did not stop finding fault with him he would have to ask authority to dismiss them, yet within one month after Major Hodgins left this work this Mr. Heaman was taken by the Grand Trunk Pacific and appointed to be their inspecting engineer over the very engineers with whom he had had the difficulty. If that is not an unfriendly act, I do not know what would constitute one; and you can depend upon it, that from that out it was Heaman's business to make things just as uncomfortable for the engineers as he could, and I think the future developments have shown that he performed his work to the very letter, because we find that he not only made report after report finding fault with the classification in that district—and it is on these reports that Mr. Wood's letter of April 21 was written—but that he betrayed the trust reposed in him and was in constant communication with Hodgins. Although he was sworn to secrecy, he was the man who was furnishing the evidence to Major Hodgins and on whose statements Major Hodgins was able to make these charges. I do not know Mr. Heaman, never saw him, but if there is a man who has appeared to disadvantage in this matter, it is Mr. Heaman. And if the Grand Trunk Pacific want to be fair, if they want to carry out the work according to the spirit and as business men should, the only fair thing they can do is to remove Mr Heaman to another sphere of operation. If they want him as district engineer, let them send him to some district where he has not had quarrels with all the engineers working in the employ of the commission. I do not know that I need say anything further about the question of classification.

After the investigation had proceeded a certain distance, Major Hodgins came to the conclusion that he was wrong, and I give him credit for his honesty. He saw that he was in error about the classifications in the province of Quebec, and as these were the basis of the whole charge, he admitted that he was wrong. When he found that his premises were wrong, when he found that the increased cost was not due to wrong classification but was due to the conditions I have mentioned, of his own free will he withdrew his charges. My hon. friend from South Simcoe has contended that these admissions were drawn out of Major Hodgins by great ingenuity. No doubt the questioning of my hon. friend from Pictou (Mr. Macdonald) was very searching, but the withdrawal by Major Hodgins of his charges was the only thing left for him to do under the circumstances. At any rate he withdrew all charges. He said that he had not applied to the First Minister and had not been refused an investigation. He said that neither Mr. Young nor any other member of the commission had tried to influence him improperly. He admitted that he was wrong. If you want confirmation of my statement, you will find it in the evidence. He unqualifiedly withdrew all charges of improper conduct on the part of the commissioners or the government and admitted that the only question left at issue was the purely scientific one of classification. Now I have read from the reports to show the difficulty of arriving at an agreement on this question of classification—so much depends on the judgment of the individual engineer, whose duty it may be to go on the work and determine whether a certain cut can be classified 50 per cent or 100 per cent solid rock. You can take two engineers equally honest and efficient, put them on a work, and in nine cases out of ten you will find them differing in opinion as to the exact classification. There never was a railway built in which this difficulty of determining the classification has not arisen. It is an all important question in railway construction. The commission knew it and so did parliament; and when the contract was drawn in 1903, it provided for the appointment of a third arbitrator in case of any differences between the engineers. My hon. friend has tried to argue that section 7 of the contract of 1903 does not provide for arbitration in case differences may arise between the commission and the Grand Trunk Pacific.

Mr. LENNOX. As to a matter of this kind.

Mr. CARVELL. I am going to read that clause of the contract. It is as follows:

> In order to insure, for the protection of the company as lessees of the eastern division of the said railway, the economical construction thereof in such a manner that it can be operated to the best advantage, it is hereby agreed that the specifications for the construction of the eastern division shall be submitted to, and approved of by the company before the commencement of the work, and that the said work shall be done according to the said specifications and shall be subject to the joint supervision, inspection and acceptance of the chief engineer appointed by the government and the chief engineer of the company, and, in the event of differences as to the specifications, or in case the said engineers shall differ as to the work, the questions in dispute shall be determined by the said engineers and a third arbitrator, to be chosen in the manner provided in paragraph four of this agreement.

That provides that the chief justice shall appoint the third arbitrator.

The solicitor of the commission sent a letter to the board in which he expressed doubt as to whether this clause of the contract provided for arbitration in case of a disagreement between the engineers. Well, while I have great regard for the legal attainments of that gentleman, having known

him many years, I do not see how any one can come to that conclusion. An arbitration is stipulated in case of any difference regarding the supervision, inspection and acceptance of the works. If the question of classification does not come within those three expressions, then I do not know what they mean; and I do not see how you could better include classification unless you use the word itelf. But lest there should be any question about that, the Grand Trunk Pacific and the commission got together and by agreement dated January 10, 1908, they settled it. That memo. of agreement, signed by the different parties, is as follows:

Monthly estimates for contractors shall be submitted promptly from time to time by the chief engineer of the commissioners to the company's assistant chief engineer at Montreal for approval. If he has any objection to such estimate he shall promptly file the same with the chief engineer of the commissioners, and any objection from time to time filed shall thereupon be considered, and, if possible, determined by the said engineers, and in case of their failure to agree, may then or at any time before or at the time of final payment, at the option of either party, be considered and determined by arbitration as provided in the agreement of July 29, 1903, but in no case shall the payment of monthly estimates be delayed except with the consent of the commissioners.

In case the chief engineer of the commissioners and the assistant chief engineer of the company disagree as to the final payment, the same shall be withheld until the matter is determined by arbitration, as provided in the said agreement of July 29, 1903.

In the face of that agreement I would like to know how my hon. friend can have the assurance to say that there is no provision for an arbitration in case the parties do not agree on the question of classification. I would not be so much surprised at a layman taking that view, but I am surprised that a man who, in his heart, believes he is going to be Minister of Justice some day, should make such a statement. I do not think that the hon. member for Hamilton (Mr. Barker) who we know is a good lawyer, will take the ridiculous position of saying that there is no reference to this question of arbitration.

Mr. BARKER. Does the hon. gentleman state as a fact that any such agreement is in existence?

Mr. CARVELL. I do most positively.

Mr. BARKER. Where is the evidence?

Mr. CARVELL. At page 439 of the printed evidence.

Mr. BARKER. That is contrary——

Mr. CARVELL. The hon. gentleman may make his speech later. I have given him the answer; he can accept it or not as he pleases. But I would ask him if he thinks that the commissioners of the Grand Trunk Pacific are such absolute scoundrels that they will bring forward a document bearing the initials of Mr. Hays and Mr. Parent and also of their engineers, and put it forward as an agreement solemnly entered into, if no agreement was ever entered into? I do not need to argue that; I do not think my hon. friend will insult his own intelligence and that of the members of this House by making a statement of that kind. I am not surprised that the only way he dare try to get it in is by asking a question.

Mr. BARKER. I do not think that any gentleman would pretend that that was an agreement.

Mr. CARVELL. If it comes to splitting hairs to that extent, I will leave it to hon. gentleman opposite. There is the evidence of the agreement as brought before the committee.

Mr. LANCASTER. Who signed it?

Mr. CARVELL. I have told you three times. I do not consider the hon. member for Lincoln (Mr. Lancaster) in this at all. He was not on the committee; I do not suppose he has read a word of the evidence; he could not discuss the matter intelligently, even if he wanted to; so it would be only a waste of time to argue the matter with him.

Mr. LANCASTER. The people of the country may be more intelligent than the member for Lincoln, and they would like to know who signed the agreement.

Mr. CARVELL. I have told you three times.

Mr. LANCASTER. It has not been signed by any officer of the Grand Trunk Pacific Railway.

Mr. CARVELL. The hon. gentleman will quiet down after a while. I was just going to say when my hon. friend got excited, that, in view of these facts and of the fact that Major Hodgins had unqualifiedly withdrawn all charges of improper conduct, what was there for this committee to do but to close this investigation unless these hon. gentlemen opposite wished to give more evidence on the ground of fraud or improper conduct on the part of the commissioners or their engineer or any person in their employ? My hon. friend (Mr. Lennox) made what I thought was a very unfair statement when he alleged that the commissioners had forced their interpretation of the clauses of this contract upon the chief engineer. I want to tell the hon. gentleman that under the ruling which I gave in that committee—and I am going to refer him to it particularly—he had all the chance in the world to bring Mr. Lumsden before that committee, after Major Hodgins withdrew his charges, to prove whether the commissioners had forced their opinions upon him

or not; he had every chance to bring any man in the Dominion of Canada who could say that there was an act of fraud of wrong-doing on the part of the commissioners, or their engineers or servants. But, Mr. Speaker, with that staring them in the face, neither the hon. member for South Simcoe, or the hon. member for East Hamilton (Mr. Barker) had the assurance to ask one solitary witness to be brought before them when they state that the committee refused to hear more evidence, they are stating what has no foundation in fact. And, when my hon. friend (Mr. Lennox) this morning was reading what I had said, and what my hon. friend from Pictou (Mr. Macdonald) had said, at one meeting of the committee, in order to try to prove that at a certain time we wanted to investigate everything, and that, because we wanted to investigate everything, we should have investigated this question of classification, I say he did not treat the subject fairly. Because he did not state what I said to the committee at page 62 of the evidence. And this was all the more unfair because the matter was specifically called to his attention when he made his argument before the committee. I want to put this on 'Hansard': At the second meeting of the committee this question came up as to what was to be included in Major Hodgins' specific charges, and my hon. friend read one or two pages out of the evidence to show that my hon. friend from Pictou and myself at that time were anxious to have everything put in. At page 62, I said:

There are practically three or four branches to the charges contained in this letter. We are discussing entirely the question of classification which to my mind is a very unimportant part of the matter because that has to be settled later on by arbitration. To my mind the point in this charge is that Major Hodgins claims he was dismissed from the service of the Transcontinental Commission because he would not classify as the commissioner wanted him to do. He does not require documents in the possession of the commissioners to specify that. He can say whether it is true or not.

Following up that, the day Major Hodgins withdrew his charges, the question came up as to the future conduct of the committee. I stated my view as to the proper course to be taken, and the distance to which I was willing to go in admitting evidence or shutting it out. My hon. friend will find what I said at page 438 and at page 450 of the evidence. I will refer first to what I said at page 438. The matter came up as to whether we would receive more evidence or not, and I made this statement from my position as a member of the committee, and as a member of the committee also I made the statement which appears at page 450. This was a committee of five, and my hon. friends from South Simcoe and East Hamilton and I, if we joined together, could have carried——

Mr. CARVELL.

Mr. LENNOX. A great combination.

Mr. CARVELL. It made a majority. I made this statement at one meeting, and repeated it the next meeting. And I will read the statement and the repetition to the House. At page 438 is the following:

It is not for the committee to decide whether the engineers are exercising proper classification in different parts of the work, the question is are they doing it honestly. As far as I am concerned if Mr. Hodgins, K.C., or Mr. Lennox here wishes to call witnesses to show anything that is improper or dishonest on the part of the commissioners or the engineers under the commissioners I have no objection to having it investigated; but when it gets down to a question of a difference of opinion, it has been stated here by Major Hodgins this afternoon that it is simply a question of opinion between the engineers, one engineer saying I would classify that cut at 59 per cent of solid rock and another saying I would classify it at 60 per cent of solid rock. If there was no other tribunal possibly we would be in a position that we would have to decide, like many judges who are compelled to listen to evidence about which they have no knowledge—I do not know anything about engineering, possibly Mr. Lennox does not, Mr. Barker may know a little more about railway engineering than any other member of the committee—but a tribunal has been provided, under the statute passed at the time the Transcontinental Commission was formed, and that tribunal consists of the chief engineer of the Grand Trunk Pacific and the chief engineer of the Transcontinental Commission, and if they cannot agree they apply to the Chief Justice of Canada who appoints a third arbitrator, and that is the right tribunal to decide whether these engineers are properly exercising the duties and responsibilities placed upon them.

Now, I want to know if that was an attempt on my part to shut out evidence? Was it not an offer to bring on all the evidence that showed wrong-doing on the part of the commissioners or their engineers? At the next meeting of the committee, I followed this up. I referred first to the fact that Major Hodgins had withdrawn his charges and that the only thing left was the question of classification which must be left to the engineers.

All we can do, to be logical, is to close up the inquiry and report to the House. While I do not want to be put in the position of burking any investigation, if any evidence is produced to show that the commissioners committed fraud, or asked Major Hodgins or anybody else to do what was wrong I do not think it ought to be excluded, but I think we ought to consider our position and let us understand where we are.

Now, Sir, there again I repeat the offer to allow them to bring on evidence.

Mr. BARKER. Go on and read a few lines after that.

Mr. CARVELL. (reading):

So far as I am concerned, I am absolutely opposed to any evidence being given by anybody as to classification that has to be decided by another body.

I have always taken that ground.

Mr. LANCASTER. How would you prove your fraud?

Mr. CARVELL. Now, let me show this engineering light from Lincoln (Mr. Lancaster) what would happen. He is in for knowledge and I am going to give him some.

Mr. LANCASTER. It is time you started.

Mr. CARVELL. It is time the hon. gentleman got the wax out of his ears so that he could hear and learn something. Suppose we had taken the course suggested by the hon. member for South Simcoe, and we had called 25 engineers from the Grand Trunk Pacific. I have here, but will not read them, letters written by Mr. McIntosh, by Mr. A. G. Macfarlane, by Mr. M. C. Macfarlane, by Mr. Richard, and a dozen other engineers, stating that they had classified the work according to the interpretation of Mr. Lumsden. Now, suppose we had all those engineers here, and they all swore that they had classified this work exactly according to the interpretation of Mr. Lumsden. They were on the work; they saw it being done; they exercised their judgment and they swear that they did it honestly and uprightly. Then suppose we brought this precious Mr. Heaman, the man who made the charges. Suppose Mr. Heaman was put up and said: These men classified too liberally. I ask my hon. friend from Lincoln in what kind of a position this committee would be? What position would a committee of lawyers be in to decide whether they were over classifying or not?

Mr. LANCASTER. If the hon. gentleman took the evidence without cross-examination he would probably have more information than he would be guessing at it, as he does now.

Mr. CARVELL. After all it would only amount to a guess. How would any lawyer know? Suppose he said: I am going to believe one set of engineers and disbelieve another. What position would he be in? Two months afterwards the legal tribunal, the arbitration provided by parliament, would sit, and suppose the arbitrators decided that we were wrong, what a position we would be in. Think for a moment the position we would place ourselves in by trying to decide an intricate and technical question like this by bringing on one set of witnesses saying that the work was classified wrongly, and another set of witnesses saying it was classified rightly. That shows the absurdity of the whole contention.

Now, I have discussed this matter as far as I wish to. In conclusion, I say that there are two views to be taken of this question. One, I am sorry to say, is not a pleasant view, another one is an extremely pleasant view. The unpleasant side is the eagerness of my hon. frinds to search out scandals, after having been defeated in all their scandal mongerings this session. I will refer to only one to show, after they have been trying to find scandals and have been defeated, how anxious they are for a genuine scandal. Take, for instance, the committee that has been sitting in regard to timber lands in the Northwest. After we had the sworn evidence of different witnesses that everything that was alleged was untrue, and after the unfair statements made by the hon. member for St. Antoine (Mr. Ames) and the member for North Toronto (Mr. Foster) we find the member for St. Antoine, instead of being in his place to face the music, is off down in Nova Scotia with his yatch and his moving pictures exhibiting pictures of a few clumps of good timber as a sample of all timber in the land that friends of the government have got hold of. After seaching in vain for scandals like this, and getting defeated, no doubt they would like to find a genuine scandal, and if they could prove that by the wrong-doing of somebody in the construction of this railway this country was going to pay $28,000,000 more than it ought to pay, what a glorious scandal they would have discovered. After their complete failure I am sorry they did not have the fairness to take the view that was taken by one of their leading organs in the province of Ontario, which stated that there was nothing wrong and they had better let the matter drop. Let me read a short extract from the Toronto 'News', and I earnestly commend it to the perusal of my hon. friend from South Simcoe, who probably has not seen it. The article appeared in the 'News' of the 29th of June, but I will read it as copied in the Halifax 'Herald,' and I may say that if my hon. friend from South Simcoe (Mr. Lennox) and my hon. friend from Hamilton (Mr. Barker) had taken the fair view that the 'News' has taken we would not now be discussing this matter:

Thus far nothing has been proved which reflects discredit upon the Transcontinental commissioners, or warrant any charge of impropriety. It is necessary, however, that the reports of the Grand Trunk engineers should receive attention, and that an authoritative reply thereto should be furnished by the commission through the government. Many millions of public money will be expended on the National Transcontinental Railway, and the country should have every assurance that the work will be honestly and economically constructed.

Questions have been raised which have still to be settled, but in the meantime, there should be no persistence in insinuations and charges which the facts disclosed do not warrant.

I commend that to the careful perusal of my hon. friends. I can only repeat that it is a lamentable thing that the Conservative party in parliament have not taken the manly view of this thing which the Conservative editor of the Toronto 'News' has taken. On the other hand, there is a pleasant feature of this question. The pleasant feature is that in a work involving so many millions as this work does, extending over three or four years already, a work in which the commissioners are compelled to rely on the honesty and fidelity of hundreds of different officials, it is a great pleasure to find that there has not been one tittle of evidence produced which shows any suspicion of fraud, dishonesty or unfair dealing. On the contrary, it has been proven to the hilt that every part of this contract has been carried out to the very letter; it has been proven that these commissioners and engineers have honestly endeavoured, and have actually succeeded in performing this work honestly, uprightly and according to the letter of the contract. Sir, I think the people of this country can well afford the time that it has taken parliament to investigate this matter in order to have the assurance that they have a body of men of such calibre as Mr. Parent, Mr. Reid, Mr. Young and Mr. McIsaac, who are so efficiently carrying out a work involving millions of public money, in which work the searchlight of the opposition has not been able to find the least flaw. Therefore, I feel that the amendment should be voted down, and the report of the committee should be adopted.

Mr. WM. ROCHE. I would like to ask the hon. member who has just taken his seat (Mr. Carvell) to tell us who this Major Hodgins is and who appointed him as engineer. There may be some members of the House who do not know.

Mr. CARVELL. I can only say that so far as I know Mr. Hodgins is a gentleman. He was appointed, I presume, by the chief engineer of the Transcontinental Railway, who is, I understand, the officer invested with the authority to make appointments to the engineering staff.

Mr. W. B. NORTHRUP (East Hastings). Mr. Speaker, as I listened to the eloquent words of the last speaker, proclaiming aloud to the people of this country their good fortune that no evidence whatever had been brought out to implicate the commissioners of the Grand Trunk Pacific Railway in this whole Hodgins investigation, my memory went back to a scene in this chamber only a few years ago when the same hon. gentleman, with the same eloquence, was supporting a report which I think was drawn by himself; at all events was made by a committee of which he was a prominent member, when he called the attention of this House and of the people of this country to the gratification with which he had learned that no evidence had been brought forward to show any wrong-doing in connection with that famous steamer 'Arctic,' The fact was that every motion made by certain members of the committee in order to put themselves and the committee in a position to get all the information was always voted down by the majority. I am willing to concede that the hon. gentleman and his colleagues in the committee, whose report is before the House a greater need of respect than apparently he is willing to pay to some hon. gentlemen on this side of the House. I am quite willing to admit that the hon. member for Pictou (Mr. Macdonald) possesses the ability, legal experience and acumen which would enable that hon. gentleman to do great and glorious work in the interest of the country on such a committee, or on the Public Accounts Committee, or on similar committees. These hon. gentlemen have been afforded an opportunity in the Public Accounts Committee to show us what they can do, to show their willingness and anxiety to do something to ascertain the facts, to pry into the misdeeds of the government and to lay before the people the information which will enable them to judge as to what becomes of their money. I have great respect for the hon. member for Carleton, N.B., and his colleague the hon. member for Pictou, but I venture to say that neither of these hon. gentlemen, in the use of their great abilities in discharging their duties in the Public Accounts Committee, or in this investigation, has been painfully conspicuous. Perhaps it was on account of that experience added to the manner of which his followers were willing to employ the ability, which, I admit, they possess, that the right hon. leader of the government (Sir Wilfrid Laurier) placed these hon. gentlemen upon the Hodgins committee. The hon. gentleman who has just taken his seat spent a great deal of time in discussing this subject. I listened very carefully to him from beginning to end and I do not think I am far astray when I say that not more than ten or fifteen minutes of the time was spent by him in discussing the question before the House. We heard about the construction of the Grand Trunk Pacific, we heard about the horrible character of some unfortunate engineer now in the pay of the company, we heard a great deal in connection with the Grand Trunk Pacific contract, we heard everything discussed but the question before the House. What is the question before the House? Some time ago there was a reference to a committee. Certainly something must have been referred. We

have only to look at the first volume of the evidence brought down to show what was referred. We find that Major Hodgins, having made certain charges in a letter and certain newspapers have taken up, repeated and added to these charges, the Transcontinental Railway Commissioners, whom the last speaker praised so highly, were so exercised by the reflections made upon them that they came to parliament and insisted that they should no longer be left under the stigma under which they were placed, by these, as they said, unfounded charges, flying over the country. Not at Major Hodgins' request, but at the request of the commission the Prime Minister moved :

That the memorandum of the chairman of the Trancontinental Railway Commissioners to the Prime Minister, of April 23, and laid on the table of this House on the 24th instant, and the papers accompanying the same, together with the letter of Major Hodgins to the public press therein referred to, be referred to a special committee of five members, with instructions to investigate the matters and charges therein mentioned.

So that parliament being seized of this material, referred it to a committee and instructed this committee to investigate the charges that were contained in these papers. As has been well pointed out, it is a matter of indifference whether Major Hodgins appeared or not except in so far as his absence might make more difficult the proof of these charges. The charges were referred to a committee, not Major Hodgins, and the committee met to consider and discuss these charges. At the beginning of their conference there seemed to be some little difference as to what course the proceedings would take and the majority were clear in their expression of fear that the charges would be limited——

Mr. MACDONALD. Would the hon. gentleman be good enough to give a single quotation in which I said anything to warrant him in making that statement ?

Mr. NORTHRUP. Page 59. The last speaker read it and I thought that it was not necessary for me to occupy the time of the House in reading it again.

Mr. CARVELL. I did not read anything from page 59.

Mr. NORTHRUP. Page 50, was it ? You read it yourself ?

Mr. CARVELL. No, I read nothing from page 50 either.

Mr. NORTHRUP. It is here ; I have read it half a dozen times.

Mr. CARVELL. You will find what I read at page 62.

Mr. NORTHRUP. I find at page 59 the following :

Mr. MACDONALD (Pictou). That is how I understand it, and the committee have the right to investigate everything contained in the order of reference.

That is very plain English.

Mr. PARENT. We have been accused in the newspapers——

Mr. CHAIRMAN. Yes, it has been spread all over the country.

Mr. PARENT. If the gentleman is allowed to limit his charges, I suppose the evidence will be confined to that.

Mr. CARVELL. Oh, no.

If Major Hodgins was allowed to limit his charges Mr. Parent was afraid that evidence would only be given on the limited charges and his vindication would not be complete.

Mr. MACDONALD (Pictou). Do not worry about that.

Mr. E. A. MACDONALD. Is that the only evidence, because I hope to reply to my hon. friend, of my having made any such statement as he has indicated.

Mr. NORTHRUP. I did not name the hon. gentleman in the first instance because I thought it was not necessary to do more than refer to the statement which was read to the House by the hon. member for Carleton, N.B.

Mr. CARVELL. The hon. member for South Simcoe (Mr. Lennox) read it. I did not.

Mr. NORTHRUP. I beg pardon. 'Hansard' will show. There is a subsequent page in which it is referred to again. I do not propose to take up the time of the House reading more than that one passage. It is proved up to the hilt in that one passage that Mr. Parent was afraid that the charges would be limited, that if this gentleman was allowed to limit his charges the evidence would be confined to them and the hon. member for Carleton, N.B., said 'oh, no.' Then the chairman of the committee added :

I understand it to be the feeling of the committee that they should not be dropped.

There is no dissent on the part of any of the committee. These matters having been referred to the committee, I take the ground that Major Hodgins had nothing to drop. Major Hodgins did not ask for this investigation. It was not given to Mr. Hodgins, but when this House, in the exercise of its authority, charged five or six of its members with the duty of investigating certain serious allegations, to say that this committee was deprived of its power to investigate because a witness said that he did not take any further interest in the proceedings is the most monstrous proposition that was ever enunciated in this House. What did take place ? Major Hodgins lost his position in consequence of something with which

we are not concerned. He was out of a position and he was called as a witness to the city of Ottawa. It meant that he had to be absent from his home for forty-nine days. He had been undergoing examination day after day before the committee, he was entitled to be paid the ordinary witness fees and he was compelled to be represented by counsel day after day retained at an enormous sum. When he first appeared before the committee with his counsel application was made that the committee should report to the House in favour of Major Hodgins' counsel fees being paid. On the one hand there was the commission which was empowered to employ such legal assistance as it saw fit, there was the commission, backed by the majority in parliament, assisted by the most learned counsel that could be obtained in the whole country, and on the other hand we had a gentleman called here as a witness who was obliged to remain here at great expense, losing money every day and who perhaps incurred a counsel fee that will hang a weight around his neck for years to come.

That is the position in which Major Hodgins was put; that is the idea of fairness that filled the minds of that committee when this investigation began. Is it at all surprising what Major Hodgins did, after he had been before this committee for weeks and weeks, after he found that he was the man that was going to be the sufferer and after he found the committee coming to him with a bogus story of arbitration—because there will be no arbitration and there can be no arbitration and I say further that except from the members of the committee itself an arbitration was never suggested by anybody between the parties concerned. It was simply an attempt to draw a red herring across the scent to say that there would be an arbitration between the Grand Trunk Pacific Company and the government. That about an arbitration between the contractors and the government. The real question was whether the contractors were robbing the government. It was only incidentally the Grand Trunk Pacific was interested at all. Had it not been for the fact that the statute provides the Grand Trunk shall rent a part of the line and pay interest on 3 per cent of the cost of construction the Grand Trunk Pacific would not have the slightest interest in the matter. The real question was between the commissioners who were building the road and the contractors, and the charges are clear and explicit. Whether or not they are proven is another question but the charges are clear and explicit that the contractors were robbing the commissioners. It is all very well for hon. gentlemen opposite to come here and talk about changes in specifications and to say that the chief engineer was trying to do what was right and all that. If they take the trouble to read the papers which are laid on the table of the House they will find that the great difficulty came, not over any dispute as to what was the meaning of solid rock or loose rock, but that the charges made can only be based on deliberate and wilful fraud. These are the charges made originally by Major Hodgins and these charges are made by Mr. Woods, the engineer of the Grand Trunk Pacific in his famous letter. He charged that such and such things had been done that could not have been done as the result of any misunderstanding of the specifications but, as Mr. Woods said, they must have been done deliberately under instructions from above. Not only did Major Hodgins make these charges but Major Hodgins made certain charges that are a reflection on the commissioners. I am not here to say a word against the commissioners. The evidence was shut off, and what the evidence might have resulted in I do not know. Without casting the slightest aspersion on any person I can say that there was another investigation which is within the knowledge of members of this House and some members of that commission would have been just as well satisfied I have no doubt if that investigation about the purchase of some lands around Winn had not been held. Let us see what Major Hodgins has said in the way of making charges in the statement put in by him. I quote from page 112 of the evidence:

A. And Mr. Reid said that the appointment of (Grant) was made and it would have to go, that it was their intention, it was no slight on the district engineers, the appointing of a junior man above them, that it was the intention of the commissioners to have uniform classification all over the line and that Mr. Grant had been selected.

Q. They wanted a uniform classification?—A. They wanted a uniform classification.

Q. Did they say what the uniform classification, what the standard was.—A. No. They told me afterwards that the Quebec classification was to be taken as the standard.

Now, Major Hodgins in his evidence, whether truly or untruly, has stated what he himself saw in Quebec and he has sworn to what he says he was told by one of the engineers as to 86 per cent of rock being allowed in a certain cut which was mainly sand. That would be a matter of evidence which the committee could well consider, and the alleged fact being pointed out to the committee it would be their duty to make some inquiry to ascertain whether that statement was true.

Mr. CARVELL. Is the hon. gentleman not aware that the monthly estimates were put in evidence and they showed that that particular cut in the month of June was allowed at 32 per cent solid rock, and in the month of May preceding at 29 per cent solid rock.

Mr. NORTHRUP. I am aware of that, but that does not touch the point, and in the first place it may or may not have been the same cutting.

Mr. CARVELL. Is not the best evidence you could get, the estimate on which the money was paid ?

Mr. NORTHRUP. If my hon. friend would try to understand the argument he would not interrupt me. The duty of the committee was to receive what evidence it could get but the moment my hon. friend (Mr. Carvell) got a piece of evidence that suited him he shut off inquiry and he announced that the committee would refuse to receive any further evidence unless members of the committee would take responsibility themselves of charging fraud.

Mr. E. M. MACDONALD. Might I——

Mr. NORTHRUP. Excuse me, the hon. gentleman will have an opportunity of speaking a little later and he can castigate me as much as he likes.

Mr. E. M. MACDONALD. I do not want to castigate you; I want to ask a question.

Mr. NORTHRUP. It is impossible for me to make a connected speech if I am to be interrupted every minute.

Mr. CARVELL. If the hon. gentleman confines himself to the facts there will not be any interruption.

Mr. NORTHRUP. I am confining myself entirely to the facts and if I make a single statement which is incorrect I will be pleased to withdraw it.

Mr. LENNOX. You are all right so far.

Mr. NORTHRUP. And so the committee absolutely declined to take further evidence unless some hon. member of the committee would take the responsibility of saying he could prove fraud and if so he could go on and prove it.

Mr. CARVELL. My hon friend is not sticking to the facts because that was not included in my conditions at all.

Some hon. MEMBERS. Order.

Mr. CARVELL. Do not get excited; I will call him to order whenever he is not in accordance with the truth.

Mr. NORTHRUP. Why, the hon gentleman (Mr. Carvell) forgets what he himself read to the House not more than ten minutes ago.

Mr. CARVELL. Read it and I will be obliged to you.

Mr. NORTHRUP. You shall have it, but if I speak for two hours as the hon. gentleman did, I want it distinctly understood that three-fourths of the time was taken up by interruptions.

Mr. CARVELL. If you stick to the facts there won't be any interruptions.

Mr. NORTHRUP. Well here is what Mr. Carvell said as will be found at page 450 of the printed evidence :

Mr. Lennox.—Then as I understand it Mr. Carvell's view is substantially as he stated it the other night.

Mr. Carvell.—About the same.

Mr. Lennox.—That is that it can be investigated only in the event that some member of this committee comes forward and says : I am prepared to establish fraud.

Mr. Carvell.—That is it.

Some hon. MEMBERS. Hear, hear.

Mr. CARVELL. Go on. I submit the hon. gentleman should read what I said.

Mr. LENNOX. Order, keep quiet.

Mr. NORTHRUP. I will read every word of it if you like.

Mr. Carvell.—That is it, I take the ground that supposing Mr. Barker's contention is correct, that there is evidence to establish the fact that the engineers are not exercising proper judgment in their mode of classification, that he should take the responsibility as a member of this House to rise in his place and say so on that responsibility, and ask for the matter to be investigated, if he should do that it is a new question entirely.

Do you want me to read any more?

Mr. CARVELL. Yes.

Mr. NORTHRUP. I shall :

We are not appointed to investigate whether these engineers are properly exercising the discretion conferred upon them—

We are not, eh ?

We are not appointed to investigate whether these engineers are properly exercising the discretion conferred upon them but whether there is fraud between them and somebody else, and that brings up the question suggested by Mr. Barker, supposing there is fraud between them and the Grand Trunk Pacific, that is a proper subject for inquiry if somebody takes the responsibility of making the charge, but until somebody does I do not see that we have any right or jurisdiction in it at all.

Now, I think my hon. friend will concede that my original statement about what he said was correct. Every statement I make as to what the evidence contains will be and is correct, but at this late stage of the session and in this weather I do not think it fair to take up hours in reading the evidence. But let me point this out, that when the hon. member (Mr. Carvell) cannot remember what he said himself, is it surprising that the light he can give us on this or any other subject is very dim indeed. I repeat that the committee refused to allow any more evidence to be taken unless some Conservative member would jeopardize his

seat by charging fraud. But, the hon. gentleman (Mr. Carvell) could not confine himself to the evidence. He had to hunt around the country to bring in outside information in the shape of a statutory declaration made by a man who perhaps under cross-examination would have told an entirely different story. I only heard that declaration read hurriedly by the hon. member, but I would direct the attention of the House to one point in it and I think the hon. gentleman (Mr. Carvell) should investigate this matter.

Armstrong, in this affidavit, speaks of the cuts referred to in the letter of Wood of the 7th of October, which refers to two different sections over which he had gone. The first, he said, was from 15 to 20 miles long, but he could not speak positively as he had not proper instruments ; the other section was for mile 315 to mile 332, a distance of 17 miles. As to the 17 miles, according to that statutory declaration, Armstrong completely vindicates the commissioners in the judgment of the hon. gentleman by pointing out that the over-classification would not amount to over $50,000. This railway is to be from 1,700 to 1,800 miles long, but assuming that it is only 1,700, and supposing that the over-classification amounts to only $50,000 on the 17 miles, which is a subject of such delight and surprise to these gentlemen, supposing that the boodling or stupidity, or whatever you call it, of the engineers, amounts to only $50,000 in 17 miles, if you take that same proportion for the 1,700 miles, you have to multiply it by 100, and you find that for the whole line that it amounts to $5,000,000. So that under your evidence given as a climax to complete the vindication of the commissioners $5,000,000 is the shortage, provided the amount of rake-off is the same in every other mile of the line as in the sections dealt with by Mr. Armstrong. If that is the best evidence the commissioners can find after four weeks hunting up and down the country, it is no great wonder they objected to any further evidence being given in the committee, and that such witnesses should be asked to give their evidence by statutory declaration rather than by an examination followed by a cross-examination by men competent to elicit the facts. Among the last words spoken by the hon. gentleman (Mr. Carvell) was a reference to an alleged agreement. I would not occupy time in referring to this agreement, for in my humble judgment it has nothing to do with the case, except that a justification was attempted to be set up by a majority of the committee for stopping this investigation on the ground that an arbitration was already going on and this matter might be better decided there than before the committee. I say, in the first place, that no arbitration has ever been suggested by anybody except members of the commission, or between the government commissioners and the contractors, and that is where the boodling is going on. I say, in the second place, that no agreement was ever drawn up so far as any evidence submitted to the House goes—I am not going to say that no agreement was drawn up, and then my hon. friend, who has access to documents to which I have not access, produced one of a different date, and possibly on a different subject, and says that is the agreement—but I say that the document referred to by him is not an agreement in any sense of the term, it does not purport to be an agreement; and if it was an agreement, it does not relate to arbitration in the slightest. All it does, as far as arbitration is concerned, is to point out that if the engineers cannot agree amicably they can fall back on the mode of arbitration provided in the statute. So if the hon. gentleman had taken the trouble to read the document he would have found that what he calls an agreement is a memorandum of an agreement to be drawn up between the Commissioners of the Transcontinental Railway and the Grand Trunk Pacific Railway Company. And even that memorandum of agreement to be drawn up was not signed by anybody, a few initials appear on the side of it. My hon. friend is a learned, distinguished and successful lawyer. I wonder if he really would advise professionally that if something was done in the way of arbitration, or anything of the kind, under the alleged authority of that so-called agreement, and Mr. Hays, whose initials are supposed to be there, should pass away to his reward and someone else take his place who dissented from what had been done, that the Grand Trunk Pacific would be bound by the fact that an informal memorandum of agreement intended to be drawn up was produced with Mr. Hays' initials on it.

Mr. CARVELL. The chairman of the commission told the committee that the formal agreement was drawn up, and that they had it in their possession.

Mr. NORTHRUP. I am discussing what is before the House, and I was careful to say that I did not deny the existence of an agreement, because a document which the hon. gentleman could see and read, but to which I had not access, might be produced. But I say we are bound to discuss the matter upon the evidence before the House, and if the commissioners had an agreement of the kind to which the hon. gentleman refers, I think they were guilty of contempt of that committee in not putting it before the committee and in submitting in its stead a paltry memorandum of agreement intended to be drawn up with a few initials on the side. This particular memorandum of agreement merely provided that two engineers could go to the work, and if

they then and there agreed on what was being done, everything was lovely. That is simple enough. If they did not agree they could fall back on the statutory provision, which, of course, adds nothing to the powers then existing.

There are two clauses of the statement to which the hon. gentleman refers on which I need not spend any particular time, because they are so simple that I doubt if any lawyer would differ as to their meaning. Clause 7 is the first. Leaving out the earlier portions, I come to the operative section. It says:

And in the event of differences as to the specification——

The day for that is past and gone, the specifications are settled on.

Or in case the said engineers shall differ as to the work, the questions in dispute shall be determined by the said engineers and a third arbitrator, to be chosen in the manner provided in paragraph four of this agreement.

I do not think any lawyer will contend that when the dispute was as to the interpretation of the specification it would come under that clause. When the question was whether or not a fraudulent amount was being paid for work that really was not done, the dispute would come under clause 47, which provides:

Any dispute which may arise as to the meaning or construction of this agreement, or as to the performance of any of the obligations of either of the parties to this agreement, or as to working expenditure or cost of construction.

That would be settled by arbitration. But where do you get your arbitration? You fall back on section 47. The statute provides that one of the arbitrators shall be appointed by the government. There is no reference to the commissioners at all; the commissioners have no more authority to appoint an arbitrator under section 47 than my hon. friend or myself.

Mr. CARVELL. I did not claim they had.

Mr. NORTHRUP. Then where is the point of the argument about an arbitration going on?

Mr. CARVELL. The chief engineer is their arbitrator.

Mr. NORTHRUP. My hon. friend is entirely wrong. My hon. friend is as far astray as one of the principal ministers who, after a debate on this original matter for months, disclosed the fact that he did not know half the different items that were to be allowed under the head 'Cost of Construction.' I may point out that the only clause under which there might be an arbitration is clause 47, and an arbitrator under that must be appointed by the government and not by the commission at all. so it is evident that when Major Hodgins was—I do not like to use the expression 'buncoed,' but led to believe it was undesirable that he should waste any time in the committee, because the whole matter would be threshed out by arbitration, he was misled, because there was no arbitration, there could not be any, and there never was any pretense of one except in the minds of the members of the committee.

I was going to call attention to some of the charges made by Major Hodgins in order that we might see whether or not he was in a position to withdraw those charges. The first I was going to refer to is on page 112. I was referring to the fact that the classification was to be made uniform along the line and that the Quebec classification was to govern. Take the statement made by Major Hodgins on page 115, a very important statement made under oath. Speaking of Mr. Armstrong, he said:

He said the classification was very high, and I said, 'what are you doing about it-'? He said, 'I am reporting it to my people.' I said, 'what are they doing'? And he replied that he did not know, that they hadn't done anything just yet. I said, 'is there very much more classification of that kind'? And he said, 'it is pretty general, all over the district.' I said, 'are you going to dispute it'? And he said he presumed they would.

The engineer of the Grand Trunk Pacific presumed that his company was going to dispute it.

I asked him what it was going to amount to in Quebec and he said he had not made a very close estimate of it, but he was pretty certain it would amount to nearly $2,000,000, that his company would object to.

Q. What did he say would amount to $2,000,000? —A. The difference in what we called over classification then.

There is a statement under oath by Major Hodgins that the engineer of the Grand Trunk Pacific had told him that in Quebec alone his company would claim that over $2,000,000 had been paid in excess of what should have been paid. He was only speaking of the wrong-doing up to that date, and he is the same gentleman who this present month has figured out an estimate of $5,000,000 for the whole line as being the amount of over classification. On pages 141 and 144 there is further evidence of complaints and there is Mr. Mann's letter. I shall not occupy the time reading that letter, dated September 6, 1907. In it Mr. Mann says:

I find that at many points on these divisions, the classification is too liberal, while at some points it is excessive. I cannot tell in some cases just what classification has been allowed, for the reason that there is no distinction made between solid rock in classification and in place—that is solid in boulders and in mass. In some cases, however, as between Canyon Lake and the Wabigoon, where

the solid in place in some of the cuts had not been touched at the time I saw it, an amount of solid has been allowed that quite evidently was not based on the measurement of boulders found that would class as solid under the specification. Loose rock has also been allowed in quantities that could not possibly be given if the specifications were followed as the only guide.

And so all through his letter. On page 142 he gives some twelve or fifteen illustrations of work in which wrong classification was made. There again is a charge over Mr. Mann's own signature, the district engineer of the Grand Trunk Pacific. How can Major Hodgins withdraw that? On page 148, we have Major Hodgins declaring under oath that McArthur, the contractor in Winnipeg, told him that Mr. Grant had been sent up to help him out. Surely that is a matter for the committee to investigate. Mr. Hodgins could not withdraw that charge. On page 154, Mr. Hodgins testified that Mr. Dutton said if he got some of the promises Mr. Grant made him, that was all he wanted, but if he did not he would pull out. On page 263, we have Major Hodgins swearing that Mr. Foss, one of the engineers, told him that something must be done to help McArthur, the contractor. On page 301, we find that Grant suggested to Hodgins that the classification should be increased. On page 307, Major Hodgins swears that loose rock had been classified as solid rock. And when asked how he knew it was not solid rock he replied: 'My eyes told me.'

I have given the House case after case in which evidence was adduced by Major Hodgins which could not be affected by his withdrawal of the charges, and his withdrawal after all had only reference to the honesty or dishonesty of the engineers.

A great deal of weight has been given to the opinions obtained from certain lawyers. As far as the individual lawyers are concerned, I agree that no more eminent men are to be found at the Canadian bar, and I have not the slightest fault to find with any of these gentlemen regarding what they did. But calmly considered what really did they do? Objections were being made by the Grand Trunk Pacific engineers to the Railway Commissioners regarding the classification. Major Hodgins was dismissed, and about that time Mr. M. P. Davis, one of the contractors at the Quebec end, for some reason best known to himself, went to Montreal and obtained opinions from Mr. McMaster and Mr. Lafleur. Then he went to Toronto and obtained opinion from Mr. Shepley and Mr. Ritchie and Mr. Nesbitt, and no better men could be found. But after all what did he get? He got an ex parte opinion from lawyers on a statement presented by a man who wanted an opinion in his favour. It was of vital importance to Mr. Davis that he should get legal opinion that the classification should be as he wanted. So he went to the lawyers, and without the other side being heard, his lawyers gave a certain opinion on Mr. Davis' own statement. That opinion may be very well as it goes, but would any one say the opinion would have the same authority as that of the same lawyers, if they sat on the bench and had heard the facts and the arguments on both sides? One would have thought that those opinions would have been held by Mr. Davis for his own protection. But no, they were fired at the commission. The chief engineer was doing his duty. When a particularly competent specialist is put at the head of a great national road and when parliament by statute decides that he is the man to decide these questions, that question of classification comes before him and he decides it. When the chief engineer appointed by parliament rules one way and the engineers another, they must give way. That is an excellent rule, but it does not apply when Mr. Davis happens to be contractor. Mr. Davis sent in the opinions he had obtained to the department and these were forwarded to the Minister of Justice, and in turn we have the opinion of the Deputy Minister of Justice which seems to be an admirable one. Those of us who are acquainted with Mr. Newcombe will know that he is a distinguished lawyer whose opinions are entitled to the utmost respect, and there is nothing in this opinion given by him which could in the slightest degree detract from that respect. One not only admires his legal ability but his astuteness when reading this opinion. There are so many 'ifs' in it that it would puzzle a Philadelphia lawyer to make out what it meant in any particular instance. But then he winds up:

It seems to me, however, that these questions are largely engineering questions, the solution of which depends principally upon the judgment of the engineer, having regard to the terms used in the specifications.

Mr. E. M. MACDONALD. Hear, hear.

Mr. NORTHRUP (reading):

I must call your attention to clause 15 of the contract, which provides that the engineer (this term to be construed as defined in clause 2 of the contract) shall be the sole judge of work and material, and that his decision on all questions in dispute with regard to work and material shall be final, thus expressly stipulating that such questions as these shall be submitted to the decision of the chief engineer.

Not of Mr. Davis' lawyers.

I wish to add that it is very difficult for me to advise generally upon the interpretation of these specifications, and a general ruling may not infrequently overlook the peculiar facts and circumstances of an individual case, which, if stated, might lead to an exception or modification. I would prefer to advise upon any special case as it may arise, having all the particulars and circumstances stated.

So that in the end the opinion amounts to this, that if such and such be the case, such shall be the result. And then he winds up by saying that it is a question for an engineer and that nobody's opinion, practically, is of value unless he is sure he has all the circumstances of the case before him. That opinion, in due course, reaches Mr. Lumsden, because we have a letter from Mr. Lumsden;—Now here is the chief engineer of this railway, appointed by parliament to use his judgment in these matters, a man to whom the people of this country and the Grand Trunk Pacific Company—which company has to pay interest on the cost of construction—have a right to look to use his best judgment. He exercises his judgment and gives an interpretation of the specifications. But these legal opinions are given, and with this result:

Ottawa, January 9, 1908.

The Commissioners of the Transcontinental Railway, Ottawa, Ontario.

Sirs,—I have to-day been handed by the secretary a copy of a letter from the Deputy Minister of Justice, dated the 6th instant, with respect to my interpretation of clauses 33, 34, 35 and 36 of our general specifications. After fully considering his remarks in regard to the words after 'rock assembled' (the individual pieces of such assembled rock exceeding one cubic foot in size), I have concluded in deference to his remarks these bracketed words might be omitted, as also the words 'not covered under clause 34' in items 1 and 2 under the heading 'loose rock.'

My interpretation of these clauses will now be as follows:

So here we have the chief engineer of the Transcontinental road deliberately writing to the commission that he has interpreted the specifications not as he himself would interpret them, or had interpreted them to his engineers, but to use his own language 'in deference to' the remarks of the Deputy Minister of Justice——

Mr. E. M. MACDONALD. Will the hon. gentleman be good enough to show me where the chief engineer had at any time previous to December 10, 1907, ever given any official interpretation of these specifications?

Mr. LENNOX. On October 30 he said definitely that he would not admit the specification——

Mr. E. M. MACDONALD. That deals with a specific case. But where are the instructions given by him to his sub-engineers to take a——

Mr. NORTHRUP. I did not say a word about instructions. It was a case of interpretation. There had been a conflict between himself and his subordinates and it was because of this interpretation by Mr. Lumsden of the specifications that Mr. Davis went around the country gathering these opinions, so that when he was fortified with these opinions, including that of the Deputy Minister of Justice, the chief engineer says that 'in reference to the remarks of the Deputy Minister of Justice his interpretation would be, so and so. We have the deliberate case of a chief engineer deliberately abandoning his own idea of how the contract should be interpreted in deference to the opinion obtained by Mr. Davis one way and another. And the result was that the chief engineer virtually said: Whereas I said a while ago that where the chief and subordinates differ the subordinates must give way, yet as Mr. Davis, the contractor in this case, has secured contrary opinion, the chief is obliged to give way. He seemed to have some suspicions as to the propriety of what he was doing, so he sent a memo. to the commissioners telling them what he has done, and the answer comes from the commissioners as follows:

Ottawa, January 14, 1908.

Hugh D. Lumsden, Esq.,
Chief Engineer.

Dear Sir,—I beg to advise you that your letter of the 9th instant giving your interpretation of clauses 33, 34, 35 and 36, of the general specifications for construction, modified so as to conform with the opinion expressed by the Deputy Minister of Justice, was considered by the board on the 10th instant and approved.

Yours truly,
(Sgd.) P. E. RYAN,
Secretary.

Of all the farcical positions in the world surely this was the most farcical—that of a chief engineer of a great railway who is to be instructed by the contractors' lawyers and the Deputy Minister of Justice, and who, on sending word to the board that he has 'in deference' to these certain remarks reached a certain opinion, the board graciously tells him that his decision is approved. Could the absurdity of government work be carried much further than in this comedy? When the hon. members consider that these serious charges were made, first in these letters and then under oath, and then that a strong committee was charged with the duty of investigating these charges, I think they will feel that it was incumbent upon that committee to return with a report that they had investigated these charges as fully as possible. Can any one say that the committee did the best they could to ascertain whether or not improprieties had gone on in connection with the classification in the case referred to by the newspapers and by Major Hodgins? Can anybody say that the commission was in the slightest degree vindicated? I do not say that anything was given in evidence to impeach the character of the commission; I think it would be most unfair for any speaker to say that the char-

acter of the commission was blackened by the evidence that was given. But there is the evidence, the sworn statement of Major Hodgins, that contractors had made statements to him—there was the statement of Mr. Grant, the statement of Mr. Dutton, the statement of Mr. Armstrong—that he himself has seen wrongdoing, and the letters put in showing that the Grand Trunk Pacific were complaining of it. Is it not rather an abdication of their powers when the committee, on so important a question, come back with nothing accomplished simply because Major Hodgins had got tired and wanted to go home? It was the direction of the House to the committee to get what information they could because this was a most important question. It is all very well for hon. gentlemen to sneer at the small amount involved. I think it has been shown that a large amount may be involved. But the great thing is that it has gone out to the people, it has been published—truthfully or untruthfully does not affect the question—that there is rank dishonesty in the construction of the road. It is known to hon. gentlemen on the other side as well as on this side that when the road was first suggested, when the Bill for the incorporation of the company was before the House, all through the country the people were charging that the reason why the government were building the road at all was that it was a scheme to get contributions from rich contractors that the duration of the government's term in office might be extended.

Mr. JOHNSTON. That was the old time.

Mr. NORTHRUP. The old time of 1903, as the hon. gentleman Mr. Johnston) suggests. It seems a long time to the hon. gentleman and also to many people in this country——

Mr. JOHNSTON. It is the old days of 1873 that you have in mind.

Mr. NORTHRUP. If the hon. gentleman will confine his attention to the present, if instead of allowing his mind to be absorbed with the delightful contemplation of the wrongs of thirty-five years ago—when the conscience of the people was so sensitive that because a minister of the Crown was willing to accept a contribution from the wealthiest man in Canada, a contribution which spread over the whole country was infinitesimally small, they rose in their might and hurled a great party from power—he will consider the state of affairs to-day, when the charge is made that dishonest dealing is going on in the construction of this Transcontinental road by which the people are being plundered, and when this matter is referred to a committee, the committee refuses to investigate—viewing this contrast he will surely admit that there has been a wonderful change in public sentiment since 1873.

Mr. JOHNSTON. You admit it all.

Mr. NORTHRUP. I admit every word I have stated. I am not in the habit of making statements that I am not prepared to stand by. I have only to say, in conclusion, that I hope the hon. gentleman who is now to address the House insead of wandering all over creation to tell us about matters in which we are not interested, such as the character of individual engineers of the Grand Trunk Pacific system, will tell why, when a certain charge was referred to a committee, that committee did not go on and investigate those charges. If hon. gentlemen opposite will vote for the amendment moved by the hon. member for South Simcoe (Mr. Lennox)) we will have an opportunity to learn the truth about these matters. No member on this side will take the responsibility, in these matters which we cannot be supposed to know, of saying that there has been any dishonesty in the classification. It would be monstrous for us to assume the responsibility of saying that this means dishonesty or that it means that the engineer is incompetent. All we say is that charges have been made and that they should be investigated. If they are untrue, all the better for the country that they should be proven untrue ; if true, the sooner the country learns the fact the better. Whatever may be the facts, it is in the interests of the country that they should be known. For these reasons I shall have much pleasure in voting for the amendment of the hon. member for South Simcoe.

Mr. E. M. MACDONALD (Pictou). The greater portion of this day has been occupied by reason of the desire of my hon. friends opposite, to cover if possible, their retreat upon this question of the Hodgins charges. The line of the abandonment of their position is one which is being successfully handled. One of the chief artificers of the position was put up to make a special argument in support of a report which was the result of several days deliberation on the part of the minority of the committee. It is true that when the gentleman who had made the charges had come before the committee and was asked to put those charges in a definite form, and had subsequently withdrawn them unreservedly, my hon. friend who spoke so cleverly this morning in defence of the theory that Major Hodgins did not withdraw his charges, argued that there was something more for the committee to consider. It is true that he and my hon. friend, the chief tactician who, I understand, is to follow me, were so impressed by the absolute certainty of their position that they favoured an adjournment of the committee in order to ascertain whether there was anything left for them to do. One would fancy, to have heard the eloquent remarks of the hon. gen-

tleman who has just preceded me (Mr. Northrup), that the members of that committee from his side of the House were so clear in their judgment that there was something more to be investigated, that the moment Major Hodgins had abandoned his position, these gentlemen at once said: We will go on and clear up these matters.

Mr. LENNOX. So we did.

Mr. MACDONALD. My hon. friend will find that he and his colleagues almost quarrelled with my hon. friend the member for Carleton (Mr. Carvell) who wanted to go on. They both wanted to delay the investigation until next day, in order to see whether there was anything left for them to do. They are endeavouring to cover their retreat to-day, and what they have done is what we would have expected from these gentlemen. We have heard a great deal about scandals, rake-offs and graft, these words which hon. gentlemen opposite roll as sweet morsels under their tongue, we have seen the failures on their part all through this session to prove anything wrong, until to-day there is nothing left in the minds of the people of this country, not a single scintilla of all these wild stories they have been telling. When they saw the absolute abandonment of what their newspapers believed was going to be the pièce de résistance, when they saw this was all gone, they felt that, even if they did at the close of the session take up a day in endeavouring to deceive their own people, it was the best that they could do. My hon. friend who just sat down wanted to know whether I thought this committee was doing right when they abandoned this investigation. I ventured to say at the time this matter came up that the idea of a committee on the Major Hodgins charges, hearing evidence and considering charges, after Major Hodgins abandoned them, would be like an endeavour to play Hamlet on the boards without Hamlet being there to play. That statement was absolutely accurate. When Major Hodgins abandoned his charges and left the committee, when his counsel withdrew from the committee, who were left to be prosecutors of the charges? Who were making the charges? Where was the responsible man or company asking that committee to deliberate? Where were the hon. member for Hamilton (Mr. Barker), and the hon. member for Simcoe (Mr. Lennox)? Did they ever suggest that we should call a witness? We had a few lengthy addresses from those gentlemen in which they were endeavouring to play the game, but they never moved that any witness should be subpœnaed, they never suggested that anybody should come. They made no charges. On the contrary, they completely followed the line which Mr. Hodgins has taken, and withdrew every possible imputation that had ever been made against any one of the commissioners, individually or as a body.

Talk about classification. My hon. friend from Hastings (Mr. Northrup) read the opinion of the Deputy Minister of Justice as to whose business it was to classify, and the Deputy Minister of Justice said that the commission were not responsible for the classification, but the engineer was responsible. My hon. friend knows as a lawyer that under the terms of the contract and agreement, if the chief engineer of the Transcontinental Railway Commission is an honest man, not one dollar has ever been received by any contractor, and not one dollar ever can be received by any contractor, improperly; because not one dollar can be paid for any purpose in the construction of this road except upon the certificate of Mr. Lumsden, the chief engineer. So if these gentlemen want to investigate Mr. Lumsden, let us investigate Mr. Lumsden. But do not let them attempt to befool the people any longer by talking about investigating the commission or investigating the government upon this matter of classification, because neither of these bodies have anything to do with the classification which rests solely with Mr. Hugh Lumsden, chief engineer of the Transcontinental Railway. But that is not what we started out to do. Major Hodgins made certain charges in the Victoria 'Colonist,' they were repeated with great gusto by the Conservative press all over the country. They flew from city to city, and grew constantly bigger as they went, just like all the other scandals hatched by the Conservative party. When these charges reached the east they reflected upon the commission, and it was said this commission had been going it wild, and the country was in danger of being mulcted in millions. When the commission asked the Prime Minister to appoint a committee of this House to investigate what Major Hodgins had said in the west, we were dared to investigate these charges reflecting upon the credit and reputation of the commission, and in regard to all the other questions mentioned in his letter.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. E. M. MACDONALD (Pictou). Mr. Speaker, when the House rose at six o'clock I was directing your attention to the fact that the remarks of hon. gentlemen opposite, in which they seemed to reflect upon the gentlemen composing the commission on account of what they called the over-classification, were entirely beside the mark, and I make the statement that the one man who was responsible to the people of Canada for the absolute correctness of the classification that is awarded the con-

tractors upon the construction of the Transcontinental Railway and for the payments which are to be made to them is the present chief engineer of that railway. I want to say to the hon. member for Hamilton (Mr. Barker), who I understand is to follow me that I would like him to divest himself of the tendency which seems to be characteristic of hon. gentlemen opposite to get around important questions of this character, to avoid the real point at issue if, by avoiding it they can possibly enable themselves to indulge in some of those insinuations and innuendos which is so characteristic of the language used by hon. gentlemen opposite, and devote himself entirely to the question of the responsibility of the chief engineer of the Transcontinental Railway for every bit of the classification that is passed upon and on which money is paid. Before my hon. friend gets through dealing with that question I am afraid he will have a task which will occupy all the time he ought to occupy on a hot night like this. With regard to the hon. member for East Hastings (Mr. Northrup), who, I regret, is not in his place, there are only one or two things that he referred to that I propose to mention. My hon. friend's talk about impeding investigation and obstruction is rather childish—it is baby talk for hon. gentlemen occupying serious positions in this House to indulge in. It is characteristic of the irresponsibility of the Conservative press in this country nowadays to use language of that kind. It is their common stock in trade, but hon. gentlemen like the hon. member for East Hastings, know full well that with regard to the various committees which have sat during this session and during preceding sessions there has been absolutely no warrant for any such statement. These hon. gentlemen indulge in this kind of talk simply for the purpose of having themselves quoted in their partisan organs outside and thus gain the cheap notoriety of using such language in the House of Commons. I want to say to my hon. friend from East Hastings and to the hon. member who follows me, that I defy either one of them to point to a single case in regard to any matter that was investigated before the Public Accounts Committee, or the Hodgins committee, so called, during this or preceding sessions of parliament, in which the production of a single document was refused, or in which the summoning of a single witness was prevented by any hon. gentleman on this side of the House. They will be unable, no matter how much language they may indulge in, to put their finger on a single case in which the production of a single document was refused or the summoning of a single witness was prevented. Because hon. gentlemen on this side of the House desire to preserve, in some slight degree, the traditions and the rules of parliament, are they to be called obstructors? I am sorry that hon. gentlemen have found it necessary to descend to such peculiar and childish language in order to attract attention.

In this particular case of the Hodgins inquiry I would ask the hon. member for Hamilton to put his finger upon a single word in this whole report to show where hon. gentlemen supporting the government refused to produce any documents that were relevant to the inquiry, or refused to summon a single witness that any gentleman—Major Hodgins or these hon. gentlemen themselves—desired to summon before that committee. On the contrary, the only evidence that was refused was evidence which was offered by counsel representing the Transcontinental Railway Commission; we refused it because we thought it was not relevant to the issue and in that refusal hon. members on both sides concurred. In the course of what I will have to say I will probably refer to some remarks of the hon. member for East Hastings, but let me come right now to the one point about this matter as to whether or not there is any possible ground or reason for my hon. friends who were associated with us on that committee to ask this House to concur in the minority report. The consideration of that question depends on the question as to what was the matter that was referred to the committee. A committee of this House can only deal with such matters as are contained in the order of reference. Their powers are absolutely limited and defined by the order. They have no inherent rights or powers of any kind except what the House chooses to confer upon them in regard to the particular matter that may be assigned to them. What was the matter that was assigned to us? On April 16, 1908, Major Hodgins, who had been dismissed from the employ of the Transcontinental Railway Commission, in the preceding August, published in the Victoria 'Colonist' newspaper, in Victoria, B. C., a letter in which he made certain reflections upon the commissioners and upon the gentlemen who are responsible for the management and construction of that railway. The Victoria 'Colonist,' which was a good Conservative newspaper, proceeded to comment upon that letter with very large headlines and with those amplifications which are the peculiar property of the average Conservative journalist. These charges were telegraphed by the reporter of the 'Colonist' to various eastern papers, amongst them the Manitoba 'Free Press' and the Ottawa 'Citizen.' Subsequently the Victoria 'Colonist' published what they claimed to be interviews with Major Hodgins in which certain other statements reflecting upon the commission purported to have been made and this letter and the interviews were, upon the request of the commissioners of the Transcontinental Railway, referred to us by order of the House of Commons. Let me call

your attention to the memorandum of Mr. Parent, chairman of the commission:

Memorandum to the Right Hon. Sir Wilfrid Laurier, Prime Minister.

A letter from Major Hodgins, lately our district engineer at Kenora, Ontario, has been given wide publicity in the press, namely by the Manitoba 'Free Press,' and the Ottawa 'Morning Citizen,' where it is commented upon.

There are insinuation and statements in it that should not be allowed to pass unanswered.

He continues:

Taking up seriatim the allegations in Major Hodgins' letter as printed in the papers:

1. That the government is paying padded accounts for the work done, and that the Grand Trunk Pacific people are making no objection because they merely have to pay the added interest.

This statement is without any foundation. The Grand Trunk Pacific Railway Company make objections when they see fit, and these are looked into at once with due care.

2. They (the commissioners) wanted to change my ideas, based on a good many years experience on the construction, to the classification that is allowed to contractors in Quebec.

This statement is also without foundation. The commissioners never, at any time, requested Major Hodgins to adopt in his district any classification not in accordance with the contract and specifications. As to the classification in Quebec, it was looked over and found to be agreeing with these, and therefore perfectly regular.

3. If Mr. Poulin, the engineer appointed by Mr. Parent to replace me on the western district, has allowed the introduction of a classification similar to that allowed in Quebec, this will account for the increase in the estimated cost of the line. If this increase amounts to $3,000,000 or $4,000,000 it is time the public demanded some explanation.

Such hypothetical statements of course amount to nothing at all. In the first place, Mr. Poulin was not appointed by Mr. Parent, the chairman, who did not even suggest it, but by the board, on the recommendation of the chief engineer because he was considered to be the best man for the position and to take hold of the work of reorganizing the district, which had been left in such a bad shape by Major Hodgins. At this point it may be well to remark that classification comes from the chief engineer and not the chairman or the commissioners, as Major Hodgins puts it.

Since leaving our employment, Major Hodgins has talked a good deal openly, in fact much more than prefessional dignity and the sense of justice would seem usually to permit. It is time, we feel, in justice to ourselves and to the public, before whom there is an evident desire to misrepresent the facts, to call a halt and make it necessary for the accuser to bring facts to substantiate his charge.

You will find attached newspaper clippings in reference to Major Hodgins' letter, and all correspondence relating to the circumstances of his dismissal; also a letter from our chief engineer, Mr. Lumsden, on the same subject.

In conclusion, the commissioners would respectfully request, as they do not wish to remain under the aspersion which such reports cast on them, that the whole matter be referred to and looked into by a committee of the House and that Major Hodgins be assigned to appear before the same to repeat his charges in a specific manner in order to substantiate them if he can.

That matter was referred to us on the order of the House dated April 28, which states:

That the memorandum of the chairman of the Trancontinental Railway Commission laid on the table of the House on the 24th instant and the papers accompanying same together with the letter of Major Hodgins to the public press therein referred to be referred to a special committee of the House to investigate.

It is an axiom that you cannot have a charge made against any person unless you have somebody making the charge; a charge does not come down from Heaven nor does it come from the earth nor from below the earth. A charge is the crystallization of some statement reflecting upon somebody, and to have existence it must be made by somebody. The person who produced this charge was Major Hodgins and it was Major Hodgins's charge that was referred to us by this House, and it was the matter that the chairman of the Transcontinental Railway Commission asked the House to refer to us. We summoned Major Hodgins and he appeared personally and by counsel and through his counsel, at the beginning of the investigation, he assumed responsibility for the letter in the newspaper but disclaimed responsibility for his alleged interview, and of course in language of the strongest character he also disclaimed responsibility for what he called the wild talk of the newspapers. The only thing he pretended for a moment to stand by was his letter of April 16. My hon. friend (Mr. Lennox) asked that his counsel should be paid and the matter was taken under advisement by the committee. The charge was placed before the committee and when that was done we had the crystallization of all that had gone before and we had cognizance of the only one thing we had to consider. It will not do for my hon. friends opposite to refer to newspaper talk; newspaper talk throughout this country emanating from the Conservative press is of such an irresponsible character that if this House were to investigate it parliament would have no time to attend to any other business. Surely these gentlemen opposite do not consider this wild newspaper talk as a matter worthy of our investigation. In the course of the proceedings this was pointed out and on page 455 you will find the following:

Mr. MACDONALD. Would you say that the wild talk of every Conservative newspaper in the country in regard to the Transcon-

tinental Railway Commission is before this committee?

Mr. LENNOX. No, I do not.

Mr. LENNOX. What else did I say?

Mr. E. M. MACDONALD. If I were to quote all my hon. friend did say we would never get through this debate to-night.

Mr. LENNOX. I confined my remarks to the 'wild' talk.

Mr. E. M. MACDONALD. The one thing and the only thing we had before us was to consider these charges contained in that letter of Major Hodgins, and when we came to go into the question Major Hodgins discovered he was under a misapprehension. He was suffering under that sense of irritation which men who are dismissed from employment generally feel and he found he had been under a misapprehension and that his views in regard to the classification had been modified. He found that the chief engineer had in January issued explicit instructions as to how the specifications should be interpreted and he said, that while he still had his opinion, he would not proceed further on that line. In regard to any reflection upon the integrity of the Transcontinental Commission, Major Hodgins absolutely and completely withdrew all his imputations of his own accord.

Now, the issue here is simply whether or not in the light of these facts the majority report of the committee is not a proper report and one which should be adopted by the House. That report says:

Your committee, therefore, find that Major Hodgins has not only failed to prove the charges as contained in the 'Colonist,' both in the letter and interviews, but has specifically withdrawn the same, and has unqualifiedly exonerated the commissioners and their engineers from any improper conduct or undue influence over officials under them, or of collusion with the contractors, and that if questions as to classification arise they should be decided by the tribunal previously provided therefor by the statute.

In the name of common sense, in the name of every precedent that can be invoked in this or any other parliament, how could it be seriously urged in this House—as gentlemen opposite seem to urge—that when the man who was the only man in this whole Dominion who could be found willing to take the responsibility of making a charge against the Transcontinental Railway Commissioners absolutely and unreservedly withdraws that charge, that there may be other report from the committee except that which the majority has presented. Has my hon. friend from Simcoe (Mr. Lennox) or has his astute colleague from Hamilton (Mr. Barker) undertaken to say in this report of theirs that any one of the charges made by Major Hodgins is proven. On the contrary the report of the minority treats these charges as being absolutely disposed of; it treats them as being absolutely nullified and as not being before the committee at all because in this minority report they say:

As shown by the papers and documents produced by the said commissioners to your committee and set forth in the printed Minutes of the Proceedings of your committee now reported, many charges of over-classification, of excessive allowances, and undue payments by the said commissioners to the contractors.

My hon. friends would appear to have worked overtime in order to find adjectives. and so they say: Over classification, excessive allowances and undue payments. If excessive allowances mean anything at all they mean over classification, because there never was a charge of excessive allowance except with respect to over classification, nor was there any charge made by the Grand Trunk Pacific or any body at any time that there was one dollar of excessive allowance. When my hon. friend from Hamilton addresses the House, I would like to know from him what evidence there is as to any over allowance. He may find disputes about classification, but he will find no reference whatever to over allowance notwithstanding the big adjectives which he and his colleague have put in their report.

Which charges involve and are examples of enormous overpayments.

Mark the word:

—enormous overpayments——

When there is not a little of evidence to warrant the charge.

They cover and include not only the charges made by Major Hodgins, but other specific and more serious complaints of a like nature and description——

This is absolutely inaccurate and untrue, because there never was before us a single document or statement from any source to warrant any such language, and I leave it to the hon. member (Mr. Barker) to produce it if he can.

—and not merely for the period dealt with by Major Hodgins but are continuous up to the time of the order of reference to your committee.

You may search this report of theirs from end to end, but will not find a single word which evidences any belief on their part that there is extant to-day any charge by Major Hodgins. It is absolutely wiped off the slate, there is no such thing in existence; there is no one willing to say: I take the responsibility of fathering that statement. None of them do it. My hon. friend (Mr. Carvell) took a certain position as to the course which should be pursued by the committee and said that we should take further evidence along the lines of fraud if any there were.

These gentlemen would not take such a position then, and have not done so to-day. While they admit that the charges referred to the committee are abandoned and withdrawn, and while both are sufficiently experienced politicians to know that when a committee is seized of a particular fact which has been abandoned before them and withdrawn from them by the gentleman who initiated the proceedings, that there is nothing more for the committee to do, yet they wish to take up the time of the House for the purpose of enabling them to beat a retreat on this question, and to let down their press in various portions of the country. Their papers have been talking in an irresponsible and erratic way, and they wish to save the faces of some of their friends in this matter. That is the whole story, that is all there is in it, because they do not say the committee should investigate Major Hodgins' charges any longer, but ask that the subject matter be recommitted to the committee to deal with other matters altogether.

I propose to deal with one or two matters referred to in this minority report. entirely irrelevant as they are, for the purpose of disposing of and wiping away completely the last remnants that remain of all the story of insinuation and fraud we have heard upon this subject. I said my hon. friends do not pretend that anything left here involved any imputation on the commission. My hon. friend from Hamilton was reading a number of letters which he put upon the record and at page 470 of the record I ventured to interject. I said :

You are not reading these letters with the idea of showing there is anything improper on the part of the commissioners?

These are the letters the hon. member for Simcoe was reading this morning. The answer was :

Mr. Barker.—These letters will not establish that.

In other words, the letters which my hon. friend from Simcoe was reading this morning to establish that there was something wrong, according to the hon. member for Hamilton before the committee, would not establish anything of the kind. On page 475 of the evidence it was stated :

I do not understand my hon. friends to urge that there is anything improper in the position of the commissioners in dealing with the engineers, so it is purely a question of a difference of opinion between these engineers as to what the classification will be.

Mr. Lennox.—I do not want you to misunderstand our position. I am not going to charge any wrong-doing without serious reason for so believing, but I do not feel that there is set out in these letters sufficient to make it very, very suspicious.

Mr. LENNOX. The 'not' in that sentence should not be there.

Some hon. MEMBERS. Oh, oh.

Mr. LENNOX. Do not laugh at me ; the laugh will be on my side. I have received a letter from one of the reporters calling attention to that fact. He calls my attention to the fact that in the original that 'not' did not occur, but when it was set in type it was there. It should read :

I do not understand my hon. friends to urge that there is anything improper in the position of the commissioners in dealing with the engineers, so it is purely a question of a difference of opinion between these engineers as to what the classification will be.

Mr. Lennox.—I do not want you to misunderstand our position. I am not going to charge any wrong-doing without serious reason for so believing, but I do feel that there is set out in these letters sufficient to make it very, very suspicious.

That is what I said and that is what is in the original report ; that is what was sent to the printer, and without my intervention that is what will appear in the subsequent reports that will be printed.

Mr. E. M. MACDONALD. I am not responsible for any mistake in the record.

Mr. LENNOX. Neither am I.

Mr. E. M. MACDONALD. Even with the explanation of the hon. member for Simcoe he still stands for this, that he will not charge any wrong-doing without serious reason for so doing.

Mr. LENNOX. Exactly.

Mr. E. M. MACDONALD. And he would not say, and I am sure my hon. friend would have gone to the very extreme that it was possible to go even after the correction, that there was anything suspicious about the classification.

Mr. LENNNOX. Very, very suspicious.

Mr. E. M. MACDONALD. But that will not help my hon. friend from Hamilton (Mr. Barker). I said :

These letters——

That was from Woods to Lumsden.

—are such as would pass between engineers representing different interests in connection with the construction of any railway in this country.

Mr. Barker.—We admit that.

Mr. Macdonald.—I do not know how one engineer could say to another that there was over classification in a particular district without he used language such as is found in these letters. There is no way in which he could say there was over-classification or that he differed in his opinion with the subordinate engineers as to the classification that had been made.

Then on page 449 I was very anxious to see where my hon. friends were on this question, whether they would take the responsibility after Major Hodgins had abso-

lutely abandoned and withdrawn all the imputations against anybody of standing by any charges. I ventured to ask my hon. friend from Hamilton (Mr. Barker):

Mr. Macdonald.—What is your view in regard to the charges of improper conduct on the part of the commissioners, interference as to classification?

Mr. Barker.—That will be the result of the inquiry, whether there is over-classification or not. It is not perhaps material at present whether they intended them or not; the question at present is whether there is over-classification or not, whether from mistake or otherwise is a separate question.

Mr. BARKER. That is the question.

Mr. E. M. MACDONALD. That is the question, and I understand my hon. friend to confirm the position he took before the committee that there is no issue before this House involving any imputation upon the commissioners of any wrong-doing.

Mr. BARKER. I do not say there is or is not. It is none of my busines to say that.

Mr. E. M. MACDONALD. My hon. friend then takes the position that he is unable to say whether there is or not?

Mr. BARKER. I say it is not a part of my business to say whether there is anything beyond over-classification.

Mr. E. M. MACDONALD. That is a matter of satisfaction, that we have got the issue down to just one thing; the issue is simply one of correct classification by engineers.

Mr. LENNOX. No, it is not that.

Mr. E. M. MACDONALD. What is it?

Mr. LENNOX. The first issue is was there over-classification? That being established find out if you can whether it was improper or dishonest classification. These are the two points, but if you establish the first you have established the important point.

Mr. E. M. MACDONALD. Then my hon. friend takes this position that because two engineers who were working on this northern land of ours, several hundred miles away from this government and the commission and the chief engineer, one representing the Grand Trunk Pacific and one the Transcontinental Railway Commission took different views as to how a certain cutting should be classified, there may be fraud on the part of the commissioners and he would seriously suggest to this House by this minority report or rather ask this House now to stop at this busy season to consider such a flimsy proposition as that. If the opposition are in this position to-night, if it is simply a question of classification, I submit that this House should not be kept up with a question of that kind.

When we are dealing with the question of classification by the engineers, what are we dealing with? We are dealing with two questions. There are certain specifications provided in every contract. In this case the specifications were drawn by Mr. Lumsden, the chief engineer, in whom hon. gentlemen opposite have a great deal of confidence, against whom no one suggests anything. These contracts contain the specifications, and there are only two matters to be considered and determined in this question. First, what do those specifications mean when their technical language is reduced to plain Anglo-Saxon; and, second, are they properly carried out. These are purely technical questions to be decided by the engineers absolutely. The only point is this. Shall this question, which does not involve anything but the determination of a simple engineering problem, be referred back to the committee for consideration, or left to the chief engineers of the Grand Trunk Pacific and of the Commission and the arbitrator provided under the agreement with the Grand Trunk Pacific in case the two engineers disagree? To that question there can be but one reply. My hon. friend from Simcoe (Mr. Lennox) rather attempted to lead the House to believe that the Deputy Minister of Justice had not given any opinion on this question of classification. My hon. friend from Hastings (Mr. Northrup) read this afternoon the very opinion which the hon. member for Simcoe indicated had never been delivered.

Mr. LENNOX. It was exactly the same as I read it this morning.

Mr. E. M. MACDONALD. I had some difficulty in inducing you to read it.

Mr. LENNOX. I always yield to my hon. friend.

Mr. E. M. MACDONALD. This is what the Deputy Minister of Justice said:

It seems to me however that these questions——

That is the question which was agitating the minds of our hon. friends opposite.

—are largely engineering questions, the solution of which depends principally upon the judgment of the engineer, having regard to the terms used in the specification.

Now, if the chief engineer of the Transcontinental is competent to perform his duty, if he is able to define what specifications mean and what is required by those specifications, where is the necessity of this House going on and debating the matter? Even the press of our hon. friends opposite indicated some time ago that instead of this question being entertained by a par-

liamentary committee of inquiry, it ought to go to this very tribunal of engineers for determination. There is no newspaper in this country so extreme in its views as is the leading organ of the Conservative party in my province; and on May 23rd, when our hon. friends opposite and ourselves were struggling with this question in the committee, that newspaper indicated in the clearest possible language, that it was a mistake for us to bother with the question at all. This is what it says:

In this connection it may be advisable to refer to a report in the Toronto 'News,' when it editorially says that there seems to be a probability that the charges preferred by Major Hodgins against the commissioners of the Transcontinental Railway of over-classification may yet be investigated by a more impartial tribunal than the committee of the House of Commons now sitting at Ottawa.

And it explains this probability by adding that it has transpired that the engineers of the Grand Trunk Pacific Railway have been for some time disputing the Quebec system of over-classification and consequent over-valuation and cost of the railway excavation material approved and adopted by the commissioners of the Transcontinental Railway on somewhat similar lines as they are disputed by Major Hodgins, with the result that the engineer's dispute is about to be referred to an expert tribunal composed of the chief engineer of the Grand Trunk Pacific Railway and a third arbitrator to be chosen by the two engineers, or, if they disagree, by the Chief Justice of Canada.

It will be matter for public satisfaction if this important case cannot be finally disposed of by the report of the majority of a partisan committee, but will come up for full investigation before 'a more impartial tribunal.'

So that my hon. friends have been engaged in a work entirely of supererogation. Their friends throughout the country look upon Major Hodgins' charges as dead and buried, and anticipated the result of the committee's investigation by suggesting that whatever there was to be considered at all should be dealt with by this tribunal of engineers. I am only surprised that my hon. friends do not appreciate the facts, which are patent to everybody, better than to raise this great hullabaloo over the charges of Major Hodgins, which are now so effectually exploded that a thousand debates such as we have had would not resurrect them anywhere in the minds of the people.

I want to show you conclusively how the interests of the people were safeguarded when the Act was passed in 1893. We have heard a great deal about the agreement with the Grand Trunk Pacific. Let me draw your attention to a point not referred to my hon. friends. In the Act providing for the construction of the Transcontinental Railway, section 16 provides:

The commissioners shall let the work of constructing the eastern division by tender and contract after the plans and specifications therefor have been duly advertised, and they shall accept the lowest tender put in by a contractor who, in the judgment of the commissioners, is possessed of sufficient skill, experience and resources to carry on the work or such portion thereof as he has tendered for.

Thus it is provided that the commissioners shall let the work by tender and contract to the lowest tenderer, and every contract has been let to the lowest tenderer, and section 17 provides that:

The contract so entered into shall be guarded by such security, and contain such provision for retaining a portion of the contract moneys, to be held as a reserve fund for such periods of time, and on such conditions as appear to be necessary for the protection of the public and for securing the due performance of such contracts respectively.

When the souls of my hon. friends are being vexed and their press throughout the country is exclaiming about the millions of Canadian money which is being imperilled, they never venture to tell the public that the statute of 1903, providing for the construction of this road, anticipated disputes and provided that the contractors should be required to give security for the due performance of their contracts, and provided also for a retention of money, so that if any dispute should arise it would be settled in the interests of the Canadian people. Here is another provision safeguarding the public interest:

No money shall be paid to any contractor until the chief engineer has certified that the work for or on account of which it is claimed has been duly executed and that such money is due and payable, nor until such certificate has been approved by the commissioners.

So that the people of Canada have, first, the absolute responsibility of the chief engineer, whose integrity does not seem to be questioned by hon. gentlemen opposite, and over and above that there must be the approval of the commissioners to the chief engineer's certificates. I have said that this Act contemplated that every precaution should be taken to safeguard the interests of the people. These precautions were taken in every contract. Section 15 of each and every contract, including the contract of Mr. Davis, to whom my hon. friend from Hastings (Mr. Northrup) rather sneeringly referred, provides that the chief engineer shall be the sole judge of work and material in respect of both quantity and quality, and his decision on all questions in dispute with regard to work and material shall be final. It goes on to say:

Works or extra or additional works or changes shall be deemed to have been executed, nor shall the contractor be entitled to payment for the same, unless the same shall have been executed to the satisfaction of the

engineer, as evidenced by a certificate in writing, which certificate shall be a condition precedent to the right of the contractor to be paid therefor.

What is the use of talking about the question of classification and about a committee of this House investigating what the chief engineer of the Transcontinental did or did not do, especially in the absence of any suggestion of any wrong-doing on his part, or of anybody taking the responsibility of indicating that any wrong has been done? If the chief engineer has certified to payments to which he ought not to have certified, let us deal with that question. But if there are disputes between the engineers as to what is proper classification, and if the one to decide is Mr. Lumsden, no one has any right to pass him over. He stands in the path, and only on his certificate and only by his direction can money be paid. Further, let me direct your attention to section 33 of this contract, which contains the covenant to pay:

In consideration of the faithful performance by the contractor of all and singular the covenants and agreements herein contained, the commissioners hereby covenant and agree with the contractor that they will well and truly pay him on the full completion by him of all the work herein specified within the time specified and limited for the completion thereof to the satisfaction and subject to acceptance by their chief engineer and subject also as herein provided——

——certain schedule prices fixed in the contract. Then comes a section under which it is provided that the contractors are not entitled to receive payment until the completion of the work.

34. Cash payments equal to about ninety per cent of the value of the work done, approximately made up from returns of progress measurements and computed at the prices agreed upon, or determined under the provisions of this agreement, will be made to the contractor monthly, on the written certificate of the engineer that the work for, or on account of which, the certificate is granted has been duly executed to his satisfaction, and stating the value of such work computed as mentioned, and upon approval of such certificate by the commissioners; and the said certificate and such approval thereof shall be a condition precedent to the right of the contractor to be paid the said ninety per cent, or any part thereof. The remaining ten per cent shall be retained until the final completion of the whole work to the satisfaction of the chief engineer for the time being having control over the work;——

So that, at all times, there is 10 per cent of the progress estimates retained in the hands of the chief engineer. And, besides, as an hon. friend beside me reminds me, there is the deposit of 10 per cent of the estimated cost of the contact which had to be advanced by the contractor and which is a further guarantee against any mistake made by an engineer.

And section 39 of the contract provides:

The progress measurements and progress certificates shall not in any respect be taken as binding upon the commissioners, or as final measurements or as fixing final amounts; they are to be subject to the revision of the engineer in making up his final certificate, and they shall not in any respect be taken as an acceptance for the work or release of the contractor from responsibility in respect thereof, but he shall at the conclusion of the works deliver over the same in good order, according to the true intent and meaning of this agreement.

So, the commissioners have absolutely safeguarded the interests of the people by these provisions. There is this further check, which is contained in the agreement with the Grand Trunk Pacific Railway. There is the provision of section 7, which has been quoted, and there is that of section 47. The Grand Trunk Pacific Railway Company, which company is to pay interest on the cost of construction, where any dispute arises between their engineer and the engineer of the Transcontinental, can have the matter determined first under section where it was referred to a board of arbitrators composed of the chief engineers of each road, and in the event of disagreement by the appointee of the chief justice, and finally under section 47, which provides that when you come to the end of the enterprise, if any dispute arises between the company and the commission as to the elements that enter into the cost, it can all be reviewed by an entirely independent tribunal. In the face of all this, are hon. gentlemen opposite serious when they ask that a committee of this House be asked to investigate whether two engineers away in the north country on district 'F' of this road are correct in their opinions on a question of classification? And when hon. gentlemen opposite talk about arbitration, and as to whether it can legally be carried on under this section or not, the fact remains that these gentlemen are already at work on the arbitration. It was intimated that no request for arbitration has been made. I would direct the attention of the House to page 467 where we find the letter of Mr. Woods, dated April 28 of this year, where he asks:

Dear Sirs,—This is to acknowledge receipt of your letter of April 24, in regard to classifications given on districts 'B' and 'F,' wherein you say you could confer with me, either in Ottawa or Montreal, so as to arrange dates for arbitrating the points in dispute and for the appointment of a third arbitrator, &c.

In reply thereto will say that the action you propose cannot be taken——

Mr. BARKER. Cannot be taken.

Mr. E. M. MACDONALD (reading):

—until after you have complied with my request of October 7, which, as you will recall, has been several times repeated, that you and I personally make an inspection of those portions of the work on districts 'B' and 'F' where it is claimed improper classification has been made.

I will let my hon. friend know, if he is not already aware of it, that the commission came to the conclusion, before a third arbitrator was appointed, that it would be proper for the chief engineer of the company and the chief engineer of the contractors to agree as far as they could, with a third to be appointed in case of dispute. And these gentlemen have been engaged for a month in settling the classification. I happened to come up from Nova Scotia with the chief engineer who was going to look into some of these quesetions on his return. When these gentlemen agree, the classification will be fixed. If Mr. Davis, Mr. McArthur or any other person, or if the sub-contractors—because they are the ones primarily interested and not the large contractors—if these contractors have at any time, as a result of wrong classification, received more than they were entitled to, then by virtue of the ten per cent retained on the progress estimates, and the ten per cent of the whole contract in the hands of the commission. every error can be rectified. Mr. Ritchie. who, I understand, is a counsel of great eminence and a peculiar friend of my hon. friends opposite, says in his letter on this subject, page 415:

Having regard to paragraph 39 and other paragraphs of the contract, I am inclined to think it would not be successfully contended that the engineer in case of a mistake in measurement or classification could not rectify the error when making up his full certificate, and that he would not be precluded by progress measurements and certificates from so doing unless indeed it should turn out to be practically impossible after the work had been completed to determine the kind and characteristics of the material in the cut, so as to be in a position to make a proper classification.

The country has the advantage of the judgment of the chief engineer in the first instance. Then it has the advantage of the arbitration going on with the Grand Trunk Pacific. Now, my hon. friend from South Simcoe (Mr. Lennox) with great adroitness for which I congratulate him, having a bad case to deal with, attempted to make the point that the engineer was induced to take a certain course. There is not the suggestion of a tittle of evidence to that effect before the committee. It exists in imagination only. And when the hon. member for East Hamilton (Mr. Barker) intimated, in interruption of my hon. friend from Carleton, N.B. (Mr. Carvell) that the specifications were altered, he knew that they were not——

Mr. BARKER. The interpretation I said.

Mr. MACDONALD. The interpretation is another thing, but that was not what you said. It is one thing to alter a solemn contract duly drawn up and signed, and it is quite a different thing to take a different interpretation of what that document means. This afternoon the hon. gentleman intimated that the document itself had been altered. Such a thing never occurred. There never was an interpretation of the specifications issued by the chief engineer until the 9th day of January last. Each engineer had the specifications and every engineer took his own view of it. The result was necessarily that there were variances in the classification. I think the chief engineer of the Transcontinental, should, long before January last, have sent out instructions to indicate what his view of the specifications was in order that there might be uniformity in classification on the Transcontinental. But he did not arrange to do so, and I am here to say that I think if he had sent out those instructions last summer, possibly Major Hodgins would never have got into the difficulty which has occurred. I think the chief engineer of the Transcontinental Railway should have been more explicit when he went up to district 'F', in telling the engineers there just what his views were, and what his interpretation was. But he never made any interpretation until January 9, of this year. Will my hon. friends venture to say that this is any fault of the commissioners? There are documents and letters on record which indicate that they asked that this should be done long ago, and they show that the district engineer in the eastern division had applied for that uniform system of classification. So when the hon. member for Hamilton now ventures to say that the specifications were not altered, but the interpretation of them was altered, he is still incorrect, because he cannot find on record any official statement made by the chief engineer in which any interpretation was put upon them.

Mr. BARKER. The commissioners writing by their secretary to the chief engineer approved of his modification of his previous interpretation.

Mr. E. M. MACDONALD. Well, my hon. friend and his associates are doing what they usually do when dealing with any question of which they are trying to make a scandal, they are confusing language. Supposing Mr. Lumsden took a certain view of a certain cut down in the province of Quebec, his view as to whether that cutting should be classified as so much solid rock or so much loose rock, that would have nothing whatever to do with the language in the specifications or their general interpretation.

Mr. BARKER. What were all these legal letters about and letters of opinion?

Mr. E. M. MACDONALD. Legal letters, because they were dealing with a concrete case. These legal gentlemen were undertaking to deal with the question as to the proper interpretation of the specifications, because the question of classification was entirely in the hands of the chief engineer. Sir Alexander Lacoste, who I understand is one of the legal gentlemen our hon. friends have consulted, is not a gentleman who, as insinuated, would give an opinion merely to please a client. I am sorry the hon. member for Jacques Cartier (Mr. Monk) is not in his seat, because I would like to commend him the task of reading the opinion of Sir Alexander Lacoste, to find out in it how little there is in all the squabble over this question, because when Sir Alexander Lacoste deals with these questions, it is in such a clear manner that it makes my hon. friend's argument absolutely untenable. Therefore, we have established now that even if the allegation is that interpretation of these specifications was altered it does not avail them, because there was never any original interpretation to alter. But finally, on January 9, Mr. Lumsden issues a document in which he finds there were six conditions under which you can class solid rock: First, rock and ledges; second, rock and boulders over one cubic yard; third, conglomerate rock or plumb pudding stone; fourth, detached ledge rock in mass over one cubic yard; fifth, rock in masses of over one cubic yard; sixth, shale rock; six different defined conditions which can be classified as solid rock, and since that time they have been interpreted in that way. My hon. friend from Hastings undertook again to distort language with a view of endeavouring to show that Mr. Lumsden took that position under pressure. There is not any evidence of that. Mr. Newcombe, the Deputy Minister of Justice, pointed out when the matter was referred to him, that Mr. Lumsden had evidently overlooked the use of the words 'cubic foot' instead of the words 'cubic yard.' As a result, Mr. Lumsden corrected his interpretation which he had previously given on December 9, and used the words 'cubic yard' in deference to the suggestion of the Deputy Minister of Justice. But in no other respect did his interpretation differ from that made on December 9, as he stated at the end of it that he had made it after consultation with Mr. Schreiber, who was the consulting engineer in the western country. Now this is what the chief engineer did, and since January 9 of this year these uniform instructions as to interpretation have been in existence all over the Transcontinental. There never was any complaint made by the Grand Trunk Pacific in regard to classification previous to October 7 of last year, when Mr. Woods wrote on that subject. The hon. member for Simcoe endeavoured to deduce some argument from the statement in Mr. Lumsden's letter that Mr. Doucet at one time had taken a position in which he agreed with Mr. Woods. My hon. friend from Simcoe was not fair, or he overlooked the letter of Mr. Doucet which is to be found on page 399, in which he expressly states that he affirms the very position he took in the verbal discussion he had with Mr. Lumsden. But this letter of Mr. Woods, which has been made so much use of by the Conservative press, has been completely disposed of. It is disposed of by the letter of Mr. Doucet on page 398, it is disposed of by the letter of Mr. Huestis, on page 400, in which Mr. Huestis says:

Although Mr. Woods distinctly stated on the trip to La Tuque just completed that his interpretation was different to that as expressed by me, yet Mr. Armstrong told me that when he and Mr. Woods visited the work in the early part of October cut from station 5950-5969 which is classified by Mr. Bourgeois to be 88 per cent solid rock, 12 per cent loose rock was judged by Mr. Woods to be 100 per cent solid rock, which he could not possibly state on his declared interpretation of the specifications, as the eastern end shows a cut where masses of material rather than ledge rock occurs.

Also by Mr. Bourgeois' letter on page 402, where Mr. Bourgeois, who is the local engineer, states that he had kept gangs of men in these cuts measuring the boulders that came out in order to verify their size, and to make it clear whether or not they should be classified as solid rock. As a matter of fact, I am prepared to state that Mr. Woods does not pretend to suggest that this error in classification, which he claims existed in October, occurred through any instructions that came from any superior.

Mr. LENNOX. All the more reason why that should have been done.

Mr. E. M. MACDONALD. Mr. Lumsden was there, who could speedily correct it. My hon. friend from Simcoe knows as well as I do that the decision of an absolutely technical question as to whether any cut should be classified one way or another, is a matter peculiarly for engineers, and not for lawyers or members of parliament. Not only that, but you will find Mr. Woods' letter written in February 20 of this year, on page 469, in which he absolutely accepts the interpretation which was put upon the specifications by Mr. Lumsden in the previous January, and in which he says:

We are quite satisfied with your interpretation of the specifications and with your instructions, which are explicit. I do not know the date of these instructions or when they are supposed to become effective, but from reports from my assistants at Winnipeg and Quebec, there does not seem to have been any change in classification of work previous-

ly estimated was not classified according to your recent instructions being over estimated in both loose and solid rock.

Mr. Woods and Mr. Lumsden know better than the member for Simcoe and the member for Hamilton what is right, and they will so decide, if they are honest men. I do not think it is necessary to detain the house any longer. The conference between these arbitrators is now going on. If any interpretation of the classification upon any portion of this railway should, upon investigation by the chief engineer of the Transcontinental, appear to be incorrect, he will deal with the matter. There is no use talking moonshine about the people of Canada losing thousands and thousands of dollars. There is not a contractor who has not got 20 per cent, or 10 per cent of all the money that can possibly be given to him and 10 per cent of the whole value of his contract in the hands of the commission. Not one of the commissioners, not Mr. McIsaac, not Mr. Reid, not Mr. Young, not Mr. Parent, not one of them, can give to any one of these contractors a five cent piece unless Mr. Lumsden, the chief engineer, says so, and if any one of these men has got a five cent piece as a result of any incorrect classification, every five cent piece, every dollar, every thousand dollars that he has got incorrectly can be got back from him in consequence of the required certification of the chief engineer. The whole thing is in his own hands ; the responsibility is his. It is part of the political game of hon. gentlemen opposite, as they play it, to make the people believe that the gentlemen composing this commission have something to do with the question of classification. I do not know that I could conclude very much better than by asking the hon. member for Hamilton to show how a member of the commission, or a member of the government, could give to a contractor, or a sub-contractor, one dollar unless the chief engineer said not only that he should have it but that if he had got it he had a right to keep it. I submit, Mr. Speaker, that while we have had under the consideration of this House and of the committees various absurd and ridiculous charges which have emanated from hon. gentlemen opposite, who have deserted every tradition of their party, abandoned every alleged policy, the absolute fiasco which has followed their attack upon the management of the Transcontinental Railway is the worst that has marked their whole career, and this fact is so apparent that I need not argue further. My hon. friends are simply covering their retreat, and I should apologize to the House for detaining it so long.

Mr. SAMUEL BARKER (East Hamilton). Mr. Speaker, I have listened with a good deal of pleasure to the hon. member (Mr. E. M. Macdonald) who has just sat down. I give him credit for making a very ingenious speech on this subject and evading as carefully as possible any of the questions that are really involved in the report and the amended report now before the House. In rising to second the amendment I do not intend to follow the very able speech of my hon. friend from South Simcoe (Mr. Lennox) who went so fully, elaborately and completely into the facts of the case that it would be more than useless to occupy the time of the House in repeating what he has said. I wish to make a few remarks upon the argument of the hon. member for Carleton, N.B. (Mr. Carvell). That gentleman has a peculiar faculty of putting facts wrong end foremost. He is noted for that and he does it with all the apparent sincerity in the world, but he has only to be watched closely to see where the art comes in and how far he departs from the real facts. For example, he started off by asserting that Major Hodgins charged that if what he saw in Quebec were followed by Mr. Poulin, his successor, it would make a differencce of $3,000,000 or $4,000,000 in the cost of district 'F.' No such language was ever used by Major Hodgins. The hon. member for Carleton, N.B., simply reverses the facts and puts upon Major Hodgins' language that was used by the contractor. The contractor, in an interview with a newspaper, had made certain statements in regard to the increase in the cost of his work and in referring to that he had eulogized the changes made in the work and had said that the increase was a proper one and would produce a fine piece of work. It was in reference to that that Major Hodgins made his statement. Major Hodgins never said anything like what was asserted by the hon. memebr for Carleton, N.B., and I think that the hon. member for Carleton, N.B., must have known that at the time. I shall show in a moment exactly what Major Hodgins did say and how he came to refer to the contractor's statement. The hon. member for Carleton, N.B., also said that Major Hodgins signed the estimate for September. Major Hodgins had been dismissed before the estimate for September was prepared and Major Hodgins, on the contrary, said that some one had signed that estimate who did not know anything about the facts. I do complain somewhat of one thing done by the hon. member for Carleton. In the committee an effort was made by Mr. Murphy, counsel for the commissioners, after the case had been closed, to call Mr. Armstrong. The hon. gentleman who has just taken his seat objected to that. He was against Mr. Armstrong being called. The hon. member for South Simcoe (Mr. Lennox) and I did not object to Mr. Armstrong being called provided the case was opened, but we did object to Mr. Murphy calling one or two witnesses when the case was closed if we were to be barred from calling such wit-

nesses. It was a very plain position. There is not an hon. gentleman on the opposite side of the House who will say that we were not perfectly reasonable in that. We would not have objected, we were trying our best to go on with the inquiry and to call further witnesses, but they having closed the inquiry and then desiring to put in more witnesses of their own, we said: If you open it you must open the whole case and we will call further witnesses. That ended Mr. Armstrong.

Mr. LENNOX. The hon. member for Carleton, N.B. (Mr. Carvell) denied that this afternoon and contradicted me.

Mr. BARKER. The facts are as I have stated them. The hon. member for Pictou (Mr. Macdonald) strongly objected to Mr. Armstrong being called because he knew it would open the case and give us an opportunity of calling witnesses if we desired to do so. It was most unfair, it appears to me, and I hope hon. gentlemen opposite will not regard it as right or proper, that the hon. member for Carleton, N.B., failing to call that witness because of the case being closed, should read to the House a statement made by Armstrong, when we have no opportunity of cross-examining him or bringing him face to face with any other witnesses. The hon. member for Carleton, N.B., took credit to himself that he had invited us to prove anything more after the closing of the case. Over and over again he repeated that they had challenged us to call witnesses to prove any fraud, but the hon. gentleman carefully kept back from the House what he really did say. How could we, he said, be allowed to call witnesses to prove fraud if no member of the House would take it upon himself to charge fraud? The hon. gentleman (Mr. Carvell) was very prudent in his offer. He was quite willing that we should go into a case of fraud provided one of us got up and formally charged the commissioners with fraud. He knew perfectly well that no member of the committee could with propriety make any such charge. We were not there as prosecutors. We were there under the order of this House to investigate, and it would have been improper for any member of the committee to make a charge of fraud against any person. We were there to receive testimony, and the proposal of the hon. member (Mr. Carvell) that we should make a charge of fraud was simply humbug and he knows it. Then, the hon. gentleman (Mr. Carvell) said, as showing how defective Major Hodgins was in his knowledge of what passed on section 'B' that Hodgins represented that at La Tuque cutting, he was told certain work was classified at 86 per cent solid rock, and the hon. member said that Major Hodgins himself conceded that it ought to have been classified at 40 per cent. The hon. gentleman (Mr. Carvell) went on to add that in fact it was not classified at so much as 40 per cent but at only 32 per cent and had been on a previous occasion classified at 29 per cent. The facts about that are very simple and the hon. gentleman knew them as well as any member of the committee. Major Hodgins was taken down to section 'B' in Quebec; he knew nothing about the country, he had no plans and no profiles; he was just taken there to look at the work. He was shown a particular piece of work, and asking how it had been classified he was told by one of the men on the spot that it had been classified at 86 per cent solid rock. Major Hodgins may or may not have been correct in his recollection of that. He left shortly after for Ottawa, he had no memoranda about him, but nobody who knows Major Hodgins believes that he would wilfully misrepresent. I would not say that Major Hodgins may not have been mistaken; he may have made a mistake in describing the exact location of the piece of work he was speaking about.

Mr. J. T. SCHELL. That cutting is the only cutting on the eastern division of the Transcontinental that has 100 feet in depth. I know well what I am speaking about and I may say that the cutting is not all out yet and they were only working upon a very small portion of it at that time.

Mr. BARKER. La Tuque is a general designation of the place Major Hodgins went to, but he went over several places in the neighbourhood and he did not confine his walk to that particular cutting. He had firmly in his mind one spot which was represented as being classified at 86 per cent.

Mr. J. T. SCHELL. He specially mentions a cutting 100 feet deep and La Tuque is only one of that depth.

Mr. BARKER. It is clear that Major Hodgins is not alone in referring to 86 per cent classification in that neighbourhood, because the Grand Trunk engineers find a similar classification, and what Major Hodgins says is that it was quite possible for him to have made an error as to the exact spot when he was speaking several months afterwards. I assert, that when the member for Carleton ((Mr. Carvell) tells us that Major Hodgins is an honourable man and a straightforward and a truthful man, it is neither fair nor right for that hon. gentleman at the same time to represent him as wilfully misrepresenting the classification. That is all I have to say on that subject.

The hon. member (Mr. Carvell) went on to refer to force account, and he very strongly condemns Major Hodgins for the advice he gave with regard to it. But Mr. Lumsden the chief engineer expressly stated that he did not find fault with Major

Hodgins as to his advice about force account nor was he dismissed on that ground, and I shall show later that Major Hodgins was treated most unfairly and most unjustly by the commission with regard to that matter. The hon. member for Pictou (Mr. Macdonald) claims that Major Hodgins unreservedly withdrew his charges. That is putting it very strongly indeed as any one who has heard or read the evidence of Major Hodgins must admit. Major Hodgins was confronted with these legal opinions that we have heard so much about and in reply to the member for Pictou he said he did not know of those opinions when he wrote his letter. He was then asked if he would have modified his own judgment as to what he said in his letter, had he known of these legal opinions. Major Hodgins confessed that it would have had an effect upon his mind and might have altered his opinion as to the acts of others, but as to his own division and as to the cases in which he found fault with classification he never withdrew one he had uttered, and he had remained of precisely the same opinion. He was manly enough to say that if the engineers acted upon legal advice, accepted by the chief engineer, that certainly would modify his opinion as to the conduct of these engineers. But the hon. gentleman (Mr. Macdonald) carefully concealed the fact that the over classification as to which Major Hodgins gave evidence was all done before the change was made in the interpretation. The action taken by McIntosh had altered the estimates from January to June and July, 1907, but the legal opinion were later so they could not affect the charges made by Major Hodgins himself. The hon. member (Mr. Macdonald) went on to speak of obstructors and the press, but there is no question of obstruction before us here and it would be useless to follow him in that line of argument. The simple question is: The House having referred a certain subject to the committee, whether the committee should deal with it or whether they should take the opinion of Major Hodgins that another body could deal with it better than the committee. It is not for the committee, it is not for Major Hodgins to decide that. The House, knowing the facts, knowing the statute which provided for arbitrators, the government knowing all about that agreement of January 10, 1908, knowing every fact that we know today, appointed the committee and directed us to investigate. By what authority does the committee accept from Major Hodgins who is a mere witness the opinion that some other body can deal with it more satisfactorily than a committee appointed by this House. Then the hon. member (Mr. Macdonald) tries to make out there is some excessive verbiage and he says we charge over classification, excessive allowance, and undue payments. There might be over classification by the resident engineer and it might go no further, but still that might be a matter for proper inquiry. But there was not only over-classification, it was allowed, and undue payments given.

Those are the specific charges made and the amendment urges that we ought to continue the investigation of these subjects.

The hon. member also comments upon the fact that in putting in before the committee the various letters that have been referred to to-day I had said that those letters did not charge or prove fraud against the commissioners; I say so still. There is nothing in those letters that indicates any fraudulent conduct on the part of the commissioners. That has never been pretended. The letters do not say there was any fraud, but they prove what is on their face, that over-classification was allowed by the resident engineers. That is all the letters say, and that is all we put them in to show. If the inquiry had gone on, the committee would not have rested with those letters; we would have sent for those Grand Trunk engineers, would have sent for Mr. Armstrong and Mr. Woods, and would have heard all the evidence, we would have brought these witnesses face to face with the government engineers, and would have found out what the truth is about all this. But when the committee got to that point, and with those letters before them, showing most grievous errors apparently, certainly enormous amounts at stake far beyond anything that Major Hodgins knew as to his own division, the committee shut down and said they would investigate no more, although they were ordered to investigate by the House. That is all I have to say in answer to the speech of the hon. member for Pictou (Mr. E. M. Macdonald).

I propose to take up what I understand to be the real questions submitted to us and to deal with them in as brief a manner as I possibly can. The hon. member for Pictou (Mr. E. M. Macdonald) says: What is the question which was submitted to us? That can be answered very simply. In April, 1908, certain letters, interviews and comments appeared in the newspapers commenting upon charges affecting the commissioners of the National Transcontinental Railway, and these were of such a character that the commissioners considered it their duty to bring the matter before parliament, which they did by memorandum to the First Minister, appearing at page 15 of the printed evidence. That is the starting point, the bringing up of that memorandum of Mr. Parent by the First Minister. The First Minister made a motion to refer that memorandum and other papers to a committee. The motion is printed at page 5 of the evidence, and as it appears here is somewhat altered from the form in which it was at first introduced by the Prime Min-

ister, the words 'together with the letter of Major Hodgins to the public press therein referred to,' having being inserted before the motion passed. It is dated 28th April, 1908, and reads :

Resolved, that the memorandum of the chairman of the Transcontinental Railway Commissioners to the Prime Minister, of April 23, and laid on the table of this House on the 24th instant, and the papers accompanying the same, together with the letter of Major Hodgins to the public press therein referred to, be referred to a special committee of five members, with instructions to investigate the matters and charges therein mentioned, and that the said committee be composd of:

Messrs. Carvell, Macdonald (Pictou), Geoffrion, Barker, and Lennox; and that they have power to send—

Not to send for Major Hodgins, but

—to send for persons, papers and records, to examine persons on oath or affirmation, and to report from time to time.

That was the reference, but when you come to the papers themselves which were referred to the committee you find that to the memorandum were appended Major Hodgins' letter and various newspapers and other papers. For the letter Major Hodgins of course accepted full responsibility. As to the interviews he did not repudiate them in the sense that the repudiation has been represented here. He simply said that he had an interview with a newspaper reporter; that the newspaper reporter took a short memorandum from him, perhaps as he described it, it would occupy a space of two or three inches, and having got, in newspaper reporter fashion, the substance of what he wanted, the reporter elaborated that out into a rather lengthy article, and so Major Hodgins says: I do not accept responsibility for the elaboration, I only accept responsibility for what I told him. That is not withdrawing the charge, that is not repudiating anything he said; he over and over again repeated that he stood by whatever he said, and especially he stood by the letter. In that letter Major Hodgins made very distinct charges about which there could be no mistake. First of all he said that the root of all the trouble between the commissioners and himself was the question of over-classification; that is, his refusal to certify work done as of a higher and more costly class than the facts justified. There was a distinct charge that he had been in trouble with the commissioners, and because he refussed to certify for a higher class of work than the facts justified. That charge would be confined to his own district. He had, he said, refused to be more liberal in classification than he was allowing, and he had suggested that the commissioners, not being railroad men, should leave the engineering department alone. That was charge No. 2. He also said that one of the commissioners had advised him to go to Quebec and see how things were managed in that respect where the contractors were not kicking and get an object lesson. That was charge or statement No. 3.

In his letter he alluded to the interview of Mr. McArthur, and this brings up the statement with which I find fault in the speech of the hon. member for Carleton, N.B. McArthur was the contractor for 250 miles of district 'F' near Winnipeg. A statement had appeared in the Toronto 'World' of March 14, as coming from McArthur, that whereas the first estimate of the cost of the 230 miles had been $13,000,000, the actual cost would be close to $16,000,000, because so many changes had been made. That was the statement of Major Hodgins, as the member for Carleton, N.B. (Mr. Carvell) put it, but it was a statement made by McArthur, the contractor. As to this Major Hodgins replied, in his letter, that changes in location had really reduced the probable outlay by almost $1,000,000. So that the total cost should be reduced to about $12,000,000 instead of being increased to about $16,000,000. He did not say, and did not pretend to say, that the probable cost had increased to $16,000,000; that was Mr. McArthur's statement. All that Major Hodgins said was that the alterations in location really reduced the $13,000,000 by about a million and that there should be a reduction to about $12,000,000 instead of an increase to $16,000,000. Commenting upon the McArthur interview, Major Hodgins in his letter said :

If Mr. Poulin, the engineer appointed by Mr. Parent to replace me on the western district, has allowed the introduction of classification similar to that in the province of Quebec, this will account for an increase in the estimated cost of the line.

He did not say that Mr. Poulin had allowed that, but that if he had, that would account for an increase.

If this increase amounts to three or four million dollars (33⅓ per cent), it is time the public demanded some explanation from the government.

Mr. Hodgins made no assertion there except based upon what had been said by Mr. McArthur. What he said was that if the increase was caused by using the Quebec classification, as it was termed, it was about time the government should inquire into it. Major Hodgins, in his letter, went on to say :

The quickest way for the government to find out if the classification allowed is extravagant or not will be for the Minister of Railways to ask for the monthly reports of the Grand Trunk Pacific Railway engineers, who

are stationed on the Winnipeg district and the Quebec district, Messrs. Mann, Heaman and Armstrong; these reports are, I think, sent to the assistant chief engineer of the Grand Trunk Pacific in Montreal. These engineers are well known in the west, and their reports contain much more information on the subject than I have.

Here we have a clear statement involving, not merely district 'F,' near Winnipeg, but district 'B,' in the province of Quebec. Major Hodgins made no pretense of knowing anything of district 'B' of his own knowledge, but he did know about district 'F.' It must be borne in mind that Major Hodgins did not know what Messrs. Heaman, Armstrong and Mann could prove; and he could not, by this statement, have expected anybody to believe that he was himself in a position to prove anything about excessive classification in the province of Quebec. But the engineers of the Grand Trunk Pacific could give that evidence. Major Hodgins could give evidence as to district 'F.' It was as to these charges among others, appearing in the papers appended to the memo. which the chief commissioner wrote to the First Minister, that an inquiry was ordered. These charges involve, not merely the Winnipeg end, but district 'B'—not merely information within the knowledge of Major Hodgins but information that could only be obtained from the Grand Trunk Pacific and their engineers.

Now the chairman of the Transcontinental Commission used these words at the close of his letter to the Prime Minister:

> In conclusion, the commissioners would respectfully request, as they do not wish to remain under the aspersion which such reports cast on them——

Those reports include not Major Hodgins' district alone but district 'B' as well.

> —that the whole matter be referred to and looked into by a committee of the House and that Major Hodgins be assigned to appear before the same to repeat his charges in a specific manner in order to substantiate them if he can.

Thereupon the House, on April 28, referred all those papers to a special committee with instructions to investigate the matters and charges therein mentioned. I have stated the matters contained in that letter, not with the view of discussing whether they have been proven or not but to bring clearly before the House what was the subject matter referred to the committee. It is absolutely clear that what was recognized by the commissioners as affecting their reputation was not merely the charges as to district 'F,' not merely things within the personal knowledge of Major Hodgins, but the matters also referred to regarding district 'B,' and the evidence that could be given by the Grand Trunk Pacific engineers. It must be quite clear to hon. members, when they have read the evidence, that it was absolutely impossible for Major Hodgins to have known all the facts contained in these charges. He had reason to suppose there was foundation for the charges when he made them, but he could no more prove them on oath than he could prove what was going on in China. He had nothing to do with district 'B,' but he had reason to believe that things were not going on as they should in that district? He knew that the Grand Trunk Pacific engineers were finding fault with the classification there, but he knew none of these things of his own personal knowledge.

If the House desire to understand exactly what occurred with regard to Major Hodgins, they should know precisely what his position was and what were the relations between him and his chief and the commissioners. He had been district engineer, at first in charge of location, and then of the construction of about 380 miles lying immediately east of Winnipeg, known as district 'F.' He had under him the usual staff of engineers, and they apparently were quite satisfactory to him until the troubles arose to which I shall refer. Mr. McArthur was contractor for 250 miles of that district and had sub-let portions to other contractors. The classifications on which the contract prices were based were ordinary excavation, loose rock, and solid rock, and the prices were solid rock, $1.70 per cubic yard, loose rock, 60 cents and ordinary excavation, 30 cents. Mr Hodgins was under the impression—and I think that was generally understood—that McArthur had taken his contract for ordinary excavation at too low a price, and no doubt the sub-contractors were lower still. After McArthur began his work labour became scarce and wages increased which made it harder for all of them as regards common excavation. There are some gentlemen in this House who have had some practical experience of this sort of thing; but anybody who knows anything about it is quite aware that these conditions are sure to breed trouble, and the position both of the district and subordinate engineers became an exceedingly difficult one. That was the position of Major Hodgins. The progress of Mr. McArthur and his sub-contractors was very unsatisfactory. Major Hodgins seems to have found serious fault with him, but he rather sympathized with the difficulties Mr. McArthur was in. It was very difficult to get labour, the prices were known to be low, and it was supposed that some of the sub-contractors were losing money.

In December, 1906, and again a few months later, Major Hodgins had formally notified the contractor that he must increase his force, and had forwarded this notice to

the chief who had also given similar notice. In May or June, 1907, the chief engineer met Major Hodgins in Winnipeg. The commissioners were there, all of them, and it is curious to see how soon these commissioners began to meddle with the engineers. I shall not take the time to read these letters. The evidence shows the conversations with the commissioners, and the hints received by Major Hodgins that he should try and relieve matters, and the difficulties he had generally, so that he finally said to one of the commissioners, 'You don't understand the matter; you had better let the engineers alone.' I mention that as indicating that there was an interference by the commissioners that was certainly likely to lead to insubordination. Anybody who knows anything about these matters must see that it was a most improper thing for these commissioners to meddle between the contractors and engineers. It should have been left for the chief engineer. Nobody would expect to see the board of directors of the Canadian Pacific Railway or the Grand Trunk going out and interviewing contractors, engineers and subordinate engineers, consulting with or directing them apart from or otherwise than through the chief engineer.

Then, in June, Mr. Gordon Grant was sent up to Major Hodgins' district, as it was said, to report. Apparently, he was sent as an inspecting engineer over the whole district 'F,' but it was not intended that he should do more than inspect and report to headquarters. In fact, at page 116, Major Hodgins is asked:

Q. Did Mr. Lumsden tell you what instructions he had given to Mr. Grant?—A. I asked him whether we were to take instructions from Mr. Grant and he said no. Mr. Grant had been appointed against his wish and he would see that he did not give any instructions to the engineers.

Now, it has been said that there was a feeling of hostility on the part of Major Hodgins towards Mr. Grant. I think that is not improbable. Major Hodgins was in charge of District 'F.' Mr. Gordon Grant, without any communication to Major Hodgins, was sent up to be inspector of the whole district in Major Hodgins' charge. And it is here in evidence that the chief engineer said that Mr. Grant had been appointed against his wish and that he was not to interfere with the engineer, but to report direct to him, the chiet. This is confirmed in a rather singular way by a letter which appears at page 93, a very significant letter, showing how, at that date at all events, the commissioners or some of them had begun to intermeddle with engineering matters, going behind the back of the chief. This letter is from Mr. C. A. Young, one of the commissioners:

Mr. BARKER.

Commissioners of Transcontinental Railway.
Ottawa, Ont., June 4, 1907.

(Personal.)

A. E. Hodgins, Esq.,
District Engineer,
Kenora, Ont.

My Dear Major,—I am in receipt of yours of the 1st instant, and note fully the bundle of reports that Mann——

Mr. Mann was inspecting engineer of the Grand Trunk Pacific. Or, at that time, he may have been with the commissioners, but afterwards with the Grand Trunk.

—has brought up concerning the appointment of an inspector. The position of inspector was one that I had been working on for a long time.

Here is the commissioner writing to a district engineer a personal letter behind the back of the chief, telling him that this position of inspector for District 'F' was one that he, the commissioner had been working on for a long time.

I realize that, both at the head office and the district offices, there was so much office work to be done when construction was going on that it made it impossible for the engineer and staff we had to devote the time that they should devote to going over the work.

One would have thought that this was a matter for the chief engineer to consider, at all events that Mr. Young, instead of working on it for a long time, would have advised the chief and allowed the chief to make his own selection. But the commissioner worked on it, and the chief said that Mr. Grant was chosen against his will.

Finally we decided to appoint a man whose duty it would be to remain on the work constantly and not have any office work whatever. I may tell you privately that in the selection of a man for this work, it was considered by some of the board——

Not the chief engineer.

—that we should have a high class and a high priced man, and Mr. Barclay (who no doubt you know) was offered the position, but he did not consider the remuneration sufficient, and declined. It was never offered to any of our district engineers, for the reason we did not wish to disturb them in their present positions; and in looking around, Mr. Grant—who was represented as a very good man—was suggested; I think the suggestion came, in the first place, from Doucet, and Grant was appointed.

There is the connection of Mr. Grant with District 'B' in Quebec. Mr. Doucet, who was in charge of District 'B' in Quebec, recommends Mr. Grant, who was to go up as inspector of District 'F.' Mr. Young goes on:

The appointment of this man cannot possibly be considered a reflection on our dis-

trict engineers. The position was not offered to Doucet, Hoare or any one else, outside of Barclay. It is certainly promotion for Grant,——

Mr. Grant was junior to Major Hodgins and was practically put over his head.

—and might have the appearance of his being promoted over your head, from a minor position, but, as stated, did not wish to disturb the district engineers in their positions, and we preferred taking a man, if at all suitable, already in our employ rather than bring in an outsider.

Mr. J. T. SCHELL. Was any evidence given to show the status of Mr. Grant as compared with Major Hodgins?

Mr. BARKER. I think it was said that he was a junior engineer to Major Hodgins. That seems to be clear from the letter.

Mr. J. T. SCHELL. I do not ask the question with reference to his standing before, but after his appointment.

Mr. BARKER. You will see what comes presently within that month of June:

The question of his being a western or an eastern man of course cuts no figure; as a matter of fact, Grant was brought from British Columbia to take the position in Quebec in the first place. As for any complaints regarding classification——

There has been some discussion about classification.

—we have not heard them, and do not think there is anything in the report. I expect to see you when I go west, and will discuss the matter more fully with you. In the meantime, keep your shirt on. Would it not be well that both yourself and inspector go over the work with Mann.

Now, I submit to the business men of this House that here was a highly improper letter for a commissioner to take upon himself to write to a subordinate of the chief engineer. I have already mentioned the meeting of the commissioners with Mr. Hodgins at Winnipeg. All the commissioners were there. I may say that Mr. Young, the commissioner who wrote this letter, is a Winnipeg man, and McArthur, the contractor, lives at Winnipeg also. Mr. Young spoke to Mr. Hodgins about the trouble with McArthur, that something ought to be done, that McArthur complained he was not getting enough classification. Mr. Young referred to the prices in Quebec which he said, were lowest there, yet the contractors all seemed to be satisfied. There was a row on in District 'F' and no trouble in Quebec. And Mr. Young said: Why do you not do as Quebec does? There again you see meddling, which was most improper. Mr. Hodgins replied: That was an engineering matter, and that he (Mr. Young) had better leave the engineering question alone. Mr. Young said Mr. Hodgins had better go to Quebec and get an object lesson. Well, following that, Mr. Hodgins, as has been stated here today, was taken to Quebec to section 'B,' and the commissioners, the chief and a batch of engineers went along. Now, I say again as to this visit to section 'B,' in the province of Quebec, to give an object lesson, that I think these commissioners would have been doing better service to the country if they had attended to their own particular duties and allowed the chief to take his subordinates to visit these works if he thought it necessary, to show them how things were managed in Quebec. Why should five commissioners travel all the way from Winnipeg to Quebec upon such business as that? What could they do? The chief was there; had they any right to interfere with the chief? Apparently they could, but not openly, and the only supposition I can draw from it is that they went there in order to see that what they wanted done should be done. Now, I have already referred to the possible mistake at La Tuque. I will not go into that any further. It is quite true, as has been said here, that a witness called by the commissioners said that what he alleged to be the material referred to by Mr. Hodgins in section 'B' had been originally classified as 29 per cent, and I think it is quite possible there was an error. But I have not the slightest doubt that Mr. Hodgins did not wilfully misstate anything. Anybody acquainted with Mr. Hodgins knows that he would not do such a thing. The whole of his testimony before the committee showed that he was always trying to keep within the mark and avoid exaggeration. I repeat that Mr. Woods, the assistant engineer of the Grand Trunk, more than confirms, in his letters written to the Commission, all that Mr. Hodgins has said as to over-classification.

Now note this: Hodgins says that the chief engineer being present on section 'B,' in Quebec, during that 'schooling,' held aloof and took no part.

The chief, who was the man who ought to have been taking an active part, held aloof and took no part. What does that mean? Evidently he objected to this intermeddling of the commissioners between him and his staff. Mr. Hodgins went over to speak to him, the chief turned away. He received no help, no guidance, no instructions from the chief. So, he says, having looked at what was going on he made up his mind that he would stand by what his own experience and judgment taught him, and he would not follow what he saw in Quebec.

It was immediately after that trip to Quebec that Grant was sent up, by the commissioners in fact, though nominally by the chief, as inspector of District 'F,' and within a month,—although Mr. Young wrote that let-

ter in which he represented that Grant would have nothing to do with the engineers along the line, and would have to report only to the chief as to his inspection —within a month, on the 26th of June, I think it was, Grant wrote a most drastic condemnation of everything that Hodgins was doing, condemned him all along the line, everything was wrong, he was neglecting the work, not getting it ready for the contractors, doing nothing that he ought to have done. The report is one of the most severe that a man could write and I would ask the House: Is it possible to conceive that Grant, a junior to Mr. Hodgins, being sent up, as he was supposed to be sent up, merely as a travelling inspector, not to interfere with Mr. Hodgins or his staff—can we conceive that he would have written such a report as that unless he had been told to do it? There can be no doubt that he was told by the commissioner to write a report on Mr. Hodgins and Grant knew what was wanted.

But matters got worse with the contractors. McArthur, so far as one can make out, was probably not a very good contractor, not a man of experience, he was not pushing the work as it ought to be pushed, his sub-contractors were in trouble, they were complaining they were not getting sufficient classification, and everything was going wrong. Major Hodgins was found fault with, and everybody was in trouble. Some of the sub-contractors were threatening to throw up the job. That would have been very serious at the time. Whether they meant to throw it up or not, they were talking that way and Major Hodgins could not fail to see the danger and what a disaster it would be to everybody concerned if Mr. McArthur or any of these men did throw up the job. So the chief engineer having gone up to Kenora to look over the line, Major Hodgins had an interview with him and got his own subordinate engineers about him. He pointed out to the chief what the difficulty was, that the contractors were dissatisfied, that they said they were losing money on the ordinary excavation and that something would have to be done to relieve the situation. Mr. Hodgins reminded the chief that on the Canadian Pacific Railway, and some other railways that he mentioned, a force account had been allowed in a similar situation, and he suggested to the chief that they might allow 'force account' to Mr. McArthur and his sub-contractors. That meant that they would keep a particular account of the force employed, an actual account of the cost of the ordinary excavation and of the loose rock and allow, instead of the contract figures, that cost, plus 10 per cent profit. That was not to include solid rock. It was to be confined to what was called mixed material and he suggested it only as a means of relieving the sitaution and avoiding a stoppage of the work. Mr. Lumsden immediately said he had no authority, that he could not do it. In the presence of the sub-engineers Major Hodgins urged that something of that kind ought to be done at once, but Mr. Lumsden declined to take the responsibility. Major Hodgins then said to him: You go back to Ottawa and you can within five days stop me; in the meantime I can make preparations; you can stop me within five days and no harm will be done. If the commissioners say that it is all right you will have saved a great risk and the contractors will push on with their work. Mr. Lumsden went away then, telling Major Hodgins again that he would take no responsibility. But he was acting upon Major Hodgins' recommendation, for he went back immediately to Ottawa and laid that proposition before the commissioners. The commissioners declined it. They then wrote that most remarkable letter, that the hon. member for Carleton, N.B., thinks is one of the finest pieces of business he ever got his eyes upon, in which they condemned Major Hodgins for making this most awful suggestion of allowing force account in connection with the common excavation and loose rock in order to prevent a disaster. All Major Hodgins had said was submit the matter to the commissioners and if they do not approve stop me; you can do that by wire within five days. This most marvellous letter, which evoked the admiration of the hon. member for Carleton, N.B., condemned Major Hodgins for that and the man, insofar as the commission was concerned, was practically dismissed for making that proposal.

Mr. LENNOX. Or something else.

Mr. BARKER. Including something else. The man did not propose to do it without authority, but feeling that it was a case of emergency, he asked his chief to go to Ottawa, saying to him: You can stop me in five days and no harm will be done. Yet, because he dared to make such a suggestion he was condemned. The commissioners who wrote that latter which received the admiration of the hon. member for Carleton, N.B., wrote it with an object. He was not writing to educate or reprimand the engineer. He was putting himself on record for such a gentleman as the hon. member for Carleton, N.B.

Mr. J. T. SCHELL. Would the hon. member tell me if, as a member of the committee, he called Mr. Lumsden to have his statement in reference to this matter?

Mr. BARKER. No, Mr. Lumsden was never called. We were stopped from doing anything of the kind. The whole thing was wound up with Major Hodgins in the witness box. We would have heard Mr. Lumsden and all these other engineers but

this thing was all choked off by the majority of the committee. At page 153 will be found the letter of Major Hodgins to his chief, dated the 4th September, 1907, in which Major Hodgins gives fully to the chief the grounds on which he had made this suggestion in regard to a force account and in that letter he puts it practically as I have said—a little more at length, but he gives his reasons for, explains everything fully and confirms parts of his story by memoranda from the sub-engineers. If the chief engineer had thought there was anything improper in the suggestion of his district engineer why did he not tell him so promptly? Why did he not say: You must not do that; I forbid it. Surely, if he thought there was anything wrong, that would have been the manly course and the one he should have pursued. But, he showed clearly that while he did not wish to take the responsibility, while he was willing to leave the responsibility upon poor Major Hodgins, he so far felt that it was the right thing to do that he went back to Ottawa, all the way from Kenora, to lay the suggestion before the commissioners. I do not think we could have any better justification of the good faith and common sense of Major Hodgins than that.

Now, I think the House will see that Major Hodgins was in a pretty bad corner just about August, 1907. His fate was practically decided. The sending of Grant up as inspector, the condemnation for daring to suggest force account, the bringing Major Hodgins down to Quebec to see how work was classified there, his refusal to change his own opinion—all this condemned the man, and it was not long before he found it out.

I now propose to take up the question of the over-classification that occurred on Major Hodgins' division. That over-classification occurred, while Major Hodgins was on the work, only in the case of a man named McIntosh who had been in charge of the residency from the beginning and this man had, so far as Hodgins knew, always classified properly and in strict accordance with the judgment of Hodgins himself. Grant went over the district and made his report on the 26th of June, and on the 27th of July, 1907, McIntosh writes to Hodgins:

Dear Sir,—Inclosed herewith please find estimates for the month of July. I have made some changes in the classification——

He makes no pretense that he had asked the consent of his chief or anybody else unless it may be Grant:

—changing certain amounts which were returned as loose rock into solid and common excavation into loose rock on residencies 25 and 26.

There is the very beginning of anything of that kind on district 'F' under Hodgins:

On residency 25 the items are shown on memorandum attached. These transfers I have deemed advisable to make at the present time as having regard to the cost of working and material they should be promptly classed as rock excavation.

Could there be anything more satisfactory to the hon. member (Mr. Carvell) than that?

Mr. CARVELL. Nothing except Major Hodgin's letter to the chief engineer endorsing it.

Mr. BARKER I will show what kind of an endorsation that was. At page 133 he gives the changes made in residency 25 and he shows there 875 yards deducted from common excavation and 4,980 yards deducted from loose rock, and both added to solid rock 5,055 cubic yards. On 6th August, Mr. Hodgins writes to the chief engineer:

Dear Sir,—I send you to-day per Dominion Express A. D. McArthur's progress estimate for month of July. —— I inclose herewith a copy of a letter from Mr. McIntosh relating to an error of 100 cubic yards of loose rock on residency 25. This item was erroneously entered in June and has been deducted in the current estimate.

A statement is attached to form 4, residency 25, showing certain amounts, which were previously returned as loose rock and common excavation, now returned as solid rock.

Mr. McIntosh writes to same:

These transfers I have deemed it advisable to make at the present time, as, having regard to the cost of working and material, they should be properly classed as rock excavation.

You will also notice on residency 26, that 33 cubic yards of dry masonry have been deducted, and a like amount has been added to item 17, paying.

Now I would ask just here whether having regard to the facts that he, Hodgins, had refused to change classification, and that Grant had been there for a month was it unreasonable for Hodgins to suspect that Grant had interfered in this. Any man in Hodgins' position would have suspected that and that would account for some of that feeling that seems to be regarded as a crime on the part of Hodgins. Mr. McIntosh made that change off his own bat unless Grant had interfered, and Hodgins sends it on to the chief engineer with an exact copy of what Mr. McIntosh said. I quote from page 135 of the evidence:

Q. Well, I understand that Mr. Lumsden went up there about August 12 or 13?—A. I saw Mr. Lumsden up there. It would be about the time he was in Winnipeg.

Q. About August 6?—A. And I spoke to him about it, and told him I had sent it to him.

Q. What discussion took place between you and him as to these July estimates?—A. I said I had noticed that there were several cases where the solid rock estimates had jumped in that month out of the usual average, and the only way I could account for it was that somebody had suggested to the men, the en-

gineers on the line, to return solid rock with more liberality than I was inclined to do.

Q. Did you mention to him to whom you referred?—A. Yes. I said to him, 'Mr. Grant has just been over the line and the solid rock estimate has jumped.'

That was not confirming Mr. McIntosh's over-classification:

Q. Did you get any instructions from him?—A. He told me to go over the work with reference to these——

Q. Now I will fix the date of that interview accurately a little later?—A. 'Mr. Lumsden,' I said, 'I do not like the look of that sudden jump and McIntosh has not given me a very satisfactory answer.'

Q. What did the chief engineer tell you to do?—A. When I told him I was going he said 'Yes, you had better go as soon as possible.'

It appears form the evidence that month after month from January to June, 1907, Mr. McIntosh had been regularly making his estimates and classifying everything precisely according to Hodgins' view of what ought to be done. But in this July estimate he went back over the different estimates all the way to January and for the five or six months rolled up that 5,055 yards of solid rock, previously certified as either common excavation or loose rock.

Mr. J. T. SCHELL. Could the hon. gentleman state or does he know whether Hodgins had been in the habit of going over the line to inspect the work of his different residents?

Mr. BARKER. I think he had not been going as often as perhaps would have been prudent. He had full confidence in these men, who were experienced men, and in McIntosh among the rest. He had also a great deal of work to do. He had been locating engineer and was making changes in location and the commissioners seem to have recognized that he had too much work to do, because they took Major Hodgins away and put Mr. Poulin in his place, they left Mr. Grant there along with Mr. Poulin, so there were two men to do the work Major Hodgins had been doing.

Mr. CARVELL. Does my hon. friend mean they left Gordon Grant, the inspecting engineer, there?

Mr. BARKER. He was there for some time.

Mr. CARVELL. I have no recollection to that effect.

Mr. BARKER. He was certainly there in July.

Mr. CARVELL. But Poulin did not go there until September.

Mr. BARKER. But somebody was acting. The hon. gentleman makes a mistake in saying that Hodgins certified the September work. Hodgins said somebody had certified that estimate who did not know anything about the facts.

Mr. BARKER.

Mr. MACDONALD. I think my hon. friend is in error, he is talking about Mr. Foss who was transferred there from St. John for a week or two after Major Hodgins left, not Mr. Grant.

Mr. BARKER. At page 139 Major Hodgins reports after he had got through part of his examination of McIntosh's work at the chief's request:

Private and confidential.

Kenora, Ontario, September 9, 1907.

H. D. Lumsden, Esq.,
Chief Engineer, Ottawa.

Dear Sir,—In looking over Mr. McIntosh's estimate I notice that his monthly return for common excavation amounted to very little over 385 cubic yards for July estimate, the estimate immediately following Mr. Grant's inspection, and then jumped to 14,005 cubic yards during August.

Common excavation, McIntosh's division, to end—

	Cubic yards.
January	5,287
February	5,742
March	6,672
April	9,326
May	13,334
June	25,276
July	25,661
August	39,666

He gives there all the common excavation on McIntosh's division, and shows how it progressed. There was an increase in April of 2,654 yards of common excavation above the quantity from January to end of March, in May there was a further quantity of 4,008 cubic yards and in June a further 11,542. Of course at that season the work was progressing, but in July, that is the estimate after Grant's first month on the line, the common excavation went down to 385 yards. The next month, August, it went up to 14,005 yards. It was in that July estimate that the common excavation and loose rock were turned into solid rock. Major Hodgins' letter goes on:

The amount of common excavation returned in July as solid rock, it having previously been returned as common excavation, and which I altered on the August estimate, is only 875, so that it does not account for the large falling off of common excavation in July.

I went over Mr. McIntosh's division just before the August estimate was put in, and I told Mr. McIntosh I would not allow some of his classification. I did not go closely into discussion in each cut, as resident engineers were busy on their estimates. I told Mr. McIntosh his classification was high generally.

I am now going up to go over the 13 cuttings where common excavation and loose rock were transferred to solid (5,055 yards) in July, and am taking Mr. Heaman to go over the whole division with Mr. McIntosh and report. I canot understand why 12,942 cubic yards common excavation were moved in month of June 385 cubic yards common excavation were moved

in month of July, and 14,005 cubic yards common excavation were moved in month of August.

I may not be able to prove it, but I am inclined to believe that McIntosh was influenced by Grant's ideas of classification, which in my opinion are extravagant.

Previous to July estimate, Mr. McIntosh's classification was not alarmingly high. I will report to you later.

That letter was written and sent to Ottawa September 9, calling clear attention to the facts and mentioning his suspicion that Grant had influenced McIntosh's mind. Three days afterwards, on September 12, 1908, the following personal and confidential letter was written by the chief from Ottawa :

Personal and confidential.

The Commissioners, Transcontinental Railway.

Ottawa, September 12, 1907.

My Dear Hodgins,—Owing to the state of feeling in regard to the work under your charge I have come to the conclusion that it will be necessary for me to recommend that a change be made and some one else put in charge, but before doing so I am dropping you these few lines, and would suggest to you that you at once make application for a month's leave of absence, so as to give you time to look round.

Please wire me in cipher on receipt of this if you concur in my suggestion.

That was the response he received to that letter of the 9th calling attention to those changes in classification by McIntosh and intimating that they were due to Mr. Grant.

Now as to confining the inquiry to Major Hodgin's evidence. I have already said that Major Hodgins could not of his own knowledge have known anything about any over classification, except that between July and his dismissal. No doubt over-classification continued, and no doubt at all such over-classification was charged in the letter, but all that Major Hodgins could possibly give evidence about was as to the two estimates of July and August and would it not be absurd for this committee to examine Major Hodgins about those two months and then to refuse examination of the Grand Trunk Pacific officials? He could not prove what occurred after he was dismissed and yet, according to the contention of the majority of the committee, Major Hodgins was bound to prove, out of his own mouth, all the charges he made or if he could not prove them they must be dropped. I do not see how there could be a more absurd conclusion than that and yet it is the only conclusion from the contention of these gentlemen, repeated over and over again, in the committee, that Major Hodgins should not have made a charge unless he could prove it. That was told him to his face over and over again and by no one more frequently than by the hon. member for Carleton, N.B. (Mr. Carvell); before you made the charge you should have known that you could prove it. All Hodgins could know about were those two cases concerning McIntosh and he reported these instantly to his chief. He had no doubt, I have no doubt, that these over-classifications continued and no doubt the charges covered the subsequent cases. Major Hodgins could only prove later cases by calling the Grand Trunk Pacific engineers or some of the staff of the commisson. Yet the contention of the majority of the committee was that unless he could make the proof himself, none should be allowed. Precisely the same with regard to section 'B.' Hodgins could not prove out of his own mouth the charges of over-classification there. All he could do was to say: I have no doubt from what I saw when I was taken to Quebec, but if it is to be proved before this committee, I must ask you to call the engineers of the Grand Trunk Pacific and, as I said in my letter, you must get from them their reports. However the majority of the committee ruled otherwise. We were not allowed to call in the Grand Trunk Pacific engineers and go into their reports, in spite of the fact that when the committee ordered the Transcontinental Commission to produce all the paprs relating to the subject-matter of inquiry, they themselves produced letters they had received from the Grand Trunk Pacific complaining of over-classification in section 'B.' Although these letters were there before us we were not allowed to call witnesses to prove anything in respect of them. Was that common sense ? Was that carrying out the order of the House to investigate? We had positive charges in the reports of the assistant engineer of the Grand Trunk Pacific of over-classification outrageously larger than anything Major Hodgins knew of his own knowledge, yet we were not allowed to call the engineers to prove them.

With all this evidence, with all the letters read here to-day showing charges of over-classification, showing that Mr. Lumsden himself wrote to the commission that he would pass no more of these certificates, that he would not sign another certificate for payment unless the commission got a classification agreed to by both parties—in the face of all these letters, we were not allowed to go on because Major Hodgins did not think that the committee was as good a tribunal to inquire into this evidence as a board of arbitration. Therefore, the majority of the committee decided not to obey the order of the House, not to go on and complete the investigation. That is what the majority of the committee thought was their duty. The hon. member for Pictou (Mr. Macdonald) asked why should we inquire into a thing that may be settled by arbitration ? But are we to allow this thing to go on as long as it suits the officials of the Grand Trunk Pacific and the com-

missioners? Are we to let the public money be wasted and trust to an arbitration setting it right by and by? I wonder would my hon. friend from Carleton (Mr. Carvell) do that in his own affairs. Suppose some one were acting for him, would he go on paying until there was a settlement by arbitration when he had reason to believe he was paying improper charges?

Mr. CARVELL. I would do exactly what is provided by the agreement of the 10th January. I would call on this arbitration and have it settled within reasonable time.

Mr. BARKER. The hon. gentleman knows that on the 7th October, 1907, Mr. Wood, of the Grand Trunk Pacific, wrote to the commissioners and to Mr. Lumsden finding fault with these classifications and requesting Mr. Lumsden to go over the line with him and see if they could not agree on a proper method. On the 28th April, the very day this special committee was appointed, he was still continuing to urge Mr. Lumsden to go over the line with him.

Mr. CARVELL. And they have since gone over the line.

Mr. BARKER. I do not suppose they would have done so if the committee had not got to work. But are we to disobey the order of the House and refuse to investigate on that account? Suppose the commissioners and the Grand Trunk Pacific are content to let this thing go on a couple of years, are the people of Canada willing that we should go on paying and trust to an arbitration by and by? Are they willing to trust to a settlement by arbitration after a large amount of the money has been spent and paid to the contractors and subcontractors, and when there will be but little chance if any of getting it back again. One of the reasons why this committee was appointed was that there should be prompt inquiry, and yet no action has been taken. I do not want to charge anything improper against the Grand Trunk Pacific. No doubt they are as honourable as their neighbours, but the Grand Trunk Pacific may have other interests conflicting somewhat with their interests in this McArthur business. Suppose the Grand Trunk Pacific would like to do a little McArthur business themselves and get some over-classification on their own contracts? They might be well content to set off the over-classification in the McArthur contract against a larger amount of over-classification in their own case. I find in the last report of the Transcontinental Railway Commission that the Grand Trunk Pacific are contractors for 245 miles of this railway. It may suit the Grand Trunk Pacific to get a little over-classification themselves, and I can quite understand if they got many thousands of yards of 30 cent work paid for at $1.70 they could stand a good deal of over-classification being paid by the country.

Mr. J. T. SCHELL. The Grand Trunk Pacific are only the nominal contractors.

Mr. BARKER. In the commissioners' report the Grand Trunk Pacific have got that contract.

Mr. CARVELL. Does the hon. gentleman not know that all this work is sublet?

Mr. BARKER. I do not care whether it is sublet or not. Here are three distinct contracts reported in the last report of the commissioners, namely, 150 miles about 8 miles west of the Abitibi river, crossing easterly a distance of 150 miles, let to the Grand Trunk Pacific of Montreal; district 'B', from a point designated on the plan of the commissioners, about 150 miles west of Quebec, proceeding westerly a distance of about 45 miles, let to the Grand Trunk Pacific of Montreal; district 'A', from a point designated on the plans of the commissioners, at or near Moncton, N.B., westerly for a distance of 50 miles, let to the Grand Trunk Pacific. Here you have this company on both sides of the question. In the one case it may be willing to pay a little interest in the way of rent on what McArthur could get too much, and so on the other hand it would get a big increase directly into its own pockets. As I said before, I do not want to charge that company with any impropriety; I do not say they would do that sort of thing. But it is not business-like to overlook these things in matters of such importance. That company has its contracts for 245 miles of railway, just as Mr. McArthur, Mr. Davis and other gentlemen have, and if they were to consent to a generous, liberal classification to Mr. McArthur and Mr. Davis, of course, they would get a generous, liberal classfication for the Grand Trunk Pacific.

Mr. J. T. SCHELL. If the hon. gentleman (Mr. Barker) will allow me to make a statement, so far as that is concerned, the Grand Trunk Pacific have not got the contract to-day, nor have they kept them in their hands, any of them at any time in the same way that McArthur, Davis and the other contractors have. They have simply sold them out.

Mr. LENNOX. We have these cloaks all the way through with regard to the Grand Trunk Pacific; we never know where we are at.

Mr. BARKER. I say it is not business-like for this country to have disputes unsettled for over a year with these people on the McArthur and Davis contracts.

Now, after what I have said, perhaps I should remind the House of some of the remarks made by an engineer who has already been quoted here. Let me refer to

the letter of October 7, 1907, from the assistant chief engineer of the Grand Trunk Pacific to Mr. Lumsden, p. 393, regarding District 'B.'

He here makes complaints that were hanging over and unsettled when this committee was appointed :

'At the request of District Engineer Armstrong——'

That is the gentleman whose affidavit was read. He did not come before the committee—the committee would not call him. But the member for Carleton, N.B., used his affidavit.

'—he was furnished recently with a statement of classification for the heavier work on the above section, which were, when given in detail, so different from his expectations that he requested the writer to visit the work.'

That is hardly consistent with the affidavit of this gentleman, Armstrong.

'During the past week we passed over portions of the work from the Batiscan river west for fifteen or twenty miles, and later from 115 to 132.'

This seems to be the very place Armstrong was talking about in that affidavit.

'With reference to the former portion, the classification was given in distances of from three to five miles, and as we did not have total quantities of graduation, could not judge with reference to any particular cutting, although percentages for entire distance seemed excessively heavy in both loose and solid rock.

With the latter portion we had detailed percentage for each cut, and were greatly surprised at the allowances made for solid and loose rock. In nearly every case where the cuttings were not entirely all ledge the estimate given for solid rock is double, or more than double, what it should be. In fact, the specifications had been entirely ignored and an excessive allowance made, not by reason of an error in judgment, but, as I understand, by special instructions from the assistant district engineer.

Let me give you some illustrations:

Take the cutting from stations 5818 to 5826, estimated 71 per cent solid rock and 29 per cent loose rock, slopes taken out 1½ to 1.'

That was explained to-day, and I do not need to go into it.

'Very little ledge in this cut. Some large boulders, but a very large percentage is common excavation.

Station 5842 to 5860.—Classified 94 per cent solid rock, 6 per cent loose rock. Slopes taken out 1½ to 1. Solid rock over-classified at least 100 per cent.'

That is, instead of being ninety-four it should have been forty-seven.

These were before the committee, and the committee did not think it was necessary to investigate. Now, I call particular attention to this next case. It will be remembered that it is from Mr. Armstrong from whom came the wonderful affidavit.

'Station 5882 to 5901.—Estimated 78 per cent solid rock, 22 per cent loose rock. A large amount of this cut wasted with slip scrapers, and ploughing being done with two horses. There are hundreds of yards of earth here without a stone, large or small.'

'Station 6030 to 6046—Estimated 40 per cent solid rock, 10 per cent loose rock. This is the large sand cut west of O'Brien's camp. Of the 95,000 yards moved to August 31 in this cut, at least 80,000 yards were pure sand.'

I give these to show what value can be placed on an affidavit from Mr. Armstrong who joined in making this examination. Has not he been dismissed from the Grand Trunk Pacific?

Mr. CARVELL. No, he has not.

Mr. BARKER. I do not think he is there now. Now, it was said that Mr. Lumsden was supposed to have approved of these estimates. On Octobe 18, he writes : p. 395.

Sirs,—Referring to the September estimates in district 'B,' which I now beg to hand you, I may say that from the complaint made by the assistant chief engineer of the Grand Trunk Pacific Railway in a letter to me of the 7th instant, and from a verbal statement made to me on the 12th instant, by Mr. Doucet——

The engineer in charge of district 'B.'

—it would appear to me some material may be classified as rock which should be classified otherwise, still as the amount of security held by you for the completion of the work seems to me ample, and the holding back of the estimate at this date without notice to the contractors might be a serious matter, I have approved of these estimates, on the distinct understanding that before any further estimates are passed time be given and full investigation made into the matter of classification throughout district 'B.'

I do not wish at this late hour to quote further from letters appearing in the evidence, but let me refer to that wonderful agreement of January 10, 1908. I deny that the document read by the hon. member for Carleton, N.B., is a reference to arbitration.

Memo. of agreement to be drawn up between the commissioners of the Transcontinental Railway and the Grand Trunk Pacific Company.

Monthly estimates for contractors should be submitted promptly from time to time by the chief engineer of the commissioners to the company's assistant chief engineer at Montreal for approval. If he has any objection to such estimate he shall promptly file the same with the chief engineer of the commissioners, and any objection from time to time filed shall thereupon be considered, and, if possible determined by the said engineers and in case of their failure to agree, may then or at any time before or at the time of final payment at the option of either party be considered and determined by arbitration as provided in the agreement of July 29, 1903, but in no case shall the payment of monthly estimates be delayed except with the consent of the commissioners

In case the chief engineer of the commissioners and the assistant chief engineer of the company disagree as to the final payment, the same shall be withheld until the matter is determined by arbitration.

The paper is initialled 'C.M.H.' 'H.D.L.' 'S.N.P.'

It is absolutely clear that the whole purport of that agreement is to keep these disputes in suspense, open, that neither party shall be prejudiced by inaction. Accounts are to be passed through or paid, but either party can from time to time call them up again for consideration. That is the agreement, not to arbitrate, but to postpone an investigation, and that agreement was entered into while this House was in session. I leave the House to infer what was the object of that. I will make one more remark. On April 6, 1908. I put this question in the House,

1. Are there any matters in dispute or question between the Grand Trunk Railway Company and the government, or the National Transcontinental Railway Commission, respecting the route or the right of way or the works of construction, or cost thereof, upon the eastern division of the National Transcontinental Railway?

2. What is the nature of such disputes or questions, if any?

3. Has the consideration or settlement of any such disputes or questions been postponed or suspended? If so, at whose request, and until what time or event?

Hon. G. P. GRAHAM (Minister of Railways and Canals):

There is no matter in dispute or question between the Grand Trunk Pacific Railway Company and the National Transcontinental Railway Company respecting the route, or the right-of-way, or the works of construction, or the cost thereof, upon the eastern division of the National Transcontinental Railway.

Now, that agreement of January was in existence when that answer was given, all this correspondence had been going on since October 7, about these disputes, and what is the answer by the government, formally given to a formal question? It was that there were no such disputes, no such agreement, no question between the commissioners and the Grand Trunk Pacific. That is an astounding reply. There are only two ways of looking at it: Either the government knew the facts, and misled the House by an untruthful reply; or they were deceived by the commissioners; I do not care which way they put it. I was not satisfied with that reply, and I put this further question on April 13:

1. Has either the government or the National Transcontinental Railway Commission received from the Grand Trunk Pacific Railway Company or the Grand Trunk Railway Company of Canada, or from any person on behalf of either such company, any protests or objections respecting the acquisition of lands for the eastern division of the National Transcontinental Railway, or as to the cost thereof, or respecting any works of construction upon the said division, or as to the cost thereof?

2. What was the nature of such protests or objections, if any?

3. Have all such protests or objections, if any, been finally disposed of and settled?

4. If not disposed of and settled, has any and what arrangement been made to postpone or suspend the matters involved?

Hon. G. P. GRAHAM (Minister of Railways and Canals). As to the first part of the question, no; or as to the cost thereof, no. As to the third part of the question no dispute has arisen as to any work of construction. Mr. H. A. Woods, assistant chief engineer of the Grand Trunk Pacific Railway, by a letter dated October 7, 1907, objected to the classification, as to grading material on certain portions of the work in district 'B.' The matter was investigated by the chief engineer of the commissioners, who gave his ruling as to the interpretation of the clauses of the specifications relating to the classification; and Mr. Woods' objections were found not to be correct. Nothing further has been heard by the commissioners of such objections.

And yet from October 7, 1908, down to the day this committee was appointed, 28th April, 1908, there were continuous letters from Mr. Woods repeating these objections. What are we to think of answers of that kind in the House about the most inportant matters that can be brought before parliament? I say that either the government knew the facts, in which that answer was false, or the commissioners deceived the government, I do not care which way you take it.

Now, Mr. Speaker, there are many important matters dealt with in this evidence. But I think I have shown that there were many very important matters properly before that committee, which required that the engineers of the Grand Trunk Pacific be called to prove them. But the majority of the committee prematurely closed the inquiry, and dismissed nine witnesses that had been called but not examined. I beg to second the amendment.

House divided on amendment (Mr. Lennox).

Motion (Mr. Geoffrion) agreed to.

QUESTIONS.

USE OF BLACK STAMPS ON CIGARS IN BOND.

Mr. DUBEAU asked :

1. Has the government taken steps to authorize manufacturers to make use of the black stamps on the cigars in bond since June 1 last?

2. If so, what are the conditions on which the manufacturers may take advantage of that privilege?

Hon. W. TEMPLEMAN (Minister of Inland Revenue) :

1. Yes.

2. That the cigars are entered ex-warehouse for consumption prior to the 15th of August next.

MR. JOSEPH NIXON.

Mr. HERRON asked :

Is Mr. Jos. Nixon, formerly sub-land agent at Macleod, Alberta, employed in any capacity by the government or Transcontinental Railway Commission? If so, in what position and at what place and salary?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals). Joseph Nixon is not in the employ of the Transcontinental Railway Commission. He has been employed as time-keeper, but left in June, 1907.

FISHERY INSPECTORS IN ALBERTA.

Mr. HERRON asked :

1. Who are the fishery inspectors employed by the government in the territory south of the main line of the Canadian Pacific Railway to the international boundary line, in the province of Alberta?

2. What is the date of their respective appointments, their salaries and allowances?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries) :

1. The special fishery guardians employed in that section of Alberta for the year ended 31st March, 1908, were :

	Wages.	Dis-bursements.
W. A. Dunlop..	$139 50	$351 75
T. G. Brown..	46 50	54 95
H. A. Donovan..	138 00	297 85

2. Such guardians are not permanently appointed, but are employed from year to year at per diem rates, for periods when their services are required.

DIRECT COMMUNICATION BETWEEN CANADA AND FRANCE.

Mr. MONK—by Mr. Bergeron—asked :

1. Has a contract been entered into by the government in order to secure direct communication between Canada and France, during the present season?

2. If so, with whom has such contract been executed, and for what number of trips has provision been made?

3. What is the cost to Canada a trip?

4. What amount has been paid on account of said contract by the government?

5. Is there a provision in the contract for the contingency of non-ratification of the proposed treaty with France? If so, what are the terms of the said provision?

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). 1. No. The Department of Trade and Commerce is now in correspondence with Messrs. H. & A. Allan with a view to an extension of the contract with Messrs. Allan, which expired on the 9th of February last. Of course, until the terms are decided upon no announcement can be made.

ROYALTY ON COAL MINED IN ALBERTA AND SASKATCHEWAN.

Mr. LAKE asked :

What sums have been received by the government on account of royalty on coal mined in each of the provinces of Alberta and Saskatchewan during each of the financial years ending June 30, 1906 and 1907?

Hon. FRANK OLIVER (Minister of the Interior) :

During the financial year ending the 30th June, 1906 :

Alberta..	$3,828 20
Saskatchewan...	175 71

During the financial year ending the 30th June, 1907 :

Alberta..	$7,597 12
Saskatchewan...	329 20

PURCHASES OF SEED OATS.

Mr. FOWLER—by Mr. Lancaster—asked:

1. Were seed oats purchased in Prince Edward Island for the western farmers under the Act for the distribution of seed grain? If so, who made the purchases on behalf of the government?

2. What prices were paid for the oats per bushel, how many bushels were purchased, and what was the total sum paid for said oats, exclusive of other expenses incurred in their purchase?

Mr. BRODEUR.

Hon. FRANK OLIVER (Minister of the Interior):

1. Yes. C. C. Castle, purchasing agent.

2. 65 cents per bushel, free on board at Pictou, N.S. There were 100,712 bushels purchased at a cost of $65,462.80, delivered at Pictou, N.S.

PURCHASE OF SEED OATS IN PRINCE EDWARD ISLAND.

Mr. FOWLER—by Mr. Lancaster—asked:

1. Is the government aware that the firm of Rattenbury & Company is said to have purchased seed oats for the west in Prince Edward Island, as agents of the government?

2. Is the government also aware that the said Rattenbury & Company is said to have bought these oats on credit, and have since assigned for the benefit of their creditors, leaving the oats unpaid for?

3. If this statement is true, is it the intention of the government to pay for these oats?

Hon. FRANK OLIVER (Minister of the Interior):

1. No. All the Island oats were purchased from J. Read & Company.

2. No.

3. Answered by Nos. 1 and 2.

CANADA SHIPPING ACT AMENDMENT.

Mr. FIELDING moved that the House go into Committee of the Whole to-morrow to consider the following proposed resolution:

Resolved, that it is expedient to amend the Canada Shipping Act, chapter 113, Revised Statutes of Canada, 1906, by repealing section 958 and substituting therefor,

958. The Governor in Council may from time time—

(a) by order in council declare that the foregoing provisions of this part shall not, while such order in council is in force, apply, either throughout Canada or in any specified waters of Canada, to the ships or vessels, or to any specified ascertained or ascertainable class or number of the ships or vessels of any foreign country in which British ships are admitted to the coasting trade of such country, and to carry goods or passengers from one port or place to another in such country; and

(b) revoke or vary such order in council.

2. That the Act founded on this resolution shall not come into force until His Majesty's pleasure thereon has been signified by publication in the 'Canada Gazette.'

He said: His Excellency having been informed of the subject matter of this resolution recommends it to the favourable consideration of the House.

Motion agreed to.

SALARIES OF JUDGES.

Mr. AYLESWORTH moved that the House go into Committee of the Whole to-morrow to consider the following proposed resolution:

Resolved, that in the opinion of this House it is expedient to provide for the payment to one additional county court judge in the province of Manitoba, and two additional district court judges in the province of Ontario, each $2,500 per annum during the first three years of service, and after three years of service each $3,000 per annum.

He said: I beg to state, that the subject matter of this resolution having been communicated to His Excellency the Governor General, he approves the same and commends it to the consideration of the House.

Motion agreed to.

FIRST READING.

Bill (No. 198) respecting a certain patent of William B. Smith.

THIRD READING.

Bill (No. 130) to amend the Naturalization Act.—Sir Wilfrid Laurier.

POST OFFICE ACT—AMENDMENT.

Consideration of amendments made by the Senate to Bill (No. 162) to amend the Post Office Act.

Mr. BERGERON. What are the amendments ?

Hon. RODOLPHE LEMIEUX (Postmaster General). Briefly, the radius enjoyed by the weekly press for free circulation is extended from 40 miles to 60 miles. Some years ago, Sir William Mulock established for the daily press a zone of 300 miles from the place of publication within which zone the rate was a quarter cent per pound and outside of that zone the rate was half a cent a pound. In future we will have one flat rate on newspapers of one quarter of a cent per pound without respect to distance.

Amendments read a second time and concurred in.

BOARDS OF TRADE ACT—AMENDMENT.

House in committee on Bill (No. 133) to amend the Boards of Trade Act.—Mr. Fielding.

Mr. FIELDING. When this Bill was last before the committee attention was called to the fact that it seemed to prevent a man being a member of two boards of trade. Acting on the suggestion made then I am proposing to make the changes that would be necessary to permit a man to be a member of the board of trade in the district in which he resides, and also a member of the board of trade in the district in which he is doing business, if there is such a board of trade, and if he chooses to be a member.

Amendment agreed to, Bill reported the third time and passed.

DOMINION LANDS ACT—AMENDMENT

House resumed adjourned debate on the motion of Mr. Oliver for the third reading of Bill (No. 181) to consolidate and amend the Acts respecting the public lands in the Dominion and the proposed amendment of Mr. Lake thereto.

Mr. SPEAKER. Since Saturday I have considered whether the amendment then moved by the member for Qu'Appelle to the motion for the third reading of Bill (No. 181), is in order or not. The said amendment plainly contemplates the setting aside, appropriation and transferring to the provinces of Alberta and Saskatchewan of certain of the Dominion lands.

In the last edition of Mr. Bourinot's work on Parliamentary Procedure at page 628, in a foot note, it is stated that since 1874 all grants of public lands are initiated in the Commons. This is upon the theory that public lands are in the same position as public revenues. (See page 627).

At page 568 of the same work it is expressly stated that :

> No cases can be found of any private member in the Canadian Commons receiving the authority of the Crown through a minister to propose a motion involving the expenditure of public money. No principle is better understood than the constitutional application that rests upon the executive government of alone initiating measures imposing charges upon the public exchequer.

I must, therefore, rule the amendment as out of order.

In connection with the same point of order a question was raised on the Bill, which I might as well dispose of now.

A discussion also arose as to whether in view of certain clauses in the Bill a previous sanction of the Governor General should not have been obtained and announced to the House before its introduction, and such introduction preceded by a resolution.

Having regard to the precedents in the House, I find that this has not been considered necessary. In the year 1883, a similar Bill was passed, which now appears in the statutes for that year as chapter 17, intituled: 'An Act further to amend and to consolidate, as so amended, the several Acts respecting the Public Lands of the Dominion therein mentioned.' This Bill was introduced by Sir John A. Macdonald. No consent of the Governor General was announced at any stage nor was any resolution passed previously to the introduction of the Bill. This seems to be a precedent exactly in point.

This Bill is a consolidating and amending Bill and in the case of such Bills it is only when there are clauses imposing new burdens that it is necessary to consider these first in a Committee of the Whole.

The object aimed at in such Bills is to give the old law a new and more convenient form.

Mr. R. L. BORDEN. This Bill is not only an amending and consolidating Bill, but distinctly provides for the granting of pre-emptions and purchased homesteads not provided for by the Act as it stood before. It is in part an amending and consolidating Bill but it is in many respects an entirely new Bill and contains entirely new provisions for alineation of the public domain.

Mr. SPEAKER. I do not find that it provides for the setting apart for the purposes of the Bill of any wider area of lands and I think it will be found that the Bill of 1883 to which I referred, also provided for an extra homestead in certain cases as this one appears to do. I cannot find any very substantial difference and following the rule laid down by Dr. Bourinot in his work, relating to consolidating and amending Acts, I would rule that this Bill does not require any preliminary resolution or consent.

Mr. R. L. BORDEN. Of course it is true that the Bill does not cover a wider area of land than was provided in the enactments previously on the statute-book. The same observation is also true of the amendment of the hon. member for Qu'Appelle (Mr. Lake). It does not propose to go outside the area of land previously dealt with by the enactments on the statute-book.

Mr. LAKE. I beg to move then, seconded by Mr. Chisholm——

Mr. SPEAKER. I have ruled, of course, that the first amendment is out of order, and now this, I assume, is a new amendment.

Mr. LAKE. I beg to move:

That the said Bill be not now read a third time but be referred back to Committee of the Whole House with instructions to amend the same by providing,

That the Governor in Council shall forthwith institute such proper inquiries as may be necessary for the purpose of ascertaining what quantity of Dominion Lands in each of the provinces of Alberta and Saskatchewan should be set aside and appropriated for the purposes of higher education with a view to setting aside, appropriating and transferring to the said respective provinces the said lands so ascertained for the purposes aforesaid.

Mr. SPEAKER. I think that probably that amendment is in order although it comes close to the line too.

House divided upon amendment (Mr. Lake).

Amendment negatived.

Mr. JOHN HERRON (Alberta). Before the Bill receives its third reading, I wish to draw attention to clause 16. That clause provides :

16. Every entrant for a homestead shall, except as hereafter otherwise provided, be required, before the issue of letters patent therefor (a) to have held the homestead for his own exclusive use and benefit for three years from the date of entry, (b) to have resided thereon at least six months in each of the three years from the date of entry, or the date of commencement of residence, (c) to have erected a habitable house theron, (d) to have cultivated such an area of land in each year upon the homestead as is satisfactory to the minister, and (e) to be a British subject.

I would draw attention to the fifth line of this clause : 'to have resided thereon at least six months in each of three years from the date of entry, or the date of commencement of residence.' I have seen a good many cases of great hardship to settlers coming from any part of the empire or even from foreign countries to the Northwest owing to this particular clause. I have always considered it a great mistake to have this clause dealt with in the arbitrary manner in which it is. The head of a family has to reside on the homestead six months of each year during three years before he can obtain his patent. But what better proof can you have of the good faith of the homesteader than in the fact that he has left a foreign country or even some portion of our own land and has gone out to the prairies and taken up a homestead there in order to provide a home for his family. It may be argued that if you allow any leniency in the regulations, he may sell the land just as soon as he obtains his patent and go back to the country from which he came. But I would draw attention to the letter of the law which provides that the head of the family must reside on the land during six months of each year for three years before he can obtain a patent. A man might leave his family and come even from a foreign country, enter for a homestead in our country, to which he was attracted by the prospects of bettering himself ; he might leave his family in a foreign country, enter for a homestead, comply with the letter of the law by living on the homestead six months in each year for three years and perform homestead duties, and then he might sell his homestead, put the money in his pocket and go back to his own country. So that there is nothing under this clause to prevent his selling out any more than there would be if this residence obligation were not required. I admit that it is necessary to impose some restrictions so as to have some evidence that a homesteader has the necessary qualifications to entitle him to a patent. But I claim that we often work out hardship by insisting that the head of the family must reside on the land the precise time of six months each year during three years. That same point has been drawn to the attention of this House before now and has been considerably discussed in the country. I would recommend a change in the regulations to this effect. If you were to provide by your regulations that either the entrant for a homestead or his family should reside continuously on the land for three years, I would see no objection to that. What I object to is that the man himself must reside on the land so that even if he left his family on it, while he himself was working elsewhere, he could not obtain his patent. What better evidence could you have of his sincerity than the fact that he has put his family on the land. He might be so situatetd that he could not comply with the condition of personally residing on it himself.

But I say that the very fact of having the head of the family live on the homestead for six months in each year has worked great hardship in many cases in our new country. There is another very important factor in this question. There is a great portion of our population which should be seriously considered in this relation—the female population of our country. If the law which I suggest were put in operation, it would encourage young men to marry and would give our young women opportunities to assist in providing homes for themselves, their husbands and their children. This is a very important subject as every intelligent person will agree. In my observation of conditions in the west for the last thirty or thirty-five years, I have known men, even from outside our own Dominion, enter for homesteads, erect homes for their families, bring their families to this country and place them on the homestead. Then, through unforeseen and unavoidable misfortune they found themselves unable to maintain their families on the homestead, and so were compelled to go to the town, perhaps a short distance, perhaps a long distance away, to get employment. Perhaps they get into debt, perhaps further into debt, as I have suggested, through circumstances beyond their own control, and so were unable to go back and live on the homestead as required by the regulations and the law

providing that they had to live on the homestead for six months of every year. The result being that his homestead was cancelled and thus Canada lost a good citizen, settler and his family. I agree that the government, in days gone by, has been lenient in many cases. Still, there was a limit to what could be done under the law. I consider there never was a more iniquitous law upon the Canadian statute-book than this clause 16 which provides that the head of the family must reside upon the homestead for six months in each year for three years before he can obtain a patent. For these reasons, I move, seconded by Mr. Staples :

That the said Bill be not now read the third time, but that it be referred back to Committee of the Whole House for the purpose of amending section 16 and other relevant sections of the said Bill by providing that the residence of the wife and family of any entrant for a homestead shall be accepted as equivalent to the residence of the entrant himself, subject to such regulations necessary or expedient for the purpose of securing actual permanent settlers.

Amendment negatived on the same division last recorded.

Motion agreed to, and Bill read the third time and passed.

JUVENILE DELINQUENTS.

Bill (No. 190) respecting Juvenile Delinquents—Mr. Aylesworth—was read the second time, and House went into committee thereon.

Mr. R. L. BORDEN. We passed the second time, and House went into committee I presume because it comes from the Senate. Perhaps the Minister of Justice will be good enough to state the purport of the Bill and explain what its effect will be.

Hon. A. B. AYLESWORTH (Minister of Justice). The general effect of this Bill I think I may summarize by saying that it is intended to obviate the necessity for children, when accused of crime, being tried before the ordinary tribunals. The provision at the conclusion of the Bill is that the Act may be put in force in any province, or any portion of a province, by proclamation after the passing by such province of a Bill providing for the establishment of juvenile courts. And the intention is that wherever any province has established, or may hereafter establish, a special court for the trial of young persons, under the age of sixteen years, all offences against the criminal law by children under that age shall be disposed of by these juvenile courts. The case of an indictable offence committed by a young person over fourteen is excepted, but with that exception the provision of the Bill is in short, that all infractions of the criminal statutes, whether of the Dominion, of the province or municipal by-laws, shall be dealt with by this special court, instead of being tried in the ordinary way. There are many details, which are self explanatory, governing the trial. It is to be of a summary character. Notice is to be given to the parent or guardian and to the probation officer, he being an officer appointed under the provisions of the provincial statute in that behalf, or, where there is no provincial statute on the subject, he may be appointed under the provisions of this Act. Instead of the juvenile court imposing sentence of imprisonment, as of necessity under the existing criminal law, the child may be released on probation.

Under no circumstances is it to be sent to jail, but if not released on probation, or a home found for it, either in some public institution or with some private family, provision is made with regard to the disposition that the court can make of the child. The court is empowered to appoint in any community a small committee, to be called the juvenile court committee, the duty of which is to assist the court in the way of suggestion, advice, and looking after the child, who is treated, from the time when found guilty of an offence, as a ward of the court, with the idea of being reclaimed rather than punished by imprisonment. In some of the provinces there is already legislation with regard to the care of neglected or abandoned children, to which this legislation is necessarily of an ancillary character. In the province of Ontario there is elaborate statutory provision designed for the protection and reformation of neglected children, and an officer of the government, a superintendent, having charge of such matters appointed by the government, and children's aid societies established in a great number of communities. These children's aid societies have felt the necessity of legislation of this character. I want to prevent the possibility of children who might be reclaimed if treated otherwise than as criminals, being sent to the ordinary prisons of the country with the older and possibly hardened offenders.

On section 17,

Mr. LANCASTER. I am going to protest against the passing of a serious law like this in this hasty way. Here is a statute which is going to affect the character and the liberty of every little child, and I protest most seriously against the levity that is going on in this chamber.

Mr. TALBOT. The hon. member for Simcoe is the only one who made a joke about it.

Mr. LANCASTER. This levity is altogether out of place. Just because the Minister of Justice, who cannot hear a word, wants this Bill to go through it is to be laughed through as a joke. Here is an Act resepecting juvenile delinquents, a brand new law, brought in during the dying

hours of the session by the Minister of Justice, containing thirty-five sections, and after midnight we are asked to pass, but not consider it. It affects the liberty, the character and the treatment of every little child in this country. I am not going to stand for this Bill going through with this most uncalled for haste, and I think the Minister of Justice is not doing his duty in trying to rush it through in this way.

Mr. BERGERON. I was the one who asked the chairman to read the side notes instead of the clauses, because I had been looking at the Bill and I saw there was no amendment to it. I supposed it was well considered by the Senate.

Mr. LANCASTER. If the Senate passed this Bill, that is all the more reason why we should consider it carefully. Are we going to rush a law through this House simply because it has come from the Senate? I think that is a reason why it should be twice considered instead of being put through with this undue haste. My experience of legislation which has come from the Senate would lead me to the conclusion that it should be kicked out body and bones.

Mr. TALBOT. Has the hon. gentleman any amendment to propose?

Mr. LANCASTER. If the hon. gentleman will tell me what the Bill is, I will tell him what amendments I have to propose.

Mr. TALBOT. Read it.

Mr. LANCASTER. The hon. gentleman had better read it himself and not try to laugh the Bill through the House. I want to understand every clause of this Bill before it passes.

Mr. JOHNSTON. Then it will never be passed.

Mr. LANCASTER. I do not say that it never will pass with the majority that the government has to force it through, but, speaking for myself, it never will pass if it is going to be put through in this ill-advised, hasty and deplorable way in which it is attempted to put it through to-night. It is an outrage upon common decency and upon the respect that we should have for the little boys and girls of this country.

Mr. TALBOT. Will the hon. gentleman explain his anger about the matter?

Mr. LANCASTER. If the hon. gentleman chooses to call it anger, my anger is caused, if it is anger, by the fact that the so-called Minister of Justice brings into this House——

Some hon. MEMBERS. Order, order.

Mr. LANCASTER. Is he not called the Minister of Justice?

Mr. DEPUTY SPEAKER. That term should not be used.

Mr. LANCASTER. If he is not called the Minister of Justice I will withdraw it.

Mr. PUGSLEY. I think that should be withdrawn.

Mr. DEPUTY SPEAKER. He has withdrawn it.

Mr. PUGSLEY. He has not withdrawn it.

Mr. LANCASTER. I have withdrawn the word 'so-called.' This Bill may be all right, but I am not going to allow the hon. member for Bellechasse (Mr. Talbot) to assume that this Bill is all right and to swallow it holus bolus because it is brought in by the Minister of Justice or anybody else. I am responsible to my constituents for what goes on here. This Bill is dealing with a most serious matter. I do not see one word in it, for instance, in the hurried glance which I have been able to give to it, providing for the protection of the child or as to how he is to be defended. He seems to be entirely at the mercy of a person called a probation officer. There should be some provision for the child being able to say he is not guilty if he is not guilty. Whatever the probation officer chooses to do with the child is to be done. It may be all right if we had time to consider it carefully, but what I am pleading for, and I do not care if the whole House gets angry with me for doing so——

Mr. JOHNSTON. You are the one who is angry.

Mr. LANCASTER. I do not care whether the hon. member for Cape Breton is angry or not.

Mr. JOHNSTON. He may be sorry for you but he is not angry.

Mr. LANCASTER. The hon. gentleman's sorrow does not amount to anything. His are crocodile tears. I am going to protest against this Bill going through without being carefully considered. We might do it in five or six hours but we cannot in five or six minutes. I think the Minister of Justice will be well advised if he moves that the committee rise and report progres and let us take it up when we have more time. Is there any provision in this Act corresponding to the amendment made by a Bill introduced by me some years ago, providing that when a child was charged with any indictable offence no election for trial could be made without the parent or guardian being notified so as to advise the child.

Mr. AYLESWORTH. Section 8 provides for that.

Mr. ALCORN. Is this Bill modelled on some other law as to which there has been experience? I presume that a Bill of this kind consisting of a mass of detail is not

put upon the statute book simply as an experiment.

Mr AYLESWORTH. I can only answer in a very general way as I have not prepared the Bill myself. The whole subject is one to which those interested have given a great deal of attention and I have been favoured during the past 12 months with a mass of literature dealing with this question. It is stated by writers on the subject that Canada is almost alone among civilized nations in being without legislation of this character. That assertion is too sweeping because there is in Ontario a very elaborate statute going no doubt as far in the direction of this legislation as the provincial legislature felt itself constitutionally empowered to go. There is legislation of a more or less similar character in other provinces. I understand this measure has received very careful consideration from the Senate and has been passed with a view to filling a need, in order that the provincial legislation might have its full effect. The enactment goes into only as and when it is proclaimed in respect of some section of the country which asks for it and where there will be some general feeling of the necessity if it. It must be borne in mind that where this Act is not in force, if any one under the age of 16 years commits an offence, the only recourse under the present law is prosecution leading to fine and imprisonment. This statute will confer upon the court a much wider discretion so as to avoid going the length of imprisonment where it is a young offender.

Mr. ALCORN. Probably sections 34 and 35 will remove any objection to the Act that I am aware of.

Mr. CROCKET. Is there any discretion left to the magistrate as to whether proceedings shall be taken under this Act or under the general criminal law.

Mr. AYLESWORTH. When it is an indictable offence and if the child is over 14 then by section 7 the court may in its discretion order the child to be proceeded with in the ordinary way, but unless such an order as that is made all offences of a criminal nature by children under 16 will be tried under the provisions of this Act and not in an ordinary public court.

Mr. LANCASTER. If section 7 means that the child is deprived of the right to have a trial by jury I protest against it. That is although it is an indictable offence and the child is over fourteen years, the court may in its discretion let the case go to the criminal court with a jury, to the assizes or to the sessions. That magistrate ought not to have the discretion to say a child shall not have the right to a jury when it is over fourteen. My objection is to denying to that child the inherent right to trial by jury which we have all enjoyed since Magna Charta, and which cannot be denied to even a hardened criminal. The right to elect as to trial by jury should be vested in the person accused and not in some other person, in this case this level-headed judge.

Mr. AYLESWORTH. My hon. friend is right in the view that this Bill would prevent the advantage of trial by jury, but possibly there are countervailing advantages to the person accused which would be of even greater value. The provision is distinctly made that a child is not to be sent to a common gaol before or after sentence. That in itself is a greater privilege and protection against the danger of the child being destroyed by what is perhaps a comparatively venial offence than the privilege of trial by jury. Cases are continually arising, I have one in mind which has occasioned a great deal of anxious consideration to officials in the Justice Department and actual distress to the judge before whom the child was convicted. A child of some twelve years of age killed another while at play. The jury convicted of manslaughter and there was no other recourse to the judge than to sentence, and feeling that he was obliged to sentence he felt he could not do otherwise than sentence to a substantial term of imprisonment and that youngster is possibly having its life destroyed at the present time in a penitentiary because it was impossible to treat it otherwise than as if it had been a grown man.

Mr. LANCASTER. In such a case you could provide for a less severe penalty without depriving the child of the advantage of trial by jury.

Mr. AYLESWORTH. The objection to trial by jury is the publicity; the whole idea is to avoid that. There is even a provision to prohibit the publication of offences of young people in the newspapers.

Mr. GRAHAM. This clause 7 is at the discretion, of course, of the magistrate and the enforcement of the law will depend altogether on his judgment. The Act strikes me as one which will be of great benefit. Any one who has read the record of Judge Lindsay's court at Denver cannot but be impressed with the great good he has done for boys and girls of that city, in fact he is known the world over as the children's judge. It is just on the lines of this Bill that he acts, but of course the usefulness of such Acts depends altogether on the men enforcing them. He must be a man who is trying to reclaim rather than to condemn the child. In Ontario we have Mr. Kelso the head of a department and the work of the department has resulted in the emptying of at least one institution for boys in the province, these boys have all been placed in homes and the latest reports I have is that only two have turned out badly. The

Act will accomplish as much good comparatively as Judge Lindsay has in his vicinity.

Mr. LEIGHTON McCARTHY. If the child is allowed the inherent right of trial by jury, which he undoubtedly has under the British constitution, it is put in the hands of the child to do away with the entire benefit of the Act. We are passing extraordinary legislation for the protection of the child, and to amend that as my hon. friend suggests would be to do away with the benefit of the Act.

Mr. LANCASTER. You are providing that the parents shall be notified. On being notified, if the case is a serious one, the parent will employ counsel, and the child will have the advice of both the parents and the counsel, and the decision can be safely left to them. But you are leaving the decision entirely in the hands of some one who has no direct interest in the child's welfare.

Mr. LEIGHTON McCARTHY. It is the converse of the case which the hon. gentleman puts. We are passing an enactment for the benefit of the juvenile delinquent.

Mr. LANCASTER. How do you know it is ?

Mr. LEIGHTON McCARTHY. If the hon. gentleman thinks it is not, he should have moved the six months' hoist on the second reading. Having read the Bill the second time, we have admitted the principle and we are providing a special court where the juvenile delinquent will be guarded against publicity and from being sent to the common jail. We are providing a special place for his incarceration. Assuming that this is for the benefit of the juvenile delinquent, we still provide—which is the converse of the case the hon. gentleman puts —that the magistrate shall have the discretion of giving a trial by jury where he thinks the seriousness of the case demands it.

Mr. LANCASTER. By section 7 you are taking away the very thing which my hon. friend says is such a wonderful benefit that this wonderful Bill is going to accomplish. Instead of leaving the discretion to the whim of the magistrate, who has no experience of trials by jury and consequently knows nothing about them, I would leave the election to the parent of the child assisted by counsel.

Mr. CARVELL. My hon. friend assumes that every criminal case in the Dominion is tried by jury. We have heard him declaim about this inherent right of trial by jury conferred by Magna Charta, but does he not know that ninety-nine cases out of a hundred, where youths of fourteen years and under are brought before the court, they are tried by the magistrate without a jury? There are numberless instances all over Canada of criminal cases tried without a jury.

Mr. LANCASTER. When the accused elect for summary trial?

Mr. CARVELL. Without any election at all. The hon. gentleman does not know what he is talking about. For the last hour he has been trying to get his friends to help him out of his wrangling over this matter. Does he not know that more than three-quarters of the cases of assault tried in this country are tried by a magistrate without a jury and the accused has no right to a jury?

Mr. LANCASTER. They are not indictable offences.

Mr. CARVELL. I know they are not. The hon. gentleman is simply talking against time, and I want him to try and have a little sense.

On section 35, any city or town may ask for this law.

Mr. LANCASTER. Taking section 35 in conjunction with section 34, it would strike me as being rather repugnant. Perhaps the Minister of Justice will explain how it would work out. Section 34, apparently, makes it a condition precedent that the province shall issue a proclamation bringing the Act into force. But under section 35 the Act may be brought into force by proclamation, notwithstanding that the provincial legislature has not passed an Act, if the Governor in Council is satisfied. The Governor in Council would be the Governor in Council of the Dominion, I presume, and the proclamation under the section would be the proclamation of the Dominion government.

Mr. PUGSLEY. The Minister of Justice (Mr. Aylesworth) is going to move a section to meet that.

Mr. AYLESWORTH. I move that the following section be added, in these words :

This Act shall go into force only when, and as, proclamations declaring the same in force in any province, city, town or other portion of a province, are issued and published in the 'Canada Gazette.'

Motion agreed to.

Bill reported, read the third time and passed.

BOUNTY ON CRUDE PETROLEUM.

House went into committee to consider the following proposed resolution :

Resolved, that it is expedient to provide that the bounty of one and one-half cent per imperial gallon payable on crude petroleum from Canadian wells authorized by chapter 28 of the Act of 1904 shall apply also to crude petroleum produced from shales or other substances mined in Canada.

Mr. FIELDING. The existing bounty legislation respecting crude petroleum covers the case of petroleum drawn from Canadian wells. In the province of New Brunswick they are proposing to produce petroleum not by drawing it from wells but by mining shale and manufacturing petroleum from the shale. The object of the change is simply that the bounty shall apply to any oil produced in that way.

Resolution reported, read the second time and agreed to.

Mr. FIELDING moved for leave to introduce Bill (No. 199) to provide for the payment of bounties on crude petroleum.

Motion agreed to, and Bill read the first time.

SALARY OF SUPERINTENDENT OF INSURANCE.

House went into committee to consider the following proposed resolution :

Resolved, that it is expedient to provide that the Superintendent of Insurance be paid such salary, not exceeding five thousand dollars per annum, as the Governor in Council may from time to time fix and determine.

Mr. FIELDING. In the legislation of many years ago, $4,000 was fixed as the maximum salary of the Superintendent of Insurance. We propose to fix the maximum now at $5,000. The Bill to be founded on this resolution will repeal the old clause and insert a new one, simply changing the figures.

Resolution reported, read the second time and agreed to.

Mr. FIELDING moved for leave to introduce Bill (No. 200) respecting the salary of the Superintendent of Insurance.

Motion agreed to, and Bill read the first time.

CANADIAN ASSOCIATED PRESS.

House went into committee to consider the following proposed resolution :

Resolved, that it is expedient to continue for a further period the granting of aid towards the maintenance of an independent and efficient service of telgraphic news from Great Britain for publication in the Canadian press, and that for such purpose it is expedient to provide for the payment of a sum not exceeding $9,000 for the period from July 1, 1908, to March 31, 1909, both days inclusive; for the payment of a sum not exeeding $12,000 for the fiscal year terminating March 31, 1910; and for the payment of a sum not exceeding $3,000 dollars for the period from April 1, 1910, to June 30, 1910, both days inclusive.

Mr. COCKSHUTT. Is it the intention that this news shall come entirely through British and Canadian channels ?

Mr. AYLESWORTH.

Mr. FIELDING. This is a continuation for two years of the existing arrangement. The old arrangement provided that we might pay to an organization of Canadian newspapers sums of money from time to time, aggregating in five years $60,000, or $12,000 per annum, on the average. The association desires that we should continue that for a further period of five years. There was some difference of opinion as to the wisdom of binding the government for so long a period, and we concluded to continue the promise for two years, at $12,000 each. It is practically a continuance of the present arrangement whereby an association in Canada, with an agent in London, supplies every day cable news affecting Canadian affairs.

Mr. COCKSHUTT. Is it to a news company ?

Mr. FIELDING. No, it is to an association of Canadian newspapers entirely.

Mr. FIELDING moved for leave to introduce Bill (No. 201) to assist in maintaining an independent and efficient service of telegraphic news from Great Britain for publication in the Canadian press.

Motion agreed to, and Bill read the first time.

TIMBER MARKING ACT.

Bill (No. 193) to amend the Timber Marking Act—Mr. Fisher—read the second time, and House went into committee thereon.

On section 1,

Mr. LANCASTER. What will be the effect of the change.

Mr. FISHER. To apply the Timber Marking Act to the province of New Brunswick. It now only applies to Ontario and Quebec.

Bill reported, read the third time and passed.

PRINCE EDWARD ISLAND RAILWAY—BRANCH LINE FROM HARMONY TO ELMIRA.

House went into committee to consider the following proposed resolution :

Resolved, that it is expedient to provide that the Minister of Railways and Canals may, with the authority of the Governor in Council, construct a branch line railway from Harmony, on the Souris branch of the Prince Edward Island Railway, to Elmira, in Kings county.—Mr. Graham.

Hon. G. P. GRAHAM (Minister of Railways and Canals). If the House will kindly advance the resolution through the successive stages the discussion can take place upon the Bill.

Mr. A. MARTIN. I noticed that some days ago the minister had a notice on the Order Paper providing for the construction of two branch railways in place of one as

proposed in this resolution. I do not know whether it is an oversight that he has omitted one. Perhaps on second thoughts this one will disappear also and then we will have none at all. I suppose this means a sop for the hon. member for Kings, Prince Edward Island (Mr. J. J. Hughes) who, I am sorry is not in his seat. If the minister wishes to delay the discussion on this Bill we should know when it is coming up for the second reading.

Mr. GRAHAM. I will be ready to take it up just the moment I will be allowed to, but I think we will all have to stay in our seats to get the business through.

Mr. TAYLOR. I presume the minister will give notice when he proposes bringing on the second reading ?

Mr. GRAHAM. I will be glad to tell my hon. friend if I have the opportunity.

Mr. A. MARTIN. Will I and the members from Prince Edward Island get notice as to when the Bill will be taken up ?

Mr. GRAHAM. Suppose we take it up on Friday.

Mr. A. MARTIN. All right.

Resolution reported, read the second time and agreed to.

Mr. GRAHAM moved for leave to introduce Bill (No. 202) to authorize the construction of a branch line of the Prince Edward Island Railway from Harmony on the Souris branch to Elmira.

Motion agreed to, and Bill read the first time.

Mr. FIELDING moved the adjournment of the House.

Mr. TAYLOR. Will the leader of the House inform us what business will be taken up to-morrow ?

Mr. FIELDING. To-day, I presume my hon. friend means.

Mr. TAYLOR. Yes.

Mr. FIELDING. The resolution concerning the All Red Line will be the first order, then the motion will be made for Supply upon which my hon. friend the Minister of Militia and Defence (Sir Frederick Borden) wishes to make a statement.

Motion agreed to, and House adjourned at 1.25 a.m. Thursday.

HOUSE OF COMMONS.

THURSDAY, July 9, 1908.

The SPEAKER took the Chair at Eleven o'clock.

AGRICULTURE COMMITTEE.

Mr. MACKENZIE moved :

That the second report of the Select Standing Committee on Agriculture and Colonization be concurred in.

Mr. SPEAKER. This had better stand as a notice of motion for Monday next.

QUESTIONS.

MONTMORENCY FALLS.

Mr. ROBITAILLE—by Mr. Morin—asked :

1. What is the length in feet of the present supporting wall at the Falls of Montmorency?
2. What is its width?
3. How many cubic feet of wood are in that wharf?
4. What kind of wood is it?
5. How many cubic feet of stone?
6. What sort of stone?
7. Was the last money voted for that wharf after the outlay already made?

Hon. WM. PUGSLEY (Minister of Public Works) :

1. 1,325 feet.
2. 12 feet.
3. 27,000 cubic feet.
4. Pine and spruce.
5. 203,000 cubic feet.
6. Ballast stones.
7. No work was started before money had been voted by parliament.

THE CORBY DISTILLERY.

Mr. ROBITAILLE—by Mr. Morin—asked :

1. Has the Corby firm ever had a deficiency in their spirit production from the still? If so, how many and in what years?
2. What amount in proof gallons and in money represented the respective deficits?
3. How were said deficits adjusted with the Excise Department?
4. For the last deficit, how many days were given in order that the production in that distillery be computed on the whole quantity of grain used during that given period in order that over-production would reduce deficiency?
5. For any deficit, has the Excise Department pressed a demand of payment from the Guarantee Company?
6. Has any official demand been made upon the principals by the department through their legal representatives?

Hon. WM. TEMPLEMAN (Minister of Inland Revenue) :

1. Yes. One in the year 1906-7.
2. 5,528·13 proof gallons. Duty $10,503.45.
3. The period was extended to the end of the fiscal year.
4. 89 days.
5. No, the deficiency being more than overcome by surplus production in the balance of year.
6. No, for the reason given in answer to question 5.

GOODERHAM & WORTS DISTILLERY.

Mr. ROBITAILLE—by Mr. Morin—asked:

1. Has the Gooderham & Worts distillery ever had a deficiency in their spirit production from the still? If so, how many and in what years?
2. What amount in proof gallons and in money represented the respective deficits?
3. How were said deficits adjusted with the Excise Department?

Hon. WM. TEMPLEMAN (Minister of Inland Revenue):

No deficiencies of the character referred to have arisen in the distillery of Messrs. Gooderham and Worts.

SUPERINTENDENT OF PRINTING.

Mr. ROBITAILLE—by Mr. Morin—asked:

1. Is it the intention of the government to appoint a French Superintendent of Printing?
2. If it be not advisable to make a principal appointment, would the government consider the appointment of French Assistant Superintendent?

Sir WILFRID LAURIER. The attention of the Secretary of State has been called to this question and the matter is under consideration.

THE 'BESSIE BUTLER.'

Mr. SAM. HUGHES—by Mr. Taylor—asked:

1. Has the government a boat on the Trent canal named the 'Bessie Butler,' or a similar name? If so, what are its dimensions, cost, material and uses?
2. In what service was the boat engaged on July 1, instant, Dominion Day?
3. Does the government or its officers ever lease or hire out this steamer?
4. Was the boat used by the Roman Catholic Bishop and priests of Peterborough locality on July 1, during the greater part or any considerably part of the day? If so, at whose cost?
5. Is the boat placed at the disposal of the clergy of all other denominations for picnics or other entertainments?
6. If so, will the government be good enough to order it up to Victoria county waters for the entertainment of the clergy of that county and for picnic purposes?

Hon. G. P. GRAHAM (Minister of Railways and Canals):

1. Yes. The government has a tug, called the 'Bessie Butler' on the Trent canal; her dimensions are: Length 78 feet, beam 17 feet 6 inches; length of engine room 22 feet; gross tonnage, 76·99; registered tonnage, 52·36. Cost in the neighbourhood of $18,500. The tug is used for towing and inspection purposes.

2. The tug 'Bessie Butler,' went to Hastings to bring up to Peterborough a drag scow which was being used by the engineer's department. On the same day July1, the St. Peter's Total Abstinence Society were holding their annual picnic at a point about two miles below the city. When passing the street railway wharf at the south end of the city, the superintendent found that several hundred persons were in an awkward predicament. The society, which had arranged the picnic, had chartered two boats, the 'Rainbow' and the 'Beaver,' the latter boat, through unforeseen difficulties could not fill its contract, and did not put in an appearance. There were as a result, about two or three hundred people who had taken the street car to the railway terminal, but were unable to obtain boat transportation to the picnic grounds, two or three miles distant. They hailed the government boat and explained their position. The superintendent took as many on board as he could, and conveyed them to the picnic grounds. About the same number returned on the government boat. There was a number of women and children, who otherwise would have had no means of getting up that evening. The superintendent states, that his action is nothing more than it would have been under like circumstances, had the picnic been under the auspices of any other church, society, lodge or other organization. The tug made its trip to Hastings and returned to Peterborough, with the scow as originally arranged.

3. No, it does not.

4. The boat was used in the manner above set out for a few hours on July 1. The department was offered pay, for the service in this connection; but did not accept any, as the superintendent felt that he had only done a friendly act when the excursionists were placed in an awkward position.

5. The boat is not placed at the disposal of the clergy of any denomination.

6. Under similar conditions the superintendent would feel that he was not doing anything wrong in according similar treatment.

RICHIBUCTO WHARF.

Mr. GANONG—by Mr. Taylor—asked:

1. What is the length of the wharf at Richibucto, New Brunswick, for which the amount of $2,000 is included in the main estimates, and what depth of water will be obtained at this wharf at low water?
2. Has this wharf been purchased? If so, when, from whom, and at what price?
3. Is the wharf now in good repair? If not, what amount will be required for repairs?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. (a) 680 feet. (b) 13 feet of water at L.W.O.S.T. along the outer face.

2. The municipal council of Richibucto offered to sell its wharf to the government

for $1,500; the offer is now under consideration.

3. (a) No. (b) Resident engineer estimates the cost of rebuilding approach at $4,500. The addition of a pierhead would cost $7,000.

SOULANGES CANAL.

Mr. MONK—by Mr. Bergeron—asked:

1. What is the amount claimed for his services and expenses by commissioner L. Boyer in connection with the inquiry into matters on the Soulanges canal?
2. What action has the government taken upon the report of said commissioner?
3. Why was not said inquiry conducted by the Railways and Canals department itself?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. Mr. Boyer's remuneration was fixed by order in council at $25 per day, and his account was rendered in accordance therewith and paid; $485 for services and $47.85 for expenses.
2. Mr. Sauvé, superintendent, has been suspended without pay.
3. Mr. Boyer was appointed by order in council as commissioner in pursuance of the provisions of Part II. of the 'Inquiries Act,' chapter 104 of the Revised Statutes of Canada, 1906, to investigate for the Department of Railways and Canals and report to that department.

MR. F. T. CONGDON.

Mr. FOSTER asked:

Will the Minister of the Interior instruct the commissioner of the Yukon by telegraph to wire him what steps, if any, have been taken to make investigation into and audit of the accounts involved in the estates and trusts that came into the hands of F. T. Congdon, as public administrator of the Yukon; and forward to him, to be laid on the table of the House, a list of those estates and trusts, with the disposition made of the same?

Hon. FRANK OLIVER (Minister of the Interior). The Commissioner of the Yukon Territory is being communicated with by wire.

SUDBURY COUNTY COURT JUDGE.

Mr. MONK—by Mr. Bergeron—asked:

1. When is the government going to provide a county court judge for the district of Sudbury?
2. Is the government aware that its failure to appoint the said judge is said to be causing inconvenience in the said district?

Hon. A. B. AYLESWORTH (Minister of Justice):

1. When parliament has provided for payment of a salary to such judge the question of an appointment to the position will have careful consideration.

2. Arrangements were some time ago made for having the judicial work of the district attended to, and such arrangements seem to have been satisfactory.

QUEBEC TERCENTENARY POSTAGE STAMPS.

Mr. McCOLL asked:

1. Is it the intention of the Postmaster-General to have a special issue of postage stamps in commemoration of the Quebec Tercentenary?
2. If so, what different denominations will be issued, and what number of each denomination?

Hon. RODOLPHE LEMIEUX (Postmaster General):

1. Yes.
2. (a) ½c., 1c., 2c., 5c., 7c., 10c., 15c. and 20c. (b) Since the arrangements as to the respective quantities comprising the series are thus far of a necessarily tentative character, being largely dependent upon the extent of the demand therefor that may arise, no final estimate has been made of the number to be issued in each denomination.

THE ALL-RED LINE.

Sir WILFRID LAURIER rose to move the following resolution:

That at the Imperial Conference lately held in the city of London, England, the following resolution was unanimously passed:

That in the opinion of this conference the interests of the empire demand that in so far as practicable, its different portions should be connected by the best possible means of mail communications, travel and transportation; and that to this end it is advisable that Great Britain shoud be connected with Canada, and through Canada with Australia and New Zealand, by the best service available within reasonable cost; that for the purpose of carrying the above project into effect, such financial support as may be necessary should be contributed by Great Britain, Canada, Australia and New Zealand in equitable proportions.

That it is desirable that steps should be taken with all convenient speed to achieve the results aimed at in the said resolution.

That this House doth hereby endorse the terms of the said resolution, affirming that Canada is prepared to assume her fair share of the necessary financial obligations.

That in the opinion of this House it is desirable that the governments of Australia, Canada and New Zealand should, with as little delay as possible, agree upon a definite plan for carrying into effect the terms of the said resolution of the Imperial Conference, the same to be submitted for the consideration of the imperial and colonial parliaments.

He said: Of the advantages which would accrue to Canada if such a scheme as is here outlined were to go into effect I do not propose to speak. I have followed pretty carefully the expressions of public opinion

on this subject from the time, now twelve months ago, when it was first brought to the attention not only of Canada, but of the whole British empire; and, so far as my own observations have gone, I may say that though there have been some carping criticism, on the whole the scheme seems to have commanded universal approbation—I do not say unanimous, because I must recognize that some expressions of dissent have been heard. But while the expressions of opinion have not been unanimous, they have been pretty generally in favour of such a scheme. One thing at all events seemed to be certain: if such a scheme were to become a fact, its advantages to Canada would not be disputed. Canada would undoubtedly be on the highway, not only between Great Britain and her distant possessions on the other side of the globe, but also between Europe generally and the Orient. This scheme, which would primarily affect the British empire, would not in its usefulness be confined at all to the British empire; but all the countries of Europe and all the countries of the Orient would necessarily seek this route as a means of communication between each other. Canada has the advantage of geography in this matter. We have the shortest route, I believe, both on the Pacific and on the Atlantic. At present the only available route between Great Britain and Australasia is by way of the Suez canal, and the disadvantages of this route as compared with the Canadian route are manifest. First of all, the duration of a trip from London to New Zealand by the Suez canal is no less than 29 days, and the discomfort of the trip to one of European blood is pretty severe. A trip through the Suez canal, and then through the Red sea and then east by way of Colombo is a very trying one to Europeans. A similar trip by way of Canada would certainly obviate all these discomforts. There is, I may say, an alternative route by way of San Francisco, and at the time of the conference Sir Joseph Ward, the Prime Minister New Zealand, who spoke with authority on this subject, stated that he had made a trip from New Zealand to England by way of San Francisco in 29 days. I think, however, that this route is practically no longer in existence; since the earthquake at San Francisco some two years ago, I believe it has been abandoned. I speak under correction on this point, but I think I am correct. At all events, if that route is not now in existence, it may be revived at any moment. So that, in all our calculations, we have to take into consideration not only the route by way of the Suez canal, but also the possibility of having a line of communication at any time from Liverpool, by way of New York and San Francisco to Australasia in 29 days. Therefore, it behooves us, if we are to attain what we have in mind, to make the journey by the line we have organized inside of 29 days and some days

Sir WILFRID LAURIER.

more. The line may be divided into three parts—the Atlantic part, the continental part and the Pacific part. When we speak of the Atlantic part, we know exactly what we can do; we know the conditions that prevail to-day between Europe and the American continent; and we know that it is possible, with a line of steamers of the highest type afloat, such as the 'Mauretania' and the 'Lusitania,' to cross the Atlantic from British territory to Canadian territory within four days. We have the advantage on our side of distance to the extent of some about 1,000 miles, which would enable us to have easy communication from land to land with vessels of that type in four days. I do not, however, lose sight of the fact that vessels of the type of the 'Mauretania' and 'Lusitania' are still in the experimental stage, commercially speaking. So far as navigation is concerned, the stage of experiment is past. These vessels have proved their adaptability to the service in which they are engaged; but, so far as the commercial aspect of the case is concerned, we are still in the dark, and no one can say yet that these two vessels, which have been heavily subsidized by the British government, will prove a success commercially. It is a well-known fact that all such high-class steamers have not been a success commercially, and it is an essential in all countries that they should be assisted out of the public treasury. The Germans do it, the Americans have done it, the English have done it, and the Canadians have done it. But although all these high-class steamers have been subsidized by their respective countries, there is a limit beyond which such assistance is not possible, and it is a question whether or not vessels of the type of the 'Mauretania' and the 'Lusitania,' even with the assistance they have received from the British government, can be called a commercial success. Their owners say that the time will never come when they can dispense with such assistance.

Even if at the present moment we are not prepared to provide vesels like the 'Mauretania' and the 'Lusitania' it is possible for us to entertain the hope that we can have twenty knot or twenty-one knot steamers and these will easily cross the Atlantic within five days. Assuming that even it should take five days to cross the Atlantic I think I can hopefully if not confidently say that we can secure a train service which will cross the continent in at least five days; may be in four days but as to that I would not speak positively. We are, however, on absolutely safe ground when we say that the train journey across the continent can be accomplished in five days. There then remains the service on the Pacific and as to that we are to a large extent in the dark. At present there are two Pacific services subsidized by the Canadian government, one to China and Japan, and the other to Australasia. The Pacific service by

the Empresses is in every respect excellent, but the steamers have a speed only of thirteen knots and consequently the voyage from Vancouver to Hong Kong is considered somewhat slow in these days of fast transportation. The service between Vancouver and Australasia has not up to the present time given the satisfaction we had reason to hope for, and we are now negotiating for its improvement. For this service we have been paying something like $40,000 a year. The mail service on the Atlantic costs us at the present time about $500,000 a year, and, therefore, for the ocean mail service on the Atlantic and the Pacific we are paying about $540,000. It is for us to consider to what extent we will have to implement the present service in order to achieve what we now contemplate. Sir Joseph Ward, Prime Minister of New Zealand, expressed at the conference his decided preference for a Pacific service equal to the service now on the Atlantic, namely, steamers of twenty-knots or twenty-two knots, in order that Auckland may be made in ten or twelve days from Vancouver. Such a scheme is perhaps too ambitious for us now. I wish for my part I could view the matter with the same enthusiasm as my friend Sir Joseph Ward, who stated that New Zealand would be prepared to pay a subsidy of £100,000 sterling to such a line as that. This is a very large subsidy, indeed, for a country lke New Zealand with a population of less than 1,000,000, but Sir Joseph Ward attached so much importance to a fast all-British line that he was prepared to advise the parliament of his country to grant this very handsome subsidy to secure it. Whether or not it is possible to have such a service on the Pacific seems to me of somewhat doubtful possibility. We must recognize that these mail subsidies have to be calculated largely upon the basis of the population which is served. The population of New Zealand is about 1,000,000, the population of Australia is under 5,000,000 and the population of our Pacific coast is not much more than 200,000. It may be that this population is not so large as to justify a twenty knot or twenty-two knot service on the Pacific, and so we have to consider if we cannot do with less. It is quite possible I think that we might have an eighteen knot service from Vancouver to Auckland and from Auckland to Sydney, and with steamers of that speed they ought to make the voyage from Vancouver to Auckland in about sixteen days. From Vancouver to Auckland is about 6,355 miles, from Vancouver to Sydney the distance is 6,824 miles and from Auckland to Sydney the nautical distance is about 1,200 miles. That means that the voyage between Vancouver and Australia could not be covered in less than twenty-two days by eighteen knot steamers and this is not entirely satisfactory from the point of view of Australia which has perhaps the right to ask for a more expeditious service. It is, therefore, for us to consider whether it is possible to come to an agreement for a twenty knot service on the Pacific. I am not prepared now to give an opinion as to whether or not such a service cannot be attained; it is a question which has to be very carefully considered and so for the present we do not propose to ask the House to give us endorsation to this scheme in any concrete form. The only thing we ask the House now to do is to authorize us to approach the subject with the governments of Australia and New Zealand so as to give the best possible consideration to the question and at a later day to come before the House with some concrete proposition if that be possible. That the idea is an excellent one every one admits; that the idea is one which will commend itself to the best judgment of every one in this country we all recognize, but at the same time the government does not close its eyes to the fact that the scheme may present so many difficulties as to render it impossible of absolute accomplishment.

And so the question has to be considered very carefully and looked into in all its details. We know where we are on the Atlantic, we know where we are with regard to the train service across the continent, but so far as the Pacific is concerned, the matter is still in the dark and, although the idea is one which should be exploited, we do not say that it is absolutely sure or feasible. That is the reason why we are asking the House to ratify the idea of the resolution which was passed by the conference. We have no intention of saying that the thing is absolutely beyond peradventure, that it is an absolute certainty. We do not want, in approaching this subject, to give to the House more confidence than we have ourselves; we do not want to lead the House to understand that we are sure that the project is absolutely feasible, because there are things which have to be taken into consideration, which have to be determined and which must engage our best attention. There are on the Pacific ocean physical conditions which have to be looked into very carefully and which, if possible, have to be overcome. The climatic conditions are such that it is perhaps possible that the complete execution of the idea may not be feasible. I understand that vessels have the same difficulty there that we have in winter in making steam, that climatic conditions exercise nearly the same influence over the making of steam on the equator as on the frozen ocean, and, for all these considerations, whilst we bespeak the sympathetic attention of the House to the scheme, we do not in any measure commit ourselves to it as a scheme as to which we may have an absolute condition of certainty. The House will remember that all we are asking is that it shall endorse the

terms of the resolution. All we are asking it to do at the present time is to authorize us to enter into negotiations with our fellow subjects of Australasia in order if possible to find the means of having such a line as is now contemplated, and if it is feasible then to bring it before parliament for its consideration.

Hon. GEO. E. FOSTER (North Toronto). Mr. Speaker, we have all listened with a great deal of interest to the right hon. gentleman (Sir Wilfrid Laurier) who introduced this resolution. I think the House and the country will agree with me that the mover of the resolution has not been at all as positive in his statements in this House as he was in the imperial conference of 1907 when he moved, not this resolution, but a certain resolution with the same object in view. At that time my right hon. friend had no doubts. He was not only in favour of the idea, he not only believed that the idea was practicable, but, if I mistake not, his demand upon the conference at that time was to at once establish a service between Great Britain, Australia and New Zealand through Canada. I think it is of sufficient importance that, just at this point, in view of certain expressions and of the assumption that has been made, to take up a little time in presenting the history of the growth of the idea of improved steamship communication between Canada and Great Britain, between Canada and Australia and between Great Britain and Australia through Canada as a land route. It is not true that the idea, which was broached to the conference in 1907 and which the right hon. gentleman spoke of when he came to Quebec in the latter part of that year, was a newly discovered idea. It is well just here to quote what the right hon. gentleman said in his Quebec speech. He said:

During the last five days of the conference I announced a new idea which has almost become historic—the All-Red Line. My proposition was the establishment at once of fast boats on the Atlantic and the Pacific. I am thoroughly convinced that my ideas are in the interest of Canada and the empire and, although I have grown old and white in the service of the country, I am prepared to work with all my energy to further the cause.

The hon. member for Brandon (Mr. Sifton), who made a very exceedingly comprehensive statement in reference to this idea a few months ago in this House, also declared, in express terms, that the resolution of Sir Wilfrid Laurier in the conference of 1907 included the genesis and included the history of this idea of intercommunication between Great Britain and the overseas dominions. Another point I want to call the attention of the House to in connection with it is the extremely different position which my right hon. friend occupied in the conference of 1907 and occupies to-day in the advocacy of this resolution, as compared with his ideas upon this as well as some other questions as long ago as 1887, 1889, 1890 and 1896. This idea has been one of growth. It has not flashed all suddenly into the mind of my right hon. friend or into the mind of any other single man. As most ideas this has had a period of incubation, of gradual birth, so to speak, and of growth towards its more advanced and more completed form. Canada, from the time of the old Allan line steamship mail contract, has been gradually forging ahead towards a continuously better and better service. The old nine, twelve and thirteen knot steamers which plied across the Atlantic and on which we were dependent for our mail carriage and for our passenger traffic were soon seen to be inadequate to the needs of united and progressive Canada. Farsighted men living then, as farsighted and less farsighted men who live now, saw that it was necessary that this service should be broadened and bettered, and they worked towards that end as far as their resources and circumstances admitted.

In 1886-7, tenders were called for by the Liberal-Conservative government then in power for a fifteen to seventeen knot service; and in 1888, these proving unsatisfactory, negotiations began for the co-operation of Great Britain and Canada on both the Atlantic and Pacific. That was the first statement in this parliament of the idea, which has grown since, of inter-communication or co-operation between Great Britain and her oversea dominions. Well, in 1887, if I mistake not, it had its first practical embodiment in the Canadian Pacific Railway monthly service to China and Japan, which company received then and has kept ever since a contract with the British government for the carriage of the mails, a very substantial subsidy which enabled it then to inaugurate a service on the Pacific between Vancouver and China and Japan. Then we come to 1889, and the idea is still active. In that year, as Finance Minister of this Dominion, I myself had the honour of introducing three resolutions to the House, and the House will see to what extent these resolutions carried the idea of this inter-communication. One resolution was to bring about a Canadian Australian and New Zealand system of transportation for freight and passengers. £25,000 sterling or $125,000 was asked for and obtained from this parliament for the inauguration of a fortnightly service, or, if that could not be had, a lesser amount for a monthly service between Vancouver, Auckland and Sydney or some other port in Australia. A second resolution was introduced looking to the encouragement of a fortnightly service between Canada, China and Japan, in which this parliament was asked for the sum of £25,000 on condition that Great Britain would give a much larger subsidy for the

same service and put it into a permanent position. Then a third resolution was introduced with reference to the providing for a service between Great Britain and Canada with connection at a French port. We asked for and obtained $500,000 annual subsidy for a period of ten years on the basis of the negotiations and agreements which had been actually entered into with reference to that service with the mother country which was to provide a substantial contribution. Now what was the attitude of my right hon. friend and of the gentlemen beside him on that question? With reference to the Canadian Australian service, they criticised and criticised but ventured no amendment. With reference to the Canada, China and Japan service they criticised; and my right hon. friend himself moved an amendment to the resolution intended to postpone the consideration of the subject for, as he said, lack of perfect information. With reference to the service between Great Britain and Canada, for which we asked a subsidy of $500,000, my right hon. friend opposed that and moved an amendment on the ground that he did not see that the service was going to compensate this country for the large subsidy required. Mr. McMullen was dead against all three. Mr. Mills was very doubtful indeed. Sir Richard Cartwright was very critical as usual. Mr. Jones, of Halifax, declared that the whole scheme was no good. The present Minister of Customs (Mr. Paterson) declared that it was no good so long as the country had protection—that there was no use providing for improved communication between the two countries when we were by our tariff endeavouring to prevent the goods of the one coming into the other. Mr. Davies, with his usual vehemence, declared that the policy was as fatuous a one as could be proposed, and you will find that statement on page 1384 of the 'Hansard' of 1889. And you will find my right hon. friend's amendment for postponement on pages 1329 and 1389 of the same 'Hansard.' But was not the idea of uniting the British empire in co-operative work for inter-communication as good then as now? Was not the idea which, even if it did not bring equivalent commercial advantages, would tend to unite the British Dominions more closely and put Canada, which had been hitherto on the back road, upon the highway, as good then as it is to-day? Has nature shifted the highway since 1889 or do we lie under a different latitude and longitude than we did then? I do not understand that Australia has changed her geological position since that day or that Great Britain lies in another quarter of the ocean. The same geographical conditions, the same ideas of unity and of jointure, of co-operation, the one with the other, were all involved in those propositions; but at that time my right hon. friend could not discover the idea and you could not beat it into his head with a mallet. Why? I do not know. Well, things went on and the year afterwards matters took a still more advanced stand with reference to inter-communication. I am not going to take up time reading from 'Hansard' but will come from 1890-1 to another period, and a somewhat noteworthy period, in the history of Canada and the empire. I allude to the Intercolonial conference of 1894, in which a representative from Great Britain in the person of Lord Jersey, who was president of the conference, and representatives from the Australian colonies and New Zealand and from the South African Dominions took part. They all met here in the city of Ottawa and for a fortnight or so devoted themselves to the study and discussion of matters in common affecting the various branches of the empire. What took place? Among other things discussed at that time there was a prominent place given to this, which my right hon. friend declares to be a new idea that he discovered on May 15, 1907, and flashed, as though it were by limelight, into that conference. What do I find? I find that the representative from New Zealand, Mr. Lee Smith, moved the following resolution:

> That this conference take into consideration the question of mail service between Great Britain and Australia via Canada.

There is your All-Red route exactly as it is defined by my right hon. friend today. Start from London, Liverpool, or any other British port, land in Canada, tranship and traverse the continent by the Canadian Pacific Railway Company, take ship at Vancouver, land in New Zealand and then go to Sydney—in one line and a half exactly what is laid down by this resolution. I had the honour to second that resolution, and the resolution was unanimously—not only sympathetically, but unanimously—upheld by every representative in that conference. But that was a general resolution, and not only was that resolution moved, but, shortly afterward, Sir Adolphe Caron moved—directly in the same line—a more concrete resolution which was unanimously passed, and which I will read to the House:

> 1. That this conference expresses its cordial approval of the successful efforts put forth by Canada and New South Wales for the establishment of a regular monthly steamship service between Vancouver and Sydney and affirms the advisability of the reasonable co-operation of all the colonies interested in securing the improvement and permanence of the same.
>
> 2. That the conference learns with interest of the steps now being taken by Canada to secure a first-class mail and passenger service, with all the modern appliances for the storage of perishable goods across the Atlantic to Great Britain, and the large subsidy which she has offered to procure its establishment.

Of which we, at that time, were officially advised. To-day, my right hon. friend cannot put his finger on a single pound that Great Britain will give or that any colony will give towards the general plan.

3. That it regards such an uninterrupted through line of swift and superior communication between Australasia and Great Britain as is above contemplated as of paramount importance to the development of inter-colonial trade and communication, and to the unity and stability of the empire as a whole.

Every idea is taken in that my right hon. friend contemplates in the resolution which the Prime Minister has moved to-day.

4. That as the imperial post office contributes towards the cost of the mail service——

The same argument, you see.

—between England and Australia via Brindisi or Naples, the sum of £95,000 per annum, while the sea postage amounts to only £3,000; and to the mail service between Vancouver and Japan and China, £45,000, less £7,300 charged against the Admiralty; this conference deems it but reasonable to respectfully ask that assistance be given by the imperial government to the proposed fast Atlantic and Pacific service; more particularly to the British Post Office, while paying the large subsidy of £104,-231, a year to the line from Liverpool to New York, has so far rendered no assistance in the maintenance of a direct postal line between Great Britain and Canada.

That is the complete resolution. That resolution did not find a dissenting voice in that colonial conference. It was given careful attention in a long debate, every sentence of which was sympathetic. And, though there were difficulties and acknowledged difficulties in the way, you could not find a sentence which shows a greater difficulty than that shown by my right hon. friend to-day when he says that, with reference to the Pacific side, it is all in the dark and encompassed with difficulties. Lord Jersey himself, representing Great Britain, took the most intelligent and sympathetic interest, was pregnant in suggestions as to the proper forms of expression ready, with his great personal assistance, as well as his great interest in the empire, to promote the idea. That resolution, as I stated, carried unanimously. Now, how any man who has any regard for the verities can, in 1907, rise and say that this idea is his new discovery, I cannot see. But, Sir, the words had not left the lips of my right hon. friend in the conference in London before the representative of Australia rose and said that for the last ten years they had been advocating that very thing in that country, and that they had named it the 'All-Red Route.' So that neither in the idea nor in the naming of the idea was there any originality. How in the name of historical truth the Prime Minister of Canada can put himself in the position of making assertions like that is not for me to say—I cannot answer the question. But, Sir, what did he say in 1894? I do not need to quote what Sir Adolphe Caron said, what Lord Jersey said, what any other person said—or what I myself said. But I do wish to quote to this House and the country what the hon. gentleman opposite, now Prime Minister of this country, said with reference to that which was discussed and passed in the 1894 conference:

'It has been argued that we should establish a line of steamers between England and her possessions, by virtue of which trade would be cultivated between Canada and the British empire to the exclusion of the rest of the world. I have only to say regarding such an idea, it is absolutely absurd.

That is the best word he had for the idea in 1894. Now what does he say? The House has heard what he says. More, with the idea that was pregnant then and that underlay the action of that conference, with the idea which was stable then, which had the promise of a subsidy of £75,000 from Great Britain on the Atlantic side and on the Pacific side as well as a large subsidy towards the China and Japan service, with the good opinion of the delegates from Australia, that they would be prepared under that scheme, if it could be worked out, to vote their quota of some £50,000 per year—in addition to all that, a contract was absolutely secured for a 20-knot service between Canada and Great Britain and that contract was handed over to my right hon. friend when he came into power in 1896. My right hon. friend tore up that contract, he went into an absurd series of negotiations about bottle-necked steamers, and came back in 1897 from Great Britain, and, on October 7, 1897, at the time, I believe, of a political contest in the city of Toronto, electrified the board of trade and the citizens by reading a telegram which he had received from the Minister of Finance (Mr. Fielding), 'Peterson has to-day signed the contract and placed his deposit.' And my right hon. friend said that, by 1900 or 1901, this new fast steamship line would be in operation, and at an expense of $250,000 or more below what Canada had proposed to pay in 1896. Sir, the history of the negotiations with Peterson are patent to this country and remain in the memory of the people. The deposit was placed; but my right hon. friend gave back the deposit later and did not get the fulfilment of his contract. And immediately afterwards, or almost so, the prices of shipbuilding, owing to the demand by the British navy and other circumstances, increased 25, 30 and 40 per cent, so that the government had to face a market in which they could not have built at anything like the cost of steamers in 1896.

Sir, if the 1896 contract had been carried out, by 1900 we would have had a 20-knot

service between this country and Great Britain. To-day my hon. friend crawled down to a 20-knot service. When he was in London he shook his fist metaphorically into Lloyd George's face, and said: Nothing less than a 24-knot service on the Atlantic—and he got the enthusiastic support of Sir Joseph Ward who asked and got the assent of my right hon. friend for a 22-knot service on the Pacific. Now he is willing to have a 20-knot service or less on the Atlantic and a 17 or 18-knot service on the Pacific. He said here to-day, and it is true, that Sir Joseph Ward declared that the service he wanted was 24 knots on the Atlantic and no cargo, with 22 knots on the Pacific. For that New Zealand would give £100,000 but unless those conditions are fulfilled you might as well cry for the moon as to ask New Zealand for £100,000. To-day my hon. friend has clambered down to a 20-knot service on the Atlantic and an 18-knot service on the Pacific. He knows as well as he knows anything that Sir Joseph Ward's £100,000 cannot be got for any slow service of that kind. I think it is well that this country should know the kind of a proposition which my right hon. friend placed before the 1907 conference. There were three things which in reading the report of that conference grated particularly on me. One was the puny and puerile statement made by the maladroit Minister of Marine and Fisheres in answer to the plea that Canada should do something towards the naval defence of Canada in connection with the naval defence of the empire. I will not take that up to-day. He hunted out all the small punts and flat boats and little steamers that had been paid for in patrolling obscure fishery areas and the larger areas of the Atlantic and Pacific and toted up the magnificent sum in 10 years of $3,000,000 expended on Canada's protection of her own fishery service. He said: That is our contribution and our sufficient contribution to the navy and the defence of the empire and it is a sufficient one. My hon. friend went into that conference—and that was the second point that grated on me—on the last day of the conference; his failings follow him in London as they follow him here, he is the unready until everybody else is tired out and then he brings in his big schemes. On the last day of the conference he produced his resolution in the conference and demanded instant treatment and instant accord. How long did he consume in placing that immense proposition before the assembled imperial conference? Less than three minutes. What information did he give? Absolutely nothing but some geographic memoranda of knots and hours. That is all. His speech contains absolutely nothing more than the reading of his resolution and a statement of the distance between the different ports. If he was no clearer in his distances then than he was to-day when he got upon that dark Pacific, I pity the conference as to the amount of real knowledge they got from him. To-day he was going to have us get from Auckland to Sydney in 500 odd miles of sea navigation. The actual distance is 1,280 miles. His appreciation of distances is beclouded by the darkness which seems to overspread the scheme in his mind in relation to the Pacific. Thus a scheme which was revolutionary, which was advanced before an imperial conference of the best representatives of the empire, was proposed with absolutely no information accompanying it except these geographical and time measurements by knots and by hours. What was his resolution? It was very different from the resolution that was passed and consequently very different from the resolution that was brought down here to-day. Here is what the right hon. gentleman proposed:

> That in the opinion of this conference the interests of the empire demand that in so far as possible its different portions should be connected by the best possible means of mail communication, travel and transportation; that to this end steps should immediately be taken to establish a fast service from Great Britain to Canada, and through Canada to Australia and New Zealand, and also to China and Japan.

It will be noticed that he then said in so far as possible, not as far as practicable. Everything is possible if you have a mind to climb up to it.

> That such service upon the Atlantic ocean should be carried on by means of steamships, equal in speed and character to the best now in existence, and upon the Pacific ocean by steamships of a speed of not less that 18 knots, and in other respects as nearly equal to the Atlantic ships as circumstances will permit; that for the purpose of carrying the above project into effect, such financial support as may be necessary should be contributed by Great Britain, Canada, Australia and New Zealand in equitable proportions.

In all of his short speech he did not even hint at a computation of actual costs and charges, but took occasion to say that he would, on behalf of Canada, guarantee that she would contribute more than her one-third share and intimated that Canada would be willing to contribute from $1,000,000 to $1,300,000. When that airy scheme, even more airy than what he has presented to-day, taking into account the paucity of the information on which it was based, was thrown into the imperial conference, it immediately met practical men. Mr. Deakin at once expressed his sympathy but he wanted to know about things, what about its commercial possibilities, what about its cost? Will it be a cargo line, for it is a cargo line that Australia is interested in. What is its cost? for while we are willing to pay something for the imperial idea we have our taxpayers to consider and

consult with and we cannot be pressed beyond what is reasonable.

Mr. Lloyd George interrupted when Mr. Deakin was talking about the commercial capabilities and the cost and said: That is one of the questions I wanted to put. Mr. Deakin said among other things:

Consequently, we do not look coldly upon this proposition, though I am bound to say that its economic possibilities on our side are so limited that the subsidies required may be quite beyond our means.

And he pleaded for information and knowledge as to those important matters. Sir William Lynne said:

My Lord and gentlemen, this route has been advocated very often in Australia. It is known to us as 'the All-Red route' being through British territory all the way, and it is very much desired that we should get it, but I am afraid, with my Prime Minister, that the subsidy would have to be very large.

Sir Joseph Ward has been quoted, Sir Joseph Ward was enthusiastic, wonderfully enthusiastic for the project in its completed and highest form, 24 knots on the Atlantic and 22 knots on the Pacific. His idea was that passengers must get to Auckland from Vancouver in thirteen days; that would satisfy them, and nothing less than that would satisfy them. He said:

I may be taking too sanguine a view of it, but I base all my remarks upon the one potential factor, that if you want to have this close connection you must pay sufficient money for steamers of large tonnage—passenger and mail steamers only, I should say, except for the purpose of carrying certain cargo between Canada, Australia and New Zealand.

He pointed out the difficulty of transhipment, asking how it was possible that freight steamers starting from London could afford the cost and delay of two transhipments, one from the ship to cars on the Atlantic side and the other from the cars to the ship on the Pacific side, and, therefore, he argued, and I think rightly, that the only thing that would satisfy New Zealand would be a high standard swift communication, cutting out the freight factor almost entirely.

I want to go a little further and show what Mr. Lloyd George thought of the proposition. He said:

Lord Elgin and gentlemen, I am very glad Sir Wilfrid Laurier has brought forward a proposal which we can examine without coming into conflict with any popular mandate and highly controversial topics like the fiscal question. I am only sorry that we did not get this in time to enable us to give real consideration to it, and to enable us also to put forward considered views before the conference. The first I saw of this scheme was yesterday. I think I saw the resolution last night, and the resolution which is placed on the paper to-day is different in one or two material particulars. We have done our best in the very short time which has been placed at our disposal for considering such a very important business proposition, and we have made some inquiries with regard to it.

Even this discussion has shown what a very difficult problem it is, and what a many-sided problem it is. You have to consider a good many things. You have to consider the best route. As to the desirability of bringing New Zealand and Australia nearer to the mother country, there can be no doubt at all, and we shall, as far as the government are concerned, adopt the first three lines of Sir Wilfrid Laurier's resolution by way of establishing our agreement with the general proposition. But it is a matter that has to be gone into very carefully, and here I agree with Mr. Deakin, that it is a matter which ought to be gone into very carefully by experts.

That is a very sensible thing. To imagine that the representatives of the British government would vote a proposition to establish a fast service on the lines laid down, and do it without expert evidence—I do not see how any man could expect it; and that shows the utter futility of bringing forward a business proposition of that kind in that way. Mr. Lloyd George goes on to say:

We cannot examine it apart from the question of the carriage of goods, too. We must take that into account. It is not only a matter of a fast mail service, but also a question of the cheaper transportation of goods and materials from the colonies.

Well, Sir Wilfrid Laurier butted up against that idea. He is almost at once upon his feet, and amongst other things he says:

We cannot do anything more with regard to improving our communication with Canada than to have a service that is equal to the best that is now in existence between New York and England. So far, I think, it requires no expert knowledge or evidence at all. If you are not prepared to do that, then it is blocking the whole system.

Sir Wilfrid Laurier, true to his traditions, requires no expert examination or evidence with regard to great schemes. Then he goes further, and says with reference to the whole question:

I do not think it is a question of experts in this matter, but a question of policy. We want to have an All-Red route, as it has been very happily termed in Australia over British territory absolutely. If that be the case it requires no experts at all. If you have a company in which you would have such a man as Lord Strathcona, who will undertake it for such a sum, you will have to determine whether you are prepared to pay the sum or not. No expert would be required there.

There is wisdom for you—pay the sum, and do not inquire as to whether or not you are able to pay the sum for the compensations proposed to be given to you. He goes on to say:

With regard to the Atlantic service, what we want to have is a service equal to the best

now in existence in the world; that requires no expert knowledge, but it is a question of policy, shall we or shall we not have it? If we want to have it we must pay for it.

Yet in 1896 my right hon. friend wanted expert testimony when we proposed to vote $500,000 as a subsidy for a fast Atlantic service. Then he comes to the Pacific part of the project and he says:

Here again there is no necessity for experts; it is a question of policy, shall you or shall you not have such a service?

He has to-day declared that when you approach the Pacific everything is uncertain and in the dark; yet he there required no experts, no examination for either the Atlantic part or the Pacific part of the scheme. Mr. Lloyd George said again:

I have said something about experts in my observations, but that is not my proposal. My proposal is really described in the words used by Mr. Deakin in his resolution last week. I used the words 'concerted inquiry,' and he put 'systematic.' I do not think it matters. We really cannot pledge ourselves now as to the best means of doing this thing. The resolution has not even been placed on the paper. I do not think it really fair. If it be regarded as a matter of immense practical moment—I think it is—I think it would have been fair to the imperial government, at any rate, to let us have a copy of the resolution. We have had copies of all the resolutions about fiscal reform, but never a copy of this one practical proposal, which we could have examined. It ought to come before the cabinet. But we saw this resolution for the first time this morning, and it is really rushing us unfairly, I must say, to ask us to pledge ourselves, not to the general proposition that it is desirable or that we will look into the matter, but to pledge ourselves to the actual route, to a 20-knot service here, a 24-knot service there, and an 18-knot service in another place. Surely that is a thing that ought to be inquired into. The difference in cost between an 18 and a 20-knot service, I am told, is simply prodigious. The figures given to me were almost prohibitive. Possibly when we look into it, it may simply have been that a shipowner was trying to frighten us off it; I cannot say, but the figures were very alarming. To ask us to pledge ourselves to the very smallest detail (because that is what this means) without the slightest further talk amongst ourselves as to the best plan of doing this thing, I really do not think is quite fair to us.

Lord Elgin, the chairman, voiced the same objection, and in the end my right hon. friend, though he fought stoutly for his proposition, gave way, and the amendment, in the form in which it is to-day on our Order Paper, was adopted. So much with reference to that.

Now, when my right hon. friend comes down and asks this House to-day to pledge itself to this scheme, where is he as compared with where he was in 1907 at the time of the conference?

At that time he would have a 24-knot service and nothing less on the Atlantic and a 22-knot service and nothing less on the Pacific. With a 22-knot service on the Pacific Sir Joseph Ward would be willing to guarantee the £100,000 subsidy. To-day he is willing to make it a 20-knot service between Great Britain and Canada and an 18-knot service or less on the Pacific. Will my hon. friend think for a moment of what has taken place since 1896? To-day we have the time made of six days and less between a British port and our own Canadian ports by most excellent steamers of a most excellent type, and all of this has been brought about by the operation, gradual and yet in a certain sense rapid, of commercial development and general improvements in this country. I suppose that to-day he could get that twenty knot service in contradistinction to the existing eighteen knot service with the promise of a certain amount. How much is he proposing to pay? The hon. member for Brandon (Mr. Sifton) says it would cost us one and a half million dollars yearly. We pay $680,000 now, he says, for mail subsidy on both oceans, so that the increase of subsidy will amount to about $1,000,000 per year. My right hon. friend put it at from $1,000,000 to $1,300,000 per year. That question is a practical one. At this period, under our present circumstances, are we in a position to pay or to pledge this country to pay $1,000,000 more or $1,500,000 per year for ten years for the sake of getting an improvement in the service of perhaps one day, certainly not more than one day. It is a practical question. What I complain of is that my right hon. friend proposes to put this through the House without giving us any commercial or other information, except those general and indefinite statements of his. He does not tell us whether he is going to insist on a twenty knot service or a twenty-four knot service. He does not tell us whether the service will be obtained at a minimum of cost of $1,000,000 or a maximum cost of $1,500,000. All he asks for is power, after having this scheme approved by this House, to enter into negotiations. That is where, if my hon. friend will pardon me, the position is a little suspicious. Will you remember, Mr. Speaker, what occurred in 1903 when the Grand Trunk Pacific scheme was being put through? Then my right hon. friend was in a hurry, he did not want experts, he did not want information. No engineer had laid a line on that great stretch of the Grand Trunk Pacific from Moncton to Winnipeg, no traveller had ever footed it. My hon. friend declared that time would not wait and could not wait and he could not wait; no matter about expert opinion, no matter about information, no matter about the cost, circumstances are ripe for it and I want it put through and put through at once. What a parallel to the events of the

conference of 1907. The Prime Minister said: Without experts, without the information required for the establishment of the service, he would pledge Canada to take her share even up to a million and a half a year. We have information by actual experience of what the country has spent and is likely to spend by reason of taking my hon. friend at his own estimation in 1903. He estimated that the total money cost to this country of the National Transcontinental Railway would be $13,000,000. The Minister of Customs followed in his wake and used the argument throughout Ontario. The Minister of Finance made a carefully revised statement of the cost and placed it at $52,000,000. The Minister of Railways comes down to-day and leaving out terminals and interest and a lot of other things, he tells us it will cost at least $114,000,000. My friend to my right (Mr. R. L. Borden) by a most temperate and I think careful statement, placed the cost of that completed road from Moncton up to the city of Winnipeg at $170,000,000 or $180,000,000. Leaving out of account $11,000,000 which he has calculated for, which might be disputed by some, although I do not think it is at all liable to any dispute, and basing the figures on government records and information, that line of railway will cost us from $160,000,000 up to $170,000,000. We are therefore suspicious and we would not like to and do not propose to vote for any scheme that my right hon. friend brings down in this eight month of the session involving the laying of a possible $15,000,000 additional burden upon the people without making sure that no contract will be signed in the recess, and that when we meet next year we may not have the Prime Minister present to us, as he has done in the Yukon and other cases, a hard and fast contract and say to his followers: We are pledged to that, pledged to Australia, pledged to New Zealand, pledged to Great Britain, you are to see us through—and his obedient following would see him through as they have done heretofore. The financial conditions of this country are such that it is necessary to scan with the very greatest particularity any scheme by which it is proposed to place on the shoulders of an already overburdened people an additional possible tax of $15,000,000 during the next 10 years. The Finance Minister knows something of the condition of the London money market. He boasted the other day that we got our money but he was not very particular in explaining that we got it because the promoters had to put up the money, and now to hold 50 per cent of the whole subscription. Although we got our money from the underwriters, then, does he think that he has made it easier for us to go on the London market and ask for another loan of four, six or eight millions as he will have to in the course of this and the early part of next year? To-day the revenues of Canada are falling off by over a million dollars a month; to-day the taxes are rising at the rate of 16 per cent in ten years and other obligations in addition to what we already have are promised to be loaded upon the people sometime during the few remaining days of this session, some of them may be necessary, some of them I am bound to say not at all necessary. With all this in prospect we do not propose as an opposition to pin ourselves down to a position where we will be met with an added obligation of $10,000,000 or $15,000,000 facing us when the next parliament assembles at Ottawa.

Mr. R. L. BORDEN (Carleton, Ontario). The unusually late date at which this motion has been brought down, when it is anticipated that parliament shall prorogue on a week from Saturday next, is an indication that the government do not expect any very lengthy or adequate discussion of so grave and important a proposal. However, if the Prime Minister had followed the exact analogy of his course at the Imperial Conference of last year, he would have brought it down on the very last day of the session. So, I think, we may be thankful that it has not been postponed until a still later date.

There is not the slightest doubt as to the absolute importance of better means of intercommunication between the different parts of the empire. That has been an article of Conservative faith and Conservative policy for many years. I need not go over the ground already traversed by my hon. friend from North Toronto (Mr. Foster), who has pointed out that what is now known as the 'All-Red route' in Canada is practically that which for many years had borne the same name in Australia and New Zealand, and is but the ordinary development of ideas and proposals that were debated in this House long before the right hon. gentleman came into power in 1896. I do not desire to detain the House at any length, but let me point out that since 1896 conditions have changed a great deal in this country. What were essential and necessary features of any policy in 1896 may not be so essential and so important to-day. The Conservative government of this country in 1895 looked forward to a 20-knot service on the Atlantic. Since 1896, the service on the Atlantic has advanced from 14 or 15 knots to 18 knots. We have to-day on the Pacific, as well, a 14-knot service. My hon. friend the Minister of Agriculture (Mr. Fisher) in speaking on this question a few years ago in Montreal used some language which is singularly like that what the Prime Minister used to-day, but singularly different from the attitude taken by the right hon. gentleman at the imperial conference and from the view expressed

in very forcible and eloquent terms by the hon. member for Brandon (Mr. Sifton) when he addressed this House on this subject during the budget debate. The Prime Minister's proposal at the imperial conference was for a 24 or 25 knot service; and I think the hon. member for Brandon put the case for a service of that kind as strongly as it could be put when he addressed the House during the debate to which I have just alluded. My hon. friend the Minister of Agriculture, speaking on this subject not long ago, in Montreal on the occasion of a banquet to Sir Charles Fitzpatrick, then Minister of Justice, said:

Personally, as far as the fast line is concerned, I would like to see a line of ships built to steam 18 or 20 knots, carrying 10,000 or 12,000 tons of freight, and accommodating about 250 passengers with comfort. That type of boat is both profitable and comfortable. I would rather travel across the Atlantic in a steady commodious boat than in the speedy ones. The record breakers made good time, but there is more ease and comfort in crossing on the cargo boat. I think these boats could touch at some coast port for the convenience of passengers who were travelling in haste, after which the journey could be continued to an inland port. It is easy enough to get a fast line, but it costs a lot of money, and I do not see why we should be held by the nose for such a service. At present, there is an inclination on the part of some Canadians to plunge into any expense, and this must not be allowed to go too far.

That would seem to have been a rather severe stroke in advance at the statements of the right hon. Prime Minister at the imperial conference, and at the same time a somewhat forcible retort to the argument put forward by the hon. member for Brandon during the present session.

I should pause to mention the great interest which the High Commissioner for Canada has taken in this project of better communication between parts of the empire; and whether we accept or do not accept all the views which have been put forward by Lord Strathcona with regard to the rate of speed which is practically attainable under present conditions between Canada and the mother country, we must all acknowledge with gratitude and appreciation the great services which that gentleman has rendered to the empire in this and many respects, and the deep interest he at all times has shown in everything that tends to the welfare of this great country and of the empire as a whole.

My hon. friend the member for Brandon, in debating this matter during the present session, and the right hon. Prime Minister in his speech to-day, have touched this question solely from the standpoint of passenger and mail service, except in one respect to which I will allude for a moment, in which my hon. friend from Brandon did mention the subject of freight. I regard that as a rather serious omission. I am not inclined for one moment to minimize the importance of the best service for passengers and mails that can reasonably be attained, within the resources of this country, between Great Britain, Canada, Australia and New Zealand. I appreciate to the full what has been said in support of that view, especially what has been said by the hon. member for Brandon. There is a great deal of force in all that he has urged upon our attention on that subject. As a matter of sentiment, as a matter of bringing together citizens from different parts of the empire, as a means of enabling them to discover the enormous resources of this country, and, in that way, to promote the development of these resources—for all these considerations and many others that time does not permit me to dwell upon, I acknowledge the importance of that aspect of this great question. But let us remember—and it seems to me that this point has been entirely overlooked—that, after all, the transmission of passengers and mails does not constitute what is really commerce between Canada and Great Britain or Canada and the other parts of the empire. When you analyse what is meant by the promotion of trade and commerce between the different parts of the empire, you must acknowledge that, in the end, it depends upon the free interchange of commodities and upon our being able to transmit to their market in the mother country and in Europe the rapidly increasing, and already very great, natural products and manufactures of this country. It is in this that trade and commerce consists. And, without for one moment minimizing the other considerations that have been urged, I venture to regret that those who have at heart this great project do not seem to have taken that aspect of the subject sufficiently into consideration.

If you put aside sentimental considerations and the possibilities of attracting capital to this country to which I have just now alluded, what do we find to be the chief benefit that can be derived by the people of this country from better communication between different parts of the empire? How many farmers and producers of this country have occasion to cross the Atlantic in any year? But how many farmers and producers are there who are not vitally interested every year in the transmission, by the cheapest and most expeditious modes of transportation of their products to the mother country? Seventy-five per cent to eighty per cent and perhaps eighty-five per cent to ninety per cent of our people are vitally interested in that question; and any proposal which neglects to give due and proper consideration to that particular problem ought not to command the assent of parliament or the approval of the people. We know that, under modern conditions, we are obliged to compete in the market of the mother country, not only with the farmers

and producers of the United States, but also with the farmers and producers of Europe as well as those of New Zealand and Australia. It will be impossible for us to compete with them unless we have a modern and efficient cold storage system, and that system can never be thoroughly efficient so long as there is a single broken link in the chain of connection from the point of production to the markets in the old country. Therefore these essential features, more favourable freight rates, better means of transporting freights, and a system of cold storage seem to me to have been entirely overlooked by this government.

There is another consideration, and my hon. friend from North Toronto (Mr. Foster) has dwelt on it. It cannot be denied that the very prosperous times through which Canada in common with the rest of the world, has been passing until within a year ago, have led this government to indulge in enormous expenditures and obligations, the true measure of which is only beginning to be realized. When we find an expenditure of from $175,000,000 to $200,000,000 facing us in respect of the construction of the Transcontinental Railway alone, when we see the enormous demands made upon the public treasury from all parts of the country and the somewhat prodigal promises of gentlemen on the treasury benches, when we realize that up to the present we have not developed in their true sense our national ports and that we are only on the threshold of the real development of our inland waterways; when we consider the thousand and one demands for purposes of real national development which must be met within the next few years, we begin to realize that the resources of Canada, great as they are, may be strained, and strained unduly, in the immediate future if we are not careful how far we commit the country to increased expenditure. Look at the estimates of the present year. The government have already brought down estimates amounting to $127,412,724, and if rumour be true we are yet to be confronted with an enormous amount of Supplementary Estimates and perhaps a still more enormous amount for railway subsidies. We are also face to face with this huge expenditure not only on the National Transcontinental, but in almost every department we must be careful how far we commit ourselves in advance. Look for a moment at the terms of this resolution :

That at the Imperial Conference lately held in the city of London, England, the following resolution was unanimously passed:—

That in the opinion of this conference the interests of the empire demand that in so far as practicable, its different portions should be connected by the best possible means of mail communications, travel and transportation; and that to this end it is advisable that Great Britain should be connected with Canada and through Canada with Australia and New Zealand, by the best service available within reasonable cost; that for the purpose of carrying the above project into effect, such financial support as may be necessary should be contributed by Great Britain, Canada, Australia and New Zealand in equitable proportions.

I do not believe that there is any hon. gentleman in this House who does not heartily sympathize with the object aimed at. So far as the terms of the resolution are concerned therefore, we need not have any special concern at the moment because our liability is guarded by the expression 'within reasonable cost' and the whole matter is thus left open. The right hon. gentleman did not mention what he would regard as a reasonable amount this country should contribute. He did not give us any information as to the amount to which he would be prepared to pledge the credit of the country for the purpose of obtaining a twenty or twenty-one knot service. But even if he did, perhaps we could not place much dependence on it, for if we apply our experience in connection with his estimate of the cost of the Transcontinental, we would be obliged to multiply by fifteen any estimate he would offer. However, the resolution proceeds as follows :

That it is desirable that steps should be taken with all convenient speed to achieve the results aimed at in the said resolution.

That particular paragraph seems to be entirely unnecessary because it simply states what is proposed in more definite form in the concluding paragraph. The next paragraph is as follows :

That this House doth hereby endorse the terms of the said resolution, affirming that Canada is prepared to assume her fair share of the necessary financial obligations.

I would have been fairly well satisfied with that paragraph except for the circumstances I have already mentioned, namely, that the Prime Minister and the able advocate of this proposal, my hon. friend from Brandon (Mr. Sifton), have carefully omitted any reference whatever to improvement in the transportation of freight. True, my hon. friend from Brandon (Mr. Sifton), in the concluding part of his speech this session, said this :

So far as Canada is concerned, what may be said to be the argument in favour of it from a commercial standpoint. You can put it in two or three words. At the present time, mail, passenger and freight service of the best and quickest character from here to Great Britain goes through the United States, and from Australia and New Zealand goes across the continent of Europe. It does not go by our own ports or our own territory. In other words, so far as travel and transportation are concerned Canada is on the side street instead of on the main thoroughfare.

He did make allusion to the transportation of freight, but the difficulty I find with his

proposal is that throughout his speech he strenuously advocates the expenditure of an enormous sum for the improvement of the passenger and mail service but says not one word as to the appropriation of any expenditure whatever for the improvement of the freight service or the establishment of any system of cold storage.

This paragraph of the resolution pledges Canada to assume her fair share of the necessary financial obligations. I see no particular advantage in our pledging ourselves to obligations, the exact nature and extent of which we do not know at present. It has all to come before parliament again in so far as I understand. Even the Prime Minister, in so far as I have been able to comprehend his remarks, did not propose to enter into any definite engagement or to commit Canada to any definite proposal until the project—the plan, as it is called in the last paragraph of the resolution—shall have been submitted to the imperial and colonial parliaments. Of what advantage is it that the country should pledge itself to an absolutely indefinite and unknown obligation which, if the last paragraph of the resolution means anything, must be submitted to parliament before it can be entered into. There may be some sentimental purpose aimed at in the paragraph to which I have alluded, but in so far as any practical object is concerned, it seems to me that the resolution might with advantage be modified by omitting it.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. R. L. BORDEN. Mr. Speaker, before the House rose I had been considering the individual paragraphs of the proposed resolution. I had pointed out that the second paragraph seems to serve no purpose which is not equally fulfilled by the last paragraph. The second paragraph declares:

That it is desirable that steps should be taken with all convenient speed to achieve the results aimed at in the said resolution.

The last paragraph declares that it is desirable that the several governments should with as little delay as possible agree upon a definite plan for that purpose. This paragraph, therefore, is superfluous.

So far as the third paragraph is concerned, I have pointed out that it is a pledge of financial support to an indefinite expenditure, and is entirely useless unless it is intended to justify the government in committing the country in advance. For that reason I would think that no good purpose would be served by the third paragraph. If everything is to be open to the consideration of parliament when the proposal is eventually submitted, of what value is it to say in this paragraph that Canada is prepared to assume her fair share of the necessary financial obligations? The necessary financial obligations are to be within reasonable cost; therefore the whole matter, I would suppose, is to be left entirely to the discretion and judgment of parliament when the proposal comes to be submitted. Therefore of what value is it to say in advance that Canada is prepared to assume her fair share of the necessary financial obligations unless the government is now prepared to inform parliament what they consider to be Canada's fair share or the reasonable cost?

I will quote the fourth paragraph:

That in the opinion of this House it is desirable that the governments of Australia, Canada and New Zealand should, with as little delay as possible, agree upon a definite plan for carrying into effect the terms of the resolution of the Imperial Conference, the same to be submitted for the consideration of the imperial and colonial parliaments.

I have no objections to the terms of that paragraph, provided a rider, to which I will refer in a moment, is added which will make it absolutely clear and certain, beyond peradventure, that the government will not take the course of committing the country to some huge expenditure before it comes to this parliament for the purpose of procuring its ratification of that which has been done in advance. The wording of this paragraph leads me to consider for a moment just what the plan may be which the government will eventually propose. I have already pointed out the extreme importance, from my point of view, of fair consideration to lower freight rates and to a system of cold storage, and I am glad to observe that, at the recent Imperial Conference, Mr. Lloyd George apparently took the same view. At page 568 of the report of the Conference I find this:

Mr. DEAKIN. May I add that at present our connection with this country is by the alternative routes round the cape or through the Suez canal? These are our principal routes and must always remain our great cargo routes, because there is no transhipment.

Mr. LLOYD GEORGE. And, from the point of view of developing trade, they are much more important.

These words indicate his view, of which I was not aware when I spoke on this subject about a year ago. He emphasizes his opinion that one important, perhaps the most important, consideration is the development of trade by the carriage of commodities from one part of the empire to another. Again, at page 577 of the same report, I find Mr. Lloyd George using the following language:

We cannot examine it apart from the question of the carriage of goods too. We must take that into account. It is not only a matter of a fast mail service, but also a question of the cheaper transport of goods and materials from the colonies. I consider that to be a very important item, so far as we are concerned.

Speaking for myself, I consider it to be a very important item indeed, so far as Canada is concerned. Our chief market for our agricultural products is the British market, and is likely to remain the British market for many years to come. To save a cent a bushel on the transportation of 100,000,000 bushels of wheat is to put $1,000,000 into the pockets of the farmers of this country. If by a system of cold storage you enable our perishable products to reach the British market in perfect condition, you confer a corresponding advantage on the producers of these products.

In this connection might I be permitted to make another observation? It is apparently intended to negotiate for only a 20 or 21 knot service on the Atlantic. As the hon. member for North Toronto has pointed out, the government are only proposing now what their predecessors actually accomplished twelve years ago before they went out of office; and the proposal of the Prime Minister is subject to this further observation, that if unassisted private enterprise has so improved the service on the Atlantic that instead of a 14 or 15 knot service we now have an 18-knot service, might we not reasonably rely upon the same unassisted private enterprise to bring about in the immediate or early future a 20 or 21-knot service? I will not take up the time of the House further in discussing this subject, but I will conclude by moving the following amendment to the resolution proposed by the Prime Minister:

That the said resolution be amended by striking out the second and third paragraphs and substituting the following:—

'That this House in expressing its strong sympathy with the object of the said resolution desires to record its opinion that more favourable freight rates and a thoroughly efficient system of cold storage are essential features of any such transportation project.'

And by adding the following paragraph at the end of the said resolution:—

'That, having regard to the very heavy expenditures and obligations in which the present administration has involved the country, the government should not commit Canada to any such plan, or to any contract or expenditure for such purpose until after the same shall have been submitted to and approved by the parliament of Canada.'

Hon. CLIFFORD SIFTON (Brandon). Mr. Speaker, I wish to say a few words upon the resolution which has been proposed by the right hon. the Prime Minister. I wish in the first place to express my pleasure at seeing the resolution on the paper. Personally I would have been pleased if the resolution had appeared sooner in the session, for reasons which I will refer to later on; but I am pleased that the government has been able to see its way clear to make the proposal which the Prime Minister has made. I am not especially concerned in the historical retrospect of my hon. friend the member for North Toronto (Mr. Foster); at least, in so far as it dealt in criticism of the past action of members of the present government party. In matters of this kind we can at least afford to leave to one side what happened twenty or twenty-five years ago. Conditions have so changed that he would be a strange man indeed whose views in regard to some of these things had not altered with the altering circumstances. I am quite willing to admit that my hon. friend from North Toronto (Mr. Foster) did one service to the resolution when he proved—his remarks were conclusive upon the subject as were also the remarks of the leader of the opposition—that it has been the traditional policy of the Conservative party to favour better means of communication between the different parts of the British empire. That unquestionably has been a part of the policy of the Conservative party, and I trust it is a part of the policy of the party which is now in power. I am satisfied that if this resolution is adopted by this House and if due and legitimate and proper diligence is shown that in the course of time we shall be able to meet the desires of those loyal British subjects and loyal Canadians who are anxious to see such a project carried into full and effective fruition. I think, however, that our friends on the opposite side of the House in pursuance of the traditional policy of their party should give us a little more enthusiastic support than they are giving us upon the present occasion, because while the leader of the opposition may very properly say that there is much in favour of his amendment, yet that amendment can be taken as meaning nothing else than, for the present at least, a negative to the resolution which has been moved by the right hon. the Prime Minister. After all, the position we are in to-day is this: That the Prime Minister and his colleagues having attended the imperial conference, and the representatives of all the colonies having passed a certain resolution in regard to improving the transportation system between the different portions of the empire mentioned in the resolution, the question now before the parliament of Canada is: Will the parliament of Canada endorse the action of the imperial conference or will it not? That is the definite question we have to settle. I am inclined to think that it will be seen upon full consideration that the whole subject is so surrounded with difficulties that it is not possible for the government at the present stage to go into such matters of detail as those to which the leader of the oppositon refers in the first portion of his amendment—the second portion of his amendment, of course, has to do with an entirely different phase of the question. It will been seen that the effective factors of the problem are such that it is not

possible for the government to come before parliament in regard to a scheme of this kind in the same way as if it were a scheme relating to the internal development of Canada and which was solely and entirely within the jurisdiction of the government and parliament of Canada. We have before us a proposition which has to do with various portions of the empire : Great Britain, Canada, Australia, and New Zealand. You have first to get some kind of a statement of views, some kind of a general proposition to which the parties will agree. The general proposition we have in the resolution of the imperial conference, but then the parties have to find out what can be done ; they have to find out how much it will cost, they have to discuss the question, they have to settle details and arrive at a scheme which each government will be prepared to recommend to its parliament. All that has to be done before you can get any further with the project than it is at present..

Mr. R. L. BORDEN. Might I point out that my amendment does not touch that part of the resolution.

Mr. SIFTON. But my hon. friend will see that in the first part of the amendment he refers to making provision for freight and cold storage in connection with the service, and that is essentially a matter of detail which must be worked out at a later stage of the proceedings. It cannot certainly be worked out now by one of the parties before the general arrangement is at all perfected.

I hope I may be excused for a personal word or two. There has been some misunderstanding with regard to me and to my position in connection with the matter, and think it but right that I should say a word in explanation. I have not had, and I have never expected to have any interest in this project other than that which any member of this House has or ought to have in any great project affecting the well-being of Canada. I never expect to have any financial interest in it, and the part I have taken in it was simply intended to promote a favourable view amongst that portion of the public of Great Britain with whom I had an opportunity of coming into contact. My interest in it is simply that of any other patriotic Canadian and I have only done what others would have done under the same circumstances. I say this because I do not desire to be in the position of advocating in this House that in which I had or intended to have at some future stage a financial interest. I may add that I do not think any one who may interest himself in promoting the project can sensibly look forward to deriving any financial benefit from it. It is one of those things which will have to be first of all promoted, pushed forward, and carried on by those who are willing to devote time and attention to it for the purpose of promoting the general welfare of the British countries concerned.

After the imperial conference passed the resolution the members of the conference separated and no opportunity was given to them afterwards to deal further with the subject or to get more information. It was suggested to me when I was in England that I might profitably devote some time to getting information upon the subject and pursuing inquiry in a direction that might ultimately be useful. The result of my inquiries, in conjunction with Lord Strathcona, our High Commissioner, was, that such a service as is contemplated—and which I think was fairly in the minds of the representatives at the imperial conference at the time, or which would be agreeable to their views now,—the result of our inquiry was that such a service would probably cost in the neighbourhood of £1,000,000 of subsidy from the various governments concerned. My hon. friend from North Toronto seemed to question the definite nature of the service that was proposed and certain extracts from the proceedings of the imperial conference would indicate that at the time the proposition was first made all the members of the imperial conference did not have exactly the same idea of what should be done. I submit with confidence to the House that that is exactly what might have been expected. The right hon. the Prime Minister of Canada brought his resolution in and each man had at the moment his own idea as to what ought to be done and as to the method in which the plan should be carried out. These ideas necessarily will be somewhat modified by further discussion and by further information. I think I am perfectly safe in saying that so far as Australia and New Zealand are concerned, at the present time they would be satisfied with a service of ships making a speed of twenty-four knots upon the Atlantic and twenty knots upon the Pacific from Vancouver to Auckland and thence to Australia. A twenty knot service on the Pacific and a twenty-four knot service on the Atlantic would I believe be acceptable to the different members of the empire who are concerned in the project and would satisfy them as a carrying out of the resolution passed by the imperial conference. Roughly speaking, that would give us a service under which mails and passengers would go from Great Britain to a Canadian port in less than five days, to Vancouver in nine days, and to New Zealand in not more than twenty-five days. At the present time the service is about seven days to a Canadian port, twelve days to Vancouver and thirty-eight to New Zealand, so that New Zealand would make a saving of something like thirteen days on mail and passenger service. At present the mail and passenger service from New Zealand is extremely poor.

The position therefore is altered to a considerable extent since the time of the Imperial Confernce. Discussions have taken place and information has been disseminated. It has come to the knowledge of all parties concerned that in all probability such a service as I have described is a practicable service which could be made and would be the best service that could be obtained for any reasonable expenditure.

Mr. ARMSTRONG. Would such a service include the transportation of any of the products of Canada ?

Mr. SIFTON. Freight, yes. The ships on which the estimates were made provided for a capacity of 1,000 tons freight for the Atlantic boats and 3,000 tons for the Pacific boats. I may say that experience shows that a larger capacity than 1,000 tons upon fast Atlantic boats would not be of much service, because taking the year around, the probability is that that is about as much of the class of freight they would take as they could succeed in contracting for. As a matter of fact the very fast boats running from New York do not take anything like 1,000 tons on the average. The Canadian Pacific Railway boats running from Quebec and St. John do somewhat better. Therefore the conference resolution having been passed, as much information as can be gathered has been gathered upon the subject, and if we are able to infer anything as to the attitude of Great Britain, it is that if the colonies are desirous that this plan should be carried out, the colonies should get together, settle upon a definite plan and present it to the imperial government for their acceptance. That obviously is a reasonable position for the British government to take, and therefore it becomes essential that somebody should take the initiative and obviously from Canada's position in relation to the whole scheme and her great interest in successfully carrying it out, it is the logical position that Canada should become the chief promoter in carrying this into effect. Thus what the Prime Minister is asking is that, the resolution having been passed, the general features of the scheme having been accepted in so far as they can be before a definite business proposition is arrived at, the government of Canada should be authorized to take the matter up with Australia and New Zealand, arrive at a definite proposition and then go to the imperial government, get them to agree to the scheme and carry it into definite effect. I cannot see myself that any other plan could be practically proposed or would give any probability of arriving at a successful conclusion.

At the risk of repeating what I have said in this House I shall discuss briefly the cost. Expert shipping men in London were employed for the purpose of arriving at as close an estimate as possible of the cost of such a service upon the Atlantic and upon the Pacific, the probable revenue that could be safely counted upon and the probable deficit for all purposes between the revenue and the expenditure. It was computed that a subsidy of something in the neighbourhood of £1,000,000 sterling would be necessary and it was thought, and I do not think that this is regarded as being an unfair allocation of the liability, that the British government ought to be asked to bear one half of that expense, that New Zealand would be willing to bear the expense to the extent of £100,000, that Australian would probably give £75,000 and Canada would give £325,000 of annual subsidy. At the present time Canada, judging by the results of the last fiscal year's operation, is giving $679,000 for the Atlantic and Canadian-Australian services, so that if the idea prevails outside of this House that Canada is getting its present service by private enterprise alone, it is a mistaken idea. We would therefore be required to add to our present subsidy something like $950,000 or $1,000,000 per year and, shortly, what this House has to consider is whether the advantages to be derived by Canada from the institution of the services asked for is worth that amount of money. That is the question in a nutshell, that is what we have to decide.

At the present time the short rapid and in one sense, the direct service for passengers, mail and express from Canada to Great Britain is through the United States. That which it is desired to send quickly must go through the United States and I think I am safe in saying that it is a rule the world over that where you desire to have the best facilities for doing business you should have the best facilities for passenger, mail and express business. These facilities go with other business. One builds up the other, one is necessary for the other and I think it only necessary to state the proposition to have the House admit that if you are going to have the best possible development of the country's business of all kinds between Great Britain and Canada you must have all three classes of traffic, passenger mail and freight, on as good a basis as it is from any other country. Freight will follow the easiest and best line of trade.

My hon. friend speaks of freight. I do not minimize what he says. Unquestionably one of the most important things today in Canada is the carrying out and the full development of a thorough system of cold storage to get our produce, fruit produces especially, to England in the best possible form. The institution of the fast service on the Atlantic, a weekly service which can be counted upon with a capacity of 1,000 tons a week of freight, with cold storage, is the necessary complement of any scheme of the kind. These are the ships that would have the capacity and the equipment for carrying the freight that

has to go by rapid boats and to go frequently during the year, not being able to wait for the ordinary freight accommodation. Then upon the general question of freight my view is, and I submit it to the House and to the leader of the opposition (Mr. R. L. Borden) as being in accordance with the development of business in past times in this and other countries, that the best way to bring about the full and effective development of a freight route is to make that route absolutely safe, to make it well known, so that every sea captain will be willing to make use of it. We have had great disadvantages in connection with the St. Lawrence route. Every patriotic Canadian has regretted the accidents which have taken place on that route, and we all desire to see the route improved to the greatest possible extent. I am sure that every hon. member of this House must have been gratified to see from the newspaper reports that the city of Montreal is at last coming to her own in connection with the freight business, and that American ports are waking up to the fact that freight is coming to the port of Montreal in greater volume than before. That is due to the steady improvement of the St. Lawrence route. That improvement has been slow, but it has been sure. It has gone on as rapidly as the conditions of the country would allow. And, even though you had any amount of money, these improvements take time. I am satisfied that the time is coming when every stigma that has rested upon the St. Lawrence route in past years will be removed. And when that time comes, when you are landing passengers from fast boats on the Atlantic ocean at the city of Halifax in winter, and Quebec in summer, if that should be selected, and the St. Lawrence route has become known as a safe and reliable route, you will have no difficulty whatever about the freight service. The freight boats will come. The rate of insurance will be lowered, and every disadvantage that freight vessels have laboured under in this route will be removed, and we shall have as great freight advantages at Montreal, perhaps greater, than they have at New York or any other American port. So I submit that the true view is that in order to get a freight service developed, the best way is to make the route a good route and a safe route, and one that everybody knows to be good and safe; and the best proof that you have such a route is that the fast steamers make use of the route. As an illustration of what the institution of such a service does for freight, consider for a moment the case of Germany. Any one would have thought, when Germany started out to build fast passenger boats, that it was the sheerest nonsense for her to pursue the policy she did. She was doing a fairly large business with the United States, but she deliberately went to work to build the most expensive and fastest passenger boats on the sea. What for? For no other purpose than as an advertisement to show what Germans could do. And the growth of trade on the part of Germany as the result of her enterprise and success in connection with the maritime matters, particularly with reference to her development of these fast passenger boats, has been enormous. Every man who studies the subject of European and American exchanges is aware of the enormous trade that has come to Germany by reason of the improvement of her passenger service. Now, if that has followed in the case of Germany running passenger ships to the United States, an alien country, a country alien in language, alien in sentiment, and with a strong protective tariff —if that result has followed such action on the part of Germany as between Germany and the United States, what may we not expect to follow if such a policy is adopted as between Canada, Great Britain and Australia, countries that are not alien in language or sentiment, but friendly and anxious to do all the trade they can with one another.

I do no desire to speak at length; these are considerations that occurred to me while listening to my hon. friend from North Toronto and the leader of the opposition (Mr. R. L. Borden). There is, of course, the question of finance which is a serious and important question. There is the question as to what is Canada's immediate duty. The question of time is a serious and important question in connection with matters of this kind. For my part, I do not share the view—which is held, I hope, not by many members of this House, yet the view which seems at times to obtain—that there is much to deplore in connection with the past history of Canada and her work in improving her means of transportation. My belief is that no country in the world has ever accomplished so much in the way of overcoming natural obstacles to transportation, in the same length of time, as the few million people in Canada have done. I give full credit to every one who has had anything to do with that development, whether his sympathies were with the other side of the House or with this. It should be a source of national pride that we have overcome these obstacles. When we see one Transcontinental Railway in full operation, another reaching completion, and the Canadian Northern, which will probably before long be a transcontinental line, three direct lines to Canadian outlets; when we think of the great sacrifices that have been made to develop our transportation system; surely we can have the necessary complement, that which follows as the day the night, we can add to that general system an ocean service which shall put us on the same footing in respect to this, as that upon which we stand in the general business of the country. Sir,

what answer can we make when we are told that, while Canada is developing very rapidly, while she is improving her internal transportation system tremendously, she is still satisfied to remain on a side street, still satisfied to remain dependent for the ordinary interests of business upon the courtesy and good will of our neighbours to the south? It ought not to be so. It seems to me the time has come when Canada can afford what is, in this respect, a necessity for her national growth and development.

And it should be done now. Mr. Speaker, even if you allow that everything will be done that can be done, and done with all reasonable speed, it will be impossible to bring this service about inside of four years, probably five years. You have to get the several governments together; there are the interminable discussions between the members of the several governments; the British government has been brought in; the four parliaments have to be consulted. In view of all that is to be done, it is not to be expected that this can be brought into effect inside of four or five years. Then if we are going to do it for this generation, the time has arrived when we ought to make a beginning. Temporary financial difficulties which afflict us at the present time, will not, we hope, remain to trouble us four or five years from now. This temporary financial depression will pass away; it was a natural thing; a necessary thing; a good thing. For, it is as necessary in connection with the business corpus that it should have periods of recuperation as it is in connection with our physical bodies. We cannot keep going at full speed all the time. This necessary lull in business had to come. It has come. It has not hurt Canada seriously. In a year or two we shall have emerged from it, and I think that, if we have then been afraid to begin the steps necessary to bring this great project into effect, every one will feel that we have made a very serious mistake. I do not desire to be understood as advocating a reckless financial policy. I am not on my feet for the purpose of critising the financial policy of the government; but I am free to say that if, at the end of four or five years, in consequence of arrangements made in pursuance of this resolution, we shall be called upon to pay the subsidy for the purpose of securing this service, I think that some of the expenditures which this parliament is authorizing might well be cut out for the purposes of furnishing the means for this subsidy. Under any circumstances, many of the things we are called upon to do now, we shall not be called on to do then. We are accomplishing great works, they are passing into the region of things accomplished, and what we have to do is look to the future. For my part I am satisfied that my hon. friends opposite can hardly expect the House to take the position that after the representatives of Canada have gone to the imperial conference and become parties to the resolution adopted by that conference, the House should decline to endorse the position they took. And I am convinced my right hon. friend, the First Minister, can confidently ask the House to stand by the position he took at the conference.

Mr. W. COCKSHUTT (Brantford). As an ardent advocate of all things tending to the unity of the empire, I take particular interest in this discussion. The first part of the resolution is one that commends itself to all parties in the House. My hon. friend the leader of the opposition expressed his agreement in that part, submitted to us as the result of the conference held in London a little over a year ago. I am not so much concerned regarding how the right hon. the First Minister arrived at his present opinions as I am glad to know he has made some advance along broad lines and is advocating the policy he formerly opposed and which we on this side have been advocatng for many years. The question of intercommunication between Great Britain and the various constituents of the empire is one that should have the earnest attention and consideration of every citizen of the empire; and it is, as a citizen of the empire and a Canadian that I desire to make a very few observations on the question before the House. I have listened with much attention and interest to the remarks of my hon. friend from Brandon (Mr. Sifton), and I have read over the speech he made during the budget debate and noticed particularly the figures he presented on page 5355. In that speech he said, speaking of the expense:

It has been suggested that a reasonable allocation of the proportions of that million pounds sterling to the various contracting parties would be:

Australia	£ 75,000
New Zealand	100,000
Canada	325,000
Great Britain	500,000

These are very large figures, but I can quite understand that we might receive full value in return if the money were wisely expended. But there is one thing I cannot understand in the policy propounded by the First Minister and the hon. member for Brandon, and that is why South Africa is left entirely out in the cold. South Africa is one of the most important colonies of the empire, almost directly on the route to New Zealand and Australia, and it would not be a very difficult proposition for the steam service to touch at some port in South Africa as well as New Zealand and Australia. If South Africa were brought in, the advantages might be greater and the expenses to the other constituents of the empire somewhat less, as no doubt British South Africa would be ready to

contribute a fair share, as well as the other colonies, for the service proposed.

There is one feature I have not yet heard touched upon and which to me appears to be the key-not of the situation. Since the Prime Minister has taken strong grounds upon the question of transportation, I do not see why he should have overlooked the question of a mutual preference between Great Britain and her colonies. On looking over the report of the colonial conference, I find that the First Minister took a less advanced position with regard to mutual preferential trade than with regard to mutual transportation facilities. The starting point should be the effecting of a mutual preference arrangement between Great Britain and her various colonies. Have we made any advance in that line? No doubt the First Minister will say that Canada has already held out the olive branch and given Great Britain considerable concessions. But that is a jug-handled policy which gives little or no advantage to the Canadian people. We consequently sacrificed a large part of the duties we might have collected on these goods and have had no return and are not in as good a position as we were in a few years ago. We have surrendered a large part of our market to Great Britain and in return have not received a penny of preference to recoup us. A few years ago Canadian cattle were admitted to the British market free. They could be landed alive and were considered the best supply of meat that went into the British market. That meant an immense revenue to the farmers of our country. In the province of Ontario, immense herds of cattle were daily on our markets where they were herded together and shipped to Great Britain, and the average price of our cattle has considerably diminished since our cattle have been scheduled in such a way as not to be allowed to land alive in the old country. That is one question the government should take up with the view of opening up trade for our ships to carry. Australia submitted certain financial propositions a year ago, but I have not heard that any response has been made by this government with the view of developing the trade that should be carried on these ships. It is all very well to put ships on the ocean but you have to supply them with cargoes, and I want to fill them with cargoes profitable alike to the buyer and the seller, the consumer and the producer. But the government are providing transportation without saying where the cargo is to come from. A business proposition would be to establish a mutual preferential trade between Great Britain, Canada, Australia and New Zealand. Why not follow the course this government lately did with regard to France? They gave us the treaty first—which treaty, I believe, has since miscarried—and then allowed a subsidy to the line which would carry the products resulting from that treaty. Why not do the same thing here? Negotiate your treaties, produce your trade which is going to utilize the fleet of ships, and that being done the success of the steamship lines will be assured. But nothing of the kind has been done. No advance was made by the Prime Minister and his assistants in London with reference to the great question of preferential trade with Great Britain. The possibilities of the trade between Canada and her sister colonies and Great Britain are greater, more valuable and would be more profitable than all the treaties that can be negotiated by this government with all other foreign powers combined. The markets are there and the people, and all we have to do is produce the goods and we are producing them and will produce them in greater quantities in the near future. What we want is matured arrangements between Great Britain and her various colonies which would place Canada in a position she has never yet occupied.

We cannot lend our attention to that question too soon. I regret that this question has been brought to the House at this very late stage when we can scarcely give any time to its consideration. But, as has been shown very clearly by my hon. friend from North Toronto (Mr. Foster), this proposition of establishing a fast steamship service between Canada and Great Britain is not new. It is an old proposition that has been before the House on many occasions. It is a proposition that has been endorsed by the business men not only of Canada but of the empire, and, for the purpose of laying before the House, the views of the business men of the empire as assembled in Montreal in 1903 and as reported in the 'Report of the Fifth Congress of the Chambers of Commerce of the Empire' held in Montreal, Canada, on the 17th, 18th, 19th, 20th and 21st of August, 1903.' I desire to read a resolution which was submitted at that meeting by one of Montreal's leading citizens. It reads as follows:

> Moved by Mr. Robert Reford, that this congress considers it of the utmost importance to the interests of the empire that the United Kingdom and her colonies should adopt a policy under which lines of steamships will be secured and retained for (1) the provision of fast mail service on the several routes; and (2) the development and control of trade between the mother country and her possessions, and between the colonies themselves.

That resolution was discussed by 500 chosen delegates representing every principal town and city throughout the British empire and was carried by an almost unanimous vote. In 1906 the Sixth Congress, comprising the same Chambers of Commerce of the empire, met in London, England, and almost the same resolution was passed as follows:

Moved by Mr. R. Wilson-Smith, Montreal—Resolved, that this congress hereby reaffirms the following resolution, adopted at the last congress held in Montreal, in August, 1903: 'That this congress considers it of the utmost importance, to the interests of the empire, that the United Kingdom and her colonies should adopt a policy under which lines of steamships will be secured and retained for—

1. The provision of fast mail services on the several routes; and

2. The development and control of trade between the mother country and her possessions, and between the colonies themselves.

These resolutions were passed almost unanimously in these meetings of commercial men assembled from all parts of the empire. So that the proposition which the government brings down is not a new one. It is true that it is a somewhat advanced position for this government to take. It is to be regretted that this is not a very opportune time to talk of devoting large sums to be taken out of the public treasury to any enterprises at all. I could only wish that a fraction of the amount that is being sunk, for the present, at all events in the Grand Trunk Pacific, could have been withheld in order that we might have a subsidized line of steamships to carry the products of Canada to different parts of the British empire. That is a project that is worthy of the greatest consideration, and as a citizen of Canada and of the empire I desire to discuss this question entirely free from all party prejudice as I believe that this side of the House has always held the banner in regard to being the imperialistic party, if there is such in Canada, and that it has always desired to improve the relations between the mother country and the colonies. That being the case, we could not oppose the spirit of the resolution as brought down and which embodies the view of the late Colonial Conference. The amendment moved by my hon. friend the leader of the opposition (Mr. R. L. Borden) I think does not change the resolution in any particular. It is not a negative at all, as the hon. member for Brandon (Mr. Sifton) has stated, but it is simply saying that in any such arrangement as is contemplated we must have full regard to the possibilities of the carrying trade with reference to products of all kinds to and from the various parts of the empire, that they must be carried in cold storage where necessary and that all possible consideration must be given to the development of the trade of the country rather than to the carrying of passengers upon either the Atlantic or Pacific. Very few of our own citizens who go across the ocean want to go in very fast ships, but the proper transportation of the products which are daily going out of Canada means dollars and cents in the pocket of every farmer in Canada. So that the first consideration should be given to the transportation of our products in a cheap, efficient and safe way, in a way that will preserve them in the best condition so that when they arrive on the British market, or on any of the colonial markets, it will be found that they will bring the highest prices. Therefore, I think the rider that has been proposed by my hon. friend the leader of the opposition is one that we might well adopt. I trust that the right hon. leader of the government will see his way to join with my hon. friend the leader of the opposition in this and that we may have a united House on what is really an imperial question. Let this resolution, as amended by my hon. friend the leader of the opposition be the unanimous voice of this House. I think it would have a great effect throughout the empire. It would be doing something to consolidate the empire and in my opinion it would be a great step in advance for the commercial interests of Canada and of the empire as a whole. It is my intention to support the resolution as amended by my hon. friend the leader of the opposition. I trust that the right hon. leader of the House will see his way to incorporate these few words in the resolution so that it may go out to the world, to Great Britain and the colonies, that we are on this empire matter comparatively a unit in this country and that when it comes to discussing these broad imperial questions in a business way we do not allow small-minded politics to creep in, but are prepared to do our utmost to further the object which we all have so much at heart—the unification, consolidation and development of the greatest empire that the world has ever seen. If it is the desire of this House to contribute to that end I hope that the resolution, as amended by my hon. friend the leader of the opposition, will be adopted, and I trust that the same spirit that has been displayed in the discussion so far may characterize it up to the finish and that we may present a united front upon this question. I have spoken of the chambers of commerce of the empire. They held their fifth meeting in Montreal and their sixth in London. Only yesterday I saw heralded in the press that the seventh has been called and where has it been called? Away out in the Antipodes, in Australia. The next meeting of the chambers of commerce of the empire will be held in Australia. The limelight will then be turned on the transportation facilities of the empire. Business men from all over the world, from all parts of the empire, will be going to Australia to take part in that great congress and the very question that is before this House to-day will be one that will be agitating every business man, every board of trade, every chamber of commerce throughout the empire because they have all to get there. They will want to get there in the best possible way, they will want to get there expeditiously, safely and in comfort. But I say that we should not sacrifice the con-

sideration of material advantage to that of speed. It is all very well to travel in very fast ships, but it is a great deal better to travel in comfort and safety. The interests of the navy of Great Britain cannot be any more advanced than by the extension of the mercantile marine to all the seas that couple the various parts of the empire, placing upon them a class of ships that will carry safely and expeditiously both the passengers and trade of the great British empire. It is well known that in times of war the mercantile marine is the first adjunct of the navy and that fact should not be lost sight of in the consideration of a question of this kind. It is a matter that presents itself to the advanced man as one of importance. Every ship that you place upon the ocean not only carries mails, passengers and cargo from one part of the empire to another but is also a source of strength and help in time of stress and danger because it affords safe transport for troops, a means of getting supplies to any part of the earth in a short time, and it is one of the most valuable adjuncts that can be given a nation for its safety, prosperity and welfare. When the vote is taken on this resolution I trust it will be found that both sides of the House with united voice will give their support to what I conceive to be one of the greatest factors for the advancement and consolidation of the British empire in its various constituent parts.

Mr. WM. ROCHE (Halifax). I agree with my hon. friend (Mr. Cockshutt) that we should have unanimity on this resolution, for this certainly is a question which is not controversial. The people of Canada are not so much interested in the contest as to who applied the epithet 'All-Red' to this project, or as to who were the best friends of this enterprise in the past, as they are in the question: Who are the best friends of the enterprise now? He who will demonstrate that fact in this House and in the country will do more to enlist the gratitude of Canadians than one who, for the sake of political controversy, endeavours to make out that one political party was more interested in the project than was the other. I regret that the hon. member for North Toronto (Mr. Foster) imparted a political tinge to this debate. It may be that his combative energies have been so exercised lately that unconsciously polemic controversy comes upwards in his mind—anyhow, the leader of the opposition dispelled the idea that we were to have entire unanimity. I looked to him for moderate counsel so that the House might be united on the question in the manner prayed for by my hon. friend from Brantford (Mr. Cockshutt), but instead of coalescence the leader of the opposition introduced an amendment which practically will have the effect of making this a party question, although in its opening paragraph the amendment does speak of acquiescence in the principle, but not in practical details or in the operation of it as a practical measure. There has been throughout the country—there certainly has been in the maritime ports, where the subject was originally of more interest than it was in the interior of the country—a difference of opinion as to whether a comparatively slow service of 16 or 17 knots would not better serve the exigencies of the country than a more rapid service of 20 knots or over. That controversy waged in parliament. However, the discussion on that point as a practical issue has almost passed, because of the fact that a 17-knot service has been tried and has been successfully established along commercial lines. Such a service does not require so much of government aid in the way of subsidy, and it may be fairly left to achieve its own part in the commerce of the country. That controversy was not confined to politicians in the Canadian parliament or to opposing views in our commercial centres, but it was taken up by the steamboat companies themselves, and some of these companies which are esteemed to be the most highly advanced and most in touch with the freight and passenger traffic of the Atlantic have rather retrograded from the very fast service of 20, 22 and 23 knots to a service of 16 and 17 knots. The controversy existed between the directors of leading steamship lines who had experience in both directions. The White Star line, which has the largest ships in the Atlantic service, have gone back from the 'Oceanic' of 20 or 21 knots to the 'Republic' of 16 or 17 knots, and they are building monster ships which are not intended to attain a very high speed. The Hamburg-American line, which was the first to produce a fast ship, have also retrograded and they have built four enormous boats which make a speed of 17 or 18 knots. The 'Kaiserin Augusta,' 25,000 tons and accommodation for 3,000 passengers, is an 18-knot boat, and the 'Amerika,' the 'President Grant' and the 'President Lincoln' are of similar speed. Some of the White Star boats now run to Southampton instead of to Liverpool; they have enormous capacity with moderate speed and large passenger accommodation fitted up with all the adjuncts to luxury which modern travel requires. I may say that the experience of this present year has to a large extent justified those who build large ships of great capacity and comparatively slow, because the reflux of passenger traffic in the immense number of continental Europeans who have gone from the United States back to their native land has, on the return voyages filled all the space that was previously occupied by light cargo, and great difficulty has been found even on those enor-

mous boats in providing accommodation for the middle class and steerage passengers. In the minds of a number of gentlemen in this House, and in the mind of the public generally, the 'Mauretania' and the 'Lusitania' have set up the standard of what a fast Atlantic ship should be. The British government furnished the Cunard Company with a large amount of money at a low rate of interest, and also gave them a large subsidy, so that they might obtain the prestige of having the fastest ships on the Atlantic, the German builders having wrested from the British builders the reputation for constructing the fastest, best appointed and most luxuriously fitted passenger ships. But it was not only sentiment that prompted the British people to the desire to have the fastest ships, nor was it altogether that these fast ships would be a powerful adjunct in war. There was the further inducement that the prestige of building the very fastest ships was of immense advantage to the British shipbuilders, whose trade was waning and who, in consequence of regaining their reputation, would have the advantage of securing orders from foreign owners who wanted vessels of that class. The competition was between the British and German builders as to the cost of production as well as to the turning out of the fastest and most economical ships. The 'Mauretania' and the 'Lusitania' are of great size, of great speed, of luxurious furnishing, but they are very costly. Many who would otherwise advocate a fast Canadian line have been deterred from this advocacy through the belief that vessels equal to the 'Lusitania' and the 'Mauretania' would be necessary for the Canadian trade. It is a fallacy to suppose that we need vessels of that extremely costly type. The Cunard Company have, in addition to these steamers, vessels of less speed and power and cost, but of greater capacity for the carriage of freight. I believe the great lines usually run cargo boats in conjunction with their fast boats. The North German Lloyds has been spoken of. They were the pioneers in using very fast steamers. They have on the Atlantic to-day four steamers of 23 knots, which are fitted equal to the Cunard steamers, have all the modern appliances for comfort, and make the trip from Cherbourg to New York in six days. They are interchangeable with regard to berths and accommodation, the one with the other, which gives them an immense advantage. They have lately put on the New York route a steamer called the 'Kronprintzessin Cecile,' about 700 feet in length by about 70 feet broad. A ship with a little more horse-power, say 5,000, would make the passage from Halifax to a port on the western coast of England in four days, summer and winter, and there is no other port in America from which a service of that kind could be maintained. Four steamers of that size and power would be sufficient to maintain such a service continuously summer and winter, because at Halifax they would not be delayed by the tides, but could proceed at any time to the ocean. Therefore this question is not one of vague cost, as was intimated by my hon. friend from North Toronto, but is confined within narrow limits of cost. The success of these large ships is very largely governed by the amount of subsidy that will be available.

Mr. R. L. BORDEN. About how much would these boats cost ?

Mr. WM. ROCHE (Halifax). About $3,000,000 each. The New York lines obtain from the southern and western states a large passenger list of wealthy people who pay for suites of rooms and other special accommodation. It will not be necessary to incur such large expense on our boats; nor will it be necessary to furnish them so luxuriously as the New York boats. An immense advantage will accrue from diverting to the Canadian line British passengers who now go for the sake of speed to New York. Passing through Canada, they will become acquainted with the resources and possibilities of our country. And this is not a remote thing that is to be catered for 25 years hence, or even 10 years hence; but it is something to be catered for now, when public opinion is formative, when people are making their calculations, when business men are making their connections, and studying how and where they can best extend their business. I do not need to go in greater detail into a comparison of boats and routes. We know that both New York and Liverpool are bar harbours. New York dominates Liverpool. If I were asked for advice, I would say, go to a port on the west coast of England in direct communication with London and the contient. Where speed is the prime factor, there is no route between Halifax and a southern port on the west coast of England. A remark made by the hon. leader of the opposition has been enlarged upon—that these boats could not carry perishable freight. I think that is the substance of the hon. gentleman's amendment.

Mr. R. L. BORDEN If the hon gentleman will pardon me, I was not speaking of ships of any particular kind. I was merely desiring to emphasize the point, which the hon. gentleman has already remarked upon, that there should be facilities for carrying freight.

Mr. WM. ROCHE. I listened attentively to my hon friend the leader of the opposition, and although he did not expressly state it, the whole course of his remarks, and also of his amendment, tended to the position that this is a comparative question, not an absolute one, and therefore it would

be better to do something else than to do immediately what is proposed by the government. And one of the stated reasons was that the farmers might have the advantage of shipping their ordinary agricultural products, and also their perishable goods. Now, there is nothing to prevent cold storage accommodation being provided on these ships. If that were done, fancy products, such as fruit and other things, could be carried in these ships much better than by any line of freight steamers that could be subsidized or invented; because the great element would be speed. A great many products that could not be sent by an ordinary freight line, even with cold storage, could be sent by a fast line. Merchants and others passing over the line would see opportunities for increasing business, and the English market for our products would be very much extended, because they could be carried by this fast line to the best market in the world, which they have not hitherto been able to reach because of the want of rapid transit. With regard to the remark of the premier of New Zealand, that he stipulated that freight should be carried on the Pacific steamers, I am not going to speak in regard to the Pacific end of this project, as some of our friends from British Columbia are going to deal with that feature of the subject. I will merely say that if a fast line were maintained for so long a voyage as from Vancouver to Australia, it would be impossible for it to carry any great burden of freight. The amount of coal that would be necessary to maintain a vessel at a speed of 18 or 20 knots on the Pacific, would exclude any amount of heavy freight, and only a small space could be reserved for the more valuable and compact goods. Therefore for the future heavy freight would have to be carried by another kind of ship.

The hon. member for Brantford (Mr. Cockshutt) this afternoon expressed anxiety for our fellow citizens of the empire in South Africa. It is a good way out of the line of travel from Vancouver to Australia, but it shows his cosmopolitan regard for sentiment and his love for the old flag; but I can assure him that the British public have well provided for the trade of South Africa and onwards from there to Australia; they have steamers of very large size, with good passenger accommodation and that is a trade which they intend to build to its utmost capacity. There is in that country a very strong English sentiment, a sentiment to deal with the mother country. That has been well provided for and the lines well established. I think my hon. friend from Brantford (Mr. Cockshutt) and I can afford to leave our co-citizens of the empire in South Africa to the kindness of the people of England and to the care of those companies which are at present engaged in the South African trade.

It was hoped that the introduction of the turbine engine would solve a great many questions, but unfortunately the turbine engine is not more economical in the consumption of coal than the old style of engine. It is only on vessels of very high power that there is economy in the turbine and therefore the anticipation that the turbines would permit of longer voyages with the same supply of coal has not been fulfilled. Various companies have been experimenting; the German companies have adhered to the old reciprocating type, some of the British lines have adopted the turbine and the British government has been experimenting with oil fuel. But these experiments are not yet completed and it is not possible to state any results. Many interested people thought that the turbine engine would solve the problem of coal carrying capacity but as yet that has not been accomplished.

Great Britain has a great interest in this project. The leader of the opposition and the hon. member for North Toronto (Mr. Foster) called that a sentimental interest. I cannot say where the bounds between sentiment and material interest lie, but it is surely true that the amount of advantage to Great Britain will determine the amount which Great Britain will contribute to this joint project. It is not merely a question of distance but it is also a question of safety. Great Britain is looking constantly to securing fast merchant ships to supplement the navy, as was well remarked by my hon. friend from Brantford, and this line will afford useful ships for this purpose when required. It is also of great advantage to the British government to have a safe and rapid line of communication available in time of exigency, away from Europe, which would not be menaced by the navy of hostile powers. There is great rivalry as to which shall be the predominant naval power and the further the line of communication is carried away from Europe and the passage of the Suez canal, the safer are the British possessions in the east and the wide stretching British commerce to be found in every sea. The hon. member for North Toronto (Mr. Foster) and the hon. member for Brantford (Mr. Cockshutt) have perhaps not looked up the statistics of the immense damage inflicted on British commerce in the short war of independence with the United States and the war with the United States in 1812, when American privateers pushed right up to the British channel and captured whole fleets of merchantmen owing to their speed. I recommend my friends to study these subjects at their leisure and give their views at some later stage because they tend to show the immense importance of this subject to the British empire, and also that a liberal participation in this plan is essential to the efficient government and holding of British

colonial possessions. We are not looking for war. The leader of the oppposition (Mr. R. L. Borden) said it was extremely necessary that the farmers should have cheap and rapid accommodation on ships equipped with cold storage and lower rates of freight for their products. The rates of freight from Canada to Great Britain to-day are extremely low on heavy goods. My friends will remember that there are hundreds of thousands of tons of shipping laid up in England at the present time because the vessels are not able to obtain remunerative rates of freights. This government also has subsidized lines of steamers to carry freight with some regularity to compete with freight carried on the great lines from the United States. The government has been liberal in providing for this service, and there has been no complaint, by the leader of the opposition or anybody else, on the ground of excessive freights from Canada to the old country. I would like to see our shipments to Great Britain increase, I would like to see every facility afforded to the farmers, I would like to see cold storages established at every point where it would be of advantage. But the government has not protected that particular interest. I would also like to see the farmers of Ontario make more frequent passages to the old country and establish agencies under their own control for the distribution of their products there so that they would reap the whole advantage from their sale. I had remarked that this project must be dealt with comparatively. Well, we know the cost of this somewhat definitely; also there are limitations under which it will be necessary for Canada to assent to any proposals that are not fair or adequate. Only the other day, we passed a measure to extend a railway to Hudson bay, involving an expenditure of about a hundred millions. I did not hear any of these eloquent voices on the other side raised against that. We had the project of the Georgian bay canal involving a sum, we are told, of a hundred millions.

Mr. FOSTER. I did not hear about that.

Mr. WM. ROCHE (Halifax). Did not the hon. gentleman hear it stated that it would cost a hundred millions for the Georgian Bay canal?

Mr. FOSTER. I did not hear the Minister of Railways say it was going through.

Mr. WM. ROCHE (Halifax). Perhaps the hon. gentleman was out. But I am only speaking in round numbers. I have understood that the Hudson Bay proposal would cost something like a hundred millions.

Mr. FOSTER. Oh, my no! I did not hear that.

Mr. WM. ROCHE.

Mr. WM. ROCHE (Halifax). I heard no objection to the building of the Hudson Bay Railway.

Mr. FOSTER. I was in favour of it for my part.

Mr. WM. ROCHE (Halifax). Very well, then the hon. gentleman is committed to it whatever it may cost. And it was supposed to cost a large amount of money. And there was no opposition to that proposal. But here is a proposal within extremely small limitations. Formerly it was supposed to involve an expenditure of $500,000 to $700,000 annually. This proposal as stated by my hon. friend will not involve more than $1,000,000. This affects the interests of eastern Canada, it affects the interests of all the continent through which this line of communication passes; it affects the interests of the people on the western ocean; all are interested in this proposal, and nobody, up to the present time, has shown that any disadvantages are to accrue from it. When the expenditure is so limited, why should we have an amendment declaring that this is injudicious or inexpedient at the present time, especially when we have embarked upon proposals that will cost a large amount of money, and more especially when one of the routes to be provided, that by Hudson bay, is open it is said by some, for two months in the year, and by some for four. Here is a route that is opened the whole year round. It opens possibilities greater than any body has been able to prophesy. If we consider the possibilities of the development of Canada we shall give to a project which helps in the realization of those possibilities the hearty and unanimous assent of this House, backed by the enthusiasm of a growing and progressive people.

Mr. A. E. KEMP (East Toronto). I do not intend to go into this subject in great detail, as we are trying to end this debate and close the session with as little delay as possible. Nor do I intend to go into the historical phase of the question of the fast Atlantic service. It is pretty well known to the people of Canada that during the past twelve or fifteen years, or perhaps more, this question has been fully discussed. I shall discuss the question from the standpoint of to-day, and consider it in the light of conditions as they exist. The hon. member for Brandon (Mr. Sifton) says he is sorry that the government is not receiving the enthusiastic support in this measure which he would expect it to receive. Well, it did not occur to me, while the Prime Minister (Sir Wilfrid Laurier) was addressing the House upon this project, that that right hon. gentleman was over-enthusiastic with regard to it himself. If ever I saw the Prime Minister handle a question with a pair of tongs I saw him do so to-day. The

hon. member for Brandon, I notice, differed with the Prime Minister with respect to the speed of these vessels upon the Atlantic. If I understood the Prime Minister correctly, that right hon. gentleman advocated a 20-knot service. But the hon. member for Brandon still insists that this service should be by vessels of 24 knots an hour. This is a difference of opinion between the Prime Minister and member for Brandon with regard to one of the most important things in this scheme. It seems to me also that the hon. member (Mr. Sifton) has not been able to convert certain other members of the cabinet. The leader of the opposition (Mr. R. L. Borden) read an extract from a speech made on this subject by the Minister of Agriculture (Mr. Fisher). And I have every reason to believe that the Minister of Agriculture entertains the same view with regard to this service as he did when he made that speech. So, the hon. member for Brandon need not complain about the attitude of the opposition when he has not been able to win even members of the cabinet to his own view upon this project which lies so near his heart. I said that I did not intend to go into the historical aspect of this question. But it is necessary that I should refer briefly to the fact that the sum of $750,000 was voted, I believe, by the former administration to aid this fast Atlantic service. At that time, the service on the Atlantic was very poor. The time occupied between Liverpool and Canada was about double the time taken by the steamers of to-day. During these years, private enterprise, with the improvement of conditions, has given us pretty nearly what was laid out in the terms and conditions of the contract it was then desired to enter into. But, more than that, I would point out that this government, as stated by the hon. member for Brandon, is paying out pretty nearly the amount which the former administration proposed to provide for the fast Atlantic service. According to the figures given by the hon. gentleman, this government is paying $680,000 per annum to carry the mails, and, I suppose, subsidize the steamship service upon the Atlantic, which is pretty nearly as much as the amount voted under the former administration. I am glad that through the enterprise of two corporations, we have to-day an efficient service on the Atlantic without the expenditure of an enormous sum. That could hardly have been expected at the time the contract I referred to, as made by a former administation, was voted upon in this House.

This question we are discussing not only embodies a fast Atlantic service on the Atlantic, which is the most important from our standpoint, but it also embodies the putting of faster trains on the railways crossing the continent—that would apply to the Canadian Pacific Railway—and a better steamship service on the Pacific ocean between Vancouver, New Zealand and Australia. We have to look at this matter entirely from the standpoint of carrying mails and passengers, and cannot expect that vessels, such as we intend to put on the Atlantic, which have a speed of 24 knots an hour, will be of the slightest advantage to the people as far as freights are concerned.

I shall not take up the time of this House referring at any length to the sentimental aspect of the question. I wish to endorse the words uttered by Premier Deakin, of Australia, and telegraphed to this country via London by the Associated Press a day or two ago :

London, July 7.—A despatch from Melbourne says that Premier Deakin, commenting on Sir Wilfrid Laurier's request for Australia's co-operation as to the All-Red route, says the Commonwealth must have a definite financial proposal before he can advise action. The whole question had now narrowed down to cost, as the sentimental benefits were admitted long ago.

That is the position I take. The sentimental benefits which would arise from the bringing closer together the various parts of the empire are admitted. And while I am prepared to criticise the resolution submitted to this House, I do not want to be considered any the less a loyal subject of the empire ; I do not think I will be, and, in fact, I do not care whether I am so considered or not. So far as the hon. member for Brandon (Mr. Sifton) is concerned, what he proposes is a different scheme from what the Prime Minister brings down. The hon. member for Brandon (Mr. Sifton) thinks that $1,000,000 is a very small thing with which to charge the country for all time to come. Well, considering all the heavy expenditure to which the government has committed us, in view of the excellent service we have on the Atlantic at present, I think this proposed extra expenditure of $1,000,000 per year is a very serious one. Capitalize that amount of interest at 3½ per cent and you have a capital expenditure of $30,000,000, besides the subsidy we are now paying of $680,000 per year. If this government is going into a project which will involve the borrowing of $30,000,000, I think the project is one not to be at all likely lightly considered.

The hon. member for Brandon (Mr. Sifton) referred to the great development in Germany, which he attributed to their enterprise in subsidizing fast steamships. My own view is that the great development of Germany is not due to her fast Atlantic steamships, although that service may have been a factor to some small extent. But the fact is that some years ago, when the craze was on, each country was competing with the other as to which should have the

fastest Atlantic service. The 'Lucania' and the 'Campania' were built by the Cunard line and were the fastest steamers afloat. Then the Germans came on with faster steamers. A few years ago the great financier, Mr. Pierpont Morgan, appeared on the scene and attempted to consolidate certain British and American lines. That caused a sort of spasm in Great Britain, and for fear that the competition created by this great amalgamation would drive British passenger vessels of the fastest type from the Atlantic, and under the influence of that alarm, the British government subsidized two steamers built by the Cunard line, the 'Mauretania' and 'Lusitania,' but that these vessels have been an unqualified success is questioned. While we have the 'Campania' and 'Lucania' on the Atlantic it has been demonstrated that a great many people prefer to travel by slower vessels. From what I have been able to learn, this fast Atlantic travel is more of a fad than anything else. Where two vessels, such as the 'Mauretania' and 'Lusitania,' have been built, there have been twenty-five or thirty others built, more commodious and comfortable vessels, which run seventeen or eighteen knots an hour, and these have taken the business. The Cunard line, many years after they had the 'Campania' and 'Lucania' on the Atlantic, built two steamers, the 'Caronia' and 'Carmania,' which are always crowded with passengers. To suppose that every one who travels on the Atlantic wants to save half a day or a day is simply a fad. While some may think the saving of a day of great importance, a great number of the traveling public do not. I have said what the Cunard line have done; other lines have done the same. The Hamburg-American owns the 'Deutschland,' built for the New York to Liverpool business. She has been put on the New York and Mediterranian service during the winter time. Then the company have built and worked successfully vessels of great capacity which make slower time, such as the 'President Lincoln,' 'President Grant' and 'Amerika.' Probably the 'Amerika' is the most popular, and of the White Star line the 'Cedric' and 'Baltic' and 'Arabic' are among the most popular. Other companies have not pinned their faith to the extreme type of fast Atlantic vessels. Comfort and security count for something with certain people who travel on the Atlantic.

My right hon. friend the First Minister figured out that a 20-knot service would make the trip in five days across the Atlantic. Well, steamships plying to Great Britain at present take five and a-half days from Liverpool to Rimouski and six to Montreal. Are we going to pay this extra $1,000,000 for the purpose of saving half a day or a day? In my opinion, the scheme is not practicable. There is no demand for it. The time is not opportune for considering it. Twelve years ago the conditions were entirely different. Since then we have been able to secure, on a commercial basis, a service, furnished voluntarily by people well posted in the trade, which is certainly as good as the desired service in many respects.

The hon. member for Brandon (Mr. Sifton) said it would take time, after passing the resolution, to bring all the parties together and decide on a joint agreement, and that it would be five years before we can have the ships on the ocean. I believe that in three years, or in four years at any rate, we will have a 20-knot service on the Atlantic. We have at the present time an all-red route, so called. I will not quarrel with the premier or any one else who wishes to have the credit of having invented that name. It is a matter of very little importance to me what you call it, but we have an all-red line from Great Britain to Canada and from Canada to Australia and New Zealand. Only to-day I saw a gentleman who had recently come from Australia on the steamers which are plying on the Pacific which service is being improved. He came across in a ship of 7,000 tons, he had a pleasant voyage and the passengers were well satisfied with the treatment they received and the accommodation they had on that vessel. I endorse what has been said by my hon. friend the leader of the opposition (Mr. R. L. Borden) regarding the importance of freight traffic. If we have this amount of money to spend and if we feel that we ought to spend it in this way we would be doing something which would be of far greater service to this country if we did something in the direction of obtaining better freight rates for the products of Canada and of extending the cold storage facilities in a way that will make them of greater benefit to producers than they are at the present time. I do not want to be stampeded into endorsing the vague plan suggested by this resolution. I do not understand how the premier expected this resolution to go through the House unanimously. The time has come when we should stop this sort of thing. The time has come when we should get estimates accompanied by a little more information with respect to matters of this kind. The hon. member for Brandon (Mr. Sifton) states that some steps ought to be taken but I would like to ask that hon. gentleman as I would like to ask the premier what steps have been taken by the government of Great Britain, New Zealand and Australia. I do not know why we should be expected to take the initiative any more than these other governments. I think that the advantage it would be to save a day or possibly only half a day in the voyage across the ocean has been very much over-estimated. Viewing it from the standpoint that these vessels will be entirely

for the purpose of carrying passengers, that a very small portion of the people travel by the Atlantic or travel at all, and that a great many people prefer such vessels as are on the Atlantic at the present time, I think we should encourage the people who have had the enterprise to do what has been done upon the Atlantic, who have given such a splendid service, rather than create competition by government aid which would discourage men from going on in the future and continuing the splendid work which they have done in the past. I believe that if we are just a little cautious in regard to this matter, a little more sensible, we will have, in the next five years, upon the Atlantic, a far better service than we will have by the voting of $1,000,000, as is proposed by the hon. member for Brandon. Therefore, I will have great pleasure in supporting the amendment of my hon. friend the leader of the opposition.

Hon. W. S. FIELDING (Minister of Finance). Mr. Speaker, if there be some possible difference of opinion on this side of the House on details of this question, as suggested, it is quite evident that there must be larger and greater differences of opinion among hon. gentlemen opposite. I take it that the speech of the hon. member for Brantford (Mr. Cockshutt) was made in support of this fast line scheme, possibly with some modification of the words, the changing of the phraseology here and there, the dotting of the i's or the crossing of the t's, but the hon. gentleman who has just spoken (Mr. Kemp) has given us his reasons for voting against the whole scheme. Therefore, we must assume, if he is going to vote with the hon. leader of the opposition (Mr. R. L. Borden) on this question, that they have a common ground and that they are really placing themselves in opposition to this whole scheme. If that is not the meaning of the proposition of my hon. friends opposite I must confess that I am unable to see what their purpose is by the amendment which they have presented to the House, because a certain portion of the amendment distinctly declares that you must do nothing immediately. You must not commit yourself to anything, you must come back and tell the House what you have in your mind before you agree to anything. Let us suppose that delegates from this government go to meet the government of New Zealand or of Australia and that they do as my hon. friend the leader of the opposition suggests; they would go there with instructions that they could agree to nothing, commit the government to nothing, bind Canada to nothing, and that would mean the absolute obstruction of this whole scheme. If the whole scheme is a dream and a bad one that position is justifiable, but I do not think that my hon. friends would like to take that position, and certainly that was not the line of action taken by hon. gentlemen opposite——

Mr. R. L. BORDEN. Was it the intention of the resolution as proposed that the country should be committed to a definite plan and to an expenditure without coming back to parliament ?

Mr. FIELDING. No, what was intended to be accomplished was that this House should first declare its approval of the principle of the fast line service forming part of the All-Red line between England and Australia and New Zealand. My hon. friends opposite say that there is a difference of opinion on this side as to whether that should be a 24 knot or a 20 knot service. I do not see any difficulty on that score. Every one of us, I am sure, would be glad to get a 24-knot service if we could get it at a price which would be reasonably within our ability to pay, but if we cannot get a 24-knot service without paying a price that would seem to us to be excessive then I suppose we would all be very pleased to have, at a moderate price, a substantial improvement upon the service that we already have. Whether you have a 20-knot service, a 21, a 23, or a 24-knot service is a matter of detail and a question of price.

I do not see why there should be this division of opinion in the House to-day. My hon friend from Brantford expressed the view very strongly that we should be unanimous, that there should be no difference whatever. He wishes to be counted among the enthusiastic advocates of this All-Red scheme. I share his feeling that there is no good reason for a difference of opinion. If the principle generally that it is desirable to have a faster service on the Atlantic and a faster service on the Pacific is a principle which we all recognize to be a good one, then I see no reason for the amendment of my hon. friend the leader of the opposition.

We are told that this is not a new question. Very true; and if it is not a new question, if it be one that the House has considered again and again, there can be no reason for complaining that there is not ample time to consider it. If we had brought forward something that was entirely new there might be just cause for complaint on that score. This is not a case in which we are called upon to deal with details. Why should my hon. friend the leader of the opposition think it necessary or expedient to import into this discussion and into an amendment the question of cold storage or freight rates ? These are important questions, truly, but they are not necessarily part of the present side of the discussion; certainly, they are not necessary in the form of an amendment to a resolution which does not profess to deal with details but in which we are content to ask parliament to assert the general principle of the approval of this policy. So, I think

my hon. friend has made a mistake, from our point of view, in insisting that this matter shall be dealt with now as one of detail. As far as the question of a freight service is concerned no one disputes for a moment that the transportation question, in relation to the products of the country, is more important than the question of a passenger service. My hon. friend's amendment would imply that no attention had been given to the question of the freight business of the country. On the contrary, everybody knows that this government has liberally supported the establishment of lines for the development of the freight business of the country. A number of steamship lines are to-day engaged in that very line of business under grants in aid given by this government with the approval of parliament.

The question of freight has been considered, the question of freight will continue to be considered and therefore it is not necessary to assume, when we ask that the principle of a fast line should be affirmed, that we are ignoring or neglecting or not considering the development of the freight business of the country. There has been great progress made on Canadian railways in the separation of passenger and freight traffic and we can see similar development in our ocean carrying trade. It is not many years since the very best railways in the country ran mixed trains where you would have a passenger car and a cattle car following the same engine, but to-day the cattle car is to be found on a cattle train, the lumber and the coarser freight is carried on a train specially intended for that purpose, and the passenger train is operated as a passenger train absolutely distinct from the freight business. A further development is that on many trains there are only first-class cars, and although we have not yet come to it to any extent in Canada it is a quite common thing in the United States to see passenger trains made up entirely of pullmans. I have seen a cattle steamer leaving the port of Halifax which carried His Excellency the Governor General of the day.

Mr. SAM. HUGHES. Nothing wrong in that.

Mr. FIELDING. Nothing wrong at all except to point to the fact that the passenger steamer of to-day does not as a rule carry cattle. It was the only ship His Excellency could avail of in these days, and like a sensible man he took it and no doubt he would do so to-day under similar conditions. But the point I am making is that owing to the development in the steamship service these conditions do not now exist. The passenger business is being separated from the coarser freight business, and even in what might be called moderately fast steamers comparatively small quantities of freight are carried. I remember crossing on the 'Campania' which was then the crack boat of the Cunard fleet, and the commander told me he did not want more than 1,500 tons of freight, because anything more interfered with his coal capacity for attaining high speed, and the comfort of his passengers. And so on these fast ships will not carry low grade freight at all, although of course cold storage accommodation will be necessary because that is a specialized freight which can stand a higher rate. It is possible to combine cold storage freight with a fast steamship service, but it is not possible to combine with a fast service the carriage of low grade and bulky commodities. There is a tendency to-day, as we know, for many passengers to take what might be called moderately fast steamers.

Mr. SAM. HUGHES. Large ships.

Mr. FIELDING. Yes. There is no doubt that a great many transatlantic passengers prefer boats like the 'Baltic,' the 'Carmania,' and the 'Caronia, which are of moderate speed and which while carrying passengers with a high degree of comfort also carry a considerable quantity of freight. But the steamship line which will have its 'Carmania,' 'Caronia' and 'Baltic' will have also other very fast boats and without which the line could hardly keep up its reputation. My hon. friend from Brandon (Mr. Sifton) said that these very fast boats act as an advertisement, and from that point of view it is desirable that we should have them on the Canadian service. A nation, no less than an individual engaged in business, must attend to its advertising, and if we have steamers of not less than 20 knots, or possibly of 22 knots or 23 or 24 knots if we can get them, I feel satisfied that by bringing through Canada a large stream of first-class passengers who now go to New York, it will have the effect of advertising Canada amongst the people whom we desire should know the vast resources of our country. My hon. friends who are in business advertise in newspapers and spend their money freely, but they seldom can associate a given customer with a given advertisement although they do know that business comes and that if they cease to advertise business will also cease. I believe that even from the point of view of the advertisement it would be well for Canada to have a few of these moderately fast steamers, as fast as we can get. I feel interested in the matter naturally from the point of view of the lower provinces. I sympathize most heartily with my hon. friend from Halifax (Mr. Roche) in his remarks about the great advantages of the port of Halifax. I have always felt that in all probability, if some day we are to have one port all the year, that port would be Halifax. I have felt that if in the meantime we are to have a winter port probably Halifax would be found the most advantageous, and that the

summer port would undoubtedly have to be Quebec if the ships are of too great draft to permit of them going to Montreal. But while I warmly advocate the claims of Halifax I recognize frankly that this is a question which we must leave to be considered from a broad national point of view. I would be perfectly content, speaking for myself, that if a company should be found to take up this enterprise they should settle for themselves on commercial lines the point of departure in Europe and the point at which their steamers should arrive in Canada. If as a result these steamers should come to my own home in Halifax, well and good, but if, because of the application of sound commercial principles to the enterprise, the ships will go to some other port, then we shall have to be content.

I shall not detain the House further, but naturally feeling a great deal of interest in the question, I thought I might say a few words. I believe that the time is not ripe for this parliament to deal with it as a question of detail, and that all that remains for us to do at the present time is to reaffirm the resolution of the imperial conference. I am sorry my hon. friend the leader of the opposition feels it necessary to introduce that amendment. It seems to me to be unnecessary and I would hope that he could see his way to withdraw it.

As to the financial side of the question, I regret that hon. gentlemen opposite have taken such a pessimistic view. Either they want this service or they do not, and if they do want it is is a pity they should seek to alarm financiers by the story that this is a gross extravagance and that Canada cannot afford it. Canada undoubtedly has many obligations; we have great works in hand, and we have other great works which have claims upon us. This is a time for Canada to exercise all due caution, but it is not a time for timidity. It is a time for Canada to have faith in herself, and while we should hesitate to spend any money wastefully on services which are not calculated to advance the best interests of the country, let us say to ourselves and to the people abroad: we have faith in Canada, we believe she is going to pass quickly through this little temporary depression, which is less here than in any other part of the civilized world; we believe that Canada is able to undertake the various responsibilities which her condition calls for, and that the credit of Canada in the future will be upheld as it has been in the past.

Mr. J. W. DANIEL (St. John, N.B.). It is gratifying to be able in this parliament to speak to a question which cannot in any sense of the term be called a party question. We have already heard of the inception of what is called the All-Red route, which was conceived and tried to be started many years ago; and we all know that even at the present time we have an all-red route from England to Australia and Hong Kong through this country. I listened very carefully to-day to the speech of the right hon. the Prime Minister. I have also read very carefully the resolution which he proposed at the imperial conference and the remarks which he made in support of that resolution. As it gives in a short space and rather definitely the scheme which he urged, I will read it:

> That in the opinion of this conference the interests of the empire demand that in so far as possible its different portions should be connected by the best possible means of mail communication, travel and transportation; that to this end steps should immediately be taken to establish a fast service from Great Britain to Canada, and through Canada to Australia and New Zealand, and also to China and Japan; that such service on the Atlantic ocean should be carried on by means of steamships, equal in speed and character to the best now in existence, and upon the Pacific ocean by steamships of a speed of not less than 18 knots, and in other respects as nearly equal to the Atlantic ships as circumstances will permit; that for the purpose of carrying the above project into effect, such financial support as may be necessary should be contributed by Great Britain, Canada, Australia and New Zealand in equitable proportions.

This resolution, which, with slight modifications, was endorsed and carried by that imperial conference, was not for a service of twenty or twenty-one knots across the Atlantic. It was for a service equal to the best on the Atlantic at the present time. Therefore, I was very much puzzled when I heard the right hon. the Prime Minister in introducing these resolutions to-day, speak, not of a twenty-four or twenty-five knot service across the Atlantic, but of a twenty or twenty-one knot service, and I asked myself why we should go through all this formality for a twenty or a twenty-one knot service? Already we have an eighteen knot service on the Atlantic, and in a very few years we shall probably have a twenty knot service at the hands of the same companies who now give us an eighteen knot service, and at very little if any extra cost to this country. So that it appears to me that if we are looking forward to a twenty knot service on the Atlantic ocean, the members of that imperial conference who endorsed the resolution introduced by our Prime Minister, when they come to read the statement of the Prime Minister in this House to-day that he is only seeking to promote a twenty knot service across the Atlantic, must come to the conclusion that we as a parliament are not keeping faith with the other members of that conference, who voted not for a twenty knot service, but for a twenty-four knot service across the Atlantic ocean. The eighteen knot service applied wholly to the Pacific ocean. Therefore it seems

to me that the Prime Minister has put us rather in a quandary.

Speaking personally, I am quite in accord with the resolution which was passed at the imperial conference, and which is brought before us to-day ; and, for the reasons which have already been given, we can only tell by experiment whether such a service on the Atlantic would be justified or not. We all know that such a service cannot be commercially successful. It is not commercially successful at the present time, even with the steamships running to the port of New York and having the 80,000,000 people of the United States to draw upon. But if we are going to carry out the resolution of the imperial conference, we have to put on the Atlantic ocean a service equal to the best at present plying on that ocean anywhere. That means a twenty-four knot service, or all our work will be of no effect, and we cannot be considered as carrying out in good faith the undertaking of our representative. Then comes the question of freight. We all know that so far as this country is concerned, the freight business is more important than the passenger business ; and I may say in passing that the greatest usefulness of speed in crossing the Atlantic is neither for freight nor passengers, but for the mails, and there is no doubt that it is of very great advantage to have a quick mail service. Except with regard to certain classes of freight, like express freight and perishable goods, the matter of speed need not be taken into consideration in connection with freight ; it is not a matter of importance. I am speaking, of course, in a comparative sense ; therefore when we speak of bringing into force a twenty-four knot service, we cannot consider freight at all, but only mails and passengers. I would like to call the attention of the House to a remark made by the hon. member for Brandon (Mr. Sifton) when referring to this matter. He says that we already pay about $600,000, and we have our service on the Atlantic and on the Pacific, and that to pay $1,000,000 or a little more for a twenty-four knot service would simply mean the addition of say $400,000 a year. Well, Sir, I entirely dissent from that view of the matter. I say that if you pass a vote for a twenty-four knot service, which it is said will be likely to cost this country a million or a million and a half, you will have to keep up your freight service independently of this service; for that is the most important service for the business of the country, while the other is more in the nature of an advertisement or a pleasant thing for the people of this country to say that we have coming from England to Canada the fastest steamers on the Atlantic ocean. That is a pleasant thing to say, but it is not entirely business. The freight matter is business which must be looked after whether we have this fast line or not. I entirely dissent from the view expressed by the hon. member for Brandon (Mr. Sifton) that it would be adding only about $400,000 to the present expense of the country in regard to steamship subsidies as you have to maintain the freight service in as good a condition as at present, so that the fast service will be entirely additional.

Personally, I would be very glad indeed to see a 24-knot service across the Atlantic. I was a little amused at the argument of the hon. member for Halifax (Mr. W. Roche) with regard to ways and means. He referred to our heavy obligations for the National Transcontinental Railway and the probable expense of improving the Welland canal, possibly building the Georgian Bay canal and constructing a line of railway to Hudson bay. Then he said, naturally, what difference does a million or two more make under those circumstances? Perhaps that is excusable, but at the same time I think, whether it costs only a million or a million and a half, we should consider thoroughly as to whether the fun of having this service would pay us, although personally I believe in having a fast line to this country, the fastest we can get. In saying that I cannot be accused of speaking from a personal interest in the matter, because the Minister of Finance has just stated that Halifax would be very sure to be the port of call on the Atlantic. As a resident of St. John, I will be quite content to leave the choice of ports to any company that undertakes the service, to those who are particularly interested in the business. The present scheme, as introduced by the Prime Minister, is most indefinite. No one in the House or out of it knows when we vote for this resolution what we are voting for or what it will entail. The Prime Minister should have been a little more definite in his statement and have taken parliament and the country a little more clearly and thoroughly into his confidence ; he should have told us what it is intended to do, so that we can vote intelligently.

Mr. R. G. MACPHERSON (Vancouver). Mr. Speaker, I do not think there can be two opinions in the province of British Columbia, where we have seen some fairly rapid strides made in navigation, as to the advantage of this project to the western part of Canada and our own Pacific province. We have to-day operating from British Columbia ports to Australia, New Zealand, Yokohama and Hong Kong a number of lines, and the question of a much better Pacific service is one of great importance. The line of demarcation between the speeches of hon. gentlemen on this side and hon. gentlemen opposite on this question is well drawn. The resolution of the Prime Minister means action immediately upon a question which is of

importance to all parts of Canada, while our hon. friends opposite say to wait, or if not to wait, that a cold storage route is the proper route. The difference between the two propositions is that one is all red, which means fast, and the other is an ice cream route, which means anything going slow. Our hon. friends opposite are prepared to accept the cold storage route, but that is not the route which is wanted at present in Canada. From British Columbia we ship all kinds of produce to Australian and Asiatic ports, but we carry very few passengers indeed. I believe that Canada is shipping from her ports less than 6 per cent of the passengers carried from North America to European ports and to Australian and Asiatic ports. At present we have the Union Steamship Company from Vancouver and Victoria to Sydney and we have the Australian service from Vancouver and Victoria to Auckland, both very poor services, with the result that very few people travel by that line. Last summer I saw with my own eyes many people who were not able to secure transportation on the boats leaving Vancouver for Australia; they had either to go via San Francisco or wait for another boat. I talk with people arriving from Australia by every boat and ask them about the Union Steamship Company, the present line between Australia and British Columbia, and they are all of one mind in saying that it is as poor a service as is operated on salt water to-day. In face of the fact that it is a very poor service the boats are usually full, both first-class and second-class, and they are carrying a considerable line of freight. I trust that the All-Red route will consist also of a line of steamers from British Columbia ports to Yokohama, Nagasaki, Manilla or wherever it may be on the Asiatic side. We have at present the Canadian Pacific Railway 'Empress' line, which has done very good work indeed. There is also the Pacific Mail Steamship line. There never was a time in the history of any country in matters of transportation when it was so urgent that a first-class line of steamers should be established. We should have them from Canada to all ports on the Pacific coast. There is not a good up-to-date line of steamers operating there to-day. The Canadian Pacific Railway have beautiful boats, but they are not doing the trade there they should do. They should have much larger and faster boats, and any Canadian Pacific Railway official operating out of Vancouver will say as I do, that we cannot afford to wait, as the member for East Toronto suggested, if we are to hold our supremacy on the sea. Now is the time to act, and now is the time for this resolution to be carried into effect. What does the resolution of the leader of the opposition mean? That nothing can be done, not even a telegram can be sent, not an emissary can be sent to Australia, New Zealand or Great Britain to work up this All-Red route plan until parliament sanctions it.

Now, we are sanctioning the principle of it, and I trust we shall go so far as to not only sanction the principle—for that principle is accepted and admitted by all—but shall take practical steps which, in a short time, will result in a better service on the Pacific; concerning the Atlantic I do not speak. What does it mean, this carrying of passengers from British ports to Canada, across Canada and from our Pacific ports to Australia and New Zealand? It means that thousands of people will come into our country and will have the opportunity of seeing for themselves the possibilities of our country. It means that these people coming into our country will spend thousands and millions of dollars. There is no better trade in the world than the tourist trade of the world. We have demonstrated that conclusively in Vancouver, where our tourist trade has been the means of very considerable advancement for our city. So, I say, we cannot afford to take the position laid down by the leader of the opposition when he says: You should not consider this question until you have further data——

Mr. R. L. BORDEN. I did not say anything of the kind, nor does the amendment say anything of the kind.

Mr. MACPHERSON. I do not wish to misrepresent the case or to do the hon. gentleman (Mr. R. L. Borden) a particle of injustice. If I have read the amendment wrong——

Mr. R. L. BORDEN. You certainly have.

Mr. MACPHERSON. I understood the hon. gentleman's amendment to declare that Canada must not do anything further, that the country must not be committed to anything at the present time, which, I take it, means that nothing shall be done.

Mr. R. L. BORDEN. The amendment leaves untouched the words of the resolution proposed by the Prime Minister:

That in the opinion of this House it is desirable that the governments of Australia, Canada and New Zealand should, with as little delay as possible, agree upon a definite plan for carrying into effect the terms of the said resolution of the Imperial Conference, the same to be submitted for the consideration of the imperial and colonial parliaments.

That is left untouched by my amendment.

Mr. MACPHERSON. I have the amendment here. It reads:

That having regard to the very heavy expenditures and obligations in which the present administration has involved the country,

the government should not commit Canada to any such plan——

I think that is plain English.

Mr. R. L. BORDEN. Go on.

Mr. MACPHERSON. (Reading):

—or to a contract or expenditure for such purpose until after the same shall have been submitted to and approved by the parliament of Canada.

If I understand anything about business, in the first place we must negotiate.

Mr. R. L. BORDEN. Certainly.

Mr. MACPHERSON. If we are to accomplish anything we must take the first step. Now, the first step means entering into arrangements with Australia, New Zealand and the mother country. There must be some considerable expenditure in order even to accomplish that. My hon. friend (Mr. R. L. Borden) says that nothing shall be done for the present. If he says he is prepared to accept fully and without qualification the resolution brought in by the Prime Minister, well and good. But he qualifies that. And the hon. member for East Toronto (Mr. Kemp) says, 'Time enough'; the hon. member for St. John (Mr. Daniel) says, 'Time enough'; the hon. member for North Toronto (Mr. Foster) says, 'Time enough'; nothing can be done; take what you have for the present, and do nothing for the future.

Mr. FOSTER. I did not mean to say that, and I do not think I said anything that could be construed in that way.

Mr. MACPHERSON. We have a searching of hearts now; and my hon. friend (Mr. Foster) says he does not mean that. Then, what does he mean?

Mr. FOSTER. I go further; I say I did not say that.

Mr. MACPHERSON. My hon. friend (Mr. Foster) has a way of so clothing his ideas in words that almost any suggestion can be taken from them. He is very clever at that. He must take either one course or the other—either he is prepared to go on with this fast Atlantic trans-Canada Pacific route or he is not.

Mr. FOSTER. Will the hon. gentleman allow me one question? Will he ask his own leader whether he proposes, under this resolution, to enter into any contract or agreement involving financial obligation with these countries without first coming to parliament to gets its authority and approval?

Mr. MACPHERSON. Let me read the resolution. I think I understand it,—I am over twenty-one years of age and understand English fairly well. The resolution says:

That it is desirable that steps shall be taken with all convenient speed——

I do not need to ask my leader what it means. There it is, 'It is desirable.' Will my hon. friend (Mr Foster) say it is not desirable? Well, he strikes that out, that is, hon gentlemen opposite have taken the position that it is not desirable at the present time to do anything further than to allow us to drift. The people of Canada will not allow its government to drift. If the government is to be found worthy of its place, it must be in advance of public opinion. The people of Canada are no longer going to do business on a back street. Whether it is transportation by land or transportation by water, Canada must be on one of the main thoroughfares of the world's trade. The people of Canada have an opportunity, at the expenditure of very little money, to greatly advance their own interest. And, after all, dollars and cents do not count so much when it is a question of the advancement of our country. We are doing a much bigger trade than we used to do, and with better facilities our trade will grow still greater. I declare my belief that the people expect the government to take advantage of every opportunity to make broader and deeper the channels of our country's trade.

Mr. W. B. NORTHRUP (East Hastings). I would not have spoken on this subject at all considering the stage of the session, had it not been for one remark made by the hon. member for Brandon (Mr. Sifton) which has been so conspicuously accentuated and illustrated by the hon. gentleman (Mr. Mcpherson) who has just taken his seat. In voting on this motion and amendment, I occupy this position: I have the honour to represent a constituency which, I venture to say, is as strongly imperialistic in its opinions and ideas as any constituency in the Dominion of Canada; I feel very strongly that, no matter what else I may do in this House, if in any way by any action or vote of mine I should show want of confidence that this union would continue, or any unwillingness on my part to do all in my power to continue to perpetuate and strengthen this union, it would be utterly futile for me to appear again before my constituents. Therefore, it is that, when such a motion is before the House, and when such an amendment is moved by the leader of the opposition, and when the hon. member for Brandon, who has been supposed throughout the country to be the father of this scheme —though it appears most unjustly supposed, because, as shown by the hon. member for North Toronto (Mr. Foster) the scheme is older than its reputed father, but at any rate he must be admitted to be a father-in-law of the scheme—when that hon. gentleman was careful to define the position occupied by the government on this scheme,

I think it necessary to give the reason why I cannot vote for the motion and why I am compelled to support the amendment. In my humble judgment, the whole question is in a nutshell. Both sides of this House are in thorough accord as to the propriety, the necessity and duty of doing everything we can to bind the empire together. One side of the House say it is to be done in one way and the other side says another way. I believe the government is entirely wrong. I shall give my vote simply on the ground that hon. gentlemen opposite are entirely mistaken in their choice of the way to bind the empire together and that the mode they have adopted is exactly the one which an enemy of the empire, one desiring to see it dismembered, would prefer.

The resolution submitted by the leader of the government is ambiguous. It may be read one way or the other. But the hon. member for Brandon (Mr. Sifton) has kindly instructed this House as to the true meaning of that motion, and it is solely on the speech of that hon. gentleman that I feel compelled to vote against the original resolution. Discussing the various advantages which the proposed line would give the empire, the hon. gentleman was good enough to tell us that the freight and cold storage service was a mere matter of detail to be looked after later on. To my mind the freight and storage service is the crucial point of the whole case, and there is nothing more to be said in favour of the resolution after this expression of opinion from the hon. member for Brandon (Mr. Sifton).

If we are to spend one and a half million dollars, we should get something in return, and when the hon. member for Brandon says that freight and cold storage are simply matters of detail, we must conclude that the expenditure of $1,500,000 a year is for a fast passenger service.

My hon. friend the leader of the opposition, on the other hand, says that whatever we are to give should have for its primary object the best means of bringing the products of the empire to the markets of the empire. Incidentally the passenger question must of course arise, and in the ships which primarily are to bring our products to the markets of the empire, we will do the best we can for the passengers. But the hon. member for Brandon ignores freight and cold storage altogether as the primary object of the resolution. The $1,500,000 per year is to secure a fast passenger service. Incidentally he will do the best he can to secure freight; and if the rosiest dreams of the hon. friend should be realized, we will be able to carry 1,000 tons of freight on each of these mammoth steamers. Canada at the present time, with all the obligations she has to bear, is to be asked to pay $1,500,000 per year for its fast steamship service for passenger traffic. Well as an imperialist, I am not going to pay that for a passenger service. I am prepared to do whatever is necessary to bring the empire closer together by facilitating a better interchange of products, but I am not going to pay that amount simply for a faster passenger service.

My hon. friend from Brandon pointed out that we are at present paying $679,000 a year for the service we have. I presume the greater part is paid under the guise of postal subsidies, and therefore, he says, all we are asked to pay is $1,000,000 additional per year. But if we are to subtract the $679,000 on the one hand, we must subtract whatever advantage and service we are getting for that on the other hand, because it is not to be presumed that we are paying that $679,000 per year for nothing. I have always understood that the mail subsidies were practically subsidies to enable the steamship lines to give us a fast service which they could not do without such assistance. No one will pretend that we are paying all this money merely for the carriage of our mail bags. If we are, we are paying a great deal too much and are being robbed. What we are paying for is not merely the carriage of the mails but indirectly to subsidize these steamship lines which have improved so much in the last ten or fifteen years. If we were to stop the payment of that $679,000 a year, does any one suppose we would have the same efficient steamship service? It is not to be supposed that we are going to withdraw our present subsidies from those lines which have done so much to promote trade between this country and the motherland. We are asked now by the hon. member for Brandon (Mr. Sifton)—and that is his interpretation of the resolution submitted to the House—to pay annually $1,500,000 to some company, without knowing to what company or of whom it will be composed or what service it will give. All we know is that $1,500,000 per year we shall pay for passenger service, and incidentally a little freight, and the maximum freight which the hon. member for Brandon can suggest is 1,000 tons to each ship.

Then what kind of a steam service are we to have? The First Minister and the hon. member for Brandon are contradictory in their views. The one says that 20 knots per hour will do, but the other insists on 25 knots per hour; and should we vote this resolution, we will not know whether this annual subsidy of $1,500,000 is to be for a 20-knot or a 25-knot service. If a 20-knot service, that will not suit my hon. friend from Brandon. If a 25-knot service, that is beyond anything the First Minister dreams of. When these gentlemen differ so much, we are justified in asking that the government should decide what it wants and adjust its domestic differences before asking the House to vote. But suppose the scheme should be estab-

lished and suppose we are given the best steamships that can be got, running at 25 knots an hour across the Atlantic and Pacific, what do we get in return for our $1,500,000 annual subsidy? How many Canadians are going to travel on these fast steamers? Is it not a fact that the faster the steamer the higher the rates? The majority of the people who will pay the particularly high rates will come from the neighbouring republic; and the practical result will be that we will be paying $1,500,000 a year in order that our neighbours to the south may have an opportunity of travelling through the beautiful route down the St. Lawrence to reach the old country by a class of steamers which the people of Canada cannot afford to patronize. In my constituency, you will get very few men who can afford to travel on these expensive boats. I find there are very few of my constituents who will ever be able to send any of their products to the old country by these boats which are limited, as a maximum, to 1,000 tons a trip. Therefore, as representing one constituency, I feel that I am bound to ask what the people of that constituency are going to get in consideration of this grant of a million and a half to which every one who is the head of a family must contribute his share. I am as anxious as any one to support anything that will tend to bind the empire together, but I want some common sense basis for an expenditure of $1,500,000. If any man is an enemy to the maintenance of the empire, if any man wishes to see this empire dismembered, if any man wishes to create a feeling throughout this Dominion of Canada, into which people are pouring from all corners of the earth, that will cause Canadians, including this conglomerate population, to become dissatisfied with the present conditions, he will bring resolutions before this House that will compel the people to pay large sums of money for considerations the value of which we do not know.

Mr. TALBOT. The resolution says that it shall be a fair sum.

Mr. NORTHRUP. A fair sum which has been illuminated by the evidence given as £325,000 a year. The amount has been fixed practically by the conference. We have been told on the floor of the House this afternoon what the amount is to be. I say as an imperialist that with our constantly increasing population coming from all the corners of the earth, coming from countries with flags different from the flag under which we have lived, seeking to find a better and truer form of government than that which they have left, coming to this country without the feeling that we, who have been born here, possess, that there should be some material advantage in the connection between Canada and the motherland being called upon to pay £325,000 a year that our neighbours to the south of us may be able to travel a little more swiftly across the Atlantic in ships, owned by some one we know not whom, and bonused by the empire to the tune of $1,000,000 a year, and this object lesson being presented to these new-comers, it will not have a tendency to make them any more loyal or any more desirous of maintaining the connection between the mother country and our own land. Feeling that it would be in the interest of the empire that the people of this country and of the various colonies should have a better, a cheaper and a faster way of carrying their products to one another and to the markets of the world than they have at the present time, and that the resolution is not in the true interest of imperialism, I, as an imperialist, am compelled to oppose it and to vote for the amendment proposed by my hon. friend the leader of the opposition.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

Mr. HANCE J. LOGAN (Cumberland). Mr. Speaker. It is a matter of regret that the resolution now before the House and which was moved by the right hon. the First Minister; a resolution of extreme importance to all Canada, should meet with the opposition of our friends on the other side of the House. The 'All-Red route' so called, important though it is to every part of the British empire is surely of special importance to our Dominion. Were I an Australian I do not know that I would be so enthusiastic over a proposal to give a large subvention for this steamship service, but as a Canadian living in Canada which is so to speak the half-way house of the empire, I feel that interests vital to our country are wrapt up in the successful accomplishment of the policy enunciated by the right hon. gentleman. It is a matter of common knowledge and I may add a matter of general disappointment to Canadians that travellers to the American continent from the motherland do not patronize to any great extent the existing Canadian seamship lines. I venture to say that not three per cent of all the travelling Englishmen, Irishmen, and Scotchmen who come to Canada enter the Dominion by a Canadian port. They reach us by the gateway of New York; they first see a great city; their eyes first rest on a foreign land teeming with millions of people, and finally they get to Canada by a side door. It is a good deal like viewing a small chapel when one has seen the vast cathedral of St. Peters at Rome. One reason therefore why I support this project so cordially is, that it will be an advertisement for Canada and that it may exert an educative influence upon the people of the old land to

help them to a correct understanding of the actual conditions of our country, and in some degree to a knowledge of our people and our aspirations as British subjects. Ask nine Englishmen out of ten if the Halifax route or the St. Lawrence route is as safe as the New York route, and their answers will be that our ports are set in dense fog banks, that the ice coming down from the Arctic fields constitutes a danger to navigation, and that the River St. Lawrence is full of hazards. And yet, the hon. member for Brandon (Mr. Sifton) proved conclusively by the facts which he gave us in the budget debate that the Canadian route is far safer than any other and that so far as absence of danger to navigation is concerned it is incomparatively the best.

Mr. TALBOT. We have not had a single accident on the St. Lawrence route for three years.

Mr. LOGAN. As my hon. friend remarks there has not been an accident on the St. Lawrence route for three years and the same remark is true of the Halifas route. Speaking on a former occasion in this House, I cited as an illustration of the inexcusable ignorance of people on the other side of the Atlantic with regard to Canadian ports, that a merchant in this city who had ordered goods in England to be sent to him by the Canadian Pacific Railway steamers for his Christmas trade, received word from the British manufacturers that they were sending the goods via New York as the Canadian ports were all frozen up. I regret that this is not an isolated instance and that it merely expresses the general opinion to be found on the other side. Such has been my experience when travelling in England and such has been the experience of others. The people of the old land seem to think that while we have a magnificent country in the summer, and while we have great seaports in Halifax, St. John, Montreal and elsewhere, yet in winter these ports are frozen and inaccessible from the ocean. Hence it is that had we this 'All-Red' route with great vessels plying on the Atlantic subsidized by the imperial government, by the Canadian government, and by the Australian and New Zealand governments, it would be the best advertisement in the world that Canada is not a land of ice and snow, and that even in winter there are Canadian ports to which these magnificent steamers can ply successfully. I quite appreciate, Mr. Speaker, that this late hour of the session is not a time for long speeches, and so I shall be brief. I have already expressed my regret that the members of the great Conservative party in this House did not rise to the occasion, and pledge to the government the assurance of their support in the carrying out of this imperial project. It will be difficult enough to secure the All-Red route and to get subventions from the different governments even if we had unanimity here, but how much more difficult will it be to bring the scheme to successful fruition when it is proclaimed to the other governments of the great colonies that His Majesty's opposition in Canada have moved in opposition to this scheme. I am honoured Sir, to be the successor in the representation of Cumberland, of Sir Charles Tupper, one of Canada's greatest sons, and the thought occurs to me to-night that were Sir Charles Tupper at this moment leading the opposition, the attitude of his followers on this great imperial question would be far different from what it is. When the present government came to power in 1896, Sir Charles Tupper wrote to Sir Wilfrid Laurier, Prime Minister, that, if he as Prime Minister of Canada would strive for the fast Atlantic service which had been initiated by the Conservative government then he might count on cordial assistance from the Conservative party. In 1897, when this government completed a contract for a fast steamship service with Peterson, Tate & Co., the first man who spoke from the opposition benches was Sir Charles Tupper, and although he expressed himself as not agreeing with the contract in all its details he declared that he did not want to have it understood for a moment that he was opposing this scheme which he had so much at heart.

Mr. SPROULE. He should have waited for three years and then presented his congratulations.

Mr. LOGAN. Sir Charles Tupper was too big a man and too patriotic a Canadian not to congratulate his political opponents when he thought they deserved congratulation and hence he did not wait for three years. Sir Charles Tupper had his heart and soul in this project of a fast Atlantic service and when he introduced his scheme to the parliament of Canada there was no question raised as to his presenting it in all its detail. I read in the debates of 1896, some interesting remarks made by my hon. friend from North Toronto (Mr. Foster). Let me hark back to his words of that date to contrast them with his words of this afternoon. He was criticising Mr. Dobell, then a minister of the Crown, in connection with this very subject, and the hon. gentleman (Mr. Foster) said :

> He is opposed to the fast line because it is costly and it cannot be given to the government cheap. Yet the hon. gentleman himself and thousands of Canadians almost every year go down to New York and take the best berths in the fast steamers from that port to Liverpool, and they do not get them cheap.

I would commend these words to my hon. friend (Mr. Foster) in the light of his statement this afternoon that Canadians travel by the existing Canadian routes. The statement was made this afternoon, and it has not been contradicted, that only 6 per cent of the travel between Liverpool and Canada

is on Canadian ships. Is not that a lamentable state of affairs? My hon. friend the member for North Toronto, contending that they knew a good thing and wanted it and were prepared to pay for it, said:

They know a good thing, they want it, and they are prepared to pay for it. Would they not be willing to pay an equal price, if they sailed by a fast steamer from Quebec as by New York? But the hon. gentleman is opposed to a 20-knot service, chiefly because the people would not be able to get a $75 passage.

Let me quote some further words of the hon. member. A question had been raised in reference to the carrying of freight, and the hon. member spoke as follows:

The hon. gentleman, as a result of his investigations, will not be able to avoid the extreme difficulty of providing ample freight capacity and a rapid service in the same vessel. The more closely the hon. gentleman inquires into the matter, the more he will be satisfied that the government have only a limited range of choice as to the quantity of freight that can be carried, if the main idea of having a fast service is maintained.

And further on:

I think he will find out that unless he is prepared to very nearly double the tonnage of the vessels as compared with the tonnage of tenders for which we called, he will not be able to accomplish any very much larger scope of freight combined with the speed that is necessary for making it in reality a fast service. So much with reference to that. But 1,500 tons or 2,000 tons per vessel is still a very respectable quantity of freight of the kind that this will be.

The hon. gentleman went on to speak on the same lines on which the hon. member for Brandon (Mr. Sifton) spoke this afternoon, saying that if we established this fast service for passengers and for certain kinds of freight and for mails, it would not be long before the freight service would follow the passenger service. What he said was this:

But, I think what takes place is this, and what takes place under these peculiar conditions where these tenders are now, is that fast freight vessels follow in the wake of a fast line such as we are contemplating to put on.

The hon. gentleman at that time was arguing without having the present resolution before him, and it seems to me that his words are a condemnation of the amendment which has been moved by the hon. leader of the opposition, and which I presume he will be called on to vote for. Let us take this amendment, Mr. Speaker, I am bound to say that it is a little confusing. It reads thus:

Mr. Borden moves in amendment that the said resolution be amended by striking out the second and third paragraphs.

Mr. LOGAN.

Now, the second and third paragraphs of the resolution are as follows:

That it is desirable that steps be taken with all convenient speed to achieve the results aimed at in the said resolution.

That this House doth hereby endorse the terms of the said resolution, affirming that Canada is prepared to assume her fair share of the necessary financial obligations.

These are the two paragraphs which go to the root of the matter, and which the hon. leader of the opposition wishes by his amendment to eliminate. Then he proposes to substitute for them the following:

That this House, in expressing its strong sympathy with the object of the said resolution, desires to record its opinion that more favourable freight rates and a thoroughly efficient system of cold storage are essential features of any such transportation project.

Yet we find that the hon. member for North Toronto ten years ago argued that these two things could not be successfully combined. Then the hon. leader of the opposition, by his amendment, would say further, what to my mind is unnecessary:

That, having regard to the very heavy expenditures and obligations in which the present administration has involved the country, the government should not commit Canada to any such plan, or to any contract or expenditure for such purpose, until after the same shall have been submitted to and approved by the parliament of Canada.

That is practically what is set out in the resolution of the right hon. the First Minister, which says:

That in the opinion of this House it is desirable that the governments of Australia, Canada and New Zealand should, with as little delay as possible, agree upon a definite plan for carrying into effect the terms of the said resolution of the Imperial Conference, the same to be submitted for the consideration of the imperial and colonial parliaments.

So that, to my mind, the main part of the amendment of the hon. leader of the opposition is that we shall inquire into the question of obtaining 'more favourable freight rates and a thoroughly effective system of cold storage.' These are details of the question. What we are asked to do here to-night is to endorse the position taken by the right hon. the First Minister at the Imperial Conference in favour of an All-Red route throughout the empire.

I have before me an interview given to the 'Canadian Gazette' by the distinguished statesman, Sir Charles Tupper, immediately after the First Minister placed his resolution before the Imperial Conference. Did Sir Charles Tupper greet it with captious criticism? Did he say: We must have a certain amount of room for freight and a certain amount of room for cold storage? No. As a big Canadian, he expressed himself as very strongly in favour of the

scheme. It was a matter in which he had always taken the greatest possible interest, as he naturally would, having been a pioneer in the movement. He said that the All-Red route as now put forward was simply completing the carrying out of an arrangement that was made by his government when he was Premier of Canada; but the contract then made with the Allan line was prevented from coming into operation by the refusal of the Earl of Aberdeen, then Governor General of Canada, to authorize the signature to the contract. The contract was made by a government of which the hon. member for North Toronto was a member—actually made to be signed by the Governor General without submission to parliament, and Sir Charles Tupper said Lord Aberdeen refused to ratify it.

The hon. member for East Toronto (Mr. Kemp) is very frank in this matter. He is against this scheme absolutely, without any qualification. He seems to think that fast travel is a fad, saying that the fast steamers of the German lines were put on at a time when everybody had a fad for fast travelling. I will undertake to say that he could not book a berth on any of those steamers within three months. Everybody knows that they are the most popular steamers that cross the Atlantic to-day. He says the time will come when people will go back to the slower vessels. He might as well talk of abandoning fast trains and going back to slow freight trains or stage coaches. The tendency of the age is for faster travel, whether on land or sea, and my hon. friend must know that. I know that he knows it, because before taking his seat he said: Our present service is an 18-knot service; leave it alone, and in three or four years the companies will give us a 21-knot service. If that is going out of style, if this fast travel is only a fad, if people are going back to the old slow travel, why are the Canadian companies going to put on 21-knot steamers inside of four years?

This scheme appeals to us in many ways. As a great imperial proposition, it brings the different parts of the empire closer together. I do not agree with those gentleman who say that we can do greater service to the empire by being able to sell our products to the different parts of the empire; we can become greater imperialists by coming in closer touch with the rest of the people in the empire. This All-Red route will put Canada upon the main postroad of empire. Thousands of people travelling from England away to the east, or from the east to the motherland will pass through this magnificent country, will see the great harbours on the Pacific, the unequalled scenery of the Rockies, the oceans of wheat growing on the prairies of the west, will see the great provinces of Ontario and Quebec; in summer they will pass down the magnificent St. Lawrence river and in winter will go through the maritime provinces with their magnificent resources and potentialities and will sail out of a harbour unequalled in the world. This will be an advertisement for our country to our friends at home, and not only will it bring us nearer the man in London, but it will bring us nearer to the man who lives in Sydney or in Melbourne or in Auckland. To-day almost 99 per cent of those who travel between New Zealand or Australia and England go by the way of the Suez canal, and not via the Canadian route. If this line is established in such a way as we hope, it will mean that not only will we become better acquainted with people in the motherland but we will become better acquainted with our brothers in the more distant parts of the empire.

I regret very much that the proposition is not definite enough to establish Halifax, or St. John if you like, as the Canadian port for use all the year around. Then people would not wonder when travelling whether they were going to Quebec or Halifax or to St. John, they would know that they would go to one port all the year around. It would be: All aboard for Halifax or all aboard for St. John at Liverpool at all seasons of the year. It may not be possible to do this but it will at any rate mean that during a great portion of the year this magnificent service will be through the maritime provinces. The maritime provinces will no longer be reached by a switchback railway, they will be on the main line from the old land to the far east. We will be able to show travellers when they enter Halifax the great harbour which is the pride of our province. They will be able to see the little province of Nova Scotia of which we, its sons, are so justly proud. They will be able to see the great province of New Brunswick and to realize that away down east of the great provinces in which we are to-day, there are provinces well worthy the admiration of every true friend of the empire.

We spend $680,000 a year in subsidies. I am not here to say that that money is thrown away. I think a considerable portion of it is well spent. Some of it, I am afraid, is not, but is it not better to spend a million and a half and get a sure benefit than to spend $680,000 for doubtful benefit? We are sure that if this All-Red route is established it will be a great benefit to every province of Canada. There will, no doubt, be accommodation for certain lines of freight but we cannot, as shown by the hon. member for Toronto ten years ago, make it a freight and passenger service at the same time, although we may provide for some classes of fast freight, express parcels and mails. For these reasons I am very heartily in favour of the resolution

which has been moved by the First Minister.

Our friends opposite are the most shrieking imperialists that have ever been known to live until they have to pay for it. When it comes down to giving a preference on British goods entering Canada they take it with a wry face and in private and on public platforms in some parts of the country, they deprecate giving that preference. They are immense imperialists, but when it comes to giving a million and a half dollars out of the taxes to establish an All-Red route to bring all parts of the empire closer together, to cement the heart and the outlying limbs of the empire, these gentlemen throw in resolutions about cheaper freight, cold storage and one thing and another, all for the one purpose, to defeat the resolution introduced by the First Minister.

I congratulate the First Minister on the scheme which he had the honour of introducing at the imperial conference. It matters not whether he is the author of the name 'All-Red route,' or the author of the scheme, he moved the resolution before the imperial conference of this empire and to him should be given that credit. I can only say in conclusion that if our hon. friends opposite had met this resolution as Sir Charles Tupper would have met it, as the big men who were at the head of that party twenty or twenty-five years ago would have received it, they would have strengthened the hands of the government of Canada, they would have strengthened the hands of the imperial government, and their action would have been a great inducements to the governments of New Zealand and Australia to grant their subventions towards this scheme which means so much not only to Great Britain but to all parts of the empire.

Mr. E. B. DEVLIN (Wright). Mr. Speaker, I support this resolution of the right hon. the Prime Minister because I believe it to be commercially important to the Dominion of Canada. The subject-matter of the resolution has been treated under different phases, along different lines. Some have viewed it as an imperial question and others as a commercial proposition. I take it that it is solely in the interests of the different parts of the empire and that it will mean a great deal in the building up of the Dominion. The time has come when water routes are to be given their proper place in the consideration of the great national questions. I have already in this House declared myself strongly in favour of the improvement of the water routes of Canada. I believe that the construction of the Georgian Bay canal is a very live question for the parliament and people of Canada and I trust that before many months, or years at most have elapsed, we will have some definite announcement with reference to the construction of water routes in this Diminion. It is also of vital interest to the Dominion of Canada that we should improve in the best possible way the transportation facilities between Europe and the Dominion.

In connection with this resolution,I would add a word in favour of a project that is receiving the attention of the British parliament, that is to include a port in Ireland as one of the features in the All-Red route. I do this not simply because I am proud to say a word on behalf of Ireland, not only as an Irish Canadian, but because I believe the project can not be successfully carried out without a thorough, studied consideration of the advantages of a port in Ireland as a means of shortening the Atlantic passage. Therefore, I have double pleasure in suporting this motion, because ultimately Ireland will receive a great measure of justice in the consideration of this question. I am opposed to the amendment because I believe that its main object is to defeat the motion before the House.

Mr. FOSTER. Before the vote is taken, I wish to claim the attention of the House for a short time; and I do it because of certain things that have transpired since the right hon. gentleman introduced the resolution this morning, and also because of certain differences of opinion as to the meaning of the resolution and the amendment. I listened with interest to the speech of my hon. friend from Brandon (Mr. Sifton). But the House could not but ask: What scheme is it we are asked to endorse? My hon. friend from Cumberland (Mr. Logan) made a very strong appeal to the opposition to support the government scheme. The vital question with me is: What is, at the present moment, the government scheme? I know that the scheme was as proposed by the right hon. Prime Minister (Sir Wilfrid Laurier) at the imperial conference. That was a scheme of 24-knot service on the Atlantic and 22-knot service on the Pacific. I know what the scheme was as proposed by my right hon. friend this morning—it was a scheme of 20 knots or 21 knots for the Atlantic and 18 knots, if it could be had, on the Pacific. But, when the master of ceremonies came upon the scene and gave the only authoritative pronouncement, and with greater, though limited, information, the scheme he outlined was one of 24 knots on the Atlantic and 22 knots on the Pacific. Now, when heated appeals are made to this side of the House to support the government scheme, I ask myself: Which is the government scheme? Who is the master of this craft? The hon. member for Brandon gave us what may be called a matured opinion. In the speech he delivered a few months ago in this House, he declared that he had been commissioned by the Prime Minister to take this matter up in England and gather

information. To-day, he told us that he had gathered that informaion. He knew exactly the scheme that was proposed. It was the scheme of 24 knots on the Atlantic and 22 knots on the Pacific: it involved a subsidy of $5,000,000 a year, and Canada's contribution to that subsidy was to be from $500,000 to $700,000 in round figures. He declared that he had gone over to the old country, and, as no one else seemed to be doing anything about it from the public point of view, he had set himself to make these inquiries; he had talked with members of the government, with financial men, with shipbuilding experts; he had had computations made of revenue, of cost, of deficit; and had arrived at the conclusion which he announced here to-day without an if or an an as the scheme which was known to everybody who was intimately connected with it. And yet, the Prime Minister this morning did not know of that. He had not taken counsel with the hon. member for Brandon, and made the mistake of coming down to a 20-knot service on the Atlantic and 18-knot service on the Pacific. Again I ask myself: Who is the authority and what is the scheme?

Now, why was there nobody to get information? If the thing was not to go absolutely by default why was it necessary that the hon. member for Brandon should go across the water and make these investigations? One of the schemes of the imperial conference of last year was the establishment of a secretariat, under Lord Elgin, whose duty it was to take up unfinished resolutions and unfinished proceedings, pursue the investigations and report the information to the different governments, so that these governments would have the duty of placing this information before their councils, and, if thought necessary, before their parliaments. That secretariat has been organized; I cannot but think that that secretariat has been at work. Is the hon. member for Brandon a member of that secretariat? Or is it that that part of the organization of the imperial conference of last year, heralded to us as having been established by Lord Elgin in connection with the colonial office, has done nothing in reference to this, the largest piece of unfinished business which was before the conference? I cannot but think that that secretariat has done its duty; that it has been making investigations; that it has been taking the opinion of experts, and that it is giving this information to the imperial government, for every once in a while we see intimations that the imperial government is considering the matter, is taking counsel with reference to it, and we are told, time and time again, that it is more favourably inclined to it on account of the information it has received. Now, the Prime Minister should have done what the hon. member for Brandon did, only more so. They have employed him, they have authorized him, and he—as shown by his own statement to-day—having made the inquiries, the Prime Minister should have placed the information before us and given us such facts and calculations of cost, revenue and expenditure, of such commercial avenues as would be opened up by this scheme, as have been gathered by the hon. gentleman into whose hands he committed the matter and the secretariat whose duty it was to follow out this unfinished business in the way I have described. And yet my right hon. friend (Sir Wilfrid Laurier) did nothing of that kind when he came before us to-day.

Now, that is the first thing I wish to call the attention of the House to; and the second thing is this: We have had rather a remarkable change within the last few hours in the attitude of hon. gentlemen opposite. In the 1907 conference, my right hon. friend never made a plea for freight, or cold storage, or reasonable freight rates. I have read his whole speech through—it does not take long to do it—and there is not a suggestion in favour of any consideration of these important points. He does not recognize their importance. He gives way to the statement made by Sir Joseph Ward that the 22-knot service on the Pacific is necessary in order to satisfy New Zealand's wants, and, by implication, cuts out the employment of the service for fruits and perishable commodities of any kind.

When he brought this matter before the House this morning, he never mentioned, he never thought of the immense importance to this country of the cheap transport of its products. He never seemed to have had sympathy with or to have thought of the matter until it was brought up by my hon. friend the leader of the opposition (Mr. R. L. Borden). Then it certainly developed into a most important thing under the manipulation of the hon. member for Brandon (Mr. Sifton) and of my hon. friend the Minister of Finance (Mr. Fielding). Then it became the word for every speaker on the other side that we must have regard to the moving of the products of the country, to the cheapening of rates and the furnishing of cold storage facilities. The resolution of my hon. friend (Mr. R. L. Borden) has done this much. It has wakened hon. gentleman opposite to a realization of the fact that there is a farmers and producers side to this question as well as the side of the nabob and millionaire who travel and pay large sums for every luxury and comfort on their passage.

But there is another strange difference of opinion. The Minister of Finance (Mr. Fielding) blurted it out and so did the hon. member for Vancouver (Mr. Macpherson). What was the plain statement made by the Minister of Finance (Mr. Fielding)? Each of these gentlemen wanted—what? The

approval of this House to the resolution of the right hon. the First Minister, or, as they put it, the approval of the scheme of the government. It would take a Philadelphia lawyer to tell what is the scheme of the government. Who has the best of it? Is it the member for Brandon (Mr. Sifton) or the Prime Minister (Sir Wilfrid Laurer)? The one speaks as Prime Minister but the other speaks with a voice which sounds very much like a solid and supported authority. The Minister of Finance and the member for Vancouver say: Support the scheme of the government; give it your endorsation. For what purpose? As the Minister of Finance says, you could not bind Canada to anything unless parliament gave its sanction to this resolution. The member for Vancouver said: What is the use of going over there and talking to the delegates of Australia or New Zealand, you would not be liable to make any binding agreement with them. What these gentlemen believe is that if the resolution passes, the Prime Minister will have the authority to go to Australia and New Zealand and Great Britain and make hard and fast contracts and bring them down to this House—make these contracts with the authority of this parliament behind him and quoting the support of this parliament in his negotiations with these countries. But if I understood the Prime Minister at all rightly this morning, he declared in so many words that it was not a part of his resolution to make it possible for any contract to be agreed upon between Canada and the other parties, that all these things must be brought down to parliament, and be subject to the open and free discussion and approval of parliament. Did I understand my right hon. friend aright? He nods his assent. Then we may have been a little over cautious, as far as he is concerned, when we wanted to make it still more binding that we should not be bound to any financial responsibility and be prevented from obtaining the consent of the House before being bound. But my hon. friend the Minister of Finance has an absolutely different idea. He cried out with indignation: Unless you give your approval, we could not bind Canada to anything. Well it is the opinion of this side that we shall have to back up the First Minister in opposition to the Minister of Finance and his followers and help the First Minster to insist on the point that this parliament shall not be bound by any agreement or contract, that we shall be free, from the compulsion of a contract, and that the government shall not be in the position of coming down to this House and forcing its supporters to carry through the contract because this had authorized the government to make it and make it final. We are supporting the First Minister against the Minister of Finance and those who look upon the adoption of this resolution as necessary to bind Canada. I think that is a fair criticism. We must have things clear in our minds.

With reference to the resolution itself, my hon. friend from Vancouver (Mr. Macpherson) was in a dense fog. No darkness ever encompassed the Pacific ocean, so dramatically alluded to by the hon. gentleman this morning, so dense as that which enveloped him when he was trying to grasp the meaning of the resolution introduced by the right hon. the First Minister. He seemed to be impressed with the idea that you could not speak to Australia at all, that you could not pay two cents for postage to carry a document to Australia, that no steps could be taken and no expenditures made unless this resolution of the First Minister, as he intepreted it, was passed. Why, the hon. gentleman surely can read English. What do you find? You find this expressly stated in the resolution of the First Minister:

> That in the opinion of this House it is desirable that the governments of Australia, Canada and New Zealand should, with as little delay as possible, agree upon a definite plan for carrying into effect the terms of the said resolution of the imperial conference, the same to be submitted for the consideration of the imperial and colonial parliaments.

That is to be found in the Prime Minister's resolution—this resolution, one-third of which is supported by my hon. friend the leader of the opposition (Mr. R. L. Borden). Therefore the opposition and the First Minister, whatever the hon. member for Vancouver may say, are agreed entirely in saying that the government should not delay, that the government should negotiate with Australia, New Zealand and Great Britain, and as soon as possible agree upon a definite plan, and then bring it to this parliament and let us discuss it. But the member for Vancouver says: Ah, you you should show sympathy with this. You should be more enthusiastic, says the member for Brandon. What can we do more? The hon. member for Cumberland (Mr. Logan) who has been making his eulogy, long past date, of that great Canadian Sir Charles Tupper, said that if Sir Charles Tupper were here, you would not find him talking this kind of politics. Well, Sir Charles Tupper would be supporting the Prime Minister against some of his recalcitrant followers who want to push him further than he says he is willing to go. Sir Charles Tupper expressed his strong agreement with the Prime Minister in the idea which the latter brought before the imperial conference. That is what Sir Charles Tupper, that large Canadian would do were he here. That is what he did in London by interview. But what does my hon. friend the leader of the opposition propose? He proposes:

That this House, in expressing its strong sympathy with the object of the said resolution——

Do you want anything more ? Even the big Canadian, Sir Charles Tupper, used almost the same words. He said , strong support.' My hon. friend says 'strong sympathy.' That is better than strong support. It takes in the heart and vital organs. It is sentiment as well as force, and it is therefore stronger than the other. Let the member for Vancouver possess his soul with patience, let the member for Cumberland do likewise—if the resolution passes as amended by my hon. friend (Mr. R. L. Borden), you have a strong expression of sympathy with the resolution of my right hon. friend and you have the imperative command of this House not to delay negotiations, to make them as speedily as possible, to settle on a definite plan, to bring it as quickly as possible to this parliament, and we will take it into consideration. What the amendment of my hon. friend (Mr. R. L. Borden) does is this : It calls to mind, and it was a timely calling to mind, that in the midst of this lavish expenditure which has been, the lavish expenditure which is now going on and the lavish expenditure which is in contemplation it is well, if you propose to spend so many millions more, that you shall heed the great imperative necessity of this country which is to get the producer, within the smallest cost and at the greatest speed, to the market where he must sell his products. To do that you have to have cold storage, and you have to have reasonable freight rates and that is all that this amendment in that respect calls for. It does call for that and why you should not call for that ? To my mind it was not necessary for the right hon. gentleman to put that resolution before the House. He had just as much authority—he and his government—to go into the closest negotiations with the parties to this matter, to get a definite plan, to get all information, all results, all consequences, all the advantages from the plan so concerted between the contracting parties, as far as the plan was concerned then he had a perfect right to bring that to this parliament and then parliament would have something to devote its attention to instead of the airy and contraditory nothings which are banded about between the right hon. gentleman and some of his followers. I would not give a doit, or anything in the way of heavy expenditures, if we are not going to get something which was really excellent for the money. The Prime Minister seems to be willing to take a twenty knot service, or may be a little less than a 20-knot service or any old thing that he can get, and pay well for it. This is a very important crisis with reference to what I consider the greatest of all elements in the permanence and progress of the British empire. This is the first attempt at co-operation amongst the great members of the British family. What is involved ? Forty or fifty million dollars is involved. John Bull & Co., represented by the old country, by Canada, by Australia and by New Zealand, have in contemplation the putting of $50,000,000 of their good money into a certain scheme, I say it is of the utmost importance that all the strength of investigation, of business talents, of clean cut judgment and the most serious consideration should be given to the bases of the project into which John Bull and these parts of the company propose to put $50,000,000 of their good money. Rush into a scheme that shall be unfortunate, rush into a scheme that shall be unsuccessful and you damn for ever co-operation between John Bull & Co. It is of the utmost importance, therefore, that time for investigation, that the clearest expert opinion, the best commercial opinion and the best statesmanship should be lavished upon the foundations and building up of the plan upon which we propose to get into this new venture with $50,000,000 of our good money. It is because it is not in that position that I am opposed to having this country bound any more than it is to-day until we have these foundations and until we have this superstructure as well. The hon. Minister of Finance with jaunty courage as some men would call it, but which I would not designate as courage but rather as temerity, is willing to go into any expenditures at all and he piteously appeals to this side of the House and says that it would be a pity if we gave a black eye to the credit of this country. My hon. friend would have done better if he had thought of that every year in the last six years of his financial administration. He would have done well to have thought of that when, at first with reluctance, but afterwards with heels that clipped it as quickly as those of any of his supporters, he rushed into expenditures for all kinds of inexcusable things in order that patronage and political strength might be given to the party which he is trying to lead.

Mr. JOHNSTON. What are they ?

Mr. FOSTER. One of the most comical things I think I ever witnessed in parliament I witnessed this afternoon when this learned, responsible and accomplished expert in the line of expenditures and steamship building hardened his face like flint and shouted out: We will take the responsibility, when $40,000,000 or $50,000,000 was spoken of. It is courage like that, based upon strength and stability like that, that helps us over the steep and difficult places in parliament and keeps our abiding faith in our country still within our bosoms when oftentimes we would be discouraged. But let the Finance Minister not turn to this side of the House if he is so anxious not

to give to the credit of this country a black eye. He must think of his own misdeeds. He did preach economy in the days of his novitiate, he did, in the maritime provinces declare aganst the extreme extravagance of the party that he wished to dispose, but that hon. gentleman repudiated, the very moment he got into the saddle, the professions of his novitiate and entered upon a course of reckless public expenditure which has brought the credit of Canada close up to the breaking point. The Finance Minister, as the financial head of this country, for the time being in control, should have known his business better, should have had something to do with experts and something to do with foundation processes when he came, in 1903, before this parliament and pledged his faith as a minister, and pledged this country as the Finance Minister, that it would cost, for building the Transcontinental Railway from Winnipeg down to Moncton, the sum of $52,000,000. To-day he is face to face, with a market which is none too favourable, with an expenditure for that same line of railway of $160,000,000 or $170,000,000. That is something which gives Canadian credit not the best standing in the markets of London where moneys are to be raised, where financial men look keenly and carefully into the resources and into the prospectus and statements which are made by the government and especially by the financial head of the government in Canada. My hon. frind the Minister of Finance said he thought that we wanted to be solid against the scheme. We were once the imperialists ; where are we now ? Does he not know the obivious retort ? Once he was a repealer ; where is he now ? Once he advocated a commercial policy which opened the arms of Canada to the United States and which barred with all the power of a discriminative tariff Great Britain and every colony of Great Britain out of this country as far as trade privileges were concerned. That is the hon. gentleman who thinks it safe and prudent to raise a question as to the loyalty of this great Dominion ; to raise a question as to imperial preference and the imperial relations. I do not wish to take up the time of the House longer.

Some hon. MEMBERS. Hear, hear.

Mr. FOSTER. I am very glad that hon. gentlemen opposite show by their applause that they would like me to continue, and on some other occasion and in cooler climatic conditions I will afford these gentlemen the pleasure they desire.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister). It were comical, were it not so serious, to note the efforts of my hon. friends opposite to kill this project while they pretend to be in favour of it.

Some hon. MEMBERS. Oh.

Mr. FOSTER. That's all the thanks we get for supporting you.

Sir WILFRID LAURIER. My hon. friend (Mr. Foster) is perhaps not aware that in his verbose extravagance he does not weigh his own words, and probably he does not remember that not five minutes ago he used these very words : I am opposed to have this country saddled with this new burden.

Mr. FOSTER. I did say that, but I coupled with it the condition that I was opposed to having the country burdened with the financial responsibility contemplated unless we had the definite plans and the basis for it.

Sir WILFRID LAURIER. Let my hon. friend have whatever comfort he can take from that. The hon. gentleman is opposed to this project unless we have a definite plan, but I had understood that hon. gentlemen opposite were in favour of the idea and that they were anxious to have it investigated, although now they say they are opposed to it.

Mr. FOSTER. Do you say we are opposed to investigation?

Sir WILFRID LAURIER. My hon. friend (Mr. Foster) has all along shown that he does not want this scheme, but, if he will permit me to say so, he has not had the manliness to come forward and declare it boldly. The hon. gentleman wants to know what is the scheme before the House. Well, I spoke with perfect candour, and I stated that there were more ways than one to approach the subject, and that there was more than one kind of steamer afloat on the ocean. The hon. gentleman asks : Is this the scheme of the member for Brandon or is it the scheme of the Prime Minister, as if there was any difference whatever between the scheme of the member for Brandon and the scheme of the Prime Minister. My hon. friend knows the English language even better than I, and here are the words of the resolution :

That we are in favour of a steamship service by the best service available within reasonable cost.

Mark, with reasonable cost. If we can have a 24-knot service we are in favour of it if we can have it within reasonable cost ; if we can have a 25-knot service, or a 26-knot service, or a 27-knot service, or the best service on the ocean, we are in favour of it, provided we can get it at reasonable cost.

Mr. FOSTER. That's right.

Sir WILFRID LAURIER. I referred this afternoon to the 'Mauretania' and the 'Lusitania,' and the hon. gentleman (Mr. Foster) spoke as if that was the type of steamer we had in mind at the conference.

The memory of the hon. gentleman is defective; he knows that the conference sat in May, 1907, and the 'Mauretania' and the 'Lusitania' were not then launched, so that we could not have had them before us for purposes of comparison. I stated to-day that if we could have steamers like the 'Mauretania' and the 'Lusitania' that is what we would desire, but I spoke honestly as to the difficulty, and I said that it had not yet been proven that these two great steamers were a commercial success. I pointed out that while steamers of this type were what we aimed at, we might not be able to have them if they could not be obtained within reasonable cost. There are none so blind as those who do not wish to see, and there is no one who can be so blind as my hon. friend (Mr. Foster) on occasion. No one will accuse him of being naturally dense, but when he does want to be dense he will not exercise his power of discernment, and he can be denser than anybody I know of. Let us judge the policy of the opposition by the amendment they have moved. There are two propositions in that amendment, the last of which means nothing, because the difference between it and the proposition of the government is merely the difference between tweedledum and tweedledee. But there is another idea in the amendment, and I will mention it as an example of how ridiculous sensible men can sometimes be. This All-Red route is acknowledged to be a splendid project, a project which excites the pride of all Canadians and of all British subjects. What does the opposition say with regard to it? They say: Stop here; do not go any further in this imperial project until you have made arrangements for cold storage. Never was there such a big beginning and such a small ending. Is it possible that these gentlemen opposite, who claim that their party has attained to dignified statesmanship, should came down to resolve that in a project so vast you must not undertake it until you have provided for cold storage? Why do they not ask us to provide that the steamers shall have funnels and boilers? Is there any well equipped steamer to-day that is not provided with cold storage facilities as well as with a rudder and a mast? Do these hon. gentlemen opposite really believe that when we were contemplating this imperial steamship service, which is calculated to bind the British empire together, we ever thought the steamers would not be equipped with cold storage? Has it come to this? Is not such an idea too small for grown up men? Let me comfort my hon. friends opposite by telling them that it certainly does mean cold storage, for does not the resolution say in so many words that it means the best service available? Is there any kind of first-class service afloat on the Atlantic which is not provided with cold storage? Why, cold storage accommodation is just as necessary as the boilers in the ships. But my hon. friend from North Toronto, and the hon. leader of the opposition as well, have let the cat out of the bag and have —given us the true intent which moved them to this amendment. The leader of the opposition told us in his speech that there was something in this project not very pleasant for the farmers of Ontario and of the country generally, who do not travel in these luxurious steamers, but who want cheap freight rates for their products.

Some hon. MEMBERS. Hear, hear.

Sir WILFRID LAURIER. I notice that the sentiment is responded to on the other side of the House. There are more ways than one of providing cheap freight for the producers of this country. It is not altogether a matter of affording cheap transportation rates. The farmers will realize that when we provide the steamship service we have in mind we will be doing something to benefit the farmers of Canada. And here let me say that if there is one thing men should be ashamed of it is to endeavour to introduce class prejudices into a question of this kind. Let me point out that when we have these great steamers afloat on the ocean, and when we are carrying people from all parts of the world to our shores, we will be doing a good deal for the farmers of Canada.

I do not always agree with my hon. friend from North Toronto, but I must give credit to whom credit is due. We must give credit even to some persons whom I will not name, though it is not due; therefore I give credit to my hon. friend from North Toronto. My hon. friend during the present session made use of an expression which at the time seemed to me a little audacious, but which on the whole was correct. He said that in Switzerland they exported scenery. The expression was audacious, but there is merit in it. It meant that the scenery of Switzerland attracted to that country every year thousands of tourists. This is what he calls exporting scenery, and this is what we want to do—export the scenery of Canada. We are going to export it to Europe; we are also going to export it to the Orient: and this is in accordance with the views of my hon. friend. My hon. friend this morning made it a reproach to me that I brought this resolution before the imperial conference on the last day of the sitting. I do not know that it matters very much, as to the merits of this resolution, whether it was brought on the first day or the last day of the conference. Does my hon. friend want to make that an argument against the resolution? Did it occur to my hon. friend that, because the matter was brought before the conference on the last day of its sitting, it took the conference by surprise? Who expressed any surprise that the matter was brought up?

Mr. FOSTER. Lloyd George.

Sir WILFRID LAURIER. Mr. Lloyd George did not express any surprise; he only complained that he had not seen the resolution. He did not say that the idea was new to him. Does anybody suppose that at a conference of that kind, when members were meeting each other day after day, this matter had not been discussed informally between them? Does anybody suppose that this matter was brought before the conference suddenly, without a word of discussion or explanation beforehand? If the matter had not already been discussed, the moment the resolution was brought before the conference, everybody would have said: This is new to us; we must have time to consider it. Mr. Lloyd George complained only that he had not seen the resolution; but neither he nor anybody else complained that they were taken by surprise. No, Sir; the resolution was presented at the right moment; and what we want now is to have the assurance of the Canadian parliament that it will do its share when called on. I do not pretend to say for one moment, if we are authorized by this parliament to ask Australia and New Zealand for their co-operation in this scheme, that we can bind the Canadian parliament to do this or that; but we want to go to Australia and New Zealand with the moral certainty, affirmed by the Canadian parliament, that we have behind us the whole Canadian people.

House divided on amendment of Mr. R. L. Borden.

Motion agreed to.

AUDITOR GENERAL.

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into Com-

mittee of the Whole to-morrow to consider the following proposed resolution:

Resolved, that it is expedient to provide that the Auditor General be paid a salary of five thousand dollars per annum.

He said: His Excellency the Governor General having been made acquainted with the subject matter of this resolution recommends it to the consideration of the House.

Motion agreed to.

PROHIBITION OF OPIUM.

Hon. RODOLPHE LEMIEUX (Minister of Labour) moved that the House go into Committee of the Whole to-morrow to consider the following proposed rtsolution:

Resolved, that it is expedient to prohibit the importation, manufacture and sale of opium for other than medicinal purposes.

Motion agreed to.

MESSAGE FROM THE GOVERNOR GENERAL—SUPPLEMENTARY ESTIMATES.

Hon. W. S. FIELDING (Minister of Finance) delivered a message from His Excellency the Governor General signed by his own hand.

Mr. SPEAKER read the message as follows:

GREY.

The Governor General transmits to the House of Commons Supplementary Estimates of sums required for the service of the Dominion for the year ending March 31, 1909, and, in accordance with the provisions of the British North America Act of 1867, the Governor General recommends these estimates to the House of Commons.

Government House,
Ottawa, July 9, 1908.

Mr. FIELDING moved that the message of His Excellency together with the Supplementary Estimates be referred to the Committee of Supply.

Motion agreed to.

Mr. R. L. BORDEN. Before the orders of the day are called, I desire to ask the Minister of Finance if the Supplementary Estimates that have just been brought down are all the supplementaries or whether there will be others?

Mr. FIELDING. At the present moment I have no reason to believe that there will be anything further; but if it should be found that any item has inadvertently been omitted, we shall feel free to bring it down.

Mr. R. L. BORDEN. But no others are contemplated?

Mr. FIELDING.

GOVERNMENT BUSINESS.

Mr. R. L. BORDEN. I desire to ask the Prime Minister when the railway subsidies which have been spoken of will be brought down?

Sir WILFRID LAURIER. I am informed that they are ready for printing, and will probably be brought down to-morrow or the day after.

Mr. R. L. BORDEN. I do not remember whether or not all the legislation which has been spoken of by the right hon. leader of the House (Sir Wilfrid Laurier) is now before us. Is there anything else?

Sir WILFRID LAURIER. I think there is nothing more, with the exception of a certain amendment to the criminal code, with regard to the railway men, which was foreshadowed some time ago.

Sir FREDERICK BORDEN. There is to be a Bill for the transfer or sale of certain military properties at Toronto and at Montreal—simply to carry out the terms of arrangements made some time ago for which statutory authority is necessary.

Mr. R. L. BORDEN. When will that be brought down?

Sir FREDERICK BORDEN. I believe the Bill is ready now.

Sir WILFRID LAURIER. It is not contentious?

Sir FREDERICK BORDEN. No, it is non-contentious. It relates to matters which have been discussed before the House.

Mr. R. L. BORDEN. Whether it is contentious or non-contentious, everything should be brought before the House at the earliest possible moment with a view to facilitating the business. We have been here nearly seven months and a half, and any legislation necessary, it seems to me, should have been down long ago.

SUPPLY—OFFICIAL REPORT OF DEBATES.

Mr. FIELDING moved that the House go into Committee of Supply.

Mr. J. G. H. BERGERON (Beauharnois). Before we go into Supply I would call the attention of the right hon. Prime Minister (Sir Wilfrid Laurier) to the fact that a report of the Debates Committee was brought before the House on April 23rd last, but no motion has been made to have that report adopted by the House. If I am well informed, it was delayed because of an expression of my hon. friend the Minister of Finance (Mr. Fielding), but it was to have been brought forward later on. Since then, a later report, made by the same com-

mittee, and involving exactly the same principle, has been brought before the House and adopted. I would now ask my right hon. friend if nothing can be done to have the pending report also adopted by the House. This is one of these reports of committees which are generally treated with respect by this House, and I think it is due to the Committee on Debates that this report should be brought before the House and acted upon. I imagine that the answer to my question will be that the chairman of the Debates Committee should bring the matter forward. The hon. gentleman (Mr. Gervais) is not here to-day. I do not know whether he will be here before the end of the session or not. I call the attention of my right hon. friend to the fact that it will seem like a slur on the Debates Committee if its report is not acted upon before the end of the session.

Right Hon. Sir WILFRID LAURIER (Prime Minister). I must say, in justice to the chairman of the Debates Committee, that he has called my attention to this report more than once, but I have always understood that the matter was enngaging the attention of the Committee on Internal Economy.

Hon. W. S. FIELDING (Minister of Finance). The matter is engaging the attention of the Committee on Internal Economy, and in one form or other it will be brought to the notice of the House, either by the report of the committee being called up or by some other proposition, at an early day. The session will not pass without the matter being dealt with.

Mr. BERGERON. I would remind my right hon. friend (Sir Wilfrid Laurier) that, as I have already stated, since this report was brought down, a later and analogous report from the very same committee has been adopted by the House.

Motion agreed to, and House went into Committee of Supply.

Militia and Defence, chargeable to capital—for purchase of ordnance, arms, lands for military purposes, reserve stores of clothing, equipment, &c., and to pay for construction of new rifle ranges, $1,300,000.

Mr. R. L. BORDEN. Has any printed statement of the Inspector General been distributed?

Hon. Sir FREDERICK BORDEN (Minister of Militia). I am about to distribute it now. I could not do it before because it required a motion of the House, but I am going to read the document and shall ask permission of the committee to lay the report on the table and it will be immediately distributed.

I regret very much that I shall be obliged to detain the committee for some little time at such a late period of the session, but I think the committee will agree with me that I should not allow this session to close without making reference to the report of the Civil Service Commission, so far as it affects the Department of Militia, especially as my hon. friend the leader of the opposition (Mr. R. L. Borden) saw fit to give force to this report by reading very extensively from it those portions which refer to the Militia Department, thereby, I suppose, adopting the views therein expressed. I might have brought the matter up on the occasion when the report of that commission was under discussion ; but as I did not wish to discuss it generally, I thought it would be better that I should do so on the motion to go into supply upon the estimates for civil government. It so happened however that the estimates for civil government of my department were passed at a moment when, by agreement on both sides, there was no debate, when it was desirable to get the estimates through in order to facilitate the payment of the clerks in the service. Therefore I must ask, Mr. Chairman, your indulgence while I refer to that portion of the civil service report which deals with the Department of Militia. I believe it was understood that this item was reserved in order that any matter pertinent to the Militia Department should be open for discussion. I do not intend to go into a general discussion of the work of the Civil Service Commission, but I cannot help thinking that commission did not do its work in as workmanlike manner as was the work of the commission of 1892. I have carefully read the report and the evidence of the commission—the evidence taken by the commission of 1892 as well as that taken by the commission of 1907 and the report now under consideration. I observe that in 1892 the commission was very careful to prepare a list of the questions which were submitted to all the leading officials of the various departments some time before they were to be examined in order to give them every opportunity of being prepared to answer those questions. Perhaps I had better read a short extract from the report of the Civil Service Commission of 1892 because the idea is better expressed there than I can do it. It reads as follows :

> In order to fully carry out the duties entrusted to them, the first step which the commissioners took, after electing Mr. Hague chairman, was the preparation of a carefully considered schedule of questions on the above subject. A copy of these was transmitted to the deputy head or other responsible officer of each department with the request that answers shall be prepared and submitted when the officers in question shall be called on to give evidence before the commission. This method of procedure had the effect of obtaining accurate information in matters of detail and also of shortening to some extent the time occupied in the inquiry.

Nothing of this kind was done by the recent commission. On the contrary, it seems

to me, from reading the questions which were put, that there was frequently an evident intention to take the officers by surprise. At any rate no opportunity to prepare was given them. It seems to me that the questions were frequently leading and that there is every indication that the commissioners approached their task with their minds made up and not with the desire or expectation of learning anything from the evidence they were taking, which would enable them to reach a sound conclusion. It impresses me in that way, and in reading over the evidence taken in the different departments, I cannot but observe how differently the different departments were treated. I cannot help thinking that, perhaps without intention—we will hope without intention—the chairman of that commission was, let us say, unconsciously influenced by the fact that he had been an officer of the Dominion government for thirty or forty years and had been Deputy Finance Minister for something over thirty years and had thereby been brought in contact with the important officers in the different departments. This, one would have thought, would have given him possibly more special qualifications for judging the condition of the civil service, and undoubtedly it did. But, on the other hand, there were the jealousies and the difficulties which had arisen during those thirty years of office between him and other officials, and I presume that the chairman, being human, went into the work of chairmanship of this commission with a good many prejudices and possibly with some old grudges which have found vent in the report laid before the House in the manner of the questions put to the different witnesses.

I am not going to quote generally from the evidence, but I want to accentuate the observations which I have just made, by referring the committee to the evidence to be found in the first volume of the evidence, at pages 180, 183 and 184. I would suggest to any hon. gentleman who wishes to spend an amusing half hour that he read the evidence taken by the commission from the officers of the Department of Finance. It will not be forgotten, Mr. Chairman, that the chairman of this commission had been for thirty years Deputy Minister of Finance. I will give you two or three sample questions to show you how gently he treated his own department, the department in which he was formerly deputy minister. At page 180 I find this question put by the chairman to the present Deputy Minister of Finance, Mr. Boville :

Q. You worked your way up through every grade by promotion examination until you became deputy minister?—A. Yes.

Then, Mr. Fyshe says :

Q. Have you passed several promotion examinations?—A. One was all I had to take.

Sir FREDERICK BORDEN

Then, at page 183, this question is asked by the chairman :

Q. As a rule your employees are all healthy?—A. Yes.

Q. And scarcely without exception they are of good character?—A. The employees of the Department of Finance are of the highest character.

By Mr. Fyshe:

Q. Are you more careful in your selection?—A. We are very careful in selection.

Q. And your political head does not give you any trouble?—A. None whatever. He is very reasonable and very careful to give us as good material as he possibly can obtain.

A little later on; the chairman—the ex-Deputy Minister of Finance—says :

Mr. SAM. HUGHES. Who is being examined?

Sir FREDERICK BORDEN. The present deputy minister, Mr. Boville, who had grown up in the department.

An hon. MEMBER. Who appointed the chairman?

Sir FREDERICK BORDEN. Well, I did not, but I am responsible.

Q. In consequence of the training they received many former officials of the Finance Department have succeeded in outside life?—A. Yes.

Q. Mr. Ross left the department?—A. Yes, Mr. Chipman left the department.

Q. To become chief factor for the Hudson Bay Company?—A. Mr. Baker left the department in your time, Mr. Courtney.

The Chairman.—Yes. The Finance Department has trained up a lot of men.

The Witness.—Mr. Tabor is now a lawyer in Dawson.

A regular mutual admiration society. Here was Paul sitting at the feet of Gamaliel. I had a little curiosity to look up the length of time that these gentlemen had been in this wonderful department in which so many men have been trained for such important positions and this is what I found : Mr. Chipman was in the Finance Department from July 1, 1880, to February 7, 1881, and you will see what miracles were performed in that short time. I find that Mr. Ross, who was taken out of this department and given the position of general manager of a bank, was in the department exactly eighteen months, from July 1, 1901, to January 1, 1903. So you will observe that the department is able almost to perform miracles, that it is a wonderful training school. A man goes in, remains six months and is eligible for any position ! But there is one question from which probably a different meaning was intended to be taken from that which might be taken. The chairman says:

Q. And while men have constantly left the department you have had no applications from any who have retired to come back again?—A. No.

No, once having escaped they never want to return. However, I do not intend to deal with the matter in this way. I have simply given the committee this as a sample brick to indicate the method of investigation and the kind of frivolous questions with which these gentlemen occupied themselves in dealing with a serious question.

Mr. SAM. HUGHES. Were they as gentle with the Department of Militia and Defence?

Sir FREDERICK BORDEN. Not quite, as I shall show you. The Militia Department can, I suppose, fairly be called a technical department. It is a department in which the expenditure of money is based upon the policy of the country. Parliament deliberately decides how large the militia shall be, what amount of money shall be expended upon it, and what shall be the policy with regard to the development and carrying out of the defence of this country. I have read over the orders in council by which this commission was appointed and I have looked in vain for any authority given by that order in council to these gentlemen to constitute themselves a committee to investigate and criticise the policy deliberately adopted by the parliament of this country. It is not their's. Therefore, I venture to think that these gentlemen have made a very grave mistake in arrogating to themselves the right to make such an investigation, particularly as they are notoriously, absolutely and utterly ignorant of the first principles which govern military matters. But, they rushed in and we have before us, in the report of the commission, portions of which have been read to this House, from the bottom of page 37 down to the middle of page 42, what might be fairly described, I think, as an indictment against the administration of the militia services, beginning with the criticism of the policy of parliament in increasing the vote from $3,500,000 to $6,500,000 between the years 1903-4 and the years 1907-8 and ending with the conclusion that the efficiency of the militia is less than it was ten or fifteen years ago. I propose, as briefly as may be, to deal with some of the matters referred to in this report.

As I shall quote to some extent from the memorandum of Major General Lake, Inspector General upon that portion of the report of the Civil Service Commission, 1908, which deals with the administration of the militia, I propose with the consent of the committee to lay this memorandum on the table, and I shall distribute copies to hon. gentlemen. I may say that when the report of the Civil Service Commissioners appeared, General Lake was very much surprised and he at once came to see me and he said he would be very glad indeed to prepare an answer which I gave him authority to do. Everybody knows who General Lake is, and everybody will agree with me that his opinion on the militia of Canada is worth more than perhaps that of any other living man. General Lake has served in Canada now about 9 years; he served as Quarter-Master General under the late government from 1893 until that government went out of power, and then on till 1898 under the present administration. Since 1904 he has been chief of the General Staff. He has served in India and he has served for a number of years in the war office. He was assistant quarter-master general at the war office during the whole of the South African war and he had under his control and was responsible for the transport of that great army which left the shores of Great Britain and which was safely landed, I believe, without the loss of a single man. I think I am correct in saying that his department of the War Office is the only one that has not been criticised in connection with the South African war. I think I may venture to put forward the memorandum of General Lake on a military matter as against the report of the Civil Service Commissioners. While the Civil Service Commission was sitting I called upon the chairman of the commission and suggested to him that as military work was somewhat technical perhaps he would like to examine some other officers—he had then examined General Lake and the present deputy minister who had only at that time been four months in office as deptuy although he had previously been in the department as director of medical service—and I said I would like very much if the commissioners would do me the favour of allowing me to see the questions and answers which they had received. I was received very pleasantly by Mr. Courtney and while he did not promise absolutely to do so he gave me to understand that he would. But a day or two afterwards I received from him the following letter:

Civil Service Commission,
October 24, 1907.

Dear Sir Frederick Borden,—Yesterday I talked over with my colleagues the purport of our interview of last Saturday, and, while we considered it very desirable to do all in our power to make our inquiries as complete and perfect as possible yet it was felt that to let the evidence get out before the production of the report would be unsatisfactory. But while we arrived at that conclusion we thought that every facility should be given to elucidate or supplement evidence either by witnesses or handing in statements to be added to the evidence—such being the case we shall be glad to see General Lake at any time that would be most convenient to himself to come before us, and anything he may wish to add will be appended to his evidence, if General Lake would kindly favour me with a call I am sure we could easily arrange a time. I have only to add that whatever course is settled upon that in view of the

early meeting of parliament action should be quickly taken.

Yours very truly,
(Sgd.) J. M. COURTNEY.

Hon. Sir Frederick Borden, K.C.M.G., &c.

General Lake has appended to his memorandum a letter which he himself wrote to Mr. Courtney. Mr. Courtney sent General Lake a copy of the evidence he had given and General Lake had an opportunity of correcting it, although as you will see as I proceed, not the slightest attention was paid by the commission to the direct evidence given either by General Lake or by my deputy minister. Possibly it was through an oversight, but in view of the character of the report it looks very much as if the evidence was wilfully omitted. This is the letter which was written by General Lake to Mr. Courtney and which I think is of importance:

Ottawa, November 25, 1907.

Dear Mr. Courtney,—I beg to return, herewith, amended and with certain notes, a copy of the evidence given by me before the Civil Service Commission, which evidence you were kind enough to return, in order that I might verify my answers upon those matters which are the concern rather of my colleagues of the militia council, and upon which I was not in a position to speak with authority. I shall be obliged if you will kindly cause any portion of my evidence which may be published to be corrected accordingly.

I venture, also, to submit, with the utmost respect, the following points for the consideration of your commission. At least three-fourths of my examination was devoted to questions regarding the military administration of the militia force as carried out by military officers, not by civil servants. Some questions were put which were founded upon newspaper paragraphs, generally inaccurate, often misleading. Others were asked—see more especially questions 171, 311-313 and 328-334—which appeared to suggest that the increase of expenditure since 1892 upon militia force had not been accompanied by a commensurate increase of efficiency.

It is not, perhaps, for me to advance the contrary proposition—though I hold it—but I must submit that no conclusion of that nature can fairly be grounded upon what could only be a superficial examination of the case. I, therefore, feel it my duty to urge upon the commission that no opinion, such as might be inferred from the tenor of the questions quoted—the accuracy of which is not always admitted—ought, in the interests of justice and of the public service, to be recorded, without far more searching inquiry and examination than the present commission has been able to give.

Believe me,
Yours sincerly,
(Sgd.) PERCY H. N. LAKE,
Major General, C.G.S.

J. M. Courtney, Esq., C.M.G., I.S.O.,
Chairman, Civil Service Commission.

It will be observed that General Lake had given the chairman of this commission fair warning so far back as November, 1907, and as General Lake says in his memorandum this letter was never acknowledged and the contents of it were absolutely disregarded. I find that insead of trying to get information from men who might be supposed to know something about military matters, these gentlemen based their questions very largely upon newspaper articles which appeared generally in newspapers hostile to the administration. I do not complain of that, if they were newspapers which knew anything of what they were talking about; but they were not. In one or two cases questions were based admittedly upon gossip of the street corner. There is altogether too much of the element of gossip running through the report of this commission from one end to the other. That part of it which refers to the Militia Department is all based upon imagination or upon gossip.

Now, I wish to summarize the misrepresentations—I cannot say deliberate misrepresentations—that have been made in this report as to the cause of the increased expenditure; as to the condition of the stores and the safeguards surrounding the care of the stores; as to the number of the headquarters staff, which is stated in one place to be forty, in another place to be fifty, and in another place, with the addition of some other officers, to be 220, while as a matter of fact it was twenty-three, and both the deputy minister and General Lake repeated that fact over and over again in their evidence; as to the accountant of the Militia Department, against whom the commission, or some member of it, seems to have a particular grudge; as to the functions of the Militia Council, as to which I shall be obliged to detain the committee for some little time; as to an article which was quoted, and which I contributed some time ago to the 'United Service Review;' as to efficiency, upon which there is absolute and utter misrepresentation, against the evidence and the only evidence, except gossip and newspaper clippings, which these gentlemen had before them.

The commission instituted a comparison between the expenditure of 1903-1904 and that of 1908-1909, as they say for 'specific reasons'; and they go on to point out that the Militia law was changed about 1904. An attempt is made to show that the change in the law resulted in placing the Militia Department absolutely under the control of the military branch and that therefore, in some way not fully explained, the expenditure ran up from three and a half millions in 1904 to six and a half millions. The commissioners say:

Your commissioners have made a comparison between these two years for specific reasons. In 1904 there was introduced into parliament an Act respecting the Militia and Defence of

Canada, which in many particulars was a new departure from the former Act. In the Act of 1904 by section 6 it is enacted:—

The Governor in Council may appoint a deputy of the minister and such other officers as are necessary for carrying on the business of the department, all of whom shall hold office during pleasure.

In all the Act which has over 140 sections, no other reference is made to the deputy, and it is a curious circumstance that while the appointments of certain officials are permissive certain others are mandatory.

You will expect, as a logical inference from this statement, that in the old law, the law which preceded that of 1904, elaborate references were made to the deputy minister, and you will be surprised when I produce the law of 1904 and the law of 1886, to find that the language in both is precisely the same. I am reading now from the statute of 1904, which is the present law, and in which section 6 says:

The Governor in Council may appoint a deputy of the minister and such other officers as are necessary for carrying on the business of the department, all of whom shall hold office during pleasure.

Now, let me read from the law of 1886. It is this:

The Governor in Council may appoint a deputy of the Minister of Militia and Defence, and such other officers as are necessary for carrying on the business of the department, all of whom shall hold office during pleasure.

The one is copied verbation from the other; and yet these gentlemen never took the trouble to look at the statute, because they were afraid, I suppose, that they might find that the very foundation of their theory did not exist. They go on to say that the creation of the militia council brought the military authority forward and substituted it for the civil; and they say that this is proved by the fact that the headings of the reports of the Militia Department have changed—that whereas in the old days, before this iniquitous law was enacted, the report was headed as follows: 'Department of Militia and Defence year ended so-and-so;' now the heading is only: 'Report of Militia Council for the Dominion of Canada for the year ending so-and-so;' and they say that this is a proof that 'the department has been swallowed up by the militia council.' Now, the report of 1904, the last report, is under two heads—first, part 1, that is, the report of the deputy minister; next, part 2, the report of the General Commanding. Under the head of the deputy minister comes the report as to the civil side of the department under the heading of the general officer commanding, all the district officers of the Dominion are included. It would be just as sensible to say that the department was swallowed up by the general officer commanding in the old days, and much more so, as to say that the department has lost its identity through the existence of the militia council. But these gentlemen venture upon somewhat dangerous ground for novices. They undertake to say that the militia council is more powerful and has assumed more authority in Canada than the army council in Great Britain. I shall read an extract from General Lake's memorandum on that point as it will be accepted as more authoritative than anything I could say. General Lake says:

It is rather a pity that the commissioners should have commented unfavourably upon the increased expenditure without thinking it necessary to make any reference to these reasons for that increase, which are matters of policy approved by parliament.

On the contrary, they seem to wish to attribute the whole of it to the assumption by the militia council of what they designate as the 'control' of the Militia Department. A parallel is drawn between the Army Council at the War Office in London and the Militia Council at Ottawa, in which it is argued with somewhat scant acquaintance with the organization of the War Office, that the Army Council is 'entirely distinct' from the War Office, whereas the Militia Council has 'swallowed up' the Militia Department. To any one who knows the War Office, the former statement is wide of the truth.

An attempt is also made to show that parliamentary control is more fully assured in England than in Canada. Parliament is supreme in both cases, and the weakness of the contention advanced by the commissioners will be recognized when it is remembered that the Militia Council is by law (para. 7, Militia Act) purely advisory to the minister, and cannot act without his direct assent (see order in council of December 7, 1904), whereas the letters patent of February 6, 1904, which created the Army Council, not only vested in the latter all the prerogative powers of the Crown previously exercised by the Secretary of State or the Commander in Chief, but gave to any three of its members authority to exercise its full powers.

That is literally true and yet this self-constituted military critic has the effrontry to say that the militia council has assumed control and absolutely possesses by Act of parliament greater control than does the army council itself. The militia council has no control whatever. The militia council, as the Act prescribes, is purely advisory, it is simply a convenient method by which the minister brings to his aid different members of the department, four officers and two members of the civil staff. The Militia Department is peculiar in this respect, it is different from such a great department, for instance, as that of the Interior, which has its geological branch, its Indian branch its land branch, and so on, all absolutely and entirely distinct. The Militia Department has its intelligence branch, with its chief of general staff, its adjutant general, looking after the troops, the training, &c., the quarter-master general, looking af-

ter the stores and supplies, and the Master General of Ordnance, and of course the deputy minister of the department as the other departments have. But these different departments or branches are inter-dependent, they are in a sense inseparable, and in order to have successful administration you must have those different departments in perfect accord and perfect touch. You must have continuity of purpose, you must have co-operation among the different branches of the service and you must have co-ordination or you will experience very great difficulty. That is the object for which the army council was conceived, but of course, the army council has received very much greater power. That is the object I had in copying the present plan on which the war office is administered, by introducing the idea of having in Canada a militia council. The system has worked admirably, better than I expected and I hope it will always be continued.

Why in the world did the commission go so far afield to invent a cause for the increase of expenditure when they had actually before them in the evidence of General Lake and in the evidence of the deputy minister, the reasons for the increase? The reasons are known to everybody who will stop to think. They are as follows: During the year 1903-4 this country assumed the responsibility of taking over and maintaining the garrisons of Halifax and Esquimalt. That meant an expenditure of one and a half to two million dollars. There is more than one-half of the total amount of the increase at once. The militia, under the new law, was paid nearly twice as much in the latter years as in the former years. That would account for from a quarter to half a million. The militia had been increased enormously in its numerical strength between 1903-4 and 1907-8. They might also have taken note of a charge of $200,000 on account of customs which is simply a cross entry. Between these different amounts you get the full three millions. I have a statement here which will give this exactly. The expenditures on account of the headquarter staff and district staff, the permanent force, exclusive of Halifax and Esquimalt, and their pay, provisions and supplies for the permanent force, clothing for the permanent force, transport of staff and permanent force, amounted in 1903-4, to $649,000, and in 1907-8 to $1,253,700. The strength of the permanent force, exclusive of Halifax and Esquimalt, has been increased from 853 to 1,656. Now, take the expenditure of the active militia, for training, clothing, grants, etc. In 1903-4 the total expenditure under this head was $1,077,000; in 1907-8 it was $1,562,000. The number of men of all ranks paid in 1903-4 was 33,751 and in 1907-8 42,612. On rifle ranges and camp grounds there was nearly $200,000 more spent in 1907-8 than in 1903-4—and I suppose no one will quarrel with that expenditure. On ordnance, field guns and rifles the expenditure in 1903-4 was $487,000 and in 1907-8 $718,000. On warlike stores the expenditures were much the same. On account of garrison at Halifax and Esquimalt there was no expenditure in 1903-4 except $109,987, which was the amount the Canadian government contributed to the British government for the maintenance of Esquimalt. As against this, you have an expenditure of $1,256,800 in 1907-8. On Royal Military College the expenditure in these two years is practically the same. The expenditure on the Dominion arsenal has increased from $224,911 to $416,000. The output has greatly increased. I have here an interesting statement showing that in 1895-6 the output of the cartridge factory was only 672,000 rounds, while in 1903-4 it was 6,352,000 rounds and in 1907-8 10,500,000 rounds, with a very large number of shells of the most expensive kind. These figures show an output in 1903-4 eight times greater than in 1895-6 and in 1907-8 fifteen times greater. In these items I have included the vote for customs, as I have already mentioned.

Now, one of the criticisms upon which this commission has rung the changes is that there is a very large—and I suppose the inference is, useless or, at any rate, unnecessary—staff. I find that the leader of the opposition (Mr. R. L. Borden), in his speech, made special reference to this subject, and drew a comparison between Canada and Switzerland unfavourable to Canada, the statement being that whereas the army of Switzerland was between 200,000 and 300,000 and the army of Canada only 50,000, the expenditure on headquarters staff was greater in Canada than in Switzerland. Now, as a matter of fact, the headquarters staff numbers 23—not 40 or 52, as stated in this report. And, as I have already said, that report was made in the face of the evidence given by General Lake and by Colonel Fiset—a deliberate misrepresentation, because the attention of the commission was thus called to the facts. It is stated by the leader of the opposition that the Canadian staff costs immensely more than the Swiss. I find that the Canadian staff cost $82,500, and the latest reports I have been able to get, those of 1906-7, show that the cost of the headquarters staff of Switzerland is $168,289—a little more than double. More than that, I find that the highest rate of pay in Switzerland is $1,800. If Canadian rates of pay where applied to the headquarters staff of Switzerland, the cost would be fully $330,000, or just four times the cost of the Canadian staff. Nobody expects that Canadians are going to attempt to live on the pay that the officers in Switzerland can live on; it would be impossible, and the

Canadian parliament does not expect it. So the statement is absolutely wide of the facts, no wilder statement was ever made than that the cost of the headquarters staff of Switzerland is below that of Canada. It is more than double, and, if the same rate of pay were applied, it would be exactly four times as much. Now, I would like to quote from General Lake's memo. I refer to appendix B, page 15:

A considerable amount of misconception, fostered by the ill-informed report of the Civil Service Commissioners, appears to exist on the subject of the number of staff officers now employed at headquarters and on the command and district staffs. I venture to think that it is desirable to place on record a clear statement of the case.

The commissioners have, while criticising the Militia Department and the Militia Council, assumed the truth of an allegation often heard, to the effect that the number of staff officers has, of late years, been considerably increased. They have failed, however, to make any inquiry as to the real extent and nature of whatever increase there has been, or the reasons for it.

It has more than once been advanced in the press, in criticism of the administration of the militia by successive general officers commanding, that each one has apt to differ from his predecessor's views and to introduce a new organization. While there may have been some ground for this criticism, it is remarkable that all general officers have been agreed on one point, at any rate, and that point was the necesssity for a reorganized and augmented staff.

And on page 16:

The contention implied in the report of the Civil Service Commission, that any large increase in the headquarters staff has been carried out as a consequence of the inauguration of the militia council, is, therefore, without foundation. The sole increase to the headquarters staff since 1903-4 has been the addition of three officers, viz: a chief of the general staff, a director of operations and staff duties, and a director of training.

A little further down:

The total of the district staff, when Lord Dundonald first took command in 1902, amounted to twenty-four. The command and district staff together now number twenty-nine. Though the commissioners talk of them as 'about 220,' the combined total of headquarters, command and district staffs at the present moment amounts to fifty-two officers. On January 1, 1893, the combined total of headquarters and district staffs was thirty-two. The establishment of the militia in that financial year amounted to 34,330 of all ranks. For 1908, the total establishments amount to 57,718. In 1892-3, there was no Army Service Corps, no Army Medical Corps, no Ordnance Corps, no Army Pay Corps, no Corps of Military Clerks, and no Signallers. The military force of that date could, therefore, not have taken the field—at least, not without many months previous organization of these services. As to the relative efficiency for war of the forces in 1902-3 and 1908, there can, therefore, be no question, although the increase of staff in the intervening period is almost exactly proportional to the increase in strength.

Another point usually forgotten by the opponents of any staff organization at all is the fact that, so long as the imperial troops were garrisoning the fortresses of Halifax and Esquimalt, not only was an unusually large staff (eight officers for about 2,000 men) maintained at the former place for the acknowledged purpose of assisting the militia force in organizing its staff duties in the event of war, but also that the considerable number of Imperial officers regimentally employed at that station furnished at all times a military reserve, upon which to draw for staff officers on emergency. With the assumption by Canada of the responsibility for the defence of these two places, the British troops have been replaced by Canadian troops and the supply of trained British officers formerly available for these important duties has ceased. Hence a considerable increase in the number of Canadian staff officers has been imperative.

The existing militia staff, if it be anything like sufficient for a force of 100,000 men, which is more than doubtful, can only be regarded as a bare minimum.

It may, perhaps, be of interest to note that the proportion of staff officers to men maintained in Canada and Great Britain, respectively, for 1907-8 works out roughly, at: In Canada 1 to 1,110, in Great Britain 1 to 1,030, of the forces provided for in peace. If the numbers of men which would be mobilized for war are considered, the Canadian proportion would be still smaller than the British proportion.

Because you have to add nearly 52 per cent to the number we actually train, as our whole system is conducted on the basis of 100,000 men in the event of struggle occurring, and we require to have sufficient officers and staff for that number.

It may also be noted as pertinent to the subject that the cost of the military side of the headquarters of the Swiss army is nearly double——

As I have pointed out:

—that of militia headquarters of Canada, and this in spite of the fact that the rates of pay, generally current in Switzerland are lower and that the economies possible under the system of universal service which there obtains tend to reduce expenditure considerably.

Now, Mr. Chairman, these military expert and critics seem to have discovered that we have staffs sufficient for 100,000 men! They state that in their report, not knowing—not caring to know, not desiring to know, shutting their eyes and ears lest they might know—that the whole scheme on which the Canadian militia is based is one of having an effective force of 100,000 men in case of necessity. How is that made up? We have over 50,000 enlisted, we have rifle associations and men who have gone through their annual training, on the reserve

list, who could be called on and are ready to enlist at a moment's notice, so that we could raise the number from 55,000 to 100,000 and put that force in the field at short notice. But it will not do to wait until trouble occurs to have officers ready. You can improvise your men, you can bring into the field men who have a certain amount of drill and have learned how to use their rifles, but you cannot improvise your officers in thirty or sixty days. You must have them carefully trained, you must have an effective staff, you must have every one of your departments which go to make up an army ready for action. And these men are in the meantime not idle. They are all occupied, and I venture to say, as General Lake has pointed out, that there is not a department in the whole service where more work is done than in the Militia Department, particularly in the military branch of that department.

We are told that there is less efficiency. These wiseacres say there is doubt as to whether the rural militia is as well trained as it used to be, and because somebody has said so on a street corner, they say that the city militia is much less efficient. In that connection I am going to bring an absolutely disinterested witness—a gentleman who has written a letter which I happened to see in one of the Montreal papers, a gentleman who occupies a very prominent position in the Conservative party in the city of Montreal and who has been an officer of the militia. My hon. friend from Sherbrooke (Mr. Worthington), I am sure, will know him very well. I refer to Lieutenant-Colonel Meighen who wrote this letter, certainly unsolicited by me:

Civil Service Commissioners as military critics.

Editor, 'Herald.'

Sir,—I do not suppose that in the moments of their wildest ambition, the members of the Civil Service Commission ever expected to be taken seriously as military critics. One may wonder, therefore, why they allowed themselves to say that they doubted if the city corps of the militia were as efficient now as formerly. I am sure I have the support of all city militia officers when I contradict this statement. The commission evidently do not know what they are talking about. I have been long enough actively connected with a city regiment, and in touch with many others, to know the conditions prevailing, and can say with confidence that the regiments in the chief centres of the Dominion are to-day very much more efficient than in the past.

I do not make this assertion without being able to give reasons for it, as is the case with the commissioners. The officers of the city corps are better qualified for their positions. The examinations which they have to pass are more numerous and more strict, and exact a higher standard than formerly, and the same thing applies in the non-commissioned officers.

To-day practical field work is called for, and is carried out by the different corps individually and in brigades, tactical manœuvres on a large scale being a feature of the annual training. Such things were never done fifteen years ago. Discipline has vastly improved, and finally and most important of all, the rifle shooting is very much better. Thanks to the ranges provided of recent years there are now many more men able to use their rifles effectively, and any one with the faintest idea of militia training knows that this is the most important feature of it. On this count alone, if on no other the commissioners report is utterly wrong.

I do not wish to belittle the excellent work of the officers and men of the militia in former years, but they had neither the material nor the opportunities to bring their corps up to the standard of those to-day.

It is to be hoped that the gentlemen composing the commission if they are called upon to make any further reports, will be more careful to ascertain the facts, and not imagine that the rashness of ignorance is knowledge. They have cast a slur upon a body of men who are giving up more of their time and money, and making greater sacrifices in the service of the country than any other class of Canadians.

F. S. MEIGHEN,
Lieutenant-Colonel, First Battalion Royal Highlanders of Canada.

Montreal, March 30.

He is not on the active list now, he has retired and I think he retired before that letter was written.

Another point referred to by the commission and quoted for my hon. friend the leader of the opposition is in reference to desertions. The statement is made that desertions are very numerous and reasons are given which are not correct. I will quote again from General Lake, because I do not wish to give my unsupported statement. I wish to give the evidence of a man above the suspicion of writing or saying what is not absolutely correct:

The commissioners refer to the prevalence of desertion in the permanent corps and attribute it mainly to a want of sympathy between officers of the permanent corps and the men. It may be remarked that the reasons given by Major General Lake——

In his evidence, mind you, which they would not take any notice of:

—were, the demand and high pay given for labour everywhere, the smallness of the establishments, poor barracks, no change of station and the occasional failure on the part of the government to keep faith with the men. While he admitted that, possibly, in some cases, officers might not be in full sympathy with the men, he expressly stated that he did not think it to be the case to any appreciable extent.

Yet, these commissioners rush into print to say that the desertions are entirely due to the fact that the officers are out of sympathy with the men when they have the evidence before them of the man best able to give evidence, General Lake himself, that such was not the fact.

He pointed out, also, that some of the barracks were wretchedly bad. Surely it would only have been fair to the officers of the permanent force for the commissioners to have mentioned some of these reasons.

They were not mentioning reasons. Again:

(f) That 'the desertions have been one in three.'

This statement was approximately true for 1905, but there has been much improvement since then. For 1906 the figures were one in six. For 1907 they were one in nine, and many of these men rejoin from desertion and reduce the proportion.

Yet, the commission insists upon saying that the desertions are one in three when they had the evidence before them, that of General Lake, that the proportion has been reduced to one in six, to one in nine and even less. Of course, there will be desertions in a country like this. I doubt if the proportion is any greater than in the United States. As General Lake has pointed out, the demand for labour is so great and men can get higher wages outside of the service. When they can get from $2 to $2.50 a day they are not going to remain in the service where they get from 50 to 75 cents a day. A man who goes into the service goes there simply for the love of soldiering and sometimes after he gets there he finds that he is not as fond of it as he thought he would be and he deserts. But, to put the responsibility of that upon the permanent force, officers and the department is absolutely unjust and, in view of the evidence which the commisioners had before them, simply outrageous.

These military experts and critics report that there is a useless officer in the department known as the inspector general. They say that in England there are good reasons for an inspector general and none in Canada, but they fail to tell us wherein the difference lies. Again, I shall have to trouble the committee with a short quotation from General Lake who, I fancy, is as good authority as there is on this subject:

The commissioners consider that the appointment of an inspector general is of but little benefit to the militia, and recommend that, when vacant, it be not filled. They state that, in Great Britain, the appointment was made for reasons which do not exist in Canada. They do not give those reasons, and it is, therefore, impossible to judge how far the commissioners' contention holds good.

But it may be remarked that the committee of 1904——

That is the English committee, the Esher committee as it is called,

—on whose report the present War Office organization was adopted, were very insistent upon the need for an inspector general; indeed, they said that effective inspection was 'absolutely imperative.' And the appointment is at present filled in England by one of the ablest soldiers in the army (General Sir John French).

An inspector general was appointed in Canada because the arguments used by the War Office Reorganization Committee (and detailed in their report) were concurred in, and it was considered essential to provide for inspection by a highly qualified officer, competent to speak with authority upon all military questions, who should insure, first, that the directions of the Militia Council were faithfully and uniformly carried out throughout the militia force (especially that the instruction given in the various military schools should be uniform) and, second, should report to the Militia Council upon the practical results of the measures adopted by it. Thorough and competent inspection is, at least, as necessary in the militia as in any business concern.

At this moment General Lake is the inspector general and he is engaged in making a most careful inspection of every branch of the militia from beginning to end, from the Atlantic to the Pacific, for the benefit of this country and so that this parliament at its next session will be able to see exactly what that able, experienced, competent, fearless officer thinks of our militia force. General Lake came out here in 1904 as chief of the general staff to assist in the reorganization of the militia, to inaugurate not a new policy, but improvements in the general plan of the militia, and I thought it was fitting that a man of his capability and experience should occupy the position of inspector general before he leaves this country for I regret to say his term of office will be up in a few months. I thought he should have an opportunity to see whether the system he inaugurated is effective and is being properly carried out so as to inform the minister as to what changes in it he would suggest. That is a duty that all inspectors general will have to perform. It would be extremely difficult to get as able a man as General Lake. I believe men can be got of sufficient ability and sufficient honesty to fill the position advantageously in the interest of the country, and of all the positions in the militia I believe this is one we can at least do without.

As to stores, there are insinuations—I do not know what other phrase to apply for they are scarcely direct statements—there are insinuations in this report which are said to be supported by evidence given by the Auditor General.

Mr. J. D. REID. Against the department?

Sir FREDERICK BORDEN. Not against the department and not with reference to my department alone, but that the stores are not properly audited and that there is no means of preventing thefts.

Mr. J. D. REID. Is the Auditor General reliable?

Sir FREDERICK BORDEN. I could read my hon. friend the evidence.

Mr. J. D. REID. Does the minister consider that the Auditor General is a reliable officer?

Sir FREDERICK BORDEN. I am not on the witness stand just now.

Mr. J. D. REID. You are finding fault with him.

Sir FREDERICK BORDEN. Yes, I am, and I must be allowed to do it in my own way, and when the hon. gentleman gets his opportunity he can criticise me. I do not consider the Auditor General reliable upon this point. I should judge from carefully reading the evidence of the Auditor General that it seemed to be almost a rehearsal; he said there was no means of checking the stores and that he had no authority to do so himself, which is perfectly true. But it is also true that over and over again the former Auditor General asked for permission to inspect the stores and received it. I have letters written by the former Auditor General to the department asking us to facilitate his making an examination of the stores and in every case that request was acceded to. The present Auditor General himself to my certain knowledge has inspected the stores at Quebec on more than one occasion; he made a thorough examination and took a thorough inventory of the Ross rifle factory a year ago, and the department has always been ready to facilitate any inspection or audit of that kind. As a matter of fact the very greatest care is taken with reference to the stores, and if the commission instead of jumping at conclusions and examining the Auditor General who admitted he knew nothing about it before he got through, had taken the trouble to have gone to the Quartermaster General and asked to inspect the great central store department at Ottawa they would have seen exactly how the stores are managed. I have here the following memorandum from the Quartermaster General on that point:

In looking over the evidence given by the Auditor General before the Civil Service Commission I think it right to draw your attention to the entirely inaccurate statements made by him, based no doubt upon his naturally limited knowledge and want of familiarity with the ordnance stores system of accounting for all stores in ordnance charge. As the bearing of all the questions and answers relates to accounting only I will not take them separately but treat the subject as a whole. Questions and answers will be found on pages 1304, 1316 and 1318, Vol. 2, Minutes of Evidence.

Both questions and answers are entirely misleading and not in the smallest way in accordance with the facts.

1. The duties of the Ordnance Corps are to receive, hold and issue clothing and equipment which has first been inspected and passed by the government inspectors.

2. It has nothing to do with the making of contracts or payment for stores under contract. This is all done by and under the director of contracts and the stores are delivered to ordnance charge after inspection.

3. A receipt is given by the senior ordnance officer to the director of contracts for all stores received by him. These stores are entered in a daily journal of receipts and from it transferred to the store ledger in which a complete list of every article in possession of the depot is contained.

4. There is also a daily journal in which all issues are entered and thence transferred to the general ledger, and the department is debited with the receipt and credited with the issues.

The general or store ledger consists of debit and credit pages and shows at the top of the debit page every article in store charge. At the end of each month the receipts for that month on the debit page are totalled up and added to the balance brought forward from the preceding month. Issues for the month are deducted and the result shows the balance in hand at the depot.

A monthly return from each depot is forwarded to headquarters showing all transactions, including each issue and receipt, accompanied by the authority for such issue or receipt. The checking clerk at headquarters sees that the balances on hand at the end of the preceding month are correctly carried forward to the current month and that the number of articles received or issued correspond with the authority for such receipts or issues.

Should any entry appear with no authority submitted it would be at once challenged. It will thus be seen how complete the system of checking and accounting is.

5. No issues are allowed to be made by any ordnance officer except on written authority, and such authority is governed by regulations as to clothing and all other equipment and the same authority is given for all receipts from inspection stores.

6. From the date of the organization of the stores department, many years ago an annual board of survey has been held. The board consisting of the district officer commanding of the district and two other officers.

The duties of this board were to count each and every article in store charge and then compare such count with the numbers given in the store ledger, noting either surpluses or shortages (if any) also noting such stores as were unfit for further service and such stores as could be repaired.

The board then prepared a list of all the above for submission to headquarters with its suggestions as to the disposal of all unserviceable and obsolete stores.

The quartermaster general has been over twenty years connected with the stores branch and in no case within his recollection have any of the boards found evidence of wrong-doing or dishonesty.

The quartermaster general is not in a position to say that there has been an audit of the military stores by an officer of the Auditor General's Department.

He can, however, state that on more than one occasion the late Auditor General wrote to the deputy Minister of Militia to say that an audit officer was making a tour of inspection and audit in connection with the stores branch and asking that instructions be given to the officers in military stores charge to afford such auditing official all necessary assistance in connection with his work, and in every instance

instructions were sent accordingly. As no report to the contrary was ever made to the department it is assumed that the audit made was found to be satisfactory.

In conclusion the quartermaster general desires to draw your attention particularly to the fact that the work of the commission was for many weeks carried on in Ottawa, during which time it would have been an easy matter to have visited the Headquarters Ordnance Stores (the largest of all the depots) for the purpose of examining on the spot, the hundreds of thousands of dollars worth of property held in charge, the method of caring for it and the working of the ordnance system of accounting.

It may be added that our ordnance system is much more strict than that followed in the imperial service.

D. A. MACDONALD,
Brigadier General.

Well the commission was too busy bringing out evidence about how many men had been graduated from the Finance Department for high positions outside, and too busy criticising the military policy of this country. They did not want information, and nothing is clearer from the beginning to the end of this report than the fact that they shut their eyes and their ears deliberately in order to make the damaging report which they have endeavored to make. Now, the people of Canada are interested in this phase of the question. They are paying millions of dollars for stores, and they want to know whether these stores are being properly taken care of or not. And so I am taking more time than I would otherwise take in order to bring these facts before the people and to show that the insinuation contained in this report is absolutely and utterly without the slightest foundation in fact. I have here a memorandum on this subject, prepared by the accountant at the request of the deputy minister, which I will read :

Procedure in purchasing stores, clothing, equipment, &c., and issuing them, and system of audit.

All such purchases are made by contract, and before being taken over, are thoroughly inspected and tested by departmental inspectors. If found according to contract they are passed into store, the ordnance officer in charge certifying receipt of the articles and also entering them at the same time in his store ledger, in which an account with each kind of stores or article in his charge, is kept.

Issues from stores are not made until the requisition has been approved by the officer commanding district. A receipt from the corps or person receiving the articles is always taken; this and the document containing the authority for issue are the vouchers which the officer in charge of stores has to submit in support of his monthly statement of stores issued.

Until quite recently these monthly statements were sent to the Quartermaster General for examination but a regular audit was some time ago undertaken by the accountant of the department and these returns now go to him.

The system of audit adopted is practically the same as that of the British War Office, viz.: first a thorough inventory of all stores, this was made a year ago last April. Then monthly returns of all receipts and issues together with an audit of the ledgers used by the officer in charge of stores. For this purpose two ledgers are kept in each store and are sent alternately every six months to the accountant for audit and verification. Lastly, an inventory at intervals to see that the articles, as shown in the ledger on the date the inventory is made, are there and in good order.

The audit is not confined to the stores in the charge of the district ordnance officer; it is also extended to the stores in the charge of the regimental officers throughout the country, so that all articles are kept track of from the time they are purchased and pass into store until they are condemned as unfit for further use.

Any gentleman who has anything to do with the militia knows that this statement is correct.

Now, these military experts and critics have something to say which one is scarcely able to understand the meaning of. In speaking of the general increase of the expenditure, which I have fully accounted for, and which they knew the reason for themselves, they say that there is no means by which they could appreciate whether amounts payable for sub-target guns or Ross rifles are proper and just. On that point I want to read the evidence of General Lake at page 756 of Volume I. There was an attempt made to lead General Lake, which was not eminently successful. The chairman asks :

Q. Is there not now rather an over inclination to lay in sub-target guns, Sutherland rifle sights and Ross rifles—to over do it rather than under do it?—A. I think it is necessary to have an up-to-date modern rifle, whether it be the Ross rifle or the Lee-Enfield. I think you must have a rifle which is, in the opinion of the general public at least, equal to the rifle with which your foe may be armed. I believe the expenditure on certain things, such as the sub-target gun, is justified by its results on the shooting of the militia.

That is General Lake's deliberate opinion in answer to a question which was evidently intended to lead him to say something else.

Q. Granted that it is desirable to have up-to-date methods, is there not an inclination, instead of ordering fifty sub-target guns, to order a thousand? Is there not an inclination to over do it?—A. Speaking for the Militia Council, I should say that we watch very closely not to order anything more than we positively need. We know the amount available for our purposes is limited, and we endeavour not to expend anything that we think could be avoided.

Q. Then the restraint lies in the amount of the vote?—A. Largely.

Q. If you could persuade parliament to increase the vote, the Militia Department would

gaily spend it?—A. I presume that we should say this: if parliament accepts the government policy and votes more money for military purposes, it presumably wants that money expended upon making its weapons of defence as strong and efficient as possible. At present we order artillery for exactly the number of militia we have available. If parliament told us, as it has done, that it thinks an army of double the strength should be legislated for, and gave us the money to fit out that army, we should do it. But as it is we try to expend the money that parliament approves, upon our estimates, without wasting any part of it at all.

Then there is another question:

Q. After the estimates have passed the government and been laid on the table, there, have been very few criticisms as to the amount granted for the militia?—A. I should say that parliament has always granted to the militia what the government of the day, representing the majority, has asked for.

I leave that question with General Lake's answer.

Then there is a further fling at the Militia Department in the statement, which is untrue, deliberately untrue, I think, in view of the fact that the evidence was opposed to the statement—that the Ross rifle contract was prepared by the counsel employed by the Ross Rifle Company. I made a statement upon that subject on a recent occasion, and I think it is desirable that I should repeat it. In this House, on March 27, I said:

Now, Mr. Speaker, another question which I would like to answer is: Was due care exercised in making the contract? Recently there has been a report, somewhat famous now, by a commission known as the Civil Service Commission, and in that report I find some more or less complimentary references to the Militia Department, which I hope to have an opportunity of dealing with some day before long. But incidentally, as a slight instalment of the good things given out to the Militia Department by that commission, it is stated that the contract was drafted by the contractor's solicitor. Now, in order to elicit information upon that point, the chairman of the commission, when he was examining the Deputy Minister of Justice, Mr. Newcombe, with reference to the conduct of the Department of Justice, put certain questions; and I would like to read what took place:

Q. You prepare all contracts entered into by the several departments which you are asked to put into legal form, I suppose?—A. We draft them all or revise the drafts prepared in the departments.

Q. We had before us this morning the Deputy Minister of Militia and Defence, and we were asking him some questions about the Ross rifle contract. Was that contract drafted in the Department of Justice?—A. I do not know where it was drafted, but we had a great many conferences over it. It was, I think, drafted preliminarily by Sir Charles Ross' solicitor.

This is all the reason apparently that the Royal Commission had to jump at that conclusion.

Sir FREDERICK BORDEN

Q. Had he a solicitor acting for him?—A. Yes.

Q. In drafting these contracts, if it should appear they contained something that might be detrimental to the interests of Canada, would it be your duty to go on with the drafting or call the attention of the department to the matter?—A. I would call the attention of the minister, or the officer from whom I was taking instructions, to any situation of that sort and ask him what was intended. As to the substance of the contract, I would not interfere with the policy, but would endeavour to see that any deficiencies that suggested themselves to me or any supposed provisions that I thought would not work with adequate security to the government, were called to his attention. Then, that being considered, I would take the policy of the contract from him and give effect to his intentions.

Q. You have nothing to do with the policy of the government?—A. No, so far as concerns the business of the departments.

By Mr. Fysche:

Q. I suppose there is such a thing in the government service as cultivating a habit of doubt or suspicion about everything?—A. As far as I am concerned I have no suspicion. I point out to the government or the minister or the officer who is instructing me, what I suppose to be reasonable or what may work unreasonably, but the policy in regard to that is a matter for him to consider and settle.

Now I go on:

I think it is abundantly clear from this that the Deputy Minister of Justice would have considered himself in duty and in honour bound to call the attention of the minister to anything which he thought would not work well, but would work to the disadvantage of the country. He had nothing to do with the policy. Whether we should have a rifle factory or not was none of his business. But when a contract was to be made with Sir Charles Ross, the Deputy Minister of Justice stated that he felt it to be his duty to see that the government's interests were protected in every way. And yet in the face of that statement, we have the spectacle of a royal commission trying to stab and injure the department and the government by the casual statement, the unjustifiable statement, to which I have referred, that this contract was drafted by the contractor's solicitor. Now, I have a very definite recollection of what took place in connection with that contract. There were eight or ten or twelve different drafts, and time after time I took to council a draft to consult with my colleagues about; and in my room over and over again, there were present Sir Charles Ross, my deputy minister, the Deputy Minister of Justice, and on one or two occasions Sir Charles Ross had with him his solicitor. The idea was to get at a contract which would be fair; and I was determined, so far as I was concerned, to enter into no contract until I had the advice of the Department of Justice upon it. I got that advice, and I got it in the view expressed by the Deputy Minister of Justice that it was his duty to warn me if he saw anything in the contract which was unjust or improper.

That is the answer to that insinuation. I had intended to say something about our

contract system in the department, but I will only say that we have a director of contracts who supervises the business of making contracts. All requirements are sent in through the deputy minister from the different officers, the Quarter Master General and the Master General of Ordnance, whose departments are the ones principally requiring purchases. These are carefully considered. Advertisements are published, and the work is done by an experienced man who devotes his whole time and energy to informing himself as to the price and market value of goods which have to be purchased, and who has a staff to assist him in that work. We have, to aid our director of contracts, skilled inspectors who carefully examine all the goods which are delivered, and after all this has been done the goods are handed over to the Quarter Master General, and I have already read to the committee what takes place after that. So that every precaution is taken before purchase, after purchase and after the goods have been inspected and handed over to guard the public interest.

This report refers in very uncomplimentary terms, as I have already said, to the accountant and paymaster general of my department. They do not like his name;—I do not mean his patronymic, which happens to be Borden, but they do not like his official designation of accountant and paymaster general. They say that 'P.M.G.' might be mistaken for 'Postmaster General,' which does not occur to one as being a very powerful argument. Also they say that there is a member of the British government called the paymaster general. I do not think that that would cause very serious inconvenience, certainly not here; there is not the slightest danger of that distinguished member of the imperial government being mistaken for our Paymaster General or vice versa. As a matter of fact, his official designation is 'Accountant and Paymaster General' which exactly describes the duties he has to do. But what has outraged these commissioners almost beyond endurance is the belief that certain paymasters who existed some eight or ten years ago and whose services were dispensed with, have been resuscitated. Well, that is an entire mistake. When they say that the old paymasters have been restored in the districts, they say what is not correct. A pay corps was established for the purpose of better safeguarding the public interest; and I think I shall have to trouble the committee by reading further from General Lake's memorandum on this subject, I refer to page 8:

The commissioners take special exception to the existence of the 'Army Pay Corps,' which has recently been organized. In this respect, it need, perhaps, only be stated:—

1. That a trained pay corps is an absolute necessity for an army in the field. It would be too late to train it when war broke out. The enormous expenditure of the South African war is a good example of the wasteful results of maintaining too small a pay department in peace.

2. A trained pay corps is just as necessary to economy and efficiency in peace as on active service.

I would like special notice to be taken of that as against the statement of the expert critic of military affairs whose report I am venturing to criticise:

The assumption of the charge of the garrison of Halifax, has by itself made a pay corps of some sort a necessity. Col. Fiset, Deputy Minister, told the commissioners that the work of the Army Pay Corps saved to the public many times the amount of their salaries. No one who has any knowledge of pay arrangements at the annual camps and with the permanent corps during the year can have any doubt of this. Last year, at two of the smaller camps alone, over $3,400 of the unfounded claims were disallowed, which under previous conditions, would almost certainly have passed without question.

Now, the Auditor General was called upon by the commission to give his views as to the desirability or neecssity of a pay corps and he testified at almost what seemed to be like a rehearsal.

It may be noted, in this connection, that the Auditor General, in commenting upon overpayments of efficiency pay in 1905—before the Army Pay Corps existed—wrote: 'This office. . . . cannot check the pay-lists accurately in detail without the service rolls of the various corps and some local knowledge of the names thereon as well.' This local knowledge is what the officer of the pay corps supplies.

The commissioners appeared to think that all payments could be made to the militia by means of individual cheques from the Department of Militia and Defence. They can hardly have realized that this course would involve an attempt to prepare, sign and distribute on the last day of each camp, a cheque for each man, to the 25,000 or so troops in the annual camps. The impossibility of such an attempt will be understood when it is remembered that the amount due to each man depends on the efficiency pay earned and can only be computed towards the end of the camp.

Efficiency pay is dependent upon the good conduct of the soldier in camp. He is paid his 50 cents, and if his conduct is good and if he makes certain number of marks in rifle shooting he gets more, but that cannot be determined until the conclusion of the camp.

3. The commissioners assumed that the Army Pay Corps was merely a resuscitation of the old district paymasters, an entirely different body of men, not performing the same duties. The commissioners made what can only be termed superficial inquiries from Colonel Fiset and the Auditor General as to the system and duties of the pay corps, and had, apparently no knowledge of the audit side of the work.

As no officer of the pay corps was summoned before them, it is perhaps hardly to be wondered at that their report displays ignorance of the situation.

And that is a remarkable thing. They condemned the system of keeping the stores, but never took the trouble of going into a store or doing that branch the justice of calling upon one of its officers to explain the system. In the same way, they condemn the pay corps and the paymaster general, but never call him or one of his officers to come to them, nor did they go near him. That is the justice that is meted out to the Militia Department.

As regards the Auditor General's evidence, the following questions and answers, given at almost the end of his evidence on the subject are significant :—

I would like the committee to take note of this. The Auditor General was examined as to the pay corps and this is the grande finale of that examination :

Question by the Chairman.—I wanted the Auditor General to explain the system in order that the absurdity of it might be placed before us. Now, tell us another thing, Mr. Fraser, do you know anything about the working of the Army Pay Corps?

Answer.—No, not yet. I will know more about it a little later on.

And that is the evidence upon which the Militia Department and its officers are condemned, anything more grossly outrageous, I am sure, has never appeared in the annals of any parliament. Now, General Lake gives a full statement of the duties performed by the Army Pay Corps, but with this I need not trouble the committee. But on this point of the pay, there is something very refreshing with which I would like to enliven these proceedings. Mr. Fyshe, one of the commissioners, an ex-banker, put a series of questions. He was examining Mr. Boville, the Deputy Minister of Finance :

Q. Mr. Boville, you were not here when Mr. Fraser was giving us some evidence of the absurdity of the reintroduction of the paymaster's branch of the Militia Department, and this trouble, of course, has some bearing on it also.

They were referring to the forgery of some cheque mentioned in the previous evidence. I will not bother about that.

Would it not be a simplification of matters if the Finance Department made all payments for every department?

It was not merely that he would have no pay corps in the Militia Department, but he was going to abolish the paymasters in the whole service and have all the paying done through the office of my hon. friend the Minister of Finance. I want to call attention to this evidence. The answer was :

Sir FREDERICK BORDEN.

Theoretically, yes, as an academic proposition, but as our business is so tremendous and is spread over such a wide area it is not practicable.

Then the chairman comes to the rescue. He asks 'How many of these cheques do you think they pay in a year? Mr. Fyshe said : 'I have no idea.' The chairman was evidently questioning his brother commissioner. The examination goes on:

The Chairman.—Somewhere about 700,000 of all grades. Your idea is that the Finance Department should be paymaster for the whole government.

Mr. Fyshe.—Should take charge of the whole thing, of every payment from five cents to five thousand dollars. Of course each department should look after its own expenditure and vouch for its payment, for the amount to be paid, but the Finance Department or the Auditor General's Department should make the payment, they have to go over this thing anyway.

The Chairman.—The theory governing the Finance Department is that it deals with the finances of the country.

Mr. Fyshe.—Yes, well let them make the payments.

The Chairman.—You must allow the other departments some latitude in the matter of small change. The Finance Department and the Auditor General's Office do make the big payments now, but if they were reqiured to make all the payments as you suggest it would probably require a staff of a thousand men to do it.

This is the way one of the commissioners was going to economize. His brother commissioner said if you do that you will require perhaps a staff of 1,000 men. Yet in the whole service I do not suppose there are more than 100 ment connected with the pay staffs. I continue reading from the report :

Mr. Fyshe.—You would simply concentrate the staff in one department instead of having it scattered around?—A. Apart from that, this credit system we have established facilities very materially the transaction of the government's business at distant points. Supposing all the payments were concentrated here in Ottawa, you would have constant growling at the delay in making payments.

Q. Not necessarily, if the pay-lists or accounts were properly vouched for and forwarded. It is only a question of drawing the cheque and sending it?—A. Which in the case of a payment in British Columbia would mean two weeks' delay.

Q. Well, you might make an exception in that case?—A. Then Prince Edward Island, it would mean a delay of nine days there.

By Mr. Bazin:

Q. And in winter what would the delay be? —A. In winter it would mean a delay of weeks sometimes.

Imagine anybody seriously suggesting that the whole business of paying out millions on account of the different departments should be done from the Finance Department. Is there anything more than that

necessary to show the unfitness of the man to deal with a big question of this kind ?

There is one thing more I would like to call attention to. In the course of the criticisms on the Militia Department, you will observe that the high pay of the officers is frequently referred to. It is rather singular that while the Militia Depatment is criticised for paying $2,800, $3,200 and sometimes $4,000 salary, the general civil service of the country is spoken of as being inadequately paid; and it is worthy of note that in the Civil Service Bill which has just been put through, the salaries are increased to something like the amount which the militia officers are being paid, so that after all we were not so very far astray. But it is singular that in one breath this commission should condemn the Militia Department for its high salaries and in the next condemn the government for not paying the civil service more.

Further than that the Militia Department is referred to as a department in which the officers are not only highly paid but whose officers and their wives and children receive pensions. That is one of the indictments brought against the Militia Department, yet at the conclusion of this report a Bill is submitted by which it is proposed that the whole civil service, including the wives and children, shall be given the benefit of a pension. In one breath the Militia Department is condemned for having a pension, and in the next the government generally is condemned because it has no Pension Act. Just here I would like to point out that every officer in the permanent force and on the staff contributes five per cent of his salary towards the creation and maintenance of a pension fund, while the Bill, which is suggested by these gentlemen for the benefit of the civil service, only recommends a tax of four per cent, so that the militia service is actually paying five per cent while they recommend four per cent for the civil service—a much more favourable arrangement.

I find that in the evidence the commission went out of its way to introduce something very foreign indeed to the inquiry and for no other purpose than to have a fling at the Militia Department. Questions were asked regarding the superannuation of an officer of the department, Mr. Aumond, who was superannuated a year or so ago on a retiring allowance of $1,321.25, who has that amount of money for the rest of his life and does nothing, and in the course of the questioning to get evidence on that particular transaction, the chairman asked :

Q. He had served for forty years?—A. Yes.
Q. This man had never had any bad habits?—A. Never.
Q. What was his name?—A. Aumond.
Q. Did his work very well?—A. Thoroughly well.

Q. He was a faithful officer?—A. He could not be better.
Q. And yet that man after more than forty years' service was turned out into a cold world.
Mr. Fyshe.—I call that brutal.

Well, turned out with nearly $1,350 a year in his pocket for the rest of his life and nothing to do ! What is the superannuation law for? What could I do? The man had been there forty years. We had talked about superannuating him for several years. He was of no use and it was better for the service that we should let him go. We let him go. Then, they go on to prove that he had to give up his house. I do not know about that but I made some inquiry—it is an outrageous thing to put such a statement in a book like this—and I am told that Mr. Aumond took a smaller house because his family was smaller, that he moved into lodgings because it suited his convenience, and I believe that the same man has had some favours from the department since that time, that he has had an occasional day's work. But, to call it brutal to superannuate a man at $1,350 for the rest of his life seems a most extraordinary thing that any commissioner should dare to say.

I would like to bring another matter forward. There happened to be, in the Militia Department an officer by the name of Lieutenant-Colonel Guy, an English officer, or rather I think he was a sergeant when he came to this country 45 or 50 years ago. He had served in the Crimean war, he came to Halifax and was made use of by the government of Nova Scotia before confederation. Some time after confederation he was brought up here. He served in the Northwest rebellion. This officer was sent to Halifax because he had had a great deal of experience as the paymaster of troops and when we took over Halifax and Esquimalt he was sent from the head office to Halifax by the accountant and paymaster general as the most suitable man in our employment for that purpose, being an old imperial officer, who had been paymaster in the Northwest rebellion and had had years and years of experience. We had no man in the service who was as competent to do that work as Colonel Guy. So, he was sent there. The commission goes out of its way to state in its report that this man was too old to do his work and that we had simply sent him to Halifax in order to try and give him a good retiring allowance. The evidence is on page 747. I think it is just as well that we should reveal the fact that there was such a thing as animus of a very unpleasant character behind the conduct of this commission, animus begotten during the time that the chairman of the commission was the Deputy Minister of Finance. I have no hesitation in saying that that gentleman took a special dislike to poor Guy and I believe, as surely as I am standing here, that this dam-

aging report about an honest man who had served his country faithfully for sixty years and who has now passed away, was simply to satisfy a malevolent disposition.

Q. Are you aware that the paymaster sent to Halifax was a worn out officer in the service of the department, who died a few months after he was sent?

Mr. SAM. HUGHES. Who asks that question?

Sir FREDERICK BORDEN. The ex-Deputy Minister of Finance, the chairman of the commision. It is General Lake who is giving evidence.

A. Yes. I know that he died, but he was not worn-out when he was sent, though he was old. He had exceptional qualifications, and I concurred in the selection.

Q. Was not one of the effects of sending this officer as paymaster to Halifax that he became a member of the military branch of the department and came under military control rather than civil?—A. I do not know; I do not think so. There was no Army Pay Corps at the time.

Q. When he went down——

This is an assertion, not a question.

—he ceased to be an officer of the department on the civil side and became an officer on the military side, entitled to draw a pension?—A. That is news to me.

Q. And that pension is continued to his widow?—A. He did not leave a widow.

As a matter of fact his wife predeceased him. It shows how determined this commission was to create a scandal of some kind. The chairman goes on:

Q. At all events, this man, who was worn-out in the service, was sent to Halifax, the principal point, to inaugurate a new system?—A. I understand that he was the only man competent for the work they had available to send.*

Here is a note put in by General Lake.

*The circumstances of this case were as follows: The British troops at Halifax were to be paid by the Canadian government at imperial rates of pay and under the imperial regulations. It was thought desirable to send for this job a paymaster (Lieutenant Colonel Guy) who had been in the imperial service and knew their system, rather than an inexperienced civil officer.

Now, I want to call your attention, Mr. Chairman, and the attention of the committee to a note appended by the chairman of this commission, and I will read it:

I deem it right to append to the evidence a statement of the facts upon which the questions relating to the paymaster at Halifax were based.

When, in 1902, I was a member of the commission appointed to inquire into the Martineau defalcations, while examining the work of the accountant's branch of the Militia Department I found that one of the officers in that branch (Lieutenant Colonel Guy) appeared to be very dazed and enfeebled and quite unfit for duty.

I suggested his superannuation but it was intimated to me that on account of his short term of service his retiring allowance would be small, and that it would not be generous at that time to retire him. To my astonishment, when the system of paymasters was set on foot, Lieutenant-Colonel Guy was made paymaster at Halifax. This was on July 1, 1905. The salary of Lieutenant-Colonel Guy was increased from $1,650 to $2,400 per annum, and, in addition he was brought under the provisions of the Militia Pensions Act. From the outset Lieutenant-Colonel Guy had to procure assistance to do the work and he obtained help from an official of the Halifax post office.

Which is untrue.

As the post office official could not demand two salaries in a short time he was appointed assistant paymaster and certified the accounts. A year after Lieutenant-Colonel Guy went to Halifax, and when the Militia Pension Act permitted it, he was retired. Had he remained in Ottawa under the Superannuation Act Lieutenant-Colonel Guy would, on his retirement, have received about $650 per annum.

Would that have been 'brutal'? The man whom I retired at $1,350 a year was brutally treated according to this gentleman, but here he pursues the memory of a man who is in the grave because he was not retired on a miserable allowance of $650 a year, which was all he wanted him to get.

As it was by an addition of fourteen years military service he was retired on $1,450 per annum.

He got $100 a year more than the man who was 'brutally' treated.

Lieutenant-Colonel Guy died about a year after his retirement, being predeceased by his wife a very short time before his death. Such are the facts, and I feel certain that General Lake was not fully aware of the case when Lieutenant-Colonel Guy was sent to Halifax.

J. M. COURTNEY.

Let us see what General Lake has to say about that:

Report Civil Service Commission, pages 747 and 748 of evidence.

Re Lieutenant-Colonel Guy.

The foot note signed by Mr. J. M. Courtney is not a full and correct presentation of the case.

Lieutenant-Colonel Guy was one of the most capable, hard working and conscientious clerks in the service, and up to within a few months of his retirement was not only capable of doing, but did do a very large amount of work each day as the records of the department will show. As a clerk, his work was to examine the great bulk of claims that came in for payment, abstract them in duplicate and prepare them for payment. This involved a large amount of work which was always correctly done and which a man dazed could not do.

When the garrison at Halifax was taken over, it was necessary to send a paymaster down there who was thoroughly capable of

taking charge of the work. Lieutenant-Colonel Guy was considered eminently fit, both on account of his long experience and his knowledge of the departmental system of accounting. He had put in nearly fifty years of public service under the two governments as follows:—

Joined the British army just at the close of the Crimean war and was sent to the Crimea with the last draft, continued in the British service until the Trent affair, when as sergeant-major he was sent to Halifax with the troops at that time. He took his discharge at Halifax and received an appointment immediately afterwards, viz., in 1864, as chief clerk in the adjutant general's office, Halifax, Nova Scotia Militia.

I have been in camp with him many a time in Nova Scotia.

He held this position until 1869 when he was appointed superintendent of stores, Halifax, under the Dominion government with rank of captain, remained in that position till 1884, when he left the service but on the breaking out of the Northwest Rebellion, in 1885 he entered it again as paymaster of the forces in the field at that time.

He received the recognition of this parliament at the close of the rebellion, and $1,000 was voted to him.

After the rebellion he served on the Northwest Claims Commission and after that, was appointed in 1889 to the inside service, Ottawa, where he remained till he was transferred to Halifax as paymaster in 1905. After having satisfactorily established the pay office he applied for and received his pension.

Surely he had earned his pension.

It will be seen from this that he had nearly fifty years of service, the only break being between 1884 and 1885, and of these fifty years nearly forty were under the Canadian or Nova Scotia governments.

It is not, therefore, easy to understand wherein the iniquity lay of giving Lieutenant-Colonel Guy some recognition and making him paymaster at Halifax, after nearly fifty years of service. If there was any iniquity it would appear to lie in the fact that recognition was so long deferred.

Mr. Courtney points out that had he been superannuated as a civil servant, he would have received but $600 per annum. What a magnificent reward to a man who had given nearly fifty years of valuable service to his country!

Nothing brutal about that.

Now as regards the 'Clerk from the post office, Halifax,' who, it is claimed, was got to assist him, the facts are as follows:

Major Sircom was an officer of the militia, he was also employed in the post office, Halifax, as assistant inspector.

Before Lieutenant-Colonel Guy was sent to Halifax, Major Sircom made application for the position of paymaster, this application was favourably considered, but he was informed that, owing to his inexperience in paymaster work, he would have to take the appointment at first of assistant paymaster. His appointment was intended to be made concurrently with Lieutenant-Colonel Guy's, but there was some delay in getting Major Sircom's through, and it did not appear till a few months afterwards. The statement that Lieutenant-Colonel Guy had to get a clerk from the post office to assist him, was intended apparently, to convey the impression that he was not capable of performing his duties when first sent down there, which is entirely incorrect. Of course, he had to have assistance in the office as the work was too much for one man. His predecessor, the army paymaster, had an assistant paymaster and a staff of seven clerks. Lieutenant-Colonel Guy had only three clerks and his work was heavier than the army paymaster's, as in addition to the garrison, Lieutenant-Colonel Guy had all the militia of the three maritime provinces to attend to.

Lieutenant-Colonel Guy was, no doubt, not as vigorous during the last six months of his service as he was in his early days, but to assert that he was unfit for the duties of paymaster when appointed to that position is incorrect.

J. W. BORDEN,
A.P.M.G.

Appended to this memorandum in the handwriting of General Lake, which I know well, is the following:

I entirely concur in the above. I saw Lieutenant-Colonel Guy just before he started for Halifax and Mr. Courtney's description of him is certainly not truthfully applicable to him as he then was.

P. LAKE, C.G.S.

I ask the committee to define if they can what possible good motive this gentleman could have in criticising as 'brutal' the conduct of the Militia Department in superannuating a man who had forty years' service at $1,350 a year, and declaring that the department had practically put up a job on the country because it did not insist upon superannuating a man at $600 a year who had servied his country fifty years, but had given him a retiring allowance of $1,450 per annum. That is a conundrum that I cannot solve.

I have to congratulate my deputy minister, with whom the commission sympathized so deeply in his distress because he was only getting $3,500 a year, while gentlemen sitting on the board next him were getting $4,000; I have to congradulate him that if the Civil Service Bill gets through the Senate, and is approved by His Excellency the Governor General, he will have $1,000 per year more than his brothers on the Militia Council. I do not think it will be the cause of any jealousy at that board. Neither do I believe the statement made by this commission that my deputy minister, Colonel Fiset, was greatly troubled because his pay was a little lower than that of his breathern on the board. Now, I have one more, and only one more, illustration to give you of the extreme fairness of these, I might almost say, heaven-born

military critics. In the report the following statement appears :

Your commissioners have noticed that it has been held to be of serious importance that the expenditure of the militia in Canada should increase with the growth of the revenue, and that once the revenue has arrived at a hundred millions a year the expenditure should be in the same proportion to thirteen millions as thirteen millions is to one million, that rate being paid for conditions at the time of confederation. It would follow, therefore, that with a revenue of $100,000,000 a year, the expenditure should be at the rate of eight millions. How this can be adjusted with the various retardations which must occasionally happen through a bad harvest, stringency of the money market and other causes, the commissioners cannot understand. It would seem that the militia expenditure would have to be cut down in proportion to the revenues. The better method, in the opinion of the commissioners, is that the expenditures should be increased according to the growth of the population and be put on a per capita basis.

Now, it so happened that in the Nelson year, 1905, I was asked to contribute an article for the 'United Service Magazine' on the Canadian militia. The chairman of the commission asked General Lake if there had not been an article contributed by somebody to some magazine. I do not know that the general had seen the article ; he evidently did not understand the point of the question. This is what is said in the article :

At the time of confederation the revenue of Canada amounted to thirteen millions, and the militia expenditure was one million, or one-thirteenth of the revenue. The annual revenue this year will probably exceed seventy millions, so that it will be observed that the ratio of one to thirteen is being somewhat exceeded. It is not necessary to assume that this ratio must be maintained indefinitely, but it would seem probably that, to remain an efficient and effective militia force in Canada, will cost annually something like eight million dollars, an amount, however, which need not be approached until the revenue has reached the hundred million mark. It would seem probable that the ratio of one to thirteen need not be carried farther than the point just named.

I afterwards made a similar statement in the House in this language :

In 1867, when the revenue of Canada was $13,000,000 we began with a militia expenditure of about $1,000,000 or one-thirteenth of the total revenue of the country. The militia expenditure to-day is $5,500,000, still not more than one-thirteenth of our gross revenue. I do not mean to say that it would be fair to lay down the rule that because we began with a militia expenditure of one-thirteenth of the total revenue we should keep that up, but I do not think we should keep it up until we have reached the point at which we have created an effective and an efficient defensive force for Canada. Whether that will be $6,000,000 or more I cannot say, but should think it will not go very much beyond that sum. I do not think that the ratio between one and thirteen as to the revenue, will be increased in the expenditure on the militia. I hope that before we have reached a revenue of $100,000,000, one-thirteenth of which would be about $8,000,000, we shall have reached the maximum which will be required for our militia force.

I quote this because there is an evident attempt to misrepresent what I said. As is quite obvious to everybody, the amount of money to be spent upon the militia is the amount that is necessary to make the militia efficient and effective, whether the population is five millions or ten millions. According to the absurd proposal of this commission, if our population should reach fifty millions, and we established the rate at a dollar a head, a good deal more than it is, then of course we would have to spend fifty millions on the militia, whether we required it or not. General Lake shows how absurd the proposal is, on page 9 of his memorandum, in the following words :

The commissioners state that they 'have noticed that it has been held to be of serious importance that the expenditure of the militia in Canada should increase with the growth of the revenue,' and devote some space to arguing against that theory. They do not state where the view to which they refer is set forth, so that it is not possible to verify their statement.

It is more of importance, perhaps, to see why they have brought in this reference. It is in order, apparently, that they may propose, as a preferable arrangement, 'that the expenditure (on the militia) should be increased according to the growth of the population and be put on a per capita basis.' If this means anything, it must apparently mean that the requirements of the defence of the country do not affect the question. No matter how imminent or how great the danger may be, the expenditure is only to increase in the same ratio as the population—no matter if the danger decreases or disappears altogether, the expenditure is to go on increasing because the population does. Their reasoning may embody some economical doctrine, but it is hardly common sense. The only reasonable plan is to regard military expenditure as an insurance against national danger, the amount of that insurance being decided by the extent and imminence of the danger and by the degree to which the nation can afford, and is willing, to insure itself.

I had intended dealing in my statement in defence of the department against the outrageous, extraordinary and unjustifiable attack of this commission, with a number of other points mentioned by the commission, but time will not permit me to do so. I would like, however, to reproduce two tables which will be found at the end of General Lake's memorandum, Appendix D and Appendix E.

APPENDIX D.

TABLE to show establishments of organized Units of the Canadian Militia in 1895–6, 1903–04 and 1908–09, respectively.

Corps.	Establishment, 1895–6.		Establishment, 1903–4.		Establishment, 1908–09.		Remarks.
	Number of Squadrons, Batteries or Companies.	Total Numbers.	Number of Squadrons, Batteries or Companies.	Total Numbers.	Number of Squadrons, Batteries or Companies.	Total Numbers.	
Permanent Force. (Note 1.)—							
Royal Canadian Dragoons—Squadrons	2	132	2	109	2	200	
Royal Canadian Mounted Rifles—Squadrons	Nil.	.....	1	60	1	120	
Royal Canadian Artillery—							
Horse or Field Batteries	1½	173	2	258	2	315	
Heavy Batteries	Nil.	.....	Nil.	.....	1	165	Establishments provided for in the Estimates for 1908–9. (See Note 4).
Garrison Companies	2	171	2	225	4	629	
Royal Can. Engineers—Garrison Companies	Nil.	.....	Detachments....	132	2	300

Can. Army Medical Corps—Field Ambulances	Nil.	.....	8 F. Hos., 9 B.C.	705	18	1,460	
Corps of Signallers	Nil.	.....	Detachments....	7	Detachments....	88	
Totals	.....	35,835	.....	47,423	.....	57,718	
Number of horses	2,872		7,892		11,798		*Estimated.
Number of men trained (Note 2)	19,000		32,000		46,000*		

NOTE 1.—Authority was given by Parliament in 1905 to increase the establishment of the permanent corps up to a maximum of 5,000 men, as might be found necessary in order to provide for the garrisons of Halifax and Esquimalt, and to allow for organizing additional units for instructional purposes to keep pace with the growth of the Active Militia. Up to the present time only a total establishment of 3,311 all ranks has been authorized.

NOTE 2.—The permanent corps have been included in each case in the number of men trained.

NOTE 3.—All units of the Militia provided for in the authorized establishments for the financial year have been shown in each case. In each of the two earlier years, the formation of some units, though provided for, was not carried out in that year, and the same thing may possibly occur in the present year.

NOTE 4.—Of the difference in numbers between the establishments of the permanent force in 1903-4 and 1908-9, the assumption of responsibility for the defence of Halifax and Esquimalt accounts for 565 artillery, 150 engineers, 745 infantry and 150 departmental corps; total, 1,610.

APPENDIX E.

COMPARATIVE TABLE to show the Arrangement and Equipment of the Militia, also Cadet Corps and Rifle Associations, in the Years 1895-6, 1903-4 and 1908-09.

Subject.	1895-6.	1903-4.	1908-9.
Light field guns	80 9-pounder muzzle loading. 36 12-pr. breech loading (under order).	90 12-pounder breech loading 8 5″-Howitzer, B.L.	90 12-pr B.L. 12 15-pr. B.L. 36 18-pr. Quick Firing. 8 5″-Howitzer, B.L.
Heavy field guns	5 40-pr. Armstrong	17 40-pr. Armstrong (obsolete). 4 4·7″ Q.F.	16 4·7″ Q.F. 12 60-pr. Q.F. (for delivery in 1908).
Rifles and carbines	40,000 Sniders (obsolete) 5,000 Martini-Henry 2,000 Lee and Martini-Metford 42,000 Lee-Enfield (under order)	39,000 Lee-Enfield and Lee-Metford. 1,000 Martini-Metford	39,000 Lee-Enfield and Lee-Metford. 1,000 Martini-Metford. 42,000 Ross.
Maxim guns, ·303 calibre	15	18	20 and 8 Pompons.
Ammunition for field artillery	About 300 rounds per 9 or 40-pr. gun. 400 per 12-pr. gun (under order)	About 400 rounds per gun About 130 rounds per Howitzer	About 500 rounds per gun for all guns.
Rifle ammunition	About 200 pounds per Snider About 350 rounds per ·303″ rifle	About 350 rounds per rifle	Over 400 rounds per rifle.
Fortress armament (Breech loading guns only.)	8 7″ R.B.L. (obsolete) 8 12-pr. Q.F. (under order) 8 6-pr. Q.F. (under order)	1 6″ B.L. (Drill purposes) 2 6″ Howitzer (Drill purposes) 4 12-pr. Q.F. 8 6-pr. Q.F.	Halifax and Esquimalt are completely armed, Quebec partly so. It is inadvisable to give details of these.
Ammunition for fortress guns	About 250 rounds per 7″ gun. Complete to scale for smaller guns (under order) as above.	Practically complete for Q.F. guns above on Imperial scale.	Supply complete for above guns.
Camp equipment	Enough for perhaps 15,000 men	Enough for about 30,000 men	Enough for about 45,000 men.
Personal equipment of men	Knapsack, obsolete, only partly distributed.	Oliver equipment	Oliver equipment complete for all authorized units.
Harness and saddlery	Incomplete, some 30 years old	Practically complete	Complete for all authorized units.
Engineer equipment	None	In progress	Complete for 4 Field Cos.
Army Service Corps equipment	None	In progress for 8 companies	Complete for all existing units.
Medical equipment	Practically none	For bearer cos. and field hospitals, making good progress.	Field Ambulance completely equipped. Regimental medical equipment nearly complete.
Signalling equipment	Practically none	Commenced and some progress made.	Complete for all existing Sections.
Reserve transport (registered)	None	A commencement made	800 wagons, 1,600 horses.
Cadet corps	Few—no reliable record	104—Members about 5,000	152—Members about 8,000.
Rifle associations	42	93 Military, 257 civilian, 28,000 members.	130 Military, 371 Civilian, 38,000 members.

These tables give some idea of the present state of efficiency of the militia which has been branded by this commission as being less efficient than it was fifteen years ago. The objects of the militia are, as we know, three-fold, the maintenance of the civil power within our own borders, the repelling of any attack from without and the assisting when the parliament of Canada sees fit to undertake it, or whenever it may be necessary, of the mother country. The militia of Canada has performed great services for this country. It is a very old institution, and it has done its work well. One essential difference between the militia of to-day and of the time prior to 1895-1896 is that in the past on every occasion when an armed service was required in Canada, it was necessary that the imperial troops should take the initiative. We had not the departments necessary, our force was not a self-contained force; but to-day, the militia of Canada is in a position to place in the field a considerable number of men and to take the initiative itself and probably do so effectively until assistance could come, if it were necessary, from the mother country. Now, it seems to me that those of us who take an interest, a broader interest, in our future, and recognize the imperial obligation or duty, ought to feel proud that we are in that position and are no longer, as we were up to a very few years ago, absolutely dependent upon the mother country. It should be some comfort to those of us who think—though I do not believe there are many such within the sound of my voice—that this country should subscribe a sum of money for the maintenance of the British navy to know that, while we do not possess a fleet, we possess at least the nucleus of an army, with all the departments necessary and able materially to assist the mother country if it were necessary to do so. It is absolutely in our own power to say whether we shall do so or not, but it is a great thing to have the power. I would like to read a sentence or two which I have taken from the budget speech of Sir Alexander Galt when Finance Minister of Canada in June, 1866,—before confederation. These are the notable words to which he gave utterance and which are as applicable to-day as they were then:

> We must all feel that the security of the country is to be found in its own power, not in the forbearance of another or in the discharge of duty by another, but by its own ability to maintain our independence and safety.

These are sentiments which, I believe, every man in this committee, every man in this House, every man in this country, will subscribe to.

I shall not detain the committee further. I hope I have succeeded in answering some of the very unjust statements which have been made. I hope I have been able to satisfy the committee that the increase in expenditure is justifiable and that it is not due in the slightest respect to the reasons alleged by the commission—the change in the law in 1904 by which an advisory board, a militia council, was established. I hope I have been able to satisfy the committee that this country has something to show for money that is being expended. I hold that an inefficient militia is an undesirable thing; I would rather spend no money at all on the militia—I would rather wipe out the militia altogether—than have a militia that is a mere pretense and therefore absolutely worthless. You can have that by spending one or two millions, but you cannot by such an expenditure provide anything at all adequate for the services required for a country like this, and for a people occupying the responsible position which we occupy as Canadians, as people responsible for the enormous territory which we administer and as the most important member of the great British empire to which we are proud to belong. I am proud to feel and to know that the money which has been spent in the department has resulted in bringing about great efficiency; and I believe that a very small portion, if any, of the money has been improvidently spent. I invite the closest inspection—and we have had some of it already—into the expenditures that have taken place in that department—we welcome it. I consider that our system of purchasing is as good as any system in any government, and will compare favourably with the system of many large business establishments.

I thank the committee for their great patience. I would not have trespassed so long, but for the fact that the forbearance of hon. members has shown that they feel that I should be privileged at least to state my side of this case.

Mr. SPROULE. At this early hour in the morning, and very late stage of the session, it would be very much out of place for me to devote any length of time in criticism of the speech of the Minister of Militia and Defence (Sir Frederick Borden). But I will say this: though I have been in the House for over a quarter of a century I never saw at this stage of the session such an exhibition by any minister of the Crown, one at the head of a department whose expenditure is very heavy and increasing rapidly for years. The minister has devoted about two hours and a half, not to defending the expenditure, not to showing that it was wise and economical, that it was beneficial to the country, but simply attacking the Royal Commission which he himself helped to appoint, a commission that, I frankly confess, I always thought was composed of able men, eminent men, men of high aims and great ability. They did their work accord-

ing to their lights; they gave the benefit of their time to the country and to this House; and now the Minister of Militia who assisted by order in council to appoint these men as a royal commission has taken up two hours and a half to abuse and condemn them, and very little to defend the expenditure of his department. I have here in brief an account of some of the increases in the Militia department which, as it is in more condensed form than anything I could offer, may fairly be quoted in dealing with this subject. I have taken this from the Montreal 'Gazette' of some time ago:

In 1896 the cost of the Militia Department was $2,193,372, of which $1,000,000 was for arms and accoutrements. In 1906 this had grown to $5,664,192, an increase of 158 per cent. Of the latter amount only $1,299,875 was for arms, &c. The balance of $4,294,124 covered the same expenditures as the $1,193,372 spent in 1896, the expenditure for administration purposes having increased by 360 per cent.

Is the militia three times as efficient or three times as numerous as it was in 1896?

An idea of how this vast increase has been created may be gained from a comparison of the cost of the headquarters staff at Ottawa in the two years. This was the staff in 1896:

1 major-general commanding	$ 4,000
1 adjutant-general	3,200
1 quartermaster-general	3,200
1 inspector of artillery	2,300
1 assistant adjutant-general	1,800
1 A. D. C.	1,000
2 clerks of miltary stores	800
Total, 8 officials at	$16,300

Nowadays it is supposed to require, to do the same work, the following officials:

1 chief of general staff	$ 6,000
1 inspector-general	6,000
1 master-general of ordnance	4,000
1 quartermaster-general	4,000
1 adjutant-general	4,000
1 director-general of medical service	3,400
1 director of clothing and equipment	3,200
1 assistant director of operations	2,400
1 assistant adjutant-general for musketry	3,200
1 intelligence staff officer	2,165
1 director of transport and supplies	3,200
1 director of artillery	3,200
1 director of engineer services	3,200
1 assistant adjutant-general	2,800
1 assistant director intelligence	2,400
1 staff officer to inspector-general	1,200
1 intelligence staff officer	2,400
3 staff lieutenants	3,660
1 director operations and staff duties	3,200
1 medals board officer	2,600
1 assistant to A.A.G.M.	2,000
1 rifle factory inspector	2,800
23 officers at	$73,425

But this is not all. Attached to this small army of commanding officers there is another small army of staff clerks, about forty in number, apparently employed to do all the work except the deep thinking and public parades. Then, again, there has been an increase in the cost of the civil staff of the department amounting to about $10,000 per year. The total result is that the salaries paid in the department at Ottawa have increased in the period under review from $70,000 to $180,000.

Feathers come high.

The head quarters staff at Ottawa has grown from eight officials, costing $16,300 per year, to twenty-three officials costing $73,425. These are all the items I intend dealing with to-night but they are a fair sample of the increase of expenditure all along the line, and I am quite sure that the people of this country, especially the agricultural class, will not be inclined to congratulate the minister when they are properly informed of the rapid increase in our militia expenditure. I am not denying that in many respects the militia are very much better, but I am not prepared to admit that up to a few years ago we had practically no militia at all. We had some in 1885 when the Northwest rebellion was quelled, and in 1866 when the Fenian raid was repulsed and in 1871, and at various times before this heavy increase of expenditure we certainly had some kind of militia which we found very useful.

Sir FREDERICK BORDEN. I did not say that we had no militia or that it had not done good work. I said the militia had done good work always, but we had none of the departments or branches which go to make up an army and always relied on the Imperial troops and officers who happened to be in Canada at the time.

Mr. SPROULE. I understood the minister to say that we had simply a militia in name and nothing more.

Sir FREDERICK BORDEN. No, no.

Mr. SPROULE. Who was it did good service for the country then?

Sir FREDERICK BORDEN. I did not say that. My hon. friend is doing me an injustice.

Mr. SPROULE. I do not wish to do my hon. friend an injustice but that was my understanding of what he said.

Sir FREDERICK BORDEN. That was not what I intended saying.

Mr. SPROULE. I always thought that in practice our militia proved themselves efficient every time their services were called upon.

Sir FREDERICK BORDEN. So they did?

Mr. SPROULE. The expenditure has grown very rapidly and we are not getting full value for it. It is too late however in the session and the hour is too late to criticise in any detail, and we shall have to content ourselves with taking some other opportunity in the future to discuss our military expenditure and force at greater length. But let me say with regard to the

commission, that it comes with bad grace from a minister who helped to appoint them, to take up two and a half hours of our time in abusing these men after they have done their work so faithfully. The hon. gentleman has put the commission on trial and they have been quartered to the Queen's taste.

Experimental farms, $130,000.

Mr. SPROULE. As we shall have supplementary estimates on these various subjects, it might be understood that any member of this House who desires to discuss any of these questions may do so.

Mr. FISHER. I am quite willing.

Mr. SAM. HUGHES. I know that my hon. friend from Lambton (Mr. Armstrong) is anxious to speak on the same item.

THE DOMINION POWER AND DEVELOPMENT COMPANY.

Mr. FIELDING. Owing to an error on the part of one of the clerical staff, a Bill which had been practically rejected by the Private Bills Committee was sent back to the Senate as if it had been approved by the House. As it is entered in the records of the Senate, we shall have to pass a motion that the Senate be requested to return it. I beg to move therefore a message be sent to the Senate requesting them to return Bill (No. 173), letter H of the Senate, entitled an Act to incorporate the Dominion Power and Development Company.

Motion agreed to.

Mr. FIELDING moved the adjournment of the House.

Mr. SPROULE. What is the order of business for to-morrow ?

Mr. FIELDING. There are several Bills on the Order Paper—the Gold and Silver Marking Act, the bounty to South African volunteers, the Canada Shipping Act, and at a later stage we may take up the Election Bill and then Supply.

Motion agreed to and House adjourned at 1.05 a.m., Friday.

HOUSE OF COMMONS.

FRIDAY, July 10, 1908.

The SPEAKER took the Chair at Eleven o'clock.

AMENDMENT OF CHAPTER 38, 1907.

Hon. A. B. AYLESWORTH (Minister of Justice) moved for leave to introduce Bill (No. 204) to amend chapter 38 of the statutes of 1907. He said : The purpose of this Bill is to repeal one section of the statute referred to. That statute contained a number of provisions with regard to the deposit of mortgages as railway security. The retention of one provision, which was inserted in the Senate, was due to a misunderstanding between the gentleman who was interested in obtaining legislation, a legal practitioner in the city of Ottawa, and the Deputy Minister of Justice. The deputy minister assented to a number of sections, but not to this one ; but by a misunderstanding it was included among those that were passed by the Senate and concurred in by this House. As soon as the matter was noticed—in fact, within a day or so of prorogation—a letter was written to the gentleman interested in the legislation, asking him to inform his clients of the misunderstanding, and stating that it would seem to be necessary to reconsider the provision in question.

Mr. LANCASTER. What is the effect of the legislation ?

Mr. AYLESWORTH. It is difficult to state the effect of the section which is sought to be repealed without reference to the exact language of it. It relates to the registration of mortgage securities by railway companies, and the effect of that on the claims of creditors. When the Bill comes for discussion on the second reading or in committee, I shall be happy to give all the explanation in my power as to the exact nature of the provision.

Motion agreed to, and Bill read the first time.

PROHIBITION OF OPIUM.

Mr. LEMIEUX moved that the House go into committee to consider the following proposed resolution :

Resolved, that it is expedient to prohibit the importation, manufacture and sale of opium for other than medicinal purposes.

Motion agreed to, and House went into committee.

Mr. LEMIEUX. Mr. Chairman, this resolution speaks for itself. In moving it I——

Some hon. MEMBERS. Carried.

Resolution reported read the second time and agreed to.

Mr. R. L. BORDEN. I may say to my hon. friend that he is very much in the position of a certain practitioner, a friend of mine, who many years ago made a motion in court in a certain case. The court was so much in favour of the motion that they refused to hear him, and he complained most bitterly because he was not allowed to make his argument.

Mr. LEMIEUX moved for leave to introduce Bill (No. 205) to prohibit the importation, manufacture and sale of opium for other than medicinal purposes.

Motion agreed to, and Bill read the first time.

PURCHASE OF SEED OATS.

Mr. BLAIN. Before the orders of the day are called may I be permitted to direct the attention of the Minister of the Interior to a question on page 12747 of 'Hansard,' only a part of which was answered. He answered parts 1 and 2, but left parts 3, 4, 5 and 6 unanswered. Perhaps the hon. minister will give the matter his attention and have these parts of the question answered to-morrow.

JUDICIARY OF MANITOBA AND ONTARIO.

Mr. AYLESWORTH moved that the House go into committee to consider the following proposed resolution :

Resolved, that in the opinion of this House it is expedient to provide for the payment to one additional county court judge in the province of Manitoba, and two additional district court judges in the province of Ontario, each $2,500 per annum during the first three years of service, and after three years of service each $3,000 per annum.

Motion agreed to, and House went into committee.

Mr. R. L. BORDEN. I presume that this resolution is made necessary by provincial legislation in each case.

Mr. AYLESWORTH. What is proposed is two extra judges in district courts in the new portion of the province of Ontario and one extra county court judge in Manitoba. The districts in Ontario are the district of which Sudbury is the centre and another new district, in the territory of Rainy River. The Sudbury district was constituted by provincial statute a year ago. It was assented to in the provincial legislature a day or two before this House prorogued in April, 1907. It was then too late to legislate here in pursuance of that statute and the consequence has been that up to the present it has not been possible to appoint a judge for the new district of Sudbury, though the necessary legislation has now been on the provincial statute-book for some 15 months. The officers of the court, I understand, have been appointed and the court is in existence ready to do work except that there is no judge. The appointment of a judge is very urgently needed in that district. The court in the district of Rainy River is a new district court which has been established during the session of the Ontario legislature of the present year. The work of establishing the court, so far as the appointment of officials is concerned, has not gone so far in Rainy River as in Sudbury. I am not aware whether the sheriff and other officers have been appointed, but the growing needs of that portion of the province where settlement is proceeding and where the settlers are situated at very long distances from the nearest towns where courts can be held, made it absolutely necessary that these appointments should be provided for without further delay.

With regard to Manitoba there is a general statute under which the government of that province, when the appointment of another county court judge is needed, may so declare and in that way bring into force, automatically as it were, the statutory prerequisites for the establishment of the court. This county court judge is required in the northern part of the province, in the part which is at present, as I understand, filling up with settlers to a very considerable extent, and therefore, in the opinion of the provincial government, the establishment of a new court is required. It is simply with regard to these three cases that this provision is made and in each case there has been the necessary action by the provincial authorities.

Mr. GERVAIS. Might I say a few words with respect to the request which has been made to the government for years for an increase of salary to the circuit court judges of the city of Montreal. As we know, in Quebec there are but three circuit court judges, who have been appointed to sit for the district of Montreal, in the other twenty districts, the circuit court work is done by the superior court judges. They have been discharging their duty for many years ; they are hearing during that time over 20,000 cases per year ; they sit about every day in the year and they are receiving a paltry salary. I think it but fair to ask that they should now be granted the increase of salary which were granted two years ago to all the circuit court judges of the other provinces. They are but three, they are clever, painstaking learned men, assiduous in their work and I think I am safe in saying that all the people in Montreal, the bar of Montreal, everybody in the district would be highly pleased to have an increase of salary of about $1,000 given to each of these judges. They are Mr. Chief Justice Lebœuf, Mr. Justice Dorion and Mr. Justice Purcell. I hope that my remarks will be given due consideration and that some provision will be made during this session. The bar of Montreal have been petitioning for years that such an increase should be granted this year if possible. These judges deserve the increase of salary that has been granted to the circuit court judges in Ontario, and I do not know why they were left out when the general increase of salaries to judges was voted by this House.

Mr. AYLESWORTH. The question raised by the hon. gentleman is one to which a good deal of consideration has been given. Not long since a memorial on the subject was presented and I must concede that so far as my own views are concerned, I could not but recognize the justice of many of the representations with regard to the salaries of the circuit court in Montreal which were made in that memorial. The whole question of judicial salaries is, however, a very difficult one to deal with and a very awkward one to reopen. Judicial salaries were considered by this parliament only three years ago and a very considerable measure of increase given to nearly all of the judges throughout the Dominion. I cannot pretend that there are not some inequalities in those salaries and those who suffer from the inequalities think that there is lack of equity and lack of justice in the relative salaries as compared with the amount of work that falls on different courts or judges to do and press very strongly that recognition of their position should be had and some betterment of their salaries granted. Personally I am not willing so soon to open that troublesome question again. Inequalities, I am afraid, will always exist, even under the most careful revision that could possibly be made. We are, I think, and I suppose all lawyers think, not at present paying our judges enough, we are not getting throughout the country as good service as we could get if we paid better figures. I think that judicial service is just like any other service and that the cheaper you try to get it, the poorer the quality of the product. In that view I certainly should be better pleased if we could provide some considerable general increase to our judicial salaries. I am afraid, however, that that is not the sentiment of parliament and I doubt if it is the sentiment of the country. I am afraid the general view is that a lawyer is a lawyer and the cheaper you can get him, the better for your own pocket.

Mr. GERVAIS. My hon. friend the Minister of Justice should know that everybody is satisfied throughout Canada with the general increases of salary granted to the judges. There is no complaint on that score and we shall not want any more increases for twenty years to come, I think; but I would like to know from the minister whether he is aware of the fact that out of the judges who got increases of salary two years ago, the three circuit judges in the city of Montreal were omitted? There were only three judges in all Canada who got no increase of salary and these were the three circuit court judges of Montreal. I took some interest in their case and was told that it was through an oversight that no increase had been given them. That is why I call once more the attention of parliament to this omission and inequality of treatment.

Resolution reported read the second time and agreed to.

Mr. AYLESWORTH moved for leave to introduce Bill (No. 206) to amend the Judges' Act. He said: This Bill contains not only provisions embodying the terms of the resolution just passed but also a provision with regard to the chairman or assistant chairman of the Board of Railway Commissioners, where such official has been a judge of the Superior Court prior to his appointment. The effect of the amendment is to reduce from fifteen to twelve years the period of service which would entitle the chairman, in such a position as I have described, to the usual retiring allowance.

Motion agreed to, and Bill read the first time.

GOLD AND SILVER AND PLATED WARE.

Bill (No. 197) respecting the sale and marking of manufactures of gold and silver and gold and silver plated ware—Mr. Fisher—read the second time and House went into committee thereon.

On section 1,

Mr. KEMP. What are the changes in this Bill from the Act formerly passed but which never came into operation? It was to have come into operation in some seven or eight months but I doubt if it ever did. That Act was carefully thought out in committee, and I would like to know what the changes are.

Mr. FISHER. The Act to which my hon. friend refers was passed in 1906. The different interests were represented in the committee which considered that measure and they threshed out their different views, But before the Act came into force, the interests concerned found that some of its provisions would interfere with their trade and they asked the government to postpone its coming into force.

Mr. BRODER. Did it come into force by proclamation?

Mr. FISHER. No, automatically at a certain date. It was not as usual the date of the assent to the Act, but the date fixed was March 13 last. Shortly before that date, the wholesale dealers in jewellery, the retail dealers and the manufacturers met together to discuss how it would affect them and found it would act prejudicially. They made representations to the government a few weeks before the date fixed for its coming into force. The government did not see how it was possible to make the necessary amendments and put them into shape before March 13, so we brought down a short Bill simply repealing that Act, and told the interested parties that we would if possible this session bring in a new Act to meet their views. The chief difference was with regard to the amount of gold in what are called pure gold articles. The dispute was whether nine carats or ten should be required as the minimum. The old Act re-

quired ten and the English law requires nine. Therefore with a ten carat requirement, the importation of English goods was practically prohibited. Eventually the manufacturers, while not agreeing to the change to nine carats, said they would leave the decision with the government. The importers and dealers all wanted nine carats substituted for ten. Various minor amendments were also suggested and the question was threshed out between the officers of the Crown and a committee composed of representatives of the retailers, wholesalers and manufacturers. This committee drafted a new Bill, but it was found that, owing to their inexperience in drafting legislation their Bill was not in proper shape to present to parliament, and the Justice Department undertook to draft another.

Mr. KEMP. Is the change from ten to nine ?

Mr. FISHER. Yes. The other amendments are minor ones.

Mr. COCKSHUTT. Has the Bill been threshed out by the representatives of the various interests concerned and found satisfactory ?

Mr. FISHER. The accredited representatives of the retailers, wholesalers and manufacturers went into the whole matter and discussed it with the law officers of the Crown, and they have agreed on the provisions of this Bill, which has been well discussed in the Senate and meets their views.

Mr. COCKSHUTT. Does it come into immediate operation ?

Mr. FISHER. No, on the 1st of October next.

Mr. R. L. BORDEN. I would like to ask the Minister of Agriculture one question about the Bill. I have had a communication about it, in which a reference is made to section 9:

The original intention of the manufacturers was to have goods marked in such a way that the public could distinguish between spurious and reliable articles. To accomplish which it was proposed that gold jewellery when stamped should possess such marks, and only such marks, as would enable the consumer to determine, first, the maker; second, the period of time when made; third, the quality of the article made. Section 9 deals with this question, but absolutely fails in every particular. As we read the section, permission is given to stamp or apply either a trade mark only, or a quality mark only, or numbers not denoting quality only, and a trade mark combined with a dealer's initials only, or if the dealer prefers, all or any combination of said referred to marks, and the date mark is eliminated entirely.

I think the minister has a letter containing the same statement, that is from Mr. Ellis. The matter is a highly technical one, and I do not profess to understand it, but I thought it my duty to make these observations and to read this communication, in order to be sure that the matter has received the attention of the government, and that the minister is satisfied, if he is satisfied, with the present condition.

Mr. FISHER. I had the same communication from Mr. Ellis. While perhaps his views may be slightly different from the accredited representatives of the trade, we have looked into that matter, and the Senate went into the question carefully, and this section 9 seems to cover the consensus of opinion of the trade. As I understand it, Mr. Ellis' objection is to the removal of the necessity of the trade mark. But the Bill provides that the article must contain a trade mark registered in Canada, and that the trade mark contains the date. If the article is marked with a foreign trade mark, it must be registered, and the mark must be put on at the time of manufacture. But if there is no foreign trade mark put on, then it could be imported without that trade mark.

Mr. SPROULE. What is to indicate the day of the manufacture? If only the registration trade mark is given, that would give no indication to the public.

Mr. FISHER. If there is no trade mark on, the date of the manufacture would be in the record, but the importer would have to comply with the Act. If there are any trade marks, any special marks, they must be in accordance with the Act.

Mr. R. L. BORDEN. I think we are all agreed that the object of the Bill is to prevent the practice of fraud on the public, but at the same time, while securing that object, it is desirable to disturb as little as possible the trade of the country in this important branch. I assume that the government has taken this question into careful consideration, but I do not suppose that at this stage of the session we will be able to give the subject any elaborate discussion, even if we had the technical knowledge to be able to do so. I would like to know from the minister whether he is satisfied, and whether the officials of the government having that matter in hand, are satisfied, that this Bill does, to as great an extent as practicable, prevent fraud and imposition upon the public. Some cogent illustrations of that evil were brought to my attention last year by gentlemen who were engaged in the trade, particularly by Mr. McNaught, who thinks the Bill in its present form is calculated to do away with those evils. Is the government satisfied that this legislation will have that effect?

Mr. FISHER. I can say, practically yes, in regard to that. There could be greater protection, but I think it would be an interference with trade which would not be desirable. We must recognize the conditions,

and we must recognize the evidence of those who are engaged in it. The provisions of this Act seem to prevent any fraud, so far as that can be done with fair consideration for those engaged in the trade. It might be possible to invent greater restrictions, but I think it would be impracticable to enforce them. Mr. McNaught is urging upon us very strongly that this Bill should become law.

Mr. KEMP. I am not quite clear whether it is compulsory that the imported article should have a trade mark on it.

Mr. FISHER. It is not compulsory that it should have a trade mark, but if it has a trade mark, it must be a trade mark registered in Canada.

Mr. KEMP. Then it is compulsory that all articles made in Canada should have the name of the maker on them?

Mr. FISHER. No, it is not.

Mr. KEMP. It is voluntary whether a man puts it on or not?

Mr. FISHER. If he does put it on, it has to be in conformity with the Act.

Mr. COCKSHUTT. What is the least quality of gold that can be stamped as gold?

Mr. FISHER. Nine carats.

Mr. COCKSHUTT. That is less than half gold.

Mr. FISHER. The old Act was ten carats.

Mr. KEMP. I am a little anxious about the matter, although it is so late in the session that I realize that there is not much time to give it consideration. There are some things in this Bill under which it seemed to me the public will not be protected in the way we desired to protect them when the matter was first initiated in reference to the old Bill.

Mr. HENDERSON. As I understood the Bill anything that is not stamped or marked will certainly be regarded as spurious. The public has no guarantee whatever.

Mr. FISHER. That is it.

Mr. HENDERSON. An article may be eight karat, but because it has no stamp the public has assurance what the character of it is. It does seem to me that this is not a tremendous amount of protection to the public. I do not see any great advantage to be gained by it, but if I know that it is a matter that excites some considerable interest in the country and if the interests of those who are mostly concerned in providing an article for sale to the public that is reasonably good are protected I do not think we can take much exception to it. I fancy the public will have to take care of themselves in this matter as they have done before.

Mr. SPROULE. Will the public be protected against jewellers selling goods as gold, or pure gold, without being stamped, thereby deceiving the public and without any punishment provided for such deception? If that is permitted it seems to me that the Bill is of little use.

Mr. FISHER. The public will look for the mark, they will not find the mark and they will know the article is not genuine.

Mr. SPROULE. Suppose the article is stamped 'pure gold'?

Mr. FISHER. They could not do it under this Act.

Mr. SPROULE. They could do it outside of this Act and not be amenable to punishment?

Mr. FISHER. No they would be amenable under this Act.

Mr. SPROULE. What provision is there in the law to punish them provided that were done?

Mr. FISHER. This Act says that if an article bears any mark it must have applied to it the following marks and descriptions and amongst these is the number of carats.

Mr. ZIMMERMAN. The Act calls for stamps representing a certain quality of gold in the article, and if the stamp is not on it is prima facie evidence that the article is not gold. The principal change in this Bill is the difference between nine and ten carat gold. The former Bill prevented nine carat jewellery coming in from Great Britain. The change in this Bill is to conform with the English trade mark rather than with the American. It is a well understood fact that the English hall mark cuts down the quality of gold stamped on the article. The American Act says that while it is stamped ten carats it must contain at least nine and a half carats of gold, and that if the article is soldered it must contain not less than nine carats, Seventy-five per cent of the jewellery that came in from the United States stamped ten carat was really only nine carat. It would have been a great injury to the retail jewellery business in this country had they continued the ten carat mark for the simple reason that retailers have an immense business in those nine carat hall mark goods and they are excellent wearing articles. I have a letter from one of the largest wholesale and manufacturing jewellers in Canada who says:

> We think it would be in the interest of the trade if the Bill were put through in its present shape this session.

The wholesale dealers, the manufacturers and retailers have had over twenty meetings in Toronto over this Bill and practical-

ly the Bill, as presented to-day, is their own drafting.

Mr. KEMP. The drafting of the retailers.

Mr. ZIMMERMAN. No, the drafting of the wholesalers, manufacturers and retailers, with one exception. I understand there was one manufacturer who took exception to the nine carat gold. He wanted to see it ten carat but he stood at one side and said that he would leave it to the government.

On section 7—exceptions; certain articles of silver.

Mr. R. L. BORDEN. Why do you require the exemption of articles by the Acts of the Governor in Council?

Mr. FISHER. I think there will have to be a more lengthy description of these articles made by the regulations which will have to be made by experts. You could hardly do it in the Bill.

Bill reported, read the third time and passed.

MANITOBA GRAIN ACT AMENDMENT.

Bill (No. 188) to amend the Manitoba Grain Act.—Mr. Oliver—read the second time, and House went into committee thereon.

On section 2,

Mr. STAPLES. I would like an explanation of this legislation. It is one of the most important Bills of this session, affecting the interest of the farming community of the west, and I hope the committee will not rush it through without giving it the consideration to which it is entitled.

Mr. LAKE. I may say that certain proposed amendments to this Bill were laid before the members yesterday, and I have done my best to look into them. Two sets of amendments have been brought down and distributed among the members, the second set only yesterday. I understand that the minister has gone very thoroughly into this matter, and is pretty well posted in all the details. We want to know what the proposed amendments mean before passing the various clauses of the Bill.

Mr. OLIVER. In regard to the two sets of proposed amendments, they have been distributed for the information of the House, so that no one would be taken by surprise. The difference between the two sets of amendments proposed, with regard to section 31 of the Bill, is a difference not in principle but only in detail. I may say that the Bill which has come down from the Senate is based on the report of the Royal Grain Commission which was appointed in 1906, and which made a very exhaustive examination of the grain trade, both in the west and in the east and in Great Britain. That commission embodied its views in a report which has been before the House for a considerable time. Preparatory to the framing of the Bill which would embody the propositions of the commission, a conference was held under the auspices of the Minister of Trade and Commerce. That conference was attended by representatives of the railway interest, the milling interest, the grain dealing interest, the farming interest, as well as by a number of members of this House and the chairman of the Royal Grain Commission; so that there was a fair opportunity for all sides of the question to be presented. As a result of that conference it was decided not to follow in all particulars the views of the Royal Grain Commission. Some things which they recommended were not acted upon, and some of their recommendations were varied; but in the main the Bill as it was presented to the Senate and as it has come down to us is the embodiment of the views of that commission. When the report of the Royal Grain Commission got into the hands of the public generally, especially the farming community of the west, there was of course brought to bear upon it an interest that was not fully in evidence in the conference before the Minister of Trade and Commerce. In other words, the great farming interest of the country had an opportunity to discuss pro and con the merits of the question and to give their views directly as to what they wanted; and it is in accordance largely with the views that have been expressed directly by the grain-growing interest that the amendments which have been placed before the House in sheet form have been prepared. It was thought right that any amendments that were to be suggested should be printed and placed informally in the hands of members. We thought it would save time in discussion to have them distributed in convenient form.

Mr. STAPLES. This question, I understand, arose in the Committee on Agriculture three years ago, when the hon. member for Qu'Appelle (Mr. Lake) moved for a committee to thoroughly investigate the grain trade of the prairie provinces. The committee granted that request, and there was a committee formed. Parties were summoned from all over the western country, as well as millers from the east, and the matter was gone into very fully, with the result that a royal commission was appointed and given authority to go all over the country and even to Great Britain to ascertain what was the best way to protect our grain until it reached the foreign market. That grain commission cost the country something over $30,000, although it was anticipated that $10,000 would be sufficient; so that this legislation up to the present time has cost the country an enormous sum of money. The Grain Growers' Association, who represent the agricultural interest of the prairie pro-

vinces, have been very active in trying to guard that interest. When they got the report of the Royal Grain Commission, they asked for an interview with the government here. That was granted. When the delegates from that association arrived here, they were surrounded by other parties who were apparently very much interested in the grain trade. They came here, not expecting to be confronted with the bankers and the railway magnates of the country. I understand that they have had no easy task in trying to get the legislation they desire, and I regret that the legislation which is before the House to-day is far short of what they were looking for. For that reason I think the committee should go very carefully through every clause of this Bill and see if we cannot work out a measure satisfactory to the grain growers of the west. The Grain Growers' Association are so much interested in this that since that Bill has gone through the Senate, they sent their delegates back here. I understand that delegates from Saskatchewan and Manitoba are here in the interests of the grain producers of the prairie provinces. There have been many conferences to which we on this side of the House have not been asked. We did not know what legislation was going on or what provisions were being discussed, and in so far as regards what has taken place between the committee and the farmers' delegates, we are in the dark. Therefore we are entitled to all the time necessary to find out from the minister, as well as those who were with him in the conference and who were all western Liberals, how the matter really stands. I remember that when the delegates came down to meet the Minister of Trade and Commerce, we were not even given an invitation to go over to the meeting and hear the evidence. But knowing that the conference was taking place, we did go over, and were told we could not be admitted until the hon. member for Portage la Prairie (Mr. Crawford) was consulted, and he came out and graciously allowed us to go in. I hope that the interests of the farmers will be protected by this legislation.

Mr. CONMEE. The general Act, of which this is supposed to be an amendment, has certain regulations regarding the inspection of grain in the Manitoba division. It deals with other divisions, but I am more particularly interested in the Manitoba division. Under that Act and the amendment now proposed, all grain going east of Winnipeg for shipment to the terminal elevator or any point east of Winnipeg must be inspected as it leaves the car into the elevator. But that is not the practice at Winnipeg. Grain shipped to Winnipeg is not inspected as it goes into the car, but as it comes out. That grain is reinspected and a check inspection made at the terminal elevators at Port Arthur and Fort William before it enters these elevators. If it is not found up to the standard given at Winnipeg, the car is detained until it can be adjusted by the chief inspector. The law further provides that the certificate given at Winnipeg is final as between the buyer and seller. At Port Arthur or Fort William there is a better opportunity of inspecting the grain as it goes into the elevators, because the whole car load is under the eye of the inspector, and according to the rule it shall not be inspected at night. There is, therefore, a better opportunity for inspection there than at Winnipeg where the grain is not inspected in the elevator,, but samples taken from the cars after it comes out of the elevator. If the grade given at Winnipeg when inspected at the general elevator is not found to be the proper grade, the car is held up until adjusted. Under the law the certificate given at Winnipeg is final between the purchaser and the seller. This is for the purpose of facilitating grain transactions. But the grain may be discarded at Port Arthur or Fort William, because it is not up to the standard grade and may be held up. If the inspector can get a surrender of the certificate given at Winnipeg, the grain can be reinspected. But if that certificate has been negotiated and gone into other hands, it may not be secured, and in that case I am unable to find out what becomes of the grain. I am told that in some such cases, everybody gets tired. The elevator man, the inspector and the railway people, if they find some other grain will stand it, will dump it in with this other grain and somebody gets a less valuable grain. If the certificate is still in the hands of the party who got it, no doubt it could be surrendered, but frequently it changes hands and in some cases they do not get the certificate surrendered. That illustrates my point. The grain that is shipped to Winnipeg they take simply from the car, but do not give it any grade. They take it into the elevators and clean it and mix it, and then grade it after it is reloaded into the cars again. That same grain is inspected at Port Arthur going into the elevators there. The grade cannot be changed. Even if the inspector at Port Arthur or Fort William finds a difference, the chief inspector is the only one who can determine whether the grade should be changed or not. I am not finding fault with that, but it is not as speedy a way of dealing with the thing as might possibly be worked out. The result is that under this amendment it is proposed to hold cars at Winnipeg 24 hours in order that there may be a sample mark and the grain sold there without inspection. If that grain is not sold or dealt with at Winnipeg it may go to the terminal elevator without being graded, as I understand it. If it is ordered into the Winnipeg elevators and not inspected going in, it is inspected coming out after it has been treated. I am not speaking now of scoured grain. I am

speaking of the ordinary grades. Now, that privilege which is allowed to the elevators and dealers in Manitoba is taken away from the elevators and dealers of the province of Ontario, and I do not think that is fair. I will give notice of an amendment which will at least to some extent remedy the evil. If it is satisfactory to the grain or elevator people at Winnipeg to try to make an artificial condition where nature never intended it, I am willing to let them struggle with it and I do not want to interfere with their programme. If it is proper and right to take this grain and clean it and improve it to a point or two in grade in the city of Winnipeg, it is certainly right to do it at the terminal elevators. There may be some difference of opinion as to whether my amendment should be to Bill (ZZ) of the Senate or to the Grain Inspection Bill. known as Bill (CC) of the Senate. The Bill now before us is the Bill that imposes the conditions, and I think this is the proper place for the amendment. I beg to give notice of the following:

All grain not inspected and graded at Winnipeg, shipped to any terminal elevator in the Manitoba inspection division, if inspected before entering such elevator shall at the request of the owner, and upon the surrender of any certificate of inspection previously given, be reinspected and graded according to its merits, before, or at the time of shipment from such terminal elevator.

I believe this amendment would to some extent overcome the discrepancy I have pointed out. There is a considerable quantity of grain which goes through Winnipeg and which may be held there, and which may not enter the elevators at all, and as to that class of grain I simply ask that the same privilege which is extended to the Winnipeg elevators shall be extended to the terminal elevators at the head of the lakes.

Mr. OLIVER. The remarks of the hon. gentleman (Mr. Conmee) would apply entirely to Bill (CC) of the Senate, and not to the Bill we are now considering. There is a certain relationship between the two Bills, but the Bill now before the House has reference to the transportation of grain and the identity of the grain, whereas the other Bill is to establish grades, and to that Bill this amendment is pertinent. I do not think it is in order to accept notice of this as an amendment to the Bill (CC) of the Senate, which is not before the House, but that informality might be waived.

Mr. CONMEE. This is the Bill that imposes a condition on grain going east of Winnipeg—why that line should be drawn has always been a mystery to me—and, therefore, it seems to me that my amendment is relevant to this Bill. However, I do not care which Bill it goes in, if I am given an assurance that Bill (CC) of the Senate will be considered by the House. I was told that if a certain amendment to the Bill prevailed in the Senate the promoters intended to withdraw it. My position is that I want a fair consideration for this amendment, and if the House rejects it I will have to be content.

On section 3, (i) eastern transfer elevator.

Mr. OLIVER. This is in line with the suggestions of the Royal Grain Commission, and is a very important section. It provides that western grain, in transit to eastern points or to the sea-board, shall be subject to the same control, the same supervision and the same inspection in the transfer elevators as it has hitherto been in the terminal elevator at Fort William. It is a preliminary provision, looking to the preservation of the identity of the grade of the grain during its whole course of transportation, or from the collecting point to its ultimate destination, either the mill or the sea-board. While every provision was made in the original Act for the preservation of the grade of grain in terminal elevators, the transfer elevators were left free, and of course there was an opening for abuses, for which the Royal Grain Commission has suggested this as a remedy.

Mr. STAPLES. How many extra officials will be required to do all this work ?

Mr. OLIVER. I could form no idea how many would be required. The proposition certainly will involve the appointment of a considerable number of responsible officials, and will involve the payment of a considerable number of salaries. I do not wish to minimize the importance of this section, it is a radical departure from the Act as it stands to-day. The Royal Grain Commission believes this provision to be necessary in the interest of the grain growers of the west, to securing that their products shall reach the market in proper condition.

Mr. STAPLES. This is a very important section, and is drawn, I understand, to meet the views of the farmers of the west, and to protect the identity of their grain until it reaches the foreign market. As to whether the provision contained in this Bill is the best one for securing that result, we do not know. The Bill has been up in the Senate, and has been well considered there ; I believe it has also been before a caucus or committee of gentlemen sitting on the opposite side of the House, and it has come down to us in this form. So I suppose we shall have to hold them responsible for it.

Mr. OLIVER. The present section comes to us as it was framed by the wisdom of the Senate, and no one so far has suggested any amendment to it. It embodies the result of the investigations of the Royal Grain Commission, and the application of the wisdom of the Senate to its suggestions.

Mr. BLAIN. There have been several complaints from gentlemen sitting on this side of the House, that they were not invited to the meetings and the investigations that have been going on. Perhaps the minister would give us an explanation of that.

Mr. OLIVER. My hon. friend is under a wrong impression, there has been no special committee of the House.

Mr. BLAIN. I do not mean a special committee appointed by this House, but a committee composed of members on the government side of the House, with the minister occupying the chair. Perhaps the minister will explain why gentlemen on this side of the House were not invited ?

Mr. OLIVER. I do not know that there is any explanation to be offered. If any members of the House see fit to associate together for the purpose of considering a measure which is to come before the House, I do not see that their course requires any explanation.

Mr. HERRON. I am not very familiar with the grain growing business myself, but if I had had an opportunity of consulting with the delegates that have been here for the last week or ten days, I would have considerable more information than I have to-day. I have heard that there have been meetings from time to time of the western members on the government side of the House, but I only heard of them after they were all over each day. I regret that we have not been admitted to their councils, and have not consequently been able to get the views of the representatives of the western grain growers. I am as much interested in grain growing as any other member of this House, and I would like to see the interest of the grain growers well protected.

Mr. SCHAFFNER. This is not a party question, so far as I am concerned. I want the very best conditions possible to prevail as regards the grain growers of the west. Personally, I represent a district that grows more wheat than the district represented by any other member of this House. I think that the courtesy might have been extended to us of inviting us to take part in these meetings. It is another evidence of the hole and corner work done by certain members on the other side of the House. There was absolutely nothing in this question of a party nature. As we have not been able to confer with these representatives from Manitoba and the other western provinces that have been down here, we come to this discussion under great disadvantages. We should have had an opportunity of attending those meetings of which the Minister of the Interior was chairman. We knew that these meetings were going on, but we could only get in there, as it were, by pushing ourselves in. We are here, western members, trying to do our utmost in the interests of the farmers. We find that in the past we have not received justice, but that will come up a little later. However, I want to enter my protest. The Minister of the Interior may say that hon. members on this side of the House, if they had liked, could have met together and talked matters over. But, this is a little different. This is a matter which affects both sides of the House equally and I say that very small courtesy was extended to the members of the House. These meetings have been going on from day to day and we were not given the benefit of attending them. Because we did not have the opportunity of hearing what the wesern representatives had to say we are hampered in this discussion.

Mr. OLIVER. I do not think that my hon. friend's complaints are well founded. I do not think they have anything to do with the case.

Mr. SCHAFFNER. I think they have.

Mr. OLIVER. If my hon. friend has had consultations with his friends on the other side of the House with regard to matters which are not necessarily party questions, I do not see why he should deny to other people the same privilege.

Mr. SCHAFFNER. We had none with the representatives from the west.

Mr. OLIVER. With regard to this particular case, this Bill is before the House to-day exactly as it left the Senate. Nobody has suggested any interference with it. My hon. friend has had just as much opportunity to follow the discussion in the Senate as anybody else has had. He has had just as much opportunity to consider the provisions of the Bill as anybody else has had. If he is not able to give a reasoned judgment with regard to the question it is his fault and not the fault of any one else. As far as the suggestions which have been placed before the House in printed form are concerned, I will have to take the responsibility, together with those with whom I have consulted, but in so far as the Bill is concerned it is as it left the Senate, and so far as we have not attempted to make any change in it, my hon. friend is just as much responsible for it as any other member of the House. There is no change in the conditions whatever, and I think he is certainly undertaking to make a grievance when none exists.

Mr. LANCASTER. My hon. friend from Souris (Mr. Schaffner), as I understand it, complains that some hon. gentlemen in this House have been enabled to receive some information which would throw light on the matter, which is not a party question, which has been denied to himself.

Mr. OLIVER. No.

Mr. LANCASTER. That is the complaint that has been made by my hon. friend

from Souris. The people of the west have thought that this was a matter of sufficient importance to justify them in sending down special envoys to inform—the government and the members of the House supporting the government?—no, but to inform the whole House as to the scope of the measure and the provisions which they thought it should contain. My hon. friend from Souris is as much a member of the House as the hon. gentlemen opposite who were permitted to receive the information imparted by these representatives from the west. If the minister means to say that gentlemen on this side of the House can bring no intelligence to the discussion of the subject, we have nothing to say about that. He is entitled to his opinion.

Mr. OLIVER. That would not apply to the western members, only to some of the eastern members.

Mr. LANCASTER. But if he acknowledges that hon. gentlemen on this side of the House, coming from the west, possess as great an amount of intelligence as hon. gentlemen on the other side, I cannot see how he will say that the grievance of my hon. friend from Souris is not well founded. It is in the interest of the people that all possible information shall be obtained by the members of this House, whether from the government or anywhere else, because we are binding the people by the legislation that we make. I do not see how the hon. gentleman can justify the exclusion of some hon. members of the House from information which is possessed by others. because when a matter of this kind comes before the House to be discussed, and when hon. gentlemen on this side are called upon to discuss it, they are entitled to the same information as that which has been received by hon. gentlemen opposite, and I do not think that hon. members on this side have been properly treated in this respect.

Mr. OLIVER. My hon. friend speaks of the exclusion of hon. gentlemen on the other side of the House from sources of information. There has been no exclusion of any one on the part of any one from any source of information. As far as the intelligence of hon. gentlemen from the west is concerned, my hon. friend, in undertaking to speak for them, is casting a reflection upon them that I do not think he is justified in doing.

Mr. KEMP. I would like to ask the minister if this is the Bill which created so much interest in the Senate, in regard to which the Rt. Hon. Sir Richard Cartwright. representing the government, and Senator Davis, representing some one else——

Mr. OLIVER. No.

Mr. KEMP. May I inquire from the minister if he takes the same position in this House that Sir Richard Cartwright took in the Senate with respect to this Bill?

Mr. OLIVER. We are not dealing with that Bill at all. It has not come down yet.

Mr. LAKE. The two Bills are mixed up together in a way, and it is a very difficult matter to keep them separate. The conferences which I understand have been held have been in connection with both Bills, I presume, as we have amendments proposed to this Bill as sent down from the Senate. The hon. minister of the Interior speaks of this as a conference between party friends, and he says that hon. gentlemen on this side of the House may have their own meetings just the same as have hon. gentlemen on the other side. But I would point out that these conferences which have, I understand, taken place, have been on a different footing. I have been informed that not only have the members on that side been meeting together, which, of course, they had a perfect right to do, but that they have had before them the chief inspector, a paid official, to give evidence, and that they have also had before them, I presume on invitation, the representatives of the two great railways in the west, the Canadian Northern and the Canadian Pacific Railway. the two parties most interested in the conveyance of the grain and the representatives of the farmers. That being the case, it seems to me that it partook more or less of the nature of an official conference. However, the minister did not see fit to invite hon. gentlemen on this side of the House to that conference, and, of course, he takes the responsibility of that. I only express the same belief as that which has been expressed by an hon. gentleman on this side of the House already, and that is that the Bill has been treated from a purely party standpoint and not as a matter in regard to which both parties should do their utmost to agree upon some mutual understanding for the benefit of all concerned in the grain business of the west.

Mr. BURROWS. The hon. gentleman is under a misapprehension regarding what has taken place. As far as I understand. the representatives of the railway companies came here themselves. They were not asked to come here, and they were not asked to come to the meetings that the members on this side of the House had. At the same time representatives of the Grain Growers' Association also came here. They came of their own accord, they were not asked to attend our meetings, but they did attend them. It was quite open to hon. gentlemen on the other side of the House to have also met these gentlemen if they wanted to do so.

Mr. LAKE. We never heard of them until several days after these meetings had been held.

Mr. BURROWS. These gentlemen are all here. It is open to hon. gentlemen on the other side of the House to hold meetings and discuss the matter with them. I am sure that they would be very glad to place their views before hon. gentlemen. This is not a party question, but I am sorry to see that hon. gentlemen opposite are attempting to make it so.

Mr. STAPLES. Does the hon. gentleman mean to tell me that these gentlemen came to their meetings without an invitation, that they simply came and walked into the minister's room without being invited?

Mr. BURROWS. If the hon. gentleman would use his brain a little he would understand. I said that these gentlemen were not asked to come to Ottawa, that they came of their own accord, they came while this Bill was being discussed, and they had a right to come to any meetings that they could get into and we were glad to confer with them.

Mr. LANCASTER. Why did not the hon. gentleman send an invitation to hon. members on this side to attend those meetings and hear what was said by these gentlemen from the west?

Mr. OLIVER. I cannot give an answer to my hon. friend and I think my hon. friend and his friends are doing their best to give an answer that the country will accept. That is, that these gentlemen are prepared on any occasion to make any question a party question and to obstruct business when they think they can take a party advantage.

Mr. R. L. BORDEN. That is an absolutely unworthy statement of the Minister of the Interior. He is relapsing into his old mood; he had been improving lately but evidently the strain of the hot weather has upset him again.

Mr. LANCASTER. Midsummer madness.

Mr. R. L. BORDEN. What is the way to make this a party question? It is for the minister to take sources of information such as those which have been available and to call the members on his own side of the House together and to absolutely ignore gentlemen on this side of the House. That was the way to make it a party question. If he desired to have the advantage of the services of all the members of the House on this Bill, when these gentlemen from the west came here to express their views upon a subject as to which they had special knowledge, he would have called together all the members from the west whether they sat on this side of the House or on that side of the House if he did not intend to make this a party question. If he desired to make this Bill the best Bill possible in the interests of the country he would have called together the Liberal and the Conservative members from the west; if he did not desire to make this Bill the best Bill in the interests of the country but the best Bill in the interests of the Liberal party then he would do exactly what he has done. And when a respectful remonstrance is made in the House about it and when information is asked the Minister of the Interior flies into a passion and accuses hon. gentlemen on this side of obstructing. It is just what might have been expected from the minister when he is a little off his base.

At one o'clock the House took recess.

Committee resumed at three o'clock.

On section 5—sections 10 to 16 repealed.

Mr. OLIVER. These sections relate to the appointment of a weighmaster and the weighing of grain. They were contained in both the Grain Inspection Act and the Manitoba Grain Act, and it is thought better, in order to prevent confusion, to strike them out of the Manitoba Grain Act, of which this is an amendment, and leave them standing in the Grain Inspection Act.

On section 8—bond of licensee.

Mr. OLIVER. This relates to the bonds which are given by the operator of a terminal warehouse. It adds to the proviso of section 18, which reads: 'Provided that when any person procures a license for more than one elevator, no more than one bond may be given'—and then comes the amendment—'the amount of which shall not exceed the above maximum;' the maximum set out in the preceeding part of the section, which is $50,000.

On section 9,

Mr. OLIVER. I move that subclause 4 be struck out and the following be substituted:

No grain shall leave a public terminal point without being officially weighed unless the owner or his agent orders otherwise.

The difference between this amendment and the one in the Senate Bill is this: According to the latter all grain billed to any public terminal elevator within the Manitoba inspection division shall not leave that inspection division without being officially weighed. My amendment provides that if the owner orders to that effect, it need not be weighed, and the owner will not have to pay the weighing charges.

Mr. STAPLES. That would apply to dealers in grain particularly?

Mr. OLIVER. To anybody.

Mr. LAKE. Does this apply to grain placed in a terminal elevator?

Mr. OLIVER. It applies to grain that is passing through a terminal point and is not put into the elevator. The Senate Bill provides that such grain must be unloaded and weighed and then put back into the car again before it goes forward and a charge

is made against the grain. It was considered by the Senate sound public policy that grain passing east should have the advantage of being officially weighed where there were conveniences for weighing it. But on further consideration it was thought that if a man did not want to take that precaution and would rather save the expense, he could give an order to that effect and his grain would be sent forward without being weighed.

Mr. STAPLES. One of the objects of the amendment would be to hurry the grain along.

Mr. OLIVER. Precisely.

Mr. LAKE. The amendment in the Senate Bill speaks of grain billed to any public terminal elevator and the hon. minister's amendment speaks of a public terminal point.

Mr. SPROULE. What distinction between a terminal point and a terminal elevator?

Mr. CRAWFORD. The grain might be billed to a public terminal elevator and ordered forward to a further point. According to this clause, if billed to a terminal elevator, it would have to be weighed, although an order was subsequently given to send it on to a further point.

Mr. STAPLES. If it is put into an elevator, it will certainly be weighed; but if it was ordered on, it is optional with the owner whether he has it weighed or not.

Mr. OLIVER. Yes.

Mr. STAPLES. I do not see any objection provided the shipper thoroughly understands the amendment.

Mr. WILLIAM WRIGHT. What does it cost to remove the grain from the car and weigh it ?

Mr. OLIVER. It costs three-quarters of a cent a bushel to officially weigh the grain which is a considerable tax.

Amendment agreed to.

On section 10—subsection 11,

Every public terminal warehouseman in the Manitoba inspection division shall insure against fire with companies satisfactory to the commissioners, all grain received, handled or stored by him.

Mr. OLIVER. I move that the following words be inserted ; Provided always that this subsection shall not apply to eastern transfer warehousemen. The reason for making the exception in the case of the transfer elevator, is that when the grain reaches the eastern transfer elevator it is under insurance by the owner, and there is not the same necessity of making a provision for insurance that exists in the western part. So far as the Fort William terminal to which point the farmer sends his grain, he is not in a position to take special means to insure. Therefore we require the warehouseman shall insure everything in his warehouse. But we except the eastern division, because the warehouse man puts on the insurance, and the dealer makes his own insurance.

Mr. STAPLES. Therefore the owner is fully protected all the way through.

Mr. OLIVER. He protects himself after he leaves Fort William. He is protected to Fort William, and after he leaves Fort William he must protect himself, so far as insurance is concerned.

Mr. SCHAFFNER. It has been suggested that no grain shall leave the point after being inspected unless the owner or his agent gives an order by writing, so there shall be something to show.

Mr. CONMEE. He might do so by telegraph.

Mr. OLIVER. It might be held that the telegram was not a sufficient order, though it would be sufficient.

Mr. SCHAFFNER. It is a better order than exists now.

Mr. CONMEE. The elevator man must have some evidence that the order is given, he will look out for himself.

Mr. CRAWFORD. It could be done by wire or telephone.

Mr. OLIVER. I move to add this subsection :

Provided always that this subsection shall not apply to eastern transfer warehousemen.

Mr. CONMEE. I want to refer to subsection 8 of section 9 which reads:

In no case, whether in a public terminal elevator in the Manitoba inspection division or in an eastern transfer elevator, shall grain of different grades be mixed together while in store.

I want to point out what may possibly take place. The machinery of that clause simply provides that while they may mix the grades at Winnipeg and St. Boniface, by legislation, that same action is prohibited at the terminal or transfer elevators. That comes back to the point of the motion I suggested this morning. I think it is decidedly unfair. Whatever treatment or arrangement there is for handling the grain at Winnipeg should apply to other elevators. I do not see why that should not include all elevators in the Manitoba inspection division. If it is intended to include the terminal elevators of that division, and the Port Arthur and Fort William elevators are in the Manitoba division, and to include the eastern transfer elevators as well, I wish to ask the minister if he does not think that the wording of that section should be changed so as to include the Winnipeg elevators.

Mr. LAKE. Why is there a distinction made between the cleaning and scouring

elevator at Port Arthur and Fort William, and that at Winnipeg. There seems to be a distinction made with regard to the grading.

Mr. OLIVER. The reason for the difference my hon. friend speaks of is that for the purposes of trade it is found necessary to handle the grain on grade instead of on sample. Grain is bought on sample, but it is sold on grade; it is bought from the farmer on sample, but it reaches the consumer on grade. There is a point of change between the conditions of handling by sample and handling by grade. The consensus of opinion is that that point of change seems conveniently located at Winnipeg. There must be a change somewhere, and the consensus of opinion is that the change should occur at one point, and not at interlocking points. The opinion is that Winnipeg is the point at which it is best for everybody that the change from sample to grade should take place. Generally speaking, the grain comes together at a certain point, and there it is inspected. Therefore, as the conditions between the purchasing and handling on sample and the purchasing and handling on grade, change at Winnipeg, it is thought advisable that the provisions which are intended to preserve the identity of the grain from Winnipeg east, should not apply to Winnipeg or points west, Winnipeg being the point of the assemblage of the grade and the point of inspection.

Mr. CONMEE. I cannot agree with the view of the minister on that point.

Mr. OLIVER. I am not stating this as my view, I am simply stating the fact that this is the consensus of opinion. It is simply a statement of the facts.

Mr. CONMEE. I am glad that the minister has an open mind on the subject. The fact is that most of the grain now shipped from the west is not inspected at Winnipeg at all. Another large quantity comes into the Winnipeg yards, and under this Bill the owner may hold it for twenty-four hours to be sold on sample, if he wishes. If he does not order it into the elevators or on to some siding for handling, it goes on. That grain is not in some cases graded at Winnipeg, grain is not in all cases inspected at Winnipeg except that which comes from the elevator. This clause prepares the way for selling on sample, and change of conditions, and change of ownership at Winnipeg. I venture to say that perhaps 90 per cent of the grain changes its ownership before it reaches Winnipeg. When it comes to Winnipeg it is not the grain of the farmer, except in very few instances; it is the grain of the grain dealer, and the grain dealers through this Bill say: We want the privilege of taking it into the elevator and advancing its grade, advancing it from No. 2 Northern to No. 1. We want the authority of mixing it, of grading it, but we will not allow anybody else to do so. We stipulate by law that they shall not do it at the public, general or transfer elevators or in the Dominion of Canada. It is, I submit, unfair to pass such legislation.

Mr. TURRIFF. My hon. friend would give the impression that the bulk of the wheat shipped from points west of Winnipeg goes into elevators in Winnipeg before it is graded. I am satisfied that not more that one per cent is thus treated ; the great bulk is shipped from the different stations west of Winnipeg, inspected and graded on its way through Winnipeg and goes into the terminal elevator at Port Arthur.

Mr. CONMEE. Is not much of the wheat placed in elevators in Winnipeg without inspection and sent out of these elevators on grade ?

Mr. TURRIFF. Only a very small proportion. Most of it goes from the elevator at the country point through to the terminal elevator.

Mr. CONMEE. My honoured friend is mistaken, even if he is from the west. I consulted Inspector Horn and his statement was that no grain was inspected before going into the Winnipeg elevators so the Winnipeg inspection of that grain is inspection after the grain has been cleaned. I I offer no objections to the sample market or anything else at Winnipeg but I do say : Please take your hand off our throat, we do not want to be treated differently from Winnipeg.

Mr. BURROWS. This amendment is inserted at the instance of the farmers and for their benefit.

Mr. CONMEE. I did not say who had it put in.

Mr. BURROWS. You said it was done in the interest of the grain men. It is true that grain is put into elevators in Winnipeg without inspection, cleaned, possibly mixed to some extent, and then graded out of the elevator. The object of this amendment, as I understand, is that the farmer shall have the privilege of detaining his car in Winnipeg for twenty-four hours, in order that he may, if possible, sell it on sample, on its intrinsic merits, to get any possible advantage from its being above the average of its grade. I do not think it will be satisfactory to have grain inspection at Port Arthur but that is a matter for the House to decide.

Mr. LAKE. Do the cleaning elevators clean any grain in Winnipeg, except what belongs to the elevator companies ?

Mr. BURROWS. I think not. We want to give the farmer the privilege of selling on sample in Winnipeg before the grain is inspected.

Mr. CONMEE. I was not discussing the detention of the car but subsection 8 which

prohibits the mixing of grain in a public terminal elevator, or an eastern transfer elevator. If it is good legislation for the terminal elevators and the eastern transfer elevators, it should be good legislation at Winnipeg. I would like someone to show me how the farmer is to be benefited by this. It is amazing to me how many men from Winnipeg and its vicinity have a deep affection for the farmer; all this legislation is for his benefit

Mr. OLIVER. The farmer has sent them here.

Mr. CONMEE. Then all I can say is the Lord help the farmer. This is clearly a provision not for the benefit of the farmer but for the benefit of the gentleman who manipulate matters in the grain business in Winnipeg, because it is a provision which is prohibitory against everybody else. I submit that the section should be altered to include all elevators, or at least the Winnipeg and St. Boniface elevators, the terminal elevators and the eastern transfer elevators.

Mr. STAPLES. I would like to ask the minister what were the views of the delegation of the Grain Growers' Association upon that particular point. He was at the conference with them and it is quite obvious that the hon. member for Rainy River has not been.

Mr. CONMEE. I beg the hon. gentleman's pardon; I talked it over with them.

Mr. STAPLES. No doubt you did, as I can see by the fight that you are putting up. I rather appreciate the position you are taking now and I have some sympathy with your argument. Whether it would be wise to adopt it or not I am not prepared to say, but it does seem there is a discrimination against the elevators at Port Arthur. I can understand that grain going down by way of the back lane, by way of Morris, coming from county elevators, loading platforms and farmers farms, would not be treated the same as other grain passing through Winnipeg, and the question occurs as to why the shippers of that grain should not have the same privilege at Port Arthur and Fort William as the farmers whose grain goes through the city of Winnipeg. There is some force in the hon. gentleman's argument and I would like an explanation along that line. Whether it would be wise to extend the privilege as far east as Fort William and Port Arthur I am not prepared to say at the present time, not having had the opportunity of considering the question in the same way that the hon. gentlemen opposite have had. What are the views of Mr. McKenzie and Mr. Langley upon that point?

Mr. OLIVER. This subsection that has been specially amended is not proposed to be amended. It is as it comes from the Senate, and as far as I am aware there has been no suggestion on the part of the hon. gentlemen whom my hon. friend (Mr. Staples) has mentioned that there should be any change.

Mr. STAPLES. Is there any objection to the argument that the hon. member for Rainy River has set up?

Mr. OLIVER. I cannot say that, but there is no objection to the wording of the subsection as it appears in the Bill other than the objection that my hon. friend from Rainy River makes. There is no doubt that with respect to grain that does not pass through Winnipeg there has to be provision made for the inspection of that grain at Fort William, and there is such a provision, but, unfortunately, my hon. friend thinks the provision for the inspection of that grain at Fort William does not permit of the mixing process being carried on at Fort William, while, as he says, there is a possibility of the mixing process being carried on at Winnipeg, or at any other point farther west. That is true, and, if it is a grievance, that is his grievance. I am not stating any personal opinion on this subject. I am merely stating the facts. Every one knows that every farmer in the west is fully imbued with the idea that he loses, in some way or another, by the improper mixing of grain. He has that idea, whether it is correct or not, and the very purpose of the appointment of this royal commission was to go into the question of the handling of the grain after it left the farmer's wagon, so that some means might be provided that would ensure that the grain went forward in as nearly its identical condition to the ultimate market as possible. That being the case, I am satisfied that the farming interests of the west would look not only doubtfully, but with the very strongest objection, at the proposal that mixing should be recognized at any elevator beyond the point of first inspection, that is at Winnipeg. My hon. friend has said that he would make provision that there might be mixing at Fort William, at Winnipeg and at eastern elevators. I can only say that he is in the same position as the celebrated juryman who remarked, after the verdict had been rendered, that he never sat with eleven such obstinate men. My hon. friend is very definite in his opinion. But the only difficulty is that he holds it, as far as I am aware, absolutely alone, as far as the grain producing element is concerned. He may be right and the rest may be wrong. But I am bound to represent the view of the majority in this case, and the view of the majority is distinctly against any liberty of mixing grain at any point farther east than Winnipeg.

Mr. STAPLES. Has the minister any evidence as to whether or not mixing takes place in these Winnipeg elevators?

Mr. OLIVER. I think it is admitted. I do not think there is any question about it.

Mr. STAPLES. If I may be permitted to mention what another gentleman who is not here said, one of the delegates from the west stated his view to be that mixing should be prevented in Winnipeg just as much as it is attempted to be prevented at Port Arthur and Fort William.

Mr. SCHAFFNER. Why not?

Mr. OLIVER. That is another question that I am not prepared to answer at the moment. Let us deal with one thing at a time. I merely point that out to show how far in the minority my hon. friend (Mr. Conmee) is in declaring that mixing ought to be permitted not only at Winnipeg but at Port Arthur and points east.

Mr. STAPLES. If the farmers object to mixing in any case why should they be allowed to mix at Winnipeg, or if they are permitted to mix at Winnipeg, I do not see why they should not be allowed to mix anywhere. There should be the same objection to mixing at Winnipeg as at the terminal and transfer elevators.

Mr. CONMEE. I am not in as hopeless a minority as the minister seems to think. Who were the jury? The jury were the grain buyers at Winnipeg and some of the railway men who are not interested in this matter. There were a couple of farmer delegates here, and I submit that these delegates were of my opinion. I submitted this resolution to one of them and he approved of it—I forget the gentleman's name; he thought it was perfectly correct.

Mr. STAPLES. Was that one of the delegates from Manitoba or Saskatchewan?

Mr. CONMEE. He was from Saskatchewan. I submitted it to another this afternoon and he said: That would mean mixing at the terminal elevators? I said: Yes, that would mean mixing of the regular grades, but it would not mean the mixing of scoured wheat or bleached wheat. He said: I am not in favour of mixing at all. I said: Do you not know that mixing goes on in Winnipeg He said: No. I said: Are you in favour of it at Winnipeg? He said: No. So I claim that the farmers' representatives are with me in this matter. If it is proper to do it at Winnipeg, then it is proper to do it at other places; just do what they do at Winnipeg. That is all I am asking. I am not asking more, and I am not going to be satisfied with less.

Mr. CRAWFORD. The minister has very clearly set out the position of the farmers with regard to mixing. They are under the impression that they are losing by the mixing of grain in the elevators. This provision is placed in the Bill for the purpose of getting away from that condition as far as possible. The farmers expect to extend the same supervision all through the west, and they ask that the prohibition against mixing of grain at Fort William be extended to Winnipeg. The western farmers believe that they or the country are going to own all the elevators in the country and they wish to provide conditions whereby the grain can be sent forward with its particular grade and identity maintained until it reaches the miller. That is the object of the farmer, and he expects to work that out in the future. The great bulk of the grain is inspected at Winnipeg, and once that grain is inspected there should be no interference with it, and the grain should carry its inspection certificate clear through until it reaches the miller. If this amendment be adopted the existing abuses will continue. There may be a little mixing done at Winnipeg, but the great bulk of the grain is sent through in carloads to Fort William. Not five per cent of the wheat of the west that passes through Winnipeg goes into the Winnipeg elevators.

Mr. CONMEE. The hon. gentleman stated that nearly all the grain was graded and inspected at Winnipeg and if that is true it is not graded until it comes out of the elevator.

Mr. STAPLES. Why not inspect it in the elevators; would not that relieve the situation?

Mr. CONMEE. That would relieve the situation. The grain at Winnipeg being inspected out of the elevator it means they have had an opportunity of treating it and mixing it if they want to. I do not believe that any intelligent farmer will believe that my proposal would be detremental to him. If the member for Lisgar (Mr. Greenway) were here I believe he would endorse my statement that the farmer can keep the identity of his grain and that by mixing the better grades with some of the other grades he can make a car of grain worth $100 more to him. In 90 per cent of the cases the farmer parts with his grain before it reaches Winnipeg. Who gets the benefit of the raising of the grade. By this process you improve the wheat by taking the dirt and small grain out of it and you enhance its value and it is the grain dealer who gets the benefit of that. Whether grain is inspected at Winnipeg or west of Winnipeg it is all reinspected at Port Arthur and Fort William. I agree that you should not change the grade that is given at Winnipeg but Mr. Horne is chief inspector and if there is a difference of opinion he decides. Every day at Port Arthur and Fort William it occurs that they will not grade wheat as it is graded at Winnipeg and the cars are held up until the matter is settled between the inspectors. Unless a certificate of the Winnipeg inspection is surrendered there appears to be no

adequate remedy in the law and it is difficult to determine just what becomes of the grain under those circumstances. There is an inspection at the terminal elevator in every case and that is the only reliable inspection. If your inspection at Winnipeg was reliable why do you inspect it over again at Port Arthur and Fort William. The fact is that the terminal elevator is the only proper place for inspection. My position is that if this mixing is permitted at Winnipeg you should not prevent us from doing the same thing at the terminal elevators. Just prevent it at Winnipeg and you will see how soon there will be a delegation down here wanting you to change the law.

Mr. SCHAFFNER. It is my opinion that we should not have any mixing at all and with that end in view I move to amend the clause so as to make it read :

In no case, whether in a public or private elevator in the Manitoba inspection or in an eastern transfer elevator, shall grain of different grades be mixed together while in store.

I desire by this amendment to prevent this mixing in Winnipeg.

Mr. LAKE. If this amendment prevents the mixing of different grains at Winnipeg I would be in support of it. If a farmer wants to have his grain properly cleaned before inspection he has to sell it to the owner of one of these mixing elevators in Winnipeg which are in private hands. Of course he has the alternative of sending it to an elevator at Fort William but in that case it has to be inspected before it is cleaned.

Mr. CONMEE. And there is no reinspection.

Mr. LAKE. And there is no reinspection after it is cleaned. There are many cases in which the farmer would wish to have his grain properly cleaned and improved before it is inspected but this Bill would compel him to sell it before it is cleaned and therefore it discriminates against the farmer and in favour of the buyer. We have heard something about this all being in the farmer's interest, that the grain should be capable of being cleaned at Winnipeg. That is not so. The grain has to have passed out of the farmer's hands before it goes into the cleaning elevator. For my part I concur in the view of the minister that the great concensus of public opinion in the west is that the wheat should be kept intact after it leaves the farmer's hands and should be inspected and graded just as it is. I certainly do not approve of the mixing that takes place at Winnipeg, and in order to treat all alike and to have no discrimination against any one, I think that all the grain should be inspected and graded before it gets to the mixing elevator either at Winnipeg or at Port Arthur.

Mr. CONMEE.

Mr. CASH. We have to handle this subject pretty carefully, for this reason. I know that the farmers of the west very generally want an order point at Winnipeg ; but if you pass such an amendment as this, you are going to do away with the possibility of an order point. There is no doubt that five-sixths of the grain of the Northwest is mixed in elevators. The elevators have not the capacity necessary for maintaining the identity of any man's grain. There is no doubt also that the grain is inspected in Winnipeg in carload lots. The hon. member for Rainy River (Mr. Conmee) has the idea that the grain is put in an elevator to be inspected, whereas any western man knows that it is inspected while in the car. The samples are taken from the car and inspected, and the grain passes on to Fort William. I do not know what percentage of that grain is sold in Winnipeg or passes through the elevator there, but a very small per cent. It is unfortunate that the special privilege should be accorded to elevator men in Winnipeg to buy grain and mix it, whereas the same privilege is not accorded at Port Arthur or Fort William. As I understand this business—and I have been at all the conferences except one—there is an elevator man at Port Arthur who makes a specialty of cleaning, drying and scouring grain. The grain is inspected in the elevator and it is inspected out again. The inspector at Winnipeg inspects that grain ; and when it goes into the elevator at Port Arthur it is mixed, so that its identity is not preserved, except so far as it is No. 1 scoured it would go into a bin of No. 1 scoured, and it is inspected out as No 1 scoured, and is sold as that particular grade. Therefore I think it would be most unfortunate to allow the mixing of grain in this elevator. I know that the owner of that elevator thinks that when he scours the grain it is bettter than it was before—better than No. 1 hard. He also thinks that No. 1 damp is better after he has dried it than the other grain which was not damp at all. If that is his opinion, and he mixes the grain, it will have a very unfortunate effect. The main object of the farmers in asking for this legislation is to prevent the mixing of grades and also to have an order point in Winnipeg ; so that if their grain goes above No. 2, though it will not grade No. 1, or if it grades between No. 2 and No. 3, they will get the benefit of the increased value of their grain ; and the only way they can get that is by having an order point at Winnipeg where the grain can be sold on a sample. The buyer in Winnipeg will have the same privilege as the miller from Ontario or the old country of buying that grain. If a dealer buys it, he may mix it in the Winnipeg elevator, because it has not been graded. The farmer is then more likely to get the value of his grain. After the grain is once inspected, no more mixing should be allowed. If you

are going to have an inspection at Fort William, you will require the same force of men there as you have at Winnipeg; it would require a duplication of the entire force. It seems to me that you should have one point for inspection, I do not care whether you make it at Winnipeg or at Fort William.

Mr. LAKE. The hon. gentleman's argument in regard to a sample market at Winnipeg is quite correct after you get to the 15th December; but up to that time the farmer is at his disadvantage as compared with the private grain dealer, that he cannot have his grain mixed and cleaned before inspection, while the private grain dealer can do so in the Winnipeg elevator.

Mr. BURROWS. Because he has not an elevator.

Mr. LAKE. Because the farmer has not an elevator; that is the reason. Now, we have been told that possibly 5 per cent of the grain which passes through Winnipeg goes into the Winnipeg elevators; that is to say, the grain dealers mix the grain together and form a grade which is just as close as possible to the line between the different grades and themselves reap the benefit of that mixing, while the farmer cannot do so. I hold that it is better not to allow any mixing at all. All the grain when it arrives at Winnipeg should be inspected and graded. I am strongly in favour of preventing the mixing of grain at Winnipeg, more especially as we do not permit that to be done at Port Arthur, and in this way are discriminating against the farmer who have to use elevators at Port Arthur and Fort William.

Mr. CONMEE. I would be in favour of grading the grain into its proper class on its merits as they do in Minnesota, but I find I am in a minority. But the Winnipeg elevators have the same machinery as Mr. King has and so have nearly all the elevators at Fort William and Port Arthur. There is no necessity for singling out Mr. King's elevators, because the others have the same machinery, whether they use it to the same extent or not. At Winnipeg they have the facilities for doing everything Mr. King can do at Port Arthur. I have an amendment here which I would like to read because perhaps hon. gentlemen who are supporting the other amendment first moved might possibly prefer this one. If any one will look at the first section of the proposed amendment, it will be seen that it is proposed to change the interpretation clause. In the old Act——

Mr. STAPLES. What does the hon. gentleman mean by the old Act.

Mr. CONMEE. I mean the present law the Manitoba Grain Inspection Act, chapter 83 which we are now amending. The interpretation of clause 8 of that Act provides:

Public terminal elevator includes every elevator located at any point declared by the minister to be a terminal and doing business for compensation, in which grain is stored in bulk or the grain of different owners is mixed together or in which grain is stored in such a manner that the identity of the different lots or parcels cannot be accurately preserved.

A terminal elevator, in the provisions of this Act relating to terminal elevators and warehouses includes a warehouse.

That is changed in the proposed amendment and the reason is obvious. A man might say, mine is not a public elevator, I am handling only my own grain and not grain for compensation, and I have the right to mix when I choose. The minister's amendment reads:

'Public terminal elevator' includes every elevator located at any point declared by the minister to be a terminal, and 'terminal elevator' in the provisions of this Act relating to terminal elevators and warehouses, includes a warehouse.

This takes some ambiguity out of the old section. There was a doubt as to whether the minister could declare an elevator a public elevator, the owner of which would divide it into two, at Winnipeg or elsewhere, and say this half is public and the other half private, and in the private portion I can do as much mixing as I like. The gentlemen controlling elevators at Winnipeg are not subject to the Act. They are not public terminal elevators and are not under the regulations to which the public terminal elevators everywhere else are subject. They may be private elevators or elevators of any other kind, they do not come under the operation of this Act. I propose this amendment which I think will meet the objections of some hon. gentlemen and be perfectly fair:

Provided that all elevators at Winnipeg and St. Boniface in which grain is stored, cleaned or mixed and from which grain is shipped east of the said ports shall be deemed public terminal elevators.

If that be adopted all these Winnipeg elevators that do that kind of business will be on the same footing as other terminals as to the mixing and other conditions. In my opinion mixing is the proper thing. If you clean the grain, you enhance its value. You get a better grain and it realizes more money. The reason the farmers cannot do it is because they have not the machinery. But it is unfair to discriminate against that class of farmers, whose grain is not inspected at Winnipeg, but goes to the terminal elevators for treatment. They ought to have the same privileges that they have in Winnipeg.

Mr. SCHAFFNER. I beg to withdraw my motion in favour of that of my hon. friend.

Mr. OLIVER. I cannot accept the amendment. In the first place it is not necessary because at any point declared a terminal by the minister, all elevators are subject to the control of the Act. It is quite competent for the minister to bring into operation all the provisions with regard to the Winnipeg elevators. Therefore this legislation is not necessary. The only difference is that my hon. friend proposes that wherever a terminal point is declared all the elevators shall be public elevators. There is no difference in the authority of the minister to declare any point a terminal.

Mr. STAPLES. This parliament should decide and not leave it to the minister.

Mr. OLIVER. If my hon. friend (Mr. Staples) is correct, then the farmers and everybody interested in the appointment of the Royal Grain Commission were under a mistake. He has argued for the mixing of grain in transit. It may be that he is right and all the rest wrong, but he is on one side and all the rest on the other side. The change he suggests appears to be a dangerous one. There must be mixing of grain in the ordinary commercial handling of the crop, because the farmer cannot ship his individual load of grain all the way to the British market and preserve its identity. Winnipeg is the great converging point for grain in carlots, the grain must be brought together somewhere, and that coming together must take place before the grain reaches Winnipeg or in Winnipeg, as at Winnipeg it receives its final grading. To prevent that grain coming together and constituting grades in Winnipeg would unquestionably be to the detriment of the farmers. To say that there shall be no mixing in Winnipeg is to say that there shall be no dealing on sample in Winnipeg. The whole idea we have gathered from the farmers is that they wish to reap whatever benefit is to be derived from making Winnipeg an order point. In the country elevators there must be mixing, you could not legislate to prevent it.

Mr. STAPLES. I contend that the grain should go out of the Winnipeg elevators on the same grade as it goes in. This sample grain should go forward in carlots the same as other grain.

Mr. S. J. JACKSON. The farmers claim it would be a great advantage to have a sample market in Winnipeg.

Mr. STAPLES. I agree.

Mr. S. J. JACKSON. Suppose we have a sample market. Then if a farmer has a No. 2 which is nearly a No. 1, he can reap no benefit from it unless the man who purchases it can mix it with other grain and make a No. 1.

Mr. STAPLES. I agree that the establishment of a sample market in Winnipeg or the west would be one of the finest things that could take place.

Mr. SCHAFFNER.

Mr. S. J. JACKSON. That is what we are doing.

Mr. STAPLES. But it should be purchased as sample and go forward as sample wheat, not under any particular grade, then it has its intrinsic or commercial value wherever it goes. If you allow it to be mixed and to go out under grade the benefit is a question.

Mr. CONMEE. The point under discussion does not touch the question of sample market. If the Winnipeg elevator operators are permitted to clean and mix grain they and not the farmers would reap the benefit of the enhanced value of that grain due to its cleaning at Winnipeg.

Mr. LAKE. It is thoroughly understood that in order to derive the full benefit from a sample market owners at Winnipeg must be permitted to mix to grade after December 15, but before December 15, I submit there should be no mixing at Winnipeg terminal elevators or anywhere else.

Amendment, Mr. Conmee, negatived.

Section as amended agreed to.

On section 19,

Mr. OLIVER. In the printed sheets before the members, there is a proposal to add to this new section 40 the words 'or upon his written order.' I do not know that it is very important, but it has been suggested.

Mr. SCHAFFNER. That is just what I wanted in the previous clause.

Mr. OLIVER. In that case the warehouse man will not make the delivery unless the order is such as will be satisfactory to him. I do not think he needs the same protection.

Amendment agreed to.

On section 22—provision for failure to redeem cash purchase ticket.

Mr. STAPLES. What is the object of that clause ?

Mr. OLIVER. In a transaction between the seller and the purchaser, in case the purchaser of the grain, after giving a ticket to the farmer, is not able to cash the ticket, it gives the farmer a lien upon the grain. If he does not get his money within so many hours he can put his lien upon the grain in the elevator. That is a recommendation of the Royal Grain Commission.

On section 23.

Mr. OLIVER. I desire to move, in addition, that the following penalty clause be inserted :

23a. Section 60 is amended by adding thereto the following subsection:

4. Except in the case of accidental damage to, or the accidental desertion of, any public country elevator in which grain has been accepted for general storage as herein provided,

if the person operating it, when called upon to do so by the owner of the grain, fails to account for the grain in accordance with the terms of the warehouse receipt given under the provisions of this Act or of the further orders of the owner, he shall be deemed guilty of an offence under section 355 of the Criminal Code, and shall be liable to the penalties therein provided, and, in addition, to the forfeiture of his license.

Motion agreed to.

On section 24—storage, special bins; sample to be preserved, &c.

Mr. STAPLES. There will be a good many receptacles required in some of the country elevators.

Mr. OLIVER. This only applies to grain that is special binned, so that there will not be a large number. Of course, there is a suggestion that samples should only be taken on the request of the owner, but there are objections to that. Perhaps it is better to leave it as it is. This is the recommendation of the Grain Commission. I beg to move a penalty clause to the special binning clause as follows:

24a. The said Act is amended by inserting the following section immediately after section 64:

64a. An operator of a country elevator or warehouse who sells, assigns, mortgages, pledges, hypothecates, or in any manner charges any grain stored in the said elevator in special bin in accordance with the provisions of this Act, which is not the sole and absolute property of the said operator, shall be deemed guilty of an offence under section 390 of the Criminal Code, and shall be liable to the penalties therein provided, and, in addition, to the forfeiture of his license.

Mr. STAPLES. It will make the grain merchants sit up.

Mr. OLIVER. These penalty clauses are in the Criminal Code and they do apply to these cases now, but it is thought better to put them in the Act so that everybody will see what his responsibility is.

Mr. SCHAFFNER. What about a sample being a 'fair and proper' sample? It is not very definite.

Mr. OLIVER. It is hard to make it any more definite.

Mr. STAPLES. You could not get a more perfect sample than by taking it out of every load.

Mr. SCHAFFNER. How much?

Mr. STAPLES. About a handful.

Mr. SCHAFFNER. It does not say so.

Motion agreed to.

Mr. OLIVER. I move that subsection 8 of section 30 be stricken from the Bill. It is considered that this subsection would unduly disclose to competitors the private business of grain handlers. The intention of the section is to make the commissioner aware of the conditions under which each elevator operator is handling his business, and subsection 8 requires that every patron of an elevator should be entitled to that same statement. It is believed this would be an undue burden upon the men who are operating elevators, and as the interests of the public are protected by the reports to the commissioner this subsection does not seem necessary.

Amendment agreed, to, and clause 8 stricken from the Bill.

Mr. CONMEE. This subsection only applies to country elevators but if it is good for country elevators it should be better for other elevators. I suggest that the word 'country' be struck out so as to make the section read:—'Public elevators and warehouses.'

Mr. OLIVER. The new section simply amplifies the provision in the existing Act and requires that there shall be a detailed statement. The country elevators are patronized by the farmers of the surrounding country who are not in the same position as business men would be to acquire knowledge of the standing of the men with whom they are doing business, and it was considered that this section would be a protection to them. It is in the line of protection for the man who is doing business with the elevator, and it is not necessary to take the same precaution in the case of the great terminal elevators who are doing business with business people.

On section 31,

Mr. OLIVER. I beg to move that subsection 3 be omitted and the following substituted:

3. In the case of a flag station or siding from which grain is shipped, the commissioner may, in his discretion and for such period or periods as he deems necessary, require the railway company to provide at such flag station or shipping siding a suitable person whose duties shall be:

(a) to keep open for the use of shippers at all times during the day a car-order-book, as provided under this Act, in which orders for cars may be entered in accordance with the provisions of this Act;

(b) when the loading of cars is completed, to seal such car or cars;

(c) to provide shippers with the regular form of grain shipping bill; and

(d) when such grain shipping bill is properly filled out by the shipper, to hand it to the conductor of the train that picks up such car or cars or place it where such conductor may get it.

The purpose of this amendment is to provide for a convenience of shipment at railway sidings where it has not been found necessary by the railway company to establish an agent. It could not reasonably

be required of a railway company that it should establish an agent with telegraph facilities at every siding, and it was thought that if the railway company would engage some person resident at the siding to keep an order book and to allow grain to be put in the cars and to be carried on to a station where the billing would be done, every interest would be served. The railway companies were willing to do that, and as the Bill left the Senate it provided for that. But it was thought that the dates fixed in the Bill might not be satisfactory, and as the railway companies did not object, the amendment was finally agreed to, as it is now proposed—that the railway company will appoint such a person at the order of the warehouse commissioner to act during such time as is necessary, and his duties shall be as defined in the Act. This proposition will certainly be a great convenience to the farmers in the more thinly settled parts of the country. Subsection 4, which makes it possible to limit the operation of subsection 3, is struck out altogether.

Mr. SCHAFFNER. Were the representatives of the farmers agreeable to that?

Mr. OLIVER. Yes.

Section 31, as amended, agreed to.

On section 37—equitable distribution of cars.

Mr. LAKE. With regard to 99a under this section, would the amount of grain available for shipment apply only to grain in the elevator ?

Mr. OLIVER. It would apply not only to grain in the elevators but also to the cars ordered. We would be bound to assume that grain was available for shipment when the cars were ordered.

I move to insert the following on page 12, line 26, as section 99c :

99c. Grain in carloads offered for shipment to points in Canada east of Winnipeg may be consigned 'to be held at Winnipeg for orders' en route to its destination on the direct line of transit on the following conditions:

(1) The shipper shall pay to the agent of the transportation company at the point of shipment the sum of $3 per car.

(2) The shipper shall endorse upon the consignment note and shipping receipt 'This car to be held at Winnipeg for orders,' with the name and address of some company, firm or person resident in Winnipeg, who will accept advice from the carrier of its arrival in Winnipeg and who will give to the carrier instructions on behalf of the owner for its disposal.

(3) Twenty-four hours free time after such advice of arrival shall be allowed the advisee in which to dispose of the property.

(4) If the carrier, within twenty-four hours free time referred to in paragraph 3, receives written directions for delivery within its Winnipeg-St. Boniface terminals, such delivery shall be made to team tracks or industrial spurs or sidings within its own terminals upon payment of the current grain rate in effect to Winnipeg or St. Boniface at the time of shipment.

(5) The carrier may, in the absence of written instructions from the advisee for the disposal of the grain within the free time mentioned in paragraph 3, forward the grain to its destination as consigned.

(6) Grain shipped 'to be held at Winnipeg for orders' delivered in Winnipeg or St. Boniface, as provided for in paragraph 4, may be sent forward to any point in Canada east of Winnipeg within six months of its receipt at Winnipeg or St. Boniface at the balance of the through rate from the initial point to destination, as provided in the carrier's authorized tariff in force on the date of the initial shipment, plus one cent per hundred pounds terminal charges, less the $3 per car mentioned in paragraph 1.

(7) The detention of grain at Winnipeg-St. Boniface, under this section, shall not affect the application of the provisions of the Inspection and Sale Act with respect to such grain.

(8) In case of the congestion of traffic caused by the operation of this section, the Board of Railway Commissioners may make an order suspending the operation of this section for the period mentioned in such order.

(9) The provisions of this section shall have effect only from the fifteenth of December in any year to the first day of September in the following year.

Mr. LAKE. When does the inspection take place of this grain which is being held in this way ?

Mr. OLIVER. As it leaves Winnipeg.

Mr. LAKE. Is that provided for ?

Mr. OLIVER. There is no specific provision. The provision with regard to inspection is contained in the Inspection Act. This Act gives no direction to the inspector. It has nothing to do with the inspection, but merely with transportation. Therefore the provision with regard to delays in transportation, and so on, are put into this Act. Under the provisions of the Inspection Act, cars going through without being unloaded are inspected during their necessary detention of a couple of hours at Winnipeg, and grain that has been unloaded in Winnipeg and is being sent east from there is inspected out of the elevator. Grain held there under the ordinary point system would be similarly graded going out.

Mr. CONMEE. As I understand, if the grain stands there for twenty-four hours, samples are taken, an inspection is made but no grade is given and if that grain does not go into a Winnipeg elevator it passes on to the terminal elevators without a grade.

Mr. OLIVER. Oh, no, the detention for twenty-four hours makes no difference in the grading.

Mr. LAKE. The charge of $3 is for demurrage for the day's detention.

Mr. OLIVER. That is a charge for detention with the privilege of unloading in Winnipeg. The order point is a railway question rather than a grain question, and we had to deal with the railway companies. At first the railways objected to this proposal as it would interfere with their business. They now do this in the case of the miller or shipper. They will hold a car in Winnipeg and for unloading and reloading they charge one cent per hundred, that is $6 for a 60,000-pound car. In securing for the farmer the same privilege as is given to the miller we have to make some compensation to the railway and it is arranged that the railway company shall collect one-half the ordinary charge for detention from the farmer, that is $3, and then the other three dollars is to be paid by whoever ships the car out. The farmer has the same privileges and pays the same amount as the miller.

Mr. SCHAFFNER. What provision is there for the shunting of the car?

Mr. OLIVER. If he sells for delivery in Winnipeg, the $3 pays for delivery in any siding or spur there.

Mr. SCHAFFNER. The ordinary charge for that is $5.

Mr. LAKE. Am I correct in understanding that this whole provision was arrived at as a compromise after the conference held by the minister, the Grain Growers' Association and the railway companies during the last few days? If that is so, it is a matter of negotiation and it would be useless for us to discuss the fairness of the proposition.

Mr. OLIVER. When the Bill was before the Senate an amendment was introduced providing for an order point at Winnipeg. The railways and the grain growers asked to meet representatives of the government to discuss this and some other important questions in connection with the Bill before it came to this House. We met and at first the railway companies opposed granting any such privilege as was suggested in the amendment before the Senate, as they said it would be burdensome on them and would interfere with their business, but on further discussion we found that they already accorded this privilege to the milling and shipping interest and they agreed to grant the same privilege on the same terms to the ordinary shipper or the farmer. As a matter of fact the provision was drafted by one of the railway solicitors.

Mr. LAKE. The privilege is practically granted to the millers all through the season.

Mr. BURROWS. That is part of the present traffic arrangement. They stop the grain and mill it.

Mr. LAKE. I merely want to point out that this is giving a limited time to the farmers to take advantage of through rates. I think there should be a sufficiency of cars. If that were the case, this arrangement could be carried out the whole year round.

Mr. CONMEE. This arrangement with the grain shipper and the miller is that, in the case of the mills, the cars are unloaded and go off for another load; in this case they are held for twenty-four hours.

On section 41—loading lines for grain to be marked inside cars.

Mr. OLIVER moved to:

Leave out section 118a and substitute the following therefor:

118a. For the purpose of preserving the identity of grain in transit from Winnipeg to points of consumption in eastern Canada or to ports of export shipment on the sea board, the warehouse commissioner may grant to any shipper permission to lease for such term as is approved by him special bins in such terminal or transfer elevators as are necessarily used in the transportation of grain eastward from Winnipeg for the special binning of grain in transit. The bin capacity which may be so leased in any terminal or transfer elevator shall be as the warehouse commissioner shall approve, but shall not be less than 16,000 bushels in any elevator. The term of the several leases shall be as approved by the warehouse commissioner.

2. The shipper receiving such permission may, subject to its terms, enter into agreement for the lease of special bins in terminal and transfer elevators necessary to the transportation of grain from Winnipeg to the point of destination.

3. The rates to be paid for the lease of such special bins shall be such as are agreed upon: provided that on payment of the regular rate for the full capacity leased for the full term of the lease the shipper acting under the permission of the warehouse commissioner, as in this section provided, shall be given a lease of the bin capacity to which he thereby becomes entitled.

4. Upon the shipper who has secured such permission producing to the warehouse commissioner satisfactory evidence that he holds leases of such special bins in the several terminal or transfer elevators necessary to the transportation of grain from Winnipeg to the point of destination as will enable him to preserve the identity of the grain during its transportation from Winnipeg to the point of destination in not less than 16,000 bushel lots and that such leases are in accordance with the permission already granted, the warehouse commissioner may authorize such shipper to take such means as are necessary or possible within the provisions of this Act and of the Inspection and Sale Act to preserve the identity of grain which he desires to ship through the elevators in which he holds leases of special bins.

5. The warehouse commissioner shall issue such instructions and regulations within the provisions of this Act and of the Inspection and Sale Act as are practicable and necessary for the preservation of the identity of grain which is being shipped by the shipper to whom permission has been given as provided

in this section, using bins specially leased in the several elevators as above provided for the storage and trans-shipment of such grain: provided always that nothing in this section or in such instructions or regulations shall be construed to authorize the placing of grain of different grades in the same special bin in any terminal or transfer elevator.

6. An infraction of any of the instructions or regulations issued by the warehouse commissioner under this section shall be deemed to be an infraction of the provisions of this Act.

7. The provisions of the Inspection and Sale Act shall apply to grain specially binned in transit under the provisions of this section.

8. The provisions of this section shall have effect only from the fifteenth day of December in any year to the first day of September in the following year.

Mr. SCHAFFNER. If it is limited to the period from the 15th December to the 1st of September that about destroys all the good that may be in it.

Mr. STAPLES. The decision is in the hands of the commissioner as to whether special bins shall be allowed or not.

Mr. OLIVER. Yes.

Mr. STAPLES. And only within those dates.

Mr. SCHAFFNER. It is of very little benefit.

Mr. OLIVER. Possibly. Of course, a great many people hold that it will be a very serious detriment.

Mr. SCHAFFNER. But, if the Grain Growers' Association, after consulting with hon. members on the other side, in regard to which we know nothing, are willing to subscribe to such a condition they should not expect members on this side of the House to advocate very enthusiastically what they want. If they want special binning, they want it, but if it is limited to the period from the 15th December to the 1st September it will not be of very much benefit to them.

Mr. S. J. JACKSON. The representatives of the farmers are perfectly satisfied to have this from the 15th December to the 1st September, because they know that with the large crops that we expect to have the yards in Winnipeg will be so congested that it will be impossible for them to do any business.

Mr. STAPLES. If the farmers' delegation do not want this privilege—the hon. gentleman (Mr. Jackson) says he has been in conference with them while we are allowed to remain in the dark—I suppose we will have to accept the Bill as it has been prepared. But, from the information I have from the Grain Growers' Association of Manitoba, Saskatchewan and Alberta, I am satisfied that they do want the privilege of special binning. I think that special binning, if it does not create too great a congestion, is a proper thing.

Mr. SCHAFFNER. Do I understand the hon. gentleman (Mr. Jackson) to say that the farmers do not want this special binning privilege ?

Mr. COMMEE. No, he did not say that.

Mr. S. J. JACKSON. No, I did not say that.

Mr. SCHAFFNER. I understood the hon. gentleman to say so.

Mr. S. J. JACKSON. Were you talking with reference to special binning before I came in ?

Mr. SCHAFFNER. Yes.

Mr. S. J. JACKSON. I did not understand that at all.

Mr. SCHAFFNER. I have not received an answer to my question as to whether the members of the Grain Growers' Association of the west are willing to accept this Act as presented now under which the special binning privilege will only prevail from the 15th December in one year to the 1st September in the next year.

Mr. CRAWFORD. The farmers want special binning all the year around, but I think that they are pleased to get the principle approved of. They are willing to accept this for the present as an experiment.

Mr. SCHAFFNER. Will the hon. gentleman please tell us how he obtained that information ?

Mr. CRAWFORD. Well, it comes.

Mr. STAPLES. It is in the discretion of the commissioner to say whether the privilege of special binning shall be permitted or not.

Mr. SCHAFFNER. The reason I asked that question was not perhaps the same reason as that which might be taken by hon. members on the other side. I have come to the conclusion, perhaps wrongly, that it is not of very much use for us on this side to protest against this provision, because it has been cut and dried by the minister, the members on the other side of the House and representatives of the farmers. If the farmers had not agreed to this proposition I would have moved an amendment that this privilege of special binning extend over the whole year but, as I believe the representatives of the farmers of the west have agreed to it, there is not very much use of my moving an amendment. If they are satisfied I am.

On section 44—schedule ; new forms.

Mr. STAPLES. I do not see anything in the Bill that provides for the tariff that shall be charged by the interior elevators. The farmers' elevators in Manitoba have

suffered greatly and, in fact, a good many of them have had to go out of business through the competition of the elevator corporations. For example, at my own point, we have a farmers' elevator which has done more towards regulating the market than anything else could possibly have done and which has been the means of the farmers obtaining better prices for their grain than they otherwise would. But it works out in this way: I have known the elevator companies to put their tariffs down and instead of charging 1¾ cents a bushel they have charged 1 cent. That should be regulated in some way so as to prohibit that, because the effect of it is practically to cause the farmers' elevators to go out of business.

Mr. OLIVER. If the hon. gentleman will look at section 111b on page 4 of the sheet which has been distributed he will see that a section has been introduced which is intended to meet the case that he has spoken of. The idea is that the owner of any elevator must make the same charges in all the elevators he owns.

Mr. STAPLES. That is right.

Mr. OLIVER. It is not so right as it looks. Suppose a company has a large number of elevators and, at a certain point, some other company cuts rates, this section provides that the company may cut rates at that point without compelling it to come down at all of its elevators.

Mr. STAPLES. Then it is not as far reaching as I think it should be.

Mr. S. J. JACKSON. The farmer will get the benefit and that is what we are working for.

Mr. STAPLES. The farmer will undoubtedly receive the benefit for a time, but the moment the farmers' elevators are crowded out of business, good-day, Mr. Farmer, because they will fix the price as they choose.

Mr. S. J. JACKSON. The farmers own the elevator.

Mr. CONMEE. If the farmer is the aggressor and lowers the rate, then the elevator company will lower its rate at that one point also; but if the elevator company is the aggressor and lowers the rate, it will have to lower it at all other points. I think the farmer is well protected in that case.

Mr. STAPLES. It is all right if the farmer is well protected.

Mr. OLIVER. I move to repeal paragraph (h) of section 2, and to substitute the following:

'Public terminal elevator' includes every elevator located at any point declared by the minister to be a terminal, and 'terminal elevator' in the provisions of this Act relating to terminal elevators and warehouses includes a warehouse.

Amendment agreed to.

Mr. STAPLES. Before this Bill comes up for third reading it should be reprinted.

Mr. OLIVER. I will move that the committee report progress and ask leave to sit again, and in the meantime I will try to have the Bill reprinted with the amendments agreed to placed in their proper order. This will enable the Bill to come up for reconsideration with the Grain Inspection Act alongside of it, so that we can see whether there is any clash between the two.

Mr. LAKE. The opposition should have a day's notice of when this Bill will again be taken in committee. It has been brought down so late in the session that, with the long hours we have to work, it has been impossible for us to give it the consideration it should have received. Again, the amendments were only brought down within the last day or so, and the members of the opposition have not had the same advantages as the members of the government side have had in consultation with the officials of the government and with the representatives of the railway companies. There is no doubt in my mind the Bill is a step in the right direction, but it does not go nearly as far as I think it should. There is the further objection that the Bill was sprung upon us to-day, for we were told last night that other Bills would be taken up, and hence we were not prepared for it. The Bill was introduced in the Senate, which is supposed to have plenty of time on its hands, and it only came to this House within a week of prorogation. The responsibility of it must rest upon the government, for the members of the opposition have not had a proper opportunity to make a thorough examination of its various provisions and to discuss them.

Progress reported.

FIRST READING.

Bill (No. 203) to amend the Grain Inspection Act.—Mr. Oliver.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

PRIVATE BILLS.

CONSIDERED IN COMMITTEE—THIRD READINGS.

Bill (No. 192) to incorporate the Alberta and British Columbia Railway Company—Mr. Herron.

Bill (No. 195) respecting the Hamilton, Waterloo and Guelph Railway Company.—Mr. Zimmerman.

Bill (No. 185) respecting the Lake Champlain and St. Lawrence Ship Canal Company.—Mr. Johnston.

BOUNTY TO SOUTH AFRICAN VOLUNTEERS.

Bill (No. 109) to authorize a bounty to volunteers who served the Crown in South Africa—Mr. Oliver—read the second time, and House went into committee thereon.

On section 2—application of Act.

Mr. OLIVER. I desire to move that the following be substituted for this section:

This Act shall apply to all officers and men who served in South Africa with any corps raised in Canada during any of the years 1899, 1900, 1901 and 1902, and who at the time of their appointment to or enlistment in such corps or any corps so raised were resident or domiciled in any part of Canada.

Mr. R. L. BORDEN. You have a resolution on the Order Paper designed for the purpose of permitting the amendment now suggested by the minister. The usual course is to move the resolution first. Its object is to meet certain objections raised on this side to the effect that the Bill did not include but should include persons now proposed to be included.

Mr. FIELDING. The resolution should certainly be moved first.

Progress reported.

House went into committee to consider the following resolution:

Resolved, that it is expedient to provide in connection with the Bill now before this House, intituled: 'An Act to authorize a bounty to volunteers who served the Crown in South Africa,' that it shall apply to all volunteers who resided or were domiciled in Canada at the time of their enlistment for military service in South Africa; that, in the event of a volunteer's death between the date of his enlistment and December 31, 1910, the proposed grant of land may be made to his legal representatives; and that any person entitled to choose scrip in lieu of land may give notice of his choice before December 31, 1910.—Mr. Oliver.

Mr. SPROULE. Might I ask if this will apply as well to the South African Constabulary which went to South Africa from Canada?

Mr. OLIVER. That is the intention.

Mr. KNOWLES. Would it apply to Canadians who enlisted in South Africa itself?

Mr. OLIVER. No, it does not apply to any who did not enlist in Canada.

Mr. R. L. BORDEN. It applies to volunteers who resided or were domiciled in Canada at the time of their enlistment.

Mr. LAKE.

Mr. SAM. HUGHES. There is another point. There are hundreds of good Canadians who went to South Africa and joined different corps there, such as the Roberts Horse, and I would respectfully point out that these men are all omitted. Their career can be traced just as well as the career of those who enlisted in Canada. Take my own case, I was not a member of any corps that left Canada. I did not enlist in any corps in Canada.

Mr. DANIEL. This resolution refers only to volunteers who enlisted for military service. That means enlisted men and does not include commissioned officers.

Mr. OLIVER. The amendment which I have placed in the hands of the chairman provides for that.

Mr. HERRON. I would like to know if the Northwest Mounted Police are to be included. They were excluded in some way from participating in the benefits that accrued to volunteers who took part in the Northwest rebellion of 1885, and I believe that was due to some misapprehension or misunderstanding. I always think they were entitled to recognition in the shape of lands, medals or other honours which went to men who served in the Northwest Rebellion.

Mr. SAM. HUGHES. They got the medals but never got the land.

Mr. HERRON. I want to know if the members of the Northwest Mounted Police who enlisted in South Africa will be included.

Mr. OLIVER. They will.

Mr. R. L. BORDEN. The minister is going to propose an amendment which differs in terms from the resolution. The very reason which makes this resolution necessary would prevent that amendment from taking effect. Your resolution should be in exact conformity with the terms of the proposed amendment.

Mr. OLIVER. The resolution simply states the principle, and as long as the amendment does not go outside that principle, I imagine it is in order.

Mr. R. L. BORDEN. I thought the hon. gentleman said it did go outside.

Mr. OLIVER. Not outside the principle of the resolution.

Mr. R. L. BORDEN. What do you mean by the principle?

Mr. OLIVER. The question raised was whether officers would be included. I submit that when we speak of volunteers who served the Crown in South Africa, that includes officers.

Mr. R. L. BORDEN. That may be, but I certainly understood from the hon. gentleman's answer to my hon. friend from St.

John (Mr. Daniel), that there was something not included in this resolution which would be included in the amendment.

Mr. OLIVER. There was something contained in the second clause of the Bill that did not cover the point raised by the hon. member for St. John (Mr. Daniel), but the amendment I intend proposing does and it comes within the terms of the resolution.

Mr. CROCKET. Does the amendment cover all the cases provided by the resolution? I understood from my hon. friend from Haliburton (Mr. Sam. Hughes) that it did not.

Mr. OLIVER. Perhaps not. It may not cover all the cases which the resolution would cover, but it certainly is covered by the resolution.

Mr. R. L. BORDEN. The amendment can be smaller than the resolution but not larger.

Mr. STAPLES. I have had several communications from the pioneers and a petition from the association of western pioneers asking for a land grant. Mr. Isaac Cowie, the secretary of the association, has written me quite a long letter, according to which they appear to have a very just claim; and I think that while this South African Land Bill is being considered, the western pioneers should have their interests considered and some land grant made to them. I might read the letter which accompanies the petition:

The letter is as follows:

Re old settlers' claims.

I am directed by the petitioners, for whom I am acting, to inclose for your information a reprint, from the Manitoba 'Free Press' of this date, of the petition of the western pioneers, with a full list of signatures, amongst which you will find many respected names, and probably a few of your own constituents. There are probably three hundred other claims not represented by signatures—some of the persons to whom the circulation of the petitions was entrusted having failed to attend to the matter.

You are respectfully urged to give this matter your best personal attention, and to see that the petition be not only received by but also acted upon by the House of Commons, whose proceedings will be keenly watched in this respect by the parties interested.

The claims of the original white settlers and pioneers, who probably conferred more benefit upon the land of their adoption than any other of its pre-confederation inhabitants, are the only ones which have not long ago received the attention—if troublesome the double attention—of the government. And we now wish to strongly emphasize the concluding paragraph of the petition, praying for the prompt settlement of a claim held in abeyance for the last thirty-eight years by the present parliament.

I have brought this matter before the House after waiting in the hope that these people might be dealt with, but I think they are entitled to some consideration.

Mr. OLIVER. The subject of this petition is not connected with the subject of this Bill. It is, of course, a matter that can be dealt with in due course.

Mr. STAPLES. Is it the intention to deal with this petition in any form this session?

Mr. OLIVER. I am afraid it is rather late to deal with it this session.

Mr. BICKERDIKE. Would it not be possible to include the men who fought in the Fenian Raid? They fought to defend our own land, and are as much entitled to consideration as the men who went abroad to fight.

Mr. M. S. SCHELL. I wish to support this suggestion. It would be highly appreciated by the veterans who went to the front at the time of the Fenian Raid, and I would be very much pleased if the government would see their way clear to include them in this grant. They did as much to deserve recognition as any, and there are many of them in Quebec as well as Ontario. I do not think the government would make any mistake in including them.

Mr. FOWLER. As we are proposing to include all the veterans, I would suggest that the survivors of the Aristook war, who have not been spoken of, should be included, also the veterans of the rebellion of 1837.

Mr. BENNETT. And the survivors of the local elections in New Brunswick.

Resolution reported, read the first and second time and agreed to, and the House went into committee on Bill (No. 109) to authorize a bounty to volunteers who served the Crown in South Africa.—Mr. Oliver.

On section 2,

Mr. OLIVER moved:

That the following clause be substituted for clause 2:

This Act shall apply to all officers, non-commissioned officers and men who served in South Africa with any corps raised in Canada during any of the years 1899, 1900, 1901 and 1902, and who at the time of their appointment to or enlistment in such corps or any corps so raised were resident or domiciled in any part of Canada.

Mr. J. D. REID. Would this include such a case as was suggested by the hon. member for Victoria (Mr. Sam. Hughes), that of a Canadian who happened to be in London at the time who went direct to South Africa and returned to Canada?

Mr. SAM. HUGHES. For instance, I know several men who lived in the Yukon and who could not get into the first corps and went to Africa on their own account.

Take Colonel Hamilton Merritt, of Toronto: Charlie Ross, the scout——

An hon. MEMBER. And Sam. Hughes.

Mr. SAM. HUGHES. Yes, and Sam. Hughes. These men went to South Africa, and I think those three officers, 'although I say so, as shouldn't,' probably reflected as much credit on Canada as many others. But they are only instances of hundreds, possibly thousands, who went under similar auspices, who returned to this country and who represented Canada in South Africa to the best of their ability. I would suggest it might read:

This Act shall apply to all officers, non-commissioned officers and men who served in the South African field forces during any of the years 1899, 1900, 1901 and 1902, who at the time of their appointment or enlistment in such field forces were resident or domiciled in any part of Canada.

Mr. HERRON. I would refer to a case in my district where a man who had resided there twenty or twenty-five years telegraphed for permission to enlist in the Duke of Cambridge's Own. In that corps a man had to pay for his uniform, horse, accoutrements and everything but his rifle, and put $500 in the treasury before he would be permitted to join. This man left my county and went over and joined the Duke of Cambridge's Own corps, served throughout the war, and is living in that country to-day. I think it would be very hard if he is going to be excluded from this small grant.

Mr. J. D. REID. Would the amendment of my hon. friend from Victoria and Haliburton (Mr. Sam. Hughes) cover such a case as I have instanced?

Mr. R. L. BORDEN. I do not think it would, because the amendment speaks of their being being domiciled in Canada at the time of their appointment or enlistment, resident or domiciled in Canada.

Mr. J. D. REID. In case a young man happened to be in England at the time, if he was over 21 years of age, his home would be wherever he was at the particular time he enlisted. Therefore, if he were then in England he could not take an affidavit that at the time he was domiciled in Canada as his home.

Mr. STANFIELD. I would ask the minister about this case: A young man going to school in England at the time the war broke out was a native of my own county, and he went out and served with considerable distinction. Since then he has returned to his native town. Would this Bill cover his case?

Mr. PUGSLEY. I think there can be no doubt whatever that in the case the hon. gentleman has just mentioned, his domicile is Canada, because he was only going to school temporarily. Therefore, if he was entitled in other respects, there could be no question as far as his domicile is concerned.

Mr. FOWLER. But if he did not join a corps raised in Canada?

Mr. PUGSLEY. The amendment suggested by the hon. member for Victoria and Haliburton (Mr. Sam. Hughes) would cover his case. I do not understand that the Minister of the Interior objects to a clause which will cover all Canadians who served in South Africa.

Mr. OLIVER. I have an open mind on the subject.

Mr. DANIEL. Would the Minister of Militia say whether the amendment would cover those who served in the field forces in a military capacity in any corps? Because there are other forces, perhaps they are not called field forces, that might not come under that designation. For instance, would the medical department come under that designation, would the army service department and various other departments of the army—would they come under the designation of field forces? If they would, then I have nothing more to say; but if they do not, I think we should be careful in adopting the amendment of the hon. member for Victoria and Haliburton without knowing exactly what we mean.

Mr. PUGSLEY. They are all serving, are they not?

Mr. DANIEL. It is a technical term, and perhaps the Minister of Militia will be able to elucidate it.

Mr. BEATTIE. Any Canadian, if his name is on the roll, should be entitled to a land grant. The fact of his name being on the roll should be a guarantee that he has served with a Canadian corps and is entitled to the land grant, no matter where he came from. I do not think you should shut him out.

Sir FREDERICK BORDEN. Certainly not.

Mr. HERRON. A man whom I know enlisted and started out in charge of horses. After they had started on their journey he met with an injury and was invalided by the doctors of the corps. Unfortunately his injury did not permit him to go to South Africa. Does the minister think he would come in under this Bill?

Mr. OLIVER. I am anxious to know just how far the House would like to have this privilege extend. We are anxious of course to meet the views of the House. I think myself that we should deal liberally with those who sacrificed their time and risked their lives in the cause of the empire in South Africa. We do not wish to give any restricted privilege for the sake

of restriction, but what we must do is to put a proposition before the House that can be carried out in a practical way, so as to include what we wish to include and exclude those we do not want to include. I do not think it is possible to frame a Bill that will absolutely meet every case. No such legislation has ever yet been devised, and I do not think we can devise such legislation to-day. After I have heard from the House just how far they wish this privilege to go, I will do my best to put their views in concrete form.

Mr. FOWLER. I understand that some of the later contingents did not take any part in active hostilities in South Africa. I think there was one lot who just reached there after the war was concluded. I do not know whether they landed even. Would they be included?

Mr. OLIVER. I am afraid the amendment of my hon. friend from Victoria and Haliburton would exclude those.

Mr. FOWLER. I thought so. That amendment seems more restrictive than the Bill.

Mr. OLIVER. I am afraid it is.

Sir FREDERICK BORDEN. It is not intended to be.

Mr. OLIVER. We all want to do what is right and fair by the men who served the empire, as these men did, or who intended to serve. I want to know just how far we can go. From the expressions I have heard here to-night it would not be possible to draft a section that would cover all the cases that have been brought forward, that is, it would not safely cover them. It is best to decide how far we want to go, and then give time to draft a section to cover the points.

Mr. LANCASTER. I think the suggestion of the hon. member for London (Mr. Beattie) is a good one, that is, to take those who have signed the roll of any Canadian contingent.

Mr. FOWLER. That would shut out such a case as the hon. member for Victoria and Haliburton mentions.

Mr. SAM. HUGHES. That would shut out any superior officer.

Mr. R. L. BORDEN. If the committee is disposed to accept the suggestion that all persons domiciled in Canada who served in the South African war should come within the provisions of this Bill, it is not a difficult matter to alter the amendment so as to cover them. If it is desired that any person resident or domiciled in Canada who served in South Africa in a British field force——

Mr. LANCASTER. Or who enlisted for such service.

Mr. R. L. BORDEN. I am dealing with the one thing at a time. That can be added afterwards.

Mr. OLIVER. As suggested by the hon. member for Kings and Albert, that might cut out those who enlisted and who arrived in South Africa just after the close of the war, but who are entitled to consideration.

Mr. R. L. BORDEN. It is not difficult to add that:

Or who were appointed to or enlisted in any corps raised in Canada during any of the several years for service in South Africa.

Mr. OLIVER. Then my hon. friend cuts out those Canadians who enlisted in corps that were not raised in Canada.

Mr. R. L. BORDEN. No, I have covered that case by the first amendment, and I have covered the other case by the second amendment. If you ask that any other case be provided for, I will cover that by a few more words.

Mr. E. M. MACDONALD. I think it will be admitted that the wise policy is to give recognition to Canadians who went to South Africa in Canadian forces. It does not seem to me that it is wise to extend this privilege beyond the men who went out in Canadian regiments. I think this right of recognition should not depend upon whether these men actually went into battle or served in any particular engagement, but that those who left the shores of Canada to go to South Africa to fight and were prepared to fight if necessary, should receive recognition. If you take the case of men who chose to go over to England and enlisted in English regiments you are dealing with men who did not go as Canadians, and I therefore think that this recognition should be confined to those who went and served as Canadians.

Mr. STANFIELD. Will the hon. gentleman allow me to correct him?

Mr. E. M. MACDONALD. I was not referring to the case mentioned by my hon. friend from Colchester (Mr. Stanfield), but the case mentioned by my hon. friend from Alberta (Mr. Herron)—the case of a man living in the Northwest who went over and enlisted in an English regiment.

Mr. HERRON. At the time this man cabled to England for permission to join the forces he did not know that we were going to send troops from Canada.

Mr. E. M. MACDONALD. If you deal with cases of that kind, you will have all kinds of excuses which no department could follow up in order to arrive at a proper basis for determining who should be entitled to this grant. There may be cases of officers who served with distinction who being Canadians served in the

Imperial forces and who are deserving of recognition, and those can be dealt with separately. But if we are dealing with non-commissioned officers and men, I think this country would only be disposed to give recognition to Canadians who went as members of Canadian forces.

Mr. SAM. HUGHES. Take three cases that I have in mind; one was that of Charlie Ross, of the Northwest Mounted Police, the scout, and the man who won the battle at Cut Knife Hill in 1885. Charlie Ross went to South Africa and did splendid service. But the particular cases that I have in mind are those of two young men in Toronto—Wasson and Jackson. These two men could not get into the first corps. They were away earning their living and not within reach of their regiments. They started back to the regimental headquarters, but when they arrived the corps were filled. They went to South Africa in a hay ship. I could give the name of another young fellow, Charley Graham, from my own town of Lindsay who also went out in a hay ship. They joined Roberts' forces, and by their conduct reflected credit on the name of Canada. Yet these men would be excluded under this resolution.

Mr. E. M. MACDONALD. Where are you going to draw the line?

Mr. SAM. HUGHES. Any Canadian who served in any corps in South Africa. Take the case of Colonel Hamilton Merritt, of Toronto; he served on General Brabant's staff.

An hon. MEMBER. You are included.

Mr. SAM. HUGHES. Certainly. I could not go to South Africa because of the tyranny of an English general who was serving under the Canadian government.

Mr. M. S. SCHELL. I would like to ask the minister if a man availing himself of his privilege and locating on land would be entitled to a homestead and to a pre-emption also?

Mr. OLIVER. The provisions of this Bill admit of a volunteer or his assignee getting the full benefit of the Act whether he has already a homestead or not.

Mr. HERRON. Or whether he is going to get one?

Mr. OLIVER. Yes; it is precisely the same thing.

Mr. FOWLER. You are going to allow a man to have a homestead in addition to this?

Mr. OLIVER. Yes.

Mr. FOWLER. And a pre-emption, too?

Mr. OLIVER. If he takes it in a pre-emption area.

Mr. FOWLER. You will give him a whole square mile of land? He will be glad to see another war break out.

Mr. HERRON. I have given notice of an amendment to this motion. The minister has made some change in it, but I have something to add when the time comes.

Mr. OLIVER. I think we had better allow clause 2 of the resolution to stand and proceed with the Bill. We can have an opportunity to redraft clause 2.

Section 2 allowed to stand.

On section 3—grants of land authorized.

Mr. OLIVER. I would like to move an amendment to that section as follows:

That the word 'volunteer,' in the first line of clause 3, be struck out and that the following words be substituted therefor: 'officer, non-commissioned officer or man, or in the event of his death, between the date of his enlistment or appointment and December 31, 1910, to his legal representative.'

Mr. STAPLES. What will be the necessary procedure for a widow to take in order to get this land grant?

Mr. OLIVER. She would simply have to establish her identity and the rights of her husband before the Militia Department.

Mr. HERRON. Before that section carries, I have given notice of an amendment to this clause, and I think it is necessary to put it in here. I propose that clause 3 be amended by inserting after the word 'volunteer' the words 'legal representative,' by striking out the word 'adjoining' as it appears in the second line, and by providing that it shall apply to odd and even numbered sections all over the country. The Land Bill we have just passed may possibly have a bearing on clause 3.

Mr. OLIVER. Under this provision and under the Land Bill the volunteer may take his land anywhere on the odd or even-numbered sections or on adjoining odd or even sections, but it does not provide for him taking them up except they do adjoin.

Mr. HERRON. The South African veterans are generally residents in portions of the country that are well settled, and if a man could get a quarter-section in his locality, even though it did not adjoin his own quarter-section, it would be far better to let him have it than to compel him to move 100 miles away.

Mr. J. D. REID. I cannot see why the nurses who accompanied the physicians to South Africa should not get a land grant. Does this clause include the chaplains?

Mr. SAM. HUGHES. If they were enlisted it would.

Mr. J. D. REID. The minister should take into consideration the question of including the nurses.

Mr. HERRON. I would move that section 3 be amended by striking out the word 'adjoining.' I believe the word 'adjoining' will work very great hardship in the cases I have referred to. I do not see what difference it makes to the country whether the South African veteran gets his quarter-section adjoining his own, or whether he gets it some other place in the neighbourhood.

Mr. E. M. MACDONALD. The hon. gentleman is legislating for an exceptional case instead of for a general one.

Mr. HERRON. It is so general that it will apply to more than half the volunteers who are residents of that country.

Mr. M. S. McCARTHY. If the hon. gentleman from Pictou (Mr. Macdonald) was at all familiar with the conditions in the Northwest he would understand that it is very difficult to get quarter-sections adjoining each other. The Bill now practically amounts to nothing, so far as a number of young men residents of Alberta and Saskatchewan who went to South Africa are concerned.

Mr. OLIVER. If the opinion of the House is that the Bill amounts to nothing there are many people in the country who would much prefer to see the Bill withdrawn.

Mr. M. S. McCARTHY. I am certainly not of the opinion that the Bill should be withdrawn. On the contrary, I have advocated in this House for several sessions the granting of land to the South African volunteers of Alberta and Saskatchewan. I am not speaking of the men who enlisted from other provinces and who received grants from Ontario and British Columbia, but I do think some provision should be made to set aside a grant of land to the young men who went to South Africa from the western provinces. What I want to point out to the minister is that if a man takes up a quarter-section under this Act he has to comply with the regulations of the homestead law, and while that may be well enough for a farmer or a rancher who wants to get more land, still there are many young men in the cities, towns, and villages who cannot leave their business, and the only benefit of this Act to them is that that they will get scrip for $160, which if they can sell for $80 they will be lucky. I have protests from this class of veterans and at the proper stage I shall move amendments to the Bill. That is what I intended to convey when I said that the grant to this class of young men in Alberta and Saskatchewan has been practically whittled down to nothing.

Mr. TURRIFF. I do not see why a South African veteran should be allowed to locate on two separated quarter-sections any more than you should allow a homesteader who has the privilege of taking out a pre-emption to do so. There will be millions of acres of land available for the South African veterans, and I do not think there is any hardship whatever if they have to locate on quarter-sections adjoining. Let me point out to my hon. friend (Mr. M. S. McCarthy) that if the veteran does not want to live on the land and earn the patent by performing homestead duties, it is not necessary for him to take $160 in scrip. He can take his warrant which he has the privilege of selling and his assignee has the privilege of locating on two quarter-sections and performing the homestead duties and having the patent issued in his own name. I believe the warrant will be worth more to him than a separate patent for a quarter-section.

Mr. SAM. HUGHES. Suppose a volunteer does not want to take 320 acres and go and farm it, but prefers to take the 160 acres, what title would he have to the 160 acres? Would he get scrip for it?

Mr. OLIVER. He has the chance of taking 320 acres as a homestead, or the chance of assigning his right to another person who will fulfil the duties on the 320 acres; the effect of which is, as my hon. friend from East Assiniboia (Mr. Turriff) has said, to give him a free patent for 160 acres, or scrip to the amount of $160, which is receivable at its face value in payment for Dominion lands.

Mr. SAM. HUGHES. How would the assignment be equal to 160 acres?

Mr. OLIVER. In this way, that whoever he assigns to gets 320 acres for fulfilling the duties that are required of a homesteader on 160 acres.

Amendment of Mr. Herron negatived.

On section 4—conditions.

Mr. FOWLER. I do not think you should allow a substitute. I think there should be just two alternatives; either give the man a grant if he wants to go to the land himself, or give him the scrip if he does not want to go on the land. But do not allow a substitute to take up the land, because the result will be that these rights will be sold for a trifle, especially by many eastern men, to some person who has never been in South Africa, but who will reap all the benefits barring the few dollars he pays for the right. If the volunteer himself wants to go on the land and fulfil the conditions, let him have the 320 acres. If not, let him take the $160 of scrip which he can use as he likes.

Mr. SAM. HUGHES. Suppose a man entitled to the 320 acres could not conveniently go on the land himself, could he place somebody else there to do the work for him?

Mr. OLIVER. Not unless he assigns his rights to that other person.

Mr. SAM. HUGHES. Suppose he had a brother who would do the work on it?

Mr. OLIVER. That is a matter that he and his brother would have to arrange between them; but he would have to assign his rights to his brother. It seems to me that the opportunity given in the section as it stands is all that can reasonably be asked.

Mr. G. H. McINTYRE. I presume that the general purpose under this Bill is to reward Canadians who have served the empire in South Africa; but in addition to that you desire if possible to get these good Canadians to settle in the Northwest, for various reasons that will suggest themselves. A young man who is sufficiently loyal to risk his life in South Africa is a pretty good kind of man to mix with certain elements that will go into that country. Therefore it is desirable to do everything in our power to get that young man to go out there and settle; but the idea of a substitute does not appear to fulfil the purpose of the Bill, and I agree with the hon. member for Kings and Albert (Mr. Fowler) that if he will not go out and take up the land and become a settler, we would do well to drop the provision for a substitute and let him accept the scrip.

Mr. THOS. CHISHOLM. Could the minister not arrange to diminish the number of months the veteran is required to remain on land? A man who has served his country for three years in South Africa in such an arduous way should not, I think, be bound to remain so long on the land. I think it would be sufficient to require him to remain three months on the land to do his settlement duties. I am in favour of seeing that the settlement duties are effectually done. It will not do to allow the land to lie vacant, and if necessary he could make up for the diminished time the veteran would have to be on the land by doing an extra amount of settlement duties. A good many veterans might remain three months on the land, but could not conveniently stay the whole summer. It would make very little difference to the country so long as the settlement duties were thoroughly done. These veterans should certainly get some advantage in this respect. And the time limit should not be so strictly enforced against them, considering the time they have already served their King and country.

Mr. SAM. HUGHES. I am very glad that the hon. member for East Huron (Mr. Chisholm) has brought up that point. I might draw the minister's attention to the American regulations at the close of the Cuban and Philippine war. The volunteers on their return were each handed their scrip, and the time they had served in the campaign was counted in their homestead duties.

Mr. FOWLER. I believe in being generous to the young men who went out to South Africa to fight the battles of the empire, and I think the provisions of this Bill are very generous. Under it, as I understand, a South African veteran can take up 320 acres of land as a veteran; he can then take 160 acres more as an ordinary homesteader, which gives him 480 acres; then by paying $480 he can pre-empt another 160 acres, which gives him 640 acres, or a mile square, for the small sum of $480. I think we are dealing pretty generously with these South African veterans without letting up at all on the homestead conditions. It would be much better for you to give a cash bonus to the veteran than permit him to sell his rights to some person and thus let some one who never made any sacrifice whatever get all the benefit. The provisions of the Bill are quite broad and generous enough and you should strike out the substitute.

Mr. BARR. I presume that the object is to recognize the services of the volunteers who went to South Africa, and I do not think this recognition would be of much value to them if they could not hold their land by engaging others to do the settlement duties. There are many of the volunteers engaged in other business besides farming, and this grant would be of no advantage to them if they were not allowed to provide a substitute. I think this Bill is not too liberal and that you might go a little further. No doubt many of these volunteers would appreciate very much having a farm of 160 acres, and if they could, without giving up their business, go out there and work a short time on the land or engage others to break it up for farming, they would hold it for all time to come and hand it down to their children as a memento of the services they had performed. I think they should be given the advantage of holding their land without having to give up their business connection in other parts of the country. Those Canadians who went to South Africa made their mark there; they won several battles, and to a certain extent taught the British soldiers how to fight and how to manage without exposing themselves unnecessarily, as British soldiers were accustomed to do. In fact, they introduced a new life into the army of that country. It is a pity this Bill does not deal with them more liberally by enabling them to hold their land without breaking up their business.

Mr. FOWLER. I would like to hear an expression of opinion from the minister with regard to this question. We know what has been the fate of this scrip in the past. Scrip speculators went over the country and bought the scrip for a mere song and many made large fortunes out of it. In like manner fortunes will be made, though in a smaller degree, by men who have no title to any recognition. Take this land a mile square to-day, that is worth $3,000 or $4,000, and you are giving it for

the price value of the scrip. In a few years it will be worth $25,000 to $30,000.

Mr. TURRIFF. I do not think the question of a man's right to homestead and preemption need be mixed up with this at all. You are giving a veteran something for his work in South Africa. If he has had a homestead, he cannot get another. If he has not you cannot, when giving him something you say he is entitled to, cut him out of his right to a homestead. As regards the cutting down of the settlement duties, that would be most unsatisfactory. You are giving a half-section, half a mile wide by a mile long, to a South African veteran, and he has to do the necessary homestead duties and six months residence each year for three years. It would be most unsatisfactory to other settlers in the vicinity if he could earn his patent by doing less homestead duties—if, for instance, he could earn it by a three months' residence or less, or by doing the cultivation duties instead of residence. I agree with the hon. member for Kings (Mr. Fowler) that they are being dealt with liberally. They are being given half a section instead of the quarter-section, which was what most of them expected, and I do not think we are asking too much if we ask that they should perform the necessary homestead conditions. Then as regards doing away with the right to substitute; a substitute may be just as good a settler, and that is one of the chief objects the government has in view, namely, that in giving this land to the South African veterans you ensure that the land will be occupied, cultivated and settled upon.

Mr. SAM. HUGHES. What the hon. member for Kings (Mr. Fowler) said about the scrip holder in days gone by selling his scrip is absolutely true, because very few people could be induced in those days to go and settle in the Northwest, but it is entirely different to-day. I know hundreds of boys who are just waiting for this scrip to go up and settle in the country. Many no doubt will sell their scrip, but there are scores who will go there and settle.

Mr. FOWLER. My suggestion will not apply to them.

Mr. SAM. HUGHES. The young fellows in the towns who cannot afford to go out should not be discriminated against.

Mr. HERRON. There should be a distinction between a man who is a resident and a man who has never been in that country. Partially the object of giving this land is to promote the settlement of the Northwest, and I think that a man who has not been there, either before, during or since the war, should be asked to go and reside there either on his land or at least in the country.

Mr. BEATTIE. The best plan to adopt is to compel the volunteer to settle on the land or take his scrip. Otherwise you will have the land sold and held vacant by speculators for many years to come. In the case of scrip given after the Riel rebellion not one in a hundred of those who were entitled to it and received it settled on the land. The scrip was sold as low as $10 to $15. I tried to sell mine and all I was offered for it was $15. The hon. member for Haliburton (Mr. Sam. Hughes) says he knows of hundreds of boys who will go out and settle on the land. Well, that is the best argument we can have for making them settle on it or take their scrip.

Mr. BARR. The Ontario government have dealt more generously with the veterans in that province, they have exempted the land granted to them from taxation, except for school purposes, for ten years, and if the grantees do not settle on the land the government buys it back, sometimes of course for a small amount, $50 or $100. I do not think that this government would be wise in following their example and exempting the lands in the west from settlement duties. Even in New Ontario that retarded settement to such an extent that the Ontario government would probably not do it again.

Mr. FOWLER. There was some reason for the Ontario government granting this exemption from duties as they valued the land at only $50.

Mr. A. MARTIN. I do not think we should make the restrictions so very onerous. The idea in my mind is that these volunteers should be induced to settle there but you must not place too many restrictions on their mode of settlement. I have heard it suggested, and I think it is a good idea, that the nurses and chaplains who attended to the spiritual wants of the volunteers should have land as well, but I do not see how you could force these to live for six months on the land. If you make the conditions very onerous you force the grantees to take scrip, and we know that in the past many people have made it a trade to go to the west and deal in scrip. In many cases the grantees would sell their lands for very small amounts. I would again urge consideration for the chaplains and nurses, those who went there in any capacity to serve their country in the hour of need. Their action gave Canada more standing in history than perhaps any other event in the last twenty years. It will redound to the credit of this parliament to deal very generously with those volunteers. If I had my will about it I would do away with the scrip altogether. I do not think it is a fair or a good way to do the business. Some system of permitting substitutes to take the land might be adopted. I have heard this evening of a man who is ready to sell his claim for $25 and I have no doubt that some men will be ready to buy scrip at that rate.

Mr. BLAIN. As reference has been made to the Ontario Act I may quote from it:

Any person who was resident in the province and who went from the province to South Africa, to act as chaplain or nurse or Red Cross commissioner or a newspaper correspondent during the said war or any period thereof——

These classes are allowed land under the Ontario Act. I think this is an example that might worthily be followed in the passage of this Bill.

Mr. S. J. JACKSON. Reverting to clause 2, I know a young man, Mr. Muckle, who happened to be visiting in New Zealand when the war broke out. He volunteered in the New Zealand contingent, fought through the war and immediately returned to his birthplace in Manitoba and resides there.

Mr. CONMEE. There is a similar case in Port Arthur of a young man named Gillis who was in South Africa and volunteered there.

Mr. HERRON. I wish to offer an amendment to clause 4 beginning at the sixth line. I move:

That clause 4 be amended by adding thereto the words: But this section shall not apply, in so far as residence and cultivation are required, to persons incapacitated as mentioned in section 2 thereof.

The effect of this amendment is that persons incapacitated in the war may get their land without settlement duties. There are a few special cases known to every member in this House. There are a few men in my own county and if they were explained to the committee I am sure the committee would have no hesitation in adopting this amendment. There are not more than ten or twelve such cases in Canada.

Mr. A. A. McLEAN. Can a person entitled to this land assign it to any other person who must perform the duties, or would the man purchasing scrip be considered a grantee?

Mr. HENDERSON. With regard to scrip, we must all admit that in by-gone years there was a great deal of improper handling of scrip. It was no doubt bought up at very low prices, sometimes for a mere song. People there made it a business to gather up large quantities of this scrip, and buy large tracts of land with it, notably, I understand, the Saskatchewan Land Valley Company, in the purchase of 250,000 acres used a large amount of scrip. I do not think it is right that any person outside the volunteers themselves should get any advantage out of that scrip. The minister should so arrange the law that no person would be allowed to apply that scrip in the purchase of land unless he is prepared to make an affidavit that he paid the full $160 for it. I do not believe in these speculators in scrip being allowed to gather it up at a mere nominal price, and then come to the government and purchase land with it, dollar for dollar.

Mr. TURRIFF. That cash scrip at the present time would have a market value of between 90 and 95 per cent, so any one that took scrip good for the payment of $160 for Dominion lands, would be able to sell it for about $150. There is a good demand for the scrip on the part of those who have payments to make to the Dominion government, so any one who took that scrip would be sure to get close to $150 in cash for it. Of course, you can make a regulation that the purchaser must pay the full $160, but if you do there will be no sale for the scrip, because if any one had $160 to pay to the government, unless he could make five, six or seven per cent on the scrip, he would not bother buying it but pay cash instead. But there is so little of that class of scrip to be had, that he would not be sure of getting over 90 per cent for its face value.

Mr. BARR. There is another class of people that have been overlooked in the enumeration of those who ought to be entitled to a land grant, I refer to the newspaper correspondents. Like the soldiers, they went out to that country and took their lives in their hands, and they did more to advertise the country probably than the volunteers did. In my opinion they should receive recognition in this Bill.

Mr. A. A. McLEAN. With reference to some of the contingents who went out to South Africa, and did not serve, and then returned, will they be entitled?

Mr. OLIVER. That is a matter for consideration under clause 2, which has been hung up in deference to the unanimous view of the House.

Mr. R. L. BORDEN. A difficulty about the amendment of my hon. friend from Alberta (Mr. Herron) has been brought to my attention, namely, that section 2 is not yet amended, and the amendment which is proposed to section 2 would not be relevant there. I would suggest that my hon. friend's amendment be in the following terms:

But this section shall not apply in so far as residence and cultivation are required, to persons who, by reason of physical or mental incapacity arising from service in South Africa as aforesaid, are unable to comply with the conditions as to residence and cultivation prescribed in section 4 hereof.

The object the hon. gentleman desires to attain is this, that the conditions as to residence and cultivation should not be imposed upon persons who, by reason of physical injuries or mental condition arising from the war, are unable to perform the duties which otherwise they would be required to perform under the law.

Mr. OLIVER. I think the provisions of the Dominion Lands Act would be sufficient to meet the cases suggested. Beyond that point it would be dangerous to go. The provisions of the Land Act are framed to meet just such cases as my hon. friend has in mind. I think it would be safer to leave such cases to the operation of the Dominion Lands Act.

Mr. R. L. BORDEN. The minister then is satisfied that the provisions of the Lands Act would amply cover the case mentioned by my hon. friend from Alberta.

Mr. OLIVER. I could not say they would amply cover the case, but I think they would cover it so far as it would be safe to go in administration ; otherwise we might have to deal with what might amount to a scandal in the matter of medical certificates and other means of avoiding settlement duties.

Mr. HERRON. I had in mind one or two very severe cases in which I thought the applicant should get his patent forthwith without putting in the necessary three years. I have a case in mind where the man has been in the hospital ever since the end of the war, and he has a large family of ten children. I only know of two cases, but they are very special ones. I had them in view, and thought that they should be entitled to get their patents without performing the homestead duties. Does the minister think such a case could be dealt with in section 2 ?

Mr. OLIVER. I think clause 4 as it stands should be carried. The cases my hon. friend suggests can be met to a measurable degree under the provisions of the Dominion Lands Act. I could not support his amendment.

Mr. HERRON. Perhaps the minister would not mind explaining what the provisions of the Lands Act are with respect to that particular case.

Mr. OLIVER. One provision is that where a homesteader is physically incapacitated from fulfilling his duties, by order of the Governor in Council, he may be granted a patent without residence.

On section 5—substitutes.

Mr. OLIVER. I have an amendment to clause 5 that I propose shall be added as subclause 3 as follows :

No such instrument shall be accepted or recognized by the department which is not executed and dated after the date of the warrant of the Minister of Militia and Defence, provided for in section 7 of this Act.

Mr. HERRON. I would like an explanation from the minister as to what the addition to this clause means. I believe there are cases in the country in which some men have made arrangements to dispose of their land. I suppose this is what it has reference to.

Mr. OLIVER. The amendment I have moved is for the purpose that is set forth in its wording, that the assignment of the volunteer is of no value until this right has been accorded by the Department of Militia and Defence; that is to say that the trafficking in rights which is going on at the present time will be at the loss of the enterprising purchaser and not at the loss of the volunteer.

Mr. TURRIFF. I think there should be a change made in section 5. It reads :

No person shall be accepted as a substitute unless he is a British subject.

It is perfectly right that a man must be a British subject before a patent issues to him, but I do not see any more reason why a settler who purchases a warrant, and resides on the land should be required to be a British subject any more than a man who takes up an ordinary homestead. It will be a great mistake if the clause is left in its present shape. You will prevent a great many men who might wish to become purchasers from obtaining this land.

Mr. SAM. HUGHES. Say 'or makes the declaration to become a British subject.'

Mr. CONMEE. That would be better.

Mr. TURRIFF. The law which applies to the ordinary homesteader would cover this case; he cannot get his patent unless he takes out his papers and becomes a British subject. I therefore move to strike out the words 'a British subject.'

Mr. SAM. HUGHES. Then a foreigner might come in and hold this land. Can a volunteer get his patent under this section without becoming a British subject?

Mr. TURRIFF. The same provision can be made as that which is contained in the Land Act.

Mr. SAM. HUGHES. He should be a British subject or be required to declare his intention of becoming one the same as a homesteader.

Mr. TURRIFF. I do not think a homesteader has to make that declaration. I think it would be advisable to put in a provision that the patent should not issue to any one unless he is a British subject.

Mr. DEPUTY SPEAKER. Mr. Turriff moves to strike out the words 'a British subject.'

Some hon. MEMBERS. No, no.

Mr. CONMEE. I understand he has to be a British subject before he gets his patent.

Mr. LANCASTER. No, it is the other way.

Mr. R. L. BORDEN. I would like to have the amendment explained.

Mr. TURRIFF. I think there is a general misapprehension as to what I mean. I propose to strike out the words that he must be a British subject in order to become a substitute for the original grantee, but I do not propose that he shall be allowed to receive the patent for the land until he becomes a British subject. Take the settler coming in from the United States; he can take up a homestead but he does not become a British subject until he has lived three years in the country.

Mr. SAM. HUGHES. Has he not to declare?

Mr. TURRIFF. Let him make his declaration, and provide that before he gets the patent he must become a British subject.

Mr. LANCASTER. Where we grant lands to men because they went to fight for the British Crown no one should be allowed to speculate in these lands unless he is a British subject. The Bill is all right as it is.

Mr. M. S McCARTHY. Under the Lands Act we permit a man to make a homestead entry who has declared his intention, and why should there be any distinction made in this case?

Mr. TURRIFF. I will ask that my amendment should read this way:

No person shall be accepted as a substitute unless he is a British subject or has declared his intention of becoming a British subject.

Mr. FOWLER. The whole idea of allowing a substitute in such a case as this is absurd. But if it be allowed it should be confined to a man who is already a British subject.

Mr. CONMEE. It should be provided that before receiving the patent he should become a British subject.

Mr. OLIVER. There is no provision in the section as it stands for a substitute becoming a British subject before getting his patent, and while I have no objection to the amendment as proposed, it should be followed by a provision that the substitute should be a British subject before he gets the patent.

Mr. FOWLER. Where is the necessity for this? Are there not sufficient British subjects to purchase these rights. It is ridiculous to extend this privilege to foreigners.

Mr. M. S. McCARTHY. These scrips will undoubtedly be speculated in, and that being so, it is desirable to make them as valuable as possible. If we refuse to give the privilege to those who have not yet taken out their naturalization papers we limit to that extent the market value of the scrip.

Mr. LANCASTER. If I felt that these scrips were to be speculated in I would vote against the whole Bill. We should approach this with the idea that British subjects should settle on these lands as far as possible. It is not like a foreigner coming in and taking up a homestead entry in the ordinary way. This is a special grant to certain brave and loyal British subjects whom we desire to honour and we should restrict it to British subjects.

Mr. CONMEE. We encourage foreigners to come here and declare their intention to become British subjects, and when they do so in good faith we ought not to restrict them in their privileges of citizenship.

Mr. LANCASTER. I am quite content that such a one should have all the ordinary privileges of citizenship, but this is a special case altogether.

Mr. TURRIFF. I would add to my amendment the words:

And no patent shall issue for any lands under this Act until the holder has become a British subject.

Mr. OLIVER. The difficulty could be met by adding to section 2 of the Bill the words:

The patent shall not issue until he has become a British subject.

Mr. FOWLER. Suppose John Smith fought in South Africa and he sells his rights to Thomas Brown, who becomes his substitute; could Thomas Brown sell his rights to another person?

Mr. OLIVER. No. The Bill expressly says that the volunteers may sell to a substitute and the substitute must earn the patent.

Mr. FOWLER. No, it does not say that.

Mr. S. J. JACKSON. Every restriction we put on these grants is just lessening the value of the man who gets it. Our experience from 1871 to 1875, when there was plenty of scrip in the market—and at that time anybody could buy it and there was no requirement that he should be a British subject—was that better prices were got than if there had been no restriction. Any restriction is bound to lower the price to the man who holds the property.

Mr. FOWLER. This violates a very important principle that we should not lose sight of, and that is the principle of settling these lands with people who are going to farm them. It is better to have four farmers farming 160 acres each than to have one farmer owning a farm of 640 acres. You are increasing the holdings to these settlers and in that way are keeping out settlement. I do not think the minister has looked into this thing as he should. What we want to do is establish a population out there and not a few big land holders.

Mr. OLIVER. Not a peasant population.

Mr. FOWLER. I do not quite understand what the hon. gentleman means by 'a peasant population.' Do I understand the minister to say that a man with 160 acres is a peasant farmer? Does he want to establish a system of landlordism in that country? No man can possibly work 160 acres by himself. What the minister wants is to establish an aristocratic class who will have servants at their command. He desires to put the lands of this country into the hands of a favoured few. What is the secret of the success of the French nation? It is the fact that the lands of France are divided up amongst small holders—a peasant class, if you will, but the bone and sinew of the French nation. And if you call that a peasant class, I would that we had in Canada a peasant class, for that is the class which is the salvation of France where the land is held by the men who work it and not by the employers of labour. I think a very great mistake is being made when we allow any substitution and do not compel these men, who have, by their sacrifices in the past, earned their right to this land, to go out themselves and settle on it. For my part I protest against this policy in the interests of the people of the west as well as of the whole of Canada.

Mr. S. J. JACKSON. Do I understand the hon. gentleman to protest against this land being given to the volunteers of South Africa?

Mr. FOWLER. If I have not made myself clear to the bright intellect of the hon. gentleman, it will be impossible, with the slight command I have of the English language, for me to use words which would convey my meaning to his intelligence. I am not opposing the grant to the South African veterans, but I am opposing the right of substitution which is attached to the grant and which is not in the interests of this country, because it will enable some of these men to sell for a song to the scrip shark, who has been the curse of the west and who has already his eyes fixed upon this Bill. There can be no doubt about that. The speculator who deals in scrip is already looking to this Bill. He has not gorged himself quite full enough with the scrip of the half-breed and is now after the scrip of the veteran. I say it is not in the interests of the west that large tracts of land should be held by individuals, but rather that smaller holdings should be the rule, and that there should be what my hon. friend the minister terms 'a peasant population' rather than a population of rich landlords with servants and serfs at their command.

Mr. OLIVER. My hon. friend is under a misapprehension as to the purpose of this Bill. This Bill is not for the purpose of benefiting the west, and none know that better than the people who represent the west. It is supposed to be a discharge of the duty of the whole Dominion to those who went to South Africa to serve the empire. This is a sacrifice on the part of the west and is recognized as such, but the west is prepared to do its part in recognizing the service of these men. It is useless to speak of this as though it were a benefit to the west. It is a case in which the west is carrying the burden of the whole Dominion in making some recognition of the services of these men.

Mr. FOWLER. If that be true, better strike the Bill off the record altogether; and if it be necessary to provide some recognition for these veterans, we should do it by means of a money grant. This is only another illustration of the mistake we are committing in keeping the control of these lands in the federal government and not giving them to the provinces. What right have we to impose a sacrifice on the west? What right have we to do an act of injustice towards the west if, as the minister says, this is an act of injustice to that portion of our country. Let us from the Dominion treasury give these men proper remuneration for what they have done and not give an opportunity to the speculators to make a lot of money out of this grant, whereas our veterans will only get a very small portion of it.

Mr. OLIVER. I do not want to accept the suggestion, and have it put on record in 'Hansard,' that this is an injustice to the west.

Mr. LANCASTER. That is what you said.

Mr. OLIVER. I said it was a burden.

Mr. FOWLER. A burden is an injustice.

Mr. OLIVER. Not necessarily. It is a burden the people are quite prepared to bear. I want my hon. friend to understand that the honourable part which the west took in South Africa was a burden but not an injustice. It was a burden which the west bore proudly; and when we are doing what we can to recognize the services of these men in South Africa, we are acquitting a debt of honour and the west is proud to bear its share of that burden.

Mr. SAM. HUGHES. How many scrip can the speculator buy?

Mr. OLIVER. The speculator can buy as many scrip as he has money to pay for, but his scrip will only be of use to him if he can fulfil the duties and obligations required to earn the patent.

Mr. FOWLER. That means he will get a few more substitutes just as he had to produce the half-breed, and he did not always produce the half-breed he was supposed to produce. The minister says this is a burden on the west. In what respect? Is it because these lands are being granted? Then why should the west bear the burden? Why should not the whole of Canada bear

it? If you make a money grant out of the Dominion treasury, the whole of Canada will bear the burden and not the west alone.

Mr. OLIVER. Precisely.

Mr. FOWLER. Why do you want to be unfair to the west? Is the west crying out for an opportunity to bear the burden? I have not heard the cry.

Mr. OLIVER. The west is perhaps more willing to bear the burden than other parts of the country are willing to share it.

An hon. MEMBER. Why?

Mr. OLIVER. There has been no suggestion from any part of the country in the line my hon. friend suggested, that there should be a payment out of the treasury. It was a question of Northwest lands or nothing.

Mr. FOWLER. It is not necessarily a question of Northwest lands or nothing. There is no reason why some minister should not have brought down a Bill providing that a money grant should be given to the South African veterans.

Mr. LANCASTER. According to the wording of this section, there might be more than one substitute, and the question is, which one would require to be a British subject. The first substitute might dispose of his interest and go to the United States or anywhere else, and the last one who took the land would be the poor, downtrodden British subject who would have to fulfil the settlement duties. As the Bill stands, there can be one or any number of substitutes.

Mr. OLIVER. I would not wish to set up my knowledge of the law against that of the hon. gentleman ; but it is as plain as the English language can make it, that there is provision for an assignment to one substitute.

Mr. LANCASTER. That does not limit it to one substitute. I do not think any lawyer will deny that the provision for a substitute must be taken as meaning any number of substitutes. If the section said 'one substitute,' that might limit it, but as it is it means his substitute for the time being. To my mind the section is all right unamended.

Mr. CARVELL. It seems to me that it would be a mistake to curtail the number of persons to whom those lands could be assigned ; because the man in the east cannot go and cultivate them, and any curtailment you put upon his right to dispose of them makes them of that much less value to him and therefore only weakens the object of them. I would allow as many substitutes as are allowed in the case of any commercial commodity. If this is not allowed, it would be better, as the hon. member for Kings and Albert suggests, that you should give these men a money grant. But I have not heard any such proposition before. Ever since I have been here, in every session, the proposition has been to make grants of land to these South African veterans, and the powers that be have decided to give them lands. If you couple with the grant the condition that the grantee must go and settle on the land it will be absolutely useless to one-half or three-fourths of the men who went to South Africa.

Mr. S. J. JACKSON. I move that the words 'twenty-one' be struck out of the second line and the word 'eighteen' be substituted therefor.

Amendment of Mr. Jackson agreed to.

On section 6—scrip may be granted instead of land.

Mr. OLIVER. I desire to move that in the last line the word 'nine' be struck out and the word 'ten' be substituted therefor.

Mr. MILLER. If this Bill does not make it clear whether the substitute or the grantee has the right to assign, ought it not to be made clear ?

Mr. OLIVER. In regard to the question of an assignment by one substitute to another, I can only say that, so far as I can read English, this provides for an assignment from the volunteers to a substitute, and the substitute must perform the duties. If the English language does not mean what it says, then an amendment would be necessary ; but that is the intent of the Act.

Mr. MILLER. I quite agree with the hon. minister that if the English language is as he understands it and as I understand it, then an amendment is not necessary ; but there are a number of lawyers in the House who claim that the language means what it does not appear to mean, and I would like to hear from them.

Mr. HERRON. I moved that the following be inserted as section 6a :

Any person entitled to a grant of land under the foregoing provisions may in lieu thereof if he so chooses, receive a free grant of one quarter-section without residence duties or homestead regulations, provided that he notifies the Minister of the Interior of his choice before December 31, 1910.

The object I have in view in moving this amendment is this. Certain men may prefer to take 160 acres of land and get a patent for the same without residing on the land. A great many men in the west who will be entitled to lands under this Act are in mercantile business, in stores, or in various occupations in town. Many more are ranchers or are engaged in some other occupation which they followed before the war broke out. Many of them would think it a great favour to be allowed to select a quarter-section of land and obtain the patent without further conditions. I would not suggest this as taking away from the rights of those who choose the 320 acres but merely

to provide for the man who wishes to take 160 acres without condition.

Amendment (Mr. Herron) negatived.

Mr. LAKE moved :

That the following be inserted as clause 6a: Any person entitled to a grant of land under the foregoing provisions may, in lieu thereof, if he so choose, receive a free grant of one-quarter-section without residence or cultivation duties, provided that at the time of his enlistment he was resident or domiciled in the province of Manitoba or in the provisional district of Saskatchewan, Alberta or Assiniboia, and provided further that he notifies the Minister of the Interior of his choice before December 31, 1910.

He said : The reason for the proposed amendment is that there should be some provision, as the original Bill proposed, for granting to the residents of these provinces some special consideration for their services from the lands of the Northwest. The reason for proposing that this should be restricted to those who were resident in the west at the time of enlistment is that the grant is being taken from the lands of the Northwest, and the request which was laid before the House by the legislative assemly of the Northwest Territories was that the grant should be made to those men who had volunteered from the Northwest Territories as they were then. Of course, I consider that the province of Manitoba and the Yukon Territory should also be included in this request. As Mr. Herron has pointed out, there are many men who are resident in that country who have moved into the towns and are engaged in other lines of business, to whom it would be a great benefit to receive this unconditional grant of land. I am in favour of the provisions of the Bill as they have been set forth. The grant of the 320 acres with residence duties meets with my approval. The provision that a man may assign his land to a substitute I also approve. The man resident in eastern Canada who transfers his rights is sending a new settler to the Northwest. He will not sell for less than $140 or $150, because he can get that much for the scrip, and the man who has paid $140 for the right intends to reside there, so I would withhold this privilege from the volunteer who enlisted in the east, because it would not be bringing in further settlers to grant him free land. I think it is a small point for this parliament to make such a grant as I have proposed to meet the wishes of the people of these provinces, who would themselves undoubtedly grant this land if their public lands had not been taken from them.

Amendment (Mr. Lake) negatived.

Mr. HERRON. In reference to the provision that any transaction occurring before the issue of the scrip would be void, is the minister prepared immediately to issue this scrip, or will that only come into effect after a certain date?

Mr. OLIVER. The Bill will be in effect as soon as it is assented to.

Mr. T. CHISHOLM. When can application for warrants be made to the Minister of Militia?

Mr. OLIVER. As soon as the Bill is assented to.

Mr. FOWLER. When can the speculator begin to get in his work?

Mr. OLIVER. Not until the certificate has been issued to the volunteer.

Mr. SAM. HUGHES. The scrip must be issued on the application of the volunteer, not of the substitute?

Mr. ARMSTRONG. Has the minister made an estimate of the number who will be likely to accept grants?

Mr. OLIVER. The number who would be entitled according to the present drafting of section 2 would be a little over 7,000, but if all the suggestions that have been made are followed the number will be very largely increased. I would be glad to have any further suggestions in regard to the provisions of section 2 before the committee rises. I would like to have the views of the committee with regard to the different classes of people who should be provided for. If we make the provisions of section 2 so wide and so general as to cover all the cases that have been suggested to the House, we are liable to have our Act subjected to abuses in administration that will probably defeat the object aimed at. If we made the Bill fairly restrictive, or did not widen it so much that it would be difficult to operate, the understanding being that special cases might be dealt with in a special Act, I think that would be a safer plan in the public interest than to undertake to cover all cases by a general provision.

Progress reported.

PATENT AND PROPRIETARY MEDICINES.

House in committee on Bill (No. 146) respecting proprietary medicines.—Mr. Templeman.

On section 2—definitions.

Hon. WM. TEMPLEMAN (Minister of Inland Revenue). There is a custom in the trade that medicines are manufactured under contract for the proprietor. To meet that, I move to add the following as subsection (d) :

Where the manufacturer of a proprietary or patent medicine is not the proprietor

thereof, the proprietor who procures the same to be manufactured shall be deemed to be the manufacturer within the meaning of this Act.

Motion agreed to.

Mr. G. H. McINTYRE. Has the minister any further views with regard to the use of that word 'internal.' It was contended before the committee that it meant only what was introduced by the mouth, that anything taken through the nose, or a hypodermic injection of cocaine through the skin, might not come under it.

Mr. TEMPLEMAN. I do not know that the doctors would agree upon what 'internal' means. I was surprised to be told that an injection by the nose was not considered an internal remedy. This Bill proposes to deal only with medicines taken internally.

On section 7—prohibited medicines.

Mr. G. H. McINTYRE. I would like to ask the minister if he proposes to introduce a section which will make provision for the sale of such stock as druggists may have on hand at the time of the passing of this Act ?

Mr. TEMPLEMAN. That is a point I gave some consideration to and, in discussing the matter with others, it was thought that under clause 17, where power is given to the Governor in Council to 'make such regulations for giving effect to any of the provisions of this Act and declaring the true intent thereof, in any case of doubt, as to him seems meet,' we may make regulations governing the sale of those medicines that may be in stock at the time this Act comes into force which would not be labelled in accordance with the Act. It is not at all probable that this Act will be brought into force before the first of the year, which will give dealers six months to prepare their labels in conformity with the Act and to dispose of their present stock. We do not contemplate to cause the trade any trouble in changing from the old to the new system. That point can be guarded against by regulation.

Mr. T. CHISHOLM. The minister has perhaps not thought of the fact that in a a great many cases druggists do not know the contents of their patent medicines, and it will be impossible to get rid of their stock at the expiration of the time mentioned by him. I think there should be some special provision to allow them to dispose of all the patent medicines that are on their hands at the time the Act is put into force. They might be compelled to put a date upon the bottle to show that it was manufactured before the Act passed.

Mr. TEMPLEMAN. A special label ?

Mr. T. CHISHOLM. Yes, a special label. It would be impossible to put labels on the stock that they have in their drug stores to indicate what the actual contents of the bottles are, because druggists would not know what these were themselves.

Mr. TEMPLEMAN. I am of opinion that I have authority to require them to put a special label on the quantity that may be in stock at the present time, or to label it as nearly as possible in conformity with this Act.

Mr. T. CHISHOLM. If you could compel them to put some special label on to show that the stock was manufactured before the Act came into force it would save them from losing their stock. We would not wish to do any injury to those who have laid in a large stock. Frequently druggists buy a large stock of a particular kind of patent medicine which is used in their neighbourhood. They get a discount if they take a large amount, and if some provision were not made such as I suggest an injury might be done to local druggists throughout the country.

Mr. BARR. Many drug stores have these patent medicines on their shelves for probably two or three years. Giving them until next January would afford them no opportunity whatever to dispose of their stock. I think it is a question that should be carefully guarded. It is absolutely necessary that a restriction should be imposed which would prevent them from selling year after year or from buying more stock and selling it under the pretence that it was the stock which they originally had on hand. A great injustice might be done to the druggists who have a stock of patent medicines on hand unless provision is made which will enable them to dispose of it.

On section 9—distribution from door to door.

Mr. DANIEL. I would like to call the attention of the minister to the fact that in schedule (a) there are three or perhaps more coal tar products mentioned, but there are several others that might as well be included.

Mr. TEMPLEMAN. The schedule was prepared by the chemist of the department but it may not be complete. Under clause 17 it will be seen that we can add to or remove from schedule 'A' any poisonous or patent drugs as from time to time may be deemed expedient. One of the first things that would be done after this became law would be to complete that schedule and issue a circular.

Mr. DANIEL. I think this schedule would be more satisfactory if instead of mentioning a few of these coal tar products it should include all coal tar products. Why should a acetanilide be included in the schedule and antipyrine left out. If you are going to include any of these coal tar products you should include them all.

Mr. TEMPLEMAN. Are all coal tar products poisonous ?

Mr. DANIEL. One is perhaps not so bad as another but they are all of the same character and have the same effect. The Bill at present really puts a ban on these mentioned and gives an advertisement to those that are not mentioned.

Mr. TEMPLEMAN. What are they ?

Mr. DANIEL. As it happens those that are not mentioned are largely proprietary. For instance, antikamnia which is said to be an extract of acetanilide and bicarbonate of soda but the basis of it is acetanalide. It is sold under the trade name of antikamnia and would not come under this Bill. It is the same with antipyrine which I believe is made in Germany and which is also proprietary. It is a coal tar product just the same as acetanalide and phenacetine. Those that are not mentioned by name in the Bill are in the same category as those which are, and they should only be taken under advice.

Mr. TEMPLEMAN. Would you suggest that the Bill should say : Acetanalide and other coal tar products ?

Mr. DANIEL. I would put it in that way.

Mr. CHISHOLM. These coal tar products all affect the heart and are exceedingly dangerous medicine.

Mr. TEMPLEMAN. Before putting the Bill in force I presume this matter would be submitted to the proper authorities. It is my intention that it should be submitted to some eminent medical man so that we might get a complete list, and in the meantime we can insert the words : 'and other coal tar products.'

Mr. DANIEL. The trouble about inserting a complete list in a statute is that they are constantly getting out new coal tar products and describing them by some trade name. The minister in the schedule puts a ban on certain preparations and at the same time gives an immense advertisement to other preparations which are largely proprietary, such as antipyrine and antikamnia, to which exactly the same objections apply. I think it would be only fair and right, both to the public and to the people dealing in these things, that the general term should be used instead of these individual terms, unless you see the individual names of all the preparations.

Mr. R. L. BORDEN. Are there not coal tar products which are not of a medicinal character? If so, would it not be wise to say 'and all other coal tar products used for medicinal purposes' ? Otherwise you would make it too comprehensive.

Mr. G. H. McINTYRE. That would not be necessary as the Bill applies only to preparations used as medicines.

Mr. TEMPLEMAN. I move that the words 'and other coal tar products' be added to the schedule.

Amendment agreed to.

Mr. G. H. McINTYRE. I would like to ask the minister if he has been able to devise any plan for putting a limit to certain advertisements of medicines or remedies that are not at all reputable? I think I need not enter more particularly into a description of them ; they will suggest themselves. These advertisements have appeared from time to time in some newspapers which are not over particular, and it would be well, if possible, to put some limit upon them.

Mr. TEMPLEMAN. That is a point which has been considered. The practice of publishing advertisements of patent medicines that are not of a creditable character has been, I was going to say, universal ; but in recent years, I am bound to say, there has been a great improvement in that regard. Public opinion has put a ban on that class of advertising, and it is not nearly so commonly in vogue now as it was formerly. I had an amendment drafted prohibiting obscene advertising, but I recognized the difficulty and also the danger of trying to exercise a censorship over advertising of any kind. I did ask the Department of Justice some days ago how far we could go in prohibiting obscene or objectionable advertising of patent medicines, but the Department of Justice, up to the present time, has not helped me out. So I thought it better to let this Bill become law without referring to advertising at all. As I have said, the evil is not nearly so great as it used to be. The press of Canada has refused to carry in its columns advertising of that character, and I do not know that it would be wise to attempt to legislate on the subject in this Bill. I am afraid that we might have some difficulty in enforcing such legislation, and I am not prepared to draw the line between what should and what should not be published. I think that this measure, which is not very drastic, is along the right lines, and after we give it a fair trial for a year or two, we can perhaps devise a clause to regulate such advertising.

Mr. THOS. CHISHOLM. The minister has in the schedule a basis for regulating all such matters. By enlarging the schedule he can overcome to a great extent the evil complained of.

Mr. R. L. BORDEN. I observe that the minister, in section 14, subsection 2, appears to contemplate some kind of third party procedure. I am not quite sure that will work

out satisfactorily. What is contemplated exactly by subsection 2 of section 14 ?

Mr. TEMPLEMAN. In the Bill as first printed we had incorporated a warranty clause, requiring the giving of a warranty by the manufacturer to the vendor. We thought it would be very cumbersome to have that warranty accompanying every sale of goods, and we substituted clause 14, which is an entirely new clause, approved of by the special committee. If my hon. friend will look at the latter part of section 14 he will see that the manufacturer's name and number must be given on the label and that is sufficient identification of the manufacturer for the purposes of the section, and he can be brought in as the defendant in a prosecution. The action will then be brought against the manufacturer and the court will find, if the offence be proved, against the manufacturer.

Mr. R. L. BORDEN. There may be some provision in the Summary Conviction Act which provides that the defendant can obtain a summons to bring a third person before the court, but unless there is, this subsection could not be worked out. Can the minister tell me if there is any such provision ? The subsection reads :

2. If the person who gives notice of such defence, or the prosecutor, obtains a summons to bring such third party before the court, the court shall at the same time hear all the parties and decide upon the entire merits of the case, not only as regards the person originally accused but also as regards the third party so brought before the court.

Mr. CLARKE. I do not think there is any such provision in the sense the hon. gentleman refers to. There is in civil proceedings. What I should judge this to mean is that the defendant, in order to exonerate himself, must institute a new proceeding against the third party, which would really be a separate prosecution. If he wants to clear himself, he should lay information against the party responsible and prove his charge.

Mr. R. L. BORDEN. In some provinces there is a provision for bringing in a third party in civil cases, in others there is not, and this applies to the whole of Canada. Even if this were intended to apply to civil proceedings alone, I do not think it would work out very satisfactorily. But in a criminal proceeding, I do not see how you could work it out at all. There will be two different prosecutions, and the bald statement that 'the court shall at the same time hear all the parties and decide upon the entire merits of the case,' would be a little too general to enable the provisions of this section to be worked out at all. Is it contemplated, for example, that the magistrate would give the one judgment in the two cases and that this section will be sufficient for that to be done ? I would hardly think so

Mr. CLARKE. There is another way in which it could be done. The proceedings could be amended by making the manufacturer a defendant along with the other party. It is, of course open to some objection.

Mr. R. L. BORDEN. We have not the time to work it out and it is not of sufficient importance to insist upon. No doubt the Bill will have to be amended.

Bill reported, read the third time and passed.

PRINCE EDWARD ISLAND RAILWAY—HARMONY TO ELMIRA BRANCH.

Hon. GEO. P. GRAHAM (Minister of Railways and Canals) moved second reading of Bill (No. 202) to authorize the construction of a branch line of the Prince Edward Island Railway from Harmony, on the Souris branch, to Elmira. He said : This is for the purpose of taking authority, if the government so desire, to build a line, a little over thirteen miles long, from Harmony, on the Souris branch, to Elmira. It will serve a very important country, where there are several sections thickly settled which are without railway communication. The road will cost probably in the vicinity of $400,000.

Mr. R. L. BORDEN. Might I ask whether or not there were some other proposed branches which seem to have been agitated for in Prince Edward Island for a number of years? When I visited the island three or four years ago, I heard of several of these branches which seemed to be on much the same basis as regards their claims on the exchequer. Why has this particular branch been selected and the others put to one side ?

Mr. GRAHAM. The government is of the opinion that this is all we can undertake this year. Some branch had to be selected, and I suppose the same question would be asked of any branch. Two branches were asked for in this vicinity. The Prince Edward Island legislature passed a resolution in which they named several branches and this was one.

Mr. J. D. REID. In whose county is it ?

Mr. GRAHAM. It does not say in my brief which county it is in. The resolution passed by the legislature of Prince Edward Island referred to many branch lines.

Mr. A. MARTIN (Queens, P.E.I.). Has the minister that resolution with him ?

Mr. GRAHAM. No.

Mr. A. MARTIN (Queens, P.E.I.). He will find it includes many lines in addition to the little bit of a paltry spur line he proposes.

Mr. EMMERSON. I wish to again refer to the whole question of branch lines in connection with the government system of railways in Quebec, New Brunswick, Nova Scotia and Prince Edward Island.

Mr. SPEAKER. Would that not be an irrelevant matter?

Mr. EMMERSON. I think it is germane to this Bill. It is a branch line being constructed by the government, the others are branch lines connected with the government system and the one question is involved in the other. It seems to me that the government, before constructing new branch lines in Prince Edward Island or any other province should consider and deal with the branch lines already in existence connecting with the government system. The Dominion has expended in connection with the several branch lines throughout the provinces traversed by the Intercolonial Railway nearly $7,000,000. The provinces have contributed to the same end about $5,000,000. The branch lines thus added by this parliament are all designed for one purpose, evidently we must assume that they are for the purpose of promoting the interests of the several communities traversed by them.

Mr. SAM. HUGHES. I do not like to raise a point of order, but I am forced to. I do not see the bearing of branch lines in other provinces on the Bill under discussion.

Mr. EMMERSON. I submit I am in order; I am arguing that before such a Bill is proceeded with the government should deal with the question of branch lines already constructed.

Mr. SPEAKER. I am rather inclined to think that a general discussion of branch lines in other provinces is hardly relative to a motion for the second reading of a particular Bill which deals with a particular branch line in one province. Beyond that the hon. member will see he is reviving a discussion which has already taken place in this House in this session at his own instance on the same question.

Mr. EMMERSON. Of course I submit with all deference to the ruling of the Chair.

Mr. SPEAKER. I think a discussion as to whether or not this branch line should be constructed is germane, but not a discussion of other branch lines in other provinces.

Mr. EMMERSON. I do not propose to deal with other branch lines in other provinces, but I do propose to show reasons why the government should not deal with this particular branch line at this stage. Parliament, before committing itself to an expenditure of $400,000 or $500,000, should inquire into the question of whether the expenditure already made in the past in connection with branch lines has been effectually made and has been made to accomplish the object which parliament evidently had in view, that is the benefit of the communities traversed by other branch lines.

Mr. SAM. HUGHES. The hon. member has paid no attention to your ruling.

Mr. SPEAKER. I think thus far the hon. member is paying attention to the ruling.

Mr. TAYLOR. They are only building this on paper for election purposes.

Mr. EMMERSON. I am dealing with this on principle. There is no narrow pent-up Utica of partisanship that will confine my views at this time. When this Bill has passed both Houses and has received the assent of His Excellency the responsibility will be on the government, but at present it is on parliament. The question is: Should parliament authorize the government of Canada to construct even a small branch line like this of only thirteen miles until parliament has dealt with the wider and greater question with respect to branch lines already in existence?

I have no particular objection to this branch line. My hon. friend the Minister of Railways has referred to the fact that the legislature of Prince Edward Island has passed a resolution, unanimously I assume, in favour of the construction of this particular line, and other lines, and that resolution no doubt called upon this parliament to authorize the construction of this particular branch line as well as others mentioned in that resolution. In considering that request, it seems to me to be the bounden duty of parliament to inquire whether this authority should be given until this parliament has dealt with the branch lines already existing in a way that would make them fulfil the respective missions which it was expected they would fulfil when parliament authorized their construction. The same question would arise if we were asked to subsidize an additional branch line in connection with the government system of railways on the main line of the Intercolonial Railway. This, I understand, to be an extension of the government system, and you cannot separate it. Because it happens to be in the province of Prince Edward Island is no reason why it should be separated from the whole system of the government railways of the Dominion. Should that be extended, should there be a draft made upon the revenues of Canada to create additional lines to the system until that system is placed in a position whereby it would fulfil the aspirations and hopes of the people when that system was constructed? I submit I am in order. I bow to your ruling, but I do not think I am departing from your ruling. I submit that the Minister of Railways, who of course spoke for the government with respect to their policy in that regard, should give some idea as re-

gards the course to be pursued in connection with branch lines already existing before asking us to deal with the proposition involved in the Bill now before the House. I hope I have made myself clear, and I hope the Minister of Railways will see the point of the objection I take to the Bill at this moment.

Motion agreed to, and House went into committee on the Bill.

On section 1,

Mr. A. MARTIN (Queens, P.E.I.). About three weeks ago the minister gave notice of the introduction of a Bill to construct branch lines in the province of Prince Edward Island, one being the branch line mentioned in the Bill, and the other a branch line from Montague bridge to connect with the Murray Harbour Railway. I would like to know what change has come over the spirit of the minister in leaving the second branch out.

Mr. GRAHAM. No matter how willing the government might be to do things, it cannot do everything at once, even if it were inclined. This branch, I find on investigation, has been surveyed and decided on some years ago; the other one had never been surveyed except possibly by a preliminary survey. I want to know, as near as possible, what a thing is going to cost before I ask parliament to commit itself to the construction. I was not in a position to do that with the second line. I may say, without speaking from any great knowledge, because I have been but a short time in parliament, that Prince Edward Island possibly is in a different position to other parts of Canada, in many respects. I have no idea whatever that building a branch line in Prince Edward Island is for the purposes of making money for the government.

Mr. A. A. McLEAN. Was the minister ever in Prince Edward Island?

Mr. GRAHAM. I have not been in Prince Edward Island, I am sorry to say, but I hope to visit it before another session of parliament. We have selected this branch line because it seemed to be needed, and that is all we feel in a position to ask parliament to authorize this year.

Mr. A. MARTIN (Queens, P.E.I.). I think that is a very lame excuse, it is the lamest excuse I ever heard this minister make. These are hardly branch lines, they are only spurs. I do not think the ex-Minister of Railways and Canals (Mr. Emmerson) need be alarmed unless they build it in the way they constructed the Hillsborough bridge at a cost of three prices. I am a little alarmed at anything undertaken by this government from what I have known of them in the past. This railway is only thirteen miles in length and if they proceed upon the same lines as they have in the past it will cost a great deal more than it should.

Mr. EMMERSON

Mr. EMMERSON. Move the six months' hoist.

Mr. A. MARTIN (Queens, P.E.I.). The Minister of Railways and Canals says that he would not undertake that branch that he had in his proposed Bill because it was not surveyed. The minister must be asleep, or he did not know that parliament was meeting. I know that previous to the election of 1904 there was not only a survey but two or three different surveys. There were surveying parties in every section of the country to see which way the road would take. I believe that there were as many surveys there as have been made for the road which he proposes now to construct and if there is anything in his argument why not proceed with the New London branch? How many surveys had they previous to 1904 of the New London branch?

Mr. GRAHAM. There have been several surveys made of the New London branch, but of the routes surveyed not one was satisfactory to the people, we have complaints that every one of the surveys which is made will not serve the people.

Mr. A. A. McLEAN. Why did not the minister give us the report of these surveys? He has refused to give it to us.

Mr. GRAHAM. I may be dense and I may be stubborn, but I do not propose to ask parliament to vote money for a railway until I know something about it. With reference to this line that we now propose to construct, a survey has been made, it is satisfactory to the people and we are going to build this branch this year. If hon. gentlemen from Prince Edward Island do not want it we will not force it upon them. It is going to cost a lot of money for a short line. This is all that we can see our way clear to do this year.

Mr. A. MARTIN (Queens, P.E.I.). The minister is not well posted as to what has taken place in that province. Is not the minister aware that the people came to an agreement, of which I have a copy, and which agreement was submitted to the hon. Finance Minister (Mr. Fielding) a few years ago when he was in Prince Edward Island with the tariff commission. I do not think the minister has any right to say that they do not proceed with the building of that branch line because the people have disagreed about the route. Here is the agreement and I will read it to the minister. It is signed by Mr. A. B. Warburton who is my opponent in the next election.

Mr. DEPUTY SPEAKER. I hope the agreement is not too long because it is out of order. The question is whether this line should be built and no other.

Mr. A. MARTIN (Queens, P.E.I.). This bears on the question that the minister took

up and surely I should have an opportunity of replying.

Mr. DEPUTY SPEAKER. Allusion can be made to it but it is not the question before the chair.

Mr. A. MARTIN (Queens, P.E.I.). There is the agreement.

Mr. DEPUTY SPEAKER. The question before the chair has reference to the construction of the Elmira branch.

Mr. A. MARTIN (Queens, P.E.I.). I hope I am in order. The minister says they do not want to proceed with the New London branch because there is a disagreement about routes. Here is the agreement that they entered into, signed by representatives of the different sections, and it shows that there was a perfect unanimity. I believe that we are going to have an exhibition of the same character as that which we had previous to the election of 1904. We are now in the last session of parliament, I presume, and the Bill is introduced to construct a few miles of railway in Kings county for the benefit of the hon. member for Kings (Mr. Hughes). I believe it is only on paper.

Mr. J. J. HUGHES. Your belief is very active.

Mr. A. MARTIN (Queens, P.E.I.). Yes, very active. In 1904 they pursued a different course. They began surveys all over the province. They began to survey this very railway and the minister says there is a disagreement about the New London branch. If there is a disagreement about the route, of the New London branch there is also a disagreement about this one. I know something of the history of these railways and there was a pretty free fight with regard to the proposed route of the Elmira branch. Here is a statement about the surveys we had in 1904—in 1904 and it is 1908, four years ago. I made the statement in the early part of the session that the hon. member for Kings had said that unless this branch was built within a year he would resign his seat. He contradicted me, he said the statement was not true. I believe he said two years in place of one. But, four years have gone and it is safe enough to come in with a Bill now at the end of a term of parliament and say that they are going to proceed with that line. This is a different procedure from that of 1904. Here is a return which I asked for and which will be given an idea to the House of how they spend money in order to carry elections and for the people of Prince Edward Island. There is the survey of this Elmira branch costing $1,500; there is the survey of the New London branch, costing $1,500; there is the survey of the main line to the west shore near O'Leary costing $1,500. That is the way the money goes. What do they give to the people of Prince Edward Island for all this expenditure? The minister says that they cannot proceed with the New London branch. I wanted to quote the agreement that was entered into but the chairman ruled me out of order. I bow to the decision of the chairman.

Mr. DEPUTY SPEAKER. I understood the hon. gentleman was going into details about the New London branch.

Mr. A. MARTIN (Queens, P.E.I.). If this Bill on paper is going to help the return of my hon. friend (Mr. Hughes) I do not think I should oppose it, but I must say it comes far short of what Prince Edward Island requires. The Minister of Railways laid great emphasis on a petition from the legislature of Prince Edward Island, and that legislature is of the same political stripe as the Minister of Railways, and if he had so much confidence in that petition as he pretends to have, I rather think he would carry out the prayer of the whole petition and not simply a small part of it. The Conservative government, in 1896, prepared a comprehensive Bill which would satisfy the province of Prince Edward Island in regard to branch railways. In consideration of the fact that the original railway on Prince Edward Island was paid for by the province the Conservative government decided in 1896 that 106 miles of branch railways should be built; and, mind you, they came to that conclusion when the revenue of Canada was only $40,000,000, while now the expenditure is $126,000,000. Why, this Liberal government spent as much money on the few miles of railway they have built in Prince Edward Island as would have equipped the whole province with every mile of railway the people want if the money were wisely expended. The Conservative government, in 1896, knew that the people of Prince Edward Island were coming to the government year after year for a branch railway, and they asked the people to state exactly what the province required, and the people of Prince Edward Island came to an understanding as to what was required, and the government embodied it in a resolution submitted to this parliament. The resolution moved by Mr. Haggart in 1896 was as follows:

Mr. Haggart moved that the House resolve itself into committee to-morrow to consider the following proposed resolution:

That it is expedient to authorize the Governor in Council to build and operate as part of the Prince Edward Island Railway the following lines of railway, that is to say:

(a) From Southport to Murray harbour south with cross line connecting with the Prince Edward Island Railway between New Perth and Cardigan stations touching at or near Montague bridge.

That is the only line this government has undertaken, and it is not completed yet.

(b) From Souris or Harmony station to Elmira.

(c) From a point beween Loyalty junction and York station to Cove head, and thence to Oyster bed bridge.

That is one of the finest sections of country in the province, and the railway would reach the best fishing grounds and would afford the very best feeder for the main line. The branch this government did build is making money, and in consequence of it the deficit on the Prince Edward Island Railway is decreasing year by year. If you extend it to Rustico and New London, as the Conservative party proposed to do in 1896, I believe that in a few years the deficit on the Prince Edward Island Railway would be entirely wiped out.

(d) From Emerald junction to Stanley bridge touching at or near Clifton.

(e) From Summerside to Richmond bay.

(f) From some point at or near O'Leary's station to some point on the western coast between Brae and Cape Wolfe.

(g) From Wiltshire to Victoria.

All those branches would only amount to about 106 miles, and it was estimated at the time that their cost would be $1,088,000.

Mr. J. J. HUGHES. That is on paper.

Mr. A. MARTIN (Queens, P.E.I.). Your Bill is on paper too and you may be on paper yourself pretty soon. Now, these 106 miles could be built for something over $1,000,000, and yet this government built about 60 miles which cost them nearly $2,00,000.

Mr. J. J. HUGHES. That is simply incorrect.

Mr. A. MARTIN (Queens, P.E.I.). Do you know how much it cost ?

Mr. J. J. HUGHES. I do.

Mr. A. MARTIN (Queens, P.E.I.). You do not know anything about it.

Mr. J. J. HUGHES. Yes, I do.

Mr. A. MARTIN (Queens, P.E.I.). That was a comprehensive Bill which would have settled the whole trouble in Prince Edward Island. As I said before, a huge mistake was made for the province when the original cost of the railway was charged in its debt account with Canada. The Conservative party said that in consideration of that large sum of money, three and one-quarter millions, being charged against the province, the best way to expend it would be to give the province railway accommodation, and if the Conservative party had been returned to carry out that policy, I believe that all these branches would have been built to-day at no greater expense than the few lines that have been completed.

Mr. MARTIN (Queens, P.E.I.)

Mr. A. A. McLEAN. Some time ago I put some questions on the Order Paper with reference to the New London branch of this railway, and they were answered by the Minister of Railways. In the year 1904 a survey was made of the New London branch and the hon. Finance Minister, when acting as Minister of Railways, promised to do everything in his power to build that branch.

Mr. FIELDING. No. My hon. friend is not serious when he talks of the Minister of Finance promising to build railways.

Mr. A. A. McLEAN. I will just read a copy of a return dated 1904, and I think the Finance Minister will change his mind.

Mr. FIELDING. No, I did not promise anything.

Mr. A. A. McLEAN. I believe the present government will promise anything, especially when an election is coming on. Here is a letter dated Moncton, N.B., the 1st of August, 1904, and signed by D. Pottinger, an officer of the government, with reference to the New London branch, the Elmira branch and the O'Leary branch. This letter states that $1,500 would be the cost of a survey of each of these branches, and at the end it reads as follows :

All these amounts will have to be expended before the 30th June next, so it is important that the works should be got ready for tendering as soon as possible.

Why did they want these works to be tendered for before the 30th of June, 1904? Because they intended to issue the writs for an election, and wanted these tenders to be out to deceive the people. They did not intend to go on with any of these works, and they do not intend to-day to have any contract for the Elmira branch any more than they did for these three branch lines. This letter goes on to say :

If you require any more people to attend to this, please let me know, and I will ask Mr. Schreiber to give me the names of some that he says he has on his lists here.

He wanted some men to go out and tell the people that the government were going to build these branches, but there were never any contracts issued for that purpose. In March, 1908, I asked the Minister of Railways this question :

1. Did the government receive petitions from inhabitants of Clifton, Stanley and Hope River, Prince Edward Island, praying for extension of railway from the main line of the Prince Edward Island Railway to Stanley Bridge or vicinity, and for the placing of a sum sufficient for the purpose in this year's estimates?

The answer was : 'Yes.' He received those petitions, and he received petitions also in 1904, and the Minister of Finance

said in 1906 that he would appoint a competent engineer, an independent man, to go and make a survey of these branch lines, but no survey has been made up to the present day. The next question was:

Is it the intention of the government to grant the prayer of the petitions?

The answer was: 'The government has not so decided.' The third question I asked was:

Is it the intention of the government to make surveys this year with a view to extend the railway system along the north shore of Prince Edward Island?

The answer was: 'No decision has been reached.' Although the Minister of Railways gave this answer in March last, I presume that he has not considered the matter even up to the present time. I would ask him now if he has reached a decision with reference to the construction of a railway on the north shore of Prince Edward Island?

Mr. GRAHAM. My hon. friend has named several railways. What railway does he now refer to?

Mr. A. A. McLEAN. The New London branch.

Mr. GRAHAM. The hon. gentleman was complaining that no independent engineer has been sent to fulfil the promise of the Finance Minister to make a survey of that branch up to the present time. If he looks at the supplementary estimates he will see that there is an amount for that work.

Mr. A. A. McLEAN. Will the minister say that work has been done yet?

Mr. GRAHAM. The hon. gentleman was asking me if it had been considered. I was replying to his question.

Mr. A. A. McLEAN. The question is this:

Is it the intention of the government to make surveys this year with a view to extend the railway system along the north shore of Prince Edward Island?

Will the minister answer that question now?

Mr. GRAHAM. Yes. It is the intention of the government to comply with the request of my hon. friend and to meet his complaint that no independent survey has been made of what is known as the new London branch. Whether it will be built or not is a matter for future consideration, because I will not build any railway until I am satisfied that it is in the interest of the public and ought to be constructed.

Mr. A. A. McLEAN. Then I will ask the minister if he has read the report of the engineers who made the survey of the New London branch line in 1904?

Mr. GRAHAM. I have not.

Mr. A. A. McLEAN. I do not think the minister takes very much interest in the construction of this railway. The railways which he now contemplates building are simply political railways. I do not object to the building of a railway from the main line of the Prince Edward Island Railway to Elmira. I think it is necessary in the interest of the people that that railway should be built, but I think there is a railway which should be built in preference to that, namely, the railway along the north shore of the island. The people there last year, as I have stated before in this House, on account of the weather which existed in the province, were unable to ship any of their produce until after the winter season came, and as a result they were put to great inconvenience and loss. If there had been a railway on the north shore, they would have been able to sell their grain and other produce like other people in the province. You are building the Grand Trunk Pacific at a cost of $250,000,000, and you contemplate building the Georgian Bay canal at a cost of $90,000,000 and the Hudson Bay Railway at a cost of $90,000,000 or $100,000,000 where there is not one workman living, while in Prince Edward Island and in the settled portions of Nova Scotia there are people living who have been for a hundred years without any railways at all. Why does this state of affairs exist?

You go up here 150 miles north of the Ottawa, in some cases 200 miles, where there is not a man living, and you build a railway at the expense of the people where there will not be a white man living for the next ten or twenty years, and where no railway can get any traffic. Why do you build these lines? That is the question asked by every man in Canada and the government cannot give any answer. These places will never be settled except in some spots where the lands are good, but where we have land settled, on which people have been living over a hundred years—places which are the most thickly settled portions of Canada to-day, with fifty-five people to the mile—you will not give us any railway. Our sons go out to the Northwest. Why? Because they have not got the railway communication they should have at home. But when they go out to the northwest, they settle near a railway, and they will be very apt to go near where there is a railway, because they know the government are spending money for the few people living in the west in order that they may get their votes. At the next general elections however the government will be disappointed at the result of their policy, for our people are sufficiently intelligent and patriotic to know that their own homes should be provided with railway communication by the government and let those people who go out west take pot luck the same as those in the east have had to do up to the present. We are spending millions of dollars on Russians and Galicians

out in the Northwest and are leaving the Scotch and the Irish and the English to get along as best they can in the east without government assistance. Our people in the east have to haul their produce some twenty five or thirty miles to market, and in many sections in Prince Edward Island they have no markets in which to sell their produce at all which they can reach with any convenience. The policy of the government is unfair to the people of the east. The east is neglected in favour of the west. The west is getting it all. What has been the condition of affairs in this House during this session? Two-thirds of our time has been taken up with the affairs of the Northwest and of Ontario, and millions of dollars have been spent in the west compared with only thousands in the east. It is true that we have one hundred and seventy-eight items to-day in the estimates for Nova Scotia, but that does not amount to very much. That is only an election dodge. We have only a few items for Prince Edward Island, and the time will soon come when the First Minister will regret the stand he has taken with reference to the east. It is time for him to look to the east and leave the west alone. They have enough. Millions of dollars have been spent and mis-spent in the west, some of which should have gone to the east, and it is time the government realized that fact. It is time the government should take in the branch lines which the hon. member for Westmoreland (Mr. Emmerson) is interested in. I believe that probably we shall take in those branch lines, but we should build some railways for the people who have built up Canada. We should not concede everything that the people of the west ask for.

Mr. FIELDING. I am much obliged to my hon. friend for the testimony he has given of what the government are doing in the west, and no doubt in the west he includes the middle country, the great province of Ontario. Altogether too much of our time is taken up in debating these matters from a sectional point of view. Hon. gentlemen opposite tell us that the maritime provinces are getting too much and their press circulates the story that this government is favouring the maritime provinces. The speech of the hon. gentleman is a good answer to that charge and no doubt will be made use of.

Mr. J. J. HUGHES (Kings, P.E.I.) The hon. members for Queens, P.E.I., appear very anxious to get the people of Prince Edward Island to think that the construction of the branch line from Harmony to Elmira will only be on paper and that the government is not sincere. Well, this government has shown its sincerity by its action in the building of railways in Prince Edward Island and other improvements in that province. The senior member from Queens County (Mr. Alex. Martin) condemned the government because it only built sixty miles of railway in that province the last few years, but that is far more than the previous government did. The late government brought in a resolution on April 21, 1906, when parliament was about to expire by efflux of time on the 23rd of that month, to build seven or eight branches of railway on the island, and parliament had only two days in which to consider that and many other matters, and the subject was never mentioned again. But this government proceeds in another and different way. It brings in its Bills to build railways, passes them through the committee stage and makes them the law of the land, and puts the money in the estimates. That is what has been done in this case and in addition we have the word of the Minister of Railways that this branch will be proceeded with this summer.

Now let me say a word or two with regard to the senior member for Queens county, who seems to take special delight in overstating the cost of the Murray harbour branch. Why he does this, I cannot imagine except that he wishes to prejudice the construction of railways in our province in the minds of members from the other provinces. I can know of no other reason. He has repeatedly made the statement this session, which is absolutely incorrect, that the Murray Harbour branch cost over $31,000 a mile or $2,000,000. When I denied that, he asked me if I could give him the figures, and I am now in a position to give them. The total cost of that branch line, including rolling stock, stations, sidings and everything else, was $1,255,495.59 or $23,782.83 per mile, which is about one-third less than the statement made by him. But that is about as near the facts as he generally gets.

My hon. friend the senior member for Queens (Mr. Martin) professes great anxiety for the extension of the Montague branch until it would connect with the Murray Harbour line. I have just to remind him that some two years ago, when I was pressing that matter on the attention of the government, he was the very man who came in with the interruption that I was asking for too much.

Mr. A. MARTIN. You were going to Murray river at that time.

Mr. J. J. HUGHES. I was stating that the connection should be made with the line to Murray Harbour.

Mr. A. MARTIN. You said Murray river.

Mr. J. J. HUGHES. That statement is about as near the facts as my hon. friend manages to get. That is all I have to say with regard to this matter. This project of an extension of the railway from Harmony to Elmira is bona fide. The line will be constructed. The present government and Minister of Railways are the men to do what they say, and my hon. friend can possess his soul in patience.

Mr. A. MARTIN (Queens, P.E.I.). This is a death-bed repentance on the part of the government with regard to this branch line to Elmira. I do not think it will go down very much with the people, but he thinks he will get a few votes on the head of it.

The Murray Harbour Railway seems to be troubling him. I said it cost nearly $2,000,000 and he questioned that. I asked him what it did cost and he could not tell me, but said it cost $1,200,000, rolling stock and all. From the figures in the Auditor General's Report, it appears that without the rolling stock it cost more than that amount, and with the rolling stock my figures will be nearer correct than his. What petitions has the minister for a branch line from Victoria to North Wiltshire?

Mr. GRAHAM. I do not know.

Mr. A. MARTIN (Queens, P.E.I.). Has the minister received any petitions for the extension of the railway from Montague bridge to Eldon ?

Mr. GRAHAM. We have received petitions for the building of several branch lines, but I cannot answer the question. I agree that the people who live where there is no railway are very anxious to have branches.

Mr. A. MARTIN (Queens, P.E.I.). I have a return here and I have also correspondence referring to petitions which have been sent to the department which are not included in this return. I know that petitions were sent for lines from Montague bridge to Eldon and from Victoria to North Wiltshire, but they are not mentioned in this return. What rates will the minister charge on this line when it is built?

Mr. GRAHAM. That is something I am not prepared to say.

Mr. A. MARTIN (Queens, P.E.I.). I told the minister that if he had any feeling of kindness, any milk of human kindness in his breast, he would try and reduce the rates on the railways in that province.

I have here an address by Dr. Andrew McPhail, Principal of McGill, editor of the University Magazine, who lectured a few days ago before the Canadian Club at Charlottetown. Dr. McPhail is well known all through Canada and the United States, one of the prominent men of this continent, a native of Prince Edward Island, of whom that province is justly proud. Dr. McPhail says :

I see that you do not take yourself seriously.

He was talking to the people of Prince Edward Island.

The Dominion provides your railway and the trains run twelve miles an hour.

I hope the minister will hear that—12 miles an hour. Professor McPhail happens to live on a branch line ; if he lived on the main line, he could not say that the Dominion paid for the railway, because the people of Prince Edward Island built the main line.

The Dominion provides your railway and the trains run twelve miles an hour. It is incredible that you will endure it. You pay your share for trains that run at forty miles an hour in the rest of Canada. It only cost me $4 to come half the way from Montreal to Prince Edward Island—it cost me $17 to come the whole way.

What is the matter with your railway system? I presume he travelled on your railway, and he paid $4 for one half the journey and $13 for the other half.

Mr. EMMERSON. Where is the halfway?

Mr. A. MARTIN (Queens, P.E.I.). You live nearer to it than I do.

Mr. MACPHERSON. Down about Tatamagouche.

Mr. A. MARTIN (Queens, P.E.I.). Where you were born.

Mr. STANFIELD. I object to the hon. member speaking like that.

Mr. FIELDING. The member for Tatamagouche objects.

Mr. MACPHERSON. I did not know he was the member.

Mr. A. MARTIN (Queens, P.E.I.). (reading) :

It cost me 11 cents to go an equal distance from Montreal, it cost me 60 cents to go an equal distance in Prince Edward Island.

He knows what he is talking about ; he can go 20 miles from Montreal for 11 cents, but it cost him in Prince Edward Island, at a 12-knot rate, 60 cents to go an equal distance. I hope the minister is ashamed of himself.

I have something else to refresh his memory. I think this will be the last straw that will break the camel's back.

Mr. GRAHAM. It is nearly broken now.

Mr. A. MARTIN. I have in my possession a letter written to me by a prominent farmer in Prince Edward Island, and he encloses a bill from a condensed milk factory in Charlottetown. This farmer ships every few days milk to that factory. He lives twenty miles away. Here is the memo. of milk received from Mr. J. F. McLeod for the month of May, 1908 :

May, 1908—	Pounds.
4	85
6	88
9	119
11	100
13	106
15	122
18	100
19	108
21	119
22	121
23	94
25	200
26	97
27	112
28	98
29	106
30	117

Now here is the account that the factory sends him :

By 1,892 pounds of milk at $1.20 a hundred, $22.70; freight, $4.25; cheque, $18.45.

The rate, you will see, is 22½ cents per 100 pounds. Now, I hope this case will make a deep impression upon the minister. But I am afraid that all my arguments will prove fruitless. These gentlemen are here only to do something for their friends. They look well after their friends, indeed they give them too much of this country's wealth, and they are sapping the country in every way. I suppose it is useless for me to plead for the sections of country that I have mentioned. The government are squandering the public money on their friends. They squander it in the Northwest, they have sunk enough in the Quebec bridge to build all the railway accommodation Prince Edward Island will require for the next hundred years. The Minister of Railways is getting hardened. He came in with a very good record, but he seems to be getting inoculated with the spirit which animates the government of which he is a member.

Mr. J. J. HUGHES. My hon. friend from Queens (Mr. Martin) persists in overstating the cost of the Murray Harbour Railway. I gave him the full cost of the rolling stock, and he declared that I did not include the rolling stock. I gave him the figures, and I will give them again. The cost of the railway, exclusive of rolling stock, was $1,067,695 ; cost of the rolling stock, $185,407, or in all, $1,253,098, or $23,782 per mile. The hon. gentleman is entirely incorrect in his statement. The only object he can have in view is to prejudice in the minds of the members of this House the claims for the increase of railways in Prince Edward Island.

Mr. A. MARTIN. Your statement is incorrect.

Bill reported, read the third time and passed.

Mr. MARTIN (Queens, P.E.I.)

BOUNTIES ON CRUDE PETROLEUM.

Bill (No. 192) to provide for the payment of bounties on crude petroleum—Mr. Fielding—read the second time, and House went into committee thereon.

On section 4,

Mr. BLAIN. May I ask the Finance Minister how much it is expected will be paid out of the treasury under the terms of this Bill ?

Mr. FIELDING. I should think not much. There is an enterprise in the province of New Brunswick to which its friends attach some importance and they are hopeful that it will be developed to a considerable extent. I should be very much pleased if their expectations are realized and if we have to pay a liberal sum, but, at all events, we should give them an opportunity of sharing in the bounty in the same manner as they do elsewhere.

Bill reported, read the third time and passed.

CONSIDERED IN COMMITTEE—THIRD READING.

Bill (No. 200) respecting the salary of the superintendent of insurance.—Mr. Fielding.

CANADIAN ASSOCIATED PRESS.

Mr. FIELDING moved the second reading of Bill (No. 201) to assist in maintaining an independent and efficient service of telegraphic news from Great Britain for publication in the Canadian press.

Mr. TAYLOR. I understand the minister to say that this was to extend the existing arrangement for two years.

Mr. FIELDING. Except that the existing arrangement is on a sliding scale which averages $12,000 a year ; so that we propose to give them the average for two years.

Mr. TAYLOR. I heard my hon. friend the leader of the opposition saying that he had some correspondence with respect to this Bill and perhaps it would be as well to let it stand.

Mr. FIELDING. I thank my hon. friend for the suggestion. We will let it stand.

Motion withdrawn.

THE AUDITOR GENERAL.

House in committee to consider the following proposed resolution :

Resolved, that it is expedient to provide that the Auditor General be paid a salary of $5,000 per annum.

Resolution reported, read the second time and agreed to.

Mr. FIELDING moved for leave to introduce Bill (No. 208) respecting the office of Auditor General.

Motion agreed to, Bill read the first and second times and House went into committee thereon.

Mr. FIELDING. In this Bill we change the salary and we insert a section for the purpose of preserving to the Auditor General the right of promotion which, under the existing law, belongs to him now, so that there may be no change in that respect. The Governor in Council makes the appointments, but promotions have always been within the authority of the Auditor General, and as it seems that under the new Civil Service Act there may be some doubt in that respect, we are making it clear.

Mr. DANIEL. Is that the right of promotion personally or the promotion of the clerks in his office ?

Mr. FIELDING. The promotion of his clerks. The office of the Auditor General, being regarded as somewhat different from an ordinary departmental office, the practice in the past has been that he should be allowed to make promotions. It would come as my duty to report these promotions to council, but I have no voice in making them. We preserve that right to him because he is an officer of parliament and not an ordinary departmental officer. This is the law now and, as the civil service law might interfere with it, we preserve the right of promotion.

Mr. BLAIN. Who fixes the salaries of the clerks ?

Mr. FIELDING. The salaries will be fixed as required by the Civil Service Act, but promotions will be made by the Auditor General himself.

Bill reported, read the third time and passed.

CANADA SHIPPING ACT AMENDMENT.

House went into committee to consider the following proposed resolution :

Resolved, that it is expedient to amend the Canada Shipping Act, chapter 113, Revised Statutes of Canada, 1906, by repealing section 958 and substituting therefor—

958. The Governor in Council may from time to time,

(a) by order in council declare that the foregoing provisions of this part shall not, while such order in council is in force, apply, either throughout Canada or in any specified waters of Canada, to the ships or vessels, or to any specified ascertained or ascertainable class or number of the ships or vessels of any foreign country in which British ships are admitted to the coasting trade of such country, and to carry goods or passengers from one port to another in such country; and

(b) revoke or vary such order in council.

2. That the Act founded on this resolution shall not come into force until His Majesty's pleasure thereon has been signified by publication in the 'Canada Gazette.'—Mr. Fielding.

Mr. TAYLOR. We will take the resolution now and the discussion can take place upon the Bill.

Mr. FIELDING. Quite so.

Mr. EMMERSON. What is the explanation of this ?

Mr. FIELDING. The purpose of the Bill may be briefly stated. We have been granting coasting privileges to the ships of a number of foreign nations which in return have given us the privilege of coasting in their own land. There is nothing in this Bill about American vessels because the United States do not give us coasting privileges. However, in the case of Norway for instance, we have no coasting trade there and the privilege they give is no advantage to us. Norway, on the other hand, has been making much use of our coasting trade and the complaint is that our native vessels are placed at a disadvantage in that respect. An order in council some months ago provided that on the 1st of January next the privileges granted to these various countries, including Norway, should be cancelled and that thereafter their vessels should not be entitled to our coasting trade. We will probably all agree that is a desirable policy. But it has been represented to us by the coal companies that this would be a hardship upon them. They say the Norwegians have been supplying vessels of a special class intended for the coal trade and that if we should suddenly determine that these vessels are to be shut out of the coasting trade it will not be possible for them in the short time allowed to find either Canadian vessels or British vessels to do the work. They also say they have a number of vessels which have been chartered for several years, and the cancellation of these charters would be a very serious loss to them. It has been suggested that we might meet their views by giving them the privilege of employing vessels of a certain class which do not come into competition with Canadian vessels. We have discovered that under the existing law, while we have the power to shut out foreign vessels altogether, we have not the power to say that a particular class of these vessels shall be admitted. What we propose by this legislation is to give the government the power not only to exclude them altogether, but to discriminate and to say that we may admit vessels of a certain class, these being the vessels which do not come into competition with Canadian vessels. We might allow them the coasting trade for a limited time until arrangements can be made to supply their places with British vessels. We could not even say un-

der the present law that we would admit a vessel to the coasting trade of the Atlantic but not to the coasting trade of the Pacific, or the great lakes, and so on. This legislation proposes that there should be elasticity to enable the government to meet the particular conditions as they arise. The general policy of the government is to exclude these vessels from the coasting trade, but under this amendment, which cannot take effect until authorized by the imperial authorities, we would have the power to make exceptions for a limited time if we so desire in such cases as I have mentioned.

Mr. DANIEL. Will the class of vessels be decided on by the tonnage?

Mr. FIELDING. Yes.

Mr. DANIEL. Either steam or sail?

Mr. FIELDING. There is no distinction in the law as respects steam or sail.

Mr. DANIEL. Under this the government would be able to allow Norwegian vessels of a certain tonnage to engage in the coasting trade.

Mr. FIELDING. And exclude these of a smaller tonnage.

Mr. DANIEL. I presume we have no Canadian vessels to do the trade?

Mr. FIELDING. Not in the case of the larger vessels, certainly.

Mr. EMMERSON. Is it a fact that these vessels are manned by Norwegians?

Mr. FIELDING. I should think so.

Mr. EMMERSON. Is it a fact that year in and year out they do a Canadian coasting business ?

Mr. FIELDING. Yes, the coal trade is largely handled by them. In some cases they are of English build for Norwegian account, owned and manned by Norwegians and under the Norwegian flag ; sometimes they are owned by Englishmen but sail under the Norwegian flag and so are treated as foreigners.

Mr. STANFIELD. I notice in the newspapers that these foreign steamers are given a preference over Canadian ships in loading at the coal mines. Could not we protect those Canadian vessels in this legislation ?

Mr. FIELDING. That is a different question from the one dealt with by this Bill. The complaint there is that steamers are given preference over sailing ships and the steamers would be given preference whether they were British or Norwegians. I believe there was considerable trouble about that matter, but I am advised it is all adjusted now and that there is no complaint.

Mr. EMMERSON. I have a long letter from a sea captain resident in Westmoreland who sails a British vessel and his great complaint is that his vessel was discriminated against in favour of the Norwegian steamers. In that way, if this permission is given, there is some ground for the exception taken. I am not familiar with the circumstances myself, but it seemed to be a matter for the Department of Marine and Fisheries, and I submitted the complaint to that department.

Mr. FIELDING. I think it is not a question of discrimination between the Canadian vessel and the Norwegian vessel, but a question between the sailing vessel and the steamer. However, while there was some cause of complaint in the past, I understand that it has been largely, if not wholly, removed.

Mr. A. A. McLEAN. The Minister of Finance states that Norwegian vessels have been chartered for the coal trade for several years. I want to know whether that is the reason for the passing of this Act, because I think that these Norwegians should not control the shipping trade of the maritime provinces as they do to-day.

Mr. JOHNSTON. Nonsense.

Mr. A. A. McLEAN. I know that is correct. I do not care whether it is Sydney, or Inverness, or Pictou ; and I tell the Minister of Finance that he should not take the opinion of men who are interested in one particular locality. He knows that the men engaged in this business cannot get a cargo if a Norwegian vessel intervenes, whether it is half loaded or fully loaded.

Mr. E. M. MACDONALD. I rise for the purpose of letting my hon. friend know that his information is entirely incorrect, for this reason, that having been in my county within the last two weeks and knowing that my hon. friend and some other gentlemen here had been complaining of the difficulty of schooners from Prince Edward Island and elsewhere getting coal expeditiously, the managers of both mining companies informed me that there had not been the slightest delay in the shipments of coal from any of the piers by any schooners that came there so far this summer. In fact, they were anxious to get the trade and to deal expeditiously with any schooners that came there. We have two large piers capable of supplying more coal per day than all the schooners of Prince Edward Island could possibly engage in carrying. If my hon. friend will give me a bona fide case of any schooner from Prince Edward Island which has been delayed with a shipment of coal in my county, I will undertake to see that there is a remedy. I can assure him that all the complaints in that regard, so far as Pictou is concerned, are entirely incorrect. There was some difficulty in regard to shipments from the

Inverness Coal Company, and an agitation was worked up on that account; but any complaints with regard to the shipment of coal from the Dominion Coal Company, or from the county of Pictou, are not well founded.

Resolution reported, read the first and the second time, and agreed to.

Mr. FIELDING moved for leave to introduce Bill (No. 208) to amend the Canadian Shipping Act.

Motion agreed to, and Bill read the first time.

FIRST READING.

Bill (No. 207) respecting certain patents of the Metal Shingle and Siding Company.—Mr. Johnston.

Mr. FIELDING moved the adjournment of the House.

Mr. TAYLOR. What is the business for to-morrow?

Mr. FIELDING. We may take one or two Bills; but I think it more likely that we shall go into Supply and take up the remaining items of the main estimates and then proceed with the supplementary estimates, beginning with civil government and continuing somewhat in the order in which they stand.

Motion agreed to, and House adjourned at 1.13 a.m., Saturday.

HOUSE OF COMMONS.

SATURDAY, July 11, 1908.

The SPEAKER took the Chair at Eleven o'clock.

METAL SHINGLE AND SIDING COMPANY.

Mr. GALLIHER moved that Bill (No. 207) respecting certain patents of the Metal Shingle and Siding Company, Limited, be placed on the Order Paper for the second reading this day be agreed to.

Motion agreed to.

Mr. GALLIHER moved that in view of the late period of the session Bill (No. 207) respecting certain patents of the Metal Shingle and Siding Company, Limited, be now read the second time and referred to the Select Standing Committee on Miscellaneous Private Bills. He said: The reason for this motion is that Monday will be the last day of the Private Bills Committee. The Bill has passed the Senate. Its purpose is to allow the company holding the patents to pay now the amount they should have paid some little time prior to this. It was owing to a mistake of the people in their office that the money was not paid when due. The holders of the patent are a Canadian company who have manufacturing establishments at Prescott and Montreal and it was only through inadvertance that the money was not paid in time to the patent office. They have paid all the necessary fees and have been taxed $500 up to the present in fines.

Motion agreed to.

NORTHWEST TERRITORIES ACT AMENDMENT.

Hon. A. B. AYLESWORTH (Minister of Justice) moved for leave to introduce Bill (No. 210) to amend the Northwest Territories Act. He said: The purpose is to provide means for better trial of causes of action which may arise in the Territories. The proposition is to confer jurisdiction on the courts of the adjoining provinces, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, leaving the choice to the plaintiff, but conferring on the courts in each province the power to refuse to entertain the action unless it appears that it can be more conveniently tried by the courts of that particular province than of any other.

Motion agreed to, and Bill read the first time.

QUESTIONS.

COTE, BOIVIN & COMPANY.

Mr. BERGERON—by Mr. Blain—asked:

1. What are the amounts of money paid by the government for each year from 1897 to Coté, Boivin & Cie, merchants at Chicoutimi?
2. During that period were there any amounts paid to Elzear Boivin, surveyor and trader, of Chicoutimi? If so, when, and what amounts?

Hon. WM. PUGSLEY (Minister of Public Works):

1897-8	
1898-9	$ 52 08
1899-1900	199 00
1900-1	152 26
1901-2	411 74
1902-3	2,076 42
1903 4	2,456 23
1904-5	10,163 00
1905-6	6,981 65
1906-7	6,050 79
1907-8	1,596 23
	$30,139 40

2. Nothing by this department.

The following answer has been given me by my hon. colleague the Minister of Marine and Fisheries :

1. The Department of Marine and Fisheries paid as follows :

1897	Nil.
1898	Nil.
1899	Nil.
1900	Nil.
1901-2	Nil.
1902-3	Nil.
1903-4	Nil.
1904-5	$479 82
1905-6	Nil.
1906-7	Nil.
1907-8	63 25

2. Nothing was paid to Elzear Boivin during the period referred to.

FRENCH TREATY OF 1907.

Mr. MONK—by Mr. Blain—asked :

1. How much has actually been spent by Canada in defraying the cost of negotiating the proposed French treaty of 1907, including travelling expenses of ministers and all others connected with said negotiation, including all incidental expenses?

2. Is there still anything unpaid in connection with the expense of negotiating said treaty? If so, what is the amount?

3. What steps has the government taken to ascertain the cause of the non-ratification of the said treaty up to the present date?

Hon. W. S. FIELDING (Minister of Finance) :

1. $9,826.51.

2. No.

3. The government is aware that non-approval by the French Senate of the convention of 1907 is due to opposition of French interests which have thought that the advantages accorded to Canada under the convention were greater than the benefits to France.

DREDGE 'CHALLENGE.'

Mr. BOYER—by Mr. Alexander Johnston—asked :

1. How many yards of material have been taken out last year by the dredge 'Challenge'; and at what place?

2. How many yards of material have been taken out in front of or in the neighbourhood of the G.T.R. Boating Club, on the St. Lawrence river, during last season and by what dredge?

Hon. WM. PUGSLEY (Minister of Public Works) :

1. 38,900 cubic yards at Dorval ; 4,425 cubic yards at Ottawa.

2. (a) 300 cubic yards. (b) Dredge 'St. Louis.'

INTERCOLONIAL RAILWAY STATION, LAC SAUMON.

Mr. MONK—by Mr. Blain—asked :

1. What amount was voted for the Intercolonial Railway station construction in 1904 at Lac Saumon?

2. What was the amount actually expended in the construction of the said station?

Hon. G. P. GRAHAM (Minister of Railways and Canals) :

1. Amount voted in 1903-4 for construction of station and freight shed at Salmon lake, $2,700.

2. Amount actually expended in construction of station, $2,755.

COLCHESTER POINT, - ESSEX.

Mr. CLEMENTS asked :

1. What amount of money to date has the government spent on the stone pier built or being built at Colchester point, Essex county?

2. If not yet completed, what is the estimated cost for completion?

Hon. WM. PUGSLEY (Minister of Public Works) :

1. $7,150.59.

2. Resident engineer reported December 14, 1907, that wharf at Colchester had been completed. Total cost $7,150.59.

FREDERICK FOSTER, KINGSVILLE, ONTARIO.

Mr. CLEMENTS asked :

1. Is one Frederick Foster, recently in charge of the harbour at Kingsville, Ontario, in the employ of the Dominion government?

2. If so, what are his duties, and his salary and expenses, say for the last twelve months?

Hon. WM. PUGSLEY (Minister of Public Works) :

1 and 2. Frederick Foster was employed as foreman of men repairing pier at Kingsville, Ont., March 2 to 14, 1908, twelve days at $3, $36.

INTERCOLONIAL RAILWAY—STATION AT RIVIERE TROIS-PISTOLES.

Mr. GAUVREAU—by Mr. Johnston—asked :

Does the government propose constructing a station on the Intercolonial Railway at Rivière Trois-Pistoles during the present fiscal year? If so, when will tenders be asked for?

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals). Yes, plans and specifications are now being prepared and as soon as they are completed, tenders will be invited.

MAIL CARRIAGE BETWEEN ANNAPOLIS AND DIGBY.

Mr. LANCTOT—by Mr. Johnston—asked :

1. Was an arrangement made by the government with Geo. E. Corbett for carrying the mails between Annapolis and Digby, Nova Scotia, between 1884 and 1893? If so, was such an arrangement made yearly by tender and contract, or by private agreement with the Post Office Department?

2. What amounts, if any, were paid Mr. Corbett for the years ending June, 1885, 1886, 1887, 1888, 1889, 1890, 1891, 1892, 1893?

3. When did this arrangement, if such existed, cease?

4. Was this mail service undertaken by the Digby and Annapolis Railway? If so, at what date?

5. Is the George E. Corbett, above referred to, the same George E. Corbett who is stated to be the Liberal-Conservative candidate for Annapolis county, Nova Scotia, at the next general federal elections?

Hon. RODOLPHE LEMIEUX (Postmaster General):

1. (a) Geo. E. Corbett performed mail service by steamer between Annapolis and Digby from August 1, 1883 to July 26, 1891. (b) From August 1, 1884 to December 31, 1886, under temporary agreement. From January 1, 1887 to termination of service under a five years contract.

2.

Year ended June 30,	1885	.. ..	$2,260
" "	1886	....	3,130
" "	1887	....	3,690
" "	1888	....	4,270
" "	1889	....	5,500
" "	1890	....	6,260
" "	1891	....	6,260
" "	1892	....	2,020
" "	1893	.. ..	....

3. July 26, 1891.

4. Yes. July 27, 1891.

5. The department has no information in regard to this matter.

CANADIAN MAILS TO AND FROM EUROPE.

Mr. STANFIELD asked :

1. What quantity of mail matter, destined either for Canada or other countries, arrived via Canadian ports from Europe for the year ending March 31 last?

2. What quantity of mail matter from Europe arrived via New York, Boston, Portland, or other United States ports for the same period, destined for Canada, or to be transmitted over Canadian routes to other countries?

Hon. RODOLPHE LEMIEUX (Postmaster General):

1. and 2. No yearly record is kept of the weight of the mails received in Canada from Europe or any other country. Under the Postal Union Regulations once every six years a census is taken of all mails coming to Canada from other countries, and of all mails going to other countries from Canada for a period of twenty-eight days, either in the month of November or of May, alternately.

The figures so obtained are used for all official purposes, and do away with the necessity of taking figures yearly.

LOAN NEGOTIATED IN LONDON.

Mr. FOSTER—by Mr. Blain—asked :

1. What was the amount of the loan recently negotiated in London by the Finance Minister?

2. What were the conditions of issue as to rate of interest, date of redemption, privilege of exchange or extension, or in any other respect?

3. What amount of the issue was subscribed by the public and what underwritten, and how much in all was subscribed for?

4. Will the minister lay the prospectus of the loan on the table of the House?

Hon. W. S. FIELDING (Minister of Finance):

1. £5,000,000.

2. and 4. All the conditions of the issue are contained in the prospectus, a copy of which will be laid forthwith on the table of the House.

3. The whole of the loan was underwriten. Forty-four per cent of the amount was taken by the outside public and the balance 56 per cent by the underwriters.

TEMPORARY LOANS OR ADVANCES.

Mr. FOSTER—by Mr. Blain—asked :

What temporary loans or advances, at what bank, and at what interest were outstanding or running on May 31 and June 30, respectively?

Hon. W. S. FIELDING (Minister of Finance). On the 31st May, 1908, the following temporary loans were running: £500,000, Bank of Montreal, London, at 4½ per cent, issued August, 1907; £1,000,000, Bank of Montreal, London, at 4¼ per cent, issued January, 1908; $1,000,000, Credit Foncier Franco-Canadien, at 4 per cent, issued February, 1908; $1,000,000, Banque de Paris et des Pays Bas, at 4 per cent, issued February, 1908.

On the 30th June, in addition to the above, the following temporary loans were running: £1,00,000, Bank of Montreal, London, at 3½ per cent, issued June, 1908; 10,000,000 francs, Banque de Paris et des Pays Bas, at 3¼ per cent, issued June, 1908; 10,000,000 francs, Credit Lyonnais, Paris, at 3¼ per cent, issued June 1908.

CUSTOMS RECEIPTS AND EXPENDITURES.

Mr. FOSTER—by Mr. Blain—asked :

1. What were the receipts from customs for the months of March, April, May and June, respectively, for the years 1907 and 1908?

2. What were the expenditures on capital and current account, respectively, for the same months of the same years?

Hon. WM. PATERSON (Minister of Customs) :

1. The customs revenues for the months mentioned were as follows :

March.. ..	$5,744,211 52	$4,830,889 62
April.. ..	4,468,393 97	3,449,947 24
May... ...	5,333,253 63	3,568,691 56
June... ..	5,321,444 83	3,707,229 51

Hon. W. S. FIELDING (Minister of Finance) :

—	Expenditure Consolidated Fund.		Capital Expenditure, &c.	
	1907.	1908.	1907.	1908.
	$ cts.	$ cts.	$ cts.	$ cts
March	4,229,015 42	4,373,021 74	1,033,815 01	2,357,063 92
April	4,551,377 94	4,296,231 38	1,623,114 48	3,421,888 26
May	3,288,402 28	7,062,132 18	3,037,819 35	3,779,995 39
June	4,439,965 78	7,164,606 96	1,693,793 06	2,694,639 62

FRANCO-CANADIAN TREATY.

Mr. TALBOT—by Mr. Johnston—asked :

In view of the reported delay of approval by the French Senate of the new Franco-Canadian commercial treaty, will the government take steps to ask the imperial government to denounce the old treaty respecting trade between France and Canada?

Hon. W. S. FIELDING (Minister of Finance). The non-approval of the convention is very embarrassing to all business interests between France and Canada, as well as in other respects, and creates conditions which, if continued, would probably render the denunciation of the old convention unavoidable. But we do not feel disposed to take action in that direction immediately. We are aware that the French government are loyally using their best efforts to secure approval of the new convention, and it is due to them that we should await for some time the results of their endeavours.

CUSTOMS OFFICERS, WINDSOR, ONT.

Mr. HERRON asked :

1. Is one J. A. Francis, formerly of the town of Essex, Essex county, Ontario, emlong room at Windsor, Ont.; age 40, salary, $700 a year.

Mr. FIELDING.

ployed in the customs at port of Windsor, Ontario ? If so, when was he appointed, what was his age at time of appointment, and what is his salary per year ?

2. Is one Gerald Mooney, of the township of Maidstone, or Sandwich South, in the county of Essex, Ontario, employed in the customs at the port of Windsor, Ontario ? If so, when was he appointed, what are his duties and what is his salary per year ?

3. Is one Ulrich Piché, of the town of Sandwich, county of Essex, Ontario, employed in the customs at the port of Windsor, Ontario ? If so, when was he appointed, what was his age at the time of appointment, what are his present duties, and what is his salary per year ?

Hon. WM. PATERSON (Minister of Customs) :

1. J. A. Francis has been employed since July 4, 1908, as a clerk in the customs

2. Gerald Mooney is not employed in the customs at Windsor, Ontario.

3. Ulrich Piché has been employed as a customs preventive officer at Michigan Central Railway station, Windsor, Ont., since July 4, 1908; age, 36 years; salary, $700 a year.

REGULATIONS RE COAL LANDS, TIMBER, HOMESTEAD AND GRAZING AREAS.

Mr. LAKE asked:

1. At what dates were the regulations now in force sanctioned by the Minister of the Interior and put into force in respect of (a) coal lands, (b) timber, (c) homesteads, and (d) grazing areas ?

2. What were the dates of the several orders in council on which these regulations were based since the 1st of January, 1905 ?

Hon. FRANK OLIVER (Minister of the Interior) :

1. (a) Coal lands :

General coal regulations came into force on the 15th day of June, 1907. Regulations for the leasing of coal mining lands in the Rocky Mountains Park of Canada came into force on the 25th day of January, 1908.

Regulations governing the issue of permits to mine coal for domestic purposes

came into force on the 20th day of March, 1897.

The present regulations for the issue of leases of school lands for coal mining purposes were authorized by order in council of December 20, 1907, and came into force on February 8, 1908.

(b) Timber lands :

February 13, 1908.

(c) Homesteads :

The regulations were published and became effective on the following dates:

1st edition—June 21, 1907.
2nd edition—October 1, 1907.
3rd edition—November 15, 1907.
4th edition—June 1, 1908.

(d) Grazing areas :

Saskatchewan and Alberta, October 14, 1905, railway belt, August 25, 1904; grazing regulations for the Yukon Territory came into force on the 2nd day of March, 1901.

2. Coal lands—Date of orders in council :

March 4, 1907.
May 9, 1907.
December 10, 1907.

Timber lands:

December 19, 1907.

Homesteads :

Regulations are based on Dominion Lands Act.

Grazing areas :

Saskatchewan and Aberta, July 27, 1905; March 15, 1907.

Railway belt, June 4, 1904; July 5, 1904.

School lands :

The issue of grazing leases of school lands in Manitoba was authorized by order in council of July 13, 1895, and the regulations came into force on August 17, 1895. The regulations for grazing leases of school lands in the Northwest Territories were authorized by order in council of March 16, 1894, and came into force on April 28, 1894.

The regulations for the issue of grazing permits on school lands for Manitoba, Saskatchewan and Alberta were authorized by order in council of February 22, 1908, and came into force on March 28, 1908.

TECUMSEH PARK BREAKWATER.

Mr. CLEMENTS. Before the orders of the day are called I wish to direct the attention of the Minister of Public Works to a matter which though small is important.

Mr. SPEAKER. Is this for the purpose of asking a question ?

Mr. CLEMENTS. Yes. The breakwater at Tecumseh park has a face of about two feet in width and thousands of children have been playing there and quite recently drowning accidents were narrowly averted. I would ask the minister to have a railing erected.

Mr. SPEAKER. The hon. member will see that is not a question.

AUDIT AND INSPECTION OF BANKS.

Mr. R. A. PRINGLE (Cornwall). I ask the Minister of Finance whether there is any possibility of legislation this session towards government inspection or an independent audit of banks. In view of the failures which have taken place lately in the province of Quebec and the rumours that some others are pending, and in view of the fact that the reports returned to the government have been shown to be absolutely unreliable, has the minister in view any amendment by which at least we can get from our banks such a report as is obtained in other countries, sworn to by an official of the bank so that the public may know these reports are correct, and that they are not as every failure has proven, absolutely incorrect ? It is important that some steps should be taken in that direction.

Hon. W. S. FIELDING (Minister of Finance). With regard to independent audit, there is no need of any legislation respecting that. One of our large banks has now a system of independent audit carried out under the present Banking Act and there is no reason why any other bank may not avail itself of the same privilege if it regards it as important. As to bank inspection, I repeat what I said a few days ago : that it is a question of the utmost importance as to which I am willing to have an open mind, although I have rather the impression that it would not accomplish the purposes its advocates have in view. It is a very large and important question which may properly be considered in connection with the general revision of the Bank Act. I do not think there is sufficient information as to the value of bank inspection, as adapted to our Canadian system, to warrant us at this stage of the session introducing special legislation. The conditions in Canada, with its very many branch banks, are so different from the conditions in the United States where bank inspection exists, that even if it were successful in the United States it would not necessarily be successful in Canada, and there is a question as to whether it has been successful in the United States. I do not care to say more than that at present. I realize the importance of the subject and believe it is well worthy of consideration in connection with the general revision of the Bank Act which must be taken up at no distant day.

Mr. R. L. BORDEN. Even if we had nothing more in Canada than a head office inspection it might be very useful. It would be a task of very great difficulty to effectively and thoroughly inspect the enormous number of branches throughout Canada. The difficulties in the past have arisen in almost every case from the lack of any inspection at the head office of the bank.

Even if we eventually went so far only as inspection of the head office it might be a very great safeguard against the repetition of certain occurrences in the past.

Mr. FIELDING. There is much force in the suggestion and all these things are worthy of consideration. If we had a system of head office inspection, then if there was any crookedness it would not take place at the head office but at some other office.

Mr. R. L. BORDEN. Perhaps so, but I do not think it would quite work out in that way.

QUESTION OF PRIVILEGE—HON. RODOLPHE LEMIEUX.

Hon. RODOLPHE LEMIEUX (Postmaster General). Mr. Speaker, in a pamphlet widely circulated throughout the country entitled 'Facts for the People,' I read at page 17 :

Ministers oppose exclusion.

Two remarkable statements were made on this question in the session of 1908 by Mr. Lemieux, Postmaster General, and Minister of Labour, recently government delegate to Japan, and by Mr. Fisher, Minister of Agriculture, Mr. Lemieux said:

The policy expressed by the leader of the opposition during his campaign in western Canada, last fall, was a policy of complete exclusion. He argued before the British Columbians that if he were in power he would have a white British Columbia, which I understand to mean the exclusion of oriental labour, and which applied to the case in hand, means the exclusion of the Japanese.

Mr. R. L. BORDEN. Might I ask the hon. minister whether his policy is not for a white British Columbia?

Mr. LEMIEUX. No, Sir, (Hansard 1908, page 2145).

It is true I gave this answer but I explained that answer immediately afterwards as the leader of the opposition will see from the following quotation from 'Hansard':

Mr. R. L. BORDEN. Might I ask the hon. minister whether his policy is not for a white British Columbia?

Mr. LEMIEUX. No, sir.

Mr. R. L. BORDEN. It is not?

Mr. LEMIEUX. My policy is to respect the treaty to which we have adhered unconditionally and unreservedly, relying, as regards immigration, on the assurances which have been given by the Japanese government. It is very easy for the hon. gentleman to provoke an answer, yea or nay, on the question whether there should be a white British Columbia or a yellow one, but the fact is staring us in the face that not only since this government has been in power but during the time of the previous Conservative government a large influx of yellow labour has gradually settled in that province. The policy of this government is for the restriction of oriental labour into British Columbia.

Mr. R. L. BORDEN.

So you see, Mr. Speaker, my answer was a qualified answer and when quoted only in part as in this pamphlet it does not convey my meaning or give correctly the impression which I sought to leave on the House at the time.

TECHNICAL SCHOOLS.

Mr. R. L. BORDEN. I presume it is too late to expect any legislation this session with regard to the subject of technical schools or industrial education. I would like to inquire whether or not the government intend to take any action along that line in the near future by inquiry through commission or otherwise.

Sir WILFRID LAURIER. It is not proposed to do anything further this session.

OLD AGE PENSIONS.

Mr. PRINGLE. I wish to ask the Postmaster General who is chairman of the Old Age Pension Committee, whether there is any possibility of that committee making progress before the session closes? I fully recognize that the business of the House has been very pressing, but I would like to know if there is any possibility at all of further progress being made this session.

Hon. RODOLPHE LEMIEUX (Postmaster General). We had three sittings of the Old Age Pension Committee when the morning sessions of the House began, and the business became so strenuous that it was found impossible to reconvene the committee. I have arranged with Mr. Blue, Dominion Statistician, Professor Shortt, Mr. Acland and Mr. Mackenzie King (who unfortunately was absent when the committee sat) to prepare some evidence which would be valuable, but I hardly believe that the committee can meet this session. The work of the committee might well be resumed next session of parliament when we might perhaps make favourable progress.

ACCIDENT TO CORNWALL CANAL.

Mr. PRINGLE. I had understood that the Cornwall canal was open to navigation, but I have been informed this morning that some difficulty was being encountered through their not being able to remove some rocks.

Hon. G. P. GRAHAM (Minister of Railways and Canals). I have not heard of that. I received a message from the engineer in charge this morning and he did not make any reference to it. I had a message yesterday that the boats had started to lock through, and it was expected that everything would be fully completed last evening at six o'clock.

Mr. PRINGLE. I heard from Cornwall this morning that there was some difficulty.

Mr. GRAHAM. I have not heard of it.

PURCHASE OF SEED OATS.

Mr. BLAIN. When may I expect an answer to the question I put yesterday with regard to the purchase of seed oats?

Mr. OLIVER. On Monday.

INTERCOLONIAL RAILWAY—PICTOU BRANCH.

Mr. STANFIELD. When may I expect an answer to question No. 1 which has been standing on the Order Paper since June 25?

Mr. GRAHAM. These questions which involve details have to be sent to Moncton to get the information. I asked by wire yesterday for a reply as quickly as possible.

INQUIRY FOR RETURN.

Mr. R. L. BORDEN. When will the Minister of Public Works lay on the table the return I moved for early in the session as to the cost of buildings?

Mr. PUGSLEY. On Monday.

NATIONAL TRANSCONTINENTAL RAILWAY—RIGHT OF WAY IN MADAWASKA.

Mr. PIUS MICHAUD (Victoria, N.B.). I would ask the Minister of Justice if any claims for payment of compensation for right of way in connection with the construction of the Transcontinental Railway through the county of Madawaska, N.B., have been placed in his hands to be settled? If so, how many, and what is the intention of the minister in respect to these claims? There are numbers of these claims in the hands of local solicitors, and my advice to the Minister of Justice would be to settle them as soon as possible.

Hon. A. B. AYLESWORTH (Minister of Justice). The matter is in the hands of the Department of Justice for arrangement. Some 30 claims for payment to land owners through whose properties the line of the Transcontinental Railway in the county of Madawaska passes have been sent to the Department of Justice by the commissioners with instructions to arrange for fixing the true amount of the compensation to be paid. Some of these have already been settled by consent arrangement between the department and the land owners interested, and all that have not been so settled will be placed in the Exchequer Court at once for settlement of the amount to be paid in ordinary course.

SUPPLY—COST OF THE NATIONAL TRANSCONTINENTAL RAILWAY.

Hon. W. S. FIELDING (Minister of Finance) moved that the House go into Committee of Supply.

Hon. GEORGE P. GRAHAM (Minister of Railways). A few evenings ago the leader of the opposition made a statement concerning the cost of the great transcontinental highway from Prince Rupert to Moncton which has received wide publicity, and which I am bound to say has been given a publicity that is not fair to the House, to the government, to the leader of the opposition nor to the country. Might I make a very brief personal allusion; I find that some of my friends of the press misstated my own position on the occasion when the leader of the opposition delivered his speech, and intimated that for some dark reason either of ignorance or discourtesy I neglected to reply to my hon. friend. As a matter of fact, at the request of the member for North Toronto, made a short time previously—made across the floor of the House openly—I had agreed that I would not make my statement that evening, and while at that time I had no idea the leader of the opposition was going to make his statement, still I thought it better to take the risk of being placed in an embarrassing position than to break faith with the member for North Toronto. In order that time may be saved when we get into committee I shall give a few facts concerning the present position of the Transcontinental Railway including the Grand Trunk Pacific or western branch and the eastern division from Winnipeg to Moncton owned and being constructed by the government. The following memorandum is prepared by Mr. Schreiber chief engineer of the western division, and is dated May 31, 1908, so that it will contain the information up to a recent date:

Total length of western division:

	Miles.
Prairie section..	916
Mountain section..	839
	1,755

Contractors for grading, &c.

	Miles.	Amount.
Treat & Johnston, Winnipeg to Portage la Prairie..	53	$ 200,000
McDonald, McMillan & Company, Portage la Prairie for 275 miles..	275	1,672,000
Treat & Johnston, Qu'Appelle valley (covered by above)..		298,400
Canadian White Company, 275th mile to 2 miles west of South Saskatchewan river ..	144	770,000
Foley Brothers, Larson & Company, 2 miles west South Saskatchewan river to North Saskatchewan river..	318	2,500,000

	Miles.	Amount.
Canadian White Company, North Saskatchewan river to half a mile west thereof..	½	$ 29,000
Foley, Welch & Stewart, 6 miles east of Edmonton to Wolfe creek..	125½	1,200,000
Foley, Welch & Stewart, 100 miles east of Prince Rupert	100	3,200,000
Total miles grading under contract..	1,016	$9,869,400
Contractors for steel bridges.. ..		$ 1,463,400
Total approximate cost..		11,332,800

From Winnipeg to Battle river the grading and bridging is practically completed, being a distance of 675 miles. From Battle river to Edmonton about 54 miles of grading, &c., is completed.

The work of fencing, tracklaying, ballasting and telegraph line is being done by the Grand Trunk Pacific Railway by days labour; there are only 55 miles of fence built; the track is laid from a point about 30 miles west of Winnipeg for a distance of 520 miles; the line is practically ballasted for a distance of 160 miles and 271 miles of telegraph line is erected.

I want to call the attention of hon. gentlemen to the fact that this report rather confirms my statement often made that large companies do not always have their work done by contract; and members who insist on calling for tenders and giving contracts as a panacea for all the evils that may exist in a public or a private work in my opinion are wrong. This great company is doing a large portion of this work by day labour.

Mr. HAGGART. That is only ballasting and track laying.

Mr. GRAHAM. The work of fencing, track laying, ballasting and building telegraph lines.

Mr. HAGGART. Those are always done by day labour.

Mr. GRAHAM. If they are always done by day labour, it must be right; consequently it bears out exactly what I state. Now, the length of the Transcontinental line from Moncton to Winnipeg is 1,803·55 miles, or, if we include the Quebec bridge, 1,804·66 miles. The length of the Quebec bridge is merely added to the distance, as it is not a part of the Transcontinental Railway proper. The estimated cost of the 1,803·55 miles is $63,427 a mile, or a total of $114,393,765.

Mr. R. L. BORDEN. In the first return brought down the cost per mile is estimated at $63,427, which I presume is correct. In the second return the cost is sometimes referred to as $63,437, which I presume is a clerical error.

Mr. GRAHAM. My own opinion is that $63,427 was the original figure. In my memorandum '2' is used in one place and '3' in another. The estimate of $63,427 a mile does not include any allowance for interest; nor for shops at Moncton; nor for the branch line at the Quebec bridge to the terminals at Quebec, though it does include the divisional yard at the northerly end of the bridge; nor for terminals at Winnipeg; nor for shops east of Winnipeg. For terminals at Moncton the sum of $97,000 is included for a terminal yard. With regard to shop accommodation, it is presumed that an arrangement will be made for the joint use of the new shops of the Intercolonial Railway. If so, the Transcontinental share of the capital expenditure on them is estimated at $750,000, or, at 4 per cent interest, $30,000 a year. The terminals at Quebec will include the cost of the line from the Quebec bridge to Champlain market, Quebec, say six miles, and terminals at the market at an estimated cost of $2,000,000. For the shops east of Winnipeg the estimate is $1,500,000. With regard to terminals at Winnipeg by agreement of the 1st of March, 1907, confirmed by the Act, chapter 52 of that year, between the Canadian Northern, the Grand Trunk Pacific and the government, an arrangement is made to which I shall refer in a moment. The whole of the lands of the Canadian Northern Railway on the Winnipeg side of the Red river, together with the buildings, fixtures, improvements, tracks and facilities, will be jointly used by the Canadian Northern, the Grand Trunk Pacific and the Transcontinental Railways, with equal rights for passenger and local freight business. The chief engineer of the Transcontinental Railway states that the area of these terminal lands is: For the yard, 76·46 acres; for right of way of transfer railway, 2·72 acres; total 79·18 acres.

As to the question of the probable date for the completion of the railway between Moncton and Winnipeg, the department is advised by the chief engineer of the Transcontinental Railway that in his opinion, if contracts for the remaining portions of the line are awarded before the middle of September next, and the labour market remains anything like what it is at present, there should be no difficulty in fully completing the line by the 1st of December, 1911.

At the risk of being tedious I want to lay before the House a statement of the contracts which have been let on the eastern division between Winnipeg and Moncton. The number of miles under contract is 1,227·93, made up as follows:

Location	Miles let.	Estimated Cost per mile.
Moncton to near Chipman.....	50.00	$ 41,995
At Chipman..	8.55	83,570
Chipman to Intercolonial railway crossing..	39.05	32,573
Intercolonial railway crossing to mile 164..	66.40	45,341
Mile 164 to Grand Falls..	31.80	110,172

	Miles	Estimated cost per let. mile.
Grand Falls to New Brunswick boundary..	60.88	51,130
New Brunswick Boundary to 150 miles east of Quebec bridge..	53.06	65,771
From Quebec bridge 150 miles eastward..	148.89	
Quebec bridge link (not included in estimate)..	1.11	65,370
Quebec bridge, westerly..	196.33	104,589
Near Harricanaw river to junction with Toronto and Northern Ontario..	150.00	46,842
Junction Toronto and Northern Ontario railway for 100 miles west..	100.00	59,425
From 19½ miles west of Mud river, easterly 75 miles.. ..	75.00	46,454
Lake Superior junction to west bank Red river..	246.86	85,003

The number of miles yet to be contracted for is 576·73, for which the following is the estimate :

Weymontachene to near Harricanaw river..	221.68	$58,058
From 100 miles west of Junction of Temiskaming and North Ontario Railway to west end of district 'D'..	44.10	63:254
From west end of district 'D' westerly..	162.50	37,000
From 19½ miles west of Mud river to west end of district 'E'.:	20.41	33,480
From west end of district 'E' to Lake Superior junction..	128.04	55,943
Total..	576.73	

Average cost per mile, $63,427; for 1,803.55 miles, total, $114,393,765.

I might add to that the fact that on this eastern section there are 228 bridges, making something over 10 miles, which makes quite an addition to the cost of the railway over a railway that would not have this very expensive construction.

Mr. R. L. BORDEN. The cost of bridges is all included?

Mr. GRAHAM. The cost of bridges is included in the figures I have given, but I am pointing out the large number of bridges which helps to swell the cost. The total amount paid to the different contractors on the eastern division is as follows:

1906-7..	$ 3,160,954 11
1907-8..	13,190,985 54
1908-9..	2,591,750 73
Total..	$18,943,690 38

In order that hon. gentlemen may understand something that I will have to say a little later on, I will have to trespass upon the good nature of the House while I read a digest of the Winnipeg terminals agreement. It is as follows:

Partial digest of principal government privileges and liabilities under the Winnipeg terminals agreement of March 1, 1907, confirmed by the Act of 1907, chapter 52 (schedule).

Clause 48.—The agreement is valid for 999 years, dating from January 1, 1907.

Clause 3.—The government, the Grand Trunk Pacific and the Canadian Northern have the joint use and enjoyment of the 'joint terminals,' which are defined by section 1 as the lands, premises and facilities, including the transfer and industrial tracks and sidings shown on a certain identified plan; also any additional lands, premises and facilities thereafter acquired as extensions, and including freight sheds, warehouses, engine house, water tanks, turntables, coach tracks, car tracks, telegraph lines and all other buildings, improvements and facilities, furniture, equipment, locomotives and plant supplied in that connection.

Clause 12.—The value of the lands, exclusive of buildings, fixtures, tracks, improvements and facilities, is fixed at $2,625,000.

Clause 13.—On this sum the government and the Grand Trunk Pacific, pay, in equal shares, ½ of 4 per cent, until and whilst the Grand Trunk Pacific operates the eastern division as lessee; but if ceasing to so operate, then the Grand Trunk Pacific and the government, each, pay ⅓ of 4 per cent.

Clauses 5 and 13.—For the buildings, tracks, yards, structures and facilities shown on a certain identified plan, or on other plans, as may be agreed on, the Grand Trunk Pacific and the government pay in equal shares ½ of 4½ per cent, of the cost, or, if the Grand Trunk Pacific cease to operate the eastern division, one third each.

Clauses 8 and 13.—For additional buildings, improvements, or facilities, the necessity for which is agreed upon by the parties—or decided on by arbitration under clause 38—the Grand Trunk Pacific and the government pay, in equal shares, ½ of 4½ per cent, of the cost, or if the Grand Trunk Pacific cease to operate the eastern division, then each pays ⅓.

Clauses 10 and 13.—For temporary additional tracks and facilities required to be provided, pending the completion of those contemplated in clause 5, the Grand Trunk Pacific and the government pay in equal shares ½ of 4½ per cent on the cost; or, if the Grand Trunk Pacific cease to operate the 'eastern division,' one-third each.

Note. Clause 49.—For the first seven years of the lease of the eastern division to the Grand Trunk Pacific the compensation payable is to be borne wholly by the government, and, thereafter, for 43 years, the Grank Trunk Pacific repays, annually, to the government, by way of rental, the amount payable by it to the Canadian Northern.

Clauses 13 and 26.—The government, at its option, may become interested in a station hotel—and the expenditures and receipts in that connection are apportioned.

Clause 3.—The joint terminals will be managed by a board composed—while the Grand Trunk Pacific continues to operate the eastern division—of one representative of the Canadian Northern and one of the Grand Trunk Pacific; but if not so operating, then, if a board is deemed necessary, by representatives of the Canadian Northern, one of the Grand

Trunk Pacific and one of the government. The powers and jurisdiction of the board are defined in clauses 15 and 16, and certain subsequent clauses. These powers are to be exercised 'without unfair preference or discrimination.' Each representative will be paid by his own company, but the expenses of the board and its employees will be paid as part of the operation of the terminals.

Clause 17.—The monthly expenses of maintenance, repairs and operation of the terminals will be borne by the Canadian Northern and Grand Trunk Pacific, so long as it is lessee of the Eastern Division, and by the Canadian Northern, the Grand Trunk Pacific and the government, otherwise), 'companies,' in proportion to the number of vehicles and engines on their passenger trains, respectively (empties entering to take up, or leaving after discharging passengers not to be counted) the minimum charge to the Grand Trunk Pacific and the government together, to be, for the first five years, not less than 25 per cent and thereafter not less than 40 per cent of such expenses; and, as to freight, in proportion to the number of tons of freight handled for them, respectively, by the terminal staff. Insurance premiums will be borne by the companies in equal shares.

Clause 49.—The payments to be made by the government 'to the Canadian Northern or otherwise,' under this agreement are not to be included in the 'working expenditure' payable by or chargeable against the Grand-Trunk Pacific, under clauses 14 and 20 of the agreement of the 29th of July, 1903, (confirmed as a schedule to the Act of 1903, chapter 71), for the leasing to the Grand Trunk Pacific of the Eastern Division between Moncton and Winnipeg, when it becomes such lessee. (This clause 20 provided that, for the first seven years of the lease the company should operate the division, subject only to payment of 'working expenditure.'

With regard to the compensation payable by the Grand Trunk Pacific and the government 'in equal shares,' to the Canadian Northern, for the joint terminals (viz. ½ of 4 per cent on $2,625,000 and ½ of 4½ per cent on buildings, tracks and facilities under clauses 5, 8, 10 and 13 (a) and (b)—clause 49 goes on to provide that, prior to the execution of the lease of the Eastern Division to the Grand Trunk Pacific this compensation shall be paid by the Transcontinental Railway Commissioners, and form part of the 'cost of construction' of the Northern division, and for the first seven years of the lease such compensation shall be wholly borne by the government; the Grand Trunk Pacific, for the next 43 years, repaying annually to the government, by way of rental, the amount of the said compensation.

Clause 38.—Provision is made for settlement of disputes or differences, by arbitration.

Clause 49.—The government interest in the terminals, is made an integral part of the Eastern Division.

I call attention to that clause particularly because it shows that there is to be a deduction made from the amount stated by the hon. leader of the opposition as being chargeable to the Transcontinental Railway Commission. The amount paid in in interest by the Transcontinental Railway is afterwards returned by the Grand Trunk Pacific Railway Company.

Mr. R. L. BORDEN. When I computed that I made the capitalization out at $1,220,000. The minister pointed out at the time that there might be some deduction from that. Is he prepared to state just what the sum payable by the government with respect to these terminals will amount to?

Mr. GRAHAM. I am coming to that in a few moments as I have the figures. Now, I want to take up the figures of my hon. friend. I am free to admit that I did not get the impression from him that went to the country that the road from Moncton to Winnipeg would cost $250,000,000, but, in some unaccountable way his friends of the press have made my hon. friend say that all over Canada. I just pick up a paper, which is an independent paper published in the city of Ottawa, and I find this gross exaggeration:

STAGGERING COST OF THE TRANSCONTINENTAL RAILWAY.

Moncton-Winnipeg portion estimated by the government at $51,000,000 will cost the country $250,000,000.

That is the Ottawa 'Journal's' heading, and the same thing has appeared in several papers. In discussing these figures, I shall first point out the fallacy of the statement, so that the people may know that certain papers, in endeavouring to criticise the government have actually manufactured something a great deal stronger than even the estimate of the leader of the opposition. These statements, in justice to everybody, ought to be refuted. It will take some time for the correction to catch up, but I will try to make it strong enough so that it will have force to catch up when once started. Take the figures of my hon. friend to show what foundation there is for this heading:

Cost of construction from Moncton to Winnipeg, $114,393,765.

With that I have no quarrel. Then he goes on to estimate that, allowing five years for period of construction, the interest on the money paid will amount to $10,009,754.

With that I am not going to quarrel either. That makes a total of $124,403,219. I may say however that in estimating the amount of subsidy to be paid on any railway, the government never allows interest during construction to be added to the cost. We take the construction of the road without the interest, not as a matter of law but as a matter of policy. In the contract with the Grand Trunk Pacific, however, the interest on the cost of construction is to be added to the cost.

Then I come to the figure of $26,124,676 for the interest during seven years on the line from Moncton to Winnipeg during

which the Grand Trunk Pacific pay no rental. But in this connection I want to point out that the total amount of that interest will not be payable until 1918, and that if we are absolutely to compute it at present at its face value in ten years from now, we are giving the government and the country any disadvantage there might be in that computation. However that is a small matter, and I shall not deduct anything at present on that account, although if we make the computation at the moment, we will find that the amount of $26,124,676, which is to accumulate at simple interest in ten years from now, ought not to be chargeable at its full face value at present.

Mr. R. L. BORDEN. I would recognize at once the force of my hon. friend's observation if I had been adding interest annually upon the annual amount of rental which is to remain unpaid, but I have not done that. I have not included one dollar of interest which might be charged and be considered as compound interest. My hon. friend's observation would be a perfectly proper one if I had been charging interest on these annual amounts, but I have not done so.

Mr. GRAHAM. I carefully considered that while my hon. friend was speaking; and while it is not a large amount he will agree that if you take $26,124,676 to-day and place it at interest, we would have quite a balance left after completing the last payment which holds due 10 years hence. Then my hon. friend added this item to his calculation:

Also interest at 3 per cent for three years additional during which no rent is collectable unless earnings are sufficient, $11,196,290.

I want to point out that if this be payable, it will not be payable until 1911. But I am going to strike out that item altogether. It must go out unless we are prepared to take the position that the Transcontinental, after the seven years during which no rent is collectable will not be able to pay its way. If we take that position we ought to put in the 3 per cent. Possibly I may be an optimist but I believe that optimists within reason are the best class of people for the country. Taking the history of the Dominion during the past few years, taking the rapid development of our western country and the rapid expansion on every hand, I believe that everything is in favour of my contention that at the end of seven years the Grand Trunk Pacific will be able to pay its way and we will not have to pay that 3 per cent. Discussing that point with an eminent railway man not many hours ago, he said: If at any time during that period or at the end of that period, the Grand Trunk Pacific should not want to go on with that arrangement, you will find no difficulty in getting one or two other railway companies ready to take over the contract. Therefore we must strike out the $11,196,290 in all fairness.

My hon. friend put in the cost of the Quebec bridge. Well, the Quebec bridge forms no part and never did, so far as the estimate of cost is concerned, of the Transcontinental Railway. That bridge was a project before there was any question of the Transcontinental Railway. It was decided that that bridge would have to be built for the other railways; and when it is constructed it will be used, not only by the Transcontinental Railway but by every other railway which wants to do business via Quebec. It will form not merely a link in the Transcontinental but in every other railway running from east to west. While the Transcontinental will use it, it was being built as a different proposition altogether, and would have to be built even if we had never undertaken to construct the Transcontinental. You have therefore to deduct from the cost of the Transcontinental this amount of $14,422,238 put in by my hon. friend as the cost of the Quebec bridge.

Now I come to another point in which I differ with my hon. friend. In his statement he gives this item:

Estimated cost of our share of terminal at Quebec, Winnipeg and Moncton and shops east of Winnipeg, $5,470,000.

He therefore added that, under the terms of the agreement which I have stated; but under that agreement a certain share of percentage is to be paid each by the government and Grand Trunk Pacific for the terminals in the city of Winnipeg, and I need not add anything further to prove that my hon. friend should not have taken into his calculation any such amount as this.

Let me take the cost of the terminals at Moncton and call attention to this fact. The terminals tracks at Moncton have had an amount of $97,000 placed for them but that is included in the cost per mile and in the larger figure of $114,393,765, so that cannot be again counted.

Then we come to the next point and my hon. friend was not unfair in that respect, but I want to point out that, while not unfair, as far as the country is concerned, his contention is impractical. The Intercolonial Railway is building at present large shops and terminals at Moncton which will cost a large amount of money. The Grand Trunk Pacific expect, and we expect, that the Transcontinental will use these terminals, so that while the amount chargeable direct to the Transcontinental of $750,000 may be considered as capital, every hon. gentleman will see that whatever the Transcontinental pays for the use of these terminals will be paid to the Intercolonial Railway which is building them, and this money which is going from the Transcontinental or the government will come back to the Intercolonial

Railway or practically to the government in another form. So that the country will not be out of pocket one dollar.

Mr. HAGGART. But the hon. gentleman says that the share of the Transcontinental Railway only at Moncton will be $750,000.

Mr. GRAHAM. Yes, and I have just said so. But that share, or the interest on it, will not be paid to any person else than the Intercolonial Railway, that is providing the terminus, and the Intercolonial being a government railway we get back the money paid on that account.

Mr. R. L. BORDEN. But the terminals will be at Moncton just the same as if they were not part of the Transcontinental.

Mr. GRAHAM. The terminals and shops at Moncton are being built by the Intercolonial, in other words by the government, with the object of accommodating the Transcontinental at Moncton. Although we have been criticised for spending a large amount of money at Moncton, it has always been the view that we will not have to spend that money with the Transcontinental. Now, we have to take out the amount my hon. friend would apportion to Moncton. I am putting in $2,000,000 as an estimate for the terminals at Quebec. Now I come to Winnipeg. As I have pointed out, it is improper to put in one farthing for the Winnipeg terminals, as every dollar the government will spend for the Winnipeg terminals has been provided for under the section of an agreement I have read, and this will go into cost of construction, and all that will be chargeable will not be an amount capitalized, as my hon. friend's large figures tended to show, but it will merely be the interest on the interest that the government has paid. That will be during the first seven years.

Mr. R. L. BORDEN. During the first seven years the government will pay $48,750 per annum?

Mr. GRAHAM. Yes.

Mr. R. L. BORDEN. Will they ever get that back?

Mr. GRAHAM. It all goes into cost of construction, and after seven years it will be repaid.

Mr. R. L. BORDEN. After the first seven years they will get interest on it; is that not the case?

Mr. GRAHAM. No. As I said before, all we ought to be chargeable with is interest on the interest, because the total amount we pay in as interest will go into cost of construction, and for seven years we will pay interest on interest, but after that our payments will cease.

Mr. R. L. BORDEN. I think there is a misunderstanding. The government is liable for the payment of $48,750 per annum; the government will pay that during the first seven years. The Grand Trunk Pacific will not be liable in respect of that. My hon. friend says that the government will be reimbursed for those seven payments of $48,750 each, they will receive it back at the end of seven years. He claims that they will receive it back in this way, that it will be then added to the cost of construction.

Mr. GRAHAM. That is correct.

Mr. R. L. BORDEN. And therefore, after the expiration of the seven years, they will receive interest on that sum at the rental of 3 per cent per annum. Is not that correct?

Mr. GRAHAM. No, I do not think it is.

Mr. R. L. BORDEN. Then what is it?

Mr. GRAHAM. Let me read to my hon. friend the digest from the agreement itself —the last few words:

And for the first seven years of the lease such compensation shall be wholly borne by the government; the Grand Trunk Pacific for the next forty-three years repaying annually to the government, by way of rental, the amount of the said compensation.

Mr. R. L. BORDEN. That is exactly what I said. What that means is this—if my hon. friend will pardon me because I want him to understand me—during the first seven years the government pays that annual sum of $48,750. I understood my hon. friend to say that it then is to be added to the cost of construction. But the clause which he read just now does not bear that out; it may be in some other clause. Then for seven years the government continues to pay it; during the remaining forty-three years, in respect to those forty-three annual payments, they are to be reimbursed by the Grand Trunk Pacific. But they do not receive any reimbursement whatever in respect to the first seven payments made by the government, unless, as the hon. gentleman claims, interest thereon as part of the cost of construction. As to that I do not know.

Mr. GRAHAM. My hon. friend and I do not see it alike, and we will have to leave it at that. Now, I contend again that it would be a very small amount, if anything, that the country will ever have to pay on the terminals at Winnipeg, consequently I have taken that amount out. Whether my hon. friend is right or wrong, it will not make much difference in my conclusion. But we take the $2,000,000 for Quebec and we take $1,500,000 for the shops east of Winnipeg, and these will make $3,500,000 instead of the $5,470,000. There is another item my hon. friend puts in here and it is that perhaps which led the newspapers astray, the interest to be paid

by the government without recourse on the Moncton section. As we are not dealing with the Grand Trunk Pacific section at all, we must strike from my hon. friend's figures, or from the figures the newspapers published, another $11,304,300.

Mr. R. L. BORDEN. Why does the hon. gentleman strike that out when he is dealing with liabilities?

Mr. GRAHAM. Because my hon. friend did not strike it out, the newspapers went away with the idea that from Moncton to Winnipeg the railway was going to cost us $250,000,000. I am stripping the government section from Moncton to Winnipeg of excessive figures and straightening out the difficulties the papers have got into on account of my hon. friend's statement. I want to get the Moncton to Winnipeg portion righted first, as that is the portion being built by the government.

I find these additions make $38,892,828 or $39,000,000 in round numbers. If I add to the amount the guarantee on the Mountain section and the Prairie section, $58,480,000, I find my hon. friend's newspapers, for some reason, are out just the small sum of $97,048,000 in their computation. Now, I want to ask if it is fair to spread that through the country, particularly when I was bound in honour not to make any reply to straighten out the figures. I think the press supporting the hon. gentleman owes him an apology. He did not make that statement, but they made it, and, so far as I have been able to find out, no person has attempted to correct that misleading and utterly and absolutely false statement. Now, I want to go a little further with this line from Moncton to Winnipeg. Take the interest for the first seven years. I want to make this statement now, that, unlike some bargains made with railways, for the money we spend we own the railway; for the money we spend we will own 1,800 miles of the best transcontinental railway on the continent of America, without one single exception. Large amounts have been given to railways, and we in this parliament give large amounts to railways. But the country must not be allowed to forget that while we spend a large amount of money on the one side, we have got our full value for the money in the railway on the other side of the account. I am prepared to say this to the country, that the Dominion of Canada, any time it desires, can get rid of that portion of the railway at what it will cost the country. The only burden that lies on this country for this railway from Moncton to Winnipeg is the amount that it will cost the country in the way of interest for the seven years, because after that the Grand Trunk Pacific pays the interest and Canada is under no burden whatever. Now, Sir, dealing with it from that point of view, I want to call the attention of the House to a very different situation, and to one in which the country will be interested. The burden of the country, as I said, is the amount it will cost the country in interest on the money invested in this railway, being the interest for seven years of the lease, after which the Grand Trunk Pacific carries the burden itself and Canada has no burden to bear. The interest for the first seven years will be $26,124,676. That includes interest during construction as well. The interest on the $3,500,000 I have estimated for the shops east of Winnipeg and for the terminals at Quebec would be $735,000 for the term, or a total of $26,859,676 of interest that will accumulate during the first seven years of the lease to the Grand Trunk Pacific. I am prepared to make the statement that, making allowance for possible minor inaccuracies in the calculation, broadly speaking, all the burden that is placed on the Dominion of Canada for 1,800 miles of railway is $26,859,676, or if we take the surplus as we had it last year it would wipe out all this interest in about a year and a half.

I wish to carry my hon. friend's conclusion a little further and do as he suggested, instead of leaving the $26,859,676 suppose we borrow the amount at 3 per cent, which would be a business proposition. Then for this 1,800 miles of railway and the benefits to be derived from it Canada would only be burdened $805,770 per year, or less than $1,000,000. Is there anything appalling in those figures? I say the government of Canada, if it had to do the same thing again would be derelict in their duty if they did not construct the railway at that cost.

I do not want to be unfair and at the suggestion of my hon. friend I am going to take in the Mountain division for a little inspection. So far as the government end is concerned, I have stated the burdens of the country. I propose to go into the Mountain section. I have faith in Canada and I am not going to suggest or admit (and I believe the circumstances will warrant me in my conclusion) that this country will ever be called on to buy one cent on the guarantee of bonds on the Grand Trunk Pacific. The development of Canada to-day is such that the country is warranted in believing and does believe, as every hon. member in this House believes, that we will never be called upon to pay one cent of guarantee on the bonds of the Grand Trunk Pacific. If Canada is to be a failure, if our great western country has not before it the great future we believe it has, if the industry of the people is not such as we tell the world it is, if our development is not along the lines we all hope it should be, if our great

heritage is not of the abundant wealth we have believed, if the prospects which we hold out to our children about this great Canada of ours are not such as to give us confidence in it, let my hon. friend's figures be taken as correct. But if Canada is the country we believe it is, if the people are the people we think they are, if our development is only on the threshold and if, in the years to come, we expect further development, further progress, there is not the faintest chance or danger that this country will ever be called on to pay one cent on the guarantee of bonds of the Grand Trunk Pacific.

I propose to take in the Mountain section and what we have to pay? Take the $26,859,676 interest on the eastern section and the terminals I have mentioned, add $11,304,300 interest without recourse that we have to pay during the first seven years of lease on the Mountain section and we have $38,263,976, for the benefits we receive for a through line from the Pacific ocean to Moncton. If I followed out the same line of argument which the hon. gentleman would say I am justified in following, if instead of taking the $38,263,976 out of revenue we borrowed it at 3 per cent, I find that for the great benefit we will receive this country will have to pay the sum of $1,144,919.28 per year.

Mr. LENNOX. It would be better to borrow again to pay the interest on that and after a while we would have to pay nothing at all.

Mr. GRAHAM. If the hon. member discusses this with railway men he will find they make their calculations just as I do.

Mr. LENNOX. The more they borrow the less they will owe?

Mr. GRAHAM. My hon. friend shows that he has not paid much attention to this question.

I have endeavoued to show what the burden of Canada will be for this railway. I now come to the increased cost of this railway. The increased cost is due chiefly to two reasons, first the greater cost of material and labour and second the improvement of the standard of the road over what was intended by the first estimate. I shall read an extract from a memorandum upon this subject given me by the chief engineer of the Transcontinental Railway Commission. In this memorandum he says:

The apparent high cost per mile is accounted for from the fact that heretofore no railway of such a length has, in the first instance, been constructed through a similar country with the low grades and curvatures used by us, viz., 0·4 per 100 feet adverse to eastbound and 0·6 per 100 feet adverse to westbound traffic, excepting at two points, with sharpest curvature 6° (955 feet radius) and permanent structures. I may also add that with very few exceptions all the structures provided for are permanent in character, culverts being of concrete and bridges of steel with concrete substructures.

What follows is very important, coming from the chief engineer:

Had we used grades of 1 per cent in either direction, curves of 10 per cent (573 feet radius) and a large number of timber structures, which has been a common practice heretofore in similar countries, the cost might have been reduced nearly a third, but the operating and maintenance expenses would have been enormously increased.

I have another memorandum made by the chief engineer of the western division giving some information as to increased cost. He says:

A question has arisen as to the estimated cost of construction of the Grand Trunk Pacific Railway prepared in 1907 being so far in excess of the estimated cost made in 1903.

Explanation is simple; the reason is twofold—first, the general increase in cost of labour and materials; and, second, the superior character of the eastern section of the road as being constructed compared with its character as contemplated in 1903.

These are the words of the two chief engineers. The rate of wages for ordinary and skilled labour has increased at least 25 per cent, the cost of lumber, timber and ties has increased 35 per cent.

Mr. BENNETT. Was it ever contemplated that the construction of the road would be commenced in 1903, or was it not expected that the surveys would not be completed for two years and that consequently no work of construction could be commenced until about 1905?

Mr. GRAHAM. If we make an estimate to-day we make it on to-day's conditions and if the conditions change the estimate changes. You ask a man to give you an estimate of the cost of building a house and he cannot tell you what it will cost two years from now. The cost may be cheaper or it may be dearer. He will give you an estimate of what it will cost to-day and if you wait for two years you must take the chances. The cost may go up or it may come down.

The rate of wages for ordinary and skilled labour has increased 25 per cent. The cost of lumber, timber and ties has advanced fully 35 per cent, and the price of steel rails has gone up from $25 to $35 per gross ton, an advance of 40 per cent; there may be other materials, probably are, which enter into railway construction which have not advanced in the same ratio, but the above constitutes the leading and costly features.

The estimate of 1903 was based on a road with maximum grades and curves, and curves of 1,200 feet radius would be more favourable than some curves on the Intercolonial Railway. In fact, the estimate of cost prepared in 1903 was for a road of an ordinary character such as is being constructed elsewhere in Canada.

Again, the structures upon the eastern section (Moncton to Winnipeg) are being built practically all of steel and concrete, of a costly and permanent character, even in the most inaccessible sections of the road, whereas, it is well known that on roads constructed elsewhere in Canada, the structures are largely of timber, and such material was in view in the estimate of 1903.

Mr. FOWLER. Does the minister not know that one of the main reasons put forward for the cost, as given at that time of this work, was that it was to be of such a superior character and, if the minister does not know that, I would refer him to the speech of Mr. Charlton, the then hon. member for North Norfolk, who made the leading speech on the question of the Transcontinental Railway and who put forward, as the leading feature, that it would be a road of lower grades than any other road in Canada.

Mr. GRAHAM. I have just pointed out that the engineer says that, but even if that had been done and that only, it would not nearly have been the road that it is. There is not a road in Canada that runs out in that country that has not a one per cent grade on it.

Mr. FOWLER. If the minister will take Mr. Charlton's speech and take the road as it is to-day, even according to the report of the chief engineer, I will guarantee that the road falls considerably short of what it was stated in Mr. Charlton's speech that it was going to be.

Mr. J. T. SCHELL. When Mr. Charlton was making that speech he was referring to a road of the kind that the Grand Trunk Pacific is building to-day, but, when the Grand Trunk Pacific entered into the contract with the government, a condition was that the road was to be equal to the main line of the Grand Trunk Railway. You will not require to find the condition that was agreed to, do more than look at the contract which was entered into.

Mr. FOWLER. What has that to do with it?

Mr. J. T. SCHELL. It has everything to do with it.

Mr. FOWLER. Would the hon. gentleman pardon me a moment?

Some hon. MEMBERS. Order.

Mr. J. T. SCHELL. The road that was agreed upon was a road equal to the main line of the Grand Trunk Railway. But, when Mr. Charlton made his speech he made it upon a road that never was built in the Dominion of Canada. There is only one road in the United States that has one per cent grades.

Mr. FOWLER. Mr. Charlton made his speech before the contract was entered into.

Mr. CONMEE. Certainly, but what had Mr. Charlton's speech to do with the standard of the road? He was simply advocating the scheme.

Mr. GRAHAM. Now, kindly allow me to come back. This is the conclusion of the memorandum which I have.

The general result is, of course, a much increased initial cost of construction, though in the ultimate, the greatly extended life of these more stable structures, will compensate for the present expenditure.

If you will allow me to be so bold as to say it, I prefer to pin my faith to what two engineers say rather than to what any person else may say as to the conditions with respect to the extra cost of the road. My hon. friend (Mr. Fowler) insists upon my taking some person else's address. Would he want the country to get its impression of the cost of the work by head lines and reports of hon. gentleman's speeches.

Mr. FOWLER. Take 'Hansard.'

Mr. GRAHAM. My hon. friend agrees that a cost of $250,000,000 is——

Mr. FOWLER. Take 'Hansard' report.

Mr. GRAHAM. I was not referring to 'Hansard.' I was talking about the newspapers .

Mr. FOWLER. I have not had as much experience as the minister has had with newspapers, but I have quite as much faith as he has in them.

Mr. GRAHAM. I have great faith in them if they are not led astray.

Mr. R. L. BORDEN. I think my hon. friend has done the newspapers an injustice in what he has said. I find no discrepancy of $97,000,000.

Mr. GRAHAM. Will my hon. friend say that the statement is correct?

Mr. R. L. BORDEN. The hon. gentleman says there is a discrepancy of $97,000,000 and I cannot find it.

Mr. GRAHAM. It is only a difference of a few millions?

Mr. R. L. BORDEN. I do not say that.

Mr. GRAHAM. I would ask my hon. friend if that headline is correct according to his statement?

Mr. R. L. BORDEN. Is it correct that he has admitted $114,393,765 for the eastern division, $10,009,454 for interest, $124,403,219 cost of eastern division at completion, $26,-124,676, seven years' interest and $11,196,290 three years' additional interest at 3 per cent?

Mr. GRAHAM. My hon. friend, I think, is not treating me fairly now.

Mr. R. L. BORDEN. I am asking my hon. friend a question?

Mr. GRAHAM. The reporter who wrote that article did not write anything that would justify that heading.

Mr. R. L. BORDEN. I am responsible for what I said in the House and not for newspaper head lines.

Mr. GRAHAM. My hon. friend was saying that I was unjust to the newspapers.

Mr. R. L. BORDEN. I still say so.

Mr. GRAHAM. It is only a question of opinion. The reporter who wrote that article did not write anything which would lead any person to put a headline of that kind over it as the article is fairly accurate and the heading altogether inaccurate. If my hon. friend will look at an authority which I might quote, but which I will not take the time of the House to read, he will find that one of the greatest difficulties with the railways on this continent and elsewhere is the fact that they were not properly constructed in the first instance and that while some railways were pushed through and rails laid at a comparatively cheap price, inside of ten or twenty years, these roads practically had to be rebuilt. Railroading in Canada has been so revolutionized during the last five or six years that the principal railways have abandoned in some instances mile after mile in order to get easier grades and better curves. One of the leading railways in the United States, and I refer my hon. friend to the Railway 'Gazette,' has abandoned 109 miles and is rebuilding altogether. I need only call the attention of those hon. members who come from the province of Ontario to the fact that between Montreal and Toronto the Grand Trunk Railway Company has abandoned mile after mile and built a new railway on a new right-of-way in order to get rid of some curves and some heavy grades, and I understand that it is now contemplating getting rid of its track east of Scarborough Heights and getting into Toronto around by the lake to avoid the grade. Why ? In order that the cost of transportation may be cheapened, and that longer trains and heavier loads may be carried, by each locomotive.

I am told that the Canadian Pacific itself, during the past few years, has spent in the reconstruction and the betterment of its grades and curves an amount equal to its entire original capitalization. We find that the Grand Trunk Pacific is now being constructed so that these large amounts of expenditure a few years hence will not have to be made, and as the engineer says, while the initial cost of construction is apparently heavy, the magnificent road bed, the easy grades, the easy curves and the steel structures with concrete foundations will enable this road to start out with a standard of road that some of the leading railroads of America have not yet attained and can only attain after years of running by the expenditure of millions.

I wish to point out just what the increase in the standard of the road means. From Winnipeg to Quebec by this route is 223 miles shorter than by any other, but leaving that out of consideration, suppose we take a standard of five trains each way each day. With the easy grades of 4-10 of 1 per cent against east bound traffic ten trains can carry as much as on an ordinary road could be carried in 20 trains. The saving in this way in one year's operation has been estimated by a competent authority at $2,986,802. This saving will more than counterbalance anything that can be said in reference to the extra cost of construction.

But it may be said that the saving will go to the Grand Trunk Pacific in the cost of operation. It will in a measure but, I want to ask the hon. gentleman, what we are building a road for ? Is it not to improve transportation ? Why do we want to improve transportation ? In order that the products of the people may be carried more quickly and more cheaply from the place of origin to the place of consumption. That being the case, every day means money, every extra car and ton that a railway can carry with the same amount of expenditure means a bigger price on the goods that are hauled, for the people who produce them. Arguing it on that line the people of Canada in the decreased cost of operation on this line, to say nothing of anything else, will reap a benefit far outweighing all the expenditure that Canada can ever be called upon to make on behalf of this country.

Mr. R. L. BORDEN. Has the minister any calculation of the cost of operation of that road during autumn, winter and spring? It has been represented by some persons that it will be a very expensive road to operate on account of the severity of winter storms and the difficulty of getting in supplies, coal, for example.

Mr. GRAHAM. I have not gone into details of coal supply, &c., but have simply taken the difference in the cost of running a road of very superior standard and a road of ordinary standard.

Mr. SAM. HUGHES. The minister said that the cost of running five trains per day would be about half that of running 10 trains per day. That proportion would hardly hold.

Mr. GRAHAM. It would be approximately correct. So far as coal is concerned, the difficulties of procuring a supply would be the same whether the road were of ordinary standard or of superior standard except that perhaps on this road we could haul heavier loads of coal. The same applies to difficulties on account of weather and snowfall.

As to the cost exceeding the estimate, if hon. gentlemen consult the standard works on railways they will find that without exception the construction of every railway on this continent has exceeded the first estimate. That is also true of the English railways. If the hon. member goes to build a house he will find that it costs more than he estimated. If he had his plans made four years ago and had the house built last year he would find that it cost double.

Mr. R. L. BORDEN. But in those cases we do not have mountains of information.

Mr. GRAHAM. I think I gave my hon. friends some small hills anyway. What Canada is interested in is not the estimated cost of the work or what somebody has said, but: Are the people of Canada going to benefit greatly from the building of the road? I have endeavoured to show that they will, and I have faith in the country. We have one transcontinental line. Some people thought when it was being constructed that it cost too much money. It has cost a lot, but notwithstanding the fact that it has cost a great deal of money, we do not own any of the road. It is one of the best managed roads on this continent, I am glad to say, and the business of the country has made it a dividend-paying road; that is, when the business of the country was comparatively small. But Canada has reached a new era of development and its business will expand more and more in the years to come. I have faith that the increasing products of the Canadian people and the goods that will be purchased with these products, as well as the traffic flowing from Europe to the Orient and from the Orient to Europe, and the traffic from the United States across the Dominion, will in a few years reach such dimensions that Canada will need to have another transcontinental line built by somebody.

Some people have said that I am too optimistic and take too large a view of this matter. Sir, no country was ever built up by pessimists. If the people who live in a country and have its destiny in their hands, as members of parliament have, have no faith in the country, they ought to get out of the country, at any rate out of parliament. I have faith in the Dominion of Canada. I have faith in its ultimate success; I have faith that it will yet possibly be a nation by itself on this continent; I believe in the resources of the country. I believe the Grand Trunk Pacific Company will never call on the Dominion of Canada to pay one cent of the guarantee of the bonds nor one cent of the 3 per cent interest on the cost of the railway, but that on the contrary the traffic will so crowd this great transcontinental line that in a very few years we shall be compelled to see that another transcontinental line is built from the Atlantic to the Pacific.

I would have liked to have gone further and have said a few words about the waterways, but I feel that I have encroached already too long on the time of the House. But this I want to say in conclusion—Canada has value for the money that she is putting into the Transcontinental Railway and she will own it in her own right from Winnipeg to Moncton, a stretch of more than 1,800 miles. If the interest of the people is what we are looking to, then every dollar we spend in order that the products of the people may reach their market in better condition and at less cost is money well spent and will be returned to the people many fold. I trust that in the discussion of this matter we may deal with it in a broad spirit, and act as Canadians towards a great enterprise which we all believe to be in the interest of the entire people of the Dominion of Canada.

At one o'clock, House took recess.

Committee resumed at three o'clock.

Mr. GRAHAM. I want to refer for a moment to the question of the Winnipeg terminals. It is a small matter but I wish to be absolutely correct, and perhaps save time. I read my decision on the digest of the agreement. Since that time I have read the agreement itself, I want to be frank with my hon. friend, and I will say that he was right.

Mr. R. L. BORDEN. The statement made by my hon. friend is very fair indeed, and I am obliged to him for the correction. As a matter of fact, I am inclined to think that perhaps he has admitted too much against himself. I want to be fair, too, and on looking over the agreement as to the Winnipeg terminals, I think I should have made some deductions, but not to the extent he mentions. I want to say to my hon. friend that in not making the deduction, I was entirely misled by the statement he brought down. I will read that statement, and the hon. gentleman will see how easy it was to fall into error. The statement brought down was this:

With regard to terminals at Winnipeg, by the agreement of March 1, 1907, confirmed by the Act of that year, chapter 52, between the Canadian Northern, the Grand Trunk Pacific and the government, the value of the Canadian Northern lands is fixed at $2,625,000, upon which sum the Grand Trunk Pacific and the government, under clause 13, are to pay, in equal shares, one half of 4 per cent, or $26,250 a year each. This includes grading, levelling and filling, as at the date of the agreement; but does not include buildings, fixtures, tracks and other improvements and facilities. For these—which the Canadian Northern undertakes to construct and supply—the Grand Trunk Pacific and the government are to pay, in equal shares, one half of 4½ per cent. The assumed cost is set down by the chief engineer of the Transcontinental Railway at $2,000,000, making the amount payable by the government yearly $22,500, or a total for the Winnipeg terminals of $48,750.

Now inasmuch as the information I asked for was expressly asked in order to ascertain the total cost of the road, and as the cost of the road brought down by the minister in the first place was stated subsequently not to include the terminals, it is plain that what I wanted to get at was the cost of the terminals for the purpose of making a computation of the total cost of the road from Winnipeg to Moncton. This statement informed me that I must take into consideration an annual charge of $48,750, and my attention was not directed to any qualification. I think the hon. gentleman was right to a certain extent in what he said the other day, and to a certain extent in what he said this morning. In looking over the agreement which I will read, I find this to be the condition of affairs, and if my attention had been directed to it I would have placed it before the House when I made my previous statement

But it is agreed between the Grand Trunk Pacific and the government, that in the lease of the eastern division the interest of the government under this agreement in the joint terminals shall be transferred to the Grand Trunk Pacific upon the following terms:

(a) Prior to the execution of the lease of the eastern division to the Grand Trunk Pacific, the compensation payable by the government to the Canadian Northern under clauses 13 (a) and (b) shall be paid by the commissioners and form part of the cost of construction within the meaning and for the purposes of the said agreement of July 29, 1903.

It is apparent then that so far as that annual charge of $48,750 relates to, and is paid in respect of any period up to the date of, the signing of the lease to the Grand Trunk Pacific, it must be added to the cost of construction. I do not know what that will be, we can only estimate it. But then the agreement continues as follows, in paragraph (b) of the same section:

For the first seven years of the lease, the said compensation payable by the government shall not be carried to capital account or cost of construction, or be otherwise chargeable against the Grand Trunk Pacific, but shall be borne wholly by the government.

So that for these seven years it is abundantly borne out by the terms of the clause I have just read, that the government must pay $48,750 a year without any recourse whatever, and that would amount to a sum of $341,250. Then paragraph (c) provides that for the remaining forty-three years the Grand Trunk Pacific shall pay this rent, but if in the three years during which they are not to pay the whole of the rental unless the net earnings of the road are sufficient for that purpose, they may escape this payment either in whole or in part, because they are bound to pay only such proportion of it as their net earnings bear to the total amount of the rental payable during those three years. I will come to my estimate in that respect further on. For the present, it is enough to say that so far as this charge is concerned, the government must in the first place pay without recourse until the lease is signed; for seven years after the lease is signed, it must also pay without recourse and perhaps also during the three succeeding years, that question depending on the earnings of the road. Then after the fifty years have expired, if the government sees fit to operate the road, or to lease it to any one else, this annual charge of $48,750 in respect of the Winnipeg terminals must be taken care of in some way, it is a sum which for all time in the future is payable by the government under the terms of this agreement, as long as the terminals are used upon the basis set forth in that agreement.

Now my hon. friend was a little warm with regard to the headlines which have appeared in the newspapers, and for which he very fairly did not hold me responsible, and for which of course I could not be held responsible. I do not know whether in his own experience as a journalist he has always maintained the standard with regard to headlines which he lays down for his brother journalists, who, as he thinks, have erred in this case. But if he really would like something that should call for his animadversion and very severe criticism, I would direct his attention to a certain pamphlet which I hold in my hands, and which sets forth in very large and striking headlines, this legend:

A transcontinental railway for $13,000,000.

I would direct his attention to the circumstance that in the same pamphlet a certain alternative proposal which I had put forward as one to be preferred to that of the government, was set forth as costing the country $266,000,000, and in this pamphlet not one of those considerations which the hon. gentleman enlarges on as proper to be taken account of, was given the slightest attention, or allowed to influence the calculation in the slightest degree. I think if my hon. friend would take this pamphlet and sit down and read it—I suppose he is too busy a man to trouble himself with light literature of this kind—but if he could find time to sit down and read this pamphlet we would hear from him at the beginning of next session an even warmer speech than that which he delivered this morning with regard to headlines and misrepresentations.

My hon. friend referred to the fact that he did not reply to my statement immediately as the hon. member for North Toronto (Mr. Foster) had asked the discussion upon this particular subject to stand over until another day. It was very courteous, indeed, of my hon. friend to give me the opportunity of making my statement, it was convenient for me to do so, the session was approaching an end and I was anxious that the business should be advanced. I under-

stood him then to say he did not make his statement because he was not prepared to make it.

Mr. GRAHAM. I did not say that to my hon. friend, but he will understand that the arrangement I had made with the hon. member for North Toronto (Mr. Foster) altogether banished that from my mind. I had put away any papers I had and I would have had to procure them from my office. If I had not made the arrangement with the hon. member for North Toronto I would have been compelled to make the statement immediately.

Mr. R. L. BORDEN. I would have waived as far as it was in my power, any arrangement of the kind because I realized that it would be quite improper for me to make any statement and at the same time hold the minister bound to silence. I did not feel I was making my statement under such conditions and if he had suggested it I would have let the matter stand; in fact I suggested that myself.

Mr. GRAHAM. I was not blaming my hon. friend or complaining; he did not take the least advantage of me and I did not mean it in that way.

Mr. R. L. BORDEN. I have referred to the paucity of information in the report of the commissioners of the Transcontinental Railway. I have been putting the Minister of Railways to more or less trouble during the session by asking for information by motions for returns, questions and inquiries in the House as to various items relating to the cost of the road from Winnipeg to Moncton and also in some cases to the liability of this country in connection with its guarantee of bonds upon the Mountain division. It should be the duty of the commissioners of the Transcontinental Railway, at least so far as the eastern division is concerned, to give us that information in their annual report. What are these gentlemen doing, what are their duties? Is their time so greatly occupied that none of it can be devoted to the important subject of acquainting this country from year to year with the extent of the liability likely to be incurred in the construction of this road? All of the time of this House and of the department that has been occupied in giving out this information should have been saved and the report of these gentlemen should have placed before every member at the commencement of this session or at some time during the session, the information I have been at so much pains to obtain. I trust the Minister of Railways will see to it that in future the report of the commissioners shall be more worthy of what we might expect from an important body of this kind and that it shall not simply consist of three or four reports of engineers and a report of the chief engineer, but that it shall contain these important matters of information to which I have referred and that it shall be presented at the earliest possible moment.

My hon. friend's statement in criticism of my own was fair in its tone from his standpoint; I have nothing to complain of it. He went over my statement in detail and admitted some of my items and rejected others The items admitted and rejected by him are:

Items admitted by Minister of Railways.

Construction of railway from Moncton to Winnipeg 1,803:55 miles, at estimated cost of $63,427 per mile..	$114,393,765
Allowing five years for period of construction there will be an average of 2½ years simple interest at 3½ per cent per year during construction, or $4,003,781.67 per year for 2½ years..	10,009,454
To this must be added 7 years interest at 3 per cent (not compounded) after completion during which Grand Trunk Pacific is to pay no rent..	26,124,676
Estimated cost of our share of terminals at Quebec, Winnipeg and Moncton, and shops east of Winnipeg..	4,591,250
	155,118,745
Interest on bonds on Mountain section without recourse for 7 years at 3½ per cent, amounts to.	11,304,250
	$166,423,045

Items rejected by Minister of Railways.

In respect to Winnipeg terminals.	878,750
Quebec Bridge....	14,422,238
Also interest at 3 per cent for three years additional during which no rent is collectable on Eastern Division unless earnings are sufficient..	11,196,290
	$26,497,278

I might criticise some of his views in respect to the terminals, but the total cost of the road is so great and so startling that any criticism of mine would make so little difference that I pass it by as unworthy of consideration, at this stage of the session at least, and therefore I am willing to accept his view of the situation.

Let me take up the three items in my estimate to which he objects. As to the interest I take simply the $48,750 a year during the first seven years of the lease about which there can be no question. Upon this basis we have $4,591,250 as the cost of the terminals. In making that estimate I am adopting all the views of the Minister of Railways with respect to terminals. So far as Moncton is concerned no one would pretend for a moment that these huge terminals and shops would be built there if the Grand Trunk Pacific were not to be constructed. Taking the items in my estimate that are admitted by the minister we have a total of cost of $166,423,045.

Mr. GRAHAM. Might I ask a question? That last amount includes the Mountain section, and is not the cost really from Winnipeg to Moncton?

Mr. R. L. BORDEN. I will repeat it in order that there may be no misapprehension about it. The estimates which the Minister of Railways admits in respect of of the road from Winnipeg to Moncton amount to $155,118,745. The hon. gentleman says, and says correctly, that in estimating the cost of that portion of the road, one should not take into consideration the interest on the Mountain division because that portion is not to be owned by the government and is under a different stipulation to the contract. But what I am endeavouring to do just now is to set forth the total cash outlay to the country, not only in respect of the government portion of the road—the eastern division so called—extending from Winnipeg to Moncton, but the cash outlay which, under the terms of the contract, must be borne by the government in respect of the whole road from the Pacific coast to Moncton, and that properly includes the $11,304.250 interest on bonds on the Mountain section and amounts to $166,423,045 as admitted by the minister.

Let me now come to the three items in respect of which he attempted to seriously criticise my statement. The items rejected by the Minister of Railways consist in the first place of the sum of $878,750 for the Winnipeg terminals. With respect to that, I was misled by the return brought down by the minister in reply to my request for information as to the cost of terminals. I am willing to make this deduction which is relatively insignificant. The deduction would be much less if I took into consideration the payments during construction and the payments after the Grand Trunk Pacific lease shall have expired.

Then I come to the Quebec bridge. My hon. friend eliminates that item altogether. Well, if we could get rid of the expenditures of the country by striking out items of this kind that would be a very delightful and satisfactory process. But I do not understand that the country is going to get rid of its liabilities merely by a statement of the Minister of Railways. We are already guarantors on the bonds of the Quebec Bridge Company for upwards of $6,000,000, and we have in return nothing but the wreck of that bridge after its partial construction. Does any one suppose that the Minister of Railways, by a very plausible wave of his hand, can rid us of his guaranty on these bonds? If a process of that kind were possible, if the Minister of Railways could extend that to our total debt in how splendid a position we would be! I might say to him that I am inclined to think some process of that kind will be very necessary if the government keeps on in the road it has been travelling the last five or six years. Look at the situation of the country with regard to the Quebec bridge. It is perfectly true that that bridge, the construction of that bridge, was not initiated as a portion of the Transcontinental. But it is equally true that over and over again it has been admitted and acknowledged that some portion at least of the cost of that bridge must be taken into consideration in estimating the total cost to the country of the Transcontinental Railway. I have not the references here, but that position was acknowledged and taken by hon. gentlemen on the treasury benches during the lengthy debates we had in 1903-4 on this Transcontinental Railway project. The construction of a bridge across the St. Lawrence is just as essential to the effective operation of that road as a Transcontinental Railway as any one or five or ten miles between Winnipeg and Moncton. How are you to operate your trains if you have not a bridge across the St. Lawrence joining the two portions of the eastern division? We have the Quebec bridge a wreck—everything lying under the St. Lawrence except the piers and a portion of the superstructure. We are guarantors on the bonds of the Quebec Bridge Company to the extent of $6,000,000, we are face to face with the necessity of bringing the construction of that bridge to a conclusion at the earliest possible moment. I asked the government across the floor for some information or data on which I could base an estimate of the amount required to complete the construction of that bridge and the return brought down states that there is no information in the possession of the government on that very important subject. My hon. friend has not criticised my estimate of $9,000,000 as the cost of completing the Quebec bridge and I take it he has none to offer. I have said that adding to the amount already expended on the bridge the sum of $9,000,000 required to complete it you have a total of $14,422,238. I am not very much concerned with the argument as to whether or not the whole or a part of this, or what part must be charged against the Transcontinental. The particularly important point to face is that the amount must be provided by the country out of public revenues. Therefore inasmuch as this bridge is an essential to the operation of the Transcontinental, we must take it into consideration in computing the liabilities imposed upon the country by the construction of the Transcontinental Railway. Do I make myself plain? Is there any one who can say that is not a fair and plain statement of the situation which must be faced by the government?

Now there is only one other item in respect of which my hon. friend made any comment or criticism, and that is the item

of $11,196,290. That item represents the interest at 3 per cent for the three years during which no rent is collectable from the Grand Trunk Pacific unless the earnings of that road are sufficient for the payment of the rent. My hon. friend strikes that out because, as he says, he is an optimist. Well, in suggesting the possibility, and indeed I think the extreme probability, that we will have no return in respect of that sum, I trust I am not convicting myself in the judgment of my hon. friend of being a pessimist. I have taken some opinions on that subject from gentlemen who I think are as well qualified to offer an opinion as any hon. gentleman in this House and much more qualified. I would regard it from the information that I have been able to obtain, as extremely improbable that the net earnings of the Grand Trunk Pacific will be sufficient for any such purpose during those three years. Let us not put out of sight the very great difficulties that will arise in the operation of the road during the winter season. Let us not dismiss from our minds the circumstance that even during those three years there will be a very limited amount of local traffic upon that road and there are rumours, I do not know how well founded, that certain gentlemen connected with the Grand Trunk Railway have been making some investigations into the possibilities of local traffic and into the character of the country which will be opened up by that road between Moncton and Winnipeg, and they have arrived at a much more pessimistic (if I may use the term) conclusion with respect to the operation of that road during the first ten or twenty years than any I have seen fit to express to the House to-day. It is all very well to be optimistic, but let us remember that the optimism of to-day will not pay the debt of to-morrow. You must remember that by a mere statement in this House and an airy wave of the hand we cannot get rid of natural conditions and we cannot get rid of the difficulties that certainly will confront the operation of the road during the first seven or ten years. I trust that these difficulties may, in the end, be found to be much less than they are anticipated at the present time by some persons who have made a study of the situation and I would be only too delighted if the optimistic outlook of my hon. friend to-day should be justified by the events of the future. I realize to the full that my hon. friend is entitled to his opinion on this subject. It is a question of the future depending upon conditions which no one in this House has either the experience or the knowledge to estimate in a very confident manner. Therefore, my hon. friend, very sincerely, no doubt, sees fit to strike this out. I have ventured to include it as a probable amount which this country will have to meet and it is only the future that will be able to determine whether he is nearer the mark than I am in this particular instance. I think that is about all the criticism that my hon. friend made. Let me add that in the estimate I have made I have not taken into consideration the construction of telegraph lines. I do not remember at the moment whether they were embraced in the estimate which the hon. gentleman presented to us. Could he give me that information?

Mr. GRAHAM. My recollection is that they are included in it.

Mr. R. L. BORDEN. I do not remember seeing them mentioned, but my hon. friend is under the impression that they are included. I have not taken into consideration any interest on the cost of terminals, and I have not taken into consideration any of the necessary expenditures that must always be looked for in the early operation of a new road some of which at least would, under the terms of the agreement, fall upon the government, if my interpretation of the agreement is correct. My hon. friend did not state, and I would like to have that information if I could get it, whether or not any part of the computation upon which the sum of $63,427, as the cost per mile of this road, is based upon the original estimates which were before the government in 1903-4 or whether all these estimates were made recently and upon such information as is in the possession of the engineers at the present time.

Mr. GRAHAM. As far as contracts have been let, these figures are taken from the contracts and the balance, which is not very large, is taken from the present estimate of the engineers as to the cost of construction.

Mr. R. L. BORDEN. At all events they are recent estimates?

Mr. GRAHAM. Yes.

Mr. R. L. BORDEN. The old estimates are not relied upon. My hon. friend alluded to some $97,000 for terminals which I did not include in the cost of construction for the reason that he has given.

The hon. gentleman spoke of the very greatly increased cost of this road as being due to the character of its construction. The hon. gentleman will remember that the contract, if I recall its terms correctly, provides that it should be built up to the standard of the Grand Trunk Railway between Montreal and Toronto. That is correct, is it not?

Mr. GRAHAM. That is the contract.

Mr. R. L. BORDEN. That is the contract. I would like to direct the attention of the House, in connection with the argument of my hon. friend, to the opinion of the expert of the government in 1903, a gentleman who was put up for the purpose of answering the Hon. A. G. Blair, a gentleman who evidently had been in consultation

with the government, whose opinions were put forward as those of the government, although he was not a member of the administration and who made the principal argument as far as the cost of the road is concerned, in support of the government's proposition. Mr. Charlton, to whom I allude, at page 8484 of 'Hansard,' 1903, used this language:

Now, Sir, if we build a line from Winnipeg to Quebec, say 1,400 miles long, and if we can secure four-tenths per cent grades; if we lay that road with 90 pound rails, if we put bridges upon it that will carry the heaviest locomotives and trains of cars, each car carrying a load of 50 tons, we can carry, in my opinion, grain from Winnipeg to Quebec for 12 cents a bushel and perhaps even less.

I do not understand from the statement of my hon. friend the Minister of Railways and Canals that the character of the road to-day is superior to that which was set forth in the remarks which I have just quoted from the speech of Mr. Charlton delivered in this House on the 11th August, 1903. Proceeding farther and dealing with the cost of this road, he said, at page 8486:

I do not believe that this road will cost over $30,000 a mile from Moncton to Chaudière Junction, and I doubt very much that it will cost more than $30,000 per mile, or even that, from Quebec to Winnipeg.

The hon. gentleman was very far away from the mark in making that statement. Then again, at page 8496, he uses this language:

As I said last night, this road from Winnipeg to Quebec, if it is to serve the purpose which it is intended to serve, must be a first-class road. It must have not more than half per cent grades, and should have four-tenths per cent grades, coming east, or twenty-one feet to the mile. It should be laid with 90-pound rails, should have bridges that would carry the heaviest rolling stock in use, with a margin to allow for an increase in the weight of rolling stock; it should have engines of 100 tons weight without the tender and cars of 50 tons capacity of cargo. The road must be built with bridges capable of sustaining the weight of cars with a carrying capacity 50 per cent greater than is now required and with corresponding increase in weight of engines.

At page 8497 he impresses upon the government the absolute necessity of securing the construction of a road of this kind, and at page 8512 he says:

Then, we have a provision in the public interest that the standard of the road, west of Winnipeg shall be equal to the standard of the Grand Trunk between Toronto and Montreal. That is a much higher standard than that of any road that the west now possesses. The Mackenzie and Mann road is laid with 60 pound rails. The Grand Trunk between Toronto and Montreal is laid with 80 pound rails, and in some sections 90 pound rails. It is a first-class road, with the best bridges and with low grades. And, if this provision in the contract is complied with and the Grand Trunk builds a road in the west that shall not be inferior to the Grand Trunk between Montreal and Toronto, it will build a road 30 or 40 per cent better than any road now in that western country.

It would appear to me perfectly clear that Mr. Charlton, speaking for the government, considered that the standard of the Grand Trunk Railway between Montreal and Toronto was practically equal if not quite equal to the standard of the road he described in the quotation I first read to the House. It is impossible to come to the conclusion put forward by my hon. friend the Minister of Railways that the difference between the $52,000,000 or $53,000,000 estimated by the Minister of Finance and by Mr. Charlton for the construction of this 1,800 miles of road, and the sum of $114,500,000 now acknowledged by the government as the cost, is due to the fact that the character of the road has been so greatly improved. Does the Minister of Railways or does any member of the government pretend for one minute that the standard of the road between Winnipeg and Moncton is so vastly superior to the standard of the Grand Trunk between Toronto and Montreal that it will account for this excess of $61,000,000, which brings the cost of the road to much more than double the original estimated cost? The statement has only to be made to carry its own confutation. There might perhaps be a few million dollars involved, but when it is seriously proposed to the House that the superior excellence of the Transcontinental as compared with the Grand Trunk between Toronto and Montreal accounts for $61,000,000, you place a strain upon our credulity that it will not stand. I do not think the Grand Trunk Railway will make an admission of that kind.

Mr. GRAHAM. The hon. gentleman will agree that I did not say anything of the kind.

Mr. R. L. BORDEN. If the hon. gentleman did not say so then we absolutely agree that it would be absurd to put forward any such reason as accounting for the increased cost of the road by $61,000,000, and, therefore, the $61,000,000 excess cost must be accounted for in some other way. The people of the country will be deeply concerned to know what the cause of it is. Some of the causes may have already been disclosed in a recent debate, and we may hear more about that matter in the time to come.

The Minister of Railways closed with a very eloquent peroration in the course of which he described himself as an optimist and deplored pessimism. Well, I do not think there are any pessimists in this country to-day. There were pessimists in Canada 20 years ago. Perhaps the Minister of Railways was not amongst them; perhaps he dissented from his party in these

days. But surely he has not forgotten the doleful wailings that went up from gentlemen with whom he is now associated in the cabinet when it was proposed to build the first transcontinental railway across Canada. Why, the rumblings of these wailings have been heard even in recent years, although they possibly have ceased now.

Mr. GRAHAM. We may both have been converted since then.

Mr. R. L. BORDEN. It was refreshing in this heated season to hear the Minister of Railways deplore pessimism, and no doubt he feared some recrudescence of the Liberal pessimism of 20 years and more ago might appear, and so he thought by his eloquence to stifle it. We on this side of the House have an abiding faith and unalterable confidence in the resources of Canada and in its future material prosperity. But that is not necessarily inconsistent with the safeguarding of the public interests and with the principle that we should have a comprehensive appreciation of the ultimate cost of a great undertaking before we plunge heedlessly into it. That is true statesmanship ; it is not pessimism. We trust that tangible benefits may be derived by our country from the construction of the Transcontinental Railway. When the Prime Minister laid his scheme before the House we were told we had mountains of information about it, but even at this date the mountain of information with regard to the ultimate cost of the road is a veritable molehill. To-day we are confronted with the situation that even on the admission of the government the road will cost more than double that which they estimated at the start. I do not know what course the government would have taken had they been compelled to admit to parliament in 1903 that the road from Moncton to Winnipeg would cost $114,500,000 at the very lowest, without terminals without computing interest, and without including those other items which I have included in my estimate of cost. They presented the Transcontinental Railway to the people of Canada as a project which would be paid for by the investment of $13,000,000, which would represent every possible charge against the public exchequer in connection with it. It was interesting to notice to-day that the Minister of Railways in his estimate of cost exactly doubled the original estimate of the government. The Prime Minister, the Minister of Customs, the Minister of Finance, all laid stress in 1903 on $13,000,000 as sufficient if invested to discharge every possible obligation of the country in connection with the road. They put it in their campaign literature, they flaunted it through their press in glaring headlines so that all might see, and to-day the Minister of Railways, not by way of boast, but by way of apology, ventures the statement that if $13,000,000 would not be sufficient, $26,000,000 for $27,000,000 would accomplish the purpose. I should think that considerations of this kind would give pause to the government and would induce greater care and greater prudence on their part before they embark in these huge undertakings. I have done nothing more than my duty in placing the present possibilities of the cost of this road before parliament and before the country. I am very glad indeed that after my estimate has been made and submitted to the House, and has been under the consideration of the Minister of Railways for several days, the only criticism he can make of it is in respect to a sum of about $800,000 as to which I was led into error by a statement which he himself had brought down to the House. I admit of course the reasonable character of the minister's observations with respect to the item of $11,000,000 for the three years' rental. I frankly admit that that is a matter of opinion, and that my hon. friend was perfectly justified in putting forward his view of the situation. Apart from that I cannot see that we differ in the slightest, except as to the item of $800,000 to which I have alluded. As to the Quebec bridge, the only difference between us is as to whether it should be charged to the Transcontinental Railway or not. I am not concerned with any matter of bookkeeping. I am concerned with the fact that before this railway is completed that bridge will have to be reconstructed and the country will have to pay for it.

Hon. W. S. FIELDING (Minister of Finance). Mr. Speaker, the National Transcontinental Railway is the greatest undertaking of this government, a work of the greatest importance to us at present, and, as we believe, of vast importance in the future development of the country ; and therefore any hon. gentleman who approaches the question with an intelligent consideration of the cost of the road and its value to the country, is only doing what is rightly expected of a gentleman in the position of the hon. leader of the opposition. If my hon. friend had approached the question in what I regard as a fair spirit, we would certainly have no reason to complain ; but I must say that if my hon. friend did approach the question with a desire to be fair, he strayed sadly away, with the consequence that he has presented to the House and the country a statement of the cost of this road to the people of Canada which I am obliged to say is not only inexact, but is absolutely and monstrously misleading. No statement which could be presented to an intelligent body under such conditions could be more misleading than that of my hon. friend. I am afraid that his desire to make a little political capital, for which I suppose allowance

must be made, has rather blinded his judgment, for I cannot conceive how otherwise he could have presented this extraordinary statement. It is not that the figures of my hon. friend in many instances are incorrect. In many instances I assume that they are correct. My quarrel is not so much with his figures in detail as with their grouping and the conclusions he draws from them. It is as if a man having a volume of papers containing accounts for and against him should hand them to an accountant with instructions to collect them and present him with a proper statement afterwards, and the accountant should charge both the debts and the credits to the debit side of the account, and leave the other side blank. That is what my hon. friend has done. He has charged to the government and the people of Canada expenses which the contract does not contemplate shall be paid by the people of Canada, and which there is no reasonable probability that the people of Canada will ever be obliged to pay. Perhaps nothing indicates more clearly the manner in which my hon. friend has approached the question than the fact that at the beginning of his remarks he again revived that exploded fallacy that the right hon. the Prime Minister had told the people of Canada that this road could be constructed from ocean to ocean for thirteen million dollars. We have had that question threshed out over and over again in this House. Hon. gentlemen opposite have only been able to establish a colour of excuse for that statement by quoting a sentence from the speech of the Prime Minister separate and apart from its context, and utterly at variance with the spirit of the whole speech. Can any one imagine that the Prime Minister, whatever, hon. gentlemen opposite may think of him, would be so absolutely mad as to ask the people of Canada to believe that a railway 3,558 miles in length, from Moncton to the Pacific, could be constructed for $3,600 per mile? If the people of Canada believed the statement which hon. gentlemen opposite attribute to the Prime Minister, they must have understood it to mean that.

Mr. LENNOX. Are we to pay for the whole of it ?

Mr. FIELDING. We are not talking of the cost of construction.

Mr. LENNOX. The Prime Minister was talking of the cost of construction to the public—not the cost of the entire road.

Mr. FIELDING. Hon. gentlemen opposite have again and again in this House—and it has been carried into their press—represented the Prime Minister as saying that this road could be constructed from ocean to ocean for twelve or thirteen million dollars.

Some hon. MEMBERS. Never.

Mr. FIELDING. Why, in the speech of the hon. leader of the opposition which I have now under review, he quoted a sentence from the speech of the Prime Minister for the purpose of saying that very thing. Let me read :

The right hon. the Prime Minister at page 7691 of 'Hansard' used these words:

The sum total of the money to be paid by the government for the construction of the line from Moncton to the Pacific will be in the neighbourhood of twelve or thirteen million dollars.

Hon. gentlemen opposite seek to convey the impression that thereby the Prime Minister meant—and they have again and again referred to it in this House—that the cost of construction from ocean to ocean was to be $3,500 or $3,600 per mile.

Some hon. MEMBERS. Never.

Mr. FIELDING. They quote a sentence from the Prime Minister's speech, separate from its context and entirely at variance with the whole spirit of the speech, and spread it abroad.

Mr. BOYCE. Why did you put it in your own campaign literature and circulate it throughout the country ?

Mr. FIELDING. I do not think it was ever put in that form. Hon. gentlemen opposite have persistently confused two things—the cost of constructing the road and the cost ultimately to the government, having regard to what the government will be called upon to pay and what the Grand Trunk Pacific Company will be called upon to pay. And so when our hon. friend the leader of the opposition began his remarks the other night by reviving that exploded fallacy, it rather indicated that he was not approaching the question in quite the fair spirit that he would have us believe he was bringing to the discussion of the matter.

Mr. R. L. BORDEN. What could this sentence mean, in the hon. gentleman's campaign literature ?

Mr. FIELDING. Is my hon. friend prepared to explain every sentence in his campaign literature ?

Mr. R. L. BORDEN. I will deal with that when it comes before the House. I am talking about this matter at the moment, and I would like to ask what was the meaning of it :

A transcontinental railway for $13,000,000.

Mr. FIELDING. That is a correct statement of what the right hon. the Prime Minister said. He was not dealing with the cost of constructing the road ; he was dealing with what he then believed would be the cost to the government of Canada, taking into account that which they would have to pay and that which the Grand Trunk Pacific Company would have to pay.

and upon the statements and estimates before the House, which it is now found were too low and which I will deal with in a moment.

Some hon. MEMBERS. Oh, oh.

Mr. FIELDING. Yes. We will probably find that some other estimates were incorrect too. The Prime Minister held that having regard to what the Grand Trunk Pacific Company would pay, and what the government of Canada would pay under the contract, if you had taken twelve or thirteen million dollars and invested the money at that time in the hands of a bank or a trust company and asked them to make provision for all the obligations arising to the government under that contract, that amount of money would be sufficient; and, according to the estimate of the work then made, the right hon. the Prime Minister was absolutely correct. No other view was ever expressed by the Prime Minister; and when again and again my hon. friends opposite refer to that statement as conveying the impression that the cost of the construction of the road was to be thirteen million dollars, they are not treating the matter fairly. The cost of construction is one thing, the cost which the people will have to bear ultimately for the purpose of constructing this road—having regard to what the company and the government have to pay—is an entirely different thing.

I desire to take up the statement which my hon. friend the leader of the opposition submitted the other night. It has been dealt with in part by my hon. colleague the Minister of Railways, but I should like to have the privilege of reviewing some features of it also. I want to call attention to the nature of the tabular statement my hon. friend gave the House and which is now being paraded throughout the country. It will be found on page 12596 of 'Hansard.' I regard that statement as of importance as showing what it was my hon. friend tried to convey to the country. The heading is this: 'Statement of cost to Canada of National Transcontinental Railway.' Observe the words 'Statement of cost to Canada of National Transcontinental Railway.' That is the beginning. And the end is, after the various items are set forth, 'Total, $249,335,823.' My hon. friend explained afterwards that there was one item which he had under-estimated, and he increased the amount to $250,968,723. So we have the statement that the cost to Canada of the National Transcontinental is $250,968,723.

My hon. colleague the Minister of Railways referred to the heading in the press, which conveyed the impression that this $250,000,000 was the cost to Canada of the road from Moncton to Winnipeg. That is the portion which is being constructed by the government and is called the eastern division, and he pointed out that in that respect the newspapers had gone beyond the limits even of the speech of my hon. friend the leader of the opposition. That remark was certainly correct. The leader of the opposition did not represent that the cost of the road from Moncton to Winnipeg was $250,000,000, but he did represent that the cost to Canada from Moncton to the Pacific—the whole road, what we call the National Transcontinental, including eastern and western division—he did represent that the cost to Canada of the National Transcontinental was $250,968,723, and I am obliged to criticise that as a monstrous statement. Let us take it up item by item. I have already said that I am not calling in question the accuracy of the hon. gentleman's figures in detail. Some of them are based on information furnished the House by the National Transcontinental Commission, and presumably they are correct. Some of them are in the form of calculations with respect to interest made by the leader of the opposition, and I presume they are correct. In any event, there could not be any difference that would amount to anything. He puts in a statement showing the cost to Canada of the National Transcontinental Railway. His first item is:

Construction of railway from Moncton to Winnipeg, 1,803·55 miles, at estimated cost of $63,427 per mile, $114,393,765.

I say at once that it is a monstrous statement to say that that represents the cost of that road to Canada. In this case the hon. gentleman has simply set forth the one side of the account. What actually might be said would be that the cost to the government of that section of the road, which he puts in at $114,000,000 and increased by the addition of certain interest to $124,000,000—the cost to Canada of that road is not that amount, but seven years' interest on that amount, because, after the expiration of that seven years, the interest on that amount is paid by the Grand Trunk Pacific and ceases to be a payment for the people of Canada at all. As my hon. friend has taken account of that interest in a later item it is not necessary to take account of it here, and therefore you must strike it out entirely.

Mr. R. L. BORDEN. Hear, hear.

Mr. FIELDING. That $114,393,765 must be struck out, because, although the government advance the money, the Grand Trunk Pacific, after a period of seven years shall have passed, pay the interest on every dollar of that expenditure. And as that interest is included in another item to which I shall come it cannot be allowed in this case, and therefore, in absolute fairness, the whole item of $114,000,000 must be struck out.

Mr. R. L. BORDEN. If my hon. friend should build a house costing $10,000 and

lease it for ten years at $1,000 a year, would he claim that the house cost him nothing?

Mr. FIELDING. Suppose a man engaged in real estate were to put up a house costing $10,000 and then made a contract with a good, reputable tenant to lease it for fifty years at a price which would cover the interest, would my hon. friend say that he would be ruined? It seems to me he would reply that he had a reputable tenant for the next fifty years and was perfectly content with his bargain.

Mr. R. L. BORDEN. Would my hon. friend say that in that case the house cost nothing?

Mr. FIELDING. I do not say that the house cost nothing, but I say that to put down the house as costing $10,000, and leave out of the calculation the rental during fifty years, would be a grossly misleading statement.

Mr. FOWLER. What would the house cost him?

Mr. FIELDING. It might cost him nothing. It might absolutely be a profit to him, and if my hon. friend were to say to him, you are ruining yourself, he might well reply: I am putting it up under terms and conditions which make it a source of great profit, and it is no burden at all.

Mr. CONMEE. Bring up another house.

Mr. FIELDING. The next item in my hon. friend's item is this:

Allowing five years for period of construction, there will be an average of 2½ years simple interest at 3½ per cent per year during construction, or $4,003,781.67 per year for 2½ years, $10,009,454.

I do not dispute the accuracy of these figures. I am assuming that they are correct, but again I say you must strike this out. Why? Because, under the Railway Act, as well as under the contract, the interest during construction is a proper charge to capital. The interest, therefore, that is paid during the construction of the National Transcontinental becomes a part of the cost of construction, becomes a part of the principal sum, and all that the government will have to pay will be seven years' interest on that principal sum. And after the seven years every dollar of interest for the remaining forty-three years is a charge, not upon the government of Canada, but upon the Grand Trunk Pacific, and therefore the representation of my hon. friend that this is a burden on the country to that extent is entirely unwarranted, and that item must be struck out. The interest has to be paid during construction, but it is added to the capital sum, and on that capital sum we grant freedom from rental, which is the same as interest, for a period of seven years. We are properly chargeable as a cost to the government, for seven years' interest, or rental, on that item, but we are not properly chargeable with the capital sum itself.

Mr. R. L. BORDEN. Then it would not make any difference what rate of interest we pay; we might just as well pay ten per cent as three and a half per cent, because it will all have to be struck out.

Mr. FIELDING. Having regard to the manner in which my hon. friend has made up his statement, I am not surprised at that observation.

Mr. R. L. BORDEN. It was the observation of the minister, not mine.

Mr. FIELDING. It is about as easy to understand it as the statement itself.

Mr. R. L. BORDEN. Seriously, does the hon. gentleman make no difference in his computation what rate of interest we pay during construction?

Mr. FIELDING. I do not see the point that is raised by my hon. friend's question. We should get the interest back after seven years at three per cent, and if we paid a higher rate for our money then to that extent there is a difference. But we get back three per cent on our money. If we have to pay a somewhat higher rate, to that extent we lose after the seven years, and to that extent only. Then I take the next item:

To this must be added seven years interest at 3 per cent (not compounded), after completion during which the Grand Trunk Pacific is to pay in rent, $26,124,656.

I assume my hon. friend's calculation is correct, I am taking his figures, and I assume that this is a proper item to charge against the government. The interest which the government will have to pay for seven years during which they will receive no interest or rental from the company, is a proper charge, and that is the true measure of what the country will have to pay for the eastern division of the Transcontinental. For every dollar beyond that, the Grand Trunk Pacific Company is obligated to pay, and we have no reason to doubt that they will be able and willing to pay. So that item I do not strike out, that item properly remains. Then we come to another item:

Also interest at 3 per cent for three years additional during which no rent is collectable unless earnings are sufficient, $11,166,290.

I observed the other night that my hon. friend from North Toronto (Mr. Foster), in a passing remark, indicated that he realized the hopelessness of this item being kept in the computation, because he alluded to it as something which at all events was very debatable. Now there has been some dis-

cussion between my hon. friend and the Minister of Railways concerning that, and my hon. friend has admitted that perhaps the company will be able to pay it during those three years, but he is very dubious. Still, for the purpose of my argument it makes no difference whether the company pay it during those three years or not. In either case this item must go out. If they pay it during the three years, then of course the item goes out; if they don't pay it during the three years, it becomes an addition to the capital sum, which is secured to the government by the terms of the lease and upon which the government will receive interest for every dollar. So whether they pay interest as my hon. friend the Minister of Railways thinks they might, and my hon. friend the leader of the opposition thinks they won't, it makes no difference with regard to the ultimate responsibility of the government. If they pay interest, that settles it, and the item is out; if they do not pay interest, then it is simply a deferred payment which is secured to the government by the terms of the lease; it is added to the capital sum, and if the capital sum includes this $11,000,000 the government will receive interest on it for every year after the expiration of the seven years.

There is an item which follows close upon that, in relation to terminals. I do not wish to enter into that further than to say that the same method of reasoning applies to it. I am assuming that my hon. friend's statement is correct as to the cost of terminals. But whatever these terminals may cost, that cost becomes a part of the cost of the eastern division of the Transcontinental, and on that cost of the eastern division, whatever it may be, we grant them freedom from rent or interest for seven years. But after the expiration of the seven years they are obliged to pay interest on the whole cost, including terminals. Therefore my hon. friend, in charging up this principal sum as something which has to be paid by the government, and by the government only, is entirely wrong. You must strike out that sum, because the government will pay interest on that for seven years, after which the company are obliged to pay interest on it, that being a part of the construction of the eastern division.

Mr. LANCASTER. Who pays the principal?

Mr. FIELDING. For the purpose of this discussion we are dealing with the question of the burden that is to be placed on the people of Canada.

Mr. LANCASTER. There is no principal, for the purpose of this discussion.

Mr. FIELDING. For the purpose of this discussion I say if the government of Canada advance moneys for the eastern division of the Transcontinental, and if they lease that to the Grand Trunk Pacific Company for seven years without any rental, then that seven years interest is a charge upon the treasury of Canada, and from the eighth year down to the fiftieth year the Grand Trunk Pacific pay interest. Then I say there is no charge and no burden upon the treasury of Canada.

Now, I come to the Quebec bridge. I say there is not a shadow of a reason for carrying into this account the cost of the Quebec bridge. My hon. friend made a statement upon that, which I have not at hand, but this is the substance:

> It is acknowledged by everybody that the construction of the Quebec bridge is an essential part of the Transcontinental.

I think my hon. friend will find I have quoted him with substantial accuracy. Now I take exception to that. If my hon. friend will say that it is agreed all round that the Quebec bridge must be constructed, I can agree with him heartily. But when he says, for the purpose of this argument, for the purpose of charging up this item against the government, and of swelling the total of this amount, that it is universally agreed that the construction of the Quebec bridge is an essential part of the Transcontinental Railway, I am obliged to take exception to that statement, because the construction of the Quebec bridge was recognized as an essential feature of the policy of Canada before a spade was ever put into the ground with regard to the Transcontinental Railway. We can prove that by the hon. gentleman himself. I find that he is charging up this whole item, making now $14,000,000—I am accepting his own figures—he charges this whole item as something which has become necessary by reason of the Transcontinental scheme and something which without the Transcontinental would not have been a charge upon the country at all. I am doing my hon. friend no injustice when I say that is the effect of the statement he put before the country in saying it is an essential feature of the Transcontinental Railway. Now do we not all know that a good many years ago, long before the Transcontinental was commenced or even dreamed of, the people of Canada had practically recognized the necessity for the construction of the Quebec bridge? It is a well known fact, I state it on Conservative authority, that the Conservative government years ago, practically promised to construct that bridge. The promise has been made in the province of Quebec by their own political leaders. Not very long ago, at a banquet given in the city of Quebec to my hon. friend the leader of the opposition, shortly, if I remember aright, before the Transcontinental contract was approved by this House, I find that the chairman of the meeting, the Hon. Mr. Pelletier,

in introducing my hon. friend, made some remarks from which I extract the following:

The Quebec bridge has been promised to us by important Conservatives. That promise was not kept and that was an error. The electors should always insist upon the accomplishment of any promises made, and they should prefer that fewer promises be made and that those made be carried out.

Here we have from the presiding officer of a Conservative gathering in Quebec held in honour of the leader of the opposition, to welcome him in that capacity, making the declaration that the construction of that bridge had been promised by the Conservative party years ago. If it was promised years ago why should my hon. friend now treat it as something which has only become necessary by reason of the Transcontinental Railway?

Mr. SAM. HUGHES. The leader of the opposition happened to be there the day the bridge tumbled.

Mr. FIELDING. Coincidences often occur, but it is not always wise to connect two things together. The leader of the opposition was not only there when the bridge tumbled, but he was there when our friend Mr. Pelletier tumbled into this confession of the former action of the Tory party. But we had the leader of the opposition on record at that time. Did he speak of the Quebec bridge as something which was going to be required by the National Transcontinental Railway? Not exactly, he was opposing the National Transcontinental Railway, but he was there to proclaim the need for the Quebec Bridge.

Mr. R. L. BORDEN. What was the date?

Mr. FIELDING. October, 1903, at the time I think that the legislation respecting the National Transcontinental was either just about completed or was still before the House. Mr. Borden says:

In advocating the extension of the Intercolonial Railway to Georgian bay, I believe that we can hereby secure for Canadian ports a large proportion of the trade from the west. Traffic carried over a railway owned by the people of this country must come to our own ports and the amount of that traffic will develop in the future to a remarkable extent. Moreover, the extension of the Intercolonial Railway, coupled with the completion of the Quebec bridge, to which both political parties are committed, may mean much for the future of Quebec.

There is not a word about the Transcontinental Railway in that. The hon. gentleman asserted that it would be useful to the Intercolonial Railway, it would help trade generally, it would develop Quebec. I find no fault with that, but we know that the Quebec bridge was promised many years ago by Conservatives, if the testimony of the hon. gentleman who presided at that gathering was correct. We know that many years ago this government made a grant of $1,000,000 to help it, and that the Quebec government and the city of Quebec also made grants for that purpose. We know that the subject has been discussed for many years. The Quebec bridge was undertaken, aid was promised to it, the plans were made and the work begun long before the Transcontinental Railway was undertaken. When, under these circumstances, my hon. friend drags into his statement $14,000,000 for the Quebec bridge as a part of the Transcontinental Railway, he simply shows that he has no desire to deal with the matter fairly.

With regard to the Mountain section, my hon. friend carries into that the same erroneous methods of calculation as to the cost which the government has to bear in connection with this road.

Mr. SAM. HUGHES. How much has been paid or will be paid by any other party than the government of Canada for the construction of the Quebec bridge?

Mr. FIELDING. If I thought it had any bearing on the question at issue, I would be happy to get the information, but whether it costs $1,000,000 or $10,000,000 or $14,000,000 or $20,000,000, it is not merely a part of the Transcontinental road, for every dollar of that money would have been necessary as an expenditure if we had never heard of the Transcontinental Railway.

Mr. R. L. BORDEN. Does the minister take the ground that absolutely no portion of the cost of that bridge is chargeable to the Transcontinental?

Mr. FIELDING. I say that when the bridge is completed the Grand Trunk would have the right to use it, and if they used if they should pay for that, but whether the Transcontinental Railway was built or not we would have to construct the bridge.

Mr. R. L. BORDEN. The hon. gentleman said in this House in 1903:

But some part of the cost of that bridge is properly chargeable to the Grand Trunk Pacific Railway. . . . What proportion of that would be fairly chargeable to this enterprise? I am going to assume that out of what it may cost we may fairly charge the Grand Trunk Pacific Railway, $2,000,000.

Mr. FIELDING. Yes, surely, I charged two millions and my hon. friend fourteen.

Mr. R. L. BORDEN. That is hardly fair, because the hon. gentleman at that time was estimating the cost of the bridge at four and a half million dollars.

Mr. FIELDING. At that time I was complaining of the very thing my hon. friend is doing now, that he is not distinguishing between the part properly chargeable to the Transcontinental Railway and the part properly chargeable to other railways. Then

as now he charged up the whole thing to the Transcontinental Railway for the purpose of swelling the amount and alarming the country.

Mr. FOWLER. Now you are charging one-half.

Mr. FIELDING. No, I am not charging anything. I say it becomes a matter of debate. I made a rough estimate and for my purposes charged two millions. I say that the Grand Trunk Pacific if they use the bridge must pay for it to the extent of their user. That is a matter of detail, that has not been adjusted, but I take it that a portion of that expenditure would be properly chargeable to the Grand Trunk Pacific.

Mr. FOWLER. At the time you made the statement in 1903 the estimated cost of the Quebec bridge was four and a half millions.

Mr. FIELDING. No, at that time we were guaranteeing bonds to the extent of nearly seven million dollars.

Mr. R. L. BORDEN. My hon. friend has entirely forgotten. Here is his own statement:

I understand that the bridge proper, the crossings and the approaches, will cost about $4,500,000. . . . What proportion of that would be fairly chargeable to this enterprise? I am going to assume that out of what it may cost we may fairly charge the Grand Trunk Pacific Railway $2,000,000.

Mr. FIELDING. There would have to be the bridge proper, the approaches, &c. But that makes no difference. The point is that the Grand Trunk Pacific is properly chargeable with some portion of that work, having regard to the business which it would do over it.

Mr. R. L. BORDEN. The minister said not just now.

Mr. FIELDING. No, my hon. friend is mistaken. I say, on the contrary, that if that work is to be built by the government of Canada or by a company, the Grand Trunk Pacific cannot be permitted to use it for nothing. They might claim, and I do not wish to say anything that may be used as an argument by the Grand Trunk in future discussions, that we have a right to give them seven years freedom from interest on that portion of the bridge cost which would be their share. That is a matter of detail, but I say they are only to be charged with what is their proper share. If two millions is the proper sum, well and good, if that is to be the charge or a smaller sum, whatever may be found to be proper, the Grand Trunk Pacific should pay as sharing in the use of the bridge in proportion to the amount of business they may do. That is a proper charge against the Transcontinental scheme and I suppose the company might claim that as respects that charge they would be entitled to seven years' freedom from interest.

Mr. FOWLER. The minister says that in the computation of $2,000,000 he took only the bridge proper and not the approaches, but the Grand Trunk would find it necessary to use the approaches as well as the bridge and therefore should they not pay a fair proportion of the cost of the approaches ?

Mr. FIELDING. I think so. That is a matter that has not been determined. The moment the bridge is completed of course that question will have to be determined, perhaps before it is completed. Before the Grand Trunk Pacific can be permitted to use the bridge there must be a determination of what proportion of the cost is a proper charge against the Transcontinental Railway and if the leader of the opposition had treated it in that way and charged some part of it against the National Transcontinental Railway, I could find no fault whatever with his statement. When he charges the whole sum as something which is necessary to the creation of the Transcontinental Railway scheme he must see that that is not a fair presentation of the case.

Mr. FOWLER. I would like, right here, to read from 'Hansard' of August 12, 1903, page 8587, what the hon. gentleman said then:

I understand that the bridge proper, the crossings and approaches, will cost about $4,500,000.

He says also a few lines down :

That is to say, that we will be obliged to give to the Grand Trunk Pacific Company, if they demand it, a crossing on that bridge, and that in connection with the general arrangement to provide a crossing $2,000 000 will be the outside obligation which we should charge to this scheme. Our $2,000,000 will stand as part of the cost of the railway upon which the Grand Trunk Pacific company will ultimately pay interest in the same manner as on any other portion of the railway.

That is including it certainly as a part of the Transcontinental Railway.

Mr. FIELDING. If my hon. friend will look further I think he will find that during that same session we guaranteed the bridge company's bonds to the amount of $6,000,000 odd; so that it is quite evident that the estimate of the cost must have been revised. However, it is of no consequence.

Mr. FOWLER. You are constantly revising your estimate.

Mr. FIELDING. Yes; my hon. friends opposite are not likely to revise estimates. That is a responsibility that only comes to ministers. I do not dispute charging a portion of the bridge to the Transcontinental Railway. What is a proper proportion is a fair matter of debate, but I do not want to make any estimate which would be used against the government in years to come. If we could charge half of $4,000,000 or $5,000,000 to the road it might not follow that

we could charge half of $14,000,000, but what I do say is that we will be disposed to charge the amount that is right and proper. What I contend is that this bridge was rendered necessary by the condition of the country long before the Transcontinental Railway was dreamed of and when my hon. friend charges the whole cost, which he places at $14,000,000, against the Transcontinental Railway it is not a fair charge at all, because all he could properly charge would be a proportion, whatever may be thought to be proper, in proportion to the user of the bridge as compared with the user by other companies. Now then with regard to the Mountain and Prairie sections——

Mr. LANCASTER. Before the hon. gentleman proceeds to deal with the Mountain and Prairie sections, would he say what, in his opinion, is the cost of the road from Winnipeg to Moncton ?

Mr. FIELDING. No, I am going to assume that the statements which have been presented by my hon. friend the Minister of Railways and Canals and which have been accepted by the hon. leader of the opposition, are correct. I have not given any attention to it. I presume they are correct and I am quite willing to accept them.

Mr. LANCASTER. I thought you said that it was nothing. That was the logical conclusion of your speech.

Mr. FIELDING. Logic is a thing as to which different people have different views. An hon. gentleman near me has called my attention to a remark made by the hon. member for Jacques Cartier (Mr. Monk) in the debate which occurred in 1903. He was making some references to the Quebec bridge and he said :

I mention this because I have always been favourable to that project and the Conservative party, as members of this House are well aware, was committed to assisting the construction of the bridge before 1896.

So we have, in addition to the statement I have already quoted, the acknowledgement of the hon. member for Jacques Cartier that the Conservative party was committed to the construction of the bridge before the year 1896, long years before the Transcontinental Railway scheme was undertaken.

Now, in regard to the Mountain and Prairie sections, my hon. friend the leader of the opposition, I am sorry to say, carries into this also the same erroneous conclusions. He charges up practically everything. He charges up the guarantee of bonds to the cost to the people of Canada of that road. A more monstrous contention could hardly be conceived. I have read his statement, but that there should be no mistake let me read it again :

Mr. FIELDING.

Statement of cost to Canada of National Transcontinental railway.

He sets out all the items and at the bottom gives the total $250,968,723.

What can be more preposterous than that? Take the cost of the Prairie section. The government of Canada guarantees the bonds of the Grand Trunk Pacific Railway Company, to the extent of three-quarters of the cost, up to a limit of $13,000 per mile. We have guaranteed the bonds of the Canadian Pacific Railway, but it never cost the people of Canada one dollar; we have guaranteed the bonds of the Canadian Northern Railway, but it never cost the people of Canada one dollar; we are guaranteeing the bonds of the Grand Trunk Pacific for the Prairie section on the condition that they must pay interest on the money from the moment the road is open. Who says that they will never pay that interest ? Surely my hon. friend will see the fallacy of that argument. It may be that on the eastern division and on the Mountain section you will not have interest paying traffic immediately and we have made allowance for that. We recognize that, as respects the eastern division and the Mountain portion, at the beginning of operations the traffic will be very moderate and that they may not be able to pay interest and therefore we grant them seven years freedom on the eastern and Mountain divisions from the obligation to pay interest. But, when it comes to the Prairie section, with the teeming business which is there waiting to be done, with the crop which is standing today in the Northwest enough to furnish a traffic for the Transcontinental Railway, in the face of the enthusiasm of the people of the west, in the face of the demand for railways in all directions, in the face of the cry that the need of the country is not traffic but railways to carry it, the hon. gentleman carries in, as the cost to the people of Canada, the amounts that we are guaranteeing on these bonds and assumes that not one cent will ever be received on the other side of the account.

Then you turn to the Mountain section. There we guarantee three-quarters of the cost whatever it may be. We cannot expect that the Mountain section will pay at once, and so we allow them seven years without interest on the amount which we shall guarantee. But, there will come a time surely—and seven years is not too long perhaps to allow them—when, on that Mountain section, as well as on the eastern division, the traffic will pay. My hon. friend is only able to sustain his position on the assumption that the whole scheme is worthless, that the country is going to the dogs and that there is no traffic anywhere to give business to the railway. Upon that assumption my hon. friend's figures may be justified, but if that is not the fact, if

the business of that country needs more railways, if the great crops of which we have heard so much and of which we are so proud in that western country will give business to this Transcontinental Railway, or as much of it as will be ready this year, why should my hon. friend assume that for the moment or after the lapse of seven years we will not be able to get enough traffic even for the Mountain section to pay the interest on three-quarters of its bonded debt ?

Mr. R. L. BORDEN. The hon. gentleman is mis-stating altogether my position. I said not one word about any cash outlay by the government upon the Mountain section except in the seven years when we have to pay interest on the bond guarantee without recourse. The hon. gentleman has over and over again distinct portions of my statement without including what was right before his eyes and he knew it; he knew it perfectly well ; I said at the end of my statement :

Cash expenditure..	$192,920,723
Bond guarantee..	58,048,000

Mr. FIELDING. What else?

Mr. R. L. BORDEN. And the total cost of these two, that is, the total of cash expenditure and bond guarantee, $250,968,-723. The hon. gentleman has repeatedly during his speech endeavoured to convey an absolutely different impression from that which an examination of the document would convey to any fair-minded person.

Mr. FIELDING. I differ from the hon. gentleman. Any man who examines the document as it stands on 'Hansard' and as it has been published throughout the country by the organs of the hon. gentleman can see nothing else in it but that which I have read, and I will read it again:

Statement of cost to Canada of National Transcontinental Railway.

Total, $250,968,000.

If the hon. gentleman did not mean to represent that that was the cost to Canada why did he put it in that statement as such?

Mr. R. L. BORDEN. I neither meant to state it nor did I represent it, and the hon. gentleman when he made his misleading statement to the House was perfectly aware of it.

Mr. FIELDING. Well, this statement as it was given by the hon. gentleman and as it is printed with his approval in 'Hansard,' and as it has been distributed throughout the country, will go on record, and my statement will go alongside of it and I will let the country judge who misled the people.

Mr. R. L. BORDEN. Hear, hear.

Mr. JOHNSTON. He says now his statement is all wrong.

Mr. R. L. BORDEN. The hon. gentleman (Mr. Johnston) has stated what is not correct and what he knows is not correct.

Mr. CROCKET. I wish to ask the Finance Minister if that statement does not clearly separate the cash outlay from the bond guarantee?

Mr. FIELDING. Yes, but it places them both as part of the cost to Canada, and it is going the round of every Conservative paper in Canada to-day, and the only point of difference is that some of them wishing to see the leader of the opposition and go him one better represent that as the cost of the construction of the road from Moncton to Winnipeg. The leader of the opposition makes the statement that the cost to Canada—I am quoting his words so that there may be no mistake, 'Cost to Canada'—let it be printed in large letters :

'Cost to Canada,' total $250,969,723.

The figures in the first statement were slightly different and the hon. gentleman corrected them, and I am giving him the benefit of the correction.

Now, what is the actual cost to Canada? The actual cost to Canada for the eastern division is seven years' interest on the cost of construction.

Mr. CROCKET. How much is that?

Mr. FIELDING. I do not know. I am taking the figures of the leader of the opposition, which I assume to be correct, and my argument is based on the assumption that they are correct. For the eastern division the cost to Canada is not the cost of construction; it represents seven years' interest on the cost of construction, and after that for every dollar we get interest from the Grand Trunk Pacific Railway. The cost of the Prairie section is nothing to the people of Canada, because we guarantee three-fourths of the cost of construction and we are to get interest on that from the moment the road is open. Not one dollar does that Prairie section of the road cost the people of Canada in the proper sense of the word.

Coming now to the Mountain section, the cost to Canada is not the cost of construction, but it is seven years' interest on three quarters of the cost of construction, because for every year beyond that seven years the Grand Trunk Pacific is obliged to pay the interest.

So then we have this summing up :

Mr. Borden's statement of the total cost to Canada..	$250,969,723
Actual cost to Canada :	
Seven years interest on the eastern division (I take my hon. friend's figures)..	26,124,676

Seven years' interest on the guaranteed bonds for the Mountain section (again I take my hon. friend's figures). ....$	11,304,300
I insert seven years' interest upon his own estimate of the terminals—if they are not covered by his general statement of cost the item will be necessary—seven years' interest on the cost of the terminals (estimated on Mr. Borden's figures)	1,340,150
So we have the net result that the actual fair cost to the people of Canada of this enterprise, the cost the people of Canada will have to pay according to the figures of my hon. friend himself, in reality should be....	38,769,126
The hon. gentleman has overstated the cost of that work to the people of Canada to the extent of not less than.. ..	212,200,000

I am making this statement of the interest on the basis of my hon. friend's figures, but of course that interest has not to be paid immediately. It will be paid during a series of years and by an actuarial calculation you could establish its present value. I have not gone into that fully, but no doubt it would make the figure considerably less than the $38,000,000 to which I have referred.

Now, as I have stated, the difference in the statements is the point of view from which they are approached. There is only one possible excuse—if one may dare call it an excuse—for my hon. friend opposite his only possible defense for his statement would be that the whole undertaking is worthless, that the road will never earn anything and that the country has gone to the dogs. On no other grounds whatever can he justify a statement which ignores the obligation of the Grand Trunk Pacific to pay this government 3 per cent interest on the cost of the eastern section of the road after the first seven years; which ignores the obligation of the Grand Trunk to pay us interest from the very beginning on the Prairie section and which ignores the obligation to pay nterest on the Mountain section also after seven years. If it be true that the country has gone to the dogs my hon. friend is right, but our statement is made upon the belief and the faith that great has as has been the progress of Canada in the past it is going to be greater in the early future, and so we refuse to believe, and we are sure the country will refuse to believe, in the basis upon which the leader of the opposition makes up his statement.

Much has been said from time to time concerning certain estimates which I made in the debate of 1903 on the Transcontinental Railway scheme. It is easy to be wise after the event, but those of us who deal with the actualities of life must present every question in the best light we can bring to bear at the time; then if we are honest in our endeavours to get light from the most intelligent sources and present it to parliament, we need not be ashamed if it turns out afterwards we were mistaken, so long as we have brought it forth in good faith and with the best possible intent. My hon. friend quoted me as having estimated the cost of the New Brunswick section of the eastern division at $25,000 a mile. There is a sense in which that is correct, but it is hardly as fair and as full a statement as we ought to expect from the hon. gentleman. My hon. friend should have said that I made no estimate at all of the cost of that section in the sense in which he quotes it. The estimates which I presented to the House I did not presume to make myself. They were made upon the authority of a capable and experienced engineer whose integrity and ability will be unquestioned. I received the report from Mr. Schreiber, who was at that time the chief engineer of Railways and Canals, a man of the highest character, a man whose intelligence and capacity no one can doubt. Mr. Schreiber estimated that you could build a road of the character of the Intercolonial—not inferior to that—for $25,000 a mile east of Quebec and for $28,000 a mile from Quebec to Winnipeg. It is to that which my hon. friend refers when he quotes me as estimating the cost in New Brunswick at $25,000 a mile. I would remind my hon. friend that while I presented these figures and gave Mr. Schreiber as my authority for them, I stated that that would not be sufficient for the higher standard of road which we required. Therefore, I added—it was but a rough estimate—25 per cent for the better grade that we desired to have, and so the estimate I gave for the New Brunswick section was not $25,000 per mile, as my hon. friend states, but $31,200 per mile. It is not a very important thing, because the actual cost is very much above either of these sums. But I want to call the attention of the House to the fact that any estimates I gave were not estimates which I presumed to give of my own knowledge, because I had no such knowledge, but were based on the report of an intelligent and capable engineer. The hon. leader of the opposition gave us some estimates too, and he quoted them the other evening. He said:

> I estimated the road from Winnipeg to Moncton at $40,000 per mile for 1,875 miles, or a total of $75,000,000.

If the hon. gentleman had engineering advice for that estimate, he never gave it to the House, so that we have to hold him responsible for it. I had the estimate of an engineer to fall back on, but he had not.

Mr. LANCASTER. He was more correct than your engineer.

Mr. FIELDING. Neither of them was correct. My hon. friend's estimate of the cost of the road from Winnipeg to Moncton was $75,000,000 ; and yet he is now putting forward the statement that it will cost $124,000,000. And so it would seem that neither my hon. friend nor I was very near the proper estimate.

Mr. LANCASTER. Who was the nearest ?

Mr. FIELDING. Well, there is not much to choose between us. My estimate of the cost of the road from Quebec to Winnipeg was $35,000 per mile, and my hon. friend's estimate was $40,000 per mile, so that there was not a wide difference between us.

Mr. LAKE. He did not take into account the Quebec classification.

Mr. FIELDING. My hon. friends have not made much of the Quebec classification. What will be clearly understood by the public as to the Quebec classification will be this, that an engineer, who doubtless meant well, but was mistaken, made some accusations against the National Transcontinental Commissioners implying that they acted improperly and perhaps corruptly with regard to the classification of the road ; that when the matter was investigated and that engineer was brought face to face with the committee and with the gentlemen concerned, he frankly said that he had made a mistake and withdrew his charges.

Mr. LENNOX. We do not and the country does not have to depend on Major Hodgins at all in the matter.

Mr. FIELDING. But as Major Hodgins, the gentleman who made the accusation, came before the committee and frankly acknowledged that he was mistaken and had no longer any charge to make, the country will understand that.

Mr. LENNOX. Major Hodgins was not the only person who made accusations. Vastly more important accusations were made by the Grand Trunk Pacific Railway Company, and they stand on record yet.

Mr. SAM. HUGHES. Might I ask, for information, what did Major Hodgins withdraw ?

Mr. FIELDING. I was not present at the meeting. I read it in the public press, and I am stating it as the public know it, that the gentleman who made these accusations came before the committee after the inquiry and frankly acknowledged that he was wrong, stating that the points of difference were points of difference between engineers, upon which men might honestly exercise difference of opinion. The three salient facts were : first, that Major Hodgins made his accusations ; second, that Major Hodgins withdrew his accusations; and third, that even if they wanted to do so, the Transcontinental Railway Commissioners could not change the classification, because that is the work of the chief engineer, and there is not a man on either side of the House who will dare to asperse the integrity of Hugh Lumsden.

Now, my hon. friend the leader of the opposition, in presenting this deplorable picture of the future, this picture of a time when the roads would not earn anything and the revenues go to the bow-wows, gave a statement of the enormous addition that would have to be made to the net debt of the country in consequence of this arrangement. My hon. friend said :

> The public debt of Canada at present is, I suppose, from $265,000,000 to $268,000,000.

He is there alluding to the net debt, which is usually the basis of our calculations. Then he goes on to say :

> The public debt of Canada at present is, I suppose, from $265,000,000 to $268,000,000. The cost of this road will amount to at least $190,000,000 before we are through with it; and unless some considerable portion of that amount can be paid out of revenue—which does not seem very probable under present conditions—the total debt of this country, by the time this road is completed, without our spending a dollar for the development of our ports and inland waterways and on subsidies to railways or for any other of the enormous calls that will be made on the treasury within the early future—without taking into consideration a single one of these demands on the public treasury, the public debt of Canada is likely to reach $450,000,000 before we pay for the building of this National Transcontinental Railway.

I say again that my hon. friend indulges in pessimism of the worst kind. He can see no hope of anything but ruin coming out of this thing. He cannot think it possible that any portion of the payments made on this work will be paid out of revenue. He is of opinion that every dollar of the cost of the road, which at one place he puts at $190,000,000 and at another place at $250,000,000, must be added to the net debt of the country. I hope my hon. friend is not always going to be in such a gloomy frame of mind. Things are not so bad as that, I can assure him. As a considerable portion of that money has already been expended, we are able to put his theory to the test. Up to the 30th June, as near as I can get to it, we have paid out on Transcontinental Railway account $30,000,000. According to my hon. friend's idea, we must have added that $30,000,000 to the net debt of Canada ; but I am glad to be able to tell him that we have not added one-half of that to the net debt of Canada.

Mr. R. L. BORDEN. What was it ?

Mr. FIELDING. I have not the exact figures, but I think it would not be more than $14,000,000.

Mr. R. L. BORDEN. I mean what is the amount of the debt ?

Mr. FIELDING. I have not the exact figures. The net debt is a little more than my hon. friend stated ; it is about $270,000,000. I am taking the expenditures on the Transcontinental Railway since the contract was made and the increase of the net debt during that time, and from that I deduce that if during that time we have been able to pay $30,000,000 on account of the Transcontinental Railway and have added less than one-half of it to the net debt of the country, we can go on with the assurance that we can finish this road without making such a large increase to the net debt of the country as my hon. friend seems to think.

Mr. R. L. BORDEN. Can the hon. minister tell me what he estimates the net debt will be at the end of the present fiscal year?

Mr. FIELDING. I would not like to make an estimate of that. But suppose we were going to add that enormous sum of $190,000,000, as my hon. friend said in one place, or $250,000,000, as he said in another place —suppose we were to add either of these sums to the public debt of Canada, the net debt, would that be so very alarming ? Would a charge upon the treasury of the Dominion for that work, amounting to either the $190,000,000 or the $250,000,000, be an enormous and alarming sum for the people to have to bear for this railway extension ?

Mr. R. L. BORDEN. Does my hon. friend say I mentioned the amount of $250,000,000 in connection with the net debt ?

Mr. FIELDING. In that case my hon. friend used $190,000,000.

Mr. R. L. BORDEN. I never used the expression $250,000,000 in connection with the net debt. My hon. friend is not giving my statement fairly. He is omitting altogether any reference to this. I ended my statement with this expression. Total cash expenditure $191,305,823 ; bond guarantee, $58,048,000. In addition to the above cash expenditure the government incurs the following obligation on its guarantee of bonds :

Guarantee on bonds issued on Mountain section as above.. ..	$46,140,000
Guarantee of bonds issue on Prairie section, 916 miles, at $13,000 per mile..	11,908,600
Total..	$58,048,000

Mr. FIELDING. My hon. friend is repeating his statement and therefore I must repeat my reply. Again I call attention to his tabular statement in 'Hansard,' page 12595, headed 'Statement of cost to Canada of the National Transcontinental Railway.' The various items are there set forth in tabular form. And at the foot of the tabular statement appear these figures—Total, $249,253,823.

Mr. R. L. BORDEN. What are the words immediately above ?

Mr. FIELDING. As I have said my hon. friend carries into his statement interest that we do pay, interest that we do not pay, cash expenditure and bond guarantee. He clubs them all together and makes up a total cost to Canada of $249,353,823, which he afterwards corrected to $250,968,723. But suppose we had to add this very large sum to the debt of Canada for railway purposes, would that be so alarming as my hon. friend seems to suggest ? Would it create a paralysis in the credit of Canada ? I might remind my hon. friend that one great corporation in Canada, the Canadian Pacific Railway, is paying to-day interest and dividends on stocks, bonds and debentures which amount in all to $311,000,000. If that corporation—and a great one it is—is able to carry that amount, if it is able to bear the burden, and instead of doing evil be of great benefit in the development of the country, do you suppose that any one in Canada is going to be alarmed if we have to add either the $190,000,000 or the $250,000,000 to the public debt of Canada ? But while there will be a nominal addition for the time to the debt of Canada, the true measure of the cost of this enterprise to the people is not the cost of construction but the seven years rental on the eastern division and the seven years interest on the Mountain section.

That the road has cost more than we expected, I admit, and I have no apology to offer. I gave the best information I could get. What better could I have done than go to the eminent engineer whose integrity and ability are beyond question ? I gave the House the information he gave me. The road has cost more than we anticipated and there is not a man in the Dominion who voted for that Transcontinental scheme in 1904 who would not have voted for it just as readily if he had known it was going to cost the actual figures it has. But take the figures as they are presented to-day and contrast them with the cost of the Canadian Pacific Railway. The Canadian Pacific Railway was a great enterprise. It was liberally endowed, and I am not saying it was too liberally subsidized. We are all, to-day, whatever may have been our difference in the past, proud of it ; but we know that in order to secure that road, the country had to make great sacrifices, and by comparison we are getting the Transcontiental Railway on very favourable terms. That road, it is true, is costing us more than we estimated, but the reasons are not far to seek. Every railway company knows why it is costing more because it has had the same experience. Every engineer knows why the road is costing more because he has

had the same experience. Every manufacturer of Canada, whose wares enter into the construction of the Transcontinental, knows why it is costing more, because he is getting higher prices than he did in 1903. Every workman in the factories knows why, because he is getting higher wages for the work on the Transcontinental than he did in 1903. Every rail maker knows, because he is selling his rails at a higher price than he did in 1903. Every coal miner knows because he is getting more from the coal he produces which is used in making the rail. Every lumberman who supplies the ties, every shantyman who goes into the woods to cut the timber for the ties, knows why this road is costing more, because he knows he is getting more wages to-day than he did in 1903. Every labourer on the road knows that the higher wages he is getting must increase the cost of the road. But so long as this road is well constructed, so long as we have the proud satisfaction of knowing that we are getting the best Transcontinental railway ever built on the continent of America, so long as that railway is well constructed and equipped, so long as we are moving forward rapidly to the fulfilment of our expectations, the country will not quarrel with the increased expenditure but will say: We wanted the road in 1904, we want it now, and if it becomes necessary to send the government back to power to give us that road, that will be one of the many reasons why they must be returned.

Mr. HAGGART. We have had a very exciting debate over a very simple question. My hon. friend the leader of the opposition asked information from the government as to what the cost of our Transcontinental Railway would be. We got that information from the Minister of Railways, My hon. friend made a calculation upon it and presented it to the House and the country. It was a calculation on which two parties might differ, but the experts at the head of the Railway Department differ very little from my hon. friend the leader of the opposition. Why then all this wind? Simply because the figures now given do not correspond with those which the government furnished again and again to this House, and because these figures are so enormous that they have startled the country.

In their campaign literature which hon. gentlemen opposite circulated from one end of the country to the other, they stated that the cost of this road was only going to be $8,700,000. The statement of the Finance Minister, which he sticks to yet, is that it was only to be $13,000,000 plus the interest.

Mr. FIELDING. I do not say that now.

Mr. HAGGART. The leader of the government sticks to the same statement, I suppose, of $13,000,000. Now the Minister of Railways sums the amount up to $26,000,000. A word with regard to this so-called extravagant statement of the leader of the opposition. The Finance Minister tries to make the most out of it he can. That statement is headed 'Statement of the cost to Canada of the National Transcontinental Railway,' and the Minister of Finance tries to lead the House to believe that the leader of the opposition argued that the total cost of this road to the government would be $250,000,000. My hon. friend never intended anything of the kind.

Mr. R. L. BORDEN. And never said anything of the kind.

Mr. HAGGART. He never said anything of the kind, and he handed over to the Minister of Railways a copy of the account prepared by him, and the account does not contain that amount. My hon. friend makes the amount $191,000,000, and the Minister of Finance says my hon. friend is committing a fraud upon the country by making a misstatement of that kind. The Minister of Finance, however, hasn't brought forward any proof. It is the logic of the Minister of Finance that is entirely wrong. Suppose the imperial government were to build a dock at Gibraltar at an expenditure of £1,000,000 sterling, and they received a benefit from dockage of ships which paid the interest; therefore, the £1,000,000 is not a straight expense by the imperial government, because they are receiving a corresponding compensation from year to year from the dockage of vessels. The same idea enters into the calculations of the Finance Minister. Get it into the capital account, it is a good investment, it does not show in the receipts and expenditures for the year, and it enables him to make a good financial statement. But any one who looks over the way the accounts are kept by the imperial authorities in reference to expenditure on capital account, if he has common sense, sees the fallacy of the book-keeping of the Finance Minister. The hon. gentleman has done it again and again. Because he gets this as a capital expenditure, and we are only to pay interest on it for seven years, he argues it is an amount that should not be charged against the people of Canada. The Minister of Finance says: Oh, an expenditure of this kind is a good investment, we get our money back. We do not, of course, get the 7 per cent back, nor the interest which we have lost on that cash investment. But my hon. friend seems to think that if we get the railroad back again we have good value for our money. I will go so far as to say that possibly the railway from the Pacific to Lake Superior may be a good investment. But that is something which belongs to the Grand Trunk Pacific alone, it is the only part they are interested in. Does the Minister of

Railways, considering the country which that railway passes through from Winnipeg to Moncton, think that if we were obliged to take it over and work it, it would be a good security for the money invested in it? Does it pass through the fine grazing and agricultural country, or the good mining country, that the Intercolonial passes through in New Brunswick and Nova Scotia? It passes through a country from Winnipeg to Quebec which is now a virtual wilderness. Taking the history of the Canadian Pacific Railway, of the Canadian Northern and other railways, we learn that in order to procure a traffic upon that road you require a long time. Some portions of the Canadian Northern have been built for eighteen years, other portions for twelve, eight and six years, and the Canadian Northern, although passing through choice farming lands in the Northwest Territories, is only now beginning to reach a good financial basis, but barely so. Possibly the Grand Trunk Pacific, from the Pacific to Lake Superior, may, in four or five years' time, reach a good financial basis with the traffic of that splendid country it passes through. But as for the section between Winnipeg and Moncton, you may have possession of it from twenty-five to fifty years, and at the end of fifty years you would be poorer than you were at the beginning. We are justified in coming to that conclusion from observing the manner in which the Intercolonial Railway is managed, with a deficit of $4,500,000 per year, and upon a road passing through a country not nearly as good as the Intercolonial passes through you would have a deficit of $6,000,000 or $7,000,000, and, instead of having an asset for the money expended on this road, you would have on your hands an elephant which would cost the country millions every year.

But we are told we have a guarantee from the Grand Trunk Pacific that after seven years or ten years they will pay interest on the amount. What is the guarantee of the Grand Trunk Pacific? It is a guarantee on the value of the undertaking. It does not bind the bondholders of the Grand Trunk Pacific. If they build a road from the Pacific to Lake Superior they are free from any such liability at all. It is only the actual stockholders of the Grand Trunk Pacific that make that promise to the government. Suppose they say: We find that we cannot work that road, the receipts do not enable us to meet the expenditure; they can force the government of this country to take over that road. They can say: We won't work it; and what remedy have you against it? No remedy at all. You are obliged to take over the road. You will have on your hands a road on which you have expended $191,000,000, and under the circumstances it would have been better if that $191,000,000 had been thrown into Lake Superior, because you have a liability of $5,000,000 or $6,000,000 a year to work this railway afterwards. We had a calculation made by the Finance Minister that the eastern section of that road would cost from $25,000 to $28,000 per mile, plus 25 per cent, to bring it up to the standard that Mr. Charlton advocated. The Minister of Finance has forgotten that in the estimate he was providing for the whole cost of the Quebec bridge up to that moment. Does he forget that? If he does, perhaps I had better read to him from the 'Hansard' a statement that he made at the time:

Adding all the various sums together—the present value of seven years' interest on the eastern section, first, on the basis of $25,000 and $28,000 per mile, which is the way the figures are made up; seven years' interest on the Quebec bridge represented by its present value.

Mr. FIELDING. That probably will be on the $2,000,000 which I estimated as the proportion chargeable to the National Transcontinental Railway.

Mr. HAGGART. You were including the Quebec bridge.

Mr. FIELDING. To the extent of $2,000,000.

Mr. HAGGART. The minister made a statement and asked for a guarantee of $6,200,000 and odd or bonds issued to the Quebec Bridge Company. His figures in the estimate for the Quebec bridge were $500,000 too low:

The government's liability for the Quebec bridge was limited by chapter 54 of the Acts of 1902 to a guarantee of the payment of the principal and interest on the authorized bond issue by the company to the amount of $6,678,000. This guarantee was given, the bonds were issued and pledged for the company to the Bank of Montreal for the raising of money. Of these guaranteed bonds £478,700 sterling, approximating $2,330,000, have since been returned to the government and are held as collateral for an advance of $2,000,000. Therefore, we have advanced $2,000,000 out of the amount. The remaining bonds to the amount of the sterling equivalent of $4,348,200 are outstanding in the hands of the Bank of Montreal. The bank's claim against the bridge company on April 13, 1908, for general advances and interest was $3,773,000 and another special advance of $174,000.

Deducting them from the amount the bank holds as security for this amount leaves the amount advanced by the government $5,900,000 or about $500,000 less than my hon. friend estimates it. I remember the Finance Minister stating when he brought down his motion for the guarantee of the bonds by the government that the Quebec bridge was an essential part of the undertaking of the Grand Trunk Pacific. I believed him too. What are you going to do? Are

you going to end the Grand Trunk Pacific at Quebec or do you intend to build a bridge to Point Lévis to connect with the Lévis section ? There is not a doubt that the government will be compelled to build that bridge, either as a separate undertaking or as a part of the Grand Trunk Pacific.

The hon. the leader of the opposition (Mr. R. L. Borden) did not care two cents whether the amount of money was expended on the Quebec bridge under one name or under the other, what he was directing to the attention of the country was the enormous expenditure for the purpose of accomplishing what the government wished in the building of the Transcontinental Railway. My friend's estimate of $9,000,000 to complete the bridge has not been assailed or questioned. It may be too much, I do not know whether it is or not, but I do know that already $5,900,000 have been expended on it and I should judge that as the government had authority in their hands to investigate it and must have had information on the subject as to the probable cost of the new bridge, they know my hon. friend's estimate of $9,000,000 is correct. The $11,196,-290, as my friend puts it, is only a hypothetical amount at the moment and the Minister of Railways and the Minister of Finance so treat it. But what are the probabilities ? After seven years running of that road from Winnipeg to Moncton across the Quebec bridge, if the bridge is built by a company, what amount of money will the Grand Trunk Pacific probably have to pay for the use of that bridge by the Transcontinental ? The probabilities, judging from railway construction in portions of Canada more favourably situated, are that the government and the country for twenty years afterwards, and the Grand Trunk Pacific, if they are in a position to pay it, will be paying more for the running of the road than they get in receipts. It would be a fair estimate to add the three years' interest but my friend says : No, take it off. Fancy the argument of the Minister of Finance in reference to the terminals at Moncton ! The $750,000 is to be spent there but by some jugglery we are to have the shops built by the country and it was not to be a charge to the country or a charge against the Grand Trunk Pacific. Perhaps it is a charge against the Intercolonial Railway ?

Mr. GRAHAM. It certainly is. That is where it is being charged.

Mr. HAGGART. You make an expenditure of $750,000 more than is needed on the Intercolonial Railway owing to the possibility of the Grand Trunk Pacific reaching Moncton and the National Transcontinental is not to pay for it. It does not matter two pins who has to pay for it, the country has to pay the $750,000 and if it was not for the Grand Trunk Pacific reaching Moncton we would not have to spend the money.

Mr. GRAHAM. My hon. friend is wrong. He will see that enlarging certain buildings is not nearly as costly as building them from the beginning and we did need shops at Moncton. The only difference is that we might not have built them so large.

Mr. HAGGART. I was taking the hon. gentleman's own estimate. But in answer to my hon. friend's question the minister sends down information that the government are spending $750,000 more at Moncton on account of the Grand Trunk Pacific.

Mr. GRAHAM. I did not say that. I said it was fair to charge the Grand Trunk Pacific $750,000 for their share, but we are not spending that much more on their account.

Mr. LENNOX. Then it is not fair to charge them that much.

Mr. GRAHAM. Yes, it is.

Mr. HAGGART. Here is the statement from the memorandum.

For the terminals at Moncton the sum of $97,000 was included in the bulk for a terminal yard.

Then it is added to the cost of construction of the road.

With regard to shop accommodation, it is assumed that an arrangement will be made for the joint use of the shops of the Intercolonial Railway. If so, the National Transcontinental Railway's share of the capital expenditure on them is estimated at $750,000 or, at 4 per cent interest, $50,000 a year.

The government estimated the cost of this road at from $25,000 to $28,000 a mile, but they subsequently found that it was going to cost $63,000 a mile. I venture to say that with the terminals and all the other things to be added it cannot be built for much less than $70,000 per mile. The Minister of Railways and Canals says that the excessive cost was caused by the adoption of modern gradients and curvatures and he makes the bold statement that large expenditures are being made on the Canadian Pacific Railway and Canadian Northern Railway and Grand Trunk Railway for the purpose of bringing them up-to-date. That is perfectly true, but he also says that roads being built in the same section of the country which is being traversed by the Grand Trunk Pacific are being built upon that principle, that it is better and cheaper, to build the road with four-tenths per cent grades one way and six-tenths per cent grades the other way. The experience of railway men is to the contrary. Every railway man in the country, especially those connected with the Canadian Pacific Railway, and the Canadian Northern, laughs at the absurdity of building a first class road from Winnipeg to Quebec in the first instance with the gradients and curvatures mentioned by the Minister of

Railways and Canals. The principle they adopt on other roads is to get their road through the country first with moderate grades and curvatures and then, when they have developed the traffic, bring the road up to a higher standard. That is what was contemplated by the original Grand Trunk Pacific agreement. There is no necessity for building a road with gradients of four-tenths of one per cent and a maximum curvature of four degrees under the contract made with the Grand Trunk Pacific Railway Company. The road between Montreal and Toronto cannot be compared with that standard as to grades and curvatures. All we were bound to do at best was to build a road equal to the road between Montreal and Toronto. The Minister of Railways and Canals says that the Grand Trunk Railway Company, in view of the difficulties of operating the road with the gradients and curvatures between Montreal and Toronto, are at present contemplating abandoning the road over Scarborough Heights and going along the lake shore. The contract allows the Grand Trunk Pacific to have gradients of at least 90 feet to the mile. At the time that the proposition was made for the building of the road I stated my opinion of the country through which it will pass from Winnipeg to Quebec, I stated that the cost of the road would, at the minimum, be $50,000 per mile, and I stated also that the expenditure on the Quebec bridge would be in excess of the amount that the right hon. Prime Minister (Sir Wilfrid Laurier) and the hon. Finance Minister (Mr. Fielding) stated it would cost the country. I hardly believed, and I can hardly believe up to the present time, that the government will abandon the building of the road from Quebec to Moncton. I pointed to surveys made by Sir Sandford Fleming and I pointed out that it was impossible to get a better road than they have at the present time to Moncton taking into consideration distance, gradients and expenditure. I was told by the premier that there would be a saving in distance between Lévis and Moncton of from 100 to 130 miles. They have let contracts, but is the proposed route one mile shorter between Lévis and Moncton than that which they have at the present time?

Mr. E. M. MACDONALD. May I ask the hon. gentleman (Mr. Haggart) whether the policy of the opposition to-day is that this Grand Trunk Pacific Railway should not be built, or, if not built in its entirety, whether some portion of it should not be built?

Mr. HAGGART. I have no authority to speak for the opposition or to state what their policy is.

Mr. E. M. MACDONALD. What do you say?

Mr. HAGGART. I was a supporter of the building of the Grand Trunk Pacific from Winnipeg to Lake Superior and to the Pacific. I stated that the proposed expenditure from Winnipeg to Quebec was a useless one. I stated also, that of all the monstrous, extravagant, useless expenditures that were ever made by the government of this country, the building of a road from Quebec to Moncton must be given the first place—paralleling your own Intercolonial Railway, making worse an asset which is useless to the people and to be supplemented, as the Minister of Railways and Canals states, by the double tracking of the line from Moncton to Halifax, or, if that is not practicable on account of the gradients, the construction of a shorter cut across to Halifax.

Mr. JOHNSTON. Perfectly satisfactory.

Mr. HAGGART. Of all the extravagant statements made by the Minister of Railways and Canals that is the most extravagant one. Surely he does not contemplate anything of the kind.

Mr. CONMEE. Does the hon. gentleman approve of the section from Winnipeg to Quebec? I understand him to say that he does not approve of the section from Quebec to Moncton, and I want to know if he includes the section from Winnipeg to Quebec?

Mr. FIELDING. Yes, he says so.

Mr. HAGGART. I do not think that the road will be in a financial position to pay in the next fifty years from Winnipeg to Quebec.

Mr. CONMEE. I am asking if the hon. gentleman approves of the building of it.

Mr. HAGGART. Last year I spoke on the subject for nearly an hour, and I had the honour of being supported by the government party; they took my speech as the pattern for theirs in explaining the building of the Transcontinental Railway.

Mr. FIELDING. That accounts for the mistakes.

Mr. HAGGART. And they paid me the compliment of giving me the credit of saying that I was the first to initiate or suggest it. But, when we come to such a road as the government are at present building between Winnipeg and Quebec with the prospect of extending it to Halifax or St. John and when we come to consider the claim that it can be industrially used for the purpose of conveying the grain from the Northwest to the sea-board, I do not think there is a sane man, let alone a railway man, in the country who will say that the project is feasible. It is supported by some politicians who are anxious to get votes in their particular provinces by promising all sorts of imaginary things to the people. The statement made by my hon. friend the leader of the opposition as to the financial position of this road is strictly correct. There is nothing in the argument of my hon. friend

the Minister of Finance that because the Grand Trunk Pacific promises to pay at the end of seven years it is not a liability to the country. The liability of the country begins the moment the amount is paid. We do not know whether it will ever be returned.

We may not treat that as a liability, but though our creditors will treat our endorsation of the bonds of the Grand Trunk Pacific on the Mountain and Prairie sections as a liability, I believe that we may never be called upon to pay the interest with respect to the section from the Pacific ocean to Lake Superior. The line passes through a fertile country there, and it brings the grain to the quickest ports from which to reach the markets of the world. The development of the immense resources of British Columbia and of the prairies will require the Canadian Pacific Railway, the Canadian Northern Railway and the Grand Trunk Pacific. The Conservative party was never opposed to any proposition to build the Grand Trunk Railway in the west, and, Sir, we could have had that road running to Lake Superior for a nominal sum without loading upon the country the immense liabilities which this scheme of the government proposes. I was sorry to see the plight of the Minister of Finance when he tried to answer the statement of the leader of the opposition. He is generally clear in his argument but he floundered through in a manner which excited not my hostility but my pity. I trust that the next time the Finance Minister has a financial statement to make he will have a better subject, for to-day he showed that he knew it was desperate to attempt to refute the figures given by the leader of the opposition. The statement of the leader of the opposition stands without contradiction as to the liability of the country for this railway. The expenditure will be enormous and it is better that the Minister of Finance should acknowledge it now. It may be too late for him to halt, but he should seriously consider the curtailment of what may not be absolutely necessary in the undertaking.

Mr. W. F. COCKSHUTT (Brantford). There are three questions that presented themselves to my mind in considering this matter. First, was an honest effort made by the government to get at the real cost of this railway when the project was launched; second, what was to be the character of the work; and third, is an honest effort being made to fulfil the promises given to the country. The leader of the opposition made it clear to every fair minded man that misrepresentations were made to the parliament of Canada when this project was first commenced. I was surprised to hear the Finance Minister today endeavour to perpetuate the fallacies which were announced by the government in 1903. He seems to have got this $15,000,000 in his head yet. Just look at the Public Accounts of Canada and under date of October 31, 1907, under the signature of the Hon. W. S. Fielding, you will find this entry :

Expenditure chargeable to capital.

Intercolonial Railway..	$1,473,907
Prince Edward Railway..	91,210
National Transcontinental Ry..	5,537,867

This shows that the expenditure on National Transcontinental Railway is put in the same category as the expenditure on the Intercolonial Railway, and yet the Minister of Finance sticks to his proposition that all the National Transcontinental will cost the country is the interest upon the capital while the road is being constructed. Would the Minister of Finance dare to go to his bankers and borrow money on the statement that the road will only cost $13,000,000, when even according to the Minister of Railways himself, it will cost anywhere from $125,000,000 to $200,000,000? The hon. A. G. Blair left the cabinet because he refused to become a party to the argument the Minister of Finance set up to-day, and as a fair and honest estimate of what he considered would be the real cost of the National Transcontinental Railway to the country he put it at $120,000,000. All the rest of the ministers apparently disagreed with that and gave an estimate of $13,000,000, basing it on the interest alone, but Mr. Blair, astute and clever as he was, left the cabinet because he would not accept any such argument. Such a statement from the Finance Minister is not calculated to reassure the people of Canada that the management of our finances is at present in safe hands. I doubt if the Minister of Finance in his heart believe his own statement. He cited the instance of a real estate man investing $10,000 in a house and immediately renting it for 50 years so that it would be a paying proposition. That is quite so but he forgot that the man's $10,000 had gone into the house just as the money borrowed on the credit of Canada has gone into the Transcontinental Railway. The Minister of Finance told us that we guaranteed the bonds of the Canadian Pacific Railway and had lost nothing and that we had guaranteed the bonds of the Canadian Northern Railway and had lost nothing up to the present. True, but he did not tell us we had guaranteed the bonds of the Quebec bridge. Will he say we will lose nothing on that? He gives two instances. I give him a third; let him take his chances on that. Two investments out of three may be good, and the third may be bad. There are many men in this country who think that the whole eastern section of this road is likely to be a gigantic failure.

Mr. FIELDING. Is my hon. friend opposing the Quebec bridge ?

Mr. COCKSHUTT. I will come to that shortly, and I will endeavour to show that it is a part, and a consistent part, of the Transcontinental project. But I say that whether or not the eastern section is a paying proposition, it becomes a liability of this country. Perhaps the hon. leader of the opposition was technically wrong when he said that the debt was increased by close upon $200,000,000. but he was absolutely right if he said the gross debt instead of the net debt. The $191,000,000 was what the leader of the opposition contended would be the cash expenditure of this country on this project. He did not for one moment say that the bond guarantee was a part of the cash expenditure of this country. Would any one who heard the proposition of hon. gentlemen opposite in the year 1903, that this road would be built for $13,000,000, expect that in this year of grace we would be discussing in this House a vote of $30,000,000 for this road for one year ? The Finance Minister has told us that $30,000,000 has already been spent on it and now the government ask us for another vote of $30,000,000. Therefore the scheme was wrongly presented to the country. It is all very well for hon. gentlemen opposite to try to escape from the representations they made when the scheme was launched, but they cannot do it. They are there in 'Hansard,' in the public press and in their campaign literature; and everybody knows that in the last campaign the Grand Trunk Pacific Railway and what it was going to cost the country, were the principal subjects of discussion.

Now, as the campaign literature has been referred to, I am going to read a few lines from a pamphlet which was sent broadcast all over the country from this House by some one who I suppose spoke for the party. The Minister of Railways complains of headlines; let him read this headline in the campaign literature of his own party : 'A Transcontinental Railway for Thirteen Million Dollars.' Then it goes on to say :

The feature of the bargain in regard to which most of this is done is the financial arrangement. It is an actual fact, an indisputable fact, that $13,000,000 will cover every cent of the country's expenditure in connection with the railway and that if $3,853,502 cash were invested to-day with an insurance or investment company it would have grown large enough by the time the railway is completed to actually pay all the expenditures that the country will have to make. This sum seems only a trifle when it is compared with the 25,000,000 acres of land and the $63,000,000 in cash and completed railway lines that Canada gave to the Canadian Pacific railway, but it represents Canada's total liability nevertheless.

What do they say of the hon. leader of the opposition's counter proposition ? Were any of the allowances or deductions asked for by the Finance Minister made in the case of the hon. leader of the opposition? Not one. This is what they said on the Conservative proposal :

The presentation of the Borden alternative scheme to parliament constituted an admission of the necessity of a new transcontinental railway. According to the calculation of Sir William Mulock this scheme, however, would cost $266,000,000.

These are the only figures that were given. No deductions were made on account of the acquisition of the Canada Atlantic Railway, running from Montreal to Parry Sound, which was a part of the proposition; no deductions were made on account of capital expenditure. Yet these hon. gentlemen come down to-day and make all the deductions in favour of their own estimates and figure that this country is only going to have to pay the interest on this debt. Surely the Minister of Finance will not let it go abroad that he claims that the Transcontinental Railway should be put on any other basis than that of the Intercolonial; and all the money invested in that railway was shown in the public accounts. The only point wherein he showed any difference between himself and the leader of the opposition, was in regard to the net debt being given by the leader of the opposition instead of the gross debt.

At six o'clock, House took recess.

After Recess.

House resumed at eight o'clock.

SUPPLY.

House in Committee of Supply.

National Transcontinental Railway — surveys and construction, $30,000,000.

Mr. HENDERSON. What does the minister want $30,000,000 for when he says the road is only to cost $26,000,000?

Mr. FIELDING. You will have to give notice of that question.

Ocean and mail service between Great Britain and Canada, $550,000.

Mr. FIELDING. This is a contract which the Allan Line holds and what they have in part sublet to the Canadian Pacific Railway.

Mr. FOWLER. To what extent have they sublet it?

Mr. FIELDING. I understand the arrangement is that the Allans put on the 'Virginian' and 'Victorian' and the Canadian Pacific Railway contribute the two 'Empresses,' so that associated they furnish a very good service. Payments are made on the basis of so much to each steamer according to her class; and as we get the services of a better class of steamers we

have to pay a little more, and in that way there is an occasional increase.

Indians—Ontario and Quebec, $150,155.

Mr. STAPLES. What progress has been made with the sale of the Indian reservation out at Swan Lake?

Mr. OLIVER. We were only able to secure the surrender of part of the reserve, and we intend selling it this fall about the time the crops are in, so that the surrounding settlers will have a better opportunity to bid on the land.

Mr. STAPLES. The last time I inquired, the minister told me that the sale would likely take place during the summer. No doubt he will carry out what he is now saying and call it in the coming fall which would be an advantage for the surrounding settlers. I hope he will stick to that promise and see that the land is sold and that he will not cease in his efforts to get the balance of the reserve in order that it may be opened up. Is it the intention to continue negotiations?

Mr. OLIVER. Yes, but we find it difficult to get the Indians to sell out altogether, because they would then have to move to another place. We found them not unwilling to part with a portion of the reserve near Battleford, but the Swan reserve is their home, and they object to parting with all their interest in it. However, if the sale turns out well, they may part with the balance.

Mr. STAPLES. Will it be sold by auction?

Mr. OLIVER. Yes, in quarter-section lots.

Mr. STAPLES. To what extent does the minister purpose advertising it?

Mr. OLIVER. We generally give very ample notice, about a month or two advertising in the leading papers of the capital and the local papers in the vicinity. There will be no lack of advertising.

Mr. LAKE. I think the minister will have to issue some new regulations with regard to advertising if he is going to carry out that promise. I have been looking into a number of cases of sales of portions of different reserves which have been thrown open by the Indians relinquishing them. The minister is aware that the Indian lands are in the shape of a trust, and we should do the best we can with them for the Indians. It seems to me that the advertisements are a matter of patronage. I have noticed in the past that advertisements for the sale of Indian lands are only given to those who are on the patronage list. This is a mistake, because it does not give the amount of local advertising which is necessary. Take for instance the sale of the Pasqua reserve, which produced pretty fair prices, but I think it would have produced better prices if it had been better advertised. The advertisement appeared in one or two papers, but it did not appear in all the papers which were circulated through that district, and consequently many people did not know that the sale was going to take place. In the report of Mr. Graham, the inspector of the Indian agency and who conducted the sale, he states that there was insufficient advertising, that many people had not seen the advertisement at all. For the sake of exemplifying this there are two papers published in the town of Indian Head, the nearest large town to this reserve, one is a Liberal and the other a Conservative paper, and the advertisement only appeared in the Liberal paper, so those who only took a Conservative paper did not know anything about the sale. I myself wanted to find out when the sale took place, and I was not able to do so. The words that Mr. Graham used were:

> I regret that the sale was not advertised in the local papers. People living in Regina, Indian Head and other local points did not know anything of it.

The advertisement did appear in some of those papers, but not in all of them. That was not the only sale in which I noticed that there was insufficient advertisement. In the sale of the Moose Mountain reserve of land surrendered by the Indians, the same complaint was made. A gentleman who is now an officer of the government, an Indian agent, complained that he had not seen the advertisement. In that case the advertisement was authorized from Ottawa on the 8th October, the sale was to be held on the 15th of November. The first advertisement appeared on the 25th and 28th of October in the Winnipeg 'Free Press' and in the Calgary 'Albertan.' There was an advertisement in one of the French papers of Manitoba and in the Moosomin 'Spectator.' On the 7th of November the first advertisement appeared in the 'Moosomin 'Spectator.' That is the point nearest to the location of these lands, and so it happened that when the sale took place there was practically no competition at all. The arrangements for the sale were such that a man who wanted to tender had to send his tender down to Ottawa accompanied by a portion of the first payment, and therefore the advertisement which appeared on the 7th of November for the sale to take place on the 15th, made it impossible for any of those people who then saw the advertisement for the first time to put in their tender, consequently there was very little competition for the land.

Mr. OLIVER. In what year was that sale held?

Mr. LAKE. In 1901. The prices realized for the land were below its value. Most of the land was bought by three gentlemen who tendered through a legal firm in the city of Toronto. I think all but ten of the quarter-sections which were put up for sale were brought by them. There were 308 quarter-sections put up, and these three gentlemen from Toronto were able to secure all but ten of them. The prices they paid ranged all the way from 50 cents, 75 cents, 80 cents, 90 cents, $1 and up to $2.50 per acre. In one case I think a section was sold for $3 per acre. These are very low prices for a lot of land which was considered to have a good deal of value. There was no local competition, and consequently the land was practically given away. The ment was considerably more than the land by the officials of the Indian Department was considerably mor ethan the land brought. I think at that time land was being sold right alongside these sections by the railway company for $3 an acre. The report of the agent in charge was that the land was worth about $3 an acre all through, yet it only fetched from 50 cents upwards. A great part of the land did not bring more than $1. There were 47,000 acres sold at that time. There had been some good offers for the land previously from people who wanted to come in and make a bargain with the government for the whole area. Another similar case took place with regard to the reserve near Battleford. The gentleman who was to conduct the sales only had notice at 10 o'clock in the morning of the sale. The sale had to open at 12; he only knew of it at 10 and although he hurried around and put up all the posters he could very few people knew of the sale, the attendance was small, the prices realized not high and it was his opinion that the small prices realized were on account of the sale not having been sufficiently advertised. The minister has said that the sale of the Crooked Lakes reserve will take place this fall. I would impress on him the necessity of fully advertising it all through that district where the people know its value. I doubt if the newspaper published at Broadview, the nearest point, would be on the patronage list and if the advertising is restricted in the usual way it would be a mistake.

Mr. OLIVER. Whatever may have been the mistakes in the past we propose in the future to give ample advertising with plenty of time. I may not be altogether unprejudiced in the view that newspaper advertising should be freely employed, but I believe it is economy and I am glad to have my hon. friend's endorsation.

Mr. STAPLES. What about the section of land near Indian Ford on the south side of Assiniboine river, have there been negotiations ?

Mr. OLIVER.

Mr. OLIVER. Yes, but I understand there are several bands, some of them not resident there, who have claims on the land and as the proceeds of the sale would be a small amount to distribute among so many, they do not care to make a sale.

Mr. CLEMENTS. Is it the intention of the government to secure a surrender of the Indian reserve adjoining Fort Pelly ?

Mr. OLIVER. There are two reserves there, one at Kamsack and one at Fort Pelly. We have no surrender in regard to the Keys reserve but we have a surrender in regard to the Cote reserve.

Mr. BENNETT. Did Mr. Peter Ryan receive the ordinary fee of one-quarter of one per cent of the proceeds of the sale of the Dokis Indian reserve the other day ?

Mr. OLIVER. Yes.

Mr. BENNETT. That would be about $2,000 that would be paid to Mr. Peter Ryan for selling the timber on the Dokis reserve ?

Mr. OLIVER. About that.

Mr. BENNETT. Does not the minister think that is a pretty large amount of the money of the Indians to pay for bringing that gentleman out of the registry office in Toronto down here and giving him a job for a day? Does he not think that Mr. Ryan could have been induced to ascend the rostrum for an hour for less than $2,000? It is putting a slight appreciation on members of parliament, who are compelled to sit here for seven months for $2,500. I do not think that there is any reason why the Indians' money should be spent in that way.

Mr. OLIVER. I am credibly informed that the percentage that has been paid by private persons for selling timber limits in the Ottawa valley and also by the Ontario government——

Mr. BENNETT. But that was in the old times of the Ontario government. That does not happen now.

Mr. OLIVER. I am informed that private owners having valuable limits to sell have paid, not only one-quarter of one per cent, but two and a half per cent, on whatever was realized over the upset price. In our case we paid one-quarter of one per cent right through. I made careful inquiry into the matter, and I took the action that I did on the results of this inquiry. It is not fair to make a comparison between the wages that an auctioneer receives for the short time that he is employed and the wages that another person receives when his employment is by the year or for a longer term.

Mr. BENNETT. The minister must have known about what the fee would be when

he made the arrangement, because he made an estimate of the property, and knowing that it would realize about $800,000 the minister must have known that the auctioneer would get about $2,000.

Mr. OLIVER. Yes.

Mr. STAPLES. I do not think the government are justified in paying $2,000 for the sale of these limits. You can hire the best auctioneer in Canada for $100 a day.

Mr. BENNETT. I know a case of a large sale of timber limits on the board of trade in Toronto not many months ago for a private concern in which a gentleman was paid $200 for his day, and he thought he had got rather a good thing.

Mr. LAKE. I notice that in the instructions for the sale of these Indian reserves in the Northwest the minister gives a percentage not to exceed $200. I should have thought that this was a case in which some reservation of that sort might certainly have been made.

Mr. OLIVER. The eight limits ran from $50,000 up to, I think, $150,000. It seems to me that in handling that amount of money we were just as much justified in paying the auctioneer a good price as we would be in expending a large amount of money in advertising the sale, as my hon. friend from Qu'Appelle has said that we should.

Mr. BLAIN. I would like to ask the minister if the terms of sale were carried out in every case. Did the buyers pay the first instalment that was due?

Mr. OLIVER. I understand so. It certainly requires to be paid.

Mr. BLAIN. My information is that it was not. However, leaving that; I want to say a word or two on what my hon. friend from Qu'Appelle has brought up. I was interested in the answer that the hon. gentleman gave, that in future he proposed to advertise more widely the sale of lands of this kind. I am sure the committee will appreciate that. Will he confine these advertisements to newspapers that support the government, or, where he finds a Conservative paper with a much larger circulation——

Sir FREDERICK BORDEN. Hot air.

Mr. BLAIN. I know it is hot air to my hon. friend, but we had to listen for three hours the other night to the Minister of Militia, and perhaps he can stand it now. It was hot air that he gave us, and every man in the House had to listen to him repeat himself in condemnation of the report of the Civil Service Commission that he had himself helped to appoint.

Sir FREDERICK BORDEN. Consider me squelched after that.

Mr. BLAIN. No, I shall not consider the hon. gentleman squelched. It takes more than that to squelch him. I was proposing to say a few words when I was interrupted by the hon. gentleman saying it was hot air. The last man in this House who should talk about hot air, or anything else that is hot, is the Minister of Militia and Defence.

Sir FREDERICK BORDEN. I was not referring to the hon. gentleman.

Mr. BLAIN. I would like to ask the Minister of the Interior if he proposes to broaden out the advertisements in the newspapers in future, and whether, if he finds that a Conservative newspaper has the largest circulation in a district, he will refuse to insert the advertisement in that newspaper?

Mr. OLIVER. My hon. friend will have to be satisfied with the statement that each case will have to rest upon its merits. There are cases in which it would be desirable to advertise in every newspaper and there are other cases in which it would not be. While it is our desire to give every reasonable publicity, we cannot bind ourselves to advertise in every newspaper my hon. friend may desire to have accorded the government patronage.

Mr. BLAIN. That is not an answer to my question. I did not suggest that the hon. gentleman would put the advertisement in every newspaper that I might favour. I am not objecting to the minister inserting the advertisement in newspapers supporting the government, but what I do say is that in districts where he finds a Conservative newspaper having a very much larger circulation why should he not insert the advertisement in that newspaper in addition to the Reform paper which has a smaller circulation?

Mr. OLIVER. I do not propose to admit that I would not insert it in a Conservative paper.

Mr. BLAIN. That is all right.

Mr. OLIVER. Where there is only one paper and it is a Conservative paper we have no hesitation in advertising in it. Where there are two papers, naturally we give the preference to our own friends. But if it is a question of circulation as between the two papers, my hon. friend knows how reliable the statements of newspapers are in regard to their respective circulations. I do not think we can be guided by the statements made as to their circulations.

Mr. BLAIN. The Minister of the Interior ought to know more than I do about statements that are made with reference to the newspapers.

Mr. OLIVER. The newspaper man who does not claim the largest circulation is not a true newspaper man.

Mr. BLAIN. The Minister of Public Works was about to erect a small post office in St. Marys which only cost about $30,000——

Mr. PUGSLEY. Your ideas are growing; you now seem to think that a $30,000 post office is a small one.

Mr. BLAIN. For the construction of this post office the Minister of Public Works inserted advertisements in thirty newspapers at a cost of $658, but he did not advertise in the London 'Free Press' which has more than double the circulation of any newspaper published in that district. In the future we will look to the Minister of the Interior for wider circulation of advertisements about the sale of lands.

Mr. ALCORN. Is 10 per cent deducted in addition to the expenses ?

Mr. OLIVER. Ten per cent is deducted and out of the 10 per cent the costs are paid.

Mr. LAKE. Quite recently I saw that two sales were postponed evidentiy on account of the notice of them being insufficient to enable the people to examine the lands and put in tenders. I am glad to hear what the minister says about more extended advertising in future. The Indians in whose interests the lands are sold have no politics and the advertisements should be inserted in newspapers irrespective of their political complexion.

Mr. WM. WRIGHT. Is the 10 per cent sufficient for the expense account or has it to be supplemented by a grant out of the consolidated revenue ?

Mr. OLIVER. Except on very rare occasions the 10 per cent is sufficient. The vote of $10,000 to Indian management fund is to recoup the fund for money taken out of it a number of years ago for purposes alien to the fund. The fund was, so to speak, robbed and we are from year to year recouping it.

Mr. W. WRIGHT. Is it not forbidden by the Indian Act to use the money for other purpose?

Mr. OLIVER. The money was taken out of the management fund for other Indian purposes. It was contemplated by the Indian Act but the rights of the Indians are being preserved by restoring it to the fund from time to time.

Mr. LAKE. Can the minister say definitely when the Crooked Lake reserve is to be sold ?

Mr. OLIVER. We have not advertised the sale yet, but my intention is to have it in the fall when the crop has been sufficiently assured to place those in the surrounding country in a fair position to take advantage of it.

Mr. LAKE. Are there any other agencies where land has been surrendered and which will be sold during this fall?

Mr. OLIVER. I think the Swan Lake, the White Bear, and a small piece of Enoch's reserve near Edmonton are all we will be in a position to dispose of the coming fall. We have other surrenders in prospect but they are not concluded yet.

Indians—New Brunswick, salaries, $1,408.

Mr. CROCKET. Who is the Indian agent for the northeastern district of New Brunswick ?

Mr. OLIVER. Robert A. Irving. He was appointed in May, his salary is $500, which is the same salary the previous incumbent had.

Mr. FOWLER. What Indian schools are there in New Brunswick, how many teachers, where are the schools situated, what do they cost and what is the average attendance of pupils?

Mr. OLIVER. Six day schools, number of pupils, 137; average attendance, 77; salary of the teachers, $500. The schools are situated at Burnt Church, Eel Ground, Kingsclear, St. Marys, Tobique, Big Cove Camp. There is an appropriation for a new school building at Eel Ground.

Mr. FOWLER. Mow many doctors are there for the Indians ; I refer particularly to Kings county ?

Mr. OLIVER. The medical attendance vote is $4,000 the same as last year. The expenditure in the nine months ending March 30, 1907, was $2,653. The physicians are: J. D. Rose, Moncton, Westmoreland County, $200; J. A. Leger, Shediac, Westmoreland County, $200; P. F. Sprague, Upper and Lower Woodstock, $100; D. H. McAllister, Sussex, Kings County, $200; R. H. McGrath, St. Mary's, York County, $150; W. J. Weaver, King's Clear, York County, $150; R. W. Earle, Tobique Reserve, $300; A. C. Ferguson, Eel River, Restigouche, $50; W. G. King, Buctouche Reserve, Kent County, $40; F. J. Desmond, Eel Ground and Red Bank, $200; J. L. McWilliams, Big Cove and Indian Island, $175; J. B. Mackenzie, Burnt Church Reserve, Northumberland County, $150; G. M. Duncan, Gloucester County, $100; J. M. Peake, Oromocto, $125. The salary includes medicine as well as professional attendance.

Mr. FOWLER. Was there any resignation of the Kings county doctor during March or April or of the doctor in Sunbury about that time?

Mr. OLIVER. Does the hon. gentleman refer to Dr. D. H. McAllister of Sussex?

Mr. FOWLER. Yes.

Mr. PUGSLEY. He resigned before the 3rd of March. I may say that I recommended his reappointment, as he is a good officer, and I was sorry to lose his services.

Mr. OLIVER. Dr. Peake, of Sunbury, resigned, and is not now in the service of the government. Dr. McAllister, who resigned, has been re-appointed.

Mr. FOWLER. Who has Dr. Peake's place?

Mr. OLIVER. I cannot give my hon. friend the information at the moment, but if he will allow the question to stand until we deal with the Supplementary Estimates, I shall be sure to give it to him then.

Mr. FOWLER. In case I should not be in the chamber at the moment, will the minister state it so that it will be on 'Hansard'?

Mr. OLIVER. I will attend to it.

Mr. FOWLER. There is a vote here for seed grain. Where is seed grain supplied to the Indians in New Brunswick?

Mr. OLIVER. The seed grain is supplied to the Indians of different bands on representations made by the agents that it is required. It is purchased and sent forward to the agents to be distributed to the Indians. The plots of ground cultivated by the Indians are very small, and the Indians, not being very provident, are apt to use up the whole of their crop, and to leave themselves without seed.

Mr. FOWLER. Have you any particulars of the amount of seed grain supplied during the last fiscal year?

Mr. OLIVER. The amount distributed last year was about $500 worth.

Mr. LAKE. I received a letter the other day from a gentleman at Qu'Appelle with regard to some trouble in the Pasqua Indian reserve north of that place. Some Indians have interviewed him time and again about some trouble they are having with the instructor. Although my correspondent does not like taking up this matter, yet he thinks something ought to be done to try and settle the difficulties. I do not know what the root of the trouble is and my informant is not able to tell me, but the gist of the thing is that the Indians are not satisfied with a certain Indian instructor, whose name I do not think it necessary to mention. It is a matter the minister might inquire into. These Indians are trying to do some very extensive farming, but they are easily discouraged, and if they are having trouble with their instructor, that is likely to stand in the way of good work being done. If the minister has any information on the subject I should be very glad if he would let me know.

Mr. OLIVER. We have no information of any difficulty existing on that particular reserve. I might say further that, in my experience, it is not to the advantage of the service that the Indians should be too well satisfied with their instructor. If the Indians and the instructor arrive at a basis of too much amity, that may mean that there is not very much work going on.

Mr. LAKE. When, as in this particular case, men who are putting in a large amount of crop are making these complaints, one after another, about the same man, I do not think the minister should go on that general rule. The best results I have seen have been accomplished by men who, while exercising a very strong hand over the Indians, still have their respect and confidence. Mr. Graham has been able to get remarkably good results, yet we do not find the complaints about his management that I do in this particular case. He is a strong man, who holds a strong hand over them and is doing excellent work. I have letters inclosed to me by my correspondent from the Indian Department in which the department say this matter was brought to Mr. Graham's attention. Mr. Graham was out of Ottawa at the time, and the matter should be looked into further. I trust the minister will take it up with Mr. Graham and see if something cannot be done. It is not a good thing to have the Indian thoroughly dissatisfied, as the Indian nature will not stand too much and bloodshed might result when personal violence is used against them as is charged in this case.

Mr. OLIVER. My deputy has not any information on the subject. The disputes may very well be left to Mr. Graham, whose duty it is to deal with such matters.

Mr. WILLIAM WRIGHT. There is a very large amount under the head of general expenses, some $204,000. I would like to ask whether the Indians are self-sustaining, whether all the money spent on the Indians is recouped out of the Indian fund, or how the matter stands.

Mr. OLIVER. The whole Indian expenditure is about $1,250,000. Of that amount $300,000 is for expenses of management, of which $200,000 is for the expenses of management of the Manitoba and Northwest Indians. The Indian expenses are not self-sustaining at all except in the case of one or two bands. The amount of $1,250,000 is what has to be provided each year out of the general treasury of the Dominion to go to the advantage of the Indians in the different ways provided in the Indian Act.

Mr. WILLIAM WRIGHT. I understood that a large amount of land was held by the Indians and was sold from time to time and the proceeds go into the Indian fund

and are used for the management of Indian affairs, and there might be sufficient to pay the amount of expenses generally, or are we short this $1,250,000 annually?

Mr. OLIVER. That is correct.

Mr. LAKE. With reference to the letter about the Pasqua reserve, I have a long statement here of the different complaints of the Indians, and among other minor complaints is one that the instructor gets the loan of the fields of the Indians to put in crop, and when the Indians have broken the land he puts in a crop on his own account and so on. Perhaps the best thing I can do is to send the letter to the minister and ask him if he will inquire into it. The gentleman who writes me is not a man who takes notice of things which he thinks are of small account. He is a gentleman of judgment, and I will send his letter over to the minister.

Mr. OLIVER. I shall be very glad to take the information and have an inquiry made.

Mr. BENNETT. Is the Blood Indian reserve under lease, and to whom and for how long?

Mr. OLIVER. The grazing rights have been leased for five years to the McEwan Cattle Company and the lease will expire in 1913.

Mr. BENNETT. Is that an incorporated company?

Mr. OLIVER. I am not aware whether it is or not.

Mr. BENNETT. Is it one McEwan alone?

Mr. OLIVER. In the books of the department the lease of the grazing privileges stands in the name of the McEwan Cattle Company, and the person who represented the company to the department is D. McEwan. We have no further knowledge of the matter. In the Toronto 'News' of the 27th of November last appeared the following item :

Want forty per cent share—Suit of Peter Ryan, Charles Beck and others regarding a ranch.

Peter Ryan, of Toronto, and Charles Beck, of Penetanguishene, have issued a writ against James T. Gordon, William H. Fares and Gordon Ironsides & Fares, Limited, of Winnipeg; Donald McEwen, of Brandon; Robert Ironsides, of Montreal; and Charles Millar and Walter McKeown, of Toronto. The claim is for a declaration that the plaintiffs and the defendants Millar and McKeown are entitled to a forty per cent interest in the net profits of a certain ranching enterprise on the Blood Indian reserve, leased by the Dominion government to McEwen.

An accounting of the ranching moneys is also sought.

There was considerable discussion on the question in the House, and I think this item throws a little light on some facts that did not come to the surface at that time.

Mr. LAKE. This seems to be a case in which the department has not been considerate of the rights of the Indians. The lease consists of about 219,000 acres, one of the most valuable grazing leases in the whole country. There were a number of applications for the lease of this reserve. One man after another applied for the lease, some of them being local ranchers in the neighbourhood. They offered considerable sums for the right to lease this land. I have before a number of offers which were made, and some of which were certainly as good as the offer which was finally taken by the minister. I have a list of eight or nine different applicants, all offering within a very short time, and all offering sums of money for the property. Under the circumstances, one would think that the proper thing for the government to do was to put the lease up at auction and try to get the best results for the Indians. But instead of that, we find that the contract was made with this D. McEwen and Company without the others knowing anything of what was taking place. The last application before that was dated April 30, offering a good sum of money for the reserve, and on the 16th of the following month the government made an agreement with Donald McEwen, of Brandon, who had only recently appeared as one of the applicants for the lease. The agreement was drawn up and signed with the Indians, acting through their agent, for the sum of $5,000 rent for ten years, and the agreement was ratified on the 6th of June. It was quick work, considering that at that time there were a large number of applicants, good strong men, for the land. I saw in the papers laid before the Public Accounts Committee that the assistant Indian commissioner at Winnipeg, a few days later on the 20th June, stated that he had accidentally learned when he was at Macleod that this lease had been entered into, showing that the commissioner's office at Winnipeg was not the first to know of this arrangement, as it ought to have been. A month later there was some trouble going on in the party camp, for we find that the Hon. Clifford Sifton takes a hand in, and asks that the whole lease should be cancelled because it had not been entered into with his authority. So the matter stood. The Department of Justice was consulted, and they decided that the agreement was valid and would have to stand. We find that there were other people than the applicants who had been unable to get their tenders in, and who were dissatisfied with this lease. But the people who were most dissatisfied were the Indians themselves. Still, the lease has to stand. My hon. friend from Simcoe (Mr. Bennett) just now brought attention to the fact than an action at law had been taken to ascertain who had

a claim upon this leasing privilege. Two or three different sets of people were at that time sending money up to the department and insisting that the money should be received from them on behalf of the D. McEwen Company. That is evident from the extract my hon. friend has just read from the Toronto 'News.' Altogether, it seems to me a very curious deal from beginning to end.

Mr. HERRON. There was a great deal of dissatisfaction when this lease went through among owners and men who were looking for grazing privileges. I know of many strange transactions in regard to it, but I will not take up the time of the House to mention them to-night. But there is another side of the question which is even more serious than the discrimination among the white applicants for grazing privileges, and that is the Indian side of the question. I have not been requested to bring this matter to the attention of the House, but I have heard complaints in the community that there is a great deal of dissatisfaction among the Indians about the way the conditions of the present lease are being carried out. There were certain representations made to the Indians at the time this lease was granted, that they should perform certain duties on the reserve, some of which were to build reservoirs, to dig wells, and make several other improvements that had to be made on the reserve. But they have not been carried out, and it was generally understood that a misrepresentation was made to the Indians by a former government official who stood in very well with them, and was looked upon as a reliable man by the Indians. He went there on behalf of the lease holders and represented to the Indians that the whole transaction was going to be in their favour. The Indians were not aware of the fact that he was not working in their interest. That is the way it was represented to me, and I am told it was on this representation that the Indians consented to this agreement. Now the lease holders are not carrying out this agreement, and the Indians have been much dissatisfied with the transaction.

Mr. OLIVER. My information is that the Indians have made no representations to the department or to any officer of the department with regard to any breach of contract with them, or any failure to carry out the agreements that were made with them. If my hon. friend knows of any breach of agreement it would be a favour to the Indian Department for him to state the particulars in which that agreement was not being carried out. We pride ourselves on carrying out our agreements with the Indians, all the more because the Indian is not in a position to enforce his rights.

Mr. LAKE. In the papers I find that on May 31, McKenna writes of dissatisfaction with the Indians on account of the lease. In December, 1904, the department seems to have taken this matter into consideration and consents to a visit of the Blood chiefs to the east at the expense of the D. McEwen Company in order to have the matter explained to them so that the papers themselves show that there was dissatisfaction and that it was brought to the attention of the department. As to what further dissatisfaction there may be at present, of course the hon. member for Alberta (Mr. Herron) will be in a better position to speak of that.

Mr. OLIVER. Has the member for Alberta (Mr. Herron) anything definite to say?

Mr. HERRON. No, as I said in the beginning, I am not supplied with official information in regard to this, but I know it from rumour in the country and from people who are well posted as to what is going on. I do not shirk getting the information.

Mr. OLIVER. This reserve has been made a political and partisan issue of the lowest kind in the House, and we may as well deal with it now on that basis. My hon. friend has intimated that there were breaches of the agreement as between the Indians and the lessees but he has not been able to tell us what they were. We will be glad to hear it at any time because we want to be informed of these matters. The hon. member for Qu'Appelle (Mr. Lake) undertakes to represent that there were breaches of the agreement.

Mr. LAKE. I represented what is in the document, that his own commissioner said there was dissatisfaction.

Mr. OLIVER. He said he had evidence in his hand that there were breaches of the agreement and he read from the paper; but there were no evidences of breach of agreement in the paper.

Mr. LAKE. I did not say I had evidence of breaches of agreement.

Mr. OLIVER. Then he had no evidences of breaches of agreement because he certainly had not in the paper he had.

Mr. LAKE. I want the minister to take that back, I did not state I had evidences of breaches of agreement.

Mr. OLIVER. I will take it back if my hon. friend said he has no evidence. The paper he read did not show any breaches of agreement, it indicated that the Indians were dissatisfied.

Mr. LAKE. That is all I said.

Mr. OLIVER. My hon. friend will not find in the west any band of Indians who are not more or less dissatisfied now or at any time. In his district he will find very few white men who are not dissatisfied in

regard to some matter of business, politics or something else.

My hon. friend suggested that an official of the government had acted as the agent of the ranching company while representing himself as the agent of the government.

Mr. HERRON. I said that a gentleman who was formerly an employee of the government represented to the Indians that he was still an employee of the government when on the other hand he was working on behalf of this grazing company.

Mr. OLIVER. If my hon. friend is alluding to James Wilson who was Indian agent would he be good enough to say so?

Mr. HERRON. No, it was not Wilson.

Mr. OLIVER. Was it Wadsworth, inspector of agencies?

Mr. HERRON. Yes.

Mr. OLIVER. Hon. gentlemen opposite have harped on this grazing lease on the Blood reserve and have suggested it was a case of party graft. The agent of the Indians at the time, James Wilson, who afterwards became an employee of this ranching company was an appointee of the Conservative government and, so far as I am aware, never cast a Liberal vote in his life. Wadsworth, the inspector, who is said by hon. gentlemen opposite to have played double between the Indians and the company, was also an appointee of the hon. gentlemen. The company who occupy the territory today on that grazing lease are, one and all, so far as I am aware, not only strong supporters of the party of my hon. friend, but are prominent in the ranks ; Messrs Gordon and Ironsides.

Mr. BENNETT. Peter Ryan and Beck are not.

Mr. OLIVER. So if there is anything wrong about it I want it to be understood it was a Conservative transaction from first to last.

Mr. BENNETT. Tell that to the marines, rot.

Mr. OLIVER. So far as this party is concerned, it is a straight business transaction in the interest of the Indians, with which the Indians, so far as our information goes, are perfectly satisfied and the agreement made with them is being carried out. They gave their consent to that agreement in due form.

Mr. LAKE. When did Gordon and Ironsides become holders of the lease?

Mr. OLIVER. I do not know.

Mr. LAKE. I call attention to the fact that on September 19, 1906, the McEwen Company wrote that Gordon and Ironsides should not pay the rent, that it should be accepted from no one but Miller.

Mr. OLIVER. Gordon and Ironsides are the occupants of the lease. I do not know how they got into possession but they are.

Mr. BENNETT. Does the minister say seriously that Beck, Peter Ryan and Charlie Miller are Conservatives?

Mr. OLIVER. No. I notice that these gentlemen are entering suit to establish some claim.

Mr. BENNETT. That kind of a crowd when they get into a business arrangement always end in litigation.

Mr. LAKE. Gordon and Ironsides offered the rent, but the department would not accept it. The minister says they are the people who occupy it and makes the point that they are Conseravtives.

Mr. OLIVER. Which they are.

Mr. LAKE. And he excuses everything on the ground that some party concerned in the transaction appeared to have been appointed by a previous government.

Mr. OLIVER. I excuse nothing.

Mr. LAKE. These are the grounds which the minister usually takes with regard to these transactions. If there is any question about a transaction, the minister gets very angry and keeps on insisting that there can be nothing wrong with the whole thing. When he begins to get angry I generally begin to look into the papers more closely and think that there is something wrong about it when he thinks it necessary to abuse hon. gentlemen on this side of the House. I have made no insinuations with regard to this matter. I did not know about the matter being brought up before. I simply got the papers and looked into them.

Mr. OLIVER. And found nothing.

Mr. LAKE. I found a good deal. The transaction seemed to be a very peculiar one. I found amonst other things that we had a number of applications, one following the other.

Mr. OLIVER. What is remarkable about that?

Mr. LAKE. There is nothing very remarkable about that, but there is something remarkable when we find that a large number of these applications are made all offering considerable sums of money for this privilege.

Mr. OLIVER. Did they offer more than the man who got it?

Mr. LAKE. Yes, I think in one case.

Mr. OLIVER. Let us have the case.

Mr. LAKE. The man who got it offered a minimum of 7,000 head at 50 cents per head making $3,500. Another gentleman

had applied for the lower half of the reserve at $2,500 straight.

Mr. OLIVER. Is that more?

Mr. LAKE. I could not state, because I do not know the circumstances of the land. Another gentleman offered $5,000, Mr. J. F. McLaughlin. I see that he was to place 10,000 head upon the reserve and pay 50 cents per head.

Mr. OLIVER. Is that a better offer than the other ?

Mr. LAKE. Yes, that is a better offer than that of Mr. McEwen, because he only offered to place 7,000 head at 50 cents a head which would be $3,500. It is a simple matter of arithmetic.

Mr. OLIVER. When the hon. gentleman is through I will show him that it is not a better offer.

Mr. LAKE. The minister had a number of applications, one following the other, and he apparently gave no opportunity insofar as the papers show, to the other applicants to compete for this reserve which in my opinion he was bound to do if he had the interests of the Indians at heart as their trustees. He apparently, in a hole and corner way, had the lease drawn up between the Indians and this applicant, the Indians acting through their agent and the lease was given without the knowledge apparently of the Indian office at Winnipeg which should have been informed upon this subject. The papers show that the department did not act in the way it should have acted if it had had the best interests of the Indians at heart.

Mr. OLIVER. It is rather a pity to take up time at this hour on a hot night in threshing over straw that is five years old.

Mr. LAKE. The minister started it.

Mr. OLIVER. No, the minister did not start it. The hon. gentleman undertook to revive an alleged scandal of five years ago, which has been threshed out in this House by a very much more able man than himself and which never brought any result. In regard to the respective values of these different applications, there is a very serious difference between an offer of $3,500 for 7,000 head and an offer of $5,000 for 10,000 head. My hon. friend does not understand it. That is the great difficulty with him. There are so many things about this matter that he does not understand, and he is ready to jump at the conclusion that he has found a scandal when he does not understand the question. The Blood Indians themselves occupy this reserve. They have a large amount of stock, both cattle and horses. They must use this reserve for the pasturage of their own stock and it must be elementary to any person who understands the situation that they could not afford to allow the reserve to be leased for such an amount of stock as would prejudice the pasturage of their own stock. They preferred to accept an offer of $5,000 for 7,000 head rather than of $5,000 for 10,000 head because it would leave sufficient pasturage on the reserve for their own stock. My hon. friend is only absurd when he suggests the auctioning off of the privilege of grazing under these circumstances. The object is to get a lease at a fair rental for as many head of cattle as the reserve will carry. To let the grazing privilege for a smaller number would not be advantageous because the grazing right would not be occupied and to let it for a larger number would not be advantageous because the Indians would lose the pasturage of their own stock.

Mr. LAKE. The minister himself was at one time of the opinion apparently that the leasing of this tract to outsiders was not quite the correct thing because amongst these papers I find a letter of his dated April 30, 1903, in which he says :

> I shall insist that the interests of the several hundred Mormons who live adjoining the reserve of this part shall be considered in preference to these outsiders.

Mr. OLIVER. I want to say that that is exactly my position, that as a question of policy I did not approve of the leasing of the reserve. I did not consider that it was good policy in the interest of the surrounding settlers. But there is quite a difference between the suggestion that the leasing was the subject of a scandal and objecting to the leasing on the ground of public policy and guarding the interests of the surrounding settlers who were my constituents.

Mr. BENNETT. May I ask the minister who is cutting the timber on the Christian Islands? How is it being cut, and to what extent?

Mr. OLIVER. I do not know of any timber cut on Christian Islands last winter, unless it was cut under permit by the Indians or under trespass.

Mr. BENNETT. To what extent was timber cut last year?

Mr. OLIVER. I am not able at the moment to give the exact amount but the Indians get a permit year by year to cut a moderate quantity, ranging from 500 to 1,000 cords.

Mr. BENNETT. I will tell the minister something of the real conditions and perhaps he will have the evil remedied. A number of lumbermen in that country wish to obtain in open competition the valuable timber on that island and it is grossly unfair that they should be treated as they

have been. One firm, Liberals of course, and represented by the son of a defeated Liberal candidate has apparently the entree on this island and they are cutting the timber there not in chords but the most valuable timber in sawlog lengths. There is no use denying this because I know it myself and have seen the timber brought into Midland on a large barge. If you are going to give a tip that only one man can go on the island, well and good, but if you are acting in the interests of the Indians, let there be open competition for the timber and make it a condition of sale that the Indians shall be employed. If the minister will make inquiry he will find that my statement is correct. It is a matter of complaint among the other lumbermen that they cannot get a look in.

Mr. OLIVER. I will make inquiries.

Mr. BENNETT. And let me know what quantities were cut last winter when you go into Supply again.

Mr. HERRON. Let me assure the minister that I had not the slightest intention of making political capital out of my remarks about the grazing land. There is no question about it but that there are Conservatives mixed up in the matter, and if I wanted to make political capital I probably would not mention it. I simply stated the fact that there was dissatisfaction on the reserve and that fact has been represented to me by men on whose word I can rely. If the minister investigates he will find that my statement is perfectly true. There were a great many transactions with reference to McEwan & Co., or whatever their name is obtaining that lease.

Mr. OLIVER. Name the transactions.

Mr. HERRON. There are persons living on the lower part of the Blood reserve who offered almost as high a rental for half the reserve as was given for the whole reserve.

Mr. LAKE. They offered more.

Mr. HERRON. There are two or three ranching companies who spent a great deal of time and money there and who were promised they would get leases of that land but they were ignored. I stated in this House last year that a certain man in Ottawa obtained a contract for supplying 600 head of cattle for the Blood reserve at $28 a head, when far better cattle could be bought on the ground for $19 a head and were offered to the government at that price. The minister will see that there are many things in connection with this business that political capital could be made out of much stronger than anything I have mentioned.

Mr. OLIVER. I am not suggesting that my hon. hon. friend (Mr. Herron) is talking politics ; I refer to the member for Qu'Appelle who butted into something he did not understand. If my hon. friend (Mr. Herron) has knowledge of any breach of the contract by the lessees I want to know it. If he knows there is anything wrong he should inform the House or the department of it.

Mr. LAKE. I am ready to admit that I know more about the question now since the hon. member (Mr. Herron) has spoken. The hon. member (Mr. Herron) knows that country thoroughly and is conversant with all its conditions and he states that the upper half of that reserve is better than the lower half, so that the offer of $3,000 per annum made for the lower half is a better offer on the face of it, the number of cattle not being stated, then the offer of $5,000 for the whole reserve.

Mr. OLIVER. You cannot arrive at a conclusion as to which was the better offer unless the terms of the offer are known.

Mr. LAKE. So far as I can see from the correspondence the department was putting these people off with the answer that they were not in a position to deal with the matter while they at the same time were making an agreement with outsiders to the exclusion of the settlers living in the neighbourhood. The minister professes to be in sympathy with the people living in the neighbourhood, but here were people living in the neighbourhood——

Mr. OLIVER. Some of these people in the neighbourhood were trying to exclude their neighbours.

Mr. LAKE. I have proven everything I started out to prove and the minister has plainly demonstrated by his answers that he is not conversant with every thing that has taken place in the matter.

Mr. ARMSTRONG. Does the minister propose to handle the lands in the same manner as for the last ten years, namely, to sell them at an upset price fixed by the department or at private sale ?

Mr. OLIVER. The minister intends to handle the lands as they are being handled to-day.

Mr. ARMSTRONG. The minister must know that out of 650,000 acres he has disposed of 500,000 acres at an upset price fixed by the department or at private sale. Some days ago I showed that the Indian lands have been disposed of at ridiculously low prices ranging from ten cents an acre up. I showed that about 650,000 acres had been disposed of for about $15,000.

Mr. OLIVER. Does my hon. friend suggest that the land was worth more than the department got for it ?

Mr. ARMSTRONG. I say that the lands should be put up at public auction.

Mr. OLIVER. I understand that my hon. friend is a man of means. If these lands

are worth more than we are selling them for, and we are selling them to the first comer at an upset price, why does he not put some money into them ?

Mr. LANCASTER. Does the hon. minister want to disqualify the hon. member ?

Mr. OLIVER. Does my hon. friend, as a lawyer say that that would disqualify him as a member of parliament ?

Mr. LANCASTER. Certainly it would.

Mr. ARMSTRONG. Members on this side of the House do not get a look into any of these sales. I can only say that in disposing of these lands by private sale at upset prices fixed by the department, the minister is acting most unfairly towards the Indians of this country. Since I made the remarks I did a few days ago, I have received letters from prominent men in different parts of the country, urging me to press on the minister the necessity of putting these lands up at public auction. It is time that the minister took an active interest in the Indian Department and investigated every part of it, because not only are the Indian lands being squandered, but the Indian schools are not being conducted as they ought to be. Instead of these people being elevated and enlightened, so as to be fitted to be citizens of the country, they are being left practically in darkness.

Mr. MILLER. When the hon. member for East Lambton (Mr. Armstrong) spoke on this matter some days ago, I told him, and I will now say to the House, that in the northern part of the county of Bruce lands of the character he speaks of have been put up for sale at public auction at tax sales, and after being advertised for months in the newspapers have been sold at less than ten cents an acre. If the hon. gentleman desires to speculate in these lands, and the hon. member for Lincoln (Mr. Lancaster) thinks there would be any danger of him being disqualified if he purchased from the government, I think I could take him to a neighbourhood where he could get Indian lands from private parties at less than ten cents an acre and where, in purchasing them he would not run any risk of being disqualified.

Mr. OLIVER. My hon. friend from East Lambton (Mr. Armstrong) has entirely misstated the position. What we have done in selling Indian lands is this : In the northern parts of Ontario, where land is sold at a fixed price to the first applicant, it is sold on settlement conditions ; and I think it is sound public policy to have that land brought under occupation whether the price be great or small.

Mr. ARMSTRONG. How will that benefit the Indian ?

Mr. OLIVER. The Indian gets the price and the country gets whatever development the land may be capable of. It is not the fault of either the Indian or the purchaser if the land is not worth more or is not capable of development. There are small islands in the Georgian bay, which, having been valued carefully, and being valued at less than $100 each, are sold to the first applicant at the valuation, because we have not considered it worth while to hold an auction sale for lands of such small value. Islands valued at more than $100 are sold either by auction sale or by tender. Lands in the western country, which are valuable for agricultural purposes, are invariably sold by public auction ?

Mr. ARMSTRONG. Why should the minister dispose of any of the lands of the Indians without putting them up at public sale ? The minister knows that he has disposed of scores of islands at a dollar apiece. What sort of valuation is that ? The men who pay a dollar apiece would no doubt gladly pay five or ten dollars apiece. A number of the islands might be put up at the same time at public auction. I think the minister is doing a very unfair thing towards the Indians in disposing of their lands in the way he does.

Mr. MILLER. I would suggest that the hon. member name some single instance and have it investigated.

Mr. ARMSTRONG. I am satisfied that the hon. member for South Grey knows full well that a great deal of this Indian land is worth more than ten cents an acre. What is the need of disposing of it if that is all that can be got for it ? When you find the department disposing of over 500,000 acres of Indian lands at private sale at upset prices fixed by the department, and disposing of quantities of islands in the same manner, you cannot help feeling that they have not been conducting the affairs of the Indians in a business-like manner.

Mr. M. S. McCARTHY. I observe that a part of this vote is for clothing. I suppose that would include clothing for the Indians on the Sarcee reserve. How many Indians are on that reserve at the present time ?

Mr. OLIVER. About 200.

Mr. M. S. McCARTHY. What is the area of the reserve ?

Mr. OLIVER. About three townships.

Mr. M. S. McCARTHY. When I brought this matter up in the House last session, I was told by the minister that the Rev. John McDougall had been negotiating with these Indians with a view to getting from them a surrender of their lands. Will the hon. minister tell me what success he met with, and whether or not the negotiations are being still carried on ?

Mr. OLIVER. We absolutely failed to get a surrender from the Indians. We have not yet been able to bring the negotiations to a successful conclusion.

Mr. M. S. McCARTHY. No effort should be spared on the part of the department to bring those negotiations to a successful conclusion. It is rather singular that the Reverend John McDougall has succeeded in obtaining surrenders in a great many other parts of the country but not in this. This reserve consists of some 7,000 acres, only three or four miles from the town of Calgary, and is very valuable land. It is far away beyond what these Indians require. They are practically making no use of the land and are keeping it closed against settlement.

Mr. OLIVER. I entirely sympathize with the view of the hon. gentleman, and the department is well aware of the facts. We have made two attempts to secure a surrender from those Indians and have failed. The lands are absolutely the property of the Indians, so that we cannot take them except with their consent. We have made every offer in reason, but this particular tribe has been known from time immemorial as the most intractable on the plains. We are not relaxing our efforts, but my hon. friend will perhaps agree that with Indians, as in the case of white people, if they have something you want, the more they know you want it the more they are likely not to let you have it. In negotiating with them, it is not good policy to keep continually urging them to make the surrender? It is better to make a liberal offer, and if it be not accepted cease all efforts for the time. If you keep continually urging on them to surrender their lands after they have made a refusal they will get an entirely exaggerated idea of their value, and it may become absolutely impossible to negotiate with them.

Mr. M. S. McCARTHY. Some time ago the minister promised to let me have a detailed statement of the allowances made Mr. McDougall, amounting to $4,600.

Mr. OLIVER. I have that statement fully prepared, but cannot lay my hand on it at the moment. I will produce it before the end of the session.

Mr. SAM. HUGHES. I do not know exactly what all these supplies for destitute Indians amount to—$149,000 this year and $140,000 last year. Could the minister give the details?

Mr. OLIVER. I can give the amount to each agency and also the actual items, but the items in one agency are pretty much what they are in another, and it would take a long time to give them all. They consist of provisions and medicines and other necessaries, which we have to provide those Indians who are destitute or infirm and who are not cared for by their relatives. These supplies are all purchased by tender for distribution to the different agencies, and they are rationed out according as the circumstances seem to require.

Mr. SAM. HUGHES. What is the last item for?

Mr. OLIVER. That, generally speaking, includes salaries for the department, for those who are in the field. It includes, for instance, the survey staff whose headquarters are in Ottawa.

Mr. HERRON. I want to call the attention of the minister to another transaction with reference to leasing. It has been represented to me that there are applications at the present time for a portion of the Blackwood reserve for grazing privileges by some large stock companies in that country, and also by some of the smaller stockholders who reside in the immediate vicinity of the reserve. These latter have been asking me to draw the attention of the minister to the fact that these small cattle owners will be very glad to pay as much rent for the use of the Blackwood reserve as any big company owning large herds of cattle. After what the minister has stated with reference to the Blood reserve, I take it he is in sympathy with the smaller owners. I think if the owners of small herds are willing to pay as much rent as the large ranching companies, they should have the first privilege.

Mr. OLIVER. Some years ago there were a number of applications made for grazing rights of the Blackfoot reserve. We believed that the Indians had a right to be consulted in the matter, and these people were informed that if the Indians were willing to make a bargain with them for grazing rights, and if the bargain was on fair terms, the government would assent to it. But the Indians declined to enter into any arrangement, so none was made. In regard to the grazing rights to be acquired by settlers in the surrounding country, that is a policy that certainly appeals to me. It is somewhat difficult to carry out. Of course, as my hon. friend knows, nothing can be done in that matter except with the consent of the Indians. But my preference would be to give such advantages in grazing rights upon the Indian reserve to ordinary settlers who are living in the vicinity, if it can be done on fair terms to the Indians and with their consent.

Indians—British Columbia, $194,730.

Mr. FOWLER. Is there any intention to dispose of any of the Indian reserves in this province?

Mr. OLIVER. I think I have had the honour to make a statement to the House of the position in which the reserves stands in British Columbia. A question of title has to be settled before we can do any-

thing in the way of securing alienation of the rights of the Indians to the reserve in British Columbia.

Mr. FOWLER. At that time I think the minister stated that steps were being taken to have a friendly case argued.

Mr. OLIVER. This government has forwarded to the government of British Columbia a memorandum suggesting the submission of a case for adjustment, but so far that proposal has not been replied to. So we are in the unfortunate position that we cannot take any steps to secure the surrender while the title stands in its present condition. I am not sure, however, but that in one or two cases of a special nature the British Columbia government has expressed a willingness to waive its rights in that particular instance, and in such cases we have been able to go on and deal with the Indians. But the British Columbia government will not make any general waiver of their rights.

Mr. FOWLER. What reserves are these to which they have waived their rights?

Mr. OLIVER. There are two instances in which the provincial government has quit claimed to parties acquiring rights from the Indians ; one was a small piece of land on the reserve at Kamloops, called Deadman's creek, and the other was some place in southern British Columbia.

Mr. FOWLER. What was the amount of land at the Kamloops reserve?

Mr. OLIVER. About 4,000 acres. The lease from the Indians was for 50 years, that is for irrigation rights. But the quitclaim by the provincial governments is practically perpetual.

Mr. HERRON. Are there any negotiations going on in regard to the land on the south side of the Blood reserve adjoining the town of Cardston ?

Mr. OLIVER. Negotiations are going on, but they have not produced any result.

Mr. WM. WRIGHT. I wish to ask a question of the minister with regard to the Northwest Coast Agency, B.C. The former agent there, Mr. Morrow, it is claimed, neglected the agency and engaged in the superintendence of a sawmill. I believe that he was transferred to the Customs Department at Port Simpson, and the Indians claim that a bartender was appointed in his stead and put over them. Is that true and is he being continued in office?

Mr. OLIVER. Morrow retired four or five months ago and was replaced by a man named Laurenz. About the time Laurenz was appointed we received a communication from some of the Indians complaining in a general way, but the objections were not of so definite a character as to seem to warrant the department in acting upon it.

Mr. A. MARTIN (Queens, P.E.I.). An item was left open for discussion of steamship subventions and subsidies. The vote for a subsidy to a line between Prince Edward Island and Great Britain was struck out. It has been reduced from year to year. Some years ago it was $20,000, last year it was reduced to $7,000 and now it has been struck out. The minister is aware of the great disadvantage under which the province of Prince Edward Island lies in shipping its butter, cheese, eggs and other produce to Great Britain ; it has to send these products to Montreal to be loaded on the steamers, which is a very round-about and unnecessarily expensive method. I suggested to the minister, I think last year, that if they could not succeed in getting a steamer to undertake this service they could have a tender built at a comparatively small expense, that goods could be shipped from the island on that tender, that the tender could intercept a subsidized steamer going from Montreal to Great Britain, and transfer the freight to her. These tenders are now built so that they can attach to a vessel running at full speed, and transfer their cargo to the steamer without her stopping. Telegraphic communication is now easy and inexpensive and the connection between the steamer and the tender could be easily arranged. In the same way a vessel from Great Britain for Montreal could be intercepted in the Gulf by the tender and goods for the island transhipped without loss of time or detention of passengers. I make the suggestion in all honesty to the minister, and I think when we are spending so much for steamship subsidies in all other parts of Canada, and I think this is a proper expenditure, a practical suggestion such as I have made should be favourably considered by the minister and his colleagues.

Mr. FIELDING. Any suggestion my hon. friend may offer in the good spirit he displays to-night is deserving of the most serious consideration. I would be inclined to think there would be some difficulty in inducing any established steamship company to undertake a service of the kind he suggests. It would seem to require co-operation of some of the steamship lines, and if any of them would indicate a willingness to take part the matter should be seriously considered. It is most desirable that the island should have every opportunity of shipping goods to Great Britain. We have had an offer on the statute-book for years, but unfortunately no company has been willing to take it up. I am sure the Minister of Trade and Commerce, under whose department this would fall, would cordially sympathize with my hon. friend's object and if there was any indication of a desire to do this by a company the matter would have his sym-

pathy and support. I would like to have an expression from some practical steamship man engaged in the Atlantic trade of his willingness to take up an enterprise of that character. I shall mention it to the Minister of Trade and Commerce and ask him to give it his serious consideration.

Mr. A. MARTIN (Queens, P.E.I.). I am very much obliged to the minister. He has met me pretty nearly half way, but I would suggest to him that it would be the duty of the government to have that tender built. At the present time steamers running at full speed are loaded from a tender. I do not see any difficulty that would arise. It would place the province in a better position. Before these steamship subsidies were adopted the province had a steamer of its own which traded between Prince Edward Island and the old country but when you adopted the policy of subsidizing steamers from Montreal, Halifax and St. John, our steamer could not compete with them. We are under the disadvantage that our goods have to be shipped to Montreal and then reshipped to Great Britain. I do not think there is an instance anywhere in Canada where there is such a round about way of doing business as that which has been forced upon Prince Edward Island. It it not creditable to the government that that should be the case. When the minister struck out this item of $7,000, he said he would apply it in some other direction and I would like to know how he is going to apply it.

Mr. FIELDING. I think my hon. friend will find in the Supplementary Estimates, page 30, that we are providing an additional amount for steam communication between Prince Edward Island, Cape Breton and Newfoundland. I do not give that as a reason why we should not have this service across the ocean if the opportunity should come, but I hardly think it would be wise for the government to build a tender for that purpose without endeavouring to ascertain what steamship lines would co-operate with us in that business. Any measure which will enable the people of Prince Edward Island to share in the advantages of cheap and prompt transportation will have our heartiest and fullest support.

Department of Railways and Canals—to increase the salary of M. J. Butler, deputy minister and chief engineer, to $8,000 per annum from April 1, 1908, $500.

Mr. FOWLER. Explain.

Mr. GRAHAM. The item explains itself. This increase to Mr. Butler is not as large as it looks. The sum is $500. Under the new Civil Service Act the salary of a deputy minister is $5,000, and for anything over that we have to take special vote. Mr. Butler has been receiving $7,500 and it was understood that he was to have $8,000.

Mr. FOWLER. When and where was it understood he was to have $8,000? There has been no statement in the House to that effect.

Mr. FIELDING. Mr. Butler has been receiving $7,500 and that has been voted in the main estimates.

Mr. FOWLER. This proposition will make his salary $8,000.

Mr. W. WRIGHT. That will be $1,000 more than the salary of a minister.

Mr. FIELDING. Mr. Butler is a professional man of high standing and there is no doubt that in the case of professional men engaged in the higher ranks of the public service, the temptation is very strong to leave the service, and we must expect to pay them something like the figures they would be paid in private employment. Mr. Butler, I am quite sure, would get $8,000 readily from any of the big railways or contractors by whom he might be employed.

Mr. W. WRIGHT. It seems to be an anomaly that you should pay a deputy minister $1,000 more than the minister gets. The salary is high enough without any addition being granted.

Mr. GRAHAM. He performs a double duty; he is chief engineer as well.

Railways and Canals, chargeable to capital —Railways—Intercolonial Railway—diversion of public road to eliminate a crossing at rail level between St. Cyrille and Drummondville, $1,300.

Mr. FOWLER. I would like some explanation in regard to that.

Mr. GRAHAM. The amount is asked to divert the public highway between St. Cyrille and Drummondville in order to get over a level crossing. The part of the highway touching the railway is going to be deeded to the government by the municipality. We are getting rid of the level crossing and they are deeding the property.

Mr. FOWLER. Why should you make an exception in this particular case?

Mr. LAVERGNE. This railway was built after the highway. It was built along the roadway for nearly a mile. There are two level crossings, about 350 feet long, they are very dangerous and there have been many accidents. The government proposes to divert the roadway to another place and this diversion will involve a small expenditure. If the railway had been built a little farther away from the highway these accidents would not have occurred.

Mr. FOWLER. In the province of New Brunswick there are places where the railway has been built since the highway, where the highway and the railway parallel each other for a long distance and where there are many crossings. In my town there are level crossings and yet no step like this has been taken by the railway. I would like to know why this particular place was singled

out and whether it is the intention of the department to pursue this policy in other places as well as at this favoured place.

Mr. EMMERSON. It has been done in New Brunswick.

Mr. FOWLER. It certainly has not been done in my county.

Mr. FIELDING. It is not done for the convenience of the highway, but for the convenience of the railway. If a crossing is dangerous to life and property, and if, by a small expenditure, you can divert the highway and remove the danger, it would be the part of wisdom to do so.

Mr. EMMERSON. At Campbellton, N.B., there was a diversion of the highway, which the railway paid for.

Mr. FOWLER. I know a very dangerous crossing in my own constituency, and the minister might apply the same rule there that he has applied in this case.

Mr. FIELDING. If there is any case on the line of the Intercolonial where, for a small expenditure, you can divert the highway and do away with a dangerous crossing, it would be wise to do so in the interest of the protection of life, as well as in the interest of the protection of the government from claims for damages.

Mr. FOWLER. The Minister of Finance seems to labour under the misapprehension that I am opposing a policy of this kind. I am not. I merely wanted to know why this particular place was singled out while other places equally needing this protection have not been attended to. Is it the policy of the minister to do this wherever it is needed?

Mr. ALCORN. And if it is the policy of the minister, I would point out to him that the crossing at the Grand Trunk station in his own constituency is extremely dangerous.

Mr. GRAHAM. Unfortunately, the Intercolonial Railway does not run in my constituency, and I cannot apply the policy to it.

Diversion of line at Chatham and branch to wharfs, $40,000.

Mr. GRAHAM. Some months ago I visited Chatham, and this diversion of the line was strongly urged on me by the leading citizens. It is part of the old Canada Eastern and is on a heavy grade, and the station is two miles away from the town. By the diversion of the road for six miles we will save a considerable haul, get rid of a heavy grade, get down to the town and to deep water, reach one mill that turns out 4,000 carloads of lumber annually and another mill at deep water. I can recommend it to the House as a business proposition.

Mr. CROCKET. Will $40,000 complete?

Mr. GRAHAM. Oh, no. I want to make it clear that it will cost about $400,000, but this is all we can expend this year.

Improvements at Fredericton, $10,000.

Mr. CROCKET. I presume this is the initial vote for a new station at Fredericton?

Mr. GRAHAM. I visited the pretty little city of Fredericton, and I found there a very nasty little station which was not suited to the requirements of the capital of the flourishing province of New Brunswick. There was talk of our being able to join in a union station with the Canadian Pacific Railway, but that seems to be out of the question, and it is my opinion that we should have a proper station at Fredericton. We propose to spend $60,000 for a new station there. I ask for $10,000 now to get a start at it next fall, and we will go on with the work.

Mr. FOWLER. I draw the attention of the minister to another flourishing and beautiful town in New Brunswick which requires a new station. When the Minister of Finance was acting Minister of Railways he promised we should have a new station at Sussex, but we have not got it yet. Sussex is one of the principal towns in New Brunswick, and is a town in which a great deal of business is done on the Intercolonial. The present station is a disgrace to the town and a disgrace to the road. New stations have been built to replace old stations that are far better than the station at Sussex. It is a ramshackle wooden building, erected when the road was first built, and it should be replaced. I ask the minister if he will now put in the estimates an item to build a new station at Sussex?

Mr. GRAHAM. The matter will be considered. Although I would like to do so, I regret that I cannot make any more promises at present. We ought to have decent stations at places where we do business.

Mr. CROCKET. Can the minister say how much of the $60,000 is to be applied to the Fredericton station building itself?

Mr. GRAHAM. I cannot say at present. I went into this question with my deputy the day before he was taken ill, and I told him we wanted to have a decent station at Fredericton with surroundings that would conform to it. He said it would cost $60,000 as an approximate estimate. My own opinion is that before we complete the work and get the yards as we would like to have them it will cost more. We intend to put up a decent station at Fredericton.

Mr. CROCKET. Has it been decided yet whether it will be of brick or stone?

Mr. GRAHAM. No.

Diversion of line, Sydney Mines to River George, $25,000.

Mr. GRAHAM. This is somewhat like the Chatham proposition. On this piece of track there is a grade both ways. There is a very large traffic on that section, and to continue to do business hauling up grade both ways is out of the question. The diversion of this line, which would cost, I think, anywhere from $375,000 to $425,000, would put North Sydney and Sydney Mines on the main line, would do away with the operation of quite a length of branch, and would give us a comparatively level grade. After looking into the matter, I considered it a business proposition and decided to submit it to the House.

Mr. SAM. HUGHES. Are the highly paid engineers of the department satisfied with it ?

Mr. GRAHAM. Yes.

Petit Rocher—spur track to wharf, $15,000.

Mr. GRAHAM. The Public Works Department have constructed a wharf at this point, and we want to get access to it by rail.

Mr. FOWLER. What will that cost ?

Mr. GRAHAM. The approximate cost will be about $30,000.

Mr. FOWLER. Is there any business done at Petit Rocher, or is it something like the wharf at Caraquet, where business is expected in the dim and distant future ? The hon. member for Gloucester (Mr. Turgeon) gave us an explanation of that at one time. He said that at Caraquet there was no business yet, but he hoped that at some time there would be business. In the meantime that part of the wharf which did not drift out to sea was rotting away. The hon. member for Gloucester seems to have a great capacity for drawing grants from this government ; but the unfortunate thing is that in most cases the money is spent for useless works which can only serve the purpose of strengthing the hon. gentleman in his constituency, while the rest of the province suffers on account of the great pull which the hon. member seems to have with this government.

Mr. TURGEON. Surely my hon. friend knows the resources of Petit Rocher as well as I do. So far as Caraquet is concerned, he knows what I meant when I said that the harbour there could not be yet used by ocean steamers, as we could not get the railway company to build a spur to the wharf to afford the same kind of accommodation that this proposed spur will afford at Petit Rocher. It is true that the Petit Rocher wharf is not used by anybody yet, because it is not yet completed. But it will be completed and handed over to the government within the next two months, and there is an immense possibility of business there, especially in the shipping of lumber. The only way to make that district productive is to afford transportation facilities, and this spur will give accommodation to that splendid location that I have heard praised so much by our friends opposite.

Mr. SAM. HUGHES. How long is the spur ?

Mr. TURGEON. About three-quarters of a mile.

To provide for survey to ascertain the best route for an additional line from Moncton, New Brunswick, or Amherst, Nova Scotia, to a point at or near Truro, Nova Scotia, $10,000.

Mr. GRAHAM. A few weeks ago a very important deputation waited on the government and urged strongly the wisdom of looking into the matter of having a link constructed from Moncton to Truro or from Amherst to Truro to shorten the line to Halifax and to get better grades. One idea was to have an eye to the increased traffic that will pass in the future over that portion of the Intercolonial Railway. This line would also serve a new country that is not now served. In order to find out exactly what the request meant, what benefits would be derived, and most of all what the proposed line would cost, I decided to put an amount in the estimates to survey the line.

Mr. SAM. HUGHES. Is it intended to run north or south of the present line ?

Mr. FIELDING. South, by Parrsborough on the Bay of Fundy.

Mr. FOWLER. I read in the papers the other day that there was to be double-tracking from St. John to Hampton. Has the minister any information about that proposition ?

Mr. GRAHAM. I really have no information on that point. I did say the other day in a speech which I thought was a good speech that if we carried all the traffic to Moncton that we hoped to carry, there would be an ultimate necessity of double-tracking the line from Moncton to St. John as well as from Moncton to Halifax.

Mr. FOWLER. Was the minister only indulging in prophecy, or has he any present intention of doing that ?

Mr. GRAHAM. Not until it is needed.

Mr. E. M. MACDONALD. I hope that the minister, before deciding on the direction of any new line of railway, will take into consideration the very much greater advantages that would be afforded by building a line from Moncton along the northern portions of the counties of Westmoreland and Cumberland to Pugwash. By so doing he will secure a line running through a country where much better grades can be

had than those of the present line, and he could utilize what is known as the short-line portion of the Intercolonial and obtain very much better advantages than could be obtained by building any new line along the Bay of Fundy. I have already called the minister's attention to this matter. I do not wish to elaborate the proposition I make at the time, but it is one that the minister will be bound to take into consideration before deciding on any such policy.

Mr. SINCLAIR. Before this item passes I wish to draw the attention of the minister to the fact that there is a better way of reaching the Atlantic sea-board than either by double tracking the Intercolonial or building a new line around by Parrsboro. Every one who is acquainted with the geography of Nova Scotia is aware that the Cobequid range of mountains have to be crossed between Amherst and Truro. On this part of the Intercolonial there are several very steep grades that lower the character of the whole line as a traffic road. It would be poor policy to build a line of railway across the continent at vast expense and with grades of one-half or one per cent and continue those steep grades between Moncton and Halifax. These can be altogether avoided by running the line north of Amherst and along the north shore to Pugwash, then to New Glasgow and Country Harbour. This would give us a splendid outlet on the Atlantic for the traffic of the Grand Trunk Pacific. I need not speak of the advantages of Country Harbour. This harbour is well known to be one of the great harbours of the world. If you made a list of say twelve of the greatest harbours of the world I will venture to say that you would be compelled to include Country Harbour in the list. I have not time at this late hour to speak of all the advantages of this route. By adopting my proposal you will get a level route and pass through the coal deposits of Pictou and open up a good country and reach the sea at a harbour that is 100 miles nearer Europe than Halifax. I hope that no action will be taken until my proposal is carefully considered.

Mr. McLENNAN. I would like to ask the minister whether he has given any attention to the very modest request I made the other evening. I observe a duplication of the Intercolonial Railway in the county of Cape Breton, a proposed duplication in Cumberland and Pictou and Colchester and a subway in the county of Pictou in the country district. I do not object to these, but I claim that the very modest requirements of the county of Inverness should receive a little more consideration. I noticed in the city yesterday Mr. Mann one of the Inverness Railway and Coal Company, and I hoped that the minister would call his attention to the matter of the joint user of the terminals at Port Tupper. I would like to know from the minister whether he has given attention to the advisability of either coming to an arrangement with that company or making some provision or other out of this item for increased accommodation by furnishing a modest shelter in the way of a station at Hawkesbury junction on the Intercolonial Railway.

Mr. GRAHAM. In reply to my hon. friend, that is one of the questions which will have to be considered. My department is looking into the question to see if we cannot obviate the difficulty to which he refers.

Mr. FOWLER. Where are you getting your water supply for the Intercolonial Railway buildings at Moncton ?

Mr. GRAHAM. I have not the information here and there is no Intercolonial Railway official present who knows anything about that special work.

Mr. SAM. HUGHES. Does the minister know nothing about the Moncton waterworks ?

Mr. GRAHAM. When the item comes up I shall be able to give the information, but regret that I have not got it at hand just now.

Prince Edward Island Railway—to pay M. J. Haney on his contract, amount of award in connection with Hillsboro bridge, $164,633.33.

Mr. GRAHAM. The amount of the claim was $390,000. Under the contract all work had to be certified to by the chief engineer but I was under this difficulty that the chief engineer was Mr. Butler, who is now chief engineer of my department. Consequently it would not do for him to certify to the work and I decided to appoint Mr. Collingwood Schreiber as engineer and arbitrator, as he was the chief engineer of the department at the time the work was done. He made an award of $194,000.

Mr. CROCKET. What does that make the total cost of the Hillsborough bridge ?

Mr. GRAHAM. $1,365,376.18 to June 30, last.

Mr. CROCKET. What was the department's estimate of the cost ?

Mr. GRAHAM. I had a long memo. about that. There was an estimate made but the work was absolutely changed. It was found in one place that it would not do to use the crib-work on account of its decayed condition and a new arrangement was made under which an embankment was used.

Mr. FOWLER. What was the contract price?

Mr. GRAHAM. It was on schedule price, the whole thing. It was found impossible to make it in any other way. This claim was to settle up the whole work. The contract was changed, the steel work was changed, and an arrangement was made

with the Hon. Mr. Blair and the contract was signed by the Hon. Mr. Sutherland. I think the offer for the work was 50 cents a yard, and the late minister gave a schedule price at 30 cents a yard. Some of this work was done in a greater depth of water than any work he had ever known to be constructed.

Mr. CROCKET. When was the bridge completed and accepted by the department?

Mr. GRAHAM. Nearly two years ago.

Mr. FOWLER. I fail to understand why, if this work was done under schedule prices, there should be a dispute. Why would this man claim $390,000 more than the department was willing to give him?

Mr. GRAHAM. The quickest way to answer that perhaps would be to give the claims made by the contractor, but it would take a long time to read them.

Mr. FOWLER. State their general character.

Mr. GRAHAM. For instance, he claims for additional work, materials on hand, interest account. Then he gives a list of claims for extra work, such as pneumatic caissons. His claim for interest was $82,907.

Mr. A. A. McLEAN. Why did he make a charge for interest?

Mr. GRAHAM. The account has never been settled up, and he made a claim for interest. If I had time to read the award the hon. gentleman would see that the claim was not allowed.

Mr. A. A. McLEAN. I would ask the minister to read the award.

Mr. GRAHAM. I will give a copy of the award to my hon. friend any time he wants it.

Mr. A. A. McLEAN. I think a copy of the award ought to be put on the 'Hansard.'

Mr. GRAHAM. The award was made by Mr. Collingwood Schreiber and is in the following terms:

Now know ye that I, the said Collingwood Schreiber having taken upon myself the burthen of the said reference, and having heard, examined and considered the witnesses and evidence on behalf of both the said parties concerning the said claims so referred to me as aforesaid, do make and publish this my award, of and concerning the same, that is to say, I award and determine that the said Michael J. Haney pursuant to the said contract and lease and the said agreement, has a just and valid claim and demand against His Majesty the King to the amount or sum of $164,633.33.

And I award that the said sum of $164,633.33 shall be paid by His Majesty to the said Michael J. Haney and shall be accepted and taken by the said Michael J. Haney as and for full satisfaction and discharge, and as a final end and determination in respect of the said claims so referred and the matters in dispute as aforesaid, and all demands upon and in respect of the same.

And as an accompaniment to this my award I do pursuant to the said agreement hereto annex my certificate, in duplicate, in the form of a chief engineer's certificate for payment covering the said amount or sum total to be paid to the said Michael J. Haney by virtue of the said agreement.

And I further award that each party shall bear and pay his own costs of and attending the said arbitration and the said Michael J. Haney shall pay the costs of this my award, that is to say, the sum of $223.75 being the amount due for stenographer's fees.

In witness whereof I have hereunto set my hand this 21st day of February, 1908.

COLLINGWOOD SCHREIBER,
Sole Arbitrator.

Surveys of branch lines, $10,000.

Mr. FOWLER. Is there any intention to take over branch lines in the province of New Brunswick?

Mr. GRAHAM. That is a very large question. If I were the manager or president of a company owning the Intercolonial, I would at once proceed to see what branch lines would be of benefit to my main line, and try to get hold of them. Another announcement will be made before the close of the session on the question of branch lines.

To provide for survey and location of a line of railway from the Saskatchewan river to Hudson bay, $100,000.

Mr. LAKE. I see it is stated that the line is to be from the Saskatchewan river to Fort Churchill. I presume the railway has been completed to The Pas, on the Saskatchewan river, so the Minister of the Interior said the other day. I asked him for some information as to the condition of that line and he told me he would have to ask the Minister of Railways for that information. Would the minister give me some information in that respect.

Mr. GRAHAM. I have no positive information. I have been greatly rushed with business. I intended to-day to ask Mr. Mann about it. I am going to tell the proprietors of the road what condition it is in, and if it is not improved it ought to be referred to the Railway Commission.

Mr. LAKE. I understood that the Department of Railways sent out an engineer last fall to go over that line. He would have a report. I think he returned in the fall.

Mr. GRAHAM. I will look into it to see if there is a report.

Mr. LAKE. And would the minister bring it down the next time he goes into the estimates? The Minister of the Inte-

rior stated that the land grant for this railway had all been patented.

Mr. SAM. HUGHES. This last spring has been very wet in the Northwest, and any one who is familiar with the lower Saskatchewan knows that for many a mile on either side the country is flat and boggy. It will require a great deal of work to get any road in good condition, more especially in a very wet spring such as we have had in the Northwest. No new railway in the Northwest was in a good condition this year.

Mr. HERRON. Has the government arrived at any policy yet with regard to the building of this road? Are they going to build it themselves, or let it out to a corporation?

Mr. GRAHAM. The one definite policy the government have arrived at is that this road will be built, and built immediately, by somebody. To ascertain what the probable cost of the road would be is the first necessary step, whether we shall build it ourselves or let it to somebody else. For that purpose I am having a party organized to start out very shortly to make a survey from the Saskatchewan river to the Hudson bay, to Fort Churchill probably, possibly, to some other point on Hudson bay. But before I take any steps in that direction we will have to have a survey made to see what it is going to cost, whether we build it ourselves or whether we get it done by somebody else.

Mr. LAKE. When will the parties start out, and how long will it take them.?

Mr. GRAHAM. A survey party will be organized instantly. They will be away from here shortly after we are. This road is going to be built by somebody and built immediately.

Mr. LAKE. Would the minister let this item stand until he can give us the information in regard to the condition of the railway to which I referred just now, and in regard to which I asked for information? Unless that bank is completed, and I understand the whole country has to be drained, it will not be possible to get to the Pas.

Mr. KNOWLES. I object to allowing the item to stand. Whether the hon. member for Qu'Appelle (Mr. Lake) is of that opinion or not, in my opinion the people of the west want the preliminary survey and the location of the route effected at the earliest possible moment. I extremely regret that as a representative of the people the hon. member would be a party to the delaying of the matter by having the item stand. More than that, I think it is not fair to say the vote is only for the making of a preliminary survey, because it is not only for acquiring the information which is essential, but likewise to locate the line which is to be built. As the Minister of Railways has said, the first step to be taken in the construction of the road by the government or by a company is to make the survey and locate the line, and the Minister of Railways says that is being done this year. I trust the hon. member for Qu'Appelle (Mr. Lake) will withdraw his objection and will not insist on allowing the item to stand, causing further delay. I also wish to respectfully correct the impression in the minds of the House that the banks of the lower Saskatchewan or the country in the vicinity of the banks is of a marshy nature. I have given some little study to this, and I might say there are 70 miles which are of limestone formation to the north of the river, which is the best formation on which to construct a railway.

Mr. SAM. HUGHES. The hon. member does not know that the railway approaches the river from the south.

Mr. LAKE. The hon. gentleman's remarks about holding this item up are absolutely unfair. He knows that perfectly well and knows that he is trying to make a little paltry political capital out of it.

Mr. KNOWLES. I rise to a point of order. The hon. member should not say that I am trying to make cheap political capital.

Mr. DEPUTY SPEAKER. I do not think that is out of order.

Mr. LAKE. The hon. gentleman is perfectly aware, no one more so, that to ask this item to stand for another day will not affect the date on which the item is passed by the House, as all these items must be collected into a Supply Bill.

Mr. GRAHAM. My hon. friend surely does not mean to hold this item as a hostage until I bring down the information? This has nothing to do with the Canadian Northern Railway Pas line.

Mr. SAM. HUGHES. The greater part of the Pas line is fit for any sort of traffic, but there is no railway in that part of the west which has not been softened up by the heavy rains in this wet spring.

Mr. LAKE. If the minister will give the information I will ask him for it on going into Supply.

Mr. LENNOX. I do not wish to delay the item, and I hope the hon. member for West Assiniboia will not think I am doing so. I think it is utterly contemptible the tactics some hon. gentlemen seem to adopt at times for the purpose of making cheap political capital. There should be a sense of honour among gentlemen that will not, for the mere petty advantage they can make in that way, utterly misrepresent what another member says.

Mr. KNOWLES. Will the hon. member say whom he means?

Mr. LENNOX. I mean the hon. gentleman who has just risen.

Mr. DEPUTY SPEAKER. I do not think the expression 'cheap political capital' is out of order.

Mr. KNOWLES. He said 'contemptible.'

Mr. DEPUTY SPEAKER. It is a matter of taste whether it should be used.

Mr. KNOWLES. I submit the hon. gentleman is out of order in saying my tactics are contemptible.

Mr. LENNOX. I repeat the remarks very deliberately.

Mr. DEPUTY SPEAKER. I do not think the hon. member is justified in using the word 'contemptible.'

Mr. LENNOX. I am pleased that I used it and will withdraw it in deference to your remark, because I think it necessary——

Some hon. MEMBERS. Order.

Mr. LENNOX. I withdraw the remark in difference to the chairman. I have not changed my opinion one iota. I shall ask the minister for more definite information as to the policy of the government in this matter. The minister has not said whether the government will construct it as a national work or have it constructed by an independent company.

Mr. GRAHAM. I thought I made myself clear. The government have not come to a decision as to whether they will undertake the work as a government work or let it by contract to some great company. They have come to the conclusion that they will immediately ascertain by practical means what the work is likely to cost. Later they will decide the best means to secure its construction.

Mr. FOWLER. How long are the straits open?

Mr. GRAHAM. I should say from the information I have gleaned that navigation might be assured for four months in the year. Of course the bay is open longer.

Mr. FOWLER. The Ottawa 'Free Press' announced the other day in flaming headlines that the straits are open for navigation only about two months. Was that an inspired article?

Mr. GRAHAM. Oh, no.

Mr. S. J. JACKSON. I do not think it is wise to confine this survey to the Pas route. I am of opinion that we can find a more satisfactory route from the main line of the Canadian Northern Railway, and that the survey should be commenced 100 or 150 miles south of the Saskatchewan river in the hope of finding a better line. I am told there is a high ridge 30 or 40 miles east that would give a better line than the Canadian Northern line from Erwood.

Trent canal—to pay damages to properties by flooding, $100,000.

Mr. FOWLER. What is that for?

Mr. GRAHAM. Owing to the building of the Trent canal and the construction of various dams certain lands have been flooded. We have had a man going through there and trying to value the damages. He reports that it will be necessary to put $100,000 in the estimates to provide for the damage that has been done to the property of various farmers along the line of the canal.

Mr. SAM. HUGHES. Why is there not more in for the construction of the canal and less for the buying up of this land?

Mr. GRAHAM. There is $1,000,000 in the main estimates for the Trent canal.

Mr. SAM. HUGHES. That is only a trifle you should put the whole thing in.

Mr. FOWLER. I would suggest that if you had acquired the right to flood these properties before you commenced it would have cost infinitely less than what it will cost now that the damage has been done.

Cornwall canal—repairs to break in bank west of lock 18, $150,000.

Mr. SAM. HUGHES. Is it true that the department was notified upwards of a year ago by Capt. Donnelly that this bank was likely to give way? I have seen that statement made on the authority of Mr. Hiram Calvin.

Mr. GRAHAM. I never heard of it.

Mr. SAM. HUGHES. Would the minister look up and see?

Mr. GRAHAM. I will look into it.

Mr. FOWLER. I would like to ask the minister if he proposes to do this work by day labour or by contract?

Mr. GRAHAM. A portion has been rushed by days' work; for the balance we will advertise for tenders and award the contract to the lowest tenderer.

Carillon dam—dam across slides, $40,000.

Mr. BLAIN. I suppose the minister will allow one item to stand so that any one who is not here to-night may have an opportunity of discussing any of these items.

Mr. GRAHAM. We will allow item 457—Carillon dam—to stand.

Item allowed to stand.

Miscellaneous.

Railway Commission—maintenance and operation of the Board of Railway Commissioners for Canada (exclusive of an amount of $25,000 authorized by statute)..$13,000 00

To provide for the expenses of preparing plans for the reconstruction of the Quebec bridge..	$25,000 00
Attendance, repairs and alterations Governor General's cars..	2,500 00
Railways statistics including clerical assistance notwithstanding anything in the Civil Service Act.	1,200 00
Expenses of Quebec Bridge Commission..	53,500 00
To pay a gratuity equal to two months' salary to the widow of the late Judge Killam, chairman of the Railway Commission.. ..	1,666 66
	$96,866 66

Mr. LENNOX. There is an item of $25,000 to prepare plans for the reconstruction of the Quebec bridge. Will that pay for the plans ?

Mr. GRAHAM. It is expected that it will. It may take more than that. I think it is a small estimate.

Mr. SAM. HUGHES. You had better get the plans of the Forth bridge and use them for the reconstruction of the Quebec bridge.

Mr. FOWLER. Have you in mind any engineer whom you propose to employ to draw these plans ?

Mr. GRAHAM. No, we have not chosen an engineer. That is something that will have to be done with very great care so that we will be absolutely sure of our ground.

Mr. FOWLER. I quite agree with the minister that it is a matter that should be done with very great care, and the principal reason is that the government has already had a warning on account of the disaster that has occurred. I do not think that this estimate of $25,000 will be at all sufficient for the purpose. It will be necessary to ask for a subsequent vote, because if the government does its full duty in the premises, as it is building a bridge greater than has been, it will procure the services of the most eminent engineer that can be found in the world, and in order to get that man it strikes me that it will be necessary to go across the water. We have had an experience of American engineers and it has been a very unfortunate experience. To say nothing of the loss of money it has entailed great loss of life that is more deplorable than the loss of money. I hope the government will spare no pains to get the best engineering service that is available and I think it would be a wise economy to pay a price sufficient to get that service.

Mr. SAM. HUGHES. Comparing the frame work of the Quebec bridge with the framework of the Forth bridge, the one looks like a toy as compared with the other. The girders on the Forth bridge are 12 feet in diameter and I do not think there is one on the Quebec bridge in which there is more than an inch and a half of steel at any point. The part that is down and the part that is still standing are very flimsy looking. The chief engineer on the Forth bridge is no longer living, but other engineers who were engaged in the construction of that bridge are available and I think it would be wise to procure for this work the best engineering ability.

Mr. E. M. MACDONALD. Have a Canadian engineer with them.

Mr. FIELDING. There will be no difference of opinion on that. The view of the government is that no matter what it costs it must get the best and most capable engineer that can be found. I am glad to hear the views expressed by hon. gentlemen opposite; so that, if a larger appropriation is needed we have only to ask for it.

Mr. LENNOX. I would like to ask whether it is the intention of the government to erect the bridge in the same place again or whether a new site is to be selected?

Mr. GRAHAM. That is one of the questions that will have to be considered. There will be a difference of opinion as to that. Some people think that it should be higher up the river. These are questions which will be decided by the engineer or engineers whom we engage.

Mr. LENNOX. I think there is a good deal in that and the sooner the government get to work to procure that engineer the better. I would like to ask the minister if this amount of $53,500 for the expenses of the Quebec Bridge Commission covers the total cost?

Mr. GRAHAM. Yes.

Mr. LENNOX. And the matter is completed in every respect?

Mr. GRAHAM. Yes.

Some resolutions reported.

Mr. FIELDING moved the adjournment of the House.

Mr. HENDERSON. What business will be taken up on Monday?

Mr. FIELDING. The resolution respecting the provincial boundaries, some minor Bills and afterwards Supply.

Motion agreed to, and House adjourned at 11.47 p.m.

HOUSE OF COMMONS.

MONDAY, July 13, 1908.

The SPEAKER took the Chair at Eleven o'clock.

GENERAL LAKE'S MEMORANDUM.

Hon. Sir FREDERICK BORDEN (Minister of Militia). On Thursday last I laid on

the table of the House a memorandum prepared by General Lake with reference to certain matters pertaining to the militia. I supposed then that the memorandum would become one of the parliamentary papers, but I understand now that it is necessary to make a motion for the paper. Therefore, with the consent of the House, I would move :

That an order of the House do issue to the proper officer for a copy of a memorandum by Major General P. H. N. Lake, C.B., C.M.G., Inspector General, upon that portion of the report of the Civil Service Commissioners, 1908, which deals with the military administration of the militia, and that rule 72 be suspended and the said memorandum be printed.

Motion agreed to.

PUBLIC BUILDINGS.

Hon. WM. PUGSLEY (Minister of Public Works). I desire to lay on the table the return to an order dated 13th January, 1908, moved by the leader of the opposition (Mr. R. L. Borden) :

For a return showing the population of each town, village or other place in Canada in which any public building has been erected at the expense of Canada since January 1, 1897, or for a public building in which any public money has been voted, expended or appropriated since that date, together with a statement of the amount voted, expended or appropriated in each case, the total cost of each such building, the estimated total cost of any such building not yet completed, the purpose of each such building in each instance, the cost of the annual maintenance and upkeep thereof ; and so that the said statement shall show the information aforesaid by division of the said towns, villages or other places in the following classes: Those having a population not exceeding 2,000, 3,000, 4,000, 5,000, 6,000, 7,000, 8,000, 9,000, 10,000 ; also giving the names of all other towns and villages in Canada of each of the said classes in which no such public buildings have been erected up to the present time.

I may say that the hon. member for West Algoma (Mr. Boyce), and possibly other members made motions somewhat similar to the one in return to which this information is brought down. I think that this return will embrace all the information called for by these different motions.

RAILWAY SUBSIDIES.

Mr. R. L. BORDEN (Carleton). Before the orders of the day are called, I would ask the Prime Minister (Sir Wilfrid Laurier) when the railway subsidies will be brought down. I would inquire also whether he is aware that seven months and sixteen days of the session have elapsed and that we are presumably within five or six days of prorogation, and to ask respectfully whether, under these circumstances, these should have been brought down long ago ?—seven months and sixteen days.

Right Hon. Sir WILFRID LAURIER (Prime Minister). I am aware that we have been in session for seven months and sixteen days. I am glad to hear that we are within five or six days of prorogation. I am not aware that these railway subsidies could have been brought down one hour earlier.

Mr. R. L. BORDEN. But the main point is, when are we to have them ?

Sir WILFRID LAURIER. I understand that they are in to-day, are they not ?

Hon. G. P. GRAHAM (Minister of Railways and Canals). I expect they will be down to-morrow. I expected they would be down to-day, but they are not printed.

THE WOOLLEN INDUSTRY.

Mr. BLAIN. I desire to inquire if it is the intention of the government to introduce this session any legislation for the relief of the woollen industry ?

Sir WILFRID LAURIER. I have just been told by my hon. friend the leader of the opposition (Mr. R. L. Borden) that we may hope to close the session within five days ; and I do not think in those five days we can do more work than we have on the Order Paper.

INQUIRY FOR RETURN.

Mr. R. L. BORDEN. I would like to inquire from the proper minister—I suppose the Minister of Marine and Fisheries—when we may expect a return to the motion of the 10th of February last with respect to the lobster fishery in the county of Pictou ?

Hon. L. P. BRODEUR (Minister of Marine and Fisheries). I will make inquiries about it. I thought everything asked for has been brought down.

Mr. R. L. BORDEN. Possibly it has been brought down. Perhaps the minister will be good enough to inquire and let me know to-morrow.

Mr. BRODEUR. Yes.

DOMINION GUARANTEE COMPANY.

Mr. R. A. PRINGLE (Stormont) moved :

That this House do not insist on their amendments to the Bill (No. 127) respecting the Dominion Guarantee Company, Limited, and that a message be sent to the Senate to acquaint their honours therewith.

He said : I may explain that I find it will become necessary, in order to get over a little difficulty in connection with this Bill, to introduce a short amending Bill, and I shall ask leave of the House to that end. Perhaps this would be the time for me to state the reasons. When the Bill

was before the committee, the general borrowing powers were struck out. The Dominion Guarantee Company have erected a building in the city of Montreal, and so it has become necessary for them to borrow the sum of $55,000. The Bill legalizes and declares valid that mortgage, but does not give the company power to borrow the money that may be necessary in the event of their being called upon to pay off the mortgage. I shall ask leave to introduce the Bill and would request the House to give it its first and second readings that it may be referred to committee. I have the enacting clause of the Bill here, though I have not it in the form of a Bill.

Mr. PRINGLE. I now move for leave to introduce a Bill (No. 127) respecting the Dominion Guarantee Company, Limited.

Sir WILFRID LAURIER. I suppose this Bill is introduced by my hon. friend in consequence of the amendment which was made in the Senate to the Bill which he has just brought under consideration.

Mr. PRINGLE. Yes. I was under the impression that we could have made the amendment which was inserted here. The Senate refused to make it, considering they had not power to do so. So they sent the Bill back here, and in having the matter looked up by the officials, they advised me that the proper course was to introduce a short amending Bill instead of asking for this amendment.

Sir WILFRID LAURIER. My hon. friend is aware that such a Bill at this stage is very irregular. At all events no harm will be done if we read it a second time and send it to the committee, where it can be considered. We can go no further than that to-day.

Mr. PRINGLE. That is all I ask, that it be sent to the committee.

Motion agreed to, and Bill read the first and second times.

QUESTIONS.

INTERCOLONIAL RAILWAY — PICTOU BRANCH.

Mr. STANFIELD asked:

1. When the Pictou branch portion of the Intercolonial Railway was transferred from the Halifax and St. John district to the Sydney and Oxford district, were instructions given that the employees on the Halifax portion of the line would not be affected by its transfer?

2. Have any changes been made that have affected the employees on said portion of the road? If so, at whose solicitation, and why were not the instructions carried out, if any were issued?

3. If these changes were made, what advantage have they been to the line?

4. How much more has it cost the railway monthly since the change, such as paying employees who are taken off their trains before their trip is ended, and also paying them passenger time between Truro and Stellarton?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. The late Hon. Mr. Blair, then minister gave instructions February 28, 1898, as follows: 'The Truro and Stellarton section is to be transferred to the Sydney and Oxford district, on the 1st March, but the same trainmen and enginemen, who have been working that road, are to continue to do so, if they so desire.' The above arrangement, was not satisfactory to the trainmen and enginemen at Stellarton, who requested that the matter be referred to the Brotherhood, which was done, and in March, last, the minister instructed the general manager, as follows:

2. That the Truro men who are at present manning trains on the Stellarton-Oxford district be transferred to that district, and in the event of any of these men not wishing to do so, an equivalent number of men should be transferred from the Truro district with equal rank; and that trains Nos. 17 and 18, from New Glasgow to Halifax, shall belong entirely to the Truro crew. In case of vacancies occurring, these trains shall be manned by Truro men, and that for all future purposes of promotion, the Halifax, Truro district and the Stellarton, Sydney and Oxford district be separated as distinct promotion districts; choice of men affected to be made at the next change of time or within thiry days from date. Crews of trains Nos. 17 and 18, are to be given train home and return at week's end, if business warrants as in the past. These instructions were carried into effect in April last.

3. The department was of the opinion that the changes would be in the interests of the railway.

4. There is nothing to show that it increases the cost of operating the railway.

INTERCOLONIAL RAILWAY—AMQUI STATION.

Mr. MONK—by Mr. Blain—asked:

1. What was the amount voted to defray the cost of construction of the Intercolonial Railway station built at Amqui in 1904?

2. What amount was actually expended in the construction of the said station?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. There was an appropriation of $12,550 for increased accommodation at Amqui, voted in 1904-5; but this appropriation provided for other work in addition to building a station.

2. The amount expended in building the station at Amqui, was $6,460.50.

GOVERNMENT EXPENDITURE FOR COUNTY OF NICOLET.

Mr. TURCOTTE asked:

1. What is the total amount of the grants of public moneys for the county of Nicolet from 1878 to 1896?
2. What is the total amount of the grants of public moneys for the county of Nicolet from 1896 to this day?

Hon. WM. PUGSLEY (Minister of Public Works):

1. $141,667.07.
2. $230,083.72.

NATIONAL TRANSCONTINENTAL RAILWAY—CONTRACT FOR STEEL RAILS.

Mr. BOYCE asked:

1. What quantities of steel rails have been contracted for by the National Transcontinental Railway Commission for use in the construction of any part of the railway between Winnipeg and Moncton, during the year ending June 30, 1908?
2. With what firms or corporations, respectively, have such orders been placed, and at what rates, respectively?
3. What quantity of rails imported from foreign countries for use in the construction of such railway were admitted into Canada free of duty?

Hon. GEO. P. GRAHAM (Minister of Railways and Canals):

1. 130,371 gross tons.
2. With the Dominion Iron and Steel Company, Limited, of Sydney, as follows:

	Per Ton.
Delivery free at Quebec..	$34 00
" "	35 00
" Port Arthur or Fort William..	34 50
" Moncton	35 85
" Edmunston. ..	37 60
" Lévis..	35 00

With the Algoma Steel Company, Limited of Sault Ste. Marie:

	Per ton
Delivery free at Port Arthur or Fort William..	$34 00
Delivery free at Junction T. and N. O. Railway..	40 00

3. None.

FLYING RED ENSIGN ON MERCHANT VESSELS.

Mr. SINCLAIR asked:

1. What is the authority for flying the red ensign with the Canadian coat of arms on the flag on board merchant vessels registered in Canada?
2. Does section 73 of the Merchants' Shipping Act call for the national colours without defacement or modification on all merchant vessels?
3. Is there any official warrant or order varying this rule? If so, when was the same issued?

Mr. GRAHAM.

Hon. L. P. BRODEUR (Minister of Marine and Fisheries):

1. Admiralty warrant, February 2, 1892.
2. Yes, with the exception of ships registered in the Dominions of Canada and New Zealand and the Commonwealth of Australia.
3. Answered by No. 1.

BOUNDARIES OF MANITOBA.

Rt. Hon. Sir WILFRID LAURIER (Prime Minister) moved the following resolution:

Whereas petitions have been presented to the government and to this House from the legislative assembly of Manitoba, praying for an extension of the boundaries of the said province northward and eastward, and for an additional subsidy to the said province in lieu of the ownership of public lands in the territory to be so added,

Be it resolved,

That it is expedient that the prayer of the said petition should be acceded to, and that upon such terms and conditions as may be agreed to by the said legislative assembly and by parliament, the boundaries of Manitoba be extended as follows:

The northern boundary to be the sixtieth parallel of latitude; the western boundary to be the present eastern boundary line of the province of Saskachewan to the said sixtieth parallel; the eastern boundary to be the present eastern boundary as far north as the northeast corner of the province, thence on a straight line to the most eastern point of Island lake, and thence on a straight line to the point where the eighty-ninth meridian of west longitude intersects the shore line of Hudson bay.

And be it further resolved:

That whereas notwithstanding the extension of territory above described, the ungranted lands of the Crown in the territory so to be added to the said province will still continue to be administered by the government of Canada for the purposes of the Dominion; and the said province will not have the public land as a source of revenue.

It is just and equitable to recognize the increased cost of civil government which such extension of territory will occasion to the province, and in view of the premises, to make to the said province an increased allowance by money payment, the amount of which should be the subject of negotiation between the government of Canada and the government of Manitoba.

And be it further resolved:

That, upon the legislature of the province of Ontario consenting thereto, it is expedient to extend the boundaries of the said province, upon such terms and conditions as may be agreed to by the said legislature and by parliament, so as to include all the territory to the north of the said province lying between the extended boundaries of Manitoba above described and the waters of James bay and Hudson bay.

And be it further resolved:

That, upon the legislature of the province of Quebec consenting thereto, it is expedient to extend the boundaries of the said province,

upon such terms and conditions as may be agreed to by the said legislature and by parliament, so as to include all the territory to the north of the said province now known as Ungava, and extending to the waters of James bay and Hudson bay, and the entrance thereto.

He said: The resolutions to which I now call the attention of the House provide for the extension, upon such terms and conditions as may be agreed to by the respective legislatures therein mentioned and by parliament, of the boundaries of Manitoba, Ontario and Quebec, out of that portion of the northern territories which lies north of the same. This extension has been asked for by the legislature and executive of the province of Manitoba, and by the executives of the provinces of Ontario and Quebec. Here the question may be asked, whether it is desirable, or even possible, to create a new province or provinces out of the territory which lies north of the provinces of Quebec, Ontario and Manitoba. Simply to state the question is to suggest the answer. It has never occurred to any one, that out of that territory which extends north from the present frontiers of Manitoba, Ontario and Quebec, it were possible to form anything like a provincial organization. The conditions both of climate and soil preculde the possibility that there can ever be in that section of our country a population of such density as to suggest the desirability of forming a new province. Ungava, which is the largest of these territories, is known to be absolutely barren for agriculture; the same may be said, I think, of the section of country which extends north of the boundary of Ontario. With regard to the section which extends north of the province of Manitoba above Lake Winnipegosis and Lake Manitoba, there is a portion which is known to be reasonably fertile and reasonably fit for agriculture, in the valley of the Saskatchewan but immediately beyond that, it is pretty generally admitted that the country is not fit for agriculture. In every one of these territories there is some possibility of timber and forest production. The resources in minerals are very promising, but like all things of this kind, until they have been actually tested and developed, they are uncertain. Under such circumstances therefore there is only one of two courses to follow. One is to continue to adminster this territory as we are doing at present; and the administration at the present time is practically nil, it simply provides for the administration of justice in case of crime committed, and some cases of a similar character, because there is practically no population in that territory. The other recommendation is to hand over this territory to the provinces which now claim it, and whose geographical form is such that it may be brought within the purview of their provincial and municipal organizations. Of these two courses before the government, the more reasonable, the more practical and the more expedient in the interest of all parties appeared to be that these respective territories should be annexed to the provinces of Manitoba, Ontario and Quebec, so that there might be the usual provincial and municipal administration as their development takes place. This course was contemplated, I may say by the fathers of confederation, because in the British North America Act of 1871, suggested by this parliament and the government of that day and passed by the British parliament, provision was made not only for the creation of new provinces out of the general Dominion territory but also for the extension of the provinces now existing. I call the attention of the House to section 3 of that Act which reads as follows:

> The parliament of Canada may from time to time, with the consent of the legislature of any province of the said Dominion, increase, diminish or otherwise alter the limits of such province, upon such terms and conditions as may be agreed to by the said legislature.

We are therefore to-day just carrying out the intention which was embodied in the Act. The case of Manitoba seems to be particularly pressing. Manitoba has the smallest territory of all the western provinces and it is a matter of public notoriety that there is in Manitoba a sentiment of disappointment, almost akin to irritation, that the province has not been as liberally endowed as the adjacent provinces of Alberta and Saskatchewan which were carved out of territory out of which the boundaries of the province of Manitoba could have been increased. We all sympathize with this sentiment and there is no reason that I can see why this desire for increased territory should not be gratified. There is a more important consideration and that is that at the present time we are taking measures and asking parliament to vote an appropriation for the construction of the Hudson's Bay Railway; that is to say, of a railway which is destined to connect the existing systems of railways on the prairies with Hudson bay. This railway is not so much intended to develop local traffic as to provide an outlet to the sea-board for the ever increasing products of our western provinces. It has therefore been thought advisable, not only advisable but I should say necessary, that immediate steps should be taken to provide for this new territory, municipal and provincial organization since it is probable that following the construction of this railway population must set into that territory and, therefore, the requirements of civilized man should be provided for in the way of administration and otherwise. These are the main reasons which have prompted us to ask parliament to assent to this resolution which I have placed on the table.

In 1905 the province of Manitoba made a strong appeal to this parliament to have its boundaries extended but it seemed to the

government at that time wise and prudent, before acceding to the request, that the adjacent provinces of Ontario and Saskatchewan, which, perhaps, might have also a claim to the territory which was sought by Manitoba, should have an opportunity of being heard. We therefore extended an invitation to the several provinces to meet us and discuss this question. A conference took place in November, 1906, at which all the respective governments that I have just named were represented. The Dominion government was represented by the Prime Minister, the Minister of Justice and the Minister of the Interior; the Ontario government by Mr. Whitney, the premier, Mr. Foy, the Attorney General, and Mr. Matheson, the Provincial Treasurer; the government of Manitoba by Mr. Roblin, the Premier, Mr. Rogers and Mr. Campbell, the Attorney General, and Saskatchewan by Mr. Walter Scott, the Premier, and Mr. Lamont, the Attorney General. The province of Saskatchewan, at that conference, through its representatives, asked to be allotted the territory which extends north-eastward of the provincial boundary to the shores of Hudson bay. After giving due consideration to this claim on the part of the province of Saskatchewan, it seemed to us, that, as between the claim of the province of Saskatchewan and of the province of Manitoba to have the territory which lies north of Manitoba and west of Saskatchewan allotted either one way or the other, the weight of argument was certainly in favour of Manitoba and we could not grant the prayer of Saskatchewan. We therefore had to ignore it. We are prepared to admit the claim of Manitoba to have its boundary extended northward up to the 60th parallel of latitude. But a difficulty arose as between the provinces of Manitoba and Ontario as to the extension of the boundary eastward. The claim of Manitoba was that its territory should be extended eastward, north of the Albany river, that is to say, between the Albany river and Hudson bay, to a meridian line drawn from the confluence of the Mississippi and Ohio rivers. Perhaps some hon. member may ask: Why bring the line of the confluence of the Mississippi and Ohio rivers into this question? The older members of the House will remember that this line was exhumed out of old documents at the time of the controversy between Sir John Macdonald and Sir Oliver Mowatt as to the boundary line between Ontario and Manitoba. It is not necessary to go into that old controversy to-day but let me say at once that if the prayer of Manitoba had been granted and if its boundary had been extended over the northern boundary of Ontario between the Albany river and the waters of Hudson bay as prayed for, the eastern boundary of Manitoba and the western boundary of Ontario in this new territory which is to be allotted would have been brought into the vicinity of the longitude of Fort William, Port Arthur and Lake Nepigon. The government did not think it would be advisable to agree to such a claim as that.

On the other hand, the province of Ontario, represented on that occasion by Mr. Whitney, Colonel Matheson and Mr. Foy, urged that the boundary of Ontario should be the Churchill river, that the boundary of Manitoba should be a continuation of the present boundary of that province northward until it reached the Churchill river and then that the Churchill river should be the boundary between the two provinces. As the two provinces could not agree upon their respective claims it became the duty of the government to give to the matter its very best consideration and to endeavour to arrive at a conclusion which would commend itself to the judgment, not perhaps of both parties, but of all fair minded men. We could not agree to the claim of the province of Ontario that the Churchill river should be made the boundary for one very obvious reason which will, I think, commend itself to all those who do me the honour of listening to me. It is expected that the new railway to Hudson bay will have its terminus at Churchill; in fact, it cannot have its terminus anywhere else. Churchill is known to be the best of the harbours on Hudson bay and perhaps the only harbour. The only rival harbour possibly is the harbour at the mouth of the Nelson river but I understand, although I speak subject to correction, that, as between the two harbours, Churchill is by far the preferable one. At all events, I think it is admitted that the mouth of the Churchill river should be the terminus of the railway. If the terminus of the railway is to be at the mouth of the Churchill river it is reasonable to expect that a town of some proportions must eventually grow up at the mouth of that river, and if you have the two provinces separated by the Churchill river, Manitoba on the one side and Ontario on the other, and a town growing up upon both sides of the river, it is manifest that complications would arise and that the progress of the city might be materially retarded for the necessity of having legislation either from one province or the other. Therefore, it is far preferable, far more convenient and far more suitable in every possible way that the city be either in one province or the other.

Taking all these things into consideration we believed we could not grant the prayer of the province of Ontario to extend its boundary to the Churchill river. After giving the matter the best consideration we could we came to what we think is a fair conclusion and one which will be acceptable to all reasonable men, namely, to fix the boundary of Manitoba from the north-east corner of the province of Manitoba extending it over the height of land between

the water system of the Hayes river and the Nelson river on one side and the water system of the Severn river on the other side. That was the idea which actuated us when we came to approach the subject and to decide upon it. Our first intention was to make the height of land between the Hayes river on the one side and the Severn river on the other, the boundary. But when we came to put this line upon the map we found that serious complications might arise if we were to say ipsissima verba that this height of land should be the boundary because we found that the height of land between the Hayes river and the Severn river did not extend all the way to the shore of Hudson bay but that it was met some distance from the shore by another height of land. The height of land between the Hayes river and the Severn river runs north and south, but at some distance from Hudson bay that height of land is met by another height of land which runs east and west. Therefore, while adhering to the same idea we had to express it otherwise and we determined that the boundary should be a straight line from the northeast corner of the present boundary of Manitoba to the east end of Island lake and thence to a straight line to the point where the eighty-ninth meridian of west longitude intersects the shore line of Hudson bay. This practically adheres to the height of land as the boundary so far as it can be done, but we do not put it in so many words for the reason wherein I have stated.

I am aware that the boundary we have laid down has been disappointing perhaps to both parties. Judging by what I have seen of statements made by the premier of Manitoba he expresses disappointment although I do not believe it would be possible for the government or for parliament to concede in full the claims of Manitoba. I have seen some flaming articles in some newspapers stating that the rights of Ontario have been sacrificed in as much as the two harbours of Churchill and Nelson have been given to Manitoba. Well, Sir, I think the province of Ontario has enough of wealth and of territory and of glory to enable her to willingly concede to the sister province what little advantages there may be in that. Moreover, the traditions of history would seem to indicate that the Churchill and Nelson rivers should belong to Manitoba. They were the avenue of the fur trade in the olden times when the fur trade was all the trade there was, and if we were to take away from Manitoba what advantage there may be in this, I think Manitoba would be entitled to complain on sentimental grounds if not on other grounds. At all events I submit these reasons to the fair consideration of the House and I think they will impress themselves on all those who will give this matter impartial consideration.

Mr. R. L. BORDEN. What will be the respective areas of the provinces ?

Sid WILFRID LAURIER. The new territory which is to be added to Manitoba will be about 180,000 square miles in round numbers. I had a precise calculation made on the basis of the height of land, but it is sufficient to observe the boundary now adopted will give to Manitoba added territory of about 180,000 square miles. The present area of Manitoba is 73,732 square miles and with the area to be added, her total area will be about 253,000 square miles. The territory of Ungava which is added to the province of Quebec is 180,000 square miles (water) and 266,000 square miles (land), or a total of 456,000 square miles. I have not the figures with regard to the province of Ontario, but I believe the added territory is in the neighbourhood of 140,000 square miles.

I have the figures as to the population which may be in the territory now being added to Manitoba. I made no inquiries as to the population of the territory to be added to Ontario or Quebec because I believe it is admitted that in this territory there is no white population. The population of the territory to be added to Manitoba, according to the last census, is as follows :

Memorandum re population of the parts of Northwest territory added to the Province of Manitoba under the resolution of 1908, as shown by the census of 1901.

	Indian and Half-breed.	White	Total.
Parts of the District of Keewatin containing :—

Making a total for the new area added to Manitoba of..	3,644	87	3,731

There is another consideration which must engage the consideration of the government and of the House. We had always understood that the province of Manitoba in making this claim for the extension of her territory was asking for the ungranted

Crown lands, and in fact I remember that at the opening of the session my hon. friend from Marquette (Mr. Roche) reminded me that the province of Manitoba wanted to have, as he pointedly remarked, her lands. But in the petition which has been sent by the legislature of Manitoba to the House during the present session the province has taken an altogether different attitude. In that petition the province asks, not for all the ungranted Crown lands, but for a money allowance in lieu of lands. It must be remembered that in this matter the Dominion is not a free agent. The constitution of the province of Manitoba gives the lands, not to the province, but to the Dominion. The terms under which the province of Manitoba has been admitted into the union are exactly the same in that respect as these under which the provinces of Saskatchewan and Alberta have been admitted. The province of Manitoba therefore asks that it should be given the same treatment as has been given to the provinces of Saskatchewan and Alberta. The claims of Manitoba in this respect are in my estimation somewhat exaggerated. These claims follow :

That supplementary and in addition to the prevailing provisions as to the annual allowance of the province by the Dominion for cost of government, a per capita allowance of 80 cents a head of the population, there be inserted in any Act of the parliament of Canada extending the boundaries of the province as above set forth, the following provisions respecting capital account and in lieu of lands, such provisions in every respect being similar to and identical with those respecting said matters as are contained in certain Acts of the parliament of Canada, passed in the year 1905, creating the new provinces of Saskatchewan and Alberta.

The memorial then goes on to say :

Inasmuch as the province of Manitoba is not in debt, it shall be entitled to be paid and to receive from the government of Canada, by half-yearly payments in advance, an annual sum of four hundred and five thousand three hundred and seventy-five dollars, being the equivalent of interest at the rate of five per cent per annum on the sum of eight million one hundred and seven thousand five hundred dollars.

I may say at once that this claim of the province of Manitoba to be given a certain allowance in lieu of public debt will not strike this House as at all tenable. Manitoba is not a new province. It has been a province now for more than forty years. It has received an allowance on account of public debt, as all the other provinces did when they came into confederation. The House does not perhaps remember at the moment the reason for the allowances on account of debt made to the provinces when they came into confederation. At the time of confederation the debt of the united provinces of Upper and Lower Canada amounted to $67,000,000, and of this amount the Dominion assumed $62,100,000; that of Nova Scotia was $8,000,000 and that of New Brunswick $7,000,000. The Dominion assumed the debts of these two provinces. It was found that the debt per head of the population was larger in the provinces of Upper and Lower Canada than in the provinces of Nova Scotia and New Brunswick; and there was a provision introduced in the British North America Act to this effect :

In case the public debts of Nova Scotia and New Brunswick do not at the union amount to $8,000,000 and $7,000,000 respectively, they shall respectively receive, by half-yearly payments in advance from the government of Canada, interest at five per centum per annum on the difference between the actual amounts of their respected debts and such stipulated amounts.

That is to say, the government of the Dominion having assumed the debts of these four provinces at the amounts stated, it was provided that if they did not correspond to an equal standard, the provinces of Nova Scotia and New Brunswick should receive compensation from the treasury of Canada to bring them to a parity with the other provinces. In 1884 or 1885 another arrangement was made whereby the government of the Dominion assumed the debts of Ontario and Quebec to the amount of $5,000,000 and gave equal treatment to all the other provinces of the Dominion, giving them a special allowance to bring them up to the standard with regard to the allotment of the debt. When the province of Manitoba was taken into the Dominion, that province was given compensation for debt—because it had no debt at that time—similar to what was given to Nova Scotia and New Brunswick. When British Columbia was taken into confederation, the same thing was done with respect to that province. In fact, when any other province was taken into confederation it was given a special allowance in lieu of debt. But I do not think that the province of Manitoba has any claim whatever at the present time in that regard. It is true the public debt is much larger today than it was when Manitoba was admitted to the Dominion, but Manitoba has had the benefit of its share of that debt, which has gone into the construction of public works. So that there is no reason to depart from the arrangement that was made when Manitoba entered confederation. Then the province of Manitoba puts forward another claim in these words :

As an additional allowance in lieu of public lands, there shall be paid by Canada to the province, annually by half-yearly payments in advance, for five years from the time this Act comes into force, to provide for the construction of necessary public buildings, the sum of ninety-three thousand seven hundred and fifty dollars.

In view of the fact that grants were made to the provinces of Saskatchewan and Alberta for public buildings at the time they were taken into confederation, Manitoba asks that it should also be given a special grant for public buildings. I have only to say in answer that Manitoba has received more than once from the Dominion treasury grants for public buildings. But it seems to us that it is not unfair or unreasonable, since we are retaining the control of the Crown lands, that we should do for Manitoba what we have done for Saskatchewan and Alberta—indeed, what we have done for Manitoba herself, because on more than one occasion, as I can show, the Dominion has granted to Manitoba a special allowance in lieu of public lands, because it did not have them as a source of revenue. Therefore we are disposed to think—and we submit and commend it to the House—that Manitoba should receive compensation in lieu of the public lands, but what is to be the amount of this compensation, whether or not we should adopt the basis which was adopted for Saskatchewan and Alberta, is a question which at this time I do not think it would be fitting to discuss. The government simply ask that that matter should be left for negotiation between the Dominion government and the Manitoba government.

I have looked at the claims of Manitoba at the present time. I have my own opinion of them, but I do not think it would be advisable to-day to express this opinion. I think it is preferable to leave the matter at large, so that the negotiations which are to take place between Manitoba and the Dominion should not be prejudiced in any way by any opinion I might express at this moment. We simply declare that we are prepared to meet the province in a fair spirit.

Mr. W. F. MACLEAN. Will the right hon. gentleman say whether the Hudson Bay Company comes into the calculation in any case?

Sir WILFRID LAURIER. The Hudson Bay Company does not come into consideration in this matter; it has nothing whatever to do with it. With regard to the claims of the province of Ontario, they will be found in a sessional paper brought down last year, No. 64a, which gives a full account of the conference that took place here in November, 1906. The province of Ontario asked to have its territory extended to the Churchill river. To this extent we cannot recognize its claim, but we have suggested both to Ontario and Manitoba what seems to us a reasonable settlement for their respective claims. In proposing this resolution, it will be observed that we are not asking for any concrete legislation, we are not asking parliament to be bound fast and hard to any proposition. We simply propose this as a reasonable settlement and basis upon which parliament ought to proceed in increasing the boundaries and territories of the provinces therein mentioned. If the boundary which we have suggested to Manitoba is not acceptable to that province, nothing can come out of it. We are confident, however, that on mature consideration it will be found difficult for either Ontario or Manitoba to suggest a fairer or more reasonable boundary than the one proposed in each case.

Barring this exception, we are prepared to grant the claim of Ontario. We think it is legitimate and perfectly reasonable to that extent, and that it will be conducive to the best administration of that part of the territory we are prepared to give to Ontario, that it should be included at once in that province. One has only to look at the geographical condition, one has only to take a glance at the map, to realize that the territory we are asking parliament to grant resepectively to Manitoba, Ontario and Quebec, geographically forms part of each of these provinces.

With regard to the province of Quebec, the claim is a new one. It has not been brought to the attention of the House before. It has been brought to the attention of the government by a memorial from the executive council of that province, which I shall lay on the table. This is dated 9th November, 1907:

In submitting to the House of Commons the Act to establish the provinces of Alberta and Saskatchewan, the Prime Minister of Canada declared as follows:

'Manitoba has asked to have her territory extended to the shores of Hudson bay; and this is a prayer which seems to me to be entitled to a fair hearing. The province of Manitoba is not, however, the only one whose territory could be extended towards Hudson bay. The province of Ontario would have the same right; the province of Quebec would also have that right; and the new province of Saskatchewan also.'

The governments of the provinces of Ontario, Manitoba and Saskatchewan are pressing on the Dominion government their respective claims for a share of the territory of Keewatin and of the shore of Hudson bay, and the government of this province submits that it has no desire to share in such partition, and will agree to what may be decided on this matter by the government of Canada.

On the other hand the government of the province of Quebec is entitled to a portion of the shore of Hudson bay, and supports its claim thereto by the following facts:

The country lying beyond the northern boundary of Quebec forms geographically part of the territory of this province. The country in question is wholly isolated from all other parts of Canada, being separated from them by a wide expanse of sea, and offering to other provinces than Quebec neither advantage nor interest.

For the province of Quebec the annexation

of this undeveloped region is necessary, with a view to the protection of the timber, fish and game, over a considerable extent of the actual territory of the province.

The natives who occupy this region in coming south to hunt in the province of Quebec are the occasion of the most disastrous forest fires, as has been shown by Dr. A. P. Low, of the Geological Survey, and other explorers. Having caused this havoc they return to their own region, where they are beyond reach of the regulations made by the government of Quebec for the protection of its timber.

It is precisely the same with regard to the preservation of fish and game.

It is obvious that in view of its geographical position the region in question has everything to gain in becoming a portion of the province of Quebec. The government of this province is in fact better situated than that at Ottawa for administering and developing the natural resources which this district may contain. So far as the government of Quebec is concerned, the work of protecting and administering the territory would be but an extension of the system now existing immediately to the south, while in the case of the Dominion government it would be necessary to organize a special system which could have no important results save at relatively heavy expenditure.

Moreover, the enlargement of its boundaries can be claimed by the province of Quebec as compensation for advantages given the provinces of Ontario, Manitoba and Saskatchewan by the extension of their respective territories to the western shore of Hudson bay.

For these reasons it is deemed proper to request the Dominion government to annex to the present territory of the province of Quebec all that country to the north of the northern boundary of this province and extending to the Hudson straits lying between the bay of that name and the Atlantic ocean, and including the skirt of land which is supposed to belong to Newfoundland extending along the shore of the ocean, and, on the western side, the archipelago and islands adjacent to the mainland, as well as the following islands and groups of islands: Ottawa, Sleepers, Baker's Dozen, Belchers, North Belchers, King George, Mansfield, Charles, all the islands of Ungava bay and the Button islands.

I am aware that if this territory is added to the province of Quebec, that province will be by far the largest of the Dominion. The Ungava district, land and water, contains no less than 456,000 square miles.

Mr. W. F. MACLEAN. Does that include the islands which the province of Quebec ask for in that memorial?

Sir WILFRID LAURIER. No, it does not. If the territory of Ungava, which includes 456,000 square miles, were of the same character as to soil and climate as the valley of the St. Lawrence, we would not ask to have it added to the province of Quebec, but would make it another province. The conditions, however, are such that it is not possible to expect any large influx of population into that country. In fact, we cannot expect any influx of population there at all unless there should be the discovery of very large mineral deposits. Ungava has been known to civilized man for more than three hundred years. The French explorers knew it and explored it; French missionaries visited it, but no settlement has taken place, and there are no white people there except a few traders and hunters and trappers connected with the Hudson Bay Company and with a new rival to that company—the Revillion Company. Outside the traders, hunters and trappers, I am not aware that there are any civilized men in Ungava. No development of any kind has taken place in that territory. Recent explorers assert that its climate and conditions are such as not to invite civilized settlement unless there should be discoveries of minerals. Under the circumstances, it seems to me that the prayer of the people of the province of Quebec, that this territory should be added to that province, is not unreasonable. I am aware that some nervousness has been expressed more than once on the floor of this House regarding any extension of territory to the province of Quebec, because that province is the pivot on which representation must take place. In 1896, by one of the last Acts of the late government, one, however, that we fully endorsed and carried out, the boundaries of the province of Quebec northwards were readjusted. and by this readjustment it is asserted that an addition was made to that province of 118,000 square miles.

I have heard this referred to more than once on the floor of this House as being an invasion of the rights of the other provinces on the ground that probably it might have an effect on the distribution of the right of representation of the provinces. The point would have been taken with some degree of reasonableness if there had been any possibility at that moment—as there was not—of there being a population in that territory. But I am free to say, and everybody knows—it is a matter of general notoriety—that in the 118,000 square miles which are said to have been added in 1896 to the territory of Quebec, there is not one single voter, indeed not one single white man. And, in the new territory to be added to Quebec, under these resolutions, there is nothing of that kind to be expected. If the territory were of such a nature that it was reasonable to expect that there would be an influx of population there, the doubts which have been expressed more than once on the floor of this House as to the effect of this annexation would have to be considered. However, such as they are, I do not suggest that they should be minimized or ignored. I think it is a fair consideration to be brought to the attention of the Quebec legislature this nervousness expressed in some quarters, especially in the maritime provinces, that, possibly, the change

of conditions may have an effect upon representation.

Mr. FOSTER. In making his calculation of 456,000 square miles territory of Ungava to be added to Quebec, has the right hon. Prime Minister taken into consideration the Newfoundland strip? If so, how has he got at the calculation of area?

Sir WILFRID LAURIER. I have taken the calculations as I understand them to be made by the statistician. The strip of Newfoundland is not taken into consideration. No human being can say to-day where the boundary line is between Newfoundland and Canada. The matter is very much involved. It is now to be referred to arbitration, an agreement with the government of Newfoundland having been reached to that effect. If I remember well, it is to be left to the arbitration of the Privy Council. But I have read the memorial of the province of Newfoundland upon that and also the views presented by the province of Quebec; and their views are so much at variance that I would not presume to give an opinion. At all events, I do not know whether this includes the strip of land of the Labrador coast. I cannot say as to that.

Mr. FOSTER. Is there not a danger of complicating the matter if you give a definite territory out of Ungava to the province of Quebec and do not know the amount of territory that Newfoundland may ultimately be adjudged to own?

Sir WILFRID LAURIER. That difficulty will no more arise now than a similar difficulty arose in 1881, when the boundaries of Manitoba were extended to the frontier of Ontario. This is a matter that is to be settled by judicial authority. But whether the territory continues to belong to Canada or is given to Quebec, at the present moment it does belong to Canada. We have taken the precaution to ask the province of Quebec to be a party to that arbitration, because it is interested in the boundary wherever it may ultimately be decided to be. In 1881, when the Act was passed extending the boundary of Manitoba to the frontier of Ontario, the contest was removed from Canada to Ontario and Manitoba—they were the parties who fought the issue. In the same way, if we allow this territory to go to Quebec, Quebec will become interested in the question. Then, though we retain our sovereignty, I think they should have a say and become a party to the question.

Mr. E. N. LEWIS (West Huron). In arranging all these matters, are precautions being taken to safeguard the immense forests there and, to that end, to establish forest reserves such as will be necessary for the future of the country, following the lead of the United States where immense sums of public money are now being spent in forest reserves?

Sir WILFRID LAURIER. One of the reasons why Quebec has asked for this territory is because that province is in a better position to take care of the forests than we are. They can follow trespassers and otherwise enforce regulations. This extension is advocated as one of the methods of preserving the forest, and that is one of the arguments put forward by Quebec.

Mr. LEWIS. Why not federal forest reserves?

Sir WILFRID LAURIER. That is another consideration. But it is not germane to the case I have now in hand. As I have said, this preservation of the forests is one of the points made by Quebec in favour of placing this territory within its jurisdiction. I think that it is admitted that at the present time the province of Quebec and the province of Ontario are taking reasonable precautions for the protection of their forest —not as much as they should do, I believe, but they are advancing in this respect and constantly improving their methods. Returning to the point with which I was dealing, the effect of this annexation of territory upon representation, I must say that I sympathize with that view of the question; it is a view that must not be forgotten. But, for my part, I cannot see that any immediate, or even future, danger is threatened. It has never been contemplated, and cannot be seriously contemplated, that there will be any great influx of population into that territory. But, even should there be an influx of population, it will be time to consider the question and see what safeguards should be adopted in order to preserve the balance of representation. More than that, I intend, for my part, when the matter is referred to the government of Quebec to draw the attention of that government to the objections which have been advanced more than once on the floor of this House against the increase of the territory of Quebec on this ground. I have reason to believe that these objections will be given a fair hearing and full consideration.

Mr. R. L. BORDEN (Carleton). I have very little to say on this occasion. The difficult part of the question which has been presented to the House is left entirely open by the remarks of the Prime Minister this morning. I do not understand that the resolution which has been proposed is to be the basis of any Act to be passed this session; it is merely a resolution which defines the boundaries and leaves everything else absolutely open. I observe that that is the view taken of it—apparently an inspired

view—by representatives of the government press, as the following will show:

With regard to the request of Manitoba for an additional federal subsidy in lieu of the ownership of public lands in the territory to be added, as in the cases of Saskatchewan and Alberta, the resolution provides that this question should be dealt with later, on terms to be mutually agreed upon by the provincial legislature and the federal parliament. The question of the provision for separate schools in the new territory is also left over, and the contentious details in this respect will be one of the big problems of the next session of parliament. The actual extension of the boundaries is thus postponed till next year, but the resolution paves the way, in so far as it determines the actual territory to be added to each province.

I thought it worth while to place before the House this expression of opinion which I find in the Manitoba 'Free Press' and the Toronto 'Globe' as to the motives which have influenced the government in merely bringing down the suggestion of boundaries and leaving the terms and conditions absolutely open for negotiations between the federal and provincial governments. We were promised in the speech from the Throne that legislation would be passed this session on the subject. That legislation, apparently, is not to be passed. That is due to one of two causes, either the government has not come to a conclusion as to the terms and conditions upon which it is willing to make the extension of the boundaries of the provinces, or it has come to a conclusion which it does not think expedient now to announce to the House.

So far as the lands and forests in the northern country are concerned, the Prime Minister appears to consider that the province of Quebec, or the province of Ontario, would be better able to deal with them than the federal government. I do not understand why a principle of that kind, applied to the provinces of Ontario and Quebec, would not be equally applicable to the provinces of Manitoba, Saskatchewan and Alberta.

With respect to the strip adjoining Newfoundland, there is very little information before the House to enable us to form any opinion. One would suppose that when it is necessary to have the assent of the Governor General and precise information upon going into Committee of the Whole upon a matter dealing with half a million acres of land, it would be equally necessary, and certainly quite as desirable in this case, to have laid uopn the table of the House some map so that we could intelligently comprehend exactly the extension of the areas which is being proposed. The mere enumeration of those boundaries in the resolution of the Prime Minister gives us very little information indeed. Nevertheless, the House is asked to go into Committee of the Whole without having any map placed upon the table and without anything more than the very general statement made by the Prime Minister as to the disposition of a territory amounting in all, I suppose, to a million square miles. It may be that this matter will be open at another session. Properly speaking, I suppose the House will be bound by the terms of the resolution which we are asked to pass to-day. If that is the intention, I desire to say, in the first place that we have not enough information before the House to enable us to consider it intelligently; and in the next place, I think it would be proper that we should have gone into Committee of the Whole for the purpose of that debate, which cannot be obtained in a discussion on such as is proposed to-day.

With respect to the Newfoundland strip, it would have been wise to consider the possible entrance of the colony of Newfoundland into this confederation, and it might have been well to consider whether some portion of the territory which is proposed to be added to the province of Quebec should not be reserved for that eventuality, and whether some part of that territory at least could not be better administered by the colony of Newfoundland as a province of this confederation than it could be administered by the province of Quebec. In saying that, of course, I would have regard simply to the convenience and efficiency of administration. If it can be better administered by the province of Quebec, then it is eminently proper that it should be added to the province of Quebec; if, on the other hand, it could be more effectively and conveniently administered by the island of Newfoundland as a province of this confederation, it would be better to have it administered in that way. The Prime Minister has given us no information on that subject, nor has he apparently taken into consideration the possibility, and indeed the hope, that the island of Newfoundland may at no very distant day become one of the provinces of this confederation, and in that way round out into one great Dominion all the British possessions in the northern part of this continent. I have nothing further to say with regard to the resolution to-day, except again to express the regret that it has not been brought down earlier, that the government was not in a position to deal with the whole matter at the present moment, and that all the questions which have been alluded to in the comments of the government press are not brought before the House for its information and for determination at this session, as was proposed in the speech from the Throne.

Hon. DAVID TISDALE (Norfolk). I wish to say just a word in expression of my own views on this resolution. I do not think there is any present necessity for the disposition of the 400,000 square miles as proposed in this resolution, especially in view of my very strong desire to see the colony of Newfoundland enter this confed-

eration. I cannot concur in the view that this Dominion is not capable, and is not prepared to incur the expense, of looking after the timber and other natural resources in that vast territory, at least until we know something more about it than what is before the House.

Mr. G. W. FOWLER (King's, N.B.). I cannot allow this resolution to pass without raising my voice in protest, as representing a constituency in the maritime provinces, against this very large addition of territory to the province of Quebec. Quebec, as we know, forms the unit of representation, and if an addition is made to the territory of the province of Quebec it will no doubt have an effect upon the representation from the other provinces. In the provinces of New Brunswick, Nova Scotia and Prince Edward Island we have suffered with respect to this matter already. It is impossible for us, owing to our geographical position, to have any territory added to our provinces, while the other provinces, these large western provinces, are getting additional accessions of territory. Of course this view of the question is not so important to the other provinces as it is to the lower provinces. If a provision were made that the maritime provinces should have restored to them the same representation that they had at the time they entered confederation, I would be satisfied to see an addition of territory made to these other provinces. But as it is, I must protest as a member from the maritime provinces, against any addition to the territory of Quebec unless provision is made to restore to the maritime provinces the representation which they had when they entered confederation.

Hon. W. S. FIELDING (Minister of Finance). I think it would not be well to assume that this addition to the territory of the province of Quebec will necessarily place the maritime provinces at any disadvantage. There is a question in regard to that matter which I take it for granted is still at large. When the moment comes for dealing with this matter more definitely, and in a legislative form, that question should certainly be considered. We in the maritime provinces, cannot get any addition to our territory, as my hon. friend has well said. The difficulty then that occurs to the people of the maritime provinces is this: The population of Quebec establishes the unit of representation for the whole Dominion. Now if there should be a large increase of population in the new territory of Ungava, and that population were included in the population of the province of Quebec in establishing the unit of representation, that unit would necessarily become much larger, and that unit, applied to the small provinces, might lead to a further diminution of their representation that would be regarded as a very serious matter. That is a difficult point to deal with. I do not wish to do more to-day than to say that I regard that as an open question. One way in which I hope it might be dealt with would be that the unit should be established upon the basis of the population of Quebec as it now exists, and that for any additional population that might come from this territory of Ungava, Quebec should receive additional representation, in other words, it would lead to some enlargement of the total representation. But even though the maritime provinces would still have their proportion, if the effect of that enlarged territory of Quebec would be that they suffered a further dimunition in their representation, even though mathematically you might say they still retained their proportion, I think it would undoubtedly lead to much dissatisfaction and discontent.

Mr. R. L. BORDEN. I do not exactly understand the hon. gentleman's proposal. How would you deal in that case with the additional population within the present area of the province of Quebec, because you could not allow that to go unrepresented?

Mr. FIELDING. Whatever the population is within the present area of Quebec, would of course be the basis establishing the unit for the whole Dominion. It was contended by the representatives from the maritime provinces, when this question came up at an earlier period, that the province of Quebec had already received an enlargement of its territory. The answer to that was that there was no enlargement, but merely a definition of a territory previously established.

Mr. R. L. BORDEN. I think I misunderstood the hon. gentleman. He said the present population of the province of Quebec. He meant, I presume, the population within the present area of the province of Quebec.

Mr. FIELDING. Quite so. If I said that I did not correctly express what was in my mind. I mean the population of Quebec as it might be from time to time within the territorial limits of the province as now established, and that would necessarily involve that for the population coming into that new territory Quebec would have to have additional representation; so that she would never lose the proportion as it now stands. Hon. gentlemen will see that if the population of Quebec were to increase very largely throughout this augmentation of territory, and if the unit of representation were thus made larger, and if the population of the maritime provinces increased but little, the effect would be that while mathematically we would still have that proportion which the constitution establishes, it might be that the maritime provinces would suffer some further diminution of representation. Take the case of Prince Ed-

ward Island, formerly its representation was six, now it is four and if you should have to reduce it to three or two it would be small comfort for the good people of Prince Edward Island to be told that by the law of mathematics they still had their same proportion. I think that it would be the more obvious and reasonable course for the government to defer action in order that all parties may be consulted to see if they would consent to such an arrangement. I throw this out, as my own idea, as a possible means of a solution of what might otherwise be a rather embarrassing question.

Mr. J. W. DANIEL (St. John City). I think it would be better, rather than to wait until a difficulty like that referred to arises, to make provision so that it will not arise. This matter is a very important one, especially, as has been stated, to the people of the maritime provinces. We have already lost representatives for the reason that the original charter of confederation has been broken by subsequent Acts of the imperial parliament at the request of this parliament. Now, we are told that we should wait to see if we are to lose any more. The right hon. Prime Minister (Sir Wilfrid Laurier) says that there will be no population in Ungava and those portions of the territory that it is proposed to add to the province of Quebec. The Prime Minister is hardly in a position to make that statement. It has been stated by some, in regard to the last addition made to the province of Quebec, that the population would not be affected, that it was a sterile country. We have had others say that this was by no means a sterile country, that it was a country capable of maintaining a large population. If the country that was last added to Quebec is not of that character, what possible excuse is there for this country going to the expense of building the new Transcontinental Railway through it? We are building an immense railway, an expensive railway through this country which is stated to be sterile and not capable of maintaining a large population. One or the other must be wrong; either the statement that it is incapable of maintaining a large population must be wrong, or else it is extremely wrong and criminal indeed to build a railway which has nothing more before it than that. I have already, on one or two occasions, spoken on this subject and I do not wish to go into it again. The Minister of Finance (Mr. Fielding) stated, in his speech just now, that the boundaries of Quebec were not enlarged, that they were simply adjusted. I call his attention to the fact that the hon. Minister of Justice (Mr. Aylesworth), in his speech last session, allowed that when the Confederation Act was passed the boundaries of Quebec were understood to be those that the maps of the period and the departmental publications of this government such as the census, gave. The census gave the area and the maps gave the delimitation of the boundaries of Quebec at that time. I do not think the Minister of Finance or anyone else is justified in making the statement that the province of Quebec was not enlarged at the time the boundaries were changed in 1898. As a representative from the maritime provinces I certainly protest against any addition to the area of the province of Quebec unless satisfactory arrangements are made to qualify the effect on the provinces that are affected thereby and more particularly the maritime provinces. I do that as a duty and also because the Minister of Justice at the last session stated that the maritime provinces must have been quite satisfied with what went on when the subsequent changes were made in the British North America Act or they would have protested against them. New Brunswick protested at the time Saskatchewan and Alberta were brought in. No heed was paid to its protest and I take this opportunity of protesting again. Whether heed will be paid to our protest I do not know, but it is our duty to make it. I do not think it is right, equitable, or just that the maritime provinces should be robbed of their representation by changes in the charter to which they gave their consent and by changes which have been made without their consent and without their having been consulted.

Mr. O. S. CROCKET (York, N.B.). Mr. Speaker, I did not think that after all the discussion that has taken place in this House on the question of the representation of the maritime provinces the right hon. Prime Minister (Sir Wilfrid Laurier) would have ventured to propose a further extension of the boundaries of the province of Quebec without so much as suggesting that the wrong which was entailed upon the maritime provinces by the last extension should be first righted. It is not necessary for me, in view of what has been said by my hon. friend for Kings and Albert (Mr. Fowler) and my hon. friend from St. John (Mr. Daniel) and at any rate there is no time at this stage of the session to speak at length upon the subject. It is well understood by all hon. members of this House that Quebec is the pivotal province by which the representation of the maritime and all other provinces of Canada is fixed and that if the population of the province of Quebec is increased by the addition of any territory the representation of the maritime provinces is correspondingly reduced. I do not think that I can put the case very much more stronger than it was put in the words of the hon. Minister of Public Works (Mr. Pugsley) when he was discussing in the New Brunswick legislature, in the session of 1905, the injustice

which was done to New Brunswick by the extension of the boundaries of Quebec in 1898. At page 33 of the Debates of the Legislative Assembly of New Brunswick in 1905 we have these words as spoken by the Minister of Public Works who was then the attorney general of New Brunswick :

The boundary line of Quebec was well recognized, and is laid down in Arrowsmith's map, published in 1815. It is referred to in the work of Bouchette, the surveyor general of Lower Canada, which was published in 1832. This is a book of the very highest authority, and it shows that the northern boundary of Quebec was long recognized to be the height of land which divided the waters flowing into the St. Lawrence from those into Hudson bay. Now, it must have made a very great difference in the willingness of the people of New Brunswick to join the confederation if Quebec had then been as large as it is now. I submit that when our people entered into the union, they agreed to go into the confederation with Quebec as it was, and that the boundaries of that province ought not to have been altered without our being consulted and our interests safeguarded.

As already stated by the Premier the Imperial Act of 1871 provided that when the area of a province was extended the rights of the other provinces should be properly guarded. Yet, in 1896, without this legislature being consulted, the late Dominion government agreed with Quebec to extend that province to Hudson bay thus adding to it a territory which will soon be traversed by the Grand Trunk Pacific and which in time will become populous. The Bill to carry out this agreement was introduced on the 2nd of June, 1898, by Mr. Sifton. It was introduced in blank and treated as a mere formal matter. On the 8th of June, it was read a second time and passed. So far as the records of parliament show, there was no debate whatever on the subject, and this large area was added to Quebec without the maritime provinces being consulted. It does seem to me that in view of the legislation, which has already taken place so seriously affecting our interests, and in view of what is now being done in connection with the legislation for the Northwest Territories, this government is but doing its duty in asking the legislature to express its views and to endeavour to undo this great wrong.

At the conclusion of that debate a resolution was passed by the legislature of New Brunswick unanimously affirming that a great injustice had been committed against the province of New Brunswick by reducing its representation. As the representative of one of the constituencies in that province I cordially join in the protest already made against any further extension of the territory of the province of Quebec unless there be a distinct understanding that the rights of the maritime provinces with respect to their representation in this House shall first be safeguarded. It would only be upon such an understanding that I as one member of this House would assent to the terms of the resolution now before us.

Mr. A. MARTIN (Queens, P.E.I.). As a representative of the province of Prince Edward Island I also desire to raise my voice against this legislation. I agree most heartily with what has been said by the members from New Brunswick. The province of Quebec at present is the size of a pretty large kingdom. Some years ago more than half its original area was added to that province, and by this proposal another kingdom in extent is to be given it. To whom do these lands belong that we so cheerfully give away? What right has this government or any government to alienate the property of Canada and give it to any province without a consideration in return? This is part of the Hudson Bay Company's territory ; it was bought and paid for by the people of Canada generally ; paid for by New Brunswick and Nova Scotia and Prince Edward Island as well as the other provinces. What right has this parliament to hand over this territory unless we get something in return for it to recoup the public treasury the amount which these lands cost the people of Canada? Years ago two millions of money was borrowed to acquire these lands and adding interest they stand to-day as costing us $10,000,000 if not more. This is the land you are giving to these provinces for nothing. Ontario some years ago got a very large increase in its territory. I do not know that I would raise my voice against adding to the territory of Manitoba, because her area as compared with the other provinces in the west is so small that she has been dubbed the postage stamp province. I do not know that the maritime provinces would raise any objection to increasing the area of Manitoba, but I protest strongly against the public domain being given away to the other provinces without some quid pro quo to the maritime provinces which cannot have their areas extended. Look at the preponderating influence over the smaller provinces which this extension of area will give to the larger provinces in this parliament. We saw how that resulted about a year ago when the subsidy question was brought before the House. So much did the large provinces receive under that Subsidy Act that although Quebec came here saying she was in debt and she wanted money to tide her over her difficulties, she has now a million dollars surplus. Nova Scotia, New Brunswick and Prince Edward Island got a mere trifle under that Subsidy Act, and now you come to parliament and you propose to give those larger provinces the public domain without any compensation. The Prime Minister told us that this territory would not be settled for years to come, but we do not know the value of these lands. There may be millions and millions of acres of mineral lands worth incalculable wealth there. Before the House proceeds in this we should know exactly what we are giving away and how much

of the wealth of the country we are divesting ourselves of. The question of representation in the maritime provinces as bearing on the increased territory is also a great hardship to us. I tell the government that if they want to adhere to the terms of confederation and to maintain Quebec as the pivotal province on which representation is based the proper thing to do in arriving at the basis of representation is to take the province of Quebec as it stood at confederation. I think the Prime Minister will agree with me that that would be a fair proposition. We came into confederation on the understanding that the basis of representation would be on Quebec as it then stood and not on the population you would give to Quebec by adding thousands of square miles of territory. After what has been said here to-day the government should hold their hand; find out what these lands are worth and find out what we should get in return for these lands for which the whole Dominion of Canada paid. Is it right that this territory should be thrown away without our knowing what its value is?

Mr. FOSTER. Can the Prime Minister now state the area that will be added to the province of Ontario?

Sir WILFRID LAURIER. I cannot find it in my notes, but I am pretty sure it is about 140,000 square miles.

Hon. WM. PUGSLEY (Minister of Public Works). Mr. Speaker, I deem it my duty to make a few remarks to the House in consequence of my hon. friend the member for York, N.B. (Mr. Crocket) having quoted some remarks which I made while I was a member of the legislature and of the government of New Brunswick. I stated at that time, that in my opinion the boundaries of the province of Quebec had been enlarged pursuant to the provisions of the statute of 1871. I think there can be no doubt whatever that the northern boundary of the province of Quebec at the time of confederation was the height of land separating the waters which flowed into the St. Lawrence from the waters which flowed into Hudson bay. That is very clear from the treaty which was made between Great Britain and France. Under that treaty the land which was watered by the rivers flowing into Hudson bay remained under the jurisdiction of the Hudson Bay Company, while the land which was watered by the rivers flowing towards the St. Lawrence was given over to France. There can be no doubt whatever that the boundary line was the height of land. If I am correct in that, as I think I clearly established before the New Brunswick legislature, there is, to my mind, no question but that the territory which was defined as belonging to the province of Quebec in 1896 was new territory, and that therefore the boundaries of Quebec were enlarged beyond what they were at the time of confederation. I argued then, and I maintain now—as, of course, my own individual opinion—that in fixing the number of representatives at 65 from the province of Quebec, the province was taken as it existed at the time of the union. I had to do with the carrying of the question of representation to the Judicial Committee of the Privy Council; but I may say that New Brunswick did not lose its representation by reason of any question which arose with regard to the added territory. There was no such population in the added territory as would alter the representation, but we lost by reason of the addition to Canada of the new territory which is now the provinces of Manitoba, Saskatchewan and Alberta. It was the rapidly increasing population of those sections of the Dominion which prevented the province of New Brunswick from retaining the representation which it had at the then last preceding census.

Having made these remarks, Mr. Speaker, I desire to say that, as I understand it, there is nothing in the resolution now before the House which in any way commits the House upon the question of representation. The terms upon which the boundaries of Quebec shall be enlarged are left open, to be taken up between the government of Canada and the government of Quebec. My right hon. friend the Prime Minister has stated that this government will feel it to be its duty to make a representation to the government of the province of Quebec on the subject of representation.

Mr. CROCKET. Might I ask the hon. minister a question? Are not the terms stated to be such terms as may be agreed upon by this parliament and the legislature of Quebec?

Mr. PUGSLEY. Quite so.

Mr. CROCKET. There is no provision for safeguarding the interests of other provinces affected. I would like also to call the minister's attention to and get his opinion upon section 3 of the Act of 1871, which says:

> The parliament of Canada may from time to time, with the consent of the legislature of any province of the said Dominion, increase, diminish or otherwise alter the limits of such province upon such terms and conditions as may be agreed to by the said legislature, and may, with the like consent, make provision respecting the effect and operation of any such increase or diminution or alteration of territory in relation to any province affected thereby.

It seems to me that there should be some provision made in this resolution with respect to that; because, if this resolution passes, it will be declared as the opinion of this parliament that it is expedient to ex-

tend the boundaries of the province of Quebec upon such terms and conditions as may be agreed to by the legislature of Quebec without reference to the other provinces.

Mr. PUGSLEY. My hon. friend must see that it is upon terms and conditions to be agreed upon by the legislature and by this parliament. Therefore, it will be quite open to this parliament to say to the legislature of Quebec: We will agree to extend the boundaries, but upon the condition that the old province of Quebec shall be the pivot of representation, and that, with regard to the added territory, it shall stand exactly in the same position as the other provinces.

Mr. LENNOX. But New Brunswick would have no say except as represented by this parliament.

Mr. PUGSLEY. And if I understood for a moment that this parliament was committing itself in any way on the question of representation, I would hesitate before being a party to the measure before the House. But I understand that it is entirely open to this parliament to safeguard the interests of the other provinces with respect to representation. My own opinion is that it would be a proper and generous thing on the part of parliament and the larger provinces to agree that the representation of the smaller provinces should be restored——

Mr. DANIEL. Would the minister allow me a question? He said that there was nothing in this measure to affect the representation. I would like him to say whether, in his opinion, it is possible to increase the area of the province of Quebec without affecting the representation of every province in the Dominion?

Mr. PUGSLEY. Does not my hon. friend see that all this resolution does is simply to commit parliament to an expression of an opinion as to what would be the proper boundaries of the different provinces? It does not in any way determine the terms and conditions upon which the boundaries are to be enlarged. It expressly provides:

That, upon the legislature of the province of Quebec consenting thereto, it is expedient to extend the boundaries of the said province, upon such terms and conditions as may be agreed to by the said legislature and by parliament.

Mr. CROCKET. And without any stipulation with respect to its effect upon the representation of the other provinces.

Mr. PUGSLEY. It seems to me that my hon. friend does not wish to understand the meaning of this clause. It expressly reserves to parliament the right to stipulate as to the terms and conditions upon which the boundaries shall be enlarged. I was going to say, speaking for myself individually, and as a representative of the maritime provinces, that I would hope that when these boundaries are extended, and when this proposition is crystallized by an Act of parliament, the larger provinces, including the province of Quebec, would be generous enough to agree that the representation of the smaller provinces shall be restored to what it was at the time of confederation.

Mr. HAGGART. Would you have power to do that without an alteration of the Imperial Act?

Mr. PUGSLEY. It is very clear that the British North America Act will have to be altered; but I presume that an expression of opinion from the various provinces through their legislatures, and the consent thereto by this parliament, would be all that would be necessary in order to have the imperial parliament make such an alteration. But of course that is only my individual view, which I put forward as a representative of one of the maritime provinces. But failing that, I would feel, while not pretending to any great knowledge of constitutional law, even if there were no provision made with regard to representation, that when we come to interpret the law—and that would arise when the next census was taken and the question of representation would again come up—Quebec, for the purposes of representation, would mean Quebec as it existed at the time of confederation. If Newfoundland were to come into the confederation as a part of the province of Quebec, how absurd it would be to contend that Quebec would then mean the added territory of Newfoundland.

Mr. LENNOX. Has it not been so decided?

Mr. PUGSLEY. No, it has not been so decided. All that was decided in the representation case to which I have just referred was that under the terms of the British North America Act it was contemplated that Rupert's Land should be brought into the confederation, and that the word Canada, whenever we came to interpret its meaning, would be Canada as it might exist from time to time. But that is a very different question from the question of what would be the province of Quebec for the purposes of representation. Apart altogether from the legal view, I would hope that if the representation of the smaller provinces might not be restored when we come to consider definitely the terms of the extension of boundaries, it would be provided, so that there would be no doubt about it, that for the purposes of representation the province of Quebec should mean that province, as it existed at the time of confederation, and that the added portion of the province should have its

additional representation based upon population just the same as in the case of the other provinces.

At one o'clock, House took recess.

House resumed at three o'clock.

Mr. W. J. ROCHE (Marquette). At this late stage of the session I do not propose to claim the attention of the House, even on so important a resolution as this, for more than a few minutes. I think the government are certainly deserving of serious condemnation for their procrastination in bringing down even this resolution—to say nothing of the Bill that was promised—not only in the dying days of the session but in its very dying hours. When we look at the speech from the Throne delivered last November and see that amongst the Bills promised to be brought down this session is one for the extension of the boundaries of Manitoba, and yet we find that far on in the eighth month of the season, the Bill is not introduced but we have only a resolution declaring that certain boundaries shall be carried into effect. I think I put it mildly when I say that such procrastination on the part of the government in so important a matter is certainly deserving of censure. I do not think that the excuse given, or the reason assigned by the government, that the legislature of Manitoba, had, at its last session, varied its demands to a certain extent in regard to these boundaries is one that will appeal to the members of this House, or to the country, as being sufficient to justify this procrastination. We must take into consideration the fact that the latest memorial of the legislature of Manitoba I had the honour to present four or five months ago. And surely in that time, on a matter which, no doubt, has engaged the serious attention of the government in the past, there was no reason to postpone action until the very last week of the session. I desire to give briefly the historical facts of this boundary question: Successive legislatures of Manitoba have dealt with this matter, and always in a non-partisan and non-political way, so that resolutions passed relating to the boundaries of the province of Manitoba have been, almost without exception, passed unanimously. Manitoba entered confederation in 1870, with an estimated population of 17,000 and having at that time an area of 13,500 square miles. It is true that we had some addition to our western boundaries which increased our territory to 73,700 square miles, a large proportion of which is water. That area was afterwards enlarged in the manner that I shall advert to in a few moments. The first resolution passed in the legislature of Manitoba, subsequent to confederation asking for an extension of boundaries was passed in 1873, and an Act received the assent of the Lieutenant Governor in 1873 praying for the further extension of our boundaries. So far as relates to the eastern territory, it asks practically the same amount of territory as in the recent resolution passed by the legislature and presented in the form of a memorial to this parliament. This request of 1873, had it been carried into effect, would have given us a port on Hudson bay and also a port on Lake Superior. So far as I can judge, the people west of the great lakes are, territorially in sympathy with and are united in interest with, the west. I believe that the people, in their ideas, are decidedly western. I had the honour to address a meeting in the city of Port Arthur four years ago and nothing that I said seemed to meet more the approbation of the electors than the declaration of my opinion that that part of the country, now in Ontario, was essentially western country and should have been left to the province of Manitoba. And I believe the feeling of the people thus indicated has not changed to the present day. The request of the legislature of Manitoba, if granted, would have given the province of Manitoba an area of 279,000 square miles. The second resolution passed by the legislature asking for an extension of boundaries was passed on April 26, 1875, and practically endorsed the resolution of two years previous. Then, on February 13, 1880, Mr. Greenway, leader of the opposition in the legislature, moved that a memorial be presented to the Dominion parliament asking for the extension of Manitoba's boundaries and that a deputation should proceed to Ottawa to lay the case of Manitoba before the members of the Dominion government. This resolution was passed unanimously and a deputation was sent east to interview the government. As a result, a Bill was introduced into Canada called the Campbell Bill. Sir Alexander Campbell was a minister in Sir John Macdonald's government. He introduced in the Senate a Bill providing for the extension of Manitoba's eastern boundary to harmonize with a line drawn due north from the junction of the Ohio and Mississippi river, which would run in the neighbourhood of Port Arthur and up to Hudson bay. This, had it passed, would have given Manitoba an additional 154,411 square miles. But this measure was taken exception to by the then Ontario government. Sir Oliver Mowat claimed that a portion of the territory—only a portion, however—was wrongly handed over to Manitoba and in reality belonged to Ontario. As a result, there was an appeal to the Privy Council of Great Britain. That was not decided till the year 1884. The result of that appeal was that there were some 39,000 square miles handed over to the province of Ontario. This was a part of the 154,411 square miles which was, by the Campbell Act, handed over to Manitoba. There was also 40,000 square miles in Keewatin recognized as undisputed territory, and lying north of what was then considered the northern boundary of On-

tario. The Ontario legislature agreed unanimously that it should go to the province of Manitoba. Now, I would point out that the Privy Council not only decided the western boundary of Ontario, but its northern boundary as well. I think that anybody who will read the resolution and the despatches that passed between the government of Ontario and the Secretary of State of the Dominion, and the Bill passed by the imperial government, will see that the northern boundary of Ontario was Lac Seul, Lake Joseph and the Albany river—all south of that line was to be in the province of Ontario. In 1901 a resolution was passed unanimously by the Manitoba legislature, moved by the present Judge Myers, then a representative of the constituency in which I reside, and seconded by the member for Dauphin. In 1902, the present leader of the Manitoba government moved a resolution seconded by the then member for Dauphin, the present member for Dauphin in this House (Mr. Burrows) that the boundaries of Manitoba shall be extended northward to Hudson bay and also to include a portion of Assiniboia. Folowing that there was action taken in the sessions of 1905, 1906 and 1907, all asking for much the same thing, at any rate asking for the extension of the boundaries of Manitoba. And up to this time, not one inkling had the people of Manitoba or of Canada that the province of Ontario laid any claim to territory in Keewatin not given them by the decision of the Privy Council in 1884. Up to the time of the introduction of the Autonomy Bills introduced in 1895, no claim was made by any public man or by the legislature of Ontario by any resolution upon one acre of land in what was known as the undisputed territory. On the contrary a resolution had been passed as I have said, by the legislature of Ontario, declaring that they welcomed the addition of this area in what was known as the undisputed territory to the province of Manitoba. It was only this 39,000 square miles adjudicated upon by the Privy Council and handed over to the province of Ontario that Ontario claimed, and that province appeared to be perfectly satisfied, and stated in so many words that that boundary was established now and forever. I do not blame the premier of Ontario for the action he has taken. No public man occupying the position of premier of so important a province as Ontario could ignore the invitation practically extended to him by the Prime Minister of Canada to claim a portion of this territory which formerly the legislature of Ontario had declared to belong to the province of Manitoba.

Now the Prime Minister, when he was introducing his Automony Bill, stated that this territory was a very important portion of the Dominion of Canada, that Ontario had something to say, that Manitoba had something to say, that even Saskatchewan should be consulted, nay, he even went further, and said that the province of Quebec was entitled to take part in the disposition of the territory of Keewatin. Now what on earth has Quebec got to do with Keewatin? The hon. gentleman himself recognized the absurdity of calling in the province of Quebec as to the disposition of this portion of Keewatin, and he afterwards withdrew from that ground, properly taking into consideration that in the year 1898, not 1896 as stated by the Prime Minister, a Bill passed this parliament, agreed to by the province of Quebec, interfered with by no other province, giving a portion of Ungava to the province of Quebec. Manitoba was not asked to a conference with regard to the division of Ungava and an addition to Quebec, Ontario was not invited, and by an arrangement made between this parliament and the parliament of Quebec, an Act was passed by this government in the year 1898, giving Ungava to Quebec. The Prime Minister does not seem to agree with that.

Sir WILFRID LAURIER. The resolution was passed on July 6, 1896.

Mr. W. J. ROCHE (Marquette). But it was in 1898 that the Bill was passed introduced by the then Minister of the Interior. But the point I desired to make was that no person was invited to the conference, no other province at that time. Why should Quebec be asked as to the disposition of Keewatin, as the Prime Minister suggested in 1905? However, he retraced his steps so far as that province is concerned, and he did call a conference of the premiers of Saskatchewan, Manitoba and Ontario. Of the result of that conference and of the policy of the government, we have been left in entire ignorance up to this moment, up to the time the Prime Minister made his speech to-day, and he divulged but very little, even of the proceedings of that conference, in his speech to-day. I think it would have been an act of courtesy to the premiers of those provinces who came here and sat in solemn conclave with the Prime Minister and his colleagues, that the Prime Minister and his colleagues should have notified them what decision the government had come to as a result of that conference. The Prime Minister of Saskatchewan, I believe, has been interviewed, and has stated that he knew nothing of the result of that conference, that he had received no intimation. Certainly the Prime Minister of Manitoba has publicly stated the same, and so has the Prime Minister of Ontario. But that conference was held, and as a result the Prime Minister comes down to-day with a resolution, not a Bill. We do not know when a Bill will be produced before this House. But in my opinion the government, seeing some embarrassment in store had a Bill been presented to parliament, desire to place themselves in a position that they may make a double-faced appeal to the country. This resolution provides for no speci-

fic thing. A Bill would have had to provide for the granting of certain powers and privileges in regard to the people resident in the portion of the territory that will be added either to one province or the other. So the Prime Minister, in the dying days of the session, has introduced a resolution merely, and with the object no doubt of allowing his followers to go before the people and to explain what they are going to do after the elections—because this is a sure precursor, in my opinion, of an election between now and another session; and true to their old time policy, they will make one appeal to a certain class of people, for instance, as to educational matters, and another and entirely different appeal to another class of people of different views. This has been an embarrassing question in the way of bringing down a Bill, and therefore a resolution is substituted.

Now the Ontario government passed, in 1882, as I say, a resolution approving of the undisputed territory being added to the province of Manitoba. This resolution was passed on March 9, 1882:

That the extension of Manitoba by the federal Act of last session receives, so far as the territory added is undisputed, the hearty approbation of the inhabitants of Ontario.

The disputed part is that part that was won by Ontario in an appeal to the Privy Council; the undisputed part was that lying north of the Albany river, and the legislature of Ontario gave their hearty approval to that being given to the province of Manitoba. But on the invitation of the Prime Minister of Canada they have now put in a claim for this very same territory that the legislature of Ontario claimed should properly belong to Manitoba. It is true that the province of Manitoba, through their legislature, has made a somewhat different appeal in their latest memorial, to that submitted to this parliament in days gone by. But there has been a reason. The Prime Minister has quoted myself as saying that in giving any additional territory to Manitoba there should be a provision for handing over the public lands to that province, and that is very true. Our claim has always been that the public lands shall be handed over to the province. But we recognized, taking into consideration that the two new provinces, Alberta and Saskatchewan, were refused the power, there was no possibility of Manitoba getting that power at the present time and it would be somewhat of an anomaly if the province of Manitoba had not jurisdiction over all the public lands, having a divided authority, one portion of the land being administered from Ottawa and the other portion from Winnipeg. We recognized that anomalous position, and we therefore asked for the same terms and conditions that were accorded to the new provinces of Alberta and Saskatchewan. In that I am in accord with the legislature of Manitoba, and it is my desire, as a representative of that province, to back up her policy on the floor of parliament.

Now Ontario has been increased in area since confederation from 109,480 square miles to 260,862 square miles, not taking into consideration what is proposed to be added at the present time, which, as the Prime Minister says, is in the neighbourhood of 140,000 square miles, which would make Ontario in the neighbourhood of 400,000 square miles. The province of Quebec has been increased since confederation from 193,355 square miles to 351,873 square miles, the second largest in area at the present time in the Dominion of Canada. By this resolution there will be added to it, in round numbers, 466,000 square miles which will make the province of Quebec of the enormous area of 817,873 square miles. It is an enormous area, out of all proportion to the other provinces, and I think that some greater respect should have been shown to approximate uniformity in the area of the provinces. But as a result of this proposition, while Ontario and Quebec have these large additions, Manitoba has 80,679 square miles less than she had in 1891. Now that is a very serious condition for the province of Manitoba to be in. She has that much less than in 1881 was acorded her by the Campbell Act. The two new provinces have in the neighbourhood of 250,000 square miles, with a population less than the province of Manitoba to-day. In 1881, when this addition of territory by the Campbell Act was given to Manitoba, and which was taken away afterwards by the decision of the Privy Council, Manitoba's area was 62,260 square miles. But Manitoba has increased since confederation from 13,500 square miles to its present area of 73,732, an increase of only 60,232 square miles, while her population has increased from 17,000 to close on 400,000. So I think she has been very unfairly treated, and deserves better consideration at the hands of this parliament.

I am not going to discuss the financial question at all. Apparently, however, the government have made up their mind not to accede to the request of the memorial presented to this parliament by the legislature this session, otherwise they would have brought down a Bill giving the same terms as had been accorded by the Autonomy Bill to the provinces of Alberta and Saskatchewan. But, inasmuch as it is to be left to negotiations to be carried on between representatives of the Dominion government and representatives of the provincial government and as I have every confidence that our provincial interests will be safeguarded in that respect by those in authority at the present time in the province of Manitoba, I am not going to enter into a discussion of the financial aspects of the matter farther than to enter my protest that the province has not been fairly dealt with in not hav-

ing the memorial acceded to and in not being given the same terms as those that are accorded to the sister provinces of Alberta and Saskatchewan.

As far as the lands are concerned, I have already referred to that feature of the case. The new provinces were refused their lands, Ontario getting this additional territory, will get the land and everything else. On the other hand, Manitoba, not being handed over the land, the financial aspect of the case will have to be taken into account to compensate the province for the retention of this land by the Dominion government, and I trust that when the representatives of the provinces and the Dominion meet once more the Dominion government will see its way clear to do justice to the province of Manitoba on the question of finance.

I desire to say a word with reference to the fact that no Bill has been presented. There is absolutely no excuse, no justification why we should not have had a Bill presented to this House so as to submit it to the next legislature of Manitoba for consideration.

Mr. TALBOT. Why did you waste so much time on the Manitoba Election Act?

Mr. W. J. ROCHE (Marquette). If the hon. gentleman will consult his leader he will know that the time was not wasted. The time was utilized to very good purpose, because we succeeded in convincing the Prime Minister, the hon. gentleman's leader, if we did not convince the hon. member for Bellechasse (Mr. Talbot), that he was on the wrong tack and he had the wisdom to accede to the request made by members of the opposition from the province of Manitoba. When the new Northwest Territories Bill was being passed in 1905 a strange thing happened that I have referred to before in this parliament, and it was this: Sir Charles Fitzpatrick, then Minister of Justice, in forming the new Northwest Territories, specially omitted the district of Keewatin from the new territories, and he gave us his reason for so doing. It had been under the jurisdiction of the Lieutenant Governor of Manitoba for upwards of twenty-five years and it was known that there was no necessity for adding that to the territories which he was forming by the Act then before the House. They were allowed still to remain under the jurisdiction of Manitoba. That Bill passed parliament in the session of 1905, but a strange thing happened. Within four days after the closing of parliament, by a proclamation, Keewatin was added to the new Northwest Territories. What for? No satisfactory explanation has been given to the people of the country up to the present time why this was done. But, the people of Manitoba know why it was done, and that is the reason why there has been no Bill introduced to extend the boundaries of Manitoba at this session. The Prime Minister pointed out that the new provinces of Alberta and Saskatchewan must have their educational systems continued as they existed in the Northwest Territories under the old Northwest Territories Act. He made his whole plea on constitutional grounds. In order to have the same educational powers conferred upon the district of Keewatin, after parliament closed in 1905, by proclamation of the Governor in Council, he added the Keewatin district which had been especially exempted in the Northwest Territories Act so as to fasten that same system of education upon that added territory. He is now face to face with another school question that he has not the courage to grapple with prior to an election, and he is going to allow his supporters to go out amongst the people and tell those who are in favour of separate schools: It is all right; Sir Wilfrid Laurier was in a very embarrassing position, it was immediately prior to an election, but after the election he is going to give separate schools to the people of the Territories; whilst his other supporters who are not in accord with that view, such as the hon. member for Selkirk (Mr. Jackson), will tell a different story. The hon. member for Selkirk for the last four or five years has been telling the people of Manitoba that the boundaries were to be extended. On two different occasions he gave public expression, if reported correctly in the Winnipeg Liberal paper, to the idea that the boundary of Manitoba was to be extended northward and eastward. It is because of that very same action of this government in issuing that proclamation and bringing into effect the old Northwest educational clauses in connection with the school difficulty that the government have been procrastinating, dilly-dallying with this question and postponing it. They are going to the country with every pledge of their party unfulfilled, face to face with this question that they dare not grapple with, and they are going to try to hoodwink the people by telling two different stories according to the views of the people with whom they are dealing. That is in my opinion an objection that I wish to give expression to on the floor of parliament. I am not going to occupy any more of the time of the House. This is a very important resolution, and I would have liked more time to go into the details, but I recognize that in the dying days of the session it is not wise to monopolize too much time with any one question. But, as a final appeal I may say that my province, even under the present resolution, is not receiving the justice that it should receive, that the Prime Minister has not dealt fairly with

the province, that he has not dealt courageously with this whole question, that it should not be treated in the double-faced manner in which it has been treated, that, sooner or later, he, or some one following him, will have to face the difficulty, and if it has to be faced it might as well be faced and fought out in the first place as in the last, and that the people of Manitoba will not be satisfied before they can see the provisions of a Bill submitted to parliament and passed upon by the representatives of the people in this House.

Mr. W. D. STAPLES (Macdonald). Mr. Speaker, I am sure that hon. gentlemen on both sides of this House will join with me in extending their heartiest congratulations to the right hon. Prime Minister (Sir Wilfrid Laurier) upon the rapid strides that he has made towards extending the boundaries of Manitoba. Just think of it; he has led the government for twelve years and in the twelfth year and in the eighth month of a long and tedious session, he has had the courage to introduce a harmless resolution for the extension of the boundaries of Manitoba. During these twelve years the right hon. gentleman has been besieged by delegations, resolutions and memorials from the province of Manitoba urging him to take some action. Here are we to-day with a resolution which practically provides for nothing in my opinion. There was a time when the boundaries of Manitoba should have been dealt with, should have been extended and that time was on the 21st February, 1905, when the right hon. gentleman introduced the Bill for the creation of the new provinces of Saskatchewan and Alberta. That was the time when action should have been taken for the extension of the boundaries of Manitoba. The same reason prevails to-day for action not being taken as that which prevailed in 1905. Where did you find the Liberal contingent from Manitoba on that day? If the hon. gentlemen who sit behind the right hon. Prime Minister had done their duty in 1905 when the provinces of Saskatchewan and Alberta were being created, the boundaries of Manitoba would have been extended, not only eastward and northward, but westward as well. If the hon. members for Lisgar (Mr. Greenway), Dauphin (Mr. Burrows), Selkirk (Mr. Jackson), and Portage la Prairie (Mr. Crawford), all supporters of the old Greenway government, gentlemen who sat in the local legislature for years and were parties to the petitions and resolutions that were sent down here asking for the extension of the boundaries of Manitoba, had taken action at that time, had stood out for the rights of Manitoba, we would have had our boundaries extended and have had all the consideration that the province of Manitoba is entitled to.

Mr. W. J. ROCHE.

It is true that at that time the hon. member for Brandon (Mr. Sifton) thumped his desk and flurried around for a while, but he soon came back to the Liberal fold quite satisfied that things should go on as they were. I trust the Liberal members from the province of Manitoba will now rise in their seats in this House and protest against the procrastination displayed by the government towards the province of Manitoba. It is their duty to insist on the Prime Minister, even at this late hour, bringing down a Bill. It is true that we have been here for eight months, and it has been a long and tedious session, but as one of the representatives of Manitoba, I am prepared to stay here in the interests of the people until we crystalize into legislation that which the people of Manitoba are entitled to. I say to the right hon. gentleman, the Prime Minister: Bring on your Bill. If that Bill proposes to give us our lands, well and good; if it proposes to give us a monetary consideration in lieu of lands, let us know it.

Mr. BURROWS. Does the hon. gentleman (Mr. Staples) want the government to submit to parliament an arbitrary measure and force it on the governments of the different provinces without consulting them?

Mr. STAPLES. The Prime Minister knows right well what the people of Manitoba want, for he has it before him by memorial and resolution. I can tell this House that nothing will be gained by delay, because neither the present government of Manitoba, nor any Liberal government that may succeed it, will be satisfied unless justice is done the province, and delay will not remove the points of contention. We might just as well deal with the question now as in the future. But what the right hon. gentleman wants is to have this resolution dangled before the eyes of the people as a subterfuge until after the next election, and I presume his followers from Manitoba are satisfied with that. The right hon. gentleman has told us that the province of Manitoba has changed its point of view, and that while formerly they insisted on having their lands now they do not so insist. The right hon. gentleman knows very well that the province of Manitoba has taken this action because he has time after time announced that he could not give the lands to the province, and so they ask, for the present, at all events, that they shall be treated as the provinces of Saskatchewan and Alberta have been treated. As to what may be the attitude of Manitoba when there is a government in power at Ottawa disposed to do justice to that province I am not prepared to say now. For the present we ask that we shall be treated at least as favourably as Alberta and Saskatchewan. And, even though the Prime Minister has announced

that we are within five days of the end of the session, surely he has courage enough to bring in a Bill which will deal with this question from the viewpoint of a statesman. I see the Prime Minister shakes his head. I protest against the delay; I say this resolution is nothing more than a fake intended to stand off the people until after the election. I want to tell the right hon. gentleman and those who sit behind him that the people of Manitoba will not stand for any such treatment as that, and he will find at the next election they will enter their protest at the polls as I have entered my protest in this House. The right hon. gentleman has the British North America Act before him; he knows the wishes of the people of Manitoba, and all they ask is that they be dealt with under the terms of the constitution. I repeat, in conclusion, that this resolution is merely intended to give the Manitoba Liberals something to go on the stump with, and in that light it is a subterfuge and nothing more.

Mr. JOHN STANFIELD (Colchester). In view of the fact that this proposal of the government is to give additional territory to the provinces of Ontario, Quebec and Manitoba, I think it is a fitting time for the people of the maritime provinces to ask that some safeguards be provided against the ruthless cutting down of their representation in this House of Commons. I am strongly of opinion that no justice can be done the people of the maritime provinces until their representation in this House is restored to that which it was before 1896. I do not think any member of this parliament will deny that the people of the maritime provinces are entitled to the representation which they understood they would have when they entered confederation, and with that end in view I move:

That the proposed resolution be amended by adding thereto the following paragraph:

Be it further resolved that the extension of the boundaries provided for by this resolution should be accompanied by such conditions as will prevent such extensions prejudicially affecting the representation of any province in parliament.

Mr. A. A. McLEAN (Queens, P.E.I.). I have great pleasure in seconding the resolution moved by the hon. member for Colchester. The House will observe that the resolution proposed by the right hon. the Prime Minister opens with this paragraph:

That it is expedient that the prayer of the said petitions should be acceded to, and that upon such terms and conditions as may be agreed to by the said legislative assembly and by parliament, the boundaries of Manitoba be extended as follows:

The northern boundary to be the sixtieth parallel of latitude; the western boundary to be the present eastern boundary line of the province of Saskatchewan to the said sixtieth parallel; the eastern boundary to be the present eastern boundary as far north as the northeast corner of the province, thence on a straight line to the most eastern point of Island lake, and thence on a straight line to the point where the eighty-ninth meridian of west longitude intersects the shore line of Hudson bay.

And then with reference to the terms

And be it further resolved:

That, upon the legislature of the province of Quebec consenting thereto, it is expedient to extend the boundaries of the said province, upon such terms and conditions as may be agreed to by the said legislature and by parliament, so as to include all the territory to the north of the said province now known as Ungava, and extending to the waters of James bay and Hudson bay and the entrance thereto from the sea.

The provisions of the resolution respecting Manitoba, Ontario and Quebec are practically the same, with the exception that the lands to be granted to Ontario and Quebec are to be given absolutely to these provinces without condition, whereas the lands added to Manitoba are to be retained in the possession of the Dominion government and disposed of by them as may be thought proper, while the province has simply the power to administer the civil government in the territory. However, in lieu of the lands Manitoba is to receive a monetary consideration. The wording of these resolutions is copied in effect from the first lines of section 3 of the amendment of the British North America Act of 1871, which reads as follows:

The parliament of Canada may from time to time, with the consent of the legislature of any province of the said Dominion, increase, diminish or otherwise alter the limits of such province, upon such terms and conditions as may be agreed to by the said legislature.

These are the exact words of the resolution as introduced by the Prime Minister. There is another clause in this section of the Act which has been omitted from the resolution, and I call the attention of the Prime Minister to the fact that this clause is permissive. It is permissible to this government to extend the limits of any province; it is not imperative. Neither is the second part of this section imperative; it is simply permissive; and if this resolution should pass without the amendment which has been moved by the hon. member for Colchester (Mr. Stanfield) I believe that the condition which is incorporated in it could not be considered by this parliament or by the legislatures of Manitoba, Ontario and Quebec in the final settlement of this matter. That condition reads as follows:

And may, with the like consent, make provision respecting the effect and operation of any such increase or diminution or alteration of territory in relation to any province affected thereby.

Why did not the Prime Minister, in drafting this resolution, include that portion of section 3 of the Act of 1871 ? There is no doubt that such a clause should be incorporated in this resolution, if the increase of territory does affect in any way the status of the other provinces of this Dominion. Here we have an addition of territory given to the province of Manitoba of 180,000 square miles, to the province of Ontario of 140,000 square miles, and to the province of Quebec of 466,000 square miles. Whose property is this ? Has it any value ? Where is it ? As has been stated by the leader of the opposition, we have had no maps placed on the table of this House to show the members where this land is. We know in a general way that there is a lot of land lying to the north of the province of Quebec, but we have no evidence of the value of that land. We have no evidence of the value of the land to be conceded to the province of Ontario. Before this resolution passes, I think the Prime Minister or some member of his government should inform the members of this House, in order that they may vote intelligently on this matter, what the value of this property is. Is it worth $1,000,000? Some years ago the United States of America bought some territory in Alaska from the Russian government, paying a very small sum of money for it ; it was not considered of very great value. Since then that territory has developed rich mines, worth, it is stated, a billion dollars of money. What may be the effect of the exploration of this great country to the north ? I understand that Ungava and Keewatin have never been explored ; and it may be that when these lands have been explored within the next twenty or twenty-five years, they may become of incalculable value to the provinces to which they are granted by this parliament. These lands are owned by the whole Dominion of Canada ; and if they have a value at the present time, the government which is introducing this measure should be able to tell parliament what their value is and to some extent what their prospective value is. Without that information this resolution should not pass. If the other provinces are affected by this resolution, they are affected not only in a monetary way, but also in their representation in this parliament. Quebec, the pivotal province on which the representation is based, will receive this large addition of 466,000 square miles to its territory. This land may within the next few years be teeming with population. You know that years ago it was stated that Manitoba and the Northwest would never be inhabited ; yet I believe that within a very few years the greater part of the population of this country will be living in those western provinces. It may be that a million will be added to the population of Ungava and Keewatin within the next twenty or twenty-five years. The effect of that will be that the representation in this House of the maritime provinces, whose territories cannot be increased, will be greatly diminished. As was stated by the Minister of Finance, the possibility is that within twenty or twenty-five years, as a result of the increase of population in these new territories, the representation of the province of Prince Edward Island will be diminished to only one. In view of these considerations, we should have conceded to us the representation which we had when we joined the union. I would say further that if these lands, which are to be added to the territories of Quebec, Ontario and Manitoba, are of any value, all the other provinces which are in any way interested in them, or which are in any way affected by these additions, should receive a proportionate share of the money value of the lands. That should be conceded to them in the final settlement of this matter, when the Bill comes up in parliament at the next or some future session, in accordance with the resolution and the amendment which are before the House.

Mr. GEORGE W. FOWLER (Kings and Albert). Mr. Speaker, while I am in favour of the amendment proposed by the hon. member for Colchester (Mr. Stanfield), I think that it does not go quite far enough in the direction of meting out justice to the provinces of Nova Scotia, New Brunswick and Prince Edward Island, better known as the maritime provinces. These provinces had a certain representation at the time of confederation. The fathers of confederation in their wisdom thought that there was no danger of our population not keeping pace with the population of Quebec, or falling so far below it that a portion of our federal representation would be lost. Unfortunately that has not proved to be the case ; and but for the fathers of confederation resting upon that idea, some such provision would have been inserted in the British North America Act with reference to those provinces as was afterwards inserted with reference to British Columbia when that province came into confederation, namely, that the representation of British Columbia in the federal House was not to fall below what it was at the time the union was consummated. A similar provision should have been inserted with regard to the maritime provinces; but unfortunately it was not. The principle reason why in the last census the maritime provinces did not show an increase proportionate to that of the province of Quebec is that many people from the maritime provinces, perhaps more largely in proportion than from any other part of Canada, have gone to the Northwest and are helping to build up that country.

When we contribute to the west, as we are

doing, the bone and sinew of our country, our best and most enterprising young men—because it is the enterprising who leave home to seek their fortunes in the west—and when we thereby find our representation diminished in this parliament, it seems unfair that we should suffer both the loss of these young men and the consequent decrease in our representation, and be given nothing in return. I would have been in favour of a resolution which would provide that when the boundaries of these provinces—I am not confining my remarks to the province of Quebec—but when the boundaries of any province are enlarged, provision should be made that to the maritime provinces should be restored the same federal representation which they had at the time of confederation. That would put us on a fair basis. I want the House to distinctly understand that I have no desire to discriminate against the province of Quebec in any shape or form; my sole desire is that the equilibrium established at confederation should be maintained. That is an important question which is bound to be agitated in the future. It is important to the eastern provinces that the present representation of the east at least should not be disturbed.

I understand from what the right hon. gentleman has said that while Manitoba is to have its territory extended it shall not receive the new lands in fee. They are not to be Crown lands of the province but are to remain subject to the control of the Dominion parliament, whereas in the case of Quebec and Ontario the lands given them are to become Crown lands of the province and be administered by these provinces. And in order to make up to the province of Manitoba for the loss of authority over these new lands, and put it on an equal footing with Ontario and Quebec, it is to receive a money grant. Evidently the First Minister regards these lands as belonging, in the first instance, not to the Dominion but to the several provinces which they adjoin. But surely they belong to the Dominion as a whole. They were purchased by the Dominion. They form part of the purchase by the Dominion at the same time we bought out the Hudson Bay Company. If that be recognized, how is it that Nova Scotia, New Brunswick and British Columbia are to receive no compensation? Suppose the government were to bring down a resolution to increase the money subsidies now given Ontario, Manitoba and Quebec, and that the province of British Columbia and the maritime provinces were to be left entirely out of the reckoning, would that be considered just and equitable to these other provinces? Well, what is the difference between a money and a land subsidy? Surely these lands are worth something. Surely this territory of Ungava, some 466,000 miles in extent, is of some value. As was pointed out by my hon. friend from Queens, P.E.I., (Mr. McLean), the territory purchased by the United States from Russia, known as Alaska, was not considered of much value at the time of its purchase. The United States paid only $5,000,000 for it, but it would take a great many times that amount to purchase it back from the United States to-day—not on account of the desire of the Americans not to lose any territory but because of the very great money value of Alaska itself. What reason have we to expect that Ungava shall be less rich in mineral wealth? If it should turn out to be as rich in this respect you are by one stroke of the pen adding to the province of Quebec a tremendous extent of valuable territory and leaving the poor little provinces down by the sea without any compensation at all for the loss they suffer as part of the Dominion. I am surprised that the members of the government from the provinces of Nova Scotia, New Brunswick and British Columbia did not oppose this thing in council. Perhaps they did; but if they did, I am still more surprised that they did not carry their opposition into effect and refuse to accept such a proposition at all and resign from the government rather than see the provinces they represent suffer such an injustice. We form a part of confederation, we are assisting in bearing the burdens of Canada—why then should we be singled out? The two leading povinces of Canada, Quebec and Ontario, are to be given this additional territory. Manitoba has been spoken of as the postage stamp of confederation. But let me remind you that that province is considerably larger than the three maritime provinces taken together. It is larger by one-fourth at least. It comprises 47,000,000 acres as against 32,000,000 acres for the maritime provinces. Yet those three provinces, each much greater in extent and resources than the maritime provinces, are to have all this given them and we are to get nothing. Nothing for the maritime provinces; nothing for British Columbia—though this is not so hard on British Columbia because that province is very large in extent, and until this addition was made to Quebec, it was the largest in Canada. But the three little provinces down by the sea are to get nothing. Yet they have always cheerfully borne the burdens of confederation, they have always stood for the policy that would build up Canada, they have not been narrow or provincial or 'little Englanders' in any respect. And it does seem to me, in view of what they have done in the past, that their claims should in justice and equity be considered. If you are going to take from the Dominion territory which belongs to the Dominion and give it to these other provinces, you ought to give us compensation. And as there is no way in which you can enlarge our territory, that compensation must take the form of a money grant. I am surprised that the representatives in the government from the province of British Columbia, and more

particularly from the provinces of Nova Scotia and New Brunswick, have not stood up and demanded that their provinces should be given equal justice at the hands of this government.

In point of fact, I do not see the particular necessity of a step of this kind. I do not see why there is any particular need, in the first place, for the Dominion of Canada divesting itself of this territory. I do not see any particular need for adding this territory to the already overgrown provinces of Quebec and Ontario ; but since the government have determined to do so, then let the other provinces have fair play and equal justice. Do not do something which will affect the representation from these provinces as it must be affected by the addition of this additional territory to the province of Quebec. That our representation must be affected is a proposition which needs only to be stated to be admitted. This territory of Ungava will no doubt in the near future become inhabited. There is, I believe, vast mineral wealth lying undiscovered in that territory.

I believe there is a vast mineral wealth lying still undiscovered in that great territory. There are great fisheries on the coast to be developed. Taking all these things into consideration you are adding very largely to the province of Quebec territory which will be inhabited and so will affect the unit of representation as applied to the small provinces. As I said, I have no wish to discriminate in any way against the province of Quebec. It is unfortunate that when members from other provinces speak on behalf of their provinces some supersensitive members from Quebec think that their province is affected. It will be seen that I am looking at this matter from the eastern standpoint. I am looking forward to the time when, by reason of the great growth of the west the representation from that section will have largely increased ; and, in order to preserve the equilibrium between east and west, it will be important that the representation of the maritime provinces should not fall below the figure of to-day. To recapitulate ; I am in favour of this resolution for the reasons I have stated ; but I say to the government that they are not acting justly by the maritime provinces in not giving to them some compensation to weigh against the large increase in material wealth which they are adding to the three great provinces I have named.

Sir WILFRID LAURIER. With regard to the suggestion of my hon. friend the leader of the opposition (Mr. R. L. Borden) that it would have been preferable to leave this matter open, I must say that my observation leads me to an entirely different conclusion. Nothing is so likely to create bad blood between neighbours as these boundary questions. At the present time, I am sorry to say, our relations with Newfoundland in regard to boundaries are not as satisfactory as they ought to be. I stated this forenoon that we have provided for an arbitration to determine the boundaries between Newfoundland and Canada, Canada in this matter being interested for herself and for Quebec. This step was rendered necesary because Newfoundland has given concessions in a part of the disputed territory alleged to be encroaching upon the rights of Quebec. A lawsuit was entered in the province of Quebec to test the legality of the concessions given by Newfoundland. Rather than have this private litigation going on, parties holding rights from either one government and from the other going before the courts with their claims, we appealed to the government of Newfoundland to have an arbitration to determine where the boundary is. It is particularly desirable that we should eliminate this question in view of the possibility, which we hope some day will be realized, that the question of Newfoundland entering confederation may be brought forward for practical decision. I am sure I simply voice the feeling of every Canadian when I say that if the time comes when the Newfoundland people are willing to enter confederation we will extend to them a very cordial welcome. When that time comes as I hope it may, there will be a multitude of questions to be determined—questions of finance, questions of education and many others. And it will be all the better if, at that time, the question of boundary shall have been removed by the decision of arbitration. Therefore, I cannot agree with the leader of the opposition——

Mr. R. L. BORDEN. The right hon. gentleman has certainly misunderstood me. I did not make the slightest objection to the settlement of the boundary. It was an entirely different matter to which I was referring.

Sir WILFRID LAURIER. What was it, then ? I failed to comprehend.

Mr. R. L. BORDEN. I said that it might be an inducement to Newfoundland to enter confederation if some part of that territory were left to the administration of that province.

Sir WILFRID LAURIER. But what would be an inducement to one member of confederation might be the reverse of an inducement to the other. The province of Quebec might have something to say to that. As far as that goes, it is preferable in every way that the claims of Quebec and the claims of Newfoundland should be settled so that neither party may have any doubt as to the matter.

Mr. FOSTER. Is it in respect of the present boundaries or possessions of the province of Quebec that the dispute is to be settled ? Or is the delimitation of the

whole boundary between Newfoundland and Canada ?

Sir WILFRID LAURIER. It is in respect of the whole boundary.

Mr. FOSTER. Not simply Quebec ?

Sir WILFRID LAURIER. No. But my hon. friend remembers that the lower part of the territory belongs to Quebec and the upper part to Canada, so that Quebec and the Dominion are both interested. In a matter of this kind, Canada would have the right of eminent domain and might dispense with the consent of Quebec. But, as Quebec would be brought into the dispute, she should be given the opportunity to do the best possible for her own interest. My hon. friend from Macdonald (Mr. Staples) says that we should have brought in a concrete Bill. But, even though we had brought in a Bill and it had been passed by King, Lords and Commons, or, as we would say, by the Governor General, the Senate and the House of Commons, nobody would be more bound than by this resolution. A Bill passed by this parliament upon this matter would not be binding upon Manitoba. We must have the consent of Manitoba to anything we do here in order to make it effective. We propose here certain boundaries for the province of Manitoba. These may be, or may be not, satisfactory to that province ; if that province does not accept the Bill, the Bill is null and void.

Mr. STAPLES. Then, why did not the Prime Minister (Sir Wilfrid Laurier) open negotiations four months ago with the government of Manitoba in order that we might arrive at a conclusion ?

Sir WILFRID LAURIER. Well, we have done a good many things in the last four months. And I must say I was taken by surprise when I saw the last memorial of the province of Manitoba, altogether going back on what was understood to be her contention. They were understood to claim that they should be given land instead of money, but now they propose a money consideration. We had to look into that and it involved a good deal of work. We had to go into the whole history of the financial transactions of this government with the government of Manitoba, and they are pretty voluminous. I think that no less than seven or eight times during the time that Manitoba has been in confederation, the financial terms of the province have been altered. So, we have some anxious work to do in order to reach a conclusion. I find that in 1870, in 1873, in 1876, in 1879, in 1882, in 1884 and 1885, the financial arrangements of Manitoba were altered and that on every occasion Manitoba was given better terms. We had to look into all these things so that we could see whether the present proposition of Manitoba could be entertained. At last we concluded that it would be safer to negotiate with Manitoba. We could have got nothing by a Bill, and therefore we have taken the best course by thus calling attention to their claim and asking what should be given. We have to deal with the province on its claims and satisfy those claims, as we hope we shall be able to do. When this is done the subject will be ready for legislation. But now the discussion has taken another turn in the position which has been taken by hon. gentlemen from the maritime provinces. My hon. friend from Kings and Albert (Mr. Fowler) has taken the position that the policy we have adopted is unfair to the maritime provinces, and that they are entitled to some compensation, because the territories which were acquired in 1869 in the Hudson Bay district were paid for by the Dominion of Canada, and that if we dispose of them, we should give some compensation to the maritime provinces. Well, the question is not new, it has been raised before, and it has received no solution such as the hon. gentleman now desires. Those territories were acquired in 1869, and in the year following, the parliament of Canada carved out of them a certain domain for the province of Manitoba. But no compensation was asked by the maritime provinces. Later on when we appropriated a certain portion of that domain for the new provinces of Saskatchewan and Alberta, we made the same disposition.

Mr. FOWLER. Would not the right hon. gentleman see a distinction between the carving out of this territory a new province and adding out of this territory to the provinces forming part of confederation when Nova Scotia and New Brunswick came in?

Sir WILFRID LAURIER. Does the hon. gentleman believe it makes any difference? The basis of our national life is a federative system. This country is covered by provinces, that is the idea which we have always had before us. That has been the case in the United States. The United States purchased territory from France, Louisiana and from other countries. Since that time her policy has been to turn those territories into states, forming now the American Union. This is the object we aim at. For my part, I regret that the climatic conditions are such in this new territory that it cannot be created into new provinces. I wish we could form a new province on the Hudson bay, I wish we could form a new province out of the Mackenzie river territory, I wish we could form a new province of Ungava. But while it is a wish I devoutly entertain, every man must see that such a thing is impossible. No man, I am sure, from the maritime provinces pretends that we could form new provinces out of that territory. If, then, that terri-

tory cannot be turned into new provinces, does it not seem to my hon. friend that the best way to deal with it is to annex it to the existing provinces? We must come to that conclusion. We cannot desire that at one end of this Dominion we should have provinces and at the other end a large unorganized territory. Is not that the goal to which we should aspire, that every inch of Canadian territory should ultimately be under provincial organization? That has been the policy of the United States, until to-day I think all their territory has been turned into states.

Mr. FOWLER. The Prime Minister refers to the United States. Is it not a fact that no portion of their territory was cut up into states until it had a population sufficient to warrant its erection into a state? The territory was not added to states already existing, but when it had a sufficient population it was created into a state.

Sir WILFRID LAURIER. The conditions in the United States were such as permitted that policy to be adopted. If we had the same conditions we would create more provinces. Oklahoma was the last state which has been introduced into the union. I believe they have no more territory to be turned into states. If our conditions were the same we would follow the same policy.

Mr. FOWLER. They have Alaska yet.

Sir WILFRID LAURIER. Yes, and we have the Yukon, but I do not know that I would turn the Yukon into a province; I think I would rather annex it to the province of British Columbia. Moreover, I do not think that the climate and soil in the Yukon are such that we could make it into a province. At all events, that is my opinion. You cannot hope, with the territory you now have in your hands, to make it into new provinces; and if that is so, the policy should be to bring this territory under the supervision and jurisdiction of the provinces to which geogrannically it belongs. That is the view we take and the policy we are pursuing at the present time. Can anything be more reasonable than that the territory which to-day lies north of the province of Ontario should belong to Ontario? Is it not in the best interests of the country that Ontario should have the administration of that territory? And if that be so, the hon. gentleman will have no objection to this resolution going into effect. Now, with regard to representation——

Mr. FOWLER. Before the hon. gentleman leaves that part of his subject, I would like him to say a word as to compensation to the provinces.

Sir WILFRID LAURIER. I must say that, so far as I am concerned, I can see no force in that plea. The fathers of confederation, and those who sat here in 1870, when Manitoba was organized, saw no force in it. I do not believe, moreover, that this territory was added to our domain in order that it should be parcelled out among the other provinces which, at that time, formed the Canadian confederation. We must deal with the conditions as they exist. At the time of the federation of the older provinces, Ontario, Quebec, Nova Scotia and New Brunswick retained their own provincial domain and control of their own public lands. That has been the policy ever since. When we came to form the prairie provinces the question of immigration became very important, and from 1870 to 1895 we followed the policy that this parliament should retain in its own hands the public lands in those provinces in order the better to pursue the policy of immigration. In respect to the older provinces, we had turned over to them control of the public lands which were added to their territory. The territory which is now wild and unsettled was annexed to the provinces from time to time; we annexed certain portions to Quebec, certain portions to Ontario and certain portions to Manitoba. But if that same policy were to prevail, and the northern portions of that country were to be annexed to Manitoba, Saskatchewan and Alberta, then I would unhesitatingly give them all that land, because the policy of immigration which we have in hand would not be prejudiced by such a course. Therefore, I cannot see the force of the objection of my hon. friend. But a more important question, a more practical question, is that of representation. However, I do not see any immediate danger in it. My hon. friend stated a moment ago that the maritime provinces had lost some of their representation in this House. But if that is so, and we all deplore it, it is not in consequence of anything that has been done by this parliament, it is not in consequence of any accretions to the territory of Quebec. If the maritime provinces have lost a portion of their representation it is in consequence of the development of the Northwest. If the Northwest had not been developed, Nova Scotia and New Brunswick would probably have the same representation here to-day that they had years ago. But although the maritime province men have good reason to deplore the changing conditions, their objection should not lie to this resolution, but they should consider the broader question whether, in view of the great development which is taking place in the Northwest, it would not be advisable to revise the basis upon which representation is established.

Mr. R. L. BORDEN. Allow me to ask the right hon. gentleman a question? Does he contend that the development of the Northwest reduces the actual representation of the maritime provinces?

Mr. PUGSLEY. In the last census it prevented New Brunswick and Nova Scotia from preserving their previous representation.

Sir WILFRID LAURIER. I put this to my hon. friends from North Toronto and from Kings and Albert: If, at the last census, we had eliminated the whole of the population of Manitoba and the Northwest Territories, would not the diminution of the representation of New Brunswick and Nova Scotia have been less than it is to-day? I have not the figures under my hand, but I remember that the subject was closely considered by the Hon. Mr. Blair at that time, and he came to the conclusion that if the population of the Northwest had been eliminated altogether the representation of Nova Scotia and New Brunswick would have been larger than it is to-day. But I have simply to say this, as one of the representatives from Quebec: At the time of confederation Quebec was made the pivotal province, around which the representation of the whole Dominion revolved. But that gives no advantage to the province of Quebec, it is a matter of entire indifference to the province of Quebec. But, if it is to us a matter of total indifference and it is a matter not of indifference but of great interest to the maritime provinces, for my part, I would not be averse to selecting another mode of representation. On this matter I feel very strongly that we should not have any province harbouring the feeling that there had been an injustice done to it. The basis of representation adopted at the time of confederation was believed to be just and equitable and nothing could be more detrimental to confederation itself than the existence of such a belief, and if we are in a position to remedy that belief there is no reason why the question should not be tackled at the proper time. But, I would observe to the hon. member for Kings and Albert (Mr. Fowler) that he has attached undue importance to the addition which is said to have been made in 1896 to the area of the province of Quebec and that he has attached undue importance to the extension which it is proposed to make to the province of Quebec to-day. My hon. friend knows that at the present time, in the added territory, there is not one voter. It may be that there will be some voters at the time of the next census. If it be true that the boundary of Quebec was the height of land, which is the opinion of the Minister of Justice, then probably it is quite certain that the construction of the Grand Trunk Pacific will bring a population into that part of Quebec which will, to some extent, although not materially, affect the unit of representation. I do not think it will affect the next census. I do not think it is possible that it will do so, but in the future it may have some effect. But, in so far as Ungava is concerned, it will be many generations, I am afraid, before the population of Ungava will have to be taken into consideration when we have to determine what shall be the unit of representation in this House. I wish it were otherwise. I wish I could say to the House that I believe that there would be a large population in Ungava, and if there were to be a large population in Ungava I would have no hesitation in saying to my compatriots in Quebec: Do not hesitate to disarrange the basis of representation so as to give satisfaction to the other provinces. I do not think the amendment which has been moved is at all justified by the circumstances of the case. The contingency is too remote. I would say more; it is not advisable at this moment to burden this resolution with conditions. The conditions should be left altogether open. I call the attention of hon. gentlemen to these pregnant words in the resolution:

> That, upon the legislature of the province of Quebec consenting thereto, it is expedient to extend the boundaries of the said province upon such terms and conditions as may be agreed to by the said legislature and by parliament.

These words cover everything. They cover the very subject in hand. At the next session of parliament, if the government see fit to present a concrete resolution from the legislature of Quebec offering to take advantage of this resolution, and hon. gentlemen on the other side of the House say it is not sufficient, that they have the right to insist that some provision should be made for another basis of representation, then we can refuse our assent to the resolution of the Quebec legislature. As far as I can see it there is no necessity for inserting such an amendment as has been moved by the hon. member for Colchester.
