ANALYSIS OF THE ST. LEON WATER.

I have the honor to inform you that I find it to be strongly saline. It contains chloride of sodium in large quantity, with magnesia and lime, partly as carbonates, dissolved by the excess of carbonic acid, and partly as chloride. Like most waters of the country, it contains no iodine or bromine and iodine; it is distinct in which, I have detected, in small quantities, salts of barytes and strontia which had hitherto been met with only in the Waters of Varennes, Vichy, Bourbonne, Bareges, Bonnes, Mont Dore, Bains of Cauterets, Plombieres, and the Intermittent of Caledonia.
