

MEDICAL CHEMISTRY.

A Text Book of Chemistry for Students of Medicine, Pharmacy and Dentistry.

By Edward Curtis Hill, M. S., M. D. Medical Analyst and Microscopist; Professor of Chemistry and Metallurgy in the Colorado College of Dental Surgery; Professor of Chemistry and Toxicology in the Denver and Gross College of Medicine, University of Denver. With 78 illustrations including 9 full page half tone colored plates. Pages XII-523. Crown Octavo. Extra cloth, \$3.00 net delivered. Philadelphia, F. A. Davis Company publishers, 1914-16 Cherry Street.

This work comes to fill a real place and to meet a long felt want. The whole range of medical chemistry is treated of under the following headings:—Medical Physics, Chemic Philosophy, Inorganic Chemistry, the Carbon Compounds, Analysis, Incompatibility, Sanitary Chemistry, Toxicology, Physiologic and Pathologic Chemistry, Clinic Chemistry, and an Appendix on some general and useful topics. There is scarcely a subject in the whole range of chemistry, as it pertains to the physician or druggist, that is not treated of in the present volume. Chemistry is often regarded as an uninteresting subject. This is due, in many instances, to the manner in which is handled by the writers upon it. This charge cannot be made against Dr. Hill's work. It is certainly a very valuable addition to the physician's library.

ORGANIC NERVOUS DISEASES.

By M. Allen Starr, M.D., Ph.D., LL.D., Professor of Diseases of the Mind and Nervous System, College of Physicians and Surgeons, the Medical Department of Columbia University, in the City of New York; Consulting Neurologist to the Presbyterian, St. Vincent's Hospitals, St. Mary's Free Hospital for Children, and to the New York Eye and Ear Infirmary, etc., etc. Illustrated with 275 engravings in the text and 26 plates in colors and monochrome. Lea Brothers & Co., New York and Philadelphia. 1903. Price, cloth, \$6; leather, \$7.

The present volume is a large one, containing 750 octavo pages. It is got up in a very attractive form. The paper and binding are good and the press work and illustrations perfect.

Dr. Starr is a well-known writer on nervous diseases, and his "Familiar Forms of Nervous Diseases," his "Brain Surgery," his "Atlas of Nerve Cells," and his many journal articles have made his name familiar to most doctors. In the present volume he confines his attention solely to organic nervous diseases. Throughout the book the utmost attention is given to diagnosis. If diagnosis is not everything, it is absolutely essential in the study of nervous diseases. Many regard the study of organic nervous diseases as both difficult and uninteresting. This is due to the fact that a proper foundation has not been laid by acquiring a thorough working knowledge of the anatomy and physiology of the nervous system. Without this there is little use proceeding with the study of its special diseases.
