

(3) **Reactor internals:**

(e.g. support columns and plates for the core and other vessel internals, control rod guide tubes, thermal shields, baffles, core grid plates, diffuser plates, etc.).

(4) **Reactor fuel charging and discharging machines:**

Manipulative equipment especially designed or prepared for inserting or removing fuel in a nuclear reactor as defined in paragraph (1) above capable of on-load operation or employing technically sophisticated positioning or alignment features to allow complex off-load fuelling operations such as those in which direct viewing of or access to the fuel is not normally available.

(5) **Reactor control rods:**

Rods especially designed or prepared for the control of the reaction rate in a nuclear reactor as defined in paragraph (1) above.

This item includes, in addition to the neutron absorbing part, the support or suspension structures therefor if supplied separately.

(6) **Reactor pressure tubes:**

Tubes which are especially designed or prepared to contain fuel elements and the primary coolant in a reactor as defined in paragraph (1) above at an operating pressure in excess of 50 atmospheres.

(7) **Zirconium tubes:**

Zirconium metal and alloys in the form of tubes or assemblies of tubes, and in quantities exceeding 500
