CHIGNECTO POST AND BORDERER

SACKVILLE, N. B., SEPT. 13 1894

THERE are 511 Young People's Societies of Christian Endeavor in the Maritime Provinces to-day with a total membership of 30,000. The growth of the society during the past year has been most remarkable. In that time 114 new societies have been established of which Nova Scotia claims 64, New Brunswick 26 and P. E. Island 24. Pictou with 50 societies is the banner county. In New Brunswick with 122 societies in all St. John county leads with 24. P. E. Island has 45 societies in comparison with 21 last year. Twenty two Junior societies have been established 17 in Nova Scotia, 4 in New Brunswick, and 1 in P. E. Island. During the year there has been a gain of 3,577 from the associate ranks to active membership and $3000 has been contributed for missions in comparison with $1500 last year.

Decreasing U. S. Trade

Reports from consular officials show that the exports of every country to the United States during the quarter ending June 30th last, decreased to an extraordinary degree, compared with the corresponding period of last year. Exports from the United Kingdom alone fell off more than $16,000,000, and this during only three months. The figures from Canada are:

Charlottetown, P. E. I., decrease of	$101,305
Halifax, N. S., decrease of	5,749
Moncton, N. B., decrease of	96,027
Pictou, N. S., increase of	12,675
St John, N. B., decrease of	159,987
St John's, N'fld, decrease of	30,963
St Stephen, N. B., decrease of	8,203
Windsor, N. S., increase of	19,936
Woodstock, N. B., increase of	9,314
Yarmouth, N. S., decrease of	118,134

The total export for the quarter was $1,158,539, a total decrease of $418,423. The total exports to the United States from Ontario were $4,013,150. The total for the same quarter in 1893 was $4,704,903, a total decrease of $694,752. Quebec increases and decreases not shown. The total articles exported are valued at $1,108,545.

Methodist General Conference.

At the meeting of this conference at London, Ont., Saturday, the report of the general conference fund was presented by the Rev. Dr. Griffin, treasurer, showing that there is still due about $1,300 from the eastern conferences, and a correspondingly large amount from the western conferences, but that is largely due to the closing of the accounts a month earlier than heretofore, so that the collections taken up in August are not included in the account, although a very considerable amount from that source is now in the hands of the treasurer. Taking these amounts into consideration, the fund shows a gain of nearly two thousand dollars.

Dr. Sutherland presented the report of the church and parsonage aid fund, from which it appears the fund has a capital of $21,266. Some of the loans made from this fund, prior to 1877, proved bad, owing to their having been made to the churches and parsonages in localities in the Northwest from which the population has since moved.

The secretary of the missionary society read his report, showing that the gross income of the society was $234,154, showing an increase of $7,375. The expenditure, however, had exceeded the income by about $8,800.

Dr. Withrow, editor of Sunday school papers and magazines, laid before the conference the Sunday school report and also that of the Epworth League. The Epworth League shows a membership of 47,125.

Rev. Dr. Lathern has given notice that he will move that the title general superintendent be changed to bishop.

The committee on the course of study has decided to recommend raising the standard of education of probationers for the ministry The conference will be asked to legislate requiring candidates for probation to pass university matriculation examinations, except under a special circumstance.

The committee on sustentation almost unanimously decided to recommend that each conference shall maintain and control a sustentation fund.

The missionary committee favors a reduction of the number of members of the mission board about one-third.

The committee on itinerancy by a vote of 21 to 20 decided to recommend a possible extension of the pastoral term to four years.

WAR NEWS.

ADMIRAL TING DISGRACED: CRUELTY TO JAPANESE.

It is reported that Admiral Ting, commander of the Pei Yang squadron, has been degraded for cowardice and incapacity, ordered to leave the fleet, and take a shore command.

The native papers say that the viceroy, Li Hung Chang, has been working to procure the mediation of Great Britain and Russia, in the war with Japan. The Emperor and the Dowager Empress it is said, are furious at the suggestion, and refuse to listen to it. Mr. O'Connor, the British ambassador, has returned to Pekin. The country around Pekin is flooded. The government has given orders that no attempts to lower the water on the plain shall be made. The object of the order is to prevent a Japanese advance.

News has been received that on Sept. 1st at New Chwang, a port of China on the River Liaon, the British steamer Feilung, which was taking on cargo for Japan, was ordered by the authorities to stop the work of loading. The order was obeyed. On the following day 12 Japanese women and the Japanese consul went on board the Feilung and asked for protection, saying that their lives were in danger. The women told the captain that their houses had been attacked and destroyed by 200 Chinese soldiers, and that they had been robbed and mal-treated. They had been rescued by Europeans, and kept in concealment until an opportunity was offered to them aboard the British steamer. The women were brought to the vessel, two and three at a time, and in disguise. It was not long after their arrival that the steamer was surrounded by boats full of Chinese, who were seeking to get hold of the refugees. Two Chinese soldiers actually boarded the vessel, but they were promptly driven away. No further attempt was made to get aboard. On the afternoon of Sept 2nd, a Chinese officer went off to where the Feilung lay and advised the captain to leave the port with his vessel the same night, otherwise, he told him, the authorities might not be able to prevent trouble. Word has since been received of the arrival of the Feilung at Kobe, Japan.

UNVEILED.

SPRINGHILL MINERS' MONUMENT.

No coal was raised in the Springhill mines Tuesday the fifteenth anniversary of the Provincial Workman's association but the public holiday was for another reason. It was the unveiling of a magnificent monument in memory of 125 brave men who met death on Feb. 21st, 1891, by an awful explosion in the mines. Business was suspended generally for the miners, who are the very life of Springhill. Of a population of 5,000, twelve hundred are miners.

In the forenoon the usual procession of lodges of the P. W. A. was held. Hundreds of miners and their friends came from Pictou and the Joggins to take part in the demonstration.

Early in the afternoon crowds began to wend their way towards the grounds where the miners monument stands, and when the time came for the unveiling at least 5,000 people were within the enclosure waiting for the unveiling ceremony.

The monument is erected on a lot fronting sixty feet on Main street by 150 deep, the gift of the town to the miners. It is about a quarter of a mile from the post office and half a mile from the cemeteries where peacefully lie the bodies of the dead whose tragic end it commemorates.

It was four o'clock when Sir John Thompson and Sir C. H. Tupper arrived. A platform was erected for the speakers. It was surrounded by a guard from No. 2 company of the 92nd regiment, commanded by Capt. Letcher. Besides the premier and Sir Hibbert there were on the platform Senator Macfarlane, J. W. Longley, Judge Townshend, A. R. Dickey, M. P., John McDougall, M. P., T. R. Black, M. P. P. A. E. Fraser, M. P. P., C. E. Tanner, M. P. P., and Mayor Conway. The chair was occupied by Mayor Conway. Proceeding began with the singing of the 100th psalm by the whole assemblage led by the choir of the Presbyterian church, and prayer was offered by Rev. W. D. Wright. Then the cotton covering which enwrapped the beautiful monument was loosened, and the statue stood unveiled by the premier of Canada. As the folds fell off Nearer My God to Thee broke in plaintive notes from the choir, and the immense gathering took up the hymn. Many eyes were wet as bereaved ones renewed the recollections of their terrible sorrow. Then Mayor Conway called on the first speaker, Sir John Thompson, intimating that the speeches would all necessarily be very short.

Sir John Thompson expressed his pleasure on seeing so many people gathered at the unveiling of the monument. He referred to the sad event which took place Feb 21st, 1891, and expressed his sympathy for the distressed. He gave the miners great credit for erecting such a monument.

Mr. Tanner, M. P. P., of Pictou, strongly sympathized with the miners of Spring Hill.

Attorney-General Longley regretted that Mr. Fielding was unable to be present. In his opinion the great need of our country was not supplied by any one class of workers, but by all classes. There were perils in all occupations of life, but mining was especially fraught with perils. He expressed sympathy with the erection of the monument.

Mr. Dickey, M. P., united his sympathy with that of the others and extended congratulations on the erection of the monument.

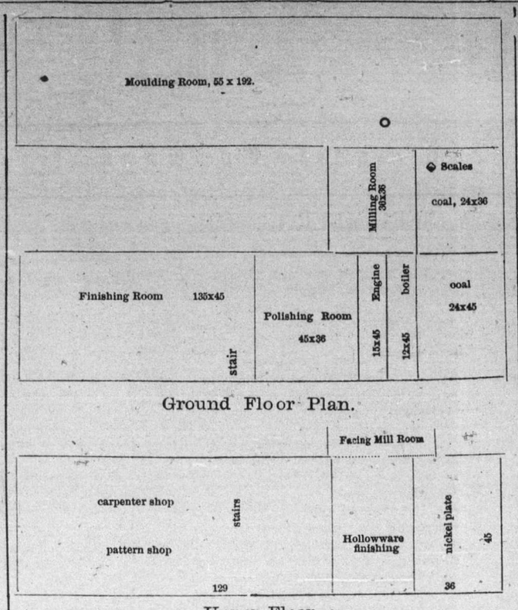
Sir Chas H. Tupper spoke of the evidence of universal sympathy shown by the contributions, which came from all parts of the country, to relieve the distressed. Monuments were not unnecessary, for they expressed the ties of sympathy which bound man together in one common brotherhood.

The ceremony of unveiling, being closed, all united in singing the national anthem.

Queens County Sensation.

On Saturday night 1st inst. an infant was picked up on the steps of Mr. John Campbell's house in Carleton, St. John. Subsequently the waif was taken to the almshouse, where it died on the following Saturday morning. Since then the police have been searching for its parents and both have been hunted up. The alleged father is Thos Palmerston Hetherington son of Thos Hetherington ex M. P. P. Johnston Queens county, and the mother Eva Bostwick daughter of Capt Bostwick of Wickham in the same county. Hetherington was arrested on Saturday evening. The information upon which Hetherington was arrested was laid by Miss Bostwick, who alleges that she ascused in the month of September 1892, did unlawfully marry her in Boston while his (Hetherington's) wife, nee Agnes Armstrong, was still alive. The young woman, it is said, had an extensive tour through the United States in company with Hetherington. The prisoner has a wife and three children in Queens county. Miss Bostwick is only 21 years of age.

Joseph Lennon Unsworth, superintendent of the Prince Edward Island railway, died at noon Monday of congestion of the brain, aged 54. Superintendent Unsworth was born in Liverpool in 1840. He was educated in Montreal and St Hyacinthe. He became an apprentice of the Grand Trunk railway in 1855 and remained with the company till 1872, when he began the work of construction of the Intercolonial. He was master mechanic on the same railway at River Du Loup for seven years, mechanical superintendent of the Island railway since 1881, and chief superintendent since 1887. Mr. Unsworth leaves a widow, two sons and three daughters.



SACKVILLE FOUNDRY.

HAS ARISEN FROM ITS ASHES.

Most Commodious and Best Equipped in The Maritime Provinces.

During the past week a number of moulders have been busy at work in Fawcett's new foundry and on Saturday for the first time metal was melted in the new furnace and a quantity of hollow ware and stoves cast for the first time since the fire. The work will now go on regularly and though much yet remains to be done before everything is in running order yet enough has already been accomplished so that orders can be filled and business carried on. Neither is the supply of stoves and repairs on hand when the fire took place yet exhausted. In hardware as in other trades each season has its peculiar demands and while the spring and summer trade has well nigh emptied some sections of the great warehouses, piles of stoves furnaces, farmers' boilers, and repairs of all kinds suitable for the fall and winter sales remain almost entirely untouched. And the foundry is again in running order and in a better position than ever before to fill orders and supply its customers.

It is over twenty-eight years since Mr. Fawcett first entered the foundry business in a comparatively small way. From the first the business prospered and increased. Every year saw new additions of machinery or workshops. The force of men too continually increased and never during those twenty-eight years of business life did Mr. Fawcett fail to pay his workmen full wages on every Saturday night. The number of men who will begin work in the new foundry will be about forty nearly three times the number which began work with him at the first foundry.

The new buildings cover an area of 2,314 square yards. They consist of two long buildings, a moulding shop 192 x55 feet single story, and a workshop 192x45 two story. These run parallel 36 feet apart and are connected for a distance of 45 feet from the west end by another building which is therefore 45x36 feet. The buildings are all neatly painted and the roofs covered with ribbed galvanized iron. Special arrangements have been made for ventilation and there is not a dark corner in the whole mass of buildings. The moulding room has 44 windows each containing 28 lights 12x16 in. It is also provided with ten ventilators. The rest of the buildings are equally well equipped. The foundry and shops throughout will be heated by steam. Cold water is also pumped to all the appartments by a large pump in the engine room. A gangway runs from end to end of the moulding shop and another crosswise through moulding shop, milling room, and polishing room. The saving in labor by the straight ways is considerable and at each end of each gangway is a door opening into the open air. Everything is arranged with a view to comfort, convenience, and rapid workmanship. Twenty-eight years experience and a lavish outlay of capital have furnished foundry and workrooms which Mr Fawcett claims to be more commodious and better equipped than any other in the Maritime Provinces.

The moulding room occupies the whole of its building and is therefore 192x55 feet capacity. The moulders floors are 25x12 feet each, but if necessary room can be conveniently made for forty moulders. The roof is upheld by trusses so that except around the walls there is not a post in this building. The advantage where men are obliged in their work to carry huge pots of molten iron at a rapid pace, is apparent. The walls are boarded, papered, and sheathed. The cupola is situated near the entrance from the milling room and is a splendid piece of workmanship. The mechanical part was purchased of a Springfield, Ohio firm: the stack from I. Matheson & Son, New Glasgow, N. S. It is lined with fire brick throughout and has the usual arrangement for a forced draft. The water tank for the moulding room is also near this door.

From the moulding room one passes into the milling room in the connecting building. The mills which are just being placed in position are new machines made by a Philadelphia firm and of a kind not in use elsewhere in the Maritime Provinces. It will be seen from the ground floor plan above that an apartment for coal adjoins the milling room. It is so arranged however that in case more space is needed the coal room can be taken into the milling room. A tramway runs along the side of the coal room and up a grade in the milling room to the cupola platform. The object of this is to convey iron and coal to the door of the furnace. At a point in the coal room the road runs over scales so that each load can be weighed as it goes up. In the second story above the milling room is the facing mill room where charcoal is ground up to make facing for the moulds This room is 36x26 feet.

The building which contains the work shops machinery, etc, is 192x45 feet and is on the lower floor divided into coal room, boiler room, engine room, polishing room, and finishing room. The coal room is 45x24 feet and contains soft coal and wood for the boiler. The boiler room is 45x12 and contains all that remains of the old foundry, the boiler and brick chimney. Both have been thoroughly repaired. The boiler is surrounded by brick work and the brick work of the chimney is at its thinnest parts two and one half feet thick. So that this department is equally free with the others from all danger of fire. The engine room is 45x12 feet. It contains a new 80 horse power Robb Armstrong engine, a large sized pump, a water heater, and a fan for forcing a draft in the cupola. The pump was manufactured by the Northey Manufacturing Co. of Toronto. It will be used not only in forcing water into the boiler but also through the entire building upstairs and down. And by hose attachment it will be available in case of fire. The water heater is a large one manufactured by a Connecticut firm. By its use the exhaust steam is made to heat to boiling point the water passing into the boiler. The fan is a highly improved and modernized machine manufactured by the Sturtevant Co. of Boston Mass. It makes 3000 revolutions per minute. It is situated on an adjustable bed so that the belts can be tightened by simply turning two nuts. A large pipe of galvanized iron carries the current of air from the fan through the milling room to the blast furnace. The fan is on an elevated platform in one corner of the room so as to be entirely out of the way. All the machinery here and elsewhere is on a firm foundation some 300 tons of stone having been drawn in before the buildings were erected. From the engine room a door leads into the polishing room, a light pleasant apartment, 45x36 feet. Grinding and polishing machines of all kinds here hold sway. Here the rough castings are dealt with before passing into the finishing room to receive the final touches. Through the entire length of the finishing and polishing rooms, and the engine room runs a line of shafting manufactured by the New Glasgow Steel Co. Split pulleys manufactured by Goldie & McCullough of Hamilton Ont are attached at points along the shafting and belts from these pulleys run the various machines. In the finishing shop which is 104x45 feet the stoves are fitted together and finished. A long work table runs along one side of the room provided with emery wheels, thread cutters, and all manner of machinery, while scattered about the room numberless other machines big, bigger, and biggest, are being placed in position, Lathes, horizontal and upright, drills, emery grinders, etc. are strewn about in apparent confusion but really in position where they will best serve their purpose.

A flight of stairs from the finishing room leads up into the carpenter and pattern shop a room 129x45 feet. Here moulds are made and patterns finished. Here Mr. Fawcett has already a number of new patterns in an advanced state. This apartment like all the others has plenty of room and lots of light. From it a door leads into the hollowware finishing room 27x45 feet where pots, kettles, boilers, etc. receive final attention before being taken into the warehouse. From here one door leads into the facing mill room a description of which has already been given. Another into the nickel plating room an apartment 36 feet by 45 and one which will be when in working order one of the most interesting in connection with the whole works. As yet much of the machinery for this part of the business remains packed in mysterious looking boxes. Several large tanks lined with lead or asphaltum and used for holding various chemicals stand about and some machines have been placed in position. Here the dynamo will have its abode and it will have as companions a multitude of curious, mystical, machines used in nickel plating. By comparing figures it will be seen that three rooms just mentioned take up all the space in the second story of the work shop. The exhaust pipe from the engine is led up through the central room and by a simple device it can be used in case of fire as a motive power to through a stream of water to any part of the building. It will be seen that the machinery came from a great many and widely separated parts of Canada and United States.

Outside the yards and warehouses are not without interest. Near the main entrance to the new building is the water supply a boiling spring capable of supplying all Sackville. Between the new buildings and the road is the great warehouse, 100x80 feet, and three story. The lower story is divided into two apartments 80x40 and a linter 80x20. All kinds of stoves, farmers boilers, plow shares and pieces, and repairs of all kinds are stored in this building. One room is largely devoted to the storage of flour and feed; in another hollowware of all kinds is sorted out and piled in bins; while in yet another stove doors, linings, and parts are neatly arranged in racks. One large room contains supplies for the foundry and workshop. A good sized elevater is used in raising the heavy ironware to the upper stories. On the south side are two warehouses used for storing patterns and moulds. One is three story 80x40 feet, the other one story and a half 25x30 feet. At the west end of the new buildings is a blacksmith shop 40x30 feet and a warehouse for storing sand. Here also piled in the open air is a quantity of pig iron and a huge pile of what before the fire was $3000 or $4000 worth of stoves. The retail store, offices, tin shop, and ware rooms, are situated at a short distance on the opposite side of Main Street in a building 60x60 feet. And lastly in connection with the foundry may be mentioned the thirty tenement houses on Foundry street owned by Mr. Fawcett and occupied by the moulders and their fellow workman.

Tormentine Notes.

—Showers now water the earth.

—Frost has visited these parts and thereby every green thing has suffered.

—Potatoe fields are all blackened as result of last Friday night's frost, but the crop it is thought will not be seriously injured.

—Owing to showery weather marsh haying is not rapidly advancing, but some has been saved in good order, and the yield is up to the average.

—In notes of marriage service last week it ought to have been noticed that the church was profusely and tastefully decorated with forest green and house plants; and also that Mrs. Rattray the organist rendered the wedding march and other appropriate musical airs.

—Mackerel and bass are sometimes very plenty along the coast, and occasionally these fish can be taken at the Pier in large quantities. On Friday Mr. Job Dobson and wife and Miss Hattie Allen hooked 140 mackerel and 15 bass. Mr. D. got so interested in the sport that he forgot to take any food from breakfast time until about half past seven in the evening. But he made up for his long fast at the evening meal when it is said he ate about 25 of the fish he took during the day. This may perhaps serve to indicate both the appetite of the eater and the size of the fish.

—W. F. Hamilton, M. D., of Montreal has been spending a few days with his brother, Rev. C. W. Hamilton, at Bayfield. He is on the eve of starting for the Continent of Europe for the purposes of study and travel. He will be absent for the greater part of a year. Dr. H. holds the position of assistant attendant physician in the "Royal Victoria Hospital." To the duties of these positions he will return at the close of his stay abroad. Thirteen years ago he taught the school on Lower Emmigrant Road. On Monday last he visited the old school house and was particularly struck with the sameness of everything in and about the place. Perhaps there is too much of a sameness to have existed through so long a period in this progressive age in connection with an Educational Institution.

--The late teacher of the school at Bayfield is now fairly embarked upon the jewellry business, with headquarters at Port Elgin. Mr. Allen possesses elements calculated to command success for their possessor in any business he might elect to pursue. A personal acquaintance for over two years warrants the above assertion. Mr. A. has recently purchased the jewellry department of Mr. M. G. Siddall's business, and is now prepared to furnish anything in his lines that is needed by the public.

PERSONALS.

—Mr. and Mrs. W. Harvey Dobson of Bayfield returned from their bridal trip to P. E. I. on Saturday evening.

—Miss Joey Crane returned to Bayfield on Monday evening from a brief visit to Sackville.

— Miss Jessie Jones after some time with her people in Bayfield will return next week to resume her business at Port Elgin.

—Miss Huestis from North Tryon, P. E. I. is visiting relatives at the Upper Cape where she is guest at Mr. Albert Allen's.

—The Upper Cape Methodist ladies are now at work providing for fencing and otherwise, improving the old cemetery.

S. S. Convention.

The annual S. S. convention of the N. B. Association will meet with the church at Pt. de Bute on the 19th of September at 2.30, p m. Five delegates are invited from each school. The nearest railway station is Aulac. We are expecting the usual reductions in railroad fare. Teams are expected to meet us at the station to convey us to Pt. de Bute. The following is the programme for the meetings:

WEDNESDAY AFTERNOON SESSION.

Reports from parish superintendents and delegates from different schools, also appointment of officers.

EVENING SESSION,

1. Model Lesson. John 4:9-26. Taught by Rev. S. W. Keirstead.
2. Deacon Palmer on the use of tobacco.
3. A plea for the use of the Bible in our S. schools—S. H. Cornwall.
4. Rev. A. H. Lavers, paper; subject—The relation of denominational and interdenominational work.

THURSDAY FORENOON.

1. Bro. A. C. Sears—"Hindrances in our School Work.
2. Rev. W. Camp, paper; subject—How to secure teachers for our S. Schools.
3. Report from the secretary.

Thursday afternoon—Unfinished business.

Each subject on the program is left open for discussion.

S. H. CORNWALL, Sec. of Convention.

Flies and Hooks,
BASE BALLS, BATS and FOOT BALLS.

I have also opened a MUSIC DEPARTMENT in which I have a good stock of
VIOLINS FROM $3.50 TO $40.
Also agent for the
Cornwall Organ.

W. I. GOODWIN,
SACKVILLE BOOK STORE

PAIN CURE.

Those who have used it need no one to tell its value; they know burns will not blister by its proper use, fevers relieved at once and very quickly cured, catarrh made endurable till recovery comes, headache, toothache and neuralgia vanish at once; weak and harmless as water taken by children or adults.

COSTS YOU NOTHING TO TRY IT.

Also, A New and Important Discovery of A Second and heretofore Unnoticed Nervous System. Having control of the Heart, Lungs, Stomach, Liver, Kidneys and all internal organs. The secret of Health and Beauty. To be had only from
R. ALEX McCOUBREY,
Squire St., Sackville, N. B
Assistant to Dr. Shoop, Racine, Wis.
