The sanitary officer, Mr. A. K. Farquharson, has undertaken to enforce the order of the government Agent and on Wednesday morning the first load was hauled to the new garbage ground. He has had notices printed warning the public against dumping refuse anywhere else. Those who disregard this notice will be prosecuted to the full extent of the law. This is as it should be, and those who have been guilty of violating the government order will easily understand the justice of it when they consider the discomfort caused to resident of the northern end of the townsite, as well as the alarming effect that such a course may have on the sanitary condition of the town.

THE LEAD BOUNTY.

The Dominion Government has at last granted assistance to the lead industry in the form of a bounty. The sum of $500,000 a year is to be spent as a bounty, 75 cents being paid for every 100 lbs. of lead contained in lead ores. The grant is to last for five years. The present bounty on refined lead is to be decreased.

The result of this legislation will be felt throughout the Kootenays where a revival of the almost dormant industry is sure to spring up. The St. Eugene, the North Star and the Sullivan mines of East Kootenay will again commence operations, neighboring towns now quiet and retrogressive will take on new life and swarm with activity, cold furnaces of the lead smelters will again be heated and the whole lead country will go forward as in the old days.

It is significant that at this particular time the output of our coal mines is being increased enormously and new coke ovens are being pushed to completion. This will ensure plenty of smelting fuel so that no obstruction of this nature is to be feared by the lead-miners.

Mr. J. L. Parker, of the North Star mine, who is an authority on the subject, estimates that in the period of five years the lead mine owners of the district will expend $10,000,000 in operating the lead mines of the Kootenays. This together with the bounty of $2,500,000 will give a grand total of $12,500,000 to be put in circulation as a result of the bounty.

EDITORIAL NOTES

It is a ticklish matter to hold a 4th of July celebration on Canadian soil and that the affair held here last Saturday was so great a success was due no less to the broadmindedness of the Canadian citizens of Fernie than to the tact shown by the participating Americans. While Canadians rejoice with their American cousins on the occasion of their natal day they lose none of their love for their own flag; and while Canadians are always pleased to note the progress made by the great nation to the south of the international line they lose none of their admiration for, and their confidence in their beloved Canada and her free institutions.

* * *

The Nelson Tribune in discussing the probable voting strength of the different electoral districts in the coming election stated that the Fernie district would poll 1000 votes. This is not a large vote when the male population over 21 years is considered. There are many Americans and other aliens, however, in this constituency that either cannot or will not qualify as voters. There are many also who have come to the district recently and cannot register as well as a large number of roving spirits who never remain long in any place. Add to these the usual list of careless ones who will neglect to register and who will elude the alert committee, also those who will leave the district before election day or who will not take enough interest to cast his vote. Taking all these things into consideration the estimate of the Tribune is a liberal one notwithstanding the large population we possess.

* * *

Mr. Hawthornwaite stated last evening that five millions of people did all the work in the United States last year and produced $13,500,000,000 of wealth. What did the remaining sixty-five million people do?

No man or woman will hesitate to speak well of Chamberlain's Stomach and Liver Tablets after once trying them. They always produce a movement of the bowels, improve the appetite and strengthen the digestion. For sale by all Druggists and Dealers.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped portions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding against the wasteful destruction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

FERNIE DAIRY

Fresh milk delivered to all parts of the town.

Dobson & Willingham

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1, That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electoral districts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

Louis Carosella & Co.

WHOLESALE LIQUOR MERCHANTS

Fernie, B. C.

232-4 M. J. CLAXTON.
Dated May 23rd, 1903.

LOCAL AND GENERAL.

Hazelwood Ice Cream at Cuthbert's.

Dr. Morrison was out of town a few days this week.

James A. Macdonell was down from Michell yesterday.

Usk "Griffin Brand" brix butter, you can get none better. x

Miss Gertie Crawford left for Minneapolis on Monday evening.

Mitchell the tailor is putting on a $5 discount on suits for July only.

Mrs. Stewart, of Regina, is the guest of her daughter, Mrs. W. R. Ross.

Mitchell's tweed suits range from $23 to $28 for July only.

Mr. G. Griffith, of the Columbia Hotel Elko, was in town early in the week.

We buy, sell and exchange new and second-hand furniture, stoves, etc., at the B. C. Furniture Company. x-t.f.

Rev. J. C. Herdman, D. D., of Calgary, superintendent of Presbyterian Missions in B. C, assisted Rev. D. L. Gordon in his services last Sunday.

Mr. and Mrs. J. R. Pollock left on Tuesday for a month's holidays at San Francisco and other coast points.

Mr. A. Delvin, of Barrie, Ont., arrived in Fernie on Thursday and is the guest of his brother-in-law, F. J. Watson

Do not neglect to register your name. Attend to it today while there is yet time, for the day will soon come when you cannot register.

Miss Ralph left for Ontario this week being called suddenly by a wire conveying the news of the dangerous illness of her mother.

Mr. Claxton and John Claxton, of Orangeville, Ont., father and brother of A. T. Claxton arrived in Fernie on Wednesday on a visit.

The weather for the past two weeks or more has been showery with very little sunshine mixed in. The summer however, appears to have settled in at last.

Mr. W. H. Whimster has been appointed collector of votes for the Fernie district vice Mr. L. R. Forbes. The notice appears in this week's Gazette.

Engine 344 and crew have been added to the C. P. R. yards here. Engine 342, with the mine work as well as the yard work, has been overworked of late and the crew will be glad to have it lightened.

Miss Carrie Hall was on the derailed train east of Winnipeg in which all the passengers miraculously escaped injury. The passengers were taken to Winnipeg to be taken on by the first regular train.

Mr. C. D. Reed, of the Calgary Cattle Company left with the base-ball boys for Calgary on Tuesday. He expected to bring a car-load of beef cattle back with him, but owing to the blockade on the road he did not get further than Macleod.

James Johnstone of Nelson, formerly manager of the C. N. P. Coal company, was at Elko this week to inspect some iron properties near that place, but owing to the high water in some of the creeks he was unable to get to the claims.

Pretty and comfortable hammocks at reasonable prices at the Fernie Drug store. x

The regular services will be held at the Methodist church to-morrow by the pastor. In the morning he will discuss the subject of "Discipleship and Service" and in the evening "The Best Kind of Workman." The public are cordially invited to attend.

Mr. J. F. Armstrong was in town on Thursday. He states that there were strong grounds for believing that the government were looking with favor upon the proposition made by the Board of Trade that the road should be built to Morrissey on the west side of the river.

The Clara Mathes Co. played in Cranon Monday and Tuesday evenings and in Pincher Creek on Thursday and Friday evenings. This excellent company evidently has given Fernie the go-by. This town has not gained an enviable record for its treatment of shows of the better variety.

The recent entrance examination was a very stiff one as is evidenced by kicks from different parts of the province. The results recently published show only one successful candidate out of the five who wrote at Fernie, Gordon Johnson being the fortunate one. At Cranbrook only one of ten candidates passed.

Miss Porter and Miss Davis of Kingston, Ont., arrived on Wednesday and are the guests of Rev. and Mrs. D. L. Gordon. Miss Porter is a sister of the latter. These ladies are associated with college work in their native city and will spend the summer vacation in Fernie.

The American consul's flag was stolen from the flag pole early Sunday morning. Mr. Harwood who sleeps above the office, heard a noise about half past two which he then believed to be caused by the yard engine, but which he now knows was caused by the rope being pulled through the ring. The local police are doing what they can to locate the thief. It is the general belief that it was stolen either by a drunk or by some ignorant person who did not understand the rights of an American consul.

The Calgary Cattle Company bring in only the best prairie cattle for use in Fernie. x

C M. Edwards of Cranbrook was in town on Monday.

Evan Evans of Michel was in town on Wednesday.

R. M. Fullerton of Elkmouth was in Fernie on Wednesday.

Geo. A. Leitch of Jaffray was in Fernie on Wednesday.

Get your summer suit this month while the $5 discount is on at Mitchell's.

The hot weather is here, buy a hammock at the Fernie Drug Store and enjoy yourself. x

Miss Thiner, of Lethbridge, is the guest of Mrs. H. Bentley.

Mrs. (Dr.) LeClair, of Milestone, Man., is the guest of her sister, Mrs. Jos. Jean.

The Calgary Cattle Company can meet all your meat wants. Give them a trial. x

The Fernie Manufacturing Co. received their new boilers and engine this week, and also a couple of car-loads of glass.

The Cranbrook and Nelson Boards of Trade have again passed urging for Sunday mail service along the Crow's Nest line.

The new butcher shop of the Calgary Cattle Co., in the Turner Block, under the competent and obliging management of Mr. C. D. Reed, is now in full swing. The company guarantees satisfaction to all its customers. x

Board of Trade Meeting.

The regular meeting of the Fernie Board of Trade will take place on Monday evening next, in Joyce's Hall at 8 o'clock. Several important matters including the Morrissey Road, will be discussed.

Miss Mary Whimster who during the past year has been attending the Presbyterian Ladies College, Toronto, has received honorable mention in the report of the recent college examinations published in the Toronto papers. Miss Whimster took honors in several departments.

D. McKay, Government Inspector of roads, was in town this week. He says the Morrissey road would have been started before this but for the heavy rains of late. Mr. McKay is of the opinion that the road will be built on the west side of the river and that a bridge across the Elk at Morrissey will be built out of this year's grant.

The homeseekers' excursion which left Ontario for western points on July 4th was so well patronized that it required five sections to carry all the excursionists. The rates extended as far as Macleod and many bought tickets there for points further west. Passengers from the first section arrived on Wednesday and since then the other sections have been been coming in.

Liberal Meeting.

The Fernie Liberal Association met in Joyce's Hall on Monday evening to discuss the advisability of calling a district convention of Liberals. There was a good turn out of Liberals and several new members were added to the list. It was decided that the association should correspond with the liberals in the other parts of the district with a view to having a convention at an early date. A committee was formed to assist in building up the voters' list.

The Fernie base-ball team left on Tuesday for Calgary where they take part in the base-ball tournament. The players who went are, Messrs. Taylor, Peacock, C. Whalen, Kastner, McFadden, McCreary, McIntyre and Wilson, and Walters as spare man. Neil Dunlap went along as mascot. T. Whelan and W. W. Tuttle also accompanied the team. The party were stalled at Macleod over Wednesday on account of a serious wash-out on the line at High River, caused by the recent heavy rains, and they did not leave Macleod before Thursday evening.

"Griffin Brand" brix butter is fresh from the churn and retains that peculiarly delicate flavor that only the best and freshest butter can have. x

Your credit is good at the B. C. Furniture Co. x

Boston Pie.

Waiter—Have a piece of pie, sir?

Pincher—No, thank you; I never eat pie; it doesn't agree with me.

Waiter—To every person who has eaten one order we give pie without extra charge.

Pincher—Come to think it over, you may bring me three pieces of pie, two of berry and one of custard.—Boston Transcript.

The Skin and the Graft.

"Truly," says the patient who is being skin grafted, "surgical science is a wonderful thing."

"It is," says the friend who is helping out with the required skin. "First they skin me and then they graft you; but after you get well and they send in the bill you'll find that you've been skinned for their graft."—Judge.

Ultra Swell.

"She's one of these society women who keep a pet dog to go with them when they promenade, isn't she?"

"Oh! She's more fashionable than that. Why, she keeps a dozen dogs of different sorts and shades to match her various costumes."—Philadelphia Press.

Remedy For Wrinkles.

Managing Editor—Well, what's the trouble?

Assistant—The beauty editor is away and a woman writes to know what to do with a wrinkle in her forehead.

Managing Editor—Tell her to putty it up and forget it.—Detroit Free Press.

Definite Measurement.

"Do you think the world is growing any better?"

"I'm absolutely sure of it," answered the monopolist. "Why, five years ago I made only a hundred thousand a year. Today I am making that much a month."—Washington Star.

His Experience Was In Mines.

"Did you ever salt sheep?" asked the farmer of the new hired man who came from Colorado.

"No," replied the new hired hand, "but I've had considerable experience in salting mines."—Ohio State Journal.

In 1905 A. D.

Mrs. Uptodate (to maid)—Marie, you need not set out the capsules for Mr. Uptodate's dinner. I have received a marconigram that he will not be home until 10 o'clock, as his santos-dumontobile has had a breakdown.—Judge.

For Others to Enjoy.

Brown—You should do something to contribute to other people's enjoyment.

Jones—I do; I'm always making a fool of myself.—New York Press.

NATION'S BIRTHDAY.

DECLARATION OF INDEPENDENCE AS A BIRTH CERTIFICATE.

OUTGROWTH OF THE MOMENT.

"Startling Culmination of Manly Intolerance of Injustice," Says Rev. Dr. Talmage in His Sermon Prior to the Coming Fourth of July—Quotes President Roosevelt on the Quality of Liberty.

Entered according to Act of Parliament of Canada, in the year 1903, by William Bain, of Toronto, at the Dep't of Agriculture, Ottawa.

Chicago, June 28.—In this sermon the preacher chooses a patriotic theme. The text is Psalm cvi, 5, "That I may rejoice in the gladness of thy nation."

When a child is born the attending physician makes out a birth certificate. This important document is sent to the fireproof building where are preserved the county records. The omission of this certificate or the improper filing of the same might cause inestimable damage. Years hence the lack of it might disinherit the child of large property interests and involve many would be heirs in interminable legal strife.

But though the birth certificate of an individual may be vigilantly guarded it is not so carefully preserved as is the birth certificate of a nation. Then the sentimental as well as the intrinsic value places it above the price of silver and gold. If possible it is carefully housed within the sacred hall wherein the nation was born. The paper upon which is written the Declaration of Independence is the American nation's birth certificate. Other nations came to recognition by the slow processes of evolution, but the United States of America sprang into existence in a day, and this Declaration announced in an astonished world on July 4, 1776, the birth of a new member of the family of nations. As the young King Alfonso XIII. of Spain, having been born after the death of his father has the unique distinction among sovereigns of being born a king, so the American Goddess of Liberty at her first appearance took her place in the world as a sovereign. The document in which she declared her sovereignty and her rights constituted the old Independence hall of Philadelphia the most sacred building in American history, since within its walls is that sacred birth chamber in which was first rocked the cradle of this newborn national infant. It publishes to the world that the men who signed their names at the foot of that immortal document, penned by Thomas Jefferson in the little three story red brick house still standing at the corner of Seventh and Market streets Philadelphia, were the attending witnesses whose testimony gave validity to that national birth certificate.

The Declaration of Independence was the startling culmination of manly intolerance of injustice. The document was not, as some people suppose, the result of a long and carefully planned conspiracy extending over many years. It seemed rather to have been the outgrowth of the moment. It was the crystallization of sentiments the results of which but few men could foresee. The British ministry had not anticipated it, neither had the American people. When the First Continental congress assembled in Philadelphia, on Sept. 5, 1774, there was probably not one prominent leader in all America who wished for national independence with the sole exception possibly of Samuel Adams of Boston. "Before the 17th of April, 1775," wrote Thomas Jefferson, "I had never heard a whisper of a disposition to separate from the mother country." "When I first took command of the army, July 3, 1775, I abhorred the idea of independence," wrote George Washington in one of his letters, "but I am now convinced that nothing else will save us." All that the American colony wished from England was not separation, but justice.

The two countries in every essential part of their make up were one. They spoke the same language. Many families had brothers and sisters and other relatives in both countries. The children of prominent Americans were for the most part educated in English schools, where they were taught to reverence the British king. When Richard Henry Lee arose on the memorable 7th of June, 1776, and read the following resolution: "Resolved, That these united colonies are and of a right ought to be free and independent states and that they are absolved from all allegiance to the British crown," his own boy was at that time attending an English school. This American youth, some weeks later, was standing beside one of his teachers when a visitor asked, "Who is that boy?" "He is the son of Richard Henry Lee," was the teacher's answer. Then the visitor placed his hand upon the lad's shoulder and said, "Boy, we shall yet see your father's head upon Tower hill!" To this the son replied, "Yes, you may have it when you get it!" If Richard Henry Lee for years had been conspiring for American independence, he would never have sent his son across the sea to be educated under the domination and influence of the English throne. The Declaration of American Independence was written and signed as a last resort and because the British Ministry would not listen to American petitions. It was written because King George with the fatuity of royal and imperial natures imagined that he had the right to enforce his will on a people as resolute as himself. He believed that it was for him to command and for them to obey and that their protest against taxation without representation was wicked rebellion against divinely constituted authority. It was written because our forefathers believed that in a struggle for right and justice God would be on their side, though they had to contend with a foe more powerful than themselves.

Standing here, in this year of grace 1903, with our hands upon this venerable and sacred scroll, we may learn the mighty lesson that the really true, the great, the omnipotent and enduring Government is not that which rules by force of arms, but by the all conquering power of justice, and of justice alone. This is the historical teaching of England's mistake in 1776. We have now a great nation, stretching from the Atlantic to the Pacific and from the Gulf of Mexico to the great lakes—a nation of over 70,000,000 souls. But our people will remain a great nation only so long as they are an honorable and an honored people. Beware of the legislation that would make one law for the rich man and another for the poor man. Beware of the law that would send an ignorant criminal to prison and yet permit a brutally selfish coal baron to traffic in child labor. Beware of a social condition which makes it possible for capital to starve and grind down labor while labor, with an honest heart, is ready to give capital a full day's work for a fair day's wage. Our laws should tolerate neither tyranny of capital nor tyranny of labor, but should afford equal protection to both and facilitate mutuality of interests and friendly relations between them. It is only when a Government honestly tries to administer equal justice and afford equal protection to all its subjects that it gathers the robes of immortality about its loins. When a Government by unwise laws and administrative neglect makes possible the enslavement or oppression of its seemingly helpless ones such a Government is paving the way for its own disintegration. Had King George III. been a wise ruler and had Britain tried to be as just to the thirteen colonies in 1776 as she is honestly trying to be to her colonies at the present time our country might have remained the brightest jewel in the British crown. Would that our own land, profiting by this great lesson, so closely interwoven with our national birth and childhood, might always be just to the helpless, the weak and the poor as well as to the rich, the influential and the strong.

The strength of our present Government is due to the fact that it tries to be just to all its people, irrespective of class. "Ours is a Government," said Theodore Roosevelt in a recent speech, "of liberty through and under the law. No man is above it, and no man is below it. The crime of the cunning, the crime of greed, the crime of violence—all are equally crimes, and against them all alike the law must set its face. This is not and never shall be a Government of the plutocracy or of the mob. It is, as it has been and as it will be, a Government of the people, including alike the people of great wealth, of moderate wealth, the people who employ others, the people who are employed—including them all, protecting each and every one if he acts decently and squarely and discriminating against anyone if he does not act squarely and fairly, if he does not obey the law. While all people are foolish if they violate the law or rebel against it—wicked as well as foolish, but all foolish—yet the most foolish man in this republic is the man of wealth who complains because the law is administered with impartial justice." May God always continue to give to us for the office of chief executive men who are Presidents of the whole people, who will see that the Government is not a Wall street hireling or a gigantic monopolizing trusts' employe; who will protect the rich as well as poor, black as well as white, Jew as well as gentile, woman's virtue as well as man's honor; who will not cringe to a class, but who will protect and guide all honest people alike!

In olden times the Scottish youths were inspired to deeds of valor by the knowledge that they were members of the clan MacGregor or Campbell or Stuart or McCoy. They were inspired with the determination never to disgrace the family name. It is recorded that in one of the northern battles the MacGregors were being driven back. Their chief rallied his followers and led them forth to a victorious charge with the cry: "My men, come on! Come on! Fight like brave men! Your ancestors are to-day watching you!" So let us be brave and true to America's best interests, not only for our own sakes, but also for the sake of those illustrious ancestors who are watching us. Let this national anniversary be to us a day of consecration to the cause of right and freedom. As the mother of Hannibal led her son to the grave of Hamilcar, his sire, and there made him swear unceasing war against the enemies of his country, so may we, remembering the graves of the signers of the Declaration of Independence, pledge ourselves anew to the struggle against the evils which menace the greatness and righteousness of the nation that they established.

I repeat, in the great crisis of national affairs God, if we only trust him, will give us the right men for the right places. Did he not give the right man for the right place when he gave Thomas Jefferson as the writer of this immortal document? Did he not give the right man for the right place when George Washington became the head of the American armies? Did not God give the right man for the right place when, at the breaking out of the civil war, Abraham Lincoln became president of the United States? Did not God give us the right man for the right place when William McKinley sat in the White House and calmly and bravely guided the affairs of state during the Spanish-American trouble? And shall not God raise up and inspire our future leaders if the American people are a Godly nation and unfailingly look to him for divine guidance?

But while the members of the Continental congress of 1776 were brave men, they were also, as a class, praying men. True courage and consecration are brothers. They were men who believed in God. They were men who, down upon their knees, reverently and earnestly and intensely sought divine light. In the famous historical picture the members of the Second Continental congress are shown on their knees in prayer. To the Christian American student that picture ought to be the most impressive historical painting ever hung in legislative hall or in foreign or domestic art gallery. I have seen the noted war pictures of Berlin and Dresden. I have seen the form of Emperor William I. in many scenes, flanked by Von Moltke and the nation builder, Prince Bismarck. In Paris I have seen the Napoleonic pictures and in London the war pictures of Waterloo, where the pale-faced Wellington immovably sits his horse, watching the destruction of the French grenadiers. But in all the art galleries of the world there is no historical picture that, to my mind, is so impressive, so significant, so full of inspiration as that historic picture of the Continental congress in prayer.

Most of the members of that congress came from praying Christian homes. They assembled in the spring and summer of 1776 to take the most momentous step which the citizens of any country can take. It was no light or trivial act to renounce allegiance to King George and to defy the power of the British Government. These men well knew the consequences involved in such a step and realized the necessity of having divine guidance. One of the members arose and moved that a prominent Episcopalian minister of Philadelphia should be sent for and asked to lead the members in prayer to God. Samuel Adams, I think it was, seconded that motion. He said in substance: "I am not an Episcopalian, but I am not a bigot. I feel that God's hand must lead us in this national crisis. I second the motion." The motion was carried. The next day this Episcopalian minister came to the legislative hall. He came in full canonical robes. All the members knelt. I can well believe that all must have joined in the prayer that the God of the armies of Moses and of Joshua would lead and guide them. How on any other assumption can we explain their dauntless courage? It would have been sheer temerity for those men to sign that Declaration unless they had believed that God would be with them in the struggle that must ensue. And their faith was justified by the result. The God who heard the pleading of the Israelites in the wilderness heard the prayers of that Continental congress. In his providence England was not left free to use her strength in crushing the infant nation. The life and death struggle in which she had to engage nearer home curtailed her power, and to that fact, due to the overruling mercy of God, our forefathers owed their success. Oh, my fellow countrymen, let us on this anniversary exercise the faith that our fathers had in the God of nations. May we continue to pray as our ancestors prayed in 1776 and in 1812 and in 1861. May we feel as a nation that our God is a prayer answering God, and that he will listen to our petitions, whether lifted in church pulpit or in the legislative hall.

Thus on this glorious national holiday I want you to take the Declaration of Independence, which is our birth certificate, and place it between the leaves of your Bible. There may it speak to us as Christian citizens and as individuals. While it reminds us of the patriotism and sublime heroism of our fathers, may it also remind us to redeem our beloved land from the plague of sin and to promote, as far as in us lies, the righteousness which alone exalteth a nation. And as individuals may it not remind us of our high privileges as citizens in the kingdom of God? When assailed by temptation and by the evil that would subjugate us let us remember the Declaration of Independence which Christ signed for us with his own blood and realize in our own lives the truth of his words, "If the Son make you free ye shall be free indeed!"

Glass Walls Stop Sound.

Who would have supposed that a partition of sheet lead would prove less effective in cutting off the passage of sound than a partition of glass of equal thickness? One instinctively expects his voice to be carried through a sheet of glass to the ears of a person seen sitting on the other side, while lead might well be thought to exercise a deadening effect on sound. Yet experiments, reported at a recent meeting of the American Physical society, show that a wall of lead transmits sound better than a wall of glass. The conclusion drawn from the experiments was that, other things being equal, the medium which yields most to steady pressure best transmits sound.

Skilful Transplanting.

Set plants into freshly turned soil so that moist earth will come into contact with the fine roots. A rainy or at least a cloudy day late in the afternoon is a favorable time. Make the hole about the depth of the root, insert plant and press the earth closely and firmly to the roots. In dry weather press the soil with the foot, and then go over lightly with a rake to stir the surface and to hold in the moisture. Keep the plants wet during setting. Ten minutes of wilting either before or after setting would often settle the fate of the plant.—American Cultivator.

English as She Is Defined.

The tedium of an English teacher's work is not infrequently relieved by the unconscious humor of her pupils. The following are definitions culled by one English school.

The word "buttress" occurs in the lesson, and the teacher upon asking for a definition receives this response: "A buttress is a woman who makes butter."

Even more choice than this is the idea a little girl has of a ruminating animal. She gravely writes, "A ruminating animal is one that chews its cuds."

MASTERS OF MUSIC.

THE GREAT COMPOSERS AND THEIR PECULIAR METHODS OF WORK.

Eccentric Habits, as a Rule, Are Linked With This Phase of Genius. Haydn's Dress Suit and Sapphire Ring and Beethoven's Wild Walks.

All the great musical composers had their own peculiar ideas and manner of working. They had their peculiar traits, their moods, their eccentric habits, such as are generally said to mark the genius. In "Musical Education" M. Lavignac tells of their peculiarities.

"Haydn was a very early riser," he writes, "and yet he never worked except in full dress, in which he was like Buffon. He began by shaving himself carefully, powdered himself and put on his finger a certain ring, a sapphire, I believe, surrounded with brilliants, which had been given him by the great Frederick, unless it was Prince Esterhazy. That done, he shut himself up in a quiet room and wrote for several consecutive hours, five or six, without stopping.

"Mozart, the gentle and pious Mozart, was sometimes less particular and composed a little everywhere and under all conditions. Happily the ideas came often enough and pursued him even into the restaurants of Vienna, Prague and Munich, where he was very fond of playing billiards and smoking a pipe and composing in his head.

"Rossini composed almost constantly and in all ways, rarely at the piano, most often in the evening or at night, and, like Mozart, often found inspiration in a carriage or post chaise. In the irregular joltings of these vehicles he perceived rhythm, and of these rhythms melodies were born. There is no doubt that he would have found them in the trepidation of the railroad if he had dared to try, but he had such a dread of this mode of locomotion that no one was ever able to induce him to set foot in a car.

"Gluck composed violently gesticulating, walking up and down and acting all his characters, often in the open air, on the lawn, in a garden.

"Beethoven also undoubtedly found a powerful auxiliary to inspiration in motion and walking. Whatever the season, every day after dinner, which was at 1 o'clock, according to the Viennese custom, he set out for a walk, and with big strides twice made the circuit of the city of Vienna. Neither cold nor heat nor rain nor hail was able to stop him. Then it was that his heat of fancy attained its full ardor. He would enter a restaurant, sit down for an instant and ask the stupefied waiter for the bill, without having ordered anything. His clumsiness was prodigious. He usually broke everything he touched. Not a single piece of furniture in his house, and any article of value less than anything else, was safe from his attacks, and many times his ink pot fell into the piano by which he was working, which, religiously preserved in the museum at Bonn, still retains its indelible traces. Although he had always lived in the midst of the high Viennese aristocracy, in which drawing room dances were held in high honor, he never succeeded in dancing in time.

"Herold composed while walking, humming or singing, often in the Champs Elysees, and often passed his best friends by without recognizing them.

"Gounod composed especially at the table, or at least in his head. When he wrote, everything was absolutely clear in his brain. His manuscripts prove this.

"Wagner liked to write standing up before a large table desk like the cash desks in the shops. His scores were written without erasures, in a superb calligraphic hand, admirable for its clearness and firmness and worthy of a professional copyist.

"Berlioz, who played no instruments but the guitar, flute and flageolet, necessarily worked at the table.

"Franck, who was the head of a school, scarcely composed at all till after 9 o'clock in the evening.

"Meyerbeer wrote in a regular manner in the evening, and his servant had orders to drag him away from the piano at the stroke of midnight. Schumann would not admit that any one could write otherwise than at a table. Mendelssohn made much use of the piano and preferred to work in the morning. Auber generally worked at night and very late, till 2 or 3 o'clock in the morning, in order to avoid outside noises.

"Halevy had a table piano that had been made for him by Pleyel. From time to time he would draw out his keyboard, strike a few chords on it, and then push it back like a simple drawer and continue to write.

"Boieldieu also wrote at the piano. Felicien David, not being much of a pianist, sometimes sought the aid of his violin. Adolphe Adam almost always worked at his grand piano, the right hand side of whose keyboard was stained with innumerable splashes of ink. He played eight, ten or twelve bars, and then wrote them down. Bizet worked especially in the evening and still more at night; he often made use of a piano bureau by Pleyel, like Gounod and Halevy."

His Guess.

"Where were they married?"

"I ain't jest sure," answered the small boy, "'cause they left me home, but I guess it was in the steeple."

"In the steeple?"

"Well, I heard 'em say it was a high church wedding."

There are two kinds of unhappy people in the world—those who are sad because they are not known and those who are miserable because they are known too well.

Time is money, yet some men spend lots of their time getting a little money

Good advice has a momentary value. It's the other kind that is handed out by those who are running a gift enterprise.

If the child is father to the man, some children haven't much to be proud of

While the easy-going individual is trying to figure out which is the best foot to put forward the strenuous man gets there with both feet.

Many a man goes to the bad because he attempts to pose as a good fellow.

PAINS IN THE BACK FOR TWENTY YEARS

Could Not Turn Over in Bed—Kidneys and Bladder Affected—Experienced Great Sufferings—Cured by

DR. CHASE'S KIDNEY LIVER PILLS.

The old people especially appreciate the effectiveness of Dr. Chase's Kidney-Liver Pills, because the kidneys are usually the first of the bodily organs to give out, and the result is backache, lumbago, pains in the side and limbs, urinary disoreds and consumption.

Old people learn to trust in Dr. Chase's Kidney-Liver Pills, for when all other treatments fail this great medicine seems to go directly to the diseased part, and promptly affords relief and cure.

Mr. David Misener, farmer, an old and respected resident of Port Robinson, Welland county, Ont., writes: "I wish to state to you that I had pain in my back and left side for over twenty years. At times I could not turn over in bed, I was so badly used up. I had cramps in my feet and legs, and my hands were so entirely useless that I could scarcely lift anything."

"Kidney disease, was, no doubt, the cause of all my suffering, and sometimes the urinary trouble would be so bad that I would have to get up five or six times during the night. Fortunately, I began using Dr. Chase's Kidney-Liver Pills, and they cured me completely. I am now 79 years old and quite well now, but still occasionally use these pills to keep my system in good order. Several persons to whom I have recommended Dr. Chase's Kidney-Liver Pills have been equally benefited."

Dr. Chase's Kidney-Liver Pills, the comfort of old age, one pill a dose, 25 cents a box, at all dealers, or Edmanson, Bates & Co., Toronto.

FREE TRIAL FOR 90 DAYS.

Not a penny down. Simply drop me a postal card with your name and address and I will forward you at once one of my latest improved high grade Electric Belts You can use it three months, then pay me if cured, and the price will be only half what others ask for their inferior belts. If not cured you can return the Belt to me at my expense and YOUR WORD WILL DECIDE I am willing to trust you entirely, knowing that I have the best and most perfect Belt used in Canada to-day, and nine men in ten always pay when cured.

I WILL TRUST YOU.

This modern Belt is the most perfect and complete ever invented. It will cure all cases of Rheumatism Varicocele, Indigestion, Lumbago, Weak Back, Kidney, Liver and Stomach Complaints, Losses and those weaknesses caused by abuse and excess. I will also send absolutely

FREE

A beautiful illustrated Medical Book which should be read by all weak men. This will be sent free, sealed in plain wrapper, all charges prepaid. It is free and can be had for the asking. Don't neglect this splendid opportunity to regain your health. Write to-day.

DR. J. G. MACDONALD 2362 St. Catherine St., Montreal, Que

Some men stand by their convictions, while others sit by their conclusions.

Minard's Liniment Cures Colds, etc.

There is certainly enough money spent on the road to ruin to keep it in excellent repair.

The Untamable Tiger.

Of all wild animals trained for menagerie and show purposes not one is as hard to conquer as the tiger. Compared to the training of lions and elephants the training of a tiger is as the breaking in of a vicious boarhound to the first lessons in etiquette of a chubby Newfoundland puppy. Even the most expert wild animal trainers balk at an assignment to "break" a tiger. Not more than one in ten professional lion trainers has the nerve to try his hand at the great, ferocious, striped cats.

As a matter of fact, there is no such thing as a "tamed tiger." Few and far between there are instances where the animals are shown as trained and broken in, but the friendship of the animal for the trainer who may have befriended it for years hangs at the end of the man's black snake whip. From the day the acquaintance is made to the day man and beast are separated there is a stealthy warfare between them, the catlike slyness of the ponderous brute directed toward the one aim of killing the man and the vigilance of the master ever alert to frustrate that plan.

Flattery.

"The flatterer is all right," said the office philosopher. "While no one believes a word he says, every one wants to."

SATISFIED MOTHERS.

When sales are large and increasing, when customers are satisfied to the extent of continuing to buy the same remedy, then it must be admitted that the remedy has real merit. Baby's Own Tablets occupy this enviable position. Mothers having once tried them seldom fail to duplicate the order—no other remedy for children can truly claim as much. Concerning the tablets Mr. C. W. Stradey, (general dealer), North Williamsburg, Ont., writes: "Baby's Own Tablets have a large sale, and every purchaser is more than satisfied. We use them for our baby and have found them all that is claimed for them."

Baby's Own Tablets cure colic, indigestion, constipation, diarrhoea, simple fevers and all the minor ills of little ones. They make baby bright, active and happy and a joy to the home. Sold by druggists or will be sent by mail at 25 cents a box by writing the Dr. Williams' Medicine Co., Brockville, Ont.

NEW G. T. P. SCHEME

LATEST RUMOR REPORTED FROM OTTAWA.

It is Said That the Government Will Build the Road and Lease it to Grand Trunk for Fifty Years, Running Rights Being Given to Other Roads.

A dispatch from Ottawa says: When the details of the agreement between the Canadian government and the Grand Trunk-Pacific railway for a transcontinental line are made known the public will appreciate the difference in cost than that which was paid to the Canadian Pacific. Although the negotiations have not yet entirely closed Mr. C. M. Hays and Mr. Wm. Wainwright being here the principal points of the bargain have been well settled.

The government has decided to build from Moncton to Winnipeg and to lease the road for fifty years to the Grand Trunk-Pacific. The Grand Trunk-Pacific will pay operative expenses only for the first five years. It is well known that this portion of the line between Quebec and Winnipeg will require to be run at a loss to begin with. For the next successive five years the company will pay net over working expenses, but not to exceed 3 per cent.

On the line between Winnipeg and the Pacific ocean the government will guarantee 3 per cent. bonds to the extent of 75 per cent. of the cost of construction, but the maximum amount to be guaranteed on the prairie section is not to exceed $13,000 a mile. The mountain section is to be reckoned as 500 miles.

From Winnipeg to the Pacific the road will be built and owned as well as operated by the Grand Trunk Pacific. It is understood that the company will have to pay 3 per cent. interest from the date of issue, that is when the road is completed, on the prairie section bonds.

On the bonds of the mountain section the company for the first five years will only have to pay to the government on such surplus as exists after the payment of working expenses, but in case this will not exceed 3 per cent. After five years the company will have to pay 3 per cent. The mountain division bonds, like the prairie section bonds, will be issued on the completion of the road. In this way the Grand Trunk-Pacific will finance the whole construction from Winnipeg to the Pacific ocean, and add interest to the cost thereof.

The road from Moncton to Winnipeg will be constructed under the supervision of a government commission. The Grand Trunk-Pacific will deposit with the government $5,000,000 in cash or approved securities as security, the government to pay 3 per cent. on the cash and the interest that may be secured on these securities. This deposit will be released by the government so that it may be available to the company for the construction of the last section of the line wherever that may be.

The capital of the Grand-Trunk-Pacific, which is now placed at $70,000,000, will be reduced to $45,000,000. This will comprise $25,000,000 preferred stock and $20,000,000 common stock. The latter will be owned and controlled by the Grand Trunk of Canada. In this way it will be seen that the Grand Trunk is to be interested in the project. Running powers will be given to any railway from Winnipeg to Moncton on such terms as may be agreed upon by the governor-in-council, having due regard for the interests of the Grand Trunk-Pacific as operators and lessees.

The equipment of the whole line will require to be furnished by the Grand Trunk-Pacific and must be secured as rapidly as the development of the traffic demands. The rates on the whole line will be subject to the governor-in-council or railway commission, but must not be reduced below such a figure as shall enable the Grand Trunk-Pacific to pay rental to the government. A majority of the directors of the Grand Trunk-Pacific must be residents of Canada.

It will be seen that the government has taken ample security for every dollar invested in the undertaking as well as securing the control of rates.

King Edward has sent his congratulations to the King of Servia.

Two specimens of the dreaded tarantula have been found in Winnipeg. They came in on bunches of bananas.

In the Minto cup lacrosse match the Montreal Shamrocks defeated Brantford by 6 goals to 5.

During June in Winnipeg there were 165 births, 62 deaths and 100 weddings.

Qu'Appelle and Long Lake bondholders in London, England, are complaining.

In a certain office at an Australian railway station there may have been seen a very long list of names of women who have at various times begged the booking clerk to let them have, without payment, tickets to various places. They have forgotten their purses, or lost them, or spent their last penny on a new pair of gloves, and various reasons. They will call the very next day and refund the money without fail. But there the names and addresses lie, with the amount of the borrowed money written opposite.

Slater Shoe Advertising

Shoes of Beauty

Short talks by the Slater Shoe ad man, No. C.

A shoe which looms large in the public eye must combine in it positive elements of price value, of durability, comfort and beauty.

The "Slater Shoe" because it makes strenuous claims on public attention must not only feel easy when worn, it must not only wear well, but it must look well,—all advertised claims are unconsciously and critically weighed by the first impression conveyed to the mind through the eye in its initial inspection of the shoe.

So the "Slater Shoe" with its high prestige obtained by years of advertising must not only fulfil the wearer's expectations of fit, shape retention and wear, but its beauty must meet with the instantaneous approval of the wearer's eye in its most critical moment, viz: the first glance, and the succeeding closer scrutiny.

And the makers of the "Slater Shoe" realizing this fact have made "Slater Shoes" not only foot houses of ease internally, but foot palaces of beauty externally.

The Slater Shoe

Made in Canada 40 years. Goodyear Welted.
For men $4.00 and $5.50.
For women $3.50 and $5.00.

GUAN, THE LAZY LAND.

An Island in the Ladrones Where People Refuse to Work.

After a trip around the world, Arthur Stanhope Plunkett, of Poona, Bombay, has arrived in Winnipeg. For the past year Mr. Plunkett has wandered from place to place over the globe studying natural history as a recreation. Since the horrible volcanic explosion which destroyed St. Pierre, Martinique, he has devoted a great deal of his time to studying seismic disturbances. To do so properly he visited the curious Island of Guan, which is the largest of the Ladrones. The island is of coral formation, and is frequently visited by earthquakes. Last September one of unusual force visited the coral rock, which is 40 by 10 miles in area, and as a result old buildings that had stood for 200 years were destroyed. Among the large structures razed by the shock were the cathedral and two schools.

The island is now an American possession, but it has undergone a British invasion which has left in its wake schools and other educational institutions. Many of these are now closed for lack of funds.

The land is not cultivated the natives being too lazy to attempt agriculture. They exist mostly on cocoanuts, bananas and oranges, which grow wild. Japanese swarm the little oasis of the ocean and grow rice in small quantities. Idleness is the curse of the place and is an insuperable barrier to the improvement of the natives.

Mr. Plunkett thought that the most peculiar thing he saw on the island was the corraling of the natives by the police for the unloading of the few ships that visit the small port of Agana. The men are so averse to labor that this is necessary, and when the long black streak of smoke which foretells the arrival of a ship appears on the horizon the male population takes to the woods and the tall palms. The United States government pays them 40 cents per day for work, which is three times as much as they ever got from the Spanish, who formerly possessed the island. Mr. Logan, a Congregational minister, was unable to secure labor to build a church. There was a sufficiency of labor, but the natives object to exertion of any kind, and are said to be the laziest people in the world. They only work when they absolutely have to or cannot invent some means of escape.

If they covet anything for which they have to pay they work until they have earned the exact amount, when they again lapse into their characteristic lethargy. Mr. Plunkett, never in the three months which he spent on the island, saw as many as six men working in a gang, for the simple reason that it was impossible to get that many men on the island who would go to work. Higher wages are now paid than ever before and this only makes matters worse. The laborers' wants are no greater and he finds that he can supply them in a much shorter space of time.

No intoxicating liquors are sold on the island, there are no newspapers and the natives are too lazy to create enough news in a year to fill a column. There are no murders, the natives have no morals, and as a whole the island forms one great lavy man's paradise, where earthquakes rumble and the sad sea waves beat a loud protest against the coral banks of the island. The small area is a marvel of fertility, and were it not for this the inhabitants would die of laziness.

Capitalists have discovered the spot, and are devising means to make the island productive, but it is thought that only the introduction of Chinese labor and the extinction of the lazy inhabitants will do this.

Imperial Limited Jumps the Track.

Passengers on the Imperial Limited from the west miraculously escaped from what might have been a terrible railway accident at Rosser on July 3. The Limited from the west ran foul of the rails about two miles east of Rosser station, and some 13 miles west of the city. The train was going at a high rate of speed as it was considerably behind time owing to an accident to a freight train ahead of it earlier in the run, and the fact that no one was seriously injured is marvellous. The accident is supposed to have been due to the spreading of the rails, derailing the engine and three cars and turning over a couple of cars, including a Pullman, in which nearly everyone was asleep.

Hon. Thomas Duffy, Quebec's provincial treasurer, died on July 8.

NEW TARIFF IDEAS

CHAMBERLAIN SPEAKS AT A BANQUET.

He Again Gives Expression to His Desire to Unite the Colonies Commercially with Great Britain—The Wall of Tariff Must Go.

A London cable, of June 26, says: The constitutional club to-day entertained Colonial Secretary Chamberlain at luncheon, and presented him with an address enclosed in a casket, in recognition of his services to the nation.

Premier Balfour made the presentation speech. Referring to Mr. Chamberlain's fiscal proposals he said it would be absolute folly for the Conservative-Unionists party to make opinions on econimic questions a test of party loyalty. The present economic position of the country demanded the most careful consideration. It must not be supposed that because self-government had been given to the colonies that these could be regarded as separate political entities. On the contrary, they were integral portions of the British empire. The question at issue was not new. But Mr. Chamberlain more than any man, dead or living, had given life to the expression of the idea of imperial unity.

Mr. Chamberlain received a remarkable ovation when he rose to reply. The colonial secretary opened his remarks with repudiating the suggestions of personal competition between himself and Mr. Balfour, remarking that he could not conceive any occurrence that could shake the political association and friendship existing between them. He desired on the eve of a great controversy to publicly state that he believed the leadership of Mr. Balfour was essential to the success of the Unionist party. If the Unionist alliance was dissolved or weakened the "Home Rule snake, which was only scotched and not killed," would again come to the front.

Mr. Chamberlain declared that the commercial union of the colonies would be far more profitable than their political unions. It was not true that he had raised the cry of preferential tariffs for the benefit of himself or of the party, but it was because there was no other alternative to a man holding his position, and he believed that only thereby could the empire be held together. A policy of retaliation could be better described as a policy of negotiation. The ministers would endeavor to break down the existing wall of hostile tariffs, and if they failed in these negotiations they would endeavor to retain for their own country the vast possibilities for production and opportunity for employment, the lack of which was now driving British subjects to foreign lands. The time was surely drawing neat when a decision must be reached on the question. But he was now speaking for himself, alone, and he did not ask anyone to commit himself to the acceptance of his views.

Gone With the Hired Man.

A dispatch from Vancouver, says: Gavin Hamilton, aged 75, postmaster at Harmatten, Alberta, is at Chilliwack, endeavoring to locate his wife, who is a woman of 64. Hamilton says that his wife eloped with their hired man, John Wall, a beardless youth of only 48. It is to hunt the couple that he came west.

Hamilton arrived at New Westminster armed with a revolver, which the hotel people carefully removed from his pocket last evening. Hamilton had been married only 5 years before the event occurred which broke up his home circle. The bride came by the matrimonial agency route from New York, and they were married in Calgary on the night of the day they first met. For a couple of years everything went peacefully. Then Mr. Wall, with the more courtly manners of one of his years, joined the household. Friendship sprang up between wife and hired man, which resulted in the elopement. Hamilton declares that his wife sold the store and outfit, and it was only inadvertently that he learned that they had gone to Chilliwack. He at once started on their trail.

Shot and Killed His Officer.

A dispatch from Victoria, B. C., says: Frederick James Bailey, naval storekeeper at Esquimalt, was murdered on June 27 at the naval yard by Alfred J. H. Frith, a subordinate, who shot and killed him. Frith has been arrested and confessed. He tells of having words with Bailey, who accused him of undermining him, and Frith took a naval bulldog revolver from his pocket and shot Bailey in the back of the head, killing him instantly. He then walked to the dock and threw his weapon into the harbor. He went home and was at breakfast with his family, whom he had not apprised of the deed, when arrested.

Chatham, Ont., June 28.— Last night Miss Jessie Galloway was drowned at Rondeau by the upsetting of a boat, due to the efforts of others to get into it from the piers. She was one of an excursion party, who, under the auspices of the C. B. Football club, went to Erie in the afternoon. For a time three other lives were in imminent danger, and Mr. Lindsay was quite exhausted when rescued.

An auctioneer swindled the Union at Calgary out of $500.

CABLE NOTES.

New Zealand Meat Shop Scheme Meets With Strong Opposition.

London, July 6.—The meat shop scheme of Mr. Seddon, New Zealand's premier, promises to arouse formidable opposition in this country. The great trading firms declare if he becomes a menacing competitor they will start a war of rates. A large importer says: "The scheme will be disastrous to New Zealand and result in Premier Seddon being driven from office."

A story is now going the parliamentary rounds that Chamberlain is in command of a big election fund, which has been subscribed to pay the expenses of the candidates advocating his plan at the coming general election. It is also stated that every Unionist and Free Trader will be opposed by a Chamberlainite, which The Spectator calls "an impudent piece of political buncombe." These funds are said to be subscribed largely by the capitalists and trading corporations in Canada and South Africa, who expect to recoup themselves with the prfits earned under a preferential tariff system.

The Canadian Pacific has placed an order for twenty powerful compound locomotives with the North British Locomotive company, of Glasgow. The contract was secured after close competition with American firms.

ONTARIO FATALITIES.

Horrible Accident in Grand Trunk Yards at Windsor.

A dispatch from Windsor, Ont., says: Charles Hodgins, a switchman in the Grand Trunk yards here, met death in a horrible form on the night of July 5. He had just given a signal to the engineer of the yard engine to back down when his foot was caught in an open frog. On account of the escaping steam the engineer failed to hear his cries to stop, and the wheels passed entirely over his body, which was ground into a pulp. Hodgins was 23 years of age and unmarried.

Barrie, Ont., July 5.—Lorne, the six-yearold son of Thomas McMann, who had been missing, was found in the bay

Toronto, July 5.—W. H. Moore was drowned at Port Carling, Friday. He jumped out of a boat while paddling with his wife to swim ashore, but was seized with a cramp.

A six-year-old boy named Geo. Gallagher fell into the canal at Bobcaygeon and was drowned on July 5.

Mrs. Wm. Hulse, near Burk's Falls, committed suicide Friday by swallowing Paris green.

Herbert Cobett, aged 22 years, of Innisfail, was drowned while swimming on Sunday last.

Winnipeg Fair Attractions.

In these days everybody rides a bicycle. The merchant and clergyman on his way to the office and store, as well as the youth and maiden out for pleasure. The old velocipede, or boneshaker, as it was termed, has given way to the pneumatic tired safety, and in city, town and village thousands of these convenient machines are used daily. Considerable enjoyment is found by all in speeding along some country roadway, and distances which one had never dreamed of traversing before the advent of this convenient means of transit are now accomplished with ease.

The desire to excel is seen even in the riding of a wheel. Each wants to outride the other or perform some trick which he is unable to accomplish. This desire is responsible for the many clever trick riders who are seen in our theatres, and at our fairs. Each is anxious to outdo the other and thus a high standard of excellence is attained.

"Diablo," or as he is known in ordinary life Charlie White, who is to be seen at the Winnipeg fair this in his daring act of whirling the loop has attained a very high standard as a professional cyclist, he being now without doubt the most sensational rider in the world. The rider does not coast down an incline or dive into a tank of water or coast around a loop. His act consists of a combination of a cycle whirl and a loop the loop, and besides possessing all the risks of both, is a greater novelty than either. The rider does not depend upon any inclined chute for his momentum, but acquires it himself by pedalling around the cycle whirl, from which when he has gained sufficient speed, he guides his wheel up an incline to the loop, which he then circles, pedalling all the while.

This will prove to be without doubt the greatest and most artistic act ever seen. It not only needs nerve on the part of the rider, but a considerable amount of brains.

Negroes vs Whites.

A dispatch from Evansville, Ind., of July 5, says: There is a race riot on here. Whites and negroes came in contact tonight with the result that at least one boy was killed and a number of persons injured. To-day twenty-five policemen twice prevented a lynching at the city hall jail, but their bravery was not sufficient to avert the bitter race war between the negroes and the white mobs that sought the life of Brown, the negro slayer of Patrolman Massey. The mob tore down the iron gate and was partly in the jail before they were repulsed by the police.

Their efforts to lynch Brown aroused the enmity of the negroes of the city, who gathered about the jail and made a threatening demand. The negroes were chased away by a crowd of white men, but later returned in greater numbers.

MY HEART'S DARLING

BY W. HEIMBURG.

"No, I will not break my word; and, besides, by this morning Wilken will have read the announcement of my betrothal."

Lucie said no more. The midday train carried them away. Just as they were approaching Hohenberg, Hortense asked:

"Will it trouble you that your ci-devant lover lived here?" And without waiting for an answer, she added: "Oh, no, it will not. You never cared for him."

Lucie looked at her.

"I should never have come here," she said, in a trembling voice, "if I did not know that you really needed me."

"I do need you, indeed." Just then, Hortense, smiling and gracious, waved her hand to a tall man who was standing with his hat raised at the door of the railway carriage just as it was being opened. "My fiance is waiting for me," she said, turning round as she was in the act of alighting. She gave full sound to every syllable of "my fiance."

Lucie received a surprised look from him; but Hortense said, as she declined his arm, and seized Lucie's hand:

"I have recaptured the fugitive. How is grandpapa?"

CHAPTER XXI.

The Frau Counselor sat knitting at the window of her sitting-room. Nothing had changed in her surroundings or in herself; only she looked more contented, particularly when her glance returned from a young girl who was sitting beside her, crocheting vigorously. She had a full, robust figure, with heavy flaxen braids, and a color like a full-blown rose, which extended to her large, plump hands, ornamented with numerous rings. Broad silver hoops clasped her by no means delicate wrists; she wore, besides, a coral brooch, and festooned from it hung a watch-chain nearly as heavy as the chains on her father's ox-carts. A pair of good, honest blue eyes belonged to this young lady, who for some time past had been visiting the Frau Counselor, "so that she should not be so entirely alone," for Aunt Dettchen had moved with her nephew to his little cottage, where she kept house as only she knew how to do.

Fraulein Selma Mahnert had long been loved by the Frau Counselor. Frau Adler had visited her mother, who lived about an hour's distance from Hohenberg, when the tall Backfish had just returned from the pension and had announced them in her own peculiar way.

"That would be a good wife for Alfred."

And in pursuit of this idea she had done everything very tenderly—for according to her opinion such a thing had to be handled very tenderly—to interest the child in Alfred and Alfred in the child. In the latter she had found the most touching willingness, while her son had done her not only the affront to misunderstand this delicate meaning, but even to go and engage himself to Lucie Walter before his mother had had a chance to give an opinion on his choice, or a warning.

"Yes, such a thing always brings its own punishment!"

Fraulein Selma had certainly not fainted away at the news of the engagement, though she had kept away from Frau Adler and avoided her house on her shopping expeditions to town, which meant to the Frau Counselor the loss of many a fat goose or turkey. But on hearing of the breaking of the engagement, she returned to the motherly arms that were still open to her, and listened to the accounts of that horrid, heartless person, that Lucie Walter, only interrupting her to ejaculate: "Oh, no!"— "Is it possible?" and so on.

It was again to-day their theme, and pursued with the same interest as ever.

If Alfred would only at last realize what a jewel this disdainful little fool had left ready for him when she ran away! But it seemed as if he did not appreciate what this large rosy girl might be to him, for he scarcely bestowed a glance upon her, and seemed to think he had done all his duty if he said politely "Good-day" to her. He actually did not observe, or would not observe, that it was her hands that prepared every kind of delicacy for him, according to his mother, tasted far better than anything she herself could make. She embroidered slippers for him, and knit him socks with double heels.

"He is really a fool in this respect," said his mother to herself, angrily. And it was of no use if, when he did lay aside his hat and stay to take coffee with them, she had herself called off on some excuse by the little maid-servant. The stupid creature could not keep from laughing when Frau Adler asked, in a dignified tone:

"Well, what is it?"

[TO BE CONTINUED.]

Yellow Legged Fowl.

The yellow legged breeds of chickens are the Cochins, Brahmas, Wyandottes, Leghorns, Plymouth Rocks and Dominiques, but some do not develop yellow legs until fully grown.

He Knew How.

Mr. Kidder—People say that it is impossible to find a needle in a haystack, but they're wrong.

Mrs. Kidder—How would you go about it?

Mr. Kidder—Walk across the stack in my stocking feet.

Poor Simile.

"I never saw any one so timid as Henpeck is," remarked Wigger. "Why, he's like a mouse in his own house."

"Nonsense!" exclaimed Wagger. "His wife isn't the least bit afraid of him."

MORRISSEY

From The Despatch

E. Mace, of Fernie, has opened a barber shop in his building opposite Sligers Cigar store. Mr. Mace is a first-class workman and fills a long felt want in the community as up to now anyone needing the services of a tonsorial artist had to walk to the mines.

Anyone desiring to have their name put on the new voters list now being prepared can do so by applying to F. C. Lawe, L. W. Patmore or Constable Tranter. As all previous lists have been cancelled anyone wishing to have a vote at the coming provincial election must register at once.

A meeting of the License Commissioners was held in Fernie on Faiday evening last to consider the application of Thomson & Hazard for an hotel license in this town. The petition presented did not have the required number of names and the Commissioners refused to consider it.

MICHEL

From Our Own Correspondent.

Dr. Bonnell was in town this week.

Chas. Spence, of Morrissey. is visiting E. Stewart.

Mr. N. E. Suddaby, of Fernie, was in Michel over Tuesday night.

A. Dick, Inspector of Mines, was in town this week on official business.

Miss Annie Evans visited Mrs. R. L. Henderson at Fernie on Thursday.

Geo. McCurnock, secretary of the Michel Miners' Union was to Fernie on Wednesday.

Several good catches of fish from Michel Creek are reported by local sports this week.

Michel Junior base-ball team are trying to get a game on with Sparwood seniors for the near future.

E. P. Miller and family went to Lethbridge on Wednesday where they will stay for a time in hopes that the change may benefit the little girl's health.

Constable Henderson was kept busy hunting up a Chinaman who was accused with theft at McDonell's ranch. He caught him at Blairmore and took him to Fernie on Wednesday.

The labor organization of the district are holding a convention at Michel on Saturday of this week. It is expected that delegates will be sent here from Fernie and Morrissey. The convention is called for the purpose of discussing the political situation.

Cranbrook

From the Herald.

Mr. and Mrs. C. M. Henretta, of Calgary, were Cranbrook visitors last Saturday.

The Misses Cartwright took in the school teachers' examination at Nelson last week.

C. M. Edwards returned last week from a prolonged visit with relatives in England.

Steve Clancey is carrying his left hand in splints as the result of the lacrosse game at Fernie last week.

Mrs. Barber returned to her home in Fernie last week, after a pleasant visit with Mrs. J. D. McBride.

Married, at the manse, Cranbrook, on Saturday July 4th, by the Rev. W. G. W. Fortune, Henry Pearson, of Jaffray, to Alice Elizabeth Carnell, of Moyie.

The Crow's Nest Pass Brewery at Morrissey is now ready for business, and will soon have its product on the market. The brewery has a capacity of 30 barrels a day, and judging from the first beer turned out, which is never as good as that which follows, the new brewery is equipped to give the beer drinking public a first-class article. The men in charge thoroughly understand their business, and will soom make a most favorable impression by the quality of their product.

John Phillips, a tailor well known about Macleod and Lethbridge, and for a short time an employe of McSweyn & Griffith, in this town, was struck by the west bound passenger last Friday forenoon near Ryan, and badly injured. He was lying on the grade with his head and arms on the rail and apparently fast asleep. One arm was badly mangled and the skull crushed. He was taken west until the east bound train was met, and then brought to the St. Eugene hospital. There was little hope of his recover and he finally succumbed to his injuries, dying Sunday morning. The burial has been postponed pending an investigation

---

Notice is hereby given that 30 days after date I intend to apply to the Chief commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay:

Commencing at a post 280 chains west of a post marked (Port No. 1) situated on the line of the west boundary of lof 6033, group one, Kootenay district, and one mile south of P. Buhl's pre-emption, thence running south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to place of commencement. M. H. GRIMES.
Dated May 20th, 1903. 233-4t

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber on the following lands on the west side of Kootenay river, in the district of East Kootenay:

Commencing at a post 200 chains west of a post marked (Post No. 1) situated on the line of the west boundary of lot 6033, group one, Kootenay district, and one mile south of the south-west corner of P. Buhl's pre-emption, thence running north 160 chains, thence west 40 chains, thence south 160 chains, thence east 40 chains to place of commencement.
233-4t J. W. CLAXTON.
Dated May 20th, 1903.

Commencing at a post 80 chains north and 200 chains west of the south-west corner of P. Buhl's pre-emption at the west boundary of lot 6033, group one, Kootenay district, thence running north 160 chains, thence east 40 chains, thence south 160 chains thence west 40 chains to place of commencement.
233-4t J. MCDONALD.
Dated May 21st, 1903.

INGRAM & McINTYRE

THE CITY BARBERS.

Shop in the Royal Hotel.

Notice is hereby given that 30 days after date we intend to apply to the chief commissioner of Lands and Works at Victoria for a special license to prospect for coal and petroleum upon lands situated north of the 35 mile line on Fording river, in South East Kooteday district, British Columbia, and described as follows:

1. Commencing at a post planted eight miles north of the 35 mile line on Fording river, joining James A. Sutherland's coal and petroleum claim at the north-west corner,thence 80 chains north,thenc 80 chains east, thence 80 chains south, thence 80 chains west to point of commencement and containing 640 acres.
Dated June 16, 1903. A. MORROW.
F. R. DELZELL, Agent.

2. Commencing at a post planted at the north-west corner of A. Morrow's coal and petroleum claim and marked H. Hill's south-west corner, thence north 80 chains, thence east 80 chains, thence south 80 chains, thence west 80 chains to place of commencement.
Dated June 16, 1903. H. HILL.
F. R. DELZELL, Agent.

3. Commencing at a post planted at the north-west corner of H. Hill's coal and petroleum claim and marked B. Laidley's south-west corner, thence north 80 chains, thence east 80 chains, thence south 80 chains, thence west 80 chains to place of commencement.
Dated June 16, 1903. B. LAIDLEY.
F. R. DELZELL, Agent.

4. Commencing at a post planted one-half a mile east of B. Laidley's north-west corner, and marked M. A. Taylor's south-west corner, thence north 80 chains thence east 80 chains, thence south 80 chains, thence west 80 chains to place of commencement. M. A. TAYLOR.
Dated June 16, 1903. F. R. DELZELL, Agt.

5. Commencing at a post planted one-half a mile east of M. A. Taylor's north-west corner, and marked C. Laidley's south-east corner, thence north 80 chains, thence east 80 chains thence south 80 chains, thence west 80 chains to place of commencement. C. LAIDLEY.
Dated June 16, 1903. F. R. Delzell, Agent.

---

There is no better evidence

of the confidence of the Directors and Officials of the

Crow's Nest Pass Coal Company, Limited

in the future of

MORRISSEY MINES.

than the fact that they are buying lots in the new town as private investments at the Company's set prices. The erection of a $20,000 block for the establishment of a branch of the Canadian Bank of Commerce here, speaks in no uncertain manner of the high opinion of conservative financiers in the future of this place. Those who have to do with the policy adopted by the Crow's Nest Pass Coal Company, Ltd., in the opening up of these immense coal measures, are in a position to realize, to some extent at least, the great possibilities in the way of coal and coke production of these collieries, when, with further development, they are operated on a larger and continuously growing scale. The reasons for their faith, which they are showing in such a practical manner, are well founded. But we do not ask you to simply follow the lead of these men ; investigate the position for yourself, and you will be convinced that the outlook for the future of MORRISSEY MINES is an exceedingly bright one.

Thomas Crahan, Agent,

MORRISSEV MINES, B. C.

Notice is hereby given that thirty days after date I intend making application to the Chief Commissioner of Lands and Works for a special licence to cut and carry away timber on the following described lands, commencing at the south west corner of lot 320, group 1 Kootenay District, thence east 140 chains; thence south 40 chains, thence west 120 chains, thence south 40 chains, thence west 20 chains, thence north 80 chains to point of commencement, said land to contain 640 acres.

BASEBALL AT CALGARY

REPORT OF FERNIE'S TWO BIG GAME'S.

The Victors Played An Exhibition Game At Macleod Under Unfavorable Conditions.

Lovers of base-ball had a feast of the grand old game at Calgary on Friday last The Fernie team played two games one in the morning with Macleod and the other at 4 o'clock with Red Deer who previously beat Calgary.

The Fernie boys had some reason to fear the result of their first game, as seven of the Macleod team were imported players, three of whom were pitchers. However nothing could daunt the "miners," as they were called, and the game they put up clearly showed that Fernie does not need to import material to play winning ball anywhere between Nelson and Alberta's eastern boundary.

The game was a fight to the last and the excitement was intense. Fernie did good battery work, while Peacock held the prairie team down to six hits. In the 6th innings Macleod secured 4 runs on a passed ball and poor fielding.

The score was as follows.

MACLEOD.

	A.B.	R.	H.	P.O.	A.	E.
Whitney, c	4	0	1	10	1	0
Cohean, 1b	4	1	1	8	0	1
Hamilton, 2b	4	1	1	3	2	1
Jamieson, ss	4	1	0	0	2	2
Poberts, p, 3b	4	0	0	1	1	0
Lauder, 3b, p	4	2	1	1	4	1
Ross, rf	3	1	2	1	0	0
Moffat, lf	4	0	0	2	0	0
Neoni, cf	4	0	0	1	0	0
	35	6	6	27	10	3

FERNIE.

	A.B.	R.	H.	P O.	A.	E.
Peacock, p	5	0	0	0	6	0
Kastner, 1b	5	2	2	12	0	1
Whelan, c	4	2	2	4	2	0
McCreary, 3b	5	1	2	2	6	0
McFadden, 2b	4	0	1	5	2	0
Wilson, lf	4	0	1	0	0	0
McKellar, ss	4	1	0	1	2	3
McIntyre, cf	4	1	2	3	0	0
Taylor, rf	4	0	0	0	0	0
	39	7	10	27	18	4

Fernie.....0 0 2 0 0 1 3 0—7
Macleod.....0 0 0 0 2 4 0 0 0—6

Two base hits, Ross.

Stolen bases, McIntyre, Whelan, Wilson.

Struck out by Peacock, 3; by Roberts 7.

Passed balls, Whitney, 1; Whalen, 2.

When Fernie went out to play its second game with the victorious Red Deer team, they had more confidence in themselves as they felt that they had already defeated their strongest competitors. Taylor's arm which was injured on July 1st was not sufficiently recovered to relieve Peacock in the box and the later was obliged to pitch the whole game. Considerable doubt was felt by the boys as to his ability to pitch 18 innings against two fresh teams but he more than fulfilled their expectations and earned for himself the enviable reputation of being the best pitcher on the field. He showed no sign of distress until the last innings was reached.

The game was snappy throughout and the interest steadily increased until the grand climax was reached in the ninth when Red Deer was put out with three men on the bases. It looked at this time as if Red Deer would tie the score. The score at the beginning stood 3-7. Wetherby hit for a single, Butterfield followed with a double, Minkler put one to second which McFadden missed, filling the bases. Rowskme went out. Then Peacock gave Cook a base on balls forcing in a run. Edgington and Gilbert flew out and the game was over. The score:—

		R.	H.	E.
Red Deer	0 0 0 1 0 1 1 0 1	4	8	4
Fernie	0 1 0 0 1 1 0 4 x	7	7	4

A double play on the part of each team and a beautiful three bagger by McCreary were features of this game.

Macleod and Red Deer were then matched for second money but the latter decided that two games in one day were enough and forfeited the game.

Fernie won first money consisting of $150. Better than this the team won the golden opinions of many spectators who claimed that their work was equal to that of many professional teams of large cities.

On the way home the Fernie boys were induced to stop off and play an exhibition game at Macleod, the citizens generously offering to divide $100 evenly between the two teams.

Peacock was unable to take his place in the box and McCreary did the twirling. The latter as a third baseman is hard to beat, but he was outclassed as a pitcher. The game lasted only seven innings on account of darkness. The visitors showed little interest in the game, as they were in poor shape and they were in no way surprised or dissappointed at the result.

The following is the score by innings.

Macleod	0 0 3 2 4 0 1—10
Fernie	1 0 2 0 1 0 0— 4

The Fernie visitors were treated to a banquet in the evening and the boys are unstinted in their praise of Macleod's hospitality. A return game has been promised in the near future, when a splendid exhibition of the sport may be looked for by the Fernie people.

THE FRANK SLIDE.

Further investigations by Frank residents reveal the following very interesting information.

The gap in the mountain, where the slide took place, was 4,043 feet wide, and cut 1,000 feet back from the face of the mountain. The peak was 4,200 feet high, perpendicular from the river bed. Part of the top of the peak was carried over two miles away from the base of the mountain, and is there just as it slid down, with moss and small trees still covering it; it measures 300 feet in circumference, and is 50 feet high. The debris of the slide fills the valley 1¾ miles wide and 2 miles long. On its way it cut off a mountain of solid rock 300 feet high, and rose 400 feet high on the opposite side of the valley; and such was its force and weight that it scooped the river bed down to bedrock forcing it and the water before it up several hundred feet on the opposite side of the valley, leaving the lakes thus formed, one a mile and the other a mile and a half away from the original river.

McPHERSON WILL RUN

SOCIALISTS START THE BALL ROLLING AT MICHEL.

Convention Last Saturday Controlled By Socialists—Hawthornwaite's Influence. An Official Report.

The convention held last Saturday at Michel was a brilliant success from the Socialists point of view, but from the view of those who advocate the straight labor party in politics it must have been a keen dissappointment.

There were 74 delegates present, the majority of whom belonged to Michel unions. Mr. Hawthornwaite, M. P. P. for Nanaimo, who just previous to the meeting of the convention had held a public meeting, in which he had given an address on socialism, was admitted as a delegate at large and there is no doubt that the influence of this forceable speaker is easily discernable in what afterwards transpired.

The straight labor element were outvoted by the Socialists and amid a stormy scene, in which the latter made offensive statements that were afterwards withdrawn, the convention adopted the platform of the Socialist Party of British Columbia.

E. Neye, formerly in the employ of Mott, Son & Co., and known in Fernie as one of the leading socialists was nominated by Fernie delegates, while J. McPherson, president of the Michel Miners' Union and also president of the convention was nominated by the Michel delegates. The vote even each securing 37 votes, and the chairman Hawthornwaite gave the casting vote the Michel man, who is running as a straight socialist.

The following is an official report of the meeting as submitted by the secretary of the meeting.

To the Editor.

The nominating convention of the wage-earners in the Fernie and district riding of southeast Kootenay was held in Michel on Saturday, July 11th, 1903. The action of the previous convention in adopting the platform of the B. C. Socialist party, was reaffirmed by an overwhelming majority.

The nominees were Com. J. McPherson and Com. E. Neye, of Fernie Lumbe men's union. Com. J. H. Hawthornwaite, of Nanaimo, was admitted as a delegate at large and called upon to take the chair in place of Com. McPherson one of the nominees.

The ballott resulted in a tie and Com. Hawthornwaite having the casting vote gave it in favor of Com. McPherson on the ground that this was a mining camp. Com. Neye then moved seconded by Com. O'Brien that the nomination of Com. McPherson be made unanimous, which was carried mid loud applause. This finished the important business of the convention and after some time spent in speeches of congratulation and pledges to support the candidate in every possible way the convention was brought to a close.

Ernest Craig,
Secret ary of Labor Convention

THE LACROSSE GAME.

FERNIE DEFEATED BY LETHBRIDGE IN ONE-SIDED CONTEST.

Score 16—1. Fernie boys Superior in Stick Work but lack Speed and Combination.

Fernie's aggregation of lacrosse players who went to Lethbridge on Tuesday evening to play the first scheduel game with that team returned on Thursday somewhat sadder and wiser for the experience they gained.

The stories, as told by the different players and others, who accompanied the team, agree as to the account of the game and the cause of the disastrous defeat. The prairie team were much swifter on their feet and played a much more effective combination game. The Fernie players on the other hand handled their sticks in a superior manner and what combination they did was characterized by sharp swift passes.

The players were:

LETHBRIDGE		FERNIE
McIntosh	goal	McKinnon
Wallwork	point	Reynolds
Wallace	cover point	Rastner
Van Horne	1st defense	Shoemaker
Andrew Scott	2nd "	Taylor
Ripley	3rd "	Smith
Alex Scott	centre	Gordon
Stewart	3rd home	Chapman
Appleford	2nd "	McLaughlin
Frazer	1st "	Flett
Gow	outside home	McGuir
Stafford	inside "	Mitchell
Dr. McClure	field captins	Schram
Kirkpatrick	umpires	Cuthbert
Burnett	time keepers	Liphardt

J. A. McCullough, referee.

The game was comparatively even for the first half, when tho score stood 3—0 in favor of the home team. Upon resuming play in the third quarter Gordon secured the ball at centre, carried it up the field, passed it to Chapman who missed. He again got it, juggled it past a couple of Lethbridge players and passed it to McGuire who landed it in the net. This made the score 3—1, but the pace was beginning to tell on the Fernie boys, and by the time the whistle blew for the third rest the score stood 7—1 and they knew they were up against it.

In the fourth quarter the visitors played in a half-hearted manner and they allowed 9 goals to be made in the 20 minutes of play. Smith hurt his leg and was unable to run with his usual speed and a couple of others were used up from want of practice. The boys also were unaccustom to playing on grass. "Jimmie" Miller was unable to leave his work at the station and his absence was felt.

The individual work of the Fernie team is alright, and with practice to give them stability and combination there is no reason to fear the next game with Lethbridge, which will be played on the home grounds on August 31st.

A SERIOUS CHARGE.

Frank Pennock Sent up for Trial on the Charge of Arson.

Frank Pennock, an old resident of Fernie, was up before Stependiary Magistrate Forbes on Tuesday on the serious charge of arson. The two witnesses brought by Chief McMullin to prove the charge were Messrs. Neil Graham and W. Harwood.

These witnesses swore that on the preceding evening about dusk as they were returning from The Cedar Valley Improvement Co.'s mill on horse back they came suddenly upon a small fire below the hill. The accused was standing behind a tree about 8 feet away from the fire with his back towards them. They stopped and told him to put the fire out, which he did. They also accused him of having started it and this he denied.

The fire, according to their evidence was just starting. It was in some brush near a dry log and it was of such a nature that it could not have been burning more than a minute before they detected it. A very heavy wind was blowing at the time and had the fire ever got headway there is no doubt that a large area of fine timber would have been destroyed.

Herchmer & Herchmer who defended the accused put up a strong defense. The accused was put in the witness box and he denied much of the evidence submitted by Messrs. Graham and Harwood. He stated that he met these men at the place where the fire started and that he knew nothing of it until it was pointed out to him. The magistrate considered the evidence produced by the prosecution to be of sufficient weight to send the accused up for trial. The latter chose a speedy trial and he will appear before County Court Judge Forin here on Wednesday, 22nd inst.

POLICE COURT.

Ed Doran of Morrissey Mines was brought up in the police court yesterday charged with the theft of $27 from a man in the bar of the Western hotel. He was seen to deliberately take the money from the mans pocket and go to the bar and buy drinks with it. In defence he stated that he took the money for safe keeping as the owner was too drunk to properly look after it. The magistrate sent him up for trial before the county court. The accused chose a speedy trial and he will appear before Judge Forin next Wednesday.

Edward Cusak was summonsed to appear before Stipendiary Magistrate Forbes under the vagrancy act on the charge of having no visible means of support. The prosecution gave evidence to prove that the accused was not regularly employed and one of his socialistic friends gave evidence to the effect that he and four others had written him a letter advising him to go to work. In defense the accused proved on the day following the delivery of the summons he had secured employment at his trade of carpentering and that he was steadily employed since. C. M. O'Brien swore that during the time he had known the accused he was always working, either at his trade or in the interest of socialism and labor unions.

The Magistrate took a lenient view of the case on the grounds that the accused had secured work at once and dismissed it.

There are 17 civil cases and 3 criminal cases to be tried before Judge Forin of the county court to be held here next Wednesday.

NEW LUMBER COMPANY

Elk Lumber and Manufacturing Co. Organized.

Take Over Business Formerly Conducted Under the Name of Mott, Son & Co. A Number of Eastern Capitalists Here in Connection With the Deal.

A notable party of American and Winnipeg capitalists arrived on Thursday's delayed train in the private car Desdemona, furnished by the Great Northern R. R.

The party consists of the following gentlemen. O. A. Robertson, F. B. Lynch, C. A. Chambers and J. C. Wood, of St. Paul; F. G. Barrows and W. L. Parsons, of Fergus Falls; H. J. Box, G. S. Clark and W. P. Dutton, of Winnipeg; J. M. Elder and W. F. Ferris, of Bramard; C. Schendel, of Campbell; E. T. Young, of Appleton; G. S. Dutton, of Sycamore, Ill.; E. Smail, of Pittsburg; and G. S. Comstock, ex-M. C, of Morehead, Minn.

Most of these people are stock holders in the Elk Lumber and Manufacturing Co., Limited, which has been formed to take over and operate the property of Mott, Son & Co. The members of the old firm are also stock holders in the new organization.

A board of directors consisting of the following named persons were elected yesterday. O. A. Roberstson, F. G. Barrows, H. J. Box, F. B. Lynch, W. P. Dutton, G. S. Comstock, G. S. Clark, J. C. Wood and D. V. Mott. Mr. Robertson was made president, Mr. Wood vice-president, Mr. Barrows, secretary, Mr. Dutton, treasurer, and D. V. Mott is to be the manager for the Company. The Co has an authorized capital of $250,000, and expect to erect a large up-to-date mill at Hosmer as well as to improve the present plant just across the river. The new planer is now in operation and its capacity is fully equal to that of the sawing capacity—30,000 ft. per day. The Company now employ about 60 men and this number will be increased to 100.

The Company has 16,000 acres of leased timber on the west side of the Elk. The party went to Hosmer in the private car yesterday to inspect some of their property and they leave to-night for their homes in the east.

NOTICE

Notice is hereby given that the partnership heretofore subsisting between F. Labelle and Jos Jean, under the firm name of Labelle & Jean, hotel keepers, in the town of Fernie, has this day been dissolved by mutual consent. All claims against the said partnership are to be presented to the undersigned by whom same will be settled. Business will therefore be carried on under the name of Jos. Jean.

JOSEPH JEAN

Dated at Fernie, this 17th day of July, A.D., 1903.

Your credit is good at the B. C. Furniture Co. x

WILL PAY $130,021.05.

Pay Given Out Today Exceeds Last Month By $15,000.

Coal Creek Climbing up. Improvements at the Latter Place.

Today is pay-day once more. The grand total of $130,021.05 will be paid out at the three camps. This is an increase of $14,817.25 over any previous monthly pay. The figures of each camp are as follows:

Coal Creek	$49,839.40
Michel	48,371.50
Morrissey	31,810.15
Total	$130,021 05.

Coal Creek's pay is larger than michel's in proportion to the output on account of considerable construction work at the former place. A large gang is working on No. 1 tipple and the tramway from mines 4, 5 and 6, where development work is being rapidly pushed. A 60 foot picking band is being put in this tipple.

THE PREMIER VISITS FERNIE.

He Looks Into the Needs of the District and Promises Aid.

Last Sunday evening the Honorable Richard McBride, premier of the province, arrived in Fernie accompanied by his private secretary, Mr. W. McNeil. The premier remained over night and returned west in the morning. He is looking over the province to improve the organization of his party and to look into the needsof the different districts.

He wired ahead to arrange a meeting with the Fernie Board of Trade At the meeting he freely discussed the pressing needs of the town and district as presented to the government time and again by the Board of Trade. He admitted that the district's growing importance had not been duly recognized by the government and he gave assurances that the matter would receive more attention. The question of drainage and sewerage was being held over by the government pending an official report from Dr. Fagan, Provincial Health Inspector.

The Board of Trade took the most effective manner of impressing upon th the Premier Fernie's need of better jail accommodation. They marched him down to the little lock-up and showed him the exact condition of affairs. Mr. McBride was forced to admit that the accommodation was entirely inadequate. He promised to have more room added at once and to improve the sanitation of the building as well. In reference to the Fernie-Morrissey road the Premier stated that owing to the representations made to the government by the Board of Trade in favor of the west side route he had ordered the government Agent not to proceed with the work. A government engineer will be sent up to carefully go over both routes and his report will largely determine the action of the government. The Premier seemed to favor the west side.

The Premier entertains optimistic views as to the future of Fernie, and he expressed the opinion that if the present prosperous conditions continue the town would soon have its own government buildings and its own government agent.

After the meeting a gathering of the faithful took place in which matters of a strictly party nature took place.

COAL COMPANY'S NEW OFFICES.

Plans for Magnificent Building and Ground Nearing completion.

The Coal company have decided to build their new office building on block 15, formerly used as the recreation ground. The whole block will be utilized, the building being placed in the centre. The remainder of the block will be beautifully laid out in drives, walks, fountains, grass and flower plots etc.

Several plans of buildings have been submitted to the head office, but the choice has not yet been made. The size will be somewhere in the neighborhood of 80x120. The work will be commenced this summer and rushed to completion before winter sets in.

A wreck occurred on Thursday morning a couple of miles this side of Michel. Five box cars loaded with coke jumped the track while going at a good rate of speed. Three cars were smashed into kindlingwood and the contents scattered. The track was undergoing repairs at the place when the accident occurred. The express was delayed 8 hours in consequence.

MY HEART'S DARLING

BY W. HEMMURG.

If she returned after half an hour, she would find the young girl at her crocheting and Alfred reading a book. Even had found him once looking out of the window in an incomprehensibly persistent manner, although nothing was to be seen on the street that could be compared to Selma, particularly when one thought of the fifteen thousand thalers she would inherit.

He really ought to be shaken, that was certain, for of all useless things a doctor without a wife was the most—it could not be borne any longer! They were sitting to-day drinking their coffee and repeating the question as to whether the doctor was coming or not. He had not appeared for several days. The little maid had been sent to the Wassergasse early in the morning to beg the doctor to come, as his mother had "a little sore throat."

This stratagem had been used several times, and had always been treated with the greatest seriousness by him. Each time he wrote new directions, either for spraying or for a liniment for the pain, and when the prescription was finished, he seldom had time to stay any longer.

The ladies were talking again of Lucie, and Fraulein Selma had just said:

"Yes, she must have been frightfully brought up!"

Just then steps were heard coming up the stairs, and the long-expected son appeared.

"Well, another sore throat!" he said, in a friendly tone. "You must take more care of yourself, mother; you should give up these walks in the evening; it is too damp in this neighborhood."

"Oh, that is not it, Alfred; Selma complains of it, too. Selma, get a silver spoon and let him look in your throat. I am afraid there is something the matter."

The young girl became rosier than was her wont, brought what she had been bidden to, and opened her mouth as he desired her. It was not at all a small mouth, but ornamented with a magnificent set of teeth.

"Nothing is the matter," he said, and laid down the spoon. "Gargle a little; that's all that will be necessary."

"Have you many patients, Alfred?" asked his mother.

"Very few."

"Then why do you come here so seldom?"

"It is true that I have not been here for a day or two, but I have been away at the burial of Frau Oberforster Kemmert."

"Well, I am surprised!" and the mother looked at her son in astonishment. "I suppose there were a good many people there."

"I came too late," he answered. "I saw no one beside the Oberforster and his cousin."

"What! Was not even her sister there?" exclaimed his mother. "Now you see, Selma, what she is like."

"If you mean Fraulein Walter, she was most certainly there; but I did not see her; she must have been in the nursery."

"Very possibly. Now she will stay and bring up the children. At least it will be something useful."

He stood at the window for a long while, for the conversation was very painful to him.

"Probably—I don't know," he replied, and then was silent. A wagon rattled by in the street; it was the old Herr von Meerfeldt's landau.

Suddenly he leaned heavily on the window-sill, for in the carriage next to Frau von Lowen, but anxiously shrinking into the corner, sat Lucie Walter, dressed in deep mourning. The wind tossed her veil till it looked like a black shadow hovering over her pale face; her eyes were cast down, though for a moment it seemed they were about to seek the well-known windows. In the next moment the carriage had rolled by.

"Well, that is too bold!" cried the enraged Frau Counselor. "The one in black, Selma! Did you see her? That was she! And to come here! it is not to be borne! it is too much!"

"Great heavens!" exclaimed the girl, sympathetically.

At that moment Alfred turned a pale face toward them.

"I must beg you, mother, not to make these criticisms in my presence. You know as little as I do what reasons bring Fraulein Walter here."

"Reasons! Oh, I will tell them to you if you want me to. No, I can not be calm or be silent. That—that—"

"I hope you will compose yourself in my absence, then, mother," he said, interrupting her, and taking his hat, "and that this storm will be over on my return."

He bowed slightly and left the room.

"Oh, heavens!" said the Frau Counselor, taking up her knitting, and very visibly embarrassed by his abrupt departure.

She saw that she had been very imprudent, for he never could bear to have her who was to have been his wife spoken of in his presence. But she could see he was not indifferent to her in his thoughts, and that was the reason he ignored all the plans and wishes her motherly love had entertained for him. She shook with inward rage.

"Get the coffee, child," she said, forcing herself with great difficulty to be calm. "Oh, these men!" she grumbled to herself. "Blockheads! pig-headed creatures! when they get an idea in their heads, they would like to go through a wall! Quite crazy! and his father was just the same. What dances that sainted one led me, till I got my own way! But they all have a fire in their heads, and if it does not burn it smoulders!"

With a sour expression she drank the coffee with her young companion, talking of a knitting pattern she had lost and that could not be found anywhere, but finally, with a sudden turn, she said:

"Dettchen will have a bad day, my child. Nothing imbitters men more than to be unexpectedly reminded of a foolishness they have committed. We will never speak of her"—she made a motion in the direction of the Meerfeldt grounds—"in his presence, even if she were to dance on a rope in front of our windows."

Dettchen did not have a bad day, but a sorrowful one. The doctor came home apparently hurried, went at once to his room without taking a cup of coffee with her, though the fragrant beverage was waiting for him, kept warm on the bright coffee-heater, covered up with a gorgeously embroidered cozy. She poured him out a cup, went upstairs with it, and knocked timidly at his door. When he answered, she went in and found him standing, with a gloomy expression, before his writing-table.

"There are several appointments for you," she said, cheerfully. "You are to go to Brewer Gunther's, and to Banker Josephson's, and Mademoiselle Bertin left word that she wanted to come in the course of the afternoon and see the old baron again, he has had another bad attack. She was here herself and very much excited. Just think! Hortense von Lowen has engaged herself."

"Indeed!" said he, indifferently.

"Yes: and to a Herr Weber. 'If he were only a Von Weber!' " Bertin said.

He had to laugh over this last remark.

"She is coming back to-day, Alfred."

"The engaged couple are already here, and Lucie with them."

"Lucie!" Tante Dettchen turned pale and looked at her nephew. "I thought she was going to stay with her brother-in-law, Alfred?"

"Yes, indeed!" he exclaimed bitterly. "I thought so, too."

"Do not let it worry you, my boy," said the little lady, stepping up to him with a troubled look. Smoothing his thick hair, she said: "Can you never get over it?"

He turned away from her hastily.

"Do not speak of it; it was only for a moment; and it is hard to realize that so much heartlessness, so much—" he stopped and sprang up. "So I must go to Gunther's and to Josephson's? Thanks, I will go at once!"

The next moment he was out of the garden gate and walked rapidly down the street.

In the dining-room of the Meerfeldt house, the tapestried walls of which were decorated with deer heads and stag horns, they were all at dinner. The old baron sat at the head of the little table, Hortense on his right, her fiance on his left, and next to him Mademoiselle, who, in honor of the occasion, had on her pink silk dress and a black lace shawl over her shoulders. Lucie had a place at Hortense's side.

The dinner was unusually stiff and formal. The room was never very cheerful, for the thick shrubbery before the window kept out the light, and there was a cellar-like atmosphere which made one look at the huge chimney-place and wish they could see a fire burning there. Altogether it had a depressing effect, although champagne was foaming in the glasses, and the huge buffet was groaning under the weight of the old baron's massive pieces of silver.

Hortense had grasped Lucie's hand under the table. She scarcely touched anything, only drank something occasionally.

The old baron did his duty as host in an old-fashioned, ceremonious way, was courteous to the ladies, and extremely polite to his future grandson. Whether or not he was satisfied with Hortense's choice even the sharpest observer could not have told. At all events, the most welcome suitor could not have been treated with more deference than was this large, light-haired man at his side.

They were now talking of Weber's estate, which they knew of old. Hortense sat there in the most indifferent manner. She seemed scarcely to hear the animated conversation of the two gentlemen. Only when they began to speak of horses did she become more attentive. Mademoiselle, who had drunk a good deal of champagne—she always said she learned to drink it in Germany, because she was so bored—now said to Lucie across the table, as she pushed the silver fruit dishes a little aside:

[TO BE CONTINUED.]

The Albanians.

Albanians believe that they have a better right to exist than other races and that all other races, being inferior, are on earth only to serve them. Death has no terrors for the Albanian, for his highest philosophy is in the saying, "Dying is a plague, but it is half a plague to live."

The Sacred Plants of the Druids.

The Druids held many plants sacred, as, for instance, vervain, selago, mistletoe, and among trees the oak and the rowan. There is, i think, no serious doubt as to the identity of any of these except the second (selago), which is generally thought to be the club moss. Oak mistletoe is certainly rare, and that may have been the reason why it had an especially sacred character, but it does exist.

The Band Played.

General Custer believed in having martial music on all possible occasions. He would have the band out at 5 o'clock in the morning and the last thing in the evening. One day when a regiment had just come into camp General Custer ordered the band out. The men were tired and reported that they had lost the mouthpieces of their instruments.

"Very well," said the general, "you may take pickaxes and shovels and help repair the roads. You may find the missing mouthpieces while you are working." It is unnecessary to state that the band played soon after.

MR. WILLIAM (BUNTY) SMITH

By G. W. Ogden

Copyright, 1902, by T. C. McClure

To designate Smith from Smith, both being named William, the people of Tow Head Junction resorted to the primitive expedient of rechristening them according to their distinct physical characteristics. William Smith, the widower, was tall, so they gave him the name of Shanghai; William Smith, the bachelor, was short, and for twenty years they had spoken to and of him as Bunty. Neither enjoyed a middle name, and neither was resourceful enough to supply a distinguishing initial. The postmaster at Tow Head Junction never knew whether a letter was for Shanghai or for Bunty. He could generally place postal cards in the proper box by studying their contents.

Bunty, by reason of lack of experience, had matrimonial aspirations. Shanghai, who lived at the other end of the village street, was resting in full enjoyment of the respite death had given him from a somewhat overstrenuous term in the yoke. When he tired of his own cooking, he went and stayed with his married daughter a week. Bunty had been seriously considering the Widow Dunnigen for three years. He had gone over the ground and knew she was ready to become a member of his household upon invitation. Just as he had made up his mind to make his formal proposal he received a matrimonial paper through the mail. At least he got it out of the post office, and it was addressed to William Smith. The sender may have intended it for Shanghai.

That paper opened a new perspective to Bunty. He never dreamed that the matrimonial market offered such possibilities. It became plain to him that he had been fooling away his time with the Widow Dunnigen, faded, somewhat wrinkled and owning but twenty-five acres of bottom land. Here were ladies—the paper spoke of them always as "ladies"—who appeared willing to marry anybody, and some of them had $25,000 in cash. Bunty opened correspondence. To make sure his letters would not fall into the hands of Shanghai, he directed the ladies to address them thus: "William (Bunty) Smith."

William (Bunty) Smith soon began to receive no fewer than two letters from each mail. The superscription was so unmistakably feminine that the postmaster mentioned it to the loungers. They twitted Bunty and told him he would prejudice his chances with the Widow Dunnigen if he persisted in his trifling with ladies' hearts by mail. Bunty laughed. He could marry the Widow Dunnigen any day, he thought. What he was after was bigger fish. He finally sifted the choice down to two. According to their uncontroverted statements one was a widow with $12,000 in mining stock, the other a maiden lady of means. Her mysterious reserve on the question of means led Bunty to believe she must at least own a bank, possibly a railroad. To these ladies he sent his photograph, taken ten years previously, when he attended the Grand Army encampment. He also gave them to understand that he was able to support a wife as a wife should be supported and that he did not so much value means as a faithful heart and a face free from wrinkles.

Bunty made progress. He arranged with the two women to meet him on a certain day in the city, twenty miles from Tow Head Junction, one at the union station at one hour, the other at the post office at another. One was to wear a pink, the other a white rose. Bunty marked himself apart from all mankind by tying a red ribbon in his lapel buttonhole. He did not go to the post office that morning, but took the 9:10 train for the city. When Shanghai went after his mail the postmaster handed him a letter. "Ain't for Bunty, I reckon," he said, "as it's addressed jist William." Shanghai opened the letter and read:

Dear William—Looking at the map, I see Tow Head Junction is very near the city. I find the first train from the city reaches Tow Head Junction fifteen minutes before the train you will leave on gets there, so I have decided to go to Tow Head. Meet me on the station platform. I will wear a pink. CAROLINE.

"Must be for Bunty," Shanghai reflected as he set out to look him up. Jim Daniels said he saw Bunty at the depot and that he heard him ask for a ticket to the city. Before Shanghai got there the 9:10 came, but the train from the city had not arrived. At the depot they said it was thirty minutes late.

Bunty was to meet Caroline at the union station in the city at 10 o'clock. Caroline was the maiden lady with means. He had named 1 o'clock as the hour for seeing the widow who held the mining stock at the post office. The widow also consulted time tables and maps. She found that she could get a train to Tow Head Junction that would put her down there at 8:55 and that she could return to the city at noon. She decided to run out and look the place over. So when the train from the city which should have arrived at Tow Head before Bunty left stopped two women got off. One wore a pink pinned to her bosom, the other a white rose. The one adorned by the rose was fat, short, broad faced and masculine.

The tall woman scanned the men on the station platform. There was not a gleam of red ribbon on any of them.

"Is Mr. William Smith here?" she asked the agent.

"That tall gentleman over there," he answered, pointing out Shanghai, who, having missed Bunty, had forgotten the letter and Caroline. The fat woman, who was standing near, with hands on her hips and a valise between her feet, critically surveying the peaceful, dusty landscape whereon Tow Head was a dot, heard the query and answer. She picked up her grip and headed for Shanghai. The tall one reached him first.

"Is this Mr. William Smith?" she said.

Shanghai bowed. "That's my name," he replied.

"Well," said the tall one, "I am Chroline."

The fat one approached. "Is this Smith—William Smith?" was her stern query.

"The same, madam," Shanghai answered, somewhat confused at the attention.

"I am Maudie," she explained.

Light dawned on Shanghai. "Ladies," said he, "I am William Smith, but not your William. He is known as Bunty. I am Shanghai."

Confusion followed. The women accused each other of treachery and Shanghai of deceit. They drew a crowd.

"If you will walk up the road with me, I may be able to explain," Shanghai suggested. They went. Half an hour later the fat one returned. She told the agent she had been tricked and deceived by William, otherwise Bunty, Smith and that she would not live in a hole like Tow Head for all the Smiths in the world. Shanghai and the tall one came along later. They all took the 11:05 train for the city.

Bunty kept his tryst faithfully and returned, downcast and disappointed, to Tow Head on the 6:15. He did not see Shanghai and his female companion until they stepped from the train at home. Then Shanghai took a letter from his pocket and handed it to Bunty. "She forgot to put the 'Bunty' on the envelope this time," he said, "an' so she found me 'stead o' you. Now she's my wife."

Bunty looked at the letter. "Car'line," said he. Then he studied Caroline's face. "Well, Shanghai," he said, "you're welcome to her."

Bunty called on the Widow Dunnigen early that evening. He sighed contentedly as he settled down in a rocker on her front porch. How much better were the simple pleasures of life, after all, than the race for conquest and riches!

"Guess we might as well git married, Betty," he remarked conclusively.

Betty laughed. "You're too late, Bunty," she said. "I promised Jake Laster two weeks ago while you was a-courtin' them other women by mail."

Plenty to Talk About.

High up on the side of Cumberland mountain a traveler found a cabin in such a lonely place that he wondered how the old mountaineer and his wife entertained each other.

"Do you and your wife see many people here?"

"Scarcely ever see anybody, suh," was his reply.

"Then you have to depend entirely upon yourselves for society?"

"That's it, suh."

"And what do you find to talk about?" the visitor continued, having noticed that neither was inclined to conversation.

"What do we find, Martha?" he appealed to her.

"Heaps, I reckon," she said. "When breakfast is ready in the morning I says to you to sot down to co'n coffee and hoecake."

"Yes."

"When it's noon and you are hanging about I says that hoecake and co'n coffee is ready."

"Yes."

"And when it's candlelight I sort of jerks my head, and you hitches up to sorghum and hoecake and wants to know why we don't have bacon. Ain't that talk enough, stranger?"

"But there are the evenings," said the traveler.

"Yes, thar's the evenings, of co'se, and I says I reckon it will be a fine day tomorrer, and Jeb he reckons the same thing, and we wind up the clock and go to bed. Oh, I don't reckon we are suffering to death for the want of somebody to gab to."—Cleveland Plain Dealer.

Cause For Thanks.

When Colonel "Joe" Rickey was quite a young man he had occasion to employ a lawyer to collect a bill against a business man with whom he had had a number of dealings. As he had never before retained counsel he went to the lawyer his father had always employed and placed the claim in his hands. The lawyer collected the amount, $276, and notified young Rickey to call for the money. In due time he called, and, after waiting for some time, was shown into the private office.

"Good morning, Joseph," said the lawyer. "I'm glad to see you are so prompt in attending to business. I have your money for you."

Then ensued a general conversation for a few minutes, in which the lawyer said among other things: "Joseph, I knew your father well and for many years, and I knew your grandfather well and for almost as many years. They were fine men."

"Yes, sir," replied Rickey, "but as I am in a hurry, sir, I would like to get my money and go."

"All right, Joseph. I will charge you even money. I will take $200 for my fee, and give you the $76," said the lawyer as he handed the money over.

"Very well, sir," said Rickey, "and I am thankful you did not know my great-grandfather too."

The Gentleman.

The gentleman is a man of truth, lord of his own actions and expressing that lordship in his behavior, not in any manner dependent and servile either on persons or opinions or possessions. Beyond this fact of truth and real force the word denotes good nature and benevolence, manhood first and then gentleness.—Emerson.

"You say you took automobile rides for the sake of exercise?"

"Certainly."

"But where does the physical exercise come in?"

"Getting out to see what the matter is."

Pat—Sure I'd lay down my loife for ye, Norah?

Norah—But would you lay down a carpet for me, Patrick?

A writer says that whipping a boy may make him stupid. Perhaps that is true, but we think it is more likely to make him smart.

There is no despair so absolute as that which comes with the first moments of our first great sorrow, when we have not yet known what it is to have suffered and be healed, to have despaired and have recovered hope.—Eliot.

WAS CURED OF PILES SEVEN YEARS AGO

A Chronic Case of Twenty Years' Standing Cured Permanently by DR. CHASE'S OINTMENT.

Piles or hemorrhoids are among the most common as well as the most torturing ailments that afflict humanity. The keen distress caused by the itching, especially when the body gets warm, is almost beyond the power of description.

The very mention of piles suggests Dr. Chase's Ointment as it is beyond denial the only actual cure for this loathsome disease. If you ask your doctor, your druggist or your friends what to use for piles they will in nine cases out of ten advise Dr. Chase's Ointment.

Mr. Alex. McLaughlin, for 30 years a resident of Bowmanville, Ont., writes:

"For twenty long years I suffered from itching piles, and only persons who have been troubled with that annoying disease can imagine what I endured during that time. About seven years ago I asked a druggist if he had anything to cure me. He said that Dr. Chase's Ointment was most favorably spoken of, and on his recommendation I took a box.

"After three applications I felt better, and by the time I had used one box I was on a fair way to recovery. I continued the treatment until thoroughly cured, and I have not suffered any since. I am firmly convinced that the ointment made a perfect cure.

"I consider Dr. Chase's Ointment an invaluable treatment for piles. In my case I think the cure was remarkable when you consider that I am getting up in years, and had been so long a sufferer from this disease."

Dr. Chase's Ointment is the only absolute and guaranteed cure for every form of piles. It has a record of cures unparalleled in the history of medicine. 60 cents a box, at all dealers, or Edmanson, Bates & Co., Toronto. To protect you against imitations the portrait and signature of Dr. A. W. Chase, the famous receipt book author, are on every box.

ARE YOU BUILDING?

IF SO USE EDDY'S IMPERVIOUS SHEATHING

THE BEST BUILDING PAPER MADE.

It is very much stronger and thicker than any other (tarred or building) paper. It is impervious to wind, keeps out cold, keeps in heat, carries no smell or odor, absorbs no moisture, imparts no taste or flavor to anything with which it comes in contact. It is largely used not only for sheeting houses, but for lining cold storage buildings, refrigerators, dairies, creameries, and all places where the object is to keep an even and uniform temperature, and at the same time avoiding dampness.

Write our Agents, TEES & PERSSE, Winnipeg, for samples.

THE E. B. EDDY CO., Limited, HULL.

Power of a Swan's Wing.

"Swans," said an official of the zoo, "have great strength of wing. It is said that with a blow of its wing a swan can break a man's leg, and I have no doubt this is so. A doctor told me one day, as we stood together by the zoo lake, that one of his first cases had been that of a man whose arm a swan had broken with its wing.

"The accident occurred in Arkansas, on Swan lake, a body of water where these birds abound. A huntsman was fire hunting, when a swan, making for the light, flew straight at his head. He put up his arm to shield his face, and the powerful wing of the big white bird struck him like a club. Both bones in the forearm were broken; it was a compound fracture.

"If a swan accidentally can break in this way a man's arm, there is, in my opinion, no room to doubt that it could, if it desired, break with a well directed blow a man's leg."

The Inspired Idiot.

"Strange, isn't it," remarked the inspired idiot, "that some people spread scandal wholesale by retailing it everywhere?"—Baltimore Herald.

SHAKY NERVES.

Sufferers from Nervous Troubles Are In a State of Continuous Torture-Suggestions as to How the Trouble Can be Overcome.

When your nerves are shaky your self-control is shattered—your will power is broken. Sudden sounds startle you; your temper is irritable; your hands tremble; there is weakness in your knees; your skin is pale and parched; you are restless at night and tired when you wake. It all comes from nervous exhaustion, perhaps due to overwork and worry, late hours, hot days, and want of blood. Dr. Williams' Pink Pills is the only cure. They make new, rich, red blood. They brace up jangled nerves and strengthen tired backs. They give health and energy to dull, despondent men and women. Strong proof is offered in the case of Mrs. Wm. Westcott, of Seaforth, Ont., who says: "For a long time my health was in a bad state. I was subject to headaches, dizziness and nervous exhaustion. My appetite was poor, and I was so badly run down I could not stand the exertion. I tried several medicines and consulted different doctors, but they did not help me any. One of my neighbors strongly urged me to try Dr. Williams' Pink Pills, and before the second box was finished the turning point for the better had been reached, and by the time I had used a half dozen boxes, to the surprise of my friends and neighbors I was again enjoying good health, and have since been strong and well. I do not know anything to equal Dr. Williams' Pink Pills when the system is run down."

What the pills have done for others they will do for you if you will give them a fair trial. Sold by all medicine dealers, or sent post paid at 50 cents a box or six boxes for $2.50, by addressing the Dr. Williams Medicine Co., Brockville, Ont.

There have been no duels among Belgian military men for fourteen years. Disputes are decided by courts of honor.

LADY AGENTS WANTED

Best Selling Skirt Supporter and Waist Adjuster ever introduced. Sells at sight. Good profit. Send 25 cents for sample and terms to agents.

BRUSH & CO., Dept. W. TORONTO.

THE MARCH WIND

OH, I'm happy when the bitter
March wind blows,
Though it puts a pinkish glitter
On my nose.
For I know the merry twitter
Of the robins in their glee
Soon shall one the day for me,
And I know the sturdy crocus
Will be playing hocus pocus
With the poets presently!

Oh, I hail the March winds gladly,
Though they treat
Maid and matron rather badly
in the street!
From the stables where they sadly
Loiter now and ruminate,
Growing fuzzy as they wait,
All the lambs and colts and heifers
Soon will rush to greet the zephyrs
Swooping down across the state.

Oh, the March winds that go tearing
In full swing,
Ne'er respecting, never sparing,
Anything,
Start the grave professor swearing
As they whisk his hat away!
I behold their willful play
While he madly hurries after,
And my heart is filled with laughter
Forty-seven times a day.

Oh, the March winds that come ripping
O'er the leas,
That go howling through the shipping
At the quays,
Have an angry way of nipping
At the gentle maiden's nose,
But in every blast that blows
There's a promise for the lover
And the faith that lifts the cover
Where the dandelion grows.

—S. E. Kiser in Chicago Record-Herald.

The Real Thing.

Napoleon was rusticating on Elba.

"I wonder," he mused, "why they call me Corporal Violet."

"Probably," asserted the guard, "because they think you are the whole bunch."

"Right," exclaimed the emperor, "and that is why Louis XVIII. can't afford to pay for me."

Laughing at their expensive mistake, he fell to thinking how much cheaper it would have been to call him a daisy.—New York Herald.

Out of Question.

Kwater—Well, you know, it's a poor rule that won't work both way.

Wiseman—Nonsense! You couldn't possibly expect a headlong man to be long headed, for instance.—Philadelphia Press.

LOUBET IN LONDON

PRESIDENT OF FRANCE CORDIALLY GREETED.

He is Met By King Edward at Victoria Station,-Banquet at Buckingham Palace Was Attended by All High Officials of the United Kingdom.

London, July 6.—President Loubet arrived in London soon after four o'clock to-day and was greeted at the Victoria station by King Edward and the Prince of Wales, accompanied by the cabinet ministers and other distinguished persons. The feature of all decorations was the profusion of French national colors in bunting and flowers.

King Edward wore a field marshal's uniform and a Grand Cordon of the Legion of Honor. The Prince of Wales had on an admiral's uniform. They waited the King's guest.

His Majesty stepped forward as the president alighted and repeatedly shook hands with him. King Edward then introduced the Prince of Wales, the Duke of Cambridge, the Duke of Fife, Premier Balfour, Foreign minister Lansdowne, Field Marshal Lord Roberts and others, who were all in uniform or court dress. M. Loubet presented the members of his suite to the King, who warmly shook hands with them.

After an inspection of the guard of honor, the King and M. Loubet left the station and entered a state carriage, in which the Prince of Wales and the Duke of Connaught were also seated. The vehicle, escorted by a detachment of Life Guards, was then driven through the crowded, troop-lined streets, by way of Hyde Park Corner, Clubland, in Piccadilly, to St. James' Palace. M. Loubet was loudly cheered everywhere.

On his arrival at St. James palace M. Loubet received a great ovation. Opposite the entrance of the palace on a balcony of Marlborough house were the children of the Prince and Princess of Wales, who saluted the president and the King. The latter first noticed his grandchildren, returned their salute and drew M. Loubet's attention to them. The president immediately half stood up, smiled and saluted the youngsters.

After a brief rest M. Loubet visited their majesties at Buckingham palace, accompanied by Foreign Minister Delcasse. Later the president proceeded to the French embassy and received an address from the French community.

The only untoward incident of the day was the arrest of a foreigner near the railroad station who declared he wanted to hand a petition to M. Loubet. After an examination the man was released.

President Loubet's first day in London closed with a state banquet at Buckingham palace. It was the most brilliant function the dingy old pile had witnessed for a long time. The company included all the high officials of the kingdom.

M. Loubet was seated next to the Queen and King and the Prince of Wales sat opposite to them. A concert followed the banquet. The cabinet and royal family were among the guests at the banquet.

Proposing the health of President Loubet King Edward expressed the pleasure that he and Queen Alexandra felt at welcoming the French president at Buckingham palace. The King alluded to his recent visit to France and the pleasure he experienced at his friendly reception there.

President Loubet responded, thanking King Edward for his reception and declaring that his visit to France had done much toward a guarantee of the peace of the whole world.

Capt. Webb's Marvellous Seals.

Various animals have been trained by man to perform most wonderful tricks, from the canary bird to the enormous elephant, but it has been reserved for Captain Webb to train an animal which one would hardly have thought could be trained to do anything in the way of tricks, so altogether ungainly has it always appeared. Captain Webb, however, has succeeded in training a troupe of performing seals to perform feats which seem almost impossible. These clever animals play musical instruments, perform clever juggling and balancing feats and more than astonish all who see them.

The carrying of these seals from place to place is most expensive, as they consume an enormous amount of fish each day, and a seal which has been well trained is worth some thousands of dollars. These seals should prove a great drawing card to young and old alike at the Winnipeg Fair.

Murder at Beausejour.

A quarrel took place between two Polanders, Tukes Kyruk and Paul Wyrchuckski, twelve miles north of Beausejour, early on Monday morning. The body of Wyrchuckski was found in the bush not far from the scene of the quarrel soon after, with the head split open, apparently with an axe.

Edwin Parker Lowrie was found dead Saturday evening just outside Brandon city on the trail leading to Wawanesa. He was subject to epileptic fits, and it is supposed that he died in one of these while on his way home north of Carberry to Wawanesa.

The Argonauts of Toronto won the senior eight at Philadelphia regatta, breaking the record.

WRECKED IN SOUTH SEAS

Terrible Sufferings of a Boat's Crew—Twelve Lives Lost.

Advices from Victoria, B. C., say: The steamer Miowera, which arrived on July 9, brought details of many shipping disasters which occurred off the Australian coast and in the South Seas as a result of the tremendous gales which raged during June. Brief facts have been cabled of the loss of the German bark Edith, with Captain Oertel and 11 men, en route from Puget Sound, with lumber, and of the dismasting of the German bark C. H. Watjen, both of which vessels were long on the overdue market.

The Edith struck a reef off New Caledonia and her crew left in two boats, one with Captain Oertel and eleven men, the other with the mate and eight men. The captain's boat was not seen after they left the vessel. It was provisioned for fourteen days. The other boat was at sea for eight days and the shipwrecked men suffered great privations before they were rescued. After leaving the wreck the survivors made for the Solomon Islands. Fierce contrary winds and heavy seas then arose, inflicting great sufferings on them. On the eighth day they sighted the C. H. Watjen, from New York to Yokohama, with a cargo of 100,000 cases of kerosene. The vessel had been caught in a furious cyclone, which rendered her an almost complete wreck. Her masts, spars, rudder and other gear were completely lost. Of her cargo no less than 20,000 cases of kerosene had been jettisoned in order to relieve her. For another 76 days the companions in suffering partly drifted and partly sailed with the assistance of jury masts, which they had rigged, finally finding themselves at Yule island, off the coast of New Quinea, whence the Edith's crew were taken to Australia, while the Watjen people remained with their vessel, hoping to get her to Australia for repairs. The Edith broke in halves after striking the reef. The C. H. Watjen had lost all her masts, rigging, rudder, three boats and bulwarks on the starboard side. It was not known whether she would be condemned or not.

Montreal Port's Advantage

The port of Montreal is expected to have a banner season this year. The exports of grain so far show a remarkable increase, and by the end of the season are expected to exceed previous years.

The principal reason is the cheapness of freight rates. Grain can be brought cheaper from Fort William to Montreal than it can be laid down in New York from Chicago, and this has given the port of Montreal a big advantage.

According to statistics issued by the Montreal Board of Trade the exports from this port from the opening of navigation to the end of June are as follows:

	Bushels.
Wheat	5,259,360
Corn	1,647,574
Oats	239,403
Barley	140,419
Rye	250,121
Total	7,536,877

It is estimated that there are still fifteen millions of old crop grain still awaiting shipment from the west.

Surplus of $15,000,000

A dispatch from Ottawa says: The statement of revenue and expenditure issued by the finance department shows the revenue to be $63,739,271 for the year ending June 30 last, compared with $56,303.694 for the same time last year, an increase of $7,455,577.

The expenditure was $41,449,103, a decrease of $806,213, making a betterment in the finances of $8,261,760.

The expenditure on capital account was $7,230,093, a decrease of $4,302,000 over the previous year. There is a surplus of over 22,000,000 as compared between the revenue and the expenditure for the year, but there are outstanding accounts which will reduce this.

If the capital and ordinary expenditure be deducted from the revenue there will be still left $15,000,000 to the good. The financial showing is certainly an excellent one for the year.

Doctors Want Protection.

At the Ontario Medical council last week, Mr. Rose, official prosecutor, recommended that the council ask the legislature for a short amendment to the Medical act, in order to protect the public from the persons who call themselves osteopaths, magnetic aealers, and other classes of "healers," who did not flourish when the present Medical act was passed. "These people," says Mr. Rose's report, "by the decisions given by some of the higher court judges, can practise their art and rob the public with impunity, so long as they do not give medicine and drugs."

The Salvaggis.

A Parisian novelty to be seen at the Winnipeg Fair this year will be given by the Salvaggis, who are described as Whirlwind Dancers. Whirlwind dancing and posing are novelties which have been but lately introduced from Paris and other continental cities. This act is most artistic, and the two performers give some most original and clever dances. This is a novelty which has never before been seen in Canada and comes straight from New York here.

NEWS FROM BRITAIN

ENGLISH, SCOTCH AND IRISH NOTES.

Interesting Items Culled From Old Country Papers, Recording the Death of Some Notable Personage, and the Occurrence of Unusual Events.

ENGLAND.

Luncheons on the 'penny-in-the-slot principle are now provided at Lord's cricket ground.

Hundreds of hares, pheasants and rabbits have been destroyed by a fire at Altcar, Lancashire.

Over eight hundred shire horses were included in the Whitsuntide cart horse parade at Regent's Park.

Motor trains have superseded ordinary trains at Portsmouth on the mile-line between Fratton and East Southsea.

The ordinary manuscript of the first opera composed by Handel for the Royal Academy was sold for 1s. at Sotheby's recently.

The King and Queen attended divine service at St. Paul's on a recent Sunday. Two hundred hospital nurses formed the guard of honor.

It is stated that Turkey has ordered two heavy guns in England, which are to be used as patterns in the imperial foundry at Tofane.

The meteorological office has made an appeal to yachtsmen to provide and used kites for atmospheric research from floating experimental observatories.

A remarkable operation has been performed at the London hospital. A man, stabbed through the heart, had the breast wound reopened and the cut in the heart sewn up. He is still living.

Henry Horn, aged 84, one of the survivors of the charge of the Light Brigade, died in the Islington Infirmary, Highgate Hill, recently. He was a trooper in the 10th Hussars.

Old-age pensions were referred to at the opening of several of the friendly society conferences on Whit-Monday. The Manchester Unity of Oddfellows has already put a scheme into practice.

Henry C. Crispin, an ex-army officer, who was burned to death while reading in bed at Bessborough gardens, Pimlico, was stated at the inquest to have drunk half a pint of methylated spirits a day.

The total strength of the Metropolitan fire brigade is 1,285. It possesses one fire-float, five steam fire engines on barges, seventy-two land steam fire engines, and seventeen six-inch manual fire engines. It has also 42½ miles of hose, twenty long fire ladders, one motor car, four bicycles, 288 horses, 116 telephone lines between fire stations, and 801 fire alarms.

SCOTLAND.

Trawling is not paying at present, and five vessels have already been laid up at Aberdeen until better times come.

Jack Cooke, the boy preacher, has now a rival in Clin Livingstone, aged fifteen, of Motherwell, near Glasgow.

Glasgow's tramway record is an amazing one. The passengers carried during the last financial year numbered 117,179,549, an increase of 13,501,359.

A Dundee grocer, on opening a banana box shipped at Jamaica found amongst the fruit a live opossum, with four of its progeny, two alive and two dead. The creature on the passage had given birth to a litter of four.

The United Free Church assembly, recently concluded, is spoken of on all hands as the quietest in the history of the United Church. It has, however, had one or two important features. First there was the resolution come to at the great meeting to extend the church's operations in the foreign field: and in the second place, there was an anxious desire shown at almost every session of the house to 'go to the people of the slums.' The church recognizes her obligation in this matter.

Took Poison in Mistake.

A dispatch from Toronto says: As a result of mistaking oxalic acid for lemonade, Arthur Dewey, a deckhand on an incoming steamer, was taken to the emergency hospital on Thursday suffering horrible agony, and very near death's door. The cause of the curious mistake was the similarity in the appearance of the contents of two pails, which were placed on the deck together, one containing oxalic acid for cleaning the deck and the other containing lemonade. Dipping a cup into the former pail he took a deep draught of the fluid, but suddenly perceiving his mistake hurriedly informed his companions. He will recover.

Two American detectives have arrested James Beasley at a place 70 miles beyond Pietersburg, South Africa. Beasley is charged with having forged postal orders at Cape Nome. The detectives pursued for 17,000 miles, he having gone to South Africa by way of the Philippines and Australia.

TUBERCULOSIS IN CATTLE

Interesting Report of Experiments Made in Germany.

Berlin, July 9.—The Berlin Medical society assembled yesterday evening to hear Prof. Kossel, of the Imperial health office, report the results of prolonged experiments of the tuberculosis commission in infecting calves with human tuberculosis.

Prof. Koch's observations prior to the celebrated London address caused the health office to appoint the commission to make systematic experiments. The commission's investigations cover three forms of introducing tubercle baccili in calves. First, subcutaneous injection; second, in food, and third, by inhalation. The preliminary report covers only the first form; but, the experiments with the other forms continue.

The experiments cover 39 separate cultures, 23 from adults and 16 from children. The results were that nineteen calves subcutaneously treated did not show the slightest change of condition, and seven showed more marked symptoms, but the propagation of tuberculosis in the body did not occur. On the other hand, four inoculations from tuberculous children infected calves with a disease which resembled a weak type of animal construction, and two of this number died from tuberculosis.

The commission summarizes as follows: "The series of experiments strengthens Prof. Koch's view, that animal consumption as the cause of human consumption does not play the role generally attributed to it; but definite judgment requires further experimentation."

In the discussion which followed, Prof. Orth, the late Prof. Virchow's successor strongly combatted the view that human and animal consumption were dissimilar and not transferrable.

EXHIBITION EXCURSIONS.

These Trains Will Be Run for the Benefit of Visitors to the Fair.

In connection with the Winnipeg Industrial Exhibition excursions have been arranged by the Canadian Pacific railway company as follows:

On Tuesday, July 21st, Farmers' Day, a special train will leave Manitou at 7 a.m., calling at intermediate stations, due to arrive in Winnipeg at 11 o'clock a.m. This train will leave Winnipeg at 12 o'clock same night, thus affording visitors an ample opportunity of witnessing the fireworks.

On the same day a special train will be run from Minnedosa and intermediate points, leaving Minnedosa at 6.30 a.m., and arriving in Winnipeg at 11.40 a.m. This train is scheduled to leave Winnipeg on the return journey at 11.30 p.m.

The regular train from Brandon at 7.40 a.m. will be run as usual, arriving in Winnipeg at 12.20. Tickets, however, will be good to return by all trains on Wednesday, July 22.

Wednesday, July 22nd, Citizens' Day. The regular train from Glenboro and intermediate stations leaving at 7.55 a.m. and arriving in Winnipeg at 12.50 will be detained until after the close of the attractions programme in the evening, being scheduled to leave Winnipeg at 11.30 p.m.

On the same day the train from Emerson at 8 a.m. and due in Winnipeg at 11.45, will not return until 11 p.m.

The ordinary 8.35 from West Selkirk, Lower Fort Garry and Middlechurch, due in Winnipeg at 11.45, will leave on the return journey at 10 45 p.m.

Thursday, July 23rd, Americans' Day. Daylight excursions will be run over all the American railroads on this day; the Manitoba Derby will be ran.

A special excursion train will leave Portage at 7 o'clock, calling at Keewatin, Rennie, Whitemouth, Molson, Beausejour, Tyndall and Selkirk, arriving in Winnipeg at 11.50 A.M. This special will return from Winnipeg at 11.30 p.m.

The ordinary 8 a.m. train from Emerson will return from Winnipeg at 11 p.m.

The 7 o'clock train from Teulon, calling at Balmoral, Stonewall and Stony Mountain will return at 11 p.m.

Friday July 24—Ladies' Day. On this day the great Free-for-All is run. The Ladies' Plate will also be competed for and the great cross-country steeple chase is on the racing card for this day.

The ordinary 7.40 from Brandon and intermediate stations will not return until 11.30 p.m. on Friday night.

The 8 a.m. from Emerson starts on the return journey at 11 p.m.

The 7 a.m. from Tuelon leaves Winnipeg on the return journey at 11 p.m.

German Meat Trade.

The German meat law, which went into effect in April, is having more serious consequences commercially than anticipated. As the regulations require the inspection of meats and lard to take place in bonded warehouses, before export, and the inspection fees are heavy, the German merchants complain that they are placed at a great disadvantage in transit trade. They had hitherto supplied Austria and Switzerland with American meats and lard, sending it directly from the bonded warehouses without expense. But since the meat law has been applied the Belgian and Dutch shippers are getting all the Austrian and Swiss trade and Germany is losing the transit profits. The German shippers, therefore are calling loudly for the abolition of the inspection requirements in the cost of export goods.

A FATAL QUARREL

ONTARIO FARMERS FIGHT OVER 85 CENTS.

Oliver Richardson Shoots Edmund Matthews During a Dispute over a Little Patch of Land—The Slayer Claims He Fought in Self Defence.

Harrow, Ont., July 13.—A long drawn out quarrel between Edmund Matthews (colored) and Oliver Richardson (white), third concession of Colchester South, about two and a half miles west of this village, over the boundary lines between their farms, culminated on Friday night in a fight in which Matthews received injuries from which he died.

Richardson had a revolver and fired several shots at Matthews, four taking effect, three in the body and one in the arm. The ball which, no doubt, caused death lodged in the kidneys. Richardson and his two sons, who also took part in the melee, were immediately arrested and lodged in the village lockup, and afterwards taken to Windsor.

In the police court there Mrs. Richardson and the sons were discharged, and Richardson remained in jail. The tract of land in dispute, according to the valuation of an expert, is said to be worth, at $65 per acre, only 85 cents, but each of the disputants has spent hundreds of dollars in law costs, besides having several previous encounters, in one of which Richardson nearly lost his life by an axe in the hands of Matthews. Richardson claims to have acted in self defence.

CUT TO PIECES.

Negro Assailant of a Young Girl Meets an Awful Death.

A dispatch from Bluefield, W. Va., says: The full details of one of the blackest crimes that has ever blotted the history of this state have just reached that city. In Devon a little 14-year-old girl was assaulted by a negro. The negro was afterwards lynched by an enraged mob of over two hundred men.

The little girl was caught a short distance from her home by a negro and carried to a neighboring wood where she was tied to a tree, bound and gagged. Her absence was noticed by the neighbors who immediately formed themselves into a searching party. The girl was found in an almost dying condition, but was able to tell her story.

After a consultation it was decided to lay in wait for the girl's assailant. In a short time he appeared and was about to renew his assault upon the helpless child when the searchers made for him. He was dragged to the village common and bound to a tree. Only by the greatest efforts of the leaders was the crowd held from tearing the man to pieces. His clothing was torn from his body, and pins, tacks, penknives and every conceivable weapon of torture was stuck into the negro's flesh as he struggled and pleaded for life.

The almost lifeless form of his little victim was then placed before the eyes of the negro, while willing hands cut the tongue from his swollen mouth. His cries became incoherent, and before the enraged citizens could be checked, the skin was literally cut from his body and distributed among the villagers. The negro died with his eyes on the little girl he had assaulted. His heart was then cut out with jack-knives, his toes and fingers chopped off and carried away as mememtoes. His mangled body was then soaked with kerosene and fired.

Exhibition Accommodation.

It has been decided by the accommodation bureau to permit private parties to erect large wooden temporary buildings on vacant lots in Winnipeg for the purpose of accommodating visitors to the exhibition who will be unable to gain admission to hotels or private houses. They will be so arranged that thousands of people will be able to find accommodation in them.

Mr. J. Obed Smith, Dominion commissioner of immigration, has advised the manager of the Winnipeg Industrial Exhibition association that the Hon. Clifford Sifton, minister of the interior, has agreed to allow the immigration tents to be used for the accommodation of visitors to Winnipeg during Fair week.

Mayor Arbuthnot, of Winnipeg, stated last week that the accommodation bureau is daily receiving requests for rooms from parties all over the west and that the householders of Winnipeg are showing a most commendable spirit in the way they are coming forward and offering rooms. He anticipates no difficulty in being able to supply ample accommodation, but if necessary, would do as they did last year, throw open the City hall.

Judge Armour, of Ottawa, died in London on July 11.

Lord Strathcona is suffering from a sprained ankle.

Manitoba editors will go east on their annual excursion August 7.

A number of mill accidents, one proving fatal, are reported from Rat Portage.

The Italian convicted at Fort William of stabbing, has received a sentence of three years.

EDWARD A PEACEMAKER

Lord Beresford So Styles the King at a Banquet.

A London cable says: At the Pilgrims' Club luncheon to the visiting American officers at the Carlton club on July 9 Vice-Admiral Lord Charles Beresford read a message of regret from the Prince of Wales. At the centre table Lord Beresford presided. On his right was seated Rear Admiral Cotton and on his left Captain Lambton, naval aide de camp to King Edward. Ambassador Choate, Senator Gorman, Senator Depew, General Lord Grenfell, the Archdeacon of London, Dr. Sinclair, and Admiral Sir John Dalrymple Hay sat at the same table.

In proposing the toast of "The King" Lord Beresford said he believed the day was coming when King Edward would be known as "Edward the Peacemaker." Lord Beresford then toasted "President Roosevelt," and asked why the President was liked in England. He added:—"We like the man. We like the strong, generous man, what I may call the real, human man. The president will do his level best to bring the two English speaking nations together in one harmonious whole, which is the same idea King Edward had on the occasion of his visit to the president of France. If President Roosevelt were to come here I believe the enthusiasm would be far greater than in the case of any reception ever accorded to any visitor from any country."

In proposing "The American Navy" Lord Beresford said that whenever there was anything disagreeable abroad Great Britain and America generally drifted together. If these two nations got together to maintain their common interest and commerce it would make for the peace of the world. Neither Great Britain or America wanted an alliance." But, the speaker added, "we want an understanding. Both Great Britain and America are increasing their fleets, but that is no more a threat to other nations than increasing the police force of their cities in order to maintain order."

Admiral Cotton, replying, testified to the warm feeling existing between the two nations and their navies, and recalled instances where British and Americans had served together. He thanked the King and the people of Great Britain for the welcome given to the Americans and proposed the health of Lord Beresford amidst great enthusiasm.

A TERRIBLE PLUNGE.

Three Engines and Ten Cars Fall 2,000 Feet into Arkansas River.

Canon City, Col., July 10.—Three engines and twenty cars of a freight train have jumped the Denver and Rio Grande track in the Royal Gorge and plunged into the Arkansas river, a sheer fall of 2,000 feet. The engines have not yet been found. Ten freight cars are also missing. The river is very deep and high and the current runs at a terrific speed. The three engineers, a fireman and a brakeman disappeared in the wreck.

The accident took place near the hanging bridge in the Royal Gorge, about six miles east of Canon City. It is the most picturesque railroad spot in the west. The gorge is only 50 feet wide, but the rocks rise perpendicularly from the Arkansas river to a height of more than a third of a mile. The freight train was bound east. Two of the engines were dead, being drawn along with the cars. Without warning the locomotive that was furnishing the power jumped the track, bumped along on the ties for a few feet, and then plunged into the abyss, dragging the other engines and the cars after it. Two of the firemen jumped.

The engineers refused to leave their posts and fell to certain death in the torrent two thousand feet below. A brakeman was thrown into the gorge when the cars ran off the track. The breaking of the coupling saved the ten rear cars from falling into the river.

For the accommodation of those going to the Winnipeg Fair from country points, the management beg to give notice that reserved seat tickets for the grand stand for any of the performances during the week will be on sale in Winnipeg from Monday July 13th, and visitors desiring to obtain good locations can obtain same by sending the money for the seats to the exhibition office and their seats will be reserved. These seats are 25 cents each.

On July 9 at Baltimore, Md., Frank Manoley shot and killed his wife while she was sleeping in bed. She was shot four times in the head. Manoley says he was dreaming and imagined he was shooting at a burglar.

A marble bust of George Stephenson was unveiled at the railway station at Rome recently. The bust was presented by the Institution of Civil Engineers to the Municipality of Rome as a supplement to the tablet placed in the vestibule of the railway station at Rome in 1881 to commemorate the centenary of the birth of the father of the railway system.

Mr. Frank Elmore, of the Toronto Mail and Empire, who is looking after the entries of horses from the east for the speeding events, reports that quite an interest is being taken in Winnipeg's annual meeting and that quite a number of runners will be entered as well as some trotters and pacers.

STREET SPRINKLING.

The hot dry season is here, and for the next two months it is safe to predict that uncomfortably warm and dusty weather will predominate.

Perhaps there is no class in town who feel the discomforts caused by heat and dust more than clerks, merchants, office hands etc., the majority of whom are employed in buildings fronting Victoria avenue and within a radius of three blocks from thd Royal hotel corner.

There is a simple and effective manner by which the heat and dust in the business part of the town can be so modified as to reduce the discomforts to a minimum, viz, street sprinkling with the fire hose. By thoroughly watering Victoria avenue from the Roma hotel to the Central hotel, and the cross streets for a short distance every day, not only would those employed along the main street be benefited but those who have occasion to walk up or down the street would receive some advantage,especially when, as on Monday, such a wind storm springs up as to sweep the dust in blinding clouds up the street. Chief Tuttle, of the Fire Brigade, frequently applies this refreshing remedy about his corner and occasionally at other hydrants, has repeatedly offered to do the work all along the business part of the street systematically if those directly interested would provide an assistant. This generous offer still holds good. Doubtless it would have been acted upon before this had the offer been brought more to the notice of the people, and it is for that puprose that we mention it.

The matter, though an important one, can be easily arranged without carrying it before the Board of Trade or devising any system of taxation. A man, we will say, can be got for $2.00 per day, it being necessary to pay a man more than ordinary wages for a part of every day. The sum of $60 will therefore ensure this highly serviceable sprinkling system for the balance of the summer. We venture to assert that this amount could be gathered in one hour by a door to door canvas.

It is to be hoped that some prominent citizen or citizens will take the matter up and pass around the hat, or, failing in this, that the Board of Trade take some action, and thus show some practical public appreciation of Mr Tuttle's generous and public spirited offer.

THE Liberals of Cranbrook district held a meeting this week, at which it was decided to held a nominating convention on July 29th. There will be 17 delegates divided as follows. Cranbrook, 5; Ft. Steele, 3; Moyie, 3; Wardner, 2; Kimberley, 2.

* * *

The Western Canada college is a new nstitution that is abont to be started in Calgary. The college has been incorporated into a joint stock company with a capital of $50,000. It is entirely undenominational though christian. It fills a long felt want and there is no doubt that the institution will be a huge success.

* * *

The socialist idea does not take the intelligent workman of today. This could be seen at the meeting in this city last Tuesday night, during the address of Mr. Hawthornwaite. The workman is a practical individual. He is not indulging in fantistic pipe dreams of the future, but is anxious to bring about conditions that will improve the present. Mr. Hawthornwaite had a most respectful hearing, because he had an intelligent audience that was searching for knowledge. But the socialistic theory did not meet with a cordial reception, as was evidenced by some very pointed questions asked at the close of the address. It will be a long time before the Cranbrook district will elect a socialist candidate. The people here favor practical methods, practical people, and practical measures.—Cranbrook Herald.

BORN.

PURDY—At Fernie on July 12th, the wife of Mr. A J. Purdy, of a daughter.

His Last Hope Realized.

[From the Sentinel, Gebo, Mont.]

In the first opening of of Oklahoma to settlers in 1889, the editor of this paper was among the many seekers after fortune who made the big race one fine day in April. During his traveling about and afterwards his camping upon his claim, he encountered much bad water which, together with the severe heat, gave him a very severe diarrhoea which it seemed almost impossible to check, and along in June the case became so bad he expected to die. One day one of his neighbors brought him one small bottle of Chamberlain's Colic, Cholera and Diarrhoea Remedy as a last hope. A big dose was given him while he was rolling about on the ground in great agony, and in a few minutes the dose was repeaed. The good effect of the medicine was soon noticed and within an hour the patient was taking his first sound sleep for a fortnight. That one ittle bottle worked a complete cure and he cannot help but feel grateful. The season for bowel disorders being at hand suggests this item. For sale by all Druggists and Dealers.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped portions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable.

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding against the wasteful des truction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

FERNIE DAIRY

Fresh milk delivered to all parts of the town.

Dobson & Willingham

The hot weather is here, buy a hammock at the Fernie Drug Store and enjoy yourself. x

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1, That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electoral districts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

Louis Carosella & Co.

Fernie Cartage Co.

BOARD OF TRADE MEETING.

At the regular Board of Trade meeting this week little business came up for consideration. The secretary read a communication from W. A. Galliher, M. P., in answer to an appeal for a daily mail, stating that he was doing all in his power to bring about the desired reform.

A communication was read from U. S. Consul, J. R. Pollock, officially notifying the Board of the theft of the American consul's flag, and asking the Board to take some action to show that the citizens of Fernie do not countenance such deeds. The letter was laid over pending Mr. Pollock's return from California.

Some discussion followed on the fire protection subject after which the meeting adjourned.

Drink Maple Leaf Tea and you will have no other. x

FISHING TACKLE

Cranbrook

From the Herald.

Sid Small, son of Will Small, was thrown from a horse last Saturday and had his face badly scraped.

Mr. and Mrs. George Hoggarth returned from their wedding trip Saturday and Mr. and Mrs. E. H. Small accompanied them to Elko for a few days visit.

C. M. Edwards left Tuesday for Crow's Nest to look over the coal property in which he is interested with Mr. McInnis and others.

The work of removing the East Kootenay Lumber company's mill at Jaffray to its new location has been completed and this week the mill resumes regular work.

Inquiry by The Herald has developed the fact that the freight business shows an increase of 110 per cent over June of last year, the express 74 per cent and the ticket business 94 per cent. This makes a most excellent showing and is one that every resident of Cranbrook may rejoice over.

It is said that John Hutchison, of the firm of Beale, Hutchison & Elwell expects to remove to Fernie, where he will engage in the insurance business with Mr. Cree of that city. It would seem strange not to see "Hutch" around Cranbrook. He was the second man we met when we came here. Jim Ryan was the first, and there were only A. Leitch, R. E. Beattie, G. H. Miner, L. B. Van Decar and a few more at that time. "Hutch" had on those checked knickerbockers and was building a shack on the site of his present residence. Since that time we have known "Hutch." Anyone visiting Cranbrook always met him, and wherever we have traveled in the province and have met people who have been in Cranbrook one of their first questions would be, "is 'Hutch' still there?" "Hutch" is a rustler, a genial chap with a heart as big as Baker mountain and a friend maker from Friendlyville. We hate to see him leave Cranbrook and can't help but think that it is a mistake, no matter how flattering his prospects may be. We will miss him. We will miss those knickerbockers we have know so long. We will miss that Texas hat worn on Sunday mornings. We will miss that Hutchisonian vest with the two lower buttons unbuttoned. We will miss that characteristic necktie and that utter disdain of modern day shoe polish. There is only one "Hutch." Born in Italy, raised in England, he had his eye teeth cut ranching in Manitoba and gathered experience in Massachusetts, Virginia and Florida. He was a pioneer of Cranbrook and Cranbrook will miss him. He was always a booster for the town and the district.

FIFTY LIVES LOST

A FLOOD ENGULFS PLEASURE SEEKERS.

Waterspout Causes a Dam to Burst and Flood a Park in Greenburg, Pa., Where a Picnic Was in Progress—Pathetic Scene.

A dispatch from Greenburg, Pa., says: A waterspout of immense proportions struck in the vicinity of Oakford park at 4 o'clock on Sunday afternoon and created a flood that caused great loss of life and property.

At 3 o'clock rain began to fall in torrents in the vicinity of the park and spread over territory covering probably 10 miles. Half an hour later the cloudburst occurred. The waters in the lake north of Oakford park began to rise and Manager Jas. McGrath, believing there was danger of a final break in the great walls of the dam, hurried among the crowds of pleasure seekers who had gathered under the roofs of the eating stands and dancing pavilion and other buildings, and warned them to run to the hills. On both sides of the pleasure grounds are high hills, the park being located in a ravine about a quarter of a mile wide and a mile long. The people were loathe to leave their protection and not until Mr. McGrath and his assistant, C. E. Thomas, entered each building in turn and simply drove the crowds out in the rain did they realize that the managers were in earnest. The gathering flood meant the breaking of the wall that held five acres of water. Soon after the buildings had been cleared the waters swept over the wall of the dam, and in a moment a torrent of water was rushing over the entire length of 400 feet of the dam. The park buildings, the merry-go-round and other amusement places were twisted about and all but the dancing pavilion and lunch stand were carried from their foundations. The rain continued to fall in torrents, and it was not long before a great section of the wall gave way with a crash.

The flood beat down the ravine with a roar that was heard for two miles. A half mile down, at the junction of the Greensburg and Jeanette, the park car lines, and the car barns are located. The entrance gates to the park were lifted and with the force of a pile driver the mammoth posts were hurled by the water against the barn. Beyond were located the smoking room and on the track was standing a car loaded with passengers on their way from Greensburg and Jeanette.

The electric storm had rendered the power south of this place useless and the motor man was unable to move the car. The flood struck the waiting room containing probably a dozen people. A number of them struggled to a point of safety, but it is believed that at least ten persons were drowned. The street car was caught and swept into the creek. Hundreds who at nightfall missed members of their families hastened with lanterns over the hills in search of their loved ones, and many of them were overjoyed to meet their relatives on their way home. Late reports say that from 50 to 75 men, women and children perished by the cloudburst. The majority were drowned or swept to death against the rocks in Brush creek, but a number were electrocuted. At least 800 persons were in the park seeking relief from the heat.

Kingston Convicts Fight.

There was a pitched battle among the prisoners in the blacksmith's shop at the Kingston penitentiary on July 3, and one named McMurray of Toronto, sentenced some time ago to ten years for resisting arrest, along with two comrades, and attempting to shoot Constable Tidsbury, was stabbed in the hand. Nolan, the Welland canal dynamiter, is charged with the stabbing.

The trouble was of religious origin and has been brewing for some time. Some of the prisoners resented the favoritism shown to Nolan, a Roman Catholic, and hence the bad blood.

There was only one guard in the shop when the melee began. The prisoners fought each other viciously until separated by other guards and taken to their cells.

Drowned at Selkirk.

John McDonald, a stone mason, was drowned in the slough at West Selkirk on Sunday, July 5. He, with some others, had gone bathing and for safety had fastened one end of a rope to his wrist and the other to a boat. When he jumped from the boat the rope broke, and he sank to the bottom, and was drowned despite the efforts of a young lad named Comber, who tried hard to save him. McDonald was a young man about 23 years of age, and had lately arrived from Scotland. He was a member of the Brocklayers' union. He said to a boy who was holding the rope that that he was a very poor swimmer. When he came up he said: "I am done for." He then sank.

For the fiscal year ending June 30, 124,658 settlers came to Canada.

The Western Canada Press association excursion has been declared off.

Eight cattle sheds and the swine pen, together with 150 yards of fence at the Winnipeg Industrial Exhibition grounds were destroyed by fire on July 5.

THE WIDE WORLD.

Telegraphic News of Two Hemispheres Briefly Chronicled.

In eight years Canada's aggregate trade has doubled.

Twenty-three persons were killed in a wreck in Virginia.

Manitoba wheat has been listed on the London exchange.

The Bisons, of Winnipeg, were beaten by the Galt football team by 2—1.

Edward Priestly lost his life at Kenlis, N. W. T., while bathing.

The United States squadron was given a royal welcome to Portsmouth, Eng.

A heavy hailstorm did much damage south of Red Lake Falls, Minn

The Dominion government will aid Canadian papers in securing a better cable service.

Neepawa defeated Minnedosa in the final game for the district lacrosse championship.

Three small boys, guilty of shopbreaking and theft in Winnipeg, received two years in the reformatory.

There were 401 homesteads taken up in the Regina district during the week ending June 8. This is the second largest record for the preseot season, the highest total for the record week being 452 entries.

It is learned that Chinese coolies are surging into Canada by every steamship in anticipation of the law imposing a poll tax of $500 upon every Chinese immigrant entering the Dominion. About six steamships have entered Victoria within the last six weeks or a month, and each has been crowded with Chinese to the utmost extent that the law permits. The new law, it is expected, will be prohibitive, and the Chinese are coming in as fast as they can under the $100 rate.

Within a few days Maine is likely to be in fact what it is supposed to be—a prohibition state. Never until now has constitutional prohibition prohibited the sale of liquor anywhere in Maine if a saloon-keeper was willing to submit to arrest and fine about twice a year. Now, however, the judges of the supreme court have given notice that the possession of a United States internal revenue liquor stamp will subject the possessor to a jail sentence instead of a fine, and all over the state hotels and restaurants are closing their bars, wholesalers have gone out of business, and within a week every retailer will have quit selling.

Advices from Athens say that British residents of Greece are much wrought up over the action of the government in accepting the offer of a foreign capitalist to erect a gambling casino in the old British cemetery in Corfu. When the Ionian Islands were ceded by England to Greece in 1864, it was specifically provided that the cemeteries would remain undisturbed. The new scheme includes a hydropathic institution, concert hall, and casino, where a full "lay out" will be run after the fashion of Monte Carlo.

A deadly enemy of cotton boll weevil has appeared in cotton fields couth of Austin, Texas. It is a small green bug, which has a voracious appetite for the weevils, and does not harm the cotton plants. It is estimated by United States experts that the cotton boll weevil caused a financial loss of $25,000,000 to Texas cotton planters last season. Until this green bug appeared no remedy had been found for the pest.

A Balance in Nature.

Did you ever notice the exquisite balance of the scales of nature? Just as it takes all sorts of people to make a world, so it takes all sorts of weather to make a climate and all sorts of conditions to make a country or a continent. It is man's duty to discover, impose, and adopt. Even when there seems to be a defect in nature's plan some equally natural remedy or complement may be found near at hand.

Science has just discovered that the barnacles which make frequent docking of vessels in Puget Sound necessary will die if in fresh water. A canal is now being dug from Seattle to Lake Washington, so that a ship by running up a few days into fresh water will be self-cleared of the incumbrances. Just the opposite condition prevails in Louisiana, where once fresh water streams, have the past season become salty through the flow backward from the Gulf of Mexico. Water hyacinths have for years choked these streams, but the salt water has destroyed them utterly. Unfortunately, it does its work so thoroughly that fresh water animal life has suffered also, and a new government service is under way which will have for its object the remedying of the salt water plague.

The Sex of Eggs.

Mr. Gerrin lately addressed the Academy des Science, France, on the subject of "The Sex of Eggs." He affirms that he is now able, after having studied the subject for upwards of three years, to state with assurance, that the eggs containing the germ of males have wrinkles on their smaller ends, while female eggs are smooth at the extremities.

It has been estimated by an expert in the employ of the government at Washington that agricultural machinery reduces the number of men employed to do a given amount of work to one-third, while manufacturing machinery reduces the number to one fiftieth.

Many a man has a great head from other than intellectual causes.

MARKET REVIEW.

Compiled from The Commercial.

Wheat.—Considerable activity has continued in the American speculative markets during the past week, but prices have been on the down grade since the 26th June, and the week closed with quotations showing a decline of 4 to 5c on all months and markets except Chicago July, which shows a decline of 7c, and St. Louis July and September which show declines of 12c and 8c respectively. The reason of the heavy drop in St. Louis was the failure on Tuesday of a bull corner run by prominent parties in that market which had been very much responsible for bringing about the sharp advances in prices and carrying them so high at the present time. No doubt had rain not come to relieve the Northwest crops just at the time it did, prices would have been carried higher. The world's wheat markets have continued almost indifferent to the changes in the speculative markets. They advanced slightly towards the top of the bulge and have declined slightly since, and a marked feature has been the small amount of new business reported for export during the recent excitement. Foreign merchants may easily keep calm in the meantime, for although European requirements are large, both presently and prospectively, the world's shipments from exporting to importing countries have averaged over 10,000,000 bushels per week for about four months past, besides which this season's new crops are being harvested along the southern line of the wheat belt in both Europe and America, and every day carries the harvest line northward. It should be kept in view that last Russia and the Danube have been able to export very largely from last year's crops, their shipments from August 1 to June 13 being 168,560,000 bushels against 116,888,000 bushels for the same time last year, an increase of 52,000,000 bushels. In the same way Argentine shipments have been 51,072,000 bushels against 19,792,000 bushels, an increase of 21,000,000 bushels; and India also has increased her exports 7,000,000 bushels in the same time. Argentina continues to ship freely and India has just begun to ship of the largest crop on record for that country. Consumption has during recent years crept well up on production, and this year's world's crops are likely to be smaller than last year's, and stocks are almost as low as in 1898, the year of the Leiter boom, still it may turn out that present prices are too high for an average. Should the ripening and harvesting of the wheat crop this year be done under fairly favorable weather conditions the grain will be of a higher average quality and more fit for milling than much of last year's grain. This and the higher level of price would save much of it from going for cattle feed as compared with last year's crop, and thus bring about a gradual increase in available stock. This, of course will not prevent speculative operators carrying the price up or depressing it down according to their views or sentiments for the time being, and under what we understand of present circumstances and feeling in the grain trade we would expect generally active markets during the season now beginning. The weather for growing and harvesting crops has been more favorable during the past week, warmer and drier in the winter wheat belt, and good rains have fallen over the spring wheat country. In Manitoba and the Canadian Northwest all apprehension of drought has been relieved as there have been heavy and frequent rains all over the country and from every district there are more or less satisfactory reports of the growing crop; some of the reports are very flattering. Early fields are heading out. European crop reports show little change from a week ago. The weather has been very favorable in Western Europe, but too much rain is reported from Central Europe.

Manitoba wheat has been quiet and dull, gradually declining with the decline in American markets, though not to the same extent, the difference in price from a week ago being 2¾c, and we quote values now 1 hard 80¾, 1 northern 79¼c, 2 northern 77c, 3 northern 73c, and No. 4 wheat 66c, spot or July delivery, in store Fort William and Port Arthur.

WINNIPEG PRICES.

The following are the Winnipeg jobbing prices:—

Oats—At Fort William No. 1 white oats are worth 32½c; No. 2 white, 31½c.
Barley—Feed, 32@34c per bushel.
Flaxseed—$1 per bushel.
Hay—Baled, $7@$8.
Potatoes—Car lots, 65c per bushel.
Poultry—Live chickens, 50@75c per pair; turkeys, 15c per pound.
Butter—Creamery, 18c per pound; dairy, 15@16c.
Cheese—11c per pound.
Eggs—13@13½c per dozen.
Hides—No. 1, 6½c per pound; calfskins, 7c; shearling sheepskins, 5@15c each; lambskins, 20@30c.
Wool, 6@7c per pound
Seneca Root—40c per pound.

LIVE STOCK

Cattle—Best steers, 5c; butchers' ordinary, 4@4¼c; stockers, yearlings, $17@$20; two-year olds $26@$28.
Sheep—4½@5c per pound.
Hogs—6¼c per lb. for best weights.
Cows, $30@$50 each.
Horses—Teams, $300@$450.

His Head.

Smarticus—Well, how are you?

Spartacus—Poorly; poorly! Got an awful cold in my head.

Smarticus—Well, well, that's comforting.

Spartacus—Comforting! Explain.

Smarticus—What a joy it ought to be to you, after years of uncertainty on the subject, to be assured definitely that you really have something in your head!

Patent and Enamelled Leather Shoes The Slater Guarantee

No shoe manufacturer would have the temerity to guarantee ordinary Patent or Enamelled leather—certainly the makers of the famous "Slater Shoe" would not guarantee ordinary Patent or Enamelled leathers because with them a guarantee is a guarantee, not a pleasant sounding but meaningless play of words.

But the "Slater Shoe" makers use a standard of Enamelled leather which they can and do guarantee—every Enamelled shoe which bears the "Slater Shoe" trademark is guaranteed—The "Slater Shoe" makers use no Enamelled leather which they cannot guarantee.

And the "Slater Shoe" people have a patent leather made of Colt skin, pliable, flexible, as brilliant as the best patent leather and tough and durable enough to carry with it the responsible guarantee of the "Slater Shoe" makers.

Every pair of "Slater Shoes" bearing their guarantee has with it a Guarantee Bond Scrip lithographed like a bank note and as good a guarantee as one.

It says:—

"We (the makers) warrant the leather in this pair of shoes not to break through within three months from date of purchase."

The bond also bears the registered factory number of the pair of shoes to which it belongs.

The Slater Shoe

Made in Canada 40 years. Goodyear welted.
For men $4.00 and $5.50.
For women $3.50 and $5.00.

A NIGHT OF TERROR

Six Shot Dead and Twenty Five Injured at Evansville, Ind.

Evansville, Ind., July 7.—Six shot dead and twenty-five injured, four fatally, is the outcome of the race riots that have caused a reign of terror in this city during the past four days.

At 10.30 last night the Evansville company of Indiana National guards, assisted by 200 special deputy sheriffs sworn in during the day, while guarding the county jail in which were sixteen negro prisoners, poured a deadly volley of buckshot and bullet into a crowd of several thousand people, led by a hundred armed rioters, which was pushing them back amid jeers and threats, accompanied by stones and missiles. When the smoke cleared away 31 wounded and dead bodies lay on the pavements. There is a contention as to who fired first, the soldiers or the rioters. That the troops were fired on is proved by the fact that of the fallen four were members of the company. Their wounds were slight.

AT HER COMMAND.

Birmingham Grocers Think Canada Needs No External Aid to Capture Trade.

A London cable says that the colonial secretary has invited the Canadian government to discuss certain proposed amendments to the militia act, presumably to deal with the proposition that the commandant may be a Canadian.

The Grocers' federation conference at Birmingham is eagerly discussing Mr. Chamberlain's plans. While enquiry is generally held to be necessary, especially as regards the effect on the price of British food, the delegates find it difficult to believe that Canada needs any external stimulus to enable her to capture the British markets in all directions. Traders testify to the great strides made by Canada recently in the quality and amount of provisions shipped, Canadian cheese being a favorite food.

They also quote the latest returns of Anglo-Canadian trade as an evidence that Canada already has the British market at her feet.

Settlement Retarded by Speculators.

A Toronto dispatch says: The clog retarding the rapid settlement of the Temiscaming district is stated by the Rev. W. E. Morton, superintendent of Baptist home missions in Ontario and Quebec, to be land speculation. Owing to the speculators' activity it was now impossible to obtain a government lot or claim within forty or fifty miles of New Liskeard. Much of the land was possessed by men who had no intention of making the country their home, and in one township of 144 homesteads of 160 acres each, every one had been taken up for two years, although there were only thirty settlers in the township.

The devices used by the speculators to obtain free land included the registration of fictitious names and the hiring of men to make entries. To such an extent was the land taken up that new settlers were in some cases jumping claims and public opinion supported them. Other intending settlers were returning discouraged to old Ontario, or were going to the Northwest.

Enticed From Home by a Minister.

A dispatch from Williston, N. D., says Richard Gould, of Central City, Neb., was arrested on July 7 on a charge of maliciously enticing Eva Flint from her home in that city on June 10, 1903. They came to this city June 12, and have been living as man and wife. He assumed the name of Whitaker and filed a piece of land under that name. The girl is only a few days past 15. Gould is a Free Methodist preacher and thinks he has acted in a proper manner.

STEEL TRUST COMING.

Said to Be About to Erect a Large Plant in Canada.

A dispatch from Montreal says:—Iron and steel circles are greatly agitated over the possibility of the United States Steel corporation invading the Canadian field.

Gentlemen deeply interested in the Canadian steel industry state that they know nothing about any such plan, but they admit that Port Colbourne is admirably fitted in every way for such a huge undertaking as the United States corporation is said to have decided upon.

It is stated that there is no doubt that interests very closely identified with the American steel magnates have secured options on land there and have also secured immense concessions from the Canadian government, and have already arranged for 6,000 horse-power from the Niagara Power company. Some, however, profess to believe that the action is merely a bluff, intended to induce the government of Canada to believe that there is already ample protection for the Canadian industry, and if possible, induce the government to refrain from granting any further concessions to the Canadian companies, which would practically close the Canadian market to American product, and tend to rapidly develop the home industry.

Exhibition Notes.

The Winnipeg Exhibition has ever been an occasion for rejoicing, being as it is a splendid indication of the irresistible progress and abnormal prosperity of the province. Thirteen years ago it was non-existent and last year over $42,000 was taken at the gates alone and the 100,000 limit was passed as regards attendances. It is a season of rejoicing over the triumph of pluck and energy which in the course of but thirty years has established in Manitoba alone thousands of farmers upon at least 3,000,000 acres of land with comfortable houses, farm buildings, modern machinery, horses and cattle that are able to compete with the best specimens of the world-famous Canadian stock.

As was announced some weeks ago, the directors of the association have had the west end of the grand stand raised to an equal height with the other portions, so that all visitors may have an equal opportunity of witnessing the many events and attractions which are always such a feature at the Winnipeg fair.

The Press competition which was inaugurated this year for the newspaper men of Manitoba and the Northwest bids fair to be a big success. Several editorials have already been received and after July 11, the last day for receiving the marked papers, the adjudication of the prize and medal will be at once proceeded with and the prize article printed in the Winnipeg daily papers.

Manitoba Fall Wheat.

At the provincial department of agriculture, there is at present a fine specimen of fall wheat—the first grown in Manitoba. It is from 5 ft. to 5ft. 8in. long and has a very heavy ear on it. It was grown by P. B. McLaren, of Clearwater and is remarkable for its size and quality and for the fact that hitherto it has been contended that the winter frosts prevented fall wheat being grown in this country. Last winter was pretty severe, but it has not affected this crop, of which there is about half an acre.

Double Drowning.

Wolford and Franklin Nelson, aged respectively nine and ten years, were drowned while bathing in the lake near Stillwater on July 9. The younger of the two ventured into deep water and sank. The younger brother tried to assist him, but also sank. John Ryan and Ruby Foley, two small boys, swam to their rescue, and tried to pull them in, but their strength gave out, and they were forced to seek shore. The bodies were recovered.

Eighteen New Elevators.

Vice-President F. W. Thompson announces that the Ogilvie Mills Company will, during the present season, build eighteen elevators in Manitoba and the Northwest Territories, bringing the number of the company's elevators to one hundred. Respecting an estimate of the grain crop, Mr. Thompson says officials of the Ogilvie company have studied the prospects carefully and estimate the yield at 60,000,000 bushels. They think the average per acre will not be as large as last season.

The Methodists may establish a college at Edmonton.

United States sailors were warmly entertained at Portsmouth, England.

Great Britain is said to be on the verge of a lead famine.

Vigars and Co.'s mill at Port Arthur Ont., was destroyed by fire on July 8.

Fort William ratepayers have decided to build a $40,000 city hall.

The Dominion government will eject all squatters on permanent timber limits in the west.

Stock judging at the Winnipeg fair will be delayed a day, owing to the date of Manitoba elections.

The Dominion government has announced details of the bounties to encourage steel and binder twine manufacture.

A man named James Ralleston, working for W. B. Robertson, of Glendale, was kicked in the head by a horse while working in the field and instantly killed.

FERNIE FREE PRESS.

FERNIE, B.C.

M. Darsonville has submitted to the Academy of Science, Paris, an invention for typesetting by telegraph, an electric current being made to perforate characters on a moving band connected with a typesetting machine. It is claimed the contrivance, which is the work of M. Rodmal will dispense with transcriptions altogether for press purposes.

Shaving In Egypt.

The earliest reference to shaving of the beard is found in Genesis xli, 14, where we read that Joseph on being summoned before the king shaved himself. There are several references as to shaving in Leviticus, and the practice is alluded to in many other parts of the Bible. However, Egypt is the only country mentioned in the Bible where shaving was practiced. In all other countries at that time such an act would have been considered ignominious. Herodotus mentions that the Egyptians allowed their beards to grow when they were in mourning. So particular were they as to shaving at all other times that to have neglected it was to make oneself the butt of coarse and ridiculous jokes.

Even in this day and age when the Egyptian wants to convey the idea of a man of low condition and slovenly habits he always pictures to you a man with a full beard. This notion is very ancient, a fact attested by works of art found in burial monuments dating back thousands of years.

Southern Europe.

A traveler writes: "I have often been struck by the ease with which people in southern Europe are amused. In Paris 100,000 people go out to Longchamps for the Grand Prix race, and half a million people go out and line the roads on their return to see them come back. In Rome at the feast of the "Divino Amore" 5,000 people go out on the Campagna to a spot where once stood a temple to Venus and hold a picnic, while 50,000 go out and line the Appian way to see them return. In Madrid this peculiarity is even more marked. On the Puerta del Sol about a thousand people stand around and do nothing outdoors, while crowds of people sit indoors or lean from balconies to watch them do it. And in Seville the idle rich sit in clubs and cafes on the Sierpes to watch the lower classes walk by, while the lower classes walk by to watch the idle rich sitting in the clubs and cafes on the Sierpes."

False Hair In Elizabeth's Time.

Queen Elizabeth had eighty wigs in her collection, and her cousin, Mary, queen of Scots, had "as many as a hundred," and among the incongruous presents made her while confined a prisoner in gloomy Lochleven, previous to her being beheaded, wigs were numerous. Gentlemen who particularly wished to please their lady friends presented them with wigs of the latest shade of hair and newest style of coiffuring. Fancy a gentleman of today presenting his sweetheart the last idea in back hair!

Bamboo Opals.

Bamboo opals are peculiar gems which are sometimes found in the stem of the bamboo. This gem is very rare from the fact that not one in a thousand bamboo stems contains it. These vegetable growths are called tobacur by the Filipinos. Some of them are so similar—that is, they exhibit so perfectly the characteristics of the opal—that even experts frequently fail to distinguish them from the real gem.

Why He Applauded.

"Are you fond of music?" asked a stranger of the young man at the concert who was applauding vigorously after a pretty girl had sung a song in a very painful way.

"Not particularly," replied the young man frankly, "but I am extremely fond of the musician."

Perfect Respiration.

For perfect respiration two things are necessary—chest capacity and breath control. The average individual, woman especially, uses but a limited portion of the lungs and upper chest in ordinary breathing. Whenever a little unusual physical effort makes demand for an extra breathing capacity, note how she puffs and pants, almost to a point of gasping. The reason for this is that the muscles of the lower chest, waist and abdomen have become well nigh atrophied through neglect and abuse. They are stiff and unresponsive and have now to be coaxed back to a condition of activity and obedience.

It is quite as possible to educate these muscles so that they shall respond to our slightest demand as it is that our hands are trained to do our bidding. Different teachers will advocate different forms of breathing—upper chest, side chest, lower chest and abnormal breathing—but what we most want is absolute control, such control of the muscles as shall enable us to make use of any desired form of breathing at the word of command, for all forms have special values. Full upper chest breathing is used most, but lower chest and abdominal breathing are very valuable in cases of nervousness, indigestion, stomach and bowel troubles.

The Truthful Pioneer.

"One day," said the truthful pioneer, "I was whacking up some wood down by the creek, and ten Indians loomed up. They were pretty thirsty even for Indians, and they said they knew I had a jug somewhere, and they wanted to sample it. I had a log about half split at the time, and the ax was sticking in it. I told them if they would help me get that log in two I would show them where the jug was. So they took hold, five on one side and five on the other, and pulled. And when I took the ax out the log sprung together and held them all by the fingers. Then I walked away to the house and loaded the shotgun and three or four pistols and then went back and argued with them, and they reformed right away." This story, says the Nebraska State Journal, was originally told of Daniel Boone or Davy Crockett and has done good service ever since. It is not copyrighted, however, and there is no good reason why Nebraska pioneers should not use it.

Eyes With Double Pupils.

Cicero says that "the glance of all women with the double pupil in the eye is noxious, blighting and withering." Cadmus tells us that such persons would not drown. Still others say that if they did drown the body would never sink, neither would it decay. They could cure the disease of the chest—consumption—by rubbing their perspiration on the affected parts of the individual, and in case the double pupils were red instead of black they could cure the lepers and the blind.

Politician and Statesman.

"Maw, what's de difference between er politician and er statesman?"

"Well, honey, a mushroom's good ain't it?"

"Yes, 'um."

"And a toadstool is pizen, ain't it?"

"Yes, 'um."

"And dey bof look alike?"

"Yes, 'um."

"Des same difference from a statesman to a politician."—Exchange.

Minard's Liniment Cures Colds, etc.

Use Lever's Dry Soap (a powder) to wash woolens and flannels,—you'll like it.

Subtle Husband—There was a perfectly lovely woman in the theatre to-night, my dear. I couldn't keep my eyes off her.

Wife—Indeed! How kind of you to tell me!

Keep calm, my love, keep calm—it was yourself!

SICKLY BABIES.

Weak, sickly babies are a great trial to mothers. They need constant care both night and day and soon wear the mother out. Baby's little stomach is the cause of most of the trouble; it is very weak, and in consequence very easily upset. Baby's Own Tablets will cure all baby troubles. They are mildly laxative and give prompt relief. Concerning them Mrs. R. J. Balfour, Omemee, Ont., says: "I have used Baby's Own Tablets for stomach troubles and constipation from which my little girl suffered and they entirely cured her. They produced sound refreshing sleep, and I regard them as indispensable in any home where there are little ones."

Mothers from all parts of Canada write in favor of Baby's Own Tablets, proving the claim that they are the very best medicine for all the minor ills of infants and young children. Guaranteed to contain no opiate. Price 25 cents a box, at all druggists or direct from The Dr. Williams' Medicine Co., Brockville, Ont.

Character is the substance; reputation the shadow.

Ill fitting boots and shoes cause corns. Holloway's Corn Cure is the article to use. Get a bottle at once and cure your corns.

That automobile racing will be permanently prohibited in France is unlikely. Automobile building now engages more than 20,000 skilled workmen in France, and the races give world-wide advertising to French machines.

Minard's Liniment Cures Distemper.

Our faults are soon forgotten—if known only to ourselves.

HE'S AT WORK ONCE MORE

Simon V. Landry Cured by Dodd's Kidney Pills.

Had Lame Back, Weak Legs, and was a Total Wreck before he was induced to Try the great Kidney Remedy.

River Bourgeois, Richmond Co., C. B., July 6.—(Special)—One more remarkable cure has been credited to Dodd's Kidney Pills in this neighborhood, and the story is best told in the words of Simon V. Landry, the man cured. Mr. Landry says:

"I was bothered for over a year with Lame Back, Weak Legs, and Palpitation of the Heart and general weakness and shortness of breath. In fact I was a total wreck. I could not work as I got tired and weak so easy

"I also had a weakness in my stomach, and it was so bad that I could not bend down to do anything. I tried many medicines without getting any relief till I was induced to try Dodd's Kidney Pills.

"After I had used three boxes of them I was able to start work again. I recommend Dodd's Kidney Pills to everybody."

It is cures like these that give Dodd's Kidney Pills their popularity. They not only relieve but make people able and willing to work.

The New Zealand government has appointed two dairy experts with a view to increasing their exports to Great Britain. One of the experts is a Canadian.

Minard's Liniment Cures Diphtheria.

With the exception of lovemaking there are many new ways of doing old things.

EXCELLENT REASONS exist why Dr. Thomas' Eclectric Oil should be used by persons troubled with affections of the throat or lungs, sores upon the skin, rheumatic pain, corns, bunions, or external injuries. The reasons are, that it is speedy, pure and unobjectionable, taken internally or applied outwardly.

Attar of ylang-ylang, which rivals attar of roses as a perfume, and is worth from £8 to £10 more per lb., is the product of a tree which grows in the Philippines.

If your children are troubled with worms, give them Mother Graves' Worm Exterminator: safe, sure, effectual. Try it, and mark the improvement in your child.

An iron cable, which claims to be the largest in the world, has been finished at Lebanon, Pa. It is more than a mile long, and each link weighs 93 pounds.

Few Flies last year
No Flies this year
If you use
Wilson's Fly Pads

A Somerset innkeeper, who has failed in his business, gave as a reason for his insolvency at his public examination that "the whole of the villagers had turned teetotallers."

Some persons have periodical attacks of Canadian Cholera, Dysentery or Diarrhoea, and have to use great precautions to avoid the disease. Change of water, cooking, and green fruit, is sure to bring on the attacks. To such persons we would recommend Dr. J. D. Kellogg's Dysentery Cordial as being the best medicine in the world for all summer complaints. If a few drops are taken in water when the symptoms are noticed no further trouble will be experienced.

Some people are too independent to take a hint.

A little Sunlight Soap will clean cut glass and other articles until they shine and sparkle. Sunlight Soap will wash other things than clothes. 4B

PAPER BRICKS FOR FUEL.

Possibilities of Dry Rubbish as Substitute for Coal—Interesting Experiments in New York City.

Dr. John McGaw Woodbury, commissioner of street cleaning of New York city, has installed in extemporized garbage incinerator in an abandoned public school building, where he has been demonstrating the possibilities of dry rubbish of which 90 per cent. is waste paper as a substitute for coal.

Dr. Woodbury says that he expects soon to have in readiness a machine of great power that will compress this material into bricks, thus saving the great item of transporting and storing it in its loose forms. These paper bricks, he expects, will be as readily handled as sticks of firewood and can be thrown into the furnaces in the same manner. He said that he was arranging to deliver the first output of fuel bricks to Commissioner Robert Grier Monroe of the department of water supply, gas and electricity for use at the reservoir pumping stations.

At present he can supply 877,000 cubic yards a year of this material, which used to cost 19 cents a cubic yard to take to sea and dump. He believes that in the brick form it will be easy to sell the excess over what is required for the city's power plants to private consumers for 4 cents a cubic yard.

At a recent test the incinerator developed 1,500 heat units and showed that it could yield twenty-four horse power. The combustion, too, was far from perfect, the residue being so rich in carbon that it seemed as if it could be used for fuel as readily as coke or charcoal.

Planting the Soy Bean.

Planting may be made at intervals from the 20th of May until July 1, but satisfactory results are often obtained when the seed is not planted until after the removal of an early grain crop. On many soils it will not pay to make applications of manures containing large quantities of nitrogen, as in several tests conducted at this station the increase in yield has not been sufficient to pay for the additional cost of the nitrogen. It will not be wise, however, to attempt the growth of this crop in soils deficient in potash and phosphoric acid, unless these substances are added. Potash in muriate gives good results, while as a source of phosphoric acid dissolved bone or fine ground bone will give satisfactory returns upon soils which are not too deficient in lime, but on those which show a greater lack of lime more satisfactory results may be obtained by the use of slag meal or floats.—G. E. Adams, Rhode Island Experiment Station.

The Dominion Experiment station experts advise a trial of the soy bean in Canada. The above is from one who has made some study of its culture.

Honesty Is the Best Policy.

The office cat was dead. Caught in the act of devouring the head clerk's lunch, it came in contact with his boot and died suddenly. The questions were: "Where could it be buried in the heart of the city?" and "Who would bury it?"

Bob, the office boy, offered to get rid of it for a consideration, and proceeded to consult a friend of his at a neighboring hotel.

After the office closed, Bob took his seat on the outside of an omnibus, carefully carrying a parcel (containing the cat), from which protruded the tail feathers of a pheasant. The parcel was carefully labelled; but Bob left it under the seat when he got off the 'bus. (Boys are forgetful!)

Soon another passenger noticed the parcel, and gradually shifted his seat until he was able to lift the parcel, when he very speedily took his departure, taking it with him. Bob got rid of it, but to this day, no one in that office knows who buried the cat.

To Test Innocence.

"A strange way of testing the innocence of an accused person is employed in India," said a traveler who lately returned from Madras. "They haul the man up and give him a mouthful of dry rice to chew. Dry rice takes a deal of chewing to get it masticated into a glutinous mass like gum, and that is the condition that the accused is required to get it into within ten minutes. If you are calm and not afraid you succeed, but if you are nervous and scared you fail. For it seems fear has a strong effect upon the salivary glands. It prevents them from secreting saliva. The mouth of a badly-frightened person is always dry as a bone. It requires a tremendous flow of saliva to chew dry rice, and therefore the scared prisoner inevitably fails in this test."—Tit-Bits.

More Than He Could Do.

York House, Twickenham, so long the home of the exiled Orleans family, is to be sold. A number of anecdotes are related of the Kings in exile. Louis Philippe once had a witty conversation with the landlord of the Crown hostelry, hard by York House itself. "And who are you?" asked the exiled King of the landlord, whom he met in the grounds. "I keep the Crown," said the other. "Ah," answered Louis Philippe, "that's more than I could do!"

When to Trim Shade Trees.

Trim the branches off your shade and ornamental trees at any time between the middle of June and the middle of July while the trees are in full foliage and in their most vigorous state of growth. At such a time the trees are best adapted to withstand the effect of pruning.

Farmers Should Keep Accounts.

Every farmer should know just what every horse, cow, hog, sheep, hen, duck, goose, turkey, tree, vine, field and garden on his farm costs him and nets him. He can know this only through the keeping of accounts.

Good Bread—Good Children.

Other things being equal, the child who is best nourished—has more of brain and brawn than his playfellows—makes the best man and the best citizen.

OGILVIE'S HUNGARIAN

is the flour that produces the bread that nourishes the child that makes the best citizen, and that's easily demonstrated.

The Ogilvie Flour Mills Co., Ltd.

"The honorable gentlemen opposite may scarcely credit this, but it is my firm belief that if a few boxes of these most excellent cigars had been judiciously distributed among the Boer Generals their savage natures would have been soothed and that cruel war might never have taken place."

The Chamberlain CIGAR

The acknowledged Leader.

J. M. Fourtier, Limited, Montreal.

Everything Men & Boys Wear from Head to Foot

Shoes for Men $2.50

With the approach of spring comes wet, slushy weather—that is the time your shoes get the greatest test. **Do you want a Pair of Shoes** that will keep your feet dry—will withstand slush and water—are always pliable and comfortable on the foot, and will outwear anything you ever had before? **That's the kind we want to sell you.**

No tacks, nails or lumps, but as smooth as a glove inside, Goodyear and English welts, carefully made expressly for us by expert workmen. Heavy soles and uppers for heavy wear, medium soles and uppers for light wear, and in the single sole light shoes for dress wear. The leathers are **Box Calf, Dongola Kid, or Patent Leather.** Tell us the sort of boot you want and the size, and you will be delighted with what we send you. (If you are not satisfied with them when you see them you have the privilege of returning at our expense, and we will refund your money.) Order a pair to-day. They are equal to the best $3.50 and $4.00 shoes you ever saw.

WOULD YOU LIKE OUR CATALOGUE? It's brimming over with new things for men and boys, and some things for ladies, and you will find it a great money-saver—you really can't afford to be without it. Send us a post card with your name and address and we will mail you one FREE.

It will help you to carry off the Blue Ribbon.

Fifty Cents per package.

LEEMING, MILES & CO., Montreal, Agents.

Take a few swimming lessons before burning your bridges behind you.

As Parmelee's Vegetable Pills contain Mandrake and Dandelion, they cure Liver and Kidney Complaints with unerring certainty. They also contain roots and Herbs which have specific virtues truly wonderful in their action on the stomach and bowels. Mr. E. A. Cairncross, Shakespeare, writes: "I consider Parmelee's Pills an excellent remedy for Biliousness and derangement of the liver, having used them myself for some time."

Somebody says that politeness is like an air-cushion—there may be nothing in it, but it eases our jolts wonderfully.

A Sweet Stomach

comes only by having a perfect acting liver and good digestion—both can easily be had by using

Beecham's Pills

Sold Everywhere. In boxes, 25 cents.

The Austrian empire is the greatest of Royal sportsmen. Between 1856 and 1897 he killed 1,243 deer and 730 chamois, besides thousands of head of other game.

Chronic Derangements of the Stomach, Liver and Blood are speedily removed by the active principle of the ingredients entering into the composition of Parmelee's Vegetable Pills. These pills act specifically on the deranged organs, stimulating to action the dormant energies of the system, thereby removing disease and renewing life and vitality to the afflicted. In this lies the great secret of the popularity of Parmelee's Vegetable Pills.

Owing to the high price of British coal, the Swedish government is extending largely the use of turf as fuel for its goods locomotives on State railways.

Jean Lancelle Sexangerian, the keeper of the Jardin des Plantes, who has passed thirty years attending herbivorous animals in the State Zoological Gardens at Paris, met a tragic death recently. He was cleaning the hippopotamus quarters, when an animal, which was always considered harmless, rushed upon him, using its head as a battering ram. The brute tore open his chest and crushed his body.

MICHEL

From Our Own Correspondent.

Register your vote.

F. R. Delziel, of Fernie, was in town this week.

Miss Williams is visiting her sister Mrs. Geo. Wilson.

Dr. Barber is at Michel Hotel on professional business.

Dr. Bell, V. S., was in town on professional business this week.

Statements were given out on Thursday and Saturday will be pay-day.

Mr. Dudley who has been at the coast for some time returned to Michel this.

Mr. McEachren, Presbyterian missionary, held service here Sunday afternoon.

A force of C. P. R. men are at present employed on improvements in the Loop.

Miss Leeth, of Toronto, is the guest of Miss Cassel at the home of Mrs. Chas Greer.

Dr. McSorley's "Ambulance" class met Wednesday and Thursday in the school house.

The Trites-Wood Co's new team ran away Monday and the wagon is now laid up for repairs.

The new coke ovens are looming up now. A large number of piers are already built.

A match race between Burdett and Fowler will take place in the near future, distance one mile.

Mr. Chas. Spence who has been visiting Mr. E. K. Stewart left for Edmonton on Sunday evening.

Spurgeon McKay had the misfortune to have a pick driven through his right hand on Friday last.

Monday evening Mr. Dudley gave a party in honor of Mr. Jas. Adams, who is on his way to England to play profession-foot-ball.

The M. A. A. A. will hold a grand picnic on Michel prairie, July 25th. Football, base-ball and other sports will be the order of the day.

Probably the largest congregation ever assembled in Michel was present on Sunday evening last to hear Rev. Mr. Marshall, the new pastor for the Methodist church.

A cricket out-fit has been ordered by some of the local sports, and as there are a number of good players in town it is expected that a fine team will be organized in a short time.

Up to date there are about 150 voters registered in this vicinity, it is expected that before the time for registration closes, which is August 14th, that this number will be more than doubled

Work will shortly be commenced on the new church which will be built next to theschool house on the west side. A choir has been organized in connection with the church under the leadership of Mr. amsay.

It is with deep regret that we report he death of the eldest daughter of Mr. and Mrs. E. P. Miller, which took place at Lethbridge last week. The parents have the heartfelt sympathy of their many friends in Michel. The interment took place at Lethbridge.

On Thursday evening a large number of young people gathered at the home of Mrs. Alex. Fraser whence they proceeded to the residence of Mr. and Mrs. J. R. Wilson in the old surprise party fashion. A most enjoyable evening was spent.

Mr. Frank Sample, building superintendent for the C. N. P. Coal Co., had the misfortune to receive a bad cut in the foot while on his way from Fernie to Michel on the Company's gasoline speeder. A torpedo which had been placed on the track to protect the bridge was exploded and a piece of the torpedo lodged in his foot.

TENDERS

Tenders will be received by the undersigned up to 9 p. m. Saturday 10th July 1903 for the erection of a Bank building and five stores at Morrissey Mines. The lowest or any tender not necessarily accepted, plans and specifications may be seen at the office of the undersigned.

There is no better evidence

of the confidence of the Directors and Officials of the

Crow's Nest Pass Coal Company, Limited

in the future of

MORRISSEY MINES.

than the fact that they are buying lots in the new town as private investments at the Company's set prices. The erection of a $20,000 block for the establishment of a branch of the Canadian Bank of Commerce here, speaks in no uncertain manner of the high opinion of conservative financiers in the future of this place. Those who have to do with the policy adopted by the Crow's Nest Pass Coal Company, Ltd., in the opening up of these immense coal measures, are in a position to realize, to some extent at least, the great possibilities in the way of coal and coke production of these collieries, when, with further development, they are operated on a larger and continuously growing scale. The reasons for their faith, which they are showing in such a practical manner, are well founded. But we do not ask you to simply follow the lead of these men ; investigate the position for yourself, and you will be convinced that the outlook for the future of MORRISSEY MINES is an exceedingly bright one.

Thomas Crahan, Agent,

MORRISSEV MINES, B. C.

Notice is hereby given that thirty days after date I intend making application to the Chief Commissioner of Lands and Works for a special licence to cut and carry away timber on the following described lands, commencing at the south west corner of lot 320, group 1 Kootenay District, thence east 140 chains; thence south 40 chains, thence west 20 chains, thence north 80 chains to point of commencement, said land to contain 640 acres.

PENNOCK SENTENCED.

City Legislative Assembly 31 1903

GOT ON A YEAR IN NELSON JAIL—OTHERS ALLOWED TO GO.

Civil Cases Dwindled Away. Some Settled Out of Court and Others Laid Over.

Judge Forin, of Nelson, held county court at the Fernie court house on Wednesday. There were two criminal cases and several civil cases tried.

That of Frank Pennock on the charge of arson was the chief case. Theevidence submitted was almost identical with that given at the preliminary trial last week. Messrs. Neil Graham and Harwood gave clear evidence showing the manner in which the fire was first observed by them and the suspicious circumstances surrounding the accused in being found standing beside the fire. The accused made a defence similar to that of his preliminary trial, that he knew nothing of the fire until it was shown to him by Graham and Harwood. His Honer at the close of the evidence stated without hesitation that there was no doubt in his mind as to the guilt of the accused. He dwelt on the seriousness of the offence in which through malicious intentions a very heavy loss to property might ensue. He sentenced the accused to one year at hard labor at the Nelson jail.

Edward Doran was tried on the charge of "rolling" a man named Wm. Grass at the Western Hotel, Morrissey Mines, for $27. The prosecution had no dificulty in proving the charge, but the accused in defence claimed that he took the money to keep it for Grass who was intoxicated. The Judge allowed the accused to go on suspended sentence after receiving a promise from him that he would go to work at once.

Many of the civil cases were either settled out of the court or postponed until the next sitting of the court which will be held in November.

Kubas vs Kasak, an action to recover $33 for the theft of which the defendant is now serving a term in the Nelson jail. Judgment for the plaintiff.

Crow's Nest Trading Co. vs MacGuire, an action for the recovery of the balance of an account of $8.73. Judgment for plaintiff.

Wallace vs Colling, action for the payment of a loan. Jndgment for plaintiff.

Manaham vs Dunlop and Balko vs Dunlop. These cases were left over until the next sitting of the court.

Marks vs Kubos, settled out of court.

Carosella vs Bennett, settled out of court.

Hirtz vs Gall, reserved till next court.

Turner vs Balko, next court.

ANOTHER POINTER.

Cranbrook Herald: The boundary papers that are kicking on the coke supply should take into consideration the fact that the Crow's Nest Pass Coal Co. are spending thousands of dollars this summer building additional coke ovens at Michel and Morrissey. These are not being built as a bluff, but for business, and in a few months will be in operation. It is well enough to be fair and honest in your criticisms.

AFTER MANY DAYS.

The body of John Sucksmith, sawmill owner of this city, who was accidentally drowned in the Kettle River, below Gilpin's on June 11th of last year, was discovered Monday at the head of the Cascade Power Co's. dam at Cascade. A coroner's jury at the inquest held here Tuesday night returned a verdict of "accidental drowning." The remains were positively identified as those of the deceased.—Grand Forks Gazette.

John Sucksmith was well known in the Crow's Nest Pass. having engaged in the lumber business at Cranbrook and Wardner in the early days.

I. O. O. F. ELECT OFFICERS.

At the regular meeting of the Mount Fernie Lodge No. 47 I. O. O. F. D. D. G. M., O. N. Ross, assisted by other grand officers installed in their respective places the officers of the lodge as follows;

J. P. G., J. R. McEwing.
N. G., Thos. Beck.
V. G., F. J. Watson.
R. S., John Williams.
F. S., O. N. Ross.
Treasurer, George Reynolds.
Warden, George Clapp.
Conductor, J. C. Hutchison.
Guardian, S. Slinn.
R. S. N. G., Dr. C. P. Higgins.
L. S. N. G., A. Berridge.
R. S. V. G., A. Campbell.
L. S. V. G., J. E. Eakins.
R. S. S., T. Bell.
L. S. S., A. C. Liphardt.
Chaplain, Rev. D. L. Gordon.

After the installation refreshments were served and speeches were made by the installing officers and others.

The Oddfellows have opened a subscription list for the purpose of raising money to place headstones over the graves of the members killed in the explosion last year and to place fences around the graves. They have met with great success, $200 having been collected already. The list will remain open another two weeks to give everyone a chance to help in this worthy cause.

FOOLISH CRITICISM.

The Grand Forks Gazette is still harping on the coke shortage. It at last admits that the company are building 250 ovens at Morrissey Mines, and probably by next month it will have learned that there are a like number under construction at Michel.

The writer goes on to say: "But apparently twice that number are needed and at present the same causes which have operated to delay the building of these coke ovens may operate to keep them unfinished if the company are of the opinion that the present government enquiry may end in smoke like many another inquiry before it."

The coal company, we believe, are mining coal and manufacturing coke for profit. They do not build expensive plants to please the government but for their own benefit. It is to the company's advantage to sell as much coal and coke as possible and none will profit more than they will from the early operation of their large coke plants now under construction.

FAIRFIELD—LAKE.

Mr. W. S. Fairfield, the well-known book-keeper for the Fort Steele Brewing Co. was married on July 15th to Miss Eva Lake. The ceremony, which was a very pleasant event, took place at the home of the bride's father, Mr. Wm. Lake at Vachell, near Sutton, Ont., in the presence of 150 guests. The ceremony was performed on the beautiful lawn at 7:30 in the evening. A very large number of beautiful gifts attested to the high esteem in which the bride is held by her many friends. The honeymoon was spent in Toronto and Chicago, and on Thursday the newly married couple arrived in Fernie where they will start up house keeping. The Free Press joins with their many friends in wishing Mr. and Mrs. Fairfield much happiness and prosperity.

IMPROVEMENTS AT MORRISSEY.

Mr. T. R. Stockett was at Morrissey Mines several days this week partly on business connected with the installing of an electric light plant in that town. Mr. J. D. McDonald, general superintendent of the West Kootenay Power and Light Company, of Bonnington Falls, was also there. The new plant will have a capacity of 3,000 lights with a two-phase alternating system.

Six carloads of wooden stave piping rom six to twelve inches in diameter has arrived for the water-works system at Morrissey Mines and two more cars are on the way. A large force of men are at work digging the ditches for these pipes.

One million feet of timber will be used for the construction of the new slack bins at Morrissey Mines, much of which is already on the ground. These bins will have a capacity of 5,000 tons.

The coke oven construction work at Morrissey is progressing rapidly. The brick and stone work on 60 of them is now completed and very soon they will be ready for operation. The locomotive for coke oven work is on the way.

CHURCH SERVICES.

Services at Christ Church tomorrow will be as follows. Matins and Litany, 11 a. m.; Sunday School, 2:30 p.m.; Evensong, 7:30. Collections in aid of church expenses.

Rememl er the Children's flower service in the Methodist church tomorrow morning. The pastor will preach in the morning on the subject "What a child can teach us" and in the evening on "For what are we waiting." You are all welcome.

A CHALLENGE.

I hereby challenge Geo. Appleford, of Lethbridge, to run a 100 yard race, mutual consent, for $250 a side at the Lethbridge celebration, Aug. 11th. I have deposited $50 with the Fernie Free Press as forfeit money.

F. J. MITCHELL.

Fernie, July 21st, 1903.

ARE BRITISH SUBJECTS.

A List of Those Whose Naturalization Papers Were Read Before Judge Forin.

Thirty men were made British subjects by Judge Forin on Wednesday, when the applications were read before him by the clerk in open court. The following is a list of the names:

Pasquale Giora
Currico Cocciolom
Sabastino Prata
Dennis John McCormack
Mike Reguly
Prosper Van Hulle
Frank Chiodo
William Edward Russell
Joe Colistro
Dominico Donacci
Felix Costanzo
Colorimo Rosario
Charles Mantello
Cosmo Crisafio
Joe Vecchio
Francesco Sirarini
Tony Caravetta
Matey Mlaka
Henry Miard
John Kapalka
George Pete
John Stancik
Joe Kubick
Adam Florian Vand
Charles Oswald Demaurez
Fredrick Delzell
Fred Alfred Grant
David Corp
Victor Anderson
William Seleuski.

POLITICAL PARAGRAPHS.

The Liberals of the Greenwood district have selected J. R. Brown to represent them in the coming election.

P. Herman will run in the Liberal interests in the Skeena electoral district.

Stewart Henderson, of Ashcroft, has accepted the Liberal nomination for West Yale.

J. C. Drewery will secure the Liberal nomination at the convention to be held at Cranbrook next Wednesday if Dr. King cannot be prevailed upon to take it.

Last Saturday a labor convention was held at Cranbrook for the purpose of nominating a labor candidate. Three names were put before the meeting, Mr. McDonald, of the C. P. R., Mr. Doyle, postmaster at Kimberley, and Mr. Lovitt, engineer. No unanimous decision was reached and the convention ended without anything definite being decided upon.

COAL CREEK MINES.

Mrs. Mitchell, of Coal Creek mines, lost a little girl last week with scarlet fever. A young sister afterwards contracted the disease and she has not yet passed the danger mark.

Dr. Ker has again taken up his professional work in this place.

The Coal Company is now clearing for more buildings on the north side of the creek.

An English miner received a painful injury while at work at Coal Creek mines on Wednesday. His leg got caught between the wire cable and a post, breaking both bones. He was removed to the Fernie Hospital.

Mr. McTavish, of the Scranton school, was looking up business here this week.

Many berry-pickers are at work these days, notwithstanding the fact that bruin is picking too and sometimes comes in sight. There is an excellent crop of blueberries this year.

Mr. Nimmo left for Michel this week, where he will in future reside.

The people are now enjoying the boon of a daily mail.

ELECTION ACT AMENDED.

The government has decided to extend the powers of the collectors of votes to enable them to take applications to be placed on the list from those entitled to franchise rights in any part of the province.

Up to the present time each collector has, by his commission, held the power to accept only the names and applications of those resident and entitled to vote in his own individual electoral district.

STORM AT GREENWOOD.

A small sized cyclone struck Greenwood on Wednesday afternoon and made things interesting for half an hour. A stage driver approaching the city was struck by a falling branch and knocked insensible from his seat. The horses galloped into Greenwood and wrecked things generally by colliding with a telephone pole. The big 90 foot smoke stack of the Greenwood smelter was toppled over and was badly smashed. About $500 damage was done to plate glass windows in the town. A large number of trees were blown down in the town and surrounding district.

WHAT ABOUT THE DRAIN?

Some time ago advertisements were published by the government agent for tenders for a ditch to drain along Victoria Ave. to the foundry corner and thence past the hospital to the flat below. No tenders were received that were considered sufficiently low and nothing more has been done.

If the tenders were too high why should the work not be done by day work? There are plenty of government officials in town to oversee the work and the government would make the contractor's profit.

The drain could be built considerably cheaper and it would answer a much better purpose by running it from the corner of Victoria and Hanson to Pellatt and down to the hospital. This course is much nearer the water level and the drain would not need to be so deep as by the contemplated route.

McBRIDE AND THE SOCIALISTS.

Nanaimo politicians are discussing the possibility of an alliance between the McBride government and the socialist party. It is alleged by the Nanaimo Herald that the socialist leader, J. H. Hawthornwaite, has some understanding with McBride. Nanaimo conservatives will be asked to support the former's candidature instead of putting up a straight party candidate. In Yale it is openly asserted that a socialist candidate has been promised the support of the conservative party, though some of the leading men in the party, like Semlin, Langley and Judge Cornwall don't take kindly to the idea. No alliance that McBride might enter into would occasion much surprise after his acceptance of Gifford, a pronounced liberal, as a government candidate in New Westminster.—Nelson Daily News.

POLICE COURT.

George Howard got a small fine for being drunk and disorderly.

Mrs. Wiely, a dissolute woman, was up for trial this week. She was brought in from Morrissey where she had caused considerable trouble. The magistrate sent her to Nelson jail for two months.

SPORTING EVENTS.

The Champion Souris Lacrosse team is touring the west. They meet Medicine Hat in two games next week after which they play in Nelson. Nelson and Medicine Hat will then have an opportunity of comparing their merits.

Lethbridge and Cranbrook play a league game of lacrosse at the latter place on Monday next.

Miss McKay, of Lethbridge, is visiting Miss Dunlap.

Business since pay-day has been brisk and collections good. In a commercial sense the town is in better shape now than at any time since the explosion.

A small picnic party went to Elko today. There are few prettier or more refreshing spots than at the canyons of the Elk to spend a pleasant holiday in the heat of the summer.

The new electric light system is nearing completion. The construction of the new line from the mine has reached the town and the workmen are busy lining up Victoria avenue and Howland avenue for the new 50 foot poles that are being used. The line will be run so that all parts of the town can be easily reached. The machinery for the new dynamo plant at the mines is being installed and it is estimated that the new system will be in working order in six weeks.

The operations of the coal company at the three collieries have been seriously retarded this week owing to many of the men laying off for a few days after payday. Drink is largely responsible for these irritating interruptions. At Coal Creek on Thursday several lamps were stopped, as the company's rules require that a workman must not absent himself more than two days without a reasonable excuse. At Morrissey Mines the work has been slower than during any week since the strike. Owing to the 1st and 4th being holidays and to these more recent disturbances it is doubtful if the month's output will be larger than June's.

MICHEL

From Our Own Correspondent.

A. B. Trites was in town this week.

M. Kastner was in town Monday night on business.

Miss Beaton returned to town on Wednesday.

C. Wagget, of Fernie, was in town on Thursday.

W. S. Keay, collector of customs, made a couple of trips here this week.

Mr. Mitchell, of Fernie, spent Monday in town attending to business.

M. McKay, of Fort Steele, was in town looking over the government road this week.

A Hungarian had his leg and arm badly pinched between a timber and a car in No. 8 mine on Monday.

Rev. Stoney held Church of England services in Michel hall Sunday evening.

Mr. E. P. Miller and family returned home from Lethbridge Wednesday morning.

Mr. F. Sample, building superintendant for the Coal Co., was over the works Wednesday.

The cricket goods have arrived, and the boys are trying to get in shape for a game before the season closes.

Some of the musicians here have formed an orchestra and meet for practice twice a week.

The fishing in the creek is very good and a large number of sports are out every day.

Mr. J. H. Tonkin, wife and child, Mrs. S. T. Tonkin and Mr. Austin and wife of Wilkesbarre, Penn., and Miss A. Frye spent a couple of days in Michel this week.

Constable Henderson took a Slav to Fernie Monday, on the charge of obtaining goods under false pretenses at the camp of Foss & Macdonell.

On Thursday evening Mrs. Robert Duggan returned home from the coast, where she has been spending the last two or three months.

The members of the M. A. A. A. are working hard to make their picnic a success, and no doubt they will have one of the finest picnics ever held here. Some very valuable prizes are to be given for the various sports. Great interest is centered in the drilling contest.

The Ladies' Aid of the Methodist church gave an ice cream social in the hall Thursday evening. The program rendered by local talent was all that could be desired. After the program the ladies passed round the good things of which there was an abundance. The hall was well filled and all had an enjoyable evening. The proceeds will go to the building of the new church here.

Miss Nina Finniss, of Cranbrook is spending part of her holidays with Miss Cassie M. cody.

Solicitor W. R. Ross was up to Fort Steele attending the county court on Thursday.

Mr. Jos. Jean secured a license for the Waldorf Hotel before a sitting of the license commissioners last week.

During the last seven days only 100 names have been registered. At this rate the list will fall far short of the number generally estimated for this district.

Canadian Pacific employees to the number of a thousand will hold a picnic at Rossland next month, including all those on the Kootenay-Boundary division. Extensive plans are now being arranged for the event.

The premier when in the Boundary Country was asked his intentions with regard to the timber and coal licenses in blocks 4593 and 4594, East Kootenay. His reply, to the effect that the government could take no action till after they had been endorsed by the people of the province, seemed to satisfy the enquirers. The attitude of the government on this question is weak A party must be judged by its policy, and if the policy is not clearly defined how can the electorate judge whether the party is worthy of their support or not. The right thing for the government to do is to boldly declare its policy on this most vital question and then sink or swim as the verdict of the people of the province shall declare.

THE SUICIDE CRAZE.

REV. DR. TALMAGE PREACHES A VERY TIMELY SERMON.

TEXT: CURSE GOD AND DIE.

Causes of the Present Increasing Suicidal Epidemic Pointed Out in Graphic Language, and the Gospel Remedy for This as Well as All Other Evils Eloquently Upheld.

Entered according to Act of Parliament of Canada, in the year 1903, by William Baily, of Toronto, at the Dep't of Agriculture, Ottawa.

Chicago, July 12.—In view of the startling increase in the crime of self destruction, as shown by the latest statistics, the subject chosen by Dr. Talmage for his discourse to-day is a most timely one. His text is Job ii, 9, "Curse God and die."

Two incitements—desperate, fierce, definite, outrageous! The one urges the broken hearted father, the financial bankrupt, the physically tormented man, to grit his teeth and, with flashing eyes and uplifted hand, hurl a futile malediction at the Almighty, to curse God with an eternal blasphemy. What a shocking appalling suggestion! Enough to make all heaven stand aghast in horror and to render even the demon infested caverns of a hopeless inferno silent with fear and to turn the flushed cheeks aflame with the fires of eternal woe white with terror. Curse God! Who could do that but a human being crazed and desperate and reckless under intolerable anguish?

The second incitement puts in the hands of the sufferer the suicide's knife, the hangman's noose or the vial labelled with the two fatal words, "Deadly Poison." To how many in every age has that insidious temptation come? In the United States alone more than 30,000 persons have yielded to it during the past four years. In Chicago alone 1,294 persons passed out of life by the suicide's gate in three years—nine victims on a single Sabbath. In two months of the present year seventy-five lives have ended in self immolation. How long will the human race listen to that hideous voice which bade Job seek in death escape from his misery? That tempter's voice is sounding louder and louder every day. Shall the crime of self murder be allowed longer to spread the pernicious doctrine that with one stroke of the razor across the jugular vein or with one plunge in front of a flying locomotive or with one leap from high building or lofty palisade the would be suicide can find rest, eternal rest, God given, blissful oblivion for all who are weary of life and peace for souls sick of the results of sin?

The increasing suicidal epidemic of the present generation should be halted in its onward march of destruction. I lift my voice to-day in warning against this evil. It cannot be stayed by upbraiding a mangled corpse or by calling a dead man a coward. I would prayerfully and earnestly try to indicate some of the causes which produce it.

First, I charge atheism with the chief responsibility for the crime. Self murder is the hideous black visaged executioner of the merciless monster we call atheism, agnosticism infidelity. It is the old, slimy serpent coiled up under the overshadowing branches of the gnarled and worm eaten tree of unbelief, at the foot of which sits the grinning, blear eyed hag misery crooning a dirge for a lullaby. It is the death rattle of a human being whose parched lips have been set to the rim of the chalice filled with the scorching, poisonous concoction of blasphemy and falsehood compounded by a Voltaire, a Rousseau, a Thomas Paine or a Robert G. Ingersoll. It is the whetstone, wet with human blood, upon which moral sensibilities can be blunted and at the same time the suicide's knife sharpened, for it teaches immortal man that there is no hereafter and that he is responsible for his life's actions to no Divine Maker and King.

No suicidal razor was ever honed upon the leaves of the opened Bible. Though the morning newspapers almost every day are blackened with the awful obituary tragedies of men and women who have deliberately taken their lives by the bloody hand of self murder, you cannot find among those who perished, in the full possession of reason, a single consecrated Christian church member. You cannot find one person among them all who realized that he was a beloved child of God and that he expected to go to meet a loving Heavenly Father unless the person killed himself during a fit of temporary insanity as did Hugh Miller, the great Scotch scientist, who blew out his brains during mental derangement, or that eminent New York clergyman who, in delirium, leaped from a window. Why? The Bible distinctly and emphatically declares that no man has a right to commit self murder. It warns men that they must answer for this terrible crime before the judgment seat of Christ, and it holds out to them no hope of pardon during all eternity. Read the eighth chapter of Revelation: "And murderers and whoremongers and idolators and all liars shall have their part in the lake which burneth with fire and brimstone, which is the second death." Read the first epistle of John, third chapter and fifteenth verse: "No murderer hath eternal life abiding in him." In the sound of such a divine warning, does any Christian man, with his eyes wide open, attempt to sound the "open sesame" of the pearly gates of the New Jerusalem with the crack of a suicidal pistol? Dare any Christian, by self destruction, obliterate that life which God alone can give and which God alone has a right to take away?

The whole tendency of the gospel of Jesus Christ is opposed to this suicidal epidemic; the whole tendency of unbelief is to promote and increase it. To the atheist life is a single span, one abutment of which is the cradle and the other the grave, at which he meets annihilation. To such a man there is no better principle of life than to eat, drink and be merry, for to-morrow he dies. He would make life a comedy for all and death a great finale. The earnest Christian disciple says, "Life is not a joke; death is not a finale." Life is an opportunity for doing good and for struggling against evil. Because the good as well as the evil lives on for ever and ever we ought to put ourselves in the hands of the Almighty, who arranges our lot for us, and say, as did Job, "All the days of my appointed time will I wait till my change come."

The unbeliever in the gospel says: "If there is a hell it is to be found this side and not the other side of the grave. When things go wrong the best way to escape suffering is to snap the silver cord of human life and silence the beating heart." The Christian disciple says, "Sanctified troubles are a spiritual means by the grace of God for raising an immortal soul on and up. Unsanctified troubles are the inexorable means of dragging a sinful, defiant soul on and forever down. 'He that is unjust let him be unjust still, and he which is filthy let him be filthy still, and he that is righteous let him be righteous still, and he that is holy let him be holy still.'" Such are the two extremes—the tenets of the believers in total annihilation at the brink of the grave and those of the earnest disciple of Jesus Christ.

False standards for happiness can be catalogued among the frequent, prolific causes of the suicidal sin. They are the decoying mirages which tempt the weary life's traveler to lose himself in the midst of a Sahara of sand. They are the deceitful stars, twinkling their benedictions over altars of silver and of gold and of fame, which suddenly go out and leave the devotees worshiping in total darkness. They are the musical voices of the sirens singing their sweetest songs when luring their victims on to fatal shipwreck.

In the false standard of happiness can be found the origin of the disappointments which so often end in suicide. Men do not first seek wealth or fame to possess those treasures, as a miser might hoard up his gold. They desire the merchant prince's palace and the king's throne because they foolishly think that happiness is a coy maiden who loves to robe herself in silks and to have her throat and fingers a-glitter with precious jewels, and therefore they can the more readily find her in the rich man's mansion than in the poor man's hut. If they cannot have wealth or fame or worldly honor is about to be taken away from them, then they feel they cannot have happiness. Then, with one pull of the pistol's trigger, they fling away their blighted lives.

Now, my friends, the human being who commits suicide merely because the golden breasted oriole of wealth has plumed her wings and disappeared from sight or because the iconoclast of trouble has shattered the idol of fame is doing a fool's business. Happiness, true happiness, the happiness for which we all long, and for which some of us are seeking, is not dependent upon outside surroundings, but upon the condition of the heart. Some of the most unhappy human beings have been the so-called worldly successful men. Did all the unlimited financial wealth of Nathan Rothschild make him happy? For many years he was the universally recognized financial king of Europe. In a single day he made over $9,000,000. But, though Nathan Rothschild was the wealthiest financier in all Europe he was one of the most unhappy of men. When a friend visited him one day and said, "You ought to be a happy man with all this wealth." Nathan turned and, with a look of scorn, answered: "Happy! Happy! I happy! Bosh! Let us change the subject."

If wealth does not in itself produce happiness neither does worldly fame nor honor. Men strive for place and power as if with them they were sure of happiness. They plot and conspire and murder that they may mount the steps of a throne, and when they succeed they find that they have gained nothing but anxiety and worry. When the Servian King and Queen, Alexander and Draga, were assassinated Pope Leo XIII. was heard to exclaim in the Vatican, "Oh, when will the people learn that thrones stained with blood are not worth having?" And yet for financial wealth and worldly honor thousands of men will surrender their all. They will follow these will o' the wisps, though the shining lights may lead them over miasmic swamps and quaking bogs and into the fatal quicksand. Then, when they have been defeated in the struggles of life they sometimes drive the destroying dagger into their own arteries, as a tantalized serpent buries his poisonous fangs in his own flesh.

Moral application: Do not try to build the temple of happiness out of yellow bricks. Think not that the broad highway which leads to the throne room of joy is always lined with applauding and vociferating multitudes. The ground mole may tunnel his way into a gold mine, but he still remains a ground mole. The bat, flying about in the darkness, may be able to push his claws into trembling men's pockets, but he is still nothing but a hateful bat.

Envy and covetousness also lead to suicide. The unwillingness to love our neighbors as ourselves is one of the indirect causes of this dreadful sin. Two ways of looking at this old world—the one is through the green glasses of envy, the result unhappiness; the other way is through the sanctified crystals of a tender, a holy love, the result gospel joy. The one way is to bitterly bemoan because some people are supposed to be better off than we are. The other way is to try to find out how many people are worse off than we are and then with a Christian desire to try to help them as we would like to be helped if we were in their places. Through what kind of lenses have you been scrutinizing the human race? Through the green glasses of envy, which make all the world look dark, or through the clear, transparent crystals of gospel love, which always make all the world look bright? No happy man ever wanted to commit suicide. No man can be truly unhappy who is trying to help his fellow man. When he finds that he is making others happy, their joys become part of his joys.

The suicidal knife is blunted upon the whetstone of kindness and love and self sacrifice for another reason: When a Christian earnestly consecrates his life to helping his fellow men he is amazed how many troubles are piled at his neighbor's door and, instead of repining at his lot, thanks God for the mercies he enjoys. He becomes more contented to carry his own burdens because as his brother's sorrows grow larger and larger in his eyes his own necessarily by comparison shrink and dwindle and become less and less. Beautifully illustrated is this thought by an old Latin classic. The gods hearing the continual grumblings of the human race, decreed that all men should be able to choose their own burdens, but they must choose some. They decreed that every man, woman and child should bring their load of trouble in a pack and throw it in one place. Then all the different troubles of the world were piled in a heap. The rich man came from his palace; the poor man came from his hut. The old man came tottering upon his staff; the young man came leaping as a roe upon the mountain side. The father came, followed by his swarm of children; the single man came alone. The bridegroom came, leading his bride; the widower came after his wife had been snatched from his side. All came with their troubles. All threw their packs in the one pile. "Now," said the gods to the assembled people, "let each individual select any one pack of trouble that he would." Of course the multitudes were overjoyed. Each man at first lifted and weighed the troubles of every other man. "Then at last," so goes the fable, "each individual at a given signal was satisfied to lift up again his own troubles and in contentment go his own way."

A coward's heart is a direct cause for the suicidal sin. "Oh, no," says some one; "that cannot be. A suicide may be this or that or the other thing, but he is not a coward. No man is a coward who dares to commit self murder. No man is a coward who will calmly look death in the face and defy the grinning skeleton of the tomb."

Ah, my friend, you are wrong. The direct cause of the suicidal sin is invariably the result of a coward's heart. It is the act of a man who runs away from trouble instead of courageously grappling with it. The bravest of deeds is to die if necessary to save others. But it would not be heroic for men to die merely because they are too cowardly to fight. Neither is it heroic or brave for any man to commit suicide merely because he is too craven hearted to meet the responsibilities of life as they arise. The noblest word in some respects in all the English language is "duty." That word will sometimes compel its followers to plunge into and endure the bayonet thrusts of a thorny hedge, as it will sometimes give the pleasanter command of following that stern word through an embowered pathway.

Now, my friends, as the suicidal sin is often caused by a coward's heart, how best can we become brave and true? How can we better fight this tendency to self murder than by nobly and conscientiously and dauntlessly meeting the most pressing duty which is nearest at hand? How can we cease to be cowards better than by fulfilling our honorable obligations which we know we owe to our God and our Christ? He has placed us here to do our duty, to live his life in the world, to serve him by serving our fellow men. Shall we cravenly desert our post? Shall we declare that the task assigned us is too hard for us? Rather let us look to him for the almighty strength that he promises to his faithful servants that we may endure as seeing him who is invisible. So let us stand undaunted beneath his standard until his summons reaches us and we quit with the triumphant shout: "I have fought a good fight. I have finished my course. I have kept the faith. Henceforth there is laid up for me a crown of righteousness."

The bravest act in all the world for some men is to publicly confess Christ. While we are preaching today on the suicidal sin are you ready to be as brave as William Cowper once was? In a time of great mental depression he was on his way to the river Thames to take his own life. When he arrived near the fatal waters he saw a man fishing at the end of the dock from which he intended to throw himself into the stream. He turned back. Then he went home and tried to stab himself to death, but the knife snapped in two. Then he tried to hang himself, but the rope broke. Then William Cowper realized what he was doing and how cowardly he was. He confessed his error before the world and gave himself up, as never before, to sound forth the divine praise. Oh, my friends, will you not realize that one of the chief reasons of the cowardly tendency to suicide is the unwillingness to publicly confess and work and live for Christ? As all roads were once supposed to lead to Rome, every act and deed and thought of your life should lead you to the foot of the cross. Then, oh, then, if you are true to Christ, you will never be false to yourself! Then, oh, then, your life, instead of having a suicidal tendency, will be an eternal life of triumphal joy!

Perverted Proverbs.

You never know how little you can do until you try.

Two heads are better than one, especially if you are looking for a dime-museum engagement.

Never put a gift cigar in the mouth.

While it is never too late to mend, it is often cheaper to buy a new article.

Little Carolyn and The Word Present

Carolyn had been in a state of excitement for days, for at last her mother had consented to let her attend school.

When the morning came the little maid trotted off with her eyes shining in happy anticipation of the pleasures as well as the dignity of her new estate in life, a schoolgirl.

When she came home at noon her mother said:

"Well, dearest, and how do you like going to school?"

"I like it pretty well, mamma," was the reply in doubtful tones, "but I haven't got my present yet."

"Your present? Why, what do you mean, Carolyn?"

"Why, this morning teacher said, 'You may sit here for the present, little girl,' but I sat there all the morning and did not get it. P'raps, though," and she brightened up, "I'll get it this afternoon."

Awful.

"No, George, I can never be your wife."

"What! You're not going to throw me down way up here, are you?"

A Cold, Calculating Nature.

"I'm afraid that you lack personal popularity," said the confidential friend.

"Well," answered Senator Sorghum, "I sometimes have my doubts about the desirability of too much of it. Personal popularity seems to me to be something which makes everybody feel that you are naturally under obligations to do him a favor."

The Height of Modesty.

Irate Visitor—That reporter of yours who called on me yesterday must be an exceedingly modest fellow.

Editor—Well—er—possibly—er—how so?

Irate Visitor—I told him the naked truth, and I see he has proceeded to "dress it up."—Philadelphia Ledger.

All the Facilities but One.

Summer Boarder—I thought your advertisement said something about boating.

Farmer—Oh, yes. We have a boat and oars, only sometimes the creek dries up.

His System.

"Before I ask you to prescribe for me, doctor," said the patient with the shiny black coat, "I should like to know what system you practice"

"Cash," replied the doctor.

His Indifference.

"He's rather an indifferent character, that fellow, isn't he?"

"That's so. He's forever saying, 'I don't care if I do.'"

A Close Friend.

Hetty—He is your closest friend, is he?

Bertie—Yes; he never lends a cent.—Boston Globe.

Adroit.

She—Are you fond of tea?

He—Yes, but I like the next letter better.—

His Education.

"How well you row, Percy!"

"Yes, I suppose I do. A fellow has to learn something at college, you know."

The Composite House.

When Mr. Subbubs built a nest
In which to house his bride,
He borrowed from his friends the best
Ideas they had tried.

He borrowed here, he borrowed there,
Smith's frieze and Green's veneer;
He borrowed Johnson's porte cochere
And Cooper's chandelier.

He borrowed Wilson's water tank,
Park's pantry, Grady's grill,
And then he borrowed from the bank
The cash to pay the bill.

—Frank R. Batchelder in Lippincott's Magazine.

Dr. Arlt, son of the famous opthalmologist, has discovered a new remedy for trachoma, or inflammation of the eyes, which does so much harm in Egypt and other countries. It is called cuprocitrol, and its special advantages are that it gives no pain, costs little, and can be applied by the patients themselves.

The House of Lords contains 590 peers, of whom 22 are dukes.

Umbrella bearers are shown in ancient sculptures at Persepolis, where a king is depicted in royal state attended by a fly-flapper and an umbrella man. In Persia the umbrella is still an appendage of royalty.

Out of every 1,000 pounds of beef consumed in Great Britain in 1901, 700 pounds was home produced, reports the United States Consul at Nottingham.

PAINS IN THE BACK HIPS AND SPINE.

Great Suffering and Loss of Weight—Doctors Could Not Help Him—A Splendid Tribute to

DR. CHASE'S KIDNEY-LIVER PILLS

When you read such letters as the following from well-known and highly respected people in all parts of the country you need no longer wonder why the sale of Dr. Chase's Kidney Liver Pills is so far in advance of any similar remedy. When the people find out the virtue of this great medicine they tell their neighbors about it, and so the good news spreads.

Mr. James Clark, Consecop, Prince Edward Co., Ont., states: "Eleven years ago I was taken with pains in my back, settling in my hips and extending up my spine. The pain was very severe, and at times almost unendurable, and many days I was not able to do an hour's work. My weight was reduced from 190 to 160 pounds, and though I had consulted many first-class physicians and tried several advertised medicines I could get no relief.

"At this time my father-in-law told me to try Dr. Chase's Kidney Liver Pills, and said he knew they would cure me. I secured a box, and great was my surprise when I began to feel better, after using only the one box. I continued their use until I had taken about four boxes, which made me a sound man, and I also regained my usual weight, 190 pounds. I cannot say too much in favor of Dr. Chase's Kidney Liver Pills, which have done so much for me. I have recommended them to a number of my friends, and have never met with one case where they did not meet with good success. My daughter, Mrs. Chas. Philips, has also been cured of a severe stomach trouble by the use of these pills."

Dr. Chase's Kidney Liver Pills, one pill a dose, 25 cents a box, 5 boxes for $1.00. At all dealers, or Edmanson, Bates & Co., Toronto. To protect you against imitations the portrait and signature of Dr. A. W. Chase, the famous receipt book author, are on every box of his remedies.

KENDALL'S SPAVIN CURE

Used it ten years.
Washington, D.C., Nov. 20, 1900.
Please send me your "Treatise on the Horse and his Diseases." Have used Kendall's Spavin Cure for ten years and gladly testify to its merits.
Yours truly, Justus C. Nelson.

Five Cases of Spavin Absolutely Cured.
Buffalo, N. Dakota, Jan. 26, 1903.
I have cured five horses absolutely of Spavin in the last four years with your Kendall's Spavin Cure.
Very truly yours, Harry D. Raettel.

THE OLD RELIABLE

And Most Successful Remedy Ever Discovered for Spavins, Ringbones, Splints and all Lameness.

This is the unqualified experience of thousands of horsemen and others in this and other countries and there is no reason why you should not share in these benefits. Just read what the above people say about "Kendall's." Write to them for your own satisfaction.

In addition to being the best stable remedy known, it is unequaled as a liniment for household and family use. Sold generally by all druggists. Price $1; six bottles for $5. We send valuable book, "A Treatise on the Horse," profusely illustrated, free upon request.

DR. B. J. KENDALL CO., Enosburg Falls, Vt.

The Ship's Steward.

A steward is nothing more or less than a combination waiter and chambermaid. His duties begin an hour before breakfast, by all rights, inasmuch as it should take him that time to brush up his blue or black uniform, shave, make his hands neat and shine his shoes. He is supposed to wear a spotless and expansive bosom to his shirt, clean collar and black or white tie. I do not think I ever saw but two stewards who had shirts; all the others used a dickey for the sake of economy.

Waiting on the passengers at table, the care of the tables, the care of the silverware and a certain amount of dishwashing and pantry work make up the steward's dining room duties. The other half is work in the staterooms, making the beds, straightening up the rooms and doing the general work of a chambermaid, as well as giving a certain amount of attendance to the occupants of the rooms.

The pay is very poor, and the principal dependence of the steward is on the tips he receives. They are really the poorest paid class that go to sea in one way, and yet I have known men to make £40 in tips on a six weeks' voyage.

The Horse In Mythology.

The Grecians placed in the sun the god of their wisdom and intelligence and gave him a chariot and four fiery horses—the chariot to symbolize doctrine and the horses intelligences. So with their god of the sea. Neptune was drawn in his sea chariot by horses—the sea to symbolize all scientific knowledge in general, the chariot to symbolize doctrine or science and the horses intelligences. They mythologically described the birth of the sciences by the flying horse Pegasus, which with its hoofs burst open a fountain out of the hard rock at the moment of his rising from earth to heaven, at which fountain were seven virgins who were the seven sciences.

The flying horse symbolizes an intelligence directed heavenward; the hard rock represents hard matter of fact or sensual knowledge; the fountain springing therefrom represents pure truth, where the virgin sciences delight to dwell.

An Ingenious Suicide.

That was a peculiar case of suicide—a self guillotining. The average suicide shoots or cuts or swallows poison recklessly, frequently botching the job fearfully. But this fellow? Listen: After sharpening the edge of a spade he fastened the implement, blade downward, to the end of a carpenter's bench, which he weighted heavily. He then placed a block of wood under the same end of the bench in such a manner that it could be easily removed, and so let the bench fall, together with the sharpened blade. When these preparations were completed he lay down, placed his neck across a thick piece of wood directly under the spade, knocked away the support and was immediately and completely decapitated.

Beware of the widow who firmly believes that she is an example of the survival of the fittest, says an old bachelor.

There never was and never will be a universal panacea, in one remedy, for all ills to which flesh is heir—the very nature of many curatives being such that were the germs of other and differently seated diseases rooted in the system of the patient—what would relieve one ill in turn would aggravate the other. We have however, in Quinine Wine, when obtainable in sound, unadulterated state, a remedy for many and grievous ills. By its gradual and judicious use the frailest systems are led into convalescence and strength by the influence which Quinine exerts on nature's own restoratives. It relieves the drooping spirits of those with whom a chronic state of morbid despondency and lack of interest in life is a disease, and by tranquilizing the nerves, disposes to sound and refreshing sleep—imparts vigor to the action of the blood, which, being stimulated, courses through the veins, strengthening the healthy animal functions of the system, thereby making activity a necessary result, strengthening the frame and giving life to the digestive organs, which naturally demand increased substance—result, improved appetite. Northrop & Lyman, of Toronto, have given to the public their Superior Quinine Wine at the usual rate, and, guaged by the opinions of scientists, the wine approaches nearest perfection of any in the market. All druggists sell it.

In the court of love the strenuous prosecutor wins his case.

HE HAS TRIED IT.—Mr. John Anderson, Kinloss, writes: "I venture to say few, if any, have received greater benefit from the use of Dr. Thomas' Eclectric Oil than I have. I have used it regularly for over ten years, and have recommended it to all sufferers I knew of, and they also found it of great virtue in cases of severe bronchitis and incipient consumption."

Laboring under a mistake is the most unprofitable of all employments.

Minard's Liniment Cures Colds, etc.

When Brignoli Was Excited.

Brignoli always expected an encore, no matter where or what he sang, and if it was not forthcoming he was off in a rage instantly. In some small town he sang his favorite song, "Com e Gentil," a serenade from Donizetti's "Don Pasquale," with unusual care and walked off the stage perfectly satisfied, pausing at the wings to listen to the applause. To his utter amazement there was not a sound of approbation. He strode into the dressing room muttering that he would not respond to an encore; he would refuse to sing another song. Still the house remained silent. "No," he cried to those about him; "I refuse to sing again. I refuse to respond to the encore."

Barbagelata, who was more clever than the ordinary servant, humbly approached and said:

"Signor Brignoli, you sang that like an angel. The people could not appreciate it."

The old fellow nearly wept.

"Barbagelata," he exclaimed, "give me your hand. I did not know you were such a musician. Tagliapietra, I must introduce you to Barbagelata, my servant," turning to "Tag," who stood near by. "He is a great musician. He appreciates my singing more than all those fools."

MY HEART'S DARLING

BY W. HERKBURG.

"Do you know, Lucie, that I have made an acquaintance in this dull place? The aunt of our physician. Oh, she is charmante, quite charmante, so modest and simple. I once went to his house to consult him, and met only this lady. I came back quite delighted with her."

"Yes, she is very kind-hearted," said Lucie. She knew that Dettchen's charm consisted in her listening with the patience of a lamb to the little French woman's stream of talk.

"And so interested in doing everything for her nephew," continued mademoiselle. "It is so comfortable in the tiny house, so cozy — he could not have a pleasanter home if he — Do you know that he is going to be married? You did not know it? But what is the matter with you, ma petite; are you ill?" asked mademoiselle, who had not the least idea that she was opening afresh an unhealed wound. She had not much sentiment in such things, but according to her ideas, Adler was the same as a stranger to Lucie now she would not marry him. Eh bien! she must be indifferent to him. "Are you ill?" she asked once again, "you look so pale!"

"No," whispered the girl, but her face had become as white as the table-cloth itself.

"Take a glass of wine, ma mignonne — so; that will do you good. So, then, you did not know it? Why, yes, he is engaged; she is a large blonde young lady. Entre nous" — she put her hand to her mouth — "very mauvais genre according to my taste; she makes one think of a dairy-maid. She has been staying for six weeks with his mother. Well, it is very necessary that he should marry. A physician without a wife—"

"Lucie," whispered Hortense, "now they are getting confidential." She glanced over at the two gentlemen. "It will not be long before he begins to entreat grandpapa about the day for the wedding. I know that."

But Hortense was mistaken. To her surprise, neither at dessert nor when they were drinking their coffee, which they did in the old gentleman's room, was a word said on the subject. The lover merely accepted with a silent bow the baron's invitation to spend a few days with them; nor did he devote himself exclusively to Hortense or express any longing to carry her off as soon as possible to his rococo castle. The young baroness was decidedly surprised at this.

"What does this mean?" she said to Lucie as they were walking in the garden toward evening.

"I do not know," said the girl, rousing herself out of a deep reverie.

"Well, I am contented," said Hortense.

"This time madame has the right kind of a man!" mademoiselle exclaimed. "Just.. look how he goes about; so quiet and decided; and see how he looks out of those eyes. Mon Dieu! he is not one to be trifled with, Hortense," she whispered, as the young baroness came up to her, having just gathered some early roses, "I am afraid he has the genuine German iron will!"

Hortense smiled, and made a motion with her hand toward the ground, as if she had brought some one to his knees. "Don't be afraid, my dear," she said, as she passed her and slipped her arm into her grandfather's, so as to join in the gentlemen's conversation.

That evening Hortense and Lucie were sitting in the baroness's boudoir with the tea-kettle on the table. Herr von Meerfeldt had, according to his usual custom, retired early to rest; and mademoiselle always went to bed with the chickens.

Herr Weber had risen with a bow to excuse himself too, when Hortense called to him:

"Will you take a cup of tea with me?"

It sounded as if a refusal would not have displeased her at all.

"With the greatest pleasure," he had answered; so there they sat waiting for him.

Hortense had not yet had the lamps lighted; the little blue trembling flame under the silver kettle made but a dim light in the comfortable room. Lucie could not banish from her mind the thought of how often she had sat here, and near her some one who had every now and then secretly pressed her hand, and that this could now never be again.

After a few minutes Waldemar Weber came in; the servant brought in a red-shaded lamp and placed it on a side table, and Hortense poured out the tea.

"Your grandfather does not look well," he began, after a pause.

"He is always so," returned Hortense.

"What does the doctor say as to his condition?"

"I do not know. Lucie, have you ever heard Doctor Adler say anything about him?"

"No," said the girl.

"Adler?" he asked.

"Yes, Doctor Adler," said Hortense— "Alfred Adler. I believe that is his name, is it not, Lucie?"

"Yes," was the low answer.

"So the old fellow is here? That interests me very much—no, it delights me!" he cried.

"Do you know him?" asked Hortense, surprised.

"Do I know him? Many pleasant hours we have spent in Heidelberg together. I must hunt him up tomorrow; is he married?"

"No," returned Hortense, abruptly.

"What a pity! It would have interested me so much to see what kind of a woman he would choose, he has such peculiar ideal views on that subject. If he ever finds all that he wants in his future wife combined in one person, he must be more than human—a fairy or an angel."

Hortense looked over at Lucie; and as she noticed her sad expression, she said, trying to turn the conversation into a lighter vein:

"What do men understand by that kind of angel? First of all, they must know how to cook well; is it not so?"

He laughed.

"No; that was not what he meant; though it should go with the other virtues. He used to rave about a soft, loving being, who would find all the happiness of her life in his love, who would meet him after the heat and toil of the day with a cheerful look, and in whom he could confide everything; in a word, some one that would ask nothing in the world beyond him and her home. Hundreds of times he has described all this to me. He used to be so vexed when he saw young married women in a ball-room allowing themselves to flirt to their heart's content. 'Let me ask you,' he would say, 'does it not take away all one's desire to marry! Is that worthy of a wife? If I were to see mine surrounded by such a silly crowd I do not know what I should do. Domestic they ought to be—domestic. And then he would describe to me how it would be if he were to find his paragon. I could see the lamp burning on the table, and a blonde head bending over her work, be beside her, with a book from which he was reading aloud, and I could hear the trees without groaning in the autumn storm; he had always had a great love for the autumn; and I could hear the rain pattering against the window-panes—"

"Do you take arrack in your tea?" asked Hortense, rather loudly.

"Thanks. Is not that a charming picture?" he added, without allowing himself to be interrupted. "You agree with him, of course, in everything?"

"I can not deny it, Hortense. Every man longs for a happy peaceful home."

Lucie rose and left the room; she went to her bedroom. She scarcely knew why she went there. She stood in the dark. "It is over," she whispered. "Too late!" She could see no clearly a little room by lamp-light, but it was not she who sat there; it was another, who had picked up the jewel which she had thrown away because she did not appreciate its worth.

She took a fresh handkerchief, sprinkled it with cologne, and made ready to go down-stairs again. As she had her hand on the latch of the salon door she heard Weber's deep voice.

"Refuse a man like Adler! that borders on— Foolish girl! However," he continued, "it is of course my knightly duty to open my house to her if you have promised her a home, Hortense."

"Not only that," interrupted Frau von Lowen, "I love her, and do not want to be separated from her. I thank you, Waldemar."

[TO BE CONTINUED.]

The fixed capital in agriculture in the United States is four times that in manufactures.

THE RADIATOR

Oh, the weary radiator! It has toiled the winter through.
We nourished it with soft coal and with boards and barrels, too;
We utterly forgot it when it did its duty well;
When it failed our indignation 'twas impossible to tell.

We were often fain to chide it as a source of much distress
When it used to raise a racket just to ease its loneliness.
We begrudged it all amusement, and we thought it very wrong
For it to find a little leak and sizzle with a song.

Ere long 'twill have to meet the benefactor's usual lot;
The spring will gently blossom forth and then 'twill be forgot,
And folks who turn to cleaning house will speak in accents rude
About the room it takes, and this is human gratitude!

—Washington Star.

From a Late Novel.

"He had a frank and open countenance."—Chicago Tribune.

Rather Gave Him Away.

Fond Father (showing off his offspring's intelligence)—Now, Elsie dear, what is a cat?

Elsie—Dunno.

Fond Father—Well, what's that funny little animal that comes creeping up the stairs when every one's in bed?

Elsie (promptly)—Papa.

Sarcastic.

A young author, evidently desirous of benefiting by the experience of an older brother craftsman, once asked Richard Henry Stoddard how he had acquired such a mastery of Anglo-Saxon.

"I don't know how I ever did it," replied the poet, who, after a moment's reflection, added, "I think, however, I must attribute it to the fact that I never had any education!"

The First Idea of the Telescope.

The telescope we owe to some children of a spectacle maker placing two or more pairs of spectacles before each other and looking through them at the distant sky. Their idea was followed up by older heads.

PAYS THE PENALTY

DOUGAL, THE WIFE MURDERER IS HANGED.

He Was Suspected of Having Killed Five Women to Whom he Was Married—One Died at the Military Barracks Halifax, N. S.

London cable: Samuel Herbert Dougal, the perpetrator of the Moat House murder, who was convicted at the Chelmsford assizes, June 23, of the killing of Miss Camilie Holland at Saffron Walden, Essex, and sentenced to death, was hanged at the Chelmsford jail at 8 o'clock on July 14., after making a full confession of his crime.

The Moat house murder, as it was known, was committed over four years ago, and the hope of solving the mystery had almost been given up when the body of the victim, Miss Holland, was found last April, buried in the Moat house grounds. Miss Holland was the owner of the Moat house.

...About four years ago, Dougal, who was supposed to be her husband, but who, it was discovered subsequently, had never been married to her, made his appearance there, and Miss Dougal, supposed to be his sister, took up her home on the place. Miss Holland then disappeared suddenly, and Dougal sued the women, supposed to be his sister, but who really was his wife for divorce. This aroused suspicion, and lead to an investigation.

Dougal was arrested for cashing a check purporting to have been signed by Miss Holland, and while he was in custody the body of Miss Holland, for which a thorough but unsuccessful search had been made, was found by a laborer in an old ditch which had been planted over with shrubs nearly four years previously. The laborer struck his fork into a hard substance which proved to be a woman's shoe, containing a woman's foot. Then Miss Holland's body was found, lying face down ward.

An examination showed that the head had been pierced by a bullet, which was found in the skull. Dougal was suspected of having made away with at least five wives. One of these died under suspicious circumstances at the military barracks at Halifax, N.S., while Dougal was in the imperial army.

UP IN THE AIR.

Santos Dumont Witnesses a Military Review from an Airship.

The French national holiday was enthusiastically celebrated on July 14 in brilliant weather. The main feature was the review of the garrison of Paris. The troops assembled at Longchamps at an early hour. At 9 o'clock an artillery salute announced the arrival of President Loubet, who was accompanied by Premier Combes and other cabinet ministers, whom Gen. Andre and the military governor of Paris and the Irstaffs escorted to the reviewing stand. Mme. Loubet soon followed and the review commenced, ending with the usual distribution of decorations.

The charge was executed by six regiments of cavalry and aroused the greatest enthusiasm.

Santos Dumont, from an airship over Longchamps, saluted the president with blasts from the whistle of his motor and with a salvo of revolver shots. The aeronaut then sailed off rapidly to his headquarters at Puleaux.

Mosquitoes in London.

London cable: Life is becoming a burden too hard to be borne in the suburbs of London bordering upon the lower Thames by reason of a mosquito plague. All the lands adjacent to the docks and the Thames marsh ground at Woolwich, Greenwich, and even the high and wholesome lands towards Blackheath are made untenable by the pests. To sit in a garden in the cool of the evening is to invite an attack. An evenwalk in Bostal Wood is a torment, and a stroll across the soft grass of Greenwich park as twilight falls results in swollen ankles from the stings of mosquitoes brushed from their resting places. They sting through thick stockings.

In Estham hospital attendants are obliged to cover the beds with muslin curtains, a thing hitherto unknown here. During the long hot nights little children toss their arms outside the curtains and before morning they are suffering torment, with their hands swollen and inflamed. Some of the nurse's hands are swollen like puddings.

A dispatch from Ottawa says: Now that Senator McMullen has managed to get a seat in the senate for life he thinks he can afford to pitch into artisans, farmers, and others of that stamp, whose votes he at one time courted. In the senate last night he characterized the farmers of the Northwest as the most persistent grumblers in creation. They, he said, were always yapping. The Canadian Pacific had made a steady effort to serve the Northwest and he hoped the farmers would give up their everlasting complaint.

Lady Carlisle, who has succeeded Lady Henry Somerset as president of the Women's Christian Temperance union of Great Britain, would like to abolish all titles of nobility, and if her husband and relatives did not insist upon her using the title, which is very old, it is said she would have dropped it long ago.

BROTHER OF CRIMEAN HERO.

Member of Distinguished Nova Scotia Family Passes Away.

The part played by a son of Nova Scotia in the Great Crimea struggle is recalled by the death at Gay's River, Colchester County, Nova Scotia, on Saturday, June 13, of G. H. O. Parker, a brother of Capt. Parker, the hero of Alma. The Welsford-Parker Monument, which stands in Old St. Paul's burial ground, was erected to commemorate the gallant deeds of Major Welsford and Capt. Parker. The former was killed at Sebastopol and the latter who was a captain in the famous 77th Regiment, was killed at Alma. He fell while leading his men to victory in that decisive struggle. Capt. Parker was the first to scale the walls, but was shot down when victory was almost in sight. He was a great favorite in Halifax, where his regiment was stationed before the Crimea, was several times mentioned in despatches and would have had rapid promotion had he lived.

Capt. Parker's brother, the subject of this sketch, was also in the Imperial service having served in the Royal Navy for many years. About forty years ago he retired from the navy and located at Gay's River, where he had since lived a quiet life. The Parker family has been represented in the army and navy for over a hundred years, and was one of the oldest in Nova Scotia. Hon. Benjamin Green, who was a prominent Nova Scotian of the old days, and was once acting Lieut.-Governor, was grandfather of the deceased.

G. H. O. Parker was twice married. His first wife was a Miss Dunlap of a well known Truro family. Three children were born of this union, viz: Mrs. William C. Noble, Boston; Wm. O. N. Parker, connected with the White House Clothing Co. of St. Catharines, Ont.; and Arthur Hyde Somerset Parker of St. Lambert's, Montreal. The deceased's second wife was a Miss Brehm of Dartsmouth. She died only recently and was buried in Camp Hill Cemetery. Since his wife's death Mr. Parker commenced to fail and passed away on Saturday, June 16. He was 80 years of age.

A Moose in the City Streets.

During the recent dry spell a nimble, powerful, anxious-eyed cow moose made its appearance in the streets of St. John, N.B., and The Daily Telegraph says that it attracted much attention.

The animal had evidently been driven toward the city by the forest fires. It made its appearance on Fort Howe about 8 o'clock, and, being startled by humans there, dashed down Millidge street, across Paradise row and along Mill street to the I.C.R. terminus, where it took to the water.

Everybody in sight gulped down his astonishment and attempted to intercept it. Small boats by the dozen put out, and one of them caught up to the moose when it was just off Long Wharf. The men cast a line around the animal's head and managed to row the captive into the slip. It was here the real fight commenced. The moose resented every effort to bring it to land. It struggled in one direction after another, and it kicked. It was brought under control only when additional lines were attached to it, and each hauled by scores of men and boys. Once on the land, the moose resorted to front and rear kicking; every method, honorable or unscrupulous, was employed in its attempt to break away, but eventually it was thrown and securely tied.

It was placed on a sloven and hauled to one of the sheds on Smythe street, where it spent the night.

An Historic Celebration.

At Welland, on the evening of the 3rd June, 1903, Mr. Isaac P. Willson, who has for many years occupied the position of Registrar of the Surrogate Court and Clerk of the County Court of Welland, tendered at his residence, Strathavon, a banquet to about one hundred invited guests, in commemoration of his grandfather, Isaac Willson, who was a United Empire Loyalist, crossing the Niagara River one hundred and twenty years ago and settling in Canada. Mr. Willson, upon rising to respond to the toast of "Our Host," was given a most hearty and enthusiastic reception. Mr. Willson, who is a fine and interesting speaker, gave a most interesting speech, touching upon his ancestors coming to this country, and of the toils and hardships endured. The results assisting in building up Canada. It took his grandfather thirteen weeks to bring his family from New Jersey to the Niagara River. They then had to build rafts to cross to Canada. Upon arriving here they settled in Pelham Township, their descendants having resided in this district ever since. Mr. Willson gave many interesting reminiscences of his earlier life and hardships endured until the country was improved and prosperity was brought out of their labors.

B.C.'s Minister of Mines.

Hon. R. F. Green, the Minister of Mines in British Columbia's new Government, served in the Northwest rebellion, being in the pursuit of Big Bear. Mr. Green was born in Peterboro', and, after a short residence in the States, removed to Winnipeg in 1882. After the rebellion he became a resident of Revelstoke, B.C., where he is still in business. He has been in the Legislature since 1898, and is not ranked as a hard and fast partisan in Dominion affairs.

Best Sale of Lands.

A sale of lands held for school purposes took place during May in Regina. About 50,000 acres were sold, and the average price realized was $9.52 an acre. The highest prices realized were paid by farmers who bought lands adjacent to their property. This is described as the best land sale ever held in the Canadian West, and it is hoped that high watermark is not yet reached.

PATENTS IN CANADA

SOME QUEER INVENTORS AND THE PATENTS THEY ASK FOR.

The "Ezekiel Flying Machine," for Which the Idea Was Got From the Prophet' Book—Three or Four Flying Machine Applications Yearly in Canada—Roller Boats Also a Popular Scheme.

The Canadian Commissioner of Patents, under the present system, has no easy job of it, says Day by Day in The Toronto News. One day, not so very long ago, the patent office received an application for a patent on the "Ezekiel flying machine." The applicant proved to be a minister of the Gospel, and he explained to the examiner that the book of Ezekiel was not merely prophecy, but contained a full and accurate recipe for aerial flight. This he had worked out with India ink drawings and diagrams, which he was positive would settle the case. The examiner answered that he had no doubt it would, but meanwhile the applicant would be required to subscribe to the customary oath. The minister seized the paper with avidity, but laid it down sadly when he found that he was required to swear that he was the original discoverer of the invention. As he could not afford to discredit his favorite book of Scripture, he withdrew his letter of application and sketches.

Inventors' Secrecy.

Three or four times a year have the officials in the Patent Office to receive applications for patents on flying machines. The secrecy with which so many inventors surround their experiments is usually due not alone to the desire to be sensational, but quite as much to the fact that they cannot get a patent on their inventions, and thus protect them against ruinous imitation. The Patent Act requires that an invention be really an invention, i.e., that it be new and useful. To be of use, it would seem a flying machine must be able to fly. In the case of any ordinary mechanism, it suffices to make a series of drawings to file with the specification, the principles involved being so familiar that any one skilled in the art to which the device belongs could produce a specimen from the patterns and descriptions, and would know in advance that it would work. Not so with the flying machine, which has so far defied the brightest wits that have been trained on it. There never was an inventor of a flying machine who did not "know" that it would work. But, on the other hand, there is at Ottawa no model that has ever borne out its claims.

Roller Boats Roll Not.

The same way with the roller boats. Tens of thousands of dollars have been spent on the effort to make the boat "roll." And roll it did—usually in a totally unexpected direction. There have been half a dozen inventors of roller boats, at least one of whom has spent his entire fortune in striving after the seemingly impossible. The flying machine presents even more difficulties. When the application for permission to submit plans and specifications is made, the Patent Office blandly and patiently answers that, by all means, the gentleman may send in his descriptions of the flying machine. Of course, the Patent Office believes that the gentleman is going to score a failure, but that is not the business of the Patent Office. If the gentleman—as has been done once or twice—asserts that he has a full-sized machine that will fly, he is asked to bring forward the testimony of persons who have seen it fly.

Maxim's Machine.

Probably the man who has made, next to Santos Dumont, the best effort at solving the problem of human flight, is Sir Hiram Maxim, the gun inventor. He built a huge aeroplane, which was propelled by a powerful steam engine, and which ran between upper and lower rails. It demonstrated the ability of a self-propelled aeroplane to elevate itself, but was not regarded as a successful flying machine, because it could not run long enough. The engine required so much water that it could not carry the weight of fuel necessary for sustained flight. Sir Hiram Maxim never allowed his machine to soar away from the rails that held it in subjection for fear it would run out of fuel and come to earth with a crash, for no means had been discovered to keep it in control. The fuel difficulty may, of course, be settled by the use of gasoline. Still, the way out is not yet clear.

Flying Machine Toys.

There have been invented a good many small affairs which will go into the air and stay there a while. They will not carry human passengers, and they are really toys. As toys alone have they received the sanction of the Patent Office. Anybody can get a patent on an invension of this kind if only it will perform gyrations in the air. Dirigible balloons are not treated by the Patent Office as machines for mechanical flight, for the balloon is an old device and all that can be new is the steering apparatus, which, owing to the way the field has been covered, is usually rejected on the ground of a lack of novelty without any serious examination of its broader claims. The English and American inventor always seeks to have his inventions patented at Ottawa, as well as at London and Washington, and the Canadian Patent Office usually follows the English or American precedents in adjudicating on the applications of the flying machine men. The experts at Ottawa are still unconvinced that a flying machine, despite Santos Dumont's exhibitions, will "work." Until a balloon can maintain a speed of twenty-five miles an hour and be subject to human direction, they assert that it gives no assurance of ability to keep on its course in a wind of any strength, and is, therefore, not to be set down among the possibilities. Gas bags are no part of flight; flight is the result of motion alone.

THE PUSHFUL JAP.

One Who Prefers the "Yellow Evil" to the "White Uncertainty."

The Jap and the Chinaman, who are numerous here, writes Victor Ross, The Globe's traveling correspondent, from Moosejaw, N. W. T., will hear with interest the finding of the Presbyterian Assembly at Vancouver on their fitness for citizenship. Both have obtained a firm foothold, and their standing has not been secured via the laundry, either. John Chinaman has done much to solve the domestic servant problem. He is the undisputed ruler of many bachelor establishments, and his abilities as a chef have lent new significance to the term "celestial" as applied to him. He is also in the restaurant business, and even dabbles in land speculation.

The Jap has reached the exalted position of a hotel clerkship, and the diamonds of a similar dignitary in the east shine not more brightly than his black eyes when he welcomes you at the register. As a valet de chambre he is a considerable improvement on the female domestics in hotels. He is scrupulously clean; he makes up beds with the care of a hospital nurse, and he knows that shaving water is better when it is hot, and that a hairpin is useless to a man in case of a broken shoe lace. Into the dining-room, too, the Jap is making his way, and in some western hotels he has entirely supplanted the strenuous young woman who in other days dared you to choose between roast beef or roast pork. The Chinaman and the Jap usually fight shy of heavy manual labor, or any employment outside of the towns, and engage in the lighter household work, which is not so trying on them, and quite as remunerative. Their wages average about $20 a month and board on this side of the Rockies, which, judged by western standards, is not excessive. The Chinaman is of little use to the country, but he is a great advantage to the white people who live in it, and that is perhaps the reason why he stays. In a few years he will be several hundred miles farther east, but as a household servant. A train which left Moosejaw to-day had one car of Chinese, who by their inscrutable methods had placed a commercial estimate on almost every town east of Brandon, and were ticketed each one to a point where there is no Chinese competition. Whatever he is in the east, the Chinaman in the west is not a good washman. He makes money at the business, but he fails to get the clothes clean, and one is never actually certain whether one's linen has just arrived from or is ready to be sent to the laundry. And there is no opportunity for an argument, for on being approached on the subject the Chinaman declines to know any more English than the figures of the amount due him.

The wife of one western public man who has been denouncing the admission of the Chinese told me secretly that she preferred the "yellow peril" to the "white uncertainty," anyway.

Why We Shake Hands.

The custom of handshaking dates back to prehistoric times, a relic of those savage days when strangers could not meet without suspicion of murderous purpose. Then all men went abroad with weapons and shields, and, when they met, would stand in pleasant converse, each with his shield upon his left arm and with right hands clasped so that there would be no chance for a sudden swing of the knife or bludgeon. The right hand was invariably used for the weapon, with the result that we are a right-handed race. The reason for this lay undoubtedly in the fact that the left arm was always employed in the important work of shielding the heart. Among the common people of the Aryan race, the old pledge of amity in yielding the right hand to be grasped and held has since remained the chief token of open friendship. In the Iliad the returning chiefs were "greeted with extended hands." Even at that remote day the early significance of the handclasp had been lost in the nobler meaning of civilized life. But it remains a salutation in which a greater or less degree of equality is claimed or conceded.

Lumber Camp Education.

The annual report of the Canadian Reading Camp Association has just been published, in which satisfactory progress is reported. The work began in a tentative way three years ago, and the experiment has proven a happy one. The interest has been aroused and the co-operation secured of both employers and men, the Ontario Government and the public generally. The object of the association is, by the establishment of reading camps and schools in the backwoods, to afford a measure of refinement and culture for manual laborers, while it also gives a manual training for the teachers. In addition to imparting instruction in an unconventional manner to the men during the evenings, the reading camp instructors themselves engage in teaming, cutting, mining, railroad construction, cooking, etc. The association has eleven instructors, and the results so far have been most encouraging.

A Brilliant Student.

In the interval before the gowned procession appeared at the convocation proceedings of Toronto University the other day, two ladies were overheard discussing things in general. They found on the program a list of names of those on whom degrees were to be conferred, and immediately sought familiar names.

After a time one exclaimed, "I wonder who this man 'Honoris Causa' is? He seems to have been an awfully clever fellow. He has his name in nearly every class there is."

"That's so," returned the other. "Seems to be a foreign name, too. I would like to see him."

And the two ladies spent the rest of the afternoon trying to identify the phenomenal student and wondering why they could not locate him.

The Fernie Free Press

ESTABLISHED 1898.

The voters' list closes on August 14th. The act makes no provision for the addition of any names after that date though full directions are given for the removal of names of parties not qualified to vote. The court of revision sits on August 31st and all protests of names must be in the hands of the collector of votes at least six days previous, accompanied by a fee of $1.00 for each name protested, which is returned if the protest is sustained.

* * *

The returns from the Manitoba election give the conservatives a sweeping victory, Roblin securing 30 seats out of the 40 with two elections yet to be held The result is no doubt largely due to the unprecedented prosperity of the prairie province during the past two years, the government in power always getting considerable credit for such conditions, whether deserving or not. The government's railway policy is also a popular one with the Manitoba farmer, the lower grain rate over the Canadian Northern making it a vital question to him. There is reason to believe that this conservative victory will in a measure counteract the influence of federal politics in the approaching B. C. elections.

* * *

The voters' list now contains about 680 names for the Fernie district. This does not show a satisfactory condition when it is considered that over five weeks have passed since the list was opened, that only three weeks remain before it is closed, and that there should be about 500 more names in the district at a very fair estimate. If this district is to have the list that it should have there has got to be an awakening on the part of these who are making some pretense to a systematic canvas for names. It may be taken for granted that the great majority of those who have allowed five weeks to pass by without getting their names on the list will make no effort to do so now, and these names will not appear on the list unless solicited by those who are drumming the district for this purpose. The Morrissey end of the district has made the best showing so far. Michel is somewhat behind, Jaffray has only a couple of names, Coal Creek mines has many names to contribute, and one or two mills near by is not well represented.

* * *

We hear a good deal these days from the socialists of the wonderful growth of their cause in Germany where in a recent election three million votes were polled for so called socialism. The argument loses its force when we stop to compare the socialistic platform of the Germans with the irrational and extreme doctrines advocated by those who call themselves socialists in this country. The socialists of Germany are striving for reforms that have been in vogue in Canada for many years, and these people would be fairly contented under a government similar to that in Canada. Canadians are a socialistic people so far as those doctrines are compatible with practicability. Socialism, here, is a misnomer for Anarchism, which attempts to tear to pieces the principles underlying modern civilization and constitutional government, and offers to replace them with impracticable theories which cannot deceive the thoughtful student of political economy.

His Last Hope Realized.

[From the Sentinel, Gebo, Mont.]

In the first opening of of Oklahoma to settlers in 1889, the editor of this paper was among the many seekers after fortune who made the big race one fine day in April. During his traveling about and afterwards his camping upon his claim, he encountered much bad water which, together with the severe heat, gave him a very severe diarrhoea which it seemed almost impossible to check, and along in June the case became so bad he expected to die. One day one of his neighbors brought him one small bottle of Chamberlain's Colic, Cholera and Diarrhoea Remedy as a last hope. A big dose was given him while he was rolling about on the ground in great agony, and in a few minutes the dose was repeaed. The good effect of the medicine was soon noticed and within an hour the patient was taking his first sound sleep for a fortnight. That one ittle bottle worked a complete cure and he cannot help but feel grateful. The season for bowel disorders being at hand suggests this item. For sale by all Druggists and Dealers.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped portions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding against the wasteful destruction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

FERNIE DAIRY

Fresh milk delivered to all parts of the town. . . . . .

Dobson & Willingham

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1, That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electoral districts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

Louis Carosella & Co.

WHOLESALE LIQUOR MERCHANTS

Fernie, B. C.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted at Ed Robbins north-west corner, thence 80 chains north, thence 80 chains east, thence 80 chains south, thence 80 chains west to place of beginning.

Dated at Fernie this 6th day of June, 1903.

W. C. LIPHARDT.
F. R. DELZELL, Agent.

Notice is hereby given that thirty days after date I intend making application to the Chief Commissioner of Lands and Works for a special licence to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay:

1. Commencing at a post 120 chains west of a post marked (Post No. 1) situate on the line of the west boundary of Lot 6033, group one, Kootenay district and one mile south of the south west corner of P. Buhl's pre-emption, thence running south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to place of commencement.

2. Commencing at a post 120 chains west of a post marked (Post No. 1) situate on the line of the west boundary of lot 6033, group 1, Kootenay district and one mile south of the south-west corner of P. Buhl's pre-emption, thence running south 160 chains, thence east 40 chains, thence north 160 chains, thence west 40 chains to place of commencement.

232-4 W. H GRIMES.

Yours for $15

Works are Elgin and Waltham, as you choose. Case is 14 K., gold inside and out, but not all through; as pretty as solid gold, and stronger; guaranteed to wear 25 years.

If you think of buying a Watch you ought to learn about the "Gold Filled" case. I can show you five sizes and a good variety of patterns, and would like to describe its construction.

A. C. Liphardt.

Mr. J. Moe, the day operator at e C. P. R. depot, has been appointed fill that position at Macleod. He and s family leave next week for that place here they will make their home. Dur-g their stay in Fernie they have made any friends who will regret their de-ture.

Miss Carrie Hall who recently went st has sent in her resignation as teacher the Fernie Public School. Miss Kid-ll who taught the mine school has o given up her appointment. The ustees have the heavy task on their nds of securing three new teachers, a rincipal and two assistants.

Those who drove home from Gilling-am at 4 o'clock on Saturday morning tnessed one of the finest mirages that as been seen for many years. One old mer here declares it to be the most eautiful mirage he has ever seen. At rst it had the appearance of clouds of e conformation of a range of moun-ins. Little by little, as in the develop-ent of a negative, it distinctly unfold-d its beauties until a replica of the Kootenay Lakes, and the range of ountains from Chief Mountain a hun-red miles or more to the north, was lainly to be seen in the sky above the astern rim of the world. Looking over he Porcupines, the towering reflections f the main range of the Rockies were istinctly visible. The line of snow and he contour of each mountain could be learly seen, and in comparison to their vast height, the Porcupines seemed a very low range of foothills.—Pincher Creek Echo.

Get your summer suit this month while the $5 discount is on at Mitchell's.

Don't be a nonentity in the coming election by failing to get on the voters' list.

Mr. Richie of Nova Scotia, a fuel inspector for the C. P. R., will take up his residence in Fernie.

Drink Maple Leaf Tea and you will have no other. x

Lethbridge has adopted a by-law authorizing the putting in of a system of water works.

Miss Stork arrived this morning from the east and is the guest of her brother, Mr. Fred Stork.

Miss Mamie Campbell, of Morrissey Mines, was in town a few days this week visiting Mrs. J. W. Nunn.

Mr. R. Randall has been appointed a commissioner to take names for the voters list at Coal Creek mines.

The new Roma Hotel is now complete. It is a large and well-built house and reflects credit upon the proprietor.

Mr. T. H. White arrived from Collingwood last week to take charge of the grocery department for The Trites-Wood Co.

J. A. Cryderman, of the Nelson Daily News, was in town several days this week on business connected with that publication.

The very newest creation in men's ties. The La Casca and Midget Teck, to be found at Crows Nest Trading Co. x

Mr. C. B. Pitblado of Kinross, Scotland arrived in Fernie on Tuesday and is the guest of his son-in-law, Mr. J. F. Jarvis, at the Victoria Hotel.

Both the Conservative and Liberal parties in the Cranbrook district are wakening up and holding meetings. It is about time similar action was taken in this district.

Mr. G. Chew, of Kalispell, has been given the contract to get out the season's logs for the Cedar Valley Improvement Co.'s mill. The contract calls for 5,000,000 feet of logs besides a running supply of 40,000feet per day.

The B. C. Furniture Co. are now prepared to do all kinds of picture framing also framing charters, diplomas, resolutions, etc., for lodges, schools and societies in the latest and most exclusive designs. A complete line of art goods are carried in stock. x

No man or woman will hesitate to speak well of Chamberlain's Stomach and Liver Tablets after once trying them. They always produce a movement of the bowels, improve the appetite and strengthen the digestion. For sale by all Druggists and Dealers.

All druggists and dealers will refund your money if you are not satisfied after using Chamberlain's Colic, Cholera and Diarrhoea Remedy. It is everywhere admitted to be the most successful remedy in use for bowel complaints and the only one that never fails. It is pleasent safe and reliable.

During the past two weeks a considerable number of miners, mostly married men with families, have come to live in Fernie. Many of these men are from England, Wales and Scotland, though some have come indirectly, having first worked at coal mining in Vancouver Island. They are an excellent class of people and the town and district welcome them to our midst. The coal company is advertising in England for men, to which cause, no doubt, this immigration is partly due.

A number of Nelson people who located timber lands in East Kootenay during the early spring and winter, were much pleased to receive the licenses for the same. The applications were sent in three and five months ago. Whatever faults the departments at Victoria may have, undue haste in dealing with legitimate applications is not one of them.—Nelson News.

Michel Picnic.

The Michel Athletic Association and the Miners' Union are holding a union picnic today. The Fernie base-ball and foot-ball teams have consented to take part, in the place of the Pincher Creek teams which backed out at the last moment. A full list of sports will be held and prizes to the extent of $300 will be distributed. A special train left Fernie at one o'clock and will return at seven. A fair crowd of Fernie people have gone to take in the celebration.

Later—The football team have been unable to gather themselves together to go to Michel this p.m. The base-ball team have with difficulty secured nine players who can get away.

The people of Coal Creek mines can now get their mail at the Trites-Wood Co. store at that place if they so desire it. A mail bag is sent up from the post office every day containing the mail of all those who wish it sent up and it is distributed by the manager of the store. It is a great advantage and until a regular office is put in no doubt this system will be widely patronized.

NOTICE.

Sealed tenders will be received up to July 22nd for warehouses to be built at Morrissey and Michel. Plans and specifications can be seen at our head office at Fernie, B. C. We reserve the right to reject any and all tenders.

THE TRITES-WOOD CO.

Fishing in the Elk was reported good until the heavy thunder showers of this week raised the water. The rain has tempered the excessive heat of the early part of the week.

A visitor from Macleod tells of an important case that was heard before Judge Sifton at that place on Wednesday. A miner named Davis who was injured in an explosion at Frank several months ago sued the Canadian-American Coal and Coke Co. for $8,000 damages. The case involved a thorough investigation into the principle of mining vertical coal seams. Chutes are used and these are supposed to be always full in order to prevent the air from passing through and thus cutting off the circulation into the more remote working parts. The plantiff claimed that one of these chutes had been emptied of coal and not refilled thus causing the gas to gather at the place where he was working. The jury brought in a verdict sustaining the claim to the amount of $1500. Two other miners named Haines and Clark lost their lives in the same explosion and it is thought that their friends will institute damage suits.

Cranbrook

From the Herald.

The liberal nominating convention will be held next Wednesday.

W. T. Reid left Tuesday for Fernie and Blairmore. Mrs. Reid and the children will return with him.

Rev. Fortune organized a Presbyterian congregation at Creston last Friday and appointed three managers. Mr. Broodfoot, of Moyie, will have charge of the services at that point.

The Crother Lumber Company is the name of the new organization that is to operate on limits located on Perry and St. Marys river. The company will have a capital of $30,000 to $50,000, and will put in its plant about eight or ten miles from Cranbrook.

The final payment of $11,500.00 was made through the Canadian Bank of Commerce Wednesday by F. L. Byron and J. E. Woods, of Frank, Alta., to John F. Sherwood, of Perry Creek. The deal was entered into about three weeks ago, when F. L. Byron took property from Mr. Sherwood. The price was $12,000, $5,000 of which was paid down at the time.

ELECTION OF PONTIFF

HOW THE NEW POPE WILL BE ELECTED.

A Popular Account of the Interesting Conclave at the Vatican, Rome—Two Thirds of the Cardinals Must Agree—A Graphic Description.

The election of the primate of Christendom has been fittingly termed the supreme administrative act of the church, and is necessarily fenced around with elaborate and extraordinary precautions.

Upon the death of the pope, the government of the church devolves upon the college of cardinals till such time as his successor is elected, and a small executive council undertakes the work of administration, the president being the camerlengo, or chamberlain, of the Holy Roman church. This high official at once takes charge of the vatican and then proceeds to verify the decease of the pope. Going with various prelates and other ecclesiastical dignitaries to the death chamber, he taps the brow of the deceased portiff three times with a very small silver hammer, and thrice calls him by his Christian name. Receiving no reply, he turns to those present and announces, "The pope is indeed dead!" He then takes possession of the fisherman's ring, which has been removed from the pope's finger, and subsequently breaks it in the presence of his fellow cardinals, at the first meeting of the sacred college.

The next days are occupied in the funeral ceremonies, which are of the most elaborate and stately character, and last about a week. The body of the deceased pontiff lies in state in St. Peter's, where vast multitudes assemble to take a last look at the face of the father of Christendom.

The actual entombment takes place at night on the third or fourth day, and it affords one of the most impressive scenes that can be imagined. The church is closed and is only lighted by the torches carried in the procession, as the body is borne from the chapel of the blessed sacrament past the high altar of the chapel of the canons, where it is deposited in a coffin of cypress wood, which is enclosed in lead and finally placed in a casket of oak or chestnut. In the inner coffin are laid purses containing coins struck in various years of the late pope's reign, and a brief history of his chief acts inscribed on parchment and enclosed in a metal tube. The inner coffins are sealed by the camerlengo and other high officials.

The tomb is situated in a niche in the wall over a door on the left-hand side of the chapel. Here the body reposes until the tomb to be erected to the pope's memory by the cardinals whom he created is ready to receive it. If it happens that at the death of the pope the coffin of his predecessor is still in this provisional tomb, it is removed to the crypt under the church.

In the meantime the vatican is being prepared for the assembly of the conclave which is to elect the new pope. All the cardinals are summoned to attend, and the rule for six hundred years has been to commence the work of election on the tenth day after the death. This worked well enough when all the cardinals were resident in Europe; but now that members of the sacred college are scattered throughout the world, it is obviously impossible for them all to arrive in time, and Pius IX. authorized the conclave to commence work as soon as two-thirds of its members were assembled, without waiting for the rest. As Leo XIII. was camerlengo at the time, and took a prominent part in drawing up these rules, it may be assumed that in new laws that he has laid down for the conclave this principle has been maintained. Many of the ancient rules have been modified, as a result of the changed position of affairs created by the loss of the temporal power.

The conclave is now held in the vatican though the cardinals are empowered to assemble elsewhere if they think fit. Several large suites of apartments are allotted for the accommodation of the cardinals and their attendants, who, together with a large staff of conclavists, or officials employed in various ways, are shut in by a door which bears four locks; two on the inside the keys of which are kept by the cardinal camerlengo, and two on the outside, which are controlled by the marshal, Prince Chigi.

The rooms are divided by temporary partitions into cells for the cardinals, each cell having an outer apartment are alotted for the accommodation apartment, which is occupied by a chaplain or other attendant. When it is remembered that a large number of persons are thus enclosed—in 1878 there were nearly two hundred and fifty—it will be apparent that the task of housing them all is no light one.

In addition to the chaplain and personal attendant that each cardinal brings with him, there are a sacristian with 5 sub sacristans; a secretary with two assistants; a prefect and five masters of ceremonies; two physicians and a dispenser; several barbers; a number of cooks and domestic servants; and a few masons, carpenters and plumbers, in case of any repairs being urgently needed.

On the day for opening the coning the conclave, a mass of the Holy Ghost is sung in St. Peter's, a sermon preached, and the cardinals enter the vatican in solemn procession. The Veni Creator is sung, and they then take the oath to observe the apostolic constitutions, after which they go to their cells, which are assigned to them by lot. All the other conclavists then take oath not to meddle in the election nor reveal any secrets that may come to their knowledge.

Later in the evning the bell rings, and the order, "Extra omnes!"—"all outside!"—is given, after which the door is locked by the camerlengo from within and the marshal from without. The camerlengo and three other cardinals then make a tour of inspection throughout the building to see that everything is in order and that no strangers are present.

The door of the conclave is that of the Sala Regia, at the top of the marshal's staircase. All other doors giving access to that part of the vatican have been previously walled up. Beside this door are four turns, similar to those sometimes seen in the walls of kitchens, through which correspondence and food are passed. One of these turns is closely guarded by bishops, another by prothonotaries, the remaining two being in charge of the papal tribunals.

The cardinals are at liberty to receive letters on personal or family matters, but not communications bearing upon the elections. To ensure the observance of this rule all correspondence passing through the turns, either from within or without, is read by the guardians, unless it is marked "private," in which case it goes direct to the secretary of the conclave, and is read by the chiefs of orders—certain cardinals who are responsible for the direction of each day's business—who, if they think, fit, may read it to the whole college.

Newspapers and books are admitted without restriction, and a cardinal may go to the turn to speak to anyone, but only in the presence of its guardians.

Should a cardinal arrive after the conclave has assembled, he has the right of admission, and the marshal without communicates with the camerlengo within, and arranges a convenient time for the door to be unlocked. The new arrival is met by the whole college who have assembled in the royal nall to welcome him, and advantage is taken of the open door to admit fresh conclavists and any articles that may be needed, as well as to pass out anyone who through ill health or other reasons finds it necessary to leave the conclave.

The door can also be opened to allow a sick cardinal to pass out, but he is not allowed to re-enter. Owing to the age and infirmities of many of the members of the sacred college, it is not uncommon for some of them to be taken ill, especially in the case of a protracted conclave in the unhealthy months of the summer, when malaria is apt to be prevalent in Rome. Occasionally cardinals have died in the conclave.

The day's routine is almost monastic in its regularity. The first day of the conclave begins with the community mass at 8 o'clock in the Pauline chapel. This mass is celebrated by the dean or senior cardinal, and at all the members of the sacred college communicate. Afterwards they return to their cells to take the morning collation.

On all other days each cardinal says mass in his cell at whatever time suits him best, but all who are not unwell assist also at the community mass, which is said every morning by the bishop-sacristan. At its close all proceed to the hall of election, where the morning voting takes place.

About noon all return to their cells where dinner is served separately to each, and the short siesta, common in southern countries, follows. After this those who feel disposed to take exercise in the corridors or pay visits to each other's cells, until three or four o'clock, when all assemble for the afternoon scrutiny. This is followed by transaction of miscellaneous business of the conclave by the various officials, and if anything very important arises a meeting of the college may be held to discuss it. Towards nine or ten o'clock supper is served, after which the bell rings, and the order, "In cellam, domini"—"In your cells, my lords"—gives the signal for retiring. But a good deal of visiting from cell to cell goes on, and the conclavists—who are not always as discreet as their masters—wander freely about the corridors, discussing the affairs of the day. If a cardinal wishes to be alone, his servant places at the door of the cell two bars of wood, somewhat like a St. Andrew's cross, as a signal that his eminence is not visible.

The voting takes place in the Sixtine school, which is entered from the royal hall, which in its marvellous mural decorations is only next in beauty to the chapel, to which it serves as an ante-chamber. Ranged around the chapel are the thrones of the cardinals, each surmounted by a canopy in token of the joint sovereignty of the members of the sacred college during the vacancy of the Apostolic See. The dean, or senior cardinal, occupies the first throne on the gospel or north side of the altar, and after him in order of seniority, come the cardinal bishops, priests and deacons, the junior cardinal deacon sitting on the throne nearest the altar on the Epistle or south side.

Before each throne is a small table, supported with writing materials, while in the middle of the chapel are six other tables, provided for the use of any cardinals who may be afraid of being overlooked by their neighbors while filling n the voting papers. All the tables are provided with sealing wax abd tapers for use in closing the papers in the manner to be described.

There are three methods by which a pope may be elected—those of acclamation, compromise and scrutiny. In the first case all the cardinals leave their thrones to do homage to one of their number, who—subject to his own consent—thereby becomes pope. Here there is absolute unanimity, but no instance of election by acclamation has occurred for about three hundred years.

The method of compromise is only adopted in the case of an extremely protracted election, when there seems no prospect of a two-thirds majority agreeing upon any one candidate. The cardinals then appoint a small committee to settle the matter and pledge themselves to accept its decision.

The usual method is that of scrutiny, or ballot. The rules are that every cardinal present must vote, no one can vote for himself, a two-thirds majority is necessary for an election, and the voting must be absolutely secret.

It is to secure the last of these conditions that a very ingenious voting paper has been adopted. It is divided into three compartments, in the first of which the cardinal writes his own name, in the second that of the candidate for whom he votes, and in the third a motto and number.

The first and third compartments are then folded twice and sealed down at both sides, so that only the middle compartment can be seen by the scrutineers. The back of the voting papers, behind the spaces for the name and motto of the voter, is covered with fancy printing that the writing may not show through.

Although the instructions for filling in, folding and sealing these voting papers are most clear and precise, a surprising number of mistakes sometimes occur. At the conclave that elected Leo XIII. several papers in the first scrutiny were rejected because improperly sealed; in the second scrutiny one of them was utterly illegible; and in the third one of the cardinals was found to have voted for cardinal Nobody!

At each assembly of the conclave, three cardinals are elected as scrutineers, and three infirmarians. The duty of the latter is to take the votes of any of the cardinals who may be confined to their cells by sickness.

In voting, the electors in order of seniority go to the altar, where each kneels for a few minutes in private prayer. He then rises and holds his voting paper over a large chalice which stands on the altar, and audibly takes oath that he is voting for the man he sincerely believes to be the most suitable; after which he places the paper on the paten and lets it slide into the chalice.

The next business is to count the votes. The chalice is shaken to mix the papers, which are then counted into a second chalice, in order to see if they correspond in number with the cardinals present. If they do not, they are burnt, and a fresh vote taken.

Each voting paper is taken from the chalice by the first scrutineer, who looks at the name voted for and hands the paper to the second scrutineer, who, after looking at it, gives it to the third, who reads the name aloud. All the cardinals then make a mark against that name on their lists.

When all the votes have been read out, the papers are pierced and threaded on a string. If no one has obtained the necessary two-thirds majority, a second vote is taken, which is known as that of accession. This is done in order that if any candidate has received a large number of votes, any cardinal who may please may transfer their votes to him, and so bring about an election without further delay. No one can vote again for the same person, but each is obliged to hand in a voting paper, though he need not insert anyone's name in it.

The votes thus acceded are now added to those previously given, and if no candidate has secured the necessary majority, the papers are mixed with some damp straw and burnt in a small stove, placed in the chapel for this purpose. The appearance of smoke from the flue is the signal to the people outside that the pope is not yet elected.

When either by scrutiny or accession, it appears that someone has received a two-thirds majority of the votes, the papers are re-counted, and in various ways examined to see that everything to see that everything is in order. Should the majority be exactly two-thirds of the total votes recorded, the papers are opened and the names of those voting in the majority examined, in order to make sure that the elected cardinal did not vote for himself.

If all is proved correct three cardinals are chosen by lot to act as revisers, and these re-count and check the voting papers. When they certify that the pope is elected the papers are burnt, but without any damp straw.

The secretary of the conclave and the master of ceremonies are now summoned, and the dean proceeds with them to the throne of the newly-elected pope, and asks if he is willing to accept office. Should he consent the canopies over all the thrones but his own are at once lowered, in token that the temporary joint sovereignty of the sacred college is at an end.

The new pope now proceeds to the altar, and, after spending a short time in prayer, is conducted to a vestry, where he assumes the usual papal dress, after which he returns to the altar and receives the homage of the cardinals. This is sometimes known as the adoration, and the absurd notion has gone abroad that divine worship is paid to the pope. It need hardly be added that this is utterly untrue.

Later, the election is announced from the balcony of St. Peter's by the senior cardinal deacon, and the new pope's first public act is to give the apostolic benediction to the city and the world from the loggia of the cathedral.

Hon. A. G. Blair has resigned from the Dominion cabinet on account of a disagreement about the eastern section of the Grand Trunk Pacific.

Usually the spinster willingly accepts the inevitable when it meanders along in trousers.

HIS TRAGIC END

CHIEF ARTHUR DIED WHILE MAKING A SPEECH.

Venerated Head of the Brotherhood of Locomotive Engineers Drops Dead While Returning Thanks for a Presentation from Winnipeg Engineers.

The final meeting of the convention of the Brotherhood of Locomotive Engineers came to a tragic termination in Winnipeg shortly after midnight on Thursday last.

The banquet, which was given by the local lodge of the Brotherhood, started at 9 o'clock. At midnight the Winnipeg lodge presented P. M. Arthur, grand chief of the order, with a miniature engine and tender made of purple and white artificial flowers. In a few words he commenced to thank them for the gift. He paused. He then said:

"We are here to-night, and we don't know where we will all be to-morrow." Before he added another word to this sentence, he reeled forward and fell from the diaz. Several near the platform rushed to his assistance, but found him dead, and immediately the hall full of people was thrown into the utmost confusion. Strong men reeled under the shock and women threatened hysterics.

Dr. J. A. McArthur, who was sent for, said death was caused by heart failure due to emotion.

Mr. Arthur was born in Paisley, Scotland, in 1828, and came to America ten years later, and did not revisit the old land for 52 years. He has been connected with the Brotherhood since 1863, when it was first first organized, and in 1868 he was appointed grand auditor Five years later, in 1873, he was appointed to the head of this great body and has been grand chief ever since.

TERRIFIC EXPLOSION.

Twelve Chinamen Meet Death in a British Columbia Coal Mine.

A dispatch from Nanaimo, B.C., says: By an explosion of fire damp in No. 6 mine at Cumberland, B.C., where fifty Chinamen and four white men were employed, twelve Chinamen were killed and eight injured. Very little damage to property was done.

Since the strike the mine has been worked entirely by Mongolians, with a few white overmen. The mine was very gassy, safety lamps being used always. The explosion occurred about 7.30, just after lunch, when the mine was in the most dangerous condition as the shots were fired just before lunch. This was the mine where a big explosion occurred two years ago by which fifty men were killed.

Nothing was known of the disaster at the surface until two Chinamen came up in an excited condition, followed by others at short intervals, the explosion having bad no effect beyond a section of the original wall being broken.

A rescue party, headed by Manager Matthews and composed of white overmen, went down and penetrated to the scene of the disaster, getting out the injured as fast as possible. Deadly black damp made this a slow and dangerous process.

THE WIDE WORLD.

CURRENCY IN SOUDAN.

Travellers Use Slaves Instead of Coin to Pay Expenses.

Within the past three months British troops under Sir Francis Lugard have put an end to the supremacy of the Sultan Sokoto, east of the Niger River, in the Central Soudan. They have also occupied the famous town of Kano and subjected its Sultan. The British flag is now supreme in the great country of the Hausa tribes between the Niger and Lake Tchad.

One of the most significant announcements in a long time relating to Africa is the statement in the London Times that the British now propose to make an end, once for all, to slave raiding and the slave traffic throughout the Hausa country.

The overshadowing evil of the Central Soudan is slave raiding and the traffic in slaves. Up to this year the evil has been entirely unchecked by any Caucasian influence, and there is probably no other part of Africa of equal size where the slave traffic in recent years has flourished as in the Hausa country.

Most of the slaves are obtained, not from outside of Hausaland, but from Hausa villages and towns. The captors belong to the same tribe and race as the persons they enslave. The result is that the country has practically been in a condition of perpetual civil war.

A petty Sultan at any time is likely to receive a message from his superior lord ordering him to send at once a certain number of slaves on pain of having his own towns raided. He accordingly selects some village within his territory or outside of it, against which he quietly sends a force large enough to overcome all resistance, attacks the town and carries off the inhabitants.

Those who resist are killed on the spot and the remainer are marched away in fetters. Many of them have been included in the annual tribute payable to the Sultan of Sokoto, while others are sent to some other central slave market to be sold or taken back to the town of their captors.

When C. H. Robinson traveled in Hausaland a few years ago he said that about 1,000 slaves were brought into Kano on a single occasion as a result of a slave-raiding expedition. Between Kano and Bida he passed a large number of towns and villages that had recently been destroyed and whose inhabitants had been sold as slaves. This was done not by foreign invaders, but by the Sultan in whose territory the towns were included.

He found that slaves are to a large extent the currency of the country. A native who is about to travel usually takes with him slaves proportionate in number to the length of his journey. After traveling perhaps 100 miles, he will sell a slave and then travel another 100 miles, when he will sell a second, and thus by the time he returns home he will have sold all his slaves and devoted the money to paying all expenses of his journey.

The maximum price for a 14-year-old girl in Kano is about $35 to $50. A young man of 18 brings about $30, a man of 30 about $20—the price decreasing as the age advances.

This one of the more thickly peopled parts of Africa, and it will be a great blessing to hundreds of thousands when the terrible evil of slave raiding is thoroughly suppressed. Life is not secure in Hausaland. Few persons know whether they will continue to have a home, a family and liberty from one week's end to another.

The certainty that the British have the power and the intention to suppress this terrible evil betokes better days and more prosperous and peaceful times for this region, which in spite of the barbarism from which it has suffered, is in many respects more highly developed than most parts of tropical Africa.—New York Sun.

THOUGHT IT HUMANE

REMARKABLE STORY OF A LOVER'S CRIME.

A German Factory Hand Kills His Sweetheart, Who Had Made a Bad Job of Suicide—He is Sentenced to One Year's Imprisonment.

A remarkable murder trial has just been concluded at Berlin, Germany.

Hugo Noecker, a young married man, employed as clerk in a textile factory, fell in love with a young unmarried woman named Martha Kersten, who also worked in the same place.

Noecker's wife became suspicious of the relations between the two, and finally intercepted them walking together on their way home from work. She created a violent scene, and accused the young woman of having robbed her of her husband's affections.

Some time before this occurrence the girl had implored Noecker either to give her up or to commit suicide with her, and after the scene with the wife the two went away to Spandau. Here, after they had purchased two shrouds, they went to an hotel, intending to take some poison which Noecker had been carrying around with him.

After robing themselves in the shrouds they took the poison. They lay down and waited for death, but it did not come, the poison having lost its potency by being carried about so long with exposure to the air.

Morning came and both were alive. Then they went out, and Noecker, at the girl's earnest request, bought a revolver and some more poison. All day long they walked about the streets waiting for evening, and when darkness at last fell they dragged themselves to a neighboring wood.

Again they took poison, but again it failed to act, and then, according to Noecker's story, the girl suddenly snatched the revolver from his hand and fired it into her temple. It did not kill her at once and she lay writhing and groaning on the ground beside him.

"I did not at first know what to do," said Noecker. "It was a horrible sight. But suddenly it came to me that the only humane thing to do would be to end the poor girl's sufferings, and so I placed the pistol to her forehead and fired it again. Her struggles ceased at once and she was dead."

He then fired a bullet at himself, and said he remembered no more until ten days later, when he found himself at his wife's house in a terrible condition of emaciation and raggedness.

The girl's body was found in the wood, evidently having been laid out as if for her gtave. Her clothing was neatly folded about her, her hands were placed together on her breast, while a sunshade was opened and placed over her head in order to keep the birds off.

Noecker, who was charged with the murder of the girl, affirmed that he was so impelled to put her out of her agony that he could not help killing her, and the jury took a merciful view of the case. He was sentenced to one year's imprisonment.

Hudson's Bay as a Grain Route.

The Canadian government has chartered the Newfoundland sealing vessel Neptune to convey a scientific expedition to Hudson's Bay. The expedition will winter at Chesterfield inlet. Its object is to determine the availability of the region for a Canadian grain route.

Capt. Samuel Barlett, for several years navigator of the Peary steamers is in command of the ship, the crew of which consists of Newfoundlanders familiar with ice work. The scientific party is composed of Canadians. The ship will also enforce the Canadian customs laws against American whalers who are operating in Hudson's Bay. This is the second seal ship chartered within a month, the British admiralty recently securing the Terra Nova to convey a relief expedition to the Antarctic steamer Discovery.

Gruesome Find on Lake Beach.

St. Thomas, July 18.—A young lady, one of the summer resort colony at Port Stanley, made a gruesome discovery on the beach about 5 o'clock yesterday afternoon. In almost the same spot where the body of the London man was found a few weeks ago, lay the body of a woman washed up on the sand. It was stylishly dressed, with beautiful underwear, and wearing high-heeled French kid shoes. An ugly cut was on the right temple, which gives rise to a suspicion of foul play. The woman was young and good looking, and had been in the water but a short time apparently.

David Hartwick, who resides on a modest farm near Arden, in Kennebec township, determined to build a new house and began blasting out a cellar. He thought the rock was of a peculiar color and unusually heavy. He had the samples assayed and was surprised to learn that it was worth $90 to the ton. Of this amount $60 was in pure gold and $30 in silver, copper and other metals. He has delayed building the house.

A dispatch from Detroit says: The names of 13 boys ranging from the age of 5 to 18 years, have been added to the list of those who have died in Michigan from lockjaw caused by the explosions of toy pistols on independence day.

FERNIE FREE PRESS.

FERNIE, B.C.

WHAT A MOTHER SAYS.

"It gives me great pleasure to say a good word for Baby's Own Tablets. At the age of two months my baby was dreadfully constipated. He could not digest his food and screamed incessantly. I was almost in despair, but since giving him the Tablets he has been well and is growing splendidly." Such is the testimony of Mrs. S. Craig, 329 Bathurst Street, Toronto, and thousands of other mothers speak in a similar strain.

Summer is here and mothers should take special pains to guard their little ones against illness. At this season infant mortality is at its greatest; colic, diarrhoea and summer complaints can be guarded against and prevented by the use of Baby's Own Tablets. Keep a box in the house—they may save your little one's life. Sold by all druggists or may be had by mail, at 25c. a box by addressing The Dr. Williams Medicine Co., Brockville, Ont.

Work may have slain its thousands, but the struggle to avoid work numbers its victims by the tens of thousands.

Is There an American Face?

The English face, the Jewish face, the Irish face, the Italian face, the Chinese face, the Japanese face, the French face, the Indian face, even the negro face—all these have something about them which calls up a definite picture in one's mind. But the American face has no strong characteristic to differentiate it from other faces of superior races, remarks London Health. It is international, for here and there one may find the traces which suggest a relation to this, that or the other face. It may be a line or a ligament bequeathed by an early English ancestry, or something suggestive of Teutonic origin, or a sharp suggestion of the Frenchman's face or the Irishman's or the Italian's or the Scotchman's. But when one must deal with the American abstractly one can scarcely call up the American face.

Uncle Sam, with his striped trousers, his sharply cut coat, his plug hat, his whiskers and his bland, good natured countenance, is a happy conception, yet he may never hope to portray the matchless and indescribable cosmopolitanism of the American face.

Mufti and Gold Lace.

Officers of the army on duty in the war department wear uniforms the same as if they were on duty at military posts. The practice has resulted in making nearly every room occupied by officers a dressing room, where wardrobes are kept. Most officers dislike very much to appear on the street in uniform; it makes them too conspicuous. Uniforms for use in the department are kept in a wardrobe, and the officers put them on when they arrive in the morning, take them off and don civilian dress to go to luncheon, and upon their return in the afternoon and departure for home later go through the same process. They don't like it, but it is an order. For people doing business at the department it is much better, for a stranger knows whether he is talking with an officer or a clerk, and if familiar with the emblems can tell the rank of the officer.

Precious Seeds.

The calceolaria seed is so minute that the actual cost of producing the finest strain exceeds ten times the weight of the seed in pure gold! The outlay in growing double begonia seed is so great that a liberal allowance for a five shilling packet is measured in a tiny spoon with an outside diameter of three-sixteenths of an inch. And yet in that tiny spoonful there would be enough seed to produce more than a hundred stately begonia plants! Naturally such very minute and precious seed has to be handled with extreme care, and as a sudden draft from an open door would scatter perhaps £100 worth, the counters where the seeds are packeted are closed to traffic and so arranged that not a puff of wind can ever enter. —London Chronicle.

Timber Books.

There is at Cassel a library probably unique in the world. It is bound in timber, printed on timber pages—possibly from wood blocks—and deals exclusively with timber. The library in question is the Holzbiblistek, which was compiled at the end of the last century by Karl Schieldbach and is composed of about 500 volumes made from trees in the park at Wilhelmshohe. Every volume bears on a tab—not in timber, but, queerly enough, in morocco—the name of the tree from which it was obtained. There are plates of the tree in all stages of its growth, and the letterpress is a treatise on the foresting and natural history of the tree.

The Panama Silk Tree.

One of the greatest curiosities of the Panama isthmus is the vegetable silk tree. It is a plant that grows from fifteen to twenty feet high, and in appearance does not differ greatly from other trees, but the inner bark is a perfect silky fiber, long, smooth and strong. The natives separate it by some method best known to themselves, the process somewhat resembling that of beating flax. When once it is separated and spun into threads, it can be woven into a fabric so closely resembling silk that it is difficult for any one not familiar with it to distinguish between the two.

His Apology.

Mrs. Minks—I don't want to make a scene, but that man over there is staring at me very offensively.

Mr. Minks—He is, eh? I'll speak to him.

Mrs. Minks (a few moments later)—Did he apologize?

Mr. Minks—Y-e-s; he said he was looking for his mother and thought at first that you were she.

Just to Make Sure.

Customer (to waiter who has brought him a beefsteak very much underdone) —Waiter, just send for the butcher, will you?

Waiter—Why, sir?

Customer—This steak doesn't seem to be quite dead yet!

Entirely Right.

Tess—Oh, yes, I feel pretty sure of him. I rejected him when he proposed first because I was positive he'd try again.

Jess—And you were right. He did try again, and I accepted him.—Stray Stories.

Comeliness In Several Forms.

A Burmese proverb says: A priest is comely if he be lean; a four footed beast is comely when he is fat; a man becometh comely when he is wise, and a woman when she hath a husband.

A luxury becomes a necessity just as soon as we can afford to have it.—Puck.

COULDN'T PUT HIS COAT ON

Remarkable Cure of Dropsy by Dodd's Kidney Pills.

George Robertson, of Montreal, a Physical Wreck, Restored to Splendid Health by the Great Kidney Remedy.

Montreal, July 20—(Special).—The case of George Robertson, of 392 James street, this city, is looked upon by those interested in medical matters as one of the most interesting on record. Mr. Robertson was a sufferer from Dropsy, and was so bad that tapping was resorted to. Dodd's Kidney Pills cured him.

Interviewed regarding his cure, Mr. Robertson said: "I was troubled with Dropsy and Rheumatism for five years. I was a total wreck before I started to use Dodd's Kidney Pills. Before I got out of bed in the morning I could hardly put my feet on the floor, they were swollen so much from Dropsy.

"My arms used to swell at times, so that I could not put my coat on. Before I had taken two boxes of Dodd's Kidney Pills I felt greatly relieved. Seven boxes cured me completely. I also had lumbago, but since I used Dodd's Kidney Pills I don't know what it is to be sick."

Dropsy, Lumbago and Rheumatism are all caused by diseased Kidneys. There can be no diseased Kidneys when Dodd's Kidney Pills are used.

Hall Caine locates the scene of the bravest deed with which he is acquainted at the Vatican. "The hero of the incident in question," he writes, "was that venerable nonogenarian, Pope Leo XIII., who, on the occasion of our first interview, actually confessed that he had never read one of my books."

COULD NOT SLEEP.

ON ACCOUNT OF HEADACHES AND PAINS IN THE SIDE.

The Sad Condition of a Bright Little Girl Until Dr. Williams' Pink Pills Came to Her Rescue.

Many young girls, seemingly in the best of health, suddenly grow listless and lose strength. The color leaves their cheeks; they become thin, have little or no appetite, and suffer from headaches and other bodily pain. Such was the case of Bessie, youngest daughter of Mr. Chas. Cobleigh, Eaton Corner, Que. Speaking of his daughter's illness and subsequent cure, Mr. Cobleigh says:—"Up to the age of eleven, Bessie had always enjoyed the best of health, and took great pleasure in out-of-door play. Suddenly, however, she seemed to lose her energy; her appetite failed her; she grew thin and pale; slept badly at night, and complained of distressing headaches in the morning. We thought that rest would be beneficial to her, and so kept her from school, but instead of regaining her strength, she grew weaker and weaker. To make matters worse, she began to suffer from pains in the side, which were almost past endurance. At this stage we decided to try Dr. Williams' Pink Pills. After a couple of weeks, the good effect of this medicine was decidedly apparent. Bessie became more cheerful, her step quicker, her eyes were brighter, and she seemed more like her former self. We continued giving her the pills for several weeks longer, until we felt that she had fully recovered her health and strength. I honestly believe had it not been for Dr. Williams' Pink Pills, our daughter would not have recovered her health and strength, and I shall always have a good word to say for this medicine."

Dr. Williams' Pink Pills will cure all troubles that arise from poverty of the blood or weak nerves. Among such troubles may be classed anaemia, headache, neuralgia, erysipelas, rheumatism, heart ailments, dyspepsia, partial paralysis, St. Vitus dance, and the ailments that render miserable the lives of so many women. Be sure you get the genuine, with the full name, "Dr. Williams' Pink Pills for Pale People," on the wrapper around every box. Sold by all medicine dealers, or sent by mail, post paid, at 50c per box, or six boxes for $2.50, by writing direct to the Dr. Williams Medicine Company, Brockville, Ont.

No man is wise who is unable to realize the uncertainty of a sure thing.

Eight persons were killed in a railway accident near Liverpool, England. The train ran off the track.

It is said of Sir Frank Green, Lord Mayor of London in 1900-1901, who recently died, that the first sight he saw on going to London as a country boy was the Lord Mayor's show, which took place on the day of his arrival, and that he became Lord Mayor himself exactly fifty years after.

SUNLIGHT SOAP REDUCES EXPENSE

Ask for the Octagon Bar.

Opera Under Difficulties.

Signor Arditi tells the following story in his autobiography: "During my first long stay in America our company was announced for one night, during a terribly cold winter, at Washington. Shall I ever forget the bitter cold of that season? It was as though we had suddenly been transported to the arctic regions, and the theater in which we had our performance was as inadequate to cope with the frost as though we had fixed up a summer tent for the purpose. 'Norma' was the opera, and Grisi, instead of appearing in her traditional white robe with flowing folds, was compelled to come on the stage wearing a huge fur cloak in which she was huddled up almost to her eyes. The house only really rose to the occasion with loud bursts of laughter when Mario made his entrance holding a coachman's umbrella over his head—he, as Pollio, being confronted by Norma in their tragical meeting—under which prosaic safeguards both artists cowered while singing their grand duo. The roof of the theater had given way under the weight of a heavy fall of snow, and its coating of ice, melting under the heat of the gas, was streaming down on the artists."

Ancient Ideas of Africa.

In mediæval times Africa was an unknown continent as well as Asia. Until a few years after the discovery of Columbus no one had sailed around it, and it was quite generally thought, as it had previously been thought in regard to Asia, that the African continent extended on and on indefinitely. It was supposed that far to the south was the zone of heat, in which no human being could live. This was by no means an unreasonable inference to the ancients. They knew that the farther they sailed to the north the colder it grew and that in the extreme north was a region of perpetual ice and snow.

They also knew that the farther they sailed to the south the warmer it grew, and what was more natural for them to suppose that if they went far enough in that direction they would come upon lands that were parched and baked and upon seas that boiled, where nothing could live but salamanders?

He Could Wield an Ax.

Queer and racy are the tales told of the skill of the Maine shipbuilders in the use of the adz and broadax. One old time yarn is of a carpenter who applied very drunk at a shipyard for employment. In order to have a little fun with him the foreman set him to give a proof of his skill by hewing out a wooden bolt with no chopping block but a stone. The carpenter accomplished his difficult task without marring the keen edge of the broadax and showed the foreman a neatly made bolt. Then he brought the ax down with a terrific blow that shattered its edge upon the stone. "I can hew fust rate on your chopping block," he hiccoughed, "but I'll be blamed if I can make the ax stick in it when I git through." The story runs that the foreman lost no time in employing such a workman.

How the Patent Office Was Saved.

When in the war of 1812 the British, who had taken Washington, trained their guns upon the patent office, Dr. Thornton, throwing himself directly before the guns, cried:

"Are you Englishmen or Goths and Vandals? This is the patent office—a depository of the ingenuity and inventions of the American nation, in which the whole civilized world is interested. Would you destroy it? Then let the charge pass through my body."

And the building was spared. Twenty-four years afterward, however, it was destroyed by fire, together with everything in it.

Localizing Her Emotions.

Our minister during a call sang one of those touching, simple melodies which Edith is so fond of hearing. She was very attentive, gazing on his face with her bright, wondering eyes. As the song continued tears began to glisten beneath the lids and glide down her dimpled cheeks. After a few minutes' silence he asked:

"Edith, how do you like it?"

"Oh, very much, Mr. Webb; but it hurts my eyes."

Her Troubles.

Single Man (to himself)—I am sure that darling little angel loves me. She takes me into her confidence and tells me all her troubles.

Same Man (some years later)—Confound it all! From morning till night and night till morning when I'm at home I hear nothing but tales about the servants, the butcher, the butler, the baker, the candlestick maker and all the rest of 'em.

An Eye For Business.

"I am afraid the nobleman who is to become your son-in-law has not much talent for business."

"I don't know," answered Mr. Cumrox. "If he can manage to get as good prices for other merchandise as he does for a title I'll trust him to take his chances in business."

Mending.

Mix—I noticed your wife sitting by the window sewing this morning. I thought you told me yesterday she was ill.

Dix—So she was, but today she's on the mend.

Borrowed Plumes.

"Some folks' ideas," said Uncle Eben, "is jes' like an ostrich's feathers. Dey doesn' 'mount to nuffin' in partickler till dey gets into de possession of somebody else."

Fisherman's Luck.

"So you think justice should be represented with a rod and reel?" "Yes, of course! The big fish most always get away."

A LITTLE LIGHT

on the subject of good

BREAD.

To make the best bread you must obtain the best flour. Bread made from common brands of flour cannot hold a candle to bread made from

Ogilvie's Hungarian.

That's a strong assertion we'll admit, but we firmly believe that this flour not only has no superior, but has no equal.

The Ogilvie Flour Mills Co., Ltd.

Mr. Speaker and Gentlemen:

I take this opportunity of saying to you that this cigar, to which the maker has courteously given my name, is the most deliciously fragrant weed I have ever smoked, and here is another instant of the supremacy of the Canadian manufacturer.

THE **Chamberlain CIGAR** is worthy of its name.

It puts cows in perfect health, and increases the flow of milk.
DICK'S gives horses a smooth glossy coat, and puts life and spirit into them.
Try a package with any run-down animal you may have and you will be convinced.
50 cents a package.
LEEMING, MILES & CO., AGENTS, MONTREAL

The British admiralty has directed that the time interval between guns firing salutes is to be reduced from ten to five seconds.

Parmelee's Pills possess the power of acting specifically upon the diseased organs, stimulating to action the dormant energies of the system, thereby removing disease. In fact, so great is the power of this medicine to cleanse and purify, that diseases of almost every name and nature are driven from the body. Mr. P. Carswell, Carswell P. O., Ont., writes: "I have tried Parmelee's Pills and find them an excellent medicine, and one that will sell well."

Probably there is nothing more touching than the youth who is struggling with a moustache.

In his Vegetable Pills, Dr. Parmelee has given to the world the fruits of long scientific research in the whole realm of medical science, combined with new and valuable discoveries never before known to man. For delicate and debilitated constitutions Parmelee's Pills act like a charm. Taken in small doses the effect is both a tonic and a stimulant, mildly exciting the secretions of the body, giving tone and vigor.

In the British army there are 11,000 men at least 5 feet 11 inches in height.

Even when a woman is up against a lot of worry she doesn't forget to see that her hat is on straight.

All men may be born equal, but it doesn't take the majority of them long to live it down.

Minard's Liniment Cures Diphtheria.

A man who will not listen to reason soon becomes a crank that cannot be turned.

Speech is silver—and the free and unlimited coinage thereof is something terrific.

Flies Carry Contagion

Wilson's Fly Pads

kill the flies and disease germs too.

Teacher—Which letter is the next one to the letter "H"?

Boy—Dunno, ma'am.

"What have I on both sides of my nose?"

"Freckles, ma'am."

Minard's Liniment Cures Distemper.

A woman dislikes to hear a man talk shop almost as much as a man dislikes to hear a woman talk shopping.

The Mattress.

Some one has been hunting up the history of the mattress. Its beginning was the collection of rags, husks or reeds which were bound together and thrown down anywhere to form a resting place for the hinds and serfs of the rich. It is suggested that their names of shakedown and makeshift were derived originally from the Arabic word "matrah." In the middle ages feather beds found favor with the wealthy and the mattress was not used by them. Inventories of estates owned by the American colonists show that mattresses were then worth $200 each, being made of hair. In England mattresses of rabbits' fur were once used and vegetable fibers of various kinds have served their turn.

W. N. U. No. 438.

MORRISSEY

From The Despatch

Fishing is all the rage at present Morrissey Creek is yielding splendid sport for the local fishermen and half the citizens of the town may be seen almost any evenjng wending their way home with a good string of trout.

J. D. McDonald, Gen. Supt. of the West Kootenay Power and Light Co., of Bonnington Falls, visited the town with Gen. Supt. Stockett on Wednesday to arrange for the installation of the electric light plant. The proposed plant will have a capacity of three thousand incandescent lights.

Dr. Willson, was in Fernie last night on business in connection with the holding of a Liberal Convention for this district. The doctor is one of the most prominent Liberals in this section and his name has been suggested as the probable choice of the coming convention.

Six car loads of pipes have arrived for the new waterworks system and two others are on the way. The pipe when completed to the townsite will be between sixteen and eighteen thousand feet long. Seventy-five men are at work on the construction and they expect to have the water system completed next month.

No steps have been taken yet toward the erection of a jail here. The attention of the government is called to the pressing need of such an institution at this point. All prisoners have to be taken to Fernie as soon as placed under arrest as there is no place where they can be confined here with safety even for a brief period.

Some little excitment was caused on Tuesday evening when F. Moncuso's horse ran away. He had been up delivering groceries at the mines and while returning, the box of the wagon suddenly collapsed and the horse evidently thought it time to be getting home, so he immediatly struck up a 2:10 gait for home, leaving the driver about a mile in the rear. The wagon was badly damaged.

FRANK AND BLAIRMORE.

(From The Blairmore Times.)

The C. P. R. who sometime ago distributed heavy steel rails along their line here have gathered them up again and shipped them west to be used on some new work. This was done owing to the fact that they were unable to procure steel for their new branches, and were forced to use this steel and abandon the laying of heavy steel here for the present.

At Frank considerable work is being carried on by the Canadian-American Coal Co. of that place. This company who were the principal sufferers from the big rock slide have bravely gone to work to reopen the mine and again put it on a paying basis. Their new shaft near the railroad switch is now down over 100 feet and good progress in sinking is being made. A tipple has been completed at the new entry started on the north side of the track and a spur built in to it from the main line, and coal is being shipped daily.

Work on the Lille Collieries, up Gold Creek, is being pushed so as to have their big property in shape to commence shipping on a large scale just as soon as the railroad to the property is in condition to carry freight. The piece of railroad that was destroyed by the Frank rock slide is again ready for the steel and the men are at work upon the extension at the upper end of the line to Grassy mountain. Work upon the coke ovens is well under way and with the arrival of the material from the Old Country will be rushed to completion. When these ovens are in operation they will be the first Solvey ovens to be operated in the Dominion.

BORN.

Regeto—at Fernie on July 19th the wife of George Regeto of a son.

Rubrick—at Fernie on July 19th the wife of Joseph Kubrick of a daughter.

Rubala—at Michel on July 23rd the wife of Thomas Rubalo ofaa daughter.

MARRIED.

Gabara—Capala—At the Roman catholic church on July 20th, by Rev. Father Milleux, John Gabara to Theresa Capala, both of Fernie.

Notice is hereby given that 30 days after date I intend to apply to the Chief commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay:

Commencing at a post 280 chains west of a post marked (Port No. 1) situated on the line of the west boundary of lof 6033, group one, Kootenay district, and one mile south of P. Buhl's pre-emption, thence running south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to place of commencement. M. H. GRIMES.
Dated May 20th, 1903. 233-4t

Dated May 21st, 1903.

INGRAM & McINTYRE

THE CITY BARBERS.

Shop in the Royal Hotel.

Notice is hereby given that 30 days after date we intend to apply to the chief commissioner of Lands and Works at Victoria for a special license to prospect for coal and petroleum upon lands situated north of the 35 mile line on Fording river, in South East Kooteday district, British Columbia, and described as follows:

1. Commencing at a post planted eight miles north of the 35 mile line on Fording river, joining James A. Sutherland's coal and petroleum claim at the north-west corner, thence 80 chains north, thenc 80 chains east, thence 80 chains south, thence 80 chains west to point of commencement and containing 640 acres.
Dated June 16, 1903. A. MORROW.
F. R. DELZELL, Agent.

2. Commencing at a post planted at the north-west corner of A. Morrow's coal and petroleum claim and marked H. Hill's south-west corner, thence north 80 chains, thence east 80 chains, thence south 80 chains, thence west 80 chains to place of commencement.
Dated June 16, 1903. H. HILL.
F. R. DELZELL, Agent.

3. Commencing at a post planted at the north-west corner of H. Hill's coal and petroleum claim and marked B. Laidley's south-west corner, thence north 80 chains, thence east 80 chains, thence south 80 chains, thence west 80 chains to place of commencement.
Dated June 16, 1903. B. LAIDLEY.
F. R. DELZELL, Agent.

4. Commencing at a post planted one-half a mile east of B. Laidley's north-west corner, and marked M. A. Taylor's south-west corner, thence north 80 chains thence east 80 chains, thence south 80 chains, thence west 80 chains to place of commencement. M. A. TAYLOR.
Dated June 16, 1903. F. R. DELZELL, Agt.

5. Commencing at a post planted one-half a mile east of M. A. Taylor's north-west corner, and marked C. Laidley's south-east corner, thence north 80 chains, thence east 80 chains thence south 80 chains, thence west 80 chains to place of commencement. C. LAIDLEY.
Dated June 16, 1903. F. R. Delzell, Agent.

6. Commencing at a post planted at C. Laidley's north-east corner and marked R. L. Henderson's north-west corner, thence 80 chains east, thence 80 chains south, thence 80 chains west, thence 80 chains north to place of commencement.
Dated June 16, 1903. R. L. HENDERSON.
F. R. DELZELL, Agent.

7. Commencing at a post planted at the north-east corner of M. A. Taylor's claim and marked A. Weigert's north-west corner, thence east 80 chains, thence south 80 chains, thence west 80 chains, thence north 80 chains to place of commencement. A. WEIGERT.
Dated June 17, 1903. F. R. DELZELL, Agt.

8. Commencing at a post planted at B. Laidley's north east corner, and marked W. Swain's north-east corner, thence east 80 chains, thence south 80 chains, thence west 80 chains thence north 80 chains to place of commencement.
Dated June 17, 1903. W. SWAIN.
F. R. DELZELL, Agent.

9. Commencing at a post planted at the north-east corner of H. Hill's claim and marked H. D. Turner's north-west corner, thense east 80 chains, thence south 80 chains, thence west 80 chains, thence north 80 chains to place of commencement. H. D. TURNER,
Dated June 16, 1903. F. R. DELZELL, Agt.

10. Commencing at a post planted at the north-east corner of A. Morrow's claim and marked W. Swain's north-west corner, thence east 80 chains, thence south 80 chains, thence west 80 chains, thence north 80 chains to place of commencement. W. SWAIN.
Dated June 17, 1903. F. R. DELZELL, Agt.

11. Commencing at a post planted at the north-east corner of W, Swain's claim aad marked W. Humphrey's north west corner, thence east 80 chains, thence south 80 chains, thence west 80 chains, thence north 80 chains to place of commencement. W. HUMPHREY.
Dated June 17, 1003. F. R. DELZELL, Agt.

.12. Commencing at a post planted at H. D. Turner's north-east corner and marked W. H. Roger's north-west corner, thence 80 chains east, thence 80 chains south, thence west 80 chains, thence north 80 chains to place of commencement. W. H. ROGERS.
Dated June 17, 1903. F. R. DELZELL, Agt.

13. Commencing at a post planted at the north-east corner of W. Swain's claim, and marked W. Moon's north-west corner, thence east 80 chains, thence south 80 chains, thence west 80 chains, thence north 80 chains to place of commencement. W. MOON.

There is no better evidence

of the confidence of the Directors and Officials of the

Crow's Nest Pass Coal Company, Limited

in the future of

MORRISSEY MINES.

than the fact that they are buying lots in the new town as private investments at the Co pany's set prices. The erection of a $20,000 block for the establishment of a branch of t Canadian Bank of Commerce here, speaks in no uncertain manner of the high opinion conservative financiers in the future of this place. Those who have to do with the poli adopted by the Crow's Nest Pass Coal Company, Ltd., in the opening up of these immen coal measures, are in a position to realize, to some extent at least, the great possibilities the way of coal and coke production of these collieries, when, with further development, th are operated on a larger and continuously growing scale. The reasons for their faith, whi they are showing in such a practical manner, are well founded. But we do not ask you simply follow the lead of these men ; investigate the position for yourself, and you will convinced that the outlook for the future of MORRISSEY MINES is an exceedingly brig one.

Thomas Crahan, Agent

MORRISSEY MINES, B.C.

Notice is hereby given that thirty days after date I intend making application to the Chief Commissioner of Lands and Works for a special licence to cut and carry away timber on the following described lands, commencing at the south west corner of lot 320, group 1 Kootenay District, thence east 140 chains; thence south 40 chains, thence west 120 chains, thence south 40 chains, thence west 20 chains, thence north 80 chains to point of commencement, said land to contain 640 acres.

THE OUTPUT FOR JULY

71,462 TONS OF COAL AND 16,335 TONS OF COKE.

Largest Monthly Record to Date in Both Products. Morrissey Ovens will Ship Next Week.

The mines at the three collieries for the month ending yesterday show a steady increase over all previous months notwithstanding the serious interruptions caused by holidays during the month. It is estimated that had there been no break the total coal output would have been 10,000 tons greater. The figures for the camps are as follows:

Coal Creek	24,793	tons.
Michel	28,569	"
Morrissey	18,100	"
Total	71,462	"

The total for June reached 71,253 tons.

The coke shipments for the month were as follows:

Fernie	8,696	tons.
Michel	7,639	"
Total	16,335	tons.

This is slightly in access of any previous monthly shipment.

The company will be shipping coke from some of their new ovens at Morrissey next week. A temporary tressle for filling the ovens as they are completed has been erected.

Twenty five new cottages will be erected as rapidly as possible for the use of oven workers at that place.

MINERS' UNION ELECT OFFICERS.

The Fernie Miners' Union, No. 2314 of the United Mine Workers of America, held a meeting on Wednesday evening for the election of officers. The following is the result:

President, J. Holbrook.
Vice-President, S. Armstrong.
Recording Sec., T. Addison.
Financial Sec., D. McClimant.
Treasurer, C. Dunlop.

An executive committee is yet to be appointed.

The Crow's Nest Valley District Union has recently elected new officers. The membership of this union consists of 9 made up of three from each camp, as follows: Michel—Messrs. R. Duggan, J. McPherson and Sherman. Coal Creek—Messrs. J. Holbrook, T. Addison and C. Burrows. Morrissey—Messrs. J. Smith, J. Johnson and Harman. These members have elected the following officers:

President, Chas. Burrows.
Vice-President, Mr. Sherman.
Sec.-Treasurer, Mr. Harman.

An executive committee consisting of Messrs. Smith, Duggan and Holbrook.

CABINET MINISTERS VISIT FERNIE

Hon. Chas. Wilson and Hon. Robt. Green Stay Over on Their Way From Ottawa.

The Hon. Chas Wilson, of Vancouver, President of the Council, and the Hon. Robt. Green, of Kaslo, Minister of Mines, were in town on Monday, having stopped off on their way home from Ottawa, to have a look at the town and its chief industries. In the morning they drove out to the Cedar Valley Improvement Co's mill and in the afternoon they went to Coal Creek mines where they were courteously shown around by the Company's officials.

Ths visiting ministers disclaimed any object in staying over in Fernie other than getting better acquainted with the district. They were not on an organizing tour and their visit had no official bearing. The government was not disposed to dictate in any way in the different electoral districts and the work of organization was left in the hands of district associations.

They spoke freely of their mission to Ottawa, which they believed would result in material advantage to the province. They attached most importance to their representations for greater financial assistance from the Federal Government. This matter was placed clearly before the Ottawa government and it was up to them to give a decisive answer. The province had paid the enormous sum of fourteen million dollars into the Dominion coffers since Confederation, at the rate of $2 for every dollar it received.

Messrs. Wilson and Green touched lightly on the political situation in the province, as they were not in close touch with recent events owing to their absence. They had no doubt however from assurances from many sources, of an overwhelming victory for the Conservative party at the coming elections.

The elections, they admitted, were late. The government had planned having them much earlier but they found it impossible to carry out their plans owing to the clumsiness of the election act which causes the waste of much time in arranging for a court of revision.

Hon. Mr. Green was approached by the Chief of Police about the jail accommodations and the former promised to urge the attorney general's department to make immediate improvements. He asked for estimates of the proposed changes and these were given.

The minister proceeded to Cranbrook the next day where they stayed over a day. One of the matters rectified there was the granting of regular fees to Deputy Mining Recorder Morris. He has held the position for three years during which time he has received no remuneration.

A PATRIOTIC MOVEMENT.

To Unite Canadian Labor Unions.

The New Glascow Times is a new publication, the third number of which has found its way across the continent to our office. The leading editorial fosters a patriotic labor movement by which all trade unions in Canada might be brought under a national executive. The movement appears to be growing in favor in that extreme eastern province. It says;

"At its recent district meeting, held in Sydney, the Provincial Workmen's Association discussed the practicability of extending its operation so as to include all labor organizations in the Dominion. Secretary John Moffat, who introduced the subject, briefly reviewed the labor movement as it now exists in Canada; the growing sentiment, both of labor and public opinion, in favor of separation from the American Federation.

The voice of the meeting seemed unanimous in favor of a purely Canadian organization.

We earnestly commend Secretary Moffat and his co-workers for their pronounced attitude, and we trust they will continue to agitate the subject until their efforts are crowned with success.

Capital and labor are potent factors in the prosperity of the nation, but to ensure the success of either, or both, it becomes imperative that as little friction as possible should exist.

When properly constituted, and controlled by men of integrity, capital has nothing to fear from organized labor. On the other hand, we are assured that Canadian capital is not unfavorable to unionism when in the hands of Canadian workmen.

The American federation of labor appear to have a number of men at their head who are neither more, or less, than professional agitators. The hardships, privations, etc., invariably following in the wake of strikes, are not felt by these men, who take precious good care their salaries are paid promptly. Neither capital or labor in Canada can afford to become shuttlecocks for the gratification of this element. The recent strikes in Montreal and other parts of Upper Canada, has been a bitter lesson for us to learn. In these disputes the sympathy of the populace was with capital, because the people recognized in the action of outside agitators, an ulterior object, which aimed at the industrial progress of Canada.

If trades-unionism is ever to assume any strength in Canada, depend upon it, it has got to have Canadian men at the helm, and adopt Canadian principles.

'Made in Canada' should be the watchword of all true friends of labor. If those who advocate the continuance of the present misalliance between Canadian and American labor, would take time to weigh the facts carefully and impartially, they would recognize that Canada's industrial progress means the presence of a keen and dangerous competitor close to the gates of the United States. Neither labor nor capital in the States, can afford to build up the prosperity of Canada on the ruins of their own industries. Depend upon it, Canadian labor has more to fear from the dangerous intrigues of American labor, than from any body of the domestic capitalists.

Don't procrastinate! Delays are dangerous. Take time by the forelock, and strike out for freedom."

CARD OF THANKS.

The members of the Amateur Athletic Association wish to express their hearty thanks to the Ladies of Michel, the management of the Crows N. P. Coal Co., and the management of the Trites-Wood Co. who each so kindly assisted us in making our picnic of July 25th a success.

A. N. Fraser,
Rec.-Sec. Michel A. A. A.

POLICE COURT NEWS.

MANY CASES OF CARRYING MATCHES INTO THE MINES.

A Heavy Docket This week Under Various Charges. Two Cases Sent Up for Trial Before the Judge.

The police court was a busy place all day Monday and Tuesday when a number of cases were disposed of before Stipendiary Magistrate Forbes.

Steve Fetseck and Joe Fetseck, two Slavs, were brought from Michel charged with obtaining money under false pretenses from Foss & MacDonell's store. Steve had received by mistake a time check worth $22 belonging to an Italian named Chesceleno. Some time afterwards he sent his cousin Joe to the store to cash the time check, but as the proper officials were not present to pay the cash Joe took $17.75 worth out in goods after stating to the clerk that he was Cheseleno. After this Joe went to Morrissey and worked under a different name. Joe was ordered to stand his trial, while Steve was allowed to go.

Harry Ferguson and Bert Harrison, two characers well known by the police, got into trouble on Monday evening. They were in a quarrelsome humor through the effects of drinking and went into Elliott's restaurant, where under the pretense of having a meal they caused no end of disturbance, assaulting Mr. Elliott and breaking the glass in the door. They each were given two weeks' imprisonment or an option of a $15 fine. The former paid his fine. They were also charged with using indecent language on the street and an extra two weeks was added to the sentence of each.

Edward Beaujolie was up under the vagrancy act and was given two weeks on the chain gang.

Patrick Martin an old offender against the peace and quietness of the town will do government work for his board for the next six weeks.

Three cases of carrying matches into the Coal Creek mines were tried on Monday evening. Andrew Lasco was found guilty of this offence before, and when he was being searched this time he managed to get rid of the matches by throwing them behind him where they were found. He was given a month in jail. On Thos. Nelson only 1 match was found. He was not a smoker and pleaded that he was wearing another man's overalls. He got off with a $5 fine. A pipe was found on Victor Lamot, but no matches, and he was allowed to go.

Stipendiary Magistrate Forbes and Chief McMullin went to Michel on Thursday evening to try a number of cases, reported by Constable Henderson charged with carrying matches or pipes into the mines. There were eleven cases altogether. One could not be found and four others, charged with carrying pipes only, were dismissed. The other six pleaded guilty and each were fined $5 and costs. There names were, E. Dudley, Pete Montebetta, Louis Aguino, Jas. Green, Frank Durkin and Mike Williams. A drunk was also tried and got the same fine.

Constable Kummer took Frederico and Fetseck to Nelson on Thursday. They have applied for a speedy trial and it is possible that they may be brought back to Fernie for that purpose.

Edward Doran, who was allowed to go on suspended sentence last week by Judge Forin on the charge of theft, was this week up under the vagrancy act, he not having kept his promise to go to work. He got off with one week in the Fernie jail.

Joe Fetseck and his cousin. Steve Fetseck two Slavs of Michel, were given a preliminary hearing in Fernie on Monday on the charge of obtaining goods under false pretences from Foss & MacDonell's store. The case arose over a time check for $22 belonging to one Chiseleno being given by mistake to Steve Fetseck who in turn gave it to Joe to get cashed. He could not get the money as no one authorized to write checks was in the store, but he took $17.75 worth out in trade, after assuring the clerk that he was Chisileno. He very shortly after left Michel and went to work at Morrissey Mines under an assumed name. Joe was sent up for trial while Steve got off.

A GAME OF BASEBALL

A game of baseball between the boarders of the Angels' Rest and a second nine, gathered together by Tom Whalen, proved a very interesting event to a big crowd of spectators last evening. The game was interesting more from the fact that the sides were well matched than from the general excellence of the playing, though there were a few on each side who played good ball. The Angels led off with seven runs in their first innings but at the end of the fourth innings the game stood a tie, each side having 11 runs to their credit. The fifth gave the "Never Sweats" 3 runs and their opponents 2. Darkness interfered before the completion of the 6th and the referee—Con Whalen—gave the decision on the fifth.

WANTED FOR EMBEZZLEMENT.

C. D Reid Left Suddenly With His Employer's Funds.

C D. Reid who was intrusted by the Calgary Cattle Co. with the management of their business at this place left here on the 18th for Calgary. Several days ago Chief McMullin received a wire from the chief of police at Calgary instructing him to keep a look out for Reid as he was wanted for embezzling the company's funds. He has been traced as far as Macleod from where it is thought that he made his way to American territory.

Shortly before the 18th Reid requested the company to send him a relief man, as he was sick. Mr. Bennett arrived from Calgary to take his place on the 18th and Reid left the same day, ostensibly for Calgary, taking with him all the firm's funds on hand. The company learning some time after from Mr. Bennett's report, of Reid's departure from Fernie, at once put the police onto the case. Nothing definite is known here of the amount which Reid got away with but it is thought that it may not exceed three or four hundred dollars.

COAL CREEK MINES.

(From Our Own Correspondent.)

Mr. Sample is going about on crutches but will soon be well again.

We congratulate Mr. McLellan on the twin boys who have come to his home, we trust to stay.

Miss Ryan of Fernie assisted Miss McNee for some time this week. She has again returned to Fernie.

We will soon have twenty new houses ready for occupation and these are only foretokens of things to come.

Mr. Sullivan, principal of Nelson public school, this week spent a few days with his friend T. C. Colwell, our minister.

Our popular manager of the Trites-Wood Co. store here has filled the late vacancy in his butcher shop by a gentleman lately from the "Land of the Thistle."

Mr. Dunsmuir's foot was more badly crushed than at first supposed. The bone leading to the large toe being broken and several smaller bones broken in the foot.

On Tuesday next Rev. S. J. Thomso the popular preacher and lecturer of Cranbrook will deliver his lecture on "Abraham Lincoln" at the regular meeting house at Coal Creek mines We hope everyone will avail themselves of this interesting and instructive lecture. An offering will be taken on behalf of the new church to be at Coal Creek mines.

The work is being energetically pushed in No. 4 and 5. Coal has been struck in four at about fifty feet and in five at a very short distance. The seam in four runs in a slanting direction of about fourteen degrees and is twenty feet thick. In five the seam is about eight feet thick. The car road to both will soon be complete when coal will be mined from both tunnels.

Mr. Webber who was injured lately is scarcely yet out of danger. He was working in No. 4 shaft under what appeared to be a perfectly safe portion of coal and was caught by it while stooping. His face jammed on a rock beneath and he was severely cut across the forehead and nose. In the fall his leg was broken in the thigh by a wrench. Mr. Webber showed splendid will-power and presence of mind, maintaining consciousness throughout. His brother Chas. was with him at the time and everything was done to alleviate his sufferings.

We regret to report the death of Mrs Mitchell's second little girl a bright child of three years who contracted scarlet fever from her sister. The interment took place on Monday. Mrs. Mitchell has the sympathy of the community in the sudden loss of her only two children.

The little ones are gone,—
There mission done?
Ah no! They beckon home.

A CHINAMAN HELD UP.

A Bold Outrage Perpetrated Near the Town's Limits.

Early on Monday morning about four o'clock, a chinaman named Lung Lu started out to fish in the Elk river. As he approached the bank where the road runs down to the bridge at Mott's mill he was accosted by two tall, dirty men who asked him where he was going, and upon his reply that he was going fishing they said they would show him the best fishing grounds, as they knew the river perfectly.

The unsuspecting Chinaman accompanied them and when they had reached a point a short distance beyond Mr. Forbe's residence the two strangers turned on the Chinaman and robbed him of all the valuables he had in his possession consisting of $20 in cash and a gold watch.

They immediately jumped into the brush on the north side of the road and disappeared from view. The Chinaman received some knocks in his tussle and was lame when he reached town. He told a very straight story to the police officers. The two men he described as tall, dressed in very dirty clothes of a dark color, and dirty caps. One was smooth shaven and the other had a whisker of two weeks' growth.

The Chinaman bears a good reputation. He was employed as cook for some time by Mr. Pollock. The police and the robbed Chinamen are looking for the cowardly thieves. Any parties possessing any information which might lead to their detection should report the same to the police. This is the boldest hold-up that has yet occurred in the district, and if they are caught their conviction ought not to be difficult as Lung Lu would easily recognize them. A wholesome example ought to be made of the first thug that can be convicted.

NEW FACTORY COMPLETE.

Fernie Manufacturing Company will Commence Operations on Monday.

The plant for the Fernie manufacturing Company has all arrived and a large force of men have been busy for some time putting the various machines in their proper places, adjusting the belting and arranging the hundreds of details connected with a large manufacturing plant. This work is almost completed and the management expect to begin operations on Monday. To those who have never seen a large and modern factory for the manufacture of the sash, doors and other inside house finishings an hour's inspection of this new industry will prove most interesting.

The company have erected two large parallel buildings with the engine room between. The smaller of these, the one nearer the town is the dry-kiln. A network of steam pipes distribute the heat as it is required for drying purposes. The green lumber enters the building at the end next the siding. It is loaded on low trucks run on iron rails. It is taken out three days later at the other end perfectly dry. The building handles 60,000 feet at one time. It is transferred to other tracks without unloading and wheeled to the factory building, where it is treated by the long rows of machines until, when it reaches the other end of the big building, it is the finished product, ready to be loaded on the waiting car or stored in the store room that will be conveniently located at that end of the factory.

The engine is a massive one of 125 h.p. fed by two immense boilers each 80 h.p. There are 35 machines systematically arranged to manufacture the rough lumber into sash, doors, mouldings, and all other forms of house finishings. One machine sandpapers the lumber as rapidly as it can be fed. Another clamps a door and fits it together by steam power and so on, each machine intended to reduce labor to the minimum and to improve the quality of the product.

NEW RAILWAY LINE.

Ottawa, July 28.—An act to incorporate the Southern Central Pacific Railway company was reported at the railway committee today. Those who are asking for incorporation are K. D. McLennen, Cleveland, E. F. B. Johnson, Toronto, John Milne, Duluth, and James Whalen, Port Arthur. The proposed capital stock is $20,000,000. The company asks for power to construct a line of railway from Vancouver northerly and easterly by way of Kootenay Pass to some point on Old Man river, district of Alberta, thence north-easterly through Saskatchewan to 100 miles north of Fort Churchill.

MY HEART'S DARLING

BY W. BRIMBURG.

CHAPTER XXII.

Lucie turned away and went back to her room; and she sat there and repeated, in a low voice, the words she had just heard:

"Foolish girl!"

Half an hour later Hortense came.

"Are you asleep already?" she asked. "Where are you? You quite forget your duty as chaperon. Now, Lucie," she continued, and seated herself on the broad window-seat, "the matter is settled; we are to be married in four weeks."

She sighed comically as she said this, and then began to sing softly. Lucie knew what that meant; when she sung so she was ill at ease; there was a storm brewing.

"Four weeks! And you have consented?"

"Yes, my love. We are to visit his mother, and then our ideal life at Wottersdorf is to begin. I propose that you and I—that we should get ourselves lambs with red ribbons round their necks, and crooks, and he should play the flute to us; it would be so lovely! Well, our heads are in the trap already."

"I repeat again, take your head out and tell him honestly 'I do not love you; I will not make you unhappy.'"

"Rather a hell with him than to appear again before the world with a broken engagement," said Hortense. It sounded as if she were gnashing her teeth. "I only need to think of Wilken if he were to hear the news that the engagement was off between Herr Weber and Frau von Lowen! I can see clearly how he would stroke his beard with a grave look and mutter, 'It would be impossible to marry her; I acted very properly.' Rather misery to-morrow!" The slender hand that lay in Lucie's doubled itself up. "I am not so sure that it may not still come to that. Grandpapa tells me that he hinted to Waldemar that papa was a very frivolous sort of man; but that he—that he was worse than that, he did not think it necessary to say; and I—I am such a coward, I can not. Well, there may be some good friends who will show him the morass upon which the flower that he wants to pluck grew. And then—then, Lucie, I do not know what will happen."

"Shall I talk to him?" asked Lucie.

"I am convinced that he knows all about it, and that you are worrying yourself needlessly."

"And if he were only now to find it out—he loves you, Hortense, and your father's reputation would not injure you in his eyes."

"Oh, you do not know men. Vanity and selfishness are their chief characteristics. No, do not say anything to him. I do not wish it; let things take their course. Only do not forsake me, Lucie."

"Or say, rather, do not forsake me, Hortense," returned the girl. "You are my only refuge in the world."

"My good little mouse," whispered Frau von Lowen, tenderly, "no, indeed! I can not think of any life without you."

"I will make myself useful to you," promised Lucie, "You are not made for the burdens of life. I will take all care from you; the little worries and annoyances of housekeeping, things that you can not trust servants to attend to; you shall feel no thorns, only roses shall bloom for you!"

Hortense laughed.

"What will you do? Pour out tea, and after dinner make a cup of coffee? I know of nothing more, except the colossal undertaking of helping me to bear life, and that you understand famously, my darling. However, to-morrow he is to go away—'to prepare his house for my reception,' as he says; probably he is going to have the little Cupids on the ceiling that stretch out their fat little legs so roguishly in the air freshly gilded, and have the elaborate furniture freshly covered with brocade. He will also want to burn all his old mementoes and love letters—"

"But, Hortense!" exclaimed Lucie, half laughing and half shocked, "you have really a very flattering opinion of him."

"Oh, child," said the young baroness, yawning, "you do not understand that. I have a cousin in the Guards that spent three days before he was married in doing nothing but destroying all the mementoes of his happy bachelorhood. In the end he forgot one photograph, and this picture was the cause of the newly-married couple almost being divorced. So, you see, it is no joking matter." She slid down from the window-seat, yawning again. "I am dreadfully tired, Lucie. A good night's rest—"

"Does Herr Weber leave as soon as to-morrow?"

"Yes; as soon as that, thank Heaven! An engaged man is dreadfully tedious. Good night, Lucie."

She kissed the girl on her brow and left the room.

"How sad," thought the one left sitting there, "so poor in love—in sentiment so unable to believe anything really noble! Poor Hortense!"

The next afternoon Herr Weber left, after having hunted up Dr. Adler. He looked very happy when he returned from his house.

"He is the same sensible, good fellow as ever," he said at dinner, but suddenly stopped as his glance fell on Lucie, who sat by Hortense with her eyes cast down.

Hortense allowed herself to be kissed on the forehead by him at parting, and called him "dear Waldemar."

A look of real sorrow shone out of his eyes at leaving. "May we soon meet again," he said, much moved; and Hortense called after him:

"Do not forget to have the stall prepared for the golden sorrel; he is accustomed to a box-stall."

She stood in the open door, and at these words looked toward the stable where the beautiful head of her pet could be seen over the top of his stall, and this sight so occupied her that she did not hear the carriage roll away or see two eyes looking longingly for a last glance from her.

Mademoiselle, who was sitting at the window of her room, shook her head. She had only heard that morning that the wedding was to take place in four weeks, and that Lucie had been chosen by the bride-elect to follow her to her new home. She would have to stay there, alone and forgotten, with no resource but to play chess with the baron, and with it all must be thankful that Hortense granted her that much. A pitiable life—that was the result of all her faithfulness. And now that madame was to be married, if she should have children, she would say, in that tone of quiet malice so peculiar to her, "Dearest Bertin, all respect to you, but my daughters must be brought up better than I was, I can not make any use of you."

In fact, madame had once said something very much like that to her when she had ventured at such a thing.

Alas old age! She went to her bureau and took from the lowest drawer a double cushion with a crest embroidered on the white satin of each. It had been intended for Hortense's marriage with Wilken. The one with his crest was now useless, and Herr Weber had none with which to replace it. A long-drawn sigh escaped from the plump little lady.

"Oh, It is excessively annoying! Now, que faire, Hortense must be contented with one cushion."

CHAPTER XXIII.

The weeks flew quickly by; the preparations were but few. The trousseau of house linen needed only to be packed in trunks and sent to the station; everything was finished and ready. The costly lace veil which Hortense's mother had worn lay ready to adorn the young baroness for the seond time. A white silk dress had arrived from Gerson—a beautiful soft material which fell in heavy folds; and for the civil marriage a black lace dress with bonnet and mantle to match all dotted with jet.

The baron had had all his orders fastened upon his coat. Mademoiselle had endeavored to give an air of splendor to her claret-colored silk with some yellow real lace; and Lucie had taken a white cashmere dress out of her wardrobe in order not to appear in gloomy black on such a day.

Only a few guests were expected. Of the bridegroom's relations only his youngest brother could come, the one who lived in Hamburg, and was agent for a large firm. His mother had declined, saying the journey was too long for an old and feeble woman, and she hoped soon to welcome her daughter-in-law within her own four walls. The other relations were not invited, as Hortense was decidedly opposed to any great celebration. So there was no one else to come but the baron's bosom friend, Major von Schenk, who lived by himself on his lonely estate in the neighborhood of Hohenberg, and the clergyman who was to say the "Amen" over the bridal pair.

Even on the wedding day the bridegroom might draw back.

Hortense seemed to realize that. She appeared to be remarkably calm and quiet at this time; at least her grandfather and mademoiselle thought so; but Lucie knew better; she knew of the wanderings up and down until deep into the night, saw how she paled if the postman failed to bring one of the square, cream-colored envelopes which Waldemar Weber was in the habit of using.

And yet it was no longing to hear from him that made his letters so much missed; it was restlessness and a certain dread; and countless times through the day Lucie had to reassure her as she said: "Do you think anything will happen to prevent it, Lucie —anything shocking? You know— Papa—"

If she received a letter she answered it immediately; but they were only short notes, and three lines of her large, energetic writing would completely fill the little sheet.

"If he knows that we are still alive, and that our house is still standing, what need of more?" she would say as she pressed her dainty seal with its seven-pointed coronet on the purple sealing-wax, and then she would sigh as if she had finished a difficult piece of work.

* * * * * * *

[CONTINUED.]

Footless Men.

A footless race of men is said to have been discovered in New Guinea. They live in the midst of lakes, moving about on little canoes and possessing a few cabins built on wood piles. Their feet are so undeveloped as to be practically useless for walking.

Caucasia.

The 10,000,000 inhabitants of Caucasia are made up of the remnants of many ancient nomadic tribes. According to Russian statistics, only 2,500,000 are Russians, 1,000,000 are Armenians, 1,500,000 Tartars and Georgians, while the rest are principally Mohammedan tribes. It is asserted that there are thirty different languages and dialects spoken in Caucasia.

The Baby Giraffe.

A giraffe assumes a high position immediately after his birth. At that time he measures six feet from his hoofs to the top of his head.

Chinese Firemen.

Chinese firemen seem to be immune to the fierce heat of the fire room on ocean steamers and can stand up to temperatures that would speedily prostrate white men.

Creaky Hinges.

The application of a bit of soap on the point of a lead pencil to a creaky hinge will cure its stiffness and silence its complaints.

Half-Crown Eyelashes.

"Art eyelashes" are the latest invention of a hair specialist in Great Castle street.

Before noon yesterday, six ladies with downcast eyes emerged from the specialist's establishment. They had long silken eyelashes.

An Express representative who entered the shop gleaned some interesting information. On the counter were cardboard boxes containing countless cards. On each card was a delicate set of lashes, attached to a scarcely visible strip of fish-skin.

A small bottle containing a "skin fluid," patented in America, and two cards complete the outfit. The eyelashes are 2s. 6d. per pair for "society wear," and 1s. 6d. per pair for theatrical wear.

"On our customer's first visit," said the manager, "we fix the skin on the eyelid with the fluid, and the false lashes mix with the lashes of the lady. It is beautiful—beautiful!"

The lashes last 10 days, usually, but 20 with care.

The manager declared that the 2s. 6d. pairs were proof against even a prolonged fit of hysterics, but he admitted, of course, that he had no direct evidence to that effect.

The theatrical lashes are black and very long, and made of coarser material. The hairs are of vegetable origin, and of every shade. They can be curled with the tongs when they become aggressively downcast.

Eyebrows at 10s. 6d. per pair, lasting from three to six months, are another specialty at this shop, and into those sold to elderly ladies grey hairs are cunningly inserted.—London Express.

Individuality in Trees.

Those who are planting hardy varieties of apple trees for the purpose of top-grafting them with the best varieties of marketable apples, are working along right lines to secure profitable orchards, providing other details, such as pruning, spraying, cultivation, fertilizing, etc., are attended to. But there is a pointer here for the grower: Whether he intends to do his own grafting or to employ someone else to do it, he should be casting his eye around at this time of year to see where he can secure the right kind of scions with which to top work his young orchard. Not only should he be on the lookout where to secure the proper varieties, but there is another point of very great importance to the future bearing of his orchard. He should observe the individuality of the trees from which he intends to cut his scions.

This is a new theory to most people, and many are incredulous, but there can be no doubt from the evidence gained by experience that this is not a theory, but a well-established fact—the individuality of fruit trees—that some individual trees will far surpass others of the same variety under the very same conditions as to soil and care, and that scions obtained from such a tree and grafted into another will carry that individuality with it and perpetuate it. Here is simply another evidence of our ability to control the forces of nature for our own benefit, and the fruit-grower should not be slow to take advantage of it.

Caricaturing Crookes.

Sir William Crookes, F.R.S., the subject of a genial caricature by "Spy" in a recent number of "Vanity Fair," was born one and seventy years ago, and at sixteen, after damaging much of the paternal furniture by acids and explosions, he was an active student in the Royal College of Chemistry, since when he has done much to advance the science of chemistry and physics. He invented the radiometer; he discovered thallium and radiant matter generally; he evolved the genesis of the elements, and founded the "Chemical News." He is a past President of all our best scientific societies, and he has published many practical works on many applied sciences. Without the Crookes tube the Rontgen rays were unknown; and he has this week shown at the Royal Society his newest invention, the spinthariscope, by which the curious scintillations of the newest element, radium, may be readily seen. Altogether he is a very great man of science, who has done much to benefit the world very practically.—London Star.

Early Rising Proverbs.

A father was telling his son of the advantage of early rising, which he emphasized by using the well worn (but much appreciated) adage, "It is the early bird that catches the worm." The precocious juvenile replied, "All right, father; you get up in the early morning and catch the worms, and I'll go fishing with them in the afternoon." Charles Sothern (of illustrious memory), in his famous character play of "Lord Dundreary," used to quote the proverb, "Early to bed, early to rise, makes a man healthy, wealthy and wise," on which he commented as follows: "Now, there's my brother Sam; he used to go to bed early, sometimes as early as 4 o'clock (in the morning), and he was not particularly healthy. As for being wealthy, he would borrow a half crown from anybody without the slightest hope of being able (or even willing) to pay it back. And I never knew him to be wise, but confoundedly otherwise."

Desolate St. Helena.

A recent leading article in the only paper printed on the Napoleonic rock advocates the conversion of St. Helena into a sort of penal settlement as the only mode of salvation. St. Helena had an extraordinary boom of prosperity during the South African war, when thousands of Boer prisoners were isolated there. Now there is no market for the local beef and vegetables, and the agriculturists are in despair. "Their lands are full of weeds, their gardens unplanted."

Trouble in Ant Colonies.

The chief cause of the hostility of different colonies of ants is found to be difference of odor and of ages.

The Quest For a Place to Eat.

He was hungry. Before he finished his morning's work he consulted his watch with a frequency born of gastronomic longing. The perfume of Hamburger steak wafted through the office window from an adjacent German restaurant convinced him that he would not hunt long for a place to get luncheon. Once out of the office, however, the old indecision returned. The Teutonic repast did not seem half so attractive as it had twenty minutes before.

He went on up Nassau street. Restaurants to the right of him, restaurants to the left of him; signs in big letters told of the joys of living. He passed them by. Cafes, three to a block, told him where he could dine like a prince on anything from roast beef to canvasback duck.

What did he do? He rushed into a dairy lunch room.

"Give me a ham sandwich and a cup of coffee!" he cried to the waiter. "It does beat the deuce how hard it is to get something you want to eat."—New York Press.

Lost Money Market.

London is waking up in rather amusing astonishment to the fact that it has ceased for the time to be the "money market" of the world. Just as Mr. John Burns asked, "What has Battersea to do with the British empire?" so readers might ask, "What have we to do with the money market?" In a complex civilization like ours the money market rules everything relating to business.—London Pilot.

She Knew It.

"The longer I live," sighed the sage, "and the more I learn the more firmly am I convinced that I know absolutely nothing!"

"I could have told you that twenty-five years ago," said his wife, "but I knew it would be of no use."—London Answers.

WEAK AND FAINTING

THE SAD PLIGHT OF ANAEMIC PEOPLE.

They Have Headaches and Backaches—Are Languid and Unable to Stand Exertion.

From the Sun, Orangeville, Ont.

You can always tell anaemic men and women. They are pale, weak and languid. They have headaches and backaches. They can't eat—or they can't digest what little they do eat. And it all comez from poor blood and unstrung nerves. Banish anaemia at once by enriching your blood and toning up your nerves with Dr. Williams' Pink Pills. Thousands of grateful women have said that these pills have restored them after all other means tried had failed. Mrs. Josias McIlroy, of Orangeville, Ont., was a great sufferer for several years and spent much money looking for a cure. To a reporter of the Sun Mrs. McIlroy said: "Several years ago my health gave out completely. I was so weak that I could not do my housework. If I went upstairs my heart would palpitate violently, and sometimes I would faint away through weakness. My nerves were unstrung, and I suffered much from dizziness. I tried many remedies, but they did not help me. Then I was advised to try Dr. Williams' Pink Pills and decided to do so. I am glad I did, for the pills soon built me up and made me a well woman. My health remained good until last spring, when I was again taken with weakness. I now knew by experience the value of Dr. Williams' Pink Pills and at once got a supply. The result was as beneficial as before and I can conscientiously say the pills have done me untold good. I am grateful for this, and hope my experience will benefit some other sufferer."

Dr. Williams' Pink Pills have cured more sickly, pale-faced girls and women than any other medicine ever discovered, for they supply new, rich, red blood, and so strengthen every part of the body. They are equally suitable for men, women and children, and cure not only anaemia, but decline, consumption, indigestion, rheumatism, St. Vitus dance, and the special ailments which all women dread. These pills can be had through any druggist, or will be sent postpaid at 50c a box, or six boxes for $2.50, by writing direct to the Dr. Williams' Medicine Co., Brockville, Ont. Look for the full name on every box, so that no worthless substitute may be palmed off on you.

The United States life-saving service costs $1,700,000 per annum.

THE PUBLIC should bear in mind that Dr. Thomas' Eclectric Oil has nothing in common with the impure, deteriorating class of so-called medicinal oils. It is eminently pure and efficacious—relieving pain and lameness, stiffness of the joints and muscles, and sores or hurts, besides being an excellent specific for rheuma-

Ellen Terry's Toe.

When Ellen Terry was a little girl about ten years old she played Puck in "A Midsummer Night's Dream" and had to make her appearance through the stage floor on a trapdoor. The trapdoor was shut too soon, and one of the child's feet was caught. She screamed with pain, and Mrs. Charles Kean whispered to her: "Be a brave girl, Nellie. Finish your part, and you shall play Arthur in 'King John.'" The trapdoor by this time was opened, but the child's toe was broken. She, however, pluckily pulled herself together and finished her speech.

Finger Nails.

A man of seventy has renewed his finger nails no fewer than 186 times. Taking the length of each nail as half an inch the total length grown on each finger has been 7 feet 9 inches.

There is some hope for a man as long as he knows how to take a hint.

At Leicester, England, a crippled bridegroom rode into the church and up the aisle on a hand-propelled tricycle.

The oldest map of Rome, which is preserved, is the Forum Urbis, cut in 140 pieces of marble.

A man named Winder walked from London to Brighton, carrying a hod of bricks, in eighteen hours and 25 minutes.

The celebrated petition crown of Charles II., coined by Thomas Simon in 1663, was sold at Sotheby's for £365 recently.

Some men let dollars slip by while struggling to save the pennies.

DIZZY SPELLS AND BODY WEAKNESS

Tell of a Run-down System and Exhausted Nerves—Strength Comes With the Use of Dr. Chase's Nerve Food.

To many people peculiar spells of dizziness and weakness are a source of almost daily annoyance and distress. Some see flashes of light before them, and become blind and dazzled; others experience severe attacks of headache. The cause is exhaustion of the nervous system and deficiency in the quality and quantity of blood. In all such cases Dr. Chase's Nerve Food is the most certain as well as the most thorough cure obtainable.

Mrs. Symons, of 42 St. Clair street Belleville, Ont., states: "Some weeks ago I began a course of treatment with Dr. Chase's Nerve Food, and found it a very satisfactory medicine. I was formerly troubled with nervous exhaustion and a weak, fluttering heart. Whenever my heart bothered me I would have spells of weakness and dizziness, which were very distressing. By means of this treatment my nerves have become strong, and the action of my heart seems to be regular. I can recommend Dr. Chase's Nerve Food as an excellent medicine."

Mrs. James Clancy, 714 Water street, Peterborough, Ont., states: "I have used four boxes of Dr. Chase's Nerve Food, and found them an excellent medicine. I was troubled more or less for nineteen years with severe headaches, which made me useless as far as accomplishing my work was concerned.

"The Nerve Food seemed to build me up generally, and so made a thorough cure of my old trouble. I would not think of being without Dr. Chase's Nerve Food in the house, and would strongly recommend anyone suffering as I did to give it a trial. It succeeded in my case after a great many remedies had failed."

To the thousands of women who are victims of nervous headache this letter should prove of inestimable value. If they will but follow the advice of Mrs. Clancy they can be certain of great and lasting benefit.

Dr. Chase's Nerve Food, 50 cents a box, at all dealers, or Edmanson, Bates & Co., Toronto. To protect you against imitations, the portrait and signature of Dr. A. W. Chase, the famous receipt book author, are on every box.

A Clever Escape.

Prince Louis Napoleon, afterward Napoleon III., effected his escape from Ham in 1846 in a singular manner. He was imprisoned for his attempts against the French government, made at Boulogne in 1840. At 7 o'clock one morning the prince, having shaved his mustache and thrown a blouse and workingman's trousers over his own clothes and wearing wooden shoes, quietly walked out of the prison, carrying a bookshelf over his shoulder to complete his disguise. He was taken to be one of the painters then at work in the prison and was passed by several persons. A carriage was waiting in the neighborhood, and by 3 o'clock in the afternoon he was at Valenciennes, where he took a train to Brussels, and he arrived in London two days later. Meanwhile in the prison Dr. Conneau, the prince's physician, had placed a dummy in the prince's bed and told the governor that the prince was confined to his room by illness. This satisfied the governor until 7 o'clock in the evening, when he insisted on seeing the prince and discovered the fraud. By this time, of course, the prince was over the frontier. Dr. Conneau got off with three months of prison. Within thirty-one months Prince Napoleon was the first president of a French republic, supplanting King Louis Philippe, who had abdicated.

Bedouins and Water.

It is not unusual to hear a Bedouin upon reaching a camp where water is offered him refuse it with the remark, "I drank only yesterday." On the Bedouins' long marches across dry countries the size of the water skins is nicely calculated to just outlast the journey, and they rarely allow themselves to break the habit of abstemiousness, as this would be sure to make their next water fast all the harder. They are accustomed from infancy to regard water as a most precious commodity and use it with religious economy. They know every hollow and nook in the mountains where water may be found. Their camels and goats, which they take with them on their marches to supply them with milk and meat, live principally on the scanty herbage and foliage of the thorny mimosa. Neither men nor animals drink more than once in forty-eight hours. No wonder they can subsist where invaders quickly perish.

Rats and Their Food.

The capacity of rats for discovering fresh stores of food is astounding and often leads to those united migratory movements that periodically create alarm and are described as "plagues of rats." These great movements are undoubtedly initiated and "personally conducted" by old and experienced rats, the aldermen of the colony, at once a proof of highly developed intelligence and unselfishness. Rats in large centers of industry, if not present in commercial plague form, do a great deal of good as consumers of garbage that would otherwise become a perilous nuisance. It is also a popular delusion that a rat bite is unusually dangerous from this fact of sewer garbage eating. On the contrary, rats cut as clean as a new lancet.

In a Balloon.

It is one of the peculiarities of travel by balloon that you do not feel anything. All is still with you, no matter if you are in the teeth of the hurricane.

Tar and Feathers.

Tarring and feathering was a pleasing custom of the English as early as the days of Richard Lion Heart.

Divorces.

It is said that Switzerland grants more divorces and England fewer than any other country.

Men and Arms.

In thirty-two out of 100 cases a man's left arm is stronger than his right.

Of the 2,894 Congregational ministers in England and Wales, 2,573 are teetotallers.

BRITISH CABLE NEWS

NEW BUTTER BILL WILL BENEFIT IRELAND.

Britain's Foreign Policy Discussed in the Commons—Open Door Recognized—Colonies Must Be First—Largest Man-of-War in the World Launched.

A London cable says: The House of Commons has practically adopted the principle of preference by the passage of the new Butter Bill. This measure will, in its working, help Ireland to the disadvantage of all outside countries, including Canada, Australia, and New Zealand. The measure penalizes all butters, including colonial, which contain over 16 per cent. of water, but exempts Irish butters from its operations, butter from that country being allowed when it contains as much as 20 per cent. of water. The Irish members have thus squeezed a preference for Irish butter out of the government and secured discrimination against Canadian butter. As a British Radical said: "Ireland is anti-Canadian in so far as it relates to its dairy and cattle interest, in both of which Canada is her strongest competitor. Ireland wants protection against Canadian butter as much as against Danish."

BRITAIN'S FOREIGN POLICY.

Sir Charles Dilke, in the House, assailed the foreign policy of the government, which he said was strangely inconsistent. He compared the recent visit of King Edward to France and President Loubet's return visit to England with the government's attitude toward Germany, and accused the government of cringing to Germany in the Venezuelan matter and "allowing themselves to be hoodwinked." "But," Sir Charles added, "when there was a popular cry against Germany the government had patched up the Canadian tariff grievance and lately the ministers had used language of absolute ferocity against Germany."

The under foreign secretary, Lord Cranbourne, replying, said the German emperor had nothing whatever to do, directly or indirectly, with the communications in regard to the co-operation of Great Britain and Germany in the Venezuelan affair. He vindicated the policy of the government in this matter, and said Great Britain was on friendly terms with all the powers.

He denied that Great Britain was getting the worst of it in Manchuria where, he said, Great Britain recognized the open door policy. Referring to the Canadian tariff question Lord Cranborne said they must put their own colonies first and an end must be put at once to the disabilities under which they suffered.

KING OF BATTLESHIPS.

The new battleship King Edward VII., the largest in the world, was successfully launched by the Princess of Wales at Devonport on July 23. Among those present were the Prince of Wales, Princess Henry of Battenberg and the lords of the admiralty. King Edward laid the keel plate on March 8, 1902. The vessel cost $7,500,000.

"ORGAN-GRINDIGG EARL."

The Claim of William Turner Thos. Poulett, Viscount Hinton, the former organ grinder in the streets of London, who is a claimant to the earldom of Poulett, was before the committee of privileges of the House of Lords on July 23. The claimant, who is a man of striking appearance, was present with counsel, who requested an adjournment, as his evidence was not ready. Counsel for defence was allowed to state his case contending that it was impossible for the claimant to be a son of the late earl, though the earl's marriage to the claimant's mother was not declared. The hearing will probably last several days.

FOR THE PEACE OF THE WORLD

It is understood that the probable result of the visit of the French legislators to London will be the formation of a Franco-British arbitration agreement independent of The Hague Court. It is believed the occasion is ripe for such a step. Baron d'Estournells de Constant says that the suggestion would receive the hearty support of the French parliament. The idea has been discussed and well received at Westminster. Lord Cranborne, in the House of Commons incidentally referred to the presence of the French delegation in London as an important event which argued well for the peace of the whole world.

WILL LITTLE BOBS COME?

The statement that the British cabinet has vetoed the proposed visit of Lord Roberts to the United States is inaccurate. The truth is, the whole matter has always been indefinite. Lord Roberts will visit the United States in the autumn if his duties will permit.

NOVELIST DEAD.

B. L. Farjeon, the novelist, died suddenly at his residence at Hampstead on Thursday morning. Mr. Farjeon died from the rupture of a blood vessel.

The feeling of New Brunswick residents is said to be favorable to the building of the Grand Trunk Pacific.

Two drownings occurred in Winnipeg on Wednesday afternoon. One was at the Louise bridge bathing station in the Red river, where Arthur Atkin, aged 21, of Louise bridge, lost his life. The other happened in the Assiniboine river, near the golf grounds, and the victim was Charles Smith, aged 16.

CHIEF ARTHUR'S MEMORIAL

A Movement Started to Erect a $50,000 Monument to His Memory.

Already a movement is on foot, says a Cleveland, O., despatch, to erect a $50,000 memorial to Chief P. M. Arthur of the Brotherhood of Locomotive Engineers, who dropped dead at a banquet in Winnipeg on Thursday night. C. H. Salmons, editor of the official organ, and himself in line for the highest office in the lodge, said to-day that such plans would be acted upon at the annual convention in Los Angeles, Cal., next May, and favorable action is certain to be taken. He says the money can be raised in sixty days, and it will be a memorial from railroad men all over the country.

Cleveland was greatly shocked at the news of the death of Mr. Arthur, for not only has he long been recognized as the greatest labor leader of the country, but socially his family is listed among the most prominent in Cleveland, his East End home being one of the finest in the city, and his wife and daughter being social leaders. His funeral will be one of the largest ever seen in Cleveland. A temporary successor will be chosen shortly to take charge of the order until the Los Angeles convention can select a permanent head. A Cleveland man will probably be named.

THE WIDE WORLD.

Telegraphic News of Two Hemispheres Briefly Chronicled.

Robert Brown was drowned near Morris, Man.

W. R. Hall, a young man well known in Winnipeg, was drowned in the Red River.

A quantity of dynamite at a Virginia mine exploded as an express train was passing.

A $50,000 memorial will be raised to the late Chief Arthur of the Engineers' Brotherhood. The body has arrived at Cleveland.

Dr. Neilson, ex-M.P.P., North Winnipeg, is dead.

The Winnipeg Water Power Bill has passed in the Commons.

Hudson's Bay Grain Route.

A St. John's, Nfld., despatch says: The Canadian Government has chartered the Newfoundland sealing steamer Neptune to convey a scientific expedition to Hudson's Bay. The expedition will winter at Chesterfield Inlet.

Its object is to determine the availability of the region for a Canadian grain route.

Capt. Samuel Bartlett, for several years navigator of the Peary steamers, is in command of the ship, the crew of which consists of Newfoundlanders familiar with ice work. The scientific party is composed of Canadians. The ship will also enforce the Canadian customs laws against American whalers who are operating in Hudson's Bay. This is the second seal ship chartered within a month, the British admiralty recently securing the Terra Nova, to convey a relief expedition to the Antarctic steamer, Discovery.

Russia and Domestic Reforms.

A despatch from St. Petersburg says: In furtherance of the proposed domestic reforms, a new law has been promulgated giving factory employes the right to appoint delegates from their co-workers to represent their interests in conferences with the factory inspectors.

The plan for the formation of a new police force to maintain order and security in the rural districts of forty-six provinces of European Russia will be carried out immediately in fifteen of these provinces, but, owing to the large expenditure involved, $2,250,000, six years will be allowed for its complete execution in other provinces.

Over 320,000 men have been called to the colors in order to complete the strength of the Russian army and navy for the present year.

Ottawa Mystery.

Adelard Franche, a young man who resided with his mother at 14 Notre Dame street, Ottawa, Ont., died suddenly on Sunday on a vacant lot near Water street. Shortly before he died two men, Edward Oliver and Paul Laroche, came across him lying on the grass in an exhausted condition. They sent for the police and before Constable Walters got to the man he was dead. Walters searched the man's pockets and among other things found a small empty vial, which it is thought might have contained poison. The dead man's friends, however, say that Franche was troubled with a weak heart and as he had been sleeping out for a couple of nights, they think he died of heart failure.

Last Year's Crop.

The report of Mr. Gibbs, grain inspector at Fort William and Port Arthur, has just been issued, showing the movement of last year's crop up to the 14th inst. It shows that 39,764,794 bushels of wheat have reached the terminals, of which amount 37,651,547 bushels have gone forward, leaving 2,113,247 bushels in store. The total receipts of wheat, oats, barley and flax amounted to 41,409,821 bushels, and shipments to 38,858,677 bushels.

TRAGIC REVELATIONS.

Horrible Details of Baby Life in Slums of English Cities.

A London cable says: Tragic revelations concerning baby life in the cities of England signalized this week's annual congress at Liverpool of the Royal Institute of Public health.

"Our slums," declared Miss Jeanette Heald, the well known worker among the poor, "are hot-beds of infant misery. The great heat which has been experienced since July set in, coupled with the crimes of tradesmen and the ignorance of mothers, converted the courts, lanes and crowded quarters of the large cities into social infernos for babies, thousands of whom are being fed on impure milk and food. I have seen infants for whom the purest milk was the only proper food, sucking pickles and mustard, dirty suet and sugar-coated sticks."

Miss Heald described the distribution of the sterilized milk by the corporation and asserted that it had saved innumerable babies' lives. She also said that the municipalities should grapple with the problem of the babies of the poor.

Eaton Jones, the chief veterinary authority of Liverpool, stated that one-half of the dairies throughout the country were in abominably unsanitary condition and that probably 50 per cent of the milch cows were more or less affected with tuberculosis.

These disclosures created a most profound impression and effective means will be taken to hunt down the vendors of tainted milk and food in the centres of population.

FOUND MURDERED.

Capt. Tom Howard, Former Manitoba Provincial Treasurer Found Dead.

A dispatch from Victoria, B. C., says: Captain Tom Howard who was well known in Winnipeg and who was the first provincial treasurer of Manitoba, has been found murdered at Berkeley, California. The unfortunate man, who was a captain and paymaster in the Red River expedition under Lord Wolseley, was found with his skull badly fractured by some blunt instrument lying behind a barn on San Pablo avenue in Alameda, and the body was taken to the morgue "an unknown." There was no one to identify the remains and they lay for days in the morgue unknown and unclaimed.

With the arrival of the mails from San Francisco came the papers, which published photographs of the dead man and descriptions of articles found upon the body. These resulted in the identification of the late Captain Howard by the Rev. J. H. Sweet of St. James church, James Bay, who recognized the pictures.

The dead man went to San Francisco, via Montreal, to dispose of some mining properties owned by him in the Klondike.

Tariff Campaign Has Opened.

A London cable says: The educational campaign on the tariff question which Colonial Secretary Chamberlain has vigorously launched by means of leaflets and circulars issued under his supervision, though not bearing his name, came in for serious criticism in the House of Lords on July 23. Earl Spencer, the Liberal leader in that house, complained that Mr. Chamberlain was practically violating the government agreement, namely, that the fiscal discussion should be postponed until October. He said the distribution of such literature looked on its face as though the government had taken up Mr. Chamberlain's views. Earl Spencer added that if Mr. Chamberlain remained in the cabinet it would be almost impossible to disassociate his views from the policy of the government as a whole.

The Duke of Devonshire, lord president of the council, and Conservative leader in the house, retorted that while he gathered from the remarks that the premier ought to tell Mr. Chamberlain to resign, he feared this was a rather illogical proceeding, since the government had by no means yet adopted the views of the colonial secretary. The government's investigation so far as it had proceeded had convinced the premier and his colleagues that Mr. Chamberlain's impeachment of the fiscal policy was well founded and that changes ought to be effected.

NEWS NOTES.

The London Stock Exchange has barred all colonial loans.

One colored circus employee killed another at Picton, Ont.

The Shamrocks, the western football champions, were defeated by the Galt team on July 23 by a score of 1 goal to 0.

TELEPATHY PROVEN

MESSAGES ARE TRANSMITTED 125 MILES.

A Committee of Englishman, With W. T. Stead at the Head, Make a Severe Test of the Science of Telepathy—Collusion Was Impossible.

The most astonishing experiments in thought transference were recently made in the offices of Mr. William T. Stead, at the Review of Reviews, in London. A committee of six distinguished men, that included Mr. Stead himself and the noted Dr. Wallace, had the matter in charge, and none who witnessed the experiments doubts in the least that what he witnessed was a genuine psychological accomplishment. Telepathic messages were successfully transmitted between Nottingham and the Review of Reviews office simultaneously. Nottingham is 125 or more miles from London. In Nottingham was Mr. Franks, a telepathist, stationed. In London was another telepathist, Dr. Richardson, who is an American and New Yorker, and who had undertaken to receive from Mr. Franks the telepathic messages.

The eminence of the men who formed the committee makes the thought that there was any collusion in the wonderful results subsequently attained absurd. Besides, Dr. Richardson, the American, was closely guarded in his room after 5 o'clock. There was no opportunity for a confederate to pass to him what went on in the committee room. As to Franks, at Nottingham, he had no possible way of sending information other than in the manner in which he did—telepathically.

The first test was a telepathic transmission from Dr. Richardson to Franks at Nottingham. The committee gave him the number "579." At 6.34 Dr. Richardson went into an adjoining room. This was done for the purpose of allowing him the solitude necessary for the concentration of his mind.

Even had he wished to do so, there was no possibility of his establishing any normal means of communication with Franks from this room. At 20 minutes to 7 o'clock the committee got an answer telegram from Franks. It read, "579."

Then Mr. Stead's secretary sent by telegraph to Franks three messages—a time, a number, a name. In the course of an hour Richardson received three telepathic messages from Franks. The first was that of time—"7.20"; the second was that of a number, "777," and the third was the name "Scotland."

These were the identical things that Mr. Stead's secretary had telegraphed earlier to Franks at Nottingham. The telepathic communications were instantaneous. The two hours and a quarter consumed in the test were for the most part taken up by the exchange of messages regarding the telepathic communications.

When the test had ended there was not one who had been privileged to witness the extraordinary demonstration who felt himself assailed by the least doubt as to its genuineness.

Triumph for Canada.

The London Times' Berlin correspondent says that despite the faux pas of the German foreign office in threatening Great Britain with the withdrawal of the most favored nation treatment as a punishment for Canada's action there is no doubt that Germany is now eager to have the Canadian tariff question settled with the utmost celerity.

The progress of the tariff reform movement in England has created alarm, and the whole business world of Germany would like to see German interests withdrawn from the line of fire. So far as Great Britain and Canada are concerned there is every reason for conducting negotiations as hitherto with perfect coolness and deliberation. It would suit certain people in Berlin only too well if some precedent could be established by special arrangement, regulating Germany's relations with Canada so as to form a German barrier to the ultimate federation of the British empire on the basis of preferential trade.

A Halifax dispatch says: Fifty sailors from the German warship Vineta were detailed to extinguish a serious fire in the cargo of a coal barge in the harbor. Warship pumps sent effective streams into the barge's hold. Halifax firemen were much surprised to see one of the German sailors, clad in a suit of asbestos, descend unharmed into the flames and smoke, his supply of air being maintained by pumps, as in diving apparatus.

Victor Brand Evaporated Cream

For Household Use

takes the place of fluid milk or cream. Never sours or causes disappointment at the last moment. It is handy, pure, digestible, nutritious and appetizing. Makes delicious ice cream, custards, puddings, etc.

Ask your Grocer for it.

KING IN IRELAND.

He Visits the Workingmen's Dwellings, and Talks With the Tenants.

Dublin, July 24.—King Edward and Queen Alexandra separately visited a number of public institutions to-day. His majesty first visited the dwellings built for working people by Lord Iveagh (Cecil Guinness) and accompanied by them and Irish Secretary Wyndham, entered the tenements and talked freely with the inhabitants.

His majesty expressed pleasure at the excellence of the plan. The King then went to the famous St. Patrick's cathedral and received an address from the chapter. After luncheon at the castle the King and Queen visited the Irish Constabulary depot, where a drill exhibition was given in their honor.

The King and Queen this afternoon visited Maynoth college, attended by Chief Secretary Wyndham and his suite. The King expressed his hearty thanks for the welcome tendered him and said:

"I value highly your true appreciation of feeling toward my Irish people, who have contributed so much to the strength and honor of my empire, and who bring such admirable gifts of heart and mind to the enrichment of the national life. It was with saddened feelings that I listened to your reference to the venerable pontiff, who has just passed away, leaving a memory that will long be cherished far beyond the bounds of the church of which he was the exalted head."

The evening party given by Their majesties to-night practically closed the visit to Dublin, which has been devoid of a single untoward incident.

AFTER CANADIAN TRADE

United States Furniture Association Wants Our Materials.

New York, July 24.—The second session of the first national convention of the Furniture association of America was held to-night. Eugene W. Foss, of Boston, was the principal speaker of the evening on reciprocity with Canada, saying among other things:

"Canada is the largest purchaser of our manufactures on the face of the globe, and we ask our government to deal justly and fairly with our best customer.

"Our demand for closer trade relations with Canada rests upon broad foundations. Pre-eminent in the need of our manufacturers for cheaper raw material, iron, coal, wood, hides, etc. We must develope our export trade or suffer serious consequences. Canada can, and is anxious to supply us with what we need in our industries. If we enlarge our free list, particularly under the conditions of give and take, incident to the negotiations of a trade treaty we supply our manufacturing plants with their natural material and place ourselves in a position to compete for the trade of the world.

"The Chamberlain plan of an imperial customs federation has not so dazzled the Dominion authorities that they are blind to the benefits of reciprocity with the United States."

The following resolutions were adopted: Resolved, That the Furniture Association of America regards with approval the action of the United States government in seeking to reconvene the Anglo-American joint high commission, for the purpose, among others, of negotiating a reciprocity treaty with Canada; that it is the sense of this convention that reciprocal relations would be beneficial to both; that each country should follow the general lines of the removal of the duties on some or all of the natural products of each and such mutual extensions of the free list; and reductions and changes of the duties on the manufacturing products or both as will give to both as low rates on duties as is given to any other country.

"Al" Proctor, the Canadian horseman, was fined and suspended at Detroit on July 24.

A party of English journalists, who will tour the Northwest, have reached Quebec.

H. Gordon B. Capel, at Craven, near Regina, N.W.T., a young Englishman, attempted suicide by cutting his throat with a razor.

The claim of the "organ-grinding" earl, W. T. T. Poulett, Viscount Hinton, has been disallowed by the House of Lords.

Premier Seddon has started the empire's relation policy by the introduction of a bill in the New Zealand legislature empowering the government to prohibit or restrain coasting trade in New Zealand by foreign ships. This order will counteract the disadvantages which British ships suffer in foreign waters. The colonial conference advised the consideration of this step. The United States is especially aimed at.

Immigration Agent James Hartney, of Toronto, says he is making the usual arrangements to handle the Manitoba crop this year. "We have crop correspondents in every township, and they have been asked as usual to furnish a list of the number of men they will require in their township. It is from their reports that we find out how many we require. We then form a pretty good idea of when the harvest will be ripe and after consulting with the C. P. R., we are able to fix the dates of excursions and the number of men wanted.

In Algeria there are more horses than human beings.

HELPFUL HINTS TO YACHTMEN.

If in safety you would be,
Always let your sheet run free.

Do not gybe in heavy seas,
Put down your helm and face the breeze.

A foot to windward 'gainst the wind
Worth yards to leeward, bear in mind.

But do not go and overdo it,
And 'pinch' too much, or you will rue it!

Authority should always be
But one on land—more so at sea.

Don't run ashore to save a tack
At most a few yards you'll go back.

On a lee shore never land,
You may get blown upon the strand.

Always ready'—ever will
Prevent upsets and many a spill.

In a squall, though going free,
To down your helm must careful be.

If round a mark a gybe you make,
Don't cut it fine—'tis a mistake.

Sit to windward on your tiller,
Or p'r'aps a sudden puff might spill her.

If 'neath a lee you're sailing then—
Look out for gusts down dale or glen.

When out from 'neath a lee you go,
Be ready for a stronger blow.

Never, never hesitate,
One second's pause—'tis then too late.

Don't carry sail for swagger's sake,
You're pretty sure to have a break!

If you have to scrub your sails,
Choose a day when sun prevails.

When sailing with the girl you love,
Don't let her 'gainst the tiller shove.

—Negemoosha, in Bermuda 'Colonist.'

HEYDAY OF THE TAVERN.

Resort for Men of Letters During First Half of Eighteenth Century.

The heyday of the tavern as a resort for men of letters was in the first half of the eighteenth century. Addison and Steele, Pope and Swift, Akenside, Garth, and Gay have conferred undying fame on Button's, Tom's and Wills' coffee-houses, all in Russell Street, Convent Garden, Dick's in Fleet Street, the Cocoa Tree, in St. James' Street, and the Upper Flask at Hamstead. A little later on Dr. Johnson, with Boswell, Burke, Reynolds, and the Literary Club gave almost equal celebrity to the Crown and Anchor, Arundel Street; the Essex Head, Essex Street; the Turk's Head, Gerrard Street; the King's Head, Ivy Lane, and the Mitre, Fleet Street, while in addition Goldsmith is specially associated with the Globe, Fleet Street, and Garrick with the Queen's Arms, St. Paul's churchyard. Johnson declared "there is no private house in which people can enjoy themselves so well as at a capital tavern." At Nandos, now the so-called palace of Henry VIII., Thurlow obtained his first brief after engaging in a chance argument, and John Philpot Curran when in London, made it a point to "spend a couple of hours every night at a coffee house."

The order of the "Monks of the Screw," over which he presided in Dublin, was hardly inferior to Johnson's coterie, including as it did such celebrities as Lords Avonmore and Charlemont, Bowes Daly, Father O'Leary, Henry Grattan, and Henry Flood. Edinburgh had its eighteenth century tavern clubs, such as the Ante Manum (pay before hand), and the Marrowbones long before Christopher North gave a semi-fictitious fame to the Noctes Ambrosianae of the Blackwood group. A generation previously his gifted countryman Burns had set an example of tavern haunting in a coarser kind than that prevalent at Ambrose's, and earlier still Thomson, who wrote part of the "Seasons," at the Doves, Hammersmith, indirectly met his death while returning from that hostelry. The modern club has killed its public-house prototype, but the older institution has died hard. Lamb, Southey, and Coleridge carried on the ancient tradition in the Salutation and Cat in Newgate Street, where Sir Christopher Wren used to smoke his pipe. Dickens was himself the hero in David Copperfield's scene in the Red Lion, Parliament Street; he sketched the Leather Bottel, at Cobden, from personal knowledge; and he well enjoyed a day at Jack Straw's Castle. His great contemporary, Thackeray, frankly confessed to liking "what was called Bohemians and fellows of that sort," and long after he was a member of several well-known clubs he drew James Russell Lowell into Evans' to tell him he had killed off Col. Newcome. —London Standard.

A Story About Du Chaillu.

Du Chaillu was a little man of great good humor, but of very quick temper, and used to relate with satisfaction his first encounter with the late Duke of Argyll. When the skeleton of the first gorilla ever brought to Europe was on show in London the public was admitted on presentation of cards. The duke wrote to Du Chaillu that on such and such a day "the Duke of Argyll proposed to visit the gorilla." Du Chaillu at once wrote back that the gorilla was to be seen every day between certain hours and that of the Duke of Argyll presented his card he would no doubt be admitted like the rest of the public.

A Tailor's Perquisites.

There has been a serious strike of tailors in Edinburgh, and it has revealed an interesting state of affairs concerning the way the journeymen are treated by the masters. One of the latter, complaining of the unreasonableness of the strike, said that he allowed his men three glasses of whisky a day, with an extra nip if they started work before 4 in the morning and an extra glass if they stayed late after tea time.

Coal in South Africa.

South Africa is probably the richest mineral country in the world. The coal is almost equal in calorific values to the standard Welsh. It is so convenient, often lying on the top of the gold mine, that it can be delivered for $3 a ton. One coal mine company will probably abandon its coal to dig for gold.

The Fernie Free Press

ESTABLISHED 1898.

H. G. WATSON, Editor. J. R. WALLACE, Manager

THE FERNIE FREE PRESS, FERNIE BRITISH COLUMBIA

SATURDAY, AUGUST 1, 1903.

THE BALANCE OF POWER.

The socialists hope to secure the election of a sufficient number of their candidates to hold the balance of power in the next B. C. legislature. This balance of power, they boldly boast, will be used as a lever by which the government will be forced to yield to their demands. Granting for the sake of argument that there will be a sufficient number to accomplish this purpose, the government will be forced to follow one of two courses. Either, it will have to resort to the unscrupulous course of sacrificing its own policy and bend to the will of a few men, or it will have to suffer defeat at the hands of the same few men on the first measure submitted which does not meet with the approval of socialist members.

The government which adopts the first named course in order to hold office is unworthy the confidence of the electors who send them there, and it is to be hoped that the next government, be it conservative or liberal, will not be guilty of such a violent breach of its pledged principles. The adoption of the other course will mean a general election at any time that the socialists may see fit to disagree with the government.

This state of affairs is not a new one in B. C. politics, in fact it is exactly what has been going on at Victoria during the past years, a condition which has disgusted all honest men and which has led to the adoption of party government in the province as a means to rid the legislature of individualism and the despotic sway of the few who rule the many. It is this "balance of power" that Joe Martin has so often wielded with telling effect, and which has made him a factor always to be reckoned with in his B. C. career. It is this "balance of power" that has obtained for certain districts extravagant government patronage and grants, while other districts, represented by men who are not feared by the government because they are men of principle, such districts get little or nothing.

British Columbia can never have a free, independent, honest government until it is entirely free from the intimidation of a few "independent" members of the legislature who term themselves the "balance of power". The province cannot boast the Anglo-Saxon heritage of a responsible, representative government while a few can dictate to the many; yet the leader of the B. C. socialist party recently stated in a public meeting in this town that they would have at least six socialist members with which to hold the "balance of power" in the new legislature.

EDITORIAL NOTES

There has been considerable neglect shown by many citizens in the matter of cleaning up their back yards. Half the summer has passed and this work, which should have been attended to long ago, is in some cases untouched. The police have been serving a number of blue papers in this connection, and one was prosecuted and fined $100 and costs or six months in jail. This should act as an example and cause others to take speedy action.

* * *

THE voters' list this morning numbers only 790 names. At this rate the list will not total more than 1000 names. This is a very small list when compared with the large population from which it is drawn. Only two more weeks remain in which this work can be done. During those weeks this one thought should be uppermost in the minds of all who take an interest in the welfare of the district. Those particularly interested in the coming elections should concentrate all their efforts on this work. There are 10 long weeks intervening between the closing of the lists and election day, which will be amble time for the opposing parties to select their candidates and conduct a thorough campaign. In the meantime every voter should be on the list. At the best, the vote in this district will be small comparatively speaking, owing to the large alien population, and it is necessary that this drawback be overcome by getting every eligible name that the growing importance of the district may be as correctly represented as possible by the voters' list.

H. Bentley will, in all probability, be the Conservative candidate for this district, though nothing authentic will be known until the 15th, when it is expected a nomination convention will be held, in conjunction with others all over the province. The only other name that has been seriously considered is that of W. R. Ross, but that gentleman has repeatedly thrown cold water on the proposition.

* * *

REPORTS from Michel show a deplorable condition of affairs existing in the post-office there. Some weeks ago W. MOON, postmaster resigned his position, the government has not yet appointed his successor and in the meantime the office is run in a reckless manner. The government should use greater expedition in appointing a new postmaster, and the retiring official should show more consideration for the public and the government until such appointment has been made. In the meantime the people of Michel are bravely submitting to the inevitable, hoping that the present chaotic conditions may soon be remedied.

* * *

What has become of the fire committee appointed to report on the purchase of a lot and the erection of a fire hall? It is now some months since this movement was commenced, but, like the matter of incorporation, everybody evinced much enthusiam at the beginning and then allowed it to gradually decrease as the object of their desire came nearer to view. The committee worked faithfully in canvassing the town for subscribers. The subscribers contributed to the best of their means, fully believing that there would be no further hitch, and that a well equipped fire brigade wonld be an accomplished fact by this time. Instead of this, the matter has been allowed to cool down. Some money has been collected, a lot more has been promised, an engine has been ordered, a committee has been appointed to complete arrangements for a fire-hall, and there the matter rests. The committee should complete the work for which they were appointed without delay, and report to a general meeting. Some of these days the engine will arrive and there will be no place to put it. A man should not accept a position on a committee unless he is fully prepared to perform his duties as a member of that committee.

* * *

LABOR Day will be here in five weeks. This is a most suitable day for a grand celebration in Fernie and now is the time for the Athletic Association to take the matter up. The first consideration in connection with such a celebration is the raising of sufficient funds. The 1st of July sports proved beyond a doubt that it is useless to get up a good program of sports without decent prizes to defray expenses, etc. The hotels are institutions which reap direct results from a big day of sport and they ought to liberally support such a scheme. With a good supply of coin on hand the association will have no trouble in arranging a good program which will draw competitors from surrounding towns and a host of friends and supporters. Fernie is centrally located, has ideal grounds and possesses ample hotel accommodation. The association should call a meeting at once, and we believe with earnest effort on their part and hearty co-operation on the part of the citizens generally that Labor Day of 1903 can be made a most eventful and interesting day, long to be remembered by its residents and those of neigboring towns. A strong drawing card for this celebration would be the lacrosse match which Lethbridge has requested to have postponed until that day. One or more base-ball clubs and foot-ball teams could also be induced to come here if only a sufficient sum of money is raised for prizes, medals, expenses, etc.

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1. That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electoral districts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

Louis Carosella & Co.

WHOLESALE LIQUOR MERCHANTS

Fernie, B. C.

Notice is hereby given that I, Mary Connor, 60 days after date intend to apply to the Chief Commissioner of Lands and Works for permission to purchase 640 acres of land. Commencing at the north-east corner post of G. O. Foss's location, thence running 80 chains west, thence 80 chains north, thence 80 chains east, thence 80 chains south to the point of commencement.

234-8t MARY CONNOR,
Dated June 24th, 1903.

IN THE COUNTY COURT OF KOOTENAY HOLDEN AT FORT STEFLE.

—IN PROBATE—

Notice is hereby given that on the 23rd day of July, 1903, it was ordered by J. A. Florin, Esq., Judge of the said Court, that James Ferguson Armstrong, Official Administrator of the County of Kootenay, be administrator of all and singular the estate of ALEX. BODIE, of FERNIE, miner, deceased intestate.

Every person indebted to the deceased is required to make payment forthwith to the undersigned.

Every person having in possession effects belonging to the deceased is required forthwith to notify the undersigned.

Every creditor, or other person, having any claim upon or interest in the distribution of the personal estate of the said deceased is required within thirty days of this date to send by registered letter, addressed to the undersigned, his name and address and the full particulars of his claim or interest and a statement of his account, and the nature of the security (if any) held by him.

After the expiration of the said thirty days the Administrator will proceed with the distribution of the estate having regard to those claims only of which he shall have had notice.

Dated at Fort Steele this 30th day of July, 1903.

JAMES FERGUSON ARMSTRONG,
Official Administrator,
Fort Steele, B.C.

Yours for $15

Works are Elgin and Waltham, as you choose. Case is 14 K., gold inside and out, but not all through; as pretty as solid gold, and stronger; guaranteed to wear 25 years.

If you think of buying a Watch you ought to learn about the "Gold Filled" case. I can show you five sizes and a good variety of patterns, and would like to describe its construction.

A. C. Liphardt.

Miss Mary Whimster arrived home on Wednesday morning from Toronto where she has been attending college.

A picked team, outside of the regular teams, have challenged the Angel's Rest to a game of lacrosse on Monday evening.

F. Bryan, an experienced lumber man of Rat Portage, arrived yesterday to take a position with the Fernie Manufacturing Co.

An addition is being put on the rear of the Waldorf Hotel consisting of a dining room and kitchen with bed rooms over the former.

"Griffin Brand" brix butter is fresh from the churn and retains that peculiarly delicate flavor that only the best and freshest butter can have. x

Constable Tranter brought a prisoner from Morrissey yesterday charged with carrying matches into the mines. He will be tried this evening.

H. S. Tibbs, son of the manager of the King Edward Hotel, Toronto, was in Fernie this week. He is travelling for the Toronto Saturday Night.

The liberals of the Cranbrook district held a convention on Wednesday but owing to a dispute over delegates from Marysville the meeting was adjourned for three weeks.

A complete line of wall paper has been added to the housefurnishing department of the B. C. Furniture Co. and has been marked down to mid-summer prices, less than you have been paying here before. x

Sewing machines—the New Model and Empire—warranted by the manufacturers for ten years are now sold by the B. C. Furniture Co. These machines while comprising all the latest improvements of the high-priced machines, are sold at a medium price—$25 each. x

The B. C. Furniture Co. are now prepared to do all kinds of picture framing also framing charters, diplomas, resolutions, etc., for lodges, schools and societies in the latest and most exclusive designs. A complete line of art goods are carried in stock. x

Lethbridge Lacrosse Club have written the secretary of the Fernie club asking for a postponement of the game at Fernie from August 31st to Labor Day, which comes a week later. The reason given is that a number of the Lethbridge people would accompany the team at that time who couldn't come on the former date. The local team have willingly made the change.

Register! Register!! Register!

Mr. W. Austin left on Tuesday for his home in Wilkesbarre, Pa. Mrs. Austin remains in Fernie to make a longer visit.

Mrs. Campbell and Mrs. Chamberlain, of Strathcona, mother and sister of Mrs. Gould are visiting at the latter's home this week.

Mr. Beane, of Fernie, B. C., spent a few days in town last week, on business (?) returning Sunday evening—Macleod Advance.

Wm. Eschwig is erecting a building across the street from his hotel which when completed will be occupied by the Crows Nest cigar co.

P. Van Hulle's property near the station was sold on the 27th to Chenette & Ross for $2500. The deal was put through by F. J. Watson.

Dr. Wilson of Morrissey Mines was in town over Thursday. The doctor is alive to the liberal interests of the constituency and is doing good work in looking after the voters list in his town.

Messrs. Thomson and Martin who have been employed in the engineering department of the Coal Company's office left last night for the east, where they will continue their university course.

A petition is being circulated around town praying for the release of Frank Pennock who was recently given a year in the Nelson jail for setting fire to a tree across the river.

The Conservatives of the Kamloops electoral district held their convention on Wednesday afternoon. F. J. Fulton, barrister and former member for north Yale was the unanimous choice of the meeting.

Mr. John Hutchison arrived in Fernie last evening where he will in future reside and engage in the insurance business under the name of Cree & Hutchison. On Tuesday evening his friends in Cranbrook held a "Smoker" in his honor.

The Souris lacrosse team was defeated by Medicine Hat on Wednesday by a score of 4 to 1. The Souris team was to have played a couple of games in Nelson, but owing to other arrangements they are unable to come farther west than the Hat.

The city of Rossland will hold a summer carnival on August 25 and 26th. $5,000 will be offered in prizes. It will be under the auspices of the Mayor and city council and the patronage of the Brotherhood of Railway Trainmen and the Miners' Union.

Mr. Jewell took in the Winnipeg fair last week and returned on Monday bringing with him his wife and family who were visiting for some time at Dauphin, Man. Miss Reynard, sister of Mrs. Jewell, accompanied them, and is now their guest at Coal Creek.

The police report the departure of five undesirable characters from the town this week. When it was too late it was learned that one was wanted on the charge of theft, and another if he shows up again, may be required to answer some hard questions about a pack of marked cards.

A Slav employed as a driver in No. 1 mine was seriously injured on Thursday afternoon. He was not familiar with his work and got jammed in between the moving cars and the rock-wall. His head was badly bruised and his collar bone broken.

Mr. Chas. Fife, operator at Macleod, has been appointed operator in the Fernie depot in the place of J. Moe who has been given the position of agent at Macleod, not operator, as incorrectly reported last week. Mr. Fife is well and favorably known in Fernie having lived here some time ago.

D. McNeil, who has been trainmaster on the Crow for several months past, has resigned the position and will return to his old run from Calgary to Macleod. Mr. McNeil will be succeeded by Alex. McKenzie, the pioneer freight conductor on the Crow, and one of the most popular railroad men on the system.

The services in the Methodist church to-morrow will be conducted by the pastor. The subject for the morning will be "Joy in God's Service," and in the evening "Seeking light and Life for all." Reception of members and Sacrament of the Lord's Supper will be held in connection with the morning service.

F. J. Deane, publisher of the Nelson News and the Kamloops Sentinel was unanimously nominated on Wednesday by the liberals of the Kamloops electoral district as their candidate. Mr. Deane was the only name offered. He represented that district in a previous legislature and his friends predict an easy victory for him.

The Fernie Liberal Association will hold a meeting on Monday evening to arrange the details for a nomination convention of the liberals of the district. The liberals have rented a large room at the rear of Purdy's store with the entrance on Wood St. for their exclusive use during the campaign. The meeting on Monday evening will be held in this room.

B. Bannett's store at Rossland was burned down at 3:30 one morning this week. The firemen had difficulty in saving the Clifton Hotel which adjoined it. The store was a total loss. The police believe the fire was of incendiary origin as a quantity of stolen goods from this store was found by them in a raid on a gamblers' den.

Rev. D. L. Gordon was at Michel over Sunday, Rev McEachern of that place filling his pulpit here. Mr. Gordon while there took steps towards the improvement of the church organization and he received assurance from the members that they would support a resident ordained clergyman. Mr. Gordon went to Morrissey today with a similar object in view.

Last Saturday evening a little girl of about ten years of age fell from an upper window of the Muskoka Hotel to the hard sidewalk below. She was picked up unconscious and medical aid was hastily summoned. Her head and back was found to be injured but not seriously and she is now almost recovered from the effects of the dangerous experience.

Mrs. M. Barrett, who with her daughter has been visiting Mrs. J. Elliott for the past three weeks, returned to her home at Didsbury, Alta., on Monday, being notified by a wire that day of a serious fire in that town which burned the Beemer Block including the post-office, bank and stores and badly wrecking the Alexandra Hotel opposite which is owned by Mr. Barrett. Didsbury is 50 miles north of Calgary.

Travellers from Manitoba report the crops to be only fairly good and that the yield will fall considerably short of last year's, despite the glowing accounts sent out by the C. P. R. The drougtht in the early part of the season has retarded the growth of the straw. The crop in the territories, however, will exceed that of any previous year. The total wheat crop for the territories is estimated at over fifteen million bushels.

Constable Kummer arrived from Nelson last evening bringing with him J. McFadden who is wanted here by the police for theft. Word had been wired ahead to the Nelson authorities on Wednesday evening to be on the look-out for him as he had left on the morning train for that place. The boat had landed before the word was received but the officers soon located him though he had purchased another suit of clothes and had otherwise changed his appearance.

A meeting was held in Princess Hall on Tuesday evening of those proposing to form a Knights of Pythias Lodge in this town. It was decided to hold the inaugural meeting on August 26th when the grand officers for B. C. will be present to assist. There are already 46 names on the list and the work of initiation will be heavy, necessitating its continuance on the following afternoon and evening. A banquet to the visiting officers will be given late in the first evening.

The Fernie Baptist church, which for some time has been unfortunate in having no regular pastor, is now under the regular charge of Rev. P. H. McEwen of Victoria, Supt. of Baptist Missions for B. C. The new pastor will preach in this church tomorrow morning and evening. Mr. McEwen has recently given up the pastorate of a large church in Victoria in order that he might the better look after the superintendency of his work. He will remain here only until a regular appointment is made for this place.

Mr. A. H. Reeder a coal expert from Pennsylvania has been employed by the C. P. R. to assist Mr. C. M. Henretta in reporting on the coal prospects up the Elk north of Michel. These gentlemen have been up in that neighborhood all week making a thorough examination. It is understood that the C. P. R. require an extensive and absolutely correct report before going ahead with the extensive development work on their coal claims, which has been contemplated for some time. Mrs. Reeder and her little boy have been guests at the Royal hotel during the absence of Mr. Reeder.

Mr. G. Appleford has accepted Mr. Mitchell's (Fernie) challenge to run 100 yds for $250 a side providing the date is postponed until Aug. 21st, or any later date that Mr. Mitchell may desire. As Mr. Appleford will be participating in the lacrosse match and sports on the 11th of August, he would be handicapped in accepting the challenge for that date.—Lethbridge News. Mr. Mitchell was seen re the above paragraph and he expressed some surprise that a later date should be chosen. He preferred to run the race at the celebration. The lacrosse match need not interfere with it as he was willing to run in the morning before the game was called.

Mr. F. Keffer, manager of the Mother Lode mine and well known in Fernie as a member of the conciliation commission, stayed over a day in Fernie this week on his way east as far as Medicine Hat. He reports the mining operations in the Boundary country to be flourishing. The fuel situation is improving steadily, the smelters seldom being entirely without coke though the supply often runs low. He felt assured of the fact that the Coal Company's new oven plants now under construction would permanently dispose of the coke shortage question. He expressed much satisfaction with the way the management of the Coal Company were treating the smelters of the Boundary country. He believed the company was doing its best to supply the demand and to distribute their product equitably among the smelters, and he deplored the unfair criticisms of some of the papers in the smelter country, in which the real facts were misrepresented.

Sentler's north east corner post, thence south 80 chains, thence west 80 chains, thence north 80 chains, thence east 80 chains to point of beginning.

J. H. [illegible]
May 30, '03 Daniel McKenzie, Agent.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a special licence to cut and carry away timber from the following described lands:—

Commencing at a post planted on the south bank of the Skookum-chuck river, at the west boundary of lot 6033, South-East Kootenay, running thence south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to place of commencement.

A. M. GRIMES.
Dated this 2nd of May, 1903. A. Milton, Agt.

C. N. R. CROP REPORT

LIGHT RAINS HAVE BEEN OF BENEFIT.

Reports Say Good Yields are Expected, but more Rain would assist the Growth in Many Localities--Wheat is Rapidly Heading Out.

The Canadian Northern crop report for the week ending July 18, which is given below, shows that rain is very badly needed in some districts. In others the crops are in good shape and conditions have been favorable. On the whole there appears to be no reason for thinking that Manitoba will not have a fair average crop this year, although the yield all round will not be so heavy as was anticipated earlier in the season.

The report is as follows:

RAINY RIVER SECTION.

Steinbach—All crops in good condition. Wheat heading out and weather cool and showery. Very favorable for crops at this stage.

Ste. Anne—Crops looking very good in this vicinity; plenty of rain and sunshine. Farmers are now busy making hay, which is a very good crop.

Lorette—Farmers claim that crops are holding out very well. The splendid weather we have had during the past week has greatly improved the prospects. The probable yield is: Wheat 15 to 20, barley 30 to 35, oats 30 to 35.

DAUPHIN SECTION.

Eli—Crops of all kinds are improving rapidly but will not be abundant, as at one time expected.

Oakville—All crops in good condition; plenty of rain and nice warm weather has improved them wonderfully lately. The average crop per acre of all grains is estimated at 20 bushels to the acre.

Portage la Prairie—Weather past week has been very favorable for growing crops. Several showers during the week did good service. Hail Thursday, but no damage reported in this district.

Beaver—Crops in some sections doing fairly well, but need rain.

Gladstone—Crops continue to do well. Weather conditions very favorable.

Plumas—Crops in this district for past week continue favorable. Light rains improved greatly their condition.

Makinak—The weather has been warm during the past week and very favorable to the crops in this district.

Ochre River—Crops in this vicinity continue to do well. A good yield of all grains is expected. All other crops are doing well.

Dauphin — Considerable rain this week. Grain is now in full head and continues to promise well. The latter part of the week has been dry and warm.

Ethelbert — Crops continuing to make good progress and are in splendid condition. Weather is warm and favorable. Great prospect for large harvest.

Minitonas—Wheat is all deaded out and looking fine. All others growing fine.

Swan River—Weather for the past week fine with light showers. Crops are looking well and are nearly all headed out.

GILBERT PLAINS BRANCH.

Grand View—Crop prospects at the present time are very promising. Weather fine and clear with numerous local showers. Yield will be phenomenal if there is no unforseen drawback.

CARMAN BRANCH.

Sperling—Crops looking well, much improved by some showers. Wheat all headed out, also some oats and barley. Haying nicely started. Vegetables doing well.

NEEPAWA BRANCH.

Neepawa—Crops still continue in splendid condition. Several good rains since report of a week ago. Prospects good.

EMERSON BRANCH.

Ste. Agathe—Crops doing fairly well, but the yield will be light.

Morris—Crops in this district are looking better, much improved by recent rains.

St. Jean—Have had no rain this week excepting a few light showers. Wheat heading out very well; no damage by hail.

Letellier—Crop has poor appearance for two or three miles around here, but looks better back of that. This is due to not having any rain around these districts.

Emerson—Weather has been favorable for the grain during the past week and crops are doing nicely.

BRANDON SECTION.

Myrtle — Weather during the past week has been very hot with no rain. Crops are not suffering, but could stand a good rain.

Roland—Crops are doing very well in this district, but a little rain just now would be a great help. Estimates of last week of fifteen bushels or upwards is still borne out.

Rosebank—Crops require rain very weeks has been dry and windy. If we get any amount of rain during next week will still take in an average crop.

Miami—The weather during the past week has been dry and warm. Rain is very badly wanted and crops are not doing as well as expected.

Altamont—The crops in this district, although looking well, require a good rain.

Somerset—Wheat crop in this district well headed out. Weather is changeable, without rain.

Swan Lake—The few rains during the past week have made a most wonderful change in the appearance of the crops of this district. Farmers are expecting a fair crop. A good rain would now be of great benefit to crops of oats and barley.

Baldur—Conditions of crops about the same as last week. Needs a good rain to help the grain to fill.

Belmont— Crop outlook not so bright as could be expected.

Hilton—Weather has been fairly good this week for crops, not too hot and with occasional showers. Cannot estimate wheat yield over fifteen bushels to the acre.

Wawanesa—Crops in good growing condition, but could do nicely with more rain. Wheat all headed out. It is expected yield will be from 15 to 20 bushels.

Rounthwaite—Crops in this district made but very little progress during the past week. Rain is needed in the worst way, and unless it comes at an early date the outturn will be lighter than has been looked for.

Brandon—Weather cool. Rain badly needed. Farmers advise that the crops are not going to be as heavy as at first expected. Probable yield 15 bushels to the acre.

SOURIS SECTION.

Ninette—Crops are all out in head. A little rain this week.

Dunrea—Weather the past week has been cool and dry, with exception of one or two light showers. Wheat all headed out looking fairly well.

Margaret—Wheat all headed out. Yield will not be as heavy as anticipated.

Minto—Crops nearly all heading out and looking well. Prospects for a good yield are better than for some time past, owing to the favorable weather we have had.

Fairfax—Crops in this district are still looking fairly well. Experienced farmers tributary to this station estimate yield of wheat in this section at about 18 bushels to the acre.

Elgin—Since last report we have had nice shower of rain, which will be of great benefit to the grain. From best reports yield will be about 15 bushels to the acre.

Hartney—The weather has been dry and warm. The grain is making good headway. The wheat is mostly out in the head and cutting will be general in about three weeks. Average yield about 20 bushels.

THE KING IN IRELAND.

Is Tendered an Enthusiastic Welcome at Kingston.

A cablegram from Kingston, Ireland, of July 21, says: King Edward and Queen Alexandra, accompanied by Princess Victoria and their suites, arrived here at five minutes past nine this morning on board the royal yacht Victoria and Albert.

In replying to an address here King Edward said he shared in the sadness of multitudes of his subjects over the news of the pope's death. The King added that his visit came at a time when a new era is opening for Ireland.

His Majesty said he remembered the kindness with which his holiness had so recently received him and the interest which Pope Leo took in the welfare of the English people.

Immediately after the ceremony their majesties, accompanied by the lord lieutenant and a brilliant staff, and escorted by Horse Guards, drove off in the direction of Dublin, amid the greatest enthusiasm on the part of the crowds lining the road between Kingston and Bulls Bridge.

The Dublin corporation is the best hated and most thoroughly despised body in Ireland because of its churlish refusal to join in the popular welcome to the King and Queen.

Rescued by an Engineer.

A dispatch from Belleville, says: Engineer Brown, of this city, prevented an outrage by two tramps, three miles east of Kingston. He was coming west with a train and while looking out of the cab window saw a young lady a short distance from the track struggling in the hands of a couple of rough looking men. He at once stopped the train, and with his fireman, started to the rescue. The tramps made for the woods and disappeared. The young lady was almost exhausted. She said she was walking with a gentleman friend when two tramps accosted them. They overpowered her escort and attempted to drag her to the woods. They were only frustrated by the timely arrival of the trainmen. Her escort had been so badly treated as to be unable to give assistance.

George Gregor, a Canadian, won the Alexandra competition at Bisley.

During the year ending June 30 over 31,000 homestead entries were made in the Canadian West.

Simpson, of Winnipeg, won the amateur championship at the annual trap-shooting tournament of Western Canada.

A part of Minnesota capitalists have purchased immense timber areas in British Columbia, and have organized a company.

Ladies' Day at the Winnipeg Fair was well attended, some 20,000 people being present. Chestnut, of the Portage la Prairie string of horses, made a Canadian record. The provincial running record was also broken.

The London Times announces that it is anticipated in official circles that parliament will be dissolved early in the next session and that a general election will occur in March.

C. P. R. CROP REPORT.

Agents Say That Warm Weather Has Hastened the Harvest.

The C. P. R. crop report for the central division, issued on July 22 from the assistant general superintendent's office, shows very encouraging prospects along its lines. The past week or two of warm weather, with frequent showers, is rapidly ripening the crop.

MAIN LINE.

Rosser—Weather favorable, prospects very fair; no damage.

Marquette—Weather O.K., require rain; no damage.

Burnside—Weather rather dry, slight damage by hail.

MacGregor— Everything favorable; no damage reported.

Sewell—Prospects bright, weather fine; no damage.

Carberry—Crops progressing favorably, no damage.

Brandon — Weather favorable, no damage, prospects bright.

Kemnay—Crops in fine condition; prospects never better.

Alexander — Crops looking great, plenty of rain, no damge.

Griswold—Weather favorable. prospects exceptionally good.

Oak Lake—Weather most favorable, prospects bright.

Virden—Weather favorable; no damage, prospects bright.

Elkhorn—No damage reported, weather favorable for crops.

Kirkella—No damage, prospects for good crop, fine.

Fleming—Everything is favorable; bumper crop assured.

Moosomin—Weather most favorable and no damage reported.

Red Jacket—Weather favorable, no damage, prospects bright.

Wapella— Weather favorable; no damage, prospects first-class.

Whitewood—Prospects favorable for good crop, require rain.

Broadview—Weather favorable, no damage, prospects excellent.

Grenfell— Weather favorable, no damage, prospects very good.

Sintaluta—Weather fine, no damage to crop, outlook grand.

Indian Head—Weather favorable, no damage, splendid outlook.

Qu'Appelle—Weather favorable, no damage, prospects bright.

Balgonie —Weather favorable for crops, no damage reported.

Regina—Weather favorable, no damage, outlook bright.

Pense— Weather favorable, prospects bright for heavy crop.

Pasqua—Weather favorable, prospects bright, no damage.

MINNEDOSA AND YORKTON.

Macdonald—Crops looking fine, average yield will be 20 bushels.

Westbourne— Have had showers, prospects never better.

Gladstone— Weather favorable, no damage, splendid outlook.

Arden—Weather favorable, no damage, prospects bright.

Neepawa—Splendid weather, prospects bright.

Minnedosa—Weather O.K., will have better than average crop.

Birtle—Crops all doing well, no damage, prospects bright.

Binscarth—Weather favorable, no damage, prospects bright.

Saltcoats—Weather very favorable, prospects very bright.

Yorkton — Weather favorable, no damage, good crop expected.

PRINCE ALBERT BRANCH.

Condie—Weather favorable, no damage, prospects for heavy crop.

Lumsden—Weather favorable, no damage, prospects bright.

Sraik—Weather favorable, no damage, outlook bright.

Chamberlain— Weather favorable; fine hay crop this year.

Davidson—Crops doing well, no damage reported.

Hanley — Weather favorable, no damage, prospects bright.

Dundurn, Osler, Hague, Rosthern, Duck Lake, and West Prince Albert also report no damage done, weather favorable and prospects bright.

LARIVIERE SECTION.

La Salle—Weather fair, will have average crop.

Morris—Crop in fair condition, no damage.

Morden—Weather too dry, require rain, no damage.

Thornhill—Weather very dry, need rain, no damage.

Darlingford—Rain required, no damage reported.

LaRiviere—Crops slightly damaged for want of rain.

NAPINKA SECTION.

Pilot Mound—Weather very dry, no damage reported.

Crystal City—Crops looking well; but require rain.

Clearwater—Weather dry, prospects fair.

Mather—Slight damage by continued dry weather.

Cartwright—Prospects fairly good, rain required.

Killarney—Rain badly needed, keeping crops back.

Ninga—Weather favorable, but require rain.

Boissevain—Weather favorable; no damage, average yield.

Whitewater—Weather O.K., no damage; yield, wheat 20, oats 50, barley 40.

Deloraine— Weather favorable, have had frequent showers.

Napinka—Weather fine, no damage, prospects never better.

SOURIS SECTION.

Starbuck— Weather favorable, no damage, prospects bright.

Rathwell—Crops thin on account of not enough rain, prospects bright.

Treherne—Good rain last night, but crops damaged by drought.

Holland—Slight damage by hail and drought.

Cypress River—Weather too dry; slight damage by hail.

Methven—Weather favorable, no damage, prospects bright.

Nesbitt—Weather too dry, want rain, prospects bright.

Souris—No damage; weather fair; prospects bright.

ESTEVAN SECTION.

Beresford—Crops in need of rain, but not suffering.

Hartney—Weather favorable, prospects fair, no damage.

Melita, Elva, Gainsboro, Carievale, Carnduff, Glen Ewan, Oxbow, Alameda and Estevan report weather favorable, no damage, and prospects bright.

MISCELLANEOUS.

Rosenfeld—Crops damaged about 35 per cent on account of want of rain.

Altona, Gretna, Carlyle, Manor, Arcola, Reston, Dominion City, Emerson, West Selkirk, Stonewall, Stony Mountain, Waskada report prospects favorable, with no damage.

Snowflake—Weather too dry, crops suffering.

Mowbray—Require rain here at once, crops not doing very well.

DEGENERATION IN BRITAIN

Peers Discuss the Startling Decline in the Birth Rate.

Some rather startling statements were made in the course of a debate in the British House of Lords on a motion by Lord Meath to appoint a committee of inquiry into the causes of physical deterioration.

The Bishop of Ripon declared that if the present decline in the size of families continued, in sixteen years the natural source of increase would inevitably be dried up.

Britain had lost 1,100,000 children by the shrinkage in the birth rate, and every year the doctrines of Malthus become more popular, and last year decreased the child population in London by 26,000.

The Duke of Devonshire agreed that the condition of things was serious, not only from the military, but also from the industrial point of view.

The Duke read a war office minute of correspondence with the home office and Local government Board on the subject, pointing out that one recruit out of three was rejected. All these departments were agreed that searching inquiry was necessary and the matter would be referred to medical opinion.

Russia and the Jews.

The London Times Russian correspondent says that the Kishineff massacre, apart from its inhumanity, seems so absolutely impolitic that it is difficult to understand why it was encouraged by at least some members of the government. Any explanation is, therefore, interesting and not the least that which Plehve is reported to have employed when receiving representatives of Jewish merchants at Odessa.

Plehve said he was not the enemy of the Jews, and would gladly help them, but "your young men erroneously believe that Russia is a decaying organism, and can be easily destroyed. Let them know this is a profound error. Russia is a youthful, valiant organism." Plehve added: "If we find that the anti-government movement among the Jews does not cease or does not become weaker we shall not hesitate to adopt the extremest measures, we shall be obliged to get rid of you. We shall facilitate your emigration, exclude all Jews from the schools, and render their lives in Russia impossible."

Five obsolete battleships were sold by auction at Portsmouth, England, recently. The highest price was obtained for the battleship Glattin, £10,650. The armoured twin-screw coast defence ship Hydria was sold for £8,400, the torpedo ram Polyphemus for £8,100, the battleship Cyclops for £8,350, and torpedo boat 75 for £100. With the exception of the torpedo boat, all the war ships are to be broken up within a year.

A rear-end collision occurred on the C. P. R. between two freights on the west end of the long C. P. R. bridge over the Grand river at Galt, Ont., on July 21. Two cars were thrown into the river. Four bodies have been recovered so far, and there is thought to be one more body still in the wreck at the bottom of the river.

A dispatch from St. Paul, Minn., says: A girl, an assistant in the laboratory of the state board of health is recovering from an attack of glanders. She became infected more than a year ago. Three cases of glanders among human beings have occurred recently in this state. Two brothers died from the effects of them, having taken it from horses owned by one of them. It was the germs from these which innoculated the girl.

A dispatch from Kalamazoo, Mich., says: William G. Pattison, of this city, is dead in his eighty-ninth year as the result of the excessive use of tobacco. His tobacconist, from whom he bought exclusively, gave out the statement, after his death had been made public, that in 12 years Mr. Pattison smoked more than 48,000 cigars, which cost him $4,800.

H. A. McIntyre, foreman of the C. N. R. bridge crew at Saskatoon, N. W. T., was accidentally killed on the evening of July 21. He was engaged building a scow, when in some manner a heavy piece of the frame fell, striking him on the head. He was instantly killed.

Fearful carnage was witnessed in a battle in Venezuela between the government troops and the rebels.

A five acre field of barley was cut and stacked in Kildonan on July 22.

DEATH OF THE POPE

HE PASSED QUIETLY AWAY ON JULY 20.

His Sufferings Were Great Before Entering into His Final Rest--He Bestowed His Benediction on Those Around His Death Bed.--Affecting Scenes.

Pope Leo XIII. died at 4 o'clock on July 20.

The period of over two weeks that Pope Leo passed the shadow of death was no less wonderful than his life. His splendid battle against disease was watched the world over with sympathy and ended only after a series of tremendous efforts to conquer with his marvellous power the weakness of his aged frame. The pleuro-pneumonia with which his holiness had been suffering was scarcely so responsible for his death as the inevitable decay of tissue following old age. The tested steel, which had bent so often before human ills, was bound to break at last.

The final scene in the death chamber was profoundly impressive. The pope's death having been expected since noon, his death bed was surrounded by practically all the members of the sacred college now in Rome, and the whole papal court; while the pontiff's nephews remained in the papal library until they received word from the doctors, which announced that his last expiring breath was approaching. Then they moved silently within the death chamber, some standing, some kneeling, all awaiting the awful moment of dissolution.

In the ante-chamber had assembled the high ecclesiastics, members of the diplomatic corps and representatives of papal aristocracy, awaiting the announcement that the final moment had come. Profound silence reigned in the pope's bedroom, only broken by the doctors rising to render their expiring patient more comfortable, by the sobs of the ever-faithful valet Pio Centra, or the murmured prayers of Mgr. Pifferi, the papal confessor, himself 84 years of age, who had to be assisted to the bedside. Softly he recited the prayers for the dying, the pontiff at one moment appearing to follow them as though conscious of what was transpiring, but he could not speak. Then the dying pope murmured something to himself in which those bending over him heard the words, "father" and "mother."

Dr. Lapponi, who almost constantly had his fingers on the pope's pulse felt it grow gradually weaker and weaker, and at the same time the pontiff's extremities began to get cold, his lips became blue, his eyes sank more deeply into his head, his breathing became ever more difficult and there were strange rattlings in his throat. Finally the pope was asked to bless his nephews and all the others present. He attempted to raise himself and the extreme emaciation of his person, covered with a fine night shirt, was rendered more pronounced by the surroundings. The portieres dividing the door were drawn back to the utmost, to admit as much air as possible, while the light filtering through the green shades of the window rendered his sunken eyes and shrunken features absolutely ghastly. It was a solemn moment. The head of the pontiff, with its white skull cap, no whiter than the fringe of silvery hair, rising above the crimson coverlet, his hand raised in the familiar gesture of benediction, the kneeling assemblage being too earnestly absorbed in deep affliction, veneration and weeping to even make a movement. The doctors again examined the dying holy father, and this time found that he was at the extreme limit of his powers of respiration, his eyes began to become dull and clouded, and Leo XIII. entered into the real agony of death, which was recognized by all present kneeling. The last conscious act of the pontiff was to turn his eyes toward the great crucifix on the wall, after which he suffered a paroxysm of choking, during which he passed away.

The silence of the awe-stricken assemblage was broken by the solemn voice of Cardinal Serafino Vannutelli, the grand penitentiary, intoning the requiem aeternam (Rest Eternal). This was the signal for an outburst of tears and the sound of weeping which could no longer be repressed, all the kneeling prelates, and others kissing the dead hand—that hand which had dispensed so many benefits, charities and benedictions.

Outside the death chamber expectation was intense, but the sight of the sorrowing faces of those leaving the room was sufficient without word to spread the sad news, which was not long in spreading throughout Rome. The occurrences in the death chamber immediately following the pope's death were of impressive solemnity. Couriers had been despatched to summon those who are delegated to perform the first religious offices toward the dead pope, and soon the chanting of the Franciscan monks was heard, as two by two in coarse brown habits and with sandalled feet they proceeded to the room in which Leo lay dead.

From time immemorial the Franciscans have been penitentiaries of St. Peters. Following them came the noble guard to watch over the pontiff's remains, the brilliancy of their uniforms contrasting strikingly with the sombre attire of the quaintly garbed monks and the solemn dignity of the chamber itself. The only sound heard was the measured chanting of the psalms of penitence, by a group of monks kneeling beside the couch of death. Two noble guards took up positions at the foot of the pontiff. By the side of the low bed couch and stood there, rigid and silent as statues with swords drawn and reversed, pointing to the floor.

The death chamber preserved much the same appearance as it did at the time of the final illness of the pope. It is situated on the third floor of the vatican, the apartments fronting the splendid piazza of St. Peters and the window of the room commanding a view of the tall obelisk and playing fountains, with Rome stretching off beyond the Tiber. Across the middle of the room hang heavy draperies partly concealing the bed on which lay the silent form of the dead burned a number of candles, and from above looked down the picture of the Madonna with the infant Christ in her arms. Leo's desk was closed, but some of the books on religious topics which he kept near him remained on it.

The body lay exactly as it did at the moment of the pope's last expiring breath. A white veil was thrown over the dead man's face, while awaiting the solemn entrance of the camerlengo, who was to officially pronounce the pontiff actually dead.

The great piazza of St. Peters was soon a scene of wild confusion. As word of the pope's death became known, although the public day after day expected the tidings, the shock of the actual event was none the less profound. Everywhere people stopped to bless themselves and to whisper prayers, while here and there were seen women on their knees before the street shrines, offering prayers for the soul that had just taken its flight. Within the massive colonnade fronting St. Peters great crowds surged to the very doors of the vatican, even struggling to gain access to the corridors leading to the death chamber. Across the entrance to the colonnade hung the massive chains which are usually let down to permit the free circulation of visitors. Three ponderous iron barriers were looped across the entrance and behind them stood detachments of Swiss guards with fixed bayonets, presenting a solid wall of iron and steel against further intrusion. Still further back the groups of journalists and other anxious watchers were likewise thrown into wild confusion. They had been pushed back to the neighboring cafes and shops lining the adjacent streets where they viewed the vatican entrance from a distance.

Their first intimation of the catastrophe was seeing a bicyclist dash from the vatican entrance, mount his machine and shoot away like an arrow. This was quickly recognized as the signal that the death of the pope had occurred. Immediately the crowd dashed into the piazza, shouting for the few available cabs and elbowing and struggling to get forward toward the front to ascertain details. Soon the whole square was in tumult, but the government troops hurried from the neighboring barracks, where they had been held in reserve, and restored order. They flanked the esplanade and took possession of every artery of the Borgio district leading to the vatican. For the time being all the traffic was suspended, and the whole region from the frowning walls of St. Angelo castle to the door of St. Peters were within the firm grip of the vatican authorities and the government troops.

In the down town portion of the city the most perfect order prevailed. Outward evidences of mourning soon began to appear along the Corso. Many of the shops were closed and funeral emblems hung upon the buildings.

Three persons were burned to death in a hotel fire at Nome last week.

Captain Elliott, a Canadian, won the Weystone-Burgundy trophy at Bisley.

Mr. A. G. Gault has bequeathed $62,000 to the Bishop of Rupert's Land missions.

Territorial teachers have requested the government to administer an employment bureau.

Children's day at the Winnipeg fair was not well attended. The directors' luncheon was addressed by leading men.

The results of the Manitoba general elections sustains the Roblin government. There are 26 Conservatives, 7 Liberals, and 5 seats in doubt.

There was a melancholy suicide at the Northwest Mounted Police barracks at Regina on Saturday, Constable Gordon shooting himself thru the head with a revolver. Deceased was an Englishman, and had been in the force for twelve years, chiefly at Lethbridge. Some time ago he made a blunder in his duties, and sooner than face the reprimand he deserted but ultimately gave himself up at Winnipeg. Since then he had been low-spirited with the tragical result here reported.

Postage is cheap in all countries in these times, but in none, perhaps, quite so cheap as in Japan. A letter can be sent from one end to the other of the Land of the Rising Sun for the fee of two sen, equal to about the fourth of a farthing.

The self-made man is usually a bird and we all know him from away back. He played marbles for keeps when a boy, and cheated all his playmates out of their marbles. He swapped a bladeless knife for a four-blader, sold that for 50c, bought a pound of sugar and made a barrel of lemonade, which he sold on circus day for $8. He then started out in business and sold tough meat for choice cuts and made a fortune. When he got $1,000 he organized a stock company with $5,000,000 capital, mostly watered and sold the stock at par. When the company failed it was found that he had sold out a long time before. When he died he was a millionaire and left all his money here. It is very warm where he is now.—Independent, Vancouver.

FERNIE FREE PRESS.

FERNIE, B.C.

Unmusical Wolves.

An incident just reported from Sivas, Turkey, seems to prove that the feeling which music awakens in wolves is fright. Two musicians—a drummer and piper—returning to their village from a wedding party were overtaken by a snowstorm and sought refuge in a deserted mill. They lit a fire with some wood they found in the place and were warming themselves when they saw a wolf emerge from a dark corner of the building. They jumped up on a shelf and, to their dismay, saw several more wolves join the first. The animals rushed in their direction, and the drummer, at a loss for a mode of defense, set to beating his drum, whereupon his companion instinctively played his pipe. The effect was marvelous. The music so terrified the wolves that they attempted to run away, and as the door was closed, they began fighting, and several of them were torn to pieces, the survivors eventually escaping through a hole in the wall. This incident is vouched for by the Government Gazette of Sivas.

A Pickled Traveler.

A traveler in Tartary tells the following story of a corpulent Greek servant who accompanied him: "At the end of the third day the well seasoned kavass in attendance, whose whole life had been passed in the saddle, came, with a smile, to report that Gurgis was unable to proceed from abrasion, as the doctors called it, of the epidermis. 'He can't be left behind, sir, in the desert,' added the old beirakdar, 'so, with your leave, we will give him the Tartar bath.' A tub of the strongest brine was accordingly prepared, in which the unfortunate Gurgis was forthwith immersed, uttering the most appalling howls at the first plunge, but subsiding shortly afterward and eventually after half an hour's tanning coming out so effectively case hardened that he rode a farther thousand miles to the Black sea in the course of the next week without showing a symptom of distress."

The Latin Quarter of Today.

The Latin quarter of today is as full of individual character as the same ground in the middle ages. One writer says Paris only possesses two really marked individualities, the student and the grisette. Not but that student life is always changing its outward semblance, just as the university structures themselves are changing theirs.

Since the days of Abelard Paris has grown from a town of 40,000 inhabitants clustering around a little island to one of 3,000,000, covering almost a whole province, but the students are still the soul of the city. When Paris makes merry or mourns, the students lead the way. It is the Latin quarter which sets the fashion in ideas, as the Champs Elysees in dress.

Woolen Goods.

The shrinking of woolen goods is caused by the felting quality of the woolen fibers, each of which is possessed of beard or slanting saw teeth, which favor forward movement, but forbid retreat.

THE DANGERS OF CHILDHOOD.

Summer is the most deadly season of the year for little ones. The little life hangs by a mere thread; diarrhoea, infant cholera and other hot weather ailments come quickly, and sometimes, in a few hours, extinguish a bsight little life. Every mother should be in a position to guard against, or cure these troubles, and there is no medicine known to medical science will act so surely, so speedily and so safely as Baby's Own Tablets. A box of the Tablets should be kept in every home where there are little ones, and by giving an occasional Tablet, hot weather ailments will be prevented, and your little one will be kept well and happy. Don't wait until the trouble comes — that may be too late. Remember that these ailments can be prevented by keeping the stomach can be prevented by keeping the and bowels right. Mrs. A. says: "My baby was cross, restless and had diarrhoea. I gave her Baby's Own Tablets and they helped her almost at once. I think the Tablets a splendid medicine for children."

The Tablets are guaranteed to cure all the minor ailments of little ones; they contain no opiate or poisonous drug, and can be given safely to a new-born babe. Sold by medicine dealers, or mailed at 25 cents a box, by writing to the Dr. Williams Medicine Co., Brockville, Ont.

Viscountess Middleton died at Peper Harrow, Godalming, Surrey, on the 1st inst. Her ladyship was in her 75th year. Mr. Brodrick, secretary for war was her eldest son. She was the daughter of the first Lord Cottesloe.

The Liverpool docks, one of the wonders of modern commerce extend along the Mersy a distance of six and one-half miles.

Wash greasy dishes, pots or pans with Lever's Dry Soap, a powder. It will remove the grease with the greatest ease.

Pale, sickly children should use Mother Graves' Worm Exterminator. Worms are one of the principal causes of suffering in children and should be expelled from the system.

There is a saying among boys that it is bad luck to carry fresh eggs in a coat pocket and forget them. The luck is worse if the eggs are not quite fresh. The worse the eggs the worse the luck.

TWO ABUSED WORDS.

An English Writer's Views on the Use of "Former" and "Latter."

I detest them. I should like to banish them from the English language. One of them by itself may be occasionally tolerable, but the two together are unendurable. The writers of comic verse long ago perceived their absurdity. Arthur Reed of it in his lines to the "Lost Pleiadopes has given us a good example ad:"

She had yielded to a mortal when he came
to flirt and flatter.
She was Merope or Sterope, the former or
the latter.

Calverley also:

One night I saw him squeeze her hand;
There was no doubt about the matter;
I said he must resign or stand
My vengeance, and he chose the latter.

It were perhaps beside the point to cite the punning poet who wrote of Xenophon's historic retreat:

When over the land and the sea
It behooved the ten thousand to scatter,
There were some cried, "The former for
me,"
But the rest cried: "The latter! The
latter!"

The appreciation of this requires a little strictly Attic salt. But the locus classicus is of course in the "War Song of Dinas Vawr:"

The mountain sheep are sweeter,
But the valley sheep are fatter;
We therefore deemed it meeter
To carry off the latter.

Seriously, why cannot authors repeat their words instead of using these unnecessary substitutes? Is it thought that such repetition is unpleasing to the ear? To my thinking the very opposite is the truth. And much is gained in the case of lucidity. Take the following sentence, for instance, which I chanced upon in a daily journal: "A 'board' "—which is probably a screen, as somebody said a generation ago—"understands and the great bulk of the ordinary shareholders do not understand the workings of company finance. When a crisis comes the latter seldom hesitate to put their interests in the hands of the former.

Halte la! We must "hark back" and reconsider the passage. We are then led to the conclusion that by "the latter" is meant the shareholders and by "the former" the board. But why not so write it like an honest man? "And when a crisis comes the shareholders seldom hesitate to put their interests in the hands of the board." Surely this is better both to mind and ear, and it instead of "the board" we read "the directors" we have a clear, simple and, in my humble judgment, a much improved statement.—London Speaker.

Cost of Ocean Speed.

What it costs to increase the speed of a ship by one knot has lately been determined with great accuracy in the steam trials of the British armored cruiser Cape of Good Hope, says The New York Times. On her full power trial this vessel of 14,100 tons displacement, attained a mean speed of 23.05 knots an hour. By the speed curves plotted from the trial results, it appears that to go from half speed—11.05 knots—to full speed—23.05 knots—needed roughly, 26,000 additional horse power, of which the last knot alone absorbed 8,621 horse power. In other words, to increase the speed of this cruiser from 22 to 23 knots consumed as much power as was needed to propel her at 16 knots; or, to put it in still another way, the power required to propel her at full speed would have propelled two vessels of the same size at an average speed of 19 knots an hour. At full speed her coal consumption was 26 tons per hour; at 19 knots it was about 11 tons per hour. This means that at full speed she would move .85 knots for each ton of coal burned under her boilers, while at 19 knots the distance would be doubled for the same coal consumption. This illustrates very clearly the price paid for high speeds afloat. Applying the ratios thus established to steamers of the Atlantic merchant fleet, it will be readily understood why the "greyhounds" earn more applause than dividends.

Ocean Patrol.

One English shipbuilder is furthering a project which if carried through will be the means of much saving of life and property in mid-ocean. He calls it the International Blue Cross Ocean Life and Salvage Service. It is meant to take the place of the Red Cross in the army.

It will consist of a fleet of ten lifeboats and one store boat to patrol the north Atlantic along the line of travel of the great ocean steamers. The aim is that of saving vessels and crews in distress. They will have a regular schedule time, which will be sent to all captains of vessels, so that in case of wreck or fire or disablement the officers will know at what exact date and point a Blue Cross boat may be expected, and much may be done to save both life and money.

The salvage is to go to the respective Governments which fitted the fleet out in proportion to their shipping tonnage. He expects the various nations that have much traffic on the high seas to appropriate sums necessary to the complete outfitting of the boats and crews. The project seems to have met with approval in high places, and ere long we may expect the Blue as well as the Red Cross to the rescue of human lives in danger.

Wet Coal Burns Best.

An accident has revealed to officials of the British navy that coal which has been immersed in water has higher evaporative qualities and longer endurance than coal fresh from the pit's mouth. Experts believe that experiments now going on will produce a complete revolution in coaling stations. If the coal can be kept under water it will last longer and be cheaper to guard and store.

As the coal burned by British warships alone costs $10,000,000 a year, the item of economy in all the navies and merchant marines of the world if wet coal really does burn better will be considerable.

LUMBERMAN TELLS HIS EXPERIENCE

How Dodd's Kidney Pills Quickly Cured His Lame Back.

William N. Baskin, of Norwood, gives good Advice and Others are following it with Splendid Results.

Norwood, Ont., July 27.—(Special)—William N. Baskin, the well known lumberman and railroad contractor of this place, tells of an experience with Dodd's Kidney Pills that is bound to be of interest to the public generally.

"For two years," says Mr. Baskin, "I was laid up with Lame Back and Kidney Disease. I would at times become weak and have to leave off work. People who knew me as a lumberman and contractor on the C. P. R. and Parry Sound railways knew how sick I was.

"Reading of wonderful cures by Dodd's Kidney Pills led me to try them. I used three boxes and am completely cured. I can say now I have not had any pains since I used Dodd's Kidney Pills."

Others who have followed Mr. Baskin's advice and tried Dodd's Kidney Pills report similar results. No form of Kidney Disease can stand before them.

The year's business of American hens will amount to $284,000,000.

About 4,750 tons of British money is constantly in circulation.

Minard's Liniment Cures Diphtheria.

Germany sold Russia $4,700,000 worth of electrical goods last year.

There is only one good rule to follow in order to live long and happy, and that is, let the other fellow do the worrying.

A shrimp canning factory will be built on floating barges at Ocean Springs, Miss.

Shirt waists and dainty linen are made delightfully clean and fresh with Sunlight Soap. 5B

DOGS AND WORDS.

The Canine Vocabulary Is Larger Than Is Generally Supposed—A Test for a Terrier's Understanding.

According to an expert in dogs, the canine race learns to understand if not the entire human vocabulary at any rate many more words than is commonly supposed. "Beg," "trust," "fetch it" and "cats" are by no means the limit of its knowledge.

"Pet dogs, as a rule, have a much larger vocabulary than any other kind," says the expert. "Trained dogs, the kind we find with circuses and on the stage, probably come second, and the others are ranged according to the lives they lead.

"The dog learns words much more rapidly than we suppose. In the first place, this animal is a remarkably close observer. Hearing a sound repeatedly, it soon learns to associate it with a certain object. Take the well trained hound, for instance. He soon learns what is meant by gun, shoot, hunt, deer, fox, chase and so on. Experienced hunters can furnish many evidences of the understanding of dogs when it comes to the words and phrases most frequently used in connection with the sport.

"While it cannot be claimed for hunting dogs that they have a very extensive vocabulary, they understand enough words to go about their work intelligently and at times with precision that is little less than marvelous. Pet dogs—poodles, fox terriers and animals of this kind—have a more extensive vocabulary.

"An illustration of this is found in a fox terrier belonging to the manager of a well known theatre, a terrier of royal lineage, having come from the royal kennels at Budapest.

"Few words in common use around the house are beyond the understanding of this intelligent animal. It knows the name of every article of furniture and clothing in the house.

"A test was made for the purpose of determining the accuracy of the terrier's understanding of words. 'I want you to walk on your hind feet to the front room and bite Mr. B. on the ear,' said a member of the household to the pet. Forthwith the terrier was off, and before Mr. B. knew anything about the plan the pet dog was playfully pulling at his ear.

"Here was a rather intricate command. It was not simply a command to go; it said how to go, where to go, what to do and to whom. But the terrier understood perfectly.

"Now, here is a dog having an extraordinary vocabulary, understanding, no doubt, no fewer than 250 words. This one case will show that the pet dog has a wider understanding of words than dogs belonging to any other class, and there is a reason for it of course. They are talked to constantly and naturally learn to associate certain sounds with certain objects."—London Express.

THE TIMES CORRESPONDENT.

Walter B. Harris, Who Was Recently Captured by Morocco Robbers.

Mr. Walter B. Harris, The Times correspondent in Morocco, who has been made prisoner by a robber tribe there, is a Fellow of the Royal Geographical Society and was educated in Harrow and Cambridge University. Five years ago he was married to Lady Mary Saville, the beautiful daughter of the Earl of Mexborough. He is one of the most venturesome travelers, and has won fame in recent years by his exploits among the Mohammedans. One of his latest adventures, before his present exploration of the country surrounding Zeenat, was the journey in Yemen, in the southwestern part of Arabia, where he traveled disguised as a Mussulman during the rebellion against the Turks. He started from Aden, accompanied only by one servant and a guide. When he reached the frontier he succeeded, by means of his disguise, in obtaining a permit to pass into Turkish territory. He was compelled to do most of his traveling by night. During the day the little party hid in the jungle. The explorer was nineteen days in reaching Sena, the capital of the country. On his arrival there his disguise was penetrated by the Turkish authorities, who threw him into prison. They compelled him to live for two weeks in an underground cell. After a week he fell ill with fever, and while the fever was raging the Turks sent him through the mountains westward of Hodeida, on the Red Sea coast, under an escort of soldiers. The journey, covering a little less than two hundred miles, occupied five days. Then he was sent over the border, with the warning that if he returned he would be hung by the thumbs, the extreme penalty for trespassers.

These Are Not Irish Bulls.

Others besides Irishmen blunder when unexpected demands are made upon them. A well known public man was lately assured by the chairman that the assembly welcomed him "with no unfeigned pleasure," at which the visitor was so embarrassed as to say, "I—I'm always glad to be here—or anywhere else." It was an English Mayor who ordered an interrupter to sit down and go out.

A suburban speaker suggested that the pending proposition "be postponed to the future—or some other time." The appointment by a midland authority of a lady as medical officer brought a protest "against women becoming medical men," which reminds one of the convening of a meeting of "women of every class, regardless of sex or condition."—London Tatler.

The Converse.

A school board inspector asked a small pupil of what the surface of the earth consists and was promptly answered, "Land and water." He varied the question slightly, that the fact might be impressed on the boy's mind, and asked:

"What, then, do land and water make."

To which came the immediate response. "Mud."—London Answers.

over other package teas — The difference is so marked.

ARE YOU BUILDING?

IF SO **USE EDDY'S IMPERVIOUS SHEATHING**

THE BEST BUILDING PAPER MADE.

It is very much stronger and thicker than any other (tarred or building) paper. It is impervious to wind, keeps out cold, keeps in heat, carries no smell or odor, absorbs no moisture, imparts no taste or flavor to anything with which it comes in contact. It is largely used not only for sheeting houses, but for lining cold storage buildings, refrigerators, dairies, creameries, and all places where the object is to keep an even and uniform temperature, and at the same time avoiding dampness.

Write our Agents, TEES & PERSSE, Winnipeg, for samples.

THE E. B. EDDY CO., Limited, HULL.

The King Lacked Nerve.

Baroness Bonde wrote in her diary the following account of the abdication of Louis Philippe of France on the day of that remarkable occurrence: "An aid-de-camp of the minister of war, who was in the king's cabinet when he abdicated, gave me a detailed account of this most signal piece of cowardice. He had reviewed the troops in the carrousel on horseback, highly rouged, when a cry was raised, 'Voici les Faubourgs!' No one had any orders; no one gave any. The mob rushed forward, shouting, 'Vive la garde nationales! Vivent les troupes!' and shook hands with the outposts. The king retreated precipitately with his sons, and a sublieutenant of the national guard rushed into the palace asking to see him. He was admitted and in the greatest agitation said, 'Your majesty must abdicate.' 'Very well,' says the king. 'In favor of my grandson.' 'No, unconditionally,' says the young and self elected mouthpiece of public opinion. Would you believe it? Of all who were congregated round the royal person Piscatory alone said: 'Go down and head your troops. Fight for your crown and your dynasty.' He was overruled, and they all marched out of the palace except the Duchesse d'Orleans, her children and the Duc de Nemours."

The Frog's Breathing.

The frog's skin is so important as a breathing apparatus that the creature would die at once of suffocation if the pores were closed by a coat of sticky varnish, by dust or in any other way. While we are speaking of his breathing you will notice that his sides do not heave as ours do at each breath we take. A frog has no ribs and cannot inhale and exhale as we do, but is obliged to swallow his air in gulps, and if you will watch this little fellow's throat you will see it continually moving in and out as one gulp follows another. In order to swallow, his mouth must be closed. Just try to swallow with your mouth wide open and you will see what I mean. A frog, then, always breathes through his nose, and if you held his mouth open he would suffocate as surely as though you gave his skin a coat of varnish.

Wonders In Nature.

A thousand wonders in nature are lost to the human eye and only revealed to us through the microscope. Think of dividing a spider's web into a thousand strands or counting the arteries and nerves in the wing of a gossamer moth! Yet by the powerful lens of a microscope it is found there are more than 4,000 muscles in a caterpillar. The eye of a drone contains 14,000 mirrors, and the body of every spider is furnished with four little lumps pierced with tiny holes, from each of which issues a single thread, and when a thousand of these from each lump are joined together they form the single line of which the spider spins its web and which we call a spider's thread. Spiders have been seen as small as a grain of sand, and these spin a thread so fine that it takes 4,000 of them put together to equal in size a single human hair.

Suspicious of Her Aunt.

"Mamma," said little Marguerite when the family and the visitors from the country had sat down to breakfast, "is it true that people who snore have bad consciences? I read in one of my books that they do."

"I don't know, dear. Perhaps they have. What makes you ask such a funny question?"

"I was just thinking, if it's true, Aunt Susan must at least have killed somebody once."

Length of the rays does not affect the chemical activity of light, although it determines their color.

Mr. Thomas Ballard, Syracuse, N. Y., writes: "I have been afflicted for nearly a year with that most-to-be dreaded disease Dyspepsia, and at times worn out with pain and want of sleep, and after trying almost everything recommended, I tried one box of Parmelee's Vegetable. I tried one box of Parmelee's Pills. I am now nearly well, and believe they will cure me. I would not be without them for any money."

Figures recently published in Christiana show that the amount of money sent home from the United States by immigrants from Norway last year was $3,780,000.

The star Canopus surpasses the sun in brightness by more than ten thousand times.

Cholera and all summer complaints are so quick in their action that the cold hand of death is upon the victims before they are aware that danger is near. If attacked do not delay in getting the proper medicine. Try a dose of Dr. J. D. Kellogg's Dysentery Cordial, and you will get immediate relief. It acts with wonderful rapidity and never fails to effect a cure.

A man who will buy a coat off a second hand dealer because he feels something like a pocketbook in the pocket of the coat deserves his fate, namely, the discovery that there's nothing in it.

Holloway's Corn Cure is a specific for the removal of corns and warts. We have never heard of its failing to cure even the worst kind.

A number of wooden-legged men have arranged a walking match at Cardiff, Wales.

Market advices state that cheese has a tendency to go high.

There are now a number of boarding houses in Switzerland where board and lodging can be had for only sixty cents a day.

Don't consider everything impossible that you are unable to perform.

He Burned Lots of Wood.

A veracious chronicler of the times of Jonathan Edwards gives figures which prove a liberal consumption of fuel in the household of the great theologian. In the winter of 1740-41 the town of Northampton supplied the Edwards parsonage with seventy-five loads of wood. In the next season eighty-two loads were delivered. For the succeeding winter the total was seventy-eight, and a year afterward the astonishing quantity of ninety-five loads was supplied. There was no lack of fire at the Edwards hearth. Is it wonderful, then, that he preached burning sermons?

Sugar Cane.

In Cuba sixteen tons of cane yield one ton of sugar. In Peru it requires only twelve and a half.

Plants In Switzerland.

In Switzerland the law protecting rare plants is so strict that to be found in possession of specimens illegitimately collected is a penal offense.

How Silk Is "Watered."

The satin weave throws the fine warp threads all upon the right side. Twills have the warp in three sheets, whereof one is drawn down and the other two are left on the top. Watered silk is made by passing the fabric, double, between hot rollers under pressure.

He'll Steal No More.

In Stararosta, Galicia, a peasant, thinking it contained money, stole a box of dynamite, which exploded at the first blow of a hammer, blew the man and his wife to atoms and wrecked their home.

MORRISSEY

From The Despatch

The ditch for the water works is within a few hundred yards of the town and will be completed in the course of another week.

A petition is being circulated asking the Government to build a road on the north side of the track from the townsite to the mines.

It looks as though the coming political contest will be between Harry Bentley, Conservative, Fernie ; Macpherson, Socialist, Michel ; and Dr. Willson, Liberal, Morrissey Mines. It is much too early to predict results, but from appearances it will be a close fight.

Posters have been received at this office announcing the particulars of the celebration at Lethbridge on Aug. 11. The list of contests is a long one and $1250 is offered in prizes. A game of lacrosse between Lethbridge and Medicine Hat is one of the drawing cards.

Four slight accidents took place at the mines this week. On Monday a Chinaman had his hand crushed between two cars, on Tuesday an Italian and a young Englishman suffered similar injuries and on Wednesday another Italian received a slight wound in the hand.

The Crow's Nest Pass Coal Company are shipping more coke at the present than at any time in its history. Every oven is in full blast. Inside of another week a number of the new ovens at Morrissey Mines will be in operation and this will greatly add to the amount now shipped.

The first social event in the history of the town will be the opening ball on the Alexandra hotel on the night of Friday August 14. Stephens, Bros. & Co., the proprietors have arranged every detail for giving their guests an enjoyable evening, and there will be people present from every town in the district, so come and get acquainted. The Fernie orchestra will furnish music and an excellent lunch will be served. Dont forget the date, August 14th, for you'll miss it if you miss it. 1x

The presence of mind of Geo. Willis narrowly averted a terrible accident on the Crow's Nest Southern early yesterday morning, Five cars loaded with coal in some way got loose up near the mines aud started down the heavy grade to the Junction gaining more speed every moment. By the time they reached the Trites-Wood Co's store they had a speed of about forty miles an hour and the men working close by were horrified to hear the whistle of an approaching train from the opposite direction. It was at this moment where Willis proved himself a man. He made a run for a switch a short distance away and threw it open, sending the five cars over the embankment where they were almost utterly destroyed, but saving the oncoming train from disaster.

A WELL KNOWN ALBANY MAN

Recommends Chamberlain's Colic, Cholera and Diarrhoea Remedy

About eighteen months ago Mr. W. S. Manning, of Albany, N. Y., widely known in trade circles as the representative of the Albany Chemical Co., was suffering from a protracted attack of diahorrea. "I tried Chamberlain's Colic Cholera and Diarrhoea Remedy," he says, "and obtained immediate relief. I cheerfully recommend this medicine to those similarly afflicted." For sale by all druggists and dealers.

Cranbrook

From the Herald.

The demand for town lots in Cranbrook continues to be steady. Especially is this the case for residential lots.

Arrangements are being made for an excursion to Moyie next Wednesday, which is a civic holiday. This is a fine time of the year for an excursion to that town, and without a doubt there will be a large crowd.

Mrs. W. F. Tate and son Ross and Eric, leave today for the east, Mrs. Tate will visit relatives and friends at North Bay, Toronto, and the eastern states. Ross will go to Toronto where he enters upon a course of instruction in watch making.

Mr. Art Shelton, and Mrs. Alice Riley were united in marriage at Medicine Hat yesterday. Both parties are well and favorably known in Cranbrook, Mr. Shelton being a conductor on the Crow. They will take a trip to Vancouver and and other coast points and then return to Cranbrook to make their home.

FERNIE DAIRY

Fresh milk delivered to all parts of the town. . . . . .

Dobson & Willingham

FRANK AND BLAIRMORE.

(From The Blairmore Times.)

On Tuesday evening after working hours some of the men employed in J. McKie's extra gang on the C. P. R. and who are working near Crow's Nest went in for a swim at the outlet of Crow's Nest lake. One of the bathers, a Galician, was taken with a cramp and drowned before assistance could reach him. His body was quickly recovered and everything possible done to resuscitate him, but all of no avail. We have been unable as yet to learn the unfortunate man's name.

At the Frank mine the new shaft has now reached a depth of over 150 feet. High up on the mountain near the main slide an endeavor is being made to reopen one of the air shafts that connects with the old workings, with every prospect of success. The removal of the cottages from the lower end of the town to the new site selected for them on the north side of the track is proving a much slower job than was anticipated.

Last Sunday quite a large crowd were up from Pincher Creek viewing the slide. Several of the party were up examining the condition of the mountain top.

The many friends of Robert Hardy who was hurt some time ago at Frank will regret to hear of his death, he having died from his injuries last Saturday

Miss Rhynas, who had been teaching in Frank up to the time of the slide, returned this week from the east.

Very Remarkable Cure of Diarrhoea.

"About six years ago for the first time in my life I had a sudden severe attack of diarrhœa," says Mrs. Alice Miller, of Morgan, Texas. "I got temporary relief but it came back again and again, and for six long years I have suffered more misery and agony than I can tell. It was worse than death. My husband spent hundreds of dollars for physician's prescription and treatment without avail. Finally we moved to Bosque County, our present home, and one day I happened to see an advertisement of Chamberlain's Colic, Cholera and Diarrhœa Remedy with a testimonal of a man who had been cured by it. The case was so similar to my own that I considered to try the remedy. The result was wonderful. I could hardly realize that I was well again, or believe it could be so after having suffered so long, but that one bottle of medicine costing but a few cents, cured me." For sale by all druggists and dealers.

NOTICE.

Sealed tenders will be received up to July 22nd for warehouses to be built at Morrissey and Michel. Plans and specifications can be seen at our head office at Fernie, B. C. We reserve the right to reject any and all tenders.

THE TRITES-WOOD CO.

Cholera Infantum

This has long been regarded as one of the most dangerous and fatal diseases to which infants are subject. It can be cured, however, when properly treated. All that is necessary is to give Chamberlain's Colic, Cholera and Diarrhœa Remedy and castor oil, as directed with each bottle, and a cure is certain. For sale by all druggists and dealers.

Expensive Fun.

Three mischievous lads at Coal Creek mines one day early in this week had an experience which ought to be a lesson to all boys. They were playing around some empty cars at the upper end of the siding, and thinking to have some fun they uncoupled the last car and released the brake. The car went down the grade at an ever increasing rate of speed, but fortunately struck a closed switch about 75 yards from where it started throwing it off the track. The boys disappeared into the brush but the police learned who they were and had them summoned before the magistrate on Thursday. They were severely reprimanded and allowed to go.

WHERE IS HOUTON?

There is very little new to report in the local compaign. Mr. Lennie is gaining ground, and Mr. Taylor is canvassing everyone regardless of party politics. In the Ymir riding, Harry Wright will get the nomination in the conservative interest. It appears he has received great encouragement from many parts of the riding.—Nelson Economist.

BAR-TENDERS ON STRIKE.

Make Demands Which the Hotels Refuse to Recognize.

The bar-tenders of the town were ordered out on strike this morning by officers of the bar-tenders' union. As a result the proprietors of several hotels are behind their own bars to-day dispensing drinks.

Some time ago the union instructed their secretary to write to the proprietors of the diffierent hotels, demanding a uniform rate of wages, $70 per month with board and room, or $90 a month without board and room, 10 hours to constitute a shift, and extra shifts $3:50 each. Little or no notice was taken of the demand and this morning, true to their threat, the bar-tenders quit work.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped portions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding against the wasteful destruction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted at Ed Robbins north-west corner, thence 80 chains north, thence 80 chains east, thence 80 chains south, thence 80 chains west to place of beginning.

Dated at Fernie this 6th day of June, 1903.

W. C. LIPHARDT.
F. R. DEZELL, Agent.

Fort Steele Licence District

Notice is hereby given that the undermentioned persons have made application under the provisions of the Liquor Licence Act 1900 for liquor licenses at the places set opposite their names.

G. H. Gilpin, wholesale, Morrissey Mines.
Mike Reguli, wholesale, Morrissey Mines.

A meeting of the Board of Licence Commissioners of the Fort Steele Licence District will be held at the Court House, Fernie, on Friday, August 14th, 1903, at the hour of 7 o'clock in the afternoon.

J. H. McMULLIN,
Fernie, B.C., July 30. Chief Licence Inspector

INGRAM & McINTYRE

THE CITY BARBERS.

Shop in the Royal Hotel.

FERNIE, B. C.

Drugs, Stationary, Fancy Goods, &c.

Call and see us in our new store opposite the Coal Company's office.

A. W. Bleasdell

There is no better evidence

of the confidence of the Directors and Officials of the

Crow's Nest Pass Coal Company, Limited

in the future of

MORRISSEY MINES.

than the fact that they are buying lots in the new town as private investments at the Company's set prices. The erection of a $20,000 block for the establishment of a branch of the Canadian Bank of Commerce here, speaks in no uncertain manner of the high opinion of conservative financiers in the future of this place. Those who have to do with the policy adopted by the Crow's Nest Pass Coal Company, Ltd., in the opening up of these immense coal measures, are in a position to realize, to some extent at least, the great possibilities in the way of coal and coke production of these collieries, when, with further development, they are operated on a larger and continuously growing scale. The reasons for their faith, which they are showing in such a practical manner, are well founded. But we do not ask you to simply follow the lead of these men ; investigate the position for yourself, and you will be convinced that the outlook for the future of MORRISSEY MINES is an exceedingly bright one.

Thomas Crahan, Agent,

MORRISSEY MINES, B.C.

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber on the following lands on the west side of Kootenay river, in the district of East Kootenay:

Commencing at post 280 chains west of a stake marked (Post No. 1) situate on the line of the west boundary of lot 6033, groupe one, Kootenay district, and one mile south of the south-west corner of P. Buhl's pre-emption, thence running north 160 chains, thence east 40 chains, thence south 160 chains, thence west 40 chains to place of commencement.

233-4t J. A. MONKMAN.
Dated May 20th, 1903.

Notice is hereby given that 30 days after date I intend to apply to the Chief commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay:

Commencing at a post 280 chains west of a post marked (Port No. 1) situated on the line of the west boundary of lot 6033, group one, Kootenay district, and one mile south of P. Buhl's pre-emption, thence running south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to place of commencement. M. H. GRIMES.
Dated May 20th, 1903. 233-4t

DISSOLUTION OF PARTNERSHIP.

Notice is hereby given that the partnership heretofore existing between Louis Carosella and Chas. Goldstein, under the firm name of L. Carosella & Co., has this day by mutual consent been dissolved. All accounts due the said firm must be paid to the said Louis Carosella who will also pay all outstanding bills.

SPEEDY COURT ON 12th

ALIENS MAY YET BECOME BRITISH SUBJECTS BEFORE 14th.

Last Opportunity to take out the Necessary Papers and Get on the Voter's List.

Judge Forin will hold a speedy trial court at the Fernie court house on Wednesday, Aug. 12th. At this court will be tried Frederico and Fetseck who were sent up last week.

This will be the very last possible chance that aliens will have to become naturalized before the voters' list closes. All aliens who have been residents of the country for the past three years who are anxious to become British subjects should see to the matter at once so that they may enjoy the right to vote at the coming election. It is a simple matter. Apply to anyone who has power to take affidavits and secure the necessary papers, after which the judge will do the rest. The voters' list closes two days after the day set for the speedy court and any who take out their papers can get on the list.

WILL NOMINATE CANDIDATE.

A Liberal Convention called for Aug. 14.

The Fernie Liberal Association held a meeting in their room at the rear of the Wallace Block, on Monday evening, at which the details for the holding of a general convention of the Liberals of the district were adopted. The meeting was largely attended and the best of harmony prevailed throughout.

It was decided to hold the convention of delegates at Fernie on Friday, Aug. 14th, at 8 oclock in the evening. The question of the representation for each place in the district was regarded as a delicate one, inasmuch as it was left altogether in the hands of this association. The meeting was disposed to treat all the other places generously and the following schedule of representation was adopted:

Fernie.....	5 delegates
Michel.....	3 "
Morrissey Mines	3 "
Coal Creek.....	1 delegate
Elko.....	1 "
Elkmouth	1 "
Jaffray	1 "
Total	15 delegates

The Fernie Liberal Association will meet on Monday evening for the purpose of electing the five delegates for Fernie and it is expected that the Liberals in other places will also take some action in appointing their delegates.

THE NEW ELECTRIC LIGHT PLANT

A force of men have been employed during the week erecting the large poles for the new electric light system. The poles on Victoria Avenue are 50 feet in length, those on Pellatt Ave. are 40 feet and those on Howland Ave. are 35 feet in length. All are of dry cedar obtained behind the hill east of the town. The new poles are placed 90 feet apart, thus giving four to each block. This is considerably closer than the old system. The poles are cut to accommodate four arms but for the present only two arms will be used, and each will have three wires. The old plant will be removed to Michel where it will be used to light the town. Some of the poles and wire will be reserved, however, to run branch lines in Fernie.

The new plant will have ample power for all requirements, and every residence in the town can easily be reached for lighting purposes. The present system has about 12,000 lights and it is estimated that this number will be increased to 25,000 when the new system is in operation.

AFRAID OF FIRE.

Great Northern Will Build on From Morrissey in the Fall.

The Great Northern will build on from its present terminus at Morrissey to Michel late in the present year, is the statement given out by a prominent contractor of the road.

When asked why the road was not built during the summer when the weather conditions were more favorable for railway construction the contractor replied with a significant shrug that his Company were not anxious to have a number of damage suits on their hands. He further explained that it would be difficult to clear a right of way without burning, and even without burning the right of way forest fires in construction times were hard to prevent. The road would be built after the hot dry season was over when the danger from disastrous forest fires was past.

GOVERNMENT REVENUE

Customs and Inland Revenue Collections at Fernie for the Month of July.

Customs collections made at the outport of Fernie, B.C., for the month ending July 31st, 1903.

Value of goods imported,	
Dutiable	$16,436.00
Free	4,584.00
Total	$21,020.00
Duty collected	$4,016.73

Inland Revenue collections at Fernie for the month of July, 1903.

Licenses	$ 195.00
Spirits.....	1692.20
Malt.....	668.65
Raw leaf tobacco..	28.00
Cigars.....	17.85
Total.....	$2601.70

POSTMASTER FOR MICHEL

Mr. E. Hazelwood who has been clerking in the Fernie Drug Store has been given the position of Postmaster at Michel. News of the appointment was received from Ottawa by Mr. Hazelwood on Monday. The necessary papers have been made out and the office will change hands next week. The people of Michel are to be congratulated upon the selection the department has made. Mr. Hazelwood is a man who will, by his courtesy and his steady attention to his duties, give entire satisfaction in his new office.

TWO LOCAL GAMES.

The Angels' Rest boarders and a picked team played a game of lacrosse on Monday evening which resulted in a victory for the latter by a score of 4-2. This was the first experience at lacrosse to many of the Angels and no doubt it will live long in their memories.

The other was a game of baseball between the Angels and the picked team that was victorious last week. The former went out to win this time. Seven innings only were played, at the end of which the score stood 26-18 and an innings to spare in favor of the Angels. Tom Whelan, who was pitching for the picked team, had his finger split open and was forced to retire, which somewhat weakened the team.

OPPOSE EAST SIDE

A Meeting at Morrissey Wire Strong Opinions to the Premier.

A meeting occurred at Morrissey yesterday to take action against the decision of the government to build the road to Fernie on the east side of the river. This decision had been reached by the government after reports were made by engineers, and it was announced by the government agent.

The meeting was composed of citizens from both towns though the upper town was not so well represented as the lower. A strongly worded telegram was sent to Premier McBride opposing the proposed route and asking that the matter be reconsidered. The meeting was of one mind as to the many advantages that the west side had over the east, the only disadvantage being the extra cost.

NOTICE.

Owing to the several misunderstandings that arose between the Rocky Mountain Bartenders Union No. 297 of the A. L. U., and some of the hotel proprietors of Fernie over the late bartenders strike, we the members of the bartenders union believe we owe it to the public at large to say that the proprietors of the following hotels have granted every request made by the bartenders union, and we wish to publish them as fair to organized labor. Hotels Victoria, Fernie, Royal, Central, Roma, Queens, Alberta and Northern.

Wm. Mills, President.
C. E. Laderoute, Sec.-Treas.

Fernie, August 7th. 1903.

BORN.

GOULD—At Fernie on Friday, July 30th, the wife of Mr. Harry Gould of a daughter.

HERCHMER—At Fernie on August 5th, the wife of Mr. H. W. Herchmer of a daughter.

POLICE COURT NEWS.

SPENCE LYON IN THE TOILS FOR THEFT.

Two Morrissey Men Use Knives After Attending Political Meeting.

Two men named J. Watson and Harris while under the influence of liquor attended the liberal meeting this week at Morrissey Mines, where they created considerable disturbance. The first named man left the meeting and the other becoming unruly was fired out by L. Foley. Harris looked up Watson and told him of his troubles, and they started out to wreak vengeance upon Foley. Watson came across his man after the meeting was over and made a rush at him. The latter having heard that his assailant carried a gun promptly knocked him down. Constable Tranter observed the other man creeping up on the object of his wrath and he arrested him and afterwards found on his person a knife of extraordinary size. The men were tried before Stipendiary Magistrate Forbes this week and though they pleaded "not guilty" the facts as above were clearly proven. Watson got 6 weeks and Harris 3 weeks.

Spence Lyon was arrested at Macleod and brought up by Constable Walker on Thursday. He was wanted here on the charge of theft. It appears that he borrowed the sum of $133 from Mike Kret for the purpose of paying the costs of securing a hotel license. The application was refused and Lyon received a rebate of the full amount in a government check. He got it cashed and left the town without paying Kret. The case came up yesterday. The evidence for the prosecution was clear and the accussed made no defense. The case was sent up for trial.

A negro and a half-breed got into a scrap on Baker St. last night and the case was aired in the police court this morning. The latter was found to be the cause of the trouble and he was fined $20.

SOCIALISM IN RUSSIA.

What Constitutes a Socialist in the Czar's Dominions.

London, July 31.—A Times' Russian correspondent criticising the Russian school system, quotes the case of a Russian student who had difficulty in producing a clean moral bill of health for his entrance to the university. The gymnasium director when pressed said:

"You are a socialist."

"How do you know that I am a socialist?" the student asked.

"At fifteen years" was the answer, "you were seen in the streets with one of Herbert Spencer's works under your arm."

It is needless to multiply details, as as Russian literature abounds with the evidence that the average student regards school as little more than a prison and the teacher as little better than a jailer and a spy.

A CASE OF CARELESSNESS.

Many New British Subjects Neglect to Call for their Papers.

Our attention has been called to the fact that about 20 of the 30 aliens who were made British subjects last month have neglected to call around at the clerk's office to get their naturalization papers.

It is very important that these men should call and claim their papers and have their names registered on the voters' list. Unless this is done they cannot vote at the coming election.

ACCIDENT ON THE ELK.

Berry-Picking Escapade Almost Results Fatally.

On Monday evening of this week a boat accident on the Elk River at Coal Creek would have resulted fatally for two of its occupants but for the presence of mind and splendid swimming ability of two men.

In the morning a party of five berry pickers including Mr. McKenzie, bridge foreman, Edna Hoey and May McPhail, went over to the Lizzard Creek district to pick berries. On their way home they got lost and it was seven o'clock in the evening when they struck the Elk River at a point directly opposite Coal Creek mill. There they signalled for assistance and a boat was taken over by one of the mill men. The party was all taken on board but when near the middle of the stream where the current was strong and the water 15 feet deep the boat struck a log and the jar caused the two girls, above named, who were sitting in the bow to fall overboard.

Mr. McKenzie and the boatman fortunately are both good swimmers and they showed rare pluck and presence of mind in the work of rescue. They both jumped into the water and each grabbed one of the girls as they were going down for the third time. Considerable difficulty was experienced in overcoming the resisting current and in supporting the drowning girls and but for a rope which one of the men had grabbed it is very doubtful if both the girls would have been saved. Some time elapsed after the boat was reached before the girls were fully resuscitated and it was ten o'clock before their homes were reached and the anxiety of their alarmed friends was relieved.

REDMEN ON WAR-PATH.

The police have received word of a raid which the Stoney Indians of Alberta are planning to make on the Kootenay Indians of the Flathead country. The report says they have left their women and children behind and are on their way to make a silent attack.

Later two parties of these Indians were reported in force on the Big Timothy Meadow near the head of the Flathead, North Kootenay Pass. They must have come back to British Columbia by the Windy Gap, an old and little used pass.

As an explanation of the bad feeling shown by the Stoney Indians towards the Kootenay tribes, it is said that a a short time ago one of the Stoney tribe was poisoned while visiting the Kootenays at Tobacco Plains by drinking some "trail scent." The Kootenays claim that one of their tribe warned the visitor of the poisonous nature of the drink, and that the Stoneys when leaving for their homes parted with them in the most friendly manner.

The police at Tobacco Plains have been warned of the plot by Inspector Davidson, of the N.W.M.P. at Pincher.

MR. W. R. ROSS EXPLAINS HIS POSITION.

The Editor FERNIE FREE PRESS;

Sir,—I notice in your issue of the 1st inst the statement is made that I have repeatedly thrown cold water on the suggestion that I should stand as the Conservative candidate for this Riding at the next election.

In order to avoid any wrong impression that may have been created by the statement which you have published and in order to prevent the further diffusion of the same, I take this opportunity of placing my views on record.

If the Conservative party should, at its nominating convention, see fit to entrust the nomination to me, I shall be quite willing to accept it and devote my best efforts to the interests of the cause. If, on the other hand, any other person should be selected, I shall be found in the proper place devoting my humble energies towards the election of the convention's nominee.

Yours truly,
WM. R. ROSS.

Fernie, Aug. 7, 1903.

COMPANY TROUBLES AT FRANK.

A detachment of police under Inspector Davidson, of Pincher Creek, and Captain Wickham, of Macleod, were sent to Blairmore last Tuesday to maintain the law in case the dispute between the contractors and purchasers over the possession of the newly completed railway spur connecting the Gold Creek collieries with the C.P.R., should end in violence. The contractors, Poupore and McVeigh who hold an injunction against the road being opened until the settlement of the matter in dispute, took possession of the first rock cut and tore up the rails to prevent the manager of the coal mines from running a train as he had threatened to do. It looked for a while, as if Briton and Gaul were again about to struggle for the supremacy in the Golden West, but no opposition force could be hired by the colliery to face the defenders of the cut. It was decided by the Inspectors that the contractors were acting within their rights, and Mr. Fluetot was informed that the orders of the court must be obeyed, until the matter has been finally settled at Calgary where the case is to be tried. The material for the mines and ovens must remain where it is and the work of development at the mines is perforce at a standstill.

The Conservative convention on the 15th at Ymir will consist of 28 delegates. The Liberals will have a like number of delegates at their convention on the 10th.

MCKAY GOT LOST.

Executive of Board of Trade Discuss Matters of Importance.

The executive of the Board of Trade which met on Wednesday evening took prompt action on a rumor that was abroad as to the determination of the government to build the wagon road on the east side of the Elk and to the cause which led to such a conclusion. The rumor had it that Government Surveyor McKay was sent to look over the route on the west side and that he got lost. This, it was said, led him to conclude that the road was impracticable and he decided upon the east side. The secretary was instructed to write to the government remonstrating against this decision.

Premier McBride when in Fernie recently promised to try to secure a government grant of $250 towards the fire protection fund of the town. Nothing had since been heard of it and the secretary was instructed to write to the Premier reminding him of his promise.

The fire protection question was again touched up. The fire committee that was appointed to report re the purchase of a lot and the erection of a fire-hall had failed to give an account of their investigations and the secretary was instructed to write the committee asking them to report at an early date. The engine was expected soon and there was no place to put it.

It was brought to the attention of the meeting that Mr. F. Stephens. C.P.R. Agent, was shortly to be moved to Calgary and the matter of taking steps to show some recognition of his services by the Board was left in the hands of a committee of five.

TO HAVE DAILY MAIL.

W. A. Galliher at Last Secures This Much Needed Reform.

The action of the different Boards of Trade along the Crow line in agitating for a daily mail service over the Crows Nest branch has at last been rewarded.

The following telegram was sent by Mr. Galliher at Ottawa to the President of the Nelson Board of Trade.

"Minister advises me daily mail service over the Crow's Nest without delay."

COAL CREEK MINES.

(From Our Own Correspondent)

Mr. Sampler paid us another visit early in the week.

Mr. W. H. Whimster, collector of votes was in town this week.

A cave-in at the mouth of No. 2 mine delayed work a little this week.

Twenty new houses are contemplated the following season down near the new mines.

Mrs. Robertson, Master Gordon and Murray, left for a short visit at her home on the prairie this week.

All who attended the lecture given by Rev. S. J. Thompson, on Wednesday evening went away delighted and benefitted with what they heard.

Some of our boys are delighted to meet some friends who have come with those who have lately arrived from England.

The company at present are handicapped in going on with the new engine room for the cable owing to the lack of cement.

The new track joining the tipple with Nos. 4 and 5 is being quickly laid. Then no doubt there will be needed more new men to develop these mines

A new lady teacher is expected from Victoria at the beginning of the term. No doubt some of the children will be sorry to give up their holidays.

Mr. Jos. Smith met with an accident this week which will lay him off for a couple of weeks. His partner and he were digging at close quarters and unfortunately a pick pierced his arm.

Messrs. Dunsmuir and Webber are both improving nicely and their recovery is expected soon. Mr. Webber purposes returning to his home on Vancouver Island to recuperate.

The miners in No. 2 mine have come out to light in the ravine to the right. This was not expected to happen so soon. This opening will have to be closed in order to prevent interference with the air currents.

A CHALLENGE.

A picked town team do hereby challenge the Angels and Ex-Angels to a game of foot-ball to be played next Thursday evening, at 7 o'clock p.m. sharp. Signed on behalf of the team.

E. JARVIS.

MORE USE FOR LASH

MANY CHANGES ARE MADE IN CRIMINAL CODE.

Severer Provisions Against Prize Fighting Likely to Be Enacted—List of Crimes Punishable by Flogging Will Be Added to.

In the House of Commons on July 28 the bill to amend the Criminal Code was taken up. The clause allowing art drawings under certain restrictions was allowed to stand for further consideration. A clause was inserted forbidding the destruction of cranberry patches under penalty of $50 over and above the value of the patch. The destruction of shrubbery or garden produce was made a criminal offence where the value exceeds $10, and the penalty was fixed at $50.

F. B. Wade (Annapolis) offered a clause that where a person has in his possession amalgam gold or precious metals not coined, the onus of showing where he got them shall rest on the possessors. He represented that trouble frequently arose from this source in the neighborhood of mines, and while it was easy for an honest man to show where he got it, the necessity of proving that the possessor has actually stolen the gold rendered conviction impossible. After some discussion the clause was allowed to stand on the Hon. Mr. Fitzpatrick's promise to investigate the subject.

The clause forbidding the putting of advertising devices on coin was adopted.

Col. Sam Hughes called attention to the damage to which women are frequently exposed from tramps. He thought it would not be a bad plan to shoot such gentry on sight, only it would hardly be consistent with good government.

Mr. Fitzpatrick replied that the difficulty was met, partly, at any rate, by the provisions which it was proposed to insert for the use of the lash in punishment of such crimes.

L. E. Champagne offered an amendment giving the judge power in Quebec and Manitoba to decide whether the jury shall be English or French. He called attention to an abuse now existing whereby a mixed jury is habitually selected, thus lengthening the trial and necessitating the services of extra counsel, interpreters, and other court officers.

Mr. Fitzpatrick accepted the amendment, with the further promise that the language to be selected by the judge shall be that in which the delence is skilled.

W. Gorman wanted the law made more stringent with regard to prize fights. Such contests, he said, were often held not to be prize fights merely because the contestants wore gloves. He thought the evil would be largely remedied by inserting in the law the words, "with or without gloves."

Mr. Fitzpatrick agreed that the disgusting exhibitions where men get together and fight for money should be suppressed, and he was sure they could be suppressed, but he did not think it necessary to prevent every contest with boxing gloves, where men go together in manly contests such as took place every day in athletic associations. He promised to consider what alterations should be made.

A portion of the cigarette section was passed and another portion held. The portion passed forbids the sale of cigarettes or tobacco to persons under 18 years of age, under a penalty of from $10 to $15, or 30 days. The minister of justice said this section had the merit of pleasing neither the reformers nor the tobacco men. It would have to be accepted as his peace offering. A section giving the magistrate authority to exercise his judgment as to whether a person is under 18 years stands for further consideration.

THE NEWS IN BRIEF.

The mayor of Winnipeg has declared August 20 Civic holiday.

Burglars made two successful raids in Portage la Prairie on July 28, securing over $100.

A C. P. R. immigrant special was derailed at Dinorwic, Ont., on July 28. No one was injured.

Cobourg "Old Boys" of Winnipeg have decided not to go east on an excursion.

Mackenzie and Mann have purchased the Middleton and Victoria Beach railway in Nova Scotia.

100 MILES AN HOUR.

Rate of Speed Promised on a Line to Be Built in England.

One hundred and ten miles per hour in an electrical railway car is going some, and doubtless to many it sounds like the recital of a dream; but a line is now being constructed in England with an electric express mono-rail track which will be the pioneer high-speed railway in the world.

A speed of sixty or eighty miles an hour on the ordinary two-rail track is considered wonderful, but with the single rail such speeds will not amount to much. We are so accustomed to the two-rail system that we are likely to be a little startled when an inventor proposes to substitute for it the single rail system, and on this single rail the cars are straddled, half on one side and half on the other, the carrying rail being in the middle.

Mr. F. B. Behr, the inventor of the high-speed electric mono-rail which the English parliament has authorized to be built between Manchester and Liverpool, became convinced that the mono-rail was the only system by which trains could be run at speeds of 100 miles an hour and over with no possibility of coming off the track.

He accordingly built a high speed experimental line in Belgium for the Brussels exposition. Very high speeds were attained with perfect safety and comfort of the passengers, owing to the guide rails and guide wheels provided by Mr. Behr.

He then proposed to build a full-sized railway in England, and decided finally to construct one between Manchester and Liverpool, a very happy idea, because the pioneer steam railway in the world was built between these two cities. England led the way in the steam railroad, and now she is again leading the way in the matter of high speed lines.

When the mono-rail bill came before parliament the most eminent engineers of the day came forward to testify their belief that speeds of 100 miles an hour and over were perfectly feasible with no fear of derailment on the mono-rail. The committees, impressed with the weight of scientific evidence, sanctioned the construction of the line, which will, one may safely say, create a revolution in express passenger travelling. The English railway companies are watching the progress of the mono-rail with the greatest interest, and there are rumors that they are considering the question of laying mono-rail tracks for express trains alongside or above their existing tracks, the latter for local and goods traffic.

"Special tracks for special speeds" should be the motto of the companies. This will mean, experts say, that expresses will be no longer delayed by slower trains; that there will be no fear of express trains dashing into slow ones, as has so often occurred; that more trains of all kinds will be run at increased speed; that the working of railways will be greatly simplified; that we shall reach places in half the time now taken and with double the comfort. The coming of the mono-rail will indeed mean a new era in railway enterprise.

The length of the first line in operation will be thirty-four and one-half miles, and the cars will run it without any stops in twenty minutes instead of forty to forty-five minutes as at present done by the fastest express trains. The new system allows cars to run around sharp curves with no possibility of derailment, and the passengers will feel no bad effects from such fast travelling.

Canada's Opportunity.

Information has reached the agricultural department at Ottawa from Japan that there is going to be a shortage in the wheat crop of Japan by about 30 per cent. less than last year, and also a considerable shortage in Corea, from which Japan gets a quantity of her wheat supply. In consequence of the political difficulties in Manchuria there will also be a shortage in the wheat trade between Japan and Manchuria. In this connection the Hon. Sidney Fisher points out that now is the time for the Canadian flour dealers to slip into the Japanese market as there will be an increased demand for Canadian flour, which has attracted so much attention since the Canadian exhibition at Osaka. It is thought that if Canada and her dealers step into the increased market they can easily capture the entire trade.

Robert Melville, a telephone lineman, fell from a 30 foot pole in Portage la Prairie on Tuesday last and was seriously injured.

In the Lumberman's Shanty.

One of the hardest things in the life of the lumbermen, the miner and the prospector is being deprived of the good things to eat which men have who live comfortably at home.

The **Victor Brand** of **Evaporated Cream** has brought the luxury of good living into the camp and the shanty. For all cooking purposes, for Tea and for Coffee it is fully equal to the richest fluid cream.

MY HEART'S DARLING

BY W. HEMBURG.

A few days before the wedding Hortense and Lucie were taking a drive. Hortense had complained of headache. In the house there was hammering and every kind of noise. A carpet was being laid in the room where the marriage ceremony was to take place—the so-called "vaulted room" in the oldest part of the old house—and the noise disturbed the baroness so much that she fled from it. They drove through the hot, narrow streets, and suddenly the coachman turned into the Wassergasse. Lucie started; it was the street where his house was! She turned her head to the other side; but—see there! on the narrow sidewalk the Frau Counselor was walking in a slow, dignified manner, and before her a very tall figure in a gray-colored sateen dress and a Rembrandt hat trimmed with waving feathers. As the carriage approached them Lucie bent down to pick up her handkerchief, which had slipped from her hand and escaped the old lady's glance, but she met the look of curiosity in the girl's blue eyes, and Lucie's heart beat loud and painfully. She sunk back into the cushions feeling weak and helpless.

"Why, who was that?" asked Hortense, without noticing the girl's emotion.

Lucie knew well, but she could not bring herself to speak.

"Well, if they had put that figure on the pedestal in the Niederwald, travelers on the steamboats could not complain any longer that it looked too small. I think this must be the time of the yearly market, and that the giantess has come. Did you see her, Lucie?"

But Hortense held her handkerchief to her aching temples, and did not notice that she received no answer. A bell rang behind them; Lucie recognized the penetrating sound of the tones, although she had only heard it once. It was the bell on Dr. Adler's little gate. She saw herself entering and he standing on the threshold expecting her. The thought came over her with overwhelming force; she would have liked to spring out of the carriage.

When they returned toward evening a note from Dr. Adler to Hortense lay on the writing table. In it he regretted extremely being obliged to decline the invitation to the wedding, as he had a very sick patient whom he must visit some distance out in the country.

"Very good," said Hortense; "he has tact," and she threw the letter in the paper basket. "You know Weber of course had to invite him, but we fully expected he would decline."

cline." Lucie assented silently. In the evening, at table, Hortense asked: "Do you know, mademoiselle, who that young giantess is that we see going about the town?"

"Immensely tall, with a Rembrandt hat?" asked mademoiselle.

"Yes; and very blonde, and very red cheeks—"

"Oh, mon Dieu! That is the girl Doctor Adler is engaged to, or is going to be engaged to."

Hortense laid down her knife and fork and laughed till the tears came in her eyes so that she had to dry them with her napkin.

"Mais c'est vrai," murmured mademoiselle, with a stolen look at Lucie. "What is there to laugh at?"

"Children, how is it possible!" cried Hortense, as she mastered her merriment, still without looking at Lucie. She became graver and clasped the girl's hand. "My own darling!" And as she noticed her pale face she whispered: "Have I hurt your feelings, child? It is so ridiculous! Laugh, too, it is the best thing to do—to laugh over the comedy we call life."

But Lucie did not laugh.

And now all was ready for the wedding. The beautiful vaulted room in which the ceremony was to take place looked grand and festive; through the stained-glass windows a bright colored light streamed over the white altar surrounded with orange trees. From the centre of the vaulted ceiling hung an old brass candelabra filled with wax candles, and some carpeted steps led to the adjoining dining room. There stood the little table richly decorated with glass, silver, and rare china. The servants had taken pains to do their part toward making the house look gay with wreaths and garlands.

Hortense found it distasteful. "I suppose they have put gay rosettes on the horses' heads and ornamented the whips," she said to Lucie as they were standing at the window waiting for the carriage which was to bring the bridegroom-elect from the station.

It was noon of the day before the wedding. The young baroness had put on an embroidered batiste dress, with some yellow roses at her neck instead of a broach. Every vase and jars in her rooms was filled with roses. Lucie was arranging various wedding-presents on a little table; among them some gorgeous pieces of jewelry from the mother and sisters of the groom. Dr. Adler had sent a majolica vase filled with roses. Mademoiselle's cushion with the crest lay among the other things.

Hortense had already repeatedly turned her head to look at the clock on the writing-table.

"What does keep the carriage?" she said at last.

"The train may be belated," said Lucie.

"No, I hear the whistle plainly."

"Then, perhaps, Herr Weber waited for the Hamburg train—it comes a quarter of an hour later—so as to bring his brother with him."

Hortense shrugged her shoulders impatiently.

"That is not exactly gallant."

The noise of wheels was now heard in the street by the gate, and a moment after the carriage drove into the court-yard with no one in it.

Hortense turned pale as death.

"He has not come," she said, with apparent coolness.

"There is another train in two hours, Hortense."

"Oh, as to you, Lucie, if the world were to come to an end you would have some explanation for it," cried Frau von Lowen, stamping on the carpet with her dainty foot.

Lucie looked up surprised.

"But I do not know—"

"No, you do not know; but I—! He is not coming; he will not come at all. He has not written since the day before yesterday; he has probably—" she stopped. "I do not know what will happen if—if —" she murmured.

"But, dear heart, why do you work yourself up so?" said Lucie, going over to her.

"You do not understand, of course, because fate has never played you such hateful tricks; but one who has suffered as I have— Oh, I am prepared for anything."

"Do you imagine that he can have heard about your father?"

"And is that not quite possible? It is certainly well enough known. It would be much more of a wonder if he—"

"Well, and suppose it is so, that he meets someone in the railway carriage who should say to him, 'This Herr von Lowen is a man without any sense of honor,' do you believe that Weber would get out at the next station and go home? For shame, Hortense, to have so little confidence in the man to whom you will belong to-morrow!"

"Think of Wilken, Lucie."

"Because one man acted so meanly is the other to forget all his vows? Just now, as you stood at the window, I thought you were impatient, that you were glad he was coming, that you cared a little for him; but I see well it was not that. You make me feel badly."

"Stop tormenting me! You know that I do not love him. Say rather what shall I do—if—"

"Calm yourself, Hortense," whispered Lucie. "Mademoiselle is coming."

The old lady came in, evidently much heated and excited.

"How is this, Hortense? Monsieur has not come! What does this mean? A bridegroom missing on such a day! It is unheard of, child; it is not very flattering; it is an insult."

Frau von Lowen gave a little laugh.

"You appear to be quite worked up, dear Bertin. It is quite possible that there has been an accident on the railroad."

"And you say that so coolly, Hortense! You are—"

"A dreadfully frivolous person, am I not? But that is no matter; I still say that is not the worst that may happen. Do not make yourself anxious, but rather go to sleep. Do you hear? take a little nap, now, at once; it is the best time before dinner. Au revoir, dear Bertin."

The old lady withdrew. She was accustomed to be dismissed in this way. Hortense began to walk up and down the room, and kept it up for two long hours. The carriage went again to the depot, and this time it brought Herr Weber's brother. The baron had to receive him alone. Hortense begged to be excused. She went about with a watch in her hand, and listened at the window to hear if the west wind brought over the whistle of the train.

"Now," she said to Lurie, "do you hear? If he does not come this time, then—then—"

She stared motionless out of the window as the noise of wheels approached. She became as white as her dress, and when the open landau turned in at the gateway, and the tall man who sat on the back seat looked up at the window at which she stood, with eyes full of expectation, she was seized with a fit of trembling, and leaned as if about to faint against Lucie's shoulder.

[CONTINUED.]

Palaces of Waters.

The principal Palace of Waters is an immense hall which stretches in mysterious grandeur far beneath the city of Constantinople. Its roof is formed of wide spanned arches supported on massive marble columns. These stand some ten feet apart, and their capitals are elaborately wrought.

This marvelous building springs from an expanse of waters which underlies the foundations of the city for miles. Its origin and extent have been shrouded in mystery ever since its discovery about seventy years ago, when some of the arches gave way. All attempts to explore by boat this marvel of construction have been either fatal or fruitless.

Another palace of waters was the stately Palace of Ice which was built in 1739 at the command of Anne, empress of Russia, to honor the nuptials of the Prince Gallitzin and a simple peasant girl. In this novel palace bride and bridegroom were housed, in rooms of which the walls and furniture and bed were constructed wholly of frozen water.

Magnet Finds Needles.

"John, buy a magnet while you're out. Ruth has lost the old one," said the head of a big dressmaking establishment to her errand boy.

"What do you do with magnets here?" a woman who was being fitted asked.

"We find needles with them."

"How do you mean?"

"Every day it naturally happens that my forty-five assistants drop a great many needles on the floor. To stop and look for these needles would take time. They are all left lying, therefore, till the day's end, when a cleaner goes over the room with a magnet, holding it close to the floor. Every lost needle instantly, then, jumps up on the steel and in that way all are recovered in a few minutes. To recover them by any other means would take at least an hour."

MARKETS.

(Compiled from The Commercial)

Wheat—During the past week the speculative markets in wheat have had rather a quieter time than for the week or two immediately preceding. But the lessened activity seems to proceed more from uncertainty in the minds of operators as to actual outcome of the crops, than from lack of interest in trading, because the markets have daily shown a good deal of nervousness, being quick to advance or decline within the range of a cent, according to the sentiment of the hour. On the week there has been a sharp decline in July wheat in New York, and only a little less so in Minneapolis, but July in other markets has declined about in line with the decline in other months, which runs from 1c to 1¼c. Cash wheat in all American markets continues at a good premium, but the feeling towards it is becoming dull, for the miller sees lots of new wheat of good quality within a short distance ahead. European markets lend no help either to high prices for immediate delivery. Nevertheless public stocks are so small and the requirements of many millers so urgent that they seem impelled to pay high prices for quick delivery. Perhaps one of the principal circumstances which has held the markets this week within narrow limits is the expectation that there is a large quantity of new wheat ready to move to market in the middle and northern winter wheat belt. Apparently farmers are in no hurry to put it freely on the market, because for some time now the weather has been very favorable for harvesting and threshing operations, and prices are good, but primary receipts up to date are only about 50 per cent. of what they were last year under unfavorable weather conditions. Therefore, the quantity of wheat getting ready for market holds prices from advancing, and the slowness of movement holds them from declining much. Time will develop the situation and new circumstances will become apparent. Up to within a fortnight ago it has been generally considered that Manitoba and the Canadian Northwest Territories were promising a crop of about the same yield as last year, say around 60,000,000 bushels. One or two estimates have indicated only 50,000,000 bushels, but generally these were considered underrated. It looks now, however, as if during June and the early part of this month the appearance of the fields being green and healthy has deceived the judgment of most people, or otherwise the more recent development of the crop is showing that previous estimates have been mistaken ones, and the general estimate to-day by the Manitoba grain trade is for not over a crop of 50,000,000 bushels. Recent weather has been unfavorable for the crop, being too hot and dry, and the time is fast passing when a good rain would be of service. In some districts cutting may begin within two weeks, which is early, and means light crop. In Europe the crops have been making seasonable progress and in the south wher? harvest is in full swing the yield is fair and quality good. Europe also continues to receive large imports of wheat nearly twice as large as last year, so that in the meantime European markets take little notice of what the conditions on this side may turn out. A very large consumption, however, is evidently going on over there, as well as increased consumption in other places and the effect will probably be larger demand and higher prices later.

The trade in Manitoba wheat continues to be of trifling amount as the old wheat is well cleaned up. There is a little demand for 1 hard and 1 northern for immediate or early delivery and the price is well sustained. Prices are: 1 hard, 83¾c; 1 northern, 82¼c; 2 northern, 79¼c; 3 northern, 74¼c; and No. 4 wheat 66c, July or first half of August delivery, in store Fort William or Port Arthur.

WINNIPEG PRICES.

The following are the Winnipeg jobbing prices:—

Oats—At Fort William No. 1 white oats are worth 31¾c; No. 2 white, 30¾c.

Barley—Feed, 32@34c per bushel.

Flaxseed—$1 per bushel.

Hay—Baled, $7@$8.

Poultry—Live chickens, 30@50c per pair; fowls, 60@75c.

Butter—Creamery, 16½c per pound; dairy, 11@13c.

Cheese—9½@10c per pound.

Eggs—15c per dozen.

Dressed Meats—Beef, city dressed, 7@7½c; mutton, 11½c; veal, 9c; lambs, $4@$4.50 each.

Hides—No. 1, 6½c per pound; calfskins, 7c; shearling sheepskins, 10@15c each; lambskins, 10@20c; horsehides, $1.25@$2.

Wool—7½c per pound.

Tallow—No. 1, 4c per pound; No. 2 3c per pound.

Seneca Root—45c per pound.

Cattle—Best steers, 4½c; ordinary, 4@4½c.

Hogs—6c for best weights.

Cacao in Nicaragua.

Nicaraguans use up about 500,000 pounds of cacao a year. Chocolate, hot or cold, is used twice a day in every well to do household. Cacao grows in large pods containing from fifteen to twenty-five beans each on trees from ten to twelve feet high. A yield of $400 an acre is not unusual.

Salt Freshens Ink.

To prevent a mold in ink infuse a piece of salt the size of a hazelnut in each quart.

Charcoal and Yellow Jack.

Dealers in charcoal in Havana are said never to have yellow fever, while in lay circles it is advised always to have it about during its prevalence, because of its absorbing properties, it is presumed.

TO FACE MURDER CHARGE

A Convict Suspected of Killing a Farmer Near Red Deer.

Calgary, G.W.T., July 28.—Ernest Cashel, at present under sentence in Stony Mountain, is now charged with the murder of a farmer named Belt, who lived on Tail Creek, some miles east of Red Deer.

The alleged murder was committed last autumn. Ernest Cashel is a young man not yet of age. He was first known to the police last fall. He came down from Ponoka and while here passed a worthless check upon one of the merchants here. Chief English went north and arrested the young man near his home and brought him down. This side of Red Deer the young fellow escaped through a window when the train was running at full speed and got away.

For some weeks there was a merry chase, and from every quarter there were reports that Cashel had been seen, that he had committed some depredation, but it was impossible for the authorities to lay hands on him. At one time he was settled at a breed camp out of Calgary. Finally he went a bit too far and was gathered in by the police. He came before the authorities and was sentenced on charg?s of forgery and horse stealing and on another charge. After his sentence he created a scene in the city driving to the barracks wrapped in his mother's arms, both weeping audibly.

Shortly after the escape of Cashel the man Belt disappeared. He went suddenly and there was not the slightest indication of his whereabouts. From the fact that Cashel had been seen in the district and that later he had in his possession a horse and saddle belonging to the missing man, it is believed that he knew something of his whereabouts. But nothing in the way of a charge could be made until the man or his body could be found.

The police then began to make a search. A large reward was offered for the recovery of the body. A very close search was made of Tail Creek from end to end. Until last week there was no trace of the missing man. Then some people near the mouth came upon the dead body of a man. An inquest was held and a relative of the missing man positively identified him as the man Belt. A bullet was found in his shoulder. The coroner's jury which was summoned, listened to some of the evidence which the police had secured and brought in a verdict of wilful murder. The preliminary investigation will be held in Calgary or Red Deer, probably in Calgary, as soon as the prisoner Cashel can be brought here from the penitentiary. Cashel originally came from Montana.

THE WIDE WORLD.

Telegraphic News of Two Hemispheres Briefly Chronicled.

A banner crop around Regina is predicted.

Sixty-four cardinals will ballot for the new pope.

The attendance at the Winnipeg fair totalled 68,544.

The Arctic ice plant and storehouses in Winnipeg were destroyed by fire on July 27.

Albert Stewart, a young farmer of the Cypress River district committed suicide on July 27 by hanging himself.

An eastern Canadian company may enter for 500 homesteads north of Moose Mountain.

Five members of the St. Louis House of Delegates have been sentenced for bribery.

The police were necessary to keep the crowd back from viewing Manitoba potatoes in London.

Dr. Grain has been declared elected M.P.P. for St. Andrews and Kildonan by the casting vote of the returning officer.

Lady Rothschild, whose husband is head of the famous family, does an immense amount of charitable work, but never of a public character. In the vicinity of Tring Park, her country home in Buckinghamshire, England, she is known all over the countryside on account of the benefactions conferred at her instigation.

The King of Denmark, who is 85 years old, is one of ten children, of whom three survive. The average age of the ten is nearly 71. The late Queen was one of the five who averaged 67 years. Their descendants occupy the thrones of Great Britain, Russia, Denmark, Greece and Baden.

The report of the interstate commerce commission on railroad accidents in the United States for the three months ending March 31 last shows that during that quarter 300 persons were killed and 2,831 injured in train accidents. Other kinds of accidents, including those sustained by employees at work and by passengers in getting off and on cars, make the aggregate casualties 827 killed and 11,481 injured. There were 1,650 collisions and 1,811 derailments, causing $2,491,046 damage to cars, engines and roadway.

Found a Skeleton.

A Montreal dispatch says: Thirty-five years ago Joseph Lee, hunter and trapper at La Rose, Argenteuil county, mysteriously disappeared, and no trac? was ever found, despite searching inquiry. His friends remained firm in the belief that he was murdered, but the mystery was never cleared. Last week, while digging a grave at La Rose, the skeleton of the missing man was found. Lee had a withered arm and other marks which his friends claim make the identification complete. Chief Detective McCaskill and an associate are investigating the matter. It is said suspects are still living in the neighborhood.

FERNIE FREE PRESS.

A wise man knows all he tells, but he never tells all he knows.

Minard's Liniment Cures Garget in Cows.

Usually the right side of the market is the outside.

C. C. RICHARDS & CO.

Dear Sirs,—I have used MINARD'S LINIMENT in my stable for over a year and consider it the very best for horseflesh I can get and strongly recommend it. GEO. HOUGH.

Livery Stables, Quebec.

In the last twelve months there were 5,684 miles of railway laid in the United States.

Minard's Liniment Cures Colds, etc.

A woman loves a man in proportion to his ability to make her angry.

Mrs. Celeste Coon, Syracuse, N. Y., writes: "For years I could not eat many kinds of food without producing a burning, excruciating pain in the stomach. I took Parmelee's Pills according to directions under the head of 'Dyspepsia or Indigestion.' One box entirely cured me. I can now eat anything I choose, without distressing me in the least." These Pills do not cause pain or griping, and should be used when a cathartic is required.

When a man's nose is as red as a beet it's usually safe to bet that he is one.

Minard's Liniment Cures Distemper.

According to the London Pioneer, the actual position of affairs in regard to British relations with Thibet is that the government of India has lately addressed strong representations to the Thibetian authorities, calling upon them to fulfil their treaty pledges to encourage Indian trans-frontier trade, and not to hinder it. It is denied that an Indian trade commissioner, or any other special emissary of the government, has entered Thibet in connection with the negotiations.

BABY'S VITALITY.

The vitality of infants and young children is at its lowest point during the hot weather. More children die in summer than at any other season. This is because the little ones suffer more from bowel troubles, are nervous, weak, sleepless and irritable. Prompt action often saves a valuable little life, and troubles of this kind can be promptly met and cured by giving the little ones Baby's Own Tablets, which should be kept in every home ready for emergencies. These Tablets speedily relieve, and promptly cure all stomach, bowel and other hot weather ailments, and give sound refreshing sleep. Mrs. P. Ferguson, 105 Mansfield street, Montreal, says: "My baby was attacked with dysentery and was hot and feverish. I gave him Baby's Own Tablets and they promptly cured him. Before this he had been rather delicate, but since using the Tablets he has been better and stronger in every way."

These Tablets can be given with an absolute certainty that they will do good to all children from a new born upwards. They contain no opiate or poisonous "soothing" stuff. Sold by medicine dealers or mailed at 25 cents a box by writing direct to Dr. Williams Medicine Co., Brockville, Ont.

It takes a shrewd man to dispose of his property in a way that will shut out the lawyers as well as his relatives.

Lever's Y-Z (Wise Head) Disinfectant Soap Powder dusted in the bath softens the water and disinfects.

Though the man who hesitates may be lost, the one who deliberates is usually to be found on deck when wanted.

Catarrh Cannot be Cured

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years and is a regular prescription. It is composed of the best tonics known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing Catarrh. Send for testimonials free.

QUAKERS IN CANADA.

Brief Sketch of the Society and of the Children of Peace.

Two hundred and seventy-five years ago George Fox began to preach to the England of Charles I., gembling, judge-bribing, cavalier England, where "Thee" and "Thou" were meted out to the farmer and the mechanic, and "Mr." and "You" to none lower than a merchant. Emotionally Fox was a Bunyan. His early life reads like a mixture of John Wesley and Luther. Of martyr lineage, his life was a series of martyrdoms. He was in foul dungeons for months—often; for preaching that a man's religion is an inward experience and not a painted show. His doctrines are incorporated in a discipline drawn up this year for the Canadian society in their recent annual convention in Toronto.

Quakerism in Toronto dates back to 1877, when the first meeting of friends was held on Berkeley street. This grew out of a Bible class, and was founded by Mr. Elias Rogers, who still remains an active member of the society on Carlton street. The second church was on Pembroke street. That being too remote for convenience the society moved in 1902 to the present new edifice on Carleton street, which is the only Quaker church in Toronto; not a remarkable fact when it is considered that the total Canadian membership is but 2,000.

Quakerism in the vicinity of Toronto dates back to 1800, when Timothy Rogers received from Gov. Simcoe a grant of 8,000 acres of land up Yonge street in the solid bush vicinity of what is now Newmarket, on condition of settling forty families in that part. In 1803 he brought forty families from New England, all Friends. The following year came twenty families from Pennsylvania, Friends also. Thus began the colony of Quakers which for thirty-five years knew no adversity but the wilderness. But about 1835 David Wilson organized a cult among the Sharon Society, known as the Children of Peace. On behalf of this offshoot, with its somewhat new-fangled and variant doctrines concerning government, etc., Wilson built a temple; a 19th century reproduction in pine of Solomon's temple. In this temple twice a year was held a great feast. Near the temple was a regular meeting house, in which David preached. He also organized a brass band for help in the musical service. And between the temple and the meeting-house he built a curious study for himself, with many windows, from which he could see all the works his hand had made. He called it "The All-Seeing Eye." But the movement went the way of all fads. It died, and the primitive Fox religion again held the field.

So also it does to this day; as simple and severe, if not quite so unpopular as it was in the day when plain George Fox respectfully called the great Cromwell "Thee," spent twelve months in the Derby jail, six of them in a filthy dungeon, because he would not become a soldier, and left the name of "Quaker," as a sobriquet for his sect, because he told the Derby magistrates to tremble at the word of the Lord—and they did. A humble, democratic sect, they still eschew finery. They pay no stated salary, but a spontaneous giving to the minister, who does not claim to be called "Reverend," and is not regarded as a better man than the humblest of his flock, but merely as one having spiritual gifts. Every man may, if he choose, take part in any service if he be so moved of the Spirit. Formalism in service they have none; not even a prescribed order. They freely admit women to the work of the church, both private and public. In the courts of justice they will not swear, but simply make affirmation. They believe not in war but a kingdom founded on peace. Neither will they speculate in stocks or attend balls. They also give freely, and without advertisement of their estate, to the poor.

Ontario Metal Output.

The Bureau of Mines has published a statement of the output of metalliferous mines and works of Ontario for the first three months of 1903. Gold ore treated was 9,688 tons; gold product, 2,692 ounces, valued at $45,218. Nickel copper ore raised was 52,866 tons; ore smelted, 47,880 tons; nickel in matte product, 1,059 tons, valued at $567,211; copper in matte product, 780 tons, valued at $112,676. Copper ore raised was 9,940 tons, concentrates produced, 236 tons, valued at $10,388. Iron ore raised was 78,789 tons, valued at $116,620; Ontario ore smelted, 7,392 tons; foreign ore smelted, 18,349 tons; pig-iron produced, 14,357 tons, valued at $165,656; steel produce, 1,340 tons, valued at $29,480. Arsenic produced was 216,000 pounds, valued at $6,264.

As compared with the first three months of 1902, the total value of production shows a decrease from $1,256,685 to $1,055,513. This is chiefly accounted for by the falling off in the output of pig-iron, from $397,838 to $165,656 due to shutsing down at the furnaces for repairs. Nickel rose in quantity from 1,485 tons to 1,659 tons, and in value from $546,356 to $567,211.

Could Be Copied in Canada.

The Rev. S. Swan, vicar of St. Alban's, Carlisle, England, has hit upon a novel way of making the acquaintance of his parishioners. The reverend gentleman notifies in his parish magazine that he has been very busy sharpening 540 lead pencils, which will be placed with wrapping paper in the pews of the church, in order that the worshipers may leave behind them their names and addresses, which will constitute a visiting list for the vicar.

A Long, Stopless Run.

The London and Northwestern company has announced its intention of putting on a train between London and Carlisle which will make the trip of 209 miles without a stop. This is 105 miles farther than any similar run in Great Britain.

SICK TWO YEARS BUT WAS CURED

Dodd's Kidney Pills Credited with Another Victory over Lumbago.

John Ball, a Quebec Bricklayer, Tells how his Troubles Vanished when he Tried the Great Canadian Kidney Remedy.

Quebec, Aug. 3—(Special).—One more remarkable cure has been marked up to the credit of Dodd's Kidney Pills in this city. John Ball, bricklayer, of 57 Little Champlain Street, is the man cured. Interviewed regarding the matter he said:—

"I have been troubled with lumbago for two years and could not do my work. I was also suffering from urinary troubles and had to get up at night so much that my rest was spoiled.

"I bought one box of Dodd's Kidney Pills and after I had used them began to see and feel a change. I have used three boxes and I am now cured."

Similar cures by Dodd's Kidney Pills are reported so frequently that it seems safe to say that Dodd's Kidney Pills will cure any form of Kidney Complaint or any disease caused by disordered Kidneys

Revenge is sweet only to the very small individual.

There never was and never will be a universal panacea, in one remedy, for all ills to which flesh is heir—the very nature of many curatives being such that were the germs of other and differently seated diseases rooted in the system of the patient—what would relieve one ill in turn would aggravate the other. We have however, in Quinine Wine, when obtainable in sound, unadulterated state, a remedy for many and grievous ills. By its gradual and judicious use the frailest systems are led into convalescence and strength by the influence which Quinine exerts on nature's own restoratives. It relieves the drooping spirits of those with whom a chronic state of morbid despondency and lack of interest in life is a disease, and by tranquilizing the nerves, disposes to sound and refreshing sleep—imparts vigor to the action of the blood, which, being stimulated, courses through the veins, strengthening the healthy animal functions of the system, thereby making activity a necessary result, strengthening the frame and giving life to the digestive organs, which naturally demand increased substance—result, improved appetite. Northrop & Lyman, of Toronto, have given to the public their Superior Quinine Wine at the usual rate, and, guaged by the opinions of scientists, the wine approaches nearest perfection of any in the market. All druggists sell it.

Unlike most bachelors, Lord Kitchener is a good housekeeper. He has certain fads and fancies, and one point on which he is most particular is the appearance of his dinner table and household equipments generally. Among other items despatched by his order to grace the Durban entertainments was a beautiful glass dinner set, of finest cut glass, embellished with the viscount's coronet and with "K" beautifully embossed in gold engraving.

The Old Reliable Remedy

for Spavins, Ringbones, Splints, Curbs and all forms of Lameness. The use of a single bottle may double the selling price of your horse.

GOOD FOR EVERYTHING.

DR. B. J. KENDALL CO.,

Dear Sirs:— Gallatoe, N.M., June 18, 1902.
I have been using your Kendall's Spavin Cure for some time. I use from twelve to fifteen bottles a week and find it an excellent remedy for Spavins, Sweeney, Galls and all Cuts and Swellings. I have two hundred head of horses in my care.
I enclose a stamp for your "Treatise on the Horse and his Diseases."

Yours very truly, H. W. LAIRD.

Thousands of Men report equally good or superior results from its use. Price $1; six for $5. As a liniment for family use it has no equal. Ask your druggist for Kendall's Spavin Cure, also "A Treatise on the Horse," the book free, or address

DR. B. J. KENDALL CO., ENOSBURG FALLS, VT.

Parliamentary papers recently issued show that the South African war cost £187,725,700. The troops employed numbered 448,445, of whom 82,742 were colonials. The Boer force has been estimated at 60,000, of whom 3,800 were placed hors de combat, 31,000 were taken prisoners, 5,564 joined the British, and 19,036 gave up their arms on peace being declared.

EXCELLENT REASONS exist why Dr. Thomas' Eclectric Oil should be used by persons troubled with affections of the throat or lungs, sores upon the skin, rheumatic pains, corns, bunions, or external injuries. The reasons are, that it is speedy pure, and unobjectionable, whether taken internally or applied outwardly.

Men seldom leave behind both inquest and bequest.

WHERE DEATH LURKS.

Hints Which If Followed Will Lessen the Number of Drowning Accidents—The Man Who Can't Swim.

Drowning accidents have been very numerous this season. Indeed, one does not pick up a newspaper nowadays without seeing the account of some drowning accident. Those who could swim, seem to have been little more fortunate than those who could not. Alike, they have perished, sometimes meeting their death alone, sometimes sinking to rise no more in view of their friends. It is almost with a feeling of hopelessness that one ventures to repeat the platitudes of safety. The blame for an overwhelming majority of drownings must be placed on the victims themselves. Sometimes, reading the account of a fatality, one doubts the sanity of the person who perished. Truly wisdom seems to have no abiding place on the face of the waters, nor prudence a habitation within sound of the deep.

Defying Law of Gravitation.

It is a pity that every man before going in for a swim, does not reflect for a moment on the nature of the feat before him. He should bear in mind that he is about to set himself in opposition to one of the greatest of nature's laws. He is about to defy the law of gravitation, and, in principle, is in exactly the same position as the lunatic who tried to fly off the top of a house. The mere recollection of this fact would save many lives, for when a man realizes that he is "bucking" against an immutable law, he will proceed with some circumspection. He will enter such a contest only when every chance seems to be in his favor, and, if he be a sensible man, will neglect no precaution. For instance, he will not take his plunge immediately after a meal, knowing, as he must know, that the store of vitality on which he must reckon to bear him safely through is not in the best condition to respond to a call at that time. Nor will he take to the water when hungry, lest his weakness betray him. He will on no account dive in a strange river. Many a strong swimmer has met his death for violating this rule, for the treacherous weeds he did not suspect have held him fast, while only the bubbles on the surface of the stream have borne witness to the tragedy below. A folly which is the peculiar property of experts consists in high diving into unknown waters. Let there be a good "take-off," and some of them ask no more. The possibility that a rock may lie but a few inches under water is disregarded as often as not. It would not be exaggerating to place the number of swimmers killed in this way at many hundreds. Most of them have been stunned and drowned. Others have simply dashed their brains out.

The Man Who Can't Swim.

Under no circumstances has the non-swimmer any business in water that comes up to his neck. Foolishly, he imagines that as long as he can stand and keep his head above the surface he is safe. So he walks around and enjoys himself, until he slips on a stone, stumbles and disappears. Water as high as his chin is plenty deep enough to drown this man. When he bobs up his lungs are half-filled with water, he is nearly choked, and quite panic-stricken. Unless help is at hand the probability is that he will sink again, unable to get a foothold, and drown as ignobly as Clarence in the Malmsey Butt. This kind of accident can happen in swimming places where no holes exist. Where there are holes, however, death awaits, knowing no disappointment, for there is a victim for every hole. The swimmer sometimes loses his life in them, his arms being impeded by the death-trap in which he finds himself, and the bather who cannot swim has not one chance in a hundred.

Boating Accidents.

Boating accidents are about as common as any kind of drowning. The "rock-the-boat-idiot," hounded by comic and serious journals for a decade, is not so common as he was a short while ago. Sometimes a summer goes by without him having murdered anyone, so that the hope is entertained that he may have perished with his last victim. But still he looms up occasionally. He should be hit on the head with an oar as soon as his presence is detected. Changing seats in a rowboat is a favorite form of suicide. Usually a girl is responsible for this. Nothing could be more dangerous. Many a brave fellow has been drowned by his escort trailing her fingers through the water, suddenly grasping at a water-lily or endeavoring to recover something dropped overboard.

One Great Rule.

Rules for the guidance of swimmers, bathers, rowers, drowning persons, and life-savers have been drawn up by the score, so little good would be accomplished by their repetition. But there is one great rule which embraces all—Have Common Sense. Don't take any chances. If you win, you are no further ahead, and if you lose—is it worth while? A man with common sense would never invite a lady to go rowing with him unless he was sure of one thing—that he could save her if the boat upset, or that she could save herself. Not being sure, he has no right to invite her to risk her life with him. Everyone who disregards this rule and yet returns without mishap might well give thanks for an escape, for it is an escape and nothing else. As a matter of fact, a man should be an expert swimmer, a champion sculler and a veteran life-saver before he ever goes on the water. This is a "bull," and also a "bull's-eye." However, it is too much to expect that the majority of people would consent to deprive themselves of the delights of boating and bathing because they are not experts; nor is it desired that they should. Only let them be fully aware of the risks they are running, and then most of the risks will disappear.

Many are called, but few like to get up, especially if it is a cold morning.

At present there are about 75 firms engaged in gem cutting in the United States, with not far from $5,000,000 capital inaested. There are probably about 700 skilled lapidaries at work, earning an average of $1000 apiece a year.

It is said that the Victoria Falls, on the Zambesi, which are to be used to develop electrical energy, have an estimated horse-power of 35,000,000, as compared with Niagara's 7,500,000.

A man exhibits great presence of mind if he isn't absent-minded when the contribution box comes his way.

A constantly increasing evil in France is the drinking of kerosene.

Pelican Island, in Indian river, on the coast of Florida, has been acquired by the United States Department of Agriculture as a government reservation. The step was taken to prevent the entire extinction of the brown pelicans which breed there.

HEALS INFLAMED ITCHING SKIN

Cures Eczema, Salt Rheum and Tetter, Leaving the Skin Smooth, Soft and Natural. Dr. Chase's Ointment.

As a means of allaying inflammation, relieving the dreadful itching and healing and curing itching skin diseases, ulcers and corruptions, we believe that we can prove that Dr. Chase's ointment is the most potent preparation that it is possible to obtain.

So many extreme cases have been cured, so much intense and continued agony has been relieved, and such a host of people have volunteered their evidence in this regard that we challenge anyone to produce like endorcement for any ointment or preparation which is recommended for such diseases.

Dr. Chase's Ointment certainly stands alone, unapproached and unrivalled as a healer of the skin and positive cure for itching skin diseases. From pimples to eczema, from chilblains to ulcers, each and every form of itching skin disease has been cured by this great ointment.

Mr. G. H. McConnell, engineer in Fleury's Foundry, Aurora, Ont., states: "I believe that Dr. Chase's Ointment is worth its weight in gold. For about thirty years I was troubled with eczema, and could not obtain any cure. I was so unfortunate as to have blood poison, and this developed into eczema, the most dreadful of skin diseases.

"I was so bad that I would get up at night and scratch myself until the flesh was raw and flaming. The torture I endured is almost beyond description, and now I cannot say anything too good for Dr. Chase's Ointment. It has cured me and I recommend it because I know there is nothing so good for itching skin."

Dr. Chase's Ointment is known in almost every community. Ask your neighbors about it. There is probably a marked cure at your door which you can investigate. The cures made by this preparation will stand investigation; 60 cents a box, at all dealers, or Edmanson, Bates & Co., Toronto. To protect you against imitations, the portrait and signature of Dr. A. W. Chase, the famous receipt book author, are on every box of his remedies.

POLITICS AT HOME.

Though nearly three months distant from the election, interest in it seems to steadily increasing throughout the province, and it is safe to predict that the fight will get warmer and warmer until the last gun is fired and the smoke rolls away from the political battleground, revealing to view the result of the carnage. In that fight nearly two thirds of the candidates must go down and during the next three months much speculation will be indulged in as to who they will be.

This constituency is not far behind in exhibiting a keen interest in the situation though neither of the big parties have been in a hurry to get their men in the field. The socialists however rushed into the fray with mad frenzy, thinking that they could capture the labor vote the better by being the first in the field. The Liberal and Conservative parties are using more judgement. They are wisely holding back for a time to make sure of getting the best available men.

The Conservatives are now taking active measures to hold a district convention and though it will not be held on the regular nomination day, August 15th, it will not be many days later. Mr. Bentley's nomination will not be unopposed. The friends of W. R. Ross are working steadily on his behalf. His letter in another column outlines his position, and corrects any wrong impression our remarks of last week may have created.

The Liberals hold their convention next Friday and it is impossible to predict who will be the nominee of the party. Several local men are spoken of as aspirants for the position but the name most frequently mentioned is that of the late member, Mr. E. C. Smith.

Both parties are fully alive to the importance of putting up the strongest possible candidate and there is no doubt that the mature consideration being given to the subject will result in this object being obtained. It only remains for both parties to carefully avoid splits by unanimously adopting the nomination of the men who have the majority vote. The Socialist vote is not regarded seriously by either parties, and a keen party struggle is expected.

Reports from Cranbrook indicate that Jas. Ryan will be offered the Conservative nomination in that district, and that Dr. King will accept the Liberal nomination. Both gentlemen are very popular and it is generally believed that they are the strongest possible candidates that the district can produce. With these men in the field a keen clean fight may be looked for.

* * *

Secretary Cree of the Athletic Association called an executive meeting for Wednesday evening for the purpose of discussing a Labor Day celebration, and of the fifteen who comprise the executive of this important association only three took the trouble of answering to the call. These three were Messrs. Cree, Tuttle and McKellar. Such apathy on the part of those who accepted a position on the executive is most discouraging to Secretary Cree who has worked hard for the success of the association. A general meeting will be called early next week to attempt to form a union celebration by getting the labor unions to join forces with the association. This move should be a popular one as Labor Day is cherished by labor unions as their own peculiar holiday. The town is anxious for a big celebration and all that is required is hearty cooperation by the two parties to make the day a huge success. The lacrosse game with Lethbridge will be a splendid contest and it in itself will draw a crowd. The base-ball and football teams are ready for games with outside teams. An interesting program of other sports, including drilling contests, would easily fill in the whole day. A parade woulld be in keeping with the traditions of the day and it would be a splendid forenoon attraction. All that is required is prompt action and a generous contribution fund, for without money it is difficult to have a successful celebration.

NOTICE

I hereby notify the public that my wife, Jesse Wilcox, has left my bed and board and that I will not be responsible for any debts contracted by her from June 28th, 1903.

R. WILCOX.

Fernie, B.C., June 28th, 1903.

MICHEL

From Our Own Correspondent.

F. J. Mitchell was in town Sunday.

General Manager Tonkin visited town Monday.

Chas. Maggett spent a couple of days in town this week.

C. O. Demaurez, watchmaker, has arranged to be in town a couple of days every week for the purpose of attending to repair work.

The land below the tipple is being rapidly cleared for the buildings.

A large force of C. P. R. men are employed below the Loop widening the road bed and straightening the track.

The C.P.R. have everything ready for moving their water tank from Crows Nest station to the summit.

The dance at Crows Nest Tuesday night was attended by a number from Michel.

A number of Fernieites joined "Kamp Kontent" at Crows Nest on Thursday night.

Chas. Richards was in town this week.

(Too late for last week.)

The stone foundation for the new stable is completed.

Dr. Bell, V. S., was here attending a horse which was badly cut in the mine

Engine No. 428 is replacing No. 335 in the yards here, the latter having been sent to the shop for repairs.

A Swede workman employed in No. 8 mine had the misfortune to fall and break right forearm one day this week.

Unless the voters of Michel get a hustle on there will be a very poor showing on the registration lists for the town.

About 25 of Michel's most popular young men and women leave this evening for Crow's Nest lake for a weeks' outing. Poor fish!

A. Dick, mine inspector, was in town Friday evening to attend the sitting of the magistrate's court on account of the breaking of coal mines Regulation Act.

Part of the material for the new Methodist church has arrived and it is expected that building operations will commence shortly.

James Night and Patrick Herley are anxious to meet any team in a drilling contest for from $75 to $100 a side. Messrs. McDonald and Wilson preferred. There is an opportunity for our champions to grasp.

The grand free ball and supper given by the M. A. A. A. in Michel Hall on Friday evening proved to be one of the most successful social events held here, about one hundred were present. Music was furnished by the Fernie orchestra.

A new powder magazine for the Coal Co. is being built at the rock quarry 2½ miles west of town. This has become necessary because of the extensive building operations which will soon be under way in the west end of the town. A large force of men are now employed clearing the land for this purpose.

The union picnic given by the M. A. A. A. and Miners' Union on Michel prairie last Saturday proved a success. The most interesting event of the day was the mile race between Burdett and Fowler, on which considerable money changed hands, Burdett winning easily. The baseball match between Michel and Fernie was too much one-sided to be interesting. The drilling contest, the first event of its kind in this vicinity, was won by J. A. McDonald and J. Wilson in the doubles, 25⅓ inches, and by J. A. McDonald in the singles, 7½ inches. The usual program of races proved very interesting.

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1, That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electora-districts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

Louis Carosella & Co.

WHOLESALE LIQUOR MERCHANTS

Fernie, B. C.

Notice is hereby given that I, Mary Connor, 60 days after date intend to apply to the Chief Commissioner of Lands and Works for permission to purchase 640 acres of land. Commencing at the north-east corner post of G. O. Foss's location, thence running 80 chains west, thence 80 chains north, thence 80 chains east, thence 80 chains south to the point of commencement.

MARY CONNOR.

234-8t Dated June 24th, 1903.

IN THE COUNTY COURT OF KOOTENAY HOLDEN AT FORT STEFLE.

—IN PROBATE—

Notice is hereby given that on the 23rd day of July, 1903, it was ordered by J. A. Florin, Esq., Judge of the said Court, that James Ferguson Armstrong, Official Administrator of the County of Kootenay, be administrator of all and singular the estate of ALEX. BODIE, of FERNIE, miner, deceased intestate.

Every person indebted to the deceased is required to make payment forthwith to the undersigned.

Every person having in possession effects belonging to the deceased is required forthwith to notify the undersigned.

Every creditor, or other person, having any claim upon or interest in the distribution of the personal estate of the said deceased is required within thirty days of this date to send by registered letter, addressed to the undersigned, his name and address and the full particulars of his claim or interest and a statement of his account, and the nature of the security (if any) held by him.

After the expiration of the said thirty days the Administrator will proceed with the distribution of the estate having regard to those claims only of which he shall have had notice.

Dated at Fort Steele this 30th day of July, 1903

JAMES FERGUSON ARMSTRONG,
Official Administrator,
Fort Steele, B.C.

NOTICE

A convention of the Liberals of the Fernie district for the purpose of nominating a candidate, will be held in Fernie, on Aug. 14th, at 8 p.m.

Representation at this convention has been arranged on the following basis: Fernie 5 delegates, Michel 3 delegates, Morrissey Mines 3 delegates, Coal Creek 1 delegate, Elko 1 delegate, Elkmouth 1 delegate, Jaffray 1 delegate.

The Liberals of the district are requested to act in accordance with these arrangements.

FRED STORK, President F. L. A. J. H. BRICKER, Secy. F. L. A.

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber from the following described lands on the west side of Kootenay River in the District of East Kootenay:—Commencing at the north-west corner of F Milton's timber license, number 2318, on Skookumchuck river, thence north 160 chains, thence east 40 chains, thence south 160 chains, thence west 40 chains to the place of commencement.

T. GRICE.

Dated at Fernie, July 11th, '03.

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay:

1. Commencing at a point 160 chains west and 80 chains south of the north west corner of M. J. Claxton's timber license No. 2310, on Skookumchuck river, thence south 160 chains, thence east 40 chains, thence north 160 chains, thence west 40 chains to place of commencement.

2. Commencing at a point 160 chains west and 80 chains south of the north west corner of M. J. Claxton's timber license No. 2310, on Skookumchuck river, thence south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to place of commencement.

A. F. GRIMES

Dated at Fernie, July 14th, 1903. 239-4

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay:

1. Commencing at a point 80 chains south and 80 chains west of the north west corner of M. J. Claxton's timber licence No. 2310, on Skookumchuck river, thence south 160 chains, thence east 40 chains, thence north 160 chains, thence west 40 chains to place of commencement.

2. Commencing at a point 80 chains south and 80 chains west of the north west corner of M. J. Claxton's timber license No. 2310, on Skookumchuck river, thence south 160 chains, thence west 40 chains, thence north, 160 chains, thence east 40 chains to place of commencement.

W. H. GRIMES.

Dated at Fernie, July 14st, 1903. 239-4

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay:

Commencing at the north west corner of M. Claxton's timber license No. 2313, thence running north 160 chains, thence west 40 chains, thence south 160 chains, thence east 40 chains to place of commencement.

W. E. GRIMES.

Dated at Fernie, May 13th, 1903. 239-4

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, iu the district of East Kootenay:

1. Commencing at the north west corner of J. W. Claxton's timber license No. 2316, thence north 160 chains, thence east 40 chains, thence south 160 chains, thence west 40 chains to place of commencement.

2. Commencing at the north west corner of J. W. Claxton's timber license No. 2315, thence north 160 chains, thence west 40 chains, thence south 160 chains, thence east 40 chains to place of commencement.

Hazelwood Ice Cream at Cuthbert's.

Mrs. Richards is visiting friends in Elko this week.

Mrs. Halton, of Pincher Creek is visiting friends in Fernie.

Register Your Name.

H. H. Pitts, of Nelson, has opened up a cigar store in the Free Press block.

Mr. and Mrs. Pollock returned from their trip to California this week.

Drink Maple Leaf Tea and you will have no other. x

Jas. Hargreaves, of Nelson, and formerly of Fernie, was in town on Sunday.

Mr. and Mrs. Foss and their two daughters were Fernie visitors on Tuesday.

Use "Griffin Brand" brix butter, you can get none better. x

Mrs. Mott is giving an 'At Home' to a large number of her friends this afternoon.

We buy, sell and exchange new and second-hand furniture, stoves, etc., at the B. C. Furniture Company. x-t.f.

Keith Whimster, of Frank, is spending his vacation with his parents here this week.

A. C. Liphardt left on Saturday on a business trip to the east and expects to return in about three weeks.

Piano for sale, cheap. Apply Room 4, Turner block. x

Mrs. Nicol and children returned on Monday from a visit to Pincher Creek where they were visiting Mrs. A. Morden.

Miss Knisley, of the hospital staff, returned on Sunday from a pleasant vacation of a month's duration spent with friends at Salmon Arm and Revelstoke.

Dr. Jordon, the eye specialist, accompanied by his wife came to town this week but owing to the sudden illness of Mrs. Jordon they left next day for the east.

As for "Griffin Brand" pig's hocks and tongues. They are boneless and cooked ready to serve. The real thing for picnic lunches.

The pulpit of the Methodist Church will be occupied on Sunday by Rev. A. E. Marshall, of Michel, who is exchanging pulpits with Rev. J. Robson for the day.

Miss Jean Anderson, of Sarnia, arrived this week to take a position in the post-office as assistant postmaster, in the place of Mrs. Cooley who has resigned.

School will re-open on Monday. Miss Marshall, of Michel, has been engaged in the place of Miss Hall and a gentleman from Calgary will preside in the principal's room.

A complete line of wall paper has been added to the housefurnishing department of the B. C. Furniture Co. and has been marked down to mid-summer prices, less than you have been paying here before. x

Mr. A. McBean and family have moved to Morrissey Mines where they will make their home in future. Mr. McBean is the manager of the branch store of the Crow's Nest Trading Co at that point.

The B. C. Furniture Co. are now prepared to do all kinds of picture framing also framing charters, diplomas, resolutions, etc., for lodges, schools and societies in the latest and most exclusive designs. A complete line of art goods are carried in stock. x

Mr. and Mrs. Tonkin gave a party on Tuesday evening in Princess hall. Considerably over 100 guests were present and all expressed themselves as having spent a delightful evening. Dancing and card playing were the chief amusements and refreshments were served. The hall was beautifully decorated.

Misapplied Mercy.

Frank McFadden the erstwhile ball-player who was brought back from Nelson last week under the charge of theft was tried before Stipendiary Magistrate Forbes on Monday. There was plenty of evidence produced to prove that the accused had attempted to get out of town with different articles of clothing belonging to C. Whelan and others and the magistrate found him guilty of the offence. The accused at this juncture showed the magistrate a letter from his home in Washington State beseeching him to come home on account of the serious illness of his mother. He promised to leave town at once and the magistrate allowed him to go. Considerable dissatisfaction is expressed by those who know the facts of the case, that the accused should have got away so easily. The letter in question was a bogus affair fixed up by his cronies who had gone to Nelson with him and it had previously been used in town to secure small loans. He went under the name of Jackson on the Nelson boat and there are people in town who are certain that McFadden is not his real name. Immediately after his release he asked the Chief of Police for permission to remain in town and upon his refusal McFadden went as far as Morrissey where he remained. The magistrate lost a golden opportunity of administering a wholesome lesson to a deserving subject.

Register! Register!! Register!!!

Mrs. Cooley left this morning for Nelson.

Cassie Cody is visiting friends in Cranbrook this week.

Mrs. Stork entertained a number of friends on Thursday evening.

Mr. T. R. Stockett and Miss Edmund left on Monday on a two weeks' vacation at Banff.

Mrs. Roaf, of Toronto, arrived this week on a visit to her son, Mr. J. R. Roaf, of this place.

The big celebration at Lethbridge is billed for next Tuesday. Reduced rates are offered over the Crow line.

Mr. W. R. Ross was up to Jaffray yesterday and brought back with him a number of applications for the voters' list.

Mrs. Whimster entertained a number of young people at a party on Monday evening. The evening was pleasantly spent in music and card-playing.

A flock of 20 wild geese of the "waver" variety were observed flying southward one day last week. This is taken by keen observers of natural phenomena as a strong indication of an early winter.

The Michel Miners' Union have written a denial to the assertion printed on the hand bills that the late picnic at that place was a union affair. They state that it was gotten up by the Michel A. A. A. alone.

Sewing machines—the New Model and Empire—warranted by the manufacturers for ten years are now sold by the B. C. Furniture Co. These machines while comprising all the latest improvements of the high-priced machines, are sold at a medium price—$25 each. x

Major MacPherson, of Toronto, travelling inspector and general auditor of the Crows Nest Pass Coal Co., Limited arrived in Fernie last Saturday on his regular round of inspection and will remain a month or thereabouts.

Mr. F. C Lawe, of the firm of Ross, Alexander and Lawe, of Morrissey Mines, left last week for Helena, Montana. It is reported on excellent authority that Mr. Lawe will be accompanied on his return trip by a bride. Mr. Ivan Poole, of the Fernie office is filling his place at Morrissey Mines.

A party of Fernie people, accompanied by others from Michel, went on a camping expedition to Crow's Nest Lake on Tuesday. The following from Fernie are in the party, Mr. and Miss Gates, Misses Farquharson, Mrs. Henderson, Miss Dean and Miss Elliott, They expect to return on Monday.

W. H. Dorman, of Vanvouver, Inspector of Post Offices, was in town this week on a regular official trip. He went to Michel yesterday where he expected to remain for a couple of days straightening affairs in that office and installing the new postmaster. Mr. Hazelwood left last evening for Michel.

Mr. Fred Johnson who was employed in ths office of Herchmer & Herchmer for several weeks has accepted the position of chief accountant in the business of Breckenridge & Lund, contractors and millmen at a handsome salary. Mr. Johnson left on Wednesday for Frank where the firm have a large railway contract.

Mr. A. E. Ingham, a successful rancher on the Elk below Elko, was in town on Thursday and gave the Free Press a call. Mr. Ingham had an excellent crop of strawberries this year which he disposed of in Fernie, and he reports other garden produce this year to be away ahead of other years. Two years ago four Swede turnips which grew in his garden weighed over 100 lbs.

It is reported that the C.P.R. will commence work at once on the grade at Elko. This cut was determined upon last year but nothing was done on it then. The grade is to be reduced 20 ft. and the cut will be commenced about a mile and a half this side of the town in order to secure the proper grade. A couple of boarding cars arrived on Wednesday and it is thought they will be used in connection with the construction work.

A Peculiar Accident.

Paul Gingara, a young man engaged at clearing a piece of land west of the Cedar Valley Improvement Co's mill was severely injured this week owing to a peculiar accident that occurred while he was sharpening a saw. He was using a small emery wheel that was geared to a high rate of speed. Suddenly the wheel burst and one of the flying pieces struck him with terrible force in the centre of his forehead breaking in the skull bone. The accident occurred about 8 o'clock in the evening and it was about 12 o'clock before the unfortunate man reached the hospital. He was assisted by his uncle who was with him, to the house of H. Levers, the nearest neighbor, when a horse and saddle was obtained for the unfortunate man. The doctors found that a clear elliptical hole was cut in the skull bone about two inches long and three quarters of an inch wide at the widest part. The pieces of bone have been removed and the brain is exposed. Every effort is being made to save the man's life and unless meningitis sets in there are strong hopes for his recovery.

Register your name.

N. E. Broley was in Cranbrook on Tuesday.

Mrs. E. H. Bird is visiting friends at the coast.

Miss Macdonald, of the hospital, is visiting friends at Michel.

Miss Griesbach, of Lethbridge, is the guest of Mrs. Bentley.

Mr. Rennie and family went to Elko this morning to spend a month's holidays.

The voters' list now numbers over 900 names No more can be registered after next Friday.

Mrs. Jas McEvoy arrived yesterday from an extended visit to the east and the Pacific coast.

Messrs. W. W. Thomson, A. C. Liphardt and F. J. Watson have purchased the Hill block and two lots, at a good figure.

A general monthly meeting of the Fernie Board of Trade will be held on Monday evening, Aug. 10th, in Joyces Hall at 8 o'clock.

The Venerable Archdeacon Pentreath, D. D., is expected from the west to-morrow and will preach at Christ Church in the evening.

Fernie real estate is looking up. Several good lots, both business and residential, were sold by Watson, the real estate agent, this week.

Nearly one hundred turned out to the Sabbath School picnic of the Methodist church on Thursday afternoon. It was held on the old grove grounds about a mile down the railroad track, and the games and frolic were thoroughly enjoyed by all present, as the weather turned out fine.

Dr. W. J. Harvey, O.D., M.F.E.C.O., Professor of Physiological Optics in the Empire College of Opthalmology, Toronto, is scheduled for a visit to our city, and may be consulted free, about all errors of Refraction, Accommodation, Convergence, and general anomalies of sight, or the fitting of spectacles, at Bleasdell's Drug Store on Wednesday, August 12th.

Mr. Stephens, the C. P. R. agent, has been offered the agency at Calgary by Superintendent Jamieson and after some hesitation he has accepted the offer. The change may not be made at once. Mr. Stephens has worked this C. P. R. office up to a high state of perfection and all who have business relations with the C. P. R. here will be sorry to lose the most efficient agent that has ever had charge of the Fernie station.

A party of 55 miners arrived from Durham, Eng., on Wednesday. They were offered work at the Morrissey mines but they refused to go on without their baggage which was delayed on the road. These men complain that the agent who engaged them and arranged their transportation, misrepresented the facts in his terms of agreement. A large contingent of about 150 men is expected early next week and it is reported that 500 men in all are coming from England to the Crow's Nest collieries.

The pullman on Thursday evening's express caught fire west of Cranbrook. At the time it contained only one passenger, Mr. R. M. Hood, of Nelson. He noticed the smoke gathering in the car and seeing no explanation for it he went out to the front vestibule and there found that the roof had caught fire and was burning fiercely. The train crew was called and the fire was apparently extinguished, but some glowing embers must have remained for before the train had proceeded five miles farther it was burning as fiercely as before. Greater care was then taken and every vestige of fire was extinguished.

The blue berry season is at its height and hundreds of quarts are brought in from the mountains every day. The crop this season is a phenomenal one and those who have been out say that the sight of the hill sides covered with loaded bushes is worth seeing. The Lizzard Creek district is the favorite picking grounds, though many go above Coal Creek mines. Several small picnic parties have gone into these places to spend the day and invariably every member has returned loaded. The blue berry is a tasty fruit, and in a town where any kind of fruit is at a premium it should be appreciated very highly.

Cree & Hutchison

REAL ESTATE

WE HAVE FOR SALE

One of the best dwellings in town. Cheap for cash.

Two good cottages, $800 each for a quick sale.

A boarding house cheap and on very easy terms; 15 rooms.

WHEN BOYS WERE MEN

By JOHN HABBERTON,
Author of "Helen's Babies," "George Washington," Etc.

COPYRIGHT, 1901, BY JOHN HABBERTON

CHAPTER I.

JACKET AND SPUR.

A FEW years ago, when war was the most active of American industries and the supply of men and material was never equal to the demand, my friend, Charley Brainard, and I, with a lot of other Summerton boys, joined a militia regiment which had been hastily called to the front. Not one of us was killed, and at the end of our three months' term of service the stupidest of us knew more about military life and duty than any of our officers when we first took the field, so several of us thought it our duty to re-enter the army and help save the nation.

We knew exactly how to do it; we knew almost everything in those days, for the youngest of us was fully 18 years of age, and one was almost 20. On being mustered out of the militia service we were to enlist in the Thirty-eighth cavalry, a regiment then being formed about a veteran battalion of troopers near whom we had camped and whom we greatly admired. No more tramping for us, with a musket on one shoulder and a knapsack on both, while the nation was willing to provide horses for such of its defenders as knew how to ride!

Immediately after enlisting we were to go to recruiting. The government was begging for men and, with state and local authorities, was offering large cash bounties by way of persuasion. We would do all we could to help the government to increase the army; we would also do all we could for ourselves while recruiting, for at that time and during the remainder of the civil war the only way to become a commissioned officer in a new regiment was to persuade some men to enlist and then see carefully to it that they were mustered into the service. Although there was no law defining this method, there was a general understanding which was fairly lived up to by the authorities. A man who could "raise" 50 recruits might feel assured of a captain's commission, 30 would secure a first lieutenancy and 20 a second lieutenancy. Any one who could persuade half a dozen men to enlist could become a sergeant, a position not to be despised in a fighting regiment could the sergeant himself succeed in not being shot, for after a regiment got to fighting the officers who were killed or otherwise disposed of were replaced by deserving noncommissioned officers.

I was so sure of becoming a lieutenant that I had myself measured for an officer's uniform before I ceased to be a private in the Ninety-ninth militia. Had not 27 members of our company promised to enlist under me if I would enter the Thirty-eighth cavalry? They did it with their eyes open, for all of them had seen what there was of the Thirty-eighth and they admired it as much as I. Their willingness to serve under me did not imply that they regarded me as a military genius or a born leader of men. It meant only that my father's little farm, at the edge of our town, contained the largest assortment of fruit trees in all Summerton, that I had never said "No" to any acquaintance who longed for apples, pears, cherries or plums, and that small boys have large memories. Besides, my cousin May, who had always lived with us, was greatly admired by all the boys whom I knew, and it had long been the fashion to be obliging to me because I was the cousin of so nice a girl.

I was not the only Summerton aspirant to a commission. My special friend, Charley Brainard, was willing to be sergeant, or even corporal, under me, but there was Phil Hamilton, a First regiment (militia) man, who had left his old regiment only because he had to study in Europe for two years, and he joined the Summerton company of the Ninety-ninth militia merely because his old regiment had not chanced to be called out, and he wanted to see something of field service. Phil was much the richest young man in town. He was also the handsomest, which really is a great deal to say to any one who chances to know Summerton. His mustache was large enough for a major general. He owned at least 20 walking sticks and twice as many scarfpins, and all the girls were said to be dying for him.

Then there was Cloyne, confidential clerk of the lumber company. He, too, was a handsome fellow, and he had been a cavalry soldier in the British army. He wanted to raise recruits and get a commission. Indeed, both he and Hamilton had seen the prospective colonel of the Thirty-eighth and had so greatly impressed that gentleman as to elicit the statement that he would be greatly disappointed if they did not become officers of his and perhaps succeed him should the fortunes of war carry him out of the service.

So we three formed an amicable partnership to raise a company, of which Hamilton was to be captain, Cloyne first lieutenant and I the second lieutenant.

"To show the other boys that we are dead in earnest," said Hamilton, "there being a lot of trickery and underhand work in the recruiting business, let us all enlist as private soldiers in the Thirty-eighth before we begin business, so our men may feel sure that we are in the service to stay. There is quite a lot of money offered in the form of bounties to recruits. It amounts to several hundred dollars per man. Instead of pocketing it, let us divide it among the men who enlist with us. That ought to give us some advantage over other recruiting officers."

We agreed to follow Phil's advice. Brainard offered to use his bounty in the same way, although he did not expect to be an officer. He wanted to become a minister after the war ended, and he said he didn't wish to expose himself to any temptation that might alienate him from his purpose.

We four enlisted together at the regiment's recruiting headquarters in

"Don't be dismal, Jack."

New York, but Brainard, who hurried back home to see his sick mother, did not reach the medical examiner as soon as we. After Hamilton, Cloyne and I had been accepted and sworn into service we spent a pleasant hour or two at the regiment's recruiting headquarters chatting with the officer in charge, who was to be major of one of the regiment's two new battalions. In the course of time Brainard crept in, looking so dismal that I at once asked him whether his mother was much worse.

"That isn't the trouble," said he. "The surgeon has rejected me. He says I'm under the regulation height and too slight for service anyway."

Suddenly the whole world looked dark to me. Brainard was my dearest friend, and my cousin May was very fond of him, although Phil Hamilton—handsome, rich, stylish Phil—was one of her most devoted admirers. The idea of going to the war again, and for three years, without Brainard being where I could see him every day was too dreadful to be thought of. My feelings must have got into my face, for Brainard put on a ghost of a smile and said:

"Don't be dismal, Jack, for now you'll have the chance to do all the fighting for both of us."

This ought to have comforted my patriotic soul, but it didn't. I was so disloyal to my new vows as to declare that if Brainard was not allowed to enter the Thirty-eighth I wouldn't go either. I would do all in my power to raise men to defend the Union, but afterward I would run away, and Brainard and I would go to some other state and enlist together, where Charley's smallness of stature might not be against him.

But this resolution did not cheer Brainard any, and he felt worse an hour later when the three of us who had passed the mustering officer were looking at one another in new cavalry uniforms, while he was in civilian's dress. He felt still worse when we all went back to Summerton and took supper together at our house, for my cousin May noticed him scarcely at all, but was very agreeable to Hamilton.

The next day, by special permission of the major, Hamilton, Cloyne and I opened a recruiting office at Summerton. Brainard attached himself to us as a sort of civilian aid. He said if he wasn't to be a soldier and fight there was the more reason why he should try to persuade other men to enlist. I immediately notified my 27 men that the roll was ready for them to sign. Hamilton and Cloyne had previously looked at my list and assured me that they would not accept any of these men without specially crediting them to me.

But somehow none of them made haste to sign. Some had heard that larger bounties were being offered in other towns or states, so they were going to look about carefully and do the best they could for themselves; others had themselves seen the cavalry major and obtained promises of commissions if they would raise men; still others had heard that so many men were enlisting from day to day that wages for work at home were going to be much better. Several had spent their final pay from the Ninety-ninth for drink and been picked up, enlisted and mustered for other regiments before they became sober.

Well, to make a long story short, not one of the 27 did I ever secure for the cavalry. Hamilton tried to comfort me by crediting me with Cruse and Whyde, two of our militia comrades who declared they would not have reenlisted had it not been for me; but, as Cruse's parents refused to sign the certificate necessary in the case of minors who enlisted, Cruse was released from his promise. Whyde went swimming one day in water too deep for him and was buried three days later with such military honors as Summerton could extemporize.

For the week after my re-enlistment my heart was as heavy as if it had been filled with bullets. No recruits; no chance of a commission; worse than all, no prospect of having Brainard with me during the three years to come. I was too downhearted to notice that Hamilton and Cloyne were not in their usual spirits, but one day, as the three of us sat in the vacant store in which we had our recruiting office and stared gloomily at the roll which was still blank except for our own names, Brainard came in, looked at us and said abruptly:

"If you fellows don't get your spirits up in some way, you'll never find the government any soldiers, and you won't be fit to be soldiers yourselves."

The looks that were fixed upon him quickly by three pairs of angry eyes ought to have scorched him and made him shrivel. But they didn't, for he went on:

"You haven't got anybody by sitting here or strutting around the village. Why don't you go about everywhere and talk your best? Why, there's Mick McTwyny, a village rowdy, who's working for a sergeant's position in the same regiment—he's enlisted seven men out of the fire engine company alone!"

"Mick McTwyny!" exclaimed Cloyne, springing to his feet.

"That ignorant ruffian?" shouted Hamilton, also rising hastily. "Has he the impudence to want to be a sergeant in our regiment—perhaps our very company?"

"Yes," said Brainard, "and he'll be one, too, if he keeps on as he's begun."

I didn't say much; I couldn't. A whole dictionary could scarcely have supplied words to express what I felt. For a while, as I imagined Mick in camp in a sergeant's uniform and myself a private in the same company and subject to his orders, I wished it had been I instead of poor Whyde who had been drowned. Hamilton and Cloyne began to pace the floor like tigers in a cage. Suddenly Hamilton stopped and exclaimed:

"There's but one way out of it. We must get more men at any cost. I'll have a handbill printed at once and circulated throughout the county saying that larger bounties will be paid at this office than at any other in the United States. 'Twill cost all the money and property I have, I suppose, but I'd rather lose my last dollar than go out again in the ranks with a beast like Mick McTwyny in authority over me."

"I'll distribute your handbills," said Brainard.

That boy's faculty for seeing what ought to be done always persisted in cropping out just when I wasn't in condition to see anything whatever. Pretty soon, however, the old worry about soldiering under Mick McTwyny and of being three years without Brainard's society came back to me, fully prepared to stay and make itself disagreeable.

I don't know how I should have lived through those days if it hadn't been for my saber and spurs and the chance to display them on horseback. Arms were not given out at recruiting stations. We were told, when we received our uniforms, we would have to wait until we reached the regiment for sabers, revolvers, carbines and ammunition, but I learned that there was no law against a soldier purchasing for himself such arms as his branch of the service used, so I bought a saber and belt and took great comfort from the clank of the saber as I dragged it after me in dismounted cavalry fashion. Then I bought a pair of spurs, and as my father lent me a horse with which to ride about to look for recruits, I had the pleasure of feeling that I was the first cavalry soldier that had been seen in our county since the Revolutionary

I went head first over his shoulders.

war ended. I enjoyed my spurs, too, after I learned not to strike their teeth into my trousers legs. Our horse Rover did not agree with me. For several years I had found him entirely trustworthy under the saddle, but one day when I was approaching a country store in front of which stood several men, among whom I hoped to find at least one recruit, I gave Rover the spurs so as to dash up to the group in fine style and make them fall to admiring the cavalry service. Rover had never before felt a spur, and as he was a thoughtful, sagacious animal, he stopped short, turned his head and looked at his sides to see what had caused the new sensation.

"Get up, Rover!" said I. He resumed the gentle pace at which he had been traveling, but we were now only a few rods from the store, so I again used the spurs. Rover bounded wildly forward. Then he reared his hind quarters high in the air. I went head first over his shoulders, neck and ears, and almost before I knew what had happened I was on my face and breast in a disgusting puddle such as is always found by the pump in front of a country store. At the same time I heard a chorus of hard laughter, and as I picked myself up and rubbed the mud from my face a man in the crowd drawled:

"That hoss 'pears to be a rebel sympathizer, colonel."

I lost all interest in the war for a few moments; being called "colonel" didn't comfort me at all. I didn't ask any one to join the Thirty-eighth. I merely picked up my cap, mounted Rover and went on as if my errand would carry me farther. Even then my humiliation was not complete, for some one shouted:

"Hadn't ye better take yer frog sticker with ye?"

I looked back and saw one of the men with my saber in his hand. It had fallen from the scabbard as I went down. As I rode back to get it the man who held it was trying the edge with his thumb.

"That won't make no reb feel unhappy," said the fellow as he handed me the weapon. "It's got an edge like the back of a hoe."

I sheathed the sword and passed on without even saying "Thank you." I rode until I reached a bit of wooded land. There I dismounted, removed my spurs and buried them in the hollow of a rotten stump, where I found them after the war ended. They hang in my bedroom now to give me a friendly warning whenever I am tempted to put on airs about anything.

CHAPTER II.

THE UNEXPECTED, WHICH FREQUENTLY HAPPENS.

RECRUITING at Summerton went on slowly in spite of our new efforts and of Phil Hamilton's money. There were many reasons for the lack of recruits, and each new reason as we were brought face to face with it proved depressing. First, it became evident that all of our fellow townsmen who really wanted to go to the war had already enlisted. Again, offers of bounties had increased so rapidly that men who looked at soldiering as a mere matter of hire and pay were waiting for higher offers to come.

Besides, the old patriotic enthusiasm which had caused men to enlist at the first notice of a new call for volunteers had entirely disappeared, perhaps because an end had been put to the early impression that the war would be only a sort of picnic, ending in the speedy suppression of southern malcontents. Worse still, increasing taxation was causing a number of the earlier hot blooded patriots to become very cool and conservative and wonder whether the north hadn't perhaps been too hasty and whether the disagreement might not better be settled by words than bullets.

Yet none of these depressing influences seemed to affect the class of men among whom Mick McTwyny was working, for Mick's list had crept along until he had a full dozen of men enlisted and sworn in. They were the 12 worst characters of Summerton, and the natives rejoiced to learn that they were to go where they might be effectively killed. I had my doubts as to their value to the Union cause, although Cloyne said they would be as useful as better men in the work of stopping bullets and that a barroom loafer often fought better than an accomplished gentleman.

As for Hamilton, Cloyne and me, we got less than a dozen men between us in the three weeks in which we worked at Summerton and its vicinity. Another personal discouragement slowly worked its way after each trip that any of us made to headquarters in the city. We found at the major's office from time to time about 25 quite fine fellows, all of whom were trying to get recruits, all hoping or expecting to be made officers, yet the entire number of commissions, including the major's own, could be but 13 to the battalion. How were the conflicting claims to be adjusted and by whom? I asked Cloyne this question, and he replied sadly:

"There'll be no claims to adjust unless the other claimants are getting more recruits than we."

It seemed he was right. If Hamilton's wild offer could not bring men to our office, how were poorer men to secure recruits? Yet Mick McTwyny—ah, there was a mysterious, provoking, enraging, affrighting puzzle!

When I hadn't my own disappointments in mind, I couldn't help worrying over affairs at home. My father and mother grew more and more silent. Little Ned complained that there was no one to play with him, and my cousin May was becoming more deeply interested in Hamilton and Brainard. Which she liked best I could not discover—probably because May herself did not know. She wasn't old enough to know. She treated Brainard as a schoolboy friend and Hamilton as an adult and gentleman. She was right in both cases, but I couldn't help seeing that both of my comrades were very fond of her, and I feared that when the time for parting came one of them would have to suffer greatly. Which would it be? I could not for the life of me tell for which I would feel worst should he be the least favored.

One day word came by mail that the major would like to see all of us at headquarters the next day about noon if entirely convenient to us.

"That looks as if we were to have commissions in spite of our small success at recruiting," said Hamilton. "Officers aren't in the habit of saying 'entirely convenient' to privates when they've any orders to give. Between ourselves, I've been asking my father to use a little family and political influence with the governor to get us commissions, either in our own regiment or elsewhere, and this may be the outcome of it."

"More power to his elbow then," said Cloyne, "if it isn't."

Somehow we all were more hopeful for the remainder of the day, and I would have felt entirely cheerful were it not for the thought that whether officer or private I should still be deprived of Brainard's companionship for three years.

Suddenly there came to my mind a plan which was irregular and shocking, yet which made me wildly gleeful in an instant. The medical examiner had to see daily hundreds of different recruits of all ages, sizes and differences of appearance. His memory certainly could not recall Brainard's appearance were he again to see his name. Suppose I were to enroll Brainard again, take him to headquarters, have his name put on the day's list of recruits to go before the surgeon and then, before that functionary were reached, substitute myself for Brainard in the squad, answer to his name when the surgeon called for him and be examined in his stead? Then Brainard could go on with the new squad, none of whom would know us apart, to the mustering officer and be sworn in.

The plan looked deceitful enough to appear about as bad as treason, but I was equal to any wildness for the sake of having my old chum in the army with me. I did not tell Brainard the whole of it, but I asked him to let me enroll him again and see if the surgeon might not find him a little taller and stouter than before. The poor fellow was willing, but he had not much hope.

Brainard and I hurried to headquarters very early the next morning. I had heard that the old sergeant who always was on duty there would do anything for $5, so I took him aside, told him of my plan and offered him a $10 bill to help me through. I was about to explain further how good a soldier Brainard had been and how much more useful I would be to my country if I could have my old friend with me, but the veteran scoundrel cut me short with:

"That'll do. The $10 is explanation enough."

Then he made out the day's list, which didn't take long, as there were only three recruits besides Charley. He explained to me that with Brainard's name on the list he was giving my height, age and particulars of personal appearance. Then he told me to hurry myself into civilian's dress. I had not such clothing in town, but from some cast off coats and trousers at head-

Charley smiled sadly and leaned against a doorcasing.

quarters I selected a suit, and away we went, Brainard walking beside me. When we reached the examiner's office, I asked Brainard to wait outside a few moments while I could speak a few words with the surgeon, with whom I thought I might have some influence. Charley smiled sadly and leaned against a doorcasing, while I entered, with my heart beating so violently that I feared it might burst before the surgeon could examine it. At last came the call:

"Charles Brainard!"

"Here!" I shouted.

The surgeon looked at the list and then at me, at which I began to tremble guiltily and wondered how soon I would be shot or hanged after discovery. But the surgeon went on with his examination, exactly as he had done three weeks before, and then he marked the list and gave it to the sergeant with the words:

"All accepted."

The sergeant dug his fist into my ribs as we passed out. His fist was big, and he used it with thoughtless vigor, but I imagined there was much more force in a similar familiarity I bestowed upon Brainard as we rejoined him, and the old sergeant said:

"Come along."

"Won't he even see me?" asked Charley pitifully, as we marched toward the mustering officer's quarters.

"He's changed his mind about you," I explained. "All you now need, to be a soldier once more, is to take the oath and be mustered in."

"Hurrah!" shouted Charley, with a glad look which I thought absolved me at once of whatever crime I had for his sake committed. "Let's run!"

There was no chance to run, the two offices being near each other. At the mustering officer's it was my turn to stand outside, but I got near enough to look through the door, and I wished all Summerton might be there with me to see how handsome and manly a little, thin, flat chested, round shouldered fellow could look when his heart was full of honest joy.

And how glorious it was to help select a uniform for Brainard when he returned to headquarters! True, his trousers had to be turned up several inches to clear the floor, and the collar of his jacket had to be turned down until none of the yellow braid could be seen, and the row of buttons on the front, which should have reached only his waist, seemed to descend half way to his knees. Still, he was a member of the Thirty-eighth, duly sworn and mustered, and nothing but death or the end of the war could change the situation. How I did wish my brilliant plan had occurred to me sooner, so that Hamilton's father might have used his influence with the governor in Brainard's favor also!

After I got into my uniform again we sat and talked and planned as happily as if we were going into possession of unexpected riches instead of to war and possible death. The wicked old sergeant strolled to and fro in front of us, smoking his pipe and eying us strangely. Suddenly he stopped in front of us and blurted out:

"I never struck a couple like you before. I'll tell you what I'll do. I'll take you both out and get you drunk at my own expense."

We declined, with thanks, explaining that we expected to be quite busy for an hour or two, as we had to make some purchases and I had an engagement at noon with the major, whom I didn't like to disappoint.

"Oh, no; of course not," he replied, with a grim grin. "I wouldn't keep the major waiting for anything if I were you. But, say"—here he drew me aside and pressed something into my hand—"you'll take back your $10 anyhow."

I tried to decline, but he said that if I didn't take the money he'd light his pipe with it. He insisted that he already had pay enough for his trouble, and when I replied that I couldn't see how, he called me a fool. He put a lot of uncomplimentary adjectives in front of the "fool" too.

CHAPTER III.

OUR APPOINTMENT WITH THE MAJOR.

BRAINARD and I spent an hour and quite a lot of money in shops not far from headquarters, taking care to return in time to meet the major at noon, according to request. As we approached headquarters from the opposite side of the street we saw Hamilton and Cloyne coming down, and Brainard stopped me, exclaiming:

"Did you ever see two finer looking soldiers?"

I said I never had. Each was tall, straight, well formed and carried himself with the grace and ease that came of military training long before they, with us, had joined Billy Beecham's company of the Ninety-ninth. Their cavalry uniforms had been carefully altered and refitted, so there was none of the awkwardness about them that made the volunteer soldier appear more shabby than the average citizen. Each wore a slouch hat and plume, like the regulation "dress" hat, only much finer, and they attracted more attention from passersby than any of the commissioned officers whom one met every moment or two on Broadway in those days. I wanted to tell Brainard how much more distinguished they would look within a day or two when they had received the commissions, about which the major undoubtedly wanted to see them and me, but I hadn't the heart to speak of good fortune from which poor Brainard was to be excluded, so I said nothing.

The two fine fellows entered the stairway which led to the loft in which our regiment's recruiting headquarters were, and I followed them. Quite a number of uniformed recruits were there in the back part of the room, so it seemed to me that other officers and would be officers must have been more successful than our trio at Summerton. I was about to tell Hamilton and Cloyne of my luck with Brainard, but Charley begged me not to. He said he wanted to surprise them when we returned to Summerton. Until then he would try to keep out of sight. I joined them alone, therefore, and the three of us walked about together, amusing ourselves by observing the old sergeant, who seemed to be trying to find some one or count the recruits, we could not discover which.

The major had not yet arrived. The lieutenant, who always seemed to be on duty as aid or assistant, leaned from the window as if looking for the major. Finally he withdrew his head, walked to the rear of the room and shouted:

"Attention, men! Fall in!"

"I wonder if he is going to indulge in a squad drill?" said Hamilton to Cloyne, as both of them stepped aside, followed by me, in order to be out of the line which the men were forming by the aid of the old sergeant.

"Fall in, men," said the lieutenant, approaching us.

"Beg pardon," said Hamilton, saluting gracefully, "but we've an appointment at noon with the major, at his own request."

"Yes, I understand," said the lieutenant. "I represent the major. Fall in—according to height."

"If he meant drill," muttered Hamilton to Cloyne, "why didn't the old duffer say so? Did he think we wouldn't obey orders, that he got us here by such unmilitary ways?"

"Right—dress!" shouted the old sergeant, who had stationed himself at the right of the line. Then he ran along the front, pushing some men back a little and pulling others forward. Finally he returned to the right and shouted "Front!" Then the lieutenant looked at us as carelessly as if merely to see if our general appearance was fair. At last he shouted:

(To be Continued.)

NEWS FROM BRITAIN

ENGLISH, SCOTCH AND IRISH NOTES.

Interesting Items Culled From Old Country Papers, Recording the Death of Some Notable Personages, and the Occurrence of Unusual Events.

ENGLAND.

According to latest returns there are 702,083 paupers in England and Wales.

The census of the church-going population of London shows that only one person in four attends service of any kind on Sunday.

One firm of publishers announces that its present output of British picture post-cards is at the rate of forty-three millions a year.

A mother and son who have forgotten their names and where they came from have been taken into custody at Brighton. The police are trying to find their relatives.

At Shelmsford, on a recent Tuesday morning, Charles Howell, a private in the Suffolk regiment, was executed for the murder of Maud Luen, aged nineteen, of Colchester.

Sir Frederick Mappin has tendered his resignation as a director of the Midland railway on account of advancing years. He was appointed on the board as long ago as July,1869.

A Newbury poultry farmer moved into new premises and the next morning found that 83 young chickens from prize birds, had been killed by a big rat, which he caught.

During some excavations for a new graving dock at Hebburn-on-Tyne,on Thursday a large body of earth fell in, burying a number of men. Seven dead bodies have been recovered.

The chief commissioner of Metropolitan police intimates that action will be taken against the promoters of walking matches if such obstruction as warrants that course is caused by them.

A walking competition on the parade at Hastings between eight flower girls, carrying baskets of blooms, was won by Bessie Mitchell. A prize for the best arranged basket went to Lizzie Gannon.

The ancient ceremony of blessing the fisheries at Folkestone took place on a recent Sunday morning, the Rev. C. J. Risdale and procession of choristers marching from St. Peter's church to the harbor, where the quaint ceremony was observed.

The ancient ceremony of promulgating the Manx laws passed during the previous year took place on Monday on Tynwald Hill. The Licensing Bill was not among these, and the lieutenant-governor, Lord Raglan, read a letter from the Privy council giving reasons for its reconsideration by the legislature.

A poll of the ratepayers was taken at Southport on the question of running Sunday trams, which has been the subject of keen controversy for several months. The result was declared to a large crowd on Saturday night, and showed that 3,639 had voted against and 1,834 for, so that the opponents had a majority of nearly two to one.

A touching scene was witnessed during the visit of Lord Roberts to Colchester. Among the crowd was an old man wearing war medals. Lord Roberts went up to him, shook him by the hand, and, looking at the medals, remarked, "Afghan March!" "Yes," replied the man, "I have not seen your lordship from that day to this."

The home secretary had ordered the removal of the eight-year-old boy, Patrick Knowles, to Broadmoor Criminal Lunatic Asylum, instead of placing him upon his trial for the murder of Frederick Hughes, a fifteen months' old child, by burying the infant alive at Stockton on May 30th.

An ancient moat surrounding an old farmhouse at Challow, in the Vale of White Horse, which filled water during the recent heavy rainfall, has yielded some fine full-grown fish. The spot is a long distance from any river, and the fish must have been borne to the moat from their usual haunts by the flood water, for they were unknown there before the heavy rains.

An ancient couple have been discovered at Laughton-en-le-Morthen, a village not far from Worksop, says a London print. Their united ages total 194 years, the old man being 96 and his wife 98. They have been married seventy-five years and have lived in their present cottage sixty-six years. They are in receipt of ten shillings per week outdoor relief.

The members of the Guild of Our Lady of Ransom made their annual pilgrimage to Canterbury. There was an immense procession from London, Hastings, Ramsgate, and elsewhere, and the processionists, carrying banners and singing hymns for the conversion of England, attracted much attention. They engaged in silent prayer in the nave of the cathedral, and many paid for admission to the scene of the martyrdom.

Two swarms of bees took possession, one after the other, of the postal pillarbox at Cruxeaston, near Newbury, with the result that no one was able to post letters between a recent Saturday evening and the following Tuesday afternoon. The postman had to call in the assistance of a bee keeper to clear the box, but the bees returned, and he has had to collect the letters from the houses of the villagers.

The turn of Fortune's wheel sent John Hartshore from wealth to poverty and then promised luxury again, but death intervened. In former days Hartshore was a colliery proprietor near Wolverhampton, but at 95 years old found himself penniless in Newark workhouse. Then a ray of sunshine broke through. An American relative left him four thousand pounds, and negotiations were going on well when the clouds gathered again and the poor old man was taken ill. Death won the race, and the romance coldly ends.

An exciting scene was witnessed near the western heights of Dover cliffs on Tuesday. Thomas Howard, aged fourteen, was picking some flowers on the edge of the cliff when he slipped and fell on to a ledge a little way down. In trying to climb back he slipped further and further until he reached about fifty feet from the top, when he cried for assistance, as he was on a precipitous part of the cliff. A number of people shouted to the boy not to move, and then a man named George Jones volunteered to be lowered by means of a rope. He reached the boy, and both were hauled safely to the top.

SCOTTISH.

A French citizen has given a thousand pounds to the Sir Hector Macdonald memorial fund.

The estate of Cordon, in the parish of Abernethy, including the farms of Cordon, Provost Mains, and Cordon Hill, extending to 316 acres, mostly arable, rental £387, has been sold at £10,000, the upset price, to Mr. Isaac Connell, S.S.C., Edinburgh, for a client.

James Johnston, the man who recently broke into a house in Abercrombie street, Glasgow, and was seized by a dairymaid and held fast till the arrival of the police, pleaded guilty before Sheriff Davidson, and was sentenced to sixty days' imprisonment.

The fishing population of the East coast of Scotland have been much saddened by the disaster which overtook the Wonderful Star, of Pittenweem. During the recent gale the vessel capsized to the south of the Fair Isle, and five of the crew were drowned. Skipper Aitken, one of those drowned, was one of the ablest and best known fishermen on the Fife coast. Two men were rescued after a thrilling experience.

The June reports of the Scottish Labor Colony association show that the number of colonists on the farm at the end of May was 19. There were admitted during the month of June 10, and there left for situations five and on own account one, leaving on the colony at the end of June 23. As in the past the conduct of the men and their willingness to work has been everything that could be desired.

The funeral took place recently from 6 High street, Edinburgh, of John Anderson, late of the 1st Battalion Black Watch. Anderson enlisted in 1854, and in the same year was sent to the Crimea, where he gained a medal and three clasps,and the Turkish medal. He took part in the battles of the Alma and Balaclava, and was at the siege of Sebastopol. He then went through the Indian Mutiny in 1857, and received the medal and clasp for Lucknow. He next saw service in the Ashanti campaign, and was at the battles of Amvaful and Brena, and the capture of Coomassie. For his services in this campaign he was mentioned in despatches. Anderson, who was a native of Edinburgh, was soldier servant to the late General Wauchope. A firing party was provided from Edinburgh Castle.

Not many know that the beginning of the cotton industry in Scotland was laid in Rothesay. In one of the back streets, away from the esplanade and the haunts of the day-tripper, stands a delapidated old building, which, until recently was used as a dwelling house. It has now, however, become too decrepit and squalid even for its slummy neighborhood, and with its broken windows, mouldering wooden stair, and battered roof, uselessly encumbers the ground. It seems too disreputable and down-at-heel to call for even a passing mention, and yet this despised auld biggin is the veritable cradle of the Scottish cotton industry, for here the first cotton spinning machinery in Scotland was set up.

IRISH.

The Irish Court of Appeal has decided to allow a jury for the trial of the action brought by Lord de Freyn against several members of the United Irish League for alleged conspiracy. The vice-chancellor refused to allow a jury.

Ireland possesses the oldest judge in the United Kingdom. This is Vice Chancellor Chaterton, who was born in 1819—six years before Lord Halsbury—and who stepped from parliament to his present position in 1867. As the office will cease with his own life he will enjoy the distinction of having been the first, and at the same time the last, Vice-Chancellor of Ireland.

A terrific explosion took place in a powder works near Lowell, Mass., on July 29. Over twenty people were killed and an entire street wrecked.

POLICY IS OUTLINED

GRAND TRUNK PACIFIC SCHEME BEFORE HOUSE.

Sir Wilfrid Laurier Announces the Details of the National Transcontinental Railway Contract—Says Interests of the Dominion Will be Safe-Guarded.

Ottawa, July 31.—Sir Wilfrid Laurier announced in parliament yesterday afternoon details of the National Transcontinental railway.

The road will extend from Moncton to the Pacific ocean, and will be 3,300 miles long. From Moncton to Winnipeg, the distance is estimated at 1,800 miles, and from Winnipeg to Port Simpson, on the Pacific coast, 1,500 miles. The eastern section from Moncton to Winnipeg will be built by the government and leased to the Grand Trunk Pacific for a period of 50 years.

For the first seven years the company gets the lease free of rent, but will have to meet operating expenses. During the next three years the company will require to give the government the net earnings, but if these should not equal three per cent. upon the cost of the section, the deficit is to be added to capital account. For the next forty years the Grand Trunk Pacific will have to p ay three per cent. per annum to the government upon the capital cost of the section. This portion of the line that is from Moncton to Winnipeg, will be built according to specifications and standard to be approved by the Grand Trunk Pacific and the government engineers jointly. A commission to be appointed by the government will supervise the work.

From Winnipeg to the Pacific ocean the road will be constructed by the Grand Trunk Pacific within seven years. The government will guarantee 75 per cent. of the cost of construction up to a maximum of $13,000 per mile on the prairie division between Winnipeg and Edmonton and $30,000 per mile for the Mountain division between Edmonton and the Pacific coast. The principal and interest of the bonds are to be guaranteed for fifty years. On the completion of the Prairie division, the company will commence paying interest on the guaranteed bonds. In regard to the Mountain division the company will not be called on to pay anything for the first seven years,but for the succeeding three years it will have to pay the net receipts over working expenses, and any deficit that will be added to the cost for the remaining forty years the company will pay 3 per cent. per annum. Between Winnipeg and the Pacific ocean the government will take a first mortgage on the line as security for its guarantee, and the Grand Trunk railway of Canada will be called on to guarantee the bonds issued by the Grand Trunk Pacific for its proportion of the cost of that section.

The G. T. Pacific agrees to place rolling stock to the value of $20,000,000 on the whole line. On the $5,000,000 worth in use on the section between Moncton and Winnipeg the government will hold a lien as special security for the operation of this particular section of the company. This section on leaving the city of Quebec will traverse the back country of that province to Lake Abittibi and proceed westward to Winnipeg. Until the region has attracted much population and the company will have been able to obtain profits the government takes a mortgage on the rolling stock in use, lest the company, having built the paying portion of the route between Winnipeg and the coast, should endeavor to throw the Moncton and Winnipeg section, with its uncertain future, upon the hands of the government before the 50 years' lease expires.

The Grand Trunk Pacific railway will have running powers over the section of the Grand Trunk Pacific between Moncton and Winnipeg, subject to the right and obligations to the lessees and the payment of proper compensation. The railway commission, which is now being created by the parliament, will control the freight rates. The government will have the right to appoint a director on the board of the Grand Trunk Pacific. Unrouted export traffic is to be carried in winter to its destination at St. John or Halifax through Canadian ports at rates no higher than would be charged if it were sent by Portland, the winter port of the Grand Trunk. This is done to overcome the geographical disadvantages of the situation. In the summer the route for eastbound traffic from Manitoba by the Great Lakes to Georgian Bay ports and thence by rail to the ocean vessels at Montreal.

The capital of the Grand Trunk Pacific is not to exceed $45,000,000. The company is to issue interim bonds as construction progresses on the section between Winnipeg and the Pacific, such bonds to be guaranteed by the government and to be replaced by permanent government bonds on the completion of the work. As far as practicable the rolling stock and equipment of the whole line are to be purchased in Canada. The government is to give the company, free of cost, such lands as may be required for right of way, station grounds, etc., wherever it owns lands suitable for such purposes. The company shall build the section through the Rocky Mountains to the Pacific coast concurrently with the prairie section between Winnipeg and Edmonton. It must deposit within 60 days $5,000,000 in cash for securities as a guarantee for the fulfilment of its covenants under the contract This money will be released at the final stage of the construction between Winnipeg and the Pacific coast. The cost of the construction and equipment is estimated at $100,000,000.

GREATEST IN THE WORLD

A Most Extraordinary Clock Being Manufactured for the Louisiana Exhibition.

The greatest clock in the world,the dial of which will be 120 feet in diameter, is being built at Milwaukee for use at the Louisiana Purchase exposition next year. Only the hands and machinery are being made in that city, for the dial is to be a brilliant bed of flowers. The clock will be placed on one side of the hill north of the agricultural building.

The minute hand will be sixty feet long, and the ring at the end which will be fastened to the machinery, will be eight feet in diameter. The minute hand will move five feet every minute. The numerals marking the various hours will be fifteen feet in length and made of bright colors.

In a broad circle surrounding the dial will be twelve flower beds, one opposite each hour, and each two feet wide and fifteen feet long. At night the timepiece will be illuminated with two thousand incandescent lights.

NEWS NOTES

Edmonton is to have a $150,000 jail.

The Dutch members in Cape Colony are opposed to the preference tariff.

The Territorial crop bulletin estimates a yield of over 15,000,000 bushels of wheat.

The Manitoba harvest excursions will start about the middle of August.

The Winnipeg fair directors may build a mile racing track.

There is a stampede of gold searchers to Cassiar, B.C.

A small herd of buffalo will shortly be added to River park, Winnipeg.

A. B. Youngson, successor to Grand Chief Arthur, of the Brotherhood of Locomotive Engineers, died on July 30th.

Fourteen silver fox pelts have been received in a fur shipment in Winnipeg.

The first of the Seawanhaka cup races was won by the Canadian boat over the Lake St. Louis course.

Steve Rowe received a two years' sentence for stealing a gold-headed cane in Winnipeg Exhibition week.

The City of Winnipeg will this season spend over $500,000 in improvements to streets.

Magistrate McMicken, of Winnipeg, has sentenced Jean Baptiste Blondin, of St. Norbert, to five years and 20 lashes lor assaulting and robbing an old man of 90 years.

At a meeting of the Dominion elections committee at Ottawa on Friday it was decided to recommend to the house a law providing for compulsory voting at elections. Any qualified elector who fails to vote will be deprived of the right to do so at the following general election.

At Kansas City, Rev. H. D. Hilson, a negro preacher, shot and killed his wife in a confectionery store. Hilson's wife had sued him for a divorce.

The British third class cruiser Melampus collided with and sunk the British steamer Ruperrai, off the Lizard, on July 29. The crew of the Ruperrai were saved. The damage sustained by the Malampus will necessitate docking her for repairs.

At Trenton, Ont., the captain of the excursion steamer Veruna, refused to lower the Stars and Stripes flying higher than the Union Jack, whereupon the young men in town shot the American emblem full of holes.

St. Petersburg, July 31.—Ten striking workmen were killed and 18 were wounded as the result of a volley fired by troops at Mikhailovo, on the Tiflis-Batoum railway, July 28. The strikers attempted to stop trains and a detachment of 40 soldiers were summoned. The soldiers were greeted with a shower of stones and some revolver shots. After repeated warnings the troops were ordered to fire. The street car service at Odessa is suspeoded in consequence of a strike of drivers and conductors for higher wages. The employees are preventing the cars from leaving the sheds.

Boer Bibles.

A militia general order, issued on July 30, says: "At the conclusion of the recent war in South Africa, a large number of Boer families found, on returning to their farms that their family Bibles had disappeared. The Boer inhabitants of the South African colonies set great store by their family Bibles, which often contain family records of some antiquity being in some cases the only repository of such records in consequence of the unavoidable destruction of church registers. If any members of the Canadian contingents, or others, who have served in South Africa, or their friends to whom they may have been given as relics, have in their possession any of these Bibles, it is requested that they may be forwarded to the adjutant-general, militia headquarters, Ottawa, for dispatch to their owners."

CAPTIVE AMONG MOORS.

Experience of London Times' Correspondent Held by Brigands.

Walter B. Harris, the correspondent of the London Times in Morocco, after three weeks of very unpleasant captivity among the brigands in northern Morocco, has at last been permitted to join his friends. Being a white man he was regarded as a very valuable captive, and his release was obtained only by the exchange of sixteen men who had been captured from the tribe that held him a prisoner.

The natives who caught Harris are among the mountaineers who have never admitted the right of the Sultan of Morocco to impose taxes upon them; and of course they are part and parcel of the rebels who have recently been making so much trouble for the Moroccan government. They did not exert themselves to make their white captive enjoy his short stay among them.

For nine days he was unable to wash or change his clothing, for 36 hours he was left in solitude with nothing to eat, and for several days a headless corpse occupied the room in which he was confined, and it was intimated to him that his physical appearance would soon resemble that of the hapless victim of the brigands whose remains he saw before him.

Harris, however, lives to tell the story of his captivity, and it will doubtless make good newspaper reading. No other white man in Morocco has in recent years had so many interesting stories to tell of his personal adventures as Harris.

He first brought himself into notice a few years ago by his venturesome journey in disguise to the chief town of one of the fanatical mountain tribes, who would have killed him without any preliminaries if they had supected that he was a white man.

At that time he knew no Arabic nor any of the native tongues, and though his skin was stained to the proper Moroccan hue, and the native costume sat well upon him, he would not have been able to travel a mile among the mountains if he had not pretended to be a deaf mute. He had with him a faithful young native, who carried on his conversations for him.

When approaching the town which no white man had ever entered he passed two men on foot, who decided that he was a white man, and when they reached the same place a few hours after Harris' arrival they lost no time in spreading the news that one of the hated foreigners was there in disguise. The report caused much excitement, with the result that in the darkness of night, Harris, who had been redisguised as a woman at the home of his servant, stole out of the town and made his way back to Tangier, travelling only at night and hiding in the forests in the daytime.

Harris has spent a long time in Morocco, and probably no white man is better acquainted with the natives and their country than this adventuresome European.

A TEMPTING OFFER.

$5,000 Reward Offered for the Capture of a Polar Flea.

A London cable says: There is one form of Arctic exploration little known to the general public. The history of famous Polar expeditions,the trials of the gallant explorers, and the large sums expended in fitting out and maintaining vessels is news familiar to all, but the hunt for the Polar flea is not so well known as it deserves to be.

More than a year ago the Hon. Charles Rothschild commissioned the Arctic sailing whaler Forget-Me-Not to hunt for the Polar flea. The hunt was apparently futile, for Mr. Rothschild now offers a reward, according to the Daily Express, of £1,000 for the Arctic fox flea, to add to the collection of those insects in the famous Zoological museum in Tring park, where already there are thousands of fleas which have been obtained from birds and beasts in all parts of the world. It seems that the flea of the Arctic fox is to flea fanciers what the egg of the great auk is to collectors of birds' eggs, for only two perfect specimens are known to exist in the collections.

In addition to the reward referred to, Mr. Rothschild has again fitted out the Forget-Me-Not, which is already at work looking for the flea.

A Big Log.

What is said to be the largest log ever floated in Puget Sound has been towed in to the Capital Box factory pond. It is a 40-foot spruce log,nine feet through at the small end and fourteen feet through at the large end. It was cut on the Skagit river banks and towed to the mill by the tug Elf, which had all she wanted to do to handle the one log. It is said to be the largest log ever brought to any mill in this district. There is no mill in the state, and probably none in the country, that can cut the log as it lies. It will be necessary to blast it with powder before it goes into the mill.—Canadian Trade Review.

Frederick Shaffer, a well known farmer and market gardener, living half a mile east of Berlin, Ont., was found dead in his oat field on July 31. He had been cradling oats up to 11 o'clock, and it is supposed death was caused by heart failure, brought on by over-exertion in the sun. He was about 60 years of age and leaves a grown up family.

The Winnipeg Shamrocks look like lacrosse champions; the Mintos were defeated 12-5 on July 31.

FELL INTO THE RIVER

COLLAPSE OF A BRIDGE AT PORTLAND.

A Crowd of Sightseers, Watching an Armless man Swim Across a River, is Precipitated Forty Feet Into the Water—Several Lose Their Lives.

A dispatch from Portland, Ore., of July 31, says: A section of the bridge which spans the Willamette river here collapsed this afternoon, precipitating more than one hundred people 40 feet into the water. Three people are known to have been drowned, and it is feared that the list of dead will be much larger.

Many fell on two small boathouses moored to a pier of the bridge immediately under the spot where it gave way. About twenty-five were injured either by striking on the boathouses or by falling timbers. Many fell from the roofs of the boathouses into the water, but dozens of small boats and launches in the vicinity quickly picked them up.

Thousands of people had gathered to watch Clarence Lutz, an armless man, swim the river, which is about three-eighths of a mile wide. As Lutz was climbing out of the water, the crowd rushed to the south ends of the bridge in order to get a good view. A section of the passenger walk gave way under the heavy weight, and the crowding, struggling mass of people, were carried down a distance of forty feet.

NUGGETS IN LARDEAU.

Lucky Jack Claim Yields Lumps as Large as a Man's Hand.

A dispatch from Nelson, B.C., says: Prospectors coming in for supplies to this city for the new gold fields at Poplar Creek, state there is increasing excitement there.. Many of the claim owners have taken in mortars and pestils with which they are extracting gold values from their ore. On four of the claims armed guards patrol the workings day and night to prevent pilferers carrying off golden nuggets. Pieces of ore the size of a man's hand, and containing up to $200 in gold have been taken out of the Lucky Jack claim.

A peculiar circumstance in connection with the strike is that the linemen engaged in repairing the telegraph wires through the Lardeau camped for two weeks with a tent over where the rich discovery on the Lucky Jack was made. Within a fortnight after the linemen had left Hamilton, Morgan and O'Connor, three prospectors, located the claim. For two weeks the linemen slept over a bed of gold. Over at the lumber mills camp it is very difficult to obtain workmen, the laborers continually deserting and striking for the gold fields.

RICHER THAN KLONDIKE.

Throngs of Gold Hunters Hurry to New Strike in Takeena District.

Victoria, B.C., Aug. 1.—The steamer Amur arrived from Skagway yesterday morning, bringing further advices regarding the new placer strike in the Takeena river district, to which throngs are hurrying. T. Henderson, the first man to return to White Horse, spoke enthusiastically of the richness of the place. He said it was richer than the Klondike.

The strike is 180 miles from White Horse. Thirteen other stampers who returned to White Horse for food supplies on Monday state that gold in paying quantities was being found on the surface the full length of Ruby and Fourth-of-July creeks, both of which were well staked. No one has reached bedrock though, in fact no one who had arrived had sufficient tools or provisions to allow of this work being undertaken.

The results taken from the surface over a wide area are sufficient to show that the new diggings are very rich.

Boer Troubles.

London—In the House of Commons on July 30, during the discussion of the colonial office vote, replying to a bitter attack on the government policy and Lord Milner's administration of South Africa, by Mr. Markham, Liberal, in the course of which he charged that affairs were growing worse, Colonial Secretary Chamberlain lengthily defended the administration of South Africa. He said the greatest difficulty was not the reconciliation of the Boers and Britons, but the reconciliation of the Boers with the Boers. The secretary then called attention to the fact that the Boers were making every effort to develop the country, and were forming local agricultural associations, of which the chairmen in many cases were former leaders of the Boer forces. Mr. Chamberlain admitted that much had to be done, and said that if it was found that the work of pacification was prevented by irreconciliables, the government would not hesitate to use its strong power to deport the mischief-makers

NEWS NOTES.

C. P. R. land sales for the month of July show continued increase.

The feeling in Rome forecasts Cardinal Gotti as the next Pope.

Winnipeg Chess club may play a match with Montreal by wire.

The second race for the Seawanhaka cup was also won by the Canadian boat, the Thorella.

MORRISSEY

From The Despatch

If in need of glasses for reading you should call on Liphardt the Jeweler.

Wm. Hazard has purchased the business of the Fernie Cartage Co. here from Jas. Rogers, of Fernie.

L. Tate has accepted a large contract for getting out mine props from Wm. Wardrope of Sparwood.

A. McBain, manager of the Crow's Nest Trading Co's store here, moved his family up from Fernie yesterday.

$35 down and $7 a month until paid for will buy a high grade Gerhard Heintzmann piano from L. W. Patmore. x

Chief License Inspector McMullin was in town yesterday inspecting the Clark House previous to its being opened.

Business has increased to such an extent on the spur to the mine that it has been found necessary to put on a night crew.

We understand that the company intend erecting the twenty-five cottages for the coke oven employees on the new townsite.

Rev. C. W. Houghton, of Fernie, was in town this week in connection with the erection of the new Church of England building.

The new electric light plant at Fernie is being rushed. New fifty foot poles are being placed in position on the different streets.

Archdeacon Pentreath, D. D., expects to arrive here to-morrow and will have charge of the Church of England service on Sunday the 9th.

Achilo. Costanzo, an Itaillian employed in the mines, had the misfortune to get a leg broken on Tuesday of this week. He was removed to the Fernie hospital.

Don't forget the grand opening ball in the Alexandra hotel on the evening of Friday the 14th inst. Everything will be done toward giving guests a good time.

Jas. McDonnell, of the Elk River Ranching Co. was in town yesterday. Big "Jim" reports everything booming at Michel, where he has been for several weeks.

F. C. Lawe, barrister of this town, was united in marrage to Miss Lillian Anderson, of Helena, Mon., on Sunday, August 2nd. The young couple are expected home on Monday of next week.

Again we draw the attention of th Government to the urgent need af a jail and police court building at this place. It is a disgrace to the community that a prisoner has to be locked up in a cellar over night because there is no other accommodation.

The local miners union are arranging for a big picnic to be held on the new townsite on the 22nd of this month. The executive have arrangements in hand and nothing will be left undone to make the affair a grand success. A big programme of sports will be carried out.

The Fernie Manufacturing Co. started up operations on Monday in their new factory at Fernie. An up-to-date plant has been installed which includes 35 machines for the manufacture of all kinds of house finishings. The factory has a large steam dry kiln in connection.

The road to the mine is still impassible and will likely remain so until the Government take steps to open a road above the new ovens. It would be well for Government Agent Armstrong to look into the matter at once as it is a great inconvenience to the merchants doing business in the new town.

Cranbrook

From the Herald.

It is rumored that J. A. Harvey, the solicitor, contemplates moving to Cranbrook.

There are about seventy-five ladies in Cranbrook who would like to get hold of a smooth-tongued gentleman who sold each of them a self-heating flat iron. His life would not be worth thirty cents.

E. C. Smith, who started farming on a ranch near the Mission that was just put under cultivation this season, has a wonderful crop. His oats are heavy and well filled, and everything that he planted has prospered.

The inability of the committee to secure cars for the excursion to Moyie yesterday, was a great disappointment to a large number of people in Cranbrook. If the excursion had taken place, it would probably have been the largest ever held on the Crow.

Frank Derosier has sold his Jaffray hotel to Dr. Gaylors, who is a new arrival in this district. The doctor will make some improvements and open a general store in connection with the hotel. The consideration was $3,000. Mr. Derosier will now devote his time to the ranch, the sale having included only that part on which the hotel was situated.

"DOING TIME."

The following suggestive lines were found scribbled on the back of a magazine in the Fernie jail this week:

Tell me not in mournful numbers
Life is not an empty dream;
If you were in Fernie jail
Oh, how happy life would seem!

Lives of prisoners have taught us
We can make our lives sublime,
And departing leave behind us
The thought that we were doing time.

ED. DORAN

Fernie jail, July 19, 03.

An Italian couple were married in the Catholic Church last Saturday evening, the names of the contracting parties are Nicholas Masiska and Rosy Custanco.

FERNIE DAIRY

Fresh milk delivered to all parts of the town. . . . . .

Dobson & Willingham

Notice is hereby given that 30 days after date I intend to apply to the chief commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay.

(1) Commencing at the south west corner of J. Claxton's timber license No. 2314, on Skookumchuck River, thence south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to the place of commencement.

(2) Commencing at the south west corner of J. Claxton,s timber license, No. 2314, on Skockumchuck River, thence south 160 chains, thence east 40 chains, thence north 160 chains, thence west 40 chains to the place of commencement.

A. BROLEY

Dated at Fernie, July 13th, '03. 239-4

A WELL KNOWN ALBANY MAN

Recommends Chamberlain's Colic, Cholera and Diarrhoea Remedy

About eighteen months ago Mr. W. S. Manning, of Albany, N. Y., widely known in trade circles as the representative of the Albany Chemical Co., was suffering from a protracted attack of diahorrea. "I tried Chamberlain's Colic Cholera and Diarrhoea Remedy," he says, "and obtained immediate relief. I cheerfully recommend this medicine to those similarly afflicted." For sale by all druggists and dealers.

Very Remarkable Cure of Diarrhoea.

"About six years ago for the first time in my life I had a sudden severe attack of diarrhœa," says Mrs. Alice Miller, of Morgan, Texas. "I got temporary relief but it came back again and again, and for six long years I have suffered more misery and agony than I can tell. It was worse than death. My husband spent hundreds of dollars for physician's prescription and treatment without avail. Finally we moved to Bosque County, our present home, and one day I happened to see an advertisement of Chamberlain's Colic, Cholera and Diarrhœa Remedy with a testimonal of a man who had been cured by it. The case was so similar to my own that I considered to try the remedy. The result was wonderful. I could hardly realize that I was well again, or believe it could be so after having suffered so long, but that one bottle of medicine costing but a few cents, cured me." For sale by all druggists and dealers.

Cholera Infantum

This has long been regarded as one of the most dangerous and fatal diseases to which infants are subject. It can be cured, however, when properly treated. All that is necessary is to give Chamberlain's Colic, Cholera and Diarrhoea Remedy and castor oil, as directed with each bottle, and a cure is certain. For sale by all druggists and dealers.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted ot F. Delzell's north-east corner, thence 80 chains east, thence 80 chains south, thence 80 chains west, thence 80 chains north to place of beginning.

Dated at Fernie this 6th day of June, 1903.

J. COWARD.
FRED DELZELL, Agent.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a licence to prospect for coal and petrolium on the following described lands:

Commencing at a post planted one-half mile east of F. R. Dezell's north-west corner post, thence 80 chains north, thence 80 chains east, thence 80 chains south, thence 80 chains west to point of beginning.

Dated at Fernie this 6th day of June, 1903.

FRED ROBBINS.
F. R. DELZELL, Agent.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped portions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding against the wasteful des truction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted at Ed Robbins north-west corner, thence 80 chains north, thence 80 chains east, thence 80 chains south, thence 80 chains west to place of beginning.

Dated at Fernie this 6th day of June, 1903.

W. C. LIPHARDT.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a special licence to cut and carry away timber from the following lands on the west side of Kootenay river, in the District of East Kootenay:

Commencing at a post 40 chains west of the south-west corner of M. Claxton's timber licence application on Skookumchuck river, South East Kootenay, thence running north 160 chains, thence east 40 chains, thence south 160 chains, thence west 40 chains to place of commencement.

232-4 J. MCDONALD.
Dated May 23rd, 1903.

The Enormous Expenditure of Money by the Crow's Nest Pass Coal Company, Limited, in the construction of coke ovens and storage bins and the installation of electric light and water-works systems, determines that the industrial centre of this district is established for all time at the new town of

Morrissey Mines

The importance of this fact on real estate values here is immense. One of Canada's greatest banking institutions has established itself here permanently, and the near future will see the residential streets lined with many fine houses that will be required to house the hundreds of workers employed here. It is not hard to guess what the effect of this concentration of well-paid wage earners will have on Morrissey Mines realty. All this army must have homes.

One of these bright July days as one stands on the foothill just above the new town, and looks east toward the collieries, the whole transformation that turns a wilderness into a great industrial centre, is shown in its various stages. We see the near approaching coal train of 40 cars, carrying 1,200 tons, the output of the mines for one day, and a little further on, two batteries of modern coke ovens, many of which will be fired up within ten days.

Just across the paddock that has until recently been used for a horse pasture, can be seen 100 men, digging a ditch for the large water-main that is to supply the town with pure Spring water, while the ring of hammers can be heard on every side.

To those wishing to build homes I am offering attractive terms. Write for particulars or call at my office.

TRACKMEN TO COME.

EXCURSIONS TO FERNIE ON LABOR DAY.

Grand Celebration Being Prepared. Procession in Forenoon. A Full Day of Sports.

A public meeting called by the secretary of the Fernie Athletic Association waf help in the Royal hotel on Wednesday evening. Representatives from the Trades and Labor Council, the Miners' Union and the C. P. R. Trackmen's union were invited to be present but only the last accepted the invitation, G. Clapp being present. Mr. Clapp explained that the C. P. R. trackmen from Medicine Hat to Kootenay Landing had decided to run excursions from both directions to Fernie on Labor Day. Those from the east would come on the regular morning train while a special would be run from the west.

All present expressed much satisfaction at the action of the trackmen in deciding to visit Fernie and a motion was unanimously adopted that a monster celebratian program, suitable for the occassion be prepared.

A rough draft of a program was then drawn up, aud the following events were included.

Champion Lacrosse match, Fernie vs. Lethbridge.
Matched Race, Mitchell vs. Appleford.
Baseball game, Fernie vs. Macleod.
Rock drilling contests.
Tug of-war Tournament, trackmen, miners, lumbermen and the World.
Sack Race.
Hurdle Race.
Three-leg Race.
100 yd. race for miners.
100 yd. race for trackmen.
Three Jumping contests.
Putting Shot.
Greasy Pole.
Horse Race.

An attempt will be made to have a large parade in the forenoon in which unions, tradesmen and merchants will be asked to take part. A prize will be given for the best "float" in the procession.

The eventful day will be suitably brought to a close by a public ball in the evening.

The chairman appointed a committee of six to attend to the minute arrangements of the celebration. This committee is composed of Messrs. G. Clapp, Dobbin, H. Bentley, Tuttle, T. Whelan and S. Herchmer. They will doubtless add other events to the above and otherwise prepare for a full day's sport.

Mr. Tuttle was appointed to interview the unions with the object of securing their co-operation in celebrating the day.

SHORT $600 IN HIS ACCOUNTS.

Postmaster Moon, of Michel, Sent Up For Tampering With Post-Office Funds.

The report of the looseness of the manner in which the post-office at Michel was run was fully verified by Inspector Dorman's official visit there last Friday. He had received complaints from the Department at Ottawa and he was therefore aomewhat prepared for the condition in which he found the office. A hurried examination of the books and the cash on hand revealed a serious deficit and upon more careful investigation the amount was found to exceed $600.

Moon at first made no explanation of the shortage but attempted to get his freinds to make good the shortage. Failing in this he fell back on the claim that the office had been robbed. He was arrested by Constable Henderson and brought to Fernie on Wednesday and received his preliminary hearing on Thursday.

The evidence of Inspector Dorman as to the deficit, and that of Constable Henderson as to the habits of the accused were most damaging. The accused stuck to his story that the office had been robbed, and that he had told the Inspector of the robbery when the deficit was first noticed. This was denied by the Inspector. The magistrate sent the accused up for trial.

The Inspector and others reasonably certain of Moon's guilt do not believe that he intended to get away with the funds of the office but they attribute the shortage more to financial embarrassments on the the part of Moon who accumulated debts through drinking and gambling and who took the money, probably at different times, fully intending to put it back again. At the the time when he claims the robbery took place there was a large sum of money in the office, which had he been prompt in his duties, would have been sent to Ottawa on the previous day.

MITCHELL VICTORIOUS.

Fernie's Fast Sprinter won the Big Running Event at the Lethbridge Celebration.

The big celebration at Lethbridge was a huge success in every way. The 100 yard race was won by F. J. Mitchell over Kensey, of Raymond, and Eade, of Wardner. The last named got away first but in the last 50 yards it was between the first two, and Mitchell came in a couple of feet ahead. Kensey is the man who defeated Nevin this spring.

The lacrosse match between Lethbridge and Medicine Hat resulted in a victory for the former by a score of 6-10. The game was fast and exciting. The roping contests and all the other events, in fact, were very interesting. A large crowd of excursionists were in from out side points.

MATCHED RACE ARRANGED

While Mr. Mitchell was in Lethbridge a matched race was arranged between him and Geo. Appleford, of Lethbridge. The race is to be run in Fernie on Labor Day for $250 a side, $75 of which was put up. It was also mutually agreed that H. Bentley would he acceptable as starter. This race will be a drawing card for the big celebration.

DAILY MAIL INSTITUTED.

The Government's Promise Promptly Fulfilled.

True to its promise the post office department put a daily service on the Crow line without any delay. Last Sunday both trains carried the mail as on any other day. Postmaster Johnson very obligingly sorted the mail. The postmaster is not obliged to distribute the mail on Sunday, but Mr. Johnson informs us that he will do this as a general thing on Sunday.

The greater advantage is gained by the outgoing mail. This is made up exactly as on week days and no more inconvenience wiil be experienced by mail remaining in the Fernie office from Saturday until Monday.

COAL OIL MAGNATES HERE

Remain in Fernie a Day on their Way to Their Claims near Pincher Creek.

Messrs. J. B. Ferguson, J. L. Johnston and J. H. Thorne, of the Western Oil and Coal Co., of Vancouver, passed through Fernie on their way to their claims near Pincher Creek this week and stopped off over Tuesday in Fernie. While here they were negotiating for more claims between the town and their claims near Morrissey.

The company has decided not to proceed with development work on their claims at Morrissey for the present. This decision, no doubt, has some relation to the uncertain fate of the whole block, and the withholding of licenses.

The company's claims in Alberta will be developed rapidly. One boring machine is now at work and another will be purchased at once. Mr. Johnston will remain on the spot for a time to superintend the development work.

Mr Thorne, who is one of the directors and heaviest shareholders of the company, is making his first visit to the Crow's Nest Valley. He was very favorably impressed with the appearance of Fernie and he predicted a bright future for this corner of the province.

MORE ENGLISH MINERS.

Another Party Arrived on Thursday Morning.

A party of forty-nine English miners arrived on Thursdap morning to work in the mines of the Crows Nest Pass Coal Company. They are mostly from Durham but a few are from Northumberland and Yorkshire. The names of the new comers are as follows.

D. Bolan, J. Avery and his son A Avery, J. Wood, T. Green, H. McCrory, W. Tennant, W. Shenfield, J. Beaumont and his two sons H. Beaumont, and E. Beaumont, M. Morris, R. Redhead and his son, W. Harrold, T. Scott, J. Richardson, J. Snow, R. Atkinson, G. Smart, Jesse Stackwood, P. Irving, M. Stovel, J. Morris. W. Commons, W. Jones, V. Alexander, J. Elliott, H. Reay, J. Feenney, C. Jones, J. Thompson, E. Best, M. Joyce, J. Favell, J. Colly, T. Wassell, H. Taylor, J. Gordon, W. Snow, F. Collingwood, F. Scott, A. Hather, H. Hather, W. Risdale, J. Simpson, H. Keenin, W. Rogerson, J. Sale.

Five of these men are coke oven workers and they will remain at Fernie. Ten of the miners have been given work at Michel mines, ten at Coal Creek mines and the remainder at Morrissey.

COUNTY COURT NEWS

NINETY MORE BRITISH SUBJECTS.

Three Criminal Cases disposed of. Spence Lyon gets off.

Judge Forin held a County Court sitting in the Fernie court house on Wednesday. Three criminal cases were disposed of and ninety naturalization papers were read before the Judge by Registrar Forbes and all were passed.

The case of an Italian named Louis Frederico for the theft of $98 from his room-mate, Francisco Dercole, at Morrissey Mines, ended in the accused getting 3 months. The prosecution showed that the accused stole the money from the pocket of his sleeping companion, wrapped it in a piece of cloth and hid it under the door step of the house. When accused of the crime he handed over $60 and asked the accusers to say nothing more about it.

Joe Fetseck, a Slav, accused of obtaining goods under false pretenses from Foss and Macdonell at Michel was found guilty and was sentenced to 3 months at hard labor.

The case against Spence Lyon was dismissed. The evidence showed that Kret applied for a wholesale license at Morrissey Mines under Spence Lyon's name, the former putting up all the money. The license was refused and Lyon got the rebate and left the town without turning it over to the rightful owner. The judge cut the case short by declaring it would be impossible to convict the accused on the charge since Kret had previously acted criminally in attempting to evade the law.

A large portion of the forenoon was consumed in the reading of the 90 naturalization papers. Thirty-seven of these names belong to the Fernie district and the remaining 53 names were sent in from other Kootenay points, advantage being taken of the last County Court sitting before the closing of the voters list. Lhe following are the names of the Fernie men who became British subjects on Wednesday:

Nicholas Klausman
John P. Williams
Rafaele Marasco
Michele Serianni
Pasquale Caravetta
Felicio Antonio Miscisco
Anigi Martini
Giovanni Lamanna
Vincenzo Coztanzo
Brautomarto Rizuto
Nicolo Miscisco
Guiseppe Taverno
Andrea Rizuto
Rafaele Rizuto
Donata Cumina
Felice Pascuzi
Matteo Scarpino
Anthony Modigh
Mike Guzzi
Frederick W. Glover
Ipolda Caravetta
Gennaro Vastardrio
John Hovan
Frank Salisbury
Mike Putera
David Bannett
Charles E. Estes
John Barber
Vincenzo Rose
Bonaventura Taimo
Joseph Choy
Biogio Bafaro
Pasquale Arcuri
John Borresen
Geo. A. Millett
Henry Ruff
James M. Cready

CAMPED ON THE FLATHEAD

Stoney Indians on the March—Creston Indians badly Scared.

In consequence of the reports received last week by the chief of police of the invasion of the Stoney Indians, Constable Dow was sent down to Phillipps, Tobacco Plains, to gather news of their whereabouts. He has reported this week to the chief that the Stoney Indians are said to be camped on the upper waters of Flathead river, and he asked for further instructions. Chief McMullin at once instructed Constable Dow to go out after the invading tribe and order them out of the province.

The Indians at Creston, about 160 in number, are alarmed for their safety. They were aware of the intended raid before the police and they came to the later asking protection. It is something of a mystery how they learned about the raid.

The N. W. M. P. have in the past been accustomed to follow the Stoneys whenever they crossed the border and take them back. This fact indicates that the Indians have slipped by this time unobserved.

A TRIP UP THE ELK.

John Hutchison, and Constable Walker took a trip up the Elk river valley this week to the C. P. R. coal claims, some 50 miles from Michel. A Free Press man saw "Hutch" on his return and asked him a few questions as to the trip. "We had a grand trip," said Hutch, "we went up as far as Round prairie about 35 miles in a dead ox waggon and from there we got a couple of horses and rode the balance of the way. We made the trip in 19 hours. What do I think of the country? its the finest bit of East Kootenay I ever saw, the land will grow anything. At Foss & McDonald's ranch we saw oats and wheat four feet high and well headed and the finest vegetables I ever saw in this country. Timber! why miles of it, spruce for the most part. And coal? well, we were told that there is $50,000,000 worth in sight now on the C. P. R. claims. I would advise anyone who wants to fish or hunt to go up there this fall because the country is full of game and the river full of fish.

POLITICAL PARAGRAPHS.

The Conservatives of Cranbrook district hold their convention this evening. Messrs. Ryan, Rookes, Rollins, Hill and Thompson are the Cranbrook delegates and W. J. Nobles was appointed a delegate for Perry Creek. The Cranbrook Herald is of the opinion that Thomas Caven will get the nomination.

The trouble between the two Conservative factions in Nelson has reached an acute stage. The anti-Houston Conservatives had a meeting on Wednesday and passed several resolutions condemning the action of Fred Starkey, president of the local association in refusing to call a general meeting; also John Houston's recent utterances in his paper and his determination to ignore the meeting called for that evening. The meeting passed another resolution expressing confidence in the Conservative party as a whole. The Houston party held a meeting on the following evening and elected delegates to the convention on the 15th. The delegation are naturally of a strong Houston complexion.

MICHEL AMBULANCE CLASS.

A meeting held in the Michel school house on Monday evening, August 10 for the purpose of organizing an ambulance class was well attended. Robt. Duggan acted as chairman of the meeting. Committees were appointed and officers elected as follows. Secretary, Wm. Austin; treasurer, Wm. Powell; monitors, Thos. Miller and Wm. Harnison. Dr. McSorley who for the past two months has been giving lectures on "first aid to the injured" displays a lively interest in the matter and has won the respect and confidence of the people of Michel. The undoubted ability of Dr. McSorley as instructor, coupled with the intelligence and energy of those interested in forming this class will in time prove a blessing to the community.

A large number of students have already been enrolled and it is hoped that many more will consider the advisability of taking advantage of the instructions of Dr. McSorley on first aid. The dangers that beset the miner's path are many and a knowledge of first aid is an absolute necessity, but one which has not been given the study it deserves. Now that the class is started it is to be hoped that everyone interested will join us and insure it success.

Wm. Austin,
Secretary.

Michel, Aug. 10, 1903.

THE VOTERS LIST.

The classification of the voters list for the Fernie district, which closed last night, is as follows:

Fernie	563
Michel	157
Morrissey Mines and Junction	174
Coal Creek Mines.	97
Jaffray	37
Crows Nest	1
Foresters Mills	11
Loop	4
Carbon Creek Mill	16
Hosmer	2
Sparwood	16
Elko	19
Elkmouth	23
Edwards Lake	3
Baynes Lake	6
Gateway	2
Phillipps	9
Total	1140

E.C. SMITH NOMINATED.

RECEIVED UNANIMOUS SUPPORT OF THE CONVENTION.

Dr. Wilson Retires in Favor of Late Member. District Association Formed.

The Liberal convention held last evening was a decided success. Mr. E. C. Smith received the unanimous support of the meeting and the greatest harmony prevailed. The following delegates were present.

FERNIE—F. Stork, D. V. Mott, H. H. Trites, W. W. Tuttle and F. J. Watson.
MORRISSEY—Dr. Willson, T. R. Morton, J. F. Carter, W. Dick and McDonald.
MICHEL—P. Anderson, and Jas. Johnson.
COAL CREEK MINES—R. Randall and W. W. Thomson.
ELKO—I. C. Slater and John Mott.
ELKMOUTH—R. M. Fullerton.
JAFFRAY—Geo. H. Chapman.

Dr. Wilson was elected to the chair and F. J. Watson was appointed secretary. The business of selecting a candidate was proceeded with at once. Two nominations were put before the meeting Dr. Willson was nominated by J. F. Carter and E. C. Smith by H. H. Trites. Dr. Willson in a neat speech asked that his name be withdrawn in favor of the late member. D. V. Mott closed a forceable address by moving that the nomination of Mr. Smith be made unanimous and J. F. Carter seconded the motion, which was supported by all present. F. Stork and others gave short congratulatory addresses after which the meeting proceeded to organize a district association. The officers elected were as follows.

President—Dr. Willson.
Vice President—D. V. Mott.
Sec.-Treas.—F. J. Watson.
Executive Committee—F. Stork, P. W. Anderson, J. F. Carter, T. R. Morton, T. Keith, H. H. Trites, I. C. Slater and Geo. H. Chapman.

The executive of this association wiil draw up certain resolutions and a meeting has been arranged for August 31st at which Mr. Smith will be present.

CONSERVATIVES IN LINE.

Officers Elected. Convention Arranged for August 28th.

The Fernie Conservative Association held a meeting last evening for the purpose of reorganization. The meeting was largely attended. The following officers were elected.

President—A. Joyce.
Vice-President—J. A. Macdonell.
Sec.-Treas.—John Hutchison.
Executive Committee—F. M. McLeod, H. A, Kanouse, D. R. McDonald, J. A. Rennie, S. Bonnell, A. H. Cree and F. W. Burn.

It was decided to hold the nominating convention for the district in Fernie on August 28th. A meeting is to be held on the 21st to select delegates for this convention. Representation will be given to each polling place on the basis of one delegate for every 50 names or fraction thereof on the voters list. Small places with less than 50 names will be allowed one representative.

The executive committee meets tonight at the office of Cree and Hutchison. Mr. Hutchison has resigned the appointment of returning officer for the Cranbrook district to take the position of secretary of the association.

CHALLENGE ACCEPTED

The following wire was received this morning which explains itself:

Michel, B.C., Aug. 15th, 1903.
FERNIE FREE PRESS
"In reply to last week's challange we beg to say if Knight and Hurley will put up a forfeit of $25 we will drill them for one hundred or more.
Signed John A. MacDonald
John L. Wilson

CANADA CUP CAPTURED.

Strathcona won First Two Races and Irondequoit the Last Three.

The deciding race for the Canada Cup was raced on Thursday. Previous to that the Canadian defender, Strathcona, had won the first two races and the American challenger, the Irondequoit, had won the third and fourth. The fifth was won by the American boat in an exciting race over a triangular course of 7 miles to the leg. The Canadian boat was 70 sec. behind at the finish.

WHEN BOYS WERE MEN

By JOHN HABBERTON,

Author of "Helen's Babies," "George Washington," Etc.

COPYRIGHT, 1901, BY JOHN HABBERTON

"Atten-tion! Men, orders have come for all recruits for the Thirty-eighth cavalry to be sent to the regiment at once. You must remain here, therefore, until the order for transportation comes. We'll get off some time this evening. That's all. Break ranks—march!"

The yells, roars and oaths that went up from two or three score of the men were worse than any I ever had heard. I couldn't blame any of the other recruits, however, for I was as angry, shocked and frantic as they. "Get off some time this evening!" That meant I couldn't see father, mother or Ned before I started—couldn't see them in three years unless the war ended sooner. It was awful—it was worse that the worst thing I ever had imagined about war.

Some of the more excitable fellows made a rush for the door to find there for the first time an armed guard, beyond whom at the head of the stairs were several more. They did not belong to our own regiment either. Then they dashed to the rear of the loft and

"Fall in, men," said the lieutenant.

threw up the window sashes, but two infantrymen with fixed bayonets were in the tiny courtyard below. Then Babel began again, while the lieutenant resumed his chair, cigar and pen as coolly as if he were deaf or accustomed to such scenes.

"Can it be possible that this was what the major meant?" I asked of Hamilton and Cloyne.

"Undoubtedly," groaned Cloyne. "It isn't a new trick by any means."

"The scoundrel!" hissed Hamilton, who was the picture of more kinds of discomfort than I had ever seen in one face before.

"Perhaps he really did want to see us three on the business you suggested," said I to Hamilton. "'Twon't do any harm to ask."

He shook his head doubtfully, but approached the lieutenant, followed by Cloyne and me.

"Lieutenant," said he, "excuse me, but I have reason to expect some official communications from Albany, through the major, for myself and my friends here. Can you tell me whether they have come?"

"Not that I know of," said the officer pleasantly.

"Will the major be in soon?"

"The major is—no. The truth is, I doubt whether we shall ever see him again. He hasn't succeeded in raising a company, much less a battalion, and has dropped out of the business. He never had a commission anyway."

"Then all of us to whom he promised commissions are duped?"

"Not at all—if you've raised the requisite number of men. Have you done it?"

Then Hamilton lost his self possession for the first time within my knowledge.

"How many men have you raised?" continued the officer.

"Five," said Hamilton feebly.

"And you?" This to Cloyne.

"Four," sighed the handsome Irishman.

Then the lieutenant looked at me inquiringly.

"Three," I whispered, remembering that one was dead and another reclaimed by his parents.

"And you've consumed nearly a month at this," said the officer. "What commissions do you suppose you are entitled to?"

No one answered, so the lieutenant resumed his work.

Then we three Summerton men stepped aside at Hamilton's suggestion for consultation, but we at once began to moan and grumble instead of consulting. Cloyne said he had no one in particular to say goodby to; nevertheless to go off as we were about to, without saying a word to any of the many people he had known pleasantly for years, would make him feel very much as if suddenly arrested and sent to prison. Hamilton said he heartily wished himself in Cloyne's condition, but unfortunately there were many people to whom he owed parting calls and some with whom he had made engagements which he wouldn't break for anything. I began to say that I feared that not to see me again would be the death of my father or mother or both, but I didn't get through my speech very well. As for my brother Ned, when I thought of that little fellow and all I might have been to him, but hadn't, and now he wouldn't have a big brother again for years, I secretly promised heaven to endure patiently any hardship or suffering of war if I might be spared to make amends to that small boy.

Suddenly Hamilton exclaimed:

"This won't do. We're wasting precious time. If we can't go back home we can at least telegraph our friends to come down and say goodby to us. Let me labor with the great mogul once more."

"Lieutenant," said Hamilton, whom Cloyne and I followed to the desk, "I beg a thousand pardons, but I know you'll forgive me if you'd put yourself in my place for a moment. I'm an old First militia man, and I know orders must be obeyed."

"First regiment, eh?" said the lieutenant, rising from his desk, while Cloyne and I pinched each other with delight at the impression which Hamilton's announcement had evidently made.

"Yes, and I've enlisted for service, not for money, for I'm quite well off already. My two friends here and I would like to see our families and acquaintances before we start."

"Telegraph them to come at once," said the lieutenant. "Go to the nearest hotel and see them there. You wouldn't like to meet them before this crowd. I'll pass you through the guards."

We must have been a happy trio to look at just then as Hamilton took the lieutenant's hand and murmured:

"God bless you!"

"I hope he will," said the officer, "for everybody else is cursing me today, though I'm merely doing my duty."

We all moved through the door, the lieutenant leading. Just then I felt a clutch at my shoulder and, turning, saw Brainard, his face tear stained and most woebegone. Hamilton chanced to see him, too, stopped, stared and exclaimed:

"Eh? What's this?"

"This is a surprise," said I. "He's one of us after all."

"Thank heaven!" exclaimed Hamilton.

I was so pleased at this remark that I was hours in comprehending the entire meaning of it, which was that there was a woman in the case. Meanwhile Hamilton named the hotel to which we would go and where the lieutenant could notify us when it was time to start. We at once telegraphed our families and while awaiting them made some hasty goodby visits to friends in the city. Two hours later we felt as criminals condemned to death must feel during the final visit of their friends. My father—bless his dear, thoughtful heart—brought down the entire family and the dog besides. Had it not been for that dog's efforts to explore the hotel and Ned's efforts to bring him back there would have been little relief from the gloom of which all of us were full. Brainard's mother seemed to suffer worst of all. She had gone through the agony of giving her son away only to get him back again forever, she supposed. Now he was a soldier once more, and at scarcely an hour's notice she was to lose him. My own misery was doubled by her sorrow, for was not I to blame for his being in uniform?

My cousin May tried to put some cheer into the party, and as she always laughed heartily at the slightest provocation it was impossible not to be affected by her spirits. She made cheery though modest replies to some gallant speeches which Hamilton addressed to her, and she told Mrs. Brainard to think how much more Charley's quick wits would be to the nation than the guns of a dozen common men. She scarcely spoke a word to Charley himself, however, and he looked at her only slyly, for, as he told me afterward, he had caught a glimpse of himself in a hotel mirror and felt like a scarecrow.

A message from the lieutenant broke up our party, Cloyne departing first, followed by Hamilton and his friends. I had to drag myself away from my mother's arms and then tear Brainard away from his mother. I hope I may never again see such a picture of desolation as that couple made while taking a last look at each other. It seemed as if a sense of my own responsibility would kill me, but suddenly Cousin May relieved the feelings of all present by throwing her arms around Charley's neck and exclaiming:

"You poor, troubled little fellow, your mother shan't be lonesome while you are away."

How we got out of that room—why we did not fall dead at the final parting—I do not know. To my memory that is still the most dismal day of the entire war. We took pains not to tell our families where our rendezvous was or by what streets we would depart. We did not know ourselves. Just a quarter of an hour afterward, however, as we tramped down Broadway, a dog sprang upon me, and as I turned to cast him off I saw it was mine—that little Ned was right behind him, and my father was following Ned.

If nobody had too much then everybody would be provided for.

CHAPTER IV.

IN CAMP AGAIN.

WE went south on a train which contained some squads of recruits for other regiments, and I cannot say that any of them impressed me more favorably than our own or that they looked like men from whom the Southern Confederacy had much to fear. Certainly they could not bear comparison with the average of our old militia regiment, at whom the cavalry had sneered and whom the regular artillerymen had called "Doughboys." The great majority reminded me of the corner loungers in city and town. I said as much to Cloyne, who replied:

"For very good reason too. That's just the class from which they were recruited."

It was pleasing to think that we should see something different when we reached our camp, which was only about a day distant from New York. Our quartet wished we might soon reach there, too, for the trip persisted in recalling by contrast that of the Ninety-ninth, and the contrast made us gloomy. No natives wished us godspeed or brought fruit and refreshments to the train when it stopped at a station. Nobody sang patriotic songs in the cars or passed jokes from seat to seat. On the contrary, there were much vile language and drunkenness, with some fighting, for men who had received large bounties and were not accustomed to having much money had apparently tried to invest all their cash in whisky. Some tried to desert by jumping from the car platforms as we passed slowly through the larger towns, and apparently we all were suspected by the officers in charge of the various squads of being possible "bounty jumpers."

It was not until this trip that we came to realize, recruiting officers though we had been, that the payment of bounties, which had not begun until the Ninety-ninth had taken the field, had developed a new and highly popular industry—that of enlisting, receiving bounties, deserting, re-enlisting to receive more bounties, and so on indefinitely until the bounty jumper was detected or sent to the front too suddenly and securely to escape. One of the officers, with whom Hamilton and Cloyne scraped acquaintance, said we were lucky not to be sent down in locked cars, with windows so arranged on the outside that they could not be opened enough to let a man through. He said also that a number of hard characters had enlisted only for the purpose of robbing their comrades and that those of us who had much money would do well to hide it securely before dropping asleep.

None of these revelations promised well for the Union cause, and I asked Hamilton why it was that the army did not get a better class of volunteers.

"Because," said Hamilton between his teeth, "most members of the better classes are trying to become officers, instead of first enlisting as privates, like several fools with whom I am acquainted."

"But they can't all become officers," I argued. "There are too many of them."

"None of them will become a private soldier until there is a conscription," said Cloyne, who stood by. "It's the only way that men of the better classes ever get into the armies of other nations."

"But we are different," said I, with rising American pride. "Our better classes know they have more to be thankful for than the people of other nations, so they have more patriotism."

"They do, eh? From the appearance of this car and such others on this train I have gone through, I must say their patriotism is not hurrying them into the military service."

Then I had to change the subject of conversation.

Before reaching camp we became acquainted with some of the recruits for our own regiment and found enough varieties of human nature to interest us and to justify Cloyne's remark that it takes a net or an army to catch all sorts of queer fish. Hamilton, who had a head for statistics, took the trouble to ask each recruit for the Thirty-eighth what was his business

"Ah, you vants glory, eh?"

before he enlisted. There were only 52 recruits, but 45 different trades and professions were named. Indeed, there was but one business or calling which more than one man designated. It was "soldier." Hamilton, Cloyne and I were three of the five who made this statement. The others were two stalwart Englishmen, almost middle aged. I engaged these successively in conversation and was almost paralyzed at learning that they were survivors of the famous "Six Hundred" who formed the "Light Brigade" that charged at Balaklava and was immortalized by Tennyson in a poem which I and every other boy in our school had declaimed on "speech day."

It was long before I could tear myself away from these fine fellows and tell Hamilton and Cloyne what an acquisition our regiment had made. Hamilton was as much surprised and delighted as I, but Cloyne twitched his face, looked out the car window in an absentminded sort of way and remarked:

"They'll make about 1,200 survivors of that 'Six Hundred' whom I have personally met, yet I haven't been a great traveler."

"Perhaps," said I, "Lord Cardigan didn't carefully count his men before riding at the Russian guns, or perhaps Tennyson took poetic license as to number."

Cloyne laughed as he tried a pun.

"Somebody somewhere has ventured more lie than sense on the subject."

I thought this was very cynical of Cloyne. Of course there are impostors everywhere, but splendid, straight, manly looking fellows like our own regiment's share of the "Six Hundred" could not be suspected of anything unfair or pretentious. They were superbly cool and composed, as great soldiers always are, and neither of them seemed to take ordinary interest in any one around him until I chanced to mention one of them to the other. To my great surprise, they were not even acquaintances. This fact or some other seemed to surprise the one I spoke to, and when I brought them together and introduced them they did not look and act at all as I imagined old comrades in a historic battle would. Thinking perhaps they preferred to review old associations in private, I left them, after which they began to chat quite freely, and when next I met one of them he told me they had identified each other at last, and glad they were to find they were old friends. It was a long time before I could get Cloyne to take the slightest interest in them, but he finally eyed them, first carelessly, then curiously. Later I saw him in earnest conversation with one of them, and when I joked with him about it he put on a queer smile and patted me on the shoulder in a patronizing manner that exasperated me.

Our reception at the camp of the Thirty-eighth was not what I had expected. The veterans of the regiment did not turn out to cheer the brave youths who had come to help them put down the rebellion. They did not even offer us something to eat, although it was long after breakfast time and our haversacks had been empty since the night before. A few sauntered over to the adjutant's tent, to which we had been marched, and looked at us as if in search of familiar faces, but no one took special interest in us except the orderly sergeants of the various companies, whom the adjutant had the sergeant major summon by bugle call. The company in which we had enlisted had not yet been organized, so we were allotted temporarily among the older companies, and the orderly sergeants swore frightfully, as they marched us off, at the trouble they would have to squeeze an extra man or two into every tent of a lot already well filled. The men in the tents did not do much to make us feel at home, although one or two put on some appearance of friendliness as they asked us if we had brought down anything in pocket flasks.

We Summerton boys were not made any more comfortable by being separated, as we chanced to be. No three of us were assigned to the same company, much less to the same tent. There seemed nothing for us to do or see either, for no drill was ordered during the morning. Before dinner call was sounded I had lost all interest in the service and the war. I could think of nothing but our farm at Summerton and the people who occupied it. My father had promised to visit me in camp before winter if the authorities would permit. How I hoped he would not do it! I should have been glad to have him see the camp of the Ninety-ninth, but the cavalry camp was very different. There seemed no end of detached tents and huts, with no particular purpose that I could discover. Nothing was as I had expected.

After dinner we boys had an opportunity to see each other again. We enjoyed the meeting, but not its purpose, for each new recruit was given a shovel and set to digging post holes and ditches for some new stables that were to be built. I could have had plenty of digging without coming several hundred miles from home, for my father had long intended to set a new fence. An excitable young Frenchman among the recruits seemed somewhat of my way of thinking, for he suddenly dropped his shovel and shouted:

"I will not dig ze hole! I enlist for la gloire, not for dirty work like zis."

"Ah, you vants glory, eh?" said the German sergeant who seemed engineer in chief. "Den better it is you go back to your own country, vere dey ain't got no sense."

The Frenchman said something between his teeth and thrust out his fist. The sergeant collared the Frenchman and kicked him all the way to the guardhouse. There were no protests after that. Post holes and ditches increased rapidly, and I was somewhat astonished to discover that the short ditch dug by Phil Hamilton was the most shapely of the lot.

We recruits got some comfort after supper in criticising the movements of the cavalry at dress parade. They marched with less style than the most awkward company of the Ninety-ninth, and looked shabby by the lack of resemblance in their hats, no two of which set alike, although all were of black felt.

Signs of hospitality continuing to be invisible, some of us Summerton recruits concluded to spend the night on the quartermaster's hay pile. Virginia dews, however, had grown cooler in the month that had elapsed since the Ninety-ninth went north, and we had to arise in the middle of the night and indulge in violent exercise to warm our blood. We talked a great lot, too, so much that the sergeant of the guard came over to see what was the matter. When we told him why we were there and how uncomfortable we were, he said:

"Serves you right. Men who've been in the service once before and got out and hadn't sense enough to stay out deserve all the bad luck they can find."

I was angry and miserable enough to believe for the moment that he was nearly half right.

CHAPTER V.

THINGS SLOW AND LIVELY.

WITHIN a few days our company was organized, and we recruits were gathered into tents of our own. But we continued to be thoroughly miserable. The cavalry camp seemed such a shiftless, do nothing place for all who were not recruits that I thought seriously of writing a private letter to President Lincoln suggesting that he should have this large and lazy body of men go out and kill some rebels or do something else that would help end the war. It seemed to me that the men I saw lounging about me could not possibly be the same who had been all the talk of the post when the Ninety-ninth was there.

We recruits did very little lounging. We were drilled pretty steadily in the use of a saber, a weapon which did not feel or act anything like we had supposed. For days it seemed too heavy and clumsy for me ever to use to any purpose, and I doubted whether I ever should be able to injure the Confederacy or defend myself by any of the

I beheld an odd spectacle.

thrusts, points or cuts of the manual of arms. I told Cloyne so one day, and he replied:

"That's the reason you're being taught. There'd be nonsense in teaching you if you already knew how."

The regiment—that is, the new companies—had no horses, and we Summerton boys would feel very dismal when we saw the older companies mount and go off on a scouting trip, as they did at least once a week, while we, instead, were marched out to drill or set to work on the stables, which were so many and large that it seemed they never would be finished. There were 12 of them, and each was more then 300 feet long and required 100 thick 10 foot posts, which had to be cut in the forest, besides hundreds of smaller ones for the roof and to divide the stalls. Many of the men made up their minds while this work was going on that a soldier's life was a dog's life, and they proved their sincerity by acting like dogs—growling, snarling, skulking and fighting.

During this wretched experience of cavalry life my spirits were strengthened frequently by observing the imperturbable manner of Hamilton, listening to Cloyne's sensible comments on whatever occurred and admiring the loyal spirit of little Brainard, to whom whatever the government did through any of its officials seemed entirely right. Whenever my mind was troubled because I didn't understand the full meaning of everything that was done or left undone Brainard would remind me that if I knew everything about the war I probably wouldn't be a private soldier, but general of the army or perhaps president of the United States.

"Leave something, a little something, to the colonel or the war department or at least the president," Brainard would say. "If you could do and manage everything, as you seem to wish, the higher officials wouldn't have anything to do but draw their pay, don't you see?"

There was some truth in this, and such a remark would generally pacify me for a few hours. I think, however, that I got most comfort out of my spurs and the joy I anticipated for the time when I should have a horse and tickle his flanks. My father had never allowed one of his horses to be touched with a spur—my experience with old Rover was unknown to him—so there was a pleasure in store for me. And what spurs they were! I had brought them from New York. They were "Mexicans," the wheels nearly three inches in diameter, with points as long as a shingle nail, and they gave out a bell-like jingle as I walked, which was such sweet music to my ear that I never was without them. I even wore them to bed, for, as no one removed any of his clothing when lying down for the night on the floor of his tent, where was the use in taking off one's spurs?

One night this question was answered to some extent. Our tent was round, and the 15 men who lived in it slept with heads toward the outside and feet to the center. By early November the nights were so cold that a man needed a blanket as well as his uniform to keep him warm. Several recruits who admired my spurs had purchased others as much like them as possible of the regimental sutler or storekeeper, and they wore them continually. One evening after our tentful had enjoyed a private supper of fricasseed goose, purchased from a colored woman, we all lay down peaceably to sleep. Whether the geese—there were two of them—were underdone or too rich for men whose ordinary supper was dry bread and sauce of dried apples I don't know, but some of us were affected in our dreams very much like small children after Christmas dinner and unlimited candy. How the trouble began I do not know, but I awoke from a dream of being heavily shackled in a rebel dungeon to find a terrible uproar and struggle going on in the tent, which was as black as Egypt during the plague of darkness. To make matters worse, the most serious part of my dream seemed still in operation, for I could not liberate my feet when I tried to crawl away from the center.

"What blanked cuss has been tying our feet together?" roared one man.

"Let go of my blanket," shouted another, "or I'll break your head!"

"You're a nice one to talk," said a third, "when it's you that's making all the trouble!"

Meanwhile I, who had just awoke and didn't know anything about the difficulty, was being dragged one way and another by my feet, so I raised my own voice and complained of unfair treatment.

The din awoke the first sergeant, one of the only two noncommissioned officers yet appointed for our company, and he opened the tent flap and roared:

"Keep quiet here or I'll send you all to the guardhouse!"

"I'd be greatly obliged, sergeant," said Brainard plaintively, "if you'd send me there right away, if only to get out of this frightful snarl."

"Strike a light," said the sergeant.

Hamilton, who always carried matches, scratched one and lighted the candle, which was in a socket on the tent pole; then, as I struggled to a sitting posture, I beheld an odd spectacle. Nearly all the men in the tent seemed bound together by the feet by blankets or held down by blankets stretched tightly across their legs. After each man had investigated for himself a little while it appeared that the men with Mexican spurs, like all the others, had been tossing uneasily in their sleep, all on account of the goose supper, and had worked the point of their spurs through the blankets over their feet. As the blankets greatly overlapped one another at the center, a spur as often as not had contracted an entangling alliance with some other fellow's blanket, and the harder the wearer tried in his sleep to free himself, tossing and straining, the worse became the misery.

"Unloose yourselves!" said the sergeant.

"Unloose thunder!" shouted a big ex-drayman from New York. "You can't unloose a tie till you find the end, and the ends of these blankets is all inside somewhere."

"Be jabers," grunted an Irishman, "I belave some spalpeen has stole the inds and tuk 'em away."

We picked and pulled and tugged and lost our tempers, and the few men who weren't in the tangle drew out of the crowd and laughed and jeered. Finally one desperate man drew his pocketknife and began to cut himself loose. The others followed his example, and after five minutes of hard work we were free, with an immense heap of woolen rags in the center of the tent and a hard tuft on each spur to tell how the wretchedness began.

"No spurs in bed hereafter," said the captain, who had come over to see the fun and was nearly choking in an effort to keep down his laughter and his dignity. It took an hour of time next day to get the fragments of blanket from my spur wheels, and I wasn't helped by the fellows who sat around and said I was to blame for the whole row, for no one would have bought those infernal spurs if I hadn't set the example.

(TO BE CONTINUED.)

How Bright Joined Cobden.

John Bright's account of how he and Richard Cobden came to join forces against the corn laws early in the last century is as follows: "I was in the depths of grief, I might also say of despair, for the light and sunshine of my house had been extinguished. All that was left on earth of my life and of a too brief happiness was lying still and cold in the chamber above us. Mr. Cobden called upon me, and, having expressed words of condolence, said: 'There are thousands of houses in England at this moment where wives, mothers and children are dying of hunger. Now, when the first paroxysm of your grief is past I would advise you to come with me and we will never rest till the corn law is repealed.' The offer was accepted and the work was done."

A Queer Floating Island.

There is a floating island in Derwentwater, England, not far from Lodore falls. Its travelers are restricted to alternations between the bottom of the lake and the surface. When moved to retirement it sinks and remains in watery seclusion for periods which vary from a few months to as long as seven or eight years. Its existence above or below water appears to be determined by the presence within the island of gases whose quantity governs its buoyancy. Esthwaite lake, in the same neighborhood, boasts a not less puzzling but more amenable island. This has served as a ferryboat to conduct as many as fifteen persons at a time across the bosom of the water upon which it rides.

SOME CROP REPORTS

CORRESPONDENTS TELL OF PROGRESS.

Some Places Where the Crop Will Be About Average—Harveting Has Already Begun and Will Be General in Another Week—Weather Favorable.

Douglas—Providence is blessing the farmers around Douglas with a magnificent crop; to all appearances as good if not superior to last season's yield. From all appearances at present the wheat will average from 25 to 30 bushels per acre. Other grains are looking well, particularly barley, which will be superior to last season's crop. Wheat cutting will commence in about a week and will be general by about the 25th. The grasshoppers have nearly all disappeared around Douglas, to the general satisfaction of everybody, and everything is settling down to its former shape.

Sintaluta—Indications all point to another bumper harvest. While the average yield will hardly equal that of 1902, the increased acroage will bring the total amount fully as much. Some fields, owing to the large amount of weeds, will not go more than 10 or 12 bushels, but there are many that will go over 40. With favorable weather harvest will begin about the 20th inst. The average expected is about 17 bushels, with no damage yet.

Glenboro — Owing to the long drought in July the average of this district will not realize 15 bushels. Especially in the south, among the Icelandic settlers is the wheat light; where last year many fields yielded 35 and 40 bushels per acre, this year 10 bushels will be a good average.

Sidney—The average yield, according to all accounts, will be abour 15 bushels per acre. Barley at Sidney is ripe, and wheat cutting will begin this week.

Rosenfeld—Barley cutting commenced here on the 22nd July and is now nearly completed, and is an average crop, but with short straw. Wheat harvest commenced south of here on August 3. The sample is very good but the crop is light.

Boissevain—Mr. A. S. Barton, of the Boissevain Recorder, states that the crops around Boissevain are in better condition than any he has seen. He expects that the yield will run up to 20 bushels to the acre on his own farm and that the average will at least be over 15 bushels to the acre there.

Pipestone—The crops in this district are good in the valley, and on heavy clay land will probably average 15 to 25 bushels per acre. On light, sandy land wheat will go from 12 to 16 bushels per acre. Rust has put in its appearance, but is not doing much damage. The rust is on the leaves, so it does not injure the wheat any. The heads are well filled. Oats will be a fair average crop and will yield from 20 to 35 bushels to the acre. Barley is fairly good. Flax on well cultivated land will be a fair crop, but on spring breaking will be too short to cut.

Macdonald—Barley cutting has commenced, and the average will be 30 bushels per acre. Wheat cutting will be general about the 12th or 15th, and farmers expect about 22 bushels per acre. The crop in general is fairly good. The straw will be lighter than last year, but with good harvesting and threshing weather the sample should be good.

Shoal Lake—Crop prospects are first-class here. The fields are all in good shape, and if nothing adverse happens the yield in this nistrict will be phenomenal. The early spring and early heavy rains in May have produced the best results here from our very rich deep soil. Frequent showers during the last few days are delaying the ripening of the grain. With favorable weather harvesting will be general by the middle of the month.

Emerson—Wheat cutting throughout the district will be general next week, unless a bad spell of wet weather sets in. Some extra fine fields of grain are to be seen east of the town on the flats and the ridge. They will go 30 bushels or more to the acre, and the total wheat crop for this section of the country will be a good average. Barley is nearly all cut.

Dragged to His Death.

A terrible accident happened at Langdon, N.D., on August 5. Lawrence Hegland, 10 years of age, was riding a pony on the main street, when the animal became frightened at a dog and shied suddenly. The boy was thrown from the saddle, but one foot caught in the stirrup, and he was dragged three blocks to the barn. The pony kicked him, and he was dashed against a pair of street scales and a wagon. When found his skull was crushed and his brains were oozing out. Nearly every bone in his body was broken. He was dead when found.

A winter fair is talked of for Brandon.

A number of judges in the Dominion will shortly be retired.

The King has conferred many honors marking his visit to Ireland.

The British government has entered into a twenty years' agreement with the Cunard line for the carrying of mails.

Sunday cars in Winnipeg are now a possibility, and several of the aldermen favor the innovation.

GROWING OF VEGETABLES

Enclosure of Cheese Cloth Proves Highly Successful at the Experimental Farm.

Several interesting experiments are being conducted this year in the horticultural department of the central experimental farm, Ottawa, by the horticulturist, W. T. Macoun.

One of these experiments is the growing of vegetables in an enclosure, the top, sides and ends of which are made of cheese cloth, as compared with growing them in the open air. The object is to determine what difference there will be in time of maturing and in the tenderness of some of the vegetables. The kinds of vegetables used in this experiment are radishes, lettuce, beets, beans, carrots, tomatoes, cucumbers, watermelons, muskmelons, cauliflower, egg plant and corn. The results of this experiment will be published in the annual report of the farm, but already several interesting facts have been noted. The temperature is at times several degrees higher in the enclosure, the greatest difference being at night which is very favorable to plants that succeed but in hot weather. During heavy storms the rain comes through the cloth as thick as mist, and the soil is hence not compacted as much as outside.

Radishes were ready for use three days earlier inside and were perfectly free from maggots, while those outside were rendered almost worthless on account of them. Cauliflowers inside were also free from maggots, while those outside were badly affected. Tomatoes ripened earlier inside, but it is doubtful if the crop of fruit will set as well as outside. Cucumbers, melons, beans and egg plants are more advanced inside than out.

Even if it does not prove profitable to grow many kinds of vegetables under cheese cloth, there is no doubt but that in the home garden this method would give good satisfaction for most vegetables.

An enclosure has many advantages. The cats, dogs, chickens, birds and even children can be kept out, while all injurious insects, except those already in the soil, are excluded. The cheese cloth used in the experiment cost 4½ cents a yard of 40 inches in width. The height of the enclosure is about 6 feet 6 inches. This experiment was suggested by a somewhat similar one which was tried by Mr. Graham Bell in Cape Breton last year. Experiments of this kind are also being made in the United States.

Tobacco, which has been grown so successfully in the state of Connecticut under cheese cloth, is also being tried in another enclosure on the farm.

The Crops.

The Massey-Harris company has been making careful enquiries of the state of the crops in the west, and the following summary of the situation in Manitoba was sent east from the Winnipeg representative of the company:

"The crop, from Winnipeg on the Southwestern, out to Cartwright and Killarney, is short. It may not run over 10 or 12 bushels an acre. From the station west of Killarney, which is Ninga, to Deloraine, it will possibly run 15 bushels, and west of that to Estevan, on the Soo line, the crop is practically as good as last season. On the Canadian Northern line to Brandon the crops are also short, running at about 12 to 15 bushels per acre. The Pipestone line, west of Arcola, is in good shape, about 18 bushels. The Portage la Prairie crop will proabably run about 16 busheis, and up to Neepawa, on the Northwestern, the same. On the Canadian Northern line, running up to Dauphin, the crop will run fully twenty bushels to the acre; from Minnedosa west over 20 bushels to the acre. The main line from Moosomin westward, up to Prince Albert, will average about 20 bushels to the acre, except the country north of Indian Head and north of Fort Qu'Appelle, where it will possibly run about 12 bushels.

Salaries of Railway Board.

An Ottawa dispatch says Hon. Charles Fitzpatrick has given notice of a resolution to provide for the salaries of the railway commission board. The chief commissioner will be paid a salary of $10,000 per annum; the other two commissioners will be paid $8,000 each per annum; the secretary to be paid a salary to be fixed by the governor-in-council and not to exceed $4,000. The salaries and remunerations of the officers will be fixed by governor-in-council The commissioners and secretary will be paid monthly out of the unappropriated funds in the hands of the receiver-general. All the other salaries will be provided by parliament.

Locomotive engineers running engines with electric head lights have some strange experiences with wild birds and animals that happen to get within range of the powerful rays. They become confused and stand glaring at the light until they are run down. A few days ago on the Rainy River section of the C.N. R., a large moose was run down in this way. Another engineer on the same road nearly had his head battered by an immense owl that flew up from the track in front of his engine, and being blinded by the light came direct at the engine, which was running at a rate of thirty-five miles an hour. The engineer had his head out of the window, and the big bird came so close that it knocked his hat off. Had it struck his head he would undoubtedly have received serious injury.

IN A REFRIGERATOR CAR

Young Man Named Grayson Has a Cold Journey From Halifax.

When the transcontinental express from the east reached Winnipeg on Wednesday last a refrigerator car was attached to the train, being utilized as a through baggage car, was opened to admit the checkers for unloading. The car was loaded to the roof with trunks and boxes. Only visible space, sufficiently large to accommodate a man's proportions was to be found immediately inside the huge swinging doors that are locked from the outside. No man was in sight. But the baggage porters were filled with consternation as from behind the pile of trunks came a frantic cry, "Let me out!" There was no gruffness about the voice to lead the railway officials to believe that a bloated and ragged hobo was stowed away beneath the trunks. The voice was sharp and clear. It might have been a corpse come to life wailing to be let out of its narrow prison. When it dawned on the men that in each end of the car was an ice box they changed the scene of their operations. They climbed to the roof and lifted off a lid and fished out from the dark cavity below a youngish looking chap that did not look the tramp for a minute. He tried to explain, but they took him to the police station. He explained to Magistrate Baker. Harry Grayston is his name. He is a sailor lad, hailing originally from England. He followed the sea in a merchant ship until he became possessed of a longing to become a land-lubber. He secured honorable discharge (he had the papers to show it) and unshipped at Halifax. In the maritime city he secured employment as a gardener. The fame of the land of wheat reached his ears and he aspired to be a farmer. He worked his way to Quebec, where he received an offer to be sent west for a $5 bill. His benefactor took the money and deposited the traveller in the ice-box of the west-bound refrigerator car. The thoughtful benefactor forgot to provide his ward with refreshment for the journey. As a consequence Grayston feasted (in his imagination only) on the delectable fare of the C. P. R. from Quebec to Winnipeg, from Saturday night until Tuesday afternoon. Grayson did not wax fat on the feasting. He was hungry when they fished him out and he dined at the police station. He was charged with riding on the C. P. R. without a ticket. The magistrate heard his story, saw his papers, and let him go to find the farmer with whom he will take service.

Airship Problem Solved.

A dispatch from Sydney, N.S., says Prof. Alexander Graham Bell states that he has solved the airship problem. He has been experimenting for a long time and soon expects to make a trial, which will put the feasibility of aerial navigation beyond any possible doubt.

Prof. Langley, of the Smithsonian Institute, Washington, will be associated with Mr. Bell. Mr. Bell's work has always been with kites. He has foregone the use of silk in his construction work and used a much lighter and stronger material which resembles silk in texture. The object of the approaching experiment is to seek control of his machine. The experiment will be conducted over Brass-d-or Lakes. Dr. Bell himself has already soared in one of his machines to considerable height.

Ranchers and Their Leaseholds.

The department of the interior has given instructions to W. W. Stuart, the newly appointed inspector of ranches, to make a careful enquiry into a complaint that has been frequently made by the large ranchers of the west. The complaint is that their leaseholds are made valueless because homesteaders come forth and homestead the most desirable part of their leaseholds and so cut it up that it becomes practically valueless. Mr. Stuart has been advised to visit the different ranches and make a report and remedy the grievances. It is clearly pointed out, however, that this does not mean that there will be any absolutely closed leaseholds, nor that any really agricultural lands will be taken off the market.

Carnegie Will Die Poor.

Andrew Carnegie has made known his intention to donate $2,500,000 in United States Steel Corporation bonds to Dumferline, Scotland, his birthplace.

He stipulates that the gift shall be employed in keeping up the estate of Pittencrieff, which contains the tower in which Malcolm Canmore married Princess Margaret, and which he recently purchased as a pleasure ground. The gift is also to be used for the maintenance of a theatre, the encouragement of horticulture among the working classes, and the advancement of the moral and material interests of the town.

Belmont won the provincial cricket championship of Manitoba in Winnipeg.

A disastrous cyclone visited Plymton township, Ont., near Forest.

John Dunnett, a Brookdale man, was sentenced to four months at Minnedosa for selling liquor at an Orange picnic.

British and French statesmen may arrange a settlement of existing difficulties and a basis for future arbitration.

The body of a coal heaver, M. Strutgish, was found in the river at West Fort William docks.

THE FAIR A SUCCESS.

Winnipeg Industrial Exhibition Keeps Up its Excellent Past Record.

Winnipeg's great industrial exhibition and fair has been held again this year for the thirteenth time and again a great success has been chronicled. When it was announced that the provincial elections were to be held on the opening day, July 20th, there were many who prophesied that this would ruin the fair, but this by no means proved to be the case, and the event had very little appreciable influence upon the attendances, although of course many stayed away on account of wishing to stay at home to record their vote.

The fact, however, remains that the crowd which assembled on the fair grounds on Citizen's day was the largest yet recorded, being over 27,000 or more than 2,000 in advance of any previous year.

Taking everything into consideration there can be but little doubt but that the exhibition of 1903 was the best which has yet been held. So great a degree of excellence has been attained that it is no easy task to keep up or improve upon the standard of excellence which has been set, and yet under the management of Mr. F. W. Heubach and the enterprising board of directors this has again proved to be the case.

The exhibits this year were most creditable in character, and eastern and western manufacturers and dealers vied with each other in friendly rivalry to put up the best exhibit, with a result which was gratifying to all concerned. The stock parade this year was most striking. Cattle were shown in extraordinary numbers, their quality and appearance attracting the loud applause of the many Americans who were present. Horses were also in great evidence. The display of agricultural implements and threshing outfits was extensive.

The attractions were good all round and gave abundant satisfaction to all who witnessed them. It is difficult to particularize where all were excellent, but possibly the little Piccolo Midgets and the wonderful elephants, so cleverly trained by Mr. Sam Lockhart, were the greatest favorites.

The horse racing was the best ever seen in Winnipeg. Keen contests were the order of each day, and the free-for-all on Friday was a race which will live long in the memories of those who witnessed it. The Midway attractions were remarkably free from anything that was of a degrading tendency and were largely patronized.

The accommodation which had been provided in the city for visitors from the country was found adequate and although the number of country and American visitors was hardly as great as in 1902, yet all were able to secure comfortable rooms and good sleeping accommodation.

To sum up in a few words, the exhibition of 1903 was another unqualified success, and reflects the greatest credit upon the board of directors, General Manager Heubach, and all concerned. A word of praise must be accorded the judges, who worked well and gave almost universal satisfaction.

The Bartender's Revenge.

Since the bar is a necessary evil—to some folk—and is an institution of the state, being licensed, reference to it occasionally must be excused. There are some very clever men behind the bar, and once in awhile a gentleman. Tab is usually kept on him by the metal cash register. He feels that he is watched at all hours by a maze of patented machinery. If he steals a check of 15 cents he is caught, you may say. Not at all! The other day in a fashionable resort the proprietor, big and pompous, "called down" one of his men before some customers. As to the question of right or wrong I say nothing. But presently, when Signor Pomposity turned his back, the bar man emptied a full bottle of the finest whisky into the washing trough under the bar. It was worth at least $1.50. That was his way of getting even. I am informed that it is the usual way of resenting an insult from the proprietor. The mere stealing of 15 cents is a small matter when the bar man is to be trusted with thousands of dollars' worth of liquors. If a man is not to be trusted with change how is he to be trusted with liquors?

Grammar and Writing.

One day Julian Hawthorne was complimenting a certain writer on his wonderful facility in his handling of words and in his construction of sentences. "You are a master of phrases," said the novelist, with a twinkle, and then added:

"How do you do it, anyhow?"

"I don't know," replied the writer. "You see, I have forgotten all that I ever learned at school except that the preposition governs the objective case. To save my life I couldn't tell you the difference between the present tense and a predicate. I write by ear and don't know any more about grammar than a cockroach knows about painting roses on jugs."

"That's all right, my boy, that's all right," said Hawthorne dryly. "No man who's a purist and a master of style ever knows anything about grammar."

A Bitter Pill.

Gwendolin—So Ethel is to marry that young Bob Halstey! Why, he has been jilted by half a dozen girls!

Evelyn—Case of being well shaken before taken, I suppose.—Philadelphia Ledger.

There Were Others.

He (dejectedly)—Is this final? Is there no hope for me?

She—Oh, there must be some hope. There are lots of other girls who are not so particular.—Philadelphia Press.

MADMAN ON A ROOF.

Played on With Fire Hose and Bombards Street—Exciting Capture.

For three hours on the morning of July 5th a man ranged the roofs of the houses in Egmont street, New Cross, and bombarded with slates and bricks as much of London as his range allowed.

About 5 a.m., strange phenomena first began to force themselves on the attention of the residents. Metallic bangs and clashes, the splintering of glass abd the dull impact of heavy objects on the pavement were heard.

Having satisfied herself that it was not an earthquake, a woman opened a window and looked out. Immediately a slate broke against the wall a few feet away.

On the roof opposite a man, clad only in a pair of trousers, was to be seen taking a careful aim at her with a second slate. The woman hastily closed the window and retired downstairs.

In a few ninutes the whole street was awake. The man on the roof—recognized as one Samuel Armstrong—was making capital practice at a row of milk cans outside a dairy.

His strength seemed prodigious. He plucked up tiles and slates and hurled them down unceasingly, moving at intervals from one roof to another.

Having smashed every inch of glass from the bay window to the dairy, he proceeded to break all the others he could reach.

People ran swiftly from their houses and gathered in a crowd at the ends of the street. Two policemen came on the scene, walking boldly along the road.

Their appearance stimulated Armstrong to renewed efforts. A stream of missiles hurtled through the air. By skilful dodging the officers evaded them and got to cover.

While the lunatic on the roof resumed the work of demolishing windows a council of war was held.

One man who owned a rifle undertook to "wing" the slate-thrower. As, however, he was understood to have had all the windows at the front of his house broken, his moderation was not trusted.

At seven o'clock it was decided to call in the aid of the fire brigade, and this unprecedented official fire "call" was telephoned to the Southwark headquarters:

"Called by inmates to dislodge a lunatic who is on top of houses in Egmont street, New Cross, and who has already partly unroofed twenty houses and is pelting the people in the street with slates and brickwork."

All New Cross seemed to be present in the huge crowds that cheered the arrival of a horsed escape and a contingent of firemen a little later. The machine was galloped up Egmont street, and under a furious fire from the tireless roof-walker the men, with one eye on their work and another on their assailant, attached a hose to one of the street hydrants.

A stream of water drenched the man on the roof. He retaliated by dislodging a chimney stack and sending the mass crashing to the pavement. Chimney pots and even coping stones followed.

Fortunately no one was hit, though the wood of the fire escape was gashed and splintered.

The machine was pitched against the building, and the firemen ascended when Armstrong began to tire under the harrassing attack of the hose. They reached the roof and paused.

Then an adroitly directed and powerful jet of water caught the madman full in the face, knocking him over. The firemen dashed forward and seized him, and for a few exciting moments there was a thrilling struggle on the roof.

It ended with Armstrong being overpowered, and amid cheers and hand-clapping from the crowd, he was lowered safely to the ground.

An Ambulance conveyed him to Greenwich infirmary, where he remains. Armstrong is an engineer, who returned home from sea a few days ago. He is 28 years old.

In three hours the engineer did as much "house-breaking" as six ordinary men could do in a day. Twenty-two houses were seriously damaged.

An extraordinary spectacle was presented by Egmont street, with its broken windows, lack of chimney-pots, partially unroofed houses, and wreckage strewn thoroughfare.

Sheets of tarpaulin the next night covered the slateless roofs and gaping windows.—London Express.

Ernest Hesse, a Fort William man, will die as the result of a fall of 50 feet from an elevator.

Country cricket champions had an easy win from Winnipeg players on Friday.

CIRCUS TRAIN WRECKED

Twenty-One Persons Killed at Durand, Mich., in a Collision.

Wallace Bros.' circus trains were wrecked in the Grand Trunk yards at Durand, Mich., on August 7, and 21 men, mostly employees of the circus, were killed outright. Twenty more were injured, some fatally. The show was travelling in two sections over the Grand Trunk tracks from Lansing to Laper, and the accident, it is said, was caused by the failure of the second section of the train to stop on time. The second crashed into the first at full speed. The engine of the second section and four cars of the first section were completely demolished. Much valuable property was destroyed, and the loss to the circus people will probably be very heavy. Some of the victims were railroad people attached to the train. These include Trainmaster J. McCarthy, of the Grand Trunk. Some of the animals were killed.

The scene after the collision was appalling. The wreckage was strewn about and piled high. The shrieks of the injured, and the bellowing of the frightened animals could be heard above the hiss of escaping steam and the excited shoats of the rescuers. It was some hours before the injured were rescued from the wrecked cars. Some of them were in terrible agony and it is thought that some more will die.

The wreck, according to the statement of the engineer of the second section, was caused by the failure of the air brakes to work.

RIDE DOWN STRIKERS.

Crowds in South Russia Were Trampled Under the Horses Feet.

A London cable says: The Daily Mailjs Nikolaieff correspondent, under date of August 2, fully confirms the Times' correspondent's accounts of strikes in South Russia. Groups of men, who assembled last Saturday with the intention of holding meetings, were driven into a solid mass by soldiers. About 2,000 strikers, being enclosed, the Cossacks rode through them, striking right and left with heavy whips, the fallen men being trampled under the horses' feet.

"When the living mass had been thoroughly kneaded to the governor's will," continues the correspondent, "numerous men were arrested as suspected agitators. It is reported that 400 strikers were seriously injured, and that from six to a dozen were dismembered. The affair is a typical piece of administrative savagery. The extraordinary feature of the movement at Odessa is that the police and gendarmes belonging to one department threatened to throw off their uniforms and risk all the terrors of insubordination unless the miserable pittance of 11 to 14 pence, which they are allowed daily, was increased, and the hours of labor reduced. Siberia is losing its terrors even for Russian policemen

"The epidemic of incendiarism is spreading through Russia. Scarcely a day passes without news of conflagrations. In twenty-four of the largest towns the damage by fire during the past month is estimated at from $30,000,000 to $35,000,000. The object of the bulk of the fires is to get insurance money. Many of the incendiaries are Jews, and the insurance companies in some cases have raised premiums 50 per cent.

Terrific Hail Storm.

A dispatch from Denver says: Details of the storm which prevailed along the eastern slope of the Rocky mountains in Colorado and Southern Wyoming show it to have been much more severe than at first reported. In the neighborhood of Greely and Eaton in the northern part of Colorado, chunks of ice measuring in some instances ten inches in length fell. Sheep were struck dead. Farm houses and barns were wrecked and crops ruined. Near Greely a man was rendered unconscious by the hail. The damage in and around Lafayette is estimated at $200,000.

Lord Strathcona celebrated his 82nd birthday in London on Friday last.

Thirteen Scotchmen who attempted to cross the international boundary at Gretna without passports, were arrested and returned to Winnipeg.

Tabloid beer is the latest. The tabloid can be carried in the vest pocket and soaked or dropped into a cup of water as the circumstances warrant. To the man who likes his beer this is the greatest invention of the age.

Baby's Breakfast

The best breakfast, dinner or supper for a child is

Victor Brand Evaporated **Cream**

It is the full cream cows milk, evaporated and sterilized. It contains all the bone, flesh and muscle building elements.

Makes Happy Healthy Babies.

THE FERNIE FREE PRESS, FERNIE BRITISH COLUMBIA

SATURDAY, AUGUST 15, 1903.

EDITORIAL NOTES

THE trackmen exhibited good judgement when they selected Fernie as the meeting ground for their Labor Day excursion. The town is centrally situated; it is surrounded with unrivalled mountain scenery; it has excellent grounds and other facilities for a big celebration; and it has a population that will welcome the visitors and do everything possible to provide entertainment for them.

* * *

THE selection of Mr. E. C. Smith as the standard bearer of the Liberal party in the Fernie district will no doubt meet with the approval of the great mass of the Liberals throughout the district. It is impossible to find a man strong in all points and in Mr. Smith the Conservatives will doubtless find weaknesses, but it is safe to say that the convention has chosen the strongest all-round man in the Liberal party of the Fernie district.

* * *

THE Conservatives held a very satisfactory organization meeting last evening, and they are getting in shape for a successful convention two weeks hence. A study of the voters list shows that on a basis of one vote for every fifty names, or fraction thereof, the convention will consist of about 30 delegates, with 14 of these from Fernie and Coal Creek mines.

* * *

A visit to the Chinese gardens to the south of the town will dispell any doubts as to the adaptation of this soil and climate for the growing of vegetables. These gardens produce an astonishing amount of all kinds of the finest vegetables. The gardens on the townsite are improving year by year, and this season there are many which would be a credit to places of warmer altitudes. These gardens demonstrate the fact that a very small piece of ground properly worked can produce abundant supplies of fresh vegetables for the family table.

* * *

The editor of the Phoenix Pioneer has a deep vein of humor in him, or at least he is able to extract humor out of bare hard facts until he is fairly bubbling over with it. The statements made by Mr. Keffer in Fernie recently on the Coal Company's fair treatment of the smelters, and the certainty of an abundant supply of coke in the near future, were matters which afforded that newspaper man endless amusement, while all others were wondering where the joke was. Or is it possible that the Pioneer man has not yet learned that there are 500 ovens nearing completion in these camps, and that in a very short time the output of coke will be doubled? We lean strongly to the belief that Mr. Keffer knows the fuel situation much better than does his humorous critic.

* * *

One of the weakest features associated with party government is the distribution of government positions and more particularly those connected with post offices. These positions are left to the advise of the local representative who in turn leaves it to the discretion of his strong party supporters, and the wisdom of the choice is thus dependent upon the good sense of the latter. Too often the general efficiency of the service and the rights of the public are made subservient to party interests. The government provides one trusty safe-guard, however, which the public does not always appreciate. It is the duty of the Inspector to investigate all complaints and make unbiased reports to the government in each case. Had the people of Michel taken advantage of this safe guard there is no doubt that the present scandal in that office would never have occurred. The Inspector received the first complaint only about a month ago, and then it came from Ottawa.

A GOVERNMENT MISTAKE.

Timber Licenses Recently Granted in Block 4594 Cancelled.

Government Agent Armstrong has received instructions from the Lands and Works Department to cancel the timber licenses recently granted in block 4594. Among those who have been notified to return their licenses are Jos. Jean and T. Label. They each secured two licenses for timber claims near Hosmer.

The notice states that the licenses were issued by mistake. It is reported that a number of others, who received licenses recently, have been served with similar notices. These licenses were granted by Premier McBride during the absence of Messrs Green and Wilson and the latter gentlemen upon their return, it is said, caused their cancellation.

NOTICE.

In the last issue of the Fernie Free Press we published a number of hotels that was fair to organized labor. Since then the hotels Union and Muskoka have agreed to the union's terms and the Hotel Waldorf has newly opened and is prepared to sign the union scale. We wish to notify the public that all the hotels in Fernie are fair to organized labor.

WM. MILLS, President — C. E LADEROUTE, Sec.-Treas

MICHEL

From Our Own Correspondent.

A. Mutz was in town on Tuesday.

C. O. Demaurez, jeweller, spent a couple of days in town this week doing repair work.

W. S. Keay, collector of customs, was in Michel this week.

Fred Stork spent Tuesday evening in town.

Dr. Bonnell was in town Wednesday.

J. H. Tonkin, general manager, made a trip here this week.

A. B. Trites, of the Trites-Wood Co., was here on Thursday evening.

C. Laidley was in town on business on Tuesday.

I. McKay, government road inspector, was in town this week.

Mr. Parker, inspector of weights and measures, was here on official business and found everthing in first class shape the scales on the tipple being in favor of the men.

Mr. McEachrean, of Morrissey held Presbyterian service here Thursday evening.

Rev. Mr. Houghton, of Fernie, conducted Church of England service here Thursday evening.

The Methodist church here is being pushed along rapidly and will be ready for service in a short time.

The raspberries are plentiful around Michel prairie and a number have taking advantage of the fine weather for borrying.

The campers returned from Crows Nest Lake on Monday morning. Fish were scarce.

W. Rogers visited Fernie on Thursday.

Messrs. A. P. Walker and Hutchison of Fernie, were up the river a couple of days registering voters.

Mr. A. Gammage visited Fernie on Friday.

H. D. Turner spent a couple of days in Fernie this week

The Electrical Exhibition given in Michel Hall Wednesday evening was largely attended.

The wife and family of Mr. Lee overman in No. 8 arrived here Monday morning.

Mr. Hazelwood, late of Fernie Drug store, has taken charge of the post office here

The mines here were practically closed on Tuesday no coal being put out on account of the tipple not running. The elevators broke early in the morning and were not fixed till late in the evening.

W. H. Dorman, post-office inspector, was in town for some time installing Mr. Hazelwood and straightening out the office affairs here.

Constable Henderson, B. Owens and Ferguson attended court in Fernie on Wednesday giving evidence on the case of Fetseck who was taken up some time ago.

Fresh Fruit AND Vegetables arriving daily

W. F. Cuthbert Confectioner

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1, That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electoral districts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

Louis Carosella & Co.

WHOLESALE LIQUOR MERCHANTS

Fernie, B. C.

Notice is hereby given that I, Mary Connor, 60 days after date intend to apply to the Chief Commissioner of Lands and Works for permission to purchase 640 acres of land. Commencing at the north-east corner post of G. O. Foss's location, thence running 80 chains west, thence 80 chains north, thence 80 chains east, thence 80 chains south to the point of commencement.

234-8t MARY CONNOR,

Dated June 24th, 1903.

IN THE COUNTY COURT OF KOOTENAY HOLDEN AT FORT STEFLE.

—IN PROBATE—

Notice is hereby given that on the 23rd day of July, 1903, it was ordered by J. A. Florin, Esq., Judge of the said Court, that James Ferguson Armstrong, Official Administrator of the County of Kootenay, be administrator of all and singular the estate of ALEX. BODIE, of FERNIE, miner, deceased intestate.

Every person indebted to the deceased is required to make payment forthwith to the undersigned.

Every person having in possession effects belonging to the deceased is required forthwith to notify the undersigned.

Every creditor, or other person, having any claim upon or interest in the distribution of the personal estate of the said deceased is required within thirty days of this date to send by registered letter, addressed to the undersigned, his name and address and the full particulars of his claim or interest and a statement of his account, and the nature of the security (if any) held by him.

After the expiration of the said thirty days the Administrator will proceed with the distribution of the estate having regard to those claims only of which he shall have had notice.

Dated at Fort Steele this 30th day of July, 1903

JAMES FERGUSON ARMSTRONG,
Official Administrator,
Fort Steele, B.C.

Yours for $15

Works are Elgin and Waltham, as you choose. Case is 14 K., gold inside and out, but not all through; as pretty as solid gold, and stronger; guaranteed to wear 25 years.

If you think of buying a Watch you ought to learn about the "Gold Filled" case. I can show you five sizes and a good variety of patterns, and would like to describe its construction.

NOTICE

A convention of the Liberals of the Fernie district for the purpose of nominating a candidate, will be held in Fernie, on Aug. 14th, at 8 p.m.

Representation at this convention has been arranged on the following basis: Fernie 5 delegates, Michel 3 delegates, Morrissey Mines 3 delegates, Coal Creek 1 delegate, Elko 1 delegate, Elkmouth 1 delegate, Jaffray 1 delegate.

The Liberals of the district are requested to act in accordance with these arrangements.

FRED STORK, President F. L. A. — J. H. BRICKER, Secy. F. L. A.

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber from the following described lands on the west side of Kootenay River in the District of East Kootenay:—Commencing at the north-west corner of F. Milton's timber license, number 2318, on Skookumchuck river, thence north 160 chains, thence east 40 chains, thence south 160 chains, thence west 40 chains to the place of commencement.

Dated at Fernie, July 11th, '03. T. GRICE.

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of Fast Kootenay:

1. Commencing at a point 160 chains west and 80 chains south of the north west corner of M. J. Claxton's timber license No. 2310, on Skookumchuck river, thence south 160 chains, thence east 40 chains, thence north 160 chains, thence west 40 chains to place of commencement.

2. Commencing at a point 160 chains west and 80 chains south of the north west corner of M. J. Claxton's timber license No. 2310, on Skookumchuck river, thence south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to place of commencement.

A. F. GRIMES

Dated at Fernie, July 14th, 1903. 239-4

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay:

1. Commencing at a point 80 chains south and 80 chains west of the north west corner of M. J. Claxton's timber licence No. 2310, on Skookumchuck river, thence south 160 chains, thence east 40 chains, thence north 160 chains, thence west 40 chains to place of commencement.

2. Commencing at a point 80 chains south and 80 chains west of the north west corner of M. J. Claxton's timber license No. 2310, on Skookumchuck river, thence south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to place of commencement.

W. H. GRIMES.

Dated at Fernie, July 14st, 1903. 239-4

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay:

Commencing at the north west corner of M. Claxton's timber license No. 2313, thence running north 160 chains, thence west 40 chains, thence south 160 chains, thence east 40 chains to place of commencement. W. E. GRIMES.

Dated at Fernie, May 13th, 1903. 239-4

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay:

1. Commencing at the north west corner of J. W. Claxton's timber license No. 2315, thence north 160 chains, thence east 40 chains, thence south 160 chains, thence west 40 chains to place of commencement.

2. Commencing at the north west corner of J. W. Claxton's timber license No. 2315, thence north 160 chains, thence west 40 chains, thence south 160 chains, thence east 40 chains to place of commencement. J. A. BROLEY

Pay-day next Saturday.

Self-sealer rings at Suddaby's. x

Hazelwood Ice Cream at Cuthbert's.

Drink Maple Leaf Tea and you will have no other. x

Miss Ralph returned from the east on Monday.

Piano for sale, cheap. Apply Room 4, Turner block. x

Dr. McSorley, of Michel, was in town on Thursday.

Use "Griffin Brand" brix butter, you can get none better. x

F. S. Clements and wife, of Nelson, were in town on Monday.

Miss Campbell, of Lethbridge, is the guest of Mrs. H. J. Johnson.

Mrs. Rae and Miss Crysler, of Ottawa, are the guests of Mrs. McEvoy.

P. Lund, of Wardner, was in town on a business trip on Wednesday.

Mrs. (Dr.) Corson entertained a number of friends on Thursday evening.

Ed. Wildman took in the sports at Lethbridge returning on Thursday.

W. B. Ganong, of the Royal Hotel, was in Cranbook several days this week.

H. J. McQuaid was down to Pincher Creek on Sunday and Monday visiting friends.

The jail was crowded this week for a couple of days there being as many as 14 prisoners.

W. Hanley is building a livery stable on the lot at the rear of the Coal Company's office.

Mr. and Mrs. Clode returned from a holiday trip to coast points on Wednesday evening.

British Columbia souvenir playing cards. Latest novelty. The Fernie Drug Store.

The Misses Foss, of Michel, were the guests of Miss Macdonald a couple of days this week.

Miss Evans, of Guelph, arrived on Thursday on a lengthy visit to her sister, Mrs. A. C. Liphardt.

Mrs. Davis and daughter, Florence, returned from a lengthy visit to the coast on Wednesday evening.

Mrs. A. B. Trites entertained a large number of friends to an 'At Home' on Wednesday afternoon.

We buy, sell and exchange new and second-hand furniture, stoves, etc., at the B. C. Furniture Company. x-t.f.

A Klockman, of Spokane, was in town this week negotiating for a business interest in the Fort Steele Brewing Co.

J. L. Beach arrived recently from Calgary to take charge of the books of the Fernie branch of the Calgary Cattle Co.

W. F. Cuthbert and H. Bentley took in the sports at Lethbridge. They report the celebration as an unqualified success.

LOST—Small gold lace pin, set with brilliants, in form of cross. Finder kindly return to Crow's Nest Pass Coal Co. office.

As for "Griffin Brand" pig's hocks and tongues. They are boneless and cooked ready to serve. The real thing for picnic lunches.

Robt. Nearing moved his family to Morrissey Mines on Monday, where he has charge of an important position on the mine train.

A ball was gotten up by a few young men of the town for last night in Princess hall. A very pleasant time was spent by all who attended.

Messrs. Switzer and A. J. Mott returned on Monday from a holiday trip to California where they report having had an enjoyable time.

Mr. J. Kenny arrived this week from Wallace, Idaho. His friends, including lacrosse and hockey enthusiasts, are pleased to see him back again.

The Ymir Liberal Convention resulted in the unanimous nomination of Alfred Parr, President of the Ymir Miners' Union. Noble Binns, of Trail, was also nominated but he withdrew his name.

A complete line of wall paper has been added to the housefurnishing department of the B. C. Furniture Co. and has been marked down to mid-summer prices, less than you have been paying here before. x

Two marriages licenses were issued from the Fernie office this week: The contracting parties were, William Piper, of Fernie, and Alice Turnham, of Kilburn, Surrey, England. Horatio Nelson of Fernie, and Elizabeth Dick, of Fernie.

Sewing machines—the New Model and Empire—warranted by the manufacturers for ten years are now sold by the B. C. Furniture Co. These machines while comprising all the latest improvements of the high-priced machines, are sold at a medium price—$25 each. x

Mr. E. J. Eacrett has resigned his position of school teacher at Cardston and has taken a permanent position on the staff of the Free Press. Mr. Eacrett filled the position temporarily during the holidays and he took a run down to Cardston last Saturday to make necessary arrangements as above.

C. Richards shipped a car of goods to Michel on Monday.

The High River Eye Opener has been refused the use of His Majesty's mails.

The Waldorf Hotel, which has been closed for a few weeks, re-opened to-day.

P. R. Lundie, who has been absent on a trip to Scotland for the past three months, returned this morning.

Rev. P. H. McEwen, Supt. of Baptist missions, returned last evening from an official visit to Rossland, Trail, Nelson and other Kootenay points.

John Clark will lecture in the Methodist church on Wednesday evening on, "To and Fro in London." He comes well recommended as an entertainer.

Provincial Constable Wilson, of Creston, brought Fetseck and Frederico from Nelson for their trial on Wednesday and returned with them on Thursday.

J. G. Cummings, provincial surveyor of Fort Steele, was in town this week doing some work for A. B. Trites. His wife and his brother, A. Cummings, were also in Fernie.

The Angels Rest and the Ex-Angels played a game of foot-ball against the town on Thursday evening. The match was closely contested and ended in a score of 1-0 in favor of the town team.

The tie up of the new railway between Frank and the Lille collieries on account of an injunction by the contractors has been temporarily relieved pending the settlements of the courts, and development work is going steadily on.

The regular services of the Methodist church will be held on Sunday. In the morning the pastor's subject will be "Separated unto God's Work," and in the evening he will consider the "Value of the Straggler."

The B. C. Furniture Co. are now prepared to do all kinds of picture framing also framing charters, diplomas, resolutions, etc., for lodges, schools and societies in the latest and most exclusive designs. A complete line of art goods are carried in stock. x

Are you thinking of buying a piano? The Mason and Risch ranks as one of the best. Endorsed by Liszt, the great pianist, and Sir Alexander Mackenzie, the great English composer and musical director. Call on H. L. Staebler, agent for Fernie and vicinity. Studio—Room 4, Turner Block.

Two men were brought up from Morrissey to the Fernie hospital last Saturday evening. One was suffering from a broken leg owing to an accident in the mines, and the other was a peculiar case of paralysis which came on the unfortunate man while he was at work in the mines.

A bunch of nineteen coal licenses for claims up the Elk above Michel have been issued to as many Fernie citizens who have agreed to handle them together. Already very flattering offers have been made for the property but the license holders are disposed to hold out for something better.

The poles for the new electric light system are all up and the town wears a very metropolitan air in consequence. Some typographical errors were made in reporting the new system last week. The capacity of the old system is 1200, not 12,000 lights, and the new system will be 5000, not 25,000 as stated.

Messrs. Cree & Hutchison, the well known brokers of this town, have been appointed sole agents for the Elk Valley for Douglas, Lacey & Co., of New York, the largest stock and share brokers in the world. Mr. E. M. Mathews, late western manager for the R. G. Dun & Co., has been appointed general manager for B. C.

W. B. Ganong, of the Royal hotel, is making arrangements whereby the progress of the big international yacht races will be shown by two miniature boats on wires stretched across the street from the Royal corner. The Shamrock will be painted green and the Reliance white. As the full press despatches are received the little boats will move on the wires to show the relative positions of the racers. The first race occurs on Thursday and the second on Saturday. The first despatch will be received about 9 a.m.

School was re-opened on Monday with one teacher short, the principal engaged by the school board not showing up. It appears the trustees had offered the position to W. E. Bavis, of Calgary, and he notified the Board of his acceptance of same. As he did not arrive by Monday efforts were made to learn the reason for his delay. After sending three telegrams it was learned that Mr. Bavis had accepted position in a school near Vancouver and had left to take charge. The trustees wired to-day to A. B. McNeil, of Victoria, another applicant, offering him the position.

Mr. Willingham's milk waggon figured conspicuously in a runaway accident near the station on Monday morning. The rig was left standing near the water tank where an engine was standing. The horse was tied to the weight but this was not heavy enough to overcome the equine terror when the engine began to let off steam. It dashed off and turning the first corner too sharp, its speed was suddenly stopped by the waggon turning upside down, upsetting the horse. Little damage was done with the exception of a considerable waste of milk.

COAL CREEK MINES.

(From Our Own Correspondent)

Work has again been renewed on the new engine room for the cable.

Coal will soon be mined now from No. 5 as the track is about complete.

Our mines have been averaging over eleven hundred tons a day for the last en days.

Mr. Hereron, one of Mrs. McCliment's boarders, is suffering from rheumatism and has been off work for some time.

Mr. White, supply clerk is ill this week at his home in Fernie. Mr. Marshall of the Fernie office is filling the vacancy.

Mrs. Dunsmuir and family arrived this week from the coast. Mr. Dunsmuir's foot is slowly improving.

The lumber for the new Methodist church has been ordered and building operations will commence next week. Mr. Brolev, of Fernie, has the contract

Mr. Bristow met with an accident this week which will keep him from work for some time. He has had his leg and ankle crushed by a loaded car. The doctor scarcely knows whether any bones are broken or not.

No teacher has as yet been secured for Coal Creek mines. A number of offers have been accepted but the applicants have failed to materialize. So we may expect our school to be closed for a couple of weeks.

On the 7th of August Rev. John Robson, B. A., of Fernie visited Coal Creek mines for the purpose of organizing a Quarterly Official Board of the Methodist church. At the close of the meeting the Trustee Board was also organized to take charge of the building to be constructed.

The wedding of Horatio Nelson and Miss Elizabeth Dick two well known young people of Coal Creek mines was solemnized on Friday forenoon by Rev. Jno. Robson, of Fernie, at the residence of Mr. James Smith. It is the purpose of the young people to start housekeeping at the mines right away. We join in wishing them much success in life.

Mr. Hudock's little boy was badly injured last week while playing on the edge of the grading near No. 5. The little fellow fell down the embankment and had his face badly cut. His face is very badly swollen on one side and consequently he is suffering very much. His little brother is still suffering from the effects of drinking some lye and allowing it to run over his body.

SMALL-POX AT MORRISSEY.

Negress From Montana the Victim. Strict Guarantine Enforced.

A case of small-pox was discovered at the old town of Morrissey on Thursday. The patient is a colored lady who arrived three days previous from Montana accompanied by her three children. Dr. Willson was called and pronounced the case small-pox. The patient was removed to a log house in the vicinity. The Australian Hotel, where the party had been staying was placed under the strictest quarantine. The hotel had only nine inmates at the time. Constable Tranter reported the matter to Chief McMullin who instructed him to take every precaution for the prevention of the spread of the disease.

A DESIRABLE PREMIUM

In making choice of a premium for their weekly for season 1901-02 the Free Press, Winnipeg, have secured something quite out of the ordinary.

Consideration of the value to the farmers of Western Canada of an accurate thermometer and a reliable barometer led to negotiations with the largest makers of observatory instruments and appliances in America, and as a result of those negotiations there has been obtained a large number of accurate and reliable combined thermonmeters and barometers, which have been tested carefully, after being made especially to suit the extremes of climate met with in this country. The barometer is guaranteed to indicate atmospheric changes correctly and the thermometer to register temperatures down to 50 degrees below zero.

These handsome instruments, indispensable in every home in Western Canada, will be sent free to any person forwarding $1.00 for the Weekly Free Press.

Cree & Hutchison

REAL ESTATE

WE HAVE FOR SALE

One of the best dwellings in town. Cheap for cash.

Two good cottages, $800 each for a quick sale.

A boarding house cheap and on very easy terms; 15 rooms.

These are only a few of the snaps we have. If you want to buy or sell property in any part of the Elk River Valley, see us.

THE CANADIAN BANK OF COMMERCE

Head Office, Toronto.

MY HEART'S DARLING

BY W. HEMMBURG.

Hortense was still pale as Waldemar entered the room with rapid steps and hastened to her with both hands outstretched.

"How shall I excuse myself, Hortense? I missed the train, but from no fault of mine; on the way to the station we broke a wheel. I had, in order to catch the first train, drive through the woods, and —do you know the wood roads? No? Well, you shall never know them. The result was that I did not even catch the second train, and had to come here in the way train." He had, while talking, kissed her beautiful hands. "Forgive me," he said, again.

The color gradually returned to her cheeks; but she could not say a word. It was impossible for her to be untruthful. She did not say, "I have been anxious about you," she only said, "Worse things might happen than a broken wheel, Waldemar. Let us go to grandpapa."

Lucie, who had retired to her room, did not meet the engaged pair until dinner-time. Hortense said but little; but Herr Weber was radiant with happiness. He talked with the baron about the prospects of the harvest. The young brother from Hamburg occupied himself exclusively with mademoiselle, who had nothing good to say for Hamburg. She had, in fact, only spent twenty-four hours there, and, except a plate of turtle soup, which had tasted very good to her, she could not remember anything worthy of notice. Marseilles, now, was a very different place. He did not succeed in having any conversation with Lucie. The pale girl in a black dress, with the large brown eyes that seemed to look so sadly into every corner, seemed to him at the same time attractive and repellent. "Such a girl is only to be found in a small town," thought he, "in such an owl's nest as this house seems to be; she ought to come to a cheerful place like Hamburg; there we should soon have roses in her cheeks. Perhaps she will be more talkative to-morrow at the wedding-dinner."

Hortense was ready at twelve o'clock in her black dress with the shining jet, and was waiting for her bridegroom, who was to accompany her downstairs to the baron before they drove to the magistrate for the civil contract.

Lucie, who had helped Hortense to dress, brought her a glass ol wine, she looked so pale and nervous.

Just then Herr Weber came in. Hortense hastily swallowed a mouthful of wine and went toward him.

"I am ready," she said. Then she turned once more to Lucie. "Adieu, Lucie."

"Adieu, Hortense," answered the girl, with tearful eyes, and in her heart she said, "May this step be a happy one."

As they were in the act of leaving the house, Peter came toward them with a letter.

"For Herr Weber; it has come by a special messenger."

Waldemar Weber looked at the letter which the servant handed him, and shook his head,

"One moment," he said to Hortense, who had stepped back a little, and still turning toward her he opened the envelope and took out a crumpled piece of paper like a cutting from a newspaper. As he read it a deep color mounted to his brow. He turned the paper on the other side, then read it all through again. An embarrassing pause ensued. Hortense went up to the mirror and arranged the veil on her hat. Lucie saw how her fingers trembled, and that her eyes were not fastened on her own reflection, but were intent on that of Herr Weber as he stood there reading. His face was no longer flushed, but pale, and the blue veins seemed to stand out on his temples. He slowly put the cutting and the envelope in the breast pocket of his coat and turned to Hortense. "Forgive the delay," he said, quickly, and offered her his arm. And as he looked in her eyes, which for the moment looked dull and lifeless, he asked: "Do you not feel well?"

"Perfectly," she said, breathing again freely; and she stepped before him out of the door.

Lucie had already put on her dress for the wedding when Hortense came back. She waited in the bedroom to help the baroness with the wedding-dress. She heard Weber and his brother accompanying her to the door of the room, and how merrily she was talking to them, and she could hardly believe her eyes as Hortense entered pale and tired, shut the door, and sinking in the nearest chair, broke into tears.

It was the first time Lucie had ever seen her weep; and she sobbed so passionately, so despairingly that the girl was frightened. She embraced the trembling figure, but did not dare to speak a word to comfort such grief.

By degrees Hortense became calmer. She took her hands down from her tear-stained face and looked out of the window at the rustling leaves.

"Let us go on. I will do it." She sprung up and threw her arms roung the girl's neck. "I am already Hortense Weber, Lucie. I have a hard road before me; but — but you must go with me, Lucie; you, my good angel." And she kissed the girl so passionately as she had just before wept. "Now you can adorn the sacrifice," she said, and threw her jetted hat down upon the table. "Do I look as if I had been crying, Lucie? However, brides ought to cry!" She hastily took off her black dress to change it for the white wedding one. "Have you any idea what was in the note brought by a special messenger?" she asked, as she was sitting before the looking-glass, while Lucie fastened her veil and the wreath of orange-blossoms in her dark hair.

"No, Hortense. Some business matter, perhaps. Why?"

"I thought—I thought—you know —do not laugh at me—"

"Oh, is your father haunting you again?"

"Oh, Lucie, thank God you have never gone through what I have! But it is over. Give me the chain of pearls that Waldemar brought to-day. I ought to wear it, should I not? I would prefer to go in dust and ashes."

Lucie's fingers clasped the chain round Hortense's neck, and she brought her the fragrant bouquet of white roses and orange-blossoms.

"I will leave you alone, now," said she; "he will be here at once to escort you down; and I must be down before you in the vaulted room."

"How sad your eyes look," said Hortense.

Lucie waved her hand and went out. It seemed as if her veins were filled with lead; she had to make a violent effort to rise to her feet.

Peter, who was waiting for the bridal couple at the door, opened it for her.

"They all are assembled," he whispered.

She went in with downcast eyes, and placed herself automatically at mademoiselle's side.

"Where have you been staying so long?" whispered the latter; "we have been standing here an eternity."

The door now opened again, a silken train rustled, and the bridal pair entered. There was a deep pause, and then the minister's voice sounded loud and full through the room. "Be faithful unto death, and I will give thee a crown of life." He spoke of the faithfulness which is the Alpha and Omega of the marriage state, saying God had given to man no greater virtue than faithfulness. Where there was perfect confidence no mistrust could enter, and no misunderstandings arise.

The words went to Lucie's heart like daggers. She felt herself condemned. Faith! had she not broken her faith to him, to her sister, to the orphaned children of that sister? Her head swam. Would the preacher never come to the end of his sermon?

At last the newly married couple knelt and received the blessing. Then a loud "Amen," a low whispering, the restle of the bride's train, and Lucie knew the ceremony was over. Thank God! She had no clear idea of what went on about her. She only saw that Hortense threw her arms round the old baron's neck, that all clustered round the newly married pair to shake hands, and she heard a cry of terror as the old baron tottered and fell, apparently lifeless, in the bridegroom's arms.

A scene of indescribable confusion followed. They crowded round the old man, who lay there motionless, sprinkled water on his face, and called for a physician.

It was not long before Dr. Adler, whom the servant had fortunately met in the street, appeared.

"Do not alarm yourself, madame, it is only a fainting fit," he said, after a brief examination. "The excitement and the sultry air." He took him in his arms, as if he were a child, and carried him upstairs. Hortense and her new husband hastened after him; the others remained talking in low tones.

"He was not able to stand so long," remarked the old major, as he stroked his white beard. "I told him beforehand that he ought to have a chair brought in for himself; but his motto always was, 'Rather die than be wanting in courtesy.'"

The young brother from Hamburg stepped up to Lucie, who was leaning, as if weak, against the wall. He was evidently in anything but a cheerful mood.

"That was more of a funeral sermon," said he, but so low that the minister, who was talking to mademoiselle, could not hear him. "As if he expected one or other of them to die at least within a year. I have not observed that either of them look consumptive, nor have they the feebleness of old age."

But the pale, silent girl had no smile for his joke. She thought of Mathilda, and said in a low voice:

"It might come quickly; and then if one has done wrong to another, it hurt's all one's life."

The young man's eyes opened wide; he actually shuddered. So young, so charming, and so gloomy; and he must bear this through a long dinner! He would be glad enough when he was once more steaming for Hamburg; and to-morrow noon he would warn Robert Synkoff, when he met him at the Bourse, never to fall in love with a girl from a little town—one might as well plant a weeping willow in his garden.

"Adler," said Waldemar Weber, as the old baron came to himself, as he was going to the dining-room with Hortense on his arm, "do me the favor to stay here; we still feel anxious and—"

"I can not, Waldemar, indeed; but I will come again, about half past six, and see how he is. Farewell; and if I should not see you again, then all the happiness in the world, my old friend."

In a few minutes the little company had assembled in the dining-room. The baron, too, appeared again; he had recovered rapidly, and insisted on being present at the dinner. He sat at the head of the table between the bridle pair. The conversation was not animated. Mademoiselle and the clergyman and the old Major von Schenk kept up the most of it. The pastor proposed a toast to the newly-married pair and the major to the baron. Then they talked of Russian politics, of Italy, and the cholera. Towards the end of the dinner it was somewhat more cheerful. The young Weber offered Lucie a philopena, but she refused. He was more successful with mademoiselle; he allowed her to win at once, and inquired particularly as to her wishes. "A charming, really charming man," thought the old lady, who was delighted, and wished at once for a red Japanese fan, with gold embroidery, and quite large. He smilingly noted it down in his pocket-book.

When the ices were served, Hortense signed to Lucie to come to her The girl pushed a chair between the baron's and that of the bride, and they sat there hand in hand, and whispered to each other. At this moment, Dr. Adler entered the vaulted room, but remained hidden behind the orange-trees round the altar, and looked through the drawn portieres at the wedding favors, where the baron, apparently quite restored to health, was presiding. His eyes remained fixed on the two young women's heads, bent towards each other next to the baron. In the curious light, which was a blending of daylight and wax candles, the girl's hair looked like spun gold on her white brow. Sometimes Hortense would lean forward, and her veil would float about Lucie's face as if she too were wearing bridal array, and his heart beat at the remembrance of the dream which had been so nearly realized. Where would she find a home? Would Kemmert good-naturedly take her back again? He remembered the Oberforster's harsh condemnation of the girl as his dying wife longed for her sister and she did not come. He felt he must write a letter of entreaty to Kemmert if the young and beautiful girl was to be left alone to face the dangers of life. He shook his head; what made him think of doing so? What was her fate to him? Whether her voyage on the sea of life was happy and peaceful, or whether she went down—he had no claim on her, did not wish one. The chairs were now being pushed back. Hortense had risen. He stepped quickly into a window niche as if he feared being seen; he did not want to meet her.

Within coffee was being served, and an animated conversation was going on. Why did he not go? What held him back? The baron certainly did not need him any longer, and still, strange to say, he did not move from the spot. He looked absently at the brightly colored stained-glass windows, and by degrees what he saw there claimed his attention. The stained glass was very old; he knew that; the baron prided himself upon his taste for antiquities. A young patrician, in the costume of the early part of the sixteenth century, was standing in an arched hall with tiled floor. "Wernher Grundmann" was to be read beneath. On the other side of the window, with the same surroundings, Adler saw a young, fair-haired woman in a richly colored dress with a cap embroidered with gold, her head modestly bent, and a distaff in her hand. "Bar bent, and a distaff in her hand. "Barbara Grundmann, who was three weeks married," he read there. The inscription was divided between the two windows.

Adler could not take his eyes from this Barbara, there was something so attractive in the figure; the painter must have had an excellent model. He found himself beginning to envy this ancient Wernher Grundmann; he felt as if he knew this head so gracefully inclined to one side, and the winning smile about the mouth. He hastily passed his hand over his eyes. Then he held his breath; the noise of a silken train was heard in the room, and light feet trod the steps.

"Draw the portiere, Lucie," he heard Hortense say, "and let us tell each other good-bye. Do not cry, darling; we will see each other again in three weeks; think of me in the meantime."

"Farewell, Hortense," answered the soft, girlish voice; "be happy. I can not wish you better than that you may soon learn to love him with all your heart."

"You ought to know better than I, Lucie, that love is a gift from Heaven; it can not be forced or commanded."

"I know it; but I know, too, that one sometimes possesses this gift without knowing it; it sleeps, and one does not suspect its presence till some chance wakes it and it looks about with sunny blue eyes, or with tears that never let themselves be dried. That is when it awakes too late, and repentance comes and says, 'Hadst thou only had patience; but now it is gone for ever and ever!'"

"Ah, Lucie, dry your tears. I tell you it is all imagination; do not make my heart heavier than it is; give me a kiss and go in to our guests. Au revoir, Lucie."

All was silent in the room, only the rustling of the silk was heard by the man who stood so motionless before the picture of Frau Barbara, A suppressed sob, another farewell, then the bride went to the door that led into the hall, and the curtains closed behind a white figure. He was alone.

What had he heard? Did she regret that she had gone, did she really regret? It seemed to him that he must hasten after her and say: "Come, Lucie, let all be forgotten; let all that you have done to me be forgotten!" Then he shook his head and clinched his hand; he would not lay himself open to a second disappointment. It was not forever. What were words—her words even? He need only think of the children in the forester's home, lying with their wide-open frightened eyes, crying for their mother, of the empty place by Mathilda's work table. Away with all thoughts of her! He straightened himself up and walked suddenly into the dining-room with as quiet and measured a tread as if no passionate thoughts had made his heart beat; and the look he gave the white, slender girl was cool and indifferent. He took a place among the gentlemen, who had lighted their cigars, and appeared not to notice that Lucie soon left the room, much to mademoiselle's annoyance, who, feeling uncomfortable at being the only lady present, was obliged to follow her, though against her will. She had no opportunity to put her grievance in words, for Lucie had already disappeared in the darkness of the corridor.

She went into the bride's room, but it was empty; its inhabitant had left it forever. The twilight of the summer evening made the corners dark already; the strong odor of faded roses and orange flowers was almost oppressive. On the armchair lay Hortense's handkerchief, still wet with her tears; there, over the chaise-longue, like a specter, lay the white bridal dress so hastily taken off, and her white satin shoes. No one had yet put the room in order since she left; it was so still, so lonely in both the rooms. A nameless fear took possession of the girl. What if she should not see Hortense again! What if she were to lose her love! Then she would have nothing left—nothing left in the world.

"Hortense, do not desert me," she whispered, clasping her hands together. "Do not desert me," she repeated, as if her friend could hear her.

She then went to her room and sat by the open window and looked down in the dusky garden.

"Do not leave me, love me still! I have no one but you, Hortense—no one else!"

The windows in the dining-room under her must have opened just then. Talking and laughing could be heard from them; they were now having a glass of beer. Lucie could clearly distinguish a deep, well-known voice. From the other side of the garden came the notes of a harmonicon, and a tenor voice sung: "Er hat's mir oft gesagt,

Wenn ich ihn hab' geplagt
Du wirst noch manchmal, manchmal um mich weinen."

Hastily she shut the window and rested her head against the high back of the chair. The tears ran slowly down her pale cheeks.

[CONTINUED.]

Desert Gems.

In 1889 a hunter in the northwest of New South Wales wounded a kangaroo. The animal went off through the mulga and the salt bush at a pace too fast for the hunter to follow and was soon out of sight. The hunter was a bushman and did not despair. He followed the blood trail, hopeful of a short search and a speedy bag. At one point of the pursuit it may be that the trail grew faint and necessitated a closer inspection. Anyway the hunter stooped and picked up a piece of stone. This he examined. The red spot was not on it. It was in it. It was not blood that he saw; it was opal. Such was the beginning of the White Cliffs opal fields.

King James' Last Straw.

The stodgy faced boy at the last table in the public library reading room is having a struggle most serious. He has covered both sides of a foolscap sheet with a vague smudge over which he still labors. His twisted mouth follows the motion of his creaking pencil. Before him Greene's "Shorter History of the English People" lies open at the year 1688. Of all the two pages only so much is decipherable: "The Abdication of Jams II. The english people had born a grate deel from James 2nd but when at last he gave birth to a son they said this thing must end."—Adele Marie Shaw in World's Work.

The Cause of the Delay.

Mrs. Passe was in a hurry. She was going to a concert, and the friends who were to accompany her were waiting downstairs. She was dressing and making things most uncomfortable for her maid, unaware of the fact that everything she said was audible downstairs.

"Annette," she cried, "how slow you are! Have you the flowers for my hair?"

"Ah, yes, madame, but"—

"Well, well, well!" sharply. "Where are they?"

"They are here, madame; but, pardon, I've mislaid the hair!"

Palaces of Waters.

The principal Palace of Waters is an immense hall which stretches in mysterious grandeur far beneath the city of Constantinople. Its roof is formed of wide spanned arches supported on massive marble columns. These stand some ten feet apart, and their capitals are elaborately wrought.

This marvelous building springs from an expanse of waters which underlies the foundations of the city for miles. Its origin and extent have been shrouded in mystery ever since its discovery about seventy years ago, when some of the arches gave way. All attempts to explore by boat this marvel of construction have been either fatal or fruitless.

Another palace of waters was the stately Palace of Ice which was built in 1739 at the command of Anne, empress of Russia, to honor the nuptials of the Prince Gallitzin and a simple peasant girl. In this novel palace bride and bridegroom were housed, in rooms of which the walls and furniture and bed were constructed wholly of frozen water.

Magnet Finds Needles.

"John, buy a magnet while you're out. Ruth has lost the old one," said the head of a big dressmaking establishment to her errand boy.

"What do you do with magnets here?" a woman who was being fitted asked.

"We find needles with them."

"How do you mean?"

"Every day it naturally happens that my forty-five assistants drop a great many needles on the floor. To stop and look for these needles would take time. They are all left lying, therefore, till the day's end, when a cleaner goes over the room with a magnet, holding it close to the floor. Every lost needle instantly, then, jumps up on the steel and in that way all are recovered in a few minutes. To recover them by any other means would take at least an hour."

Where the Work Came In.

D'Auber—I only got $25 for that painting.

Friend—Well, you didn't put much work on it.

D'Auber—What! I guess you never saw me trying to sell it.

NOT ONE, BUT THREE.

Popes at Rome Who Have a Valid and Undisputed Right to the Title—The Pope's Parliament.

It may surprise many to learn that there is not one only, but three Popes at Rome, each having a valid and undisputed title to his office. Of course, Leo XIII.—the "White Pope"—was the only sovereign Pontiff of the Roman Catholic Church; but reigning with him were the "Black Pope," the General of the Jesuits, and the "Red Pope," the Prefect of the Congregation de Propaganda Fide. The Prefect must be a Cardinal, while a layman could legally be elected Pontiff.

And these three Popes do not always rule together in harmony. Indeed, the contests between the white and the black Popes have been very frequent and bitter.

During the reign of Leo XIII.'s predecessor, the unification of Italy might have been accomplished under the leadership of the Roman Catholic Church, with the Pope as King of Italy, thus eliminating the feud between the Papacy and the Monarchy. In that event the Pope would not have been in any sense a prisoner in the Vatican.

Pius IX. sent Papal troops to help the Piedmontese drive out the Austrians. All Italy at that time was fired with the ambition to be united and independent. It mattered not to the people whether the Pope or the King of Sardinia effected the revolution, all were willing to follow the banner of either to achieve the desired end. There is but little doubt that the white Pope to-day would have been sovereign of all Italy had not the action of Pius, in sending reinforcements to the Piedmontese been opposed by the reactionary "black Pope."

When Garibaldi, then in South America, heard of the action of Pius IX. he hurried home to offer his services for the freeing of Italy. When he arrived he found the Papal project abandoned, so he cast his lot with the King of Sardinia instead. That is why Victor Emmanuel I., instead of the Pope, became the first King of reunited Italy.

The red Pope is Lodochowski, and his special sphere of action is foreign missions. There has been a conflict between him and Cardinal Rampolla, the latter backed by the white Pope, about the status of Christian countries that are not Roman Catholic, such as the United States, Great Britain, Russia, Germany and other nations, Rampolla and Leo contending that to treat them as missionary or heathen countries is absurd. Yet the Prefect of the Propaganda Fide had his way, and those benighted powers are still in outer darkness, along with China and Central Africa.

Another fact not generally known is that Pope Leo, as had all other Pontiffs for three centuries back, had a prophetic motto or device. It is "Lumen in coelo" (sunshine in heaven"). How near those words come to describing his character may be inferred by observing his portrait, which always represents him as "looking pleasant."

This legend was selected for Leo several centuries ago. At that time a saint whose name history has forgotten drew up a list of mottoes to be bestowed upon each Pope in turn, so the Pope has no voice in choosing his own motto. These devices have been found to be singularly prophetic in their aptness to various Pontiffs who have borne them. Thus Leo's predecessor, Pius IX., was to be Pope of a crucial time, and so it proved, for it was during his reign that the Papacy lost its temporal power.

There are still enough mottoes on this prophetic list to supply Popes for centuries to come. Leo's successor is to bear the ominous legend, "Ignis ardens" ("A burning fire"), and the next Pontiff in succession the still gloomier appellation "Religio depopulata" ("Religion laid waste").

The Pope has more official titles than almost any monarch living. Here is the list, not including popular and unofficial titles like "Holy Father" and many others:

His Holiness Pope Leo XIII.
Bishop of Rome.
Vicar of Jesus Christ.
Two hundred and fifty-eighth successor to the Prince of Apostles.
Supreme Pontiff of the Church Universal.
Patriarch of the West.
Primate of Italy.
Archbishop and Metropolitan of the Roman Province.
Sovereign of the Temporal Dominions of the Holy Roman Church.
Prefect of the Sacred Congregations of the Inquisition.
The Consistory of the Apostolic Visit.
Protector of the Church and Chapter of St. Celus and St. Julianus of the Orders of St. Benedict, of Preachers, of the Friars Minor, and also of the Archo Fraternities of the Via Crucis of Jesus and of the Stigmati of St. Francis.

The tiara, or triple crown, was not original with the institution of the Papacy. It was suggested by similar pieces of headgear in ceremonial use among various Oriental peoples—Persians, Armenians, Parthians and Greeks. More particularly was the idea borrowed from the Jewish religion, the head dress of the Israelitish high priest having been a tiara, or something like one.

The earlier Popes possessed no such a badge of honor. The first Papal tiara, encrusted with diamonds, was worn in the thirteenth century.

Beginning in Leo IX.'s time and continuing to the present the Pope every year has presented to some monarch or church or town a golden rose as a mark of special distinction. Usually it has been a recognition of some unusual service to religion or humanity.

Of the 260 Popes who have occupied the chair of St. Peter, all but 47 are known to have been of Italian birth. Of these foreign Pontiffs 15 were French or Grecians, five Syrians, four Spaniards, three Germans, two Africans and one each Englishman, Dutchman and Jew. It has been 880 years since any but an Italian has been elected Pope.

Contrary to general opinion, a churchman need not be a Cardinal to be eligible to the highest ecclesiastical office in Christendom. The Pope may be a bishop, or a common priest, or even a layman. The last layman who became Pope was John XIX. Any good Catholic may legally be elected to fill the chair of St. Peter.

To elect a Pope in conclave a majority of all living Cardinals must be present, and of those present a two-thirds majority is required to elect. That is the only permanent rule governing the choice of a Pope.

On the death of a Pope all the Cardinals present in Rome meet, and by a majority vote decide where the conclave shall be held, whether in Rome, in some other part of Italy, or in a foreign country. Should any pressure be brought to bear for or against any candidate, whether applied by the Italian Government or by private parties, the Cardinals must select a place outside of the Kingdom of Italy.

The Sacred College is more of a ceremonial institution than a deliberative body. Whatever real business is transacted is done by smaller councils called "congregations," and every act is subject to approval or disapproval by the Pope. All members must be Cardinals. The consistories are almost purely ceremonial. The only time when the Sacred College wields independent power is during an interregnum—that is, between the demise of one Pope and the election of another. The complete college comprises a membership of 70.

When new Cardinals are created the red hat is bestowed upon them at a public consistory, which is closed by the Pope arising and blessing the Sacred College. Almost immediately a secret consistory convenes. In that session the Pope closes the mouths of the new Cardinals so that "neither in the consistory, in the congregation, nor in your other functions can you give your advice," but in a moment he re-opens their mouths. Then he puts a ring upon the finger of each, the price of which they must pay to the Propaganda, and bestows a title upon each of them. That concludes the ceremony of creating new Cardinals.

THE FEAR OF DEATH.

Some Reflections by One Who Has Thought of the Subject.

The fear of death—why, why, one asks oneself again and again, is so much done to teach us to fear the only inevitable prospect before each and all of us? asks Lally Barnard in The Globe. The awe, the gloom, the intense hush, all impress the child—and linger on as a terrible dream into manhood and womanhood. In youth there are those who picture to themselves what their own deaths would mean, and the meaning is always a sentimental one—the surroundings, the emotion and the grief of others—not the real thing—Death; the end of vital force, of bodily being, the passing out into another sphere, into a wider existence. I have been reading "The Dream of Gerontius," by Cardinal Newman. All the details of the death of the late Pontiff bring that book very close to one. Surely Newman had been vouchsafed a vision of what death really meant. Surely the priestly office which meant the close communion with the dying gave him some strong insight into the actual bodily and spiritual sensations of those last moments of human existence.

"What is this reverence?
This silence pours a solitariness
Into the very essence of my soul;
And the deep rest, so soothing and so sweet,
Hath something, too, of sterness and of pain.
For it drives back my thoughts upon their spring,
By strange introversion, and perforce
I now begin to feed upon myself,
Because I have naught else to feed upon."

We write, many of us, of death; we speculate, we wonder, and we marvel how each, as he passes, actually feels; but, as a matter of fact, each one imahines that death is less likely to come to him than to those about him. I think that in the average soul there is a rooted belief that he cannot die. Even when the doctor pronounces his doom he cannot understand the reality of it. How trivial all sorts of worries and troubles would seem could we but realize that death was actually close at hand! In this age the extraordinary whirl of speed, the rush and reach of modern invention, the thousand and one discoveries in medical and surgical science, the turmoil, the interchange of thought, rapidity of transportation—everything, everything, seems to lure us away from the contemplation of the intense stillness, the immovability, the destruction of vitality we call death. We do not allow ourselves to contemplate it; we put expert combatants of death at the bedsides of our suffering ones. If pain comes narcotics are administered; if exhaustion comes, which brings us close to the contemplation of the dissolution of the body, strong stimulants and oxygen are given. We turn at every point from the contemplation of what might lead us to realize death. Long night vigils are left to hired watchers, and the religious orders alone stand closely contemplating the inevitable, the inexorable we call death.

The Cautious Russian Censor.

All the copies of the Paris Almanach Hachette were recently confiscated by the Russian censor, who prohibited their circulation until pages 147 and 148 were torn out. The pages in question contained a table of civil lists of the various sovereigns, wherein it is shown that the Czar, with $80 a minute, is the most highly paid monarch in the world.

The Speaking Eye.

She—They say the eyes are the windows of the soul, I believe.

He—Yes, and when a man goes into a drug store and shuts a window quickly the clerk knows just about what the poor soul wants.

FERNIE FREE PRESS.

FERNIE, B.C.

Some women have, or profess to have, a horror of spiders. The spider is, however, a bringer of good fortune, according to superstitious authorities, and to kill a spider is to incur ill-luck.

CHOLERA INFANTUM.

Cholera infantum is one of the most dreaded diseases of infancy. It is prevalent during the heat of summer in spite of all the care mothers may take to guard against it, and it sometimes progresses so quickly that death occurs in a few hours no matter what care is given the child. The first thing to do is to stop feeding the child and give him plenty of fresh air and pure water to drink. Give Baby's Own Tablets to carry off the poison in the system. Do not under any circumstance give a medicine to check the diarrhoea, except under the advice of a doctor. By using Baby's Own Tablets the cause of the diarrhoea wifl be removed and the disease will thus be checked in a natural manner. Prool that the Tablets cure this too often fatal trouble is given by Mrs. Herbert Burnham, Smith's Falls, Ont., who says:—"When my eldest child was six weeks old he had an attack of cholera infantum and was at death's door. My doctor advised me to try Baby's Own Tablets, and in twenty-four hours baby was better; the vomiting and purging ceased and he regained strength rapidly."

Keep the Tablets in the house—their prompt use may save your little one's life. Sold by medicine dealers or sent post paid at 25 cents a box by writing the Dr. Williams Medicine Co., Brockville, Ont.

It is a wonder that someone has never placed advertising circulars in

Lifebuoy Soap — disinfects — is strongly recommended by the medical profession as a safeguard against infectious diseases.

Bjornstjerne Bjornson has chosen his recent novel, 'Thomas Rendolen,' as the medium for discussing his ideas on educational reform, especially in girl's schools.

Catarrh Cannot be Cured

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years and is a regular prescription. It is composed of the best tonics known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing Catarrh. Send for testimonials free.

Sold by druggists, price 75c.
Hall's Family Pills are the best.

She—And are you really so much better since you returned from your trip abroad?

He—Yes, indeed! I'm quite another man, I assure you.

She—Well' I'm sure all your friends will be delighted to hear it.

Minard's Liniment Cures Colds, etc.

When a camel is pressed beyond its speed, and is spent, it kneel's down and nothing in the world will make it budge again. The camel remains where it kneels and where it kneels it dies.

Grant's Estimate of His Generals.

In Grant's estimate of the abilities of the generals of the armies, says an officer of Grant's staff in the National Magazine, I think it is safe to say that Sherman stood first. For John A. Logan he perhaps entertained the warmest personal feelings. His friendship for this brilliant soldier was very pronounced. General Thomas he considered a safe man and an indomitable fighter. Sheridan was one of his especial favorites. He considered this dashing soldier almost invincible.

Good Sense.

Good sense is a fund slowly and painfully accumulated by the labor of centuries. It is a jewel of the first water, whose value he alone understands who has lost it, or who observes the lives of others who have lost it. For my part, I think no price too great to pay for gaining it and keeping it, for the possession of eyes that see and a judgment that discerns.

Cause For Joy.

"My darling, what delights you so? What is it that fills your eyes with the glad light of happiness and"—

"Oh, Theobald, just think! Cook is going to remain with us after all! Mrs. Goodparty, for whom she was going to work, dropped dead last night. Oh, wasn't it just too sweet of her? And, you know, I had always fancied she disliked me!"—Town Topics.

Minard's Liniment Cures Distemper.

Although nature makes no mistakes, she might have improved a little on her work by hitching the luminous end of the firefly to the business end of the mosquito.

Dr. J. D. Kellogg's Dysentery Cordial is a speedy cure for dysentery, diarrhoea, cholera, summer complaint, sea sickness, and complaints incidental to children teething. It gives immediate relief to those suffering from the effects of indiscretion in eating unripe fruit, cucumbers, etc. It acts with wonderful rapidity and never fails to conquer the disease. No one need fear cholera if they have a bottle of this medicine convenient.

According to the publishers of the Chicago city directory for 1903, the population is 2,231,000.

The Japanese Acrobat's Toes.

The little Japanese acrobat, in his short robe of black embroidered with gold dragons, walked slowly up the slanting wire cable to the very roof of the circus tent. There he paused a moment, and then—swish, swish, swish—he slid smoothly and gracefully down the steep wire to the ground. Elevating his voice above the loud applause, an old circus man said: "That sliding trick has never been learned by a European. It's a trick that the Japs alone do. If you watched our little friend you noticed that he always kept the wire between his big toe and the second toe. When he slid, the wire was between his toes. That is the way the Japanese learn to walk the wire, but we English and Americans can't learn to walk in that way because our toes have not the same suppleness and strength. Our toes, confined for generations in unhygienic, tight, heavy leather boots, have no muscle and no mobility. To slide down a wire requires well developed toes first of all. We, therefore, can't match the Japs in this showy, telling and difficult feat." — Philadelphia Record.

They Paid the Price.

The corporation of the city of Glasgow wanted to purchase the Whistler portrait of Carlyle and in due course waited on the master of the gentle art of making enemies about the price (1,000 guineas). They admitted it was a magnificent picture, but "Do you not think, Mr. Whistler, the sum a wee, wee bit excessive?"

"Didn't you know the price before you came to me?" asked the master with suspicious blandness.

"Oh, aye, we knew that!" replied the corporation.

"Very well, then," said Mr. Whistler in his suavest tones, "let's talk of something else." And as there was nothing else of interest to detain the "corporation" they paid the price and—trust a Glaswegian—made an excellent bargain.

Corrosive Ink.

With an impatient grunt the bookkeeper threw away his pen and put a new one in the holder. "It's terrible," he said, "how ink corrodes pens. In six or seven hours a new pen will begin to scratch. It keeps me busy changing the blamed things, let alone the expense. There's money in it for the man who will invent a noncorrosive ink." An old man, a bill collector, remarked to him: "My young friend, I'll tell you a sure way to stop your ink from corroding your pen. Take a few rusty iron nails and put them in your ink well. The ink's corrosive acid will play itself out on the nails, and in consequence your pen will escape. A pen that only lasts you a day now should, with my method, last at least a week."

She Believed It.

Lady—I believe you. I don't see how he could recover from it.—Baltimore American.

Time Limited.

Church—Will horses and wagons be allowed in the subway?

Gotham—No; not after it's covered up.—Yonkers Statesman.

HOT WEATHER FAG.

No Vim, No Snap, No Energy, Exertion Dreaded and Work Shunned.

"Fagged right out," is an appropriate way to express the feelings of many people during the hot summer months. No strength, no vigor, no snap, no ambition, too weary to work and too languid to take any keen pleasure in life. You need a tonic for this summer fag, and the very best summer tonic in the world is Dr. Williams' Pink Pills for Pale People. Every dose makes new, rich blood, tones the nerves, sharpens the appetite, stimulates the liver, and banishes weakness and weariness, headaches, backaches, languor and despondency. The only tonic that can do this for you is Dr. Williams' Pink Pills. It's a waste of money to experiment with anything else. Mr. Louis Doucet, Grand Etang, N. S., says: "I was very much run down in health and was weak and easily tired. My appetite was variable, my nerves unstrung, and I often felt a complete indisposition to work. After trying several medicines without benefit I decided to try Dr. Williams' Pink Pills, and after taking a few boxes I felt better than I had done for months, and equal to any exertion. I don't know anything to equal to Dr. Williams' Pink Pills when one feels fagged out."

You can get the pills from any dealer in medicine, or they will be sent paid at 50 cents a box, or six boxes for $2.50 by writing direct to the Dr. Williams' Medicine Co., Brockville, Ont. Be sure you get the genuine with the full name "Dr. Williams' Pink Pills for Pale People" on the wrapper around the box.

The proportion of men and women who retire on small competencies is supposed to be greater in Massachusetts than in any other state in the Union, unless it be Pennsylvania.

TROUBLES OF EX-CHIEF OF POLICE

Could not Stand Before Dodd's Kidney Pills.

Mr. Chas. Gilchrist had Diabetes for Years—Dodd's Kidney Pills Cured Him.

Port Hope, Ont., Aug. 10.—(Special)—Mr. Charles Gilchrist, Chief of Police here for fifteen years and afterwards Dominion Fishery Overseer, is always willing to add his testimony to the volume of proofs from all parts that Dodd's Kidney Pills never fail to cure any form of Kidney Disease.

"I am a healthy man. Dodd's Kidney Pills have done the job," is the way Mr. Gilchrist puts it. "When I first started to take Dodd's Kidney Pills I was in an awful state. I had been a sufferer from Diabetes and Kidney Disorder for ten years. My urine was of a dark bricky color and I would suffer something awful while passing.

"I tried everything and tried the doctors but could get no help till I was advised to use Dodd's Kidney Pills. They have made me a new man."

Mr. Gilchrist is getting on in years but he feels young. That's what Dodd's Kidney Pills do for a man.

Mlle. Eve Humbert, daughter of the woman of the phantom millions, is now said to be living in a charming little German nook in the valley of the Weser and near the Wesphalian woods.

FOR NINE YEARS.—Mr. Samuel Bryan, Thedford, writes: "For nine years I suffered with ulcerated sores on my leg; I expended over $100 on physicians, and tried every preparation I heard of or saw recommended for such disease, but could get no relief. I at last was recommended to give Dr. Thomas' Eclectric Oil a trial, which has resulted, after using eight bottles (using it internally and externally), in a complete cure. I believe it is the best medicine in the world, and I write this to let others know what it has done for me."

Don't climb so high that the world can't see you when it wants to remove the ladder.

Perhaps the summer girl steels her heart to prevent it from being stolen

Sir Loin of Beef.

Though the truth of the story that King James I. of England once knighted a loin of beef is disputed, the house in which the ceremony is said to have occurred is pointed out, as well as the table on which the sirloin lay. The scene of the historic jest lies between Higham's park and Chingford, near London. It is a curious house with quaint, low pitched ceilings and a fine garden with fruit trees of great size. It was on his return from one of his hunting expeditions in Epping forest that the British Solomon is said to have given practical proof of his favor for the roast beef of old England.

A Household Jewel.

A family in the southern part of the city employed what they believed to be a "household jewel." For a few days she proved to be all that they had anticipated, and everything went smoothly. One day, however, the husband came down to breakfast and made the announcement that they must get rid of the new girl.

"Why, John, you must be crazy!" said his wife with amazement. "She's the best girl we ever had, so respectful and a fine cook."

"That makes no difference. She isn't honest."

"Oh, well, we'll never miss a loaf of bread once in awhile. Her folks may need it more than we do."

"That isn't it. Early this morning I saw her creep into our room, go to my pocket, take my pocketbook and empty it."

"Oh, well, dear, perhaps it's force of habit; you know she's been married."

The First Automobile.

In these days of fast motoring and high railway speeds it is interesting to recall that it was in July, 1829, some little time before George Stephenson had solved the problem of steam transport, that Sir Goldsworthy Gurney made his famous journey in a "steam carriage" from London to Bath and back. Gurney was a surgeon in Marylebone, greatly given to the working out of inventions in his spare time, and it took him some years to complete his first "motor" in his back yard in Albany street in London. He accomplished the journey to and from Bath at the rate of fifteen miles an hour, and there was only one disturbing incident, when a crowd assembled at Melksham set upon the machine and, having burned their fingers, threw stones and seriously wounded the stoker. This Gurney journey stands as the first example of locomotion by steam in England.

His Auspicious Beginning.

"To gratify the curiosity of the public, Mr. Dollaraline," purred the young person with the notebook, "will you please tell me if the first contribution you ever sent to a magazine was accepted?"

The literary celebrity smiled genially.

"I am happy to say it was," he answered.

"What was it?"

"Four dollars for a year's subscription."

The Reason.

Mrs. Newed (as husband arrives home from work)—Oh, George, our new cook is a perfect gem! Why, she already has the kitchen looking like a parlor.

Mr. Newed—Humph! Expecting company tonight, is she?

Perfectly Reckless.

Druggist—I'm going to discharge that new clerk. He's too careless.

Friend—What has he done?

Druggist—This morning he sold a wild eyed woman a dose of poison and trusted her for the money.

The Reason.

Mrs. Flint (severely)—Why do you wander from place to place?

Soiled Spooner (calmly)—B'cuz de places won't wander to me, mum.—Puck.

A call to arms: "John, take the baby."

One week in the country should make one strong in the city.

Iceland still clings to the barter system. Comparatively little trade is done on the island with cash.

Everytime a girl gets a small dent in her heart she imagines it is broken.

Ayer's

This falling of your hair! Stop it, or you will soon be bald. Give your hair some Ayer's Hair Vigor. The falling will stop, the hair will

Hair Vigor

grow, and the scalp will be clean and healthy. Why be satisfied with poor hair when you can make it rich?

"My hair nearly all came out. I then tried Ayer's Hair Vigor and only one bottle stopped the falling. New hair came in real thick and just a little curly."—MRS. L. M. SMITH, Saratoga, N. Y.

$1.00 a bottle. All druggists. J. C. AYER CO., Lowell, Mass.

for Thick Hair

The potato has ceased to be the all-important staple food in Ireland it once was, as when its failure caused such awful famine in the years between 1831 and 1847, and the decrease in its production is rather a sign of increasing prosperity amongst the Irish peasantry.

All men are architects of their own fortunes, but few ever get sufficient money to build.

It's a wise girl who doesn't begin eating onions until after she lands a husband.

The life of the book agent is full of wormwood and gall; but the wormwood is scarcely perceptible.

The natives of India never allow a fakir—of whom there are 3,000,000 who live by begging—to starve.

Man proposes, woman disposes and the rest of the world says, "I told you so."

It is only necessary to read the testimony to be convinced that Holloway's Corn Cure is unequalled for the removal of Corns, warts, etc. It is a complete extinguisher.

German cities are growing so fast that the sawmills can hardly keep up with their orders.

SLEEPLESSNESS is due to nervous excitement. The delicately constituted, the financier, the business man and those whose occupation necessitates great mental strain or worry, all suffer less or more from it. Sleep is the great restorer of a worried brain, and to get sleep cleanse the stomach from all impurities with a few doses of Parmelee's Vegetable Pills, gelatine coated, containing no mercury, and are guaranteed to give satisfaction or the money will be refunded.

Krupp's factory has lately made the largest armor plate ever rolled. It weighed 106 tons.

More than half the battle in cleaning greasy dishes is in the soap you use. If it's Sunlight Soap it's the best.

Most of the world's annual supply of tin comes from the Straits and from the Dutch islands of Banka and Billiton. Australia, a small producer as compared with the straits and Banna, has lately been increasing its contribution.

Every woman has an idea that her husband would never have amounted to much if she had refused him.

the hymn books at church; they would be read through forward and backward.

Most men spend nine-tenths of their lives trying to accumulate enough money to enable them to spend the other tenth in comfort.

Egypt, with nearly ten million people, has only one lunatic asylum.

THE RESTORATIVE POWER OF DR. CHASE'S NERVE FOOD.

Illustrated in the Case of Mrs. Turner, Who Was Thoroughly Restored By the Use of This Great Food Cure.

The human body is composed of certain elements, such as iron, potash, lime, soda, magnesia, etc., and nature replaces wasted cells and tissues by extracting these elements from the food we eat. Consequently errors in diet, insufficiency of food or failure of the digestive organs to properly perform their work are among the most usual causes of disease.

Once the system is weak, run down or exhausted the natural process of reconstruction is tediously slow, usually slower than the wasting process, and the end can only be physical bankruptcy and collapse.

It is just at this point that Dr. Chase's Nerve Food proves its wonderful power as an assistant to nature. This great food cure contains in condensed pill form the very elements required by nature to revitalize and build up the system. These immediately enter the blood stream, and through the medium of the circulation of the blood and the nervous system carry strength and vigor to each and every organ of the body.

Mrs. F. Turner, 336 Aylmer street, Peterborough, Ont., and whose husband is employed at the Hamilton foundry, states:

"For some months past I found myself growing very nervous, and gradually becoming a victim of sleeplessness and subject to frequent attacks of nervous headache. About six weeks ago I began using Dr. Chase's Nerve Food and cannot speak too highly of this medicine. I can sleep well now, the headaches have entirely disappeared, and I believe that my system generally has been much improved by the use of this treatment."

Nervous prostration and exhaustion, headaches, dyspepsia, dizzy and fainting spells, paralysis, locomotor ataxia, feelings of weakness, depression and despondency are readily overcome by this treatment, working, as it does, hand in hand with nature. Though gradual, the results are all the more certain and lasting, and by noting your increase in weight you can prove to your satisfaction that new, firm flesh and tissue is being added. Dr. Chase's Nerve Food, fifty cents a box, six boxes for $2.50. At all dealers, or Edmanson, Bates &Co., Toronto. To protect you against imitations, the portrait and signature of Dr. A. W. Chase, the famous receipt book author, are on every box.

GOOD HEALTH AND HAPPINESS

waits on appetite if in your home baking OGILVIE'S HUNGARIAN FLOUR IS USED.

Milled from a grain that's critically selected — it yields more loaves per bag than any other, and what a delightfully refreshing loaf when compared with others.

You can't appreciate the difference till you've tried it—then you'll thoroughly understand it.

MORRISSEY

From The Despatch

The police have been notified that a number of parties are using dynamite for the purpose of killing fish in the Elk and have taken steps to ascertain who the guilty parties are. On Sunday last the river was covered with dead fish from the unlawful practice, and all true sportsmen should unite in bringing the law-breakers to justice.

A meeting of the executive of the Morrissey Liberal Association was held on Monday evening at Dr. Willson's residence for the purpose of discussing the coming Liberal convention at Fernie. It was decided to recommend that representation in the convention should be based upon the voting strength of each locality in the riding.

A case of Smallpox has made its appearance at the Junction. The victim is Mrs. Gibson, who arrived last Saturday from Franklin, Wash. She was stoping at the Australian hotel when the desease was discovered, but was immediately removed to the pest house. The health authorities at Victoria have been notified and everything possible will be done to prevent the spread of the disease. The hotel has been quarantened.

Archdeacon Pentreath, of Vancouver who is visiting the Kootenay diocese on his annual tour of inspection of the Parishes and Missions spent Sunday in town. Before leaving he made a provisional appointment of a church committee to act until Easter:—For the mines he appointed H. Halpin, Dr. Willson and R. N. Pearson. For the town W. F. Tranter, H. Oldland and G. G. Moffatt. This committee will meet and organize the Mission by giving it a name and appoint a treasurer for the church building fund. It is hoped in the near future to begin the erection of a well designed church, part of which only may first be constructed.

Cranbrook

From the Herald.

Henry Parker has gone to Michel for a time to act as weighmaster for the C. P. R.

There will be a foot ball meeting next Monday evening at the Wentworth hall for the purpose of forming a club to play for the Beattie cup.

Mr. and Mrs. J. Fraser and children, of Michel, were the guests of Superintendent and Mrs. Taylor the past week.

Last Thursday three flat cars loaded with logs on the main line of the North Star branch at the top of the St. Mary's hill got away and started on a wild run down the grade towards the St. Mary's bridge. Haste was made to telephone into Cranbrook but the regular train had already left for Marysville. A message was sent to Leask & Slater's to stop the train to avoid any trouble The cars went as far as the first sharp curve above the bridge where they were thrown off by the speed attained and piled up into a broken mass. No one was hurt, but the cars were a total loss.

Messrs. Hanson and Baker, who recently bought the mill at Morrissey of the Cedar Valley Lumber Company and were preparing to operate the same, have sold out to F. H. Gilpin of this city. Mr. Gilpin has been looking for a lumber proposition for some time, and will devote his time to this line of busi- in the future. He left for Morrissey on Tuesday and is securing a crew preparatory to getting the mill started. He contemplates some improvements and will give the business his personal supervision. For the present his family will remain in Cranbrook.

Champagne

Notice is hereby given that 30 days after date I intend to apply to the chief commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay.

(1) Commencing at the south west corner of J. Claxton's timber license No. 2314, on Skookumchuck River, thence south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to the place of commencement.

(2) Commencing at the south west corner of J. Claxton,s timber license, No. 2314, on Skockumchuck River, thence south 160 chains, thence east 40 chains, thence north 160 chains, thence west 40 chains to the place of commencement.

A. BROLEY

Dated at Fernie, July 13th, '03. 239 4

A WELL KNOWN ALBANY MAN

Recommends Chamberlain's Colic, Cholera and Diarrhoea Remedy

About eighteen months ago Mr. W. S. Manning, of Albany, N. Y., widely known in trade circles as the representative of the Albany Chemical Co., was suffering from a protracted attack of diahorrea. "I tried Chamberlain's Colic Cholera and Diarrhoea Remedy," he says, "and obtained immediate relief. I cheerfully recommend this medicine to those similarly afflicted." For sale by all druggists and dealers.

Very Remarkable Cure of Diarrhoea.

"About six years ago for the first time in my life I had a sudden severe attack of diarrhœa," says Mrs. Alice Miller, of Morgan, Texas. "I got temporary relief but it came back again and again, and for six long years I have suffered more misery and agony than I can tell. It was worse than death. My husband spent hundreds of dollars for physician's prescription and treatment without avail. Finally we moved to Bosque County, our present home, and one day I happened to see an advertisement of Chamberlain's Colic, Cholera and Diarrhœa Remedy with a testimonal of a man who had been cured by it. The case was so similar to my own that I considered to try the remedy. The result was wonderful. I could hardly realize that I was well again, or believe it could be so after having suffered so long, but that one bottle of medicine costing but a few cents, cured me." For sale by all druggists and dealers.

Cholera Infantum

This has long been regarded as one of the most dangerous and fatal diseases to which infants are subject. It can be cured, however, when properly treated. All that is necessary is to give Chamberlain's Colic, Cholera and Diarrhoea Remedy and castor oil, as directed with each bottle, and a cure is certain. For sale by all druggists and dealers.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted ot F. Delzell's north-east corner, thence 80 chains east, thence 80 chains south, thence 80 chains west, thence 80 chains north to place of beginning.

Dated at Fernie this 6th day of June, 1903.

J. COWARD.
FRED DELZELL, Agent.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a licence to prospect for coal and petrolium on the following described lands:

Commencing at a post planted one-half mile east of F. R. Dezell's north-west corner post, thence 80 chains north, thence 80 chains east, thence 80 chains south, thence 80 chains west to point of beginning.

Dated at Fernie this 6th day of June, 1903.

FRED ROBBINS,
F. R. DELZELL, Agent.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber over the following lands on the West side of Kootenay River, in the District of East Kootenay:

Commencing at a post planted at the North West corner of F. Milton's timber license, No. 2318, on Skookum Chuck River; thence north 160 chains; thence west 40 chains; thence south 160 chains; thence east 40 chains to place of commencement.

Fernie, B.C., July 11th, 1903.

T. GRICE.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber over the following lands on the West side of Kootenay River, in the district of East Kootenay:

Commencing at the north west corner of A. Milton's timber license, No, 2309, on Skookum Chuck River, thence north 160 chains; thence east 40 chains; thence south 160 chains; thence west 40 chains to the place of commencement.

Fernie, B.C., July 11th, 1903.

H. GRICE.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped portions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding agaiust the wasteful des truction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted at Ed Robbins north-west corner, thence 80 chains north, thence 80 chains east, thence 80 chains south, thence 80 chains west to place of beginning.

Dated at Fernie this 6th day of June, 1903.

W. C. LUPHARDT.
F. R. DELZELL, Agent.

Fort Steele Licence District

Notice is hereby given that the undermentioned persons have made application under the provisions of the Liquor Licence Act 1900 for liquor licenses at the places set opposite their names.

G. H. Gilpin, wholesale, Morrissey Mines.
Mike Reguli, wholesale, Morrissey Mines.

A meeting of the Board of Licence Commissioners of the Fort Steele Licence District will be held at the Court House, Fernie, on Friday, August 14th, 1903, at the hour of 7 o'clock in the afternoon.

A. W. Bleasdell

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a special licence to cut and carry away timber from the following lands on the west side of Kootenay river, in the District of East Kootenay:

Commencing at a post 40 chains west of the south-west corner of M. Claxton's timber licence application on Skookumchuck river, South East Kootenay, thence running north 160 chains, thence east 40 chains, thence south 160 chains, thence west 40 chains to place of commencement.

232-4 J. McDONALD.

Dated May 23rd, 1903.

The Enormous Expenditure of Money by the Crow's Nest Pass Coal Company, Limited, in the construction of coke ovens and storage bins and the installation of electric light and water-works systems, determines that the industrial centre of this district is established for all time at the new town of

Morrissey Mines

The importance of this fact on real estate values here is immense. One of Canada's greatest banking institutions has established itself here permanently, and the near future will see the residential streets lined with many fine houses that will be required to house the hundreds of workers employed here. It is not hard to guess what the effect of this concentration of well-paid wage earners will have on Morrissey Mines realty. All this army must have homes.

One of these bright July days as one stands on the foothill just above the new town, and looks east toward the collieries, the whole transformation that turns a wilderness into a great industrial centre, is shown in its various stages. We see the near approaching coal train of 40 cars, carrying 1,200 tons, the output of the mines for one day, and a little further on, two batteries of modern coke ovens, many of which will be fired up within ten days.

Just across the paddock that has until recently been used for a horse pasture, can be seen 100 men, digging a ditch for the large water-main that is to supply the town with pure Spring water, while the ring of hammers can be heard on every side.

To those wishing to build homes I am offering attractive terms. Write for particulars or call at my office.

NO WIND AND NO RACE

THURSDAY'S CONTEST DECLARED OFF.

Reliance Leading by Nearly Two Miles. Shamrock Has Time Allowance of Nearly Two Minutes.

Had the wind off Highlands been as strong as that which swept down Victoria Avenue on Thursday afternoon the big yacht race would have been determined in double quick time. The little boats made by W. B. Ganong worked admirably in the heavy wind but they chafed under the restraining influence of the press despatches and the connecting strings. The wires across the street were arranged to show the boats off to best advantage and a start and finish buoy was shown at each end. Mr. Ganong made use of his store of practical knowledge of yachting in arranging the details. The despatch service was somewhat slow however.

The following is a summary of what was received here:—

11.01. The start signal was fired at 11 o'clock but both boats are holding away from the line.

11.02. Reliance is running down the line on the port tack, followed a short distance astern by the Shamrock.

11.03 The yachts have just started, Shamrock crossing the line in the lead. The apparent starting time as seen from the shore is, Shamrock 11.00-50, Reliance 11.01-26.

11.17 The yachts have apparently sailed about a mile of the course, Shamrock leading.

11.23. Shamrock still leading by small margin. Reliance is gradually overtaking her.

12.00. The boats are on even terms. The wind has so changed that they are heading direct for the mark. A heavy shower is passing.

12.20. The wind has again changed so that the Reliance is now in the windward position and leads by about ten yards.

12.35. The yacht are now five miles off shore directly east from Long Branch, with Reliance about a quarter of a mile to windward, both on port tack heading in shore.

12.40. Eleven miles from start, both went on the port tack. Reliance leading by about 200 yards. Shamrock to leeward footing faster than Reliance but not pointing so high. Rain over but cloudy. Wind 6 knots.

12.47. Shamrock has gone to starboard tack and to the lee of Reliance which went on the same tack one minute later.

1.03. Reliance half a mile in lead, wind strengthening.

1.16. The wind has dropped to three knots. Reliance now leading by quarter of a mile. Both boats three miles from outer mark.

1.33. Sea is rough and boats are pounding badly. Reliance approaching mark and Shamrock nearly becalmed.

1.35. Reliance leading by one mile with the turn mark two miles away.

2.20. Unless the wind freshens the yachts cannot finish within time limit.

2.45. Reliance two miles from mark and increasing her lead. It has developed into a drifting match.

2.47. Shamrock has scarcely moved during the last half hour, while Reliance continues to forge ahead. Reliance has been carrying a large baloon jib top sail for three quarters of an hour.

2.58. The Reliance has just had a favorable wind from south and is heading toward mark. Shamrock becalmed a mile and a half astern.

3.15. With turning mark still a mile and a half away there is no change in the position of the yachts.

3.28. Light west wind, boats heading for mark. Reliance leading by nearly 2 miles.

3.35. Race officially declared off.

Reliance turned outer mark 3.37-20.

3.45. Shamrock has withdrawn from race and hauled down her sail. Evidently the race is off. She was not within half a mile of the turn when she swung round and headed after Reliance.

3.35. Reliance leading by two miles. The wind has dropped and sea is almost calm.

The boats were measured on Tuesday and the Shamrock was given a time allowance of 1 minute and 45 seconds over the Reliance. The following comparison in figures gives a fair description of the two boats:

	Reliance Feet	Shamrock Feet
Waterline	89.66	89.81
Baseline	201.75	187.54
Foreside mast	84.29	81.40
Spinnaker boom	83.75	81.40
Main gaff	71.90	65.75
Topmast	72.00	69.15
Eighty per cent of topmast	57.60	55.32
Perpendicular	149.63	144.83
Sail area (square feet)	16,169,93	14,387,45
Square feet of sail	127.16	119.79
Sailing Length	108.41	104.77
Men on board	64	56

RELIANCE WINS TODAY

The preparatory gun was fired at 11.30 and the warning gun at 11.40.

11.40. The fight for position is hot and interesting. Barr is following every move of Wringe, and it looks as if he were getting the best of it.

11 46 Start as observed from shore, Shamrock 11,45-17, Reliance 11.46-21.

12.02. Shamrock leads but Reliance seems to be slowly but surely drawing up on her.

12.06. Race at this time is a very close one. Both boats holding still to the southward on the starboard tack. They have sailed about 5 miles of the course and the Shamrock is still leading although Reliance is close behind.

12.11. Reliance has just come about on the port tack and is heading for Jersey shore.

12.13 Shamrock has come about on the port tack.

12.17. Both boats sailing very fast and in half an hour had apparently covered nearly 5 miles.

12.20. The boats on even terms. Though Shamrock is leading, Reliance is in better position to windward.

1.00. Reliance passed Shamrock and is in windward position.

1.15. Reliance leading by ⅜ of a mile.

1.17. Reliance tacked to port and headed into shore. Shamrock continued starboard tack until trifle to windward in Reliance's wake, when she also went about.

1.25 During last ten minutes Reliance gains steadily and is now half a mile in lead.

1.53. Reliance within half mile of outer mark leading by ¾ of a mile.

2.14. Shamrock hoists her baloon jib top sail.

2.25. Reliance continues to draw away and now leads by 1¼ miles.

Reliance turned outer mark 1.55-14, Shamrock, 1.58-30.

2.38. Reliance has apparent lead of 5 minutes.

2.40. Reliance increases her lead.

2.42. It now looks as if Shamrock was gaining slightly.

2.50. Reliance about 5 miles from finish, leading by mile and a quarter.

2.43. Reliance is fast approaching the finish line.

3.26. Reliance crossed line 3.17-45, Shamrock crossed line 3.26-40 official time.

The next race will be run on Tuesday over a triangular course.

A GERMAN'S OPINION

R. C. Bach a noted Journalist visited Fernie Yesterday.

R. C. Bach, German journalist and correspondent to the New York Staatszeitung and foreign papers, was in town yesterday to inspect the mines and to size up the district generally. When asked about his visit he said: "When I first visited the west, in 1894, I got an unfavorable impression of B. C. and the territories, and though I was then sent out by the Canadian government I refused to give a report to German papers. Eight years passed and I was sent out last year again, and had I not seen everything with my own eyes I would not have believed such growth and development possible in so short a time. I wrote a booklet and have sent it out to all the leading papers, and I am sure it has done much good. This year I intend to write a book giving a full description of each province and it is to secure data for this work that I am now in the west. I am now on my way to Montreal, where I have lived for 15 years. I have been much impressed with what I have seen." "What do I think of Fernie?" Mr. Bach thought a moment then answered with a smile, "The black diamonds are wanted and if you have them you are only to be congratulated. The management seems to be a good one and everything points to a bright future for Fernie. I also want to add a word of praise for the Fernie beer, which is of excellent quality. Since leaving Winnipeg I did not enjoy a good glass of lager till I came to your town."

DEATH OF HENRY J. McQUAID.

It is with regret that we have to chronicle the death of Henry J. McQuaid, which occurred at the Fernie Hospital on Tuesday afternoon. Mr. McQuaid came from Pincher Creek about two months ago to take a position in the Coal Creek store of Trites-Wood Co. He returned from a trip to Pincher Creek on Tuesday, August 11th and he then complained of suffering from diarrhoea and stomach complaint. He went to his boarding house at Coal Creek mines and was treated by Dr Ker. On Thursday he came from Coal Creek on the 6 o'clock train and while sitting in the Alberta Hotel a few moments later he was attacked by a fainting fit and Dr. Bonnell was hastily summoned. The sick man did not fully regain consciousness during the night and the next morning he was removed to the Fernie Hospital where he continued to grow worse. He became quite delirious at times, and at other times he was able to note his surroundings and speak of his friends. Finally on Tuesday afternoon he passed away. His relatives living at Charlottetown, P. E. I. were communicated with and word was received to ship the body east which was done last evening. The doctor attributed his death to epilepsy.

The deceased was a young man of thirty years of age, and was unmarried. He has been in the west for several years, having lived in the Boundary Country for some time where he was engaged in business. During his short residence in Fernie he earned the respect of a large circle of acquaintances who have been shocked at the suddenness of his death.

POLITICAL PARAGRAPHS.

Harry Wright, of the Ymir district, received the conservative nomination at their convention last Saturday. John Houston, of Nelson, gave him a close run.

The liberals of the Grand Forks district nominated their candidate on the 27th. Neill McCallum, of Grand Forks, was the unanimous choice of the convention. The nominee is an old-timer and is interested in many mining properties of the district.

The conservatives of Nelson, have nominated John Houston to represent the party of that district.

Dr. J. H. King, of Cranbrook was given the unanimous nomination of the Liberal convention for that district, held on Wednesday evening.

According to the Golden Star J. A. Harvey, of Fort Steele, will receive the Conservative nomination for that district and Wells will be the Liberal candidate.

The executive of the Provincial Liberal Association met this week at Vancouver to prepare a manifesto in which the policy of the party on all the leading provincial questions will be more clearly set out. J. A. McDonald, of Rossland and Dr. McDonald, of Grand Forks, are the two Kootenay representatives.

The Nelson voters list numbers 976 names.

COAL CREEK MINES.

(From Our Own Correspondent)

On Saturday the wedding of William Piper and Alice Gay was solemnized in the residence, now the home, of the young couple, by the Rev. J. Robson, of Fernie. A few friends were present at the ceremony. The bride accompanied by her mother, Mrs. Turnham recently arrived from their home in Kilburn, Surrey, England.

Coal is mined now in No. 5. Horses are temporarily being used to pull the cars to the tipple.

Mrs. Lester left this week to join her husband in Idaho.

Much sorrow is felt here over the sudden death of H. J. McQuaid who clerked in the store here.

A. Berridge purposes having some holidays next week at Elko.

OFFICIALS INSPECTING C. P. R.

A group of C. P. R. officials visited Fernie this week. They consisted of D. McNicoll, general manager, Montreal; J. W. Leonard, assistant general manager western lines, Winnipeg; R. R. Janieson, general superintendent, Calgary; and J. G. Taylor, superintendent, Cranbrook The party which travelled in a special train of three cars is making a regular semi-annual trip over the entire C. P. R. system. They remained over Tuesday night in Fernie and proceeded west on Wednesday morning. They will return east over the mainline.

SCHOOL FOR MORRISSEY MINES.

The Superintendent of Education has written the board of trustees at Morrissey Mines that a four room school house will be built at once on the new townsite. This step is the result of recommendation from Inspector Wilson. The new school is promised for Nov. 1st. The school at the mines will be suspended when the new school is completed and the teacher, Mr. Clark, will have the principalship.

A NEW GRAND STAND.

Executive of The Athletic Association Me On Thursday Evening.

The executive of the Athletic Association met on Thursday evening to make further arrangements for the Labor Day celebration. It was decided to offer a purse of $50 for the Mitchell-Appleford race. The executive also decided to build a permanent cinder racing track on the recreation grounds. This track will 10 feet wide.

A new grand stand capable of seating over 300 people, will be erected near the lower entrance. It will have booths at the back of it and next year it will be covered. Next week a subscription list will be passed around when it is expected that the sum of $500 will be raised towards prizes and other expenses. The day promises to be an eventful one. The trackmen are coming in full force and everybody is preparing for a good day's sport.

SALE OF COAL LANDS.

Fernie Citizens' Good Fortune.

Malcolm McInnis, of Cranbrook, and three others who held four coal claims at Crows Nest sold out this week to the C. P. R. The price paid was $110,000. The railway company will develop this property to supply their own coal requirements.

This news has inspired the holders of those claims, situated up the Elk above Michel, to hold out for a good price. The coal claims sold are on the same vein and if anything, they are regarded as somewhat inferior in the quality and quantity of the coal. The company of nineteen Fernieites who hold nineteen square miles of the best coal lands in that district are taking steps towards opening up their seams to ascertain the nature and quality of the coal, and work was commenced on Monday with this object in view. The properties are known to contain seven seams and there may be more. Some of the coal is of coking quality as was learned from crude experience with camp fires. The coal outcrops at the surface in many places and overturned trees are frequently found with chunks of the "black diamonds" clinging to their roots. This property is doubtless a very valuable one and the owners are justified in looking for a big price for it.

TO SAVE THE TREES.

Residents Along Macpherson Avenue Plead For the Lives of Their Shade Trees.

A deputation representing nearly all the land owners along Macpherson Ave. met Government Agent Armstrong on Wednesday evening to ask that the prison labor be put on that street to open up a highway and that as many as possible of the green trees and shrubs be saved for shade and ornament. This street runs along the bank on the west border of the town northward from behind the school block. The deputation represented to Mr. Armstrong that by reserving the trees that street could be made the prettiest in the town and that as it would always be open on one side the traffic would never be great enough to require the full width for a highway.

The Government Agent readily agreed to open up the street but he objected to the suggested plan of leaving any trees. He stated that if the government cleared the road at all they would clear everything away for the full width of 60 feet. He gave as his reason for this decision that residents in other parts of the town might object to this street being cleared in this way.

Mr. Armstrong was assured by the deputation that all the property owners along the street were strongly in favor of saving the trees and that the work, as suggested by them, would cost much less than by the method he was willing to use. These arguments were not strong enough to convence Mr. Armstrong and as the residents directly interested strongly opposed any unnecessary mutilation of nature along that street the matter was allowed to drop for the time being. The Board of Trade will be asked to take the matter up.

ANOTHER BIG JUMP.

PAY FOR JULY OVER $21,000 ABOVE PREVIOUS RECORD.

Pay Roll for Three Towns Amounts to the Large Sum of $151,000. Coal Creek Now on Top.

To-day is pay-day!

The pay-roll of the C. N. P. Coal Company for the month of July for the three collieries amounts to the magnificent total of $151,000. The largest previous pay was for June when $130,021,05 was paid, so that the pay given out to-day will exceed that of any previous month by $21,478,95. The pay at each place is as follows.

Coal Creek	$61,178
Michel	51,760
Morrissey	38,562
Total	$151,500

The greater amount of construction work at Coal Creek accounts for the larger pay there in proportion to the tonnage mined.

CONSERVATIVE MEETING.

Elect Delegates to the Nominating Convention.

The Fernie Liberal-Conservative association met last evening to elect delegates for the nominating convention which takes place a week later. The meeting was well attended and the busi- of the evening was got through without loss of time.

The basis of one delegate for every 50 voters, or fraction thereof, allowed Fernie 12 delegates. Open nominations were made and twenty four names were put before the meeting. Voting was done by ballott and resulted in the election of the following members.

J. A. Rennie.
F. W. Burn.
N. McKellar.
H. Bently.
Dr. Bonnell.
J. C. Hutchison.
A. Joyce.
W. R. Ross.
H. A Kanouse.
J. A. Broley.
A. H. Cree.
H. W. Herchmer.

GENERAL NEWS.

The big Pacific liner, The Empress of India, on Monday when nearing Hong Kong Harbor, collided with the Chinese gunboat, Haungtai, which was so badly damaged that it sank in 19 minutes. The captain of the ill-fated vessel, and thirteen of his officers and men were drowned.

Men are flocking into Manitoba and the territories from Ontario to assist in the harvest. The first excursion to leave Toronto carried 1812 people and the second, 2000.

Dr. S. A. Mathews, of Chicago University, has discovered what is said to be a certain cure for lockjaw. It consists of an introveinus injection of a salt solution.

PICNIC AT MORRISSEY

The miners union at Morrissey is holding a picnic today at the new townsite. A recreation ground has been cleared and a good day's sport is being prepared. A number have gone from here but no doubt many more would have gone had the day selected not been pay-day. The following is a program of the sports

Baseball..... .Morrissey vs. Fernie $30.00 for the winning team.

Football....Morrissey vs. All Comers $30.00 for the winning team.

Boys Race.....8 to 10 years prizes 1st $2, 2nd $1.50, 3rd $1.

Girls race.....8 to 10 years prizes: 1st $2, 2nd $1.50, 3rd $1.

Boys race .....10 to 12 years prizes: 1st $3, 2nd $2, 3rd $1.

Girls race.....10 to 12 years prizes: 1st $3, 2nd $2, 3rd $1.

Running long jump.....1st $4, 2nd $2.

100 yard race.....1st $12, 2nd $7.

Cayuse race. 1st $10, 2nd horse blanket

Putting the shot....1st $2.50, 2nd Silk neck tie.

Throwing baseball.....$2.50.

Tug-O-War....Cup for winning team.

A runaway occurred on Monday in Cranbrook in which a little baby girl had its leg broken.

WHEN BOYS WERE MEN

By JOHN HABBERTON,

Author of "Helen's Babies," "George Washington," Etc.

COPYRIGHT, 1901, BY JOHN HABBERTON

CHAPTER VI.

AT LAST.

ONE night as we were falling asleep just after taps the first sergeant came to our tent and said:

"All men turn out to draw revolvers and ammunition. The whole regiment starts on scout right after breakfast in the morning. The horses will reach camp tonight."

And that glorious, soul thrilling order was delivered in as careless tones as if the sergeant had merely come in for a man to carry wood for the cook. I made up my mind that the sergeant was not the man for his place and that the captain showed himself unfit for his business by appointing such a man.

Nevertheless I hurried to the sergeant's tent, and my soul thrilled with patriotic joy as I saw the great wooden box full of revolvers of the heaviest caliber. I knew something about revolvers, my father having invented one and allowed me to help him in some of his experiments. I mentally made the calculation right there that if each man in the regiment fired only one shot at close quarters, which is all the revolver is fit for in war, there would be about 1,000 fewer effective men in the Confederate army by the time we returned.

Besides the revolver each man received a holster, to be worn at the belt, a cartridge box and a box for percussion caps, for this was before the days of metallic cartridges. When the sergeant began to issue ammunition, however, his language suddenly became unfit for publication, for the department quartermaster, who was 30 or 40 miles away, had by mistake sent carbine cartridges, which, of course, were far too large for revolvers.

The sergeant reported the fact to the captain, while big Pat Callahan, of whom I had seen as little as possible, recalled old times by saying it was "all the gov'ment's fault, an' if the gov'ment's brains was turned into gunpowder there wouldn't be enough to blow it to"—perdition. The captain used language which proved that he was not a member of the church, but suddenly he dived into the big box in which the pistols had come and drew forth a bullet mold.

"Does any one here know how to load revolvers with loose ammunition?" he asked.

"Aye, aye, sir," said Cloyne, touching his hat.

"I, too," said I.

"And I," said Hamilton.

"Good!" said the captain. "You three break up carbine cartridges, make a fire, remold the bullets and load all the pistols. Six shots apiece will be better than none. Sergeant, collect the revolvers."

Then the men returned to their tents, more than half of them joining big Pat Callahan in cursing the government. Hamilton and I began breaking cartridges, while Cloyne started a fire near the cookhouse and looked for something in which to melt the lead. After much searching he settled on one of the cook's frying pans. Then he had to boil the bullets in water to get the grease from them, so an hour passed before we had any new bullets.

That job of loading pistols hung on amazingly. Some of the cylinders did not work well, so we had to "nurse" them, for it would never do for any man to be without a pistol in the face of the enemy. I became so sleepy that I had to pinch myself to keep awake. Once in awhile Cloyne did not close the mold tightly before pouring the lead, so the balls would be a little too

Down beside me came Mick McTwyny.

large to fit the cylinders, and we tried to make them smaller by scraping the sides with our pocketknives. Daylight began to dawn, and still 20 or more revolvers remained unloaded. Reveille blew, the captain came to look on, spoke impatiently and then said we were doing very well. Breakfast call sounded, and the men got not only their breakfast, but three days' rations to pack in their haversacks. Still we had some unloaded pistols. Then one man after another came up and told about the horses and made me almost wild with anticipation and fear, the latter because they said each man was allowed to select his horse, so what would be left for us but the poorest nags of the hundred?

Finally the last revolver was charged. I went at a double quick pace to the cookhouse for my breakfast and rations. The latter consisted of hard tack and a great piece of pork. How was I to put that lump of fat into my haversack? I had not even a bit of paper, much less a saucer or box. I settled the matter by throwing it away. Fat pork was disgusting stuff anyhow. Then, eating as I ran, I hurried to the stable.

The stable orderly looked at me, grinned most offensively and pointed to the only horse that remained. I went into the stall to look at him, but got out again just in time to save myself from a kick. There was no time to be lost, for most of the men had already mounted and were being cursed into some sort of line in the company street.

"Fall in on the extreme left!" roared the captain. I obeyed orders, being near there already. A mounted sergeant was already there, but he was not there a moment later. He went to the hospital with a compound fracture of the lower leg, caused by the hoofs of my horse, and he never saw active service again.

As we sat there and were again brought to some semblance of line, the captain remembered that he had not yet appointed his full complement of noncommissioned officers. The company was entitled to eight sergeants and eight corporals, of whom only five sergeants had been designated, and one of these had been sent to the rear by my horse. Of corporals we had none.

"Who loaded those pistols?" asked the captain.

"Cloyne, Hamilton and Frost," replied the first sergeant.

"And Brainard," said I from the left.

"Cloyne," said the captain, "you will act as sergeant; Hamilton, sergeant—and commissary; Frost"—

How did my jacket buttons succeed in holding in my heart during that glorious second of anticipation? I forgot every annoyance and disappointment of the past. Military ability, even if only displayed in loading revolvers, was to be recognized and rewarded. The captain was a splendid fellow. I wanted to order three cheers for him at once, but just then a familiar grating voice rose from the center of the line.

"I was promised to be sarjint mesilf. Didn't I recruit sivinteen min?"

"So you did, McTwyny," said the captain, looking at the ruffian a moment before he spoke. "Well, you shall be the remaining sergeant. Frost, first corporal; Brainard, second corporal"—

The captain continued through the list of corporals, and my heart sank. 'Twas better to be corporal than private, but to have had my expected honor snatched from me by some one else, and that somebody Mick McTwyny—to have Mick for my official superior! Oh, it put my spirits to flight, and some of my patriotism tried to go with them.

"Sergeant McTwyny to his post!" shouted the captain.

Down beside me came Mick McTwyny. Oh, if he had but been there when I first arrived and his leg instead of the other sergeant's had been broken by my horse! Still he was there now, and so was my horse, I could hope.

From the parade ground, where the colonel and adjutant sat mounted, a bugle blew the "assembly," the signal for forming line.

"Attention!" the captain roared. "Sergeant Cloyne, front! You will command the third platoon. From the right count fours."

"One, two, three, four; one, two, three, four," ran down the line in rapid succession.

"Forward!" blew the colonel's bugler.

"Fours right, march!" shouted the captain. "To the left, march!"

We obeyed orders as well as we could according to the tactics in which we had been drilled on foot. Between the tops of the tents we could see the other companies filing out of their respective streets and forming column in the road in front of camp. There was some trouble and a great deal of profanity, which began to seem an army necessity, as different captains endeavored to take place in column according to seniority and were hindered by other captains whose lines of march crossed their own. Some of the men in the newer companies got dreadfully mixed up and made a lot of trouble before they were set to rights, for they were not accustomed to horses, much less to riding. Finally, however, the whole force was in columns of fours in the road, and when the adjutant, learning this by galloping down the flanks, signaled the colonel, the latter had his bugler once more sound "Forward!"

"Forward!" repeated the bugle of each of the 12 companies.

"Forward!" shouted each captain.

With a confused trample of horses' hoofs, clank of sabers, rattle of carbines, jingle of spurs, a jumble of "Whoa!" "Git up!" "G'long!" and "Durn ye!" from the recruits and in a great halo of dust the regiment was off.

And yet—a regiment two-thirds of whose men had never seen their horses until that morning and half of whose recruits had never before been on horseback, who had to have their pistols loaded for them and who had never been drilled together nor taught even the simplest company movements on horseback!

Well, 'twas the way with hundreds of other regiments during the earlier years of the war, and 'twas nobody's fault apparently. As a nation we could bring men together faster than we could arm and drill them. Fortunately for us, our neighbors at the south were having the same ill luck.

CHAPTER VII.

IN THE ENEMY'S COUNTRY.

WE rode into and through the town, out by the road on which we used to do picket duty as infantry, across the bridge which we had laid and relaid so many times, far out to where we used to see the cavalry outpost's picket. We rode past the picket also. He was in the same place, as if he had been there ever since the Ninety-eighth went away. After that we began to eye each tree and fence for rebels, for were we not in the enemy's country?

Except for this feature of the ground we might as well have been anywhere else in Virginia for anything that was of interest. The fields of yellow cornstalks looked so much alike that one might easily have been taken for another, and the bits of woodland between were as like as two fragments of a single forest. The negro cabins were all of logs, the farmhouses of wood, painted white, and there were not many of either. The road, like all other roads in the south and everywhere else in farming countries in the United States, was just about wide enough for two wagons to pass each other, so it allowed us to ride only four abreast.

Sometimes the road bent and suggested that there might be a change of view beyond, but there wasn't. There was absolutely no change of scenery that we could remember for the first 12 miles of our ride that day, so we really felt some pleasurable excitement when we halted at a railroad crossing and saw near by a station building, a freight depot, a tankhouse, a blacksmith shop and a store building, though our captain told us that all had been unoccupied for months.

We fed our horses with oats which we had taken with us on our saddlebows, with instructions as to just how much to give at a meal, and dined on hard tack from our haversacks and water from a brook. The long ride had given me such an appetite that I was sorry that I had not brought at least part of my ration of pork. It might pass for butter when a man was very hungry. I was somewhat comforted, however, to note that my horse, which was tied next to Mick McTwyny's at the long rail fence beside the road, had frightened Mick's horse and eaten that animal's oats before tasting its own.

Brainard and I met at lunch, and I had just asked him how he liked being a trooper, and he had expressed the hope that the Confederacy might feel as shaky on its legs as he, when we heard a shot or two in the advance. A sensation passed down the line, and we all started on foot to see what was the matter, but the captain ordered:

"To horse! Mount! Remember your fours! Forward!"

Looking out the road, we could see by the dust cloud that the other companies were in the saddle and moving forward. We rode about five minutes, hearing from time to time a few shots, but no bullets. Suddenly, however, across a field of wheat stubble came one of our men on horseback, making a great noise as he appeared to be trying to check his horse's gallop.

"A cavalryman ought to be able to manage his horse without so much fuss," said I, with some pride, for I had been taught to manage horses by the rein alone.

"The poor fellow is hurt," said the lieutenant who commanded our platoon. "Seems to be his thigh. I guess his horse is hit too."

Down went my heart into my boots or up into my throat. I couldn't determine which. If this was war, I wanted it to stop at once. Just to imagine myself coming wounded and screaming across a field like that poor fellow made me feel deadly sick. I strained my eyes in the direction from which the wounded man had come, but saw nobody else. Meanwhile the surgeon had gone out to meet the man, who now was quite near us, and called to some one to take down part of the fence so the horse could reach the road. By the time the poor fellow reached the roadside he was very pale and leaning low on his horse, and we could see a broad red stain along the leg of his light blue trousers. He was helped to the ground, and the surgeon quickly cut away his clothing and examined the wound, while we moved on, my heart still being elsewhere than in its proper place.

On, on we rode, and the farther we went the more I wished we were going in the opposite direction. I am ashamed even now to remember how many different kinds of coward I was that day, but I was giving my entire mind to the subject, and in such circumstances a man can accomplish a great deal. Fortunately it was impossible to keep up the strain a long time, so within an hour or two I was cool enough for anything. I was too exhausted to be anything else.

When I regained my senses sufficiently to think of something besides myself, I was astonished at the coolness or carelessness of our lieutenant. He had once been a private soldier in one of the older companies, which were at the head of the column, but he did not ride ahead to ask questions, nor did he even dismount to speak to the wounded man, though he must have known him. In the middle of the afternoon we passed a member of one of the old companies going to the rear for something, and our lieutenant asked:

"What is it?"

"Nothin' much," said the man. "Their pickets was layin' for us."

"Nothing else?"

"No, except Big Brown's hoss was killed. He got one of theirs, though; that's all."

"Nothing much!" "That's all!" If a poor fellow, shrieking with agony over a broken thigh, which was being hurt still more at every step of his horse, was "nothing much," what would be regarded as something? If the "pickets layin' for us" could inflict so much misery, what would be the result of a full battle? Again I wanted to go home.

But no battle occurred that day, and we dismounted before dark and prepared to bivouac in the woods for the night, a stream crossing the road supplying ample water for men and horses. Brainard and I wanted to go right up to the front and learn all about the fight with the pickets, but the captain told us not to stray far from our horses. Some of the men began to ask when and where were the cook and the evening coffee, and when they learned that the cook had not come and that he should have dealt out ground coffee with the other rations, so that each man could make some for himself, there was a terrible hubbub, which reached the captain's ears and made him say dreadful things about the cook. But none of the fuss yielded a bit of coffee.

I was fortunate in never having contracted the coffee drinking habit, but what I lacked in thirst I made up in hunger. I already had eaten a full day's ration of hard tack, but it seemed only a mouthful. I consulted Hamilton, who had been named commissary sergeant, about the possibility of our getting anything else to eat during the three days, but he gave me no encouragement. Nevertheless I borrowed one biscuit of the nine which constituted the next day's ration and promised myself I would eat a light breakfast. Then I reminded myself that at home I often had gone without breakfast for the sake of starting early for a morning of fishing. Why could I not do likewise in Virginia? I regarded the proposition with enough favor to borrow another biscuit. But those bits of hard bread did not seem to fill the aching void that longed for them, and when I learned that most of the company were as hungry as I and were act-

He was very pale and leaned low on his horse.

ing according to the sentiment, "Eat, drink and be merry, for tomorrow we may die," even though the death was to be by starvation, I followed their example with such industry that by the time I was ready to sleep my haversack was as empty as when it first came from the quartermaster's. Never before had I enjoyed any meal so thoroughly, yet 'twas nothing but hard bread seasoned with Virginia air.

It seemed only a minute to breakfast time, so soundly did I sleep during nature's effort to make amends for the wakeful night before. No sooner was I awake, however, than I began to think of breakfast and of not having anything of which to make it. If misery loves company, our troop ought to have been a most sociable lot, for nearly all had been as improvident as I. Soon I began to stroll desperately about the forest in which we were camped. I hoped to find at least a slippery elm tree from which to tear some bark to eat, but the trees were mostly pines, among which the elm seldom grows. At the edge of the wood was a cornfield, into which I sprang and tore open some husks, hoping to find a belated ear which might be soft enough to chew, but all the corn was hard. I plodded so long between the rows that suddenly I saw before me the roof of a cabin. There might be rebels in it, thought I, but if they took me prisoner they couldn't refuse me something to eat. No matter how rebellious, the southerner never lost his reputation for hospitality.

I was greeted at the cabin door by an old colored woman who looked at me savagely and said:

"Don' yo' come no furder, Mas' Sojer. Dey ain't nuffin lef' to steal. Yo' men dun tuk ev'ryt'ing in de house las' night."

I took a silver quarter from my pocket. 'Twas a birth year pocket piece which I had carried for years; but, as Satan remarked the only time on record when he told the truth, "All that a man hath will he give for his life." I held the coin up between my thumb and finger, and as the old woman's countenance changed pleasingly I said:

"I don't want to steal anything, aunty. I'm almost starved, and I'd like to buy a mouthful to eat, I don't care what."

"Yo' don' mean it, honey? Yo' ain't foolin'?"

"No; here's the money. Take it—give

"Don' yo' come no furder, Mas' Sojer."

me something—quick!"

"Bress yo' soul!" said she, dragging me into the house. "Jess yo' set down 'n dat cheer, an' I'll make yo' a co'hn pone in a minute."

She raised a board from the floor, scooped some cornmeal from a hiding place, mixed it in a pan with water and poured the mass, which was exactly like the food we made on our farm for young chickens, into a heavy iron pan that was in the fireplace. On top of the pan she put an iron lid, on which she piled hot coals. It seemed to me the cooking consumed at least two hours, but 'twas only ten minutes by my watch when the woman took off the lid and lifted out an immense loaf of what in Summerton would have been called baked chicken feed, but which in the south is called corn pone, sometimes hoecake.

And how good it was! How, as I ate one fragment after another, I felicitated the ghosts of past generations of my father's chickens on the enjoyment they must have had in eating just such breakfasts! It was solid, a little of it occupied a great lot of room inside my belt, but that was just what I wanted. There was neither salt, eggs nor baking powder in it, as there always was in corn bread at our house in Summerton, but the taste of the raw meal was delightful for its own sake. And the loaf was so easily made too! I then and there resolved never to go on another scout without a little bag of meal in my haversack.

As I ate, the old woman told me of the trouble she had in keeping in the house anything to eat. The southern soldiers, she said, stole everything she had whenever they came that way, as did the northern soldiers, so she had learned to keep her chickens, pigs and corn in the woods far back from the road, where nobody would be likely to find them, and her husband always watched them when any soldiers were in the neighborhood.

I wondered what the people in the north would think about such treatment of the colored people, for whose benefit some of them seemed to think the war was conducted, but my thoughts were interrupted by the sound of a bugle.

"Take de res' along, honey," said the old woman, "an' "—here she looked under the floor again—"hyah's some yams [sweet potatoes]. Tuck 'em in yo' pockets an' roas' 'em in de hot ashes when yo' gits hungry."

I hurried away with profuse thanks, a full stomach and an entire willingness to face, single handed, the whole southern army in battle array. Many mouths later, when I had some soldiers under my own command, I gave more attention to the cookhouse than to my other duties combined. And how grateful were the smiles which Brainard, Hamilton and Cloyne gave me when I divided my surplus hoecake among them! Brainard said that bit of hoecake saved his life, so I had done the government as great a service as if I had brought a new soldier into the field.

Again we started, and as we rode the captain and lieutenants looked frequently at the horses' heads to see that curb bits were not chained too tight or hanging too high or too low and that the horses were not worried by being ridden with too tight reins. Most of the recruits wanted to make their horses arch their necks like soldiers' horses in statues and military pictures, and when the captain made them stop they muttered that war wasn't much fun. Big Pat Callahan said that a soldier was not only a dog, but he was expected to let his horse be a plug, which proved that the government was a condemned fool and deserved to be wiped out by the rebels. He did not get much sympathy from Mick McTwyny, for Mick was trying to carry the dignity of his new office, and it was such a heavy contract that he had no mind for anything else. His recruits, however, agreed fully with big Pat Callahan and cursed the government fluently, and the captain didn't reprove them, which seemed to me gross neglect of duty.

We rode nearly all day, but nobody could tell us where we were or what we were expected to do or when we would do it, all of which, when prolonged for hours, began to be enraging in the extreme. When we halted at noon to feed the horses, I complained to Cloyne that if we never were to know what we were to do we might as well be so many machines.

"That's just what we're expected to be," said he, "and the sooner you realize it and live up to it the sooner you'll be a trustworthy soldier."

This was depressing. It was simply awful. Could there be no way of release for a mind which could not help working? I asked Cloyne how high in rank a soldier must be to do some thinking for the government, and he replied:

"General in chief of the army, as a rule, though before you've been long in the cavalry service you'll have an occasional chance to use all the brains you own and wish for another headful to help you through."

This was encouraging for a little while, and then it wasn't. During the day I found something besides the conduct of the war to think of. The dust raised by more than a thousand horses in front, our company being next to the last in column, was blinding and choking, besides getting inside my clothing and making me feel unspeakably dirty. How I wished I might take in rapid succession all the baths I had with great effort avoided when I was a small boy! The water in my canteen became disgustingly warm, for the midday sun was hot, and I had not learned how to cool a canteen, yet my mouth and throat were parched. My legs ached intensely from the steady pressure on the saddle, yet the horn of the saddle was so high, with the roll of blankets strapped to it, that I could not get relief by riding "woman fashion" for a few moments, as was the custom with farmers' boys at Summerton. Poor Brainard, who never before had done any riding, said he was sure his legs were being so bowed that they would have a wider spread than his shoulders, which would be extremely inconvenient, as well as unsightly. But there was one comfort—Mick McTwyny insisted that his legs were that bad that when he reached camp he was going to the hospital and remain there for life.

Suddenly, an hour after the afternoon march began, I was given a new subject for thought. A bugle call sounded from the advance, which was passed down the column by successive buglers. It was a call I had not heard before, so I asked the lieutenant what it was.

"It's 'Charge!' That's what it is."

CHAPTER VIII.

THE CHARGE OF THE THIRTY-EIGHTH.

"ATTENTION, company!" shouted our captain. "Draw sabers!"

"Flashed all their sabers bare," as Tennyson says in "The Charge of the Light Brigade," but I hope for the reputation of their drillmasters that Cardigan's troopers flashed their swords more in unison. Had they not, some of them would not have been in condition to annoy the Russian gunners much. Ours was a sort of cumulative flash; it was literally a long drawn out effort. The boys had learned to draw their sabers quickly on foot drill or parade, where the scabbard was partly raised by the left hand as the right hand sought the grip, but the saber of the mounted trooper hangs as low as the straps will allow, and as we never had been drilled while mounted many of the men nearly fell from their saddles while leaning to the left in a frantic reach for their sword hilts.

"Captain Bright," roared our battalion's major, an officer in whom I had not previously taken any interest, not seeing where his usefulness came in, "why are some of your men's sabers undrawn?"

"You rascals," screamed the captain, facing his horse toward the flank of the company, "why don't you draw your sabers?"

"I can't get down to mine," said Brainard, answering for himself. His arm, like the remainder of him, was quite short. "I don't believe I can reach it unless I turn a somersault."

"Take your bridle in your right hand; draw your saber with your left; now change hands; the rest of you do the same. There!" the captain yelled.

"Make haste, captain," said the major. "You're opening distance badly between you and the company ahead of you by being so slow."

"Trot! March!" the captain ordered in a nervous shriek.

Off went the company, but not all of it went off in the same direction, for at least one man in every three had never felt a horse trot under him, so two or three fell off their chargers before we had gone a hundred yards. Others retained their seats fairly by grasping the horn of the saddle with the bridle hand and trying to seize the pommel with the other. But a sword is as much as a novice can hold in one hand. Several had to choose between giving up their rear hold and losing their sabers. Some did the latter, preferring present safety to future possibilities. Among these unfortunates was Brainard.

The major dropped back to the rear company, for which I was profoundly grateful. It wasn't pleasant to think of any one, even a member of our own regiment, observing all that was occurring in our company during those few moments. Men who were not accustomed to riding were bouncing briskly in their saddles and looking as wretched as the poor fellow who came in wounded the day before. Mick McTwyny lost his temper, blamed his horse for everything and, turning to the roadside and halting, began to pound the poor animal with both fists and kick him in the flanks with his spurred heels, a proceeding which the brute resented by leaping suddenly forward and tumbling his rider into the road. The lieutenant, who had chanced to look backward, turned and threatened to saber Mick then and there unless he at once remounted and acted like a soldier instead of a donkey, and Mick returned the threat, upon which the lieutenant, using his saber as a paddle, gave Mick a tremendous spank, and Mick swore an awful oath, which he chewed to extreme laceration as he uttered it, that he would get even with the lieutenant, and the lieutenant promised to give him a season of arrest in which to think up his vengeful plan.

(To be Continued.)

FIRED ON YANKEES

FISHERMEN VIOLATE INTERNATIONAL LAW.

Canadian Revenue Cutter Pumps Twenty Balls into the American Craft--Many Shots Penetrate the Heavy Steamboat --No Loss of Life Reported.

A dispatch from Erie, Pa., dated August 12, says: The Silver Spray, a fishing boat owned here, came into port this afternoon in a badly shattered condition, due to an encounter in mid-lake about noon with the Canadian revenue cutter Petrel. For years the Canadian authorities have had trouble with American fishermen poaching on the Canadian side of the lake.

About noon the Petrel came upon the Silver Spray on the Canadian side and at once ordered Captain Chris Schau to stop. The Petrel is a strong steel craft, and it is said attempted to ram the American boat before she could comply with the order. Captain Schau, remembering the fate of several other boats from this side which had been captured and confiscated, attempted to escape and started ahead at full speed.

The captain of the Petrel opened fire with all the guns he had on board, and before he ceased firing some twenty shots had struck the American vessel. One passed through the smokestack into the pilot house, in which Schau stood, and two others struck the pilot house. One came within a few inches of the captain.

That no one was killed is considered wonderful, as the shots entered the cabin and various parts of the boat. The chase continued until the silver spray crossed the line into American waters, when the Petrel gave up the pursuit. The cold water pump on the American boat refused to work for a time and Captain Schau was in despair before he reached the line. The Silver Spray is a double-decker and was run for 12 years as a pleasure steamer at Buffalo.

Captain Schau says he will report the matter to the state department at Washington, as he says he was only looking for some of his nets which had drifted from this side towards the Canadian shore. A large number of American fishing tugs have been confiscated by the Canadian government.

SETTLERS POURING IN.

Many Expatriated Canadians Returning to the Land of Their Birth.

Homestead totals received at the Immigration hall, Winnipeg, on August 12, show that an unabating steady stream of settlers are still heading from Europe, England and the United States to the Canadian west.

It is also becoming more and more noticeable that Canadians, now in the States, are pulling stakes in their foreign homes and getting back into the immigration procession, coming north.

With the exception of the Regina district, practically every homesteader in the reports is an experienced farmer, and the predominating nationalities are German and American.

Every settler in the Red Deer district during the week was American, with the exception of four, three of whom were from Canadian provinces and the fourth from England.

A dozen French-Canadian families have come back from Minnesota and Dakota to have a share in the opportunities in the Prince Albert country, while the Lethbridge office boasts the registration of fifty souls from the State of Utah alone during the week, and all but two of the entire list of homesteaders are farmers.

The Regina district seems to entice a more cosmopolitan class of settlers and besides farmers about every line of modern occupation is represented, from an army officer to a boot operator.

During last week a total of seventeen homesteads were taken up in the Winnipeg district. The number and nationalities of the settlers were: Canadians, 11; English, 25; Icelanders, 15; Poles, 2; Swedes, 1; Welsh, 6; and Danes, 1.

Red Deer District—Weekly total of entries, 34. Number and nationality of settlers: Canadians, 30; British, 20; Norwegian, 8; American, 102, German, 9; Swede, 1; Danish, 3.

Prince Albert—Weekly total, 46; Number and nationality of settlers: German, 57; French-Canadian, 23; Swedish, 12; American, 5; Galician, 15; Hungarian, 3; French, 5; Canadian, 30; English, 6; Norwegian, 8, half-breeds, 5.

Regina—Weekly total of homestead entries, 166; number of settlers, 392; former occupations, mixed, with farmers and handicraftsmen predominating.

Lethbrodge—Weekly total of homestead entries, 16; number and nationality of settlers: American, 61; British, 36; Canadian, 6; German, 12; Dutch, 4; Norwegian, 1.

Christians in Macedonia are reported to be in deadly peril of being massacred by fanatic Mussulmen.

News has been received at Edmonton of the finding of a wild man near Bresaylor, Saskatchewan. A settler named Ballenden Friday evening going out of doors was fired at from short range and the attack is credited to a demented armed man seen some time previously by Ballenden. The settler was not injured. A search was instituted for the lunatic.

INDIANS, AND LIVE STOCK

Encouraging Reports of Farming Operations on Reserves.

On the Indian reserves throughout Manitoba and far out on the prairies of the Terrirtories the blue-blooded natives of Western Canada are groaning in satisfaction, with a good portion of $140,000 snug under their wampum belts. The Indians are being paid their annuities now and Indian Commissioner Laird, of Winnipeg, is beginning to receive reports that show the distribution of treaty fees for 1903 is already well nigh completed.

The month of July and the earlier portion of August is the Christmas season to the reserve Indian, and although the government has been discouraging the custom in every possible manner, here and there a tribe breaks out into a good old fashioned dance and jollification, after the Dominion agents have passed through their villages and made reparation for the land titles which they have since ceded to the government.

Most of the annuity monies were paid out by the close of July, but on some reserves distribution is not made until as late as November, so that the Indians will have the means to put in a good winter supply.

A number of monthly reports from agents on the reserves have been received recently by the commissioner, and some interesting information is gleaned from them.

When the possibility of raising first class live stock in Western Canada is so much discussed it is noteworthy to find that the concensus of the reports from the agencies is that the Indians are quite successful in this branch of farming.

The agent for the Qu'Appelle reserve, one of the largest in the west, containing over 800 aboriginies, says that the cattle on all eight reserves are in "prime condition, and the increase this year in calves has been very good.

He goes on to state that he has never seen "a better class of cows." The Indians have been successful, as well, in raising a hay crop that will meet all demands.

Livewise, in his report from the Birtle reserves, the agent says that the "grain and garden crops promise good returns: the cattle are in excellent shape and the calf crop is satisfactory. Prospects are very bright," he continues, "for a harvest equalling that of last season."

The statistics on health show that there is little ground for the generally prevailing opinion that the Indians are a disappearing race, at least in Western Canada.

It is peculiarly notable, however, that though the average shows them to be just about holding their own, there is a steady decrease in numbers among those living out on the western plains, while the inhabitants of the reserves in the mountainous and wooded districts continue to thrive and increase in population. There is no palpable reason for this analogy unless it be the very environments of nature in which natives live.

A TERRIBLE EXPERIENCE

Boy Found Adrift in an Open Boat on the Ocean.

A New York dispatch says: The Morgan line steamer Eldorado, Captain Prescott, which arrived here today from Galveston, had on board a 12-year-old boy, who was found adrift in an open boat about 100 miles off the coast of Georgia, on August 10. He was naked and almost dead from exposure.

After the lad had been revived somewhat he told Captain Prescott that with two other boys he was fishing outside the harbor of Havana, when the boat broke adrift and they were unable to row it ashore. Two of the lads, seeing the land rapidly receding, plunged into the water and swam for shore. The other boy was unable to swim so far and remained in the boat without food or water until picked up by the Eldorado. He says he was adrift for five days.

Captain Prescott thinks the boat could not have drifted 530 miles from Havana to the point where it was sighted, in less than six days, and possibly longer.

Coal Discovery at Peace River.

Henry Campbell, government geologist and surveyor, has made a discovery of a huge coal field on the Peace river in Athabasca, near Dunvegan, 400 miles northwest of Edmonton. According to Mr. Campbell's report and advices from Edmonton, it is reckoned that the coal district contains at a conservative estimate some 300,000,000 tons of coal, which appears in nine foot seams. Mr. Campbell spent several months on the Peace river surveying the land with the greatest care in order to ascertain as accurately as possible what yield, if any, the land would give, in coal and mineral. The difficulty of transportation, of course, stands in the way of the immediate development of this great discovery, but, with the advent of new railroad lines Peace river is bound to become one of the greatest coal mining districts in the world.

In June 18 negroes were lynched in the United States. Mississippi led with seven, four being executed at one time by a mob, a woman being a victim in another instance. Georgia comes next with five. On one occasion three negroes suffered death together. Louisiana, Tennessee and Arkansas had one each.

The Irondequoit won the fourth race in the Canada cup series at Toronto.

CANTERBURY'S GREETINGS

Ancient City's Delegates to Trade Congress Bear Message to Canadians.

Among the delegates to the Congress of Chambers of Commerce of the Empire at Montreal are G. J. F. Adams and T. Easton, who will represent the Chamber of Trade of Canterbury, England.

Messrs. Adams and Easton have a unique status among the delegates as they are the official bearers of a message of love and regard from "The Mother city of the Anglo-Saxon race" as Canterbury has been termed, to the "Sons of the North who have their homes in Canada."

The idea of sending such a message emanated from Mr. Adams, and it was at once hailed with enthusiasm by the City of Canterbury. Mr. Adams has twelve sheets of parchment inscribed as follows:

MESSAGE TO CANADA.

"To the Right Worshipful the Mayor and Corporation of the City of ——— in the Dominion of Canada, in Greater Britain Beyond the Seas, Greetings—With heartfelt good will and affection and sincerest wishes for the continuance and increasing prosperity of your city, from the Mayor and Corporation of the Ancient City of Canterbury, Mother City of the Anglo-Saxon race;

"Borne by the hands of Gerald J. F. Adams and Thomas Easton, delegates from the Chamber of Trade of the City of Canterbury.

"Given under our hand and seal 29th day of July, 1903.

"(Signed) George Collard, Mayor; Henry Fielding, City Clerk."

The greeting bears the official seal of the city and is engrossed upon white vellum, beautifully illuminated. It will be presented to the mayors of the Canadian cities as Messrs. Adams and Easton pass through them during the progress of the continental tour, which will be taken at the close of the congress.

FROM BOTH HEMISPHERES

Important News Condensed Into Brief Paragraphs.

No. 1 hard wheat sold at 90 cents in Winnipeg on August 13.

Rev. Mr. English, of Cobourg, Ont., dropped dead at Fort William on Thursday last.

Two miners' strikes are reported from British Columbia.

The horticultural show will be held at Winnipeg on August 26, 27, and 28.

The C. N. R. will build an imposing office building on the site of the old Manitoba hotel, Winnipeg.

A destructive hail storm passed over 10,000 [illegible] of wheat fields in North Dak[illegible] on Thursday last.

Souris [illegible]eated Roland at lacrosse 11 g[illegible] [illegible]o 7, in Winnipeg on Friday la[illegible]

[illegible]ontract has been let for a C. N. [illegible] branch to Thunder Hill.

Winnipeg four-oar crew won the international senior race at Worcester, Mass., on Aug. 14.

Burglars entered the Pigeon River Lumber company's office at Fort William on August 13 and stole over $300.

The deciding race for the Canada cup resulted in a win for the Yankee yacht by 1 minute and 10 seconds. The Americans thus win the cup.

A fatal accident occurred at Grand View, Man., on August 13. The young son of J. Dempster was sitting on the steps of a traction engine on which his father was engaged in making some repairs, when suddenly the engine started to move, and the child fell under the wheels and was crushed to death.

The steamer Mersey, from Quebec, with a cargo for seven islands foundered on August 13 below Point Dulandes, on the north shore of the St. Lawrence. Five of her crew were drowned.

A dispatch from Vienna says the entire Servian ministry have resigned in consequence of the differences in the personal relations between the army officers who participated in the assassination of King Alexander and [illegible]en Draga, and those who took no part in the murders.

While at work ploughing on his father's farm at Nesbitt, Man., a lad of 15 was surprised and attacked by two prairie wolves. His screams for help attracted a neighbor and his men, who came to his assistance with guns and speedily disposed of the brutes. The lad was not seriously injured beyond being frightened very badly.

Hon. Mr. Seddon, the New Zealand premier, has given an impetus to the imperial reciprocity movement by stating his budget speech that he would deal with the question of preference on the basis of patriotism and not as an object of gain. He proposes a substantial duty on foreign products, leaving Great Britain to make a return if she sees fit.

Before the biggest crowd that has attended any of the championship fights at San Francisco, Jim Jeffries demonstrated that he is the best heavy-weight fighter in the world, by putting Corbett, the challenger, out in the tenth round. The first of the deciding blow was a solar plexus, which landed on Corbett's stomach. He tried to shoulder into a clinch before the count, but Jeff. measured with a right in face and stomach and the fight was over.

According to statistics compiled by the publishers of Henderson's Directory for British Columbia, just issued, the population of Vancouver is 33,000, 29,000 whites and 4,000 Orientals. The population of Victoria is given as 24,290, of which 19,290 are whites and 5,000 Chinese and Orientals.

DREAM COMES TRUE.

St. John's Man Sees His Own Corpse While Sleeping.

A dispatch from St. John, N. B., says: Having for three consecutive nights dreamed of seeing his own dead body, John F. Sutherland took out accident insurance policies for $10,000 one month before his death in the woods. Sutherland was superintendent of schools in Milltown, N.B., and one of the best known educators in the maritime provinces.

About six weeks ago he dreamed he saw his brother driving down the street in an express wagon. The body of the wagon was covered with a white sheet. Pulling back the sheet Sutherland, in his dream, saw his own body. On the two following nights he had the same dream. Though not a believer in dreams he felt worried and consulted his wife. He was in perfect health and did not fear death by disease. He thereupon took out two accident policies for $5,000 each.

On Thursday of last week, while hunting with a party on the St. John range, he recived a gunshot wound in the legs. He was taken to the nearest town, and both limbs were amputated. He died the following day.

KILLED BY A PLAYMATE.

Fatal Shooting At Kamloops--The Old Story.

A dispatch from Kamlopps, B. C., says: As a result of his companion's playing with a revolver, little Willie Edmonds, seven years old, son of W. H. Edmonds, registrar of this city, lies still and cold in death.

In the lane back of Edmonds' residence the boy Willie was playing with another boy, Charles Newman, about his own age. They had been playing together in the garden and making as though they intended to go outside into the lane. Willie was asked where he was going, and was understood to reply, "We are going to get a cart," and as it was known that the Newman boy had a cart, no more was thought of it.

After a short interval the report of a shot was heard, and Miss Jones, who was looking after the children, running into the lane, whence the sound came, was horror-stricken to find her nephew lying on the ground, shot in the head and unconscious. The child died in a few hours.

THE WIDE WORLD.

Telegraphic News of Two Hemispheres Briefly Chronicled.

Mr. Alex. Pirie, editor of the Dundas Banner, is dead.

Mr. Dan Bain, of Winnipeg, won the Dominion championship at the trap shooting tournament at Toronto.

Winnipeg oarsmen captured the senior eight-oared event at the International regatta at Worcester, Mass.

A disastrous fire occurred at the C. P. R. repair shops, Winnipeg, on Saturday night, doing damage to the extent of $25,000.

Surveyors are making good progress in locating the new G. T. P. line via the district north of Wabigoon.

Clarence McDonald, while driving across the Grand Trunk tracks at Guelph, Ont., on Sunday was struck by a train and so seriously injured that recovery is doubtful.

The special correspondent of the London Morning Post, writing from Winnipeg, says it is the largest Canadian city west of Ottawa, and that a visitor has to go far into the United States before coming upon a centre of like importance. The Northwest is not only regarded as a possible rival of the States in wheat growing, but as a certain victor. He deals enthusiastically with prospects and possibilities of the Northwest.

Sir William Van Horne is leaving Montreal on a trip to the west next week. He will visit his farm at Selkirk, where he is going to place the cattle he has just purchased at the sale of stock belonging to the late Senator Cochrane. It is reported that Sir William paid for one Shorthorn bull the sum of $3,000 and he regards him as the finest animal in the country.

The Edmonton Bulletin says: Colin Fraser's furs are attracting a great deal of attention at that point. They are being put up in five lots. Four of the lots are now stored in the waiting rooms of the skating rink and the fifth lot of silver foxes and the most valuable furs is at Ross Bros' warerooms. The local fur buyers are at work sorting out the furs and making a valuation of them. The bids will be considered some day this week. The shipment is one of the largest that has ever been brought into Edmonton by an individual trader. The furs are in good condition and an especially valuable collection. It is said they will bring from $32,000 to $35,000.

Drowned in Rainy River.

A sad drowning accident occurred near Big Fork, Rainy River, Thursday last, whereby two little girls named McDonald and a married sister lost their lives. The bodies of the children were recovered, but so far the body of the eldest has not yet been found. The accident was due to the children bathing and getting beyond their depth. Giving the alarm, the married sister hurried to the rescue and was drowned in trying to rescue them. The mother and rest of the family were berrying at the time of the accident, and it was not known until they returned.

MY HEART'S DARLING

BY W. HEIMBURG.

CHAPTER XXV.

Mademoiselle could not rest in the house. She took a shawl and went through the dark streets to Fraulein Dettchen; she must have some one to whom to unburden her heart over the events of these last festive days.

The old lady was sitting in the garden in the arbor waiting for her nephew. She had put back their evening repast, and was knitting in the dark. Not a breath of air stirred; only the water rippled and murmured softly as it flowed on behind the arbor.

Mademoiselle was quite exhausted; she kissed in an excited manner the round little fraulein on the cheeks, and seated herself breathless on the bench.

"Oh, mon Dieu! it is over! they are gone! It has been such a fatiguing day!" And without giving Tante Dettchen a chance to say a word, she described in glowing colors the bride, the presents, the menu, and finally the baron's fainting fit. "Your nephew, my dear, is still there; the gentlemen were taking a glass of beer. Lucie—"

A sharp ring at the gate interrupted her. Tante Dettchen, who had hurried down the path, came back with a tall figure at her side.

"Allow me, mademoiselle," she said, speaking into the dark arbor, "my sister-in-law, the Frau Counselor Adler."

The ladies bowed, and Frau Adler groped her way to a seat.

"It is really too bad that this old hag should be in people's way so late in the evening," she thought, as she drew her knitting out of her pocket. For awhile nothing was to be heard but the clicking of the needles. "Selma is coming after me," began the Frau Counselor at last. "She has only gone to baker Schulzen's to get a cherry cake; we have not had tea yet; we have been walking and were detained."

She omitted to say that she and Fraulein Selma had been sitting two hours at the depot with a glass of Bavarian wine that they might "quite accidentally" see Herr Weber and his bride enter the railway carriage. As the wedding did not take place in church she had to convince herself in some other way whether Hortense was really married. And now she must find out what was to become of Lucie.

"Is Alfred not at home?" she now asked.

"He is with the baron, who has had a slight attack, but is already much better. I was just telling about it," answered mademoiselle's voice.

"There he comes!" remarked Dettchen.

The latch of the trellis gate turned, and a firm step sounded on the path.

"Alfred!" called his mother, "here, in the arbor."

He came and stood at the entrance.

"Why was the gate open?" he asked, after bidding them good-evening.

"Selma is coming."

"Ah! is she?" He made a movement to go.

"Alfred, do stay; we see you so seldom," said his mother, moving up on the bench. "Here, I have made a place for you; sit down a moment."

He did so. Mademoiselle only saw the dark outline of his figure and the lighted end of his cigar.

"It will be very quiet in your house now," said the Frau Counselor, taking up the conversation and turning in the direction in which mademoiselle sat.

"With us? Oh, terribly so," answered the latter; "even Fraulein Walter—"

"You here, mademoiselle?" asked Adler, astonished.

"Mais oui! I came over to chat a little with Fraulein Dettchen."

"Ah, that is the reason we have been searching for you so vainly. Herr Weber, who was just leaving for Hamburg, wished to take leave of the ladies, and we thought at last, as there was no answer to our knocks, that you must be sleeping. He left his respects for you. Major von Schenk is just taking him to the station in his carriage."

"Oh, I regret extremely! But Lucie—Fraulein Walter — she was upstairs. Probably she has locked herself in and is weeping at parting."

"Very probably."

"I suppose Fraulein Walter will now go back to Bornroade to her brother-in-law?" inquired the Frau Counselor. At last she was on the right track.

"Quelle idee!" cried mademoiselle; 'she is to live at Wottersdorf with Hortense; that was arranged from the first; they have never thought of parting."

No one spoke a word for the next minute.

"And does he like that?" asked the mother at last.

"He?" repeated mademoiselle, raising her voice.

"Yes. Herr Weber."

"Ah, so! But what am I to understand by that, madame?"

"I mean, man and wife are generally satisfied with each other, and a third person is superfluous. If a wife loves her husband she can do without her friend."

"You forget that this is not like a simple village marriage, my friend," interrupted mademoiselle sharply. "Castle Wottersdorf is large enough to allow full opportunity to see as much or as little as one wants of one's friends, and besides, madame is so situated that she may indulge herself in a companion should she wish it."

"Ah, so! that is quite a different matter, for then one can dispense with a companion whenever one wishes. I thought Fraulein Walter was her friend?"

"And that she is, madame, and a true friend, too; they will have a very delightful life together," retorted mademoiselle, enraged at the manner in which she was questioned.

The Frau Counselor remained calm; she only said a word or two, which mademoiselle did not understand.

"Just wait awhile."

"What?"

"Do not hang up your flails till the grain is threshed; do not whistle until you are out of the woods."

"But I do not understand you."

"Well, I mean it would be the first time in the history of the world that love and friendship harnessed to one cart would draw evenly. One must give way to the other. Where can Selma be?"

"I must say good-evening," said mademoiselle. "I find it rather cool in the arbor here. Herr Doctor, do you think that faint of the baron's was anything serious?"

"Oh, no! Think how trying this parting was to him; he was sleeping very quietly as I came away. But if you will allow me. I will accompany you home."

Mademoiselle tripped along by Alfred's side, in her rustling silk dress, but her heart was full of rage at the mean insinuations which had been made. He walked along slowly, his hat in his hand, as if he were warm, not speaking a word except here and there returning the "Good-evenings" called to him from some doorstep.

As they turned at the corner of the Wassergasse, by the apothecary Zum Goldenen Elephantin, a tall figure in a light dress stepped out of the shop, and, in the light which shone out of the window, Adler recognized his mother's guest, Fraulein Selma. She stood, not noticing him, and looked smilingly through the window, where a delicate young man with a black mustache was busy corking a bottle of medicine, and tying it up in dark paper. Then she hurried off in the direction of the doctor's house.

"Good-night. Mille remerciment, doctor," said mademoiselle at the gate of the Meerfeldt mansion. "Do not forget us lonely people."

"A good night's rest, mademoiselle. I will perform my duties as house-physician conscientiously."

As he returned he passed the arbor with a cool "Good-evening." He could see Fraulein Selma's light dress within.

"Alfred," cried his mother.

"I must get my lamp," sounded back from the house door. "I have to work this evening."

Dettchen hastened to bring what he asked for, let down the curtains, and went away, stepping on tiptoe. He seated himself at his writing table before an already commenced report as to the condition of the drinking water of the town in connection with the building of a new aqueduct; but he held the pen in his hand without once dipping it into the ink. She was not going back to those motherless children, had not had any idea of doing so! She would follow Hortense as a companion, as a friend, in the luxurious life of her wealthy home. How would it be at Wottersdorf? There it was again: he was anxious about her. What was she to him now? He hastily dipped his pen in the large china inkstand and wrote:

"In the water of the Rathhaus Spring, for example, I have, by experiments made yesterday, discovered a considerable quantity of saltpeter—"

It was two o'clock in the morning before he thought of going to bed.

(CONTINUED.)

If Willie Had His Way.

Pa says if he'd of made the world
Most things would be about
The same as God has made them; cricks
Would still wind in and out;
The hills would still be steep and green,
The rivers full of crooks;
But he'd of made all women glad
By givin' them good looks.

I'll bet the women would be gay
If pa could have a pull
And make things over so that they
Would all be beautiful,
But if I had a chance to say
What change I'd rather make
I'd have it fixed—ow! Moses!—so
Boys' teeth would never ache.

—S. E. Kiser in Chicago Record-Herald.

The Summer Girl.

She's spoken of in admiration;
She's criticised through every nation;
No other subject is discussed
With so much favor and distrust
Throughout the world, in every clime,
As this, the queen of summer time,
Fair creature of the flounce and curl,
The summer girl.

Some writers scornfully assert
She's nothing but a heartless flirt;
Our "funny men" all find in her
A joke unfailing, as it were,
While others, favorably inclined,
Say she's the gem of maidenkind,
A jewel among her sex, a pearl,
The summer girl.

But through it all she stands alone
And calmly manages her own
Regardless both of praise or blame,
Remaining always just the same,
Excepting that each year she's more
Bewitching than the year before,
Keeping men's brains and hearts awhirl,
The summer girl.

—Theodore Keith in Chicago Record-Herald.

Earthquake Waves.

An earthquake wave has been known to travel over the Pacific ocean in twelve hours and sixteen minutes—that is, at the rate of six miles a minute.

The Age of Trees.

"Penn's treaty tree—the treaty elm—does that still exist?" a young man asked the antiquary. "No," said the old man; "it was blown down on the night of March 3, 1810. This tree, as its concentric circles showed, was 283 years old; no great age that for a tree. There is in England, at Cowthorpe, an oak that is supposed to be 800 years old. The English yews often reach an almost incredible age. The celebrated Ankerwyke yew is 1,100 years old, and there are others of an equal age. Some of our American pines can hold their own in respect of age with the European trees. Oregon pines on being cut down have shown as many as 1,100 concentric rings running from the heart out to the bark. Do you know who first showed us how to tell a tree's age by its rings? It was Montaigne, the essayist." — Philadelphia Record.

The Fernie Free Press

ESTABLISHED 1898.

H. G. WATSON, Editor. J. R. WALLACE, Manager

THE FERNIE FREE PRESS, FERNIE BRITISH COLUMBIA

SATURDAY, AUGUST 22, 1903.

EDITORIAL NOTES

Watch the pay roll grow! Every succeeding month establishes a record. At the present rate the two hundred thousand mark will soon be reached.

* * *

SOME time ago the Board of Trade received a communication intimating that $2000 had been appropriated for the improvements of the Fernie roads. The summer is almost gone and nothing has yet been done to have this money spent as intended by the department. This money would go far in putting in some very necessary drains and in opening more streets and in improving those already opened. This town has suffered enough from the inattention of the department without being denied the little that is actually granted.

* * *

The C. P. R. this week brought in two more littie red shacks and placed them on posts beside the two already at the depot. These four little shacks are being used for baggage and express. The whole four would not make more than a decent sized baggage room. It is to be hoped that the present make-shift arrangements will not last much longer, and that the railway company will hasten the completion of their plans for a large and modern station at this point. The railway company does a large trade here which easily justifies the erection of a first class depot.

* * *

THE police are keeping a look-out for parties who have been accustomed to discharging fire-arms within dangerous proximity to the town. This habit is a common one, so common that many do not regard it as a breach of the peace. The danger oftentimes is doubtless more imaginary than real, but when multiplied so many times it is little short of marvellous that serious accidents have not occurred. A lady one day this week while near her home heard a stray bullet whizz past her. A short time ago another pierced the walls of a house in the town. Is there any wonder that we so often read of accidental shooting fatalities when such a promiscuous use of fire-arms is permitted!

* * *

THE Board of Trade has received a letter, dated August 15th, from Minister Tatlow, who is acting Commissioner of Lands and Works, stating that the government agent had been instructed to do nothing on the Morrissey-Fernie road until fu.ther notified. The letter stated that the premier would be home from a trip in about a week when he would take the matter up. The government evidently has a hard nut to crack in determining which side of the river the road should be built. There are arguments in favor of each route and these arguments have been brought to the attention of the government. It is a important that a road be put through at once. The time will come shortly when there will be a road on both sides of the river. What we want is a road NOW.

ASKED TO MOVE ON.

Small Budget at the Police Court This Week.

Two undesirable characters left town this week against their inclinations. These men were known to be hangers-on waiting for pay-day to come around that they might get their rake-off. These men, George Williams and Albert Martin, were run in by the police and they were ordered by the magistrate to leave town. The ormer left yesterday morning and the atter went west this morning.

P. D. Murray was fined $5 and costs for being drunk and disorderly.

A quarrel between two Slavonian families from Coal Creek Mines was aired in the police court on Monday. The charge of assault was not well sustained as the evidence, which was of a sensational nature, went to show that there was "bad blood" between the families at the bottom of the trouble. The magistrate bound over both parties to keep the peace in sureties of $50 each.

Your credit is good at the B. C. Furniture Co.

LOCAL AND GENERAL.

Laidley's new fall stock has arrived.

Mr. and Mrs. Barrows, of St. Paul, are visiting Mr. and Mrs. Mott this week.

P. Burns and Blake Wilson, of the P. Burns & Co., were in town this week.

S. J. Watson, of Parkhill and G. Morris, of Chicago are stopping over in Fernie a few days on a trip through the west.

Pay was given out at Morrissey yesterday on account of the picnic held there to-lay, A. Klauer acting as pay clerk.

Mr. and Mrs. Mott and Miss Mott accompanied by Mr. and Mrs. Barrows, and Mr. Robertson were up to Fort Steele on Thursday and Friday.

A car-load of horses for the Coal Company arrived in Fernie this week from High River where W. S. Bell, V. S., purchased them. They will be used in the Coal Creek and Morrissey mines.

The service in the Methodist Church to-morrow will be conducted by the pastor, His subiect in the morning will be, "The all-potent thing," and in the evening, "The lonely cry." All are welcome.

Messrs. A. Joyce, J. Hutchison and W. R. Ross were down to Jaffray this week and assisted in the organization of a Liberal Conservative Association. A. Mudigh was appointed President and Geo. Leitch, secretary-treasurer.

The junior lacrosse players are making arrangements to go to Fernie on Labor Day, Sept. 7th, when Lethbridge seniors meet Fernie in a Crow's Nest League match. Mr. G. Appleford will also meet Mitchell, the Fernie sprinter, and quite a number are calculating on going up with the boys—Lethbridge News.

The heavy wind storm on Wednesday afternoon and evening raised the usual blinding clouds of dust. A small sized cyclone formed on the old recreation block about five o'clock and went tearing on its was through the north west corner of the town. Every loose thing in its path, including the dust, was tossed into the air.

R. A. McMordie is in town again. He spent the past few weeks in Edmonton and in a trip north of that town about 100 miles. He reports everything to be booming in Edmonton. Building operations to the extent of $400,000 are in course of construction. The crops are good and the only drawback is the excessive wet weather.

Are you thinking of buying a piano? The Mason and Risch ranks as one of the best. Endorsed by Liszt, the great pianist, and Sir Alexander Mackenzie, the great English composer and musical director. Call on H. L. Staebler, agent for Fernie and vicinity. Studio—Room 4, Turner Block. N.B—A second hand Karn piano for sale at the above address.

Three ladies and two little boys had an unpleasant experience on Monday night which they are not likely to soon forget. They left in the morning for the Lizzard range trail on the west side of river. They did not return to their homes in the evening and their friends reported the matter to the police. Constables Kummer and Warren started out at 11 o'clock in search of them. They were well equipped with lanterns and a rifle to make signals with. They patrolled the mountain side throughout the night and in the early morning an answering shout was heard to their calls. The lost party was found to have taken refuge in a vacant cabin which they had run across in their wanderings. They started out at once and reached their homes about 7 o'clock in the morning. none the worse for their night on the mountain.

Cranbrook

From the Herald.

A L McDermot and wife, visited Morrissey and Fernie last week.

Married, at the Methodist parsonage by Rev. S. J. Thompson on Thursday, Aug. 6th, 1903. Mr. Ernest Emile Neve to Miss Marguerite Rebecca William, both of Fernie.

D. McDonald and Miss Ireland, of Cranbrook, and the latter's sister at Elko attended the dance at Morrissey Mines last Friday.

T. Love received his papers this week as a final step in securing an increase of pension from the United States government as a veteran of the Mexican war. His back pay will amount to nearly $800 Mr. Love's many friends in this district will be pleased to learn of his good fortune.

The financial district meeting of the Methodist churches in East Kootenay will b. held next Tuesday in the church here. A public meeting will be held on Tuesday which will be addressed by Rev. G. E. Smith, S.T.L., the first Methodist pastor of the church here, Rev. J. Robson, B.A., of Fernie, and Rev. J. H. White, superintendent of Missions.

Cree & Hutchison

REAL ESTATE

WE HAVE FOR SALE

One of the best dwellings in town. Cheap for cash.

A Cottage, $800.

A boarding house cheap and on very easy terms; 15 rooms.

Three good lots in Morrisey Mines—cheap.

These are only a few of the snaps we have. If yon want to buy or sell property in any part of the Elk River Valley, see us.

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1, That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electora-districts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

GROWING FLAX SEED

N. W. T. YEAR BOOK OF AGRICULTURE ISSUED.

It Says Flax Can Be Tilled With Great Success—Live Stock Shows a Marked Improvement, and Especially Hogs--An Interesting Review.

The year book of agriculture and public health matters in the Territories consists this year of 206 pages, including four appendices, which comprise the reports of the several Territorial Live Stock associations and the report of the secretary of the Territorial Natural History society. There is a very complete index. The report is divided into the following sections: Crops, live stock, agricultural educational work, colonization, miscellaneous services, public health, office work and organization, appendices.

An interesting feature of 1902 statistics is the appearance of flax as an export crop. A table is given showing the production and yield of this crop in the flax producing states of the union. It appears the yield per acre of flax in the Territories last year was 9.26 bushels, as against 7.83 in the States. Another statement shows that the yield per acre of wheat was 22.3 bushels, against from 10 to 18½ in the spring wheat states. The usual complete statistics of the Territorial crops are given. Those statistics now cover a period of five years, and average yields for each district during that year are shown. The five year average of wheat is 19.53, of oats 35.30, and of barley 25.60 bushels per acre, a most satisfactory showing.

NOXIOUS WEEDS.

T. N. Willing, chief inspector of noxious weeds, contributes under this head an interesting report of fourteen pages, the greater portion of which is devoted to a description of various wedds and native plants, poisonous or otherwise injurious to stock. This part of the report, which is fully illustrated, has been reprinted separately as a bulletin, copies of which can be had free of charge upon application to the department.

Statistics are given showing the distribution of harvest help brought in last year. It would appear that only a small proportion of the farmers took advantage of the facilities offered by the department for securing a sufficient supply of labor for harvest.

ABOUT LIVE STOCK.

The live stock section of the report deals with the registration of stallions, the cattle trade, the improvement of cattle, the admission of Canadian stores to Great Britain, grain finishing of range steers, live stock markets, and the dead meat trade. From the statistics of the business of Territoial creameries it appears there was a decided falling off in the volume of business last year, the only creameries showing increases being Innisfail, Olds and Tindastoll. Live stock exports show a large increase. Five hundred and ninety-two thoroughbred hogs were brought in last year and distributed among 395 purchasers.

At the close of the year there were 16,765 brands on record. Reference is made to the tests being carried on of chemical branding fluids, but no conclusive evidence as to the practicability of this method has yet been arrived at.

AGRICULTURAL EXPERIMENTS.

The co-operative field trials conducted by individual farmers under the auspices of their respective agricultural societies are now in practical operation. Extensive trials of three different varieties of winter wheat in Alberta under the system outlined are this year being made.

The deputy commissioner points out the great possibilities before the west in the way of opening up trade with the Orient, especially in breadstuffs.

During the year eighty-seven farmers' institute meetings have been held under the department's auspices, as against seventy-six in 1901 and sixteen in the previous year. The deputy commissioner considers that only trained men should be used for this work, and that the tendency in modern institute work to demonstrate rather than describe should be encouraged as being likely to add to the popularity of the institute lectures.

LIVE STOCK JUDGING.

Official live stock judging is a matter in which the Territories has taken a foremost place and the good results of the system are already showing themselves. In a country of such vast extent there are no doubt many difficulties to contend with in carrying out work of this sort, but the department seems to have met these with a considerable amount of success.

The usual statistics given under the head of hospitals show that these worthy institutions have participated to some extent in the material prosperity of the country. Notwithstanding the fact that there has been a distinct advance in prices of all staple goods consumed by these institutions, the cost of maintenance per patient per diem has decreased.

William Thompson, of Tamworth, Ont., seventeen years old, while playing with a rifle, accidentally discharged it, and the bullet entered his temple, killing him instantly.

King Edward has taken the ancient title of Duke of Lancaster to travel incognito at Marienbad.

Slater Shoe Advertising

Art in Shoe Making

Short talks by the Slater Shoe ad man, No. 7.

Mere wear in a shoe is comparatively easy—plowman's hobnailed brogans to wit.

Foot comfort, as exemplified in your easy going house slippers, does not imply either beauty, shape retention or street-wear durability.

Yet wear in a brogan and comfort in a slipper are secured by a modicum of shoe making skill.

But to produce a shoe of wear, of comfort, of beauty and then to challenge public criticism under the limelight rays of advertising requires art, shoe making art—not the art which hides by cleverly concealing defects but the art which assembles in the shoe all the elements of wear, of foot comfort, of shape retention and shoe beauty.

Such shoe art the "Slater Shoe" makers are compelled, by advertising, to impart to the "Slater Shoe."

That's why the man or woman who buys and wears a "Slater Shoe" is assured of all he or she has right to expect in a high-grade shoe bearing upon it the stamp of the maker's responsibility as does

The Slater Shoe

NINETY ARE KILLED

TERRIBLE TUNNEL ACCIDENT IN PARIS.

Disastrous Train Wreck on the Metropolitan Underground Railway--Eighty-two Bodies Recovered From the Ruins--Blinding Smoke Caused a Panic.

Paris, Aug. 11.—Five men and two women are known to have lost their lives in a fire and panic in the underground portion of the Metropolitan Electric railway last evening.

About 8 o'clock, one of the trains, which run on five minute schedule, broke down on Meniltonant station, which is in a poor and populous section of the city. This train was promptly emptied, and the train which followed was ordered to push it to the repairing sheds. On the way these two trains caught fire, but the employees succeeded in escaping. Meanwhile a crowded train reached Les Charonnes, the preceding station, and the officials seeing smoke pouring out of the tunnel, gave the alarm.

A panic ensued, the passengers struggling to escape from the station. Some attempted to return along line towards Belleville, and the smoke was suffocating. About half a dozen of the passengers who were partially suffocated, were treated at a pharmacy near the station. The fire brigade was unable to enter the station or the tunnel, owing to the dense smoke for some hours after.

Eighty-two bodies have been recovered from the ruins of the trains. The total number of victims is estimated at 90.

CAUGHT RED HANDED.

A Toronto Residence the Scene of a Clever Capture.

A Toronto dispatch says: Charles Quackenbush, who recently escaped from the Central prison, Thomas Gallagher and Stephen Doyle, all expert porch-climbers and burglars, were arrested in the house of Mrs. Brodie, Rosedale, on the afternoon of August 11.

Just after they had commenced to ransack it, the family being absent, Detective Forrest, who had shadowed the men all day, watched them go into the house, while the fourth man sat on the verandah on watch. Forrest walked away and telephoned to police headquarters. Soon a patrol wagon filled with police and detectives dashed up the street, and on catching sight of it Forrest rushed for the man on the verandah. The man was too quick, however, and made good his escape.

Forrest thereupon rushed into the house and in a minute or two his colleagues found him in a room at the head of the stairs, his revolver drawn, feinting with the three men, each of whom had a revolver pointed at Forrest. They dropped their weapons when the other officers approached and quietly submitted to arrest. At the station several hundred dollars' worth of jewellry was found on the men, some of it known o have been stolen from houses in Hamilton, Ont.

NEWS NOTES

Short Items Culled From Telegraphic Dispatches.

Five new C. P. R. directors have been appointed.

Winnipeg police will enforce the early closing in Winnipeg.

The Russian consul was assassinated at Monastir.

A British Columbia salmon fleet was swept out to sea, and five boats are missing.

Canada's trade expansion continues in a remarkable degree.

American citizens residing in Winnipeg will organize an association

The C. P. R. have made what is practically their last selection of land.

The American wheat crop is 40,000,000 bushels short. Other crops are light.

The late W. B. Hall, of Headingly, Man., grew apples here successfully in 1869.

The body of Andrew Nordstrom was found mangled on the C. N. R. track at Fort William, and American sailors have been arrested on suspicion.

WHISKEY WAS THE CAUSE

A Treaty Indian Killed in a Drunken Brawl at Warren's Crossing.

News was received in Winnipeg on August 11 from Warren's Landing, on Lake Winnipeg, telling of the killing of an Indian named James Beecham there by another, named McKay, in a drunken brawl, which followed the payment of treaty there.

It appears that one of the traders who followed the treaty paying party, namely, D. E. Dalman, of Selkirk, took in whisky with him. When they crossed the line into Keewatin the deck hands broke it open and a number of crews in connection with the tugs running from Warren's Landing, among others the crew of the tug Omega, particularly the fireman and engineer, Beecham and McKay, respectively, got very much under the influence of liquor. These two men had always lived peaceably together, but owing to the whisky they got into a fracas in which the engineer struck the fireman so that from the effects of the blow and the drink combined the latter died a couple of days afterwards.

Beecham was a treaty Indian and was the main support of a wife, and his slayer has a wife and three children.

The case is considered a bad one throughout; but the crime charged is not more than manslaughter, the result of a drunken brawl, with no murderous intention beforehand. The blame, it is considered, rests chiefly on the man who took the liquor in.

Dalman was charged with selling liquor without a license, and was fined $100; also his privilege of getting a license as a trader was taken away from him for two years.

BRITISH IMMIGRATION.

Aliens May Be Deported if Undesirable After Two Years Trial.

A London cable says: The report of the royal commission on alien immigration is issued. It recommends that the immigration of certain classes of aliens into the United Kingdom be subject to state control, and proposes a number of regulations and the establishment of a department of immigration.

The specific recommendations made in the report are similar to the provisions of the United States law except that no educational requirements are proposed. In some directions the regulations are more stringent than the American regulations. Provisions are made for the deportation of immigrants who may be proved to be undesirable, within two years of their landing, and the vessel importing them will be compelled to repatriate them without compensation. The proposed medical inspection is similar to that in the United States. The penalty for supplying false date to the immigration inspector is deportation. The immigration may specify certain over-populated areas as prohibited territory for fresh immigrants. In the case of the conviction of an immigrant for felony or misdemeanor the court may include deportation as part of the sentence.

Great Union of Wheat Growers.

The London Daily Mail prints a dispatch from Warsaw, dated last Friday, which says that an American association, said to comprise 38,000, has addressed itself to the Russian ministers of finance and agriculture, requesting their assistance in raising the current prices of agricultural products, particularly wheat, and saying that the association projects a great union between all the wheat growing countries of the whole world for the purpose of fixing an annual minimum price.

In view of M. De Witte's abhorrence of trusts, the correspondent adds, it is doubtful whether he will accept the bait.

Appeal to Labor.

Thirteen labor members of the British House of Cammons have issued an appeal to the labor organizations of the various colonies, calling upon them to oppose Mr. Chamberlain's preferential policy. The London Daily Express authoritatively denies the Mail's allegations that officials of the board of trade reported adversely to Mr. Chamberlain's policy. Their business is simply to supply all facts and figures required from the government enquiry. The British exports for seven months of the year increased nearly £7,000,000, while the imports showed a decrease of £704,000.

To Investigate Barr Colony.

Mr. Smart, deputy minister of the interior, will visit the Barr colony, with a view of ascertaining on the spot what progress has been made by these new arrivals as well as the pretensions of the people. The reports generally with regard to the progress made by the Barr colonists show that many of them have done remarkably well, but there are some who do not appear to have had much capital and who are not doing as well as could be wished. The department is consequently anxious to have definite information on the subject.

A wealthy butcher in Hamilton murdered his wife and then suicided.

The British House of Lords passed the Irish land bill through its third reading.

The death list in the Paris tunnel accident will exceed one hundred people.

His Holiness Pope Pius X. had a fainting fit while celebrating mass at Rome.

ESTIMATE OF GRAIN CROP OF NORTHWEST.

Canadian Pacific Railway Crop Reports For the Central Division Estimate Wheat Yields Equal to Other Good Years--The Weather Now Favorable

Crop estimates were issued by both the Canadian Pacific and Canadian Northern railways on Tuesday last, and report favorable prospects in spite of the recent backward weather. The report issued from the office of the assistant general superintendent of the C. P. R. central division, gives cheering news of the estimated yields of the three chief grains. Favorable weather is reported from all points. The report is as follows:—

The chief press organ of the protectionists in Australia thus defines their attitude towards preferential trade: "We require to have next Federal parliament on a thoroughly protectionist basis and led by a protectionist government, not to amend the present tariff but to guard it intact, to be prepared to negotiate a preferential tariff with Great Britain on the basis of increasing the present duties against foreigners. To that end the Protectionist organization has been proceeding for months past."

It takes more money to be a millionaire now than it did fifty years ago.

ANOTHER OUTLET.

Proposed Railway from the Boundary to Hudson's Bay.

Some little time ago a charter to build a railroad from the boundary line between Canada and the United States through Regina to a point on the western side of Hudson's bay was given to a company composed of Mr. J. M. Young, of Regina, and his associates. Along the proposed route which this charter covers there are many settlers who are clamoring for railway facilities, and the company are anxious to begin operations as soon as possible. They have been approached by two great railroad corporations, who are offering to buy the charter from them at tempting figures. Mr. Young, and those with him, however, have refused to sell the charter on any terms to any railway that will not give a definite pledge that building operations will commence at once, and thus safeguard the interests of the settlers who are asking for the railway. If they cannot secure such a pledge very quickly the company have decided to put the project through themselves, having, they believe, sufficient capital to bring the venture to a successful issue. They are at present seriously considering the advisability of such a step being immediately taken. In fact the preliminary survey has been made, and the final survey is almost finished. The plan which the company has in mind is to build the line northerly through the Carrot River country, and south to the boundary, thence through the States to connect with the Great Northern railway.

Such a line would be of immense advantage to the Territories, affording as it would another outlet for the farmer and rancher of the country, and relieving the congestion which was so marked last year as well as opening up a new country with boundless possibilities. The mooted Hudson Bay problem is also raised once more by the plans laid out by this railway, and it looks as if the Hudson Bay route will be put to a practical test.

Mr. Young, who stands forth prominently in this new company, is an American, who came to Regina from Nebraska, and established a real estate business there about ten years ago. He has been very successful in his adopted land, and has shown himself on different occasions a progressive and public spirited citizen. He is president of the Regina Board of trade.

Cyclone in Jamaica.

A delayed dispatch from Kingston, Jamaica, says: The hurricane, only the fringe of which struck the western end of Jamaica yesterday Aug. 11), and which it was thought had passed, instead of proceeding to the northwest veered to the south early this morning and struck Jamaica with its full force, inflicting damage which it will take years to repair. Owing to the interruption of telegraphic communication, it is impossible as yet to estimate the amount of the losses, but they must reach millions of dollars.

Every banana plantation in the eastern half of the island has been devastated. The situation in the western half is unknown. Considerable injury was done to property in Kingston and the suburbs. The roof of the electric light works was blown off and the machinery was disabled. Railroad traffic was interrupted and the street cars were stopped. Many houses were damaged by falling trees. No loss of life is yet reported.

New Zealand Follows Canada's Lead.

Wellington, N.Z., Aug. 12.—Premier Seddon's preferential trade proposals will take the form of a rebate on Canadian lines. Mr. Seddon believes that an impartial inquiry will stagger all well-wishers of the empire. He suggests that an intercolonial conference of the premiers of Canada, South Africa, and the Australian Commonwealth, with Lord Roberts, an admiralty representative and Mr. Chamberlain be held.

New Zealand proposes a steamship service to India via eastern ports, and also the appointment of agents, New Zealanders preferred, to Britain, in order to induce small farmers to emigrate to New Zealand.

A dispatch from Calgary, dated Aug. 11, says: Twenty Swedes are under arrest at the barracks here on a charge of breach of contract. They have just come from Europe. They say they were induced to come here by the agents of the C. P. R., who represented that they would get from $2 to $3 per day. At Quebec they signed what they believed was a pass but what turned out to be a contract for the year to work for $1.50 per day. They quit work yesterday and were promptly arrested. The railway authorities say these men knew what wages they were to get, but find out now that they can get more money haying. It will be a test case.

The dog policeman is the newest official on the force of Ghent, Belgium. The particular duty of the police doggie will be as an "emergency man." The officers are stationed at various intervals in the street, the dogs being held in leash at a point between two "beats." When the "emergency man" is needed the policeman blows a trumpet. At the sound the animals are loosed and rush to report for duty. They are trained to spring into the water, follow a track or join a man hunt along the docks.

Kentucky distillers are making preparations for the exportation of 20,000 barrels of whisky to Hamburg and Bremen for storage purposes. It is principally of the crop of 1903. This will be the first exportation in the history of Kentucky of any great amount of young whisky to be matured in Europe.

FERNIE FREE PRESS.

FERNIE, B.C.

One hears a great deal about the glaciers of Alaska, and it is satisfactory to know that Uncle Sam possesses a few important ice rivers of his own. But few people are aware that there are in Montana some of the finest glaciers in the world, even rivalling those of the Alps.

C. C. RICHARDS & Co.

Dear Sirs,—I have great faith in MINARD'S LINIMENT, as last year I cured a horse of Ring-bone, with five bottles.

It blistered the horse, but in a month there was no ring-bone and no lameness.

Minard's Liniment Cures Garget in Cows.

Financier—I told me boss I could not afford to work for t'ree dollars a week.

Merchant—What did he say?

Financier—Said he hadn't noticed me trying to.

It may be only a trifling cold, but neglect it and it will fasten its fangs in your lungs, and you will soon be carried to an untimely grave. In this country we have sudden changes and must expect to have coughs and colds. We cannot avoid them, but we can effect a cure by using Bickle's Anti-Consumptive Syrup, the medicine that has never been known to fail in curing coughs, colds bronchitis and all affections of the throat, lungs and chest.

Fifty tons is the weight and 11 miles the effective range of a cannon which has just been mounted at l'Orient. It is stated to be the largest on the French coast.

Minard's Liniment Cures Diphtheria.

Only 25 days have been taken by a letter in travelling from Monkden, Manchuria, to Norwich, via the trans Siberian railway. By the old sea route the time would have been seven weeks.

When a woman's house is perfectly spotless she likes to greet the company with "Come in, if you can get in through the dirt."

A spoonful of help is better than a dishful of advice.

What is that which the most improvident of young men are always able to keep? Late hours.

In all countries more marriages take place in June than in any other month.

"Mary," said the sick man to his wife when the doctor pronounced it a case of small pox, "if any of my creditors call, tell them I am at last in a condition to give them something."

Minard's Liniment Cures Distemper.

The hen seldom has a grudge against the farmer she is laying for.

Catarrh Cannot be Cured

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years and is a regular prescription. It is composed of the best tonics known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing Catarrh. Send for testimonials free.

Three Curious Epitaphs.

In a cemetery near Dublin the following words appear on a tombstone:

"Here lies John Hurley, whose father and mother died while on their way home from America. If they had lived they would have been buried here."

The following epitaph adorns the tomb of a gravedigger in the Taibach cemetery in the south of Wales:

"Hurrah, comrades, parson is dead! If he had lived he would have buried all of us."

Here is another curious epitaph which was recently discovered; it marks the grave of an indefatigable smoker and contains only the following four words:

"My pipe is out."

Strait of Gibraltar.

The entrance to the Mediterranean sea at Gibraltar is twelve miles wide.

Festal Gifts In Spain.

It is the custom in Madrid for friends and acquaintances to send presents of bonbons on birthdays, name days and festivals. A large silver tray is piled with sweets of various kinds, with a cake made of eggs in the center. This is often surmounted with a silk flag or a pretty porcelain figure. Well known people receive as many as fifty of these trays on their birth and name days.

BABY'S SECOND SUMMER

Why It is a Dangerous Time for the Little Ones.

Baby's second summer is considered a dangerous time in the life of every infant because of the disturbance to the digestive functions caused by cutting teeth during the hot weather. In slightly less degree every summer is a time of danger for babies as is shown by the increased death rate among them during the heated term. Of great interest to every mother, therefore, is a comparatively recent discovery of which Mrs. David Lee, of Lindsay, Ont., writes, as follows:

"My little girl had a hard time getting her teeth. She was feverish, her tongue was coated, her breath offensive and she vomited curdled milk. On the advice of our doctor I gave her Baby's Own Tablets and she began improving at once. She had not slept well at night for about three months, and I was almost worn out caring for her. Nothing did her any good until I gave her the tablets. Now her food digests properly, her breath is sweet, her tongue clean and she is quiet and good. I can strongly recommend the Tablets to other mothers, as they cured my baby when nothing else would."

Baby's Own Tablets are sold by all dealers in medicine or will be sent postpaid at twenty-five cents a box, by the Dr. Williams Medicine Company, Brockville, Ont.

With a girl in a hammock it is a case of suspended animation.

There never was and never will be a universal panacea, in one remedy, for all ills to which flesh is heir—the very nature of many curatives being such that were the germs of other and differently seated diseases rooted in the system of the patient—what would relieve one ill in turn would aggravate the other. We have however, in Quinine Wine, when obtainable in sound, unadulterated state, a remedy for many and grievous ills. By its gradual and judicious use the frailest systems are led into convalescence and strength by the influence which Quinine exerts on nature's own restoratives. It relieves the drooping spirits of those with whom a chronic state of morbid despondency and lack of interest in life is a disease, and by tranquilizing the nerves, disposes to sound and refreshing sleep—imparts vigor to the action of the blood, which, being stimulated, courses through the veins, strengthening the healthy animal functions of the system, thereby making activity a necessary result, strengthening the frame and giving life to the digestive organs, which naturally demand increased substance—result, improved appetite. Northrop & Lyman, of Toronto, have given to the public their Superior Quinine Wine at the usual rate, and, guaged by the opinions of scientists, the wine approaches nearest perfection of any in the market. All druggists sell it.

Greece holds the earthquake record with 3,187 shocks in five years.

Minard's Liniment Cures Colds, etc.

"Gassing" trees has become so large a business in California that a Los Angeles man has an outfit for it which cost $10,000. Tents are used to confine the gas to the trees, and to protect the operators from the deadly prussic acid which is liberated from a saucer at the tree's root.

HOW TO CURE HEADACHE.—Some people suffer untold misery day after day with Headache. There is rest neither day or night until the nerves are all unstrung. The cause is generally a disordered stomach, and a cure can be effected by using Parmelee's Vegetable Pills, containing Mandrake and Dandelion. Mr. Inlay Wark, Lysander, P.Q., writes: "I find Parmelee's Pills a first class article for Bilious Headache."

Self Convicted.

"Say, pa," queried small Bobby, "what is gossiping, anyway?"

"Gossiping, my son," replied the old man, "if we get right down to the plain, unvarnished facts, is lying. But why did you ask?"

"Because," answered the young investigator, "ma says you do a lot of gossiping every time your business keeps you late at the office."—Exchange.

Her Performance.

Bellows—Does your daughter play on the piano?

Old Farmer (in tones of deep disgust)—No, sir. She works on it, pounds on it, rakes it, scrapes it, jumps on it and rolls over on it, but there's no play about it, sir.

Unappreciated.

"Do you believe," said the lady with the sear and yellow, "that the good die young?"

"How could I?" exclaimed the flatterer. "How could I, and you so good—er—that is"—

"Sir!"

HIS TROUBLES NEVER CAME BACK

Earnest Grant took Dodd's Kidney Pills—They Removed the Cause.

He Had Backache and Urinary Troubles for Twelve Years before he used the great Remedy.

Montreal, Aug. 17.—(Special)—Ernest Grant, 287½ Urbain street, this city is among those who never let an opportunity pass to say a good word for Dodd's Kidney Pills. He has his reasons for this, and here they are in his own words:

"I had been troubled with Backache and Kidney Disease for twelve years," says Mr. Grant. "My urine was very dark and high colored. I would lose my rest at night on account of having to rise so often to urinate. I could get nothing to help me.

"I tried several remedies, but all failed until I used Dodd's Kidney Pills. When I had taken four boxes, I was able to go to bed and take my rest, my Backache left me and I was cured. It has never come back."

When Dodd's Kidney Pills cure, the disease never comes back. They remove the cause.

The King Snake's Prowess.

The most relentless exterminator of reptiles is a member of the family itself—the beautiful, lithe, yellow and black king snake, the friend of man and the avowed enemy of anything that creeps or crawls regardless of size or poison fang. A native of our own south, the king snake is between five and eight feet long and no thicker around than a man's thumb. Built in every muscle and bone for speed and tremendous constricting power, there is not another snake on earth that can withstand his assault. He is immune to the poison of the cobra and of the rattler alike, and the strength of a thirty foot python has no terrors for him. Within five minutes from the opening of the fight the king snake could kill the biggest python that ever lived. Ferocious as the little constrictor is toward his own kind, toward man he is friendly and rarely tries to escape when met afield.—A. W. Roker in McClure's.

Modern Sun Worshipers.

In Europe several persons now sedulously pay homage to the sun, and in a learned journal, entitled L'Ecole Nouvelle, one of them maintains that the sun should be especially honored at Christmas.

"Christmas should be regarded as a festival for the benefit of humanity," he says. "In this way we can once more become united with the Aryans, our ancestors, who worshiped fire and who celebrated the birth of the divine constellation, who is the father of light, of heat and of life."

He then suggests that the following prayer be said daily:

"O thou who causest lies to vanish, who drivest away the evil influence of prodigies, of malignant predictions, of dreams and of wicked apparitions—O thou who bringest to naught the plots of the wicked, to thee we pray, Lord Sun, since thou art the light of the world."

Wants and Wishes.

"There's a strange man at the door, sir," announced the new servant from Boston.

"What does he want?" asked the master of the house impatiently.

"Begging your pardon, sir," replied the servant, a shade of disapproval manifest in his voice, "he wants a bath, but what he is asking for is something to eat."

KENDALL'S SPAVIN CURE

the old reliable remedy for Spavins, Ringbones, Splints, Curbs, etc., and all forms of Lameness. It works thousands of cures annually. Cures without a blemish, as it does not blister.

Complete Cure for Bone Spavin.

Russell, Manitoba, Jan. 20, 1903.

Dr. B. J. Kendall Co., Gentlemen: I had to treat a young horse of mine four years ago which had a Bone Spavin and got kicked on the same leg and was very badly swollen; so bad that I had to bathe it in warm water, then applied Kendall's Spavin Cure. I had Typhoid Fever the same winter and only gave the Kendall's Spavin Cure half a chance, and it only took one and a half bottles to cure his leg with very slim treatment, and it did so completely that you would never know that he had a spavin; he never has gone lame since.

Very truly yours, GEO. S. HARRIS.

Such endorsements as the above are a guarantee of merit. Price $1; six for $5. As a liniment for family use it has no equal. Ask your druggist for Kendall's Spavin Cure, also "A Treatise on the Horse," the book free, or address

DR. B. J. KENDALL CO., ENOSBURG FALLS, VT.

A Caustic Retort.

An Englishman of somewhat questionable reputation, who was criticising the American way of spelling, once turned to Maurice Barrymore, the actor, and said: "I'll leave it to Mr. Barrymore. Is it right to leave out the 'u' in such words as harbor, neighbor, honor, candor, etc?" "Well, about harbor and neighbor I am not sure," replied Barrymore, "but when it comes to honor and candor I leave you out."

Oranges and Tobacco.

"Did you ever notice," asked a well known physician the other day, "that men who eat oranges are not much injured by smoking? It is a fact. Orange juice has the faculty of neutralizing nicotine, and that is the reason. I have seen men weakened and even made ill by excessive smoking, and a few oranges were all that was necessary to straighten them out."—Philadelphia Record.

Cause For Pride.

Wantono—What's the matter, Blankley? You're all cut about and your arm in a sling, as though you had been in a fight, and yet you look beaming and smiling over it all.

Blankley—The fact is I have all along thought my boy Harold a sort of muff, and the other day I undertook to give him some boxing lessons. This is the result of the first lesson. Oh, I'm proud of that boy!

The Blunderer.

She—Of course, he bored me awfully, but I don't think I showed it. Every time I yawned I just hid it with my hand.

He (trying to be gallant)—Really, I don't see how a hand so small could—er—hide—er—that is—beastly weather we're having, isn't it?—Philadelphia Press.

KIDNEY TROUBLE

CURED BY DR. WILLIAMS' PINK PILLS FOR PALE PEOPLE.

Sufferers from this Disease are in Great Peril and Should Not Experiment With Other Medicines.

From the Sun, Seaforth, Ont.

The kidneys are the most important organ. They must filter every drop of blood in the body. If the blood is weak the kidneys cannot do their work, so the blood is left unfiltered and foul, and the kidneys are left clogged with poisonous impurities. Then come the backaches that mean fatal kidney disease. Don't neglect that backache for a moment. Strike at the root of the very first symptoms of kidney trouble by enriching the blood with Dr. Williams' Pink Pills—the only medicine that makes the blood rich, red and health-giving.

Mr. Wm. Holland, of Seaforth, Ont., has proved that Dr. Williams' Pink Pills will cure the most obstinate case of kidney trouble. To a reporter of the Sun he freely gave the particulars of his case: "I have suffered from kidney trouble for about two years," said Mr. Holland. "Sometimes the backache which accompanied the trouble would be so severe that I would be unable to work, and I have often suffered severely for weeks at a time. I tried a number of medicines said to be a cure for kidney trouble, but I found nothing to help me until on the advice of a friend I began the use of Dr. Williams' Pink Pills. These pills soon began to make their good work felt, and after using them for about a month every vestige of the trouble had disappeared, and I have not since had a single symptom of the disease. Dr. Williams' Pink Pills have proved a great blessing to me and I am always glad to say a good word in their favor."

As a curative medicine Dr. Williams' Pink Pills have never yet been equalled. They build up the blood and nerves, give new strength and enable the body to resist disease. Among the complaints cured by these pills are rheumatism, nervous disorder, paralysis, St. Vitus' dance, indigestion, anaemia, lung troubles and the troubles that make the lives of so many women miserable. Sold by all medicine dealers or sent postpaid at 50c. per box or six boxes for $2.50, by writing direct to the Dr. Williams' Medicine Co., Brockville, Ont. Don't take a substitute at any price—only the genuine pills can cure.

"We've had to dismiss our coachman." "For what reason?" "Oh, he got too ambitious. He wanted to be paid regularly."

It takes a man with wonderful self-control to look sad in a poker game when he knows he can't possibly lose.

The proprietors of Parmelee's Pills are constantly receiving letters similar to the following, which explains itself. Mr. John A. Beam, Waterloo, Ont., writes: "I never used any medicine that can equal Parmelee's Pills for Dyspepsia or Liver and Kidney Complaints. The relief experienced after using them was wonderful." As a safe family medicine Parmelee's Pills can be given in all cases requiring a cathartic.

It is the man on the fence who feels the first puff of a political breeze.

"Pure soap!" You've heard the words. In Sunlight Soap you have the fact.

Ask for the Octagon Bar. 231

With the object of diverting the stream of emigrants that now travel to America via Germany the Hungarian government proposes to establish a line of steamers running between Fiume and the United States.

The largest automatic weighing machine is on its way from England to Natal. It has a total weighing capacity of 120 tons, and is fitted with automatic indicators, so arranged that when an engine is run on to the machine the weight carried by each wheel is automatically and instantly exhibited.

British railway capital has increased during the last ten years by no less than £160,000,000.

WAS CURED OF PILES SEVEN YEARS AGO

A Chronic Case of Twenty Years' Standing Cured Permanently by

DR. CHASE'S OINTMENT.

Piles or hemorrhoids are among the most common as well as the most torturing ailments that afflict humanity. The keen distress caused by the itching, especially when the body gets warm, is almost beyond the powers of description.

The very mention of Piles suggests Dr. Chase's Ointment as it is beyond denial the only actual cure for this loathsome disease. If you ask your doctor, your druggist or your friends what to use for piles they will in nine cases out of ten advise Dr. Chase's Ointment.

Mr. Alex. McLaughlin, for 30 years a resident of Bowmanville, Ontario, writes:

"For twenty long years I suffered from itching piles, and only persons who have been troubled with that annoying disease can imagine what I endured during that time. About seven years ago I asked a druggist if he had anything to cure me. He said that Dr. Chase's Ointment was most favorably spoken of, and on his recommendation I took a box.

"After three applications I felt better, and by the time I had used one box I was on a fair way to recovery. I continued the treatment until thoroughly cured, and I have not suffered any since. I am firmly convinced that the Ointment made a perfect cure.

"I consider Dr. Chase's Ointment an invaluable treatment for piles. In my case I think the cure was remarkable when you consider that I am getting up in years, and had been so long a sufferer from this disease."

Dr. Chase's Ointment is the only absolute and guaranteed cure for every form of piles. It has a record of cures unparalleled in the history of medicine. 60 cents a box, at all dealers, or Edmanson, Bates & Co., Toronto. To protect you against imitations the portrait and signature of Dr. A. W. Chase, the famous receipt book author, are on every box.

"The honorable gentlemen opposite may scarcely credit this, but it is my firm belief that if a few boxes of these most excellent cigars had been judiciously distributed among the Boer Generals their savage natures would have been soothed and that cruel war might never have taken place."

A woman's idea of a true friend is one who admires her children as much as she does herself.

Patient—Are you sure you can put my teeth into satisfactory condition?

Dentist—Yes, sir; at any rate, I will spare no pains to do so.

"Did you say your husband liked these clinging gowns?"

"Yes, he likes one to cling to me for about four seasons."

Although the Suez canal is only 99 miles long, it reduces the distance from England to India by sea nearly 4,000 miles.

We all know that it is more blessed to give than to receive—but some of us know it only by hearsay.

THE COUGHING and wheezing of persons troubled with bronchitis or the asthma is excessively harrassing to themselves and annoying to others. Dr. Thomas' Eclectric Oil obviates all this entirely, safely and speedily, and is a benign remedy for sores, lameness, injuries, piles, kidney and spinal troubles.

MORRISSEY

From The Despatch

A. B. Trites of Fernie, accompanied by his wife, arrived in the city last evening. Mrs. Trites is on her way to Spokane to visit friends, while Mr. Trites will return to Fernie this morning.—Nelson News.

The lecture given by John R. Clarke, the famous lecturer, in the Methodist church last evening, was not well attended, there being only about thirty present Mr. Clarke is an able and forcible speaker and those who had the pleasure of listening to him will long remember his brilliant lecture "To and Fro in London.

A runaway similar to that which took place three weeks ago on the spur to the mine occurred last Wednesday evening. This time there were three cars, but they received the same fate as their predecessors. An Italian foreman happened to see them coming and opened the switch at the coke ovens, throwing them off the track. As before, the train from the Junction was on the way up, and had it not been for the presence of mind of the foreman there would no doubt have been a terrible accident. The cars were all badly damaged.

MICHEL

From Our Own Correspondent.

Messrs. Alpheus Cook and St. Dennis spent Sunday at Pincher Creek visiting friends.

The output of coal was not as large as usual on Wednesday on account of the tipple being stopped undergoing repairs for two hours.

There are some signs of a street on the west side now since the stump puller has been working there.

The Michel employees of the coal company held a meeting in Michel hall Sunday to settle the question of having their own doctor and hospital in this town. Dr. McSorley was appointed doctor, and he will, in a short time open a hospital the rooms above the post office being engaged for that purpose.

Statement were given out Thursday and today is pay day.

Marks Co. give a lecture and lantern views, on the Frank slide, here to-night.

J. W. McCloskey, the blind entertainer, is here and will lecture Monday evening.

There is a meeting called for Wednesday, Aug. 26th, for the purpose of organizing a Liberal-Conservative association, and also to elect delegates for the convention.

Some of the young people of Michel had a very narrow escape on Sunday, while returning from the prairie in a cart, the horse ran away and threw a couple out, bruising them quite badly.

Rev. A. Stoney, of Morrissey, held Church of England service here on Sunday.

F. B. Sample is in town inspecting the building operations.

Mrs. A. C. Murray and Mrs. P. W. Anderson, of the Loop, visited Fernie this week.

Mrs. Roaf, of Toronto, spent a few days here with her son, J. R. Roaf.

O. N. Ross was in town Tuesday night

Wm. Ingram spent a day here the fore part of the week.

D. McKay was in town yesterday inspecting the road which is being built up the Elk from here.

J. Fraser left for Calgary on Thursday evening where he will have charge of the business of Breckenridge & Lund. Mr. Fraser's many friends are sorry to see him leave town.

Dr. McSorley left for the west on Monnay morning to spend his holidays, leaving Dr. Walkem in charge here.

The boys have revived baseball again and are talking of getting together a team to play on Labor Day.

A WELL KNOWN ALBANY MAN

Recommends Chamberlain's Colic, Cholera and Diarrhoea Remedy

About eighteen months ago Mr. W. S. Manning, of Albany, N. Y., widely known in trade circles as the representative of the Albany Chemical Co., was suffering from a protracted attack of diahorrea. "I tried Chamberlain's Colic Cholera and Diarrhoea Remedy," he says, "and obtained immediate relief. I cheerfully recommend this medicine to those similarly afflicted." For sale by all druggists and dealers.

Very Remarkable Cure of Diarrhoea.

"About six years ago for the first time in my life I had a sudden severe attack of diarrhœa," says Mrs. Alice Miller, of Morgan, Texas. "I got temporary relief but it came back again and again, and for six long years I have suffered more misery and agony than I can tell. It was worse than death. My husband spent hundreds of dollars for physician's prescription and treatment without avail. Finally we moved to Bosque County, our present home, and one day I happened to see an advertisement of Chamberlain's Colic, Cholera and Diarrhœa Remedy with a testimonal of a man who had been cured by it. The case was so similar to my own that I considered to try the remedy. The result was wonderful. I could hardly realize that I was well again, or believe it could be so after having suffered so long, but that one bottle of medicine costing but a few cents, cured me." For sale by all druggists and dealers.

Cholera Infantum

This has long been regarded as one of the most dangerous and fatal diseases to which infants are subject. It can be cured, however, when properly treated. All that is necessary is to give Chamberlain's Colic, Cholera and Diarrhoea Remedy and castor oil, as directed with each bottle, and a cure is certain. For sale by all druggists and dealers.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted ot F. Delzell's north-east corner, thence 80 chains east, thence 80 chains south, thence 80 chains west, thence 80 chains north to place of beginning.

Dated at Fernie this 6th day of June, 1903.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber over the following lands on the West side of Kootenay River, in the district of East Kootenay:

Commencing at the north west corner of A. Milton's timber license, No. 2309, on Skookum Chuck River, thence north 160 chains; thence east 40 chains; thence south 160 chains; thence west 40 chains to the place of commencement.

Fernie, B.C., July 11th, 1903.
H. GRICE.

Mr. A. Archambault, of Fernie, will be in town on Tuesday next, Aug. 25th. He desires us to call the attention of the public to a meeting to be held on that date at the Alberta Hotel, in regard to the formation of a butter factory in Pincher Creek, and other points concerning the dairying business.—Pincher Creek Echo.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped portions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding against the wasteful des truction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted at Ed Robbins north-west corner, thence 80 chains north, thence 80 chains east, thence 80 chains south, thence 80 chains west to place of beginning.

Dated at Fernie this 6th day of June, 1903.

Commencing at a post 40 chains west of the south-west corner of M. Claxton's timber licence application on Skookumchuck river, South East Kootenay, thence running north 160 chains, thence east 40 chains, thence south 160 chains, thence west 40 chains to place of commencement.

232-4 J. McDONALD.
Dated May 23rd, 1903.

The Enormous Expenditure of Money by the Crow's Nest Pass Coal Company, Limited, in the construction of coke ovens and storage bins and the installation of electric light and water-works systems, determines that the industrial centre of this district is established for all time at the new town of

Morrissey Mines

The importance of this fact on real estate values here is immense. One of Canada's greatest banking institutions has established itself here permanently, and the near future will see the residential streets lined with many fine houses that will be required to house the hundreds of workers employed here. It is not hard to guess what the effect of this concentration of well-paid wage earners will have on Morrissey Mines realty. All this army must have homes.

One of these bright July days as one stands on the foothill just above the new town, and looks east toward the collieries, the whole transformation that turns a wilderness into a great industrial centre, is shown in its various stages. We see the near approaching coal train of 40 cars, carrying 1,200 tons, the output of the mines for one day, and a little further on, two batteries of modern coke ovens, many of which will be fired up within ten days.

Just across the paddock that has until recently been used for a horse pasture, can be seen 100 men, digging a ditch for the large water-main that is to supply the town with pure Spring water, while the ring of hammers can be heard on every side.

To those wishing to build homes I am offering attractive terms. Write for particulars or call at my office.

W. R. ROSS THE CHOICE.

CONSERVATIVE CONVENTION SELECT CANDIDATE.

H. Bentley moved that the Candidate's Nomination be made Unanimous

The Liberal-Conservatives of the Fernie District held their nomination convention last evening. There were 24 delegates present as follows:

FERNIE—J. A. Rennie, F. W. Burn, N. McKellar, H. Bentley, Dr. Bonnell, J. C. Hutchison, A. Joyce, W. R. Ross, H. A. Kanouse, J. A. Broley, A. H. Cree, H. Herchmer.

COAL CREEK—Dr. Ker, T. Henderson.

MORRISSEY MINES—W. A. Bleasdell, A. McKenzie, G. Morrison.

MORRISSEY JUNCTION—E. Park.

MICHEL—Dr. Walkem, G. Mitchell, E. Wriglesworth, W Brown.

ELKO—G. Griffith.

JAFFRAY—G. Findlay.

After the credential committee had reported these names and arrangements had been made to allow representation by proxy, the business of the evening was commenced. H. A. Kanouse moved the nomination of H. Bentley and J. A. Rennie moved the nomination of W. R. Ross. The ballott which followed supported the latter nomination and Mr. Bentley moved that the nomination be made unanimous which was carried amid applause.

The recent illness of Mr. Ross prevented him from more than expressing a few words of thanks to the convention, after which the meeting adjourned.

TWO MORE YACHT RACES.

Reliance Shows Herself Superior in Different Kinds of Weather.

The second race was run on Tuesday over a triangular course. The weather was hazy and the wind somewhat light, often as low as 5 knots an hour.

The starting gun was fired at 11:00. Reliance crossed the line some distance ahead of her rival who lost 25 seconds by being behind the handicap gun. The official start was Reliance 21:00:36, Shamrock, 11:02:00. The British boat seemed to be in better shape in this race than in Saturday's. She pointed higher than the Reliance and seemed to foot almost as rapidly as the American boat. 25 minutes after the start the Reliance was quarter of a mile in the lead. This lead was still reported at 12:05 and 1:06 p.m. The first turn was made with the Reliance 2 minutes and 28 seconds in the lead, the official time for the two boats at this point being, 12:21:02 and Shamrock 12:23:30. The Reliance gradually but surely increased her lead on the last leg and came in 4 minutes and 40 seconds ahead. The time for each boat was Reliance 2:15:30 and Shamrock 2:20:10. The time elapsed with each boat was, Reliance 3 hours, 14 minutes, 34 seconds. Shamrock 3 hours, 18 minutes and 10 seconds.

After deducting the time allowance of 1 minute and 45 seconds the Reliance won the race by a comparatively close margin of 1 minute and 51 seconds.

The yacht race on Thursday was not completed inside of time limit. In the morning scarcely any breeze was perceptible but at starting time it increased to 5 knots and hovered between five and seven knots until about 3:30 when it fell off. The starting time was 11.02 flat for both boats as they crossed the line after the handicap gun. Reliance crossed at 11.02.58 and the Shamrock at 11.04.0 5. The American boat gradually increased her lead and was nearly 10 minutes ahead in making the outer turn at 1.56 p.m. At 3.20 the British boat was 15 minutes behind in crossing an imaginary line. Finally at 4.32 the race was officially declared off, the leading boat being within ¾ of a mile from the goal with her rival a mile astern. The race developed into a struggle between the Defender and time.

ACCIDENT AT ELKO.

Lister Flett, of Elko, met with a serious accident last Sunday near his ranch He was driving up a bunch of horses, and riding close to the drove, one of the horses kicked him. He was back in the hills nearly seven miles from home and realizing that he was hurt, he started for home. The leg that had been kicked, became so painful finally, that he concluded to get off his horse to rest it. When he attempted to step on the ground he discovered that the leg was broken just above the ankle. The horse he was riding was a wild one, and broke loose, leaving him in the woods quite a distance from home. He managed to crawl to the road, and after waiting for some time, was picked up by R. Hirtz, who happened to drive along that way and took him to Elko. Dr. King was telegraphed for and got there the next morning and set the fracture, and took the victim to the St. Eugene hospital that day. Mr. Flett is well known in Fernie having lived here previously where he took a deep interest in lacrosse.

A SEVERE REPORT.

Result of Labor Commission to investiaate B.C. Strikes.

Ottawa, Aug. 22.—Chief Justice Hunter and Rev. Dr. Elliott S. Rowe, who were appointed by the government to investigate the recent labor strikes in British Columbia, attributed the trouble mainly to the alien labor agitator whose object in causing disturbance of Canadian industries and institutions has not been shown to be quite disinterested The report contains severe condemnation of the United Brotherhood of Railway employees in this respect. With regard to the strike of coal miners at Ladysmith, the commissioners state that the "trouble would never have arisen but for the strike of the United Brotherhood of Railway Employees at Vancouver; that it originated in the intrigues of a few men, who in part consciously, in part unwittingly, allowed themselves to be used as instruments to serve the desires and the ends of a handful of dictators residing in the United States, and not in any way amenable to the laws of this country or responsible to those of its inhabitants whom they succeed in enlisting in forces over which they hold sway."

Upon this point the conclusions of the commission are:

"It should not be tolerated that Canadian industries should be subject to the dictation of foreigners who know no law, so far as such industries are concerned, but their own desires, and whose business and avowed object it is to keep up unceasing friction between employer and employees, and who are not trade unionists, but Socialist agitators of the most bigoted and ignorant type.

"We therefore think that it is necessary for parliament to interfere in this direction in making it an offence, punishable in minor cases on summary conviction before a county judge or police or stipendiary magistrate, by fine or punishment only, for any person not a British subject, and who has not been residing in the province for at least one year to procure or incite any employee or employees in Canada to quit employment without the consent of their employer; or for any person within Canada to exhibit or punish, or in any way communicate to any employee or employees the contents of any order, request, suggestion or recommendation (or any document purporting to be a copy thereof) by any person or persons ordinarily resident without Canada; that he or they quit employment as aforesaid, whether such order, request, suggestion or recommendation or copy thereof be signed or purports to be signed by such person or persons on his or their own behalf or on behalf of any other person, or any association of persons, whether incorporated or not."

"Testimony before us showed practical unanimity on the part of intelligent and strong-minded members of the laboring classes," observe the commissioners, "that foreign agitators and their methods were not wanted; in fact as one of them put it, they regarded it as an insult that such proposals should be made to them by any outsider."

SOCIALIST MEETINGS.

The Socialists held public meetings in Fernie on Tuesday and Wednesday evenings in the Trades and Labor Hall. E. T. Kingsley, provincial organizer of the socialist party and R. P. Pettipiece, managing editor of the Western Clarion, Vancouver, were the speakers while Mr. J. R. McPherson the socialist labor candidate for the Fernie district occupied the position as chairman.

The speakers were well versed on the subject of socialism and received considerable applause from the fair sized audiences. They took up the social development throughout the ages and attempted to show how it culminated at the present time in the slavery of the working classes. The socialist party aimed to revolutionize the present social system which was maintained solely for the benefit of the capitalist and by means of the capitalistic influence at work in the governments of the world. They would work this revolution by first getting possession of the reigns of government when by legal enactment they would transfer all property from private to public ownership, after which the working hours would be reduced by half and the so-called working man would have a happy issue out of all his present troubles.

THE ROSSLAND CARNIVAL

The rain interfered with the sports at the Rossland carnival on Tuesday and they were postponed until Wednesday and Thursday. On Wednesday the Victoria lacrosse club met with a merciless defeat at the hands of the Nelson club, the score standing 11-0. Nelson also captured the hub and hub contest but lost on the wet test, Rossland bringing water in 26 1-5 seconds.

DIRECTORS VISIT FERNIE.

VicePresident Jaffray Speaks of the Progres theMines Are Making.

Messrs. Robert Jaffray, G. G. S. Lindsey, K. C., and Col. James Mason, of Toronto, directors of the Crows Nest Pass Coal Company, are in town, having arrived on Sunday morning on a tour of inspection over the Company's property. Those gentlemen have already been to the different collieries and have looked them over.

Mr. Jaffray vice president of the Company, in an interview said;—"I am more than pleased with the progress that the Company is making, not only as shown by the tonnage of coal mined but specially in the permanent development of the different mines to insure the greatest and best results for future operations. At Coal Creek the manager has accomplished wonders in widening the main levels and in reducing grades. The old mines at this point are now in excellent condition, while the new tunnels, Nos. 4 and 5 are in shipping condition awaiting the early completion of the tramway. The extensive tipple improvements have also materially increased the capacity of this colliery." Mr. Jaffray expressed equal satisfaction with the progress that the Morrissey and Michel collieries were making. He confidently believed that under normal conditions and at the present rate of progress the output of the three collieries would reach 5,000 tons per day before the end of the present year.

Touching on the coke question vice president said the new oven plants at Michel and Morrissey were nearing completion, 40 of the latter already having been fired. These new plants would increase the total to 1136 ovens, which would produce a much greater supply of coke than is required for the present B. C. demand. Mr. Jaffray intimated that the B. C. smelters had scarcely treated the Coal Company fairly in representing the coke question to the public. They were too apt to attribute all stoppages of the smelters to coke shortage. The Company had done its utmost ts distribute its coke in the best interents of the B. C. smelters, and it was very rare that smelters were forced to close down on account of the lack of fuel The Company had received a wire only this week from the Granby smelter which is by far their largest Canadian customer, and another from the Northport, instructing them to stop their coke shipments. The Granby has accumulated a surplus of 3000 tons, which together with that on the road would run them for a month. The Coal Company had always done their best to assist Canadian industries and had never shipped a pound of fuel to the American side so long as there was a demand at home for it. The surplus always found a ready market on the other side where it was sold exactly same or better prices. This foreign trade was likely to increase as the supply continued to exceed the demand. This export trade was of great benefit to the district and to the province, inasmuch as it brought more money into the country.

Mr. Jaffray was pleased with the growth of the towns of the district and he expressed his appreciation of the growing feeling of friendliness and mutual dependence existing between the citizens of the district and the Coal Company.

LABOR DAY CELEBRATION

Trackmen Unable to get Excursion Train but They will come Anyway.

Information has been received by Mr. Clapp, of the Trackmen's Union, to the effect that the C.P.R. cannot furnish the equipment for an excursion train to Fernie on Labor Day. This is a keen disappointment to the trackmen, especially as they had taken the pains, previous to making other arrangements, to ascertain if they could be furnished with a special train, which was promised them. Cranbrook and Michel have also been refused excursion trains for that day.

This piece of news will in no way seriously conflict will the Labor celebration in this town. Mr. Clapp informs us that the trackmen from the east will use the regular express service as was originally intended and those from the west will come in on the Sunday evening express. The trackmen have made up their minds to celebrate the day here and they will let nothing interfere with their plans. They expect to have a distinguished visitor in the person of J. T. Wilson, of St. Louis, who is Grand President of the Trackmen's Union.

CANDIDATE SMITH TO SPEAK

Liberals will hold a Public Meeting on Monday evening.

The Fernie Liberal Association held a meeting on Monday evening when arrangements were made for a public meeting to be held in Princess Hall on Monday evening next. At this meeting the nomination will be formally given to Mr. E. C. Smith who in accepting it will give an address enunciating his platform. Alfred Parr, Liberal candidate in the Ymir district, Duncan Ross, of Greenwood, provincial organizer for the interior, and Dr. King, Liberal candidate for Cranbrook district, will be present and deliver addresses. The meeting, is open for the public to attend and no doubt a large number will take in the first political rally.

AN OPTIMISTIC OUTLOOK

Mr. Wm. Blakemore was in town for a few days early in the week on his way to his home in Montreal. Before leaving a Free Press reporter asked him for his opinion of the outlook of the province, and more particularly, South East Kootenay, which he very willingly gave in the following words:

The outlook in B.C. is decidedly more hopeful than for several years past. The granting of a substantial bounty on lead production, the rapid development of the lumber industry, the solid advance of the smelting industry and the important discoveries on Poplar creek and in other parts of the Lardeau, are the chief factors in the evident improvement taking place.

Since I came west in May I have travelled more than 2000 miles in southern B.C. and have had ample opportunity of noting the general conditions and I must pronounce them most hopeful. To this general prosperity your own town and district have contributed materially. I have always maintained that the future of the province depended on cheap and abundant fuel and now for the first time your mines are producing a large tonnage and are within measureable distance of overtaking the demand. There does not seem to be any reason why hereafter there should be a shortage of coal or coke.

The political outlook in your constituency is promising, as in Mr. W. R. Ross I believe you have a man of character and ability and who from many years' residence in East Kootenay is well acquainted with its requirements and will if elected serve the constituency in an able and independent manner. He has my heartiest good will and support and I hope he will represent you in the next assembly.

COMMUNICATION.

(The Editor does not hold himself responsible for the opinions expressed in these columns.)

To the Editor:

Having made a study of saloon life in the west for some time, several causes which lead to so much excessive drinking have impressed themselves upon my mind. Why do the workingmen drink? The single man having no pleasant home in which to spend his leasure time, often frequents the saloons and indulges in drink because he has nothing else to do. Especially is this true of foreigners who cannot read English and their own literature is hard to obtain.

Most of us agree that something ought to be done to lessen these causes and to improve the environment of those who are most liable to fall under the blighting effect of the alcoholic appetite. Education, in the form of popular and instructive lectures for the former, and night schools to teach the latter a better knowledge of the English language, would be means by which this spare time could be beneficially spent and thus in a double sense, by instruction and by employing his time, would the working man be saved from the terrible evil.

In England and other European countries organizations of a social and educational order are being used for these purposes. Debating classes, schools, reading rooms and various other societies are formed for the purpose of educating and filling up the spare time of the workingmen. The results are most gratifying and I do not see why that which is accomplished there on a large scale could not also be accomplished here in a smaller way. A movement of this nature deserves government aid. Money spent in this manner will go much farther than that now spent in bringing to justice those victims of the drink habit who are thus led into criminal habits, and who might otherwise have become good and worthy citizens of the state.

DAVID BANNETT

Fernie, Aug. 28th, '03.

WHEN BOYS WERE MEN

By JOHN HABBERTON,
Author of "Helen's Babies," "George Washington," Etc.

COPYRIGHT, 1901, BY JOHN HABBERTON

Meanwhile another man bit the dust, for my horse stepped on the heels of his file leader, who had slackened his pace suddenly. The injured horse reared his hind quarters to kick, and over his head shot his rider, breaking his fall by rolling between two horses in front of him. A similar fate befell several other men, who, trying to brace themselves by holding their bridle reins tightly, curbed their horses so severely that the animals halted suddenly and unhorsed their riders. It seemed to me they must be trampled to death, but it was impossible to halt and ask questions or offer any assistance.

During these scenes of humiliation my heart was strengthened somewhat by the demeanor of our couple of survivors of the historic charge at Balaklava. Each rode as steadily as if he and his horse were one. Neither man looked to the right or left, but straight ahead, and each carried his saber as if on parade. I afterward told Cloyne about this, and he said:

"Why not? They did nothing but drill from the time they first enlisted in England, and a charge isn't half as hard to go through as a regimental drill of mounted troops."

Soon the major was on our flank again, shouting:

"Captain Bright, what has become of your company? There's only about half of it in the ranks."

The captain, who had ridden forward to close the gap between him and the company in front, fell back and looked along the column, which had lost all regularity of formation. Then he screamed:

"Lieutenant, why have you let so many men fall out, sir?"

The lieutenant commanding the rear platoon had been getting ahead of his proper position. He turned his horse, looked toward me and roared:

"Where's the sergeant of the left of the line?"

"You ordered him to remount several minutes ago, sir," I replied.

"And he hasn't returned to his post? Then 'twas your duty as a noncommissioned officer to keep the men from straggling to the rear."

This sudden and new load of responsibility seemed more than I and my horse could carry, but I afterward learned to bear similar inflictions better, for I found they were in accordance with military custom. When anything goes wrong during a march, the highest officer with whom fault is found immediately unloads the blame upon the officer next below him in rank, and so the scolding passes downward until it reaches some lowly noncommissioned officer, who gets rid of it by giving it to a private soldier.

But I had no time to absorb this wisdom during my first charge, for the major suddenly ordered our captain to hurry along with such men as he had, leaving the stragglers to the tender mercies of the rear guard. It seemed strange that we had not yet closed the small distance between us and the troop ahead of us, but as we hurried on we had the melancholy consolation of learning that ours was not the only new company whose men had come to grief through ignorance of their duties and by falling out had made many successive gaps in the column. Not all the unfortunates were bad riders, but some of them had pricked their horses with their sabers during spasmodic endeavors to keep these weapons well in hand, and no self respecting horse could be expected to be even tempered when prodded with a yard of steel with a sharp point at one end and 150 pounds of greenhorn at the other.

Such as were left of us went faster and faster, the horses, becoming excited, unconsciously taking the gallop. This being a gait at which a child could keep the saddle, there was no more straggling. Assisted by some vigorous language from the captain, we formed new sets of fours and went along in really handsome style.

When our rush had lasted about a quarter of an hour, I began to wonder when we would strike the enemy. If we had already suffered so severely, what would be left of us after we had met the foe and been thrown into the confusion which always befalls a cavalry party at the instant of absolute clash? Well, if it must come, it were better that it should come while we and our horses were nerved up to fighting pitch.

There came a time in our mad rush when the road led through a bit of low, damp ground on which there was no dust, so we could look along the column. Dusty though we were, the spectacle was really inspiriting, with its hundreds of flashing sword blades and its successive guidons—small flags, one at the head of each troop. We ascended a gentle slope near the top of which and perhaps a quarter of a mile in advance rode a man with a broad felt hat and a very small horse. I asked the lieutenant who he was and was told:

"He's the reb we're chasing, I s'pose."

What! All that effort to catch one man—a man who was apparently getting away? All the scare, the terror, the wild thoughts, the helplessness, the disorder, the suffering, merely to overtake one man! I felt angry enough to desert. I lost my temper and expressed my thoughts so loudly that the lieutenant overheard me and, looking angrily at me, said:

"Be quiet, you little fool. There's no better way of finding their main body than by chasing a man who is trying to get back to it, is there?"

"No, sir," I replied meekly as a flood of light descended upon my wits, and I longed to shrivel within my uniform so that I could not be seen. I did not long have to chew the bitter cud of reflection, however, for soon we heard some shots in the advance. Our pace was slackened; we became tightly packed in the road, breaking our formation and causing much trampling on horses' hoofs, with the consequent kicking and swearing. Then down the column was passed in rapid succession the orders:

"Halt! Dismount!"

Were we to fight on foot? Well, whatever might befall the enemy, I was sure it would be far safer for us. Then came the orders:

"Loosen your saddle girths. Tie your horses to the fence. Stand by and prevent them from rolling, or your saddles will be broken."

What an inglorious conclusion! I did not dare ask the lieutenant what it

We went faster and faster.

meant, but he evidently saw I was curious, for he approached me and said:

"I guess the advance has gobbled them. There's never more than a company of these fellows on the road at a time around here."

That was better than I had expected, and I was wild to go forward and see the prisoners. Soon there was something else to look at, however, and I don't believe the prisoners could have presented as sorry a spectacle—it was the mass of stragglers being urged forward by the rear guard. There seemed no end to the dismal line of men without horses, horses without men. Some of the stragglers were asking where their companies were, and once in awhile a member of our company would recognize his place by the letter which each of us wore on his cap. What astonished me most, however, was Mick McTwyny plodding along on foot and carrying little Brainard on his back. I was so astonished that it was some time before I could ask Charley what had happened, and he told me that something was biting his side awfully. When the surgeon, of whom we had three, reached our company, Brainard learned that in falling from his horse he had broken two ribs.

Soon the colonel came riding down the column, looking keenly to the right and left. I asked him about the engagement, but he stared coldly at me and did not answer. When, however, the captain saluted, the colonel told him that the enemy's entire party had been captured, being unsaddled and therefore unable to get away. He also volunteered the information that our dash had been worth more to the regiment than a month of battalion drill in camp and that if half of the new men had kept up with the procession they had done better than he expected.

Thus ended the first charge of the Thirty-eighth, and it had been quite as successful in results as early cavalry dashes in general. But what would have happened had we, with 600 or 700 raw men and only a third as many experienced members, encountered a well armed, well trained regiment as large as our own? Well, either we would have run away or been badly whipped.

It is unlikely, however, that the colonel, who knew his business, would have led us against such a body, and it is less likely that he could have done it if he would, for there was not at that time a well armed, well trained cavalry regiment anywhere in the southern army. Greenhorn against greenhorn was the rule in those days, and not only in the cavalry service either.

Oriental Dancers.

Oriental women are very graceful while young and not too fat. Their dances are like the Delsarte movements, but all are done on the space of a rug by only one dancer at a time. If men are present the dancer remains veiled unless they are husband, father or brother.

CHAPTER IX.

BACK TO CAMP.

AFTER a long rest, followed by water for our horses, the regiment started again, though as to where we were going we knew no more than when we left camp. I said to Cloyne that it would save a great deal of unnecessary worry if the colonel would post a notice before leaving camp for a scout or a fight to let us know where we were going, how long we were to be gone and what we were to do, but Cloyne replied that the colonel would first have to know all these things himself, which seemed a great deal to expect.

At any rate no such information had been given out about our present trip, nor did we ever get any about any trip on which we started afterward, so in time it came to be fun to ask when on the road, "Where are we going?" so as to get a pleasing assortment of improbable answers. At first it seemed too dreadful to take part in some movement about which I knew nothing—not even whether or not it was judicious. But when I saw the older members of the regiment calmly obeying all orders, asking no questions, I endeavored to be a veteran to that extent myself and let the government manage its own business in its own way.

As I had not made this resolve at the time of our first scout and charge I was curious and anxious about many things besides our probable route. What would we do with our prisoners should a regiment of the enemy suddenly strike us? Suppose we were to get into a fight and have a lot of horses shot; how would the riders reach camp? How were our disabled men to reach camp again, as it appeared we had no ambulances with us? Was any one sure that the colonel had calculated time and distance carefully, so that we should reach camp in time to save men and animals from starving? And, speaking of starving, where was I to get anything to eat during the coming day or more?

This question slowly but surely forced all others from my mind, for I had eaten all of my hoecake that I had not given away, I had roasted my sweet potatoes at dinner time and felt, as I ate them, so full that I wouldn't want another morsel till morning, but an hour of trot and gallop had caused a radical change of opinion. I had no more silver with which to buy should I be able to find any native who would sell, and my morning's search for corn soft enough to eat had not been encouraging enough to justify me in trying again.

As I wondered darkness approached, and we halted to bivouac for the night. Brainard, whom I found in one of the straw filled country wagons which had been seized to carry the injured, was as hungry as I and very dismal about it too. How both of us wished we had kept the fat pork which had been dealt as a part of our three days' ration! We still agreed that a very little of it would go a long way, but that was just the sort of ration we most needed at that particular moment, for the void in us seemed to reach nearly down to our boot toes. While we pitied ourselves and endeavored to deaden the pangs of hunger by the time honored truant schoolboy trick of tightening our belts, a detail was suddenly made from our own company to guard the prisoners, and I was one of the noncommissioned officers named.

We were marched to the front to take the Johnnies from their captors and bring them nearer the rear. There being no building near by, we camped them in a cluster near the roadside, clearing horses away to make room for them. Their own horses were prudently tied a troop or two distant, so that none of them, should he attempt to escape, could get his mount. They were not bad looking fellows, though they did not appear very soldierly in their uniforms, no two of which were of exactly the same tint of gray and scarcely any two of the same style of button. None looked as if he might be a "fire eater," and the majority were men of middle age. Nearly all of our own troopers were young. None seemed very sad or angry. In fact, they didn't at all meet my ideas as to southerners and prisoners of war. They were ordered to sit or lie down, but were not bound or restrained in any other way, except that there were guards, revolvers in hand, in front and rear of them, and we were quietly ordered to keep a little blaze all night in the fires which were nearest, so that no one could attempt to get away without being seen.

As the sergeant—who chanced to be Hamilton—and I had nothing to do but post and relieve the guards, we lay on the ground and engaged some of the captives in conversation. We found they were all Georgians, most of them from small villages or plantations, and they did not know much about the war except that they were sorry it broke out, but they had felt it their duty to stand by their state.

"Seems to me," said one of them after we had chatted a little while, "that you uns was all to blame for the war, for we uns didn't want none. No matter which side whips, I'm a ruined man, for there's nobody to make the crops while I'm away up here. I don't own no niggers, an' my wife an' young uns cayn't do no more'n work the truck patch [kitchen garden] an' look after the pigs an' the milk critters."

I heard this story so many times during the war that I had to do a great deal of being sorry for the enemy.

Our prisoners had been told to bring their provisions with them, and as they had eaten nothing since dinner time they asked permission, which was readily granted, to do their cooking at the fires. Their rations were so different from ours that it was interesting to look on. Instead of boiled fat pork they had raw bacon, thin slices of which they fried or toasted on sharpened sticks. Some had white bread, others biscuit or hoecake, while two or three mixed meal and water and made hoecakes in the frying pans which several of them carried; others had sweet potatoes, which they baked in the ashes.

Oh, how hungry the smell of their cooking made me! I understood for the first time why it was that some of the poorly fed children in our town used to stand around the bakery while the bread, cakes and pies were being taken from the great oven in the cellar. Some of the Johnnies asked us if we wouldn't eat with them, but Hamilton and I, half starved though we were, declined until I noticed that none of them was making coffee. Then a brilliant idea struck me. I asked one of them whether southerners never drank coffee at supper time.

"Not unless they can git it," said he, "which is mighty seldom."

I went to the servant of our officer's mess and borrowed some ground coffee and sugar, promising to repay him when we reached camp. Returning, I distributed it among the prisoners nearest me. I wish I might ever again earn so much gratitude with so little trouble as that act cost me. Those Johnnies became positively jolly, and they made haste to put cups of water to boil. Said one of them, a rough looking man with a huge yellow beard:

"Ev'rything I've got's yourn, my young friend. I'm 'most glad we got captured. Take all my stuff."

"Since you're so kind," said I in an absolute delirium of anticipation, "I'll accept a single slice of bacon. It has a more tempting odor than our fat pork."

"For good eatin'," said he as he cut several slices of bacon for me and put them in a pan on the fire, "there ain't no hogs like southern hogs. We never buy no'thern po'k, 'cept to feed to niggers."

I was quite willing to believe him. The odor that arose from that frying pan was delicious perfume to my nostrils. After the bacon had sizzled awhile the old fellow took some hoecake from his haversack, split it with his knife and laid it in the pan inner side down, saying:

"You need to eat co'n bread with bacon to git the full taste of it."

"Bless your southern soul!" said I to myself, and I was sure by the manner in which Hamilton eyed the pan that his sentiments agreed with mine. Oh, what a supper that was! I've never tasted one so good since the war ended. It seemed to me that if President Lincoln and Jeff Davis could have sat there with us and shared the contents of that frying pan they would quickly have agreed to end the war on a basis of a general exchange of northern coffee for southern bacon and hoecake.

The camp was soon quiet. Soldiers in the field fall asleep quickly after the evening meal and pipe, and our prisoners were all dozing by 8 o'clock. As I was not a smoker and was on duty I remained wide awake and, pacing to and fro in the road, spent much time in thinking how dreadful it would be to have to fight so good natured, harmless a set of men as the gray clad fellows slumbering near me. Then I put in some time being sorry for the families whose heads were so far from home. What would become of the Frost farm, I wondered, and how miserable would be the family if my father instead of his son was in the army?

Pretty soon the tenor of my thoughts was changed by a drop of water which struck me in the face. It was quickly followed by another and then by several. I was not long in getting far enough out of my brown study to discover that it was raining. I soon had my india rubber blanket over my shoulders and was wondering why the prisoners had not brought their own with them from their saddles—most of the sleeping figures were wrapped in blankets or quilts. It seemed too bad, even if they were rebels, that the poor fellows should be soaked by a cold November rain. Perhaps I could send two or three of the guard, who were not on post, to get them. I consulted

We engaged some of the captives in conversation.

Hamilton, who shook one of the sleepers and politely repeated the suggestion. The man was slow in waking and slower still in comprehending, but at last he said:

"What? Them gum cloths? Gosh! We ain't got none. Some of the army that druv you uns from round Richmond when McClellan was thar has got some that you uns left, but we uns wasn't thar."

"Oh, I see. I beg your pardon. May I ask what you do when you're caught in the rain while on duty?"

"Do?" said the man, with a mighty yawn. "Why, git wet, I reckon."

Then the prisoner lay down and went asleep again, though by that time the rain was falling furiously. As for Hamilton and me, we agreed that a so called nation that didn't provide its soldiers with rubber blankets would soon be on its last legs and that the said legs would be rheumatic.

The camp was soon in commotion, most of it verbal and shockingly profane. The men in the newer companies had not yet learned how to keep dry in a shower. The rubber blanket is so narrow that for it to be under a man and over him, too, the owner must lie as straight as a ramrod. There were individual outbreaks throughout the entire night as men woke to find their knees soaked. To make matters worse for the guard, the rain put out the fires, so there was no light. Hamil-

He handed me a dirty wad of newspaper.

ton and I took turns in pacing to and fro in front of the prisoners, counting the barely visible figures each time we passed them. The guards were as unhappy as a lot of picnickers caught in a thunderstorm, and sleepy besides. The horses huddled together as best they could, the road became ankle deep in mud, and the entire situation was as gloomy, uncomfortable and detestable as our worst enemies could have wished. The only living beings who did not seem in the least disturbed were the prisoners.

As for myself, I think I lost my senses several times during that dreadful night. Only 48 hours before, the job of loading the revolvers had robbed me of an entire night of rest. Now I was doomed to another. I had to tramp the muddy road to keep myself awake, but my head dropped asleep once in awhile on its own account, and with wide open eyes I beheld many strange visions in the darkness and imagined many things ridiculous and impossible. It seemed that the night never would end, and my gratitude was unspeakable when at early dawn we were ordered to feed, mount and resume our march. I tried to feel happy when the prisoners were placed in charge of a new guard and my sense of responsibility ended, but soon I found that sleepiness on horseback was more dreadful than on foot. No sooner would I drop into a doze than I would rouse with a start from an awful sensation of falling from my horse. Everybody was cross, particularly the smokers, for all the fires were out, and few men carried matches.

Then it was that our captain leaped suddenly and securely into the affections of his men. Passing the word for smokers to fill their pipes, he tore a long, narrow strip from his handkerchief, moistened it the least bit, lit one end with a match, lighted his own pipe and then gave the smoldering rag to the first sergeant, from whom it passed down the entire troop. After the pipes were fairly started there was no more grumbling, except from nonsmokers.

How I wished myself a smoker! Often when in earlier days I had asked schoolmates why they took to smoking I was told, among other excuses, that a few whiffs of smoke would stop the craving of hunger when a fellow chanced to be playing truant for a day or off hunting or fishing and having too good luck to get home at mealtime. Well, had I learned smoking, the third day of our scout would have been a good time to test its remedial virtues, for my hunger was so intense that it drove everything else from my mind, and the memory of the bacon and hoecake of the night before almost made me scream with rage. It seemed to me the government was mean, despicable and standing in its own light to give me as three days' ration some food which I had eaten during the first 24 hours. If only I had brought that lump of fat pork which had seemed so loathsome when it was dealt me! I actually longed for that bit of adipose tissue, longed until I saw it on the ground just where I had tossed it, saw it as distinctly as if it were really before my eyes.

Really, when we halted about noon my hunger had made me mean spirited enough to go deliberately in search of my friendly enemy who owned the bacon and frying pan. Fortunately for the poor fellow, he was eating his last bit of food apparently, for his haversack was inside out and lying by the fire to dry. He recognized me, and as the guard allowed me to speak to him he said:

"It seems too bad to waste the little fat that's left in the skillet, don't it? Wonder ef thar ain't an ear of corn in that field that we could roast?"

"It's all too hard," said I, shaking my head sadly as I remembered my search of the day before.

"The harder the better," said he.

I never was more willing to be convinced. In a single minute I was back from the field with several ears. The Johnny selected the hardest, shelled it in his pan, shook it a little while before he put it over the fire, then parched it until it was a deep brown and poured it upon the top of his hat to cool. Not a bit of the bacon fat remained in the pan, but each grain of corn was as glossy as if varnished.

"Thar!" said he, after a moment or two, as he poured a full half of the corn into a big husk and passed it to me. "Just h'ist yerself outside that an' see ef you wasn't wrong thinkin' the corn too hard."

Bless that rebel! I do believe that parched corn saved my life. I resolved never to go on a scout again without a little frying pan in one of my saddlebags and a lot of shelled corn in the other. But what was half an ear of corn to a raging hunger like mine? It was too late to parch more, for the call to mount had sounded. As I hurried down the road to rejoin my company I met a veteran of the older troop on which I had been billeted when first I reached the regimental camp, and he hailed me kindly with:

"Well, young feller, how does scouting agree with you?"

"Well enough," I replied, "if I wasn't almost starving."

"It always strikes greenhorns that way," he replied. "Now, I ain't a bit sharp set. Say, mebbe a piece of pork would help you out. Here."

He handed me what looked like a dirty wad of wet newspaper, in which I found about half a pound of pork. It was solid fat, dingy looking, and on one side, where the paper had lain closely against it, several advertisements had transferred themselves in reverse, with the general head "Help Wanted" at the top of them. The words were eminently appropriate, so I didn't scrape them off, but ate pork, advertisements and all.

About the middle of the afternoon a general buzz of satisfaction ran along the column. We were passing one of our picket stations, which meant that we were within an hour or two of our camp. When finally the march was ended, my horse was so glad to get into his stall and be relieved of bridle, saddle and blanket that he gleefully kicked the empty air for several minutes. Several minutes later his owner, lying on the bare floor of his tent, his head pillowed on the rain soaked blanket, was slumbering as sweetly as if his couch were of down, and the ugly ejaculations of the weary men who struggled in one by one were so many loving lullabies.

CHAPTER X.

WINTER QUARTERS.

OUR first scout did not differ much in duration, accidents and results from scores which followed it. Go out whatever road we might, we were always sure to find the Johnnies doing business at the same old stand and unwilling to be interfered with. We always could reach them in a day's march, consume another day in passing along their entire front and still another in returning to camp. They seldom returned our attentions in force, probably because they had not a large enough force to feel safe when far from home. Besides, they could learn all they liked about our post and its camps, for every farmer and planter in the county was a source of information to them. We never got into a big engagement. It wasn't our business, except when we were accompanied by a large force of infantry and artillery, to worry the Confederacy by making believe that the "on to Richmond" movement of the Potomac army was to be made from our direction. When we went alone, the enemy did not worry much, for they had a broad, deep stream along their entire front. They could quickly take up the planking of the only bridge within ten miles, so they exchanged shot and shells with us across the river with the calm confidence of the card player who holds all the trumps.

[CONTINUED.]

The Art of Listening.

There is a grace of kind listening as well as a grace of kind speaking. Some men listen with an abstracted air which shows that their thoughts are elsewhere, or they seem to listen, but by wide answers and irrelevant questions show that they have been occupied with their own thoughts as being more interesting, at least in their own estimation, than what you have been saying. Some interrupt and will not hear you to the end. Some hear you to the end, and forthwith begin to talk to you about a similar experience which has befallen themselves, making your case only an illustration of their own. Some, meaning to be kind, listen with such a determined, lively, violent attention that you are at once made uncomfortable, and the charm of conversation is at an end. Many persons whose manners will stand the test of speaking break down under the trial of listening.

A Lot of Sick Ones.

A delegation of clergymen once called on President Lincoln to recommend one of their number as consul at the Hawaiian Islands and in addition to qualifications for fitness appealed to the president's sympathy on the ground that the candidate was in poor health and a residence in that climate would be of great benefit to him. Lincoln questioned the man closely as to his symptoms, then remarked:

"I am sorry to disappoint you, but there are eight other men after this place, and every one of them is sicker than you are."—"The True Abraham Lincoln."

Coal For All the World.

The Shansi (China) coal fields cover an area of 14,000 square miles and contain, it is estimated, more than 600,000,000,000 tons of anthracite, enough to suffice for the wants of the world at the present rate of consumption for over 2,000 years.

TROUBLE IN TURKEY

OTTOMAN TROOPS HAVE NO RESPECT FOR OFFICERS.

Bulgarians Murdered in Cold Blood—It ly May Send Warships to Turkey—Mohammedan Fanaticism May Break Out in Salonica at any Moment.

Constantinople, Aug. 20.—The Russian demands on Turkey, growing out of the recent muder of the Russian consul at Monastir, Mr. Rostkovski, were formerly presented at the Yildiz palace yesterday. Notwithstanding the warning which Russia addressed to the Bulgarian government, it is generally believed here that the Russian naval demonstration in Turkish waters will dangerously encourage the Macedonians, who, it is claimed, will interpret Russia's action as being the first step toward intervention in their behalf.

Insubordination of the Turkish troops is regarded as being one of the greatest dangers of the present Balkan crisis. The lack of discipline among the soldiers is marked. It is found necessary to humor them in order to prevent conflicts between the soldiers and their officers. For instance a regiment on the way from Uskub to Monastir, demanded that the train be stopped at Salonica for twelve hours, instead of for the scheduled half hour, so that the soldiers might amuse themselves in the town. After futile endeavors to prevail upon the men to allow the train to proceed the officers were obliged to grant their demand. The killing of Bulgarian workmen who were repairing the railroad track near Uskub, is another grave instance of the insubordination of the Turkish troops. Details of the affair show that a trainload of Turkish soldiers, soon after leaving the railway station at Uskub, not only fired on and killed three Bulgarians, who were at work on the road, and left the bodies lying on the line, but some of the soldiers left the train and pursued five other Bulgarian workmen to a neighboring station, where the Turks murdered them all in cold blood.

Consular reports received here from Salonica continue to emphasize the danger of an outbreak of Mohammedan fanaticism there. The consular representatives have asked for protection and the question of again despatching warships to Salonica is being discussed by the representatives of the powers. Dispatches from Turkish sources say the insurgents have destroyed another village in Macedonia.

ITALY MAY INTERFERE.

No other power is in a better position than Italy to quickly send a fleet to Turkey. The torpedo boat destroyer Minerva is off the island of Lemnos, in the Aegean sea, a few hours' steaming from Salonica, and the battleship Reumberto, which is at Agosta, Sicily, can reach Ottoman waters in about forty hours. The Italian Mediterranean squadron, now off Cagliari, Island of Sardinia, has been ordered to Sicily, so as to be nearer the scene of the trouble in Turkey.

The ambassadors of the powers have again drawn the earnest attention of the porte to the fears of massacres at Salonica and have recommended the adoption of immediate and effective measures for the protection of the foreign consulates and the subjects of the various powers. Letters received here from Uskub say there is evidence there of a great feeling of unrest. The mosques are guarded by troops and it is feared they may be attacked. The monastery of the Holy Virgin, near Kitchero, has been burned by Albanians after a determined struggle between the defenders of the monastery and the insurgents, during which both sides lost heavily.

A CRISIS IN SERVIA.

King Peter in the Hands of the Military —Want a Loan.

The London Times Belgrade correspoodent says that the outlook in Servia is dark, the country seems drifting into anarchy. The result of the ministerial crisis shows that King Peter is completely in the hands of the military which placed him in power. The conspirators had their own way in the reconstitution of the cabinet. The removal of the advanced radicals, Shivovitch and Etoyanovitch, from the ministry, were further triumphs for the reactionaries, in view of the long standing feud between the army and the radical party. The radical chiefs, however, are not reluctant to part company from the present ministry, as they now obtain a free hand for the approaching elections.

The elections which were fixed for August 28, will undoubtedly result in an overwhelming victory for the radicals. The conflict between them and the army will then become acute rendering King Peter's position still more unenviable.

The London Daily Mail's correspondent at St. Petersburg describes a sensational incident which occurred during the Kieff strikes. On one occasion, he says, when the troops were ordered by the governor to fire on the strikers a young captain stepped in front of his company and forbade the troops to fire upon their "poor, starving brothers." The soldiers obeyed the counter order, and the captain made a flaming revolutionary speech to his men. He was immediately arrested and taken to St. Petersburg, where he was tried by court-martial and sentenced to death

HOT WATER WITHOUT FIRE

Citizens of Boise City Don't Have to Use Stoves.

Boise City is the only place in the world where the streets are sprinkled with hot water. The city and county buildings are heated during the cold weather without the use of a fire, and subscribers to the city waterworks get hot water all the time without the expense of stoves. This has been accomplished by harnessing an inexhaustible hot spring, and, novel as the plan may be, it works perfectly.

Time was when Boise, being way out west, was easy going and altogether lacking in class distinction. The wife of the mayor and the head waitress of the hotel met on terms of equality in the same quadrille at the weekly ball, and the young men wore their hats and smoked as the dance progressed. In those good old free and easy times if a girl winced when cigar ashes fell on her bare shoulder, it was a sure sign that she was not properly broke, and caused her to be clased as a tenderfoot. But all that has passed. The girls have been to boarding school, bringing back with them the mannerisms of the effete east. It was a hard thing to establish class lines, and separate the sheep from the goats, but half the town now dances on Tuesday nights and the other half on Thursday. The board walk and the blue wool shirt are matters of ancient history in Boise. It has automobiles and Panama hats and polite vaudeville. During the Fourth of July celebration a big woman from the sagebrush country, but who looked mighty well fed for a child of the desert, leaned up against a barber pole as the parade went by, and between the swishes of her giant palm leaf fan said, "Boise is sure a good place to come to."

Congratulatory Letters.

In reference to the Winnipeg Industrial exhibition held this year the management has been in receipt of many congratulatory letters from judges and exhibitors; and the following sent by one of the largest firms of breeders of Hereford cattle is interesting as showing the importance which is attached by exhibitors to the Winnipeg fair. This firm writes: "We must again congratulate you on the good success of the Industrial exhibition. The association have certainly proved themselves as deserving of all praise. The rebuilding of the stables for the comfort of stock, and also of exhibitors, in so short a time certainly is deserving of the highest commendation of all cattle exhibitors. I trust the financial results of this year's exhibition will encourage the management in every way and hope to hear in the near future that our Dominion government will assist you in holding a Dominion exhibition next year. Our American Hereford exhibitors will help us to try and secure some of the Hereford association funds for next year's prize list when we trust to put up another good show of the white faces."

The judge of shareholders in a congratulatory letter says: "It was a pleasure for me to meet with such an honorable and big-hearted lot of exhibitors as were showing this year and I wish you continued prosperity."

The Crops Look Well.

Prof. Wm. Saunders, director of the experimental farms, telegraphs to the department of agriculture as follows: Crops at the experimental farm at Brandon are very good. Barley is cut. Wheat cutting begins Monday. There is very little grain cut north of Brandon, but a considerable quantity south. There is splendid ripening weather and cutting is now becoming general."

In another telegram from Dr. Saunders, he says the crops at Indian Head experimental farm are remarkably heavy. Some barley and oats are cut. The wheat is not yet ripe. The wheat throughout this district is much heavier than seen elsewhere and will probably average 25 bushels to the acre.

Cossacks Charge Lot of Strikers.

A dispatch from Nikolaiev, to the London Daily Mail, dated Aug. 12, confirms the previous report of a military onslaught on a crowd of strikers at Kieff, August 11. The dispatch says the conflict arose over a design of the strikers to hold a meeting on the Chernigov side of the Dneiper. Five thousand persons were assembled and were to cross the river in boats where the meeting was to be held. The military appeared and ordered them to disperse. The mob stoned the Cossacks, who thereupon fired three volleys and then madly charged, scattering the crowd in all directions. Between twenty and thirty strikers wece killed on the spot, forty others were dangerously injured, 200 to 300 received slight injuries.

Seven hundred young men and women left Halifax on August 21, to make new homes in the Northwest. They were all from Prince Edward Island. They are of the very best class. Another two hundred and seventy-five men left to work as harvesters.

A dispatch from El Paso, Texas, says: The body of an unknown man was found north of the city today. The man had committed suicide by bitiog a piece of dynamite, which he had wrapped in his handkerchief. His head was blown into fragments. The clothing on the corpse had been purchased from a San Francisco firm. The man was in evening dress and must have killed himself after leaving a ball room.

Plans are being made to erect a monument to the philosopher Kant in Berlin, to be unveiled on the occasion of the one hundredth anniversary of his death, in 1904.

"Slater" Oxfords

Summer comfort in fashion's latest approved form—

—Lightness, grace and comfort,

—Patent Leather, Glazed Kid, leather lined to make a smooth interior.

TO HUDSON BAY.

Canadian Northern Will Start Work Next Spring.

Montreal, Aug. 18.—In railway circles report has it that Mackenzie and Mann have completed arrangements for the early construction of the Hudson Bay section of the Canadian Northern and that next spring will see the road well under way.

It is stated that the Hudson Bay road will start from a point on the Canadian Northern system, about 150 miles east of Prince Albert, and that the terminal port on the great inland sea will be Fort Churchill.

Hugh Sutherland, executive agent for the C. G. R., when interviewed, was inclined to place little reliance in the information contained in the above dispatch.

"Of course," he said, "it is the intention of the Canadian Northern to eventually tap the Hudson Bay and ship the wheat of western Canada out by that route, but I have no information that would lead me to believe that construction on that section will start next spring. As a matter of fact, I think that until we have our steel laid into Edmonton nothing will be done in the way of construction on the Hudson's Bay section of the road."

A WILD NIGGER.

Because White Men Dispoil His Melon Patch He Shoots Into a Crowd.

A dispatch from Heflin, Ala., says: News has reached here that three men have been killed and ten wounded in Randolph county by a negro named Sledge. Last Saturday a party of eleven white men working on the public road at Beaver Creek, near Lamar, asked permission to eat a few melons in the negro's melon patch. They were told to help themselves. The men began to cut and slash melons and vines. The negro warned them to stop and then went after his gun. Returning he emptied his weapon into the crowd, wounding nine out of the eleven.

Immediately Sledge fled. A posse headed by the sheriff overtook the negro near a bridge over the Tomapoose river. He was ordered to surrender, but replied by firing his shot gun, instantly killing Thomas Ebbett and Thomas Ford. Sledge was accosted on the road next day by Thos. Moore and Bud Williams. Without warning the negro raised his gun and fired, instantly killing Moore and mortally wounding Williams.

Formaline in Ice Cream.

A dispatch from Colorado Springs, Col., says: More than fifty people, the majority of who are tourists in this city and Manitou from all parts of the country, have been poisoned by ice cream made by local dealers from a consignment of cream received Sunday morning from one of the largest creameries and dairies in the state, situated near Denver. Analysis by the health officers of Colorado Springs reveals the fact that the cream was charged with formaline to keep it from souring. No deaths have resulted, although several cases are critical.

Lockjaw Can Be Cured.

A sure cure for lockjaw, it is said, has at last been discovered. It has been tested and proved. The discoverer of this cure is Dr. Samuel A. Matthews, professor of pharmacology in the University of Chicago.

In brief, Dr. Matthews' treatment of the dreaded disease consists of an introveinous injection of a salt solution. The treatment has just been tried for the first time on George Newman, an 11-year-old boy.

The patient had an acute attack of the disease, and was in the last stages when Dr. Matthews was asked to try his newly discovered treatment. As a result the boy is able to sit up. Physicians pronounce the cure a wonderful one, and say that

This Trade Mark

Evaporated Cream

Has no equal for richness and purity—Keeps perfectly in any climate. The best for all household purposes.

Ask for VICTOR Brand.

Manufactured by Charlottetown Condensed Milk Co., Charlottetown, P. E. I.

Professor Matthews has made a discovery that will revolutionize the entire prartice of medicine in cases of acute poisoning.

The Apple Crops.

A report on the world's apple crop of 1903 has just been issued by the Boston Chamber of Commerce. It shows that Great Britain is short of all fruits, notably apples. Europe is generally short of apples, but with a heavy crop of Valencia oranges and Almeria grapes. New England, in the aggregate, will have a very generous crop. New York state reports plenty of apples, the middle west only fair, the far west, very heavy. Canada also promises quite a heavy yield. The quality average is excellent.

Hr. Horace Crawford, one of Winnipeg's best known barristers, dropped dead at Owen Sound on August 18th.

The German emperor will ask the Reichstag for funds to increase the army by two more corps.

A fierce battle was fought in the neighborhood of Monastir where three Turkish battalions attacked a thousand insurgents.

The official measurements of the Reliance and Shamrock III. will give Shamrock III. 1 minute and 45 seconds over a thirty-mile course.

A dispatch from London states that rich diamond fields have been discovered in Liberia.

The C. P. R. liner Empress of India collided with the Chinese cruiser Huang-Tai off Hong Kong. The warship was completely wrecked and immediately sank. Fourteen lives were lost. The Empress was only slightly damaged.

MARKET REVIEW.

Compiled from The Commercial.

Wheat—The wheat market during the past week has shown an upward tendency nearly every day and closed Friday very strong at an advance of a cent over the previous close and a net advance in all markets of from three to four cents for the week. The market has been largely under the influence of sensational crop news and manipulation by professional operators at Minneapolis and Chicago. The principal feature of the week was the government report issued on the 10th inst., which the trade considers mildly bullish. It suggests a spring wheat crop of 224,000,000 bushels and a winter wheat crop of 410,000,000 bushels, a total of 634,000,000 bushels, compared with 670,000,000 bushels last year.

All Northwestern prices, however, are out of line, both for export and eastern business and it would seem as if the professional operators in Minneapolis had the wheat and were looking for a place to let the country have it, and in this they are being helped by the small stock at present in Minneapolis, most of which is being held by one large mill, and of course the other mills are scrambling to get the wheat to keep their mills running, and so are running the price up. Millers generally are anxious to get next to the edge of a new crop and as soon as they have felt it they fall back into line abain. Foreign news is more or less favorable to their crops and Europe reports they are getting their wants supplied cheaper from other countries than America.

In our local market here we have had a little excitement on account of one or two dealers being short for delivery first half of August to a shipper who was bound to have the stuff, and they would almost pay any price for two or three cars of spot stuff, and Friday some wheat changed hands at 91c for 1 hard, but as soon as these dealers pick up what they are short the prices will likely drop back again. En route or last half August delivery is worth, 1 hard 91c, 1 northern 87¾c, September and October delivery, 85c for 1 hard. Nothing doing in lower grades.

Harvest has begun in nearly every place in Manitoba and will be general this week. We have had rains during the last week over the wheat belt, which have delayed harvesting operations some, but otherwise they have done more good than harm, but rain is not wanted now and if we get more of it it will do damage and prices will easily advance higher.

WINNIPEG PRICES.

The following are the Winnipeg jobbing prices:—

Oats—At Fort William No. 1 white oats are worth 31½c; No. 2 white, 30½c.

Barley—Feed, 32@34c per bushel.

Flaxseed—90c per bushel.

Hay—Baled, $8@$9 per ton.

Poultry—Live spring chickens, 40 to 60c per pair; fowls, 75@80c per pair; ducks, 60@80c; geese, 10c per pound, live weight; turkeys, 11c per pound.

Butter—Creamery, 17@17½c per lb; dairy, 11@12c.

Cheese—9½@10c per pound.

Eggs—15c per dozen.

Dressed Meats—Beef, city dressed, 7c; mutton, 9c; veal, 8@9c; lambs, 12½c; hogs, 8c.

Hides—No. 1, 6½c per pound; calfskins, 7c; shearling sheepskins, 10@15c each; lambskins, 10@20c; horsehides, $1.25@$2.

Wool—7½c per pound.

Tallow—No. 1, 4c per pound; No. 2 3c per pound.

Seneca Root—60c per pound for lean, dry root.

LIVE STOCK.

Cattle—Best steers, 3½@4c; ordinary, 3@3½c.

Sheep—4c per pound.

Lambs—5c per pound.

Hogs—6c for best weights.

Cows, $30@$50 each.

Horses—Teams, $300@$450.

'AMERICAN' DEFENCE

NEW YORK TIMES ADMITS TITLE TO BE NOT STRICTLY ACCURATE.

It Hurts the Modesty of the United Stateser, But the Claim Is Made That It Is Generally Understood to Mean the People of the United Stater—Canadian a Title of Which We May Be Proud.

A friend of Canadian descent, but educated and naturalized in the United States, complains that we do injustice to his ancestors and their descendants in Canada when we speak of the people of the United States as "Americans," as distinguished from the people of the British colony—or is it colonies?—to the north of us, says the New York Times. He points out that not only are our northern neighbors inhabitants of "America," and therefore "Americans," but that their territory is considerably larger than that of the United States, excluding Alaska, all of which is entirely true, though we do not see the exact pertinency of excluding Alaska in the measurement of territory. If we are to limit the use of the word American to the designation of an inhabitant of the continent of America, the Canadian is as completely an American as a resident of New York. The designation would, of course, be strictly logical and correct. But it would also be extremely obscure and inconvenient. The inhabitants of Central and South America are as much Americans, in that sense, as ourselves or the Canadians. And even if we try to make the term a little more exact by saying "North Americans," we must include the inhabitants of Mexico. Strictly, we must also include the inhabitants of Central America, since the dividing line between the two continents lies on their southern boundary.

The poet Cowper was wont to say that he never respected the good faith of a critic of his poems so much as when the critic re-wrote his lines to show the justice of the criticism. This is an extreme demand to make of critics of verse, but it is not too much to ask of our friend who objects to our use of the word American. What better is there for its purpose? We grant that it is not entirely accurate. We confess that it is not very modest for the people of the United States to claim the sole title to it. But as a matter of fact the word in that sense is perfectly understood. It misleads no one. It corresponds to the impression the world in general has as to this continent and its various peoples. We should be quite willing to drop it if there were any single word that would take its place and convey the same meaning. But is there? Our neighbors may be clearly described as Canadians, or, if on the south, as Mexicans, and each is a title of which its bearers may well be proud. But how, other than as Americans, can the people of the United States be briefly and conveniently described and the description be at once clearly recognized? We cannot call ourselves United Statesers, and we do not wish to call ourselves Yankees, because the term was originally one of contempt and is relatively local at best.

A like miscarriage of exactness exists in the case of the Scotch, or Scots, or Scottish, who object to being called English. The word includes them in the general term, English people or the English. Politically they are subjects of the United Kingdom of Great Britain and Ireland, to which, for perfect formality, some writers add the Isle of Man. Therefore, it would be more nearly correct to call them British, which term is perhaps gaining in currency. But for the greater part of the world the term "the English people" is the only one readily understood. Indeed, the French language has no word for the British as a people except "les Anglais," and the German language, though it has "Brittische" as a term of geography, offers only "Englander" as the general equivalent of the English, meaning the English people. Thus it will be seen that the selective process of the general mind of the world has given to American and to English an exclusive meaning, which is not historically or geographically accurate, but which has the supreme merit of being easily and everywhere understood. It is, of course, a tax on the naturally retiring disposition of those the world calls Americans to appropriate a name that others may with a good deal of justice lay claim to, but, so far as we can see, there is no help for it.

To Search for Wrecks in Lake Huron.

One of the most thoroughly organized hunts for lost treasures ever attempted on the great lakes is to be made on Lake Huron, where the Milwaukee Wrecking Company is preparing to search for the hulks of vessels. Representatives of the company have chartered the tug Phoenix of Oscoda, and, with another vessel to aid her, will seek wealth among the wrecks dotting the lake bottom six or seven miles off the shore. One of the most valuable cargoes is a large one of copper, lost in the early days of lake navigation. Another is of steel ingots, and still another is a cargo of whiskey, lost in a schooner bound for Mackinaw many years ago. The Milwaukee concern secured the copper cargo of the steamer Pewabic, off Alpena, after it had been in the water nearly forty years.—Chicago Inter-Ocean.

Explained.

A youth in a country school had very little appreciation of the talents of his teacher. The lesson was on the circulation of the blood.

"If I stand on my head," said the teacher by way of illustration, "the blood all rushes to me head, doesn't it?"

Nobody contradicted him.

"Now," he continued, "when I stand on my feet, why doesn't the blood rush to my feet?"

"Because," replied the daring youth, "your feet ain't empty."

The Fernie Free Press

THE FERNIE FREE PRESS, FERNIE BRITISH COLUMBIA

SATURDAY, AUGUST 29, 1903.

THE YACHT RACES.

The International yacht races have again demonstrated the superiority of the defending American boat over the challenging British vessel. These tests have occurred with something approaching monotonous regularity. Much disappointment has been caused on all sides by the comparatively poor showing of the Shamrock, as it was the universal belief that if the challenging boat did not succeed in winning the series it would at least put up the hardest fight in the history of the famous cup.

Expert opinion differs widely as to the extent of the disadvantages that British designers have to contend with in building a yacht to make the ocean trip across the Atlantic. Be this as it may, certainly it must be admitted that two boats built under exactly similar conditions would present a fairer test for the relative merits of the skill of designers, contractors and all others connected with the construction and handling of the boats.

A boat built in Canada could not complain of being handicapped so far as these conditions are concerned. Canadian designers and sailors in other international yachting events have easily held their own with the Americans and there does not appear to be any sound reason why Canada should not aspire to this highest trophy in the yachting world.

The cost is great, it must be conceded, but where there's a will there's a way. It might be accomplished by a plan similar to that adopted by the Americans, or the cost might even be raised by private subscription throughout the country. Canadians are patriotic in a practical sense, and many would be willing to make a sacrifice in order to produce a Canadian challenger.

THE PASSING OF ARTHUR.

The death of Lord Salisbury removes from the Council of the Empire its most illustrious ornament and from the service of the King his most trusted adviser. Ever since the passing of Lord Beaconsfield his successor has been the foremost figure among the many brilliant men who determine the policy and guide the destinies of the English speaking race. With an older and nobler escutcheon than that of his great master, he was still overshadowed by the supreme genius of Disraeli, so that during the life of that statesman he never seized the imagination of the people or impressed his strong individuality upon the policy of the nation But with the removal of his chief he rapidly came to the front and not only filled the highest offices in the state but took the foremost place in the confidence and affection of the people.

Apart from his historic descent he was distinguished by those characteristics which are most typical of and always appeal to the English speaking people, imperturbability, dignity, sagacity, tenacity, loyalty, and intellectual capacity. Perhaps these princely qualities were never better displayed than on two critical occasions in the recent history of the nation, and never better to illustrate the true statesmanship of the noble earl. We refer to the sensational episode of President Cleveland's message anent the Venezuelan imbroglio, and the no less sensational affair of the Kaiser's message to President Kruger. The different temper in which Lord Salisbury received these messages, each hostile and truculent in tone, the forbearance he displayed in dealing with Cleveland, the sagacity with which he discerned the political aspect of the question contrasted with the prompt, decisive and threatening attitude displayed towards the Kaiser, so well typified in Punch's cartoon "Hands off", serve to show that Lord Salisbury was a man of the highest order and a statesman of the first rank.

His services to the Empire cannot for many years to come be properly estimated. He stood at the helm during the two greatest crises in our nineteenth century history, the Home-rule campaign and the Boer war, and from the turbulent waves of both storms successfully steered the ship of state to a harbor of safety. The services of Lord Beaconsfield were more dramatic and sensational but not more solid nor more meritorious.

Of late years this proud aristocrat once designated by his greater chief a "master of jibe and flouts and sneers", once the bitterest and most cynical of the Saturday Review writers, had become the cynosure of all eyes and the object of widespread affection, almost veneration. His pathetic home life, his devotion to his Royal mistress, his absorption in the affairs of state, and at the last, his splendid isolation elevated him to a sphere in the thoughts and feelings of his fellow subjects where he had no competitor. At the last Jubilee this last of the great Cecils, bowing before the august majesty of the greatest of all Queens caught the imagination of the people, who saw in it a fitting climax to the career of one, who in his noble ancestor, the first Burleigh, had knelt at the feet of Elizabeth. Now, all too soon after his Royal mistress he too has gone and with him the idyll of that round table at which the knightly counsellors of the empire sat, none nobler, none purer, none truer and none wiser than the great spirit which forever left us in "the passing of Arthur" Tennyson might with prophetic vision have foreseen his end when he wrote.—

"And statesmen at her council met
Who knew the seasons when to take
Occasion by the hand, and make
The bounds of freedom wider yet
By shaping some august decree,
Which kept her throne unshaken still,
Broad-based upon the people's will
And compassed by the inviolate sea."

KNIGHTS OF PYTHIAS.

Fernie Lodge No. 31 Organized Under Most Favorable Conditions.

C. F. Nelson, Grand Chancellor of the Knights of Pythias for the province, arrived on Thursday evening's train to assist in the formation of a lodge of that order in this town. He was accompanied by the following Knights, N. Binns, Trail; J. Fleishman, Vancouver; G. S. Gordon M. D., Pheonix; G. Erickson, Nelson, W. H. Brokenshire, Rossland; and J. F. Freeman, Nelson.

Over sixty names had been secured for membership and of these 41 appeared in the lodge room, Joyces Hall, on Thursday evening. The work of initiation was proceeded with rapidly and in the early morning when an adjournment was declared much of it had been accomplished. At eleven o'clock the new lodge entertained its visitors to a banquet in the Royal hotel where full justice was done to the bountiful spread, after which without loss of time the work of initiation continued. Last evening the work of initiation was continued till a late hour when an adjournment was declared till to-night. The work will be concluded to-night including the installation of officers. Five of the visiting brethern returned to their homes this morning and the remaining two, Messrs. Nelson and Brokenshire leave to-morrow.

THE VOTERS LIST.

There will be no need for a Court of Revision for the voters list for the Fernie district, as no protests have been entered. The act requires tnat six days notice of protests must be given to the collector of votes. Mr. Whimster has received no notices and a Court of Revision is thus rendered unnecessary. The list which on the evening of the 14th numbered 1143 names has, after being carefully arranged alphebetically and closely examined, been reduced by 8. Some of these were repeaters and one has since died. The list will therefore go to the printer's hands on Monday with a total of 1135.

"STEVENS FAVORITE" RIFLE.

It "Takes Down."

These are only a few of the snaps we have. If you want to buy or sell property in any part of the Elk River Valley, see us.

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1, That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electoradistricts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

CHAS. GOLDSTEIN,
LOUIS CAROSELLA.

Dated July 28th, 1

LOCAL AND GENERAL.

Hazelwood Ice Cream at Cuthbert's.

The grouse season opens on Tuesday next.

Mrs. Wooster, of Blairmore, is visiting in town.

Your credit is good at the B. C. Furniture Co.

Mr. Nicol was down to Pincher Creek this week.

Rev. P. McEwen was down to Cranbrook this week.

N. E. Broley was down to Cranbrook on business on Tuesday.

Dr. Bonnell was down to Cranbrook a couple of days this week.

The G. T. R. opened their offices in the city of Victoria this week.

N. Musgrave, of Winnipeg, was visiting friends in town this week.

Dr. Willson, of Morrissey, spent a couple of days in town this week.

J. C. Brown has accepted the liberal nomination for New Westminister.

C. Richards shipped another car-load of merchandise to Michel this week.

D. McLean, of Medicine Hat, travelling engineer for the C. P. R. is in town.

C. P. R. Agent Stephens expects to leave for Calgary on Thursday next.

J. D. Quail and the Trites-Wood Co. have unique window decorations this week.

F. L. Clarke, of Spokane, representing the Great Northern Express Co. was in town this week.

J. W. Crane, operator, is in Blairmore relieving Agent Dutil who is taking a holiday.

Engineer Ord arrived from Calgary yesterday to take charge of the yard engine.

Mrs. W. W. Tuttle returned this week from a visit to Mrs. T. H. Steadman, of Macleod.

E. Hazelwood, postmaster at Michel, is in town. Rev. Marshall is acting as his substitute.

Kid Lee and Dia Davis have bills out for a glove contest at Crows Nest on Labor Day.

Several good business lots on Victoria St. for $950 and up at Watson's real estate office. x

Mr. and Mrs. Bricker, Miss Kidd, Mr. Turney and Mr. Berridge are camping at Elko this week.

Joseph Kubiniets and Mary Gabara were married in the Catholic church on Monday morning.

The Stoney Indians have decamped from the Flathead and it is thought they have gone back to their homes.

We buy, sell and exchange new and second-hand furniture, stoves, etc., at the B. C. Furniture Company. x-t.f.

Ex-mayor Edward Quennell has been selected to represent the Nanaimo conservatives in the approaching elections.

Miss Stork, of Brantford, Ont., who has been visiting her brother, Fred Stork, left on Tuesday evening for her home.

As for "Griffin Brand" pig's hocks and tongues. They are boneless and cooked ready to serve. The real thing for picnic lunches.

John Muffett, of Nelson, has purchased the cigar business of H. H. Pitts, in the Free Press block, and took possession this week.

The C. P. R. pay-roll at Nelson amounts to $68.000 per month. The great bulk of this is paid to men who reside in the city.

Leo Dessup, an expert German piano tuner, is in town for a few days. Orders left at the Hotel Northern will receive prompt attention.

Miss McBroom who for some time has occupied the position of milliner for The Trites-Wood Co., left for her home in Edmonton on Tuesday.

A slav wedding occurred on Tuesday morning in the Roman Catholic church. Joseph Janigo and Theresa Tunder were the contracting parties.

The Ladies' Aid of the Methodist Church will be at Home at the residence of Mrs. D. V. Mott on Tuesday, Sept. 1st, from 3 to 6 p.m. Tea 15 cts.

A strike of machinists and blacksmiths is reported from Cranbrook, and cards notifying brother workmen to keep away from the town are distributed locally.

The regular services will be held in the Methodist church to-morrow, conducted by the paster. The subject for the evening will be, "The law of retribution."

Miss Kate Ross left on Tuesday for her home in Embro, Ont. During her long residence in Fernie she has made many friends all of whom regret her departure.

Baptist church, Rev. P. H. McEwen will preach morning and evening. Morning subject: "A paying investment." Evening subject, "A Question of Choice."

Constable Henderson, of Michel, brought three prisoners to Fernie for trial on Thursday, charged with disorderly conduct due to drink. They received light fines.

Use "Griffin Brand" brix butter, you can get none better. x

LOST—Small gold lace pin, set with brilliants, in form of cross. Finder kindly return to Crow's Nest Pass Coal Co. office.

C. O. Demaurez wears a broad smile these days. No doubt his profitable investment in Reliance stock is partly responsible. He wonders that people would bet on a sham loaded with rock.

J. A. Francis, of Pakenham, Ont., and A. Russel, of Arnprior who have been through the west on an extensive tour, remained over in Fernie a day this week to visit friends while on their way home.

A complete line of wall paper has been added to the housefurnishing department of the B. C. Furniture Co. and has been marked down to mid-summer prices, less than you have been paying here before. x

The picnic at Morrissey Mines last Saturday was a successful event. Six prizes were given in the baby show. Foot-ball and base-ball games were played between local teams and a program of other sports proved very interesting.

The Board of Trade have called a general meeting for Monday evening when the subject of incorporation will be discussed with Messrs. Jaffray, Lindsey, and Manson, directors of Coal Company. All members are asked to attend this important meeting.

Messrs. Dobbin, Bleasdell and Klingensmith, members of the Fernie Company that has 19 coal claims up the Elk north of Michel left this week for a trip of inspection over the property. They are accompanied by J. Wilson, of Frank, who is a coal expert.

J. M. Telford, Baptist missionary for Saanich, spent two days in Fernie this week on his way to Toronto and was much impressed with the character, quality and extent of the business done here. He returns to resume his studies at McMaster University.

J. M. McCloskey, the blind entertainer had a $40 house on Tuesday evening. The program while necessarily of a simple nature, was appreciated by the audience who saw in it a brave man's best attempt to earn a livelihood in the face of a terrible affliction.

Mr. W. R. Ross went down to Cranbrook on Thursday. Before leaving home in the morning he felt twinges of lumbago but paid little attention to it. The pain grew worse during the day and when on the train coming home Dr. Gordon, of Phoenix, who was with him found it necessary to give him several injections of morphine to ease the pain.

J. Trimble, contractor, has found a deposit of selenite near Medicine Hat, which he has tested and which he says produces a first-class sample of plaster of Paris. A commodity such as this is of great commercial value in this country and if the deposit is what it is claimed to be there should be a good thing in its development for Mr. Trimble.—Medicine Hat News.

The Nelson Wholesale Merchants' Association held a meeting this week for the purpose of making representations to the C. P. R. against the discrimination shown that town in the matter of freight rates. The rate per 100 lbs. from Vancouver to Nelson is $1.89 and from Nelson to Fernie $1.27, a total of $3.16, yet the rate from Vancouver to Fernie is only $2.16, which shows that Nelson wholesalers have to undersell the coast merchants by $1.00 per 100 lbs.

Sewing machines—the New Mode and Empire—warranted by the manufacturers for ten years are now sold by the B. C. Furniture Co. These machines while comprising all the latest improvements of the high-priced machines, are sold at a medium price—$25 each. x

The annual district meeting of the representatives of the East Kootenay Methodist church was held in Cranbrook this week. Among those who attended from this end of the district were, Rev. J. Robson, Fernie; Rev. G. E. Smith, Morrissey: Rev. A. E. Marshall, Michel; Rev. T. C. Colwell, Coal Creek; Rev. C. Dockstader, Elko, and Mr. A. T. Claxton, Fernie.

Mr. R. H. McEwing, of Arnprior, arrived in town Wednesday morning and is with his brother, Mr. J. R. McEwing. We notice by the Arnprior Chronicle that Mr. McEwing left many friends behind in St. Andrew's church, who in evidence of the high appreciation in which he was held presented him with a handsome purse of gold together with a nicly engraved locket by the Y. P. C. E.

Dorothy Proctor met with quite a serious accident on Wednesday. She rushed hurriedly into a glass door not knowing that it was closed. Her hand and forearm which broke through the glass received very deep cuts and a main artery was severed. Her friends with presence of mind bound the arm tightly, which lessened the flow of blood till the doctor arrived. It was necessary to use 19 stitches in dressing the wound.

The supply of school teachers in the province is evidently insufficient for the demand. The Fernie school board has with difficulty filled the vacancies. Mr. McNeil, of New Denver, wili take charge of the principalship on Sept. 21st and Miss McNee, of Ontario, has been engaged to take charge of the mines school on the 14th. In the meantime Rev. D. L. Gordon will fill the former position and Rev. T. C. Colwell the latter. These rooms will open on Monday Aug. 31st.

Another local game of baseball enlivened the monotony in sporting circles on Thursday. The teams went under the names of the "Angels Rest" and the "Never Sweats," but the former had several outside players to make up the required number. The Never Sweats led by one run in the first innings, but the Angels piled up 8 runs in the second innings and from that time always maintained a respectable lead and at the end of the seventh innings the final score stood 31 to 12.

The Conservatives of Michel organized on Wednesday evening. A. Joyce and John Hutchison were down assisting in the work of organization. Dr. W. W. Walkem was elected president and W. H. Brown secretary treasurer. Four delegates elected to attend the convention at Fernie for the 28th were as follows:—George Mitchell, E. Wriglesworth, and the president and secretary. These men decided that as they could not attend in person they would be represented by proxies.

A. Banks, manager of the East Kootenay Placer Mining Company came to Fernie last evening. Mr. Banks arrived home only this week from Toledo, Ohio., where he had gone to purchase additional machinery for the plant now operating on the company's property on Perry Creek. He has met with great difficulty in having his orders filled as the eastern firms are loaded up with work for this class of machinery. He was away eight weeks instead of two as originally planned. He states that the work is being pushed along as rapidly as possible with the machinery now on the ground.

We have opened up a variety of sideboards at prices to suit all purses.

"CROSSED THE BAR"

LORD SALISBURY PASSES TO GREAT BEYOND.

Short Biography of the Distinguished Ex-premier of Great Britain--King Edward VII Pays a High Tribute to the Great Statesman.

London, Aug. 22.—Lord Salisbury died peacefully at 9:05 o'clock tonight. For forty-eight hours it was seen that the end was inevitable. Even the administration of oxygen failed of effect. This evening, a few minutes after 9 o'clock, the former premier turned slightly towards his favorite daughter, Lady Gwendoline Cecil, who was kneeling beside him and then quietly breathed his last. All the members of his lordship's except Lord Cecil, were at the bedside.

Viscount Cranbourne immediately notified King Edward and Queen Alexandra, the Prince and Princess of Wales, and others, including Lord Salisbury, who is now in Egypt, and who was the only child of the Marquis absent from the deathbed. Scores of telegrams of condolence were received at Hatfield house.

The death of Lord Salisbury occurred on the fiftieth anniversary of his entrance into public life as a member of the House of Commons for Stamford.

The elevation of Lord Cranborne to the House of Lords creates a vacancy in the Rochester district and probably will entail the selection of a new under secretary of foreign affairs. The ex-premier, though retired from political life, was an important figure in many public ways. He was warden of the Cinque Ports, high steward of Westminster and chancellor of Oxford University. His death places an order of knighthood of the garter at the disposal of King Edward.

TRIBUTE FROM HIS KING.

King Edward's tribute to the deceased Marquis of Salisbury is given in the Court Circular, dated Marienbad, Sunday. It runs as follows:

"The King has received with profound regret the news of the death of the Marquis of Salisbury, and His Majesty deeply deplores the loss of so great a statesman, whose invaluable services to Queen Victoria, to the King and his country in the highest offices of state which he held for so many years will ever dwell in the memory of his fellow countrymen."

Robert Arthur Talbot Gascoigne-Cecil, Marquis of Salisbury, K.G., P.C., D.C.L., was born on February 13, 1830, at Hatfield House, the seat of the family, founded by William Cecil, Lord Burleigh. He was educated at Eton and Oxford, and entered the House of Commons as member for Stamford, in the Conservative interest, in 1853. He sat until 1868, at first under the title of Lord Robert Cecil, and after the death of his elder brother as Viscount Cranborne.

In July 1866, he became secretary of state for India in Lord Derby's ministry, but resigned in the following year owing to a difference of opinion with regard to the Reform bill. In 1868 he succeeded to the Marquisate of Salisbury on the death of his father, and in 1869 he was elected chancellor of the University of Oxford.

When Disreali took office in 1874 Salisbury again assumed the duties of secretary of state for India, and on the retirement of Lord Derby from the cabinet in 1878 he became secretary of state for foreign affairs, signalizing his accession to this office by a strongly worded circular on the eastern question. In 1880, the Beaconsfield government, of which he was a member, was ejected from office, and on the death of Lord Beaconsfield in 1881, Lord Salisbury was chosen leader of his party in the House of Lords. He again came into power in 1886, when the Liberal government was defeated on the Irish Home Rule bill. In 1892 he resigned office and the Liberal (Home Rule) party returned to power under Mr. Gladstone.

After the general election in 1895, on the retirement of Lord Rosebery, Lord Salisbury was called upon to form a ministry, and he responded by forming a cabinet which embraces both sections of the Unionist party; the Duke of Devonshire, Mr. Chamberlain, and Lord Lansdowne, leaders of the Liberal-Unionist party, consenting to accept office with Conservatives as colleagues.

As a parliamentary speaker, Lord Salisbury was distinguished for the force and weight of his utterances, as well as for the cutting satire he had always at his command. As a disciple of Lord Beaconsfield he approved of an "Imperialistic" policy, and was profoundly convinced that England could not, with dignity and safety, follow the policy of the Little England party.

From a Russian source it is announced that King Peter of Servia may resign.

Alberic Petrin, of Winnipeg, was held up by an unknown man on Saturday night, and had his thumb shot off.

The financial statement of the Province of Quebec, published for the year ending June 30, showed a surplus of over $169,000.

Eastern Canadian and English capitalists intend establishing immense pulp mills on Princess Royal Island, British Columbia.

Two men were electrocuted at Ottawa. One was a lineman who came in contact with the electric railway wire. The other was an electrician working in the collegiate institute. Two women of Ottawa were severely injured in a street car collision.

GOUGED OUT HER EYES.

Horrible Deed of an Insane Galician Woman at Gretna.

An insane Galician woman, a resident of Gretna, Man., was taken to the Selkirk asylum a few days ago suffering intense agony, the result of an attempt by herself to gouge out her eyes.

The woman is an immigrant of about six months' residence in Manitoba, and had become deranged as a result of brooding over the strange surroundings of her new home. Her mental derangement, however, was not looked upon as anything very serious.

The gruesome deed was committed on Sunday. Medical attendance was immediately summoned and the torture temporarily relieved. So very evident were the signs of mental irresponsibility that the patient was removed as quickly as possible to Selkirk. Drs. Young and Grain pronounced the eyes mutilated beyond usefulness and Dr. Grain removed both optics.

The latest reports from the asylum are to the effect that the patient will recover from the great physical shock but will, in all probability, be hopelessly insane.

NEWS NOTES

Short Items Culled From Telegraphic Dispatches.

Gladstone and Shamrocks (Winnipeg) tied in the semi-final football championship match at Gladstone on August 20.

Johnson and Smith, convicted of safe breaking at Fort William, have been sentenced to nine years' in the penitentiary.

About 1,600 harvesters' tickets to distribute the Ontario arrivals thruout the west, were issued in Winnipeg on Thursday.

At the convention of Manitoba Grain Growers, held at Killarney, a resolution was passed condemning the Grand Trunk Pacific scheme.

Owing to the light winds the yachts in the first day of the America cup races were unable to finish within the time allowance, and the race was called off. The Reliance was in the lead.

At the congress of Chambers of Commerce of the Empire, Lord Strathcona's conciliatory resolution urging upon the British government to appoint a royal commission to decide as to the length of preferential trade was adopted.

The Russian ambassador has been notified that Turkey accedes to all requests and begged that the Russian fleet be withdrawn.

Grasshoppers are so thick in the Red Lodge district, Montana, that they are interfering with the operation of trains. Locomotive wheels are made so slippery that when the engines stop it is difficult to start them again. The grasshoppers have eaten the range bare.

An Anglo-Canadian cable syndicate will be formed to make the necessary arrangements for the establishment of a direct independent cable service between England and Canada, the tariff being sixpence a word for ordinary cablegrams and threepence for press messages.

T. W. Horn, of Toronto, contractor, and member of the firm which constructed the King Edward hotel, has been awarded the contract for the new Union Bank office building in Winnipeg. The price at which the work is taken is stated to be $410,000.

A dispatch from Thornhill, Man., says: During a thunder storm this afternoon (Thursday) Henry, the eldest son of Mr. Charles Fields, who was working in the wheat field was struck by lightning and instantly killed. The young man was about 17 years of age. He was driving a binder when struck.

The Great Northern car shops at Quebec, headquarters for the Mackenzie and Mann systems in Quebec, were badly damaged by fire on August 19. The flames burned fiercely for about two hours. Locomotives aod cars were burned and the loss will be heavy. About 300 men were employed. The company was engaged in building hundreds of cars for the transportation of grain in the west, and the destruction of these cars will be a great inconvenience.

Civil Service Salaries.

A bill introduced in the House of Commons by Sir Wm. Mulock, provides that the deputy ministers' salaries will be fixed at $3,500, with annual increases, on the recommendation of the minister, until $4,000 is reached. An extra $1,000 may be paid to the deputy minister of justice, the deputy minister of finance, and the deputy minister of railways and canals, if these gentlemen are possessed of the special qualifications mentioned in the bill. A new class of clerkships will be created as grade "A." The minimum salary of these will be $2,400 with an annual increase to $2,500. The minimum salary for junior second class clerks is made $700, and the maximum $1000, but such clerks may be paid $50 each for optional subjects not to make their salaries more than $800. Junior second class clerks, now in the government employment, to be given $700 a year if they are not receiving that already. No one can be appointed a second class clerk without passing the qualification civil service examination. The minimum salaries shall be $400, and the maximum $700. For optional subjects $50 extra may be got, but the salary is not to exceed $500. After two years temporary writers may be appointed third class clerks.

C. N. R. CROP REPORT

SHOWERY WEATHER DELAYS THE HARVEST.

Wheat Cutting is Now General, and Many Heavy Yields are Predicted--A Cry for Harvest Hands Comes from Several Points.

The Canadian Northern Railway company's crop report for the week ending August 15, is as follows:

RAINY RIVER SECTION.

Steinbach—Cool, cloudy weather with rains during the past week will delay wheat cutting in this district, it has also delayed cutting of other grains. What is required now is a week or so of warm, dry weather to ripen wheat. Oats and barley are nearly all cut. Expect average yield of 65 and 35 bushels per acre respectively. Wheat, it is expected, will average 15 to 18 bushels per acre.

Ste Anne—The weather has been cool with frequent rains this week. All crops are particularly fine in this vicinity. Harvest is in full swing. The prospects for oats are 35 bushels to the acre, wheat 20 to 22 bushels per acre.

Lorette—The weather is keeping favorable. The farmers have commenced cutting their crops and expect to obtain: Wheat, 20 bushels to the acre; oats, 40 bushels to the acre; barley, 40 bushels to the acre; flax 5 bushels to the acre.

DAUPHIN SECTION.

Eli—Oats and barley are about all cut and wheat cutting is in full swing. The yield of wheat is expected to be from 20 to 25 bushels to the acre.

Oakville—All kinds of grain are ripening very fast, which promises a high yield. Wheat cutting is in full blast.

Portage la Prairie—The rains of this week have retarded oat and barley harvesting, but 75 per cent. of this crop is now cut. The wheat crop has not advanced this week very much owing to cloudy weather.

Beaver—Barley and oats are nearly all cut. Fairly good average yield. Wheat cutting is well commenced and will go about 15 bushels to the acre.

Gladstone—Crops continue to do well. The weather is favorable for growth and filling of the grain. Some of the earlier pieces of grain will be cut during the coming week. The weather is chiefly cloudy to light mist. It is now clearing to sunshine

Ochre River—Wheat cutting will not commence as soon as expected on account of the cool, cloudy weather for the past two weeks, but it is expected that harvesting will begin about the 22nd of this month, and if favorable weather ensue everything promises a good yield in this vicinity. Between 30 and 35 bushels to the acre will be the average in this vicinity. Hay making is delayed on account of the wet weather.

Makinak — The weather during the past week has been cool and showery. Crops are ripening slowly. Cutting should commence in about a week.

Plumas—The progress of crops for the past week has been favorable, the weather not having been too hot for filling out. Cutting will commence next week.

Dauphin—Some barley has already been cut. A considerable amount of wheat will also be cut the beginning of next week. The weather keeps damp,

Ethelbert—The crops never looked better in this district than they do this season. Barley cutting has commenced and wheat will be ready in about ten days. Weather is most part cloudy and damp.

Minitonas—The barley is all cut. Wheat cutting will be general the coming week.

Swan River.— Crops are looking good. Cutting will begin in about ten days. The weather is rather dull.

GILBERT PLAINS BRANCH.

Gilbert Plains—Crops are doing as well as could be expected. Had it not been for wet weather the grain would have been fully a week ahead of last season. However, cutting will become general about 18th or 20th. Prospects for good yield are good and sample is a fine one.

Grand View—Weather cool. Grain slowly turning. Warm weather is needed.

CARMAN SECTION.

Sperling—Harvesting of all kinds of grain is general. Although delayed by wet weather yield is expected to be fully up to former estimate. About 25 per cent. of the crop is cut.

Carman—Cutting is now general. In a few days the crop will be to a large extent safe from frost. Binders going in all directions, and will be a fairly good return and good sample of wheat.

NEEPAWA BRANCH.

Neepawa—Weather still remains favorable. A good average crop expected. Several light rains during past week. No damage by hail or frost.

EMERSON BRANCH.

Ste Agathe—Cutting is general.

Morris—The crops are nearly all ripe. Cutting commenced in some localities. Straw is short but heads are well filled out. Weather has been wet during the past week.

St. Jean—Wet weather has delayed cutting. The average is 12 bushels to the acre on wheat.

Letellier—Cutting of the crop is going on but is slow on account of rain. There is good appearance so far.

Emerson—Continued wet weather has delayed cutting, considerable wheat becoming very ripe. Cutting is now general.

BRANDON SECTION.

Myrtle—Cutting has been generally delayed on account of heavy rains. Threshing will commence in about two weeks.

Roland—Harvesting is well advanced. Some farmers are through with cutting. The weather is unfavorable. There were heavy rains during the last few days.

Rosebank — The recent showery weather filled out the wheat, improving the quality and quantity. Oats and barley are in stook and wheat cutting is general. The average will be about twenty bushels. No damage from hail or frost.

Miami — Several showers of rain during the past week have somewhat delayed harvesting, but wheat cutting is now well under way. Stacking will commence next week and threshing in about two weeks. Wheat is expected to yield 20 bushels to the acre or better.

Altamont — Harvesting has been somewhat delayed on account of wet weather. The crops are in fine condition and cutting will commence next week. The prospects are bright.

Somerset—The weather for the past week was very wet, consequently the grain has not progressed very much in the ripening stage. Few have started harvesting. Haying is not yet over and is delayed on account of wet weather.

Baldur—Harvesting is now well started. The weather has been wet and is delaying cutting. The general opinion is that the yield will be about 12 bushels to the acre. Oats and barfey will be a good average yield.

Belmont—The weather for the past week has been showery, and not favorable for cutting. Some farmers have commenced. In another week harvesting will be general. Wheat has filled out good and will yield better than was expected.

Hilton—The weather has been unfavorable. There is little cutting yet, but will be general next week, and will yield about fifteen bushels per acre for wheat.

Wawanesa—The weather continues cool and showery. The wheat is filling out well. The straw is shorter than last year. Some farmers are cutting but it will not be general until next week.

Methven Junction — Recent rains have made wonderful improvement in the wheat crops. It is fully headed out, and cutting will be general next week. The average will be fully 15 bushels to the acre.

Rounthwaite — Crops are ripening rapidly. A few farmers have commenced cutting wheat. The weather of the past week has been favorable, and a good yield is expected.

Brandon—The weather during the past week has been cool and wet. The crops are all well headed out. Some barley is being cut this week. The weather is getting warmer now and cutting will commence next week.

SOURIS SECTION.

Ninette—A lot of rain fell last week which stopped a lot of cutting. It is expected that cutting will be general next week.

Dunrea—The weather since the last report has been cool and showery. The crops are looking well. Cutting will be general about the middle of next week.

Margaret—Cutting will not be general as soon as expected on account of unfavorable weather. Thr average for wheat will be about 18 bushels.

Fairfax — Cutting will commence next week. Wheat is well filled out and will be a good sample, and will probably yield more than was expected.

Elgin—The crops are looking very well. Wheat has filled splendidly. From the present appearance the yield will be very little short of last year.

Hartney—Wet weather is delaying the harvest. Barley and wheat cutting has commenced. The yield of wheat promises 20 bushels to the acre. Roots and gardens are looking splendid.

PROF. SAUNDERS' ESTIMATE.

Ottawa—Prof. Saunders, director of experimental farms, who is making his annual tour through the Canadian Northwest, has sent the following telegram to the deputy minister of agriculture, from Brandon: "The crops from Winnipeg to Brandon are mostly light. Still there are some good fields. Wheat will probably average fifteen to eighteen bushels. It will average better in the western and northern portions."

The first harvesters' excursion for the Manitoba wheat fields left Toronto on the 17th inst.

Holland defeated the Strathconas of Winnipeg at lacrosse by a score of 19 to 1 on Monday last.

The Colombian government has rejected the Panama canal treaty with the United States.

A daily mail service will be opened up on the Canadian Northern railway between Winnipeg and Brandon.

Travelling Engineer Ed. McGuire, of Rat Portage, was killed by a C. P. R. train near Fort William.

Destructive hail and electric storms were reported along the main line of the C. P. R. on Aug. 18.

An amicable arrangement has been reached between the C. P. R. trainmen and the company whereby higher wages are obtained.

The fifth Congress of the Chambers of Commerce of the Empire was opened on Monday last at Montreal, Lord Strathcona presiding. Speeches were delivered by the Canadian high commissioner and Lord Brassey. Many resolutions bearing on imperial unity were discussed and adopted.

MY HEART'S DARLING

BY W. HEIMBURG.

CHAPTER XXVI.

Eight days had passed, and Lucie held a letter in her hand on which Hortense had written the address in her large hand-writing:

"My Lucie,—Do pack up your things at once and come. We arrived at Wottersdorf two days ago; I could not stand it any longer in Frankfort; what with the strangers who stared at me as if I were some strange thing from the sea, and being dragged from one dinner to another. The only ray of light was his mother, but his young married sister was unbearable, and kept me on thorns by her curiosity and inquisitiveness. She would not move from my side, and would have liked me to be surrounded with photographs of my past. 'Who do you resemble, Hortense, your father or your mother?'— 'Where does your father live now?'— 'Was he at the wedding?'— 'What kind of a wedding dress did you wear?'— 'Was not your father an officer?' Weber naturally had a great deal to do, for he had been following us for a year, after his long absence, and so much to tell his mother that he did not notice how annoyed I was. So on the fourth evening of our visit there I told him I must go away. 'Where?' 'Anywhere, only leave this.' 'Then let us go home,' he said. I believe I was inclined to be offended, but I took no notice of it. So we came here at once.

"Wottersdorf is just as pretty as I remember it used to be; what pleased me most was to hear Goldfuchs and Hella, who had arrived the day before, whinnying for me; my first walk was to the stable. I chose your room the first thing this morning; there is a spring bubbling opposite the window, and a group of nymphs surround it in the shade of the lindens; it is rococo, quite rococo. Come soon, Lucie. Let Minna pack your things, and they can be sent with my chests and boxes. Telegraph me what train you will take, that I may meet you at the station. Thy

"Hortense."

The next morning Lucie came to mademoiselle all ready for her journey; the little lady had a headache, and was inclined to be tearful.

"Much love to Hortense, Lucie; do not forget to write. Remember we live so shut up and alone here, the baron and I, that madame and monsieur ought to come and make us visits often. Farewell; I should like to accompany you to the station, but I am afraid my nerves would not stand it."

She kissed the girl on the forehead, and turned away sobbing. Lucie went to say adieu to the baron. As she opened the door, she saw Dr. Adler taking a glass of wine with the baron.

"Ah! you have come to say good - bye!" he cried. Lucie had a little traveling-bag with a strap over her shoulder and a light wrap on her arm. He stretched out his hand to her. "Farewell, dear child. Much happiness to Schloss Wottersdorf and its inhabitants."

She did not dare to raise her eyes. "Adieu," she stammered, and freeing her hand from the baron's, turned quickly and walked toward the door.

She heard how Adler moved the chair from which he had risen, and continued the conversation with the baron which she had interrupted. "There, I am quite of your opinion, Herr Baron." It sounded quite composed. The deep, calm voice sounded in her ear after she was miles away from Hohenberg and nearing the end of her journey.

It was toward evening when she reached the little station which stood in the midst of open fields. On the gravel path before the little open building stood Hortense, in a gray linen dress, a servant behind her. She was looking into the nearest railway carriage, and did not see the girl alight from the last one and hurry toward her.

"Hortense!" cried a voice beside her, and they flew into each other's arms as if they had been separated for years.

"How are you?"

"And you?"

"Were you glad to come to me, Lucie?"

"Oh, so glad!"

They seated themselves in the handsome landau, and drove at a quick trot through the twilight to their new home.

"You must excuse Herr Weber for not coming to welcome you; he intended being here. I do not know what can have kept him. He has thrown himself into the cares of his estate with such enthusiasm."

"Oh, do not speak of it, Hortense!" Lucie looked in the face of the beautiful young wife, in which an expression of utter weariness lay. "How delighted I shall be to see your home!" said she, taking Hortense's hand.

"We shall be there immediately; you can see the roof already over the trees."

They now drove back to the village, and turned into a dark alley of lindens, at the end of which they could see a bright light. By the last rosy light of day Lucie could see wide sweeps of smooth turf, splendid masses of trees which were reflected in the little lakes, and groups of old gray sandstone figures. They now entered the park. A little white castle lay before them, with carved stone balconies and the doors and windows ornamented with the same kind of arabesques. Elaborately ornamented, irregular, and of mixed style, and yet extremely attractive, looked this little reproduction of a luxurious age amid its dark-green surroundings. A blue and white flag fluttered in the evening breeze, and a blue and white tent was on the grass, and the same colors were reproduced in the awning which protected the entrance to the house. They were Hortense's favorite colors.

The carriage stopped before the wide-open portal; the servant assisted the ladies to alight; a maid in a white cap and snowy-white apron hastened forward and took Lucie's traveling-bag.

"Welcome!" cried Hortense, kissing her again. "Now I shall feel comfortable and at home, as I have you again."

She seized Lucie's hand, and they mounted the broad carpeted marble stairs. Everywhere were ornaments and decorations, beside them and above them, and on the ceiling fresco paintings in delicate colors. In everything, wall decorations and paintings, a butterfly, either white, or gold, or light blue, fluttering above a rose, was constantly repeated.

"Dearest," said Lucie, in astonishment, "what is the meaning of this butterfly?"

"The builder of this castle was called at court 'Le Papillon,'" explained Hortense. "The gentlemen instituted an order—it must be now about a hundred and sixty years ago—and called themselves 'Des Hermites de Bonne Humeur;' they wore pilgrim dresses of brown taffeta, hats with wreaths of flowers on them, and staffs bound with bright rose color. They were talented and fond of pleasure and amused themselves like the gods. The badge of their order was a scarf of white ribbon with the device, 'Vive la jole!' They gave themselves all kinds of absurd names; the amiable Count R— was called the 'Butterfly,' and used to give the merry hermits many a brilliant fete. You will find the harmless emblem on every ceiling, and every picture, and every piece of furniture."

They had been walking through a little entry, and Hortense opened a door on the left, which was painted white and highly varnished.

"I hope it will please you."

"Oh, Hortense, how pretty!"

They stood upon a parquet floor, smooth as a looking-glass; the walls were hung with white cretonne, with bunches of roses upon it, and the bed-curtains and arm-chairs were of the same material. A marble mantel-piece with a mirror, white, highly ornamented furniture, a rose-colored hanging-lamp, and the rosy light of the sunset through the windows, made it like a fairy-tale.

Hortense seated herself in one of the little arm-chairs.

"Do not hurry yourself," she said, taking off her hat. "I will wait for you, and then we will drive. Is Herr Weber at home!" she asked the maid, who just then brought in Lucie's things.

"The master has not returned yet."

"No matter; we will dine in a quarter of an hour; go down and give the order."

Lucie hastened to arrange her dress a little, brushed off the dust of the journey, and smoothed her light hair.

"I feel as if I did not harmonize with all this splendor," she said, with a sad smile, looking at her black dress.

"What did you say?" asked Hortense, who had been thinking of something else. And without waiting for an answer, she added: "Come, Lucie, I am hungry."

The girl followed her submissively. She felt quite confused by the fanciful elaborateness of everything in this house. Hortense's salon and boudoir were decorated with blue and white brocade silk; old Meissen china and wonderful clocks were to be seen on all sides, and on everything the butterfly was to be found. Here also were the same shining parquet floors, and the ceilings were decorated with shepherdess scenes a la Watteau. The dining-room and the adjoining room used by the master of the house were furnished in darker colors, which gave a quieter and more dignified effect.

In the latter the walls were hung with gold Gobelin tapestry, representing hunting scenes. The floor was covered with a simple green carpet, in which the foot sank as if in thick moss. The fresco paintings in gilded wreaths on the ceiling represented Diana following the hunt. The furniture was of dark wood covered with green material. The cabinets showed behind their glass doors old and valuable fire-arms, and on the green cloth of the open writing table was the photograph of an elderly lady with white hair.

"How beautiful everything is," said Lucie, as she stood again in Hortense's boudoir. "I never should be able to accustom myself to all this splendor."

Hortense looked impatiently at the clock which ticked on the mantel-piece, and kept watching it.

"If he does not come soon—" said she.

"Oh, let us wait! Tell me about yourself, Hortense."

"What is there to tell, Lucie?" returned the young wife. "I wrote to you."

[TO BE CONTINUED.]

The House Spider.

While the common house spider is harmless and renders a positive service to mankind by killing flies and other insects, it is generally regarded with aversion if not with fright. The ordinary spider does not deserve its bad reputation. From time immemorial it has been called crafty and murderous, luring the poor fly to its death and then greedily devouring it, but really it only punishes trespassers.

High Fliers.

Eagles have been noticed flying at a height of 6,000 feet and storks and buzzards at 2,000 feet. A lark will rise to the same height, and so will crows. As a rule, however, birds do not fly at a greater height than 1,000 feet.

Important Part Missing.

"Gosh dern, Mary!" said the bride's father. "I guess you'd better git married ag'in."

"Law! What is the matter, paw?"

"Why, the paper says the ceremony went through without a hitch."—Indianapolis Sun.

In Hawaii there are more Chinese than natives, and the Japanese outnumber the natives two to one.

TALKING IT OVER.

The Southern Educational Conferences Interesting Examples.

A shoemaker in a little New England valley displays a sign on the top of his shop bearing the following inviting language: "Walk In and Talk It Over." It is an announcement that has more of timeliness and general application than may have originally occurred to the displayer of the sign. The "get together" and "talk it over" method is having a remarkable vogue nowadays. It was conspicuously present in the world's congress of religions at the Chicago Columbian exposition. It is used by those interested in social progress; it is at the basis of the various schemes for conciliation between capital and labor; it is the backbone of the international arbitration movement, Mr. Carnegie's proposed Palace of Peace at The Hague being merely a commodious and agreeable place where the nations of the world may "walk in and talk it over" in the most convenient and dignified manner, in this case a highly civilized and truly Christian substitute for the old fashioned, romantic, corpse decorated battle field, where the nations instead walked in and fought it over.

The "talk it over" in place of the "fight it over" method implies a higher state not merely of manners and morals, but also of human intelligence, as illustrated by the story told the other day in the south of a colored servant who, referring to the civil war, remarked that, as the white folks hadn't intelligence enough to settle the question peaceably, they had to go and fight it out.

One of the most interesting modern examples of the talking over method is the series of annual conferences on education in the south, with which the name of Mr. Robert C. Ogden is prominent. The sixth was held recently in Richmond, the capital of Virginia and the former capital of the southern confederacy. The valuable and instructive "talking over" on this occasion between representatives of various parts of the north and of the south was not only upon the public platform, but in social intercourse.—Century.

British Naval Matters.

Admiral Sir John Fisher, who replied for the British navy to a toast at a recent Royal academy banquet, said in the course of his speech: "I always think on these occasions of the first time I went to sea on board my first ship, a little sailing two decker, and I saw inscribed in great big gold letters the one word 'Silence.' Underneath was another good motto, 'Deeds, Not Words.' I have put that into every ship I have commanded since. This leads me to another motto which is better still. When I was commander in chief in the Mediterranean I went to inspect a small destroyer, only 260 tons, but with such pride and swagger that she might have been 16,000 tons. The lieutenant in command took me round. She was in beautiful order, and I came aft to the wheel and saw there 'Ut Veniant Omnes.' 'Hello!' I said. 'What the deuce is that?' Saluting me, he said, 'Let 'em all come.' That was not boasting; that was the sense of conscious efficiency, the sense that permeates the whole fleet, and I used to think as the admiral it would be irresistible, provided the admiral was up to the mark."

Perils of Ballooning.

Balloon ascents are attended by many dangers, but a novel peril was experienced by an aeronaut in India some time ago. As night came on the aerial traveler found himself nearing a jungle and resolved to descend on a marshy spot at the edge of a lake. As he came down into the rushes, however, a crocodile appeared and made straight for the balloon. The aeronaut by throwing out some sand managed to rise a few feet, but the crocodile rushed round and round the grappling rope, clearly disproving the fallacy that a crocodile cannot turn quickly. It would probably have made short work of the unlucky voyager had not some natives come up just in time.—Golden Penny.

Professor Bell's Powerful Kite.

Professor Alexander Graham Bell has lately invented a variation in the form of box kites whereby he obtains a greatly increased flying or lifting power. His kite is a tetrahedron, so that it presents the form of a triangle from whatever side it is viewed. It is then self braced in every direction, and with increase of size its lifting power increases in a greater ratio than the weight. By combining a great number of tetrahedrons he has constructed a large kite, which is able to lift not only a man, but a weight of 200 pounds.

A Lucky Sultan.

Abdul Hamid, sultan of Turkey, has just celebrated his sixtieth birthday. Thirty-four Ottomans have reigned in Turkey, and the longest reign was less than fifty years, Solyman I. having sat upon the throne from 1520 to 1566. Only one sultan in the nineteenth century, only one in the eighteenth and only one in the seventeenth ruled longer than Abdul, and most of his predecessors have been slain or put in chains before their friends were able to wish them many happy returns of their sixtieth birthday.

A Forest Monarch.

A great spruce tree was felled in the state of Washington recently, and it was decided that a piece of it should be sent to Sweden for exhibition purposes. The men who went to see the tree said they would take eleven feet of the butt, but the railroads told them they could leave it in Washington if they did, for it would be impossible to transport the log on any car. The men finally bought fifteen inches, and the section is nine feet in diameter.

IT READS LIKE A MIRACLE

Only Dodd's Kidney Pills are Doing Similar Things Daily.

Reuben Draper's Gravel Was Cured Three Years Ago--It Has Never Come Back.

Bristol, P. O., Quebec, Aug. 24.—(Special).—Reuben Draper, well-known here, tells a story of his cure of a bad case of gravel that would be considered miraculous if similar cures by Dodd's Kidney Pills were not being reported daily.

"About three years ago," says Mr. Draper, "I was taken ill with what I thought was gravel. I was suffering great pain, and the doctor I sent for gave me but little relief. Another doctor I tried failed to cure me, and I was getting weaker all the time.

"Then a man advised me to try Dodd's Kidney Pills as they had cured his mother, and I did so. In just one week after I started using them, I passed a stone as large as a small bean, and in four days after, I passed another about the size of a grain of barley. That is two years ago, and I have not had any trouble since."

Dodd's Kidney Pills cure all ailments of the bladder and urinary organs.

It is more blessed to give than it is to receive—also more expensive.

There is nothing so valuable and yet so cheap as politeness.

The superiority of Mother Graves' Worm Exterminator is shown by its good effects on the children. Purchase a bottle and give it a trial.

Seven hundred thousand British wear American shoes.

Bulgaria's chief exports are wheat, wine and attar of roses.

HARD ON THE BABIES.

One of the first effects of a hot wave, particularly in towns and cities, is a pronounced increase in the number of deaths of infants. Even in the open country the suffering of the helpless little ones would move the hardest heart. Stomach trouble and diarrhoea are the foes most to be dreaded at this time and every mother should appreciate the necessity of careful diet and attention at the first sign of these troubles. Medicine should never be given to check diarrhoea except upon the advice of a physician. A diet limited almost entirely to boiled milk and the use of Baby's Own Tablets will cure almost any case and keep baby in health. Mrs. W. E. Bassam, of Kingston, Ont., writes:

"When my little girl was about three months old she suffered with vomiting and had diarrhoea constantly. I did not find any medicine that helped her until we began giving her Baby's Own Tablets. After giving her the Tablets the vomiting and diarrhoea ceased and she began to improve almost at once. Since then whenever her stomach is out of order or she is constipated we give her the Tablets, and the result is always all that we desire. They are the very best medicine I have ever used for a child."

Baby's Own Tablets are sold by all dealers in medicine or will be sent postpaid, at twenty-five cents a box, by the Dr. Williams' Medicine Co., Brockville, Ont.

The five volcanoes active last year destroyed 60,000 lives.

Minard's Liniment Cures Distemper.

Russian Jews to the number of 29,000 came to New York during 1902.

USEFUL AT ALL TIMES.—In winter or in summer Parmelee's Vegetable Pills will cope with and overcome any irregularities of the digestive organs which change of diet, change of residence, or variation of temperature may bring about. They should be always kept on hand, and once their beneficial action becomes known no one will be without them. There is nothing nauseating in their structure, and the most delicate can use them confidently.

As a rule grey horses attain a greater age than those of any other color, but when old they are white.

The average life of $1 and $2 bills from issue to redemption as mutilated currency is little more than two years.

Ayer's

You know the medicine that makes pure, rich blood—Ayer's Sarsaparilla. Your mother, grandmother, all your folks, used it. They trusted

Sarsaparilla

it. Their doctors trusted it. Your doctor trusts it. Then trust it yourself. There is health and strength in it.

"I suffered terribly from indigestion and thin blood. I found no relief until I took Ayer's Sarsaparilla. Four bottles permanently cured me."
MRS. F. R. HART, Mt. Kisco, N.Y.

$1.00 a bottle. All druggists. J. C. AYER CO., Lowell, Mass.

for

Rich Blood

Ayer's Pills are gently laxative. They greatly aid the Sarsaparilla.

PLUCKING SHEEP.

Shearing Process Not Used In Shetland on Pure Bred Animals.

The pure bred sheep in Shetland are not shorn, but plucked. The process takes place generally in June, when the fleece is "ripe" and the silky wool can be pulled off without pain.

This is called "rooing" and is much less damaging to the young fiber than clipping with shears. The wool when thus handled retains its peculiar softness, so that any one of experience can tell whether the material of a knitted article has been plucked or shorn. It ripens first upon the neck and shoulders, so that sheep half pulled resemble in some sort a poodle that is clipped.

We must suppose that harsher handling prevailed at one time, for we read that in 1616 the Scottish privy council spoke of the custom as still kept up "in some remote and uncivil places," and James I. wrote to tell them that it had been put down in Ireland under penalty of a fine. Upon this they passed an act on March 17, 1616, deploring the destruction of sheep thus caused and imposing similar fines on those who should persist in the practice.

The Tropic Home.

White men's homes in India, the West Indies, west Africa and other parts of the tropics to which civilization has penetrated are usually run on the principle of having as much air and as little furniture as possible. Carpets, rugs, cushions, hangings and portieres are banished. Tables and chairs are made of light wickerwork, bamboo or cane. The floors are polished with cocoanut husks until they become as slippery as a good dancing floor. Indeed, they are used for that purpose nearly every evening in any settlement where there is society. A ball in the tropics requires no preparation. After dinner it is only necessary to move the light furniture to one corner of the spacious room, send somebody to the piano and start dancing. The ballroom is practically in the open air, for wooden "jalousies" form most of the wall space and are opened like Venetian blinds to let in the cool night breezes

The "Just Alike."

Few people perhaps notice that all omnibus wheels are painted yellow, says the London Chronicle, so that any wheel may be worn with any bus color. Every circus ring in the world is of precisely the same diameter, whatever the size of the auditorium, so that the rider knows the angle at which he must lean in San Francisco is the angle of safety in St. Petersburg. Even the ladder is "standardized." Every hodman in England knows what he has to step when toiling up the builder's ladder, though he may not know it is seven inches. The sailor who runs up the ratlines has twelve inches as a step, and that makes a run possible, and the firemen's ladder is crossed with exact equivalence to the ratlines.

Death From Electric Shock.

The ultimate cause of death, when due primarily to electric shock, is generally considered to be stoppage of the action of the heart or of the respiratory organs. That the latter may be affected is shown by the fact that victims of electric shock are sometimes brought to by practice of some of the well known methods of artificial respiration. The cessation of the heart's action may be due to stimulation of the nerves which control the beating of the heart. These, when stimulated to excess, may cause the heart to stop altogether.—Archibald Wilson in Cassier's Magazine.

The Consulting Caddie.

There is one personage who of late years has rather disappeared from the golfing world, but used to be greatly in evidence in it—the advisory caddie. Many of the caddies of the old Scotch school used to treat their masters (so called) much in the manner that a good old nurse treats a baby when she is beginning to teach it how to walk. In those days there was not a stroke played without the most careful consultation with these sapient mentors.—Westminster Gazette.

Placing the Blame.

Caller—So the doctor brought you a little sister the other night, eh?

Tommy—Yeh; I guess it was the doctor done it. Anyway I heard him tellin' pa some time ago 'at if pa didn't pay his old bill he'd make trouble fur him.

Plain Reasons.

Harry—Blanche says she has insuperable reasons for remaining single.

Horace—Yes, I know what they are.

Harry—Then she has told you?

Horace—No, but I have seen her.

A woman's idea of anticipation is to pack her trunk two weeks before she expects to start on a trip.—Atchison Globe.

A Swan's Wing.

A swan can break a man's leg by a blow with its wing.

Largest Fresh Water Fish.

The vaca marina is the largest of fresh water fish. It weighs up to 1,200 pounds. It is found only in the Amazon and Orinoco.

Vanilla Sauce For Puddings.

Beat one egg and stir half a pint of milk into it. Add sugar to taste and five or six drops of vanilla. Put into a saucepan over the fire and stir one way till it begins to thicken. Do not let it boil.

A Hot Place.

At Whakarewarewa, New Zealand, there are geysers, hot springs, boiling pools, mud volcanoes and hot waterfalls.

Cress is the quickest growing of plants. Under perfect conditions it will flower and seed within eight days of planting.

It's a wise cow that knows her own fodder.

Some men convince themselves by trying to persuade others.

A lie made out of whole cloth should prove more satisfactory than a patched up story.

It sometimes happens that an innocent man also pleads not guilty.

At some period in his career every man carries something in his pocket just for luck.

PAINS IN THE BACK HIPS AND SPINE.

Great Suffering and Loss of Weight--Doctors Could Not Help Him--A Splendid Tribute to

DR. CHASE'S KIDNEY LIVER-PILLS.

When you read such letters as the following from well-known and highly respected people in all parts of the country you need no longer wonder why the sale of Dr. Chase's Kidney Liver Pills is so far in advance of any similar remedy. When the people find out that the virtue of this great medicine they tell their neighbors about it, and so the good news spreads.

Mr. James Clark, Consecon, Prince Edward Co., Ont., states: "Eleven years ago I was taken with pains in my back, settling in my hips and extending up my spine. The pain was very severe, and at times almost unendurable, and many days I was not able to do an hour's work. My weight was reduced from 190 to 160 pounds, and though I had consulted many first-class physicians and tried several advertised medicines I could get no relief.

"At this time my father-in-law told me to try Dr. Chase's Kidney-Liver Pills, and said he knew they would cure me. I secured a box and great was my surprise when I began to feel better after using only the one box. I continued their use until I had taken about four boxes, which made me a sound man, and I also regained my usual weight, 190 pounds. I cannot say too much in favor of Dr. Chase's Kidney-Liver Pills, which have done so much for me. I have recommended them to a number of my friends, and have never met with one case where they did not meet with good success. My daughter, Mrs. Chas. Philips, has also been cured of a severe stomach trouble by the use of these pills."

Dr. Chase's Kidney-Liver Pills, one pill a dose, 25 cents a box, 5 boxes for $1.00. At all dealers, or Edmanson, Bates & Co., Toronto. To protect you against imitations the portrait and signature of Dr. A. W. Chase, the famous receipt book author are on every box of his remedies.

PORRIDGE
MADE FROM
"OGILVIE OATS"

Is a dish fit for a king, and just as fit for any of his subjects.

It is the old fashioned brawn and muscle making sort, prepared by our pan-dried process, securing exquisite flavor. Free from hulls.

THE OGILVIE FLOUR MILLS CO., LTD.

ARE YOU BUILDING?
IF SO USE
EDDY'S IMPERVIOUS SHEATHING
The Best Building Paper Made.

It is very much stronger and thicker than any other (tarred or building) paper. It is impervious to wind, keeps out cold, keeps in heat, carries no smell or odor, absorbs no moisture, imparts no taste or flavor to anything with which it comes in contact. It is largely used not only for sheeting houses, but for lining cold storage buildings, refrigerators, dairies, creameries, and all places where the object is to keep an even and uniform temperature, and at the same time avoiding dampness.

MORRISSEY

From The Despatch

The quarantine of the Australian hotel was lifted last night. There were seven persons in the building and they were all well pleased to be released after their sixteen days confinement.

A report is current that gold has been discovered on the east side of Morrissey creek and a number of local men have staked claims and are prospecting the ground.

Another case of smallpox has made its appearance at the Junction. The victim is the son of Mrs. Gibson, the lady who was taken to the pest house with disease two weeks ago.

Jos. Thompsen, station agent at Swinton, is very ill with typhoid fever. He was taken te the Cranbrook hospital for treatment. Mrs. Thompson, who has been visiting in Anthracite, returned on Thursday upon learning of the illness of her husband.

A. Banks, manager of the East Kootenay placer company, in which a number of local men are interested, has returned from Toledo, Ohio, and is on his way to Perry creek, where the company are operating extensive auriferous gravel beds. Mr. Banks has been east purchasing machinery for the company, but has met with great difficulty in having his orders filled, as the eastern firms are loaded up with work for this class of machinery. He has been away eight weeks, through this cause, instead of a fortnight, as originally planned. He stated that at the property, work was being pushed forward as rapidly as possible with the plant already on the ground, and as soon as the new machinery arrived it would be installed.

Cranbrook

From the Herald.

The schools were closed last Monday, owing to several cases of scarlet fever in town.

This section of the country has never had so much rain before this year in the memory of the oldest inhabitant.

William West, the well known prospector, has gone to Poplar Creek district as a representative of several Cranbrook citizens.

J. W. Carpenter, Sour Lake, Texas, arrived at Fort Steele Tuesday. Mr. Carpenter is here on business connected with the Gold Creek Mining and Power company at Bull river.

Last Saturdgy the Leask and Slater saw mill with the timber limits and everything connected with that institution was sold to John Hansbury, of Brandon, Man., who was acting for the Hansbury Manufacturing company, of that town. The money was paid through the Imperial bank of this city, and Monday morning the new company assumed charge. The purchase includes about 9000 acres of timber.

The big saw mill of the Crows Nest Pass Lumber company at Wardner was started on Tuesday, and the machinery given a test by several logs being put through. Everything seemed to work satisfactorily, and from now on another large industry will be added to the commercial world of South East Kootenay.

TENDERS WANTED

Tenders will be asked in the next week or ten days for the construction of about fifty small cottages, some located east of Moosejaw, on the Soo line, and others near Banff, Alta. For particulars apply to W. H. ALDRIDGE,
Banff, Alta.

FERNIE DAIRY

Fresh milk delivered to all parts of the town. . . . .

Dobson & Willingham

Notice is hereby given that 30 days after date I intend to apply to the chief commissioner of Lands and Works for a special license to cut and carry away timber from the following lands on the west side of Kootenay river, in the district of East Kootenay.

(1) Commencing at the south west corner of J. Claxton's timber license No. 2314, on Skookumchuck River, thence south 160 chains, thence west 40 chains, thence north 160 chains, thence east 40 chains to the place of commencement.

(2) Commencing at the south west corner of J. Claxton,s timber license, No. 2314, on Skockumchuck River, thence south 160 chains, thence east 40 chains, thence north 160 chains, thence west 40 chains to the place of commencement.

A. BROLEY

Dated at Fernie, July 13th, '03. 239-4

A WELL KNOWN ALBANY MAN

Recommends Chamberlain's Colic, Cholera and Diarrhoea Remedy

About eighteen months ago Mr. W. S. Manning, of Albany, N. Y., widely known in trade circles as the representative of the Albany Chemical Co., was suffering from a protracted attack of diahorrea. "I tried Chamberlain's Colic Cholera and Diarrhoea Remedy," he says, "and obtained immediate relief. I cheerfully recommend this medicine to those similarly afflicted." For sale by all druggists and dealers.

Very Remarkable Cure of Diarrhoea.

"About six years ago for the first time in my life I had a sudden severe attack of diarrhœa," says Mrs. Alice Miller, of Morgan, Texas. "I got temporary relief but it came back again and again, and for six long years I have suffered more misery and agony than I can tell. It was worse than death. My husband spent hundreds of dollars for physician's prescription and treatment without avail. Finally we moved to Bosque County, our present home, and one day I happened to see an advertisement of Chamberlain's Colic, Cholera and Diarrhœa Remedy with a testimonal of a man who had been cured by it. The case was so similar to my own that I considered to try the remedy. The result was wonderful. I could hardly realize that I was well again, or believe it could be so after having suffered so long, but that one bottle of medicine costing but a few cents, cured me." For sale by all druggists and dealers.

Cholera Infantum

This has long been regarded as one of the most dangerous and fatal diseases to which infants are subject. It can be cured, however, when properly treated. All that is necessary is to give Chamberlain's Colic, Cholera and Diarrhoea Remedy and castor oil, as directed with each bottle, and a cure is certain. For sale by all druggists and dealers.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted ot F. Delzell's north-east corner, thence 80 chains east, thence 80 chains south, thence 80 chains west, thence 80 chains north to place of beginning.

Dated at Fernie this 6th day of June, 1903.

J. COWARD.
FRED DELZELL, Agent.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a licence to prospect for coal and petrolium on the following described lands:

Commencing at a post planted one-half mile east of F. R. Dezell's north-west corner post thence 80 chains north, thence 80 chains east thence 80 chains south, thence 80 chains west to point of beginning.

Dated at Fernie this 6th day of June, 1903.

FRED ROBBINS.
F. R. DELZELL, Agent.

Commencing at a post planted at the North West corner of F. Milton's timber license. No. 2318, on Skookum Chuck River; thence north 160 chains; thence west 40 chains; thence south 160 chains; thence east 40 chains to place of commencement,

Fernie, B.C., July 11th, 1903.

T. GRICE.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a special license to cut and carry away timber over the following lands on the West side of Kootenay River, in the district of East Kootenay:

Commencing at the north west corner of A. Milton's timber license, No. 2309, on Skookum Chuck River, thence north 160 chains; thence east 40 chains; thence south 160 chains; thence west 40 chains to the place of commencement.

Fernie, B.C., July 11th, 1903.

H. GRICE.

Mr. A. Archambault, of Fernie, will be in town on Tuesday next, Aug. 25th. He desires us to call the attention of the public to a meeting to be held on that date at the Alberta Hotel, in regard to the formation of a butter factory in Pincher Creek, and other points concerning the dairying business.—Pincher Creek Echo.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped portions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding against the wasteful des truction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted at Ed Robbins north-west corner, thence 80 chains north, thence 80 chains east, thence 80 chains south, thence 80 chains west to place of beginning.

Dated at Fernie this 6th day of June, 1903.

Commencing at a post 40 chains west of the south-west corner of M. Claxton's timber licence application on Skookumchuck river, South East Kootenay, thence running north 160 chains, thence east 40 chains, thence south 160 chains, thence west 40 chains to place of commencement.

232-4 J. McDONALD.
Dated May 23rd, 1903.

The Enormous Expenditure of Money by the Crow's Nest Pass Coal Company, Limited, in the construction of coke ovens and storage bins and the installation of electric light and waterworks systems, determines that the industrial centre of this district is established for all time at the new town of

Morrissey Mines

The importance of this fact on real estate values here is immense. One of Canada's greatest banking institutions has established itself here permanently, and the near future will see the residential streets lined with many fine houses that will be required to house the hundreds of workers employed here. It is not hard to guess what the effect of this concentration of well-paid wage earners will have on Morrissey Mines realty. All this army must have homes.

One of these bright July days as one stands on the foothill just above the new town, and looks east toward the collieries, the whole transformation that turns a wilderness into a great industrial centre, is shown in its various stages. We see the near approaching coal train of 40 cars, carrying 1,200 tons, the output of the mines for one day, and a little further on, two batteries of modern coke ovens, many of which will be fired up within ten days.

Just across the paddock that has until recently been used for a horse pasture, can be seen 100 men, digging a ditch for the large water-main that is to supply the town with pure Spring water, while the ring of hammers can be heard on every side.

To those wishing to build homes I am offering attractive terms. Write for particulars or call at my office.

IN THE COUNTY COURT OF KOOTENAY HOLDEN AT FORT STEFLE.

—IN PROBATE—

Notice is hereby given that on the 23rd day of July, 1903, it was ordered by J. A. Florin, Esq., Judge of the said Court, that James Ferguson Armstrong, Official Administrator of the County of Kootenay, be administrator of all and singular the estate of ALEX. BODIE, of FERNIE, miner, deceased intestate.

Every person indebted to the deceased is required to make payment forthwith to the undersigned.

Every person having in possession effects belonging to the deceased is required forthwith to notify the undersigned.

Every creditor, or other person, having any claim upon or interest in the distribution of the personal estate of the said deceased is required within thirty days of this date to send by registered letter, addressed to the undersigned, his name and address and the full particulars of his claim or interest and a statement of his account, and the nature of the security (if any) held by him.

After the expiration of the said thirty days the Administrator will proceed with the distribution of the estate having regard to those claims only of which he shall have had notice.

Dated at Fort Steele this 30th day of July, 1903.

TOWN AND COMPANY.

DIRECTORS DISCUSS INCORPORATION WITH BOARD OF TRADE.

Municipal Limits Cannot Extend East of Railway Track.—Other Details Discussed.

A large number of the members of the Board of Trade attended the meeting on Monday afternoon at which the visiting directors had agreed to lay before the citizens the Company's views on the subject of incorporation. The discussion was of an informal nature and no resolutions were put. The Board were anxious to learn the exact position of the Company on incorporation and the directors took pains to go into it thoroughly.

Mr. Jaffray as the chief spokesman for the Coal Company stated that the Company were interested in the general development of the town just as the citizens were interested in the development of the mines. The business of the Company was mining coal, and they did not wish to have the town on their hands any longer than such time that the citizens thought it was ripe for incorporation. When that time came the Company would offer every assistance possible towards the attainment of that object.

In defining more particularly the company's position the vice-president stated that the Company had plans for the future which would utilize all the available land on the east side of the track and that to incorporate any of that part of the town would seriously hamper those plans. It was only a question of a short time till the rapid development at Coal Creek would result in a much greater output of coal, which in turn would require large additions to their oven plant in order to use up the slack. The C. P. R. would doubtless require more yard space as their business increased and provision would also have to be made for a terminal point for the Great Northern branch if it were built on from Morrissey as all hoped it would.

Another very awkward phase connected with including this district within the town limits was the claim that the government would have to one quarter of it, and the C. P. R. to one third of the balance. For this latter reason Mr. Jaffray was opposed to including the park within the municipal limits. The company would agree to lease the park to the municipality on satisfactory terms. The Company would expect some concessions in the assessment of their new offices which they purposed building on the public square. They proposed to erect a large two storey building of brick and stone which would be an ornament to the town, and much more expensive than was necessary for the transaction of their business.

Several members of the Board expressed their views from which it was gathered that the claims of the government and the C. P. R. to the proposed addition had been lost sight of. Opinions also differed as to the actual advantage gained by extending the limits east of the track, some arguing that it would be a heavy drain upon the municipality without producing any adequate revenue.

The question of public utilities such as sewerage, electric lighting and water works was freely discussed. Mr. Jaffray admitted that the municipal ownership of these plants might prove burdensome at first and he intimated that when the town was ready for incorporation suitable terms might be arranged by which the company's lighting and water plants could be used until such time as the council could make other plans.

A hearty vote of thanks was tendered the directors for their kindness in meeting them, in acknowledging which Mr. Jaffray again expressed his deep interest in the general prosperity of the town and the willingness of the company to meet its citizens half way on any and all questions which would promote that prosperity.

The Proper Treatment for a Sprained Ankle.

As a rule a man will feel well satisfied if he can hobble around on crutches two or three weeks after spraining his ankle, and it is usually two or three months before he has fully recovered. This is an unnecessary loss of time, for in many cases in which Chamberlain's Pain Balm has been promptly and freely applied, a complete cure has been effected in less than one week's time, and some cases within three days. For sale by all druggists and dealers.

16 MORE COAL CLAIMS

Result of Prospecting Tour up the Elk above Michel.

Messrs. Bleasdell, Dobbin and Klinginsmith have returned from their trip into the coal region up the Elk north of Michel, where after several days' investigation and prospecting, in company with an expert, they gained a more intimate knowledge of the coal areas of that district. Not only did they satisfy themselves as to the quantity and quality of the coal on the claims belonging to the Fernie company that they represented, but they prospected for other claims on neighboring territory and succeeded in locating 16 more claims all of which possesses excellent prospects. On this new property is one seam of 35 ft. in width and altogether there are between 15 and 18 seams. A 5 foot seam of cannel coal was discovered. This coal is of a dull lustre, cakes, and is valuable for the manufacture of oils.

Simple coking tests were made by the party with most satisfactory results. The coke is apparently of the same excellent quality as the Fernie product Various samples were brought back by the party and have been placed on exhibition in Bleasdell's drug store window where they may be examined by all who are interested. The samples have all the appearances of first class coking coal and there is little doubt that the find is a very valuable one.

Four men are at work under the superintendence of J. Wilson opening up seams and doing development work, and more will be heard of the property before the hills are covered with snow.

The amateur prospectors enjoyed the trip immensely. The excellence of the fishing exceeded the wildest dreams. A string of 50 beautiful trout was captured by one line in a short time. Their only drawback was that their hooks were two small and the larger fish escaped with them in many cases. A heavy crop of wild raspberries covered large areas, waiting for the harvesters that do not come.

LACROSSE ON MONDAY

Monday next, Labor Day, will witness one of the warmest, and easily the most scientific game of lacrosse that will have ever taken place in Fernie. This game is the return match between the Lethbridge team and the locals. The latter very naturally resented the manner in which their defeat was magnified at Lethbridge some time ago and they are now prepared to put up a game that will not only wipe out any misconception of the relative strength of the two teams as shown by the score of that game but that bids fair to lead to the recapture of the Levasseur cup. The Lethbridge team is a strong one, as is evidenced by their defeat of Medicine Hat, which defeated Souris, which gave the Shamrocks a hard run. The locals however, are in much better form than ever in the history of the club, and if they do not win Monday's game it will be because their rivals are much stronger than when they last played Fernie.

The team will line up as follows:

Goal	J. Miller
Point	J. McCorvie
Cover point	J. Stevens
1st Defence	D. McLean
2nd "	O. Shoemaker
3rd "	A. Taylor
Centre	Wm. Miller
3rd Home	W. Mitchell
2nd "	J. McLaughlin
1st "	G. Reynolds
Outside home	G. Gordon
Inside home	McGuire
Field captain	M. A. Kastner

CUSTOMS AND INLAND REVENUE

Fernie Collection for the Month of August

The following is a summary of the revenue collections at the outport of Fernie for the month ending Aug. 31st:

Value of goods imported,	
Dutiable	$ 12,431.00
Free	7,433.00
Total	19,864.00
Duty collected	$3,017.35
Inland Revenue collections:	
Spirits	$631.77
Malt	896.38
Cigars	85.50
Total	$1613.65

They Make You Feel Good.

The pleasant purgative effect experienced by all who use Chamberlain's Stomach and Liver Tablets, and the healthy condition of the body and mind which they create makes one feel joyful. For sale by all druggists and dealers.

LABOR DAY PROGRAM.

PREPARATIONS ARE COMPLETE FOR A GOOD DAY'S SPORT.

Parade—Morning and Afternoon at the Athletic Grounds—Grand Ball in Evening.

The details for the Labor Day celebration are being completed and if the present excellent weather prevails its success is assured. The day's proceedings will commence with a mammoth parade which will form on the public square at 9 o'clock. The labor and trades unions and merchants are invited to participate. The parade will be headed by the brass band and the visiting trackmen.

After this event a long list of sports will take place in the recreation grounds, the first of which will be the matched race for 100 yds between Mitchell and Appleford. There is $250 a side on this race, beside a purse of $50 offered by the Association. Then there will be the Junior lacrosse match between Lethbridge and Fernie. The boys are getting to be clever stick handlers and a good game may be expected. The following program of other events will also be run off before the lunch hour.

	1st	2nd
Sack Race	$5	$3
Running Long Jump	5	3
Standing Long Jump	5	3
High Jump	5	3
Hurdle Race	7	3
Three legged Race	5	
100 yd. Race (Trackmen)	10	5
100 yd. Race (Miners)	10	5
Putting Shot	5	
Tug of War (Trackmen Miners and Lumbermen)	30	

In the afternoon two very interesting games will doubtless draw large crowds. At 1 o'clock Macleod and Fernie will again try conclusions at base-ball. These teams have played two games together this season, each securing a victory. Considerable change has been made in the make-up of the teams. Fernie's new pitcher will make his bow before a Fernie gathering. The lacrosse match at 3 o'clock is certain to be fast and the best exhibition of the game ever seen in Fernie is confidently expected. Both teams are in the pink of condition and neither will submit to defeat without a hard struggle. A new grand stand has been erected close by the lower gate where an excellent view of the field can be had. A cinder race track has been made in front of this grand stand. Admission to the grounds, morning 25 cts., afternoon 50 cts., children half price. In the evening the boys will have some pony racing on the main street.

The big day of sport will be fittingly brought to a close by a grand public ball in the evening in Princess hall under the auspices of the Athletic Association.

BRUTAL ASSAULT.

C. Aleck Dangerously Injures F. Verras at Michel.

On Monday night a murderous attack was made on Frank Verras by Charles Aleck in a boarding house, kept by Aleck's brother at Michel. Aleck was under the influence of liquor at the time, when he accused the injured man with improper relations with his wife. Without warning he picked up a pitcher near by and threw it with considerable force, striking Verras behind the ear and inflicting a deep and dangerous wound. Aleck made an attempt to follow up his first attack by throwing a glass at his victim, and his brother who interfered was promptly knocked down. Both men are miners of Michel.

The wounded man was immediately attended to by Dr. Walkem and Constable Henderson arrested the offender and brought him to Fernie. The preliminary trial came off yesterday, the wounded man having so far recovered as to attend with difficulty. He was charged with brutal assault and the evidence substantiated the facts already related and went to show that the accused had upon several previous occasions threatened to kill Verras. The case was remanded until this morning for medical evidence, and the accused got off with a $15 fine.

THE AGONY IS OVER.

After several futile attempts to race the third heat of the international yacht series the Reliance was able to finish within the time limit on Thursday. The Shamrock did not finish. At the turn the American boat was leading by 11 minutes.

LIBERAL MASS MEETING.

Addressed by E. C. Smith, Dr. King, D. Ross and F. Stork.

A large gathering attended the Liberal mass meeting in Princess Hall on Monday evening. The train bearing the speakers from the west did not arrive until nearly nine o'clock and no time was then lost by chairman Stork in having the meeting opened. Besides the chairman, E. C. Smith, the Liberal nominee, Dr. J. H. King, the Cranbrook Liberal candidate and Duncan Ross, of Greenwood, the interior organizer of the party, were on the platform. Alfred Farr, of Ymir, wired the association that he could not attend owing to unforeseen circumstances.

Mr. Stork in publicly tendering the unanimous nomination of the liberals of the district to E. C. Smith briefly outlined the reasons why the late member had been selected as their standard bearer. He was the strongest liberal in the district, he had taken a firm stand on the Columbia & Western deal which deserved the favorable recognition of the electorate and he was a perfectly honest and consistent representative.

Mr. Smith, amid applause, arose to accept the nomination thus tendered him. He thanked the liberal party for the honor done him and the confidence they placed in him in selecting him as their leader. He was glad that the elections were to be run on party lines as it would mean the end of personal misgovernment. He briefly reviewed the wretched conditions existing at Victoria during the time he was there, and the helplessness of an opposition member under such a regime. He touched on the general policy of the Liberal party and briefly compared the personnel of the two parties in the province.

Dr. King followed with a glowing tribute to the sterling qualities of Mr. Smith as exhibited in his public work at Victoria, and especially in the Columbia & Western deal. He confidently looked forward to the return of the liberal party to power which would establish a stable progressive government instead of the "family compacts" which had posed as governments during the past few years. He went into the policy of the liberal party in dominion and provincial affairs which he claimed was in the best interests of the country.

Mr. Duncan Ross complimented the Liberals of the Fernie district on their good judgement in their selection of a candidate. Mr. Smith had worked hard to preserve the heritage of the province from the C. P. R. grasp. He had been through the Kootenays considerably in his official capacity as organizer and he claimed that the prospects for a sweeping victory for the Liberal party were very bright. The speaker referred to the Conservative candidate, W. R. Ross, as a good fellow, much too good for the government he was supporting. He wished to sound a note of warning to the laboring men who might be looking to socialism as a possible cure for past evils. "The phantom visions" of that party could not be realized. The party would not secure 3 seats and those selected would have no power in the house. The best policy for union men to follow was to stick to the party that gave them most recognition. This party was undoubtedly the Liberal party. He believed that by splitting their votes they were weakening their cause and endangering their organizations. He also dealt briefly with the general policy of the Liberal party.

Mr. Stork in closing the meeting spoke optimistically of the outcome in the Fernie constituency and in the province as a whole. The candidate was in perfect sympathy with the advancement of Fernie and in the new legislature he would be free from the Fort Steele clique which had hitherto side-tracked Fernie at every turn. The Liberals were in the field to make the hardest possible fight. He hoped the campaign would be clean and free from mud-slinging. Later on there would doubtless be joint meetings at which both sides would be represented. The meeting closed with cheers for the King and Mr. Smith.

K. OF P. OFFICERS

Fernie Lodge, No. 31, of the Knights of Pythias have elected their first officers as follows:

C. C.—W. B. Ganong
V. C.—H. Bentley
Prel.—W. W. Tuttle
M. of W.—L. R. Forbes
M. of E.—A. B. Trites
M. of F.—J. C. Hutchison
K. of S. & R.—H. G. Watson
M. at A.—A. P. Walker
I. G.—H. J. Johnson
O. G.—D. McRae

THE GAME LAWS

What May and May Not be Killed

Herewith is appended a synopsis of the Game Act. The shooting season opened Monday for grouse, deer and waterfowl.

Open seasons.—Sept. 1st to Dec. 14th—Deer, buck or doe; mountain goat, mountain sheep (ram).

Sept. 1st to Dec. 31st.—Caribou, elk wapita (bull); grouse of all kinds, including prairie chickens: hare; moose (bull).

Sept. 1. to Feb. 28th—Bittern; duck of all kinds; heron, meadow lark, plover.

It is unlawful to shoot or destroy at any time: Birds living on noxious insects; English blackbirds; caribou cow or calf; chaffinch; deer, fawn under 12 months; elk, wapita, cow or calf under 2 years; gull, linet; moose, cow or calf under 12 months; mountain sheep, ewe or lamb; English partridge; pheasants, cock or hen, except as hereinafter provided; quail, all kinds; robins (farmers only may shoot these in gardens between June 1st and Sept. 1st); skylark, thrush.

It is unlawful to buy, sell or expose for sale, show or advertisement, caribou, hare, bull moose, mountain goat, mountain ram, before Oct. 1st; deer, before Sept. 1st; nor any of the above named animals or birds at any time, except duck, blue grouse, heron and plover, during the open season.

It is unlawful to kill or take more than five caribou in one season; more than ten deer, or to hunt them with dogs or kill for hides alone; more than 250 ducks; more than two bull elk or wapita; more than two bull moose; more than five mountain rams; or to take or destroy the eggs of protected birds at any time.

It is unlawful to enter land enclosed by fence, water or natural boundary, after notice or a notice under section 11 is posted up; for non-residents to shoot without a license; for non-resident Indians to kill game at any time; to export or transport for export in the raw state, game birds of every kind, and animals, protected, except bear, beaver marten and land otter; to use traps, nets, guns, drugged bait, etc., to catch game birds to expose for sale without its head, any deer, or bird without its plummage; to use batteries, swivel-guns or sunken punts in non-tidal waters to take ducks or geese; for unlicenced non-residents to trap or kill bear or beaver for their pelts to kill any game bird between one hour after sunset and one hour before sunrise; to kill game birds or animals imported for acclimatization purposes; to buy or sell heads of mountain sheep; to take trout except by hook and line, or to use Salmon roe as bait; to enter with hunting implements or permit dogs to enter fields of growing or standing grain, or enclosed lands, without permission; for Indians to kill does or fawns from February 1st to August 1st; to shoot on enclosed lands on Sundays without permission. But farmers or their authorized resident employees may kill deer depasturing their cultivated fields, and free miners may kill game for their own use any time.

POLITICAL PARAGRAPHS.

J. A. Harvey was offered the Conservative nomination in the riding of North East Kootenay, but declined.

R. A. Bradshaw, the Liberal nominee of the Slocan district has resigned from the contest owing to pressing private business which necessitates his departure for the east.

F. Carter-Cotton, the editor of the News Advertiser, has accepted the Conservative nomination for Richmond. His opponent will be J. C. Brown, of New Westminster. The contest between these war-horses will undoubtedly be one of the keenest in the province.

Neil McCallum, the Liberal candidate for Grand Forks riding has notified his election committee that as he has to leave for the east shortly in connection with the administration of an estate of which he is one of the trustees, and as he will be detained several months, he must retire from the campaign.

WHEN BOYS WERE ME

By JOHN HABBERTON,

Author of "Helen's Babies," "George Washington," Etc.

COPYRIGHT, 1901, BY JOHN HABBERTON

Our colonel had been quite right in saying that the first scout was worth more to us than a month of drill. The men learned to sit in their saddles and not to be afraid of their horses, so we were able to begin mounted drill in good shape and progress rapidly. Man ranks lower than his horse in all good cavalry regiments, so it was not until we had completed the stables that our own winter quarters were begun. By this time, however, we learned, to our delight, that we were too valuable to consume our time in common labor. A number of the "contrabands" (fugitive slaves) who had made our post a place of refuge were sent into the woods to cut trees and split shingles, and just before Christmas each company had a great log house, about 15 feet by 50, for its winter home. A small contribution from each man enabled us to put up a stove, which tempered the winter air, and one new member, who had always lived in the tenement house district in New York, said he never before had known so comfortable a home.

Killing time in the winter season was almost as hard as killing the enemy, for there was such an appalling lot of time ahead of us. Some men played cards all day, except while eating and sleeping; others read incessantly; still others did nothing but smoke. Some seemed to spend much of their time writing. I liked to observe these, for they had more heart in their faces for the time being, and as I knew some of the people to whom the letters were going I amused myself by imagining the scenes when the letters were received.

But it troubled me much that Hamilton and Brainard were writing so persistently to my cousin May. I did not see the letters, but I heard of them through my home correspondence. I knew that Brainard, who visibly worshiped May's portrait sometimes when he supposed I was not looking, and probably hundreds of other times, was not the sort of man to change his regard for any one, much less for a sweet girl. Some one had seen in Hamilton's hands a portrait of May. I did not know that he brought one from Summerton. I was also troubled by his manner toward Brainard. It was not ugly, but it contained a suggestion of condescension not unmixed with contempt, and I fancied Brainard noticed it.

Still, what could I do in such a matter? May was no fonder of counsel than very young women in general, nor was she less averse to admiration in large quantities. I could not imagine her in love with any one, for she and I had been rough and tumble playmates, and I knew only the tomboy and fun loving side of her nature. After much thought over the rivals and their respective chances, I could only hope, for the sake of peace, that she would not give the slightest encouragement to either, but would be won by some other worthy Summerton youth. I believed that both Brainard and Hamilton were manly enough to recover from any sorrow occasioned by the loss of something, no matter how precious, that was not their own and had not ever been promised to them.

Our special comforts were not confined to shelter and rest. Two or three of the married men knew something about cooking, and so did one man who had been a logger in Maine; so the company cook was coaxed, bullied and flattered until he learned to do something besides merely boil the several raw materials dealt him. A ration of cornmeal would sometimes be served as fried hasty pudding and again as "crackling bread"—corn bread containing tiny dice of fat pork which had been fried thoroughly and drained of grease. Remains of a dinner of salt beef and potatoes would reappear next morning as corned beef hash. Boiled rice, modified only by cheap molasses, was about as unpopular as castor oil, but with a little coffee, which would not be missed, we could trade with a native for enough milk and eggs to make that once detested rice so popular that there always was some man offering his supper portion of bread for half of some other man's rice.

Finally Hamilton, who felt that as commissary sergeant it was his duty to study up on cookery, electrified us one day by announcing that on the following Sunday there would be a dessert of plum pudding. Up to that time about half of the men had called Hamilton "stuck up." Worse still, many had called attention to the fact that never once in our many skirmishes and fights had Hamilton been under fire. Brainard had combated this story for the honor of Summerton, but one day he, too, learned that Hamilton had a picture of my cousin May. That silenced him. But the mention of plum pudding caused the grumblers to recant, Mick McTwyny going so far as to borrow a pipe of tobacco from Phil. Our gustatory anticipations were marred only by Hamilton's statement that the pudding would be made entirely from army rations.

"Where will he get the raisins?" asked one family man.

"And the suet?" said another.

"And the flavoring?" suggested a third.

"Does the quartermaster issue pudding bags?" another wanted to know.

Nevertheless the pudding was an absolute success. The flour came from the commissary stock; finely chopped fat pork, well soaked, answered for suet; dried apples, partly boiled and then candied in boiling sirup made from sugar, took the place of raisins. The sauce looked as if it were only sirup of sugar, some of which had been carameled to give it special flavor and color. There rose from the sauce, however, an odor which caused Mick McTwyny to utter an ecstatic "Whoorroo!" and Cloyne to ask:

"Is brandy an army ration, Phil?"

"Yes," said Hamilton—"that is, 'tis a hospital ration, and I got half a pint from the hospital steward by promising a small pudding in exchange—for the sick, you know."

"There's just one thing I want to ask," mumbled an ex-truck driver through a mouthful of hot pudding. "Does the government issue pudding bags?"

"The quartermaster issues cotton drawers," Phil replied, "and you'll learn, if you choose to ask, that he charged two new pairs to my personal clothing account this morning. The puddings were boiled in the legs of them."

"Be hivin," said Mick McTwyny, with an approving shoulder slap that nearly knocked our enterprising commissary sergeant into the cook's fire, "the likes of yez niver was born, and the fust money the paymaster gives me yez shall git that dhrunk wid me that yez won't know yer mout' from a hole in the ground!"

"Thanks, sergeant," said Hamilton, rubbing his shoulder. "I assure you that you're the first man who ever was boughtful enough to make me so handsome an offer."

But a grander feast was enjoyed one cool evening after Phil had announced late in the afternoon that there would be pancakes for supper and asked that each man would take knife and fork as well as plate when he went for rations. Hamilton had found some soda and cream of tartar in the village. He made the batter in a half barrel, and his griddles were an odd collection of frying pans, plowshares, flattened sides of camp kettles the bottoms of which had rusted or burned through, a stove lid and some tin plates. As we hurried to the cookhouse when the bugle blew supper call we saw all these irons on a glowing mass of coals and the cook lifting large cakes from them with a wooden turner made from a barrel stave, while Phil himself, with a huge bit of fat pork on a stick in one hand and a great cup in the other, was greasing the pan and pouring more batter. As the cook placed a huge cake and a spoonful of sugar on each plate Hamilton said that if we would be patient and stand around as we ate each could get a fresh cake every two or three minutes.

"Ah!" "Um!" "My!" "Oh!" "Golly!" "Gosh!" were some of the expressions that went up around that fire while the men began their supper, some using spoons instead of knives and forks. Oftenest heard, however, was, "This reminds me of home," or "Doesn't it remind you of home?" Had I ever before been asked to name our national dish I would have hesitated between pie and pork and beans, but since that great evening I have believed that in a competitive contest the pancake would receive more votes than beans and pie combined, besides being preeminent among eatables as "the tie that binds," "a touch of nature" and more of that sort of thing. As we ate those cakes everybody began to talk of home. Even big Pat Callahan became so absorbed in home reminiscences that he forgot to curse the government for not giving us butter to eat on our cakes.

But nobody, no matter how full of home memories, stopped eating that he might talk. The first issue disappeared from the plates in a minute, and two or three men who apparently hadn't any homes to think of returned so frequently for more that we agreed to form a circle, each man to receive a cake and some sugar as he passed the cook's table. It was an odd spectacle, apparently, to men of other companies—that company of about 80 men marching slowly in a circle and eating as they walked. But we were not at all concerned about our appearance just them. We were having a private cake walk in which each and every man "took the cake." Our officers heard of it from their servants, and the captain came down to look on.

"Won't you try one, captain?" asked Hamilton, offering a clean plate and fork. The captain accepted, tasted, exclaimed "Gracious!" and said no more until he had finished the cake. Then he remarked as he stepped into a gap in the line:

"Just let me see how it feels to tramp around in a circle a little while."

[CONTINUED.]

Free School Lunches.

The Swiss canton of Zurich provides free food in the schools for 1,330 children of poor parents.

Brushes.

Brushes which have become hard through disuse should be soaked in flaxseed oil.

ANTHONY

By TEMPLE BAILEY

Copyright, 1902, by T. C. McClure

The Misses Hildreth never spoke of Anthony's pedigree. There was a certain flavor of the stables about the word which offended their nice taste.

"His ancestor was Antonio I.," Miss Anne would say proudly. "The blue ribbon winner at the bench shows."

Anthony had never won a blue ribbon. In fact, he had not been entered. Charles, the butler, had advised against it.

"He'd never stand it, ma'am, his nerves are that shaky," he had said to Miss Angeline.

But when he took Anthony for a walk he met Tam the trainer. "What cud he git with that nose?" he had asked disdainfully, and Tam had nodded wisely.

"But, there, I wouldn't tell the old ladies that there wasn't any chance," Charles had said.

For the world of the Misses Hildreth revolved around Anthony, and they fought off the monotony of their gray lives by an absorbing devotion to the little Skye with the banged hair.

One morning in front of the brownstone Hildreth mansion stood a modest cab, while before an upstart yellow brick apartment house across the way waited a victoria, with a crest on the door and cockades on the hats of coachman and footman. Charles helped Miss Angeline into the cab. She was going to visit a cousin at Newport. She embraced Miss Anne and kissed Anthony on the tip of his unaristocratic nose.

"Take care of him, Anne," she said as she was driven away.

As Miss Anne turned to go in the house there swept into the victoria opposite an individual—a lady, the unthinking might have called her. But in spite of the borrowed crest and stolen cockades, Miss Anne knew that nowhere in the blue book of New York was there the name of a person who wore a ring on her thumb.

The fat, red face of the person peered out eagerly. "That's a darlin' dog," she said. Then the good natured creature bowed effusively to Miss Anne, but Miss Anne looked calmly over her head.

"Who is that person?" she asked Charles.

Charles did not know, and Miss Anne, with a shrug of her sloping shoulders, trailed up the stairway.

All that day Miss Anne and Anthony sat by the window in an upper front room. Miss Anne embroidered and Anthony lounged on his white covered table and was bored to the point of extinction. Outside the sun shone and the wind blew with alluring freshness. Within all was darkness and quiet and inaction. And Anthony was young! What rebellious plans raged in his bosom will never be known, but that night the Hildreth mansion was the scene of a tragedy.

Bedtime came, and Miss Anne, with her soft, gray hair in decorous curl papers, laid herself down in the stillness of the big room. Anthony's basket was in a dressing closet close adjoining. For hours everything was very, very still. Miss Anne slept soundly, with her little, soft, old face on her little, soft, old hand, and dreamed the dreams that come to such sweet saints.

"Anne! Anne!"

Wide awake in a moment, Miss Anne groped for the matches, and at once a faint glow showed the wonder in her old face.

"Who called?"

She slipped out of bed and went to the door. The hall was solid with blackness. She listened—only the far away hum of downtown noises.

In the ominous stillness came the thought, Why had not Anthony waked? She pushed the door of the closet open and listened. But no gurgle of contented doggish sleep came forth.

Anthony was gone!

For a moment the little lady stood dazed. Then she ran through her room to the hall and down the stairway. As she reached the bottom a square of grayish white light faced her. The front door was open!

Miss Anne's nervous fingers played across the buttons on the wall, and lights flared up all over the house. Then the bell connected with Charles' room whirred in the distance, and presently Charles came down in a limited costume of slippers and long coat.

"Anthony's gone," said Miss Anne, and she wept.

Charles examined the door. "That Mary came in last. It's her carelessness," he declared.

There was no more sleep for the household that night. Only a weary vigil, and all the next day Miss Anne wandered from window to window until at last she crept to the door to welcome her sister, and the slender little women fell on each other's necks.

"I woke in the middle of the night," sobbed Miss Angeline, "and called you."

"I heard," said Miss Anne solemnly, "but it was too late."

Charles looked over the heads of the little ladies at Mary, the housemaid. Then he winked and tapped his forehead significantly.

In the ghostly stillness of the old parlor the tale was all told, and the two lonely little women sat down to face the loss of the one interest in their barren lives.

But meanwhile—Anthony?

By morning he was miles away from the brownstone front. The days went on, and gradually the glory of his yellow white floss departed. At times he went hungry, and his round sides became mere hollows, but in his eyes was the sparkle of a care free spirit. Back of him was the dim room with its confining white covered table, ahead of him sunshine and freedom. But dark days came when he was driven, lame and thirsty, from place to place, and one morning the light went out of his eyes, and he lay on a path in the park, his ears alert for the sound of menacing footsteps.

All at once there came down the road a victoria. In it was the lady with the red face, who motioned the driver to stop.

"There's that darlin' dog."

She held out an open box of biscuits. "Come, doggie," she pleaded. And the prodigal, tired at last of the husks, trotted forward. The footman lifted him in, and he sat with his dirty paws on the fawn cushions and ate of the fatted calf.

When the carriage reached the familiar street the footman was ordered to hold Anthony tightly.

"It would kill them sweet old darlin's to see him so dirty," said the kind hearted person. So the small dog was carried into the gorgeous apartment and scrubbed and perfumed and decorated with a distracting pink bow. Then the red faced lady hied herself to the brownstone front.

Charles took her card up.

"The person from over there," he said discreetly.

The backs of the two little ladies stiffened.

Charles hesitated. "She said she had some news."

The eyes of the old ladies centered with one accord on a black draped basket on a white draped table.

"Anthony!" they exclaimed and fluttered downstairs.

When they reached the drawing room, however, and the vulgar awfulness of the person was revealed, they stiffened again.

But the red faced lady swept forward and put both of her fat hands on Miss Anne's protesting, patrician shoulders.

"I've found your darlin' dog," she said.

What was a thumb ring or distinctions of caste at such a moment? The frail blue veined hands of the little women clasped the pudgy digits of the red faced lady, and their well bred voices were almost shrill as they asked their breathless questions. Presently Charles was sent across the street to meet halfway the cockaded footman, and between them they brought in a perfumed and prodigal canine, who barked excitedly and licked the faces of the old ladies as they hung over him.

At last Miss Anne sank down on a sofa, her cheeks flushed, her eyes bright, her gray hair flying about her ears.

"Get him a chop, Charles," she commanded.

The red faced lady interposed. "He's stuffed already," she said inelegantly. The little ladies shuddered.

"He ought to get out more," advised the person. "You let me take him. I'm that lonesome sometimes that it seems as if I couldn't stand it." In her voice was all the wistful longing of the once busy woman to whom wealth has brought unwelcome leisure.

Before the eyes of the little ladies flashed a vision of Anthony in the victoria beside the vulgar, red faced lady. But with their other fine qualities they possessed the gentle one of gratitude, and without apparent hesitation Miss Anne responded:

"We shall be glad if you will take him."

Then Miss Angeline made another effort:

"My sister and I will give ourselves the pleasure of calling on you soon," she said.

The face of the person shone with delight, for a calling acquaintance with the Hildreths was a consummation to be desired.

But that night when Anthony was snoring in his basket Miss Annie bent over him and sniffed:

"Musk!" she said, with a shiver of disgust.

"And a pink bow," quavered Miss Angeline.

They opened their windows, and the fresh night air blew in. Then they crept into bed to listen blissfully to the deep drawn breaths that issued from the depths of the little closet.

Canine Courtesy.

"Dogs have their captains and commanders in the chase, and they follow their leaders in a way that shames the practices of men at times," said the man who is fond of the hunt. "Really, I have often thought that man could profit a great deal by going to the dog for examples of virtuous conduct, and I'm still inclined to believe that his civic virtues would be strengthened somewhat by a closer observation of the good there is in the dog. 'Going to the dogs' is used in reproach. Living as some men live is infinitely worse. Some men have all the dog's faults without showing any of the dog's virtues. But I was thinking of the captains and commanders in the chase. Dogs pay each other fine courtesy if they are good dogs and well trained. The dog who would run ahead of the dog who is the accepted and acknowledged leader of the pack or who would show him the discourtesy of crossing the line of pursuit ahead of him would be disgraced, damned and shunned by its fellows. The leader is to be followed. Dogs behind him may be fleeter of foot. But he is the leader, and that settles it. And, my, how sensitive some of these old dog leaders are! How jealous they are of their rights! I have seen them quit the chase because some green member of the pack crowded in ahead of them. They would simply quit the trail, get in behind their master, and that would be the end of their frolicking that day. Dogs are great fellows when you come to know them."—New Orleans Times-Democrat.

Different Now.

Harriet Martineau visited the United States in 1840 and reported that only seven occupations were open to women. They were teaching, needlework, keeping boarders, working in cotton factories, typesetting, bookbinding and household service.

Trees and Water.

The minimum rainfall at which trees will grow is twenty inches.

Fruit Sauce For Puddings.

Boil any kind of fruit with a little water until it is quite soft, then rub through a fine sieve with the back of a wooden spoon. Sweeten to taste, heat it and pour over the pudding. Nice for boiled or steamed puddings.

Life is a riddle that every mother's son of us must give up.

A man talks to amuse others and a woman talks to amuse herself.

HE COULD NOT LACE HIS SHOE

Till Dodd's Kidney Pills Drove Away His Rheumatism.

Story of W. J. Dixon, has set the Rainy River Settlement Talking.

Barwick P.O., Aug. 31.—(Special)—Among the settlers here the cure of William John Dixon of Rheumatism is causing much talk. The story of the cure, as told by Mr. Dixon himself, is as follows:

"During the summer of 1901, I had an attack of Typhoid Fever, and after I got over it Rheumatism set in. I had pains in my back and in my right hip so bad that I had to use a stick to walk and had no comfort in sleeping.

"I could scarcely dress myself for nearly two months, and for three or four weeks I could not lace my right shoe or put my right leg on my left knee.

"My brother advised me to try Dodd's Kidney Pills, and after taking three boxes, I began to walk, do my work and lace up my shoes. And the best of it is, I have had no rheumatism since."

Dodd's Kidney Pills take the uric acid out of the blood and the rheumatism goes with it.

Florida's orange and pineapple crop is estimated at $2,500,000.

The United States government Fish commission will raise green turtles.

CAUSED BY THE HEAT.

A Rash on Baby's Skin Often Alarms Careful Mothers.

During the summer months a rash often appears on the face, neck and bodies of babies and small children which is liable to alarm the careful mother. It is due to the excessive heat, and while not dangerous is the cause of much suffering. Immediate relief is given by dusting the eruption liberally with Baby's Own Powder, which may be had at any druggist's, but to cure the trouble a medicine must be given that will cool the blood of the little sufferer. Baby's Own Tablets will be found a positive blessing in such cases and will soon restore the clearness and beauty of baby's skin. Mrs. Clifton Cutler, of Kincardine, Ont., says: "My baby had a rash break out on her face and all over her body. I gave her medicine, but the eruption never left her until I gave her Baby's Own Tablets, and after using them a short time the rash entirely disappeared. I have also given her the Tablets for constipation with the best of results; they act gently but promptly, and always make baby quiet and restful. I think the Tablets a splendid medicine for young children." Baby's Own Tablets may be had from all druggists at 25 cents per box, and Baby's Own Powder at the same price. If you prefer to order direct they will be sent postpaid on receipt of price by the Dr. Williams' Medicine Company, Brockville, Ont.

Cider.

Cider is the only alcoholic beverage that is not taxed. When sold fermented, in bottles, it contains ordinarily 4 or 5 per cent of alcohol, but this amount may be increased largely by adding sugar—sufficiently, indeed, to render the beverage quite intoxicating.

Pipes In a Skyscraper.

In an up to date skyscraper there are usually from ten to twenty miles of piping of all sorts and sizes—water pipes, gas pipes, sewer pipes, speaking tubes and ventilation ducts.

The Mule Ducks.

If a horse touches his ears in going under a low bridge or through a tunnel he will invariably throw his head up and receive a hard knock. When a mule's ears touch anything his head goes down.

MY HEART'S DARLING

BY W. HEIMBURG.

"I thought to find you more cheerful."

"OL, I did not know— Am I not? I feel quite contented, I wished everything to be as it is."

She stood with her back to the window. Lucie could not see her face in the twilight.

Quick steps came through the next room, and in a moment the master of the house walked in.

"I beg a thousand pardons," said he, hastening up to Hortense, "but why did you not wait just a minute? I arrived at the station two minutes after the appointed time, and I saw your carriage disappearing at the end of the street, and as I had foolishly sent my horse back, I had to walk home. Has Fraulein Walter arrived?"

Hortense pointed to Lucie. "There she is, and we want our dinner."

He greeted the young girl, and offered Hortense his arm. They were soon seated at the round table in the dining-room. Lucie had to tell them how the baron was, and how he bore the parting.

Hortense scarcely spoke a word. As the conversation turned upon Wottersdorf and its surroundings, Weber remarked:

"We must soon begin to make our calls, Hortense. I have always visited all our neighbors."

"I do not like large parties, Waldemar," said the young wife; "pray spare me."

"I do not think I can, dear child."

"But what are these people to me? I will not visit them, Waldemar."

"If you will not, Hortense," and a light flush rose to his brow, "then there is an end to the matter. I can not put you forcibly into the carriage, and I shall have to bear having my house become a sort of hermitage."

"Oh, that is the best way," declared Hortense, and rang for the second course.

"I feel only that you will be the one to find the loneliness the most wearisome. It is dreary in the country without good friends and pleasant neighbors."

"Dreary? Why, I have Lucie, my piano, my painting, and the horses."

He gave a low laugh as he poured out some wine. Lucie understood him; it was not a cheerful laugh. Hortense counted up all that she possessed—of him she made no mention.

"Nous verrons," he said, quietly. "I can stand it, for I have you, Hortense; and if I see that you are happy in your home, I shall not miss the intercourse with my neighbors. Now, ladies, to the revived order 'Des Hermites de Bonne-Humeur.' May good humor reside with us as it did with those who lived before us!"

As he drank, he looked over his glass at his beautiful wife, who had not changed her expression at his jest.

At this moment a stout little woman appeared behind the servant; her good-natured face was framed in a white cap; she wore a large white apron, and at her side hung a huge bunch of keys.

"Beg a thousand pardons," she began, after an old-fashioned courtesy, "I only bring the mistress the house-book." She laid a book by Hortense's plate and stepped back. "Will my mistress look at it later? And I wish to say milk has gone down, the woman only gets the market price everywhere in the town."

Hortense did not touch the book. Waldemar took it up and turned over the leaves.

"It is probably all right," said the young wife. "I do not understand about such things."

Two arms were thrown round her neck. "Let me undertake that, Hortense, please. It is so hard for me to have nothing to do."

"But why should you? I trust Frau Nein perfectly."

The old woman courtesied again.

"It is a great honor to have you say so, my mistress; but, pardon me, accounts must be brought to the heads of the house; it is their due. I lived ten years with the Countess Hazen, and she always wrote 'In good order' under my accounts."

"Please, please, Hortense!" repeated Lucie. "Frau Nein and I will get on famously, will we not?"

"Why not, if my masters tell me I am to give my accounts to you?"

Hortense pushed the book to Lucie.

"There, if you want it."

"Will my mistress make out the list of cakes for to-morrow?"

Hortense pointed to Lucie. "There, Frau Nein."

"Oh, we will think that over together later in my room," said the girl, feeling her heart light for the first time that day. "You can arrange as you like now; from to-morrow on you will find me faithful to my duties."

"Very good," replied the woman, and went out. Waldemar had not spoken a word; he sat with a grave look on his face, and spread sugar on his strawberries.

"Is that kind of thing really so distasteful to you, Hortense?"

"I do not understand anything about it," she returned, as she rose.

"Hortense," said he, "sing us a song; I believe you have not yet even opened the Bluthner piano."

"I will try it," she answered. "Come, Lucie."

The windows of the spacious salon were open and the moon shone on the pictures, on the red silk hangings, and on the mirrors let in the walls with their flowery frames crowned with Cupids.

"No light!" said Hortense to the servant, who was coming in with two lamps.

Lucie seated her self silently at the open window; she could not see where Weber was; perhaps he was in the shadow of the silken curtains on one of the little sofas.

"What shall I sing?" asked Hortense, playing lightly part of one of Chopin's nocturnes. She turned her head toward Lucie. "What do you like?"

Her wonderfully sweet voice filled the room. She began one of Schubert's songs, but stopped in the middle; then one of Brahm's. It seemed as if something rose in her throat. She stopped several times. "I will sing a song suited to the people of the 'Order of Good Humor,' she said, and began:

" 'Ein Bauer hatt ein Traubenhaus.'

But this, too, she did not finish. "Let me only play," she said; and the air of an old minuet sounded forth, as soft and light as if it had come from a musical clock of the olden time.

Lucie looked dreamily out into the garden. The spring was bubbling, and the rays of the moon lay on the green sward, where perhaps that same minuet had oft been danced. Floating draperies and fluttering sashes seemed to move before her eyes and to keep turning backward and forward.

"Do stop, Hortense!" she cried, half in jest. "You will conjure up some ghosts. I feel as if the merry company of former times must be brought to life by that music. What a pity you will not sing!"

"I can not," she said; "sentimental songs are not to my taste;" and she noiselessly shut the piano and came over to Lucie. "Forgive me, Lucie."

"Oh, no matter about me; but your husband would certainly have enjoyed hearing you."

"Oh, another time, another time," she returned, impatiently. "It is so hard to sing just because one ought to—one must feel in the humor."

In the furthest part of the room steps sounded and could be heard going through one of the doors.

"You have hurt his feelings," said Lucie.

"Oh, nonsense!" returned Hortense. "He has probably gone out to see if the grooms have taken lights into the hay loft, or some such thing, though it is the inspector's business to attend to them. If we are to spend our lives together, let us have no unnecessary formalities. You know, Lucie, I can not pretend what I do not feel. But I must not tire you any longer. Will you go to sleep now, dearest?"

"Yes," said the girl; "I am tired."

"Come, I will accompany you."

She sat by her awhile, as Lucie unbraided her hair before the glass.

"Can you imagine, Lucie," she said at last, "that he was considered the most desirable match in the whole neighborhood?"

"Your husband? Oh, yes, I can well believe it," was the answer, in a tone of conviction.

"Oh, I do not mean on account of his possessions! There were women who were passionately in love with him." She shook her head, as if it were incomprehensible, and looked questioningly at Lucie.

"He is a splendid and courtly man—why not, Hortense?"

"You think so?" She was silent for awhile, and kept twisting a blue ribbon on her finger, and looked at Lucie. "Good-night, Lucie; sleep sweetly." She pressed her lips to those of the girl and left the room.

Lucie kept standing by the window, watching the ripples of the fountain, which threw out silver sparkles in the moonlight. Thank God, she was not quite useless! she would have some work—work, which was the only thing that could help her to bear her sorrow and regret—the only thing which could make her existence here less galling, and help her to prove to Hortense her gratitude for the shelter she gave her. Nothing should be too hard for her, nothing too much, if she could only help Hortense to be happy—as she saw she was not, despite all her splendor and luxury.

Lucie kept her word. She rose early and went to the housekeeper's rooms below, and when Hortense came to the breakfast table she saw a cheerful face and found a bunch of fresh flowers by her plate. No question of domestic economy came to the young wife's ears; everything went like a clock. The servants were efficient under Lucie's directions, and the housekeeping was most successful.

Frau Nein had been ill, but Hortense did not know of it until Weber asked Lucie if her duties were not too heavy for her. She smilingly shook her head.

"No," she said, and her eyes sought Hortense. "I am more contented than I have been for a long time. I am accustomed to 'be busy.'"

But still she had always time for Hortense. She walked with her in the park; she read aloud to her; did errands in the town with her and for her. She conscientiously tried to help Hortense to bear her life, and that was not easy—it required patience. The young wife was never more capricious than now; sometimes quiet, sometimes unnaturally gay. Sometimes she would play half the day on her piano, on others she would not touch a key, even if her husband begged her. She would sometimes sleep till noon, at others startle Lucie by meeting her in the early morning as she came out of the garden with fresh flowers for her own boudoir. She would often ride for hours alone, without saying anything to Lucie or her husband, and would then be tired and worn out on her sofa.

Herr Weber let her follow every whim. He appeared to bear these changing moods with perfect calmness. No contradiction, no caprice upset his composure, he always treated her with the same gentleness and forbearance. But he ceased to ask her to drive out with him; she had repeatedly declined, and after a few days he made no more mention of anything that went on in the house or on the estate, as he had received no other answer than "Ah! is it so?"

So there was nothing for him to do but to speak to Lucie of household matters when Hortense was not present.

The house seemed deserted and forgotten by friends and neighbors. No carriage rolled through the wide-open iron gate, the golden points of which shone so brightly against the background of dark trees. No stranger's eye admired the reception-room with its coquettish blue silken hangings. Those were curious weeks in Wottersdorf during the heat of August. That sultriness which is the precursor of a storm seemed to reign in the hearts of its inmates as it did in the weather, but the storms outside broke through the clouds and let in fresh air from the mountains, but to the inhabitants of the castle no such benefit came. Each day the "Good Humor" that used to bear the scepter here, seemed to retreat further away and to have buried itself in the tomb at the end of the park where the merry Count Papillon lay. The Latin motto over the door, "Omnes una manet nox"—over one and all reigns the same night—seemed to apply to the whole place.

Yes; one and all the same night! But where was the day?

CHAPTER XXVII.

At first Hortense used to sit for hours in Lucie's room; it was so bright and cosy. The girl had arranged a corner for her sewing; on the table there was always some book she was just reading, and beside it lay the housekeeping books and a little slate for accounts. The vases on the mantel-piece were always filled with fresh roses, their fragrance pervading the room. A silhouette of her mother and a little photograph of Mathilda hung over the bed, covered by a rose-colored curtain, as if they were too sacred for the daylight.

When Hortense was there, she kept quiet and watched the girl do her accounts or sew.

"Why are you so quiet?" the latter would often ask; but Hortense had always some non-committal answer.

Lucie, with her fine tact, forbore to ask more; she only tried in various ways to make the young wife more cheerful.

"You ought to see people, Hortense," said she one day, "you need variety, and your husband, too."

"I am ready to go to Ostend with him; he does not want to."

"He has been away from home so much, Hortense."

"You have always an excuse for everything he does, Lucie. It is a pity—you would have been a much better—" She stopped and bit her lips.

The girl opened her eyes wide and looked at Hortense. "I do not understand you; please speak more clearly, Hortense."

The young wife put her arms round her friend and kissed her.

"Forgive me, Lucie; I am half crazy."

"And why are you so angry with him?"

"I am not, indeed!" stammered Hortense.

"Fraulein," cried Frau Nein, looking in at the door; she had again resumed her duties as much as she was able; "the master wants to speak to you a moment; he is waiting in the salon."

"Excuse me, Hortense; it is probably about—"

Frau Weber waved her hand. "It is a matter of indifference to me what it is about. I will wait for you here."

Lucie went; she found him at the window reading. As she entered he turned round.

"Do you know much about handwritings?" he asked. "Will you be so good, Fraulein Lucie (four eyes are better than two), to decide for me whether these two were written by the same hand?" He drew a little table up to the window, and laid down a postal card and a cutting from a newspaper that had several lines written on the white edge beside each other, and handed Lucie a magnifying glass.

The girl bent her head over them.

"I can not help reading the words," she said.

"Oh, I beg you will, also the printing. Perhaps you remember that just as I was in the act of going with Hortense to the civil contract of our marriage, a letter came to me by a special messenger. This newspaper cutting was in it. Read it."

It was an extract from a French paper, and contained the account of a scandal in Baden Baden of which Herr von Lowen was the hero. The latter had challenged Count S—, because he had asserted that he had caught Herr von Lowen cheating at cards; the count had declined to give him satisfaction, because he considered it beneath his dignity to fight with such a man, and Herr von Lowen had disappeared that same day, leaving no trace behind him. It was supposed he had gone somewhere in Belgium; but it was hoped that the police would be able to find him. On the edge the following words were written: "It is surprising that a member of such a highly honorable family as the Webers, and who have always been so particular, should marry the daughter of such a 'mauvais sujet.' The writer saw the young lady going about Baden with her father several years ago."

Lucie's cheeks glowed, "How horrid," she said.

"Please compare the handwritings. The postal card is of no consequence in itself, and not addressed to me but to a friend of mine, and was received from the person I have long suspected, and lent to me to help me in identifying the writing of the other papers."

"There is no doubt," said the girl; "the same shape, the same style, the letters just as far apart."

"I think so, too. Thank you, Fraulein Lucie."

"Who is the writer?" she asked, involuntarily.

"A person whom my sister refused more than two years ago. A nice revenge! He lives in this neighborhood; that is, he has been abroad for the last six months, and only returned a few days ago. And now I shall—"

"What will you do?" she interrupted.

"Chastise him."

"But how?"

"The 'how' is my affair, Lucie. But please do not let Hortense know anything of this just yet."

The girl turned pale. "Oh, it is always this father!" she stammered.

"Let the unhappy man rest. He is lying dangerously ill in a Belgium hospital."

"You know?"

"I know all; I know his past better, perhaps, than even his own daughter, and not only of late."

"Does Hortense suspect that?"

He folded the papers and put them in his breast pocket. "Hortense! She has never mentioned her father's name to me, and I do not desire a daughter to be the accuser of her father."

"How much she has suffered on his account! I beg of you, judge mildly of much in her on this ground," said Lucie. She did not know how she came to make these excuses; she bent her head, feeling embarrassed.

"I have no right to complain of her, Lucie," he said. "Hortense has never pretended that she loved me; I can do nothing but wait — wait in patience, and see if her heart does not at least turn to me."

He spoke these last words in a low tone. Now they were both silent.

"Be my champion," he said, at last regaining his composure. "Hortense loves you; and, Fraulein Lucie, be discreet."

He shook her hand. Much disturbed, Lucie came back and found the old housekeeper still talking to Hortense.

"Yes, that's how it was, my mistress," she went on, not allowing herself to be interrupted, "they brought him home stunned and half dead. His mother and his youngest sister, who were not then married, came here to take care of him. I am telling fraulein," she said, turning to Lucie, "how the master saved a man from drowning when the ice was breaking up one year. He was almost drowned himself, and afterward the emperor sent him the 'Kettungs Medal; that is the most beautiful decoration there is, my countess used to say, because it is only given to those who risk their own lives for others. What was I speaking of? Oh, yes! We had a merry life here when the master was well again. The ladies stayed several weeks here; they used to dance in the salon and outside in the garden in the moonlight. Now it is altogether too quiet; all my beautiful preserves and the master's fine wines are of no use. It never used to be so in Wottersdorf, even when the master kept bachelor's hall here."

The young wife drew a rose through her fingers; a faint color was in her cheeks. She looked up at Lucie, as much as to say: "What did he want of you?"

"Your husband—he wishes—"

She stopped, and was silent; she could think of nothing to say.

"What matter is it to me?" interrupted Hortense, abruptly, as she rose from her chair. "Au r?voir—at dinner."

With that she left the room.

Lucie stayed where she was, feeling very sad.

Would there never be daylight between these two beings? No, Hortense didn't love him, never would love him. He was hoping in vain. But she must speak to her once more about it, must say to her that she was wronging a heart that loved her faithfully. Yes, she would be his champion, and hers; they must be happy, these two.

[TO BE CONTINUED.]

No Difference.

Young Criminal Lawyer—I have arranged to have the prisoner's wife and babies sit in front of the jury and weep all through the trial. Do you think it advisable to pick bachelors or married men for the jury?

Old Criminal Lawyer—Oh, it doesn't make a particle of difference. If bachelors they will sympathize with the woman and babies, and if married men they will sympathize with the prisoner.

The art of saying appropriate words in a kindly way is one that never goes out of fashion and is within the reach of the humblest.—Faber.

Death From Electric Shock.

The ultimate cause of death, when due primarily to electric shock, is generally considered to be stoppage of the action of the heart or of the respiratory organs. That the latter may be affected is shown by the fact that victims of electric shock are sometimes brought to by practice of some of the well known methods of artificial respiration. The cessation of the heart's action may be due to stimulation of the nerves which control the beating of the heart. These, when stimulated to excess, may cause the heart to stop altogether.—Archibald Wilson in Cassier's Magazine.

The Consulting Caddie.

There is one personage who of late years has rather disappeared from the golfing world, but used to be greatly in evidence in it—the advisory caddie. Many of the caddies of the old Scotch school used to treat their masters (so called) much in the manner that a good old nurse treats a baby when she is beginning to teach it how to walk. In those days there was not a stroke played without the most careful consultation with these sapient mentors.—Westminster Gazette.

Placing the Blame.

Caller—So the doctor brought you a little sister the other night, eh?

Tommy—Yeh; I guess it was the doctor done it. Anyway I heard him tellin' pa some time ago 'at if pa didn't pay his old bill he'd make trouble fur him.

Plain Reasons.

Harry—Blanche says she has insuperable reasons for remaining single.

Horace—Yes, I know what they are.

Harry—Then she has told you?

Horace—No, but I have seen her.

IN SLEEPING CARS.

The M.P. Who Poured Water on a Stranger—Profane Railway Contractor—The Dog and the False Hair.

After the early passengers had come down and before the arrival of last-minute travelers, a quarette of sleeping car porters stood on the platform of the Union Station last night and "swapped" stories, says The Mail and Empire. They talked shop, if a railway car can be so considered, and after their suspicion of the newspaper man had been lulled by the opportune display of a cigar case, they spoke freely of the oddities and humors of A. Traveler, Esquire, as revealed to their observant eyes.

The yarn spun by the first man, a round-faced good-humored little porter, had to do with the error made only a few weeks ago by a member of Parliament from Western Ontario, who was traveling down to Ottawa, and taking with him his eight-year-old son. They had "lower 5," and soon after the east-bound express left the Union Station they went to bed, the lad making from time to time audible comments on the novelty of the situation, which afforded considerable amusement to the other passengers. The car was full, every berth, upper and lower, carrying a double load. The rest of the story is best told in the words of the porter, but the soft Southern darkey accent and the facial expression which added so much to the telling can only be imagined. "It was about 4 o'clock in the morning, I had collected all the boots, and was having forty winks in the smoking car, when I heard a horrible yell. I jumped for the car, and before I took two steps several more shrieks rang out, and the call bell began to ring like an alarm clock. I was sure someone was being murdered, and you can judge of my surprise when I found the M.P. clad in pajamas standing in the aisle and trying to apologize to two ladies in lower seven. The noise wakened everyone in the car, and, what with the screams, the M.P.'s explanations, and the strong language of the commercial men who had been disturbed there was a perfect pandemonium. After I had things quited down I took the politician into the smoking-room and asked for an explanation. He told me that his boy woke him up and asked for a drink of water. In order to quiet the little chap he got up, got the water, and when he arrived at what he thought was his berth he parted the curtains, which were not buttoned, and was about to lift up the little fellow's head when his supposed son screeched. Naturally startled, he spilled the glass of water and douched the sleeping woman, who screamed again and unloaded a line of "How dare you's?" and "What do you mean's?" which put the politician clear to the bad. He dressed immediately, woke up the boy, dressed him in the smoking-room, and finished his trip in the day-car.

"What did the other passengers say in the morning?" asked the reporter.

"Oh, I told them that he was going to Kingston, and that satisfied them."

Strenuous Language.

"Speaking of strong language," said the stout porter with the well-trained moustache, "reminds me of a man I used to have on the car pretty often who swore in his sleep. And it was no mincing, either, but strong, loud conversation that for the first couple of times made all kinds of trouble for me with the other passengers. He was on railroad construction work, probably had to "talk up" quite a bit to his men; and the habit stuck to him day and night. I told him one morning what a row he had been making, and he wasn't offended, on the contrary, he said, 'Porter, if you ever hear me swear again, come to my berth and hold my nose. That is the only thing that will wake me. There is a dollar in it for you each time.' Sure enough, the next week he was up with me again, and about midnight he got going. I went to the berth and grabbed his nose, but for the first time and only time. He got excited, and when still half asleep handed me a punch on the jaw that loosened all my teeth. Of course, he apologized, and he gave me the dollar, but the punch was worth twice the money. The next week I went on a new route and I haven't seen the fellow since."

"What is the funniest incident you ever experienced in the business?" asked the anxious enquirer.

The long one smiled a reminiscent smile and delivered himself as follows "About two or three weeks ago there was a party of school teachers from the West on my car for Montreal. The most of them were ladies, and good looking ones, too, but there were two or three who were certainly more than 21 years old. One of them smuggled a small pup into the car by a hand bag, and as she went to bed almost immediately, I had no suspicion that everything was not all right. She managed to keep the little brute quiet, and so there was no way of finding out about him.

"About six o'clock in the morning she got up, and I went to make up the berth. On opening the curtains I saw a rough-haired pup, about as big as a pint of cider, mixed up with a 'switch' of false hair. He was having a lovely time, and was growling in a fierce undertone. About half of the hair was torn out of the switch, and was scattered all over the place, while the dog looked like 30 cents. While I was laughing, the woman returned, evidently for the false hair. She was worried all right, but she did the best she could with the switch, and begged me to let her keep the dog until we got to Montreal. She said she would reward me, and so as we were only a few miles from the city I gave in."

"How did she reward you?"

"She gave me ten cents," said the long porter, with a sour smile, as he took the valises of a fat drummer and pointed out his car.

The fat drummer was the advance guard of the late-comers, and the porters had to go to work.

THE SONG SPARROW.

Hail! little bird, in brown and grey,
That in the earliest spring-time first
Comes north, to greet us with lay lay,
Though March winds blow and long delay
The purple lilac buds to burst.

How cheery, then, sounds thy trill!
How spirited its brave attack!
As if ye dared the lingering chill
Of slow-dispersing snows on hill
And solitary woodland track.

Our messenger of hope, art thou,
Of flowers and sunshine yet to be,
As from the bare and leafless bough
Thou pourest forth thy ecstasy,
So joyously, so lavishly.

From thy full repertoire of treasure,
Our own Canadian Philomel,
Thou bringest forth no stinted measure;
The gushing founts of song that well
Within thy heart thy strains impel
From morning star to vesper bell.

High on the spray, thou liftest thy head
When April wakes the violet,
And when the summer days have sped
And autumn dons her robes of red
And frosted sheen, thou singest yet.

Thine is no pessimistic wail,
Glad spirit of perpetual song;
The earth is thy enchanted vale,
Whose beauties all to thee belong;
Thou drinkest from the nectared grail,
And thou must sing, sweet nightingale.

—A. L. O. O.

J. C. FRANKLIN, AGED 109.

Inmate of Toronto Asylum for the Insane—Recalls His Youth.

Mr. John C. Franklin, an inmate of the Toronto Asylum for the Insane, can probably lay claim to being the oldest man in Toronto, says The Star of that city. Last fall he was brought from Bowmanville to Toronto, and has since that time been at the Queen street asylum.

Although there is no means of ascertaining his exact age, since one of his sons claims him to be 97, while the other says he is 114, it is probable that Mr. Franklin's own statement, that he is 109, is correct.

Mr. Franklin says he was born on the Bay of Dublin on Hallowe'en night, 1794, before the great Irish rebellion, and that his birth is registered in one of the English churches in Dublin. On account of his being born on Hallowe'en his grandmother made him promise never to play any game of chance, as he would always be made win by the fairies and his winnings would always bring him harm, and so, durng his whole life, he has never played any game of chance.

When 19 years of age he went from Dublin to the Loch Erne country to avoid being enlisted against Napoleon, and from that time till 1830 he remained in that part of Ireland.

About that time and the period immediately subsequent Mr. Franklin's memory is most clear. He remembers well the excitement in Ireland regarding the threatened Napoleonic invasions and the misery which followed the close of the wars.

In 1830 he sailed from Dublin to Montreal, where he lived for a year, working at his trade as a mason, and then removed to Cornwall, where he remained until the outbreak of Mackenzie's rebellion. At that time he joined the militia, and was present at the attack on the insurgents at the windmill at Prescott and later fought against the insurgents in Lower Canada, where he was wounded in the thigh by a musket ball and had his knapsack cut off by a sabre slash.

"I was a sharpshooter," said Mr. Franklin, "and give me three fingers depth of whiskey in a glass and I would never miss."

After the close of the rebellion he went to Marmora, where he remained several years, and since then he has lived at Belleville and Bowmanville.

Mr. Franklin was married twice, having in his first family three girls and one son, who was in the Life Guards, and in his second family two girls and four boys.

In spite of his great age, Mr. Franklin's mind is fairly clear and his memory accurate regarding events which took place in his youth. He is full of anecdotes of his early life in Canada and in Ireland, and is fond of relating tales of those times. Mr. Franklin has always been a hard worker and has been idle scarcely a day until he became too old to work.

"If I were to live as long again," Mr. Franklin said this morning, "I think I would enjoy life as well as ever, and if I had my strenght I would take more recreation and less work in my life."

He cannot be called insane, but his age requires that he be cared for at the asylum.

The Late Mr. Foreshaw Day.

The death of Mr. Foreshaw Day, R.C.A., which occurred at Kingston on the 22nd July, will cause deep regret not only in Canada, but throughout the Empire. Wherever the red coats of British regiments are to be seen there may be found an ex-cadet of our Royal Military College, whose memory holds dear the eccentric but kind-hearted old artist who has now crossed the horizon. For eighteen years Mr. Day was professor of free-hand drawing and painting at the R.M.C., and during that time hundreds of young men, many of whom have become distinguished, passed through his hands.

Mr. Day was born in London, England, in 1837, and was educated at Dublin and at South Kensington. He came to this country in 1862 and was for many years draughtsman in the royal naval yard at Halifax, whence he was transferred to the Royal Military College in 1879. Here he remained until the end of the college year, 1897, when old age and ill-health compelled him to retire. In 1880 he was made a member of the Royal Canadian Academy of Arts by His Excellency the then Governor-General, the Marquis of Lorne. The picture that earned him this distinction was a landscape—his forte—"Scene on the Nouvelle River, N. B." Two of his other most celebrated works are "The Grand Pre" and "Louisburg," which gained for him favorable notice in Paris.

Gold From the Yukon.

Gold from the Canadian Yukon district to the amount of $80,000,000 has been won since the first great discoveries. Last year mining machinery valued at $5,000,000 was shipped to Dawson.

A TELEPHONE SERVICE.

G. C. Hodge, district superintendent of the Canada Western Telephone and Telegraph Co., and several other similar companies practically under the same control, was in town this week with a view to installing a telephone system in Fernie. Mr. Hodge met with most satisfactory encouragement from all whom he approached on the matter. The company have charters covering nearly the whole of the province so that little difficulty would be experienced in this direction. The company have plenty of capital behind them and they propose putting in the best possible plant; the poles for instance will be forty feet in length with 10 inch tops. The promoters do not hope to realize dividends from the local service but they have plans in view for the extension of the system by which Morrissey and Michel would be connected and eventually Cranbrook, Nelson and points on the American side would be within speaking distance of Fernie. In order to make the start the Company would require about forty subscribers. The regular rates are $4 per month for business phones and $3 for private residences.

The lack of a telephone service has long been felt in Fernie. Like many other needed reforms it has been slow in making its appearance and the long suffering people of Fernie have patiently waited, confidently believing that all things come to him who waits. The convenience afforded to townspeople by an up-to-date local telephone service can only be understood after it is installed, while the advantage gained from connection with outside points can be fully realized only by a town so isolated by railway and highway communication as is Fernie.

EDITORIAL NOTES

Now for a joint meeting!

* * *

Who shot the dog? That is the question!

* * *

Button pictures are much in evidence these days.

* * *

In discussing politics it is well to remember that no party is free from imperfections; that it is just possible that the parties other than the one you support, possess certain merits; and that the other fellow has as much right to his opinion as you have to yours.

* * *

At the annual conference of The Iron and Steel Institute in England recently, the President, Andrew Carnegie, spoke of the vast strides made in these industries, and supported his statements with figures. In 1872 United States produced 2,897,000 tons of pig iron, while now the annual production approaches 20,000,000 tons. England and Germany each produce over eight million tons per year. In 1854 the world was producing 14,000,000 tons of pig iron and 280,000,000 tons of coal, while now it produces 41,000,000 tons of pig iron and 780,000,000 tons of coal.

* * *

Complaints have been made to us of the manner in which those waiting their turn at the post office wicket, during a busy spell, are often cheated out of their regular turn by rude parties pushing their way to the front and getting their mail without waiting. A line should form along the wall and none should be allowed any precedence except in the case of ladies. Such a system would not only be a great boon to those who patiently submit to such indignities, but it would also give more room to those who have lock boxes. Any who are not satisfied as to the truth of these complaints can have them verified by observation.

LOCAL ISSUES.

The attitude of the Coal Company towards incorporation has been clearly defined and the arguments pro and con this important question are thus curtailed of many "if's" and "and's" that were used in previous argument. The question now resolves itself into a purely matter-of-fact business proposition. Will a reasonable rate of taxation and license produce for the town sufficient revenue to meet the liabilities that it would incur? In other words, will incorporation pay? The surest way to determine this problem is to find out by experiment. A less expensive though scarcely as accurate a method would be to have an imaginary balance sheet made out by experts on municipal government, showing approximate estimates of revenue and expense.

There is one crying evil which perhaps calls for reform with a louder voice than all the others put together, and that is the sewage question. The town cannot go on much longer under present conditions without escaping serious epidemics. The health of the town demands that something be done without delay to improve the drainage and to put in some sort of a sewer system. The matter is a difficult one and it might with benefit to the town become a live local issue in the coming campaign.

Apart from the result of the pending elections it is safe to predict that Fernie will receive a greater amount of attention from the government than it has in the past. The growing importance of the town is fast making itself felt throughout the province. The district is now separated from that part which has been accused of receiving the lion's share of the appropriations. The government will be a party one with a well organized party-opposition, in the face of which it will be difficult to continue the lop-sided legislation of the past-and-gone governments of graft and greed. Now that the district has been divided it is only reasonable to suppose that the Fernie district will have a Government Agent of its own and that suitable government buildings be built here. These are matters that might also be made local issues.

By reading the hundred odd clauses in the Municipal Act one can get a fuller idea of the many advantages acruing from incorporation. Is the town ready for the step? How can it otherwise secure a sewer system? What government aid may be expected in the future? The subject is a knotty one, requiring most careful consideration.

73,600 TONS IN AUGUST

Output of Mines Steadily Improving. Coke Export Reaches 19,000 Tons.

The report of the output of the Crow's Nest Pass Coal Company's mines for the month of August shows a satisfactory rate of progress. The total output for the month amounted to 73,600 tons which is an increase of over 2,000 tons over last month. This increase is made up in the Coal Creek collieries, the Michel and Morrissey collieries remaining about the same.

The total coke production for the month amounted to 19,000 tons even. This is an increase of nearly 3,000 tons over previous record.

Dysentery causes the death of more people than small pox and yellow fever combined. In an army it is dreaded more than a battle. It requires prompt and effective treatment. Chamberlain's Colic, Cholera and Diarrhoea Remedy has been used in nine epidemics of dysentry in the United States with perfect success, and has cured the most malignant cases, both of children and adults, and under the most trying conditions. Every household should have a bottle at hand. Get it today. It may save a life. Sold by all druggists and dealers.

"STEVENS FAVORITE" RIFLE.

It "Takes Down."

22-inch barrel, weight 4½ pounds. Carefully bored and tested. For .22, .25 and .32 rim-fire cartridges.

No. 17. Plain Open Sights, $6.00

No. 18. Target Sights, $8.50

Ask your dealer for the "FAVORITE." If he doesn't keep it we will send, prepaid, on receipt of price.

Send stamp for complete catalogue showing our full line, with valuable information regarding rifles and ammunition in general.

REAL ESTATE

WE HAVE FOR SALE

One of the best dwellings in town. Cheap for cash.

A Cottage, $800.

A boarding house cheap and on very easy terms; 15 rooms.

Three good lots in Morrisey Mines —cheap.

These are only a few of the snaps we have. If yon want to buy or sell property in any part of the Elk River Valley, see us.

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1, That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electoral districts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

CHAS. GOLDSTEIN,
LOUIS CAROSELLA.

Dated July 28th, 1

LOCAL AND GENERAL.

Haselwood Ice Cream at Cuthbert's.

J. Connor and wife, of Michel, were in Fernie this week.

Use "Griffin Brand" brix butter, you can get none better. x

F. Robinson, of the Moyie saw mill, was in Fernie on Tuesday.

J. J. MacKay, a traveller for a Vancouver house, was in Fernie this week.

Government Agent Armstrong was in Fernie over Thursday night.

Miss M. Donaldson, of Toronto, arrived on Thursday to fill the position of milliner for the Trites-Wood Co.

As for "Griffin Brand" pig's hocks and tongues. They are boneless and cooked ready to serve. The real thing for picnic lunches.

The new pews for Christ Church arrived this week and they are being put together. They are of a neat and comfortable design.

G. R. Mason, of Kamloops, has replaced H. Winsley in the Bank of Commerce here, the latter having been transferred to Nelson.

Messrs. Jaffray, Mason and Lindsey, directors of the Coal Co., left Fernie on Tuesday morning's train for their homes in Toronto.

Found — Gentleman's gold watch. Owner can have same by calling at the East Kootenay Bottling Works and paying for this advt.

The location of A. J. Purdy & Co's. store is well fixed by a huge sign painted on the side of the building this week. W. Hawthorne is the artist.

John Bastian left on Monday evening for Banff where he has secured a contract in the development work in opening up some C.P.R. coal claims.

The C. P. R. bridge west of Elko about a mile and a half slid off its rock foundation last Sunday, necessitating a transfer for a couple of days and delaying traffic considerably.

A party of surveyors consisting of R. H. Stewart, of Crows Nest; H. P. Renwick and J. G. Demon, of Rossland, left Fernie on Thursday evening for Michel on a survey expedition.

A. P. Walker, accompanied by his wife, Miss Kidwell and O. N. Ross were down at Galloway on a camping expedition this week. They returned on Thursday with a fine deer.

C. O. Demaurez wears a broad smile these days. No doubt his profitable investment in Reliance stock is partly responsible. He wonders that people would bet on a sham loaded with rock.

Rev. D. L. Gordon attended the Kootenay Presbytery at Rossland last week. Among other business transacted it was decided to separate Morrissey and Michel missions, giving each a missionary.

A banquet is to be given by the Board of Trade this evening in honor of F. Stephens, the C. P. R. agent, who leaves on Monday for his new field of work at Calgary. The event promises to be an unusually pleasant affair.

A party of railway officials consisting of C. H. Sloane, Philadelphia; C. Wendnoth, Cresson, Pa., and R. W. Shoop, Freeport, Pa., stopped off at Fernie on Thursday to visit their friend, Mr. J. H. Tonkin. They proceeded west yesterday.

F. J. Mitchell received a wire on Thursday from his wife at Moosejaw informing him of the death of her mother, Mrs. J. H. Bruebaker. The deceased lady had been suffering for a long time from that dread disease, consumption. Mrs. Mitchell will return to Fernie next week.

The mutilated remains of a murdered man was found by a squaw on the Blood reserve near Macleod this week. The murdered man was one of two land seekers who were seen camping near the scene of the crime a by indians week previous. The police are after the companion who is regarded as the perpetrator of the foul deed.

The Salvation Army will celebrate the "Annual Harvest Thanksgiving Festival" from Saturday, Sept. 19th to Tuesday Sept. 22nd, inclusive. The officers in charge of the local corps solicit from the public a tithe of the bountiful blessings of field and store, in kind or cash, as a thank offering to God. Anything received will be turned to good account to support the numerous benevolent institutions, as well as to continue to extend the evangelical work of this successful organization.

A runaway which caused no little excitement occurred on Victoria Avenue on Thursday afternoon. A heavy team attached to a light load of lumber were left standing on the street, and becoming scared they started off going through the central part of the town at a very respectable gait. At Purdy's corner an attempt was made to stop the runaway, which caused the team to swerve in towards the Victoria hotel where the waggon wheel came in contact with an electric light post with such violence as to effectually stop its progress and throw the off horse to the ground. Everything miraculously escaped injury and not even a stick of lumber was displaced.

A. Klauer was indisposed several days this week.

R. Black left this week for Calgary on a business trip.

T. R. Stockett was at Michel a couple of days this week.

Mrs. Roaf left on Sunday evening for her home in Toronto.

Chas. Reid the druggist at Blairmore, will move his stock to Cranbrook.

T. Poag, of the Alberta hotel, returned this week irom a visit to Spokane.

Harry Jarman left for Michel this week to assist in hay-making operations.

Messrs. Cree, Alexander and Herchmer returned on Wednesday from their outing at Banff.

Mr. J. F. Jarvis, Mrs. Jarvis, and Mr. Pitblado are camping below Elko for a few days fishing.

Mr. Rae, of Ottawa, arrived in Fernie on Tuesday and is the guest of his daughter, Mrs. McEvoy.

S. Manahan who this week severed his connection with the Hotel Fernie will go into the lumber business at Marysville.

The sale of Crow's Nest coal lands to the C. P. R. as reported in our issue of two weeks ago, has been denied by Mr. McInnes.

Frank Dunn and Chas. Laderoute have purchased S. Manahan's interest in the Fernie Hotel. They took possession this week.

W. Wilmot, formerly of the firm of Cox and Wilmot, of this place, returned to Fernie this week to accept a position in W. F. Cuthbert's store.

Heavy frosts occurred a couple of nights this week and cut down the tender vegetation. The weather, day and night, has been clear and beautiful.

Miss Watson, of Fort Steele, was married to H. B. Haines at Winnipeg this week. Mr. Haines is manager of the Bank of Commerce at Treherne.

Chas. Richards left on Tuesday on a flying trip to Winnipeg where he had important business to attend to. He expected to be absent less than a week

Chief Constable McMullin, accompanied by his wife, leaves to-morrow for a three week's holiday in the Okanagan Valley where Mrs. McMullin's relatives reside.

Buy a Mason and Risch piano. Sweet in tone, durable, and artistic in finish, endorsed by the leading artists and musicians of Canada. Terms and prices reasonable. H. L. Staebler, agent.

Wm. J. Lawrence is up from Moosejaw this week on account of the severe illness of his daughter, Laura. The little patient has been very ill during the week but we are glad to report a change for the better.

A marriage ceremony was performed in the court house on Thursday afternoon by the Rev. P. H. McEwen by which Evan John, miner of Coal Creek, and Mary John, recently of Wales, were made man and wife. The newly married couple are taking up house-keeping at the mines.

Rev. P. H. McEwen left this morning for Nelson where he will preach in the Baptist church to-morrow. Rev. C. R. G. Poole, of that place, will preach in the Baptist church here, to-morrow morning and evening. Mr. McEwen will be away all next week, visiting points in the Boundary Country in his official capacity as Superintendent of Missions.

R. Moore left recently on a trip to his home in Ireland.

Miss McEachern, of Lethbridge, was visiting Miss Dunlop this week.

R. A. McMordie returned from a trip to the Boundary County on Wednesday.

F. E. Simpson, of the Cranbrook Herald, was in Fernie over Monday night.

E. C. Smith spent several days in town this week. He also visited Michel and Morrissey.

The south end of Victoria Avenue has been greatly improved by the construction of new plank side-walks on both sides of the street.

R. Josling, of Michel who has been employed in the Coal Company's office for some time left this week to resume his work at Michel.

Father Strocky, of Edmonton, is visiting his friend, Father Milleux, for a few days. The reverned gentleman is a monk in the Greek Church.

Several fishing and hunting parties are leaving town for neighboring points along the Elk. The fishing is reported to be excellent and grouse are plentiful.

A. K. Farquharson was charged in the police court this morning by C. O. Demaurez with having shot the latter's dog. The case was dismissed as the prosecution failed to prove the charge.

G. T. P. BILL PASSED

The debate on the Grand Trunk Pacific bill which started over three weeks ago was ended on Wednesday when a division was taken. The government was sustained by a majority of 46. Tarte, Blair and Puttee, of Winnipeg, voted with the opposition. All of the proposed amendments were voted down

COMING TO FERNIE.

Toronto, Aug. 29.—The Canadian Manufacturers' Association have just completed arrangements for the western trip of the members of the association. They leave here on September 20th, and will spend two days at both Vancouver and Victoria. They will stop at Banff, Field, Glacier, Revelstoke, Rossland, Nelson, Kootenay Landing and Fernie.

COAL CREEK MINES.

(From Our Own Correspondent.)

Miss Jennie Alder is ill with typhoid fever.

The school was reopened on Monday with T. C. Colwell as teacher. Miss McNee, sister of Miss McNee, bookkeeper for the Trites-Wood Co., has been engaged as regular teacher and she is expected from Ontario by the 14th.

J. A. Broley commenced work on the new Methodist church this week.

All the new houses are being quickly occupied. Mr. and Mrs. Mitchell are soon to return to the coast and Mr. Webber will occupy their house. The superintendent's house is nearing completion. It is one of the finest residences here.

Masons are at work this week installing the new machinery for the cable.

Miss Ker, of Lethbridge, is visiting Mrs. Duthie.

When you do not relish your food and fell dull and stupid after eating, all you need is a dose of Chamberlain's Stomach and Liver Tablets. They will make you feel like a new man and give you an appetite like a bear. For sale by all druggists and dealers.

We have opened up a variety of sideboards at prices to suit all purses.

J. D. QUAIL..

Hardware. Furniture.

"CROSSED THE BAR"

LORD SALISBURY PASSES TO GREAT BEYOND.

Short Biography of the Distinguished Ex-premier of Great Britain--King Edward VII Pays a High Tribute to the Great Statesman.

London, Aug. 22.—Lord Salisbury died peacefully at 9:05 o'clock tonight. For forty-eight hours it was seen that the end was inevitable Even the administration of oxygen failed of effect. This evening, a few minutes after 9 o'clock, the former premier turned slightly towards his favorite daughter, Lady Gwendoline Cecil, who was kneeling beside him and then quietly breathed his last. All the members of his lordship's except Lord Cecil, were at the bedside.

Viscount Cranbourne immediately notified King Edward and Queen Alexandra, the Prince and Princess of Wales, and others, including Lord Salisbury, who is now in Egypt, and who was the only child of the Marquis absent from the deathbed. Scores of telegrams of condolence were received at Hatfield house.

The death of Lord Salisbury occurred on the fiftieth anniversary of his entrance into public life as a member of the House of Commons for Stamford.

The elevation of Lord Cranborne to the House of Lords creates a vacancy in the Rochester district and probably will entail the selection of a new under secretary of foreign affairs. The ex-premier, though retired from political life, was an important figure in many public ways. He was warden of the Cinque Ports, high steward of Westminster and chancellor of Oxford University. His death places an order of knighthood of the garter at the disposal of King Edward.

TRIBUTE FROM HIS KING.

King Edward's tribute to the deceased Marquis of Salisbury is given in the Court Circular, dated Marienbad, Sunday. It runs as follows:

"The King has received with profound regret the news of the death of the Marquis of Salisbury, and His Majesty deeply deplores the loss of so great a statesman, whose invaluable services to Queen Victoria, to the King and his country in the highest offices of state which he held for so many years will ever dwell in the memory of his fellow countrymen."

Robert Arthur Talbot Gascoigne-Cecil, Marquis ol Salisbury, K.G., P.C., D.C.L., was born on February 13, 1830, at Hatfield House, the seat of the family, founded by William Cecil, Lord Burleigh. He was educated at Eton and Oxford, and entered the House of Commons as member for Stamford, in the Conservative interest, in 1853. He sat until 1868, at first under the title of Lord Robert Cecil, and after the death of his elder brother as Viscount Cranborne.

In July 1866, he became secretary of state for India in Lord Derby's ministry, but resigned in the following year owing to a difference of opinion with regard to the Reform bill. In 1868 he succeeded to the Marquisate of Salisbury on the death of his father, and in 1869 he was elected chancellor of the University of Oxford.

When Disreali took office in 1874 Salisbury again assumed the duties of secretary of state for India, and on the retirement of Lord Derby from the cabinet in 1878 he became secretary of state for foreign affairs, signalizing his accession to this office by a strongly worded circular on the eastern question. In 1880, the Beaconsfield government, of which he was a member, was ejected from office, and on the death of Lord Beaconsfield in 1881, Lord Salisbury was chosen leader of his party in the House of Lords. He again came into power in 1886, when the Liberal government was defeated on the Irish Home Rule bill. In 1892 he resigned office and the Liberal (Home Rule) party returned to power under Mr. Gladstone.

After the general election in 1895, on the retirement of Lord Rosebery, Lord Salisbury was called upon to form a ministry, and he responded by forming a cabinet which embraces both sections of the Unionist party; the Duke of Devonshire, Mr. Chamberlain, and Lord Lansdowne, leaders of the Liberal-Unionist party, consenting to accept office with Conservatives as colleagues.

As a parliamentary speaker, Lord Salisbury was distinguished for the force and weight of his utterances, as well as for the cutting satire he had always at his command. As a disciple of Lord Beaconsfield he approved of an "Imperialistic" policy, and was profoundly convinced that England could not, with dignity and safety, follow the policy of the Little England party.

From a Russian source it is announced that King Peter of Servia may resign.

Alberic Petrin, of Winnipeg, was held up by an unknown man on Saturday night, and had his thumb shot off.

The financial statement of the Province of Quebec, published for the year ending June 30, showed a surplus of over $169,000.

Eastern Canadian and English capitalists intend establishing immense pulp mills on Princess Royal Island, British Columbia.

Two men were electrocuted at Ottawa. One was a lineman who came in contact with the electric railway wire. The other was an electrician working in the collegiate institute. Two women of Ottawa were severely injured in a street car collision.

WAR OFFICE CENSURED.

Royal Commission Urges Necessity of More Intelligence in the Staff.

A London cable says: The report of the royal commission on the South African war was issued on Aug. 25. It refrains from commenting on the conduct of individual officers, but strongly condemns the lack of preparations for war. It endorses Lord Lansdowne's opinion that such a condition is full of peril to the empire and says an unsatisfactory and insufficient safeguard has since been suggested to prevent a recurrence of so serious a scandal.

From the beginning to the end of the war, 448,435 troops were engaged, and owing to the drain caused by the South African defence, Great Britain became dangerously weak in 1900. The commission confirms the necessity for a higher degree of intelligence in the men and a well educated staff.

Lord Esher, a member of the commission, in a supplementary report, says the unpreparedness of 1899 shows the war secretary was guilty either of culpable negligence or ignorance of the facts, and urges the re-organization of the war office, the abolition of the position of commander-in-chief, and the appointment of a general commanding the army, separate from the war office.

A GIGANTIC MAMMOTH.

On View at the St. Petersburg Academy of Sciences.

The Academy of Sciences in St. Petersburg lately received an extraordinary acquisition—a complete gigantic mamoth with even its skin in a perfect state of preservation. When the news came that such a mammoth had been found the academy sent out an expedition under Dr. Otto Hertz, to the spot, a wild place on the bank of the Berezovka river, where a recent landslide had disclosed the gigantic animal's body. Dr. Hertz's party had the greatest difficulty in getting the animal out of its bed. A wooden house was built and big fires lighted to thaw the ice. At last it was all removed and got to St. Petersburg from Irkutsk. The hide was perfect and alone weighed 820 pounds. It is covered with thick, strong hair, from eight to twenty inches long. The flesh, according to expert geologists, must have lain in the earth and ice about 20,000 years. It is blood-red, and has a certain elasticity. Between the flesh and the hide is a coating of fat three inches and a half thick, which must have enabled the mammoth to bear the most intense cold. The stomach, found intact, was filled with various kinds of grasses, and the teeth were lined with vegetable matter, indicating that the animal was feeding when suddenly buried.

HAS SERVED 14 YEARS.

Mrs. Maybrick Will Be Released on July 26th 1904.

Mrs. Florence Maybrick, the American convicted of poisoning her husband, and for whose release scores of petitions have been presented the British home secretary, has just completed fourteen years of her sentence, and, subject to good conduct, will be released on July 26 next year. She is now in her forty-second year and enjoys good health. She has been chiefly occupied in Aylesbury jail in bookbinding.

The judge who tried her at the Liverpool assizes and the counsel who defended her, Lord Russell of Killowen, are both dead. Her two children are now nearing 20 years of age.

On her release Mrs. Maybrick intends proceeding to America to prosecute the claims of her mother, the Baroness von Roques, and herself to property valued at over a million sterling.

Drowned by Hundreds.

According to advices received from Shanghai several hundred lives were lost in the great floods at Cheefoo, which have been briefly reported. After a thunderstorm, with heavy rain, a cloudburst occurred and torrents of water poured down on the town, rushing forward and carrying houses, buildings, trees, people and everything before it.

Stores and warehouses were floored by the sudden flood and the property loss will reach millions. The water came down with such force as to sweep four hundred tons of coal out to sea. The beach was strewn with wreckage and dead, and presented an awful sight. Over three hundred Chinese were known to be dead at Cheefoo alone. No foreigners are known to have been drowned, but a sailor from the United States steamship New Orleans had a narrow escape.

Masked Thieves at Atlin.

A special dispatch from Caribou Crossing says that many robberies of sluice boxes have been committed during the past few days on Spruce Creek, Atlin. The biggest robbery was that from the sluice boxes of the Atlin Mining company, of which R. D. Featherstonebaugh is manager. Four masked men held up the watchman on Monday night while the crew were at supper. They cleaned up the pay boxes, secured about $15,000 and then made their escape, leaving the watchman bound and gagged. The watchman managed to break his bonds and gave the alarm, but the thieves got away.

NEWS NOTES.

Cloudbursts in Iowa did awful damage on August 26. Rivers overflowed their banks and railways were tied up.

The people of Naples were terrified by a spectacle they saw on Mount Vesuvius. Another crater opened and belched forth red hot lava.

MOVING THE CROPS.

C.P.R. and C.N.R. Say They Can Handle it Successfully.

A dispatch from Toronto says: Mr. Timmerman, of the C. P. R., says that the company are in a good position to handle the Manitoba and Northwest crops. The Canadian Pacific have received a number of new engines ordered from Scotland and elsewhere, as well as hundreds of new freight cars, and by this great addition to the rolling stock the company expects to be able to handle all the wheat offered.

The Canadian Northern railway company have received thirty-one new locomotives from the Kingston Locomotive works. These locomotives are of the most powerful description used in the west and in addition the company have 1,300 new box cars, each capable of carrying 1,000 bushels of wheat. With this greatly increased equipment and with the immense new elevator at Port Arthur, the company will, in the opinion of the management be able to effectively handle all grain along the company's route.

In addition to this extra rolling stock on the two railways the harvest will be about ten days earlier than last year's. If navigation remains open until the same time as 1902 there will be ten days longer in which to move grain, time sufficient for the two companies to carry several million bushels from Winnipeg to Port Arthur.

ESTIMATE OF CROP.

Report of Northwestern Grain Dealers is Issued.

The Northwestern Grain Dealers' association issued on August 26 their annual report showing their findings on the yield of all grains in the west. They have found from a careful inquiry at all points that the estimated yield of wheat this year will be 57,163,032 bushels, a yield per acre of 18.3 bushels. Oats are heavy, running 36.7 bushels to the acre, a total of 40,418,021 bushels.

The report in full is as follows:

Wheat—Area under cultivation, 3,123,663 acres; estimated yield, 57,163,032 bushels; average per acre, 18.3 bushels.

Oats—Area under cultivation, 1,101,333 acres; estimated yield, 40,418,921 bushels; average per acre, 36.7 bushels.

Barley — Area under cultivation, 381,135 acres; estimated yield, 10,900,461 bushels; average per acre, 28.6 bushels.

Flax—Area under cultivation, 64,639 acres; estimated yield, 743,348 bushels; average per acre, 11.5 bushels.

Dollar Wheat Predicted.

A dispatch from Toronto says:—There is a good deal of talk here about dollar wheat this fall in view of the shortage in the world's crop. A few dealers predict that price. Leading millers when seen regarding the wheat and flour situation said that at present there is no scarcity of wheat for their use, the mills having about all they can handle.

It is possible, too, that wheat will go to the dollar as a great deal of speculation is going on among farmers and operators. Flour is not advancing in price as compared with the rise in wheat, yet figures for breadstuffs generally remain firm and indications are for a rise. The standard of the grain this summer is only ordinary, but yet not below the average.

Banner Fruit Crop.

Reports from British Columbia state that the Okanagan valley has produced a banner fruit crop this season. In all branches of horticulture and fruit growing it has been an excellent season in the Okanagan. Already shipments are being made to Manitoba and the Northwest. The Edmonton district in the Northwest, which is attracting so much attention, is proving this year a splendid market for British Columbia fruit. The rapid increase in the number of settlers entering that grain-producsection of the great Northwest is making it a good market. The transportation is very easy, and brings that market within easy reach of the Okanagan.

NEWS NOTES.

A hurricane in the Cayman islands on the 24th inst., caused great loss of life.

Mr. Sol Taylor, of Lariviere, Man., was attacked and slashed with a knife by an Ontario man, whom he was driving to a farm.

C. R. Devlin, M.P. for Galway, in an interview at Ottawa, said that he looked for an early election in Great Britain. The Irish party, he says, is ready for the fight.

TROTTING RECORD BROKEN

Lou Dillon Goes a Mile in Two Minutes Flat at Readville, Mass.

Before a great crowd of spectators at Readville, Mass., on Aug. 24 Lou Dillon trotted a mile in two minutes and broke the world's record. The weather and track conditions were practically perfect when Millard Sanders, driver of the Dillon mare, brought her out. For pacemakers Peggy-from-Paris and Carrie Nation were used. On the first score Lou Dillon made a break just before reaching the wire. On the second attempt the word was given. Driver Tanner kept Peggy-from-Paris directly in front of the peerless chestnut trotter, while McCoy laid at her wheel. In this way the trio were at the quarter in 30¼ seconds. With never a skip. Lou Dillon went down the track stretch. The half was trotted in 1.00¾. Around the turn to the three-quarters pole the pace quickened, the third quarter being done in 30¼ seconds. Then came the real test. Faster, and faster came the leader runner and right with him trotted the handsome Lou Dillon. The amazement of all was the last quarter, which was completed in 29¼, thus making the mile in two minutes flat. The announcement caused thousands of spectators to jump to their feet with cheer after cheer.

Lou Dillon was apparently as fresh at the finish as though she had only been out for a jogging exercise. Sanders said he fully believed that before the season closes he will drive the mare in 1.55 or better.

A GIGANTIC ROAD.

Hudson's Bay and South America Railway is Incorporated.

A dispatch from Guthrie, O. T., says: Plans for a gigantic railroad, with a trunk line connecting Hudson's Bay with British Columbia, Buenos Ayres, South America, and having a network of branches, has been disclosed and articles of incorporation of the Pan-American Railway company, with a capital stock of $250,000,000 were filed here with the secretary of the territory.

The purpose of the corporation, it is said, is to build a line of railway extending from Port Nelson, Hudson Bay, in a southerly direction, crossing the line of the Canadian Pacific at Winnipeg, thence through the Dakotas, Nebraska, Kansas, Oklahoma and Indian Territory to Galveston.

Holocaust at Buda Pest.

Buda Pest, Aug. 24.—Between 40 and 50 persons were burned to death, in a fire last night in a four-story building here. The two lower floors of the building were occupied by a fancy goods firm named Goldberg, and the upper floors as residential flats. There were 200 working people in the building, and the escape of many of them, and of the residents of the third and fourth floors was cut off.

The warehouse contained piles of flimsy material, and the flames spread with great rapidity. Only the workpeople near the doors below were able to escape. The residents above, seeing their escape cut off, clung desperately to the windows, screaming for help.

Fifteen persons were saved by jumping into fire nets. Many jumping missed the nets, thirteen being killed in this way. Sixteen others were fatally and nine seriously injured. Several buildings near by caught fire, but the firemen extinguished the flames in those before heavy damage had been done. The damage is estimated at 400,000 kronen, mostly covered by insurance.

Later advices say that 120 persons perished in the fire.

A Scientific Marvel.

The announcement is made that Prof. Jacques Loeb, in a series of experiments he has just completed at the University of California, succeeded in demonstrating that the eggs of animals containing both sexes can be fertilized and developed into animals through physical and chemical agencies, technically artificial parthenonchises. This latest discovery of Dr. Loeb's is in direct sequence in a line of investigation already carried to successful conclusions in the case of echinodems and annelids. By the manipulations of sea water, through various chemicals, he produced a solution into which the eggs of the animals were placed. Then without the intervention of any male principles, these eggs proceeded to develop in the same fashion as if they had been fertilized.

More cattle have been shipped already this season than in any previous year from the port of Montreal.

The Canadian Pacific railway has given a rebate of 25 per cent. on freight rates between Vancouver and Calgary.

In the Mining Camp

With the **Victor Brand** of **Evaporated Cream** the miner in his camp and the lumbermen in his shanty can have all the good things to eat and drink that would be possible with a Jersey cow in the outfit.—For purity, richness and keeping qualities "Victor" is unequalled.

Sold by all Grocers, Dealers and Outfitters.

Mfd. by The Charlottetown Condensed Milk Co., Charlottetown, P. E. I.

IN HARVEST FIELDS

CANADIAN NORTHERN RAILWAY CROP REPORT.

Cutting Has Been Delayed in Some Districts By Unfavorable Weather--Some Yields of Twenty Five Bushels per Acre are Reported.

The latest Canadian Northern crop report, issued on August 25, is the most satisfactory that has been issued since the early spring reports appeared. Agent after agent wires that the "crops have turned out better than expected"; some report that the average yield of wheat to the acre will go from 16 to 22 bushels, and at Gilbert Plains the "wheat will average at least 25 bushels to the acre, and there will be fully 500,000 more bushels handled here than last year."

The oats and barley harvests, as well, are reported splendid and the only unfavorable feature to the 1903 harvest is the cool, wet weather. So far it has only caused an irritating delay, perhaps, to the harvest, and the farmers now look for the beaming rays of old Sol again.

The report in full is as follows:—

RAINY RIVER SECTION.

Steinbach—The weather is unfavorable. Harvesting is progressing fairly well. About two-thirds of the crop is cut, and it turned out a great deal better than expected. Wheat will average 20 bushels to the acre, and oats and barley are an exceptionally fine crop. No damage of any kind is reported, and weather permitting the crops will be all safe by the end of next week.

Ste. Anne—The weather is favorable. Barley and oats are all cut and stacked. Wheat will be all cut in another week. The wheat is not so heavy on old land as on the new. Barley is a splendid crop. No damage of any kind is reported.

Lorette—The weather is unsatisfactory. The farmers are unable to cut their crops. There has been rain all week.

DAUPHIN SECTION.

Eli—All the oats and barley are cut, and about 80 per cent. of the wheat, and if the weather keeps dry stacking and threshing will be in full swing about the middle of next week. Farmers say that the wheat will be a first-class sample, and that the yield will be higher than was expected.

Oakville—Grain cutting is in full blast and promises a heavy yield. Threshing commences Monday, August 24.

Portage la Prairie— Harvesting is progressing rapidly. A slight delay has occurred on account of the rain. Barley and oats are all cut, and about 25 per cent. of the wheat is cut.

Beaver—Wheat cutting is now general. Oats and barley are nearly all off and were a fairly good crop. The wheat is well filled and will average 15 bushels to the acre.

Gladstone—Several pieces of wheat have been cut during the week, and in most cases the grain is fully up to expectations in well developed heads and weight of grain. Cutting will be general during the coming week. Weather conditions are favorable.

Ochre River—Harvesting has commenced. Barley is being cut and wheat cutting will commence next week. The weather is more favorable. It is stated by many that the wheat here is equal to any in the province. Considerably more grain will be marketed here than last year.

Makinak—The weather has been very favorable to ripening grain and cutting will commence next week. A good yield is expected of all kinds of grain.

Plumas—Harvesting in this district commenced about the middle of the week. The weather so far has been favorable for cutting.

Dauphin—The crops around here were never better. Some wheat and a considerable amount of barley have already been cut. Harvesting will be general next week.

Ethelbert—The weather this week has been more favorable for the crops. A small quantity of wheat has been cut. Cutting will be general next week. The wheat will average 25 bushels to the acre, and oats 40 bushels.

Minitonas—Barley is all cut. Wheat will be finished by next week if the weather keeps fine. No damage by frost yet.

Swan River—The crops are coming in fairly good, but the weather is too dull to ripen them quickly.

GILBERT PLAINS.

Gilbert Plains—The crops are well advanced. Cutting has commenced and will be general next week. Wheat will average at least 25 bushels to the acre, and as there is a much larger acreage there will be fully 500,000 bushels handled here more than last year. Heat is ripening the crops fast.

Grand View—The crops are looking better than any previous crop. Harvesting will be general next week.

CARMAN SECTION.

Sperling—About two-thirds of the grain is cut and in stook. Harvesting is greatly kept back by rainy weather, but apparently no damage has been done. Threshing will commence the beginning of next week.

Carman—One half of the wheat will be cut this week. The showery weather this week has retarded cutting to some extent. Threshing will now be in order. In one case, weather permitting, it will commence on August 24.

NEEPAWA BRANCH.

Neepawa—This section of the country has been visited by hail this week, but no damage is reported. Oats and barley are being cut, and wheat cutting should be general next week. No damage by frost reported.

EMERSON BRANCH.

Ste. Agathe—Cutting is now general and will be finished about the 29th.

Morris—It will take about a week to finish cutting in this vicinity. The crops will probably average 14 or 15 bushels to the acre.

St. Jean—About 75 per cent. of the grain is now cut. Nearly all grain will be cut by the end of next week if the weather keeps favorable. Threshing is in full swing.

Letellier—Cutting is going on quickly. The weather is fair. The crops have a fair appearance. Some threshing will commence middle of next week.

Emerson—The past four days have been favorable for cutting and the bulk of the grain is down. The average for wheat points to 18 to 22 bushels to the acre, with a good sample.

BRANDON SECTION.

Myrtle—Cutting is practically finished and threshing commenced on Thursday last. Wheat is turning out fairly well and is a good sample.

Roland—Cutting is practically finished and farmers are busy stacking. Threshing has commenced, but will not be general for a few days. Weather is backward, with heavy rains during the first part of the week and some hail, but no damage to speak of has been reported.

Rosebank—Wheat cutting is well advanced. Quite a number have finished. The wheat is turning out better than expected. The weather is favorable and no damage from hail or frost. Plenty of harvesters are on hand now, which will rush the harvest through.

Miami—With the exception of a few heavy rains in the early part of the week, the weather has been favorable for threshing operations. Ninety per cent of the grain is now cut. Stacking and grain stooking will be general next week.

Altamont—The crops are in fine condition and about 40 per cent. cut. Stacking will commence next week.

Somerset—The weather for the past week has been dry and fine. Harvest is progressing favorably. No frost to date.

Swan Lake—Most of the crop in this district is now down. Stacking has commenced. Some parties will be threshing by the end of the week.

Baldur—Harvesting is now well under way. A number of farmers will finish wheat cutting by the middle of next week. Wheat is a good sample. Recent showers and warm weather has ripened the grain very fast.

Belmont—Cutting is now in full swing. Some farmers are about through with their wheat, the weather having been a great deal more favorable for cutting than last week. A conservative estimate of the average yield is 12 bushels to the acre.

Hilton—The weather has been very unsettled up to the 20th, being broken up by light showers almost every day. Everybody is hard at cutting now, and about one-fifth of the crop is cut. If the weather is favorable next week the bulk of the crop will be cut. There are a few farmers whose yield is expected to be twenty-five bushels to the acre, but the average will be about 15 bushels.

Wawanesa—Cutting is now general. The weather might be a little more favorable. The yield of wheat will be about sixteen bushels to the acre.

Methven Junction—The past week has been exceedingly favorable for all crops. Cutting has commenced all round this point. Some fields will go fully twenty bushels to the acre, and none less than fifteen.

Rounthwaite—Cutting is now general. The weather of the past few days has been ideal for harvesting, although the early part of the week was showery. It is expected that the bulk of the wheat will be cut the coming week if the weather keeps favorable.

Brandon—The weather is warm and favorable. Cutting is now in full swing. The probable yield is about twelve bushels to the acre.

SOURIS SECTION.

Ninette—We have had some rain this week, but the last few days have been very warm, which will help to make the grain a good sample. Cutting is now general.

Dunrea—The weather since the last report has been fine and warm. Wheat cutting is general.

Margaret—Wheat cutting is about half finished. There has been no damage.

Minto—The crops are lookiog much better than expected. The weather is very favorable, and unless we get frost the yield will be very fair. The average for wheat is sixteen to 20 bushels to the acre, and in some parts twenty-two bushels.

Fairfax—Wheat cutting commenced in this district the first of the week and is progressing satisfactorily.

Elgin—Cutting is in full swing now and the yield promises better than looked for a month ago. The weather is very favorable.

Hartney—Wheat cutting is in full swing and the weather is ideal for harvesting, being dry and warm. The wheat is thicker on the ground as cutting progresses than was expected, and a twenty bushels per acre yield will be fully realized. There is no damage by hail or frost.

Japan has made arrangements to borrow $100,000,000.

After Jan. 1, General Taft will be the United States secretary of war.

A MEDICINE FOR THE MINER'S PACK.—Prospectors and others going into the mining regions where doctors are few and drug stores not at all, should provide themselves with a supply of Dr. Thomas' Electric Oil. It will offset the effects of exposure, reduce sprains and when taken internally will prevent and cure colds and sore throat, and as a lubricant will keep the muscles in good condition.

The man who wants the earth is the very one the earth can get along without.

Minard's Liniment Cures Diphtheria.

Even a first mortgage isn't always satisfied.

A CURE FOR FEVER AND AGUE.—Parmelee's Vegetable Pills are compounded for use in any climate, and they will be found to preserve their powers in any latitude. In fever and ague they act upon the secretions and neutralize the poison which has found its way into the blood. They correct the impurities which find entrance into the system through drinking water or food and if used as a preventative fevers are avoided.

Fortunate is the man whose friends are all good and his enemies all bad.

Lever's Y-Z-(Wise Head) Disinfectant Soap Powder is better than other powders, as it is both soap and disinfectant.

The colonies of the world have one-third of its population.

Minard's Liniment Cures Distemper.

The Antiquity of the Ballet.

Strictly defined, the ballet is properly a theatrical exhibition of the art of dancing in its highest perfection, complying generally with the rules of the drama as to its composition and form. It was in existence in Italy as far back as A. D. 1500, the court of Turin in that day making especial use of it and the royal family and nobles taking part in it. The ballet was first introduced in France in the reign of Louis XIII., and both that monarch and Louis XIV. occasionally took part in its dances.

In its earliest presentation the ballet appeared dexterously in combination with the other theatrical acts and is said to have "completed the chaotic medley exhibited in these spectacles, which were at once mythological, allegorical, fantastic, warlike and pastoral." The reader will not be slow to observe that its development in the present day has not apparently lost sight of these conditions.

About the year 1700 women made their first appearance in the ballet, which up to that time had been performed exclusively by men, as was the case also with plays and operas, but no woman ballet dancer of any note appeared until 1790.

Comets and Women.

The analogy between comets and women once formed the subject of the following peroration from an evening contemporary: "Comets doubtless answer some wise and good purpose in the creation; so do women. Comets are incomprehensible, beautiful and eccentric; so are women. Comets shine with peculiar splendor, but at night are most brilliant; so are women. Comets are enveloped with a lucid nebula through which their forms are visible; so are those of women in their light and elegant attire. Comets confound the most learned when they attempt to ascertain their nature; so do women. Comets equally excite the admiration of the philosopher and of the clod of the valley; so do women. Comets and women are therefore closely analogous, but, the nature of each being inscrutable, all that remains for us to do is to view with admiration the one and to love the other to adoration."

Menelek and the Missionary.

A story is told of an attempt made by a Swedish missionary to obtain a foothold in Abyssinia. No sooner had he begun to preach than he was brought before King Menelek, who asked him why he had left his home in Scandinavia in order to come to Abyssinia. The missionary promptly replied that he had come to convert the Abyssinian Jews. "Are there no Jews in your country?" asked Menelek. The missionary admitted that there were a few. "And in all the countries that you have passed through did you find no Jews or heathens?" the king continued. "Jews and heathens," the missionary admitted, "are plentiful." "Then," said Menelek, "carry this man beyond the frontier and let him not return until he has converted all the Jews and heathen which lie between his country and mine."

Coltsfoot Tobacco.

Coltsfoot tobacco is smoked by the rustics in small country places in England and is called by them "the finest remedy on earth for catarrh." It is simply a powdered form of the leaves of the common coltsfoot, a plant found growing wild in chalky soil.

THE ATHLETE'S HEART.

In the Rowing Man It Is Strong and Well Developed.

A prominent member of the faculty of the University of Pennsylvania Medical school has made a study of the heart action of athletes. He has examined a large number of men in athletics, especially rowing men, and he has come to the conclusion that no man in perfect health who has been properly trained is injured by rowing, but that, on the contrary, his heart is so strengthened that, with a moderate amount of exercise after he has finished his rowing career, there is no reason, so far as the heart and lungs are concerned, that he should not live to a very old age.

"The heart," said he, "is both a very delicate and a very strong organ—that is, if it is well developed it will stand an enormous amount of strain without any permanent injury, but if it is not well developed it is very easily weakened. Violent exercise, like rowing, places a great deal of strain on the heart because when the body is being exerted it requires so much more pressure to force the blood through the body. Like any other muscle that is worked, the heart under the added labor becomes larger, and most athletes have extra large hearts, just as they also have larger muscles throughout the body.

"If the strain is put upon the heart suddenly it dilates—it becomes larger, but not more muscular—and that is the danger in athletics. If a man exercises gradually then his heart also increases in size gradually because the muscles become larger, and this is a perfectly normal condition. It simply means that the athlete has a stronger heart than the average and can cope with the extra strain that is put upon it. A man needs a larger heart to row a race, and if gradual exercise has so provided him with one then he can safely undergo the most severe tests.

"It is the same way with the lungs, and they must be developed gradually until they can undertake the extra work. A man with his heart and lungs well developed is in no danger, no matter how hard the race. He may completely keel over at the end of the race, but it will likely be from sheer exhaustion, and his heart is so strong that the effect is not at all injurious. He will be as good as ever in a few moments."

APHORISMS.

The heart gets weary, but never gets old.—Shenstone.

The only way to have a friend is to be one.—Emerson.

What we learn with pleasure we never forget.—Mercier.

Opposition inflames the enthusiast, never converts him.—Schiller.

True merit is like a river—the deeper it is the less noise it makes.—Hazlitt.

The eye of the master will do more work than both of his hands.—Franklin.

Experience takes dreadfully high school wages, but he teaches like no other.—Carlyle.

Kindness is the only charm permitted to the aged; it is the coquetry of white hairs.—Feuillet.

If we had no failings ourselves we should not take so much pleasure in finding out those of others.

A Brilliant Retort.

After dinner speaking is an art, and, like many other arts, its excellence has much to do with the mood of the artist. Some of the best of our after dinner speakers sometimes fail, but it is not often that failure results in the enrichment of the world's store of epigram, as it did in the case of Lord Erskine many years ago.

When Lord Erskine was made a member of that highly honorable body, the Fishmongers' Company of London, he made an after dinner speech on the occasion of his first appearance among them as a member. Upon his return he said to a friend:

"I spoke ill today and stammered and hesitated in the opening."

"You certainly floundered," was the reply, "but I thought you did so in compliment to the fishmongers."

The Prattle of a Bright Child.

At times it cannot be denied the questions of children become irksome, but who would wish a child to ask no questions? Julius Sturm tells in one of his pretty fairy tales how a grandfather, driven into impatience by the constant questionings of his grandchild, exclaimed, "I wish your tongue were out of joint!" But when unexpectedly his wish was fulfilled and the child became dumb how he joyfully exchanged one of the two years which an angel had prophesied he was yet to live for the privilege of hearing the little one's prattle again!

Speechmaking.

"What do you think of my speech?" said the aspiring young orator.

"Not bad," said the cold man of experience.

"I devoted a great deal of thought to it."

"Yes, that's a mistake young men are apt to make. You put thoughts into your speeches instead of telling the audience stories."

Even at That.

Gus—The idea of his saying I had more money than brains! Quite ridiculous!

Jack—That so?

Gus—Of course. Why I haven't a cent.

Jack—Well?

Comes High.

Knicker—Experience is the best teacher.

Bocker—Well, aren't we always raising her salary?—Harper's Bazar.

Celery is an acknowledged nerve tonic, and is more and more used in medicinal prescriptions.

Butter is an excellent thing for a bruise on a child's face if the skin is not broken.

Beets are fattening, because of the sugar they contain.

A raw potato cut in half and rubbed on fingers stained with vegetable paring will remove the discoloration.

Over 850,000 women voters will, it is said, go to the polls at the coming Australian federal elections.

Moths will not come near clothes sprinkled with turpentine.

DIZZY SPELLS AND BODY WEAKNESS

Tell of a Run-down System and Exhausted Nerves—Strength Comes With the Use of Dr. Chase's Nerve Food.

To many people peculiar spells of dizziness and weakness are a source of almost daily annoyance and distress. Some see flashes of light before them, and become blind and dazzled; others experience severe attacks of headache. The cause is exhaustion of the nervous system and deficiency in the quality and quantity of blood. In all such cases Dr. Chase's Nerve Food is the most certain as well as the most thorough cure obtainable.

Mrs. Symons, 42 St. Clair street, Belleville, Ont., states: "Some weeks ago I began a course of treatment with Dr. Chase's Nerve Food, and found it a very satisfactory medicine. I was formerly troubled with nervous exhaustion and a weak, fluttering heart. Whenever my heart bothered me I would have spells of weakness and dizziness, which were very distressing. By means of this treatment my nerves have become strong, and the action of the heart seems to be regular. I can recommend Dr. Chase's Nerve Food as an excellent medicine."

Mrs. James Clancy, 714 Water street, Peterborough, Ont., states:—"I have used four boxes of Dr. Chase's Nerve Food, and found them an excellent medicine. I was troubled more or less for nineteen years with severe headaches, which made me useless as far as accomplishing my work was concerned.

"The nerve food seemed to build me up generally, and so made a thorough cure of my old trouble. I would not think of being without Dr. Chase's Nerve Food in the house, and would strongly recommend anyone suffering as I did to give it a trial. It succeeded in my case after a great many remedies had failed."

To the thousands of women who are victims of nervous headache this letter should prove of inestimable value. If they will but follow the advice of Mrs. Clancy they can be certain of great and lasting benefit.

Dr. Chase's Nerve Food, 50 cents a box, at all dealers, or Edmanson, Bates & Co., Toronto. To protect you against imitations, the portrait and signature of Dr. A. W. Chase, the famous receipt book author, are on every box.

In the public eye and in everybodies mouth. Always reliable—popular everywhere.

J. M. FORTIER, Limited, MONTREAL.

Japan imported last year $1,474,000 worth of watches, four-fifths of them from Switzerland.

We have no hesitation in saying that Dr. J. D. Kellogg's Dysentery Cordial is without doubt the best medicine ever introduced for dysentery, diarrhoea, cholera and all summer complaints, sea sickness, etc. It promptly gives relief and never fails to effect a positive cure. Mothers should never be without a bottle when their children are teething.

Germany's new meat inspection laws have reduced the amount of meat imported by half.

Ayer's

Ayer's Cherry Pectoral quiets tickling throats, hacking coughs, pain in the lungs. It relieves congestion, subdues inflammation. It heals, strengthens. Your doctor will explain this to you. He knows all about this cough medicine.

"We have used Ayer's Cherry Pectoral in our family for 25 years for throat and lung troubles, and we think no medicine equals it."
MRS. A. POMEROY, Appleton, Minn.

25c., 50c., $1.00. All druggists. J. C. AYER CO., Lowell, Mass.

There are 800 Chinese students in the colleges of Japan, and 500 more are to be sent.

There never was and never will be a universal panacea, in one remedy, for all ills to which flesh is heir—the very nature of many curatives being such that were the germs of other and differently seated diseases rooted in the system of the patient—what would relieve one ill in turn would aggravate the other. We have however, in Quinine Wine, when obtainable in sound, unadulterated state, a remedy for many and grievous ills. By its gradual and judicious use the frailest systems are led into convalescence and strength by the influence which Quinine exerts on nature's own restoratives. It relieves the drooping spirits of those with whom a chronic state of morbid despondency and lack of interest in life is a disease, and by tranquilizing the nerves, disposes to sound and refreshing sleep—imparts vigor to the action of the blood, which, being stimulated, courses through the veins, strengthening the healthy animal functions of the system, thereby making activity a necessary result, strengthening the frame and giving life to the digestive organs, which naturally demand increased substance—result, improved appetite. Northrop & Lyman, of Toronto, have given to the public their Superior Quinine Wine at the usual rate, and, guaged by the opinions of scientists, the wine approaches nearest perfection of any in the market. All druggists sell it.

In order to read with profit the attention must be rendered so firm that it sees ideas just as the eye sees bodies.

JUST THE THING THAT'S WANTED.—A pill that acts upon the stomach and yet is so compounded that certain ingredients of it preserve their power to act upon the intestinal canals so as to clear them of excreta, the retention of which cannot but be hurtful, was long looked for by the medical profession. It was found in Parmelee's Vegetable Pills, which are the result of much expert study, and are scientifically prepared as a laxative and an alternative in one.

A shorthorn bull has been sold at the show of the Northumberland Agricultural Society in England for despatch to America for $1,500.

Minard's Liniment Cures Garget in Cows.

Self-possession is nine points with the lawyer.

Catarrh Cannot be Cured

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly on the blood and mucous surfaces. Hall's Catarrh Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years and is a regular prescription. It is composed of the best tonics known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing Catarrh. Send for testimonials free.

Hall's Family Pills are the best.

The Riforma Medica states that with 69 pulse-beats to the minute the blood flows a distance of seven miles an hour.

MORRISSEY

From The Despatch

J. K. Miller and Geo. Smith were in Fernie the other day.

The company had a fine horse killed n the mines last week.

Mr. Clark has about twentyfive pupils enrolled in school now.

W. D. Robertson and wife left on Monday for Indiana.

N. E. Broley, of Fernie, was in town yesterday on business.

Call at Bleasdell's Drug Store for pure drugs and fine fancy goods.

Geo. Haiseler, of the Mulligan house is in Frank looking for a location.

Eight men came up from Fernie yesterday to work on the slack bins.

Mr. E. C. Smith, the Liberal candidate for parlimentary honors, is in town looking over the political field.

E. Mace, the barber, has moved his shop up near the centre of the business locality.

D. J. Johnson, contractor, is confined to the Cranbrook hospital with an attack of pneumonia.

J. R. Grimmett, of Birtle Man., was in town yesterday. He purchased a lot in the business section of the town.

Mr. and Mrs. James R. Wilson, of Michel, were in town a couple of days this week.

Mrs. Thos. Crahan and daughters left on Monday evening for Michel were they will visit friends.

Mr. Robt. Evans and wife, of North Wales, have moved into one of the new houses on the hill and will make Morrissey their future home.

Cranbrook

From the Herald.

Miss Jennie Richards left Monday for Elko. to take charge of the school there this season.

R. W. Elliott, of Moyie, formerly manager of the Moyie Lumber company is now manager of the Leask & Slater plant.

Mr. Stewart, inpector of schools, visited Cranbrook last week and talked with many of the people regarding the local situation.

A new hardware store is to be opened in the Gilpin block by William Butt, who has sold his stock at Morrissey Mines to J. C. Patmore.

Cranbrook was visited this week by a number of French capitalists who are interested in the Byron colleries near Blairmore. They were T. Lefebvre, H. Bordonneau, G. Lefebvre and J. L. Fleutot. J. E. Woods, of Frank, the well-known engineer, was with them. The object of their visit was to inspect the Badger group on Perry Creek, recently purchased by Frank Byron, of Frank, and Mr. Wood. They were most favorably impressed with the property, not only the values shown, but the extent of the ledges. The party left for Victoria Tuesday. Mr. Byron, who is developing the property, has confined the work chiefly to preliminary preparations, yet he has done enough to demontsrate the fact that his faith in the property was based on an excellent foundation.

Notice is hereby given that 60 days after date I intend to apply to the Chief Commissioner of Lands and Works for permission to purchase 320 acres of land on the west bank of Elk river:

Commencing at the north west corner of A. Weigert's pre-emption about one half mile west of the west bank of Elk river; thence northerly along the foothills 80 chains; thence east about 40 chains to the East bank of Elk river; thence south along the said west bank of the Elk river 80 chains; thence west about 40 chains to the place of commencement.

Dated this 26th day of August, 1903.

C. J. ECKSTORM.

Thirty days after date I intend to apply to the Assistant Commissioner of Lands and Works at Fort Steele, B.C. for special timber license to cut and carry away timber from the following land: Beginning at the N.E. corner post situate about two miles north of lot 4588, gronp 1, east side Elk river, and about five chains west of the S.W. corner of T. W. Bingay's coal and petroleum claim, which was staked Sept. 22nd, 1902. thence from said N.E. corner south eighty chains, thence west eighty chains more or less to the east bank Elk river, thence northward along east bank said river about eighty three chains to a point due west of N.E. corner thence east eighty chains more or less to point of beginning and containing 640 acres more or less.

Dated this 29th day of July, 1903.

T. W. BINGAY.

Staked by H. C. Tuttle.

Thirty days after date I intend to apply to the Assistant Commissioner Lands and Works at Fort Steele, B. C., for a special timber license to cut and carry away timber from the following land: Beginning at the southeast corner post situate about two miles north of lot 4568, group 1, on the east side Elk River and about five chains west of the S.W. corner of T. W. Bingay's coal and petroleum claim, which was staked Sept, 22nd, 1902, thence from said S. E. corner north eighty chains, thence west eighty chains more or less to the east bank Elk river, thence southward along said river about eighty-three chains to a point due west of the S. E. corner, thence eighty chains more or less to point of beginning, and containing 640 acres more or less.

Dated this 29th day of July, 1903.

T. W. BINGAY.

FIRST CHURCH AT MICHEL

New Methodist Church to be Opened on September 13th.

The new Methodist church at Michel is nearing completion and plans are being made to have it opened on Sept. 13th with three services, followed on Monday evening by a tea-meeting. Great praise is being given Rev Marshall for the able manner in which he has pushed this matter.

The new church is 26 x 40 with a 12 x 12 alcove for the choir attached. The building is lathed and plastered and is in every way a credit to the town. The site is near the school house on the far side of the track. C. Greer is the contractor.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped portions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding against the wasteful des truction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and works for a licence to prospect for coal and petroleum on the following described lands:

Commencing at a post planted at Ed Robbins north-west corner, thence 80 chains north, thence 80 chains east, thence 80 chains south, thence 80 chains west to place of beginning.

Dated at Fernie this 6th day of June, 1903.

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a special licence to cut and carry away timber from the following lands on the west side of Kootenay river, in the District of East Kootenay:

Commencing at a post 40 chains west of the south-west corner of M. Claxton's timber licence application on Skookumchuck river, South East Kootenay, thence running north 160 chains, thence east 40 chains, thence south 160 chains, thence west 40 chains to place of commencement.

232-4 J. McDONALD.

Dated May 23rd, 1903.

The Enormous Expenditure of Money by the Crow's Nest Pass Coal Company, Limited, in the construction of coke ovens and storage bins and the installation of electric light and waterworks systems, determines that the industrial centre of this district is established for all time at the new town of

Morrissey Mines

The importance of this fact on real estate values here is immense. One of Canada's greatest banking institutions has established itself here permanently, and the near future will see the residential streets lined with many fine houses that will be required to house the hundreds of workers employed here. It is not hard to guess what the effect of this concentration of well-paid wage earners will have on Morrissey Mines realty. All this army must have homes.

One of these bright July days as one stands on the foothill just above the new town, and looks east toward the collieries, the whole transformation that turns a wilderness into a great industrial centre, is shown in its various stages. We see the near approaching coal train of 40 cars, carrying 1,200 tons, the output of the mines for one day, and a little further on, two batteries of modern coke ovens, many of which will be fired up within ten days.

Just across the paddock that has until recently been used for a horse pasture, can be seen 100 men, digging a ditch for the large water-main that is to supply the town with pure Spring water, while the ring of hammers can be heard on every side.

To those wishing to build homes I am offering attractive terms. Write for particulars or call at my office.

IN THE COUNTY COURT OF KOOTENAY HOLDEN AT FORT STEFLE.

—IN PROBATE—

Notice is hereby given that on the 23rd day of July, 1903, it was ordered by J. A. Florin, Esq., Judge of the said Court, that James Ferguson Armstrong, Official Administrator of the County of Kootenay, be administrator of all and singular the estate of ALEX. BODIE, of FERNIE, miner, deceased intestate.

Every person indebted to the deceased is required to make payment forthwith to the undersigned.

Every person having in possession effects belonging to the deceased is required forthwith to notify the undersigned.

Every creditor, or other person, having any claim upon or interest in the distribution of the personal estate of the said deceased is required within thirty days of this date to send by registered letter, addressed to the undersigned, his name and address and the full particulars of his claim of interest and a statement of his account, and the nature of the security (if any) held by him.

After the expiration of the said thirty days the Administrator will proceed with the distribution of the estate having regard to those claims only of which he shall have had notice.

Dated at Fort Steele this 30th day of July, 1903.

LABOR DAY CELEBRATION A GRAND SUCCESS.

Mitchell an Easy Winner. Junior Lacrosse Club wins while Seniors and Base-ball team Lose

Labor Day was ushered in with a cold drizzling morning following a night of soaking rain, but notwithstanding this threatening condition of the weather a large number of people from outside places came to Fernie to celebrate the holiday. Of the visitors a great many were members of the trackmen's union and many others were from Macleod and Lethbridge, accompanying the lacrosse and base-ball teams. The weather early in the forenoon showed signs of improvement. and little if any rain fell during the entire day, though the clouds hung low and only occasional beams of sunshine shone through. The town turned out en masse to witness the sports and taken altogether the celebration was enjoyed by all and was in every sense an unqualified success. The band did good service throughout the day in rendering many fine selections. The parade and the races which were billed for the morning did not take place owing to the dampness of the morning which delayed the program somewhat.

JUNIOR LACROSSE MATCH

The game of lacrosse between the junior of Lethbridge and Fernie, was the first event. The locals had the game well in hand throughout and won by a score of 8 goals to 2. The visitors were considerably the heavier, but what the Fernie lads lacked in weight they more than made up in superior stick handling and in their power of endurance. The game was characterized by stiff checking and numerous falls on the soft ground marked its progress.

The line up was:

Lethbridge		Fernie
Craddick	Goal	McDougall
Pilling	Point	Dunlop
Sage	Cover point	Kanouse
———	1st Defence	Sunberg
Ritchie	2nd "	Kirkpatrick
Freeman	3rd "	McLeod
McKay	Centre	Sheppard
Hopkins	3rd Home	Rhodes
Kirkham	2nd "	Fuljames
Skeith	1st "	———
Jamieson	Inside Home	Dunlap
Callahan	Outside Home	Todhunter
A. Scott	Field Captain	L. Cody

Referee, G. Reynolds.

The game opened fast with numerous skirmishes at each end, in one of which Rhodes succeeded in scoring. Another was scored as the whistle blew which was disallowed by the referee. 1-0.

After five minutes play in the second quarter, Todhunter landed the rubber. Lethbridge made several brilliant rushes but failed to break through Fernie's strong defence. Sheppard with a side shot near the end of the quarter made the score 3-0.

Fernie opened the third with a dash, the ball passing from centre up the field where Angus Dunlap neatly landed it in less than half a minute from the face off. During this part of the game Fernie had it all their own way and many shots were rained on the Lethbridge net. Finally after 9 minutes play Dunlap received a pass from Rhodes which found the net. The locals had by this time grown careless and had underestimated their opponents, for which they paid dearly. Their defence was drawn out and the visitors took advantage of the weak point by scoring two goals in three and two minutes respectively. The quarter ended 5-2.

The last quarter was very one-sided and Fernie had little difficulty in adding three more scores to their count. Dunlap, Sheppard and Rhodes made the successful shots in 3, 5 and 4 minutes respectively. Score 8-2.

The locals all played a good game and it would be difficult to name any more deserving of mention than the remainder.

THE FOOT RACE.

Not a few were attracted to Fernie by the 100 yard professional foot race between F. J. Mitchell, of this place, and Geo. Appleford, of Lethbridge. The race had been arranged on a wager of $250 a side and a purse of $50 offered by the association. The race was run on the public square, the cinder path being too soft. Dr. Bonnell acted as starter. The men got away very evenly and for the first 25 yards they ran very close. Then Mitchell quickly forged ahead of his opponent and led by about 12 feet at the finish. The time was not under 11 secs. Considerable money changed hands. Appleford and his supporters showed themselves good sports in everything connected with the contest.

BASE-BALL GAME

This game was something of a fluke owing to an accident by which Gibson, Fernie's pitcher, was unable to take his place in the box. Houston, who attempted to fill this important position, proved a failure. Con Whelan behind the bat was not in his usual form either. The work of the home team was otherwise fully equal to that of the Macleod team. The latter had a good battery, 10 Fernie men being struck out in the 5 innings. The line up was:

Macleod		Fernie
Cobean	pitcher	Houston
Torrie	catcher	Whalen
McLaughlin	1st base	Eacrett
Hamilton	2nd base	Taylor
Fowler	3nd base	Brew
Ross	s.s.	McKellar
Kearney	r. f.	Shoemaker
Moffat	c f.	McIntyre
Sherbino	l. f.	Henry

SENIOR LACROSSE.

The lacrosse game between the seniors of Lethbridge and Fernie followed the base ball. Considerable interest was centered on this contest as the local team had been greatly strengthened since the last game with Lethbridge and it was believed that the teams were well matched. The prairie team proved themselves superior in their all-round knowledge of the game and won by a score of 4--1. The locals however put up a game fight and did not acknowledge their defeat until the last whistle blew.

Lethbridge played a beautiful combination game throughout, and while the Fernie team often quite rivalled them in this respect, it was not maintained by them with the same machine-like precision, which showed that the lack of team practice was largely responsible for the inferior work of the Fernie players. The Fernie home had the ball a fair share of the time but their shots on goal were often wide, while the unerring shooting of the Lethbridge home brought out some very brilliant work on the part of the Fernie goal keeper. Hard checking characterized the game on account of which several players were hurt though fortunately not seriously, and a number were put on the fence at different stages of the game.

Play opened even enough with alternate rushes on each goal. At the end of 10 minutes very exciting lacrosse McMullin made a fine run down the left field and shot. Miller batted out but Appleford drove another which found the net. The next was won in a few seconds by clever pass work, Gow making the last shot. Fernie in the remainder of the quarter made two hard shots, one of which was wide and the other was batted out by Van Horne. 2—0.

The second quarter was Fernie's and the crowd began to brighten up. The locals made several very pretty rushes through the Lethbridge defense but failed to score. Mitchell, who was doing excellent work in this quarter, finally made a clean shot and scored. Time 12 minutes. Fernie got several more shots at goal before half time. Miller stopped one very difficult ball, and two others went close past the post. 2—1.

The third quarter belonged to Lethbridge. Gow scored in half a minute. Lethbridge played a very aggressive game and Miller stopped several shots and others went wide. Fernie got into shape again and McGuire fired but missed. A moment later the ball travelled down the field and the fourth and last goal was scored by Lethbridge. Time 7 minutes. Tyner was hurt and Taylor was put off to even up. Lethbridge made repeated assaults on Fernie defense but found them invincible. 4--1.

The honors in the fourth quarter were evenly divided, Fernie fully holding its own. Mitchell missed a fine shot and Lethbridge sent two shots against the fence. The ball returned again to the Lethbridge goal and two splendid drives were made, which the goal-keeper stopped. Score 4--1.

POLLING PLACES.

The government has had notices posted announcing the location of the polling booths for the election on Oct. 3rd. The following is a list.

Crows Nest—A. Good's bunk-house.
The Loop—MacQuire's bunk-house.
Michel—police office.
Sparwood—Wardrop's office.
Fernie—Government office.
Fernie—School House
Fernie— " "
Coal Creek Mines—School house.
Morrissey Junction—Townsite office.
Morrissey Mines—
Elko—School house.
Elkmouth—Hayes Lumber Co,s office.
Jaffray—School-house.
Phillipps—School house.

FIRE HALL AND LOT.

ACTIVE MEASURES TAKEN AT OPEN MEETING.

Purchase Lot for $700. Committee Will Arrange for Building of Fire Hall.

A public meeting was called last night by the Board of Trade to purchase a lot and arrange for the immediate erection of a fire hall, in which to keep the new chemical engine that is daily expected to arrive. Capt. McRobie was present and gave valuable advice on various points.

The meeting at once proceeded with the work of selecting a lot and decided that lot 7, Block 6, situated next to that on which the Turner Block is located, opposite Mrs. Wilkes' Boarding house, and belonging to J. S. T. Alexander, was suitable, and it was forthwith purchased for the sum of $700, half cash and balance in a year.

The meeting then took up the question of a fire hall. A plan previously discussed was decided to be satisfactory and Messrs. H. Wilkes and Tuttle were appointed a committee to arrange for its immediate construction. Contributions for building material will be solicited from lumber merchants and others and the committee will use their best judgdment in building the fire hall as cheaply as possible. The building will be 50x26 with 20 foot studding. The upstairs will have a 6 ft. hall with rooms on each side which will be fitted up for sleeping accommodation of members of the brigade Below will be troughs ranged the full length at one side of the building for the drying of hose, the engine room at one end and a Board of Trade meeting room at the other.

Arrangements have been made to have the chemical engine placed in the skating rink until the new hall is ready. Captain McRobbie will give interesting tests with it next week. H. Wilkes was asked to take charge of the engine which he kindly consented to do.

CAPTAIN McROBBIE IN FERNIE.

Captain W. C. McRobbie, manager of the Fire Extinguisher Manufacturing Co., Winnipeg, arrived early in the week and expected to find his engine that the town had purchased from him here before him, but in this he was disappointed and he has been obliged to wait its arrival. Mr. McRobbie is the inventor and manufacturer of the famous chemical fire engines bearing his name. He always accompanies every engine he sells, to see that it is delivered in first class shape and to give any assistance that his wide experience as a fire fighter enables him.

Few men in America have had longer experience in the fire-fighting business than the gallant captain, and few men exist who have a better reputation for scientific knowledge and practical skill in this department than this same gentleman.

Fifty-four years ago when quite a boy he landed in Montreal from Scotland, and during all these 54 years he has been actively connected with fire-brigades and fire-fighting appliances. During the first 6 years he served in the Montreal Voluntary Bridgade. He afterwards served in tne permanent brigade for 21 years at the end of which he nearly lost his life while fighting a fire in a 4 storey building from a ladder. As it was he lost the sight of one eye. Previous to this he had won the Victoria Cross for bravery displayed while fighting a fire in a powder factory, which blew up owing to the bursting of the hose at a critical moment.

In 1882 the Captain left Montreal to organize a paid brigade in Winnipeg. He retained that position until 1890 when he invented and commenced the manufacture of his chemical engines. The company has a branch factory at Vancouver under the management of his son. Captain McRobbie is an energetic enthusiast in his line. He has made a thorough life-long study of the subject and he is intensely practical in all his ideas as will be seen from the result of the fire meeting held last evening in which he took an actlve part.

"BIG JIM" TALKS.

The Montreal Gazette of a recent date contains the following interview with Jas. McDonnell regarding the political situation.

"I have the firm conviction that the Conservative leader, Hon. Richard McBride, will be returned to power on the 3rd of October, and that British Columbia will then possess a strong party government."

The above statement was made yesterday by Mr. James A. McDonnell, of Fernie, B. C., who is now revisiting his old home in eastern Canada, after an absence of several years. Mr. McDonnell is a railway contractor and mining man, and has had a long experience in the Pacific province, consequently it goes without saying that he is in a position to gauge pretty fairly public opinion.

He, in fact, is most confident that the British Columbia Legislature, when it next meets, will be strongly Conservative. The curse, he says, of the province in the past has been weak governments and the labor troubles. He now reports that the unfortunate difficulties at Fernie have been permanently settled, and the Crow's Nest Pass Coal Co. are vigorously proceeding with their work of a largely increased development. They are rushing ahead a largs quantity of new coke ovens, and they will be able to supply all the coke required for the smelters and other objects for years to come.

There is, in fact, he adds, a general revival of business all over the province, this fact being especially noticeable in the mining districts. The decision of the government to grant a bounty on lead has, of course, given an impetus to the silver-lead mines in the several districts, although Mr. McDennell believes in the protective rather than the bounty system.

"What the province wants," he said, "is a duty on white lead, although, of course, benefit will be derived from the bounty." Most important gold discoveries, he states, have been made of late in the Lardeau district; consequently there are more reasons than one why the province on the Pacific should now forge ahead. The turn of the tide, he declares, has come in Rossland. With a strong business-like ministry governing the province on conservative lines at Victoria there is, Mr. McDonnell opines, nothing to prevent British Columbia from entering upon a long period of prosperity.

The operations of the Granby Co. at Grand Forks and Phœnix were also discribed as marvels of enterprise and success, and they have been of immense profit to the province at large.

He brings the news that Hon. Joseph Martin is still in the political ring, but that the other restless politician, Hon. Smith Curtis, will probably retire from active political life and occupy himself in future in mining pursuits.

The gentleman from Fernie is a Conservative, and he says the people of British Columbia earnestly desire the success of the Grand Trunk Pacific enterprise. They want all the railways you can give them, he added, and the Coast and Kootenay line will likewise be a desirable enterprise.

There is tonnage enough, he stated, in conclusion, for all the railways now built, as well as those projected and under construction, for Mr. McDonnell is responsible for the claim that British Columbia possesses the finest resources of any country in the whole world.

HUGH GILMORE IN TOWN

Hugh Gilmore, ex-M. P.P. for Vancouver, was in town this week on Labor Day and he has since left on a short visit to the new coal fields above Michel in which he is personally interested. Mr. Gilmore in an interview spoke of the increase of his business in South East Kootenay where he of late has installed many large saw-mill plants. The new mill at Wardner was put in by him. It has the first double cut band saw in the province, and when in full swing will handle 125,000 feet per day. Touching on politics the ex-member stated that his business would not permit him to accept the liberal nomination of his district, which had been offered him. He took a deep interest in the contest and he believed that the liberals would have a majority of five above all others in the house. Mr. Gilmore is an ardent admirer of Joe Martin and when asked as to the latter's probable line of action should he not be selected leader by the members elect he replied, "Martin is pledged to support the choice of the party and he will do it. More than that he will submit to the voice of that party to the extent of occupying the humblest position in the party." Mr. Gilmore is optimistic in his estimate of the liberal strength throughout the Kootenay and at Vancouver he claims the party are sure of three seats. He scored McBride on his election dodge, and he claimed that the change would work a hardship on many voters who had already made plans in accordance with original date. In connection with this he mentioned the loggers at the coast who worked in isolated places who would not learn of the change in time to cast their votes. Mr. Gilmore left for Michel on Thursday and expects to be away five days.

MAIL BAG STOLEN.

Most Daring Robbery in Private House. Bag is Recovered But Thief Still at Large.

The mail sack for the west was deliberately stolen from G. Cody's house last evening at about 9;30 in the presence of Miss Matheson who is staying at Mr. Cody's. This is the most daring robbery ever perpetrated in Fernie. The chase evidently became too hot for the thief and the missing bag was afterwards found in his tracks.

Last evening at 9 o'clock Postmaster Johnson took the sack over to Mr. Cody's house as usual and placed it in the front roomseveral steps from the door. The above mentioned lady and the children were in the room at the time. Half an hour later and just after the children had gone to bed the front door opened and a young man stepped quickly into the room picked up the sack and left as quickly. Miss Matheson asked him what he was doing but no answer was given. Mr. Cody came into the house by the same door only half a minute later and upon learning what had happened he gave chase and got the aid of the police and the postmaster. Nothing was learned last night of the missing sack, but this morning it was found by Proctor Joiner in the lane behind J. D. Quail's store. The thief had evidently heard Cody going into the house and knowing that immediate chase would be given he had cut in behind the Alberta Hotel and up the lane and finally dropped it in his hurry to escape. The bag weighed about 15 lbs. and it contained six registered letters. When found it was still locked and the contents unmolested. Cassie Cody told the police that she saw a man hanging around the house previous to the time that the post-master delivered the bag and immediately after she saw him looking in the window. The child's description compares with Miss Matheson's and the police have strong hopes of finding the criminal.

COAL CREEK MINES.

(From Our Own Correspondent.)

Mr. and Mrs. Matthew Mitchell and Master Robbie left last Saturday for the coast.

A new road is now complete at the rear of the new row of houses, along the bank.

A number are now availing themselves of the open season but as yet no big game has been reported as bagged.

Mrs. Thos. Evans presented her husband last Thursday with a little baby girl who is receiving the kindest of attention.

Work is being pushed now by the Company in laying water pipes for the new system. This is a boon welcomed by many who have found it difficult to maintain a water supply.

On Labor Day a few notes of music greeted the ears of our citizens from a few members of our band. The class of music showed unmistakably what might be enjoyed if our band were fully organized.

Our school is enlarging so rapidly that we may soon require another teacher. At present it is hard to get seating accommodation for those attending. Mr. King is janitor of the school for the term to come.

Last Sunday Master Robbie Sneddon while visiting his sister was blown off a little foot bridge into the river. Fortunately his sister noticed him fall from upstairs and gave the alarm. The little fellow was by this time some distance down the river and was located by his cap which floated above him. When recovered he was unconscious but soon regained it again.

GREAT NORTHERN VISITORS.

A party of Great Northern officials are visiting Fernie to-day in a special train of three cars.

The party consists of General Manager Ward, General Superintendant Slade, 4th Vice-President Blabon, Chief Engineer Haggeland and eight other officials. The party are making an extended tour of three weeks over the whole system and as many of these had never been in Fernie before they decided to run up from Morrissey. This morning the party went through the Michel mines and this p. m. they are visiting the mines at Coal Creek.

Mr. Ward upon being interviewed stated that the road from Morrissey would not be extended until such time that the conditions demanded it.

The General Manager did not know anything of McBride's negotiations with his Company to build the Kootenay-Coast railway.

WHEN BOYS WERE MEN

By JOHN HABBERTON,

Author of "Helen's Babies," "George Washington," Etc.

COPYRIGHT, 1896, BY JOHN HABBERTON

He didn't lay aside his plate and fork either, but twice took his turn—and cake—like the commonest of his men, believing, evidently, that the pancake, like love, levels all ranks. When he departed, it was to bring the colonel over to see the fun and also to see a company which was well fed. My place in the circling line brought me near enough to the two officers to hear the captain tell the colonel how admirably Phil managed the company commissariat. A minute or two later the couple passed through the line, and the captain astonished us by saying:

"Sergeant Hamilton, can you spare a sample cake for the colonel?"

Any other man in the company would have felt awkward at coming face to face with his colonel while holding a pan greaser in one hand and a cake turner in the other, but Hamilton succeeded in throwing his implements into one hand and in saluting; then, with another salute, he passed a plate to the colonel, and all the while he looked as manly and self possessed as if he were just entering one of Summerton's best parlors. I did wish my cousin May might see him just then. A moment later I was glad for Brainard's sake that she couldn't. The colonel went through the motions of tasting the cake. It would have been undignified for him to eat all of it, though every man knew he was dying to. Then, in his clearest dress parade voice he said:

"Sergeant Hamilton, I will make you lieutenant as soon as a vacancy occurs. A man who knows how to feed soldiers well has in him the stuff of which good officers are made."

Hamilton again saluted, but with the air of a man to whom lieutenancies were offered daily. The remainder of

"Won't you try one, captain?"

the company were so profoundly impressed that no one but the cook, who hoped to be Hamilton's successor as commissary sergeant, had the sense to propose three cheers for the colonel.

But the prospective lieutenant did not leave his pans. It took an hour of time to fry and deal out that half barrel of batter. Besides, Phil was teaching the cook. Finally the supply was exhausted. Hamilton threw his greaser into the fire, turned the tub upside down and sat upon it to rest.

Suddenly one man exclaimed:

"Well, by thunder! The cakes were so good that we're forgotten all about our coffee!"

"Thanks! That's a bigger compliment than the colonel's," said Hamilton, raising his hat. He was right too. The coffee cups were filled and emptied, and we went slowly back to the quarters in little groups instead of singly and in haste, as was usual in cool weather. There were not as much scuffling, swearing and horseplay as we generally had between supper and tattoo. The quarters were quiet—so quiet that we were almost startled when Mick McTwyny's grating voice and thick brogue were heard in an attempt to sing. The words were merely "Thra-lah-lah," but the music, in spite of some eccentric sharps and flats, was finally recognized as that of "Home, Sweet Home." Some one hummed the bass, another fellow helped Mick along with the air, others dropped in, singly or two or three together, on various notes and bars, and when the last note was touched it seemed as though every voice was in it. Then Brainard started us all off again, with all the words and notes distinctly enunciated.

The effect was not what I would have expected. Everybody looked serious. Some men fixed their eyes on the ground; others looked at the shingles overhead as if trying to pierce them and see the stars; more than one fellow drew his hat over his eyes, and a married man sitting on a bottom bunk suddenly turned and buried his face in the pillow. As for me, though my gaze was fixed on the little black stove in the center of the room, I saw our house at Summerton, my father and mother, little Ned and Cousin May, the dog Rover, the horses, cows, pigs and chickens, my room and everything on its walls. I felt my face twitching, so, to keep from betraying my feelings, I hastily began looking about the room again, but I was a second too late—I couldn't see anything distinctly.

And all this merely because of a supper of pancakes!

CHAPTER XI.

CROSS PURPOSES.

TRUE to his custom, our colonel ordered a scout promptly at the beginning of one very cold spell. The roads, never traveled in wet weather, had frozen as hard as any pavement, and we and our horses had been imprisoned so long by the preceding rain that we heartily enjoyed the beginning of the trip. We had been well fed all winter, but no one neglected the precaution of carrying all the rations, particularly fat pork, that he could get. In camp we had good fresh bread daily, but once in awhile when other rations abounded I had begged a day's rations of hard bread instead and stowed it away against the next scout. I had never forgotten the semistarvation of our first three days' outing.

On the morning referred to only four companies of us went out, but we felt entirely safe. What could happen to us? We were strong enough to whip any force of the enemy that had yet moved between our lines and their own unless our irregular spies—all colored people and natives of the country—had counted incorrectly the enemy's few detachments. Of course we would be fired upon as soon as the advance struck the enemy's pickets, and, as most southerners had handled guns from their youth up, two or three of our men would probably be killed or wounded, but we had come to regard that sort of thing as a matter of course. It was one of the fortunes of war—or misfortunes of being at the head of a cavalry advance. To prevent unfairness in this respect companies took turns of a day each at the head of a scouting party, but the advance proper was always taken from the right, or head of the company, so in forming line for a start there never was an unseemly rush for positions at the right.

The extreme advance consisted of four men, riding abreast or by twos, according to the width of the road, and carrying carbines or revolvers in their hands ready for instant use. About 50 yards behind rode a single trooper, called a messenger, to pass back any alarm or other information which the men ahead might shout to him. Fifty yards farther in the rear were two men, who also had a messenger within earshot, and within 50 yards of him rode the remainder of the platoon—8 or 12 men—about as far from the main body as from the man in front.

The specified distances were measured only with the eye, but whether they were too little or too great the main body was far enough in the rear to be out of point blank range of ordinary firearms, and most firearms of the enemy's cavalry were ordinary. This distance enabled the main body to draw sabers or get their carbines or revolvers ready for action, according to order. It also allowed us to get into a trot or gallop with some momentum to it by the time we had closed on the advance and begun the charge or chase. Meanwhile the messenger and reserve had closed on the first set of fours and begun firing if they saw anything to fire at. Should the advance halt, they began firing at once; if they turned to run, they parted and galloped down either flank in single file, so the troop they unmasked could clear the road by firing or charging. (I never had the melancholy satisfaction of seeing the advance break to the rear.)

Whenever we found the enemy in line, even behind breastworks—for not all of them were cavalry—we would deploy as skirmishers in the woods or fields on either side of the road and advance at the gallop, firing rapidly as we rode. I don't believe carbine firing at the gallop at a mark 200 or 300 yards away ever did much damage, but the successive puffs of smoke made our horsemen difficult marks to hit. In such dashes the bugle generally sounded the recall before the skirmishers were upon the enemy's line. Even if it didn't, most of the horses turned suddenly and dashed back, but an occasional good rider with a horse under perfect control would get far enough within the line to estimate its strength and see if it had any artillery. Quite as often a poor rider with an obstinate horse would get within the line and find himself unable to return. The horse that knew him would know him no more forever, and the rider would take up his abode for an indefinite season at the Hotel Libby, Richmond, Va. A single man surrounded by enemies at short range was seldom killed or even hurt unless he refused to recognize the inevitable. The general mass of our men regarded a skirmish dash against infantry with very little apprehension. A trooper and his horse generally are one for practical purposes, the animal seeming to know what is in his rider's mind. Besides, the enemy had only muzzle loading weapons, which could not be reloaded and fired more than once during the forward rush of cavalry skirmishers, while the rapid fire of our breechloaders and revolvers had a disturbing effect upon a foot soldier's hand and eye.

(To be Continued.)

The Ogilvie Flour Mills Co., Ltd.

BY ROYAL WARRANT MILLERS TO H. R. H. THE PRINCE OF WALES

Daily Milling Capacity

MONTREAL.	
ROYAL MILLS, water power, Flour	4,500 Bbls.

Had To Leave School

THE PITIABLE STORY OF A YOUNG GIRL.

Every Mother of a Growing Girl Will be Interested in the Story as Told by the Young Lady.

Miss Laura Dumontier is the daughter of a well-to-do farmer in St. Cuthbert, Quebec. The circumstances under which she was forced to discontinue her studies and leave school will be of interest to all mothers of growing girls, and Miss Dumontier consents to make them public for the benefit her experience may be to others. She says: "At the age of twelve I was sent to a convent school in this parish. At that time I was as healthy as any girl of my age. At the end of a couple of years, however, I fely my strength leaving me. My appetite grew poor, and I suffered from severe headaches. I nevertheless continued my studies until October, 1901, when I became very ill and was forced to leave school. The headaches which had bothered me became almost constant. I suffered from pains in the back and stomach and the least exertion would leave me almost breathless. A doctor was called in and he said I was suffering from anaemia, and was in a very dangerous condition. Hr treated me until February without the least beneficial result. Then another doctor was called in, but no better results followed his treatment. My parents were now thoroughly alarmed and two other doctors from St. Barthelemi were called in, and after consultation their verdict was that my trouble had reached an incurable stage. I was greatly disheartened and did not expect to live long when one day one of my friends asked me why I did not try Dr. Williams' Pink Pills. I had lost confidence in all medicines, but was willing to try anything that might help me, and my father got me a supply of the pills. When I had used a couple of boxes it was very plain that the pills were doing me good, and after I had taken them a couple of months I was once more enjoying the blessing of good health. I feel that Dr. Williams' Pink Pills have saved my life and I gladly give my experience in the hope that it may be of benefit to some other young girls."

No discovery of modern times has proved such a blessing to young girls and women as Dr. Williams' Pink Pills. They act directly on the blood and nerves, invigorate the body, regulate the functions and restore health and strength to the exhausted patient when every effort of the physician proves unavailing. These pills are sold by all dealers in medicine, or may be had by mail post paid at 50 cents a box, or six boxes for $2.50, by writing to the Dr. Williams' Medicine Co., Brockville, Ont. Remember that no other medicine can take the place of these pills, and see that the full name, Dr. Williams Pink Pills for Pale People, is on the wrapper around every box.

An Impromptu Explanation.

The learned Porson was staying at one time with a well known canon of Ely named Jeremiah King. One day at dinner, when they had got into discussion upon questions of etymology, Porson gave a derivation which King considered to be so farfetched as to be quite ridiculous. "You might as well say," said King, "that my name is connected with cucumber." Possibly there was a cucumber on the table. "And so it is," said Porson. "How so?" asked King. "Why, thus: Jeremiah King, by contraction Jerry King; Jerry King, by contraction and metathesis Gherkin, and gherkin, we know, is a cucumber pickled."

In Case of Fire.

On retiring to rest place a handkerchief under the pillow. On being awakened by smoke or cry of "Fire!" thrust it in water, tie it around head, over mouth and nostrils, and you can walk erect through the densest smoke you meet. The nightly practice of placing the article will make you less nervous in the hour of danger.

SELECTIONS

A WONDERFUL TREE.

It Has Tarantula-like Blossoms With a Stupefying Odor.

A wonderful tree of unknown variety has been discovered in a mountain canyon in a spur of the San Jacinto mountains, down near the Mexican line. It was discovered by a party of prospectors who penetrated the canyon in search of water. A branch of the tree and its blossoms were brought to this city for classification, but it is unknown to botanists in this city.

The leaves of the tree resemble in size and shape the fig leaf, but they are of a vivid purple color and the under side of the leaf is thickly covered with stiff hairs which stand out from the leaf fully half an inch. These hairs are sharp and thornlike and easily penetrate the skin, and when they do so they are poisonous, causing swelling and much pain.

The blossoms are as peculiar as are the branches and leaves. They are of a rusty red color and are about two inches in diameter. In shape they are a very good representation of the tarantula. There is a huge hairy bulb, in shape resembling the abdomen of the poisonous spider, and there are several chives, or stamens, corresponding to the legs of that insect.

The most peculiar feature of the plant, however, remains to be told. Whenever one approaches the plant or when the wind agitates the branches of the tree the flowers give off an abundance of perfume—heavy, sickening and deadly. This perfume has the quality of chloroform, and a few inhalations of the odor produce unconsciousness. The prospectors who made the discovery of the plant were rendered insensible upon approaching the tree to examine it.

As the plant seems to have no botanical name two names have been suggested by the qualities of the plant itself. One is tarantula plant, the other chloroform tree.—Los Angeles Times.

Control of Surgical Steel.

Many of the best surgeons in New York, including those in the larger hospitals, send their instruments for repairs to a man in the Williamsburg district of Brooklyn. He has also a contract with the city for repairing surgical instruments for the public hospitals. According to this specialist American made steel has not yet reached a point of perfection that makes it available for a superior class of work. "Surgical steel can be wrought and bought only in England," he said. "The famous surgeons of Berlin and Vienna must send to England for their instruments. In modern surgery, where life or death depends absolutely upon the reliability of the instrument to do exactly the work that the operator expects of it, no surgeon will take chances with knife, scissors or forceps that he cannot depend upon as absolutely as he can depend upon his own nerve—and a man who cannot command his nerves has no more business at an operating chair than a man with no knowledge of navigation has on the bridge of an ocean liner."

An Ancient Tree.

In the orangery of Versailles is the oldest pomegranate tree in France. It dates, in fact, back to the establishment of the orangery in 1685. In exceptionally warm and bright seasons the old tree still decorates its branches with a few flowers, but no fruit has been seen upon it for a long time.

London Poverty.

More than 30 per cent of the inhabitants of London are so poor that they cannot afford meat, butter, tobacco, car fares or even stamps for letters.

A Tale of Two Cities.

During the nineteenth century London grew from a city of 800,000 people to one of 6,500,000—that is, increased eightfold. New York increased from 60,000 to 3,500,000—nearly sixtyfold

OF INTEREST TO MOTHERS

A Safeguard for Children Cutting Teeth in Hot Weather.

The time when children are cutting teeth is always an anxious one for mothers and when this occurs during the hot weather solicitude often deepens into alarm. So many ills that often result fatally are liable to ensue that every mother will be interested in a medical discovery that robs this period of many dangers. Mrs. R. Ferguson, of 105 Mansfield street, Montreal, Que., gives her experience for the benefit of other mothers. She says: "My baby has always been small and delicate and suffered so much last summer with his teeth that I did not think he would live. The medicine the doctor ordered for him did not do him much good. Then he was attacked with dysentery and a very hot skin and cough. I sent for Baby's Own Tablets, and they did him a wonderful amount of good, and he is now getting on splendidly."

Baby's Own Tablets are sold by all dealers in medicine, or will be sent post paid at twenty-five cents a box, by the Dr. Williams Medicine Company, Brockville, Ont.

Don't Be Afraid to Perspire.

In a hot summer nature takes matters into her own hands. Humanity perspires in spite of itself. In this way an incalculable amount of waste is thrown out through the skin. "You cannot perspire too freely so long as it is a natural perspiration, one not caused by disease," said a surgeon. "The freer the perspiration the less work for the kidneys." It follows, then, that in a cool summer it is advisable to induce perspiration through the medium of vigorous exercise. Granted that it is vastly more comfortable to lounge in shady retreats and watch some one else chase tennis balls under a broiling sun or tramp enthusiastically over the golf links, nevertheless their reward will come later. They will enter the winter, with its more or less necessary confinement, better physically, better mentally.

A Torpedo at Play.

During some torpedo practice in which the Mediterranean fleet has recently been engaged one unruly torpedo performed extraordinary antics.

Fired from the leading ship, the missile ran toward the target for about 100 yards, then suddenly turned and came back, hitting one of the ships in the line. After this the torpedo careened about in all directions, diving, jumping clean out of the water and performing all sorts of antics like a huge fish at play.

Eventually when all its air was exhausted the erratic torpedo dived to the bottom and was lost.

Why He Kicked.

"Say, old chap, it isn't nice of you to refuse to lend me that V. One friend should always be willing to help the other."

"True, but I object to invariably being the other."—New York World.

Her Excuse.

Widow (to dressmaker)—You must really wait awhile for payment for the mourning dresses. We are still too sorrowful to consider financial matters.

The Real Yellow Peril.

With China opened to commerce, her crowded, insanitary cities—none of them have either sewers or waterworks—will become a menace to the health of the world. Smallpox is always prevalent in them. Cholera is often epidemic, and plague can be found in every large town. These may constitute the real "yellow peril."

Tobacco and Cholera.

Experiments made in the hygienic institute in the Berlin university have shown that cholera bacilli die more quickly on dry tobacco than on dry glass plates, that they do not multiply, but quickly die on moist tobacco and that tobacco smoke quickly kills them.

A Short Christmas.

Christmas day at Tornea, in Finland, is very brief—in fact, less than three hours in length.

Apple Trees.

It is estimated that there are about 200,000,000 apple trees in the United States and that the average crop amounts to about 175,000,000 bushels. Apples can be grown anywhere in the United States except where it is very cold or very hot.

Sea Born Britons.

On an average 700 British subjects are born every year at sea.

The Sky.

John Ruskin, the great art critic, wrote in his "Modern Painters," "The sky is not blue color merely; it is blue fire and cannot be painted."

Use All Your Teeth.

It is a curious fact that the teeth that are seldom used decay more rapidly than those that have daily work to do. It is a fact, however, and, being a fact, the thing to do is to take pains to eat on both sides of the mouth equally.

British Merchantmen.

The statement that the British navy would protect British commerce in time of war seems absurd when taken with the fact that there are 6,500 British merchantmen afloat.

Charles Macklin.

The oldest actor who ever appeared on the stage was Charles Macklin, who represented Shylock in 1789 at Coven Garden, London, when past his one hundred'th birthday.

BRITISH CABLE NEWS

MANITOBA CEREAL DISPLAY IN LONDON.

A Stringent Enquiry is Asked for Into Complaints From Immigrants—Interesting Notes on Topics of Discussion in British Papers.

London, Sept. 3.—Several London morning papers refer to the fine display of Manitoba cereals in the Canadian emigration offices, which attract much attention to the windows of the offices. It is proving a first-class advertisement, illustrating Canadian scenery, and the productiveness of the soil.

The London Times' long, unsigned contributions upon the Alaska boundary situation are believed to have been written by Mr. Fred Wade, of Winnipeg, who assisted in preparing the British case.

The Canadian emigration office cables the immigration commissioner at Winnipeg, asking for a stringent enquiry into complaints received in a London newspaper from emigrants sent over by so-called emigration agencies. These complaints published here do an immense amount of harm to emigration to Canada.

Thursday's Freeman's Journal, referring to Prof. Goldwin Smith's article in the Monthly Review, says Prof. Smith is entitled to the respect of all Irishmen owing to the attitude he took over the Boer war. No man in the empire was so strenuously opposed to war or persistently pointed out its criminal character, and it is curious that Prof. Goldwin Smith should express opinions so antagonistic to home rule. The same journal remarks on the trade congress in Montreal that Canadian newspapers are hostile in no small degree to the food tax, and this sentiment, which is one of the main links binding the colonies to the mother country, may be strained to the snapping point.

The secretary of the Imperial Federation committee has an article in the United Service Magazine. He says it seems strange that the proposal made by the right Hon. Joseph Chamberlain at the colonial conference, re the colonies contributing to the defence of the empire should be received so coldly.

It is rumored that Sir Henry Campbell-Bannerman says it is probable the rumor is incorrect, though owing to Lady Bannerman's ill-health, Sir Henry has for some time wished to resign, but it is not likely at this stage of the game.

Phillips Thompson, of Toronto, writing to the Chronicle says the present phenomenal activity in immigration is prompted by the desire of Canadian capitalists to crush out trades unionism regardless of the hardships and suffering which must certainly result.

The attention of representatives of the colonies is being drawn to the subject of space which has been secured for Canadian exhibits at the fair to be held in the east end of Glasgow.

Lloyd's Times correspondent says an inquiry has been ordered into the loss of the C. P. R. steamer Monterey. It is particularly desirable to ascertain how the vessel came so far out of the course.

A correspondent of a Glasgow newspaper says that during his visit to Canada he failed to find a Canadian who did not think Chamberlain the genius of his race and age.

Writing to the Times Mr. Gilbert Parker, M.P., quotes Senator Bryce in support of his contention that American wheat fields are being worked to the limit.

London merchants are advocating the appointment of trade consuls to the colonies.

Lipton's failure to lift the cup aroused no regret among the working class.

Final Yacht Race.

The deciding yacht race for the America's cup was sailed on Sept. 3, Reliance winning by over a mile. Shamrock III. demonstrated clearly that she was not in the same class with the defender, indeed it was openly stated by yachting experts that she was not as good a boat as either of the former Shamrocks. Sir Thomas Lipton was sadly disappointed in this his third attempt to capture the cup.

A Road to Labrador.

The latest project credited to Mr. J. J. Hill, president of the Great Northern, is the establishment of a road from Lake Superior to Hamilton Inlet, Labrador. Such a road would enable him to get possession of a port having a command of European exports and imports. This project would bring Canada nearer to Labrador by two days than by the existing roads. In connection with this it is said that Mr. Hill may start a line of steamships to Europe.

Teachers are in demand in Manitoba.

Col.-Sergt. Youhill, of the 90th is in the Bisley team.

Cavite insurgents are still causing trouble to United States troops.

Holland has won the intermediate lacrosse championship of Manitoba.

Three Fort William convicts escaped from the sheriff when nearing Toronto on the train.

C. P. R. REPORT.

Crop Has Not Been Seriously Injured by Rain.

The C. P. R. crop report, issued on Saturday, was on the whole quite favorable, indicating that the damage resulting from wet weather has not been serious and that cutting is well advanced. The expected yield is good.

The report follows:

La Salle—Grain nearly all cut, and threshing delayed by rain. Not much damage done by rain.

Morris—Rain has been frequent, not too heavy; ninety per cent. of cutting done; not much damage.

Plum Coulee—Ninety per cent. of cutting done; rain interfered with threshing, which would have been started Monday, and is now begun.

Morden—About 75 per cent. of cutting done in this district; rain delayed cutting about two days and stacking about five or six days.

Darlingford — Cutting fully half done, but has been delayed for four days on account of rain.

Lariviere—About 90 per cent. of cutting done. Damage by hail and rain about two per cent. Crops will average about ten bushles per acre. Two per cent. stacking done.

Ninga—Three-fourths of cutting is done; no damage by rain.

Whitewater—One-third cutting done, work stopped on account of rain for two days.

Boissevain—Cutting about half finished. Rain has not interfered very much.

Souris—Twenty-five per cent. cut. Rain delayed cutting one week.

Mather—Seventy per cent. of cutting done. Rain has not interfered.

Deloraine—Cutting about half finished. Rain has done no great damage as yet.

Manitou—Cutting about three parts done. Rain has interfered somewhat.

Pilot Mound—Fully two-thirds cutting done here. If weather is fine this week will complete cutting, and threshing next week; no damage from rain.

Clearwater—About fifty per cent. cutting. Rain caused two days' delay.

Strathclair—Barley cutting is finished and oat cutting will commence this week if weather clears; wheat about beginning of next week. Rain has delayed operations. Wheat will yield about 30, oats 70, and barley 30 bushels per acre.

Langenburg—About five per cent. of grain cut. Rain stopped harvesting two days. Yield will be, wheat 20, oats 30, and barley 30.

Saltcoats — About half oats and barley, but no wheat cut. Continued rains have delayed cutting. Yield likely to be about 25 bushels.

Westbourne—Rain delayed harvesting four days. Weather still cool and cloudy. About 90 per cent. wheat cut. Threshing starts at the beginning of next week if weather is favorable. Average yield. wheat, 18; barley, 35; oats, 40.

Minnedosa—Cutting just commencing, will be general by end of week. Average yield, wheat, 20, and oats 45. Rain has not interfered yet.

Macdonald—Over three-quarters of crop cut. Late rains have delayed cutting two days. Yield expected, wheat, 20; oats, 25; barley, 30.

Yorkton—Cutting has just begun; delayed by recent rains. Average yield, wheat 25, oats 50.

Neepawa—Twenty-five per cent. of wheat cut; rain has interfered. Estimated yield, wheat, 20 to 25; oats, 60, and barley 40.

Gladstone—About thirty per cent. of cutting done. Rain has delayed cutting. Weather appears more promising. Average wheat yield, 18 to 20 bushels.

Rosser—Cutting two-thirds done; rain delayed two days. Yield, 15 to 18 bushels.

Portage la Prairie—About 80 per cent. of crop cut. Rain has delayed operations a few days. Average yield, 18 to 20 bushles.

Gretna—Cutting only half done. Weather has delayed harvesting two weeks.

Rapid City—Average yield of wheat 18 to 20 bushels. Harvesting barely started owing to heavy rains.

Miniota—About 5 per cent. of crop cut; delayed since Monday by wet weather. Yield, wheat 25, oats 45

The Bulgarian insurgents have received a set back, losing 1,000 men.

John Sibbald fell down a flight of stairs in Winnipeg on Sunday and was picked up dead.

United States friends of Sir Thos. Lipton are arranging for a popular testimonial to the distinguished yachtsman.

It is rumored that Frank Oliver is likely to be appointed to the vacancy in the senate created by the death of the Hon. Mr. Cochrane.

It is expected that the Canadian Northern railway will be constructed to Edmonton before twelve months. It is being built at six different points.

James Hendry, a C. P. R. engineer while riding a railway velocipede near Windsor, Ont., was run down by an express train and killed.

William Whyte, assistant to the president of the C. P. R., has been authorized to instal a system of irrigation in the Northwest Territories that will bring 2,000,000 acres of arid land under cultivation.

Consternation has been caused at Kingston, Jamaica, by the receipt of information that Colonial Secretary Chamberlain had refused to sanction the proposal of Governor Hemming to raise a loan of $2,500,000 to assist the ruined planters and provide relief work for persons who are destitute and without employment because of the recent hurricane. Mr. Chamberlain says he fails to appreciate the necessity for such a step. Without financial assistance many estates will remain uncultivated.

AFRAID OF INDIANS.

Settlers in Kootenay District and Alberta are Nervous.

A dispatch from Vancouver says:—Uneasiness, for which there is no apparent cause, appears to be epidemic just at present among the Indians of the plains, the foothills and the coast. There has been as yet no serious tribal clash, and yet the evidences of trouble brewing are so numerous and so significant that the provincial police of British Columbia as well as the officers of the Northwest Mounted Police, are taking precautionary measures to check the first appearance of actual hostilities. That these may eventuate at almost any moment is the opinion of old settlers, as well as agents of the Indian department.

The gravest apprehension is felt by those on or near the border line between Kootenay district of British Columbia and the adjacent territory of Alberta, friction between the tribes of these two districts having been evident for some time past, arising over the exclusion of the territorial Indians from the hunting privileges in the country across the mountains towards the coast.

As another explanation of the bad feeling shown by the Stoney Indians towards the Kootenay tribes, it is said that a short time ago one of the Stoney tribe was poisoned while visiting the Kootenay at Tobacco Plains by drinking by "trailscent."

TITLE FOR STRATHCONA.

Toronto University Confers LL. D. on High Commissioner.

The honorary degree of doctor of laws was conferred on Lord Strathcona by the University of Toronto in the presence of a large number of eminent citizens, graduates and friends of that corporation in the west hall of the university college on Saturday afternoon.

Premier Ross, in introducing the illustrious candidate, said the University of Toronto bore already on her rolls the names of many distinguished Canadians, eminent literary men and learned professors of universities, and even of the King himself. Lord Strathcona was a man whose service to the country and Empire fully entitled him to receive the doctors' degree.

With the history of his life all were familiar, he said. It was a far cry from a distant Hudson's Bay company's post to a place in the British house of lords and to the position of a promoter and director of a transcontinental railroad. His services to McGill, as chancellaor, his deep interest in the higher education of men and women; his endowment of Victoria hospital to Montreal, and the fact that there was scarcely any branch of philanthrophy to which he had not devoted his attention, were cogent reasons why he should receive honors from this university.

Wedding Was Interrupted.

A Toronto dispatch says: An unseemly interruption disturbed a wedding in full progress at Parliament Methodist church last night, much to the excitement of the people who had assembled to witness the ceremony.

The groom was a colored man, named Scott, employed by the Kemp Manufacturing company, and he was in the act of taking for richer or for poorer the girl of his choice, the sound of sobbing was heard, and a young lady came slowly up the aisle in apparent great distress. So much attention was attracted to this unpected denouement that the officiating minister, the Rev. Dr. Chambers, was compelled to stop and inquire into the cause of the trouble.

"He ought to be marrying me," wailed the intruder, endeavoring to get between the bride and groom, but her pathetic appeals were useless. The minister found no just cause why Mr. Scott should not marry whom he pleased, and, the disturber of the peace being removed, the ceremony was completed.

It is understood that the government has decided that Thanksgiving Day will be held this year on October 15th. This is about the same time as last year. Previously it was held in November, but there were so many complaints about the lateness of the reason for observing the day that it was decided to hold it a month earlier.

Developments show that the Canadian Northern railway has acquired the old James Bay railway charter, and will build a line from Toronto to a point on the Grand Trunk Pacific northwest of Sudbury via Parry Sound, thus reducing the present time to Winnipeg from Toronto by three hours.

A body of troops under command of the Sultan of Morocco was annihilated by a band of insurgents, and over 1,000 were killed.

Two men were killed at Bingnampton, N.Y., on Aug. 30., as a result of a freight train breaking through a culvert which had been weakened by high water.

Sir Thomas Lipton has received a cablegram from London offering to guarantee the expenses if he will arrange a series of five races between the Reliance and Shamrock III. with their crews exchanged.

In connection with the British Iron and Steel Institute, which meets this week at Barrow-in-Furness, J. E. Stead says he will disclose a discovery that will revolutionize the manufacture of steel. He finds that by simply heating dangerously crystalline steel to a certain temperature, however bad the steel, it is possible to restore it to a normal condition, and even to improve it.

Mayor Johnston, of Cleveland, has been nominated by acclamation for governor of Ohio.

HARVEST IN FULL SWING

Binders Busy in all Parts of Manitoba and N. W. T.

The C. P. R. crop report, issued under date of Sept. 1 shows harvesting to be in full swing and in some places even finished. Very little threshing has yet been done, but it will be general next week. The report for the different sections of the company's system is as follows:

MAIN LINE.

Rosser —Weather favorable, cutting general, thresh in a few days.

Portage la Prairie—Weather favorable, cutting nearly finished.

Brandon—Weather favorable, cutting well under way.

Grenfell—Weather favorable, cutting general.

Summerberry —Weather favorable, and cutting is general; no threshing.

Indian Head—Weather favorable, cutting general, thresh about 10th.

McLean—Weather favorable, cutting now general.

Broadview—Weather favorable, cutting now general.

Regina—Weather favorable, cutting now general.

Moose Jaw—Weather favorable, cutting now general.

PRINCE ALBERT SECTION.

Lumsden—Weather favorable, cutting general, thresh in two weeks.

Craik—Weather not very favorable, cutting general.

Davidson—Weather favorable, cutting general, thresh Sept. 15.

Hanley—Weather favorable, cutting commenced, thresh Sept. 20.

Dundurn—Too much rain; cutting now general.

Saskatoon—Weather past few days favorable, cutting general.

Duck Lake—Weather favorable, cutting will be general end of week.

Hague—Weather favorable, cutting general, thresh about 15th.

Osler—Weather favorable, cutting general, thresh Sept. 21.

West Prince Albert—Weather fair, 25 per cent. cutting done, thresh on Sept. 21.

LARIVIERE SECTION.

Plum Coulee—Weather favorable, cutting finished; now threshing.

Morden—Heavy rain last night; threshing now being done.

LaRiviere—Weather favorable, cutting completed; light rain to-day.

NAPINKA SECTION.

Clearwater—Weather favorable, 80 per cent. cutting done, threshin day or two.

Crystal City—Cutting is finished, threshing and stacking commenced.

Mather—Cutting finished, weather favorable.

Killarney—90 per cent. grain cut, threshing commences next week.

Whitewater — Cutting half done, weather favorable.

Napinka—50 per cent. done, threshing to-morrow.

SOURIS SECTION.

Starbuck—All crops cut, weather fine, threshing in full swing.

Treherne—75 per cent. grain cut, weather fine, threshing started.

Holland—Cutting finished, 20 per cent. stacked, weather clear.

Nesbitt — Cutting just finished, threshing commences to-day.

Stockton—90 per cent. cutting done, too much rain, delaying threshing.

Methven—75 per cent. of grain cut, getting too much rain.

Crystal River— Cutting finished, rain has stopped operations.

ESTEVAN SECTION.

Beresford—40 per cent. cutting to do yet, threshing in a week.

Lauder—75 per cent. cutting done, threshing next week.

Melita—75 per cent. cutting done, weather favorable, thresh in a week.

Elva—70 per cent. cutting done, too much rain lately.

Pierson—65 per cent. cutting finished, weather fine, no damage.

Gainsboro—Cutting well advanced, weather most favorable.

Glen Ewan—Cutting will finish this week, weather favorable.

Alameda—Cutting now general, no threshing, weather fine.

Estevan—Weather favorable, cutting well advanced.

MISCELLANEOUS.

Pipestone—Cutting well advanced; threshing in ten days.

Antler —Weather favorable; cutting well advanced.

Arcola—Weather favorable; 50 per cent. crop cut; no threshing.

Reston—Heavy rain and hail last night; slight damage done.

Manor—Too much rain; cutting now general.

Emerson—Weather favorable, cutting about completed.

Otterbourne—Weather fine; cutting now in full swing.

Dominion City—Crop nearly all cut, threshing in full swing.

Altona—Weather favorable; cutting finished; no threshing.

Rosenfeld—Fifty per cent. threshing done; weather favorable.

Gretna—Grain nearly all cut, threshing general.

Minnedosa—Cutting now general; threshing in three weeks.

Yorkton— Cutting now general; weather favorable.

Strathclair—Cutting now general; threshing in two weeks.

Newdale—Cutting now in full swing no threshing done.

Franklin—50 per cent. grain cut; threshing start in ten days.

Westbourne—Cutting about finished, threshing started.

Shoal Lake—Cutting now general; threshing in three weeks.

Gladstone—Wegther favorable; 50 per cent. crop cut.

Macdonald—Weather favorable; cutting finished; threshing.

Langenburg—Cutting general; weather fine; no threshing.

Arden—Fifty per cent. grain cut; threshing in a week; weather fine.

Forrest—Weather favorable; cutting well advanced.

Hamiota — Weather favorable; no damage; cutting general.

Crandall—Sixty-five per cent wheat cut; weather very favorable.

Miniota—Weather favorable; 60 per cent. grain cut.

Stonewall—Cutting just through; threshing commenced.

Tuelon—Seventy-five per cent. cutting done; weather favorable.

Stony Mountain—Cutting finished; threshing last week.

Snowflake—Cutting about through; weather favorable.

Mowbray—Cutting about through; threshing started.

THE FEMININE VOTE.

Next Australian Election Will See Women as Candidates and Voters.

The coming elections in Australia will for the first time in the history of the country be carried on under the new franchise act by which every citizen, male and female over the age of 21 is entitled to a vote. The women will be permitted fully and unrestrainedly to take advantage of the new act, and some interesting developments may be anticipated. The Australian woman seems determined to take advantage of her rights in the matter, for already no fewer than 850,000 have registered as voters in the coming elections.

This great increase of voters in the Australian commonwealth will have far reaching results. What prophet, be he ever so learned, would venture to declare with any chance of being correct, who would or who would not be returned at an election where the fair sex exercise their franchise privileges. Australia believes in allowing women to have absolutely equal rights with the stronger sex and embarks without fear of the future on the experiment of giving them full voting privileges. What the result will be remains for the future to unfold.

Not only have the women the privilege of voting, but they may become candidates for any office, and the president of the Women's Political association of Victoria has announced her candidature for a seat in the federal legislature as one of the representatives from Victoria. She will doubtless have an immense political following and has every chance of success.

The spectacle of a man and a woman as rival candidates for a seat has its amusing as well as awkward features, but in New Zealand, where women have long since had full franchise privileges, the results have been excellent. Political corruption is practically unknown in the country and the government is certainly a model of political cleanliness and ability. The new conditions which the franchise will give rise to in Australia will be followed with great interest by the rest of the world.

They Deny It.

Published elsewhere in this issue, is an interview with Mr. Sidney Humphries, a miller of Bristol, England, in which he charges that Manitoba wheat is not up to standard when it arrives in England. The Winnipeg Grain exchange have emphatically denied the charge through the press.

Gave Himself Up.

A Toronto dispatch says: Richard Carsberg, an Englishman, much the worse for liquor gave himself up to the police here and asked to be sent to England for a crime for which another man was hanged in 1883. Carsberg's story is somewhat incoherent, but in the main is as follows:

In 1883 he was travelling in a Metropolitan underground railway carriage in London, England, with one C. F. Lefroy, when suddenly a man named Gould entered and attacked Lefroy. Gould had a revolver in his hand and Carsberg attempted to take the weapon from him, in the struggle the revolver went off and Gould was killed.

Lefroy subsequently was hanged for shooting Gould. Carsberg fled to Canada and has wandered about for twenty intervening years. The affair has preyed on his mind until he could no longer keep it to himself. Carsberg is in custody and the London police will be communicated with to investigate his story.

The Winnipeg general hospital is congested with patients.

A $25,000 fire visited Carman's grain storage district on Sept. 2.

Cartoonist Bengough is leaving Canada to take up work in England.

The location of the Grand Trunk Pacific will be left to the engineers.

The Turkish government is anxious for a battle with the insurgents.

A big furniture factory will be erected in Fort Rouge, Winnipeg.

In the Kirkpatrick match at the Dominion Rifle association matches at Ottawa, the Manitoba team took second place.

The fourth attempt to sail the America's cup race since the second success of Reliance was a failure for want of wind.

City Engineer Armstrong of Edmonton, has been appointed chief engineer of the Grand Trunk Pacific between Winnipeg and the coast.

Twenty-nine people perished in an explosion which occurred on an Austrian steamer just after she left the Bulgarian port of Burgas.

Great Britain intends to be firm in dealing with China, and stories regarding United States intervention are discredited in official circles.

The Canadian Northern railway is destined to be a transcontinental road, according to an interview given by D. D. Mann at Montreal.

Montagu Holland, the English swimmer, has failed in his further attempt to swim the English channel. He left the water eight miles from Calais, after swimming 17 hours and 20 minutes.

HEAD-ON COLLISION

WORK TRAIN CRASHES INTO IMPERIAL LIMITED.

Fireman Moran and Engineer McMahon are Killed—The Passengers Escaped With the Exception of a Few Bruises—Train Crew Overlooked Orders.

The Imperial Limited, of the Canadian Pacific, met with a very serious head-on collision three and a half miles west of Grassett, Ont., at 8.30 on the morning of Sept. 1, caused by a light engine and caboose in charge of Conductor Charlebois, who overlooked the instructions and did not sidetrack as directed, to allow the Limited to pass.

Fireman P. Moran, who started to jump from his engine, was caught between the engine and the tender, and instantly killed.

Engineer McMahon stayed with his engine until he had reversed the machine and applied the air brakes. By that time it was too late to get clear and when the two large engines struck Engineer McMahon was caught by one foot. His leg was scalded terribly, from the effects of which he died at 2 o'clock the same afternoon.

All the passengers escaped with the exception of a few bruises. Conductor J. E. Lariviere, who had charge of the Imperial Limited, was very anxious as to his passengers, showing them every possible care and attention. Four dining car employees were slightly scalded.

KILLED AT HAMIOTA.

Hamiota, Man., Aug. 31.—Kate Sheardown was killed by the local train from Brandon. The accident happened about two miles east of town and a short distance from her home. The body was lying outside of the track with the head between the rails.

She was said to be deranged, and suicide is suspected.

INJURED AT OCHRE RIVER.

A serious accident occurred to Brakeman Wilson at Ochre River, Man., on Aug. 31. After giving the signal for the train to go ahead he missed his footing and fell between the cars. In the fall he fractured his skull and broke his shoulder. It is feared his recovery is impossible.

TOO LONG ON DUTY.

James Tieger, brakeman, was killed instantly on the track near New Hamburg, Ont., on Sunday afternoon. There was a wreck of an extra freight train near the village and he had been sent back by the conductor on the wrecked train to flag the express.

It is said that he had been on the road a good part of Saturday and on Sunday up to the time of his death and had apparently fallen asleep. The engineer of the express saw some obstruction on the line, but thought it was an ash heap dumped from an engine.

KILLED AT NEWBURY.

Herbert Telfer was killed at Newbury, Ont., on Monday night, stepping off a train in front of a Grand Trunk express.

Soundness in Market Horses.

The most important requirements of a market horse is "serviceable" soundness; that is, he must have no chronic disease that will unfit him for work of a general nature. He must be sound in wind and limb able to do a reasonable amount of work without fatigue or premature breakdowns. The majority of the horses sold from a great market go to the city trade and are compelled to do their work on hard unyielding pavements, pulling heavy loads, or developing speed that is an even greater strain one feet and legs. The average period of usefulness on city streets of a horse that was sound at the start is not more than five years, and it is manifestly evident that this time will be materially decreased if he begins his work in an unsound condition. Broken wind, sidebones and unsound hocks and all the various other ills that a horse is heir to should be strenuously guarded against, as they greatly diminish his value.—Bulletin 37, Bureau of Animal Industry, U.S.A.

Better Days for Ireland.

"Ireland has crossed the turning line into a newer and a better civilization, says former Lord Mayor Valentine E. Dillon, of Dublin, who has just arrived in New York. "Only those who have lived in that land all their days, as I have done, can fully appreciate the present condition of the provinces."

While not optimistic of Ireland's future, Mr. Dillon declares that the British government has eventually opened its eyes. "And now that its eyes are opened," he continued, "we actually feel better. The next ten years will see Ireland rid of the system by which the provinces have been impoverished."

A Toronto dispatch says: As the Hamilton brewers have raised the price of beer one dollar a barrel, hotel-keepers of this city met on Saturday and decided to abolish the free lunch and cut down the size of the beer glasses from twenty to sixteen ounces. After October 1 the price of all whisky will be 10 cents a glass. No distinction will be made between fighting, cooking and squirrel whisky and real goods.

The building permits issued in Winnipeg this year have reached a total of $4,181,000.

A private telephone system is contemplated between Birtle and Solsgirth.

The Fernie Free Press

ESTABLISHED 1898.

THE FERNIE FREE PRESS. FERNIE BRITISH COLUMBIA

SATURDAY, SEPT. 5, 1903.

EDITORIAL NOTES

Word was received here on Sunday that the date of the general elections had been changed from Oct. 31 to Oct. 3rd, a difference of exactly four weeks. Nomination will take place on Sept. 19th. An extra of the B. C. Gazette has been issued announcing that the old writs have been cancelled and that new ones have been isssued bearing the date Sept. 5 and returnable on or before Nov. 2. This sheet also announces that the legislature will meet on Nov. 26th for the despatch of business.

The government's explanation for this sudden change is not yet made known, though it is said that the premier was anxious to appeal to the province as early as possible as his government was merely one of sufferance: and also on account of the deplorable condition of the finances of the province, fiscal improvement was immediately necessary. Former Finance Minister Carter-Cotton says that during the past four years the excess of expenditure over revenue exceeds $5,000,000 and that it is necessary to take special action to bring about a more satisfactory state of affairs. Ministers Green and Wilson when on their way from Ottawa to the coast stated to a representative of the Free Press that they regretted the late date for the elections, which they regarded as unavoidable owing to the machinery of the law connected with the new voters list.

The liberals on the other hand regard the whole matter with suspicion. The simultaneous nominatiens of the conservative party on August 15, they claim was only a part of the concerted scheme to steal a march on them. They claim that it was curious that the government has only now discovered the financial crisis. The new railway policy of McBride's is given by them as another reason for the juggling with the dates, it being thought that he wants to rush the policy without proper time for consideration and thus catch his opponents napping. They claim that the action of the government is unprecedented in any civilized country and that it will directly affect the electorate in many cases where plans have been made by voters for the original date.

Whatever motives the government may have had or whatever motives may be attributed to it by the opposition, the new date will meet with general favor throughout this district. The old date made the campaign unnecessarily long and extended it into the season of the year when unfavorable weather often prevails. The issues are plain and a few public meetings together with a little common sense and hard thinking will enable every voter to decide which way he ought to cast his ballot.

* * *

A proposition is on foot among several enterprising business men to purchase the skating rink property from C. J Digby and form it into a joint stock company concern. The rink together with the three lots can be purchased for $2000. It is proposed to stock the company with a capital of $4000. This will provide sufficient funds to erect a large rink north and south across the lots, the full size of which is 180x120. Due provision will be made in the new rink for curling and galleries and anterooms will be arranged on up-to-date principles. The advantages of a first-class skating rink are known to nearly everyone and we believe that little difficulty will be found in disposing of this stock. Hockey has always been handicapped by the smallness of the present rink, curling is an unknown sport in Fernie for the same reason, and the skating area as well as the accommodation of hockey and carnival gatherings has been entirely inadequate. If the proposed improvement is to be made for this season no time is to be lost as the winter will be here before we are aware of it.

* * *

The district Liberal Association have secured the services of S. S. Taylor K.C., Liberal candidate at Nelson for next Wednesday and Thursday. Public meetings will be held in Princess Hall on Wednesday and at Michel on Thursday evening. E. C. Smith the Liberal nominee will also be present at both meetings and the opposing candidates are invited to be present.

Mr. Smith, of Smith Bros. a large contracting firm of Greenwood, was in town yesterday purchasing lumber for the erection of a dozen buildings at the new town of Coleman, which has been opened six miles west of Blairmore at the junction of the spur line from the International Coal Co's property. These new buildings are many of them large, three of them will be hotels and the remainder will be business houses. Greenwood and Grand Forks people are the promoters. The new town promises to be a hustler. Corner lots have sold rapidly at $600. The building operations will be rushed at once. Much of the lumber will be supplied by Fernie merchants.

C. P. R. COAL PROPERTIES.

C. M. Henretta came in from Banff yesterday on a business trip. He states that the C. P. R. have instituted a mining and metallurgical department for the purpose of developing coal properties to provide coal for their own consumption. The Company's property near Banff, about five miles from the town and within the park reserve is being steadily developed by a force of 45 men. Two seams of semi-bituminous coal are being opened and two seams of semi-anthracite coal are also thought to exist there. A railway spur of 2½ miles in length will likely be built in the spring. The coal is of good steaming quality and will be very useful for railway purposes. The seams dip at an angle of about 45 degrees. At Moosejaw the company is sinking a shaft on their coal property and they expect to produce a lignite coal for domestic purposes. The C.P.R. have abandoned the idea of building cottages at these two places this fall but it will be done in the spring. The last of the men prospecting for the C. P. R. above Michel on the Elk came out yesterday. They found many evidences of abundant coal desposits on the 46 claims held by the C. P. R. No samples had been brought out to be tested and Mr. Henretta would not express an opinion beyond the conservative statement that "it looked good."

MICHEL

From Our Own Correspondent.

F. J. Mitchell, of Fernie, has opened a tailor shop here in the Dudley boarding house.

C. Laidley was down here on business Wednesday evening.

F. B. Sample was in town this week.

"Hutch", of Fernie was in town a few days this week.

A. W. McVittie and party are up the river surveying some timber limits.

W. S. Keay was in town Thursday and Friday on business.

Chas. Richards was down from Fernie Thursday evening.

S. Herchmer was in town yesterday.

E. H. Bird, manager of Fernie bank was here Friday.

C. M. Henretta, of Banff was in town this week.

The C. P. R. have moved their outfit from their property up the Elk to Crows Nest where they are doing development work on their claims.

Walter Brown received a severe wound in the cheek just below the eye being struck with a pick while at work in the mine.

The foundation for the new water tank above the station is completed.

On Wednesday the tipple broke down so the outpnt of coal was less than usual.

The new car shop here is almost completed so it is expected that the miners will have plenty of cars once operations are in full swing in the new shop.

A number of Fernieites interested in the claims up the river went up yesterday to have a few days outing and also examine the claims.

Mr. Harry Evans and sister Miss Polly Evans left for Cowley Wednesday evening.

Labor Day was celebrated in town instead of the prairie and, considering the weather, was quite a success. The usual program of sports was carried through, valuable prizes being given for each event. The drilling contest was won by McDonald and Wilson. The ball in the evening was enjoyed by a large number, the music being first-class.

Michel Methodist church is completed and will be opened to-morrow. Services in morning 11 a.m., evening 8. p.m. Special music will be furnished by the choir. Monday evening an old fashioned Tea Meeting will be given in aid of the building. After tea there will be some first class music and short speeches by prominent speakers. This is the first church in Michel and great credit is due the pastor, Rev. A. E. Marshall, for the way he has worked to have a church established here.

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1, That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electoral districts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

DISSOLUTION OF PARTNERSHIP.

Notice is hereby given that the partnership heretofore existing between Louis Carosella and Chas. Goldstein, under the firm name of L. Carosella & Co., has this day by mutual consent been dissolved. All accounts due the said firm must be paid to the said Louis Carosella who will also pay all outstanding bills.

CHAS. GOLDSTEIN,
LOUIS CAROSELLA.

Dated July 28th, 1

LOCAL AND GENERAL.

Fresh Oysters at Cuthbert's.

Next Saturday is Nomination Day and Pay-Day.

W Cronk, of Jaffray, visited Fernie this week.

H. F. Martin was up fron Morrissey on Thursday.

H. F. Brandow was at Michel and Morrissey this week.

R. M. Hood, of the J. Y. Griffin Co., Nelson, was in town this week.

A. W. Church, of Nelson, was visiting friends in town on Labor Day.

J. Hutchison was down the Crow line this week distributing notices for nomination and election dates.

Use "Griffin Brand" brix butter, you can get none better. x

Mrs. L. M. Proctor and Miss Dorothy left on Sunday evening for a short visit with friends at Ogdensburg, N. Y.

Mr. and Mrs. Tonkin, Marjorie and Miss Frye left on Sunday for a short vacation at Banff.

As for "Griffin Brand" pig's hocks and tongues. They are boneless and cooked ready to serve. The real thing for picnic lunches.

The Presbyterian church are getting up a novel advertising scheme in connection with a lecture that will be given in that church week after next.

The regular general meeting of the Fernie Board of Trade will take place on Monday Sept. 14,at8 o'clock in Joyce's Hall.

Rev. P. H. McEwen returned from a trip into the Similkameen and Boundary Country last evening. He will preach in the Baptist church to-morrow morning and evening.

T. McQueen, a cigar maker, arrived from the coast on Monday to take a position in the Crows Nest Cigar factory. "Tommy" played star lacrosse when a boy in the Okanagan and he has since played with the Westminster intermediates.

Mr. Wheatcroft of this place has been given the contract of enlarging Harry Howard's hotel at Blairmore. The addition will be 40x50 feet and two storeys high. The Cosmopolitan, while a good-sized house, is not yet large enough to accommodate the business in sight.

The Liberal Association wish to announce that their Committee room in the Fernie Hotel block, fronting Wood street, is open every evening to all Liberals who desire to make use of the same and they are requested to bring their friends. An ample supply of campaign literature will be found on hand, and no effort will be spared to further the interests of their candidate. Each Saturday evening there will be a public meeting at which various speakers will discuss the issues of the campaign.

Development at Coal Creek mines is going steadily on. At No. 4 the coal is being wasted on the dump as the tramway is incomplete owing to the delay in the arrival of rails. Two cars are expected shortly and by Oct. 1st the coal will be landed at the tipple and several rooms will be in operation. In No. 5 three drifts have struck coal. Development work has been commenced on No. 9 which is situated close by No. 1 and by the end of the year it will be sending out coal. Nos. 6, 7 and 8 will not be developed until next year. The haulage engines at the mines are being placed on the beds and connected and alterations are being made on the tipple to suit.

At a meeting of the executive of the Fernie A. A. A. held on the evening of Tuesday last in the office of the sec.-treas., the following resolution was brought forward and unanimously approved. "Whereas it has been brought to the notice of this committee that the different clubs in the town have been in the habit of taking round subscription lists for the purpose of defraying the expenses of leaving town to play games and also bring outside teams to town, and whereas such taking around of lists is very disagreeable to many citizens, be it resolved that this committee discourage any such action on the part of the different clubs and hope for the support of the citizens in the upholding of this resolution.

A report from Morrissey states that on Wednesday the drivers in the Morrissey mines demanded $3 a day and went out in a body, on the ground that the drivers at Coal Creek and Michel were getting that wage. The contract wage for this work in the two year agreement signed April 1st was $2.50 and it was shown to them that no change had been made and that the drivers at Coal Creek and Michel were receiving exactly the same. The union was appealed to and the local manager of the Company was told by one of the leaders that since the Coal Company would not recognize the United Mine Workers of America they could do nothing in the matter. However many better thinking members seeing the injustice of the drivers' contentions offered to give up their regular jobs to go at driving rather than see the mines idle. This was not necessary as the Company secured other regular drivers and the work proceeded as usual.

A Joyce was in Jaffray this week.

Cranbrook had a successful celebration on Labor Day.

T. H. Hunter, of Pincher Creek, was in town this week.

Mrs. James Kirkpatrick and son Fred returned from the east this week.

Mrs. J. A. Hill, of Wolesley, N. W. T.' is visiting her daughter, Mrs. Vance.

Mrs. Geddes and children arrived from Elko this week to make their home in Fernie.

Mrs. Stewart McKim arrived this week from Cranbrook to join her husband who has a position with the Trites-Wood Co.

It is reported that the Coal Company operating at Frank purpose building a fine hotel where the Sanitarium hotel now stands.

"Griffin Brand" brix butter is fresh from the churn and retains that peculiarly delicate flavor that only the best and freshest butter can have. x

S. J. Watson, druggist from Parkhill, Ont., who recently spent a few days in Fernie has purchased C. E. Reid's drug business at Blairmore.

The fitters and blacksmith helpers in the C. P. R. shops at Cranbrook who recently went out on strike have returned to work.

H. F. McLeod who came here from Vancouver to open up a law office in this place closed up shop this week and has gone to Winnipeg.

The C. P. R. have bonded 12 coal claims near Crows Nest belonging to Messrs. McInnes, Moffat and Edwards, of Cranbrook. A force of twenty men are now engaged in prospecting and opening up the seams.

August Anderson an employee of the C. P. R. at Jaffray, met with a horrible death at that place late last Sunday evening by being run over by a freight train. It is supposed that he was sleeping on the track. His remains were scattered along the track for a long distance.

The installation of the new electric light system is going steadily on and it will probably be in operation by Oct. 1st. The wires are now being strung. The full current of 2,500 bolts is carried from the mines to the outskirts of the town by naked wires, after which it is conveyed in the two upper wires which are covered. These are the primary wires which carry about the same voltage as used in the electrocution chair; beneath are three covered wires of larger size called the secondary wires, which carry only about 110 volts. Transformers are being put in to reduce the current from the primary to the secondary wires. These transformers will be attached to posts in different parts of the town, 150 lights being allowed to each. The change in the system is costing the Coal Company about $25,000.

W. B. Ganong received word this week of the defeat of his yacht Glencairn IV in the inter-provincial yacht races for the Coronation Cup. The Sydney club won it last year and they successfully defended it this year with the St. Lawrence, a boat purchased at Montreal, The two races were very close, each being a matter of seconds. The Sydney club put in two boats and by this means jockeyed the Glencairn. The latter boat was backed by the St. John Boating Club. Mr. Ganong has two other yachts which participated in races in Brunswick this year. The Marquriette won the Alderman Cup offered by the city of Fredericton and the Asthore which held the championship of New Brunswick for three years was defeated. Glencairn IV was a successful defender of the Seawanhaka cup.

Mr. Rushford arrived from the east this week to take a position in the Coal Co's. office.

G. Sandstrom C. P. R. foreman at Elko has been appointed road master over the line between Medicine Hat and Macleod.

They Make You Feel Good.

The pleasant purgative effect experienced by all who use Chamberlain's Stomach and Liver Tablets, and the healthy condition of the body and mind which they create makes one feel joyful. For sale by all druggists and deal

Among the visitors from Lethbridge on Monday were the following, J. Walwork and wife, Miss Davies, F. A. Wallace and wife, Miss Wallace, Misses McKay, Thos. Burnett, E. T. Saunders and wife, R. A. Wright, R. Livingstone and R J. Moore.

The many friends of Mr. Stephens who did not get a hand shake with him prior to his departure on Sunday will appreciate the iollowing letter received from him yesterday at this office :

Editor Fernie Free Press

"On leaving Fernie rather hurridly Sunday night I did not have an opportunity of bidding nearly all of my citizens friends good-bye and I would like very much if you would do this for me through your valuable paper, for I appreciate very much the kindness shewn me at all times during my stay in your town and especially so, the very hearty send-off I received at the Royal Hotel, Saturday night.

Thanking you in advance and wishing you all every prosperity.

Believe me yours sincerely,

F. STEPHENS,

Calgary, N.W.T., Sept. 8, 03.

Dysentery causes the death of more people than small pox and yellow fever combined. In an army it is dreaded more than a battle. It requires prompt and effective treatment. Chamberlain's Colic, Cholera and Diarrhoea Remedy has been used in nine epidemics of dysentry in the United States with perfect success, and has cured the most malignant cases, both of children and adults, and under the most trying conditions. Every household should have a bottle at hand. Get it today. It may save a life. Sold by all druggists and dealers.

Mrs. Todd is having her millinery opening to-day. The fall weather is evidently coming on earlier than usual, and as her stock has all arrived she has concluded to have the opening correspondingly earlier. She has a very complete stock in all lines of Fall and Winter millinery, and the store looks very handsome in its new garb. Her ready-to-wear trimmed hats in various new styles are very pretty and her magnificent pattern hats include several importations from Paris, the centre of the fashion world. The new goods that are opened to-day for the first time include full lines of storm skirts, suit lengths, blouse goods and ladies underwear and hosiery. The dress-making department continues to turn out first class work. The ladies of the town will no doubt find a visit to this store very interesting.

The Proper Treatment for a Sprained Ankle.

As a rule a man will feel well satisfied if he can hobble around on crutches two or three weeks after spraining his ankle, and it is usually two or three months before he has fully recovered. This is an unnecessary loss of time, for in many cases in which Chamberlain's Pain Balm has been promptly and freely applied, a complete cure has been effected in less than one week's time, and some cases within three days. For sale by all druggists and dealers.

We have opened up a variety of sideboards at prices to suit all purses.

WHEAT IS MIXED

MANITOBA GRAIN NOT UP TO STANDARDS.

Mr. Humphries, a Bristol Miller, Declares That Consignments Sold in England Are Not Received as They Were Originally Shipped.

"Manitoba wheat is the best in the world, but we do not get it in England in the same condition as it is shipped by the western farmers, and as a consequence the farmer suffers a serious loss in price." This is what Mr. Sidney Humphries, an extensive flour miller, of Bristol, Eng., said to a Winnipeg Free Press reporter. "We buy your wheat on certificate, and very frequently, I may say invariably, the grain is not up to the standard represented by the certificate. When buying in this way purchasers have no recourse as they have when buying by sample, if the grain it not up to the mark. I have to-day seen the standards of your wheat at the chief grain inspector's office and obtained explanations of your method of grading. From what I learned I am more fully convinced than ever that Manitoba wheat is badly adulterated somewhere before it reaches Great Britain. Now this is most unfair to the farmer; as it seriously depreciates the value of the wheat on the old country market and causes the miller to fight shy of it. When they buy Russian, Platte or Indian wheat they know exactly what they are getting; but if they buy a shipment of No. 1 hard Manitoba, as alleged by the certificate that accompanies it, they are liable to get No. 2 northern or a grade or two lower, and the only satisfaction they can get from the broker is a reference to the certificate. In my opinion Canadian shippers should endeavor to have their wheat sent through from the initial point of shipment to the old country by an all-Canadian route, permitting no opportunity for mixing either at Canadian or United States points. If this were done I believe your farmers would receive a much better price for their wheat than they do under existing conditions, because old country millers want Manitoba wheat and are willing to pay a top price for it in its pure state. If they can get the several higher grades up to the mark required by your legal standards, we can manufacture flour in England by blending with our own wheat, of such a high quality that the United States millers cannot get a look in at our home trade. By all means get your wheat to us as you grow it, and in order to do this, ship it over an all-Canadian route. I am making no accusations against any person, but simply speaking of a condition of things that exists and are injurious to your wheat growing industry. For my part, I intend hereafter to get your standard samples each year as they are made in order to avoid the trouble and loss I have experienced in the past."

Mr. Humphries, who was one of the Chamber of Commerce delegates, made a strong speech on this subject at the congress in Montreal

HANDS ACROSS THE SEA.

Andrew Carnegie Predicts That English Speaking People Will Form one Empire.

Barrow-in-Furness, Eng., Sept. 1.—The autumn session of the Iron and Steel Institute opened here to-day under the presidency of Andrew Carnegie.

Mr. Carnegie, in opening, said that the record in iron and steel in England, "the great little mother of nations," had not been equalled by any of her children, although her oldest and biggest seems to inherit his mother's indomitable spirit and the ability to work miracles. In all matters of iron and steel, continued Mr. Carnegie, the child has been borne upon the shoulders of the parent. If the Atlantic ocean had been prairie land, there would have been little left in the world but the conquering old lady and her family. All under one roof, under one flag, a self-sustaining empire under free trade with probably two hundred millions of our English-speaking race, and a home market so big as to give control of neutral markets. There would be no question of protection or prefetential tariff then to disturb us. Besides all this, we should have been able to enforce peace among nations.

Gentlemen, unfortunately an ocean exists where we should have preferprairie, but it is traversed in about the same time as the 3,000 miles of land between Montreal or New York on the Atlantic and San Francisco and Victoria on the Pacific. Who is so bold as to predict that never is one race to succeed in converting the ocean, hitherto a barrier to your branches, into the pathway of reunion of two united branches? Not I. My faith is unshakable that some day this will be accomplished, and that instead of being two small islands here alien to the European continent, you will look across the sea to your own children in Canada and the United States and become once more the mother member of the dominant power of the world.

As a result of the Canadian flour exhibit at the Japan fair the Canadian exporters have been able to secure many orders from the Orient.

A party of ten surveyors has started out from Yorkton to locate the route of the Grand Trunk Pacific.

In order to raise a war fund Turkey has imposed a personal or land tax on the entire population.

The Shamrock lacrosse club, of Winnipeg, have sent a challenge for the Minto cup.

A NATIONAL CURSE.

The Drinking Evil is Spreading Among English Women.

The London Express of July 15th, commenting on the growing tendency of English women to drink, says:

The facts as to the consequences of drinking among women, set forth at yesterday's meeting of the Society for the study of Inebriety, once more call attention to the most terrible development of the British national curse. Unhappily, as Mr. Charles Booth's "Life and Labor in London" has lately shown, the evil is increasing. Alike among hard-worked factory girls and washerwomen and among better-to-do married women, who are bored with their lonely lives during the day while their husbands are away at work, there is more drinking than there used to be.

This is not a habit that belongs to the "self-regarding" class, as it has been called— a habit that is foolish and wrong, but harmful only to the person who gives way to it. Drunkenness, especially among women, is a wrong to the community, not merely because of the disorder and family misery to which it so often leads, or because of the appalling economic waste of the expenditure on drink, but above all through the injury that it inflicts upon the drunkard's offspring. A drunken mother who neglects or overlays her child is too common a phenomenon.

But even that is as nothing to the certainty that drunkenness among women is having disastrous effects upon the new generations of the British people. It means a dropping birthrate, an increasing infantile death-rate, a host of imbecile, sickly, neurotic or naturally vicious children. If we seek for causes of decline in the physique of large numbers of the people, and of the decreasing supply of young men really fit for the army we can certainly find one here. And the fact cannot be disguised that in drunkenness, both among men and among women, Great Britain holds an unenviable distinction. In her "Contemporary" article, from which we quoted the other day, the Hon. Mrs. Bertrand Russell showed how shocking to an American stranger in this country is the sight, to her unfamiliar, of women going into public houses, and everyone who has visited continental towns knows that drunkenness, if not wholly absent there, is at least scarcely noticeable after its daily and nightly display in Great Britain.

We must set ourselves to grapple with this national disease if we care for our country's future. Legislation may do a good deal to check some of its manifestations. But legislation, happily, is not the only method. Education and the gradual growth of a healthy feeling against drinking for drinking's sake and "standing treat" are other directions in which we must look. Another is the provision of good homes in place of the wretched dens from which the public house is a place of refuge. And it is vitally important to provide alternate resorts more attractive than the public house. Mr. Booth records that in one London district Sunday bands in the parks have, on a publican's own confession, reduced his Sunday takings by six or seven pounds. There is a plain lesson in this fact, which might be usefully developed on a large scale.

Gold in the Lardeau.

Gold excitement in the Lardeau district has received another advance by the discovery of a rich deposit near the north end of Trout Lake. The man who struck it was William Davie, who after staking his claims, came down to Trout Lake City with lumps of quartz fairly glistening with yellow nuggets, the sight of which created tremendous excitement and immediately started a stampede up the mountain. Trout Lake City, whose population is about 200, is deserted, men women and children out to camp so as to be on the spot to plant their stakes at daylight.

The scene of the discovery is about three miles east of the lake in the direction of Ferguson, where the Nettie L, Silver Cup and other rich mines are situated. The fact that it is in a direct line with the phenomenal deposits which have been struck on Poplar creek in the south and Peace river in the north indicates that the free rich gold belt of the Lardeau is from twenty to thirty miles long.

Advices from Aden Arabia, say the principal sources for the supply of rifles and ammunition to the Mad Mullah's forces in Somaliland have been traced through a complete identification of trade marks by agents at Harrar and Jibutila, Abyssinia, to a London firm. Since the commencement of the operations in Somaliland an aggregate of three million rounds of Lee-Metford rifle ammunition and correspondingly large number of Lee-Metford and Gras rifles have been shipped by this London firm to Jibutila and Harrar by way of Manchester and Marseilles.

FOULLY MURDERED

SQUAWS FIND A MUTILATED BODY.

While Picking Berries in Alberta Some Indians Make a Horrible Discovery—Swedish Landseeker is Killed and Hacked to Pieces.

Word came into the police authorities at the fort at Macleod, Alberta, late Saturday evening of the brutal and mysterious murder of a white man on Belly Buttes, Blood Indian reserve. Two squaws, Kills Herself and Bett Walsh, were picking berries on the Buttes Saturday afternoon, when in one of the coulees in the tailings of a bank washout, among the sand and gravel, they discovered the leg of a man.

Immediately they reported the matter to a police scout, "Many Tail Feathers," who hastened to the spot. Leaving the find as it was, Tail Feathers reported to Sergt. Robertson at the Belly detachment, and the two, with Interpreter English, returned to the Coulee. After a short search, about 75 yards further up the washout, the body of a man, well nourished and about the age of 55, was discovered. Both legs had been cut off at the body, and the body, which was entirely naked, had been buried with the dismembered legs deep in the gravel.

A week ago last Saturday, Day Chief, chief of the Bloods, noticed a bell shaped tent with a wagon standing near the tent of one of the Indian women, many of whom are now out near the hay camp picking. It was evidently a white man's camp and as this is not on the trail a camping place there is an unusual thing, and as such he reported it to Kills Herself and some of the other squaws. When in the vicinity of the camp he noticed a man come out of the tent, and standing near the waggon, watched him as he watered his horses. That evening Kills Herself and Bett Walsh went over to the tent to investigate. They found the place temporarily deserted. Tea was made, but was cold and other evidences of a meal for two were present, but neither horses or men were in sight. The camp was that usually made by land seekers who are driving in overland, and that these men were intending settlers was evidenced by the presence of an ordinary railroad map which was opened on the ground inside the tent. That night a heavy rain came on and during the darkness the camp was broken, for no trace of it was present in the morning save that of the now blank camp-fire embers. On examining this, traces of clothing, buttons and other things unburnt were found sufficient to warrant the belief that the clothes which had been stripped from the dead man had been burned.

The post mortem examination of the body reveals the fact that the man had been killed by a couple of blows from a blunt instrument such as an axe, as two wounds were found on the side and back of the head corresponding with such as would be made by an instrument of that nature. The man was possibly a foreigner, a Swede, 5 feet 3½ in. in height, of light complexion, but considerably grey. There were no marks on the body to aid identification and the only remarkable point noticed was the unnatural space between the two front teeth. This is fully ¼ of an inch wide. As was natural, considering the amount of rain that had fallen between the time of seeing the men and the discovery of the body, no traces of the wagon tracks were discernable either on the prairie or the trails which lead out of the reserve.

The theory advanced for the motive of the murder is that these two men were land-seekers, one possibly without much money, and the other with considerable, and that the murdered man was done to death, his money appropriated and his body stripped and buried, while his clothes were burned in the hope of destroying all means of identification. The heinous programme was carefully planned, and but for the severe rainstorm might never have been discovered.

The Middlesex Law association, at a meeting held at London, Ont., on Aug. 31, unanimously adopted a resolution approving the establishment of a divorce law for Canada.

The longest session on record of the Dominion parliament lasted 172 days. The present session reached the 172nd sitting on August 31, so that the record is now broken.

United States residents in Winnipeg have formed a national association.

THE KING A DIPLOMAT.

He Confers With Austrian Emperor on Balkan Troubles.

Vienna, Sept. 4.—Although during his visit here King Edward has not sought a private conference with the premier, Count Goluchowski, it is believed that the Balkan troubles have been the subject of discussion between the King and the Austrian emperor. It is pointed out that Count Goluchowski and other Austrian ministers have attended the numerous imperial functions in King Edward's honor.

It transpires that Prince Ferdinand's mother, Princess Clementine of Saxe-Cobourg, came here from Hungary purposely to see King Edward, and that the latter's visit to Prince Philip of Saxe-Cobourg at his palace yesterday was principally made in order to meet Princess Clementine.

It is rumored here that the sultan has received a letter from the Macedonian committee enumerating their demands and threatening him with death in the event of his not fulfilling them. It is reported from Belgrade that the headquarters staff of the insurgents has issued a new proclamation promising Bulgarian and Servian intervention.

King Edward left Vienna yesterday morning for London. Emperor Francis Joseph accompanied his majesty to the railway station, where the leave-taking was most cordial.

ACCIDENT AT BRANDON.

Traction Engine Goes Through a Bridge—Two Men Killed.

Brandon experienced a thrill of horror on the morning of Sept. 4th, when it was learned that a Port Huron traction engine, with two men, had gone through the First street bridge and both men were instantly killed.

Shortly after 9 o'clock Dick Chambers, of Brandon, aged 35 years, and William Curle, of Aikenside, aged 60, were in the cab of their engine, which was a brand new one, going over the bridge, when the rear end of the engine crashed through the bridge, turning a complete somersault, and landed in the mud below, a distance of about 25 feet, crushing both men underneath it. Their deaths were instantaneous, and the boiler exploded, letting out the steam and extinguishing the fire. The men were horribly crushed. Both men are well known here, are married and have families.

Russian Revolution Possible.

The new revolutionary party formed in Russia, entitled the Russian Socialist Revolutionary party, which differs from the Russian Social Democratic party in being less doctrinaire and more violent in tactics, is described by the London correspondent of the New York Times, in a dispatch which declares that the new organization has revived something of the terrorism which shook Russian society twenty years ago. There is a third party, the Russian Revolutionary party. All three agree as to the necessity of abolishing the existing autocracy.

The new party aims at arousing the heart of Russia, reaching the peasants not affected by previous efforts. The dispatch asserts that since April, 1902, a "fighting organization" has been created as a wing of the revolutionary part, in order to meet force with force and terror with terror.

Grain Crops in Yukon.

Dawson Exchange: Sixty-five acres of oats are being mowed on Hector A. Stewart's farm on the other side of the Yukon. The owner estimates that he will secure ninety tons from the crop, though it has been delayed by the dry weather. The crop, however, is a good looking one, and shows what the Klondike can do in the way of raising grains.

Stewart has a two-horse mower on the farm. He also has a horse-rake in operation. All the implements in use are up-to-date and of modern patters.

Besides the oats five acres on the farm are planted in potatoes. They will be in the ground for some time yet. They are doing fairly well. Stewart believes that the farm will prove a good financial venture.

Barley, wheat, etc., which were klanted in small experimental crops, are coming along in good shape.

Sale of Dominion Lands.

Ottawa, Sept. 4.—Before the close of the present session legislation will be introduced whereby a fund will be created from the sale of Dominion lands for the purpose of satisfying all the obligations of the government in connection with the Grand Trunk Pacific line. The intention is to permit settlers, who take up homesteads, to purchase an additional 160 acres adjoining their locations at $3 or $5 per acre or whatever the price may be. The lands in the Northwest are rapidly rising in value and the influx of settlers continues to increase. Before very long the fund will have reached a handsome figure.

A scarcity of school teachers in Ontario is causing trouble. The rural sections are the worst sufferers. The department has been compelled to admit students to normal schools who have not previously had one year's experience as required by the regulations. Low salaries are said to be the primary and almost only reason for this dearth of teachers.

The body of Anna Donahoe was found in a cistern at the home of her parents at Newboro, Ont., on Thursday night. She took tea with the members of her family and was last seen by her sister at 6.30. Two hours later the body was discovered. There were no marks of violence. She was 25 years old.

LOINS ARE CHEAP.

The Wild Animal Business is no Longer The Snap it used to be.

A London cable says: The recent sales of animals in Glasgow at which a bear realized £3 and a performing elephant £100 has brought home the fact that the wild beast market is in a very bad way.

"I have abandoned the trade in ordinary wild beasts," said Mr. Jamrach, "and now deal almost exclusively in rare animals. London, which was once the one animal market of the world, has lost its monopoly, and Antwerp, Hamburg, and other continental ports are now large centres of the trade. On the majority of our British steamship lines it is no longer a perquisite of the captain to import animals. They are now looked upon as freight and charged for at a high rate.

"Foreign shipping firms, however, make no such restrictions, and through their officers animals can be bought at prices which would have astonished our fathers. The Glasgow sale is not a fair index of the state of the market, but the following list will show how prices have been affected by the large consignments brought over in foreign vessels:

Elephants (young), 20 years ago, £400; now, £120 to £150.

Lions, 20 years ago, £300 to £400 now, £20 to £25.

Tigers, 20 years ago, £300 to £400; now, £60.

Wolves, 20 years ago, £6 to £8; now 30s.

Hyenas (spotted), 20 years ago £40; now, £40.

Hyenas (striped), 20 years ago, £40; now, £10.

"As to rarer animals, a fine rhinocerus might fetch £1,000, and a white specimen might realize £2,000. Giraffes, after being as low as £50, rose to £1,000 when the Mahdi closed the Soudan. They have now fallen to £300 or £400.

"The whole question of price rests on the amount of freight charged. I am not likely to import, for example a puma from South America at a cost of £40 when I can buy one from a foreign captain in Hamburg or Antwerp for £10.

"With the commoner animals the market is overstocked. That hyena" (pointing to a brute that beamed affably in a strong cage) "has cost me £60 in food alone, and I will sell him to you for £10."

The Flags of the MacLeods.

Dunvegan Castle, in the Island of Skye, has been from time immemorial the seat of the chieftain of the ancient clan of Macleod, and it is supposed to be the oldest inhabited building in the United Kingdom. Here is preserved, as an inestimable heirloom, the Braolauchshi, or fairy flag of the family. The legend is that it was bestowed upon a Macleod in prehistoric times by Titania, Queen Consort of Oberon, King of the fairies. She blessed it at the same time with miraculous powers, which were to be exerted only on three occasions; but on the last, after the end had been obtained, an invisible being is to arrive and carry off both standard and standard bearer, never more to be seen. The office of standard-bearer is an hereditary one, in virtue of which the holder of it is tenant of three lands in Bracadale. The powers of the flag have been invoked on two occasions, says The Penny Magazine. The first was in a combat with the Clan Ranald, in which the Macleods were greatly outnumbered; but when the fairy flag was wafted on high the host of the Macleods appeared in the eyes of the opposing clansmen to be multiplied ten-fold, and, imagining that overwhelming reinforcements had arrived to aid the foe they fled incontinently. The second on which the flag was produced was when there was no prospect of an heir to the chieftainship in the direct line, and fears were entertained that it would pass to a distant branch of the family. Here again the good fairy showed that her blessing was still operative, and in due course an heir was born. Let us hope, for every one's sake, and especially that of the standard-bearer, that it will be many milleniums before the mystic powers of the fairy flag require to be entreated for the third time. It is evident that this tradition has been evolved from the Norwegian ancestry of the Clan Macleod. The Danes had their magical standard called Raefan. Sigurd had an enchanted flag given him by his mother under somewhat similar conditions of the Dunvegan flag. Whoever bore it in the day of battle was to be killed; accordingly in one of his battles three standard-bearers were successively slain, but on the death of the third he obtained the victory. Another very ancient and interesting heirloom preserved at Dunvegan Castle, for which, however, no magical gifts are claimed, is a drinking cup formed of a great ox horn tipped with silver. The method of drinking from it is to entwine it round the arm, bring the mouth over the elbow, and then quaff the contents. Such cups were held in great honor. They graced the hospitable halls of kings, and out of them the ancient heroes quenched their thirst after battle.

Manitoba is to-day the greatest consumer of binder twine of any province in Canada. An estimate has been made of the amount of twine used exclusively for wheat and the result is that the province will use twelve million pounds, allowing four pounds per acre for three million acres.

In a fight between fifteen French soldiers and four Americans in the streets of Pekin, China, the French used bayonets and two of the Americans were seriously wounded.

Mr. Frank Walsh has retired from the management of the Bell Telephone company in Manitoba owing to ill-health. The company granted him a pension of $2,000 a year for life.

Holland has won the intermediate lacrosse championship of Manitoba.

MY HEART'S DARLING

BY W. ERKSURG.

CHAPTER XXVIII.

The next day, which was Sunday, Lucie went to church. As she was walking through the carriage-road, Weber joined her; he had just come out of the greenhouses. He inquired for Hortense, but Lucie had not yet seen her.

"Is she not standing there by the window?" he asked, looking toward the house. Lucie turned too, but she saw nothing but the curtains. They went on talking quietly together. He stopped at the entrance to the park; he would go back and keep Hortense company at breakfast. "Pray for us," he said, trying to jest; but his expression was troubled.

"Yes, from the bottom of my heart!" she answered, warmly.

He turned quickly and returned by a side path. As he inquired for Hortense at the house, he received the intelligence that madame had ridden out a few moments before. He shrugged his shoulders and looked at the rain just beginning to fall.

Lucie returned an hour or so later from church; the breakfast had been delayed. Hortense had not yet come home. At last she rode into the court-yard. Lucie came to meet her on the stairs, looking anxious.

"Oh, Hortense, in this weather!"

Frau Weber laughed, but she was trembling with the cold. "I will be down immediately; please do not wait for me."

"Let me help you."

"No, thank you," sounded back. She made a long, wet line on the blue carpet as she disappeared through the door.

Lucie stayed alone in the dining-room. Weber was walking up and down in the adjoining room; then she heard voices within.

"How could you ride out in such weather, Hortense?"

"It was a pleasure to me."

"A great pleasure!" said he. "You will be ill!"

"Do not be vexed," said a voice which sounded unexpectedly gentle.

"I am not angry, only worried."

"I thank you; but let us come to breakfast," she said, and opened the door into the dining-room.

She had still a smile on her lips.

"Can we have something to eat?" she asked Lucie.

"Of course; we have only waited for you."

"I have a letter from mademoiselle," she said, casually. "Grandpapa had a faint turn again a few days ago."

They talked for some time about it. Weber said he would write to Dr. Adler and ask what he thought of it.

"Please do," said Hortense again, in that unusually gentle voice.

The breakfast passed off more quietly than usual. Hortense was not as perverse as was her wont. Lucie tried to do many little things for her but she did not appear to notice them. As they rose, the girl followed her.

"Dear Hortense, are you warm now? Do put on something. May I read to you?"

She declined everything. Lucie went to her room, feeling troubled, seated herself at her work-table, and went on with a cover she was embroidering for Hortense's birthday. There was a death-like silence all around her; outside the rain pattered down; not a living thing was to be seen in the park. Her work fell into her lap; she laid back her head and thought, not on the past, she had done with that, the threads were broken. She thought of the future; she saw herself sitting in this same room, her hair white, her brow wrinkled, her bunches of roses faded, grown old in work, in care for Hortense and her house.

The world might roll on, in storm and strife, in passion and in happiness: she would not feel a breath of it in her eventless life, with one day just like another.

She looked up at the little mirror standing on the table, and saw her blonde hair shining. She smoothed her head gently; how long it would be before that became gray!

Just then wheels rolled over the gravel below; and she could hear laughing and talking. What could such an unusual thing mean? From her window she could not distinguish anything, as the main building projected. Now the crunching of the wheels ceased; the carriage had stopped at the door. Probably it was visitors; if so it would soon move away; Hortense did not receive any one. Lately, when the old Frau von B— had called, announcing that she had known Hortense's mother, Herr Weber had to receive the lady alone, and excuse Hortense on account of "headache."

All was still again; Lucie took up her work and embroidered the gay silks in the linen.

[CONTINUED.]

Talk.

The normal man, who strikes an average between indifferent silence and meaningless verbosity, will talk probably one hour, all told, each day, which would allow him 2,400 words.

Easter.

Easter is the Sunday which follows that fourteenth day of the calendar moon which falls upon or next after the 21st day of March

Java's Death Plants.

The death plant of Java has flowers which continually give off a perfume so powerful as to overcome, if inhaled for any length of time, a full grown man, and which kills all forms of insect life that come under its influence.

A Cause For Worry.

A man may go along fur fifty years an' not be worried much about de hereafter, but de minit de barber finds a bald spot on his head he's got a burden to carry fur de rest of his days.

FERNIE FREE PRESS.

FERNIE, B.C.

BURGLARIOUS STARS.

Planets and Suns May Pick Up Minor Solar Bodies.

Jupiter is much the biggest member of the family of stars which revolve around our sun; consequently the power of his attraction is greater than that possessed, for instance, by the earth. Jupiter's exploits as a burglar have caused very considerable annoyance and inconvenience to astronomers in the days before his powers were fully recognized.

In 1770 there appeared a fine comet, which was found to have an elliptical orbit round the sun of so comparatively small a size that Mr. Lexell, its discoverer, calculated it would return in five and a half years, but in 1775 telescopes were vainly focused on the spot where it was expected to reappear, and again in 1781 it disappointed all observers. Mr. Lexell plunged into fresh calculations and after much research found that Jupiter was the culprit. The unfortunate comet had been rash enough to plunge into the sphere of the giant planet's attraction, with the result that it had been completely diverted from its former orbit and flung off into quite a different one of a twenty year period. It has never been seen again by any one on this earth and probably never will be.

Jupiter was also responsible for the delay which occurred in the return of that splendid visitant known as Halley's comet. Halley found that he was not the first discoverer of this big comet. It had appeared at least twice previously, once seventy-five years before and again seventy-six years before that. The astronomer concluded that there would be a further delay in its third return and predicted that its next appearance would be 518 days later. He did not live to see it. But in 1758, the year he had prophesied for its reappearance, astronomers were waiting for it.

HUMORS OF MUSICAL LIFE.

Amusing Pranks the Erratic Types Played With a Composer.

Miss Maude Valerie White, author of numerous popular songs, has told a number of anecdotes, many of them at her own expense. I suppose, she once wrote in the Cornhill Magazine, all composers have had a laugh over the extraordinary mistakes which sometimes occur in the first proofs of their songs. I remember years ago writing a very sentimental song, in which the line occurred—

I've never once regretted the vow I made that day.

My feelings may be imagined when I found they had printed—

I've never once regretted the row I made that day.

Miss White also told about an amusing mistake which occurred in the programme of one of her concerts: A well known singer and very good friend of mine was down to sing my two songs, "To Marry" and "Crabbed Age and Youth." But the newspaper announced something very different. Not content with drawing up a programme of my concert, it drew up a programme of my future, for I read as follows:

Mr. Blank
To Marry Maude Valeria White
Crabbed Age and Youth.

As I am a good many years older than the friend in question, the coincidence struck me as particularly funny, and I cut the programme out of the newspaper and sent it to him. By the first mail next morning I received an identical cutting from him, with an inquiry whether he was to take this as a formal announcement of our engagement and expressing a mild surprise that he had not been consulted in the matter.

He Knew Sir Walter Scott.

In a booklet called "Sir Walter Scott and His Country" published in Edinburgh the author quotes this reminiscence from an old man he met who had known the romancer:

"Aye," he minded Sir Walter fine. "I seen him driving out in his carriage and pair, wi' Tom Purdie on the box seat. He had on a shepherd's tartan plaid and a glengarry cap wi' twa black ribbons hanging doon the back. I mind his dowg tae—Maida, he ca'd it—and an awfu' work he made ower the beast. But he was as pleasant a man as you could speak to, though he wasna thought muckle of as a pleader when they made him shirra o' Selkirk. Is it his buiks you're speiring on? Ou, aye, ye'll find a' his buiks ben the hoose."

Carved on the Tomb of Ingalls.

This extract from Ingalls' essay on "Grass" is carved on the glacial bowlder which marks his last resting place: "When the fitful fever is ended and the foolish wrangle of the market and forum is closed grass heals over the scars which our descent into the bosom of the earth has made, and the carpet of the infant becomes the blanket of the dead."

An Apt Comparison.

Vendome used to say of Mme. de Nemours, who had a long nose overhanging a pair of ruddy lips, "She looks like a parrot eating a cherry."

Cash Before Fame.

"Why don't you try to write your name on the scroll of fame?"

"My friend," said Senator Sorghum very earnestly, "I have never yet seen anybody tearing leaflets out of the scroll of fame and getting them cashed at the bank."

An Amateur.

Young Bride—I'm so nervous. I'm actually shaking.

Matrimonial Veteran—You'll get over it, dear. Why, when I first began getting married I thought I should never stop having altar fright.

Many different kinds of cards of thanks have appeared in newspapers, but Oswego, Kan., claims the prize with one from five prisoners in the Labette County jail, who "beg to thank the county for the good meals kind treatment and compulsory baths."

Deafness Cannot Be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed for ever; nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

Address, F. J. CHENEY & Co., Toledo, O.

Sold by druggists, 75c.

Hall's Family Pills are the best.

To remove ink spots from paper, wash the spot with a camel's hair brush dipped in a solution of exalic acid; when the ink has disappeared wash with clean water.

A modern weapon in the battle for health.—If disease has taken your citadel of health, the stomach, and is torturing you with indigestion, dyspepsia and nervous prostration, South American Nervine is the weapon to drive the enemy from its stronghold "at the point of the bayonet," trench by trench, but swift and sure, it always wins.—4.

When Victor Emmanuel II. died the sum of $400,000 was in a short time subscribed for a monument. The government added $1,600,000. The estimate now is that the total cost will reach about $5,000,000. The monument is to be the most beautiful and costly in modern Italy.

Minard's Liniment for sale everywhere.

It is said that those who eat fruit need fewer stimulants than those who do not. There are many persons who simply cannot combine the two together.

THEY ADVERTISE THEMSELVES—Immediately they were offered to the public Parmelee's Vegetable Pills became popular because of the good report they made for themselves. That reputation has grown, and they now rank among the first medicines in use in attacks of dyspepsia and biliousness, complaints of the liver and kidneys, rheumatism, fever and ague, and the innumerable complications to which these ailments give rise.

Dough always comes in handy in times of knead.

THEY CLEANSE THE SYSTEM Thoroughly—Parmelee's Vegetable Pills clear the stomach and bowels of bilious matter, cause the excretory vessels to throw off impurities from the blood into the bowels and expel the deleterious mass from the body. They do this without pain or inconvenience to the patient, who speedily realizes their good offices as soon as they begin to take effect. They have strong recommendations from all kinds of people.

Minard's Liniment Relieves Neuralgia.

In times of typhoid fever:—Sterilize all drinking water by boiling it. Pasteurize all milk and cream. Keep flies from all food supplies. Thoroughly wash in boiling water all fruit and vegetables intended to be eaten raw. Dininfect all discharges of every description from those sick with typhoid fever.

ENGLISH SPAVIN LINIMENT

Removes all hard, soft or calloused lumps and blemishes from horses, blood spavin, curbs, splints, ringbone, sweeney, stifles, sprains; cures sore and swollen throat, coughs, etc. Save $50 by the use of one bottle. Warranted the most wonderful Blemish Cure ever known.

Sold by all druggists.

Sir Francis Wingate, the Sirdar, has presented a lioness and two young giraffes to Dublin Zoological gardens.

All England is wondering if George Wyndham will accept a baronetcy, as it seems certain that such an honor will be offered him. Mr. Wyndham descends from two lines of earls, and a title would not, therefore, be a novelty in his family. The impression is general that before long George Wyndham will place the prefix of "Sir" before his name.

No man is to be praised for giving away the things he cannot use.

Nature's Compass.

In the tropical northern territory of South Australia travelers need not carry a compass. Nature has provided a living compass for them. The district abounds with the nests of the magnetic or meridian ant. The longer axis of these nests, or mounds, is always in a perfect line with the parallel of latitude, pointing due north and south. Scientists cannot explain this peculiar orientation.

Mr. John Hill, a retired bookseller of Derby, who recently celebrated his hunnredth birthday, died on the 11th of August. He claimed to be the oldest Oddfellow in the world, having been initiated in the Loyal Edwin Lodge at Alfreton, Derbyshire, in 1823.

GRAIN COMMISSION MERCHANTS
Winnipeg.

Common salt makes an excellent gargle. It has been known to cure a bad cold in the head when merely used as a gargle, this of course because the connection between the throat and nose passage is so close.

GEO. H. KENT'S CASE RECALLED.

Dying of Bright's Disease, Dodd's Kidney Pills Cured Him.

Recent Deaths of Prominent Men from the Most Dreaded of all Maladies Recalls the Fact that Dodd's Kidney Pills have Conquered it.

Ottawa, Ont., Sept. 7.—(Special)—The recent numerous deaths of prominent men from Bright's disease, recalls the case of Geo. H. Kent, of 408 Gilmour St., this city.

Mr. Kent, who is still iving here, strong and hearty, was dying of Bright's disease. He had lost the use of his limbs and his whole body was swollen to a terrible size. Three doctors were positive that he must die.

While watching at his bedside, his wife happened to read an advertisement that said Dodd's Kidney Pills would cure Bright's Disease. They were sent for as a last resort. From almost the first dose Mr. Kent says he felt benefited by them. After taking four boxes he was able to sit up. Seventeen boxes cured him completely.

Mr. Kent's case caused great excitement at the time. People who had heard of it came from far and near to see him, and all went away convinced that Dodd's Kidney Pills will cure Bright's Disease.

This conviction is strengthened by a number of other cases reported throughout the country where this great Kidney remedy has been used, and Bright's Disease vanquished.

The twentieth century will have the greatest number of leap years possible for a century—namely 25. The year 1904 will be the first one, then every fourth year after that up to and including the year 2000. February will three times have five Sundays—in 1920, 1948, and 1976.

Minard's Liniment Cures Burns, etc.

In the case of weakly, delicate children, they very often derive great benefit from being generally and regularly rubbed all over after the morning bath with the flat of the hand, special care being given to the spine.

Faulty Kidneys.—Have you backache? Do you feel drowsy? Do your limbs feel heavy? Have you frequent headaches? Have you failing vision? Have you dizzy feeling? Are you depressed? Is your skin dry? Have you a tired feeling? Any of these signs prove kidney disease. Experience has proved that South American Kidney Cure never fails.—6.

The long-winded preacher never strikes for shorter hours.

AS THE OIL RUBS IN, THE PAIN RUBS OUT.—Applied to the seat of a pain in any part of the body the skin absorbs the soothing liniment under brisk friction and the patient obtains almost instant relief. The results of the use of Dr. Thomas' Eclectric Oil have surprised many who were unacquainted with its qualities, and once known it will not be rejected. Try it.

The colonial possessions in the world number 141, and all of them are tropical or subtropical in location except Canada. Their populations aggregate 485,000,000.

C. C. RICHARDS & Co.

Dear Sirs,—For some years I have had only partial use of my arm, caused by a sudden strain. I have used every remedy without effect, until I got a sample bottle of MINCIVED from it caused me to continue ARD'S LINIMENT. The benefit I received from it caused me to continue its use, and now I am happy to say my arm is completely restored.

Glamis, Ont. R.W. HARRISON.

The hide of the hippopotamus in some parts is fully two inches thick.

Wash greasy dishes, pots or pans with Lever's Dry Soap, a powder. It will remove the grease with the greatest ease.

Pill Sense.—It stands to reason that Dr. Agnew's Little Liver Pills will crowd out of the market many of the nauseous old-timers. A better medicine at less than half the price is all the argument needed to keep the demand what it has been—phenomenal—40 doses 10 cents. They cure Sick Headache, Biliousness, and allay all stomach irritations.5

Films of soap bubbles have been measured of a thinness of a four-millionth part of an inch.

Men are known by the company they don't keep.

The satisfaction of having the washing done early in the day, and well done, belongs to every user of Sunlight Soap. 183

MARKETS.

(Compiled from The Commercial)

During the past week the wheat markets have in a very marked manner been controlled by weather changes. At the end of last week there had been a few days of continuous good harvesting weather over all the spring wheat country on this continent, and also good weather in most of Europe, and had this continued there is every reason for thinking that prices might have had a sharp decline this week. But from Saturday night until Monday rain was general over the Northwest, and the threshers who expected to begin work on Monday and Tuesday of this week have not started yet, for rains have fallen in one district and another every day since Sunday, so that it is safe to say the harvesting and movement of spring wheat has been delayed one week at least. In western Europe, including England, there has been the same unfavorable weather, delaying harvests. The speculative markets have been nervous and erratic, showing sharp advances and as sharp declines, but the change in price on the week shows advances of 1c to 1½c according to market and month of delivery. Prices are 13c. to 17c per bushel higher that at the same time last year, and no doubt the price seems high to many traders who see a sharp decline ahead if once a free movement of the spring wheat begins. Such movement depends on favorable weather, and the farmers' willingness to sell his grain at market prices. If either should be wanting, prices will not decline in the near future. The movement of wheat in the Sates is still far behind last year, and although exports have also been much less lately, the visible supply is 8,000,000 bushels less than last year. As, however, there has been a good movement for some time from Argentine and India to Europe, stocks on the continent and in England have been increasing, and are larger than last year, and the quantity on ocean passage is also larger. This naturally holds the European market from following closely the advances on this side. The English crop is estimated to be 10,000,000 less than last year. Argentine shipments are now falling off. It is reported that there is an increase of 20 per cent. in acreage under wheat in the Argentine and the recently planted crop is progressing favorably. Seasonable progress is also reported in the plowing for and sowing of the winter wheat crop in the States. Manitoban and Western Canadian harvest is greatly delayed by the rains, but if the crop is gotten off without any damage by frost, it will be of good useful quality and will probably overrun 60,000,000 bushels, the quantity practically assured now. The visible supply increased 172,000 bushels against a decrease of 561,000 bushels the previous week, and an increase of 425,000 bushels last year. The world's visible supply, according to Bradstreet's, increased 593,000 bushels, an increase of 1,427,000 bushels the previous week and an increase of 1,936,000 bushels last year.

Manitoba wheat is quiet. The old crop of wheat has been cleaned up more closely than ever before. At date there is not over 150,000 bushels left in store at lake ports. Some trade continues to be done for September and October delivery, mostly short selling of new crop. Prices at close Friday were, September delivery: No. 1 hard, 84½c; 1 northern, 83½c; 2 northern, 79½c; and October delivery ½c less than September, sales at these prices basis 1 hard; all in store Fort William or Port Arthur.

WORLD'S WHEAT STOCKS

Stocks of wheat in America and Europe and afloat for Europe Aug. 1 in each year for a series of years, were as follows—Bradstreet's report:

	Bushels.
1903	70,000,000
1902	76,000,000
1901	115,000,000
1900	128,000,000
1899	116,000,000
1898	58,000,000
1897	64,000,000
1896	108,000,000

WINNIPEG PRICES.

The following are the Winnipeg jobbing prices:—

Oats—At Fort William No. 1 white oats are worth 31½c; No. 2 white, 30½c.

Barley—Market nominal.

Flaxseed—90c per bushel.

Hay—Baled, $9@$10 per ton.

Potatoes—50c per bushel.

Poultry—Live spring chickens, 40 to 60c per pair; fowls, 75@80c per pair; ducks, 60@80c; geese, 10c per pound, live weight; turkeys, 11c per pound.

Butter—Creamery, 17@17½c per lb; dairy, 11@12c.

Cheese—10@10½c per pound.

Eggs—15c per dozen.

Dressed Meats—Beef, city dressed, 7c; mutton, 9c; veal, 8@9c; lambs, 12½c; hogs, 8c.

Hides—No. 1, 6½c per pound; calfskins, 7c; shearling sheepskins, 10@15c each; lambskins, 10@20c; horsehides, $1.25@$2.

Wool—7½c per pound.

Tallow—No. 1, 4c per pound; No. 2 3c per pound.

Seneca Root—60c per pound for clean, dry root.

LIVE STOCK.

Cattle—Ranch cattle, at point of shipment, 3¼c; butchers' cattle, 2¾@3¼c. off cars here.

Sheep—4c per pound.

Lambs—5c per pound.

Hogs—6c for best weights.

The roughness produced on the fingers by sewing can be removed by rubbing the places with pumice stone or by holding the finger lightly against a small grindstone, afterwards rubbing the spots with cold cream.

Among the many presents received by the Czar last Easter the offering of a Siberian convict attracted special attention, and the Czar is said to have derived extraordinary pleasure from it. It consisted of a hazel nut, the hollow of which contained a chessboard with all the men artistically carved in bone. The convict had worked on it for many months.

The highest tower in the world, 750 feet high, will be erected at the Central Station in New York City.

HEALS INFLAMED ITCHING SKIN

Cures Eczema, Salt Rheum and Tetter, Leaving the Skin Smooth, Soft and Natural. Dr. Chase's Ointment.

As a means of allaying inflammation, relieving the dreadful itching and healing and curing itching skin diseases, ulcers and eruptions, we believe that we can prove that Dr. Chase's Ointment is the most potent preparation that it is possible to obtain.

So many extreme cases have been cured, so much intense and continued agony has been relieved, and such a host of people have volunteered their evidence in this regard that we challenge anyone to produce like endorsement for such diseases.

Dr. Chase's Ointment certainly stands alone, unapproached and unrivalled as a healer of the skin and positive cure for itching skin diseases. From pimples to eczema, from chilblains to ulcers, each and every form of itching skin disease has been cured by this great ointment.

Mr. G. H. McConnell, engineer in Fleury's Foundry, Aurora, Ont., states: "I believe that Dr. Chase's Ointment is worth its weight in gold. For about thirty years I was troubled with eczema, and could not obtain any cure. I was so unfortunate as to have blood poison, and this developed into eczema, the most dreadful of skin diseases.

"I was so bad that I would get up at night and scratch myself until the flesh was raw and flaming. The torture I endured is almost beyond description, and now I cannot say anything too good for Dr. Chase's Ointment. It has cured me and I recommend it because I know there is nothing so good for itching skin."

Dr. Chase's Ointment is known in almost every community. Ask your neighbors about it. There is probably a marked cure at your door which you can investigate. The cures made by this preparation will stand investigation; 60 cents a box, at all dealers, or Edmanson, Bates & Co., Toronto. To protect you against imitations, the portrait and signature of Dr. A. W. Chase, the famous receipt book author, are on every box of his remedies.

THE ROBERT SIMPSON COMPANY, LIMITED

ARE YOU BUILDING?
IF SO USE
EDDY'S IMPERVIOUS SHEATHING
The Best Building Paper Made.

It is very much stronger and thicker than any other (tarred or building) paper. It is impervious to wind, keeps out cold, keeps in heat, carries no smell or odor, absorbs no moisture, imparts no taste or flavor to anything with which it comes in contact. It is largely used not only for sheeting houses, but for lining cold storage buildings, refrigerators, dairies, creameries, and all places where the object is to keep an even and uniform temperature, and at the same time avoiding dampness.

Write our Agents, TEES & PERSSE, Winnipeg, for samples.
The E. B. EDDY CO., Limited, HULL.

The Americans and English, although they consume twice as much sugar as the French and Germans, have much better teeth. The American dentist, however, ranks first in all countries.

Minard's Liniment Cures Dandruff.

A man suddenly quits dictating when he marries his stenographer.

Catarrh is not a Luxury
OR A NECESSITY.

Catarrh makes a man ridiculous—it makes him an offensive nuisance and it makes him dangerously sick. It is pretty sure to bring on consumption, pneumonia, or at least a throat affection. You cannot afford either, but you can afford the cure for it. It is Dr. Agnew's Catarrhal Powder. It relieves a cold or catarrh, or cures a headache in 10 minutes. Don't hawk and spit and disgust your friends, but cure yourself by the use of this remedy. Sold by all druggists. 3

DR. AGNEW'S OINTMENT RELIEVES ECZEMA IN A DAY, 35c

Germans have long been in the foremost rank as potato eaters. Among a very large proportion of the laboring classes potatoes and dark bread are the principal staples of daily subsistence.

Where can I get some of Holloway's Corn Cure? I was entirely cured of my Corns by this remedy and I wish some of my friends. So writes Mr. J. Brown, Chicago

Two or three hives of bees on a Kent, Eng., farm have declared war on poultry and several fowls have been stung to death.

Some people only put on their best manners with their best clothes.

Parents buy Mother Graves' Worm Exterminator because they know it is a safe medicine for their children and an effectual expeller of worms.

Mrs. Emily Crawford, Paris correspondent of the London News, will shortly, it is reported, retire from that place. For over thirty years has Mrs. Crawford—in conjunction with her husband, and then with her son—been actively employed in that capacity.

Cucumbers and melons are "forbidden fruit" to many persons so constituted that the least indulgence is followed by attacks of cholera, dysentery, griping, etc. These persons are not aware that they can indulge themselves to their heart's content if they have on hand a bottle of Dr. J. D. Kellogg's Dysentery Cordial, a medicine that will give immediate relief, and is a sure cure for all summer complaints.

A silver coin remains in currency for an average of 27 years.

MORRISSEY

From The Despatch

A letter, dated Sept. 3rd, has been received from the Educational Department at Victoria stating that the matter of the erection of a school house at Morrissey Mines had been placed in the hands of the Department of Public Works and that in the course of a few days tenders would be asked for the erection of the building.

Fifty coke ovens are now completed. About half of this number are already in use and are turning out a splendid sample of coke. The construction work on the ovens has been considerably delayed owing to the scarcity of brick.

Cards are out announcing the marriage of L. O. Stout, of Seattle, to Miss Bella W. Gourlay, of this place. The happy event occurred at Seattle on Wednesday, Sept. 2nd. The bride's many friends here extend their congratulations.

Several cars loaded with timber got loose on the steep grade near the coke ovens yesterday, and ran over an open switch. Three of them were derailed but not seriously damaged. This is the third accident at this particular point in the last few weeks.

The work of reducing the grade on the C. P. R. at Elko is going steadily on. Two work trains and a steam shovel and two crews of men are employed The dirt is being used to fill in the trestle just west of the town. The axle of one of the work engines broke on Monday and a crew from Cranbrook was sent down to repair it, which was done in time to allow the express to pass.

The post office department at Ottawa have finally decided to overcome the inconvenience caused by the similarity of the names of the different communities in this section. The post office at the mines after the 1st day of October will be known as Tonkin and the new office which has been granted to this town will be known as Morrissey Mines.

On Saturday Henry Patmore received notice of his appointment as Postmaster. The office will be located in the new building which he is erecting on Third Street

---

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a license to prospect for coal and petroleum on the following described land; Commencing at a post planted at the south west corner of H. C. Tuttle's coal and petroleum and marked "Levi Klingensmith's south East corner" thence west 80 chains, thence north 80 chains, thence east 80 chains, thence south 80 chains to the place of commencement.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped portions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding against the wasteful des truction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

Fort Steele Licence District

Notice is hereby given that the undermentioned persons have made application under the provisions of the Liquor Licence Act 1900 for liquor licenses at the places set opposite their names.

G. H. Gilpin. wholesale, Morrissey Mines.
Mike Reguli, wholesale, Morrissey Mines.

A meeting of the Board of Licence Commissioners of the Fort Steele Licence District will be held at the Court House, Fernie, on Friday, August 14th, 1903, at the hour of 7 o'clock in the afternoon.

C. Tuttle's south-west corner" thence east 80 chains, the. ce north 80 chains, thence west 80 chains, thence south 80 chains to the point of commencement.

244-4 H. C. TUTTLE
Dated August 31st, 1903- Jas. Miller, Agent

Notice is hereby given that thirty days after date I intend to apply to the Chief Commissioner of Lands and Works for a license to prospect for coal and petroleum on the following described lands:

Commencing at a post planted on the W. bank of the Elk River about 12 miles north of the 35 mile post and marked John Brown's south west corner, thence east 80 chains, thence north 80 chains, thence east 80 chains, thence south80 chains to the point of commencement

Dated the 31st of August, 1903.
JOHN BROWN,
Jas. Miller, Agent.

The Enormous Expenditure of Money by the Crow's Nest Pass Coal Company, Limited, in the construction of coke ovens and storage bins and the installation of electric light and water-works systems, determines that the industrial centre of this district is established for all time at the new town of

Morrissey Mines

The importance of this fact on real estate values here is immense. One of Canada's greatest banking institutions has established itself here permanently, and the near future will see the residential streets lined with many fine houses that will be required to house the hundreds of workers employed here. It is not hard to guess what the effect of this concentration of well-paid wage earners will have on Morrissey Mines realty. All this army must have homes.

One of these bright July days as one stands on the foothill just above the new town, and looks east toward the collieries, the whole transformation that turns a wilderness into a great industrial centre, is shown in its various stages. We see the near approaching coal train of 40 cars, carrying 1,200 tons, the output of the mines for one day, and a little further on, two batteries of modern coke ovens, many of which will be fired up within ten days.

Just across the paddock that has until recently been used for a horse pasture, can be seen 100 men, digging a ditch for the large water-main that is to supply the town with pure Spring water, while the ring of hammers can be heard on every side.

To those wishing to build homes I am offering attractive terms. Write for particulars or call at my office.

Thomas Crahan, Agent,

IN THE COUNTY COURT OF KOOTENAY HOLDEN AT FORT STEFLE.

—IN PROBATE—

Notice is hereby given that on the 23rd day of July, 1903, it was ordered by J. A. Florin, Esq., Judge of the said Court, that James Ferguson Armstrong, Official Administrator of the County of Kootenay, be administrator of all and singular the estate of ALEX. BODIE, of FERNIE, miner, deceased intestate.

Every person indebted to the deceased is required to make payment forthwith to the undersigned.

Every person having in possession effects belonging to the deceased is required forthwith to notify the undersigned.

Every creditor, or other person, having any claim upon or interest in the distribution of the personal estate of the said deceased is required within thirty days of this date to send by registered letter, addressed to the undersigned, his name and address and the full particulars of his claim or interest and a statement of his account, and the nature of the security (if any) held by him.

After the expiration of the said thirty days the Administrator will proceed with the distribution of the estate having regard to those claims only of which he shall have had notice.

Dated at Fort Steele this 30th day of July, 1903.

POLITICAL MEETING.

MESSRS. TAYLOR AND WILSON MEET ON FERNIE PLATFORM.

Two other Speakers Spoke including the Two Candidates. Both Parties Well Presented.

A large number, including nearly a score of ladies, turned out to the big political meeting held in Princess Hall on Wednesday evening. The meeting was called by the District Liberal Association, and its president Dr. W. H. Willson, of Morrissey, occupied the chair and with him on the platform were the different speakers, whose names appear later, and F. Stork, F. J. Watson and the Socialist candidate, J. R. McPherson. Invitations had been extended to opposition speakers to be present, and as Chas. Wilson, K. C., President of the Council, had come to Fernie expecting to hold a meeting on that evening he accepted the invitation and was allotted an hour. S. S. Taylor, K. C., of Nelson, closed the meeting with all the time he required. The other speakers were each given 15 minutes, though several overlapped that time. Space at our command does not permit a more than brief synopsis of the speeches, which occurred in the order given. All the addresses were listened to with evident interest and attention by the large audience and applause and interruptions were not infrequent.

E. C. SMITH.

The Liberal candidate opened the meeting with a short address in which he defended the Liberal policy and his past record in the house. He challenged anyone to name a Liberal who had been mixed up in any scandal in the many past maladministrations. He referred to the history of block 4593 and the present tie-up in connection with the claims staked there. He favored personal staking as opposed to the proxy system so much in vogue. He was a supporter of government ownership of public utilities. He was accused by some of being a capitalist but he wished to state that he had less claim to that title than before he went into politics. He was in favor of the 8 hour law and had enforced it in his own mine before the law came into force. He voted for the adjournment of the debate when the amendment in reference to coal mining was discussed for the purpose of having 3 of the clauses combined as a better protection to the miner.

W. R. ROSS.

The Conservative candidate vigorously attacked the Liberal platform. The Liberals unjustly claimed the sole credit for the Redistribution Bill. The McBride opposition action had assisted that measure. He was glad that party lines had been declared. It was unfair to claim that previous governments had been Conservative. They were composed from both parties, and it was singular that McBride, chosen from the opposition of a preceding Conservative government, should be shouldered with all the misdoings of the past governments. He had ceased to be a supporter of Col. Prior in 1901, about the time that McBride resigned from his cabinet, for the reason that he did not think the premier could fulfill his duties to the province and at the same time be a shareholder in the C. N. P. Coal Co. He alluded to Mr. Smith's change of front in supporting Prior in the last session and to his opposition to the 8 hour bill by moving the adjournment of the debate which practically killed the bill. He expressed his personal approval of of the measure and pledged his support to any such bill that his party might bring forward. He believed in giving fair treatment to all classes and he did expect to find any one class in thorough accord with all his ideas. He referred to local issues and to the lack of results from Mr. Smith's stewardship. In closing his well received appeal for support he extended a general invitation to the Conservative meetings to be held next week at which he would have more time to go more fully into the issues at stake.

E. NEVE.

As candidate McPherson was not feeling well E. Neve spoke in his behalf. Ho dealt in socialistic generalities, and his remarks, while listened to with interest, were not taken seriously by any outside of the sprinkling of Socialists in the audience, and none of his statements were commented upon by the succeeding speakers.

HUGH B. GILMOUR.

The late member for Vancouver claimed that Redistribution Bill had been opposed by McBride, Green aud McPhillips. Martin had pledged to support Dunsmuir on the anderstanding that an equitable Redistribution Bill be brought in. Smith had made representations to Martin which led to the cutting off of Fort Steele from the Fernie district thus effectively shutting off the domination that that town has held over Fernie. Smith in moving for the adjournment on the 8 hour law did not kill the bill. It had died like many other bills when the last government was defeated. The remainder of his speech was devoted to an attempt to show that members of the present government had opposed certain labor bills, including Chinese restrictions.

HON. CHARLES WILSON

The President of the Council in the McBride government followed with a strong speech in defence of the Conservative party and its policy. He took the two platforms and compared them. The Liberals was formed after the Conservatives had framed theirs and two thirds of it was copied. He held the formers' railway policy up to ridicule as being extravagant. His party had no railway promises other than that they would be built as the people required them. He did not favor compulsory arbitration as it placed the laboring classes in an uufair position. His party were not responsible for any misgovernment previous to three months ago. The past odor of corruption could not be fixed on one party more than the other. It began under a government headed by Robson, a Liberal, and ended under Martin a Liberal. Chinese restriction legislation had been disallowed by the Dominion Government and for that reason late governments saw the futility of enacting more along that line He stated that Ralph Smith as president of the Trades and Labor Council had denounced the Ottawa administration. Blocks 4593 and 4594 were not being dealt with by his government until a year had elapsed after bill 16 was passed. The Ottawa gogernment had been appealed to and a promise secured that the C. P. R. appeal would not be granted without a hearing from B. C. and he assured the audience that the C. P. R. would not get those lands so long as the McBride government could prevent it. He believed in government ownership of railways but that was a matter for the Dominion government. He believed in a general law for the province permitting anyone to build a railway without bonus. He strongly advocated a periodical financial readjustment between the province and the Dominion. Since confederation the province had contributed 45 million dollars towards the Dominion and had received only 30 million in return. The change in the date of the elections was also explained. His closing remarks were a strong appeal for the return of the Conservatives to power, which would secure for the province a progressive government.

S. S. TAYLOR, K. C.

The Liberal candidate for the Nelson district, followed with a forceable address. In introduction he referred to the modesty with which Mr. Smith had entered the fight. Of his friend W. R. Ross he had nothing but good to say, except that he was in the wrong party. He contradicted Hon. Mr. Wilson's statement re Ralph Smith's attitude towards the Dominion govt. and read an extract from the report of the Trades and Labor Congress report. He contradicted Mr. Wilson's statement that Dunsmuir was a Liberal and claimed he was a member of the Conservative party. He strongly denounced all previous governments, all of which except one were Conservative, for their many acts of misgovernment and corruption. The present administration was largely supported by the same old crowd. It was owing to such administration that lands of untold wealth had been given away to large corporations. Speaking of coal lands, he favored government leases to operators. He touched up the Columbia and Western grant, McBride was a member of that government and had taken Eberts word that the grant was all right. The premier had stated in Grand Forks that these lands would be dealt with on their merits after the elections were over, but he did not say what he thought of the merits. This was a different story to that told by the President of the Council. The speaker was in favor of giving the lands over to those who had staked them, pursuant to the laws of the province. The Liberals had not stolen the Conservative platform. The former drew theirs up in Feb., 1902 and the latter in Sept., 1902. A platform to him meant nothing unless it was backed up by a party with a record for doing what it promised. The Conservatives had government ownership on their platform and they had never done anything in that direction. The Grand Trunk Pacific was to be owned by the government from the Atlantic to Winnipeg. The G. T. R. contract was then contrasted with that under which the C, P. R. was built and scandals in connection with the latter were reviewed. The Conservative party had never passed a single bill that was intended to specially benefit the labor party. In 1896 the Dominion Senate, which was then Conservative, refused twice to repeal the act making it criminal for union men to meet in secret; and passed it the third time because of threats from the Assembly. The speaker reviewed some of the labor legislation of the Liberal party, under the headings, labor bureau, current wage scale and the union label. In 1900 the B. C. legislature voted on a resolution advising that no change be made in the 8 hour mining law, and Messrs. McBride, Green and McPhillips, of the present government had opposed it Senator Lougheed had introduced a bill in the Ottawa House against American labor organizers in Canada which was disallowed by Laurier. The latter government had raised the Chinese tax to $500 Mr. Taylor towards the close of his address, took exception to the Socialist doctrines, which recognized no international boundary line. He was too good a British subject for that. Socialism held in its ranks all classes of men and it was not exclusively a labor man's party. The leaders of socialism had stated that their aims were opposed to those of labor unionism.

CHEMICAL ENGINE ARRIVES.

A Short Description of the New Fire Appliance.

The new chemical engine arrived on Tuesday and was set up the same day at the skating rink where it will be kept until the new hall is completed. Captain McRobie was present, superintending the work and explaining every detail in connection with the engine. It was taken to the East Kootenay Bottling works building for a test. It worked satisfactory, throwing a stream nearly 100 feet.

The following information about the new engine may be of interest to those who have not had an opportunity of seeing it. The machine consists of two cylinders containing sixty gallons each, made of rolled boiler steel with hammered ends, screw caps, valves, discharge pipes and other fittings of brass or plated metal. The cylinders are covered with beaded lagging, with half inch air space between. The cylinders are coupled together and placed horizontally on a neat strong frame with the valves, guage and discharge pipes facing the platform at the rear.

The object of the two cylinders is simply to obtain a continuons stream, one cylinder being charged while the other is discharged. The 60 gallon cylinder feeds a quarter inch nozzle for 15 minutes and half that time is ample to reload the empty cylinder. The release of a valve screw releases a lead bottle containing a gallon of surphuric acid, which is thus emptied into the cylinder containing a strong solution of bicarbonate of soda in water. In 30 seconds the chemical action has created a pressure of 100 lbs to the inch of carbonic acid gas in solution which is deadly poison to fire. A stop tap is attached to the end of the hose that the stream may be regulated at will. The engine is always kept ready charged.

The running gear consists of a strong four wheeled carriage with 8 leaf side springs and carries a ceiling hook, a fire axe, complete loading apparatus which is quite simple, 100 feet good hose with branch pipe, an alarm bell, and up-to-date 30 foot extension ladder. The weight of the whole is largely made up by the water which in itself weighs 1200 lbs. The engine is simple in construction and requires no expert to handle it. The man at the nozzle however must keep a level head to get the best results. He must guage the effect of the stream and the best means of reaching the vital points in the fire. It requires 8 men to fully equip the engine though four men can generally do all that is required. Harry Wilkes has charge of the engine and it is safe to say that when occasion arises he will give a good account of it.

POLICE COURT

A young man was fined $15 for being drunk last Sunday.

Sailor Jack was brought up from Morrissey this week charged with having stolen goods in his possession. Case was dismissed.

F. Label was fined $30 and costs for selling a keg of beer to an Italian on Sunday last.

E. Doran received a sentence of two months in Fernie jail under the vagrancy act.

F. Sampson raised a disturbance in a disorderly house and was fined $12.

Lena Bell was fined $5 and costs for keeping a disorderly house.

STABBING CASE AT FRANK

"Scotty" Milne seriously Stabbed by J. Fitzgerald.

James Milne well known in Fernie as "Scotty" was dangerously wounded in a stabbing fray at Frank on Monday morning by Jack Fitzgerald. The men had been drinking and "Scotty" took offense at an unpatriotic expression made by Fitz. and the two pugilists at once began to settle the dispute in a rough and tumble fight, near the railway track. In this "Scotty" came off victorious and he made his rival exclaim, "God Save the King!" three times before desisting. Later, Fitz proceeded to the Frank hotel and was followed by Milne who attempted to start a scrap again. With this the former picked up a butcher knife and slashed "Scotty" five times before he could be stopped. He fell insensible, and a careful examination by the surgeon who was summoned showed that the worst stab was from the rear at the right side, where it was thought the knife had penetrated the lung. The other cuts were in various parts of the body, but none serious. The chances for the injured man were at first slight, but reports since state that he is gradually recovering. Fitzgerald was immediately placed under arrest. The nature of the charge under which he will be tried will necessarily depend upon whether his victim recovers or not.

Jas. Milne resided in Fernie for some time, working in the mines here. He is a young man of splendid physique and considerable ability as a boxer. He has many friends here who will be pleased to hear of his recovery. Fitzgerald has been in the Crow's Nest since '98 and has spent much of that time in Fernie. He worked on the railway in early days. He also has a reputation as a pugilist, though a better one in the rough and tumble class. He served a year in the Nelson jail a year ago for assaulting a Fernie man with an axe.

R. JAFFRAY IN SPOKANE

The Spokesman Review, of Spokane, published the following interview last week with Mr. Robt. Jaffray, vice Pres. of the C. N. P. Coal Co. who passed through that city on his way to the East.

Mr. Jaffray has made fortunes in his great Crows Nest Pass Coal Company, operating the soft coal deposits near Fernie, B. C. which Mr. Jaffray says, "will supply 10,000 tons of coal a day for 6666 years, accordidg to the geologists who have inspected the property."

The capital of the company is $3,000,000, in $25 share, and six years ago the shares could be bought in Vancouver at $5 each. Then the Jaffray interests took the mine actively in hand and, with the construction of the Crows Nest Pass railway by the Canadian Pacific, the future was assured. Since then the stock has sold up to $125 a share, and is quoted now at $75 a share, even with the Canadian stock markets in such a precarious condition. The advance in the shares has been fifteen fold in six years. A little more than a year ago the capital was increased from $2,000,000 to $3,000,000, and the extra capital was issued at $62 50 a share. At that time James J. Hill bought $800,000 worth of the stock.

"It is a mistake to think that Mr. Hill is in control of the mines." said Mr. Jaffray yesterday. "He has only a minority interest, and while we should like to have his counsel in the management of the affairs, he is not even represented on the directorate.

"Experts say that we have the greatest coal deposit in the known world. We have fifteen tunnels through which we take out coal at Michel, Fernie and Morrissey mines, and at each of those tunnels there are three adits, one above the other—the bottom for water, the middle for haulage and the top for ventilation. Some of them are a mile long. We have 636 coke ovens in operation and shall have 500 more making coke this fall when we shall be conservatively able to produce 1200 tons of coke a day. Already we have supplied the British Columbia smelters with coke so freely that some of them have begged us to stop shipments.

"We have been spending much money lately on capital account, and by October we shall be able to increase our production of coal to 4000 tons a day, and it will be brought up to 5000 tons daily by the first of the year.

"Our pay roll is $150,000 a month. We have opened virgin grounds from which not a ton of coal has been mined, that contains 32 seams of coal ranging from 2 to 30 feet in thickness. The coal seams lie very flat. It is estimated that one tunnel can be run under the mountains 18 miles in coal from one of our collieries to another.

"We have built 412 houses for the men and have 50 other buildings, including large tipples."

PAY-DAY FIGURES FOR AUGUST.

Today's Figures Beat All Previous Records By Nearly $9,000.

Pay is being given out at the three camps to-day for the month of August. The total amounts to over $160,000 or an increase of nearly $9,000 over last month.

The following are the figures for each place.

Coal Creek	$64,532.35
Michel	56,664.90
Morrissey	38,991.00
Total	$160,188.25

A Klauer left for Michel last evening to pay the men at that camp, and J. B. Turney is at Morrissey for a similar purpose.

MORRISSEY MINES CLOSED.

Men Quit Work to Discuss Grievances. The Manager Interviewed.

The miners at Morrissey took a day off on Friday to attend a mass meeting called by Organizer Bonsfield, of the U. M. W. of A. for 10 o'clock to discuss certain alleged grievances. As the train was very late the men had scattered and the meeting did not materialize. The local union at Morrissey intimated to the management that the company men would resume their work to-day but that the regular miners would not. As this did not suit the arrangements of the company the mines were closed down last night and the fans were stopped. A demand was made last night to Mr. Stockett to meet a committee of the United Mine Workers on Monday morning at which Organizer Bonsfield will be present.

From some of the men it has been ascertained that the grievances related to the appointment by the company of a coal inspector and the confiscation of any box of coal found to contain more than 100 lbs. of rock.

Mr. Tonkin when seen by a reporter this morning said he knew nothing of the grievances as no committee had asked for an audience with himself, Mr. Stockett, Mr. Martin or Mr. Simister to state their grievances. He stated that the company was always prepared to meet its employess as required by the signed agreement, and that in every other way every article in the agreement would be faithfully followed by the company. According to that agreement it was the duty of the local union to present their grievances through a committee of its members. If this failed to effect a settlement the company was obliged to treat with the district union. The men had failed in this part of the agreement as none of the company's officials had been approached by anyone.

When asked as to the clause relative to rock in coal Mr. Tonkin produced the agreement and read that where any box of coal was found to contain an excessive amount of rock it could be confiscated. The tare weight allowed for rock was 28 lbs.

LUMBERMEN STRIKE.

Object to Chinese Cooking. Other Men have been Secured.

On Monday evening the mill men at the Cedar Valley Improvement Co's. camp took exception to the introduction of a chinaman cook into the camp. The Chinaman arrived on that evening to go to work but he no sooner took possession of things than he was bundled out. The latter complained to the manager, C. H. Levers, who investigated the matter and reinstated the Chinaman. Later in the evening the men interviewed Levers and threateded to leave if the Chinaman was retained. In the morning 10 men of the 34 refused to go to work and the mill was closed down for three days until other men could be obtained. In the meantime needed repairs were attended to, and little real loss was sustained.

Mr. Levers, when interviewed, stated that his company had had considerable trouble in retaining white cooks, and it was owing to necessity that they had had recourse to a Chinaman. The one in question was a first class cook, and the men, under the circumstances, had no kick coming. Some of those who had gone on strike were now willing to come back but they were replacing them with new men.

R. Hammond left last evening on a business trip to Macleod. That town is contemplating the installment of an up-to-date electric light plant.

WHEN BOYS WERE MEN

By JOHN HABBERTON,

Author of "Helen's Babies," "George Washington," Etc.

COPYRIGHT, 1901, BY JOHN HABBERTON

Our advantages and precautions being so many, we felt entirely secure in the scout of which I have begun to tell. Yet things did not turn out at all as we had expected. We struck the enemy's outpost during the middle of the afternoon and drove it in without any casualty on our side. We dismounted, took cover behind some trees and exchanged shots with skirmishers across a small river, and we had our horses far enough to the right and left to avoid the round shot or two that were fired down the road by a cannon which guarded the bridge. Then we remounted, retired through the woods and fields until out of artillery range, after which we took the road for home, with the cheering hope that we would be out of camp only about half the customary time.

Just about sunset, as we were approaching a long bridge over one of the wide, high banked, but shallow creeks peculiar to the tide water region of Virginia, the word was passed back from the advance:

"Close up! Quick! Send the major up!"

The major commanding the battalion dashed toward the front, and the rest of us followed rapidly. As my company was the second in column we soon saw what was the matter, and it didn't please us much. A body of the enemy's cavalry was approaching the bridge from the other side.

This was something we had not counted upon. It was enraging. It

"Charge!"

was also ridiculous. We were between the Johnnies and their camp, the Johnnies were between us and our camp, and the bridge, which both parties agreed in wishing anywhere else at that particular moment, remained just where it was and looked as dark and threatening as if it meant to make no end of trouble. It would be foolish for either body to ford the stream, for those tide water creeks invariably have one bank which is too steep for horses to climb or descend, except through occasional tributary gullies.

The major began to think. So, evidently, did the commander of the Johnnies, while I indulged in a wild hope that they would both keep on thinking until one or other got tired and took his men away.

"We can reach the Blue Church road for camp by making a detour through the fields at our right," suggested a prudent captain. "Meanwhile, as soon as they cross the bridge and show fight we can fours about, come on the left into line and drop half of them from their saddles before they can fire more than once."

"No," said the major, "I don't want to show them our rear. They'd never stop blowing about it if they got away. We've twice as many men as they. We ought to be heavy enough to press them back. If we can cross first, we can drive them into our camp like cattle."

"They're as close to the bridge as we," said the captain.

"We'll try, anyhow," said the major. "No sabers, men—revolvers only!" Then the major put his hand on his revolver and shouted:

"Charge!"

We were within 100 yards of the bridge, so we easily heard the Confederate commander, a grayish brown man from top to toe, who rode to the front, dropped his bridle in his saddle, drew two old fashioned horse pistols from holsters and yelled:

"Git!"

Then that grayish brown man fired. It is astonishing how much damage can be done by the buckshot which can be put into an old horse pistol. I afterward learned that all the horses in the first set of fours, as well as two of the men, were hit, though none was seriously injured, by that grayish brown man's double shot.

In half a minute some of our men were on the bridge, but so were some of the enemy. Ten seconds later the bridge was jammed with horsemen.

"Fire fast! Fire fast!" screamed our major.

The major meant well, but how much firing could be done on a bridge only wide enough for about four men abreast after the men in front had emptied their revolvers? How were any but the surest shots and those nearest the front to fire without hitting their own comrades, who already were using their revolvers as hammers or hitting the Johnnies with bare fists? There was little firing on the other side, for nearly all the Confederates carried shotguns or muzzle loading muskets, which they could not reload in haste, so after firing once they used their guns as lances, punching our men in breast or face and being horribly cursed in return.

Meanwhile each horse was looking out for No. 1. The horse is a wedge shaped animal, and each of our four footed wedges pushed his head and shoulders between those of horses in front of him. This gave the animals absolute rest as well as safety while their riders were fighting.

The major turned to the rear, first cautioning his captains to maintain the pressure, and soon we heard him say:

"Two rear companies dismount! Third company deploy on the right; fourth on the left! Pepper their rear with carbines as long as there's a man of them in the saddle! Aim carefully! Be careful not to hit our own men!"

This promised sickening slaughter, for our men with their carbines could get within 100 yards of the most distant Johnny and do a great deal of harm before the enemy could dismount and fire more than a single shot. Probably the enemy would follow our example as soon as they saw what we were up to, if any of them were left after we had given them a volley or two. This is not a joke. Our Sharp carbines were as true as sporting rifles. For several months we had been taught, when fighting dismounted with carbines or revolvers, to shoot from a rest whenever possible, and our practice shooting showed that anywhere within point blank range we could shoot well.

At the major's orders three men of every set of fours in the last two companies dismounted and hurried to trees, logs and fences near the creek.

"Now, men," said the major to us, "as soon as they begin to fire and clear away the rear you press upon the advance with all your might. If we drive them off the bridge, divide, right and left, as soon as you get across and ride down their flanks, and we'll capture every mother's son of them who's alive."

This seemed practicable, and I hoped it might begin at once. Had there been no other reason, it would be vastly pleasanter to take a lot of prisoners into camp than to bury an equal number of Confederate dead, for burial party duty stays in one's mind.

"Why don't those skirmishers begin firing?" shouted the major, though it was not easy to hear him above the horrid din on the bridge.

"Crack!" went one of our carbines. I reined my horse toward the edge of the road to see when the enemy's rear should become weak enough for the pressure to begin.

"Crack, crack, crack!" sounded in rapid succession, but the sounds were not like the report of revolver or carbine. Something new was occurring on the bridge, for all the men, both gray and blue, seemed to press to one side. A second or two later that entire bridge, containing 40 or 50 Union troopers and as many Confederates, went down with a crash and a splash into the creek below.

Here was the unexpected again, and a great deal of it, too, so I looked anxiously at the major to see what he was going to do about it. He didn't seem a bit puzzled. On the contrary, the bridge had scarcely fallen when he roared:

"Skirmishers cover the road on the other side of the bridge! Don't let a reb get away! Second company dismount; lie down along the edge of the bank! Cover every reb trying to get out of the water and order him to come ashore here!"

Out of their saddles dropped Nos. 1, 2 and 3 of each set of fours in our troop, and in less than half a minute each had picked out for himself a gray target in the great gully below. The skirmishers had already begun to blaze away at the gray targets on the other side of the bridge, but the Johnnies, like sensible soldiers, broke right and left into the woods, left their horses pretty well sheltered from fire by the standing timber and then took cover themselves behind the trees nearest the creek and began to operate exactly according to our tactics, firing on our skirmishers and trying to secure prisoners from the struggling mass below. We were the stronger in numbers and weapons, but nature gave the enemy one immense advantage. As members of the Potomac army will remember, creeks on the Virginia coast almost invariably have one bank high and steep and one which is low and shelving, and where we were fighting the steep bank was on our side.

Our fellows could not easily get out, much less drag out prisoners, but the Johnnies had scampered up their own side before all of us were in position to fire. Some, too, whose horses had been hit or who had dropped their guns during the tumble had the presence of mind to take Yankee carbines or horses with them. One had the impudence to lead away two of our horses, including the forage, blankets and overcoats strapped upon the saddles, and he sheltered himself so skillfully with one of the animals that none of the bullets aimed at him seemed to hit. On the other hand, when one of our fellows tried to climb the bank on our side, perhaps with revolver in hand, trying to drive an unarmed prisoner in front of him, he was a capital mark for the other side to shoot at, and if he was hit his prisoner would generally change his own mind and hurry back to his friends, taking with him the wounded man's revolver and carbine as a memento. Such a dash required him to wade the creek, but the water was not very deep, and a man who had once been wet did not seem to mind a little additional soaking.

Suddenly the major, who had been closely eying all that had occurred, passed the word from man to man along the irregular line of kneeling, crouching or flat lying skirmishers that at the word of command all should drop over the bank, ford the creek, press the enemy as closely as possible and try to drive them to the left of the road. Two miles away on that side was another road by which we rightly imagined they would hurry for home should they think us too many for them. Men without carbines were warned to have their revolvers fully loaded before crossing.

It took two or three minutes for captains, lieutenants and sergeants to pass

"Forward!"

this word along, but when the major roared "Forward!" over we went. The excitement of the jump was intensified by our sabers. Many of us had made long jumps from barn roofs or brick piles or builders' scaffoldings when we were young, but our sabers hadn't. There's nothing adaptive about a saber anyway, so these weapons mixed themselves with our legs in a most alarming manner. We found the water quite as wet as any I had ever stepped into, and the bottom was not as hard and smooth as we would have liked. It made our legs feel overheavy, too, as we went up the opposite bank with our boots full of water, but it was no time and place to call for towels and dry trousers.

"Forward!" again shouted the major, who had waded the stream with us as unconcernedly as if he were not wearing his $20 trousers. "Forward!" he continued to repeat about once a second, and "Forward!" shouted each captain after him.

The Johnnies were brave fellows, but they weren't fools. They began to see that we could fire several shots to their one, and the fighting was at such close quarters that the instant one of them fired his muzzle loader a Yank was upon him demanding his surrender before he could reload. Soon they allowed us to chase them through the forest, and, as they were better woodsmen than we, they got away quite rapidly, taking with them, besides the prisoners they had already sent to their rear, one or two of our men who were a trifle too expert in the chase. When their firing slackened to scattering shots and finally ceased, our bugle sounded the recall, and we were sent back to cross the stream for our horses, which were led one by one down a path hastily broken and dug in the steep bank with fragments of the broken bridge and then up the opposite slope.

CHAPTER XII.

AFTER THE FIGHT WAS OVER.

At last we were on our own side of the bridge—those who were left of us. Roll call showed thirty men missing from the first company, which had carried only fifty men into action, besides several from each of the other companies. Some of the missing we found dead or wounded in the creek and woods, with a larger number of the enemy in the same condition, but after a careful count we found the Johnnies had secured about twice as many prisoners as we.

The proceedings of the next hour or two would not have interested any civilian spectator in search of the glory of war. Several mounted men who had been hurried away to a farmhouse known to be about a mile down the road came back with all the farmer's wagons, carts, colored men, spades and picks. Into the wagons and carts on a lot of pine tufts hastily picked were placed the wounded and our own dead. The colored men, under the direction of the farmer, who had kindly volunteered to help, buried the Confederate dead near the roadside. Some of the wounded groaned terribly, and one poor fellow almost broke my heart by faintly screaming "Father!" every moment. I didn't feel any better when we learned that the wounded boy whom we were about to cart away was a son of the old man who was preparing the dead Confederates for their last home. Then we knew why the old man had offered to assist the burial party and why he had looked so quickly and intently through the gathering dusk into the faces of the dead. The boy had been brought in later from the woods, and the father would never have known of his presence had it not been for his cries.

The next scene was equally painful—the old man begging, with tears in his eyes, to be allowed to take his wounded child to his own house and the major insisting on his duty to carry all the wounded captives to our own camp. Several minutes before the old farmer had been to us only a stay at home rebel. Now there wasn't a man of us who would not have added our entreaties to his had we dared. It was a great relief to all of us when our assistant surgeon, who had been rapidly examining the wounded, assured the old man that the boy would need frequent surgical attention instead of home nursing if his life were to be saved, so he would be better off in our hospital. Then the surgeon offered the farmer his hand, and after a shake the old man sighed:

"I'll take your word for it."

I couldn't understand why a mere handshake was so convincing until one of our middle aged chaps told me that both men were Freemasons. But the agony for us was resumed after we started for camp, for the major, though true to the letter of his duty, was a Freemason himself, so he halted us in front of the old man's farm long enough to let the family come out and bid the boy goodby, perhaps for the last time. They came down with a lantern, for it was now quite dark, and the mother sobbed and wailed as she leaned over the cart and did all her thinking aloud and told how handsome and cheery her boy had looked when he took dinner at home a few hours before for the first time in months. His pretty sister, whom all of us had adored from time to time as she stood at the farm gate with her father to see the soldiers pass by, prayed aloud for heaven's curse to fall on the man whose bullet had pierced her brother's lungs, and I am sure each of us trembled at the thought that the bullet might have been his own. Near them stood a little brother and sister crying in the pitiful, hopeless way that my brother Ned did when he first heard that I was going to the war.

Yet this was not the only family that suffered by that engagement. Besides the men killed outright, some of our own comrades died afterward of their wounds without father, mother, sisters or brothers to say goodby to them. Not all the missing were taken prisoners by the enemy, and nearly half a year of awful uncertainty and of frantic letter writing passed before we learned this through our captured men who returned when exchanged. One of our men, whose leg was broken by a bullet and who then was knocked senseless by a glancing shot on his head, floated down the shallow stream some distance before he came to his senses and got ashore. Stanching his wound by tying a strip of his shirt tightly around his leg, he bound the broken limb in twigs and then spent two whole days and nights in crawling on his hands and one knee to our nearest picket station, several miles distant. In the early spring a colored man who went to the creek to fish found the remains of one of our men beside a tree, a mile below the scene of the fight, and scratched on the bark of the tree were a few words telling how the poor fellow had died a lingering death from wounds, exposure and starvation.

Yet the entire engagement, in which a full third of the men on the bridge were either killed, wounded or captured within 15 minutes, was in military parlance "merely a little brush." Mention of it never got into the newspapers. There were thousands like it, except for the falling bridge, during the war, the results being too small or gradual to be part of the history which was being made by some great engagements which proportionately were not so bloody. Perhaps the story of this one will explain to some people why old soldiers when chatting together about the war talk much of the march and camp, but very little about fighting.

The fight at the bridge was the severest engagement in which our company had ever participated, so I ought to have been so absorbed by it as to be insensible to anything but my duty as a soldier. I am glad to say that I loaded, aimed and fired as carefully as if—oh, as if it were the first day of the "open season" for quail in the woods and fields near Summerton. Nevertheless I frequently detected myself in the act of looking about me to see what other men were doing. I saw Cloyne loading and firing as placidly and smilingly as if he were merely making out bills at the Summerton lumber yard. Mick McTwyny was handling his carbine as energetically as if it were a coffee mill, yet in his excitement he was discharging it in the direction of the sun, the tree tops and his own toes, as if the enemy were atoms of the surrounding air and could be easily hit by a man with his eyes shut. Meanwhile he was volubly cursing his platoon in English and Irish, with some assistance from the verbiage of the holy Scriptures and the vocabulary of the Bowery, for not firing more rapidly and carefully.

"Look at that little dhivil Brainard!" he shouted. "He's puttin' rebs into purgatory as fast as if he was walkin' to Sunday school in Summerton."

Brainard! The sound of his name startled me and caused a guilty pang as my having been concerned only for my own life impressed me. I looked quickly about for him and just in time to see him roll sidewise from behind a fallen log, his face as white as the paper on which I am writing. Killed? No, he moved. I hurried to his side and asked him where he was hit.

(To be Continued.)

An exchange tells the following story: A young man in a western town is very fond of the daughter of a minister. The other Sunday he went to church to hear the reverend gentleman whom he some day hopes to call his father-in-law, and unfortunately sat down where everybody in the church could see him. However, all went well till the next text was announced. The text was: "My daughter is grievously tormented with a devil!"

Married couples in Norway are allowed to travel on railways for a fare and a half.

Poverty is no disgrace, but it's a mighty good excuse for heading off a creditor.

She Nursed the Sick And Ruined Her Health

For Months Mrs. Myles Lay a Helpless Sufferer From Nervous Prostration and Gradually Grew Weaker and Weaker.

Mrs. John Myles, Sr., of South Woodslee, Essex Co., Ont., is well known throughout the surrounding country because of her work among the sick and suffering and it was on account of over exertion in this regard that her health broke down and she lay weak and helpless, a victim of nervous prostration. Doctors could not help her and she resolved to try Dr. Chase's Nerve Food. As a result she has been thoroughly restored and by recommending this treatment to others has been the means of bringing back health and happiness to many a weakened and discouraged sufferer from diseases of the nerves.

Mrs. Myles writes:—"When I began the use of Dr. Chase's Nerve Food I was confined to my bed with what the doctors said was nervous prostration. My stomach was very weak and I could not sleep at all for any length of time. Nervous chills and trembling would come over me at times and I seemed to be getting weaker and weaker all the time. There were also pains on the top of the head which caused me much suffering and anxiety.

After using half a dozen boxes of Dr. Chase's Nerve Food I began to gain in weight and to feel stronger. Since then I have been gradually restored to health and in looking back can say that the improvement has been something wonderful. I used in all forty boxes of this preparation and feel it a duty as well as a privilege to recommend it to all who are suffering from nervous disorders. Several persons to whom I have described my case have used it and been cured and I am sure that I owe my present good health, if not life itself to Dr. Chase's Nerve Food."

Nervous prostration and exhaustion, headaches, dyspepsia, dizzy and fainting spells, paralysis, locomotor ataxia, feelings of weakness, depression, and despondency are overcome by this treatment, working, as it does, hand in hand, with nature. Though gradual, the results are all the more certain and lasting, and by noting your increase in weight, you can prove to your satisfaction that new, firm flesh and tissue is being added. Fifty cents a box, six boxes for $2.50. At all dealers, or Edmanson, Bates & Co., Toronto.

Beautiful Indian Women.

It is said that some of the most beautiful women of the world are to be found among the Indians of the Tehuantepec isthmus in Mexico. They are of mixed blood, Spanish and Indian, though the Indian traits generally predominate.

Their costume for high and holy days is somewhat extraordinary. They wear skirts of satin or silk, heavily lace trimmed, and with short sleeved waists which may or may not be of the same material. The headdress is the principal feature, being an immense affair of accordion plaiting stiffly laundered. It is usually white and comes nearest in point of resemblance to the headdress of a Sister of Mercy.

There is a curious custom among the men and maidens of exchanging the twigs of certain trees in perfect secrecy, except that each new twig is carried to the father or mother or guardian of each, who formally gives assent to the further exchange of tokens. This is continued until the exchange of orange blossoms signifies betrothal. This pretty method of courtship is dying out.

Tips to the Wrong Persons.

Some one in canvassing the tip subject has discovered that we tip the wrong people all the time. Particularizing, the discoverer declares that it is the cook, not the waiter, who should receive this material expression of our favor and that it is the engineer, not the conductor, who should have the extras for getting us about on time when we travel in haste. Of course this discovery will not result in the searching out of the man behind the man who reaches out his hand for the tip. We shall continue to send our gratuities along on the same old lines, getting a smug contentment over feeling that we have done our duty—or is it the satisfaction of making the petty display of our cash resources?—and that we can't be expected to chase up the real benefactor, but it adds another complication to the tip question for those who already find it too perplexing.

The Sting Ray.

Of the many dangers which beset navigators of the tropical rivers of South America perhaps the natives fear the sting ray most. It is poisonous and is to be found in very large numbers when the river is low. That is the time when boatmen have to get in the water to push their canoes over the shallows. They are often stung by the tail of the ray and usually die unless medical assistance is promptly given. The ray cannot be seen, as it is of the same color as the sand on which it coils itself. The stab of its sharp knife-like tail is the unwary navigator's first intimation of its presence.

An Ice Poultice.

In many cases of inflammation an ice poultice is a very useful application. It is made in this way: Spread a layer of linseed meal three-quarters of an inch thick on a piece of cloth and upon the meal, put at intervals lumps of ice about the size of a marble. Sprinkle meal over the ice and cover all with the cloth, turning the edges over. In this way the ice will last much longer than it otherwise would and the poultice will be quite comfortable.

Among the prisoners in the jail at Frankfurt, Germany, there is a barber who has been confined in it for half a century. He was accused of having cut the throat of a man whom he was shaving. He has always protested his innocence, and has repeatedly refused his pardon because it was offered only on condition of his confessing his guilt.

Ayer's

Impure blood always shows somewhere. If the skin, then boils, pimples, rashes. If the nerves, then neuralgia, nervousness, depression. If the

Sarsaparilla

stomach, then dyspepsia, biliousness, loss of appetite. Your doctor knows the remedy, used for 60 years.

"Returning from the Cuban war, I was a perfect wreck. My blood was bad, and my health was gone. But a few bottles of Ayer's Sarsaparilla completely cured me." H. C. DOEHLER, Scranton, Pa.

USED FOURTEEN YEARS WITH GOOD RESULTS.

721 E. 164 St., New York, Sept. 8, 1902.

DR. B. J. KENDALL CO.,

Gentlemen:—I have used your Spavin Cure on my horses for the past fourteen years and it has always given me good results in every particular. I also have one of your books that I have found very useful. If you have any later edition of the "Treatise on the Horse and his Diseases," will you kindly send me one.

Respectfully yours, B. F. FRISBIE.

It is an absolutely reliable remedy for Spavins, Splints, Curbs, Ringbones, etc. Removes the bunch and leaves no scar. Price $1; six for $5. As a liniment for family use it has no equal. Ask your druggist for KENDALL'S SPAVIN CURE, also "A Treatise on the Horse," the book free, or address

DR. B. J. KENDALL CO., ENOSBURG FALLS, VT.

A man is never so willing to do unto others as he would have others do unto him as when he finds himself in a hole.

St. Jacobs Oil

is the greatest remedy in the world for all bodily

Aches and Pains

for which an external remedy may be used.

Price, 25c and 50c.

THEY WERE MISLED

COMPLAINT OF BIRMINGHAM MECHANICS.

They Were Induced to Emigrate to Canada by Glowing Accounts of High Wages and Plenty Work and Were Disappointed—Other Cable Notes.

London, Sept. 5.—The Birmingham Post comments on letters to the Daily Mail from Birmingham mechanics in Canada, who, it says, were misled by glowing accounts of the Dominion labor market circulated in this country for tactical purposes. It is suggested by Canadian employees that they were induced to throw up situations in Birmingham and emigrate to Ontario. The Post adds that it cannot be too often or too emphatically impressed upon intending emigrants that anonymous statements with regard to wages and employment abroad should never be trusted unless corroborated by the appointed agent of the colonies.

The Pall Mall Gazette, partly because of the condition imposed upon any English yacht competing for the America's cup, that it must be capable of crossing the Atlantic, says that it would like to see what a Canadian builder can do.

Owing to the enormous demand to hear Mr. Chamberlain at Sheffield, the charges of admission will be: Stalls, two guineas; second stalls, one guinea; other seats, half a guinea. The cheapest are five shillings. There are also 1,800 free seats.

The Free Trade Union is making strenuous efforts to combat the propaganda of the Tariff Reform committee. The union is distributing weekly a half million leaflets, exclusive of placards and window bills.

At a meeting held yesterday of Melbourne Free Traders, Mr. Chamberlain was cabled that the Protectionist association, which favored preferential trade on a basis of the existing tariff, did not express the real voice of the Australians. If a preference was given, the Free Traders say the present prohibitive duties against the motherland must be abandoned.

The Western Daily Press, of Bristol, regarding the Alaskan boundary question, says Canadians rely on the British government for support by every possible and legitimate means. The Western Morning News says there is no reason to doubt that the evidence to be presented will enable the majority to agree upon a verdict.

H. Couch Bachelder, writing to the St. James' Gazette, says we should adopt any measures calculated to bind Canada and Britain closer together, insomuch that the former may come to be regarded as a part of the empire—a sort of infinite Yorkshire.

Some British engineers are experimenting with a turbine engine which is said to be capable of developing 100 horse power at an expenditure of 12 pounds of saturated heat, which means that a speed of from 28 to 30 knots could be attained for the present cost of a 24-knot service.

Calf Has Two Heads

Dr. Hilton, of Portage la Prairie, has a curiosity in the shape of a calf with two heads, which is attracting considerable attention. The animal is black and white in color and has two perfectly formed heads. The eyes on the outside of the two heads are large and bright, while the inner two are blind. Last evening it took its first feed of milk, lapping it up with its two mouths at once. The doctor purchased the calf from a Mr. Wilson and expects to make a tidy sum out of it should it live.

Inventors Test Ideas.

A Vancouver dispatch says: A. de Keyser claims to have discovered a process by which he can extract mineral from sulphide ores without smelting. A Vancouver syndicate has given him all the money he wants, and has leased a large building to enable him to carry out his tests on a large scale. Ore from the Princess Royal mines, owned by the premier of New Brunswick and others, will be treated.

Captain Powers, who claims to have discovered a new power in hydraulics by utilizing the water passing through a pipe driven through a vessel's hull lengthways, while the vessel is in motion, tested his appliance in Vancouver harbor to-day, when a thirty-five foot steamer was driven ahead five knots an hour. A wheel placed in the pipe revolved 225 times a minute. Engineers here say Powers must still prove that the apparatus offers no resistance to the vessel.

Work on the Grand Trunk Pacific lines will be started at once, with Edmonton as a centre.

French and Belgian emigration to Canada wil be promoted by the Dominion government.

The result of the recent yacht races at New York leads British experts to think Canada is the only country which has a chance of winning the coveted cup.

W. F. Verge met a horrible death at Fannystelle. He slipped from a separator, his feet getting mangled in the fly-wheel of the cylinder. He died through heart failure.

Why do mosquitoes bite human beings? According to Dr. Santos Fernandez, of Cuba, it is because the females cannot form their eggs without sucking some warm blood. If they fail to get it they lay no eggs.

Storm in Britain.

London, Sept. 11.—From all parts of the country come reports of destruction on land and sea by a terrific gale. The wind has now abated, but telegraphic or other communication with the outside world is only possible after much delay. In some cases the lines are entirely down. The suburbs of the metropolis are littered with trees and branches which have been blown down.

The breakwater of the new harbor, in course of construction at Dover, has been entirely swept away, involving a loss of many thousands of pounds sterling. The channel steamers from France arrived late this morning after perilously riding out the storm for six or seven hours.

Many lifeboat rescues were made and several fatalities and many accidents were recorded. Much wreckage is being washed up around the coasts.

While the details of the havoc wrought by the storm are necessarily incomplete, the reports coming in from all parts of the United Kingdom show that the devastation was general and it is feared that the loss of life is much greater than was at first supposed.

Lloyds report over fifty serious casualties to shipping, a great number of minor craft are believed to have been lost and the bodies washing ashore continue to swell the terrible list of fatalities.

Dispatches from France and Germany indicate that widespread damage has been caused by the storm on sea and land.

Brighter Days for Ireland.

London—Another conference looking to the improvement of the condition of Ireland will be called shortly. Capt. Shaw E. Taylor, who was secretary to the recent landlord and tenants' conference in Dublin, which was instrumental in securing the Irish land bill, proposes to invite the representatives of the Orangemen, Roman Catholics and Protestants and the heads of the educational institutions in Ireland to meet in Dublin and confer together, with the purpose of finding a common ground on which all may stand, thus ending the religious difference in connection with education which has lasted for centuries and which has been responsible for many of Ireland's difficulties.

A Warning.

It is reported from many quarters that iron pickets, used for marking the corners of sections in Manitoba and the Northwest Territories are being removed by parties who use them for a variety of purposes, such as making triangles to support camp kettles, pickets for tying horses, bolts for sleighs, pegs in stables, narrow teeth, props in bake ovens, pokers, etc. The removal of these pickets is a felony for which the penalty is seven years' imprisonment. Even the possession of a survey picket is an indictable offence; and anybody found with one in his possession is liable upon conviction to six months' imprisonment or to a fine of $100. The department of the interior is taking vigorous steps to secure the conviction of the guilty parties. Instructions have been issued to all the members of the Northwest Mounted police to give particular attention to the matter; and the crown prosecutors have been directed to coerate with the police in bringing the offenders to justice.

Tolstoi Denounces Trusts.

Count Tolstoi, in an interview with James Creelman, of The World, says: "America has lost her youth. Her hair is gray, her teeth are falling out; she is becoming senile. Voltaire said that France was rotten before she was ripe, but what shall be said of a nation whose ideals have perished almost in one generation. Your Emersons, Garrisons and Whittiers are all gone. You produce nothing but rich men. In the years before and after the civil war the soul-life of your people flowed and bore fruit. You are pitiful materialists now.

"You talk of the trusts in America as if the question were important. To my mind these industrial questions are childish. The trust and the labor union are merely passing phenomena. A man does not have to live in an industrial centre where human slavery has been established. He does not have to live in a city. Because a man has spoiled a part of the earth, is that a reason why people should stay there and suffer? No man should work for a man like Rockefeller. He should prefer starvation. He should consider it a religious duty to refuse to work for a trust.

"Let a man who works for a trust in America, and who seeks relief—let such a man go into the country and get a small portion of ground to cultivate. Let him give up luxuries. Let him cease eating meat. The cost of living will be one-sixth of what it was."

Two Found Drowned.

A dispatch from St. Thomas, Ont., George Minhinnick, of Port Stanley, found near Orchard Beach, one and a half miles east of Port Stanley harbor, the badly decomposed body of a man lying in the water neat the water's edge. In the trousers pocket was a roll of American bills, amounting to between $90 and $100. There is no means of identification. He is a man of probably 50 years of age, about 5 feet 10 inches in height, and would weigh about 200 pounds.

An hour later another body was found in about the same state of decomposition as the first.

The bull, Spicy Marquis, has won the senior championship at Toronto exhibition for the second time, something which has very seldom been done. He also won first prize for bull and three of his get, which goes to show that he is not only a show bull, but a getter of the right kind of stock. He was purchased some time ago by James Yule, for the Van Horne farm at East Selkirk.

KILLED AT ERWOOD

HUGH MANN IS CRUSHED TO DEATH.

While Working With His Tracklaying Machine on the Canadian Northern Construction he is Caught in the Belting and Strangled.

Hugh Mann, railway contractor and inventor, was accidentally killed on Friday on the Canadian Northern railway west of Erwood. The accident occurred at 3.30 in the afternoon. Mr. Mann was working near the front of his track laying machine, when it would appear that the belt slipped off. He stooped down to readjust it, when he was caught in the belting and drawn towards the small horse-power engine which was placed in a re-modelled box car and operated the machinery, death resulting from strangulation. When the men reached him life was extinct.

The deceased devoted much time to the invention of labor-saving and safety devices for railroads. His greatest invention was the Mann track-laying machine, which practical men state to be the best contrivance for track laying ever constructed, as it not only works very rapidly but takes the place of many men and animals that are necessary under old methods of track laying. He received flattering offers for the right to construct and use the machine in the United States, but was still making improvements on it, and thought when he started out for the front a week ago, that he had got it to a state of perfection. Mr. Mann also invented an interlocking switch device which was admitted to have features superior to other interlocking switches. Mr. Mann expended much time and money in perfecting these devices and hoped to realize a competence from their manufacture and sale, besides having the satisfaction of giving to the world something of practical value.

Deceased was a brother of Mr. D. D. Mann, vice-president of the Canadian Northern Railway.

FATALITY NEAR NAPINKA.

Mr. William Buckland, a farmer living near Napinka, was killed on Friday last while threshing. He was getting the separator ready for work when the throttle of the engine was opened and the driving belt began to move. In some way he got tangled up in it and was whirled round the wheel and when picked up was unconscious; one leg was broken in three places while his back and head was badly crushed. The poor man lived only a short time. He leaves a wife but no children.

NEWS NOTES

Short Items Culled From Telegraphic Dispatches.

It is probable that Montreal will hold a big fair similar to that held in Toronto. Arrangements are now being made.

The length of the session at Ottawa has given rise to rumors to the effect that members will ask for an increased indemnity.

Prof. Cardarelli, the eminent Italian doctor has issued a statement claiming that Pope Leo died of cancer and not pleurisy.

Cotton workers of Lancashire have refused to emigrate to Canada, owing to the fact that the wages offered are not high enough.

Developments in the Macedonian trouble are rapidly leading towards war. Fresh stories of horrible massacres of Christians continue to arrive from the scene of disturbance.

The Toronto street railway earnings on Labor day were $13,939, exceeding all records. The total number of passengers carried was 263,794.

American counterfeiters have entered Canada at Emerson and are passing bogus bills.

The British government has protested against the seizure of islands near Borneo by the United States.

At a meeting of the Winnipeg Grain exchange a protest was entered against the increased terminal rates.

A Minneapolis company will develop 14,000 horsepower at Fort Frances, permission having been given by the government.

At a meeting of commercial and agricultural interests in Britain it was decided to make the embargo on Canadian cattle a test question at the coming parliamentary elections.

Thousands of French-Canadians from the New England States emigrated to Canada during the past year.

A judgment rendered by Judge Morgan of Toronto holds that the sale of confectionery on Sunday by restaurant keepers is legal.

The Canadian Live Stock breeders association will make a display of live stock at the St. Louis world's fair.

There is a growing feeling in England that irresponsible emigration agencies must not be allowed to send Englishmen to Canada.

Word has been received of a fatality on the C. P. R. between the 99 and 100 mile post near Yale, in which an employee named A. Brookfield, lost his life. The deceased, who had fallen asleep on his track velocipede, was run down by a westbound freight train and instantly killed.

For the past fiscal year ending June 30, the government was able to reduce the public debt by $12,394,366. The debt stands at $259,434,723. The exact revenue for the past fiscal year was $66,400,358, and the surplus will be nearly $15,000,000.

CANADA THE ATTRACTION

Progress of the Dominion Keenly Watched By the Mother Country.

A London cable says: The St. James Gazette says it is characteristic of the sound methods employed by those who have charge of organization and development that Canada's promise as a field of immigration can be and is supported chapter by chapter, verse by verse. There is no mild exaggeration about these fair promises of the great northwest.

Further details to hand regarding immigration show that during the month of August 4,388 English, 999 Scotch, 268 Irish and 3,036 foreigners emigrated to Canada. To Australia and New Zealand the total was 1,170; to South Africa, 2,208; to the United States 10,113 English; 2,531 Scotch, 4,139 Irish, besides 15,535 foreigners.

The Times commenting on its correspondent's letter re child emigration to the colonies says that in 34 years 45,000 children have been sent to Canada.

BECAME WEALTHY ON TIPS.

Domestics in the Old Country Often Leave Large Fortunes.

The case of William Couchman, Lord Ravenscourt's butler, who died recently, leaving a fortune of over £30,000, is by no means an exceptional one.

An old lady, who died some time ago had been for many years housekeeper to a nobleman whose ancestral residence was rich in historical associations. As it was her privilege to pocket the fees paid by Americans and others for viewing the mansion, she speedily amassed a fortune of respectable proportions. When she died and her will was published it was found that she had left behind her a larger sum than her master, whose estate was heavily entailed.

Samuel Waugh, who died six weeks ago at the age of 91, after having been butler in the service of the Clay family for 65 years, left £2,128.

Most domestics who died in comfortable circumstances, however, make their money after leaving service. As a rule, they save the commissions which they get from tradesmen and the "tips" which a ridiculous custom brings them—a head servant in one west end establishment made £700 in "tips" last year—and then take an hotel or a boarding house.

There is a member of Parliament who was once a butler. Having saved some money, he borrowed more, and took an hotel at a rental of £1,200 a year. In 15 years, having made a large profit, he sold the establishment and retired — London Daily Mail.

Destructive Genius.

One day a bulky, tall, pale-faced gentleman with bushy, restless eyebrows, entered a London tavern. The waiter did not ask him for his order, but immediately brought him a plate of bread and cheese and a glass of ale. Having consumed his lunch, this guest sat upright in his chair for a while, leaning his hands on a heavy walking cane and staring blankly at the opposite wall, as if in a dream. Of a sudden he gave a start. He seized the empty glass and dashed it to the floor with all his might, smashing it to atoms. He then reflected for a moment, laid a coin on the table, got up and left the inn without a word to any one. After his departure another guest had the curiosity to ask the waiter whether the gentleman who had just gone out was wrong in his head. Quoth the waiter:

"Oh, no, sir, that's nothink unusual with 'im, sir. 'E's broke maybe a 'undred glasses since 'e's been a-comin' to this 'ouse. 'E don't seem to know it when 'e does it. 'E just gets a-thinkin', and seems to git hangry at somethink 'e's thinkin' about. It's Lord Macaulay, sir."

A Melbourne dispatch to the Daily Chronicle says the administrator of British New Guinea reports the discovery of an extraordinary tribe of marshland dwellers in the island of Papua. Owing to the swampy ground and tangled tropical undergrowth, walking and canoeing are almost impossible. The native dwellings are built in trees and as a result of the conditions the natives are gradually losing the use of their lower limbs and are unable to walk on hard ground without their feet bleeding. Their bodies have developed enormously, while their legs and thighs have become atrophied. In figure and carriage they are ape-like.

Reports coming in from districts where threshing is general are to the effect that the work is being cleaned up rapidly. The straw is light and can be handled easily, the product of one hundred acres in some cases being put through in a day. A report comes from Emerson that one machine working in that locality threshed 2,800 bushels in a day, and a thresher in the Carman district reports 3,000 as a day's record for his machine. The yield is heavier than estimated.

A noted Italian doctor will write a pamphlet denying that Pope Leo died of pleurisy.

As an outcome of the disclosures made in the report of the South African war commission it is rumored that Lord Lansdowne will resign the office of foreign secretary and will be succeeded by Mr. Brodrick.

Quite a number of towns in the vicinity of London have raised the price of the quartern loaf from five pence half-penny to sixpence.

The London Daily Chronicle's correspondent at Melbourne predicts a victory for the Free Traders. He says that all political signs are against Chamberlain's preferential tariff scheme receiving any assistance from Australia.

The United States uses nearly a third more coffee than the rest of the world put together.

WORLD'S GREATEST

WINNIPEG IS THE LARGEST WHEAT CENTRE.

Official Figures Show That Prairie Capital Grain Receipts of Last Fiscal Year Surpass Those of Either Duluth, Superior or Chicago.

Mr. C. N. Bell, secretary of the Winnipeg Grain and Produce Exchange, has addressed the following interesting letter to the press:

"I think that but few of our own people fully realize the volume of grain that is exported from Manitoba and the Northwest Territories. The data relating to the grain inspected in this city during the grain fiscal year ending August 30, 1903, has been compiled and a reference to it reveals the fact that Winnipeg receipts of wheat for the past year greatly exceed those of Chicago or of Duluth-Superior. Following are the figures:

	Bushels.
Winnipeg, wheat	51,833,000
Duluth-Superior, wheat	42,406,923
Chicago, wheat	37,940,953

"It will now be in order, so far as relates to the grain arrivals, at least, to abandon the trite saying that "Winnipeg will some day be a second Chicago" for Chicago makes a poor showing as compared with this great wheat handling centre.

"Statement of grain inspected of the crop of 1902, from Sept. 1, 1902, to Aug. 1903:

NEWS NOTES.

The Winnipeg city council has authorized the raising of $50,000 for outside play grounds.

The Roman Catholics of Winnipeg are seeking exemption from taxation on city schools.

The Winnipeg tax rate for the year is set at 21½ mills, which is a reduction from the rate of last year.

Canada will probably grant a substantial bonus for a line of steamships to run between this country and France. Premier Laurier has announced himself in favor of this scheme.

The discovery of mineral wealth in the Unitah reservation in Colorado may lead to Indian warfare.

During a military review at Fort Leavenworth, Kansas, a grand stand collapsed, and many were injured. Three are expected to die.

Ontario has produced crops this year which are estimated to be worth $150,000,000.

CABLE GOSSIP.

Interesting Items Gathered From British Sources.

The Liverpool Daily Post says: "Canada needs capital, yet the people who have money in this country are so slow to realize the fact. It's absurd that we should possess such a country, the very country for the younger sons and their families, and that the upper classes should neither care to investigate nor care if we lose the colony. We shall, in a sense, unless we wake up."

Honorable Maud Pauncefote, in the Empire Review, points to Canada as the land of promise for families of good social standing in Great Britain, the members of which, if not in absolute want, find it no easy matter to live in Britain as they have been accustomed to do on their present diminished incomes.

The Trade Union Congress at Leicester, prior to the introduction of the budget committee, held a special session and passed a resolution urging the chancellor of the exchequer to repeal the tax on corn.

The Congress passed a resolution condemning the suggested change in the fiscal policy as mischievous and dangerous to the best interests of the country. It was carried amid applause, there being only two dissentients.

Speaking at the Trade Union congress, Delegate Hornidge, in delivering the presidential address, and referring to the fiscal policy, said: "If the people of the United Kingdom have to be taxed heavier than they are at the present time for our offspring, Canada and Australia, we require to know more of what we are likely to get in return." He could not find any great love shown on the part of Canadians for the Mother Country; certainly Canadians' best interests lie in a closer connection with the next door neighbor, and that is being generally grasped by Canadians themselves.

Mr. Arthur Chamberlain, brother of the colonial secretary, interviewed in the Manchester Guardian, said he did not believe that when it comes to the point the working classes will allow their bread taxed or any deviation made from the Free Trade policy which has done so much for them. Possibly Mr. Chamberlain does not think any very definite proposals will be put forward. The people will be asked to give the government a mandate to do what the ministers may think necessary in the direction of retaliation or protection of British interests.

The correspondent of the Daily Mail in New Zealand says the report of the commerce department of the present parliament strongly urges that the rapid progress of the Argentine meat trade compels New Zealand to carefully review every department of trade if the colony is to hold her own in the English market. The more extended distribution of meat, dairy produce and wool in the United Kingdom should be immediately undertaken. The report adds that the government must open every available market in the United Kingdom and arrange shipments direct to all large ports.

A Covent Garden apple importer says fruit of all kinds is dear. Colonial fruit in cold storage here is of very small quantity and the owners are awaiting a raise in prices; 1,830,210 cwts. of apples were imported in 1901, of which Canada sent 474,717 cwts.

Owing to the bad state of the Lancashire cotton trade, a number of operatives are emigrating to Canada. A number sailed yesterday, also a number of Durham miners going to British Columbia.

"Truth," on the fiscal policy, assuming the loyalty of the colonies can be bought, says "the day would come when we would withdraw the bribe. We have abolished rotten boroughs at home only to substitute rotten colonies across the sea, and having thoroughly corrupted them sooner or later we should find this too costly and refuse to continue to buy their loyalty."

H. Biggar, a colonial graduate, writing to The Times from Paris re the University of Oxford and colonial graduates, says: "In view of the facilities for graduate study offered elsewhere some effort should be made to improve the condition of affairs in England, if colonial graduates are to be attracted." Mr. Biggar says the United States not only attracts, but also retains some of the best Canadian youths. It seems pretty well agreed the Rhodes scholars will be graduates. The experiment of sending colonial school boys to English universities has nearly always proved a failure. As Professor Watson pointed out to the conference they come back to the colonies more English than Englishmen.

A special correspondent of the Morning Post says the Mormons in the Northwest of Canada are governed from Utah, and still send the tithes of their possessions there.

The Canadian Pacific Railway company estimates that the total number of harvest laborers brought west this year is 11,000. Some of these are not bona fide laborers as they are only seeing the country.

The customs revenue of Canada for July and August, the first two months of the new fiscal year, totals $7,131,460; an increase of $1,201,773 over the same period in 1902. For August the improvement over the corresponding month last year was $581,311.

The Fernie Free Press

ESTABLISHED 1898.

H. G. WATSON, Editor — J. R. WALLACE, Manager

THE FERNIE FREE PRESS, FERNIE BRITISH COLUMBIA

SATURDAY, SEPT. 19, 1903.

WHERE WE STAND.

Hitherto the FREE PRESS has maintained an independent attitude in the present campaign and in a limited sense we will maintain that position to the end. We have not the utmost faith in Priemer McBride, but we believe his cabinet contains several of the best men in the Province, and the Liberal criticisms appear to be harsh on an administration which as yet is untried. The Liberal party also contains many splendid candidates from which a strong government could be formed. The great bug-bear with them however will be in the selection of their leader. True, Joe Martin has resigned from that position but there is no assurance from that fact that he will after the elections meekly submit to the majority vote of the Liberal members elect.

From a general point of view we hold that the two parties have about even chances as judged by their respective merits so that we will confine our further remarks chiefly to the discussion of local issues. While we have every respect for Mr. E. C. Smith as an honest gentleman we believe that he does not possess many of the qualities that go to make up a successful statesman. On the other hand we believe that Mr. Ross does possess these qualities. Moreover, the latter candidate is thoroughly in touch with the needs of the district on account of his residing in its chief town and centre. He has always taken a deep interest in everything pertaining to the public welfare and has proved himself in both a public and private capacity to be one of the ablest and brightest men in Southeast Kootenay. Mr. Smith is an outside man and cannot claim to have the same interest in the district.

REDUCTION IN INSURANCE.

Now that we have an up-to-date chemical engine and a fire hall under construction it is an opportune time to agitate for a reduction in insurance rates in this town. The present rates are admitted even by the underwriters themselves, to be high, but it must also be remembered that their inspector's reports as to the conditions governing the danger from fire in this town are not exaggerated, but that matters are even worse than reported. Captain McRobie, a widely experienced fire fighter, sized up the situation in a nut-shell before he had been on the ground 24 hours. He said, "If a fire once gets beyond control in the business centre of Fernie, take to the mountains, for the result will all depend on the wind, Providence and how much there is to burn." He then referred to the nature of the buildings, the narrowness of the streets, the neglected state of the back lanes and the limited water supply.

The captain then went on to say that the Boards of Underwriters for Manitoba, the Territories and British Columbia had under consideration a reduction in insurance rates in all towns where the McRobie Chemical Engine was in use. He had been working for this recognition for several years. Mr. Kellie, the new secretary of the Board of underwriters in Manitoba, was taking much more active interest in the measure than his predecessor had done, and in conjunction with Mr. Gilbert, the secretary of the Mainland Board, he was certain to make a decided reduction of anywhere from 7½ to 15 per cent in the very near future.

Mr. McRobie then went on to explain why the reduction was deserved. It was not in the mere possession of an engine, but in the awakened interest caused by the possession of an up-to-date appliance. A town which goes to the expense of securing such an appliance will also have a fire hall and a live brigade, and it is upon the latter that the good results of any appliance, no matter how perfect, depends. The great secret in fighting fire successfully in Fernie was to get on the ground early. An alert brigade with a chemical engine ready for action on 30 seconds notice was the best possible prevention against fires in a town like Fernie. A few seconds gained at the beginning of a fire was worth more than as many hours after the fire was well under way. The underwriters were beginning to appreciate the many advantages directly and indirectly added to the fire protection system of towns using these engines and he confidently expected a substantial recognition from them.

This intimation will come to our merchants and others paying exorbitant rates as a welcome piece of news. A reduction of say 10 per cent will mean a very large aggregate saving each year,—a saving amounting to many times the cost of the engine, the fire hall and lot.

SOCIALISM AND LABOR INTERESTS

From the Morrissey Despatch.

That the representatives of labor interests and socialism cannot work in harmony was clearly shown at the Labor Day celebration in Vancouver where several public speakers of each party were present to address the large audience. A socialist speaker by the name of Waters, drew distinctions between the aims of the labor unions and socialism to the disadvantage of the former. Ralph Smith, the great labor reformer, followed and strongly upheld the cause of unionism. He claimed that the true aim of the two parties ought to be the same, but that State socialism was quite a different thing. The socialists in the crowd kept up a systematic howl of dissenting interruptions and the labor champion left the hall in disgust followed by many sympathizing friends. Mr. Hawthornthwaite followed and denounced Ralph Smith as a trator to labor interests.

The statements charged by Ralph Smith as having eminated from the previous socialist speaker are doubtless true as we have heard similar comparisons drawn by socialists in this district, who have openly stated that the aims of the socialist and the labor unionist are diametrically opposed to each other. The socialist aims to revolutionize the present system of society, to tear the whole system to pieces and to build another on entirely new principles The labor union man, on the other hand, takes the present system as he finds it and aims to improve his relationship to the other factors in that system. That the latter has accomplished wonders by steady perseverance and strong cooperation none will deny but the socialist, who attempts to belittle the results of labor organization in order to find support for the substitution of his pet scheme. That the labor party will not fall into line with the radical and impracticable socialists can be surmised from Ralph Smith's utterances and from the fact that Mr. Hawthornthwaite will be opposed in Nanaimo by a labor candidate.

The Socialists in this district put up their candidate expecting to receive the support of the labor party, notwithstanding the open statement that the aims of the two parties were directly opposed to each other. The great majority of the labor union men in this electoral district never had much use for it. They have still less use for it now, and the expectations of candidate McPherson and his supporters have miserably failed in this regard. The fight in this riding will be between the two big political parties. If the socialists make their nomination tomorrow, (which is doubtful), their voting strength will not materially affect the situation as the few votes that will be polled will be gathered about evenly from the ranks of the Conservatives and the Liberals.

EDITORIAL NOTES

Poor Dunsmuir, with all his millions, is hounded from one party to the other. Since the Liberal and Conservative parties have disowned him, we beg to suggest that he may be a socialist.

* * *

Captain McRobie left for his home in Winnipeg on Wednesday evening after a stay in Fernie of over a week. He was indignant at the C. P. R. freight transportation facilities which caused his long wait.

Dysentery causes the death of more people than small pox and yellow fever combined. In an army it is dreaded more than a battle. It requires prompt and effective treatment. Chamberlain's Colic, Cholera and Diarrhoea Remedy has been used in nine epidemics of dysentry in the United States with perfect success, and has cured the most malignant cases, both of children and adults, and under the most trying conditions. Every household should have a bottle at hand. Get it today. It may save a life. Sold by all druggists and dealers.

CONSERVATIVE CONVENTION.

At a meeting of the executive of the Provincial Conservative Association, held at Vancouver, the province was divided into five divisions for organization purposes. The Kootenay-Boundary division is made up of the following Provincial election districts: Revelstoke, Columbia, Fernie, Cranbrook, Ymir, Kaslo, Slocan, Grand Forks, Greenwood, the City of Rossland and the City of Nelson. At the same meeting the following resolutions was adopted:

1, That conventions for nominating candidates for members of the legislative assembly be made up of delegates chosen as follows:

(a) In city electoral districts, one delegate for every fifty and fraction of fifty votes polled at the Provincial election held in 1900, and if the city is divided into wards, the proportion of delegates for each ward shall be based on the vote polled in each ward at the municipal election.

(b) In other electoral districts, one delegate for every fifty or fraction of fifty votes polled at the Provincial election held in 1900, the delegates to be apportioned to polling places, or as near thereto as will be fair to the voters of the different neighborhoods.

2. The election of delegates shall be at public meetings, held at a designated central place in each polling division, or in each ward in city electoral districts, if the city is divided into wards. At such public meetings only those who pledge themselves to vote for the candidate or canditates selected at the nominating convention shall be entitled to a vote for delegates.

3. Two weeks' notice shall be given of the public meetings at which delegates are to be elected, and nominating conventions shall be held in city electoral-districts two days after the day on which delegates are elected, and in other electoral districts seven days after. All nominations throughout the province to be made at a designated central place in each electoral district, and on the same day.

4. All notices of the date of public meetings for the election of delegates to nominating conventions, the apportionment of delegates, and the place and date of nominating conventions in the several electoral districts shall be prepared by the member of the executive of the division in which the electoral districts are situate, and issued over the names of the president and secretary of the Provincial Conservative Association.

A meeting of the Provincial executive will be held at Vancouver within a month, and the date for holding district nominating conventions will then be fixed.

JOHN HOUSTON,
President of the Provincial Conservative Association.

Nelson, June 8th, 1903.

The Proper Treatment for a Sprained Ankle.

As a rule a man will feel well satisfied if he can hobble around on crutches two or three weeks after spraining his ankle, and it is usually two or three months before he has fully recovered. This is an unnecessary loss of time, for in many cases in which Chamberlain's Pain Balm has been promptly and freely applied, a complete cure has been effected in less than one week's time, and some cases within three days. For sale by all druggists and dealers.

LOCAL AND GENERAL.

To-day is pay-day.

Fresh Oysters at Cuthbert's.

Elections two weeks from to-day.

Guns and ammunition at Sheppard & Elliott's.

A. B. Trites is laid up with an attack of pleurisy.

J. A. Cryderman, of the Nelson News, is in town.

Mrs. Church left for her home in Almonte, Ont., on Monday.

Mr. Slinn returned from a combined hunting and prospecting trip to Perry Creek this week.

The opening of the new Methodist church is expected to take place on 27th inst.

Miss McNee the new teacher for the mine school has arrived from the east, and will assume charge next Monday.

Messrs Cree and Hutchison have secured the agency for the new townsite of Colemen, near Blairmore.

A. Colclough returned from Pincher Creek this week and will spend the winter in Fernie.

A party of four ladies accompanied by as many gentlemen climbed to the cross atop Modist Fernie last Sunday.

A slight accident occurred in the Coal Creek mines on Wednesday by which a miner's ankle was jammed by a falling rock.

The mountains are gradually being tinged with beautiful autumnal hues, a striking reminder of the near approach of winter.

R. Reading, accompanied by his wife, arrived from Calgary on Tuesday to assume the position of station agent at this place.

As for "Griffin Brand" pig's hocks and tongues. They are boneless and cooked ready to serve. The real thing for picnic lunches.

"Griffin Brand" brix butter is fresh from the churn and retains that peculiarly delicate flavor that only the best and freshest butter can have. x

A heavy equinoctial gale blew all las night sweeping the streets clean of dust. This was followed this morning by a disagreeable storm of rain.

No. O. mine at Morrissey is being rapidly developed and is now producing coal. Plans and specifications are out for the new school at Morrissey Mines.

Deputy Sheriff Sedgwick, of Hayden, was in the district this week looking for three men who broke jail there on Monday and escaped into Canadian territory

Calgary Cattle Co., Ltd., keeps a regular supply of oysters on hand. A choice shipment of dairy butter just received. Also clams. See our ad. x

Rev. F. W. Auvache, of Cranbrook, will preach in the Baptist church tomorrow. Rev. P. H. McEwen left on Thursday on a business trip to the coast.

The government authorities here have received plans and specifications from the public works department for a bridge across the Elk at Morrissey. The work will be let by tender.

T. H. White, of the Trites Wood Co., has taken up his residence in John Coward's house next to the skating rink Mrs. White and family arrived from the east last week.

Geo. L. Pedler, of New Denver, the new principal for the Fernie Public Schools is expected to arrive here in time to take charge of his position on Monday next.

A. Joyce met with a painful accident last Saturday which has confined him to his room during the week. He stepped on a nail which penetrated his boot and deep into his foot.

A. J. Mott was down to the prairie last week buying horses. He returned with six splendid heavy animals purchased at Cardston. These horses have been purchased for the Elk Lumber Co. and will be used on their timber limit.

The Trites-Wood Co. will hold their fall and winter millinery display on Thursday, Friday and Saturday of next week. This department, under the management of Miss Donaldson, an experienced milliner from Toronto, will surpass all past records. Invitations will be issued to the ladies of the town, and no doubt many will avail themselves of the pleasure of visiting these parlors during those days.

Charles A. Payne delivered his illustrated lecture on Yellowstone Park in the Presbyterian church last evening to a crowded house. The lecture was billed for next Tuesday night but owing to an alteration in railway arrangements it was changed as above on a few hours' notice. The lecturer also selected many of his best views from his "All America" lecture. The views were very fine and they alone well repaid the price of admission. The wonders and beauties of Yellowstone Park were fully brought out and proved both interesting and instructive. The Ladies Aid are to be congratulated upon the financial success of their undertaking.

Use "Griffin Brand" brix butter, you can get none better. x

Mr. H. L. Staebler is resuming his class in music this week.

Mrs. Oldlands was the guest of Mrs. Bricker this week.

R. Joyce has purchased the corner lot and house belonging to Mr. Davidson.

Mrs. Liphardt gave an afternoon tea to a large number of friends yesterday afternoon.

Mrs. W. W. Thomson and baby arrived last Saturday from an extended visit with friends at Guelph.

E. Kummer shipped some B.C. spruce trees to Preston, Ont., for experimental purposes this week.

W. A. Letcher left this week for a month's vacation at his former home in Pennsylvania.

Rev. Shearer, travelling secretary of the Lords Day Alliance, will deliver an address entitled, "Battle for the Sabbath in Canada" in the Methodist church on Thursday evening next at 8 o'clock.

OFFICIAL NOMINATION.

Held in the Government Office Today Before Returning Officer Alexander.

The nomination papers were filed before Returning Officer Alexander by 12 o'clock today for the three candidates in the field in this riding, and also the necessary $200 deposit for each man was put up. The nomination of W. R. Ross was moved by J. A. Reunie, seconded by Dr. Bonnell with the following names signed as assenters.

A. Joyce, Wm. Senkbeil, B. H. Short, A. W. Bleasdell, S. Graham, J. Graham, C. H. Levers, J. McCreedy, W. F. Cuthbert, David Williams, J. C. Hutchison, C. W. Sheppard, A. H. Cree, J. D. Quail, A. C. Liphardt, R. Neil, W. O. Robins, J. A. Broley, J. R. Wallace, S. Marks.

The nomination of E. C. Smith was moved by F. Stork, seconded by John Podbielancik. The following names were added as assenters.

W. W. Tuttle, J. L. Gates, H. H. Trites, R. W. Coulthard, R. A. Kerr, L. Dobbin, D. McRae, A. B. Smith, J. R. McEwing, John Hunter, Owen Ross, C. P. Higgins, M. D.; D. V. Mott, F. J. Watson, Jas. Falconer, A. French, F. W. Ross, D. Grant, N. Gareau, W. S. Proctor, J. F. Elliott, J. A. Maclean, J. H. Bricker, Chas. Richards, A. P. Chenette, G. Dorenbecker, F. Salisbury, T. Fury.

J. R. McPherson's nomination was was moved by E. Neye, seconded by J. A. McDonald and signed by 13 supporters.

CHAMBERS OF COMMERCE

The delegates of the Chambers of Commerce passed through Fernie on their return trip through Canada on Thursday evening. The special train was made up at Kootenay Landing. It consisted of two diners a baggage and five Pullman cars and was so heavy that it required two engines.

The party consisted of 110 people, among whom were many ladies. The train remained at the depot for an hour and a half and many of the visitors visited the coke ovens. The party included many distinguished gentlemen from every part of the British Empire, and to those who are making the trip for the first time it is proving a marvellous revelation. There is no doubt that this meeting, held for the first time outside of the British Empire, together with the trip across Canada, will widely advertise this country's many advantages abroad in other lands.

SALVATION ARMY

Ensign Scott, commanding officer of the Salvation Army is now convalescent. The S. A. meetings which have not been held for the past months owing to her illness will commence again on Sunday morning, 10 a.m. in the Barracks. Thanksgiving service in the evening. Everybody welcome.

A red-hot old time salvation meeting will be conducted in the S. A. Barracks, Monday, Sept. 21st, at 8 p.m., by Brigadier Alex. McMillan, assisted by Staff Captain Taylor, of Spokane, Wash. The Brigadier is a blood and fire Scotch Salvationist, with a keen passion for souls and has just recently come from London, Ont., where he was most successful in his position as Provincial Officer of that province. Staff Captain Taylor is well known in Fernie and has a place in the hearts of the people. An impressive part of the meeting will be a "Dedication Service". This is the Brigadier's first visit to Fernie and a good time is looked for. Everybody come.—Com.

LIBERAL MEETING AT MICHEL.

Several Fernie Liberals went to Michel on Thursday accompanying E. C. Smith and S. S. Taylor, the Liberal speakers, who addressed the meeting there. The train was late that evening and it was close to 10 o'clock before the chairman called upon Mr. Smith to open the meeting. The invitation to opposition speakers was accepted by Messrs. Duggan and Neye, the latter again speaking instead of candidate McPherson.

S. S. Taylor delivered an address similar to that given the evening before in Fernie and received an attentive hearing.

Politics are warming up and during the next two weeks no party will allow the grass to grow under its feet. The Liberals have had the first fling. Next week the Conservatives will hold three meetings, at Morrissey on Monday, Princess hall, Fernie, on Tuesday, and at Michel on Wednesday. At these meetings the Conservative candidate, W. R. Ross, will deliver addresses. W. A. Galliher, M.P., is slated to speak in Fernie on Monday and at Morrissey on Tuesday. The committee rooms are in full blast day and night, and at the present rate, two weeks campaigning is about all that the electors will want.

Cranbrook

From the Herald.

The election of school trustee last Saturday was largely attended and unusual interest was manifested. Several names were presented but all withdrew but James Gill and he was elected unanimously.

The public schools remain closed on account of scarlet fever.

Rev. Taylor, of Moyie, was admitted to St. Eugene hospital on Tuesday suffering from a bad attack of typhoid fever.

Mrs. J. R. Downes and two daughters returned Tuesday from Paris, France Mr. Downes went to Fernie to meet them.

They Make You Feel Good.

The pleasant purgative effect experienced by all who use Chamberlain's Stomach and Liver Tablets, and the healthy condition of the body and mind which they create makes one feel joyful. For sale by all druggists and deal

We have opened up a variety of sideboards at prices to suit all purses.

Stove Department

FALL, 1903

This season finds us better prepared than ever to please you in Stoves.

One Car-load just placed on sale this week, from the very best makers in Canada.

If it is a **Cook Stove** you are considering, come to us; we have all sizes and at all prices.

Ranges—from the smallest to the hotel size.

Heaters—all the different makes. HOT BLAST.

"THE FAMOUS OAK"

One of the most popular heaters made.

We can also supply you with all kinds of Stove Furniture, Stove Boards, Pipes, Elbows, etc.

Millinery Dept.

FALL, 1903

Thursday, Friday & Saturday

Sept. 24th, 25th & 26th.

On all the above dates we hold our regular Millinery Display. We promise to eclipse all past efforts this year.

Miss Donaldson, direct from the east, who is in charge, will undoubtedly please you with the many new ideas and pretty styles of Hats for this season.

THE TRITES-WOOD CO., LTD.

The Game Season is now open. Sportsmen ! ! Please note we are prepared for any call on Sporting Goods.

A Stevens LATEST MODEL Single Barrel Shot Gun for $10.00 is our special this week.

Savage and Winchester Rifles.

Browning and Stevens Pistols.

Ivers Johnson and Hopkins and Allen Revolvers.

Lubricates Prevents Rust Cleans and Polishes

You can get it here.

NOTICE.

(To Whom it May Concern.)

Take notice that the lumbering and milling business which has been conducted under the firm name of Mott, Son & Co., was transferred on the 16th day of July, 1903, to the Elk Lumber and Manufacturing Co., Limited.

All debts due the firm of Mott, Son & Co., are payable to their successors, and all bills outstanding against Mott, Son & Co., will be paid by the Elk Lumber and Manufacturing Co., Ltd.

ELK LUMBER & MANUFACTURING CO. LTD.
D. V. Mott,

MY HEART'S DARLING

BY W. HEIMBURG.

"Fraulein," cried Frau Nein, at door, "there are visitors!" The old woman's face was red, and she looked annoyed. "A fine set of people! They came in Herr Kostan's carriage; three B— officers. They seemed to have dined well; they have hot heads, and are as noisy as sparrows at day-break. And my mistress, as I announced the gentlemen—I was just then in the hall—answered: 'I shall be glad to see them.' I felt as if I had had a stroke. You ought to have seen the master's face, fraulein; he looked as if he would like to have taken them one and all by the collar and set them in the open air. The master did not seem like himself; before that he had been sitting in his room with Hauptmann von Kader, who came half an hour ago; they were apparently talking of something important, for when I announced the visitors they had papers before them."

"Hortense—receive visitors!"

Lucie shook her head incredulously.

"Who is Herr Kostan?"

"He has an estate on the other side of A—, fraulein," said the old woman, as Lucie was standing at the mirror, trying to brighten up her mourning-dress with some jet ornaments. "It is called Ichelsleben. He used to be here a great deal when Frau Weber visited our master with her youngest daughter, but they say the fraulein would not have him. No one could blame her for that. Since then he has not shown himself. I will not say any more; but I think the master would rather see him go than come."

Lucie started; she thought of the note; was it he? She felt she would far rather not go down.

At the entrance of the so-called reception-room Weber came to meet her.

"Do me the favor, Frauelin Lucie, to go to Hortense. She is dressing. I beg of her most earnestly not to come down; the gentlemen are more or less the worse for wine."

He looked annoyed, and spoke quickly. Lucie turned, but he cried after her:

"Come back; it is too late; she has gone in by the other door."

The laughing and talking had suddenly ceased; they could hear chairs move, and then Hortense's voice.

"Go in quickly, Lucie!" whispered Weber. The next moment she was in the room, followed by the master of the house. Hortense was standing by an arm-chair. She had just greeted the visitors. She looked wonderfully well in a simple dark-blue dress of some soft silken material, her high collar closed at the throat with a little diamond brooch in the form of a horseshoe; her blue-black hair was wound closely round her delicate little head, and her eyes shone as dark as the color of her dress.

Weber presented the gentlemen to Lucie; Hortense as lady of the house had already introduced herself. The visitors were three young lieutenants and a captain, who appeared to be the only quiet one among them. Near Hortense, in an arm-chair, and turning to her, sat, or rather lay, a gentleman in civilian's dress—a dust-colored suit of the newest summer style. He wore his thin, light hair elaborately brushed; his complexion exactly matched the color of his clothes, and he wore his long mustache waxed into two pointed ends, which stuck out over his thin cheeks. There was something extremely impertinent in his face and in the whole way in which he acted. As he bowed to Lucie, he let his eyeglass fall, but put it back at once on his eye, and continued to stare at Hortense. Frau Weber looked at him coldly, turned half round, and began to talk to the captain who sat on her other side.

Lucie had found a place between Herr Weber and a twenty-year-old lieutenant, who, judging from his beaming face, still found life most delightful. He took immense pains to appear entertained.

"A famous idea of Kostan's. He proposed this drive after dinner. Rainy days are so tiresome. The summer theatre does not begin till half past seven. This Wottersdorf is a jewel. What a pity the owners are so—"

The servant entered with coffee. Lucie did not answer her neighbor; she looked at Hortense, whose face was one moment pale and the next flushed; it seemed as if Herr Kostan were trying how badly he could behave in her presence.

"Kostan," cried Weber, sharply, "take that glass out of your eye; you annoy my wife."

With a movement of the face the glass fell.

"Since when?" he asked, carelessly, playing with his beard. "I can remember that Frau von Lowen used to be looked at through all kinds of glasses. Has seclusion made you so—shy, madame?"

He had spoken in a half whisper, so that Weber, who was sitting as if on the rack on the opposite side, did not understand him.

Hortense's eyes blazed. "I have never noticed that I have been more looked at than others, and I have no recollection of having seen you before."

Kostan laughed. "I am not so conceited as to suppose you have; but you must be lenient if you are not forgotten when once seen, madame."

(To be Continued.)

Heartstrings Particularly.

Whatever music there may be in the instrument called man cannot be brought out fully and entirely until a woman takes it in charge and plays upon the strings of it.

A GHASTLY TRAGEDY

MURDER AND SUICIDE AT ST. PIERRE.

Enraged at an Alleged Insult Offered to his Sister-in-Law a Half-Breed Shoots a Winnipeg Commercial Traveller—Murderer Suicides While Under Arrest

A dispatch from St. Pierre, Man., of Sept. 12, says: A young man, named Euclide Breton, was shot and instantly killed last night at 9 o'clock, by a half-breed named J. Coutois, with a shot gun, the charge entering below the left temple, and coming out at the back of his head, scattering his brains over a partition near where he was sitting.

The murderer was shortly afterwards captured, and while his captors slept, with desperate coolness, cut his own throat and died almost immediately.

The murderer, after his capture, told the following story: "Breton and a party by the name of Nathum Davis came home with me; we had a few drinks and Breton had a bottle. They went into the house, while I put away my horses. On returning to the house I met my sister-in-law, who was keeping house for me that day, and I asked her if supper was ready. She replied:

"'I am going home; Davis has been insulting me.'

"I went into the house and talked with Breton and Davis. We afterwards prepared a big supper together. I then went out and killed a fowl to make soup. Breton and Davis were wanting to fight me. I asked them to be quiet and either go home or go to bed, but they would do neither and kept on bothering me.

FIRED DEADLY SHOT.

"I at last got angry, and told them if they would not leave me alone, I would use my firearm. 'I am too old to fight young men like you; I am 57 years old.'

"I took down my gun and threatened to shoot them, but put it up again. They apparently thought I was fooling with them. I warned them again, but they laughed at me. Breton said to me:

"You are too good hearted to shoot me."

"I took up my gun to shoot him in the head. I wanted to shoot Davis also, but when he saw me shoot Breton he jumped up out of his chair and ran out, and I went after him, but could not see him as it was dark outside. I came back into the house, heard the blood dropping on the floor, took my coat and went out again."

Last evening Davis and J. Lamoureux came in the store of N. T. Carey, J.P., told him that Coutois had shot and killed Breton and asked him to take steps to have the matter investigated.

MURDERER CAPTURED.

"I requested Lamoureaux to call Dr. Jarvis," says Mr. Carey, "and we would go up and see what was the trouble. I afterwards went for the doctor myself and requested Davis to call up Constable Lemaire, which he did. We three, with others, went to Coutois' residence and found the door wide open, a lighted lamp on the table, on which were remnants of a supper, and Breton, as I thought, seriously wounded, sitting in a chair, his legs crossed, his arms hanging by his side and his head leaning on his breast a little to one side. His face was all blackened by the powder. There was a great hole in his head. The floor around was covered with boood.

"After looking over the premises for Coutois, whom I knew to be around, I went up to Breton, telling some of the others to call the doctor. I shook him by the shoulder, but found he was dead.

"The doctor came in and pronounced him dead. Shortly after the crowd departed, leaving Davis, Constable Lemaire and I alone. Coutois came and tried the door, ordering us to open it. I asked 'who is there?' He replied by again ordering us to open the door, which I did, preparing to shoot him if he endeavored to use his gun while coming in. He ordered us out. Lemaire and I wrestled with him, and after a brief struggle succeeded in taking his gun from him. He submitted to arrest, but was very much excited and still wanted to fight the constable and Davis, telling Davis that it was his fault and that he was sorry he had no opportunity to shoot him. He afterwards cooled down somewhat.

BALKS HIS CAPTORS.

"I told the constable that I was tired and would go home, but neither he, Coutois nor Garand, a neighbor who came in, would hear of it, so being tired, I went to sleep in a chair for an hour or so. I was awakened hearing Coutois calling for me, saying he was dying. I went into the room and found the floor covered with blood, and Coutois lying on the floor with a large cut in his neck. He begged me to finish him and call the priest. At 7 o'clock this morning Coutois breathed his last."

The murdered man Breton was a cream separator salesman of Winnipeg.

Lord Rosebery, replying to a correspondent on the subject of the recent report of the commission of enquiry into the South African war, vigorously condemns the cabinet as being severally and individually responsible for the disasters and the ineptitudes of the conduct of the war and advocates a new departure in the military management of Great Britain, commencing by requesting the King to instruct the entire management of the war office to General Lord Kitchener, with the fullest authority to reorganize the present system.

The short-sighted girl who wears glasses may not be vain, but she knows she looks better with them.

This trade mark on every tin.

For Miners, Lumbermen or Household use

it is the pure cream with the water taken out of it by evaporation—No sugar—Nothing but the Cream—

Add Water and you have the purest and richest of cream — as produced by the milch cows of Prince Edward Island. The most celebrated Dairy District in North America.

All Grocers and supply houses sell it.

VALUABLE GOLD FIND.

A Rich Discovery at Popular Creek British Columbia.

Revelstoke, B.C., Sept. 9.—W. B. Pool, of Ferguson, and J. J. Young, of Calgary, arrived here last night from Poplar Creek with specimens of gold quartz, which has created a sensation, and are said by old miners to be the richest ever seen either in British Columbia or the Western States. One piece, weighing five pounds, contains two and a half pounds of gold, and is worth for the gold alone about $700, though its value as a unique specimen is probably several thousands. It was discovered three days ago on a claim which Pool and Young recently acquired. "A further examination," said Mr. Pool, "after the specimen was taken out revealed the astonishing fact that the whole ledge, about four feet wide, was impregnable with coarse gold, some of it standing out like immense warts. Pieces the size of a walnut, could be pried off with a jack-knife."

The specimen, along with a dozen others of almost equal richness, were shown the chamber of commerce delegates, whose special train pulled in to Revelstoke shortly after Messrs. Pool and Young arrived from the south. The sight of so much gold in its native state aroused great excitement among the Britishers, all of whom were eager for particulars about the wonderful new gold fields and how to reach them. Mr. Pool, who is a miner of twenty-five years' experience, gives his opinion that the rich values will continue with the depth attained. In support of this he mentions that the ledge runs vertically up the mountain and is fully as rich at the base as on the summit. Furthermore, a tunnel is now in over 40 feet with the same rich quartz throughout its entire length. He lays great stress on the fact that the gold is evenly distributed through the white and brown quartz, and is not found in pockets, but exists throughout the ledge over a distance of a thousand feet or more, wherever it has been stripped or is exposed. He exhibits assays of galena and telluride ore from the same ledge, the former running $549 to the ton and the latter $6,100. Mining experts who have seen the phenomenal showings, variously estimate the quantity of gold in sight at from $1,000,000 to $4,000,000. The excitement at Poplar Creek continues unabated, every train bringing in from 20 to 50 people. Men with loaded rifles are still kept on guard night and day to prevent the gold being stolen.

WARNING TO EMIGRANTS

British Papers Criticize Canadian Immigration Agents' Methods.

London, Sept. 9.—Under the heading "Immigration Scandals" the Daily Mail publishes the Canadian government's warning to intending emigrants. The Mail says the emigration scandal took a regretable turn yesterday. The time-worn policy has been adopted of declining to assume responsibility, thus aiding the mischievous work of the agencies. The Mail also publishes extracts from an emigrant's letter complaining of the treatment received from agents.

R. A. Pease writes: "Have no hesitation in confirming these statements. Many emigrants from England were stranded in 'Brandon' Pease talked with some of them at the time.

The Anti-Emigration society of Dublin, issuing an analysis of the board of trade returns for August, says that it is unsatisfactory to find that Irish emigration to Canada for the eight months of the present year was twice as great as during the whole of last year. The society directs the attention of emigrants to the renewed warning re emigration to Canada issued on August 10 by the Winnipeg Trades and Labor council, which was endorsed by the trades councils of Toronto, Kingston, London, Hamilton, Calgary and Vancouver.

The Yorkshire Herals warns intending emigrants to Canada against pinning their faith on the representations of agencies which are neither responsible nor remarkable for their rectitude. The Herald advises emigrants to treat directly with state emigration officials.

A constable on duty at the government house at Melbourne, Australia, has arrested an armed lunatic, who said he wished to interview Lord Tennyson, the governor-general. The constable closed in on the intruder and deprived him of a loaded revolver.

Duncan A. McAlpine, of Toronto, met a sudden end in the railway yards at Grand Forks. His head was severed from his body.

BECOMING ALARMED

NEW YORK PAPER SOUNDS A WARNING.

Says Canadian Northwest is Attracting the Best Immigrants Who Come to the United States—"Annexation May Yet Prove Irresistible" says the Sheet.

The New York Sun, in an editorial headed "The Call of the Saskatchewan," sounds a warning regarding Canada's immigration inroads in the United States. It says:

"We cannot close our eyes to the fact that Canada is attracting a large percentage of the best immigrants who come to the United States—those who till the soil and help to develop the resources of the country. Upon landing in New York, they go west to Nebraska, Kansas, the Dakotas and Minnesota to take up land or buy it with their savings.

"In Europe the story is still current that for every immigrant there is a farm in the United States, but it is fiction. There are no public lands left. In the Western States the new arrival learns the truth, but he hears that in the Canadian Northwest there are fertile lands for a song and that if he is willing to live on the fringe of civilization he can have a homestead. He moves his belongings across the frontier, indifferent whether he is to become a Canadian or an American citizen, if he can have what his soul longs for, a plot of ground to call his own.

"During the last year 45,000 persons have passed through St. Paul alone to settle in the Northwest, and in the same period no less than 10,000,000 acres of land have been given away by the Canadian government or sold. The Canadian government understands the character and value of these immigrants. It has agents in every state in the west to advertise its vacant lands, and there is no finer soil for wheat in the world than that of the Saskatchewan valley. Four years ago it was untouched by the plow; this year it is producing of wheat what will be several millions of bushels.

"In the fall of 1897 there were only thirty settlers in the neighborhood of Rosthern, which is destined to be the Winnipeg of the Saskatchewan country; to-day there are thousands, and the population, purely agricultural, is increasing rapidly. This season one implement house in Rosthern has sold 246 farm wagons, 100 mowers, two carloads of farm harness, 200 plows and 65 wheat drills. Most of the agricultural machinery used is of American make and comes from Chicago.

"What effect the American origin of these settlers will have upon the political future of the Northwest it would be presumptuous to say. Aliens who sojourned in the Western States or passed through them to the promised land, will become good Canadian citizens, no doubt; native Americans from these States will carry with them love of their own country and a preference for its institutions. We are inclined to think the destiny of the Northwest and of the whole of the Dominion for that matter, will be decided by economic conditions. Canadians will always want to buy in the nearest and cheapest market—United States; and if the tariff makes shifts they are debarred from that market. A movement for annexation ultimately will prove irresistible."

A Mutual Combine

A co-operation backed by $100,000,000 capital, is the plan proposed by a joint meeting of farmers and their representatives, by which the producers of the country are to protect their interests. An association having this basic principle is in process of organization in Chicago.

Farmers and representatives from the Producers' associations in nine states are in conference. Three societies are to be amalgamated as the foundation for a monster exchange, by which the producers of the country expect to control the markets, build elevators, establish packing houses, organize banks, maintain schools and improve the highways. These associations are Producers' and Consumers' union of Tennessee and of New York, with 400,000 members; the American Society of Equity of North America, with 60,000 members, and the Farmers' National Co-operative Exchange company, with a membership of 20,000. It is proposed that the new association should be incorporated for $100,000,000 at least.

The dead body of a man named Stewart, who had been hunting, was found in the bush near Cowan station on the C. N. R., on Sept. 9.

EXHIBITION AT DAWSON.

Flowers, Vegetables, Fruits and Grain Shown in Great Profusion.

An horticultural exhibition was opened in Dawson City on Sept. 10. The display of flowers and vegetables was remarkable in quality and quantity, turnips weighing 21 pounds and cauliflower measuring 11 inches across. Every vegetable known in the east was shown. Pansies beat anything shown in Southern California. Ripe wheat, barley and oats were shown; also splendid clover and timothy. There were enormous cabbage and celery, while the potatoes are as large and fine as seen anywhere. Onions are grown from the seed. There was also a profusion of flowers, the wonder of those residing there.

Mrs. Congdon, the patroness, took a very active part in helping to arrange the floral show. The mineral exhibit was fair. All sorts of exhibits, such as needle work, school work, fancy work, pastry, preserves, from native fruits, and a large exhibit of fresh cultivated strawberries. There are fossil remains of a mammoth ox, and large numbers of Indian curios, which form an interesting exhibit. There was also a large exhibit of native raw furs, and native woods, etc. Besides these, there were large exhibits of machinery and goods of all sorts.

Brutalities in German Army.

Paragraphs similar to the following appear almost daily in the German provincial press: "Cologne—The court-martial of the fifteenth division has sentenced Sergt. Schott to a year in prison and degradation for flogging privates and horsewhipping and kicking them. Twelve artillerymen were sentenced to short terms for assisting."

There have been eighty convictions of sergeants for abuse of privates during the past three months, and about 100 court-martials are pending. The administration of the army is making most determined efforts to stop these brutalities, which Herr Bebel, the Socialist leader, detailed in a ferocious three hours' speech in the reichstag in the spring. The weak reply of Gen. Von Gossler on the following day probably cost him his place as minister of war.

Western Cattle are Wanted.

Word has been received by the C. P. R. freight and traffic department that the Union Stock Co., of Toronto, intend to make a specialty of handling Manitoba stockers to be fed during the winter on Ontario farms and to be shipped out as fat cattle during the following spring shipping season. Communications will be received by Mr. Andrew Dodds, at the company's office at No. 6 King St., Toronto, who will advertise in the Ontario papers what stockers are available from the west. Heretofore the shipment of stockers from Manitoba to Ontario has been small, but it is believed that this arrangement with the largest stock yards in the east should be productive of very satisfactory results for Manitoba stock men.

Costly Kisses in Russia.

Kisses are actionable in Southern Russia, but the many cases before the local magistrates prove that the little god of love defies law, as well as locks, says a dispatch from St. Petersburg dispatch. A kiss in the street car costs the indiscreet osculator a fine of $3.

To embrace one's fiancee in public is a privilege valued at $2.40. A declaration of "a great passion" by postal card is subject to a fine of $2.40.

The public must be protected and the disturbing influence of such sights is assessed at a figure calculated to discourage youthful impetuosity.

At Milan, Italy, 721 couples paid last year the fine of 60 ere (about $1.20) for having braved the conventions and kissed each other in public places.

A Montreal dispatch says: Fred. Hastie, the four-year-old son of Archibald Hastie, of 65 Conway street, Point Charles, was burned to death on September 9. The tragedy occurred shortly before 9 o'clock. The mother took the children to school, which was only a few blocks from the house, and during her absence from the house the child got hold of some matches and set fire to its clothing. The mother was gone only a few minutes, but upon her return she found the house in a blaze and the remains of her boy lying on the floor, almost burned to a cinder.

Mrs. Geo. Gifford, wife of a Portland, (Ont.,) farmer, lies in a critical condition. She is suffering painful injuries as the result of being gored by a bull. While crossing the barnyard the infuriated animal attacked her in a vicious manner. She was knocked down and was being gored and trampled upon, when a dog came to her rescue by biting the animal's heels. He succeeded in driving it off. One of Mrs. Gifford's wounds required 27 stitches.

A colony of 300 Welsh families will locate in the Yorkton district next spring.

Capt. Wringe of Shamrock III. has decided to reside in future in America.

A spectator was killed and a driver seriously injured at the auto races in Detroit on Sept. 9. A tire burst and the machine ran into the fence.

The Winnipeg Exhibition association has permitted the hospital authorities to use the fair buildings for the accommodation of patients who are crowded out of the general hospital.

WAR IN THE EAST

BRITISHERS THINK IT CANNOT BE AVERTED.

Newspaper Correspondent Writes of Horrible Scenes in Okrida District—A Young Man Flayed Alive—The Burning of Villages Continues.

The London Daily Mail's correspondent at Monastir, telegraphing under Saturday's date, says: "There is no doubt that a Turkish war of extermination is proceeding in the Okrida district. The massacres of a century ago are as nothing compared with those occurring daily in the vilayet of Monastir.

"I have obtained substantial evidence to prove that the Turkish soldiers, nizams, (Turkish regular troops) are in most cases committing unheard of atrocities, which are not solely the work of Bashi-Bazouks, as the authorities are seeking to prove. The plight of the survivors is terrible. Not daring to leave their houses and subsisting on grass and water, they resemble people in the last stages of famine. The Turks are also losing heavily, judging from the number of wounded arriving here."

Among the instances he gives in support of his statements, the correspondent relates that a priest's son in one village was flayed alive and kept in this horrible condition for several days to the delight of his tormentors until a merciful Turk shot him dead.

The latest order received from the Turkish government is regarded here as a sure indication that the porte entertains serious apprehensions of war. Sixteen battalions of Mustahfuz, or second reserves, have been called to arms in the Salonica, Ukub, and Monastir districts, and the artillery and cavalry reserves of the Adrianople and Smyrna departments have also been mobilized. The commander of the thirh army corps has been ordered to strictly watch the Servian frontier where, it is thought, revolutionary bands will probably gross.

LARGE VILLAGES BURNED.

The revolutionary headquarters at Sofia has received information that the Turks have burned nearly all the villages of Kastoria, near the Greek frontier. The villages in that district were the largest in Macedonia, each having from 1,000 to 3,000 inhabitants. It is added that 300 women and children fugitives from Zagonitchani went to the Turkish commander of the district to seek assistance and protection from Bashi-Bazouks. The commander promised them protection, but when the fugitives left the Bashi-Bazouks pursued, outraged and killed many of the women and children.

LONDON LOOKS FOR WAR.

London, Sept. 6.—The Balkan situation shows shows no sign of improvement. Indeed, in Constantinople it is now thought that war between Turkey and Bulgaria is inevitable; but the Turkish ambassador in London insist that hostilities can only result from an overt act on the part of Bulgaria.

The Sofia government, on the other hand, preserves strict neutrality, as advised by Russia and Austria. The announcement of Bulgaria's attitude has caused an optimistic tone in the papers and the market for foreign bonds and government securities have become much firmer. Roumania, too is enforcing neutrality in compliance with the advice of Russia, having taken measures to suppress the Macedonian agitators within her borders. The pope's refusal to appeal to the powers to act, save in the direction of stopping the massacres in the Balkans, is accepted as evidence that even the holy see appreciates the inadvisability of intervention at this time. Turkey is largely increasing the number of her troops in Macedonia, in spite of her depleted treasury, and is determined to suppress the revolution before the powers can intervene. In the vilayet of Monastir the rising has been ruthlessly suppressed, the Turks having burned many villages and committed many grave excesses.

Constantinople, Sept. 7.—War between Turkey and Bulgaria is now regarded here as inevitable. It is believed the outbreak will occur before the end of September, when reinforcements will have been concentrated in Macedonia. It is not thought that there will be any formal declaration of war, but that some frontier incident will precipitate hostilities. The Bulgarians and Macedonians in Constantinople are in terror of Massacre. A large number of them were arrested a few days ago "as a preventive measure," and they have not yet been released. The fear of a massacre is probably exaggerated, although in view of the present excited state of Mussulman feeling an insignificant incident might perhaps lead to a massacre.

The accounts received regarding the conduct of the Turkish troops have not surprised European circles here; but many who have hitherto been optimistic in their views now accept the prevailing belief that Turkey is on the eve of a catastrophe.

Archbishop Langevin has endorsed the proposal for the establishment of a French church in Winnipeg.

All the virtues of Manitoba's climate and soil have not yet been discovered. Last week the Winnipeg Free Press announced a gardener living near Winnipeg had succeeded in growing figs, and now word comes from Moosomin that an enthusiastic horticulturist of that place has a fine display of orango and lemon plants in his garden, some of the plants being well covered with fruit. The lemons have attained a length of two inches. The Canadian west is certainly getting into the banana belt.

FERNIE FREE PRESS.

FERNIE, B.C.

Kingsley's Love for Children.

The love of many women may be as great, but of few is it at once so wise and so great as that which Charles Kingsley had for his children. For the sake of their health he built for them an outdoor nursery on the highest point of his rectory house, and there he would join them when his work was done, bringing a wild flower, a fern, a beetle, a lizard, a field mouse or something that would draw forth their powers of observation and make them fond of the works of God's hand. "Oh, daddy, look at this delightful worm!" one of his guests heard, not without surprise, his little girl say. Kingsley was careful not to confuse his children by a multitude of small rules. "It is difficult enough to keep the Ten Commandments," he would say, "without making an eleventh in every direction." He had no "moods" with his family, for he cultivated by strict self discipline, in the midst of worries and pressing business, a disengaged temper, that always enabled him to enter into other people's interests, and especially into children's playfulness. He became a light hearted boy in the presence of his children. When nursery griefs and broken toys were taken to his study he was never too busy to mend the toy and dry the tears.—Chicago Record-Herald.

The Waltz of the Ostrich.

The dance of the ostrich is one of those peculiar native customs which certain fowls develop, without any apparent incentive except it may be the law of heredity. It usually occurs at early morning, when the young, strong birds are let out of their inclosure, and is said to be entirely due to awkwardness and uncertainty. This leads them to advance and turn in a dervish-like whirl which is very quaint and fantastic, as they float about assisting their motions by their outspread wings. They circle and reverse almost as a waltzer would, and when a large number of these strange birds go through their dancing antics it is almost impossible to believe that they have not been taught the accomplishment by a dancing master. Their waltz often ends in disaster, as they break each other's legs, which is certain death, or become dizzy and fall down in a demoralized heap. The kick of an ostrich has been known to destroy life.

Embarrassing.

In a suburban school a teacher once proved that it may be embarrassing to use oneself as an illustration. She was hearing a class in spelling and defining words. The word "orphan" had been correctly spelled, but none of the class seemed to know its meaning. After asking one or two of them she said encouragingly:

"Now, try again. I am an orphan. Now can't some of you guess what it means?"

The blank look on their faces remained until one of the scholars raised his hand and said, in the most guileless manner possible:

"It's some one that wants to get married and can't get a husband!"

The Vest a Minor Garment.

The waistcoat has always been a garment of minor consideration. It appeared and disappeared according to the requirements of the varying costumes in earlier times, and first had official recognition under the reign of Charles II. It was in 1666 that Pepys makes mention of the waistcoat in his diary: "This day the king began to put on his vest, and I did see several persons of the house of lords and commons wearing a long cassock close to the body."

Pertinent Advice.

A student noted for his carelessness in dress once approached Professor Simon Newcomb of Johns Hopkins university for advice. He was thinking of leaving college and going into business, having had a flattering offer.

"Now you know my case, professor," he said, "and if you were in my shoes what would you do?"

The professor looked very serious and replied:

"Black them, of course!"

Universal and Eternal.

"Yes, life is universal and eternal, for time is one of its factors; yesterday the moon, today the earth, tomorrow Jupiter. In space there are cradles and tombs. The red carbon stars will soon be dead; the hydrogen stars, like Vega and Sirius, are the stars of the future; Procyon, Copella, Arcturus are the stars of the present. Aldebaran seems to be already an autumn fruit." So said Flammarion.

An Obedient Boy.

Merchant—Did you deliver my message to Mr. Smith?

Boy—No, sir; he was out and the office was locked up.

Merchant—Well, why didn't you wait for him, as I told you?

Boy—There was a notice on the door saying, "Return at once," so I came back as quick as I could.

Sparring For an Opening.

Guest (after struggling valiantly but unavailingly for some time with fowl)—Waiter, what kind of a bird is this?

"Canvasback duck, sir."

"No wonder I couldn't do anything with it. Run and get me the scissors."

The day after a man quits work he is in the way.—Atchison Globe.

Modern Version.

Rich Heiress—Are you sure you love me?

Hard Up—Love you? Why, I worship the very ground you inherit.

"Some men have funny notions," she said. "There's my doctor, for instance. He's always telling me I'm foolish to make myself uncomfortable by wearing a corset. Yet one hot day when he was just dying for a little sympathy I told him he was foolish to wear a silk hat and deserved to suffer. He hasn't been the same to me since."—Chicago Record-Herald.

Deafness Cannot Be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube gets inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed for ever. Nine cases out of ten are caused by catarrh, which is nothing but an inflamed condition of the mucous surfaces.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars, free.

Address, F. J. CHENEY & Co., Toledo, O.

Sold by druggists, 75c.

Hall's Family Pills are the best.

A man of strong will can make a woman do anything that she wants to do.

Eat what you like.—Give the digestive organs some work to do. These functions need exercise as much as any part of the human anatomy, but if they're delicate, give them the aid that Dr. Von Stan's Pineapple Tablets afford and you can eat anything that's wholesome and palatable—60 in a box. 35 cents.—8

Holton, Mo., with a population of 4,500, has seventeen churches.

Minard's Liniment for sale everywhere.

Jealous Husband—"What did you do when that young Brown wanted to kiss you?" His Permanent Tease—"Oh, I was up in arms at once!"

KNOWN TO THOUSANDS.—Parmelee's Vegetable Pills regulate the action of the secretions, purify the blood and keep the stomach and bowels free from deleterious matter. Taken according to direction they will overcome dyspepsia, eradicate biliousness, and leave the digestive organs healthy and strong to perform their functions. Their merits are well known to thousands who know by experience how beneficial they are in giving tone to the system.

Ella—"George says that my beauty intoxicates him."

Stella—"I heard that he said that your looks would drive a man to drink.

Minard's Liniment Relieves Neuralgia.

Cares of office that worry an office-holder come with his strenuous efforts to succeed himself.

Dr. J. D. Kellogg's Dysentery Cordial is prepared from drugs known to the profession as thoroughly reliable for the cure of cholera, dysentery, diarrhoea, griping pains and summer complaints. It has been used successfully by medical practitioners for a number of years with gratifying results. If suffering from any summer complaint it is just the medicine that will cure you. Try a bottle. It sells for 25 cents.

A merchant who died suddenly left in his desk a letter written to one of his correspondents. His clerk, a son of Erin, seeing it necessary to send the letter, wrote at the bottom "Since writing the above I have died."

ENGLISH SPAVIN LINIMENT

Removes all hard, soft or calloused lumps and blemishes from horses, blood spavin, curbs, splints, ringbone, sweeney, stifles, sprains; cures sore and swollen throat, coughs, etc. Save $50 by the use of one bottle. Warranted the most wonderful Blemish Cure ever known.

Sold by all druggists.

Judge—"You threw a bottle of whiskey at the plaintiff's head."

Defendant—"I always use spiritual weapons."

Lever's Y-Z (Wise Head) Disinfectant Soap Powder dusted in the bath, softens the water and disinfects.

A boy recently went to school taking the following note of excuse to the schoolmaster: "Dear Sir.—Please excuse my boy a-scratchin' hissel'; he's got a new flannel shirt on."

A SOUND STOMACH MEANS A CLEAR HEAD.—The high pressure of a nervous life which business men of the present day are constrained to live makes drawbacks upon their vitality highly detrimental to their health. It is only by the most careful treatment that they are able to keep themselves alert and active in their various callings, many of them know the value of Parmelee's Vegetable Pills in regulating the stomach and consequently keeping the head clear.

Eleven sovereigns and five half-sovereigns tendered to Dublin cabmen in mistake for silver coins last year were given up to the police.

PAINS DISAPPEAR BEFORE IT.—No one need suffer pain when they have available Dr. Thomas' Eclectric Oil. If not in the house when required it can be procured at the nearest store, as all merchants keep it for sale. Rheumatism and all bodily pains disappear when it is applied, and should they at any time return, experience teaches the user of the Oil how to deal with them.

All new schools in Switzerland have a portion of the ground floor appropriated for baths. Each class bathes about once a fortnight, summer and winter. Soap is used, and a warm bath is followed by a cooler one. Sick children and those having skin diseases are excluded.

Cross?

Poor man! He can't help it. He gets bilious. He needs a good liver pill—Ayer's Pills. They act directly on the liver, cure biliousness. J. C. Ayer Co., Lowell, Mass.

CURED LONG AGO BUT STILL CURED

S. Kernohan's Incurable Disease Cured by Dodd's Kidney Pills.

Five Doctors Agreed there was no Hope for Him, but He has Been Strong and Well for Years.

Gelert, Ont., Sept. 14.—(Special)—The wonderful cures by Dodd's Kidney Pills published almost daily, recall the case of Samuel Kernohan, of this place. It is years now since he was cured, but as he is still cured it is well worth recalling the facts, and Mr. Kernohan delights to relate them.

"Some time in December, 1893," he says, "I was taken sick and laid up for fourteen months. During my confinement to my house and to my bed, I was attended at various times by five doctors. Three of them decided that my disease was incurable, Floating Kidney, and two of them that it was Spinal Disease. All agreed on one thing—that my case was incurable.

"When my money was all gone, as a matter of necessity and as my last hope I tried Dodd's Kidney Pills. I had only taken three boxes when I was able to walk about. I took in all eighteen boxes, when I was entirely cured and quite able to work.

"Dodd's Kidney Pills are the best friend I ever found."

Terra-cotta sleepers are in use on Japanese railways. The increased cost is compensated for by the greater resistance of decay.

A Pleasant Duty.—"When I know anything worthy of recommendation, I consider it my duty to tell it," says Rev. Jas. Murdock, of Hamburg, Pa. "Dr. Agnew's Catarrhal Powder has cured me of Catarrh of five years standing. It is certainly magical in its effect. The first application benefited me in five minutes. 50 cts."—9

London fever hospitals can accommodate 6,000 patients.

Minard's Liniment Cures Burns, etc.

The threads of silk made from wool in Germany have 18 strands, a single one of which is hardly visible to the naked eye. Real silk is two-thirds stronger.

A jovial youkel named Josh
Made a bold bid for Betsy. "O bosh!"
Cried Betsy, "You're joshing!
And went on with her washing.
While Josh was just jiggered b'gosh!

HEALTHY, HAPPY BABIES.

Every mother most earnestly desires to see her little ones hearty, rosy and full of life. The hot weather, however, is a time of danger to all little ones, and at the very first symptom of uneasiness or illness baby's Own Tablets should be given. It is easier to prevent illness than to cure it, and an occasional dose of Baby's Own Tablets will keep little one healthy and happy. If sickness does not come, there is medicine will so quickly cure the minor ills of babyhood and childhood—and you have a guarantee that it contains no opiate or poisonous stuff. Mrs. John Nall, Petersburg, Ont., says:—"I have used Baby's Own Tablets and find them a superior remedy for troubles of the stomach and bowels. From my own experience, I can highly recommend the Tablets to other mothers."

Mothers should always keep these tablets in the house, ready for any emergency. Sold by medicine dealers or sent postpaid at 25 cents a box, by writing the Dr. Williams' Medicine Co., Brockville, Ont.

The population of Ireland, which 50 years ago was over 8,000,000, is now less than 4,500,000.

Itching, Burning, Creeping, Crawling Skin Diseases relieved in a few minutes by Agnew's Ointment. Dr. Agnew's Ointment relieves instantly, and cures Tetter, Salt Rheum, Scald Head, Eczema, Ulcers, Blotches, and all Eruptions of the Skin. It is soothing and quieting and acts like magic in all Baby Humors, Irritation of the Scalp or Rashes during teething time. 35 cents a box.—7

Spain's annual export of pickled green olives amounts to about $800,000.

MARKETS.

(Compiled from The Commercial)

During the past week the speculative markets have exhibited considerable nervousness, but seem more settled now. Threshing in the northern and northwestern spring wheat country has been delayed for over a week by wet and stormy weather, and the expected free movement of new wheat has not yet begun. Farmers in the winter wheat country continue to market their wheat only on a moderate scale. While the speculative markets have seen some sharp advances and declines in the week, there is very little change in quotations from a week ago, except in Minneapolis September, which is 1c higher. European markets are generally firm, except Paris, which has declined heavily during the week, owing to the latest estimates of the French crop showing great improvement in expectations. Owing to winter wheat killing in north of France a large acreage of fall wheat was plowed up and sown to spring wheat. As a rule spring wheat does not do well in France, but it seems this year is the exception for it, and it is turning out a bumper crop. This will diminish the prospective import of wheat into France, and it is reported that Argentine cargoes, bought for France, are offered for resale to other markets. In a general way, however, it is believed that Europe will require to import quite as much wheat during the current crop year as last year, and that she will have to come to America for about the usual supply. Therefore, as American stocks are small, this year's crop not extremely large, millers' requirements extensive and immediate, if farmers will hold back their wheat from market the prices will be advanced. Harvesting in Manitoba and Canadian Northwest is becoming protracted. Where the crop was ready early, rains have delayed stacking and threshing, and in the west heavy rains have delayed ripening, so that cutting in many districts has little more than begun. Where rains have fallen on wheat in stook there is some damage from sprouting. There is now a great need of a spell of dry, quiet weather in order that the work of harvesting may be completed, and to allow threshing to go ahead. There is little to report as to the situation in other countries. The prospect for the new crop in the Argentine continues favorable, and the prospect is good in Australia.

Manitoba wheat has been dull and quiet, the delay in the movement of new wheat, with the uncertainty as to probable quality all combining to hinder trading. Prices have advanced 1c over a week ago. No. 1 hard, 86c, delivery first half September; 85½c delivery all September; 85c, delivery first half October, and 84½c, delivery all October, in store Fort William and Port Arthur; 1 northern 1½c under 1 hard, and 2 northern 3½c under 1 northern.

WINNIPEG PRICES.

The following are the Winnipeg jobbing prices:—

Oats—At Fort William No. 1 white oats are worth 31½c; No. 2 white, 30½c.

Barley—Market nominal.

Flaxseed—Market nominal.

Potatoes—40@45c per bushel.

Poultry—Live spring chickens, 40 to 60c per pair; fowls, 75@80c per pair; ducks, 60@80c; geese, 10c per pound, live weight; turkeys, 11c per pound.

Butter—Creamery, 17@17½c per lb; dairy, 11@12c.

Cheese—10@10½c per pound.

Eggs—15c per dozen.

Dressed Meats—Beef, city dressed, 7c; mutton, 9c; veal, 8@9c; lambs, 12½c; hogs, 8c.

Hides—No. 1, 6½c per pound; calfskins, 7c; shearling sheepskins, 10@15c each; lambskins, 10@20c; horsehides, $1.25@$2.

Wool—7½c per pound.

Tallow—No. 1, 4c per pound; No. 2 3c per pound.

Seneca Root—60c per pound for clean, dry root.

LIVE STOCK.

Cattle—Ranch cattle, at point of shipment, 3½c; butchers' cattle, 2¾@3½c. off cars here.

Sheep—4c per pound.

Lambs—5c per pound.

Hogs—6c for best weights.

Beauty as a Bane in Italy.

Florence and Venice and the rest are cursed with the burden of a most dangerous legacy from their past—the legacy of beauty. Because of this beauty (which the people themselves do not enjoy) the rich of all nations flock to them, bringing full purses and a disposition to spare no expense. The native begins to regard these visitors as his natural prey. Why should he work when foreigners are so easily fleeced? Accordingly he does not work—at least in the productive sense; he touts and begs and sells ornaments at three times their real value. The victory instead of going to strength goes to weakness. Parents of the poorer class look upon a deformed or crippled child as a blessing, since its pitiful helplessness makes it a more efficient beggar. Into these cities, where such a fine harvest can be gathered on such easy terms, the strong, industrious peasantry are sucked till they become idle, demoralized gamblers, and all because they are the most beautiful places in the world, because their past is so glorious that strangers come from the ends of the earth to see its grave. Thus the modern Florentine lives, like some horrible cannibal, upon his own dead.—London Outlook.

THE ROBERT SIMPSON COMPANY, LIMITED

H. H. FUDGER, PRESIDENT. J. WOOD, MANAGER.

We Are Mailing Our Fall Catalogues Now.

A regular encyclopedia of valuable information about proper styles in dress matters and newest ideas for the home. Our handsomely illustrated Fall and Winter Catalogue, just out, will be found most interesting and full of practically profitable price information. We would like every home in Canada to have a copy. A $2.00 Wrist Bag for 98c.

Real Walrus Leather Wrist Bag, ball frame, inside frame, and coin pocket, suede lined, worth $2, extra special for mail order customers . . . . . **98c.**

ADDRESS, THE ROBERT SIMPSON COMPANY LIMITED TORONTO, ONT. DEPT. N. W. T.

Mr. Speaker and Gentlemen:

I take this opportunity of saying to you that this cigar, to which the maker has courteously given my name, is the most deliciously fragrant weed I have ever smoked, and here is another instant of the supremacy of the Canadian manufacturer.

THE Chamberlain CIGAR

Is worthy of its name.

J. M. Fortier, Limited, Montreal.

"Now, good digestion wait on appetite,
And health on both!"—MACBETH, Act III., Scene IV.

Many people of sedentary occupations have a liking for foods prepared with whole-wheat flour. Whole-Wheat Bread, Gems, Pancakes, etc.

OGILVIE'S "MEOTA"

is a product specially prepared for this class of trade.

In the Dakota Presbytery, composed entirely of Indians, there are 27 churches and 1,458 communicants, ministered to by 15 Indian preachers.

The Sufferers from Colds

are numbered by millions, not including those whose annoyance by association amounts almost to suffering.

And yet it is a fact, as capable of demonstration as any problem in Geometry, that Dr. Agnew's Catarrhal Powder Has, Does, Will Cure Catarrh and colds. What are the Catarrhal Millions going to do about it? Sold by all druggists.

Dr. Agnew's Heart Cure relieves heart disease in 30 minutes. 4

Sunshine has no terrors for the girl with a $25 parasol.

Minard's Liniment Cures Dandruff.

Sir Arthur Fairburn, who is a deaf mute, is the only holder of an hereditary title in England so afflicted. He is a well-read and highly educated man.

The world seldom speaks well of a man who is dead broke.

There never was and never will be a universal panacea, in one remedy, for all ills to which flesh is heir—the very nature of many curatives being such that were the germs of other and differently seated diseases rooted in the system of the patient—what would relieve one ill in turn would aggravate the other. We have however, in, Quinine Wine, when obtainable in sound, unadulterated state, a remedy for many and grievous ills. By its gradual and judicious use the frailest systems are led into convalescence and strength by the influence which Quinine exerts on nature's own restoratives. It relieves the drooping spirits of those with whom a chronic state of morbid despondency and lack of interest in life is a disease, and by tranquilizing the nerves, disposes to sound and refreshing sleep—imparts vigor to the action of the blood, which, being stimulated, courses through the veins, strengthening the healthy animal functions of the system, thereby making activity a necessary result, strengthening the frame and giving life to the digestive organs, which naturally demand increased substance—result, improved appetite. Northrop & Lyman, of Toronto, have given to the public their Superior Quinine Wine at the usual rate, and, guaged by the opinions of scientists, the wine approaches nearest perfection of any in the market. All druggists sell it.

A pen carrying a small eclectric lamp to prevent shadows when writing some time ago in Germany.

MORRISSEY

From The Despatch

There are more men at work in the mines here now than ever before and the output is increasing daily. Yesterday was a record breaker. The daily average now amounts to almost a thousand tons.

We have much pleasure in announcing that G. G. Moffatt, Notary Public, has been appointed a Justice of the Peace for B. C. All we require now is a jail and court house. L. W. Patmore and G. G. Moffatt should make a good team to deal out justice in this section.

The stump puller which has been lying idle for some time was again put into operation this morning on Fourth Ave. The work of clearing up the balance of townsite is progressing rapidly. A large portion of the lower flat has been burned off and put in shape for building purposes.

A mass meeting of the miners is called for to-day at 10 a. m. to discuss some differences which exist between the men and the company. There is some dissatisfaction on the part of the miners o er the appointment by the company of a coal inspector and the confiscating of the coal if a car contains over one hundred pounds of rock. As there is no question at issue over wages there is no doubt that the matter can be amicably settled without further trouble and to the satisfaction of both parties.

Government Agent Armstrong visited Morrissey Mines on Wednesday and selected the route for the new road to the mines and on Thursday Don McKay commenced the construction work. He will have a force of about a dozen men and expects to finish the work inside of eight or ten days. It will cost about five hundred dollars when completed. The prompt action of the Government in opening up the road to the mines will be commended by the general public as it was badly needed. Mr. McKay also has charge of the work on the Government road between the Junction and Fernie. A gang of men are at work on both ends of the road and no effort is being spared to have it completed this fall.

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a license to prospect for coal and petroleum on the following described land; Commencing at a post planted at the south west corner of H. C. Tuttle's coal and petroleum and marked "Levi Klingesmith's south east corner" thence west 80 chains, thence north 80 chains, thence east 80 chains, thence south 80 chains to the place of commencement.

CONSERVATIVE PLATFORM.

[Adopted at Revelstoke, Sept. 13th, 1902]

1. That this convention reaffirm the policy of the party in matters of provincial roads and trails; the ownership and control of railways and the development of the agricultural resources of the province as laid down in the platform adopted in October, 1899, which is as follows:

"To actively aid in the construction o trails throughout the undeveloped por tions of the province and the building o provincial trunk roads of public nesessity

"To adopt the principle of government ownership of railways in so far as the circumstances of the province will admit, and the adoption of the principle that no bonus should be granted to any railway company which does not give the government of the province control of rates over lines bonused, together with the option of purchase.

"To actively assist by state aid in the development of the agricultural resources of the province.

2. That in the meantime and until the railway policy above set forth can be accomplished, a general railway act be passed, giving freedom to construct railways under certain approved resgulations analogous to the system that has resulted in such extensive railway construction in the United States, with so much advantage to trade and commerce.

3. That to encourage the mining industry, the taxation of metalliferous mines should be on the basis of a percentage on the net profits.

4. That the government ownership of telephone systems should be brought about as a first step in the acquisition of public utilities.

5. That a portion of every coal area hereafter to be disposed of should be reserved from sale or lease, so that state owned mines may be easily assessible, if their operation becomes necessary or advisable

6. That in the pulp land leases provision should be made for reforesting and that steps should be taken for the general preservation of forests by guarding against the wasteful des truction of timber

7. That the legislature and governmen of the province persevere in the effort to secure the exclusion of Asiatic labor.

8. That the matter of better terms in the way of subsidy and appropriations for the province should be vigorously pressed upon the Dominion government.

9. That the silver-lead industries of the province be fostered and encouraged by the imposition of increased customs duties on lead and lead produce imported into Canada, and that the conservative members of the Dominion House be urged to support any motion introduced for such a purpose.

10. That as industrial disputes almost invariably result in great loss and injury both to the parties directly concerned and to the public, legislation should be passed to provide means for an amicable adjustment of such disputes between employers and employees.

11. That it is advisable to foster the manufacture of the raw products of the province within the province as far as practicable by means of taxation on the said raw products, subject to rebate of the same in whole or part when manufactured in British Columbia.

Fort Steele Licence District

Notice is hereby given that the undermentioned persons have made application under the pro visions of the Liquor Licence Act 1900 for liquor licenses at the places set opposite their names.

G. H. Gilpin, wholesale, Morrissey Mines.
Mike Reguli, wholesale, Morrissey Mines.

A meeting of the Board of Licence Commissioners of the Fort Steele Licence District will be held at the Court House, Fernie, on Friday, August 14th, 1903, at the hour of 7 o'clock in the afternoon.

Notice is hereby given that 30 days after date I intend to apply to the Chief Commissioner of Lands and Works for a license to prospect for coal and petroleum on the following described lands:

Commencing at a post planted on the W. bank of the Elk River about 12 miles north of the 35 mile post and marked John Brown's south west corner, thence east 80 chains, thence north 80 chains, thence east 80 chains, thence south80 chains to the point of commencement.

Dated the 31st of August, 1903.
JOHN BROWN,
Jas. Miller, Agent.

The Enormous Expenditure of Money by the Crow's Nest Pass Coal Company, Limited, in the construction of coke ovens and storage bins and the installation of electric light and water-works systems, determines that the industrial centre of this district is established for all time at the new town of

Morrissey Mines

The importance of this fact on real estate values here is immense. One of Canada's greatest banking institutions has established itself here permanently, and the near future will see the residential streets lined with many fine houses that will be required to house the hundreds of workers employed here. It is not hard to guess what the effect of this concentration of well-paid wage earners will have on Morrissey Mines realty. All this army must have homes.

One of these bright July days as one stands on the foothill just above the new town, and looks east toward the collieries, the whole transformation that turns a wilderness into a great industrial centre, is shown in its various stages. We see the near approaching coal train of 40 cars, carrying 1,200 tons, the output of the mines for one day, and a little further on, two batteries of modern coke ovens, many of which will be fired up within ten days.

Just across the paddock that has until recently been used for a horse pasture, can be seen 100 men, digging a ditch for the large water-main that is to supply the town with pure Spring water, while the ring of hammers can be heard on every side.

To those wishing to build homes I am offering attractive terms. Write for particulars or call at my office.

CONSERVATIVE RALLY.

REPORT OF MEETING ON TUESDAY EVENING.

The Three Candidates and W. A. MacDonald, K. C., of Nelson, Delivered Speeches.—An enthusiastic Meeting.

The Conservative mass meeting on Tuesday evening was fairly well attendtended and again several ladies of the town showed their interest in the campaign by their presence. J. A. Rennie acted as chairman, and with him on the platform were the three candidates and W. A. MacDonald, K. C., of Nelson.

W. R. ROSS.

W. R. Ross was called upon to make the opening address and he was received with hearty applause. In opening he referred to his recent illness which had somewhat handicapped him in his campaign work, and from which it was evident that he had not yet recovered. He disposed of the Socialist candidate by declaring Socialism in many of its phases to be impracticable and an undesirable element in provincial politics. Of the Liberal candidate he had considerable to say by way of criticisms of his record during the time he represented the district. He challenged the late member to mention any useful legislation that he had introduced. He again spoke of his connection with the 8 hr. amendment. Mr. Smith had not done his duty to his constituents in visiting the district and enquiring into their needs, especially during the time of calamity and labor troubles. The district was an important one, requiring much from the government by way of public improvements, which had not been secured. The division of the district leaving Ft. Steele in the Cranbrook end was due more to the efforts of the Board of Trade than to anything Mr. Smith had done. He spoke of the labor legislation disallowed by the Ottawa administration and also of the better terms that the McBride government was trying to secure from that government. He touched on the government's policy in connection with lots 4593 and 4594 and placed himself on record as being in favor of protecting the invested rights of the original stakers. The speaker defined his position in regard to capital aud labor interests. He had been brought out by men representing all classes. He was not the candidate of the Coal Co., the C. P. R. or any other corporation. He had always proved himself the friend of labor interests, but at the same time he recognized the importance of the coal industry in the valley and if elected he would not favor legislation needlessly harassing the operating company so long as it followed its ordinary duties and did not interfere with the rights of others. The speaker referred to the efforts of the McBride government to enforce Chinese legislation in regard to coal mining and to the local trouble then pending at Morrissey. In closing he again referred to local issues, the domination of Ft. Steele, the need of a local administration in this district and the advantage of a local man to represent the d istrict

J. R. MCPHERSON.

Tha Socialist candidate in making his first bow before a Fernie audience received much applause from a number of supporters throughout the audience, but it was noticable that many who made the loudest noise were not on the voters' list. A few moments were sufficient to convince his warmest supporters that his appearance on the platform was doing his cause more harm than good, for he proved a complete failure as a speaker and did not score a single point. He blamed Mr. Smith for not supporting the amendment to the Trades Union Act but the latter gentleman afterwards explained this action to the satisfaction of the audience, and he censured the McBride government for not enforcing the Coal Mining Act re Chinese, but afterwards proved that the blame lay with the judge who interpreted the law. When asked as to his policy he said he would give it at his own meeting.

E. C. SMITH

The Liberal candidate was received with warm applause by his many supporters in the hall. He said that as the policies of the two parties were much alike the wisest course for the electors to follow was to leave the question of policy and consider which party was most apt to carry out their promises. He condemned the $5 poll tax which is now on the statute books awaiting an order-in-council to put it into effect. He believed in a more equitable system of taxation for raising a revenue, and cited an instance where C. P. R. lands that were worth $5 per acre were assessed for only $1. Mr. Smith expressed himself as opposed the right now vested in the cabinet of issuing orders-in council and also to the present government reserve on public domains. The speaker showed that by supporting the motion to adjourn the debate on the eight hour coal mining amendment he had not killed the bill, by reading from three places in the last sessional report. First on April 16th he had supported the motion to adjourn. On April 23rd the bill again came up and was adjourned without division, even Hawthornthwaite supporting it, and at the end of the session a committee, of which Tatlow was chairman, appointed to decide what legislation should be carried out, omitted this very bill. "Did you speak in favor of the bill ?" was asked by a voice, to which Mr. Smith answered, "I did." The speaker favored taxation as a check to undue passion for profits. He had voted against the four who supported the amendment to the Trades Union making it illegal to dismiss employees because they were union men, on the ground that it was impracticable as many other reasons could be brought forward to support said dismissal. He was opposed to filling the statute books with useless legislation which rendered the machinery of the law more complicated. He repudiated the statement that he was not a local man by declaring that he had prospected the hills throughout this district long before his opponent knew of the existence of Kootenay.

W. A. MACDONALD, K. C.

Nelson's clever lawyer, who followed, is a fluent and eloquent speaker. His oratorical powers and his marvellous ability at repartee would ornament any public platform and all who were present, regardless of party feeling, listened with interest and pleasure to his 60 minute address. Mr. MacDonald opened with some good natured criticisms of Mr. Smith which were received in the same spirit. He then started in on Joe Martin and gave that gentleman such a setting out that there could be no doubt his ears were burning in his distant home in Vancouver. Mr. MacDonald did not claim an intimate knowledge of provincial politics and confined most of his remarks to a comparison of the two parties in federal affairs, a subject at which he appeared to be quite at home. He went on to show that the present growth throughout the Dominion was not due so much to the merits of the present Liberal government as to the foundation laid by Sir John A. MacDonald many years ago, which foundation the Liberals had built upon by changing their policy after they were elected. A few pertinent questions were put by Liberals as the speech proceeded, which were answered in his ready and witty style but which did not always satisfy the enquirer. The audience was a good-humored one and the best of good feeling prevailed throughout. Mr. MacDonald said some very complimentary things of Mr. Ross whom he had known for 20 years and he hoped and believed he would be the next member for the Fernie riding.

The meeting closed with three cheers for the King and candidates Ross and Smith.

OTHER MEETINGS.

The Conservative candidate also held a meeting at Morrissey Mines on Monday evening and at Michel on Wednesday at which opposition speakers were invited to attend. The Conservative candidate, W. R. Ross, spoke at both meetings and the Liberal candidate E. C. Smith, was present at the former meeting and F. Stork spoke at the latter in the interests of the Liberal party. Both parties claim a fair share of the votes of these two camps.

WILLIAM R. ROSS
The Conservative Candidate for Fernie Electoral District.

THE SOCIALIST MEETING.

Rev. B. F. Wilson addresses a large Audience in Princess Hall.

On Tuesday evening the Socialists held forth in Princess Hall. The large hall was well filled, many being drawn there through a desire to hear the famous champion of socialism, Rev. B. Wilson, deliver his address. The opposition candidates were invited to speak and E. C. Smith gave a short address outlining his attitude towards socialism. He concurred in many of the aims of socialism but their methods of accomplishing those aims were, in his opinion, impracticable. He was in favor of checking the growing greed of wealth and monopoly by a system of graded taxation which would result in a more equitable division of the world's wealth. He cautioned the audience to carefully consider the grave crisis in the history of the province. If the Socialists elected six members as they hoped to do they would hold the balance of power and the Province would again be under minority rule.

Mr. McPherson who followed dealt with only one plank of the platform, that in which socialists are pledged to support labor legislation. He claimed that a balance of power controlled by six socialists would not be a minority rule as they would represent the majority of the people of the province. He blamed the government for paying $2900 in expenses to the recent conciliation committee and not giving the district executive anything for their time and trouble. He also mentioned two other labor commissions which were paid too much.

Rev. Ben Wilson, the speaker of the evening, is a clever platform orator who has prepared his subject in as perfect a form as possible. Clever however as Mr. Wilson is, he failed to give any new ideas on the subject though he presented many of the theories of socialism in a new light. Mr. Wilson, like all other socialists, takes a very gloomy view of the present social system and familiar expressions, such as, "blood of labor", "wage slaves" and "national heartache" punctuated his speech. He read the platform of the socialist party but gave no information as to how the great reforms were to be made practicable. Many present waited to the end thinking that so able an exponent of socialism, would deal with the practical as well as the theoretical side of the question, but the speaker after taking nearly two hours stated that the details would work out for themselves. "Get the great principle started" said Mr. Wilson" and the details will adjust themselves."

MORRISSEY TROUBLE SETTLED.

Matter Easily Adjusted When the District Union Met the Manager.

The miners at Morrissey went back to work on Wednesday afternoon after being out four days. The matters in dispute were of a trivial nature and when the district union executive presented their troubles before the Company management no difficulty was experienced in arriving at an amicable settlement.

The men make much of the affair and claim that they gained all they asked for while the Company make little of the whole affair and state that it might easily have been settled without the necessity of stopping the mines, as no committee came to them to present their grievances until several days after they quit work.

As to the actual settlement Manager Tonkin stated that the 100 lbs refuse as mentioned in the agreement merely placed a definite interpretation on the word "excess" in the original agreement, and was the amount governing the case at the other camps. The details as to the checkweighman are the same as those in vogue at the other camps and which Sherman had refused months ago. Mr. Tonkin had a good word to say for Mr. Bousfield and blamed him only for allowing the miners to quit work before an attempt had been made to settle it in the ordinary manner.

Memorandum of Agreement, made this twenty-second day of September, A. D. 1903, and being supplementary to that certain agreement made and entered into the first day of April, A. D. 1902, Between,

The Crows Nest Pass Coal Company, Limited, party of the first part (hereinafter called the Company) and

Their employees at Coal Creek, Morrissey and Michel mines, parties of the second part (hereinafter called the Men).

Now this agreement witnesseth, that for and in consideration of the several articles and conditions hereinafter set forth and which are to be considered as a part and continuation of the original agreement before mentioned, dated April the 1st, A. D., 1903, we, the parties of the second part, hereby re-affirm and and ratify the aforesaid agreement, dated April 1st, A. D., 1903; namely,

Article 1. The system of coal inspection as practiced by the Coal Company generally known as Court House System to be conducted as close as practicable to the Scale House and where it is to be under the immediate supervision of the Weighman and Checkweighman who shall pass on the quantity of refuse matter found in the cars; It being mutually understood and agreed that One Hundred (100) pounds of refuse matter shall constitute an excess quantity and subject the car to penalty as provided for in original agreement, excepting in such cases as the Checkweighman and Mine Manager of the mine in question shall agree upon.

Article 3. At Morrissey Mines the checks, or miners' tickets, to be placed on the outside of cars and handed into Weighman's office when passing over scale.

Article 4. The system of collecting wages of Checkweighman in vogue at Coal Creek Mines being satisfactory to the men, shall be taken as system to govern. This system is as follows: Checkweighman informs Company Superintendent not later than the second day of each month of the amount per ton to be deducted from each contract miner and the monthly wage due the said Checkweighman. The collection will be made by the Company from all contract miners who shall have notified the Company not to make collection for Checkweighman fund. The Company will furnish a statement of such exceptions when requested by the men. The men agree on their part to furnish an indemnifying bond to cover any amount that may have been collected by the Company from men who have not requested such collection to be made and demand the return of the amount collected. The Company wi l furnish on its regular pay-day a voucher showing statement of monies collected, amount paid checkweighman and balance, if any, on hand and held in trust by said Company. It being understood that the checkweighman's salary shall not exceed per month.

Article 4. The opportunity of checking Company's daily weigh bulletin as well as a weekly tonnage statement will be accorded the checkweighman representing the men.

Article 5. A place satisfactory to the checkweighman will be selected for the posting of the checkweighman's daily bulletin.

In witness whereof the said parties hereto have hereunto set their hands and seals the day and year first above written.

Signed on the part of the Company.
John H. Tonkin, General Manager.
Thos. R. Stocket, General Supt.
On the part of the men.
Charles Burrows, H. Harmer, Albert Tyas, J. R. Miller, John Howbrook, R. J. Duggan, Frank Sherman, J. R. McPherson. Representing the the District Board United Mine Workers of America.

E. C. SMITH
The Liberal Candidate for the Fernie Electoral District.

MILLINERY OPENING.

The Trites-Wood Co. opened their fall and winter millinery display on Thursday and many ladies have visited this interesting department since. The display will continue all next week. A descriptive article of the many beautiful hats and other novelties will be given in our next issue.

Dysentery causes the death of more people than small pox and yellow fever combined. In an army it is dreaded more than a battle. It requires prompt and effective treatment. Chamberlain's Colic, Cholera and Diarrhoea Remedy has been used in nine epidemics of dysentry in the United States with perfect success, and has cured the most malignant cases, both of children and adults, and under the most trying conditions. Every household should have a bottle at hand. Get it today. It may save a life. Sold by alldruggists and dealers.

MY HEART'S DARLING

BY W. HEIMBURG.

Hortense shrugged her shoulders imperceptibly.

"I had the honor once in Baden Baden, if I am not mistaken; you were accompanied by your father."

A deep red spread over Hortense's pale face.

"It is possible; I do not remember."

"I had at that time the opportunity of doing your father a little favor; he promised me to write to me some day." Here he laughed mockingly. "May I inquire, madame, how Herr von Lowen is? Where does he live now?"

Hortense rose suddenly. "Herr Hauptmann," she said, "may I show you the picture we were speaking about? It hangs in my room." she walked to the door, followed by the officer, who knew there was no picture to see, but grasped the situation.

"Lucie," said Weber, half aloud, "go with Hortense." He fixed his eyes on Kostan, who, with a malicious smile and his eyeglass in his eye, was looking after Hortense.

There must have been something peculiar in that look of the master of the house, for the smile faded out of Kostan's face; he straightened himself in his chair and began to play with the string of his eyeglass.

"Weber, how is that famous bowling-alley of yours?" asked one of the officers. "What if we were to make up a party?"

"I am ready, gentlemen; just wait a moment; if I am not mistaken, Herr Kostan is just about to leave. I will only accompany him to his carriage; then—"

"That is pretty plain!" said Kostan, smiling, and turning a shade paler.

"I am glad you have understood," returned Weber, and calling the servant, who had just entered, he said: "Herr Kostan wishes his carriage;" then turing to the totally bewildered officers, he said: "You will do me an honor if you will drive to E— with my carriage; it will always be a pleasure to me to see you if you will visit my house without this gentleman."

An unpleasant pause ensued; they looked questioningly at Weber with perplexed faces.

"This is not the place, gentlemen, to make explanations; I must ask you to wait for the present."

"I must do the same," snarled Kostan, buttoning his gloves with the greatest composure. "I suppose, sir, you will send a challenge to my second?"

"With the greatest pleasure."

"Au revoir." The next moment Kostan had disappeared.

"He has been drinking heavily, Herr Weber," said one of the officers, trying to excuse him, while another hurried after Kostan.

"He is a scoundrel!" returned Weber.

"His behavior to madame was incomprehensible; I sat as if on coals," said another. "Pardon us, Herr Weber, that we— It was a silly idea on our part."

"Not at all; will you take your places?"

He rang and ordered the bowling-alley to be made ready to play, then he stepped across to Hortense's boudoir, which adjoined the salon.

"Do you bowl, Koder? we are just going down."

The captain made his bow to the ladies and followed Weber.

"May I place myself at your service, Weber?" he asked, and took the cigar which the latter offered him.

"I was about to ask you."

"How was it?"

"I simply put him out of house."

"The scoundrel!" muttered the captain. "Just think, Weber, your wife thinks I came with Kostan. I let her think so; it will not strike her as so odd; she must not have any idea of this."

"On no account. It is curious, Koder, that I should be considering with you to-day how I should best catch the gentleman, and that he should appear here just then."

"Is it pistols, Weber?"

"Of course. All the rest I leave to you. Lieutenant Weissbirchen drove off with him," observed Weber, looking, as he walked with the captain over the wet gravel, toward the bowling-alley where the two officers were standing talking in low tones of what had happened.

The balls were soon rolling over the smooth alley, and the voice of the little groom, who was putting up the pins, cried out loudly the number that had fallen.

When the captain left Hortense's boudoir there was silence for awhile between the two friends. Hortense who had been chatting pleasantly and easily, now sat in her armchair, pale and with a drawn look about her mouth. Lucie moved her chair nearer, and bent her fair head down to her.

"Hortense," she asked, "did anything unpleasant happen? How did you come to receive the gentlemen?"

Frau Weber laughed a short, hard, little laugh, and did not answer.

Lucie was silent; she felt frightened; she had once before heard that laugh; it was on that day that she could never think of without a shudder. She took a book from the little low table by the chaise-longue. "May I read to you?" she asked, hastily.

(To be Continued.)

As a Natural Result.

Mrs. Secondtime (peevishly)—My first husband used to let me have my own way in everything.

Mr. S.—And what were the consequences?

Mrs. S.—He died.

No loafer respects a man who works, but a hard working man rather looks up to a man who is smart enough to live in idleness.

FOUGHT FOR UNCLE SAM

Bodies of Four Canadians Who Fell in the Philippines Brought Home for Burial.

The United States transport Kirkpatrick has arrived at New York from Manila with the bodies of 302 American soldiers killed either in battle or by disease in the Philippine islands.

The coffins were hoisted one by one from the vessel's hold and the boxes were laid out in long lines on the pier. On the end of each box was a card, giving the name, rank, company and regiment of the soldier whose body it contained. Two placards were also pasted on each box. One read: "This box contains the remains of a United States soldier, express charges for transportation of which, from New York to destination will be paid by the United States quartermaster of New York city." The second read: "For sanitary reasons this case must not be opened."

Among the dead were four Canadians, whose bodies have been shipped to their respective homes. They were: Robert R. Parnell, private, Company G, Ninth infantry, St. John's, Nfld.; Albert C. Krause, private, Company I, Nineteenth Infantry, Waterloo, Ont.; William H. Forsythe, private, Hospital corps, Scotland, Ont.; Thomas A. Vicars, first lieutenant, Twenty-seventh infantry, Kamloops, Yale county, British Columbia.

CANADA AND ABROAD.

A Budget of Important News in Short Paragraphs.

Winnipeg bank clearings for the past week were 43 per cent. in excess of same week a year ago.

Fifteen hundred home-seekers from Ontario arrived in Winnipeg on Friday last. They are touring the west, and many of them are making homestead entries.

The Winnipeg Board of Trade protests against the present postal facilities of the city, the lack of representation at Ottawa and the new grain tariff at terminal points.

F. W. Thompson, vice-president of the Ogilvie Flour Mills company, predicts that though this year's wheat crop in the west will be lighter and the grade lower than last year, the farmers will mave more money on account of the higher prices that will be paid.

The leader of the Newfoundland opposition stated that the sentiment in favor of federation with Canada is steadily growing in that colony.

At the meeting of the Manufacturers' Association on Friday the president in his address declared that Canadian manufacturers did not look for favors from the United States and did not require any.

E. Stroschein, a German farmer, living north of Yorkton, was accidentally shot on Thursday last and died during the night. The fatal shot was fired by his son, of about 12 years of age, who was shooting rabbits with a small rifle.

A sad fatality occurred on the farm of R. Watson, near Minnedosa, last Friday, by which John Moline lost his life. This man, with others, was running a wood-sawing machine run by steam power, when the balance wheel burst with fatal results. Deceased arrived from Sweden last fall, and leaves a wife and three children.

Treasure Trove Law In England.

In England treasure trove belongs to the crown. According to the law, if any one finds hidden treasure and conceals it for his own use he is liable to fine and imprisonment. It used to be a hanging matter. However, it may be some encouragement to English treasure seekers, if any such there be in these enlightened days, to know that the laws of treasure trove only apply to such as is discovered by accident. Treasure discovered by systematic search would not come within this description; neither would finds discovered by astrological or cabalistic sciences or by the potent influence of the divining rod.—All the Year Round.

An Impatient Man.

In a restaurant near Park row a man who had just ordered luncheon called the waitress' attention to the pepper castor, from which he could get no pepper.

"Oh, I'll make that all right, sir," she said cheerfully, and, taking a hairpin from her hair, commenced to free the openings over his plate. Instantly he seized his hat and stick and rushed out, greatly to the amazement of the obliging waitress, who remarked to another customer:

"Oh, Lord, isn't he impatient! Why, I was clearing it as quick as I could."

Willing to Compromise.

Mamma—Oh, you bad boy! Where have you been all this time? Don't you think you should be ashamed to worry your mother so?

The Boy—Well, ma, I'm willin' to be ashamed that I worried you if you'll promise not to tell pa anything that 'll worry me.

Willing He Should Smoke.

"Any objections to my smoking here?" asked the offensively cheerful man as the vessel gave another disquieting lurch.

"None," replied the pale chap in the steamer chair, "here—or hereafter!"—Cincinnati Commercial Tribune.

Following the Races.

Spoart—You say he follows the race horses. He looks prosperous.

Nervitt—Yes; the race horses keep him busy.

Spoart—Bookmaker?

Nervitt—No; pawnbroker.—Philadelphia Ledger.
