

The Canadian response can best be seen in the following figures. In the first quarter of 2010, GDP grew by 0.7% of GNP (or 0.7% of the total value added in Canada for the year 2009). GDP growth has been positive in every quarter since the third quarter of 2009 (see Table 1). In Canada, from time to time, there have been periods of economic decline, but the current growth in the economy is the longest continuous period of growth since the early 1990s. This is a remarkable achievement, given the challenges facing the Canadian economy. The Canadian government has responded to the challenges by increasing its investment in infrastructure, particularly in transportation and energy infrastructure, and by increasing its investment in research and development. The Canadian government has also increased its investment in education and training, particularly in science, technology, engineering, and mathematics (STEM) fields. The Canadian government has also increased its investment in renewable energy, particularly wind power and solar power. The Canadian government has also increased its investment in green building and sustainable infrastructure.

Canada's success in the green economy is due to a combination of factors. First, the Canadian government has invested heavily in research and development, particularly in green building and sustainable infrastructure. Second, the Canadian government has invested heavily in education and training, particularly in STEM fields. Third, the Canadian government has invested heavily in green building and sustainable infrastructure. Fourth, the Canadian government has invested heavily in green building and sustainable infrastructure. Fifth, the Canadian government has invested heavily in green building and sustainable infrastructure. Sixth, the Canadian government has invested heavily in green building and sustainable infrastructure. Seventh, the Canadian government has invested heavily in green building and sustainable infrastructure. Eighth, the Canadian government has invested heavily in green building and sustainable infrastructure. Ninth, the Canadian government has invested heavily in green building and sustainable infrastructure. Tenth, the Canadian government has invested heavily in green building and sustainable infrastructure.
