HOUSE OF COMMONS DEBATES

OFFICIAL REPORT

FIRST SESSION—TWENTY-FOURTH PARLIAMENT

7 ELIZABETH II

VOLUME IV, 1958

COMPRISING THE PERIOD FROM THE FOURTEENTH DAY OF AUGUST, 1958,
TO THE SIXTH DAY OF SEPTEMBER, 1958, INCLUSIVE

INDEX ISSUED IN A SEPARATE VOLUME

EDMOND CLOUTIER, C.M.G., O.A., D.S.P.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1958

HOUSE OF COMMONS

Thursday, August 14, 1958

The house met at eleven o'clock.

COMMITTEES OF THE HOUSE

Eleventh and twelfth reports of standing committee on miscellaneous private bills.—Mr. McCleave.

Ninth report of the standing committee on railways, canals and telegraph lines.—Mr. Fraser.

ATOMIC ENERGY

STATEMENT ON UN REPORT ON EFFECTS OF RADIATION—SUSPENSION OF TESTS

Hon. J. W. Monteith (Minister of National Health and Welfare): Mr. Speaker, further to the statement made by the Prime Minister in the house yesterday, I should like to make a few comments on the report of the United Nations scientific committee on the effects of atomic radiation which, as you know, was made public last Sunday. This report is of the greatest concern to me as Minister of National Health and Welfare, dealing as it does with matters of importance to the health of the people of Canada.

A great deal of interest has already been expressed in some of the conclusions of the report, and I should like to read one paragraph in particular of the general conclusions:

> The exposure of mankind to ionizing radiation at present arises mainly from natural sources, from medical and industrial procedures, and from environmental contamination due to nuclear explosions. The industrial, research and medical applications expose only part of the population while natural sources and environmental sources expose the whole population. The artificial sources to which man is exposed during his work in industry and in scientific research are of value in science and technology. Their use is controllable, and exposures can be reduced by perfecting protection and safety techniques. All applications of X-rays and radioactive isotopes used in medicine for diagnostic purposes and for radiation therapy are for the benefit of mankind and can be controlled. Radioactive contamination of the environment resulting from explosions of nuclear weapons constitutes a growing increment to world-wide radiation levels. This involves new and largely unknown hazards to present and future populations: these hazards, by their very nature, are beyond the control of the exposed persons. The committee concludes that all steps designed to minimize irradiation of human populations will act to the benefit of human health. Such steps include the avoidance of unnecessary exposure resulting from medical, industrial and other procedures for peaceful uses on the one hand and the cessation of contamination of the environment by explosion of nuclear weapons on the other. The committee is aware that considerations involving effective control of all these sources of radiation involve national and international decisions which lie outside the scope of its work.

These conclusions were based on scientific information obtained from world-wide sources and Canada, as a member of the 15-nation committee, subscribed to the report as a whole. Technical information available to the government does not lead it to dissent from the above conclusions.

The report observes that present information about radiation levels and effects is inadequate for an accurate evaluation of all hazards. Notwithstanding this great uncertainty it is evident that hazards to health cannot be dismissed. On the other hand, in the determination of government policy concerning the use of radiation sources for various purposes, it is proper that the health hazard should be considered in the light of all other pertinent factors.

The United Nations committee has pointed out that industrial, research and medical uses of radiation are controllable by means of appropriate protection and safety techniques. My department has been active in radiation protection since 1949, when a section that is now known as the radiation protection division was set up. This division provides technical advice on the health and safety aspects of the industrial, research and medical uses of radioisotopes and X-rays. In this regard it works closely with the atomic energy control board and other agencies concerned with this matter.

For a number of years the division has also carried out measurements and studies concerned with the possible effects on health of environmental radiation exposures. Further programs of measurements and biological studies are planned with the aim of providing answers to some of the major gaps in our knowledge concerning the biological effects of radiation.

The importance of scientific research and the collection of information on the effects of radiation have been clearly pointed out by the United Nations scientific committee. With particular reference to this subject the committee, on the basis of scientific experience, "confidently expects that continuing research on an increasing scale will furnish the knowledge urgently needed to master those risks which we know to be associated with

the development and scope of the uses of nuclear energy for the welfare of mankind."

I can assure hon. members that this government will continue to emphasize and support a progressive program of radiation protection in Canada.

Hon. L. B. Pearson (Leader of the Opposition): The minister's report on this matter, based upon the report of the United Nations scientific committee, emphasizes its vital importance. The United Nations report points out what we are sometimes prone to forget that sources of radiation danger can lie in civilian activities as well as in the explosion of nuclear weapons. While perhaps these non-military activities are dangerous and do not easily lend themselves to international control, or in some cases to national control, nevertheless we can certainly do something on an international basis about the danger from nuclear explosions, as was pointed out by the Prime Minister yesterday.

The report of the minister also emphasized once again the necessity of putting an end to tests of nuclear weapons of mass destruction. While the Prime Minister quite rightly said yesterday that there should be developed international machinery for the enforcement of such a ban and the detection of violations, and while the conference now proceeding at Geneva has apparently shown that such an end could be achieved without too much difficulty by means of international agreement, nevertheless if we cannot get an international agreement of that kind, and if this conference at Geneva also shows—as has been indicated by experts in the United States and other countries—that no country could violate a ban of this kind without that violation being detected by national mechanisms in other countries, then bearing in mind that with all these implications a violation could not take place without detection, we should perhaps give consideration to the banning of tests of this kind at least for a period of time even if we do not have a system of international inspection.

Mr. Hazen Argue (Assiniboia): I think the comprehensive statement of the Minister of National Health and Welfare points up very vividly and very accurately the great danger to the world of a continuing build-up of atomic radiation. While most of us think of atomic explosions and the danger they constitute as something in the nature of a sudden calamity for the people of the world, nevertheless such a calamity might be just as serious if it results from a continued build-up of atomic radiation.

[Mr. Monteith (Perth).]

The Prime Minister said yesterday that the U.S.S.R. had announced it was ending its series of atomic tests. This announcement followed a large number of such tests made within the U.S.S.R. and therefore, the Prime Minister said, this is a very convenient time for the U.S.S.R. to end its own tests. This is no doubt correct and is one of the major reasons why the U.S.S.R. has decided to cease tests at this time. Even assuming that to be the fact, which no doubt is the case, it would seem to me that the western world could now take a forward step by a real act of faith, namely announcing that the west, too, will cease nuclear tests in the hope that this would mean a permanent end to nuclear explosions.

I think the statement made by the Leader of the Opposition was very significant, and I hope it will be taken up by Canada at the United Nations and elsewhere. We in the C.C.F. say to the Leader of the Opposition: we welcome the support you are now giving to the stand which the C.C.F. has taken for some considerable time, that nuclear tests should be ended forthwith.

VETERANS INSURANCE ACT

AMENDMENTS TO INCREASE AMOUNT PAID TO BENEFICIARY AS ANNUITY, REMOVE RESTRICTIONS, ETC.

Hon. A. J. Brooks (Minister of Veterans Affairs) moved that the house go into committee at the next sitting to consider the following resolution, which has been recommended to the house by His Excellency:

That it is expedient, in the proposed measure to amend the Veterans Insurance Act, Bill C-34, now before the house, that clause 1 be deleted and that the following be substituted therefor:

1. (1) Paragraphs (a) and (b) of subsection (1) of section 3 of the Veterans Insurance Act are repealed and the following substituted therefor:

"(a) with a veteran, at any time on or before the 30th day of September, 1962; or

(b) with any of the following persons, at any time on or before the 30th day of September, 1962,

(i) the widow or widower of a veteran, if the minister has not entered into a contract of insurance with the veteran,

(ii) the widow or widower of a person who died on service during the war,

(iii) a member of the regular forces who has not been released from such forces and who was engaged in service during the war,

(iv) a merchant seaman who received or was eligible to receive a bonus pursuant to the merchant seamen special bonus order, or a seaman who received or was eligible to receive a war service bonus pursuant to the merchant seamen war service bonus order, 1944,

and

(v) any other person who is, under the Pension Act, in receipt of a disability pension relating to the war."

Motion agreed to.

BUSINESS OF THE HOUSE

NOTICE OF PROPOSED LEGISLATION IN "VOTES AND PROCEEDINGS"

On the orders of the day:

Hon. Lionel Chevrier (Laurier): Mr. Speaker, may I direct a question to the Prime Minister. Again I note in today's *Votes and Proceedings* notice of a measure appearing in the name of the Minister of Mines and Technical Surveys which I do not think was mentioned by the Prime Minister when we discussed these things in the house some time ago. In replying to me the other day he said he had made one omission. This appears to be a second omission. May I ask if this is now all the legislation we will have between now and the end of the session?

Right Hon. J. G. Diefenbaker (Prime Minister): Mr. Speaker, I note the remarks of the hon. gentleman. In so far as this amendment to the Maritime Coal Production Assistance Act is concerned, it is absolutely necessary if what was undertaken earlier and brought to the attention of the house is to be carried out. It is one of those things which will not bring about a measure of controversial debate, as I understand it, and I am sure that the hon. gentleman, representing the official opposition, would be the last to desire that action in this regard should be neglected at this session. I take it that would be his attitude.

With regard to any further legislation, I have referred to the probabilities in connection with some legislation which might be necessary under the agricultural program. I am sure that in this regard, there being no serious controversial issues to be raised, the hon. gentleman, representing the opposition, would be the last to desire to do anything to prevent the introduction of agricultural legislation which would be of benefit to this country, and which must necessarily receive attention at this session if it is to be appropriately applied within the next few months. I share with him the desire of hon. members to have a completion of the program, but when a government is desirous of being of assistance in meeting the needs of Canadians as a whole, matters necessarily arise that have to be brought in at the last moment. I reiterate what I stated the other day, that I am hopeful that the program as set forth is final.

Mr. Chevrier: It is being added to continually.

Mr. Diefenbaker: I will not be bound, however, to refuse to consider the introduction of measures which even at the last moment, by reason of the circumstances arising between now and the conclusion of the session, might be considered necessary for the welfare of the people of Canada. I know my hon. friend, within those limitations, would certainly agree with the view I have expressed.

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, I am sure my friend the hon. member for Laurier, as the Prime Minister indicated, would be the last to object to, obstruct or delay legislation which in the words of the Prime Minister is for the welfare of the people of Canada. That, Mr. Speaker, was not the point he was trying to make. It was that in the interests of minimizing obstruction and delay we should know well in advance, especially in the closing days of the session, what legislation is to be introduced. We had been told the other day that all the legislation was on the order paper. I therefore ask the Prime Minister to keep this in mind, that if we want to get this legislation through quickly for the benefit of the people of Canada it is incumbent on the government, especially at this time in the session, to let us know what is coming up. At the present time there seems to be about these matters, as far as the Prime Minister's statements are concerned, what I might call a continuous finality.

Mr. Hazen Argue (Assiniboia): Mr. Speaker, I think the statement of the Prime Minister is most encouraging, that even after we have had a final résumé of the legislation that is forthcoming we shall have the opportunity of dealing with other very beneficial legislation. Since the Prime Minister has emphasized the agricultural legislation that is about to be introduced, I wonder if he could satisfy the curiosity of the house by saying whether this includes deficiency payments, and what in general is contained in the legislation. I am sure the Prime Minister will find that the C.C.F. group, as usual, will facilitate the passage in this house of all worth-while legislation.

Some hon. Members: Oh, oh. Obstructionists.

Mr. Diefenbaker: Mr. Speaker, I like the attitude of the Leader of the Opposition. Everything should be done to minimize what he called obstruction. I certainly think that is a laudable purpose and a highly desirable end. Anything I can do to minimize obstruction from the other side will certainly be done, because there is none from this side.

Mr. Pickersgill: The Prime Minister should attend the house.

Mr. Benidickson: He has not had his loudspeaker on.

Inquiries of the Ministry

Mr. Diefenbaker: As to the statement of the hon. member for Assiniboia, I am not going to read into the record a report that he allegedly gave to Mr. Robert Moon on August 8 to the effect that as far as this government was concerned it was apparently not bringing in any agricultural legislation, having an undesirable end in view in taking that step. I will not read that into the record because I cannot accept such words as appear in the Regina *Leader-Post*, and attributed as a direct quotation by the hon. gentleman, as representative of his views. However, in so far as the agricultural program is concerned, I assure the hon. gentleman that the matter is receiving continual consideration. As a matter of fact, the absence of the minister from the house in the last two, three or four days has been in consequence of very serious and lengthy consideration of such proposals as will be beneficial not only to agriculture but to Canadians generally.

Mr. McIlraith: There was some important business in the house as well.

Mr. Diefenbaker: Mr. Speaker, I am glad to see my hon. friend's interest in that regard.

EXTERNAL AFFAIRS

ICELAND—EXTENSION OF FISHING LIMITS FOR FOREIGN TRAWLERS

On the orders of the day:

Mr. H. J. Robichaud (Gloucester): Mr. Speaker, in the absence of the Secretary of State for External Affairs may I direct a question to the Prime Minister. In view of the British admiralty's recent decision to augment its fishery protection squadron of two frigates and two minesweepers as a precaution against incidents with Icelanders who intend to enforce the extension of their territorial waters from 4 miles to 12 miles as from September 1, and in view of the Prime Minister's previous statement to the effect that his government was proposing that national jurisdiction be extended 12 miles offshore only in regard to fisheries matters, can the Prime Minister inform the house what action, if any, has been taken by the Canadian government to approve or support Iceland's decision or to protest against this alleged violation of the international law of the sea?

Right Hon. J. G. Diefenbaker (Prime Minister): Mr. Speaker, it is very obvious that this is not a question for the orders of the day. It is a very lengthy question and one that would require an equally lengthy answer. I submit it is not one that comes within the purview of the orders of the day.

[Mr. Benidickson.]

Mr. Robichaud: A supplementary question, Mr. Speaker. Can the Prime Minister inform the house whether any action has been taken by the government to protest against Iceland's decision?

Mr. Speaker: The question seems to be a familiar one. It seems to me I have dealt with it twice before during this session. Whether it is limited to any action since the question was last asked I do not know. If so, I suppose it would be in order.

Hon. L. B. Pearson (Leader of the Opposition): On that point, Mr. Speaker, only this morning there appeared in the press a report to the effect that the United Kingdom and certain other members of NATO were going to take action to protect their fishing vessels inside an area which is now claimed by Iceland as territorial waters. This is a matter of great importance which I think should be occupying the attention of the government and which should be brought before the NATO council at its next session.

Mr. Diefenbaker: Mr. Speaker, I can say that this matter has been before NATO, and the hon. member is fully aware of that fact.

Mr. Pearson: This is a new development.

THE CANADIAN ECONOMY

ROYAL COMMISSION ON ENERGY—REQUEST FOR INTERIM REPORT ON OIL AND GAS

On the orders of the day:

Mr. Hazen Argue (Assiniboia): Mr. Speaker, I have a question I should like to direct to the Prime Minister. Is the Prime Minister now in a position to say whether or not an interim report will be made by the Borden commission dealing with petroleum and natural gas and what action, if any, may arise from this report?

Right Hon. J. G. Diefenbaker (Prime Minister): Mr. Speaker, in so far as the latter part of the question is concerned I know the hon. gentleman does not expect an answer now. As to the first part of his question, namely when an interim report may be expected from the Borden commission, I had the chairman communicated with and he advised, as he said at the time of the adjournment of the sittings of the commission, that it is the intention of the commission to make an interim or preliminary report with respect to certain aspects of the gas and oil industry. On that occasion—that was July 22—he was unable to state exactly when the report could be expected. However, he said that it will require a great deal of consideration and deliberation and that he is hopeful

that early in October he will be in a position, with the members of the commission, to make that interim report.

That being so, my hon. friend will understand that it is impossible to say what action will be taken because the report will not be available, even with the greatest diligence on the part of the members of the commission, before that date and may even be a month later.

Mr. Argue: I appreciate the Prime Minister's report to the house. Am I to take it from his report that any further consideration of the development of the Montreal market for western oil will be delayed or will wait until after this very important report has been received?

Mr. Diefenbaker: In so far as the Montreal market is concerned, private interests are giving a great deal of attention to that matter. Naturally it is being considered also by the government. When I say that I do not want to give any indication that what is being considered will be answered in the affirmative, but simply that the matter is receiving consideration, and the report from the royal commission no doubt will be helpful in the determination of that and other problems.

FISHERIES

NEWFOUNDLAND—REQUEST FOR GOVERNMENT ACTION ON BAIT SHORTAGE

On the orders of the day:

Mr. J. R. Tucker (Trinity-Conception): I should like to direct a question to the Minister of Fisheries. In view of the present shortage of bait in Newfoundland for Newfoundland fishermen, I would be grateful if the minister would advise whether or not his department has taken any steps to relieve the situation.

Hon. J. A. MacLean (Minister of Fisheries): I am a little confused by the situation, not by the question, since the hon. member for St. John's East gave me notice of his intention to ask an identical question, and the hon. member for Trinity-Conception has asked it. This, however, indicates the interest of the people of Newfoundland in the Newfoundland fisheries, and their concern with the bait shortage.

This is something of which my department is very much aware, and the difficulty arises because of the failure of the squid fishery this year. I might say that during last winter the department's bait service froze more herring bait than ever before, but these stocks are now almost exhausted and a fairly critical situation has arisen.

The department, however, has embarked on a serious attempt to relieve the situation. For example, we have two helicopters under charter to the department scouting for squid. I am happy to say that a certain amount of squid has just now been obtained, about 30,000 pounds, and it will be delivered very shortly to the areas where it is most urgently needed. We hope to augment this supply. In addition we have obtained 150,000 pounds of herring in the Yarmouth area, which will be delivered to the bait depots in Newfoundland as quickly as we can get suitable transportation for it. For the time being we have temporarily suspended the sale of bait to foreign fishing vessels, and we have also done a number of other things which I do not think I should take up the time of the house by enumerating, but if any hon. member is especially concerned and would be interested in securing more details I would be happy to give them to him privately.

FRUIT

NIAGARA PENINSULA—DISPOSAL OF SURPLUS CHERRIES

On the orders of the day:

Mr. W. H. McMillan (Welland): I should like to direct a question to the Minister of Agriculture, or in his absence to the minister in charge. Today the Toronto *Globe and Mail* reports that the Niagara peninsula growers have 1,000 tons of surplus cherries as a result, according to the secretary of the marketing board, of a recent large volume of imports at low prices. Does the government intend to give any help to these fruit growers?

Hon. Gordon Churchill (Minister of Trade and Commerce): I shall bring this question to the attention of the Minister of Agriculture on his return.

(Translation):

ADMINISTRATION OF JUSTICE

QUEBEC—REQUEST FOR ESTABLISHMENT OF TRUSTEES IN BANKRUPTCY

On the orders of the day:

Mr. Lucien Cardin (Richelieu-Vercheres): Mr. Speaker, I should like to address a question to the Minister of Justice. Has the minister received from members of the Richelieu Bar Association, a request for the establishment of a bankruptcy registry and a bankruptcy court at the seats of the judicial districts of Richelieu, Beauharnois, d'Iberville and St. Hyacinthe? If so, may we hope that such bankruptcy registries and bankruptcy courts will be established shortly?

Hon. E. D. Fulton (Minister of Justice): Mr. Speaker, I just received notice of this question. I shall look into the matter and give the hon. member an answer tomorrow.

(Text):

CANADIAN BROADCASTING CORPORATION

REQUEST FOR RESUMPTION OF PROGRAM "THE NATION'S BUSINESS"

On the orders of the day:

Hon. J. W. Pickersgill (Bonavista-Twillingate): Some days ago I asked the Minister of National Revenue if he would make an inquiry of the C.B.C. I wonder if he has the answer.

Hon. George C. Nowlan (Minister of National Revenue): I have not, Mr. Speaker, at the moment. I only returned last night, but I will have the answer to the question tomorrow.

SUPPLY

The house in committee of supply, Mr. Sevigny in the chair.

DEPARTMENT OF NORTHERN AFFAIRS AND NATIONAL RESOURCES

266. Departmental administration, $731,410.

Mr. Fairfield: Last night I had been discussing jurisdictional difficulties in connection with conservation programs because of provincial jurisdiction in those areas over our natural resources. Many hon. members in this house know there are private groups which are endeavouring to carry out conservation projects in their own provinces and at their own expense. In western Canada we have game and fish associations which are actively trying their best, without much help from the federal government, to carry on conservation projects. These projects have had a great effect in our part of the country particularly because the game and fish are a great tourist attraction and consequently mean a great deal to our provincial treasuries in so far as the tourist dollar is concerned.

It is my understanding that for the past two years there has been a movement under way to establish a national wildlife conservation foundation. I believe the purpose and scope of this foundation has aroused widespread public support, and many prominent Canadians are giving it their whole-hearted backing. I believe the minister of northern affairs already has some knowledge of this movement.

It seems to me that a national conservation foundation, supported financially by this government and by private enterprise, could do for Canada what similar bodies are doing for other countries, and if truly national in its representation could offer logical and much needed means of bridging the gap between the efforts of federal and provincial governments and private bodies concerned in the field of wildlife management.

I understand that the architects of this plan have drafted a constitution which would guarantee that the proposed foundation would not infringe on the rights, or overlap the functions, of any existing agency, but that it would indeed be the vehicle for much needed financial assistance to all existing programs, provincial and private; would offer scholarship within the whole broad scope of resource management; would support scientific research, especially through universities, and would institute what is today so badly needed, namely a wildlife management and national conservation information service.

I hope at the appropriate time the government will give very serious consideration to the proposal to be put forward for the establishment of this independent foundation. I believe that government support would immediately result in the contribution by private enterprise in all parts of Canada, and on a continuing basis, of possibly hundreds of thousands and perhaps even million of dollars to the cause of resource conservation, and the development and utilization of those resources.

Mr. Fisher: I should like to congratulate the chairman of the committee which considered the estimates of this department. I was able to take part in the committee, in the forestry aspect. I was quite impressed with the interest of the committee, which seemed to be generated to quite an extent by the very open attitude of the chairman. The forestry aspect of the department is what interests me most, naturally, because forestry bulks so large in our particular area and I feel it is by far the most important. The one warning I should like to give to the minister is that I do not think he should be lured away by the northern aspect of his department as to forget the really fundamental role his department should be playing in forestry matters. As he knows, that is not really a northern problem so much as one that runs in the lower part of Canada, thinking in terms of north and south.

I welcome very much the fact that we have a new minister; not so much in political terms, but I felt it was time this department had new leadership with a new approach. I know from conversation with the minister that he is seriously interested in forestry. I was very pleased to see the announcement he made at Yorkton that he was calling the provincial ministers concerned with these matters together sometime in the near future to go into them.

A few of the previous speakers in the debate have emphasized conservation. I do not want to be critical of their statements or what they are trying to put over. Generally it is agreeable, but I should like to point out to them that for 70 or 80 years we have had concern in Canada for conservation. We had very large conservation meetings even before the first world war. One of the largest was in Ottawa in 1911. There has been amongst enlightened people in Canada a continuous concern with conservation. I think one of the difficulties is that maybe we have too many conferences on conservation, too much general discussion on it, and not enough particularized work.

I want to bring to the minister's attention some statements by one who first began service with the dominion government, in the forestry service, away back in the first decade of this century. He is now one of Canada's better known millionaires. I refer to H. R. MacMillan, at one time a forestry officer with the Canadian government. Last year Mr. MacMillan, to celebrate the 50th anniversary of the forestry profession in Canada, gave a speech at the University of Toronto. He made a number of very interesting points that are exceptionally apt for political consideration. He began with this theme with which I agree most heartily; that our tremendous concern with agriculture over the centuries since Canada got under way has made us lose sight of the fact that equally or even more important aspects of our economy and our industry have been neglected.

I believe, and I think this is implicit in what Mr. MacMillan said, that the agricultural interests have been able to apply better and more effective political pressure. Mr. MacMillan said:

> Because our people are not well informed, they lack of sense of responsibility towards the present and the next forest crops. This must be the reason why the forest industry alone of the great national basic industries receives no subsidies (it seeks none), and is starved of the reinvestment necessary to maintain its productivity, although yearly the forest crop, as compared with annual production from either agriculture or mining, pays out the most wages, produces a greater total buying power, contributes vastly more to a favourable trade balance, supports the greatest export trade, and begets directly and indirectly the largest tax revenue. Our national government spends each year approximately—

I should like the minister to note this:

> "On forest administration and research $6,000,000.
> On mining administration and research and subsidy, $25,000,000.
> On agricultural administration and research and subsidy, $80,000,000."

Then he went on to say:

> The national and provincial governments together receive a $230 million annual revenue from agriculture, on which they spend $150 million; from forests they receive $275 million—

In other words, $45 million more.

> —of which they spend a combined total of $45 million on administration and investment in the next crop. Such lack of foresight is equivalent to eating the seed corn.
>
> This pattern of expenditure appears to depart by a wide margin from a policy of giving attention proportionate to the public interests concerned.

That is what I am hoping from this particular minister in the leadership that he is able to give, to try to redress this balance. No matter what your economic outlook, you realize that when you have an industry there has to be a fall-back for investment in order to keep the expansion going, and especially with a renewable resource in order to keep that resource coming in the years ahead. I suggest that these figures supplied by Mr. MacMillan indicates that this has not been done.

It has already been mentioned that there is a constitutional problem. The minister, from his evidence before the committee, is very much aware of this. He knows he cannot dictate to the provinces. But I suggest that almost every province in Canada is aware of the fact that the federal government takes in a tremendous amount from the forest industry in taxation and in comparison gives very little back. I think every province is anxious to get more back. The question is, what are you going to do?

Something else I should like to bring to the attention of the minister is some evidence that was given before the committee on land use in the other place. If you look at the annual report on forest research for the year ending March, 1957 you will find that one of the leading officers in silviculture research is Mr. W. G. E. Brown. Mr. W. G. E. Brown is no longer with the government. He has joined Spartan Air Services Limited in his capacity as survey specialist. He is considered by many people to be the top expert in this field in the country. I should just like to bring to the minister's attention what this specialist gave as his reason for getting out of the government service, because this is where I hope this minister is going to give leadership. Mr. Brown said:

> I was associated on forest and soil surveys, and land use surveys from 1947 to 1951 with Mr. Hills of the Ontario department of lands and forests; from 1951 to 1956, I was chief soil and site officer for the federal forestry branch, covering all of Canada. In both cases I resigned chiefly because of the difficulties encountered between departments in the federal government, between dominion and provincial government agencies, and between industry—

He went on to state the difficulties and underline all the overlapping and the failure to get any lead on this whole question of land use as it relates to geology, soil, forest coverage and so on; a tremendous theory. I think this criticism by one of the most brilliant men in his field in Canada, who had to get out of both the provincial and federal governments because he was so disturbed over the lack of co-operation and his general feeling that he was getting nowhere, is a very severe criticism of the role which the department, especially in so far as its forestry activities are concerned, has been playing.

It was very pleasing to me, and I am sure it will be very pleasing to the forest industry as a whole, to read the recommendation made by the committee in connection with forestry. There are two sentences appearing at page 264 of *Votes and Proceedings* which I would like to read. They are as follows:

> Your committee recommends that increased attention be given to the compilation of material on water resources and to their multiple use, and, in the case of forestry, to forest research. Your committee also noted the increased emphasis being given in the United States to forest products research and recommends that the government give consideration to increased support of that activity in Canada.

Let us see that increased support given with greater and more energetic leadership, and a manifestation of the feeling that the minister and his department must get out and take the lead in this matter.

There are quite a number of ways in which forest research can operate at the present time, and I think the minister knows from the evidence given before the committee that his forest products research laboratories are understaffed. I was told of a case the day before yesterday in which a firm had sent a 4 × 4 × $\frac{5}{16}$ plywood sheet to be tested last November but had still not received the results of the test. In the United States tests can be made by private laboratories and, as a consequence of the certificate given by the scientists concerned, the particular material can be accepted by federal housing authorities.

If we are going to be in the business of testing, and I am sure the federal laboratories are a worthy venture, then I think there is very little excuse for this sort of thing. We are aware that the weakness is probably the lack of staff, and I would like to repeat some suggestions I made in committee. The first is to clear up this staff question in the forest products laboratory right now and, if necessary, have crash sessions with the civil service commission. If men with Ph.D.'s and many years of experience are getting only $6,000, $7,000 and $8,000 in these fields, and are handicapped by lack of staff to help them, then I think we have a very poor situation and I would be very interested to know more about the morale in this area.

[Mr. Fisher.]

One of the generalizations I attempted to make was that the situation in the west coast laboratory is much happier than that in the Ottawa laboratory, and there is certainly a feeling that the laboratory there is producing more in relation to industrial knowledge than is being done in Ottawa. One of the aspects of forest products research in relation to integrated production is that in eastern Canada our pulp operations still are not using enough of the hardwood species such as birch and poplar, and what we need are more establishments to turn out veneers and core stock.

This integration is not only important from the point of view of economics; it is desperately important so far as the clearing off of what have been called weed species is concerned and improving to a much greater extent the silviculture. Instead of just going in and taking out all the conifers, the development of veneer mills and plywood mills will enable us to get a really integrated operation which will clear off the total coverage. This will also give us much better control of regeneration, and I think this is one aspect of research which must be stepped up by the forest products laboratories. Everything must be done which will further advance the veneer, core stock and plywood stock sector of the forest industry economy.

One of the things we have been doing in Canada is taking tremendous advantage of United States research. This is all to the good, but I wonder whether some sort of relationship could not be worked out between this country and the United States whereby our comparable problems could be considered jointly in order to give us an opportunity for more concentration, leaving greater scope for the United States to more specifically allocate their expenditures. In the United States government research laboratories undertake a great deal of work for industry on a contract basis, and I wonder if similar work could not be done in Canada if the terms were fair.

One of our major problems in forestry is that we have a very abnormal age distribution in most of our pulpwood limits. The minister knows the situation north of Kenora, where he has a summer home, and where hundreds of square miles are overmature and should be cut in the very near future. When they are cut, however, we will continue this pattern of abnormal age distribution, and this is one aspect of research with which I think the forestry branch should be far more concerned.

There is another aspect of research to which more attention should be given, and that is with respect to herbicides for brush control. I realize that private industry is doing a lot in this connection, but I think even more could be done. Further, I have in mind the Russian experiments to develop what they call living firebreaks by the use of plants which have a very high moisture content, and this is something which could be investigated with some intensity in Canada.

Forestry research shows slow progress in terms of conclusions. The minister was kind enough to provide me with a five-year progress report of R.C.17, which is a very intricate bit of research work. Many agencies have co-operated in this connection and the research work was carried out on one of the slopes of lake Superior. After five years the most discouraging thing, although perhaps a very proper thing from the scientific point of view, is the lack of recommendations.

There are two points mentioned which I would like to draw to the attention of the house, first that scarification does help to create good seed bed conditions, and the fact that herbicides used in certain ways do help to cut out countergrowth, which assists in the providing of regeneration for the conifers. There are, however, very few conclusions, and the difficulties with respect to forest research are all old ones. It is a real challenge to the administration to try to get some conclusions from the foresters.

I would like to mention to the minister two pulp and paper industries which are in juxtaposition in my own area and which have completely contradictory forest policies. Yet they are taking those policies from the point of view of their respective foresters, who have gone into the situation. One company believes that the whole future of the pulp and paper industry lies in the spruce forests, and they are therefore concentrating upon planting where regeneration is poor. They plant over 2 million trees a year and are making strenuous efforts to help natural regeneration and so bring back the limits to their former state. The second company, which is right next door with almost identical terrain, also measured in thousands of square miles, bases its whole forest policy upon the idea of cellulose per acre. This company says it does not matter a hoot about spruce and its longer fibres, but that the chemical engineer is now playing the operative role in the forest industry. He will clear up this whole problem for us, and he is already doing it and is enabling us to use hardwoods. They say, furthermore, that in the next decade or two the whole point of the matter will be cellulose per acre, and that the question of the superior qualities of the spruce fibres for making newsprint and other pulp products will not be a factor at all.

Just that very dichotomy points up the magnitude of the forestry problem in determining what we are going to do with our forestry research. I have talked to a great many foresters and have had many contacts with them, and there is a feeling—and it is expressed by a former employee, Mr. Brown—that there is no leadership forthcoming from the federal government in this particular field. Whether or not there are constitutional problems, if we want to get anywhere in this field there has to be that leadership.

In other words there is a tremendous challenge to the minister and to his department. And this is not in the north. This is not Frobisher bay. This does not concern resources about which we know nothing. This relates to the breadbasket of this country, and I suggest to the minister that the breadbasket of this country is no longer on the prairies; it is in the boreal forests where we find our pulp and paper resources.

An hon. Member: What does the hon. member for Assiniboia say to that?

Mr. Fisher: He has just been complaining from behind. I do not mind somewhat overstating this point in relation to what the hon. member for Assiniboia tells me, but I think we have gone on long enough paying such marked attention to the agricultural interests, especially to the grain interests. It is not that there is anything wrong with that, but in the process we have lost sight of this forestry industry which has brought in even more revenue and which has even sharper problems.

I do not know whether one of the solutions would be to put in support prices for pulpwood—that is a question for the Minister of Agriculture to worry about—but I do know that one of the main problems is determining how the silviculture plan should be laid out and what guiding principles we should be following. This involves the department of the Minister of Finance, because the whole fiscal policy of the government in relation to the forest industry is in question.

As the minister is probably aware if he has read any of the representations from the industry, or even from the unions involved in the industry, this point was strikingly illustrated in the last few years when Ontario introduced a new logging tax. Immediately a howl went up from the pulp and paper interests. What did the premier of Ontario say? He said he had to get more

revenue out of his forests because there was not enough money coming back from the federal government.

Well, that is fine; he recognized the problem and went out to get some more money. What did the head of the largest pulp and paper concern in this particular part of the country say? He was enraged by this and said, "We are going to have to cut down our research program. If the federal government and the provincial government refuse to get together and work out equitable taxation with us, why should we continue to make efforts to plan for the conservation of our forests and plow back money, if the fiscal policy is so bad?"

The evidence given by the head of the Canadian institute of foresters and by Major General Kennedy, who is one of Canada's most prominent foresters, was that the government needs to look closely at its whole fiscal policy in relation to the industry. The figures I read indicate that forestry is getting very little put back into it, either from the federal government or from the provincial governments, in relation to the taxation revenue. This being the case I think the industry is in a position to say to the federal and provincial governments, why are you not showing stronger leadership in research?

The final point I wish to make is this. I hope the minister does not go off down the path that so many ministers in the past have taken with regard to forestry, and become obsessed with firefighting or getting rid of the bugs we have in profusion in many of the forests. I suggest that fire protection and forest entomology are no longer the most important problems which concern the forest industries. Action must focus upon silviculture, and upon getting the crop back again.

I am not suggesting that the minister should abandon or even refrain from extending his fire protection program in co-operation with the provinces, but I should like to suggest that he work out some scheme of subsidizing experiments in controlled burning, because almost every good pulpwood forest we have in this country was formed as a result of forest fires. In other words I suggest we should, after proper preparation, set forest fires deliberately in order to make regeneration possible. This would require considerable expenditure on control measures, but it is a field where more research should be done.

I should like to conclude by saying to the minister that you have a real problem here and a wonderful opportunity for leadership. Don't go chasing off after northern affairs completely; don't go chasing the obsession of putting out forest fires and getting rid of the bugs. Go right after the whole problem of silviculture, forest management and regeneration. I think the minister would then merit much greater thanks from the Canadian people than any of the previous ministers we have had in the department of northern affairs.

Mr. Pearson: I welcome the opportunity of making some observations about the work of this very important department of government, though I may say that these observations will not include that particular branch of the department which has just been touched upon by the hon. member for Port Arthur. I say this not because I do not recognize the importance of that branch, but because there is no time to deal with all the various activities of the department which are involved in these estimates.

The hon. member who has just spoken said some laudatory things about the minister, and contrasted his activities and energy with those of his predecessor. I am not going to say anything which would deprecate the energy and drive—

Mr. Fisher: On a point of order, Mr. Chairman, this is the second time within a week that the Leader of the Opposition has attributed things to me which I did not say. The first was in connection with Rhodes scholars. I was just making this point in connection with the change of leadership, that I think it is good to have new leadership—completely new thoughts. It was not a great reflection on the performance of the previous minister.

Mr. Pearson: I will be glad to accept that correction. As far as the Rhodes scholarships are concerned, I do not think I did the hon. member an injustice in the remarks I made on a former occasion.

What the hon. member has now said is that it is a good thing to have a change of leadership. Perhaps I should point out that though there has been a change of leadership, energetic and determined leadership has been given to the work of this department over a good many years, since the second world war. It was in 1950, under the previous administration, that this separate department was set up.

It was then, I believe, the department of resources and development, and it was under the present minister's predecessor in the Liberal administration, Mr. Lesage, that the name of this department was changed to the Department of Northern Affairs and National Resources. While a change in name may not in itself be of too much practical importance, and may have only symbolic significance, since that time, under Mr. Lesage, a great deal of energy and leadership has been given,

as indeed it was given by Mr. Lesage's predecessor, Mr. Winters, to the work of this very important department. When I say that I am not suggesting that the present minister is not showing energy and determination, because I know he is, and I also know something about his interest in northern development.

This is one aspect of the work of the department that I wish to talk about in particular, northern development. Those of us who heard the hon. member for Mackenzie River the other day must have been impressed by the very moving story he told concerning the tragedy which overtook 14 Eskimos in that part of our territory. We surely must have realized as that tragic tale unfolded that there is more to northern development than the development of the material resources of that part of the world. None of us can take very much satisfaction, and I am sure the minister takes no satisfaction, out of the development of these resources if we cannot at the same time develop our own sense of responsibility for looking after the indigenous inhabitants of that area in a way that will prevent this kind of tragedy occurring in the future. The *Financial Post* of August 2 carried an editorial dealing with development in the Arctic which included the following paragraph:

> We have made enormous strides in seven years. We are building town sites, schools and airfields along the mainland and across the archipelago. We are taking care of 12,000 Eskimos and introducing them to the ways of civilization.

Unfortunately there were a few we were not able to take care of a short time ago. Our feeling of shock and regret—and that is too mild a word to use in connection with this tragic event—was well expressed in an editorial which appeared in the London *Free Press* of August 12, in these words:

> If there was a murder, these officers—
>
> The Royal Canadian Mounted Police—
>
> —would spend months or years to run down the culprit. Would it not be well that the officers be assigned to see that the roving bands are supplied; if they lack food for the winter season to see that they obtain it or be removed to winter shelter areas.
>
> If we Canadians heard of death through starvation in some of the less developed lands we would start a campaign, gather food parcels and rush them overseas. It happened at home, months ago and now we hear of it—a shocking tale.

I am sure we all welcomed the observations of the minister in connection with this matter when he indicated the steps that would be taken to prevent the recurrence of a tragedy of this kind in the future.

The importance of the development of our Arctic territory has been dramatically emphasized and underlined by the passage, I believe within the last week, of two United States atomic submarines under the Arctic ice, which, in the application of a particular theory of international law, is Canadian Arctic ice. This magnificent achievement, and it certainly was a magnificent achievement, has strategic implications and also commercial implications which must be very much in our minds.

So far as the strategic implications are concerned, this is not the place to deal with them and I shall content myself by saying that the achievement of these two United States submarines reinforces our feeling of regret that our one naval vessel operating in those parts, C.G.S. *Labrador,* has been taken away from that kind of operation. So far as the commercial implications are concerned—and this surely has an important bearing on the development of the north, and I am sure it must have occurred to the minister as he read the news of this achievement—when the commander of the first atomic submarine to go under the Arctic ice, the *Nautilus,* reached London, England he is reported in the London *Times* of August 12 as having said:

> There appears to be no upper limit to the size you may build submarines and I think cargo submarines carrying priority cargo such as oil are definitely coming along in the future.

He was referring, of course, to submarines operating with atomic power. I continue:

> He said he thought that other commercial cargo carrying, under water, would be possible. "It must come, as you can travel more efficiently under the surface than above it." Taking oil by the Arctic route was "a very promising thing."

This opens up a whole new field of Arctic development. In view of the fact that we have these resources of oil, minerals and base metals of one kind and another in that part of Canada, as the minister pointed out, their development is bound to be handicapped by the expense of getting these materials to market. That was pointed out at the recent meeting of the Royal society, in Edmonton by experts on Arctic matters. While it is one thing to have these resources there it is another thing to exploit them economically and deliver them profitably to the markets of the world. If it could be done by underwater commercial craft we could have our resources there developed and exploited and moved to submarine ports from which they could be distributed to the markets which require them.

This may seem a pretty remote vision, but I know that visions do not intimidate the minister and this is certainly a question that deserves attention and examination. Perhaps before I get too carried away by this vision I might place on record that the estimated cost of the first atomic

submarine the *Nautilus*, was something in the neighbourhood of $60 million, so there is a great deal of progress to be made in the economic construction of these craft before they can be used for the purpose I have mentioned. But this certainly opens up new vistas of development.

This emphasizes in my own mind what I have often thought was an important point in northern development, that defence and civilian development must go together in that part of the world. I know that has been the objective of government policy for a good many years, and these recent developments just emphasize its importance. For that purpose, of course, it becomes even more important than it was previously to establish beyond any doubt our claim to our Arctic territory. This is more important than ever before in view of Soviet interest in that part of the world, in view of the utilization by Soviet parties of moving ice fields for scientific purposes and that kind of thing, ice fields which I believe are included in what we call the Canadian sector, and in view of the development with our approval and co-operation of United States defence activity in that part of the world; indeed, development to the point where I have read articles in United States magazines and newspapers on Arctic development in Canadian territory in which reference is made by the United States authors to "our" Arctic. Therefore it becomes more important than ever before that there be no doubt left in the mind of anybody that it is the Canadian Arctic.

We recall that the first claim to Arctic island territory was advanced on behalf of the Canadian government as far back as 1907, when Senator Poirier put forward the sector theory which was elaborated in the House of Commons many years later, in 1925, by the minister of the interior of that day, Hon. Charles Stewart. Under that sector theory Canada lays claim to all the land between the extension of the 60th and the 141st meridians of longitude until they meet at the north pole. In 1953 Mr. St. Laurent, who was very much alive to the importance of this problem, especially in the light of recent development, made a significant statement in the House of Commons and the previous government did something to implement that statement. Mr. St. Laurent said then:

> We must leave no doubt of our active occupation and exercise of our sovereignty in these northern lands right up to the pole.

Of course there arises at once a question of the rights of control, or sovereignty, if you like, over the permanent ice fields. Perhaps the extension of the continental shelf about which the minister spoke in this house in another debate will extend our rights over these permanent ice fields for some miles under that doctrine of sovereignty over the continental shelf which I suggest, however, is not yet quite formally established. But beyond that there is certainly no recognition by any other country that I know of, by the United States, the United Kingdom or the U.S.S.R., that we have any rights of sovereignty or control over the permanent ice.

Perhaps the time is coming, Mr. Chairman, if it has not already come, when we should try to work out an international agreement to see exactly where we stand in regard to our control and sovereign rights under this sector theory, and try to get those rights established by international agreement. I suggest to the minister that we shall have considerable difficulty in doing that if we base our claim merely on the sector theory which has not yet, I think, been generally considered a valid doctrine in international law.

The sector theory itself is not enough; it must be followed by rights based on discovery and effective occupation. That had been very much in the mind of the previous government, as no doubt it is in the mind of the present government, to buttress any claims we have under one theory of international law by rights of discovery and effective occupation, which are acknowledged by all as valid in international law. That surely means that policy must be directed toward the extension of Canadian civilian occupancy and control of all Arctic activities. I know the difficulty in this regard, but I also know a great many things have been done in the field of defence particularly, in fact almost exclusively in the field of defence by the United States, that we in Canada would not have done and perhaps would have found it impossible to do because of their expense.

I know there are a great many facilities in the Arctic which have been built by the United States, some of which are occupied by United States personnel, and some of which are occupied jointly by the United States and Canada; but surely even if we have not been able to construct things like the D.E.W. line because of the magnitude of the operation and because, in some instances, we were not convinced of the essential wisdom of doing that kind of thing at that time even for defence; whatever the reason may have been, our objective surely must be that when the United States, with our agreement always and with our rights always reserved, has constructed those facilities, to take them over, in so far as they continue to be useful, at the earliest possible moment and put them under Canadian control and, when it can be done, under civilian control.

As far as our rights by effective occupation of this great and increasingly important sector of the world area are concerned, I am informed—and perhaps the minister will be able to give the exact figure in this regard—that in the Canadian Arctic islands there are about 300 Canadian civil servants, if you like, showing the flag in the right way, and that perhaps there are about 100 other Canadians permanently resident in those areas with, I should think, three or four hundred temporarily working there especially in the summer months. We should do what we can to add to that number, of course, replacing whenever we can Americans who are there and thereby strengthening our claim, which has not yet been challenged by anybody but which does bear strengthening so that in the future it will not be challenged by anybody as the commercial and strategic importance of this part of Canada grows.

One of the aspects—perhaps not very important—of this American activity in the Arctic has been complaints from time to time that our own rights of sovereignty are being prejudiced by American activities and that sometimes the United States makes it difficult for Canadians to visit defence facilities on their own soil. I remember reading a statement on this by the minister on March 13, at a time when we were all making statements. This statement was made in Toronto and he is reported to have said—perhaps he will correct me if the report is without foundation—that it was a matter of national chagrin that Canadian cabinet ministers must get permission from Washington before they could visit certain parts of Canada's north.

I would agree at once that this would be a matter of chagrin if that had to be done, except in any but a purely formal sense. I suggest that the importance of the formal necessity for this in certain instances has been exaggerated, because perhaps it is equally true that if a German cabinet minister wished to visit a Canadian NATO defence installation on German soil he might have to go through certain formalities before he would be permitted to do so. It is true, however, that we should try at every possible opportunity to show that this is our land under Canadian law and under Canadian jurisdiction.

One of the most interesting—perhaps one of the most exciting—of the minister's statements on developments in the north that I have read concerned a visit he made, I think it was to Frobisher bay, on May 5. So far as press reports are concerned he certainly gave us some pretty exciting information as to his plans in regard to this particular aspect of development. I am reading now a report in the Toronto *Telegram* of May 5, under the headline:

A $75 Million Northwest Territories Capital City

I know the minister is not responsible for the headline. The report reads:

A "skyscraper city" of 5,000 people will rise out of the frozen tundra of Frobisher bay during the next five years—a $75 million government investment in the future of the Canadian north.

Perhaps when he speaks the minister will comment on this development. The report goes on to say—and this has a bearing on what I have just been saying about United States interests in this part of the world and United States developments up there—

Almost a third of the sum—

That is presumably the $75 million for the Northwest Territories capital city.

—will be contributed by the United States government and the remainder will be a long-term, self-liquidating capital investment by the Canadian people.

Then the minister proceeded to elaborate his vision of this new capital city in terms which were very dramatic indeed. He said, as the report from the Toronto *Telegram* gives it—

A package atomic power station—developed by Atomic Energy of Canada Limited especially for such northern stations—is expected to be built at the site, although it will be coupled with diesel-generated power source until day-to-day operation bugs are ironed out.

Then he is quoted as saying:

We have such a station ready now.

That is a package atomic power station, and this is a very important statement. I think it goes beyond anything I have heard in this house.

"We have such a station ready now," said Mr. Hamilton, "but it is being run by scientists. We want to be sure it can be operated by ordinary technicians,—perhaps Eskimos—before we use it as a single power source."

Then he went on to discuss in very interesting, indeed imaginative, terms the development of this capital in the frozen north. He said:

Although the site recommendation has yet to be made to the cabinet—

Perhaps it has been made since this report.

—it was learned that the recommendation by the Foundation Company of Canada Limited, retained to decide on a site, will be an amphitheatre running down to Frobisher bay within a mile of the present air strip.

A whole new concept of building in the north country is being developed for the city.

It involves the use of six-storey skyscrapers of concrete ringing a mammoth central, roofed and heated hexagonal plaza containing stores and offices.

Well, Mr. Chairman, that is a rather exciting prospect for development as far north as

Frobisher bay. Perhaps the minister will comment on this report. It certainly is, and I say this is not in any critical sense, a rather dazzling vision of the immediate future.

There was another aspect of the implementation of this vision of northern development about which the minister talked a good deal during the election, and that was the railroad to Great Slave lake. When this matter was mentioned in another debate the minister said that while perhaps no great progress has been made since last spring, under the previous administration nothing whatever had been done. I believe there is a statement in *Hansard* in which he rather suggested we had done nothing. So far as doing nothing is concerned, I suggest to the minister that the survey for this very important railroad was begun by the previous government. Undoubtedly this survey was continued by the present government, but if it has been completed we have not yet heard of that in this house.

On the other hand, we have heard that the government does not intend to proceed with this matter at the present session, and indeed that the government has not yet made up its mind where the railway will go. If the government has not been able to take that kind of decision after the survey has presumably been completed, I do not know why they should criticize us for not having done more while the survey was continuing. It would have been very stupid for the previous government to have taken any final decision on this matter, as to the route or any other detailed aspects, until the survey had been completed.

Perhaps the minister will have something to say about both the survey and the route, because when he was speaking in Edmonton on February 1 he was pretty definite in what he said. Speaking of the Great Slave lake railway, he said it could be built by 1961, and that the Canadian National, Canadian Pacific and the government were working at high speed to finalize the economics of the project. We would like some information as to the finalization of this particular project.

During those days the minister also had some other exciting things to say about the development of the north. Perhaps he will be able to elaborate on some of these statements during this discussion. According to the Montreal *Star* of April 10 the minister declared that the rush was on in the northland. The report states:

> Northern Affairs Minister Alvin Hamilton, in an interview on the eve of his departure today for an international conference in Geneva, said:
> "It is an attack on all fronts. The rush to the north is on."

Perhaps we can get some details in regard to that rush since that statement was made or before the statement was made. This report says, and I quote again:

> Mr. Hamilton said that since the Diefenbaker Winnipeg speech—

That was the speech beginning the Prime Minister's election campaign.

> —his department had received about 1,000 letters —800 more than during the same period last year— asking how to get jobs in the north.

Perhaps this statement has a bearing on the statement that the rush to the north is on. Then, according to the press, the minister made this very interesting additional observation:

> American applicants had outnumbered Canadians by three to one.

Presumably this means that 300 or 400 Canadian letters had been received asking how to get jobs in the north. In that connection it would be useful to the committee and interesting, I think, if the minister could give us some indication of what has happened in regard to jobs for northern development since these statements were made during the election campaign.

Then on May 6—and I found this of particular interest—according to the press the minister had this to say about another aspect of our Arctic development:

> Northern Affairs Minister Alvin Hamilton has suggested a non-military type of Arctic inspection. His idea: an exchange of visits with Soviet Russia on northern development techniques.

This matter was raised, I think, some weeks ago in the house and the minister indicated that it might be a good idea to have this kind of exchange. Perhaps it would be a good idea. I wonder whether he has made any progress in his plans for this kind of visit, because it is obviously true that we can learn a great deal from the Russians in regard to Arctic development. It is true that they have made much greater progress than we have in that regard, and that is quite natural. For one thing, they have been engaged in Arctic activity much longer than we have, and they have perhaps appreciated its importance both strategically and commercially for a much longer time than we have. This is due also no doubt in part to the fact that they have a much larger population than we have, and can direct whatever portion of that population they wish to live and work in the Arctic.

Our development of the Arctic, which is going to be just as important to us as the development of the Russian Arctic to them, has to be done under a system which does not dragoon Canadians into any part of the country, and that is bound to be, in the short run at least, a handicap. Nevertheless, even keeping in mind the differences in the

positions of the two countries—we certainly have no desire to adopt their methods in this or any other respect—I think it would be helpful to have exchanges of information and even a personal visit by the minister, especially if he were accompanied by his officials. I recall when I was in Moscow a few years ago bringing up this matter, and at that time it was received by the officials in Moscow as something that could be done with advantage to both countries.

There was a meeting of the Royal Society of Canada in the early part of June in Edmonton, at which there was a great deal of discussion of Arctic matters by experts without any axe to grind, except perhaps their own professional prejudices that experts are bound to have. At this meeting there was a rather careful and friendly, but analytical, examination of all aspects of this question of northern development. I suggest to members of the committee that the report of this convention of the Royal society dealing with this matter makes very interesting and perhaps informative reading. One of the delegates at that convention was Dr. William C. Wonders of the University of Alberta, who among other things dealt with the Russian successes in the north. He said that Canada has about 32,000 people north of the 60th parallel, compared with 4,500,000 in Russia. The Russian climate is more favourable, he said, and there has been a population pressure lacking in Canada. Then he referred to the point I have been making, that much of this northern population in the U.S.S.R. is not there voluntarily.

There are only two other matters that I want to bring to the minister's attention, with which he might perhaps deal now. He has already dealt with one of them at some length in another debate, and that is the Geneva conference on the law of the sea. The minister felt, and I am not criticizing him for his feeling though I do not entirely share it, that this was a great diplomatic triumph, a great step forward in the codification of international law.

So far as it being a diplomatic triumph is concerned, I realize the efforts that were made by the Canadian delegation to find a compromise resolution in regard to the law of the sea establishing a territorial and jurisdictional zone which would protect our own interest in this matter and would obtain the necessary two thirds approval, which you have to get if the resolution deals with questions of substance. The Canadian delegation was not able to succeed in that regard.

It is not the first time a Canadian delegation has tried to bring about a compromise and has not been able to get the necessary two thirds majority. But on this occasion, as the minister himself pointed out when he returned —I think it was in a speech he made in Aylmer—the only chance, as it developed, of getting that two thirds majority was to secure the support of the Soviet delegation and its satellites. That gives you seven or eight votes —sometimes a few more and sometimes a few less—at the meetings.

The reason that support had to be secured was that the United States and the United Kingdom were both against the Canadian proposal and were able to line up a good deal of support for their point of view. While I happen to think the Canadian position in this matter was a more intelligent one than that taken by the United States and the United Kingdom, and while I certainly believe that if we have a position which we think should be maintained we should not abandon that position or modify it substantially merely because the United States and the United Kingdom are against it—that would be the abandonment of our independent position at these conferences—subject always to the requirements of the co-operation within the coalition and the interdependence we desire to maintain. It is always an unhappy position in any diplomatic initiative for the Canadian delegation to find that you have both the British and the United States—and I think in this case the French and a good many of our friendly allies—against us and that we have to rely on the Soviet in order to get our two thirds majority.

But even if we had obtained that two thirds majority I suggest to the minister that the resolution in question could not have been very easily established as international law if the United States and the United Kingdom refused to accept it. While I realize that this matter is going to come up again, and that there are other achievements at this conference which did not get much publicity and which are important technical developments in the fields they cover, nevertheless the main issue before the conference—perhaps ultimately the continental shelf may turn out to be the most important issue—but the main issue as it seemed at that time was to establish a territorial zone or a territorial zone plus a jurisdictional zone over the sea which would be accepted by all sides.

That is an effort that has been going on since 1930, when the first conference on this matter of the international law of the sea was held at The Hague to deal with territorial waters. Over all those years attempts have been made to get agreement—something which is very important for countries like Canada—on the law of territorial waters, but they have not succeeded. The minister now

feels that great progress was made in this regard even though success was not achieved, and that another conference at the United Nations will be held before long which will be able to build on the foundations established at Geneva and perhaps bring some success out of what was failure at this conference.

I hope that will be the case, but I would point out that the leader of the Canadian delegation when the minister was not there, namely our high commissioner in London, Mr. Drew, had this to say in a statement prepared for delivery in the committee of the conference on March 31, 1958. I am quoting from the records of the conference, and I may say this was before the final vote was taken:

> If there should be no agreement, another conference would be very difficult to arrange. It has taken 28 years to bring this one together since the collapse of The Hague conference in 1930.

I was present at that collapse. It was the first international conference I had ever attended and I was much impressed by its collapse. Mr. Drew went on to say:

> Remembering all the many claims which have already been made, and to which new claims are being added day by day, it needs no great stretch of the imagination to realize how soon we would find ourselves in a state of hopeless confusion. If for no other reason and there are many other excellent reasons we should do everything within our power to agree upon a workable code which will establish a regime of settled law.

We were not able to do that at Geneva. I hope the minister is right, notwithstanding these rather pessimistic observations of the high commissioner, when he says we can look forward before long to another conference at the United Nations which will probably bring this matter to a successful conclusion.

There is only one other matter I wish to bring to the attention of the minister. It arises out of a statement he made not very long ago—I think it was on August 2—and I am quoting from the Saskatoon *Star-Phoenix*. It is a statement which he is reported to have made at Yorktown, Saskatchewan. This report reads as follows:

> Hon. Alvin Hamilton, Minister of Northern Affairs and National Resources, said here he hopes to hold a conservation conference this fall. The minister made the remark unintentionally while addressing the fifth institute of the Saskatchewan council of public affairs, on the topic, "Our natural resources; who should own and control them".

According to the report he went on to say that he had not meant to make that announcement at this meeting, that it sort of slipped out but that this conference on conservation would be held. That is a very important statement. That conference, if and when it is held, will be an extremely important conference dealing with a matter of vital significance to the development of Canada, namely the conservation of our natural resources. I think the committee would like to hear from the minister on the plans he has in that regard.

As we go on with our study of these estimates in detail, Mr. Chairman, there may be some individual questions that I shall wish to raise. Meanwhile I would appreciate it if the minister, when he comes to speak, would say something on the three or four questions I have ventured to mention now.

Mr. Payne: I should like briefly to congratulate the Minister of Northern Affairs and National Resources on taking a new and open-minded approach to the problems that face his department. I think a very significant fact has missed the eye of the Leader of the Opposition, namely that in the past 23 years the committee on mines, forests and waters has not been convened and has not had an opportunity to consider and discuss the operations, plans and estimates of the department now before the house.

Mr. Pickersgill: That was the fault of the opposition.

Mr. Payne: I would further point out that in the course of this committee's discussions, for the first time in a great many years those from the west coast—and, I am sure, from other parts of Canada—have had the privilege of bringing before the committee some of the specific, difficult and also different problems that face that area. We from the west owe a great debt of gratitude to the minister for the opportunity of bringing before the committee a few matters which affect his estimates at this time. I refer to the logging and lumbering industry in British Columbia. I should like to point out that this industry produces 17.1 per cent of Canada's total manufactured products. Speaking for those who come from the west coast, I may say that represents 54.1 per cent of all the earning power in the province from which we come.

After 23 years we feel that it has been a privilege to come before the committee on mines, forests and waters and bring to its attention some of the problems that face the lumbering industry in our part of the world. I am sure the Leader of the Opposition views any vision with a somewhat myopic eye, especially when one considers the fact that the opportunity to present such problems had been, under the former administration, so long denied to industries of such great strength and such great value to the economic welfare of this country.

I would also like to point out that the hon. member for Port Arthur, when he was

speaking a little earlier, was throwing advice around freely with respect to forestry matters, but at the same time he spoke very lightly and deprecatingly about the need for us to face the matter of fire protection. Those of us who come from British Columbia, particularly in this tinder dry year when rain has not fallen since about May 13, do not treat such suggestions in a light vein at all. The loss, not only to our province but also to the nation as a whole, in the depletion of the timber inventory amounts to millions, and will reflect for a long time upon the earning power of the nation as a whole.

I am most anxious in my few words to bring to the attention of the committee the fact that the forest industry in my province pays over $112 million annually in taxes to the dominion government, and that in the days of the previous administration less than 1 per cent of this had been returned to the province in the furthering of studies on sylviculture, upon the development of access roads and for fire protection in order that this great national asset should remain in a state of self-propagation and should not be subject to the devastation of flames.

For the first time in many, many years our industry has had an opportunity to bring before the federal minister the problems contingent upon the provision of such fire protection. Other matters are of an international character. Over one third of our border is linked to its west to the Alaska Panhandle. The previous administration at no time provided funds or took an interest in seeing that the great forest wealth at the back of the United States panhandle border was protected, nor did they at any time endeavour to negotiate for or create a co-operative fire protection plan for the area. On our northern borders along the Yukon hundreds of miles of timber land lie exposed to the ravages of fire. The myopic view of the former Liberal administration demonstrated that they were not concerned in this respect.

I am indeed pleased to bring these matters to the attention of the committee, and in so doing to again congratulate the minister for having taken a new look, an imaginative look, at some of these problems. We look forward in the next three years to seeing many of the long delayed and long ignored problems faced in a factual way which will, in the long run, well serve the economy of our nation.

Mr. Granger: Mr. Chairman, I would like to comment briefly on northern development in Labrador, which is part of my constituency and constitutes one of the last great unknown areas of the world. Sufficient is known, however, to indicate that it contains some of the largest and best iron ore and uranium deposits and forests anywhere in the universe. The greatest need in respect to development, as I see it, is the provision of roads; but as I understand the Department of Northern Affairs and National Resources and the provincial government are working out a program in this connection, there is nothing I should say at this time.

However, I would like to mention that I believe the department should consider the possibility of building roads to the huge iron ore areas, and perhaps considering this as wholly a federal responsibility. There is also a great need for airports in Labrador, for these contribute considerably to the development of an area and Labrador, being inaccessible in any other way, must have facilities for air access. I trust the minister will keep this in mind when making his plans for northern development.

I would also like to mention that caribou are essential to the Indians and Eskimos in Labrador, and that the herd is diminishing. There are reports that caribou are being wantonly slaughtered by military aircraft flying from Goose Bay. This is perhaps largely a provincial responsibility, but I think it is something which should be investigated and the practice, if it exists, should be stopped.

The whole business of the development of our north appeals to the imagination and challenges the courage of everyone with an adventurous soul. I think in our north, and I might be forgiven for saying particularly in Labrador, we probably have a new Spanish Main to challenge those living in this new Elizabethan age. Certainly northern development is something which calls for bold thinking, and I would like to quote from an ancient and wise man, Demosthenes. His words are applicable to the subject under discussion today, a free translation of which is that as a good general marches at the head of his troops, so does a wise politician march at the head of affairs. He not only anticipates events, but by bold and imaginative policies he creates the event. I think the event we would all like to see created is the development of our northern empire.

At one o'clock the committee took recess.

AFTER RECESS

The committee resumed at 2.30 p.m.

Mr. Peters: Mr. Chairman, I am very happy to participate in the discussion on the administration item of the estimates of the

Department of Northern Affairs and National Resources. It has been mentioned on a number of occasions that the ideas developed by the minister of northern affairs and the interpretation he gave to the visionary aspects regarding the desirability of northern development were factors of considerable importance in the winning of the election, and in winning the imagination of the northern people. I am very happy about that, and willing to give all the credit that is due to the minister for northern affairs.

The desirability of northern development has been for too long ignored, and I should like to refer to one aspect of this question with which I am sure the minister is familiar. It is one which affects my part of the country. It has been pointed out on a number of occasions that northern Ontario has enjoyed a certain amount of initial development, but that this development has never been proceeded with by previous governments. The vision and the possibility of development in northern Ontario and in the area immediately north of that province have been brought to the attention of some of the mining companies, and we are very happy that the minister has examined the situation and that something can be done. At Belcher island large deposits of iron ore have been found. When these deposits are developed we expect that shipments will be flowing from Belcher island in Hudson bay southward to James bay to Moosonee, and it is on this subject that I wish to speak this afternoon.

As the hon. member for Port Arthur ably pointed out, we in northern Ontario have continually given of our natural resources so that development might be possible in the industrial areas of southern Ontario, and particularly in the cities of Toronto and Montreal. Our mining industry has contributed greatly to the expansion of those areas, and in the past we have been faced with the situation that everything has been flowing out of these areas and very little has been coming back; the trade and commerce was flowing in only one direction.

As a result of the development which is in prospect and, in addition, the interest which the provincial government of Ontario has shown in this northern area, I believe something can at last be done. I visualize not necessarily a city at Frobisher of 5,000 people under glass, or whatever would have to be arranged, but certainly a large commercial centre in that area. I visualize a port being built in the near future at Moosonee, in co-operation with the provincial government; that the flow of iron will be coming down from Belcher island and Ungava, and that on the return journey ships will be carrying goods which have been manufactured in the industrial areas of southern Ontario, goods which have come by the shortest route, over the Ontario northland railroad up to Moosonee. Certainly with the development of atomic energy, ice breakers will be able to make Moosonee, when it is developed, and Churchill all year round ports. We will then come to the second stage of development, and secondary industries will be introduced to handle the iron products either on the way from the mines or after they have made the return trip. All this can come about if the minister of northern affairs is serious with regard to the need of the development of northern Canada.

At the present time such a development can take place only by means of the methods we have used in the past. We have a mining industry, and this industry has done a great deal to benefit Canada. Certainly nobody should fail to recognize the contribution that mining throughout northern Canada has made over the years. This is also true of the lumber industry, and we can go back to the days when the white pine industry of the Ottawa valley stretched well up into northern Ontario. Now the timber is gone and the product is no longer available.

Something has been said about the need for recreating this natural wealth by rejuvenating the forests and replanting where necessary to perpetuate this form of life. But the mining industry does not deal with this type of renewable resource. When a mine is worked out it is done, and this applies not only to the ores of northern Ontario but also to Yellowknife and the uranium developments in the far north. The products are no longer available, because they have a vanishing point. We have to do something about the parts of the world which are affected in this way, and one of the problems has been the introduction of secondary industries.

Industry itself, and the commercial enterprises of Canada, have faced this problem from a very one-sided point of view. They have looked at an area and said that to develop secondary industries there must be a population which will consume the major portion of the products which it is intended to produce. This is a concept which has worked in many parts of Canada, but it has failed to work on almost every occasion when northern development hinged on natural resources. For this reason we had ghost towns increasing in number in days gone by. This is true also of the economy and way of living of the people who existed in the far north, and I am speaking of the Indians and the Eskimos. We

changed their economy, but we had nothing to put in its place.

I understand that some progress is being made through associations which are being set up to encourage secondary development of particular areas. In northern Ontario they have the northeastern council set up for this purpose. This is also true of northwestern Ontario. But to date the northeastern council, though supported by every municipality in the area, has failed to bring even one industry into the region, and I think this is an appeal which the federal and provincial governments should support.

Through reading and as a result of discussions with people who have studied the economies of other parts of the world, we find that a great deal of the failure to establish secondary industries hinges on the geographical situation in a particular country. Some countries, such as Scandinavia and northern Russia, are in the tree belt—in a similar weather belt to ourselves—and they have similar natural resources. Through the establishment of secondary industries in areas where natural resources were available they were able to overcome the problem of lack of population to consume the goods being produced by the secondary industries. The situation that obtained in the Scandinavian countries and in Russia is analogous to the situation that exists in northern Canada.

Those countries launched research programs. They looked at the potential wealth they had, not in terms of basic industries like mining, lumbering and pulpwood but from the point of view of unproductive industries. For instance, they considered trees that were of no use as pulpwood and mines producing products that were not in great demand. These conditions can be found in northern Ontario, and the problem could be met if we were to establish a trade route through Hudson bay and James bay out into the Atlantic ocean.

If this were done it would not be necessary for us to completely process products in major cities such as Toronto and other centres lying along the route of the St. Lawrence seaway. Instead we would be able to take advantage of the shorter route and send our goods from the northern area to Europe. The establishment of secondary industries in northern Ontario would serve to revitalize and expand the economy.

Initially this undertaking may not be financially sound, but neither is the subsidization of gold mines financially sound. I suggest this is a project that could be undertaken on a long-term basis, and it would be more advantageous to the Canadian people than is the present system.

The towns in northern Ontario are worthy of support. We have reached a stage in our development where centralization may prove to be disastrous to our nation in the event of nuclear warfare. The government is going to have to assist in the decentralization of industry, establishing factories in areas which are not now classed as areas of secondary industry. The route to which I have referred is not impossible of realization. It has been the dream of many farsighted people over the years. Premier Frost recently addressed a meeting which I attended and then left to visit the Moosonee area.

Within 50 or 60 miles of Moosonee the provincial government is working on a power development. There is probably more horsepower available in that area than in any other part of Ontario. Power is a major problem in southern Ontario because we have harnessed all the natural waterways that are available for the production of power. In northern Ontario there are many untapped sources of power which have not been taken advantage of as yet. In the same area there is a large supply of cheap coal. The provincial government has spent much money attempting to develop that coal in a form in which it would be competitive with coal from other areas, but the attempt was not successful. However, perhaps it could be developed for use by secondary industries in fulfilment of the vision about which the Prime Minister spoke so emphatically during the election.

There is salt water north of this area, and I can envisage ships sailing into and out of the ports of Churchill and Moosonee and other ports that may be established in that area, not only for three or four months of the year but on a year round basis. The natural advantages of having a port located in a bay rather than on the shore of the ocean are obvious to everyone. Such ports could be protected in time of war, and in this instance they could be protected along Hudson strait. The advantages of the type of development I am depicting would flow to all Canadians in the form of an enriched heritage, and would not necessarily alone provide an increased profit to existing companies in the area.

The type of project I have outlined will involve a number of important considerations which must be taken into account by the Minister of Northern Affairs and National Resources. One such consideration would be the establishment of an investment board. If we are to establish pilot plants, as was done in the Scandinavian countries and Russia in the initial development of secondary industries, money would have to be loaned by

the federal government through an investment board. The federal government would also have to undertake a research program to accomplish the type of development to which I am referring, particularly with respect to the mining industry.

Those who have passed through northern Ontario will have been impressed by the resources and by-products that are waste material from the mining operation. Each mill has a large slag dump which is a collection of finely powdered rock. The establishment there of cheap gas, electricity or other fuel would assist in utilizing this waste product. It could be made into bricks which in my opinion would be superior to those presently available, because they would be made of molten stone when the means of doing this were available. The waste product lies there today in abundant quantity and is valueless because there is no means of converting it into a useful product. With a little foresight a brickmaking industry could be established in this region which would produce a superior product made of natural rock that would serve many purposes not served by the ordinary type of brick presently available.

Considerable research has already been done in this regard. One extreme advantage of this type of brick is that it is opaque, and one can envisage buildings made of this product through which a certain amount of natural light would shine. Although you could not actually see people walking around at night, through the walls of buildings made of this product, a certain amount of light would come through.

The federal government should also undertake further development in terms of parks and access roads in this area. As was pointed out by the hon. member for Timmins, we in northern Ontario are plagued because we have a road running only one way. The area would have an attraction for tourists if it were not for the fact that one has to enter and leave on the same road. I am thinking particularly of visitors from the United States. No one wants to travel 500 or more miles in one direction and return over the same road if he can take a trip of perhaps 1,000 miles travelling on roads that will constantly provide him with new scenery. One should be able to reach the area coming east from Sault Ste. Marie and west from Toronto.

I am convinced that the province of Ontario will co-operate in any development the federal government may wish to undertake in northern Ontario. The provincial government through its engineers has already surveyed the situation in that area with respect to potential development. The federal government has voted moneys for access roads, and if it is sincere in its desire to develop the northern part of Canada I urge it to take into consideration a program of expanded development in northern Ontario.

When secondary industries are developed in northern Ontario we shall be able to produce food for that area and for the rest of Ontario. In the little clay belt and in the great clay belt food can be produced in quantities which cannot be produced elsewhere. This belt consists of six or seven million acres of farm land. The production possibilities of those farming areas are unknown. The federal government has had an experimental station at Kapuskasing in the great clay belt for many years. The development at that station has been phenomenal. If we were given the encouragement and the resources we could develop in northern Ontario an area that could support 10 times the population that is there now, and support it much more advantageously than we can with the small, partial hand-outs we now receive from the government.

We appreciate those hand-outs; certainly all the people who live there and have spent a lifetime developing the towns appreciate the assistance they have received, but this is not the end. We do not want to see a situation develop such as developed in the town of Matachewan, where a few years ago there were two or three thousand people. When that area was developed initially we built railroads, access roads and development roads. We built many towns like Matachewan; we built homes, banks, stores, schools and facilities. Then when industry found that it no longer had ore that was valuable to mine, it moved out of the area. This is a field in which the Minister of Northern Affairs and National Resources must be interested. His department must set up a commission to help those people.

I would suggest that the first stage of this development is for him to examine the secondary industry situation. To do that I would suggest that he set up a commission, or have a number of the officials of his department go to the Scandinavian countries or Russia where they have done development work along this line, if what I read is true. I am told that in Scandinavia when they cut down a tree they do not do as we do, cut down one tree and destroy 10. They do not desecrate the forests. A farmer brings in a tree with the foliage still on it. He brings the tree into the factory and it is processed there and they use all parts of that tree.

They have been able to attain an efficiency of 85 per cent to 86 per cent with their

products. We in Canada are very fortunate if at the outset we are able to get an efficiency of 28 per cent. There are many modern lumbering companies with an efficiency factor of 17 per cent and 18 per cent. I would suggest that we are wasting our resources. We are wasting them because we do not know what to do about them.

I am interested in visiting anybody who has an industry that he wishes to settle in my area. We have many things to offer industries coming in, but we have not been given leadership by former governments as to what type of industry would be willing to settle in that area. The delegation the minister sent to those countries might find out how they got their initial secondary industries started. It may have been necessary to subsidize them; it may have been necessary to have government intervention to the extent of building pilot plants for those industries.

I would like to congratulate the industries themselves—and it is not often that I do this—that have taken the lead and have had the foresight to do something for themselves, in many instances despite the lack of action on the part of governments. I speak of Abitibi and the plant they built at Sturgeon Falls. May of the small lumbering companies are now sending four or five cars of scrap lumber and sawdust to this particular plant. They are making a kind of fibre board that seems to be finding acceptance on the market, which is now replacing many other types of lumber. That kind of action helps to solve problems. I think the company is to be congratulated on the work it did in developing this type of market.

The McFadden Lumber Company at Blind River is another example. They developed a bondwood plant in that town. They may not own the original patent, but they were able to salvage fifth and sixth grade lumber. By cutting it into small strips and using a process of gluing it together they were able to end up with sheets of lumber 16 feet long and 4 feet wide of No. 1 white pine made out of something that previously was considered to be scrap and waste material.

If the government, through its committee or commission, were to go to other countries they would see these things in operation. Certainly Sweden has done an outstanding job in this particular field of lumbering and forestry. If they were to go to those countries they would find out how initially they were able to start their pilot plants or secondary industry plants, under whatever type of financial basis they were established. With that information we would be able to do the same thing in Canada.

I do not think it is a good idea to look at the situation either in Great Britain or the United States, because their geographical situation and their resources are not the same as ours. I think we are going to have to go to a country which has trees and a climate the same as ours, and whose natural resources are the same as ours. We should start on that basis; we should start on what we can do, if we are willing to do it, and this information must be obtained before we decide what we are going to do.

In the two sessions I have been here I have found that the Minister of Northern Affairs and National Resources has imagination and initiative. He has the youthfulness which is necessary, because this is not an old man's area; it is a young man's country. He is capable, and he has the ability to do the developing. If the Prime Minister were realistic about this he would not be concentrating on Frobisher bay. I have no objection to a town being built eventually at Frobisher bay, but I do not think he should start that far away. He should start in on the fringe of our industrial areas and push northern development before him. He should not start on the other side and try to squeeze it down into southern Ontario. He is going to have to work, but I am quite sure that if some initiative is shown this type of vision, this type of program, can be initiated.

There may be some question as to why the federal government should be involved. The provincial government, I suggest—and I do not want to infringe on its rights—is going to co-operate in any way and any manner the federal government may suggest. I also suggest that the provincial government is not in a position to go outside of Canada to get the information and the ideas and talk to the owners of industries in other countries who may wish to put subsidiary plants in our area. We are going to have to co-operate with the provincial government. I am sure their co-operation will be readily given. I say that simply because the government of Ontario is also Progressive Conservative and knows this problem. Premier Frost, when he went into northern Ontario, had a vision of trains going from Toronto to James bay. He has the sympathy and will have the ear of the present government.

I strongly urge that this procedure of understanding and development in the far north be undertaken first in northern Ontario and continue into other areas from that point.

Mr. Nesbitt: Mr. Chairman, I shall try to keep my remarks as brief as possible. This, no doubt, will be pleasing to the members of the committee. I have two little matters I should like to bring to the attention of the minister, perhaps to nudge him a little

bit. These matters have been brought up on previous occasions by myself and by my colleagues, and I would just like to remind the minister of them again.

The first is the question of the upper Thames valley authority in southwestern Ontario, and the second matter concerns Long Point island in lake Erie. I realize that the minister is fully aware of the problem concerning the upper Thames valley authority, and I do not intend to repeat the details for his benefit or for the benefit of other members of the house at the present time. These details are on record.

I should like to say, however, that this project has been started with the construction of the Fanshawe dam at London. It is my feeling, and in fact I would say the feeling of all the people in the area, that this pilot project should be completed. The heavily industrialized and settled areas of southwestern Ontario and indeed parts of Quebec are now beginning to suffer from water shortages as a result of the lowering of the water table and soil erosion. The older parts of Canada deserve some conservation projects, I think, just as well as the new parts. Every spring the Thames river, because of the loss of the forests, floods and in summer of course the river virtually dries up. In the spring there is a flood and much valuable top soil is carried away by the water. If the upper Thames valley project were completed it would protect the top soil which is carried down into lake St. Clair every spring, and which we can ill afford to lose.

Second, as a result of the lowering of the water table in that heavily industrialized and heavily populated area there is a shortage of water in southwestern Ontario. People are having to pipe water in from the various lakes. If this project were completed the water would be conserved for irrigating farms in the summertime, particularly the tobacco farms, and there would also be a maintenance of the water supply for the villages, cities and towns.

Last, but by no means least, the lakes that would be created as a result of the construction of the dams in connection with this scheme would provide much needed recreational areas in this part of the country. For example, in my neighbouring constituency of Perth, which is represented by the Minister of National Health and Welfare, they have the Stratford festival every summer. The cities in that area are small and the facilities for recreation are limited. If the two projects which I and others have in mind were completed in connection with the upper Thames valley program, namely a dam at St. Marys in Perth county and a dam at Woodstock in Oxford county, they would provide recreational facilities and areas for the largely increased tourist trade in this part of the country.

The federal government's share of this project has been estimated at 37½ per cent; the share of the province of Ontario, 37½ per cent; and the cities and municipalities, 25 per cent. The province, I understand, is ready, willing and able to put up its share, as are the municipalities. I would hope the minister would reconsider this matter and discuss it with his colleagues and advisers. I have heard it said that it has not been shown as yet that the cost-benefit ratio would justify the expenditure of this sum. Well, I am not so sure of that. It all depends on how you estimate the cost-benefit ratio. If you include the recreational value at the present time and in the future, and this is an important factor, I am quite sure the cost-benefit ratio would go well beyond the limits that have been set.

I appeal again to the minister on behalf of my constituents and the constituents of my colleagues in the area, who I am sure will be speaking on this matter, for immediate consideration of the completion of this project as soon as possible, because of its value from the point of view of water conservation, soil conservation, flood control, and last but not least, recreation.

This reference to recreation brings me to another subject that I have mentioned in this house on previous occasions, and that is the question of Long Point island in lake Erie. This island is a very interesting place. Once again my views in this connection are all on record and I am not going to rehash them. They are there for those who are interested to read. This island is 18 miles long and is in reality a sandbar stretching out into lake Erie. It is considered to have the best bass fishing and duck shooting on the continent of North America. This island was purchased in 1866 by a company called the Long Point Island Company, most of the shareholders of which are residents of the United States.

In the very heavily industrialized and heavily populated area of southwestern Ontario recreational facilities at the present time are limited. People often have to go hundreds of miles to find a place where they can enjoy themselves. As a result of the greatly increased traffic on our highways, this is not only a chore but is actually a hazard to a family going away for a week end. Here we have in lake Erie an island 18 miles long which is easily accessible from these heavily populated areas in southwestern Ontario and within an hour or an hour and a half's drive. We have this area with the

most beautiful beaches I have seen, but nobody can go on them because a handful of people go there for about a week a year for duck shooting and have this island in their control. It is my feeling, and I have repeated this many times, that this island should be made into a national park. There are other national parks in the great lakes district such as Pelee island, Georgian bay, and so on.

These people who have this island under their control have done very well in the matter of conservation for many years. I believe this country should thank them for that. They should be left a number of acres in order to carry on their activities as a way of saying thank you for what they have done. The game on this island is unique on the continent. However, I do not believe these people, who only go there for about a week a year, need a park of about 21,000 acres. This island should be enjoyed by the people in the vicinity. It is needed now, but it was not needed when these people obtained it. These people should be left with 1,000 or 2,000 acres, but let us acquire the rest of it for the use of all our people.

Mr. Roberge: As you know, Mr. Chairman, I have had the opportunity of serving as a member of the mines, waters and forests committee. I was very interested in the work that was done in that committee. I have heard with interest the statements made by the minister as well as by the witnesses who appeared before the committee. At this time I feel it is only just that I commend the work done by the chairman of that committee, the hon. member for Lambton West. He did direct the work of the committee in a very able manner.

(Translation):

Mr. Chairman, we were reminded this morning by the Leader of the Opposition that the legislation setting up the Department of Northern Affairs and National Resources was incorporated into our statutes by the Liberal administration headed by the Right Hon. Louis St. Laurent. He also reminded us of the fact that the original holder of that portfolio was the former member for Montmagny-L'Islet, the Hon. Mr. Lesage, whose departure was a matter of general regret in this house. Incidentally, I congratulate him on the sound administration he gave the Department of Northern Affairs and National Resources and wish him, in his new capacity, every possible success. I hope he may even become the next premier of Quebec.

Mr. Chairman, we have heard a great deal of late about vision. We had heard about it too during the election campaign. I do not think I would be far wrong in stating that the Prime Minister and the members of the government have established a very close relationship between that vision and the public works program of $1,185 million announced by the government.

We are convinced that that public works program in northern Canada cannot solve unemployment, although it was in that particular sense that it was put before the people of this country. Of course, this is not saying that we, on this side of the house, are opposed to northern development, or to the exploration and possible future development of our natural resources, but I do want to emphasize that the government made much of this vision when they described it to the Canadian people during the election campaign.

If the Prime Minister and his colleagues want to keep on saying that they had a vision, that is their privilege. On this side of the house, though, we can say that the former government and particularly its Minister of Northern Affairs and National Resources had been both wise and realistic in providing for such steps as appeared necessary for the future development of Northern Canada and in making preparations in that regard. I searched the records of this house on the matter, Mr. Chairman, and I also made a detailed study of the various publications printed for the Department of Northern Affairs and National Resources, as well as the briefs submitted to the Gordon commission on economic prospects.

In the record of the 1953-54 session, I found some sentences spoken by the then prime minister, the Right Hon. Louis St. Laurent, when he introduced in this house the bill creating that department. This is what he said, according to page 697:

> One subject to which such increased emphasis will be given by the passage of this bill is the administration and development of our northern territories.

And he added in the same speech:

> Now, it seemed to us that it was becoming increasingly apparent that it would be desirable to alter the situation and to create conditions in which it is clearly indicated that the government and parliament want further attention given to the development of our north country, and I may say that that was further impressed upon us by the fact that there have to be quite a number of non-Canadians going into that territory. We felt that it was very important to have the situation such that, whenever they went there, they realized they were in Canadian territory and in territory that was administered by Canadian authorities.
>
> The present bill is designed to give more emphasis to the fact that the people of Canada are greatly interested in this northern territory and regard it as an important part of the territory subject to the sovereignty of the Canadian nation.

And I also read on page 700 the following paragraph which has already been quoted this morning in English by the Leader of the Opposition.

We must leave no doubt about our active occupation and exercise of our sovereignty in these northern lands right up to the pole.

In the report submitted to the royal commission on economic prospects by Mr. F. H. Collins, commissioner for the Yukon, I find the following text on page 5:

(Text):

This brief has as its objectives an assessment of the contribution that the natural resources of the Yukon Territory might make to the Canadian economy of the next quarter century and an appraisal of the courses of action which appear to lie open for promoting the achievement of that contribution. It describes in turn the territory's natural resources, its population, and the economic development it has undergone; it then proceeds to assess the future prospects of the Yukon's mining industry and the problems facing future economic expansion. Lastly, it suggests how this economic expansion might be encouraged and why early action along certain lines appears to be justified.

(Translation):

And on page 19 of the same report we see the following statement:

(Text):

The requirements that the next 25 years may bring for the construction of roads are given illustration in those roads which even now would form highly useful adjuncts to the territory's system of development roads.

(Translation):

The commissioner for Yukon then sums up the works to be done in connection with access roads and what I would call connecting roads. Moreover, he speaks about certain roads already started. It is certainly not necessary for me to read this whole passage since it can be found after the previous quotation.

And then he goes on to say on page 20 of the report:

(Text):

Although these appear now as the greatest needs that the foreseeable future holds for the construction of roads in the territory, the succession in which they may be built is by no means certain, nor is it unlikely that the priority given each individual road will undergo substantial revision. They nevertheless point to the significance that the provision of further roads will have for the developing Yukon economy.

(Translation):

In the brief submitted to the Gordon Commission about the Northwest Territories we again find substantially the same conclusions.

I should like to recall also that it was under a Liberal regime that positive action was taken concerning our sovereignty over Canadian northern territory; may I recall also to the house the trip made by His Excellency into the Canadian northern territory some two years ago.

The main thing, Mr. Chairman, is to establish a link between central and northern Canada. I hope that this government will carry on the policy established in this connection by the previous government. If I remember rightly, the minister has referred to this in committee. That area must be developed in accordance with a plan as definite as possible and that plan—I am glad to emphasize this once again—was prepared under the old Liberal regime, as pointed out this morning by the leader of my party.

What change did the present government make in the plan? They merely accelerated its implementation, cutting down to five years what the former government had planned to do in 25 years and what economists also estimated would take 25 years to put into effect. We can well wonder whether the government was serious when its candidates stated, during the last election campaign, that an immediate result of those projects would be to cut down unemployment and, I repeat, as I have already said and as others have said: it is not in Northern Canada especially that there is unemployment but in areas already developed where more workers are living.

I would suggest, Mr. Chairman, that there are other reasons to accelerate the implementation of this plan. When the department was created in 1953 the prime minister at that time referred to non-Canadians interested in those northern territories. No doubt he was thinking of those lands located farther north than the Yukon and the Northwest Territories. It was therefore necessary to group under a single administration responsibilities which, until then, had been spread over several departments or divisions.

Since then, we have seen important developments in ballistics and long range missiles. Very recently, we have learned of developments in submarine transport.

During the same period and closer to us, we have witnessed the construction of warning lines such as the Dew Line and the Mid-Canada Line.

If, Mr. Chairman, the government wants to speed up the exploration and development of our rich northern areas because of such events or of future developments which we have reason to dread, we Liberals are all for it. But even without such developments, we are in favour of the opening up of our northern territory, as has been already demonstrated by the Liberal government. It remains to be seen whether the acceleration

of development at this time is desirable economically, considering the urgent needs felt in other sections of Canada.

But, Mr. Chairman, in my opinion, those projects cannot help the unemployed, and yet it was in this guise that they were dangled before the people. How many men are back to work on account of such projects?

As you no doubt know, Mr. Chairman, the functions and responsibilities of the Department of Northern Affairs and National Resources are not limited to the Yukon and Northwest Territories; section 7 of the Northern Affairs and National Resources Department Act, 2-3 Elizabeth II, Chapter 4, prescribes:

(1) The Minister may formulate plans for the conservation and development of the resources of Canada and for research with respect thereto,

This section also provides that:

(2) The Minister may co-operate with the provinces and municipalities in carrying out any conservation or development plans under subsection (1).

It so happens then, that under the estimates of the Department of Northern Affairs and National Resources, which are before us at this time, certain grants or subsidies may be made to provinces, and to the province of Quebec in particular. Now, how could the province of Quebec benefit from those contributions put at its disposal by the federal government as would the other provinces?

Well, Mr. Chairman, if I turn to page 403 of the estimates, I find there "contributions to the provinces of amounts equal to one-half of their expenditures for camp ground and picnic area development." I understand this is a two-year plan and that the required amount has already been expended, or almost. I understand too that these camp grounds or picnic areas must be established alongside highways. In Megantic, more particularly, there are three provincial highways crossing the county lengthwise, whereas two other highways cross it breadthwise, at least in part. Along at least three of these roads there are magnificent lakes which could easily be developed, if not from the tourist point of view, at least for the benefit of the young people of adjoining municipalities. This could be done if advantage were taken of these contributions to the provinces.

Contributions are also made to the provinces to help them build access roads to certain resources under the provisions of certain agreements, already in force, or about to become so. An amount of $9,000,000 has been set aside in the estimates in this regard, on page 424 of the blue book.

Intense exploration is going on at this time in northern Quebec, with already highly satisfactory results, especially as regards iron ore. Will the province of Quebec take advantage of these contributions or will it act in its accustomed manner, refusing any part of the necessary or at least useful subsidies put at its disposal by the federal government?

Obviously I am not talking about national parks since no national park in the province of Quebec comes under the jurisdiction of the federal government, although there are historic sites maintained by the federal government as, for example, the Battlefields park in Quebec, and some others.

Our national resources, Mr. Chairman, are not limited to our mines, there is also our forest system which is of interest to each and every province. This year we will be called upon to vote $1,650,000 to help the provinces to take stock of their forest resources, to undertake reforestation and to protect their forests against fires, all this in accordance with certain agreements. I refer now to page 429 of the blue book. Obviously, several provinces will take advantage of that assistance from the federal government and, unless I am mistaken, the province of Quebec may be the only one to do without it.

Roads and access routes to those forests are also necessary. The federal government is offering one million dollars to the provinces in this connection. Once again, what proportion of this amount will the province of Quebec get, if the provincial government of my province clings to the policy of non co-operation it adopted when a Liberal administration was managing the affairs of this nation?

All those amounts which are lost to Quebec are lost because of Quebec's insistence on making political capital with federal-provincial relations, both in the fiscal and other fields, whereas all parts of Canada should be co-operating in the development of our country.

I am convinced that the Quebec government is as anxious as other provincial governments in Canada to develop its own province. Some one will object that national resources come under provincial jurisdiction. I agree; the objection will also be made that if the Quebec government accepted those subsidies from the central government, it would destroy provincial autonomy. The easy answer to that one is that central government contributions will in no way prevent provincial authorities from exercizing that autonomy and from favouring the more particular interests of the residents of Quebec with regard to natural resources.

These resources will certainly be neither inconsiderately diminished nor dilapitated if federal aid is acquired by the province.

Over the years, the Quebec government has refused to co-operate with the central authority, on grounds of provincial autonomy, when it suited its purpose, but in other fields saw no disadvantage or danger in doing so.

The people of the province of Quebec are well aware that, for many years, they have lost millions of dollars because of this refusal to co-operate. We hope this deficiency will now cease and that relations between the governments of the same colour, or almost the same colour, on both levels, will help Quebec obtain the amounts of money earmarked for that province as well as for the others.

(Text):

Mr. Herridge: Mr. Chairman, I am going to be very brief but I rise on this item as the appropriate one on which to utter a few sentences.

I would like first of all to express my appreciation for the interest and industry of the minister, and his serious concern with respect to the development of a policy for our natural resources. I have had the opportunity to have one or two chats with the minister, and have been very pleased after conversations with him to understand his general approach to the whole situation. In addition, I would like to express my usual appreciation of the good work done by the staff of his department with all its ramifications from water resources to Eskimos and caribou.

For some 13 years I have been one of those members of this house who have been urging the standing committee on mines, forests and waters to sit and have an opportunity to examine the estimates of this department and those of the Department of Mines and Technical Surveys. I think we must give credit to the minister in that he has seen to it that this committee has sat during the current session and has had the opportunity to hear evidence and to hear a statement from the minister. This is the only part of the minutes which I have had the opportunity to read, but I am very pleased to note in that statement the government's philosophy and its thinking in general with respect to the development of our natural resources.

I am always delighted when I find governments accepting piecemeal and from time to time policies advocated from this corner of the house. We are always ready to give credit where it is due, and in this respect I am very pleased about two things in particular. First, I should like to quote from the minutes of the committee at page 19, where the minister, as part of his statement, said:

> The tenth point is that of conservation. There will be a conservation conference called to plan the most efficient and effective use of the resources of this country at national, provincial, municipal private and research levels, because there is no use, gentlemen, in building roads and finding out the area of energy resources and finding out the area of mineral resources and in putting them together in juxtaposition, planning for the processing here in Canada—there is no use in doing all this work if there is not some thought given to a long range conservation concept of the most efficient use of those resources.

We in this group support that statement by the minister without any qualification, and if this government gives effect to that concept we shall be very pleased indeed.

As you know, Mr. Chairman, for a good many years I have had resolutions on the order paper expressing the point of view of this group with respect to the need for a dominion-provincial conference to establish national principles and policies with respect to the development of our renewable natural resources, and I am very glad indeed, as are the rest of the members of this group, that the minister has made this statement. We know it is not a very definitive statement so far, and we will have to see what the future brings forth, since our fingers have been burned on previous occasions when we have been a little too optimistic.

I have been in the habit of taking people at their word, but then I have lived among lumberjacks and they are very simple and straightforward people, but the statement sounds very well and I trust that without undue delay it would be put into effect. We are very pleased to observe this attitude toward this question because there is no doubt we have got to have an acceptance of national principles and policies with respect to the development of natural resources, and then co-operation between the various levels of government and private industry to put these policies into effect for the advantage of Canada as a whole.

My second point is that I was particularly pleased to see the mention made by the minister in his report with respect to his roads to resources program. I think there was some imagination used, not only in the terminology but in the policy itself. Although the funds which have been allocated for this purpose to date have not been very large, I hope they may become what one could call the embryo of something which will develop into a very substantial policy, because I think

it is very necessary to the satisfactory development of our provinces. First, there should be a policy with respect to principles, and a policy with respect to the development of natural resources as far as conservation is concerned, and then access to these resources.

I rose to mention those two points in the minister's report, in particular. As I said, I have not had the opportunity to read these minutes as they are the sort of thing I pack into my briefcase when I am going home on the train, and read at leisure by way of light reading. I shall not say any more at this time. I shall have something more to say on the water items and on the forestry branch, but I will not detain the committee any longer at this time.

Mr. Muir (Cape Breton North and Victoria): Mr. Chairman, unlike some other hon. members who have preceded me in the debate, I do not intend to get into a controversy over the merits or demerits of the present minister of northern affairs compared with the previous minister. In any event, I think it is common knowledge that the present encumbent is the most capable individual who has ever held the portfolio. However, I should like to make some brief observations concerning Cape Breton Highlands national park which is located in my constituency.

I should like to commend the minister and the government on the winter work program which was carried out last year. There was a great amount of excellent work done by the workers who reside in the area, under the capable supervision of Mr. J. H. Atkinson, the superintendent of the park at that time, whom I understand has served many years in the parks service. Unfortunately the department has seen fit to transfer him to Newfoundland, but what has been our loss will undoubtedly be Newfoundland's gain. I have no doubt that the present superintendent will continue to carry on the work here in a very capable manner.

There is one point in the annual report under the national parks branch which says that the increase in the number of visitors to the park is reflected in the increased use of the recreational facilities. That is true, and I fully agree with it. To give the committee an example, in 1955-56 we had 75,310 registered visitors to the Cape Breton Highlands park. In 1956-57, there were 116,556 an increase of 41,246. In the year just ended the number went up to 128,397, another increase, of 11,841, and I have no doubt that a new record will be set in the present year.

As I have already stated, a great amount of proper work—I use that term—was carried out in the park last winter with regard to camping grounds, and my attention has been drawn to a newspaper item in the Cape Breton *Post* some days ago which stated that at Ingonish more than 1,000 visitors jammed the camping grounds on a week end, and that a total of 600 were registered on another particular day. This will give the committee an idea of the extent to which these camping grounds are being used. The article goes on to say that campers have the use of showers, washing machines, tables and parking facilities, all for 50 cents a night a car, regardless of the number of passengers. This is a very good thing. We are doing something here for the ordinary people of Canada—the workers who wish to take their families and their tents and get out among the beautiful scenery that exists on Cape Breton island. I may say that I doubt that any other scenery in Canada can compare with it.

On this same subject, I hope the minister is listening very intently and that in the coming winter we will see another winter works program along the same lines as last winter, because this park could be developed to a much greater extent than it has been developed so far.

There is one other point I should like to mention at this time. Some days ago when we were discussing a bill to transfer certain land from the park back to the province for hydro development I mentioned that I felt the minister and the department should give consideration to expanding the park boundaries. I do not know if the minister was fully aware of what I meant at that time. I felt quite sure he was, but I noticed an editorial in the local newspaper afterwards which stated that it appeared that the minister and myself were unable to get together on this matter, so I should like at this point to reiterate what I have already said. My idea was that the department should give consideration to the inclusion within the park boundaries of all the northern tip of Cape Breton island. The minister did make a statement concerning the difficulties posed by town sites and so on. Well, we do not have any town sites here, only a few villages which do not extend more than a few hundred yards inland. I have in mind that if and when the park boundaries were extended we could skirt these villages and go up into the north country, as I mentioned some days ago, taking in Inverness county and down that side of the county where there are no villages that I can see on this map. I hope the minister will give every consideration to this suggestion. I can understand that there may be problems when there are town sites

within parks, but I do not see how any great problem could be created by this suggestion that I am making.

Another matter which I should like to bring to the attention of the minister is one that I mentioned in the debate on the speech from the throne on November 12 last year, namely the discrepancy in the wages paid to employees of the Cape Breton park as compared with those paid to workers in other parks throughout Canada for the same type of work. I do not know just how the authorities arrive at the amounts that are paid to workers in the park, but I understand that they are based on the prevailing rate for the area, and this is difficult to understand as there is no prevailing rate in this area because there is no industry there. I cannot for the life of me see why anyone working in the Cape Breton national park should receive less money than anyone who is doing the same job, let us say, in the Banff national park. I am sure the minister and his officials have already taken up this matter and I sincerely appeal to them to continue to give further consideration to the suggestion that wage rates in this area be placed on a level with wage rates paid in other national parks in Canada.

I raised another point on a previous occasion and no action has yet been taken in this regard. I trust that the department is giving consideration to the construction of a new club house at the golf course in the Cape Breton Highlands park. We have there, one of the finest golf courses in the country but I am sorry to say the club house is not in keeping with the standards of the golf course.

Although there are other projects which could be undertaken in the area and mentioned now I wish to bring to the attention of the minister and his department and impress upon them at this time only the three most important points I have raised. The first is a request for the initiation of a winter works program for the coming winter. The second is a request for consideration of the expansion of the boundaries of the park. The third is a request for an increase in wage rates paid to employees in the park.

I understand that the period has expired during which the provinces could indicate their willingness to participate in assistance from the federal government in the program of establishing campsites and picnic areas. I urge the minister to give consideration to renewing this invitation so the provinces can further participate in the program. Some excellent work has been done in the province of Nova Scotia as a result of this program and I hope the minister will give sympathetic consideration to the requests I have made in these few brief remarks.

[Mr. Muir (Cape Breton North and Victoria).]

Mr. Rouleau: Mr. Chairman, all of us realize the importance of the tourist industry in Canada. We had the opportunity to gain further proof of that fact a few weeks ago when we discussed in this house a proposal for joint loans to tourist resort operators. The tourist industry is a big business. It ranks third among Canada's major industries. In 1956 tourists from foreign countries spent $335 million in Canada while in 1957 they spent more than $350 million here.

What about the amount of money spent on travel by Canadians? It is quite impossible to estimate it but I am sure to be not far from the facts when I say that at least the same amount of money must be spent each year on travel by our fellow Canadians. If we look at the statistics we realize that for the past ten years, for instance, the tourist industry has developed at a tremendous pace in Canada. The tourist industry which brought in $270 million in 1948 will probably bring us $370 million in 1958. Since approximately 90 per cent of our tourist business comes from our neighbour south of the border it provides a source of United States currency of which Canada is always in need.

As I just said our best market for the tourist industry is the United States of America. In 1946 United States travellers spent some $308 million in this country while $27 million were spent by visitors coming from other countries of the world. We can increase our market in the United States and at the same time easily create new markets in other parts of the world. We in Canada have everything to offer tourists. The beautiful and diversified scenery of our country from one ocean to the other is second to none in the world.

I am certainly not going to go into detail in an attempt to give a description of every region in Canada. Hon. members with every justification have praised their own ridings in this house on occasion. I wish only to mention the majestic beauties of the province of British Columbia with its mountains, its beautiful cities of Vancouver and Victoria; the grandeur and majestic beauty of the Rockies which are not surpassed by any country in the world; the colourful spectacle of the Calgary stampede; the vastness of the central provinces; the famed Niagara falls for romance; the Queen city of Toronto; northern Ontario and Quebec with their thousands of lakes where fish and game can be found in abundance; our cosmopolitan Montreal with hundreds of attractions of all kinds; the charm of that historic, typical French city, Quebec; the little paradise for tourists which forms the maritime provinces and our St. Lawrence river which is the country's longest inland river.

We in Canada can offer winter as well as summer activities. We have plenty of snow in winter for skiing and the air is invigorating. For the sportsman Canada offers unlimited opportunities for fishing and hunting in the spring, summer and fall when Canadians as well as tourists can take advantage of the thousands of lakes and the rich wooded areas which are found in almost every province. We have all kinds of summer and winter resorts. We have some of the best hotels in the world. In our big cities we have facilities for large conventions. The Queen Elizabeth hotel just completed in Montreal can accommodate small and big conventions as well. We can offer one of the best transportation systems in the world, either by train, plane, car or boat. All that we have to offer we have to promote. The Department of Northern Affairs and National Resources has done a good job in the past, but more should be done. Our national parks which are a big attraction to the tourists should be multiplied and beautified. We should find more picnic grounds alongside our highways, we should find better accommodations for tourists.

According to the annual report of the Canadian travel bureau, which was established in 1934 and which is responsible for the promotion of travel to and within Canada and for the general welfare of Canada's tourist industry, that agency has a staff of 85 to 90 in Ottawa to do the job of promoting Canada. According to the same report there are also offices of the bureau in New York and Chicago with small information staffs, as well as a travel representative at the Canadian consulate general in Los Angeles. At page 1951, of the annual report of the Department of Northern Affairs and National Resources for the fiscal year 1956-57 we find the following statement:

> In 1956, the bureau achieved a new all-time record for inquiries handled during a single year. A total of 538,063 inquiries were received 460,882 by its Ottawa office, 55,181 by the New York office, and 22,000 by the Chicago office. An advertising program at a cost of $974,607 was conducted in 50 magazines and 59 newspapers in the United States. Combined circulation of the magazines used totalled 71,909,759.

As far as I am aware the Canadian government travel bureau is doing a good job considering the small amount of money they are given for doing so.

As I said at the beginning of my remarks, the tourist industry brings over $350 million to Canada every year. That amount exceeds the sum spent by any department of the federal government save the Department of Health and Welfare, the Department of Finance and the Department of National Defence. It is one of our largest industries and we should do the utmost not only to maintain but increase it. Any amount of money spent on it is a sound investment. The government should give consideration to expanding our Canadian government travel bureau and should do even more than is presently being done to multiply and beautify our national parks.

I also wish to suggest that a department of tourist travel and information should be created by the government, under whose jurisdiction would fall the national parks, the Canadian government travel bureau, the Canadian Broadcasting Corporation, the national film board and any other bodies related to the tourist industry and information in Canada and abroad. I submit that every possible consideration should be given to the suggestion I just made. Its purpose is not necessarily to find an opening for the many candidates there are for government posts, even if it would help the Prime Minister satisfy at least one of the many ambitious supporters of his party in the house.

The sole purpose of the formation of this new department would be to help promote by all means the tourist industry in Canada. It would also put under the authority of the same minister the bodies and corporations which have to work closely together in order to achieve good results, namely national parks, the government travel bureau, the Canadian Broadcasting Corporation and the national film board. If each and every one of those bodies have done a great job so far, they can do better still if they are working under the jurisdiction of the same minister. I hope the government will take this suggestion under serious consideration.

In closing, I should like to ask the minister if he can tell the committee whether the government has any program or plans for the development of the tourist industry in Canada?

Mr. White: Mr. Chairman, I want to take about five minutes of the time of the committee to say a word or two about western Ontario and the development there, past, present and future. I wish to bring to the attention of the minister the site that was first mentioned and developed by the late John R. MacNicol, a former member of this house. That area was situated in Kent county adjacent to the river Thames on No. 2 highway. This was the site of an Indian village which was destroyed by invading Americans many years ago. The site was lost for many years. Through the efforts of John R. MacNicol and many of the local residents the area has been developed, a small park was provided there and any time that I ever

drive that way I find the park is in use by tourists and visitors from the United States and the surrounding area. It is my opinion that this could be expanded.

I understand that in the area there are many people who are in possession of Indian relics of one kind or another and that possibly on the site a museum could be constructed which would house—and I know there are many who would contribute—those Indian relics to this museum. There are also some materials which were used by the pioneers which may disappear entirely from the Ontario scene in a very few years. They could well be housed there. I hope the minister will give serious consideration to the expansion of this project because it is situated on a very busy highway and it is a pleasant place for people to stop off at and rest. It should be very carefully considered by the minister.

While I am mentioning the name of John R. MacNicol may I say that I believe he was one of those who first mentioned the possibility of the development of the South Saskatchewan river dam.

I want to turn now for a moment or two to the Thames river valley authority and to endorse the words of the hon. member for Oxford who preceded me a little while ago. I want to point out to the minister that the work commenced by that authority some years ago is now about half completed. I refer to the major project. The Fanshaw dam has now been in existence for some years and has proven a boon to the community. But there are many other developments on the upper Thames valley which have been contemplated, and I believe considered by the minister, and we are hoping that, as the hon. member for Oxford mentioned, the pilot project will be completed.

The water problems in southwestern Ontario are acute and any development there should take water conservation into consideration. I am one of those who believe that the restoration of our forests is a fundamental part of any conservation program so that any area in the watershed that can possibly be considered as submarginal land should be devoted to forest growth.

Another problem has developed. The Fanshaw dam in the upper Thames valley was sold to the residents of the valley as a conservation measure to ensure a fresh and continuous flow of water through and beyond the city of London. However as soon as the dam was completed the city of London commenced to draw off water for city use. They polluted it with sewage and dumped it back into the river. For 50 years the city of London has also been using artesian wells nearby. Actually what has happened is that in a sense the city of London has been stealing water from the surrounding municipalities. Those municipalities find this embarrassing and the farmers in the nearby areas not only find it embarrassing but expensive because of the lack of water. It is a detriment to the farms in the community and a financial loss to many of the farmers. Therefore, when we are considering a conservation program. we should have regard for use of water.

A program that I advocated—and I am quite certain I was not one of the originators—at the University of Western Ontario some 13 years ago was to draw a supply of water for the western Ontario area from lake Huron by means of a pipe line. It would supply many municipalities en route to the city. Now with the introduction of the Ontario water resources commission this plan is under very serious consideration at this time. The city of London favoured the plan. I mention this because it has a relationship to the conservation of water and other resources in the upper Thames valley area.

But, strange as it may seem, the public utilities commission which provides the water for the municipalities and have, as I said, secured their supply of water from the adjacent municipalities by artesian wells are inclined to oppose this forward-looking plan of the Ontario water resources commission. The public utilities propose a filtration plant at the Fanshaw upper Thames valley site. The net result will be that there will be less pure clean water flowing down the Thames river through London, Ontario, and more polluted water added for questionable downstream benefits.

The department of northern affairs and all other public bodies interested in this problem should take a long forward look at it, not with a view to ascertaining what the results might be tomorrow but what the needs and results might be 50 years or more hence. I am not against, in fact I am for, the completion of the upper Thames valley authority plan as soon as possible. However, I want it to be a plan which will serve the greatest number of people in the area and which will give the greatest possible benefits for the dollars spent.

I do not want to take any more of the time of the committee in discussing the upper Thames valley authority. I hope the minister will look favourably upon the plan and consider it when he is compiling his estimates for the coming year.

I do want to say a word about national parks. I was very interested, as I am sure the members of the committee were, in what the hon. member for Oxford said about

the problem of Long Point island. I endorse what he had to say. I should like to refer also to an area called Mitchells bay where United States interests hold a long-term lease. They secured this lease from the former government. I, like the Prime Minister, believe in Canada for Canadians. I hope that when these leases run out they will not be renewed. I hope that the policy of the government eventually will be to create a national park in that heavily populated area.

(Translation):

Mr. Stearns: Mr. Chairman, my remarks will be brief, but I wish to say something in French, in my capacity as an English-speaking member from the lovely province of Quebec.

I wish to congratulate the Minister of Northern Affairs and National Resources and the Minister of Mines and Technical Surveys on the magnificent job they are doing for the benefit of every Canadian.

Mr. Chairman, speaking as a member of the permanent committee on mines, forests and waters I can assure you that the members of that committee have done yeoman service from the national point of view. Indeed, the speeches delivered this afternoon by hon. members of all parties, C.C.F., Liberals and Conservatives, were most complimentary of the work done by both the department of northern affairs and the Department of Mines and Technical Surveys. Once again, then, I congratulate the ministers in charge of both those departments.

(Text):

If I might say just a few words in English, I would call attention to the fact that in the province of Quebec we have a little different problem from that of the other provinces. We look after our own forestry affairs. The only reason we are doing this is that, in the past, we have never been encouraged by the federal government to participate in forestry affairs. Whether or not this was because of politics or for other reasons, I do not know. Perhaps in the future we will be included in the program of the department of northern affairs.

However, we have not done badly in Quebec because we have formed an association called the Quebec forestry association. This association has been the godfather of a system of 4-H clubs. The boys and girls who belong to these clubs are spreading conservation propaganda throughout their towns and villages. This has been going on now for 16 years and the results have been remarkable. The future of our province is just as much dependent on the forests as the future of any other part of Canada. Representatives from a great many of the other provinces of Canada should come down to Quebec to see the way in which the 4-H clubs are managed and the work they do in connection with conservation, the planting of trees and general education.

Mr. Howard: This vote offers members, especially those from the more remote parts of Canada, an opportunity of expressing their views on the program of the department and making some comments about the general development of northern areas. I hope that other hon. members will avail themselves of this opportunity, as I intend to do, to relate the program of this department to their particular constituencies as well as the overall good of the nation.

I should like first to make a few comments on this so-called roads to resources program. At the outset I would say that, in so far as the roads to resources program is concerned, it means practically nothing to northern British Columbia or to the type of program that was instituted for the building of roads prior to this government taking office. Certainly there have been changes to the original plan. I might say, with respect to the desk pounding that just took place, the former Liberal government had little to do with it, either.

So far as northern development roads are concerned, and particularly the one known as the Stewart-Cassiar road, they were undertaken originally by the provincial government through its department of mines as mining access roads. Just prior to the federal election of 1957 the federal government entered into a 50-50 agreement with the province for the building of that Stewart-Cassiar road. I am pleased to see that even though it has taken a year or a year and a half to put the agreement into concrete terms I believe it has been either completed or is nearly completed. I hope that when the minister rises to make some comments he will undertake to give us a little more detail about the state of affairs with respect to the federal-provincial agreement to build the Stewart-Cassiar road, especially whether or not the contract has been signed or whether it will be signed in the near future and generally what are the provisions of that agreement.

This Stewart-Cassiar road, as I said, was envisioned by many, many people in British Columbia, certainly those living in the area, a long time before this government took office. I am not saying that it is not a good project for federal government participation. I have no immediate personal knowledge of the effect that similarly constructed roads will have on other parts of Canada, but I do

have personal knowledge of the effect the Stewart-Cassiar road will have upon the development of northern British Columbia. When it is completed it will offer a means of removing natural resources from the sites in which they are located at the moment to a deep sea shipping port.

There are also some other factors that must be taken into consideration. It is true that such a road will have a beneficial effect upon the Cassiar Asbestos Corporation in northern British Columbia. We hope it will have a beneficial effect on the Grand Duke mine which has been discovered in that area and where they have now blocked out more than 26 million tons of a fairly good grade of copper. There are many other mineral deposits under claim in that area that will be beneficially affected by the completion of this Stewart-Cassiar road.

However, the vision of this government should not stop merely at Stewart or the other terminus of the road, Cassiar. The government should consider, if it has not already done so, the extensions that must be made to the Stewart-Cassiar road to provide access into and out of the area other than through the deep sea shipping port at Stewart. I would point out that connected with the proposed route of the Stewart-Cassiar road there is a very well defined, broad low level valley extending from Kitimat through Terrace and Aiyansh and northward through that area. In part of that area roads have already been constructed. I suggest that the government should give a good deal of consideration to participating in a similar financial way with the province of British Columbia in order to connect the proposed Stewart-Cassiar road with a road system extending down the Kalum valley to Terrace, highway 16, the C.N.R. line and deep sea shipping ports either at Prince Rupert or Kitimat.

I would also suggest that there are other mineral resources in the area farther to the east that require road access to them. Just north of Hazelton a group of citizens, using their own money and logging equipment, undertook last year to start the construction of a road heading generally in the direction of the Stewart-Cassiar road. They hope to link up that area farther to the east with the area to the north that will be affected by the Stewart-Cassiar road.

What the mineral potential is in that whole northern half of British Columbia may be known to some extent because of exploration work already done by prospectors and mineral claims that have already been established. But in addition, and I am sure the minister will agree with this, there is still a vast potential of unexplored mineral land in that part of the province. In past years the attitude has been that people should pioneer and develop an area first before the government would consider building roads into it but I hope sincerely that the present government will reverse that attitude and on the general basis of potential mineral, hydro-electric and industrial development in the area will undertake to build roads first knowing full well that they will have to be built in any event. I hope they will undertake to build roads first so as to assist in opening up the country and bring about the more economic development of the mineral resources that we know are there.

I just want to make one or two comments about roads to resources, or whatever term they are known by, in so far as British Columbia is concerned. If the minister wants to go one step further than the former government, and I am sure he would like nothing better than to outdo the Liberals at every opportunity; if he would like to show that so far as British Columbia is concerned this roads to resources program really means something he will not rest content with merely carrying out the program of 50-50 participation in the Stewart-Cassiar road but will exercise his ingenuity and imagination and give expression to what I am sure is his heartfelt desire to open up these areas by taking a look at the road connections which must be made between sparsely settled areas that have a road system of sorts and those areas that do not now have a system. He will enter into immediate negotiations with the provincial government to extend the provincial highway now existing between Kitimat and Terrace, from which point onward to Aiyansh the highway is now being privately constructed by the Columbia Cellulose Company, and for the extension of that road system farther northward until it meets the Stewart-Cassiar road. The area will then have access by road and rail and by shipping. In addition, he should also take into consideration the potential mineral and agricultural area to the east north of Hazelton and also enter into negotiations to provide a connection between the Hazelton area and the northwestern part of the province.

Mr. Cadieu: Mr. Chairman, in my few brief remarks I first want to congratulate the Minister of Northern Affairs and National Resources for bringing such a worth-while program before the house, one which is long overdue. The people of my constituency are deeply concerned about northern road development. I must also pay tribute to those people of Meadow Lake constituency who have formed Meadow Lake Freightways and have bulldozed a winter road through to the

south shore of lake Athabasca, thus making it possible to take in freight during the winter months to serve the vast mining area in and around Uranium City. This project has reduced transportation costs by 7 cents a pound. An all-weather road over this route would further reduce the cost of operating in this area by eliminating the necessity of stocking an eight months supply of all necessary commodities. It would open a potential 150,000 square miles of virgin territory to commercial fishing, lumbering, mining and tourist traffic.

Aside from these important facts, all Canada is interested in achieving road access to the huge uranium strike in and around Uranium City. We in the north look forward to making a considerable contribution to Canada's export trade through uranium as well as to our own national development. I look upon this road as a very urgent project and I sincerely hope that the government of Saskatchewan and the federal government will be able to work together to make this worth-while project a reality. I hope it will not be too long before I will be able to announce to the people of Meadow Lake constituency that the surveying of this worth-while project is under way. I have made many trips over this route from Buffalo Narrows to the south shore of lake Athabasca by air. I feel that this is a very urgent road and I certainly hope that we in Meadow Lake will see this become a reality.

Mr. MacLellan: Mr. Chairman, I should like to bring to the attention of the committee and the Minister of Northern Affairs and National Resources a matter which I think is of importance not only to my constituency and the province of Nova Scotia but also to Canada. A few days ago it was my pleasure and honour to be present at and associated with the ceremonies that marked the remembrance of the siege of Louisbourg on July 27, 1758. The complete success of the ceremonies and the arrangements made by the bicentenary committee are a great tribute to them and the occasion was very well commemorated.

I should like to express my sincere appreciation to the minister and the other departments of the government and to the provincial government for the co-operation that made the ceremonies in remembrance of this occasion the outstanding success that they were. It was certainly noteworthy as showing the interest of Canadians in Louisburg that approximately 40,000 people attended the three-day commemoration ceremonies.

Good work has been done to date at Louisburg. We have a museum containing a reproduction of the fort and the fortress town as it was in the middle of the eighteenth century and there are also many maps and records which to some extent portray the story of the town. I feel, however, that Louisburg has been very largely neglected and that its potential as a great national park has been overlooked. I feel that no stone should be left unturned to ensure that it should be seen by every Canadian as a modern record of a most important battleground in the history of our country and so that our people may be able to examine the monuments and records which still exist.

As has been said by others, we Canadians have a responsibility to preserve our great landmarks so that they may be enjoyed by future generations. Every school child on this continent is, I am sure, familiar with the story of Louisburg and the part it played in the history of North America as the guardian of the St. Lawrence and the foremost sentinel of France in the year 1758. I am sure all Canadians would be interested in seeing the historical relics there if they could be assured that the area had been sufficiently developed to illustrate all the interesting facets of early Canadian history. The battles before the walls of the ancient town and those in Louisburg harbour should be clearly illustrated by means of maps, et cetera, and many, many things could be done to restore the fortress itself, which was perhaps the finest fortress of its day in the only walled city in North America. It would be almost impossible to completely restore the area or at least it would cost hundreds of millions of dollars to do it. No one could expect that, but I do believe this government would find it wise to invest in the restoration of some of the walls of the fortress, to outline the main gates and to post signs to clearly indicate where the battle of Louisburg was fought, besides providing roads and better accommodation for visitors.

I believe, furthermore, that a road should be constructed for the use of automobiles so that they may have access to the park because a large number of visitors do come to Louisburg as they did during the recent ceremonies there. I think it is important that the government should consider a long range plan for the town's development so that it may illustrate the conditions back in 1758 and prior thereto. Unfortunately, after 1758 and 1759 construction stopped, probably at the request of the Americans who said that no stone should be left upon a stone. It was such an important point as the watchdog of the great fishing industry and the guardian of the St. Lawrence that it was felt no chance should be taken that it would be rebuilt. If a long range plan were developed and a reasonable allotment provided annually it would, I am sure, be a tremendous investment for Canada.

Nova Scotia regards tourism as a very great natural resource. We live next door to some 40 million people in the New England states some of whom come to the maritime provinces every year seeking relief from the heat and in order to enjoy the scenery for which we are so famous, to take advantage of our summer breezes and the salt water. When they come they expect to see something and more will come when more is provided for them to see. Any investment in this respect will be repaid in tourist dollars.

In the development of any such long term plan it should be remembered that the story of Louisburg is more than just that of a fortress besieged and finally abolished. It is rather the story of one of the great cornerstones of Canadian history when those who were enemies and soldiers, fighting outside this fortress at the dawn of July 22 of 1758, became neighbours and were perhaps the first Canadians by the time dusk fell. Their cannons and swords and implements of war became axes and ploughshares, which were used to build our country, and I think this area should be used as an illustration of what can be done by co-operation and work between two great races. The descendants of these people, both French and English, remember their historical background and this would be a wonderful monument to their history.

I would like to associate myself with the remarks made this afternoon by my colleague, the hon. member for Cape Breton North and Victoria, who spoke of the Cape Breton Highlands national park in the counties of Inverness and Victoria. The increasing number of tourists visiting the park amply illustrates the value of these parks to the tourist industry of Nova Scotia, as they afford an excellent opportunity to people to examine the scene of Cabot's exploits—the Cabot trail. I, like that hon. member, would like to see a winter works program developed in connection with the park and I would like to thank the minister for the program he instituted last winter which provided employment for local people when the pulpwood industry was not as prosperous as it has been in previous years. This year, once again, employment will be required in the area. In fact, if ever there was a time to find employment for people through the development of our great natural resources that time will be during the coming winter.

I feel that the government should consider the question of wages and salaries paid in this connection. There is no reason why the people who work there should not be paid in accordance with the standard set for mainland workers.

[Mr. MacLellan.]

I have emphasized the importance of the tourist industry in Nova Scotia and I commend to the minister the most serious consideration of the value of spending money in developing tourist facilities for the Cape Breton Highlands national park and also the great national landmark of Louisburg.

Mr. Pickersgill: I have a few observations to make and a few questions to ask of the minister, although I am not going to make a speech. I am sure that will cause hon. members on the other side of the committee to rejoice. The first thing I want to say something about is to remind the minister—I do not need to, I am sure—that when he does reply I would hope he will say something about the treatment of Eskimos in the province of Newfoundland as compared with the other provinces, in addition to what he said the other day.

The second point I should like to refer to is the electricity program and I am speaking about this on item No. 1 because I do not think that perhaps it would be in order on any other item since regrettably in my opinion, and in the opinion of my friends on this side, that program at this time does not include the province of Newfoundland despite very strenuous efforts to have it included.

The minister will no doubt recall that on February 19 of this year the Prime Minister was in St. John's to deliver a speech for the purpose, I judge, of influencing the voters in Newfoundland, and when he arrived he received a letter from the premier of Newfoundland written that same day, parts of which the Prime Minister quoted in his speech, and which he used to a certain effect. I will not bore the committee by going into further detail with regard to what effect, because I am sure the minister would get up at once and say that by quoting the Prime Minister I was out of order. I will not put the minister to the embarrassment of doing that. But this letter did ask the Prime Minister and, through the Prime Minister, the government to give consideration to a request from the government of Newfoundland. Now this letter was produced as a sessional paper on July 3, 1958, in response to a motion which I made asking for this correspondence and apparently it never received any reply except the reply which the Prime Minister gave at the public meeting and over the air on that occasion. I am not going to read the whole letter, but I would like to draw attention to two paragraphs. The second paragraph of the letter reads as follows:

> You did not find it possible, apparently, to accede to my request to you that Canadian government financial assistance be given to hydro-electric (or water power) stations in Newfoundland,

and as few if any electric stations operated by coal will ever be built in Newfoundland your present offer in that regard is of no very great importance to this province.

That, of course, was the subject of some rather lengthy debates during the last parliament, and I may add that my view is quite unaltered. On another occasion I will probably have something more to say about this matter, but I do not propose to hold up the minister's estimates today in that regard. But the premier of Newfoundland made a new request in this letter—a different request —and in the second part of the letter he said:

From your studies of Newfoundland you must be aware that our population, though fewer than half a million in number, are to be found in more than 1,000 different settlements, and that these settlements are situate in the great bays which constitute the 6,000 miles of our coastline. This means that our people are very scattered in settlements that are considerably removed from each other in distance. Even in cases, therefore, where surplus electricity is already being generated, which surplus electricity could be moved by transmission lines to certain bays, there still remains the terribly difficult problem of building distribution lines to link up these settlements; and within the settlements to link up the scattered houses wanting electricity.

There was a reference to a meeting being held, and then Mr. Smallwood said:

I suggest that you announce at this meeting tonight your willingness to ask the parliament of Canada to amend your legislation, passed in January, in such a way as to give the same financial assistance for these distribution lines as you have already so generously offered for transmission lines.

Then there is a different suggestion:

On the other hand, if you are not prepared to make this concession to Newfoundland we would be pretty well satisfied if, by administrative or executive decision, or by amendment to the legislation if necessary, you would provide that when a transmission line is built from the power house to the main centre of a bay, where that same line extends from that centre from settlement to settlement, cove to cove, within that bay or area, the extension itself will be treated as though it were the same transmission line continued from the main point in the bay or area.

That is all I think it is relevant to read from the letter, but I should like to read from Mr. Clark Davey's report of the meeting at which the Prime Minister made this letter public. It appeared in the *Globe and Mail*. I have a lot of other reports, but this appears to be a pretty accurate one, and here is what the Prime Minister said then about Mr. Smallwood's request. I will not read the other and more political comments he made.

Without really giving away anything, Mr. Diefenbaker said he would take Premier Smallwood's request for federal assistance to power distribution lines, in addition to the high voltage transmission lines already covered, under serious consideration. If federal economists think it workable within the general plan, he added, the request would get the most possible consideration in the next parliament.

That, I suppose, was posited upon the Prime Minister's success at the polls which we cannot gainsay and I hope the minister when he replies will tell us what the result of that consideration has been. I know the minister's colleague, the hon. member for St. John's West, has repeatedly said that these distribution lines are already covered. Indeed, he kept saying that all during the election campaign. If that is the minister's view—that they are already covered and that assistance is already being given, as his colleague has repeatedly said—then this matter does not require any further consideration. But it would appear to me that the minister is probably of the same opinion as he was in the last parliament, and that that is not his opinion. I very much hope it is, however, and I would be delighted, and so would almost everybody else, at least in the outports of Newfoundland, if the minister would come forward and say that the government is prepared to give the same assistance for hydro plants as they are prepared to give for thermal plants.

So much for that subject. I want now to say just a word about the roads to resources program that the minister has announced.

An hon. Member: And this wasn't supposed to be a speech.

Mr. Pickersgill: I think this is a good and constructive step, but there is one very great difficulty about it and about every other proposal made by the federal government for a 50-50 distribution of costs. That 50-50 distribution of costs makes it comparatively easy for wealthy provinces with a high taxable capacity, such as Ontario and British Columbia, to accept and exploit to the full, if they wish to do so, the offer of the federal government, without throwing any great burden upon their taxpayers. But in a province such as Newfoundland or Nova Scotia or New Brunswick, or even, to some extent, in the minister's own province of Saskatchewan where taxable capacity is very much lower, these 50-50 offers are really of very much less value in terms of real assistance and in terms of equality and I hope that in time the minister will try to influence the Minister of Finance and the Prime Minister to introduce some formula more nearly resembling the equalization formula in cases where assistance is offered.

This was done in some measure by the hon. member for Essex East when he was in office in introducing the hospital insurance provisions which are not operated on a 50-50

basis; some account is taken of the relative taxable capacity of the various provinces. I know it is not within the power of the minister to do this himself and I do not wish to take away from my approval of what he is doing within the policy which has been enunciated. I should think that the minister as the representative of a province that does not have as high a taxable capacity as the one we are now in would himself be rather sympathetic with this argument.

Finally, sir, I wish to say a few words about the Terra Nova national park. As the minister is aware this park was established by the federal government when his predecessor was in office. It had barely been established when the minister took over and I wish to give the minister credit for carrying on vigorously and aggressively the work of the development of that park. It has been a God-send to the people of Bonavista bay and that area. In a period when other employment has been exceedingly difficult to get there would have been an enormous amount of distress that has been avoided because of the existence of the park. I wish to echo the words of the hon. member for Cape Breton North and Victoria, the hon. member for Inverness-Richmond and other hon. gentlemen who have spoken about this matter in saying that I hope the minister will have an even bigger winter work program in the parks next winter than he had last winter because my own opinion is we are going to need it more than ever.

In respect of employment within the park the minister brought down a return in response to a motion I made for correspondence with the provincial government concerning employment there. I should like to say a few words about that and these, too, will be words of commendation of the attitude taken by the minister. It so happened it was for quite some time an obstacle to the establishment of the park that there are a considerable number of people living in settlements like Charlottetown, Happy Adventure, Eastport, Sandringham, Glovertown, Traytown, Port Blandford, Musgravetown and one or two others—

Mr. MacInnis: You are slipping.

Mr. Pickersgill: —where it was customary—and perhaps that was true of none more than the little settlement of Canning's Cove—for a certain number of people to make a limited part of their annual livelihood by cutting timber in the park. I wish to express my appreciation to the minister for the consideration he has shown to these people in permitting a limited amount of cutting in the last two years. I understand the policy is still being continued with respect to those people who had done this in the past. I appreciate that in the long run the minister does not want this to continue and I do not think any one else does either. But I also appreciate that the minister has many other preoccupations and I know the difficulties involved in getting new enterprises established and this has been an excellent stop-gap arrangement until the parks administration is in a position to provide through its own activities and forest management policies adequate alternative employment for these people.

But there is one thing I hope the minister will not lose sight of and that is the undertaking he gave in the letter he addressed on July 2 to the minister of mines and resources of Newfoundland with respect to those persons. I shall not take the time of the committee in reading this correspondence but will hasten to explain that the minister of mines and resources had written to the minister and asked him if he would give a preference, which the previous administration rather more through verbal conversations than in any other way implied would be given to people who had previously made their living in the park, in employment in the park. I do hope that preference will be continued because it is really quite a serious thing when through the establishment of this park in co-operation between the two governments the livelihood of these people has been taken away.

I know the minister has shown good will in this matter up until now and I merely urge him to continue to do that. When we come to the item on the national parks there will be one or two other questions which I may wish to put to him about employment not only in the Terra Nova national park but in some other parks and they are questions of detail which I do not think it would be reasonable to put on item No. 1.

Mr. Hamilton (Qu'Appelle): Mr. Chairman, there are a number of questions which I feel should be answered before the vote carries because they deal with general affairs in the department rather than with individual votes. I am going to take the liberty of dealing with these chronologically as they were put forward and even though this destroys the coherence of my remarks to some degree I think it is the only way I could manage to give the information which the hon. members have requested.

The hon. member for Bonavista-Twillingate speaking on Saturday, I believe, raised the question of the reconsideration on my part of the treatment of Eskimos in the province of Newfoundland. At this time I

should like to tell him that I have gone over the records of negotiations between the two governments and the correspondence between departments in the government. I know of his feelings and I appreciate that the agreement was made in 1954 under his signature. At this time I wish to extend to the hon. member my appreciation for bringing this matter to my attention and to tell him it has determined me to take a good look at the considerations affecting the lives of these people in Newfoundland. I coul say much more at this time but I think it would be more proper to do so after we have given it full consideration.

Mr. Pickersgill: Mr. Chairman, I quite agree with the minister and I wish to make one observation. I feel notwithstanding what may have been done at a previous time there should be equal treatment by the federal government for Eskimos in all the provinces. Of course there may be a difference between the provinces and the territories. That is all I was urging.

Mr. Hamilton (Qu'Appelle): Yes, thank you very much.

The hon. member for St. Jean-Iberville-Napierville was discussing Fort Lennox. I should like to inform him at this time that we have increased the vote this year with respect to Fort Lennox which is a beautiful tourist attraction with great historic connotations relating to our country. The estimates will indicate that the vote has been increased this year from $10,000 to $45,000 and we have moved a little ahead of the hon. member in that regard.

I should also like to point out to him that neighbouring historic parks and particularly Fort Chambly has a comparative expenditure of $5,000 and another, lower Fort Garry which is somewhat further removed, has a comparative expenditure of $20,000. So on the whole Fort Lennox has received in my opinion rather favourable and friendly treatment from the department this year. I appreciate that this fort needs a great deal of work done on it and I should like to remind him that when we finish the rewiring we shall continue the work in relation to this and other historic sites.

I wish to point out to the committee in relation to historic parks that every Canadian owes a responsibility to future generations to see that these landmarks of our history are preserved.

I know how immense the task is and any person does us a great favour by bringing to light the various historic landmarks of the nation's history so that we can make the first moves to protect them in order that over the years, as the money is forthcoming, we can restore them and do something of a permanent nature so that forever afterwards they will be there as a reminder of what happened in the formation of our country's history.

I would like to add a word in regard to historic parks. Even though we do have a nominal charge for the national parks, we do not make any charges in the historic parks.

The hon. member for Nickel Belt spoke at some length about the French river and its possibilities as a tourist attraction because it lies at one of the historic routes to the west. Every person who knows Canadian history knows that this was the trans-Canada highway of two and three centuries ago. At this time I take great pleasure in telling the committee that the department has decided on and is going forward with a program of marking all these historic canoe routes in Canada, and I am sure there will be a marker close to the Recollet falls and at the other historic landmarks in the constituency of Nickel Belt.

However, in so far as the hon. member's remarks applying to our development program are concerned, I am not too certain. He belittled the program and referred to it as a rocking chair program, and rather spoofed the word "vision". He then went on to make suggestions about roads to resources in his area and asked for information about them. My statement of policy at this time is a repetition of what I told the hon. member for Grand Falls-White Bay-Labrador. The policy is this, Mr. Chairman. Where agreement has been reached between two governments and a letter has gone forward from me giving it informal and tentative approval to go ahead, we can announce the location of some of those roads and as to where the roads will go but while any discussion between the two governments themselves are being carried on, it is part of our policy not to discuss those roads until a final decision is made.

Mr. Pearson: May I ask a question there? I am sorry to interrupt the minister. Is not it the responsibility of the provinces to initiate proposals or discussions in regard to access roads?

Mr. Hamilton (Qu'Appelle): I was going to deal with this question of policy with regard to another hon. member and I hope that when I come to his question he will pardon me for answering it at this time, because an inference could be drawn from what was said here in the remarks of two or three hon. members that it was the responsibility of the federal government to initiate proposals to the provincial governments as to which roads should be built. Exactly the opposite is the case.

The resources of the provinces belong to the provinces. They are constitutionally theirs by right and they should be theirs. In view of the responsibility of the provinces we would think it in very bad taste to suggest, and to embarrass any provinces by suggesting, certain roads. We leave it to them to recommend certain roads to us. If hon. members read my remarks to the standing committee they will see I said something along this line, that we do have the opportunity, when they propose a program to us, to point out what our philosophy is on the opening up of new resource areas. Sometimes, in the light of that discussion, the provincial governments do adjust their thinking to some degree. I do not believe there are any instances where we have forced our opinion on any provincial government. It has been done in the form of discussion, and if the proposal does not meet our criteria, then the matter is dropped. I would say in all honesty we have tried to get the provinces to see our side of the question, how we are trying to open up resource areas.

Mr. Hardie: On what is the philosophy based?

Mr. Hamilton (Qu'Appelle): The philosophy of roads to resources in the provinces is based primarily on the thought that if we are to build a grid system of roads in the territories there is no use to build that grid system of roads unless they are connected to settled areas in the provinces to the south. That is the No. 1 point. But there are several provinces which have no Northwest Territories to the north and in effect we are offering the same type of arrangement to those provinces, namely Ontario, Quebec, Newfoundland, New Brunswick, Nova Scotia and Prince Edward Island, with the exception of two of those provinces which did have areas which would bear up from the point of view of exploration, new exploration for mines and minerals first, but also looking at the possibilities of the forest industry, forest protection, recreation, etc., so there is an overall concept.

During the process of the provinces studying our proposal it became clear to two of the provinces, Prince Edward Island and Nova Scotia, owing to their situation, that they could not find roads to virgin resources areas. Therefore, on behalf of the government the Prime Minister made a statement of policy in Halifax to the effect that if any provinces could not provide suggestions of natural resources roads we would accept in their cases further tourist roads.

Tourist roads have added a great deal of difficulty to the working out of this program.

We could not touch the regular highway systems because then we would be interfering with provincial highway responsibility. But, I think at this time, and speaking only in general terms, I can announce to the committee that tentative agreement has now been reached on roads across the country totalling $110 million over the five-year period. Several provinces have taken the maximum. British Columbia, Alberta, Saskatchewan, Manitoba, Nova Scotia and Prince Edward Island have taken the maximum. Even though Newfoundland's first proposal totalled only $7.5 million to $8 million, I understand that they want to put forward proposals later that will total the full amount of $15 million. Therefore, I think when we are finished with this the estimate that I made to the committee that over the 5-year program there would be $135 million going into this roads to resources program in the provinces—and I used a very round figure as far as the Northwest Territories and the Yukon were concerned—

Mr. McWilliam: Will the minister give the figure for New Brunswick?

Mr. Hamilton (Qu'Appelle): I left out New Brunswick because they have not asked for the maximum; they have asked for a total of $12 million.

Mr. Godin: Can the minister give the figure for Ontario?

Mr. Hamilton (Qu'Appelle): So far, the figure has not been mentioned because there has been no agreement yet on any of the roads in Ontario. I announce these things only when tentative approval has just been about reached and I have only given totals in which it is formally agreed upon.

Mr. Hardie: There is one philosophy for western Canada and another philosophy for eastern Canada pretty well.

Mr. Hamilton (Qu'Appelle): You can look at it in that way but in practice, no. You heard the hon. members from those northern constituencies of Ontario and British Columbia speak today and they talked in terms of opening up resource areas in northern Ontario. That argument is just as effective and just as sound to fit into this philosophy as any argument I have presented.

I should like to keep moving on because I think hon. members who made suggestions and criticisms should have a word from me. One or two will be missed because their words were a little bit on the complimentary side and I will let those things slide.

Another question which I think was covered in several hon. members' remarks is the

matter of the conservation conference. This was raised by the hon. member for Portage-Neepawa and the Leader of the Opposition and I believe one other hon. member. The conservation conference is not a new thing; it was announced formally for the first time by the Prime Minister in Winnipeg on February 12. I have mentioned it several times since. I think I dealt at some length in the committee with the purpose of this conservation conference. I would recommend that any interested member go through that section of the report which deals with that, because it would save me a great deal of time at this moment.

The conservation conference that I mentioned at Yorkton was a slip of the tongue. I was discussing the ownership of resources in Canada, and I mentioned the fact we were going to hold a conservation conference. I laid down what I thought were the purposes of that conference which were very close to what several members said here today. Regardless of how much we discuss the necessity for holding a conservation conference, the fact remains we have a tremendous amount of material in the department which has never been correlated, where the responsibilities of the federal government have never been clearly defined, where the responsibilities of the provinces have not been clearly defined, nor have the responsibilities of municipal and local conservation authorities, the research groups and so on. What I was hinting at in Yorkton was that I could not possibly arrange, within the physical limits of our department, of our time and strength, the holding of this conference this year. What I was thinking of doing, and did do some weeks ago within the department as a matter of fact, was to outline a letter to the various provincial governments asking the premiers if they would consider appointing one of their ministers responsible for the resources of their area to meet with me at some mutually convenient time and place, so that we could accelerate the movement towards holding this national conservation conference. This was the cause of my slip at Yorkton, and I must confess to the house I am sorry I made it. It came out inadvertently. I apologized at that time, in essence, to the group for having said it there.

I should like to speak at some length on this question of conservation, but I do not believe this is the proper time. The hon. member for Port Arthur, who has made a considerable study of all aspects of forestry, outlined the arguments of Mr. MacMillan on a monetary basis. If a certain industry produces so much, then the government should spend a pro rata amount on that industry. I do not think it is necessary for me to discuss this point of view at great length today because after due consideration the fallacy of the argument, if carried to the nth degree, becomes apparent.

I should like to discuss this question of research which was raised by the hon. member for Port Arthur. There is no person who has been a stronger advocate over the years for research in all lines of forestry than I have been. I should like to tell the committee something which hon. members must have guessed and that is that when I came into the department this was one of the matters that was discussed. The department has produced for me a program of research running over four years, both in basic research and in forest products research. This program, which is now before me, will be examined from a policy point of view. I hope that I can accept what has been proposed in that program. I do know that it calls for more personnel because that has been the basic weakness of the work we have been trying to do.

It is all very fine to criticize the minister who holds this position for not having work done in research, but the research is limited by the number of topnotch people we can put on the task. The people in the department know full well what has to be done. We who sit in this house have to make up our minds that if we want more research we have to be prepared to vote more money for it, and that means supporting this type of thing in the house, not trying to follow a schizophrenic attitude of condemning us for spending too much and then saying we do not do enough work. I know other departments have this problem, but I have it particularly because in my department there is so much to be done it seems there is not enough manpower or money available to do all the jobs at once. I should like to assure the house that in this matter of research in forestry, the attitude of the department and the minister is, full speed ahead.

There were so many things mentioned by the hon. member for Port Arthur, with many of which I thoroughly agree, that if I took the time to discuss each of them we would not be finished for some time. He did raise the question of fiscal policy in relation to forest policy. I think that is the crux of this matter. It bears out what I just said a moment ago. If we are going to advocate policies of research, whether it is in agriculture or in forestry or in any other necessary line, we must be prepared to put that into relationship with the other programs of government and eventually we get back to the fiscal policies of the government. As a result I have asked,—this comes largely as a result

of the recommendations made in the standing committee—for a report on the effects of fiscal policy on the forest industry. I hope that I will be getting something of a nature that will improve the situation in the forest industry. I think that the thanks of the government, the house and the people of Canada generally, go to the witnesses who appeared before the mines, forests and waters committee, for putting forward a very sound proposal.

I should like to deal at some length with the remarks of the Leader of the Opposition. He was very kind to me in his opening remarks in speaking about zeal and energy and I thank him for that. At the same time I hope that when several years have passed he can add one more word to that group of adjectives and that is "intelligence".

Mr. Pearson: I will add that now.

Mr. Hamilton (Qu'Appelle): I do believe that besides energy being applied to these problems which are so manifest and so manifold, there must be some intelligence that looks forward a long way and at the same time can deal with the problems as they arise. I wanted to thank him particularly for the service he has done Canada in bringing to the attention of the house the significance of that atomic-powered submarine passing under the ice-covered waters of the ocean to our north. He used the words, I think, "dramatically underlines". I should like to repeat the significance of what the Leader of the Opposition has told us. No longer can Canadians think that because we have ninety per cent of our country to the north unexplored and undeveloped, because we have a great cold ocean to the north, this is our defence line. We are now fully aware of the fact that the water underneath that ice is available for the movement of underwater craft and this affects the whole future of this country and, I believe, much of the world. He went on to suggest that the possibility of oil transportation underneath the water should be looked into. I just sent out for a little bit of information of which I was already aware.

The British people, and I do not want to say particularly whether it is government or private enterprise effort, have been very much aware of the possibilities of this lead and are presently working on the building of submarines, as I understand it, that will carry up to 100,000 tons of oil. These submarines will operate more efficiently underwater at three times the speed per unit as compared with those using other power sources. Some months ago a member of my department suggested the possibility of a pipe line from Ellesmere island to Greenland to Iceland to the United Kingdom, because ultimately the western European nations must be assured of a secure line to energy sources, especially with the line to the Middle East in such great doubt. It seems only logical that this great potential oil land of our northern Arctic islands will no longer be a part of Canada that is far beyond any expectation of development in our lifetime. It is now, I believe, in the front line.

The research we are planning to start on the continental shelf and the islands of the Arctic was designed, as I said in my speech in the house a month ago and in the committee, as part of that program. I tried to say as plainly as I could that I hoped Canadians would see that national sovereignty in the north was not just a matter of politicians speaking at election times but was a vitally important matter. I am very pleased that the Leader of the Opposition has accepted the phrase, "effective occupation", because you can hold a territory by right of discovery or by claiming it under some sector theory but where you have great powers holding different points of view the only way to hold that territory, with all its great potential wealth, is by effective occupation.

The Leader of the Opposition mentioned how few people there were in the north. I had the figures sent to me and the figure he gave is approximately accurate. On the archipelago at the present time there are approximately 300 Canadians, possibly a few more. There are approximately 100 other Canadians up there in business and other occupations of a non-official sort. There are 2,000 other Canadians who are Eskimo by birth, making a total of 2,400 Canadians on the archipelago. On the DEW line sites we have about 250 Canadians and then we have another operation at Frobisher Bay with about 400. That makes a total of roughly 3,000 in the Arctic at the present time.

Obviously that number is not going to increase greatly unless there is an economic base. We are not going into Frobisher Bay primarily because we love to do things that are dramatic. Our reasons for going into Frobisher Bay are, first, the very necessary matter of improving polar transport. We hope to make that whole operation self-liquidating. The second reason for the Frobisher Bay development is the military operations which we have agreed to undertake in partnership with the United States. The third factor is that Baffin island may well be one of the richest iron areas in the Arctic.

I made it very clear to the standing committee that I hoped that what was starting there under the Department of Transport and

the Department of National Defence would some day be a completely civilian operation based on the economics of the area, in other words, mining operations on Baffin island. I should like to repeat now what I have repeated on every occasion I have had the opportunity, that development in the north in such remote places as Frobisher Bay has a very important bearing on the people who live in Montreal, Toronto or any other part of Canada.

One of the members from northern Ontario spoke of the natural route that existed from Hudson bay through Moosonee and by the Ontario Northland railway to northern Ontario. The eastern Arctic area is rich in iron. Hudson bay does provide a two-months longer shipping season. This is a natural route and more is going on than most people are aware of to turn into reality this academic idea of taking the iron in one place and by using a traditional communication route transporting it to another place where the iron and the energy resource can be brought together.

The hon. member for Timiskaming is not here but I should like to remind him that the future of northern Ontario, which for so many years the people there have dreamed about and worked so hard to achieve, is much closer than they realize. Through northern Ontario now passes a pipe line that carries natural gas. This pipe line has in it the energy resource which, when applied to such a commodity as iron, may well mean a revolution in development as far as northern Ontario is concerned.

Without saying any more than what I have just said, I should like to point out that those who make derogatory remarks about this so-called vision are doing a disservice to the people who have pioneered these areas with instinctive faith that something good was going to come from it. I feel not only in my heart but on the basis of the information I have that, having regard to the accessibility of the northern part of Ontario to the resources of iron and other metals of the north and to the industrial area of the south, the future of that area has not yet begun to be appreciated or to show its full potential.

I can only speak in general terms and the record over the years will have to be my witness whether or not I was right, but I do feel that the northern areas of provinces such as Ontario have a great future. I should like to do everything within my power, within the constitutional limits of the department, to help these things along because I think it is for the good of all Canadians.

Some mention has been made of the fact that I used the phrase "national chagrin" on one occasion. I do not back down from that expression. I am ashamed of the fact that through circumstances beyond the power of almost anyone here we have had to share responsibility, in fact, give all responsibility for the defence of our northern area to a friendly power. The things that have happened are no doubt small but employees of the government of Canada and even ministers have to go through a formal procedure of getting permission. When Canadians have to wait several months to get permission to go and do their duty in their own country at the direction of their own minister, I do not apologize to the house or the country for saying that I am ashamed of the situation.

Mr. Pearson: The minister is dealing with a point which is of great interest and I should like to ask him whether it is a fact that Canadian ministers and officials have to wait several months before they can get access to establishments on Canadian soil under the control, by agreement with the Canadian government, of the United States. Is it several months?

Mr. Hamilton (Qu'Appelle): Ministers have very little trouble. Formal request is made more or less as a matter of courtesy and it is handled very quickly but nevertheless this procedure still has to be followed. The situation is different in the case of departmental officials wanting to go there in their line of duty. I do not want to embarrass any of my colleagues by referring to a case on record but I do know of one case where the request took so long to approve that the man went somewhere else and got another job and the work has not been done to this day.

The Deputy Chairman: I am sorry but I have to advise the Minister of Northern Affairs and National Resources that his time has expired.

Some hon. Members: Go ahead.

The Deputy Chairman: Has the minister unanimous consent of the committee to continue?

Some hon. Members: Agreed.

Mr. Hamilton (Qu'Appelle): Mr. Chairman, I cannot answer all these comments, but I will wind up in this way.

Mr. Pickersgill: Let the minister go right on and finish.

Mr. Hamilton (Qu'Appelle): I am more concerned about making the policy statement clear and explaining my own position with regard to the remark I made. As far as I am concerned, I do not blame anyone for

this situation. I have made that very clear. But I do repeat that to me it is a matter of chagrin. I have taken up this matter with our United States colleagues and have had a very friendly and favourable response. Usually the United States government is very good once you bring a matter to their attention, but in the efficient and rapid movement of people in developing an area which is completely empty it is so easy to assume something which many people actually believe. The hon. member referred to the *Financial Post* of August 2, and I would like to refer to an article on page 15 of that paper on the same date which contains a statement, in so far as Washington opinion is concerned, as follows:

> An authority on international law says the sector principle doesn't apply to any part of the open or frozen ocean—only to islands which are inhabited.

So here we have a leading authority in the United States expressing his opinion to the reporter who wrote this story to the effect that the United States does not accept the sector theory or even the ownership of these islands if they are uninhabited. Therefore, it is not too difficult for men who are employed by companies working on installations in our northlands to assume that because there are no Canadians there the lands involved belong to anybody who does happen to be there, and that is why over the years I have advocated that the only way in which we can hold this northern area for the use of our future generations would be by the effective occupation and use of these areas by Canadians.

I have also pledged to the Leader of the Opposition and to this house as a whole that every move we make in the north will be made with due regard to economics and that we would not make any move without due consideration of such economics.

Some sport was also made of Frobisher Bay in the statement that there would be skyscrapers in the north and that this was an exciting proposition. I say in all seriousness that the skyscraper is not the thing. The fact is that the people who are building and co-ordinating this development at Frobisher Bay have been instructed to build accommodation there for the men and women who will be working in the area and this is the most safe and efficient type of accommodation they can build. The engineers assure us that it is cheaper, safer and better to build these houses one above the other. They can make them fireproof and can heat them more cheaply and they concentrate people into a smaller area. The skyscraper is not the thing. The fact is that we are meeting this problem of northern development in a way which will keep down the costs so that private industries can come in and follow the example we have set and can develop and maintain their operations at costs compatible with their operations in other areas.

I do not intend to go into all the statements made about the possibility of developing atomic power plants in that region, but in general I would suggest to the committee that there is enough evidence now before us to show that if we combine the use of small atomic plants for producing light as well as heat we can reduce the costs of both commodities in a northern community. In other words, the tremendous amount of heat available from nuclear power plants reduces the cost of heating the homes, so that we can foresee a cost of living up there not so far above the point where it would be possible for ordinary people to support it.

These ideas must not be allowed to disappear because people scoff at them since they are new. I am prepared and will be prepared when the information is before me in authentic fashion to bring it before the Canadian people and let them judge whether this is a vision or hardheaded economics.

I think I have said enough about the remarks made up to this point, although I hope I have not missed any particular members' requests for information.

I am reminded of one little question raised by the hon. member for Kootenay West about the size of the roads to resources program and the amount of money involved. One of the reasons why we set it at $3 million per year per province, of which we would pay half, was that this was the highest amount to which I could get the provinces to agree. British Columbia felt the same way, Saskatchewan felt the same way, as I believe did Ontario and many other provinces, and expressed themselves accordingly. I believe Newfoundland was also in this category, and the $1.5 million was set as the federal contribution, not from any desire on our part to limit the program but because of the ability of the provinces to pay money into areas which had hitherto not been built up.

Mr. Herridge: That means that the minister would increase his proportion if the provinces were willing to do so?

Mr. Hamilton (Qu'Appelle): I have not said that, Mr. Chairman. What I did say was that I had set it at that figure because I knew that was a figure beyond which any province would not go. I certainly cannot speak for the government after it has decided upon this policy, that the maximum I am allowed to put forward is a figure up to $15 million in a five-year period.

I believe the hon. member for Bonavista-Twillingate raised the point that this would not be an equitable proposition because some provinces were poorer than others.

Mr. Pickersgill: I might clarify the point in order to save the time of the minister. I suggested that while the minister was not able to make any change, the government might give some consideration to changing the formula from the 50-50 formula to a graduated formula of some kind on the basis of equalization, as was done in connection with hospital insurance and has been done, of course, most spectacularly in the tax-sharing arrangements. This is because the 50-50 arrangement is something which is easy for British Columbia and Ontario to meet but which is very difficult for the Atlantic provinces to meet and, I suggest, is also a difficult problem for the minister's own province.

Mr. Hamilton (Qu'Appelle): I think I answered that question in committee by saying that because there was a limit of $15 million over a five-year period that this put me in something of a strait-jacket with respect to my operations. However, that was the decision at that time and I have stayed with it. I do not think there is any question from what has been said by the members of the house today that by the end of these five years many ideas for new roads will be advanced and the matter should be considered at that time.

Mr. Pickersgill: I do not think the minister has answered my most important point, which was about electricity.

Mr. Hamilton (Qu'Appelle): I have the answer before me and can deal with it now. On the question of the power program or power policy for Canada, I think the argument advanced by the hon. member for Bonavista - Twillingate about distribution lines—

Mr. Pickersgill: No, by the premier of Newfoundland.

Mr. Hamilton (Qu'Appelle): By the premier of Newfoundland—I keep thinking they are the same person—

Some hon. Members: Oh, oh.

Mr. Pickersgill: I thank the hon. minsiter for flattering me.

An hon. Member: It is not flattery.

Mr. Hamilton (Qu'Appelle): The fact remains that I am guided by an act of parliament which mentions transmission lines and I have stayed by that act. I would like to point out, however, that in a province like Saskatchewan or Newfoundland, and I believe also British Columbia and Manitoba, requests have been made to the federal government for assistance in respect of power. This, of course, means that there will eventually have to be worked out a national power policy of some sort. In the case of Saskatchewan the same arguments are advanced as those advanced by Newfoundland, namely scattered population, lack of great wealth, and so on. In the case of British Columbia, development is such a costly thing that probably the province of British Columbia will want our co-operation.

I will suggest to the hon. member in connection with power that there has been considerable evidence on the part of this government that they are moving forward to new positions in connection with this whole matter of power in co-operation with the provinces. The policy laid down in connection with the Atlantic Power Development Act did, at my request, include the words Prince Edward Island and Newfoundland. It is admitted that at the time the names of those provinces were put in we did not have any idea of requests coming forward, because at that time I was thinking of a regional development concept in the maritime provinces and I wanted the possibility of expanding that program. I have also said in public and in the committee that the province of Quebec must also consider itself as part of the Atlantic region, and I should like to raise with the committee some of the remarks I have made in other places with regard to the Hamilton river.

Hamilton river power is a great asset to the whole eastern part of the North American continent, but at the present time it cannot be used until we have the co-operation of several provinces. I can only say I will do all I can in providing information to those provinces in the hope that they will see that by co-operation not only will they get more power but they will get it cheaper. And that is, I think, the extent of my answer to the hon. member.

Mr. Pickersgill: I do not think that answers the specific question I addressed to the minister. I am afraid I sent the clippings on to *Hansard*, but I recollect pretty well that the Prime Minister gave an undertaking on February 19 that this matter would be discussed by the economists of the government and I presume he meant those of the minister's department. I should like to know what progress has been made with regard to this specific proposal by the premier of Newfoundland and with regard to which no reply that I know of has yet been given.

Mr. Hamilton (Qu'Appelle): Within the government, there have been discussions on

this question of power policy. This is not an easy matter and I cannot tell the committee within a month or even within years when we can come to some definite conclusion. It is a vast subject, and all I can offer in my defence is that we are at least starting on the problem.

Mr. Hardie: I realize that the minister after listening to a good many speeches made on Saturday and today with regard to northern development has answered a good many of these questions and cannot deal with them all in a moment or two. However, I wonder if he would go back to the speech I made on Saturday and to his own speech where he said: I will come back to the actual details of the Garry lake incident in a moment. In the remainder of his speech he did not say anything about the details as he had promised to do and I am wondering if he could now give us some details on the episode at Garry lake last winter, particularly in regard to whether the department was warned of any crisis that might happen; if he could tell us how much food was dropped off on December 15; and the number of times Eskimos were contacted, say, by the northern service officer at Baker Lake, between August 16 of last year and April 4 of this year. I wonder if he could say something in regard to the reports which were made, no doubt, from time to time by his officers in the field to head office regarding this episode. I hope the minister can answer these questions, as he indicated he would.

Mr. Hamilton (Qu'Appelle): Two questions were raised by the hon. member for Mackenzie River which I did not answer because he was out of the committee at that time. The first question was the one he directed to the Secretary of State. We are working very hard and we have an eight page, single lined statement which gives the information. I am not going to table it but I will provide it for the hon. member's own personal use. He will find there the most complicated mix-up he has ever seen, but the committee is more and more optimistic that they can get it straightened out and come closer together. Not only are there differences between departments but there are differences within departments, the women differing on the furniture and so on. I hope the hon. member takes this home with him and examines it, and I hope that by the time he comes back we will have had the regulations changed.

With regard to Garry lake, this cache at Garry lake was not in the full sense of the word an official government cache. Due to a certain commercial operation in the area by one of the companies there was a surplus of food which they did not want to bring back to southern Canada and this was turned over to the department. The department then put it in a cache at Garry lake under the supervision of the local mission, and it was kept in this little mission.

Mr. Hardie: On what date was this cache turned over?

Mr. Hamilton (Qu'Appelle): I have no recollection, and I do not think anybody in the department knows. It was an unofficial act and we have no information at Ottawa as to the amount of food which was in that cache. We would have to go back and contact the company and ask them how much they gave us.

Since it is not the policy of the department to leave unsupervised caches, this cache was under the control of the local missionary, who does not spend all his time in that mission, and for a period of time the Eskimos moved in, at the time they were hungry, and took what they wanted. As members of the committee know, there was a fire due to the upsetting of a gasoline stove, and the mission and the stores were destroyed.

This brings up the question of the patrols. We have one northern service officer in this whole district, and he operates out of Baker Lake. When the weather is reasonable he moves around as well as he can using his own plane for which we provide gas and oil. He tries to make these calls, but there was a period when he did not visit Garry lake and when the missionary was not around—the missionary also informs us of cases of need—and during this period the fire took place and starvation occurred. I gave on Saturday a list of six things which we are doing to try to stop this type of thing ever happening again, but I said quite honestly I did not think I could give any full-out guarantee.

Mr. Hardie: That does not answer the question. The question I asked was how much food was left at Garry lake or Pelley lake on September 18, the last time the Eskimos were contacted, until March 22. My original question was this: was the department warned that conditions at Garry lake were such that we might expect to encounter such a situation as they did in fact encounter a few months ago.

Mr. Hamilton (Qu'Appelle): Mr. Chairman, I have already explained to the committee that we have no information concerning the amount of food put into the cache. Since the hon. member asked the question, of course, we have inquired through the local officers up there.

Mr. Hardie: Did the department receive no warning that this might happen?

Mr. Hamilton (Qu'Appelle): The answer to the second question is that we received no warning. On the contrary, the last word we had from the mounted police patrol—

Mr. Hardie: No, no. They are not responsible.

Mr. Hamilton (Qu'Appelle): They share with us the responsibility of patrolling and letting us know what is going on in the north. There is at the present time and there will be from now on a group of eight co-ordinating their patrols with our patrols. But this is a vast area and one northern service officer cannot patrol it every week.

Mr. Hardie: Since bringing this matter to the attention of the house I have directed questions to the Minister of Northern Affairs and National Resources, the Minister of National Defence and the Minister of Justice concerning what reports were made by the Royal Canadian Mounted Police stationed at Baker Lake to the office here. I inquired of the Minister of Justice if he had received reports from the Royal Canadian Air Force at Baker Lake or Churchill. I know the R.C.A.F. flew into the area on March 22 and took in a certain amount of food at the request of the R.C.M.P. at Baker Lake. However, I have received no direct answer either from the Minister of Northern Affairs and National Resources, the Minister of National Defence or the Minister of Justice.

Not long ago when five officers of the Royal Canadian Mounted Police drowned in lake Ontario an hon. member of this house asked the Minister of Justice if he would make a report concerning this tragic accident. The minister made a detailed statement in this house concerning the five deaths. I have directed questions to three ministers of the government concerning the deaths of 14 Eskimos at Garry lake and no answer has been forthcoming. I received no report from the Minister of Justice and now no answer is being given me by the Minister of Northern Affairs and National Resources.

I am sure the minister or his department must have been advised from the field. The minister said a moment ago that a northern service officer is stationed at Baker Lake. I agree that he has a large area to cover but as the minister pointed out he has his own aircraft in which to cover it. Something must be very remiss in the administration of this department when an employee of it can sit at Baker Lake and not make a single report concerning what he has done with respect to this incident between the period December 10 or 15 and April 24. I am sure that on reflection the minister will advise the committee that he has received a report from Baker Lake.

The minister says he does not know how much food was sent to Garry lake. Let me review the information I have. On August 3 the officials of the department were warned of the severe scarcity of caribou in the Garry lake and Pelly lake areas. On August 16 an aircraft flew out of Garry lake with provisions and food. I do not now recall whether it was an R.C.M.P. or R.C.A.F. aircraft nor do I recall if it carried just the normal family allowance that was given to these people but hon. members can just imagine about how much that would buy at Baker Lake where prices are so high. In any event the food was flown in and dropped off on the trail at a point between Garry lake and Pelly lake. The Eskimos were not contacted and did not know the food was there. It is to be hoped they found it and that it was not consumed by wolves.

On December 10 the missionary whom the minister said was responsible for the cache at Garry lake went into Baker Lake and reported the same condition. He explained that the people were destitute. On December 15, five days later, the R.C.M.P. aircraft flew provisions out to Garry lake. I do not know whether that aircraft was an Otter or Beaver but there was some criticism to the effect that five people had gone along on the trip when possibly an additional 1,000 pounds of food could have been taken. In any event I do know the legal load for an Otter aircraft. If it was an Otter and there were five people and their baggage on the trip, the most that could have been taken in the way of food was 1,000 pounds.

The Winnipeg *Free Press* carried a series of articles concerning this tragic incident. In one article it states that there were 100 people in the immediate area of Pelly lake and Garry lake. This sounds to me like a round figure the newspaperman may have used but in a later article the Winnipeg *Free Press* points out that 50 persons who had survived death by starvation and the bodies of 14 others who had died were removed from the area. For the sake of this context, let us use the figure 64. We will not use the figure 100. Apparently 64 people were expected to live on 1,000 pounds of food from December 15 until March 22. Do hon. members know what that would amount to each day? It would mean about 1.6 ounces of food for each person per day.

Mr. Hamilton (Qu'Appelle): Mr. Chairman, may I interrupt the hon. member at this point? The hon. member is saying something which is absolutely contrary to what has

been happening and what is now happening. I have made it clear that the policy of the department is not to set up caches of food to feed every single soul in the Northwest Territories. We do not set up any unsupervised caches.

Mr. Hardie: Agreed.

Mr. Hamilton (Qu'Appelle): The hon. member appears to be aware of this fact and yet he is suggesting today that 64 people were expected to live for several months on 1,000 pounds of food. He appears to suggest that this is as a result of the policy of this government. He is completely erroneous in that regard. His statement appears to be diabolically designed to create the impression that this department has no heart in its dealings with the people who come under its jurisdiction and is not considering the welfare of those people at all. I feel I should say a few words at this time—

Mr. Hardie: Just a minute. I had the floor. You interrupted me. If you want to make a speech you can do it after I am through.

Mr. Hamilton (Qu'Appelle): The hon. member should not be permitted to create erroneous impressions.

Mr. Hardie: I suggest to the minister that he listen to what I have to say and answer me when I am through. Since the minister has not answered my questions concerning this incident I can only state what I understand to be the facts and the minister may comment upon my understanding of the situation when I have concluded my remarks. My point was not in regard to unsupervised food caches. I will agree with the minister and say also that he should not have unsupervised food caches. I say that if you were to move 1,000 pounds of food into an area where people have nothing else to live on—and let us take the figure 64, which I took a few minutes ago—and expect them to live on 1.6 ounces per day, it would be preposterous. The only reason I give the figure 1.6 ounces is that it is based on the time the food went in until contact was made by the government three months later.

I must agree that we should have supervised food caches, but when we have not them there—whether we have them or not—you cannot expect people to live on 1½ ounces a day. I have a 3-months-old child. My wife took the child to a doctor the other day and the doctor said that the child should have 13 ounces of milk, 25 ounces of water and five ounces of pablum a day. Let us forget about the water because they could have eaten snow, but the doctor suggested 13 ounces of milk and five ounces of pablum for a 3-months-old child. That amounts to 18 ounces a day.

Mr. Hamilton (Qu'Appelle): What do the Eskimos do for a living?

Mr. Hardie: They have not anything to do for a living. I have told this government and I have told the previous government that they must have an opportunity to make a living, and in this particular area, as far as their living is concerned, they have to get caribou or they do not live, and there were no caribou. The department was advised of this. Not only was the department advised but every time you picked up a paper over the last three years you saw that the department came out with a statement that the caribou were not increasing; they were decreasing; serious things were happening. The poor Eskimo is going to be without food. What is being done? That is the point. My point is not that the caribou have disappeared.

Mr. Walker: What is your point?

Mr. Hardie: I will tell you. Well, we have the gestapo of the printing bureau, this man who is a lawyer, asking me what is my point.

Mr. Hamilton (Qu'Appelle): Give us your ideas; never mind the guff. Tell us what you are going to do.

Some hon. Members: Order.

Mr. Hardie: I will tell you.

An hon. Member: You have never told us a thing.

The Chairman: Order. I must ask the hon. member to confine his remarks to affairs concerning the Department of Northern Affairs and National Resources and to kindly explain to us the relationship between his remarks and this particular department.

Mr. Hardie: Mr. Chairman, as far as the relationship of what I am saying to this particular department is concerned, I can quote from what the minister said in the estimates committee when he said that if one Eskimo is in difficulty in the Northwest Territories the responsibility is right here in Ottawa. As far as the interjections that are taking place are concerned, Mr. Chairman, I have the floor.

Mr. Hamilton (Qu'Appelle): We want to know what you propose.

Mr. Hardie: If these little seals in training want to flap their flippers every time—

Mr. Hamilton (Qu'Appelle): Never mind the smokescreen; give us what you propose.

Mr. Hardie: I gave you what I proposed.

Mr. Hamilton (Qu'Appelle): One point.

Mr. Hardie: I asked the minister a number of questions. I asked for answers; I have received no answers.

Mr. Hamilton (Qu'Appelle): What do you propose to do about this whole thing?

Mr. Hardie: I told you on Saturday and you told me on Saturday that you agree with me and that you were trying to do something about it.

Mr. Hamilton (Qu'Appelle): That is right.

An hon. Member: Be careful.

Mr. Hardie: You be careful,—

Mr. Hamilton (Qu'Appelle): You had better be careful, my friend.

Mr. Hardie: —or you will be quoted. I asked questions. I asked you a moment ago whether people in your employ do not make reports within six months.

The Chairman: Order. I must remind hon. members that they must address the Chair and not carry on discussion among themselves.

Mr. Hardie: Mr. Chairman, I will ask you this. Will you ask the minister whether he will answer the number of questions I have asked? Will he do what he said he would do last Saturday when he said, "I will come back to the actual details of Garry lake in a moment." Will you ask the minister to give us the details of what happened since last December 10 or December 15 until March 22 or April 24, of this year, at Garry lake? Will you please ask the minister whether he will answer that?

Mr. Hamilton (Qu'Appelle): Thank you for the floor. Mr. Chairman, I think the hon. member for Mackenzie River has done the cause of the Eskimo of northern Canada no good by going through this heart-rending description, the ethics of which are very doubtful, by reading into the record parts of an autopsy, as he did last Saturday.

Mr. Hardie: What was wrong with that?

Mr. Hamilton (Qu'Appelle): I agree with him in so far as the fact that the caribou shortage has been growing in the last two or three years is concerned. I have read to the committee what we are doing. I think the general feeling in the committee was that there was a determination to grapple with this problem.

The hon. member knows full well that the area about which he is talking is hundreds of thousands of square miles in extent. He wants me to take a single information service officer and ask him to give reports of every 10 minutes of his day.

Mr. Hardie: You ask every other employee to do it.

Mr. Hamilton (Qu'Appelle): The officer gives reports, Mr. Chairman.

The Chairman: I must inform the hon. member for Mackenzie River that the minister has the floor.

Mr. Peters: Will you call it six o'clock.

Mr. Hamilton (Qu'Appelle): Not for half a minute; I have a couple of things to say. This whole matter was dealt with in the committee on Saturday in an attitude that was above reproach, and because the hon. member made his statement. I accepted in full the responsibility. I laid down what we are trying to do. Then, he asks me the impossible by saying that I have not informed the house of the details of this thing. I have given every bit of information I have on the cache. I do not know how much food was in the caches for Eskimos. They are hunters and fishermen, and when we do try to help them we do it by those patrols and reports from those people. Naturally, when we hear a report we go to help, for they are very independent. They want to move around and carry on their traditional methods of living. We try to help them in every way we can to do that. Where they cannot make a living we are moving now to bring them into areas and do the very thing which I thought the hon. member was going to say he suggested.

Mr. Hardie: I did.

Mr. Hamilton (Qu'Appelle): I say we approve of that and now the hon. member is attacking me on the basis of not doing anything about something about which I did not know anything.

At six o'clock the committee took recess.

AFTER RECESS

The committee resumed at eight o'clock.

Mr. Hardie: At six o'clock, Mr. Chairman, we were discussing a problem which I brought before the house on Saturday and to which, so far as I am concerned at least, I have received no answers. I have received generalizations, yes, but no answers.

I shall now leave this subject until possibly the officials of the Arctic division are before the minister and can advise him on what did happen, not only at Garry lake but at Pelly lake during this winter. I should like to say at this time that I was a member of the committee on mines, forests and waters

which considered the estimates of the Department of Northern Affairs and National Resources. Then, on July 7 the minister spoke in this house about northern development. He attempted to leave the impression that the former government, and the former minister, had done nothing with regard to the development of the Northwest Territories. As I say, he tried to leave the impression nothing was done until he took over the department or the present government took office last June 23.

An hon. Member: Hear, hear.

Mr. Hardie: I was going to do this a little later, but since the hon. member says "hear, hear",—no, I do not think I will quote from this pamphlet at the present time. However, I will say to the hon. member that the establishment of the Department of Northern Affairs and National Resources as approved by parliament in 1953, November, I think it was, under the new minister, the Hon. Jean Lesage, did a great deal about northern development. We heard the present minister quote figures on July 7 when he was trying to leave the impression that the former government did nothing. I should like to quote to him, just to put the record straight, figures illustrating what the former government did from the time the new department of northern affairs was set up in 1953 until the time the former government left office last June.

In 1954-55, the first year after this department was set up, the departmental expenditures were $22,812,189. In 1955-56—

The Chairman: Order. I must remind the hon. member that resolution No. 266 covers the departmental administration for the year ending March 31, 1959. What was spent during the previous years is, of course, in the record, but it is quite out of order to quote those figures at this time. I must, therefore, respectfully ask the hon. member for Mackenzie River to please concentrate his remarks on the resolution being discussed now.

Mr. Pearson: On this point, surely the chairman must recall that before six o'clock hon. members, as was their right, on the other side and particularly the hon. member for Coast-Capilano, discussed what the previous government had done or had not done and then used some interesting adjectives in referring to our lack of action in previous years. These questions have been regularly discussed on the first item of the estimates. Surely, my hon. friend is not going to be prevented from putting on the record, during the discussion of this first item covering administration where discussion is to be general, the facts in reply to the statements that have been made that the previous government had done nothing about northern development in recent years. Surely, under the rules he is permitted to do that.

Mr. Hardie: On the point of order, Mr. Chairman, I feel that all hon. members in the house—

Mr. Walker: You speak for yourself, and not for us.

Mr. Hardie: Oh, here is this legal brain from Toronto speaking. I am not a lawyer, but if you will just take your seat until I am through speaking, then you can speak. I have the floor at the moment. You may be able to bulldoze other people, but you will never bulldoze me.

Mr. Walker: My friend, if you would—

Mr. Hardie: Mr. Chairman, who has the floor?

An hon. Member: Sit down.

The Chairman: Order. In answer to the point of order—was it brought up on a point of order?

Mr. Pearson: I was, with respect, commenting on the ruling that you made to the effect that the hon. member could not talk about the record of the government in previous years in northern development.

Mr. Nielsen: There is nothing much to talk about.

Mr. Pearson: There must be or you would let him talk.

The Chairman: It is quite in order to voice one's opinion about what went on in previous years, but it is out of order to actually quote figures and give very precise details about things which happened previously and which actually are all in the record. It could be explained that previous governments did much more about northern affairs than is being claimed, but it is not really admissible at this time to cite figures.

The hon. member for Mackenzie River has the floor, and it would be appreciated by the chair if hon. members permitted him to carry on with his remarks.

Mr. Pickersgill: If the hon. member for Mackenzie River would permit me to interrupt for a moment, I might say that I appeared before the committee of supply in four successive years, and in every case when I appeared—that was before Your Honour was in the house—it was the custom to compare the estimates of one year with those of

another year. It would be very difficult to do that without citing figures. It seems to me all my hon. friend from Mackenzie River is seeking to do is to make a comparison between what happened in one year and what happened in another year. Here is the executive asking the legislative body, to whom they are responsible, to vote a certain sum of money. Surely, sir, if he cannot compare the amount for which they are asking, and what they are doing with it, with what was done in previous years, there is almost nothing left for us to discuss.

Mr. Hamilton (Qu'Appelle): I am not an authority on the rules of the house, but I would suggest that in this case it would be quite proper and in order to allow the hon. member to compare these figures. In my opinion, on the opening of my estimates almost anything that has been done in the past can be compared with what we are doing now. I wonder if Your Honour would reconsider your decision?

The Chairman: It is quite all right to discuss what was done by the previous government. Actually, what it comes to is that figures can be cited within reason, but one should not concentrate one's remarks on the record of the previous government because that is not relevant to the resolution being discussed. I, therefore, suggest that the hon. member for Mackenzie River try to relate his remarks as much as possible to the resolution being discussed. In other words, I am asking the hon. member to be as relevant as possible to the resolution.

Mr. Hardie: Mr. Chairman, I will try to be as relevant as possible. If you look at the book of estimates you will find that there is one column for 1958-59 and another column showing the estimates for 1957-58. I shall be very brief and will go on with what I was saying a moment ago. After the department was set up I find that in 1954-55 the estimates of the department amounted to $22,812,189. In 1955-56 they amounted to $28,541,754, or an increase of 30 per cent over the previous year. In 1956-57 the estimates of the department amounted to $38,033,363, showing a further increase over the previous year of 33 per cent. In 1957-58 the figure was $53,405,298 or an increase over the previous year of 39 per cent. The estimates for this year amount to $71,170,284 which is an increase over last year of 34 per cent. If you take the figures for the four years when the department was under the former minister you will find that the average increase per year starting in 1954-55 was 34 per cent, and the increase this year over last year is 34 per cent. Therefore the increase is a normal increase.

The former minister must have done something over the years because if you take the estimates of 1954-55 and compare them with those of 1957-58 you find an over-all increase of 230 per cent. These people say that nothing was done with respect to northern development prior to the time they took office. We heard in the committee and again in the house on July 7 a great deal about the necessity of having an inventory of our resources. The minister said we had to have an inventory of our resources. After attending the committee hearings and after listening to the minister on July 7 I still do not know how he intends to get an inventory of our resources.

Mr. Hamilton (Notre Dame de Grace): You had better smarten up.

Mr. Hardie: I will tell you one thing. The minister said something today about doubting my ethics in quoting from an autopsy report which was part of the evidence produced at an inquest at Garry lake, but I will say this to the hon. member for Notre Dame de Grace. I did not stoop as low as he has. I telephoned the minister and asked if I could do it. I did not do like the minister did in 1954 when he stoolpigeoned the Post Office Department, when he received a report from the postmaster general—

Some hon. Members: Order.

The Chairman: Order. I must ask hon. members to my right to permit the hon. member for Mackenzie River to carry on with his remarks. If they wish to ask his permission to ask questions they can do so but they cannot interrupt him in the manner they have been doing. I must also remind the hon. member for Mackenzie River that in one aspect in particular his remarks were not parliamentary and I would ask him to use more moderate language.

Mr. Walker: He does not know any better.

Mr. Howard: He is no different from you.

Mr. Hardie: I will try to do that since you have also spoken to the members across the way. As I said, the minister said that it was very necessary to have an inventory of our mineral resources in Canada but I do not know yet how he is going to get that inventory. I pointed out to the house on July 7 that you do not get an inventory of mineral resources by drawing lines on a map and saying that you are going to build roads from here to here not knowing what potential the area has in which you are going to build the roads. I pointed out at that time

that if the minister is so anxious to get an inventory of these resources what is needed is an acceleration of geological, magnetometer and electromagnetic surveys to find out the areas where there is a potential and give the information to private industry so that they can go there and drill the holes that will give you an inventory. You do not get an inventory by looking at a map and drawing a lot of coloured lines on it. You do not know how much ore is in the ground until you drill and block out the bodies.

The minister said that we did nothing prior to his taking over the department. I want to call as my witness with respect to what the former government did the same hon. gentleman, the Minister of Northern Affairs and National Resources. I have here a booklet entitled "This is the Arctic" issued under the authority of the Hon. Alvin Hamilton, Minister of Northern Affairs and National Resources. The present minister, speaking about what has been done over the years, had this to say as found on page 24:

> Since the second world war, government activities have increased enormously in the far north. New schools, new airfields, entire new town sites are being developed. Geological, topographical, and aerial surveys have been or are being completed. Large areas have been accurately mapped for the first time. In summer, ships plow through the ice floes bringing supplies to distant weather stations and medical attention to isolated Eskimo groups. In all seasons, aircraft of the Royal Canadian Air Force criss-cross the barrens and the bush, the lakes and the frozen seas.

This is what the present minister says has gone on since the second world war. He says it in an official booklet published last year.

An hon. Member: Where was it printed?

Mr. Hardie: The Queen's Printer. Let us take a look at this statement of the minister. New airfields were constructed before he took over the department recently, airfields which naturally were built by the former government to make it possible for the air line companies to reduce their freight rates and to reduce the cost of living and the cost of production in that part of the country.

An hon. Member: Who got the contract?

Mr. Hardie: Private enterprise. I will go further. There was not only a reduction in the cost of production but the cost of drilling and exploration necessary to find out where our minerals are located and to do the job the minister wants to do, to give us an inventory of our resources and to find out the extent of our ore beds.

The minister says in his statement "Geological, topographical and aerial surveys have been and are being completed; large areas have been accurately mapped for the first time." I ask this house, are these not methods by which we find the areas where minerals are located? In fact we must indicate to private enterprise where they should look for these minerals. The statement also goes on to say that the former minister built new schools and new townsites. This clearly indicates that the Liberal government saw the need not only of material development but also of social development, a policy which I think all members of this house will agree was a sound and practical policy.

We also find that some ships ply through the Arctic ice floes and that the Department of National Health and Welfare has done a great deal in regard to the health of our Eskimos and, I might say, in regard to the health of the Indians and the white people by providing grants with which to build hospitals, nursing stations in many areas of the Northwest Territories. I hope the minister can persuade his cabinet colleague, the Minister of National Health and Welfare, to extend those services to those areas where they still do not exist and where we feel they should be provided. Nurses and doctors are located in various areas at this time, but I hope the minister will talk over this matter with the Minister of National Health and Welfare with a view to providing an extension of all such services.

The hon. members of this house can readily see that the Minister of Northern Affairs and National Resources has been talking out of both sides of his mouth. When he puts out an official document printed by the queen's printer, like this one, he tells the truth, but when he barks in committee and in this house in the manner of a bull seal for the benefit of the 200-odd little seals in training that I see on the other side of the house and over here to my left he says things which will make the little seals flip their flappers, or flap their flippers.

We have heard a great deal about the railroad. In the speech from the throne we were told that a railroad was going to be built in the Northwest Territories and the hon. minister told this house—well, I will give it to you later, because I cannot find it at present, but since we have another hour and a half I will find it. We have, however, heard the government indicate to the people of Canada and particularly to the people of Peace river, northern Alberta and the Northwest Territories, that this government was going to bring in a bill to build a railroad this year. What do we now find? We are not to get any bill, so the Prime Minister says. The minister told the Leader of the Opposition on July 7 that the former government had done nothing about this railroad, but I want to tell him that the

officials in his department prepared and submitted to the Gordon commission in November, 1955, I think it was—or 1957, I am not sure of the date—

An hon. Member: You are all mixed up.

Mr. Hardie: I cannot carry all this in my mind—

Mr. Nielsen: It is a wonder you have been able to carry the little that you have.

Some hon. Members: Oh, oh.

Mr. Hardie: If all I had to carry in my mind were some of the silly interjections made from across there, that would be a simple proposition. In any event, the minister on July 7 told the Leader of the Opposition that if the former government had been in power he doubted if there ever would have been a railroad. I want to put the record straight. In September of 1957 the former government asked the Canadian National Railways to do an economic and route survey of a railroad from Alberta to the south shore of Great Slave lake. The report on that survey has never been tabled in this house, although I have been asking for it ever since November last.

This government received the report on that survey, not the former government. This government is the government which could have acted on its recommendation. What have they done? They have withdrawn all chance of building a railroad this year; they have withdrawn the promise they gave to the people of Canada in the speech from the throne and in particular the promise they gave to the people of the Northwest Territories; they have withdrawn all those things and today we have no bill for a railroad.

I suggest to the minister, and I am sure the hon. member for Peace River would agree with this, that if the minister cannot convince his cabinet colleagues that a bill should be introduced this session to build 400 miles of railroad from wherever it might be, Waterways or Grimshaw, then he should ask his colleagues and the railroad companies to assist him to introduce a bill this session to start construction of a railroad from Grimshaw, Alberta to Fort Vermilion, Alberta, an area which is already settled and which is composed of agricultural land.

The hon. member for Peace River can and has told this house the great benefits offered by that area, so let us bring in a bill this session to this end and then, during the following session, bring in a bill to extend that measure into the timber rich areas of the Wood Buffalo park or Fort Smith area and then, and if the Consolidated Mining and Smelting Company, which controls the biggest lead and zinc deposit in North America and possibly in the world, will give assurance to the government that they will open up their property when the road is complete we could take off a branch line from Fort Vermilion and run it north to Pine Point and terminate it up at Hay River where we have an open port and where we can transship the freight carried into Hay River down the Mackenzie river and along the Arctic coast or across to Great Slave lake into Yellowknife and into the mining country.

Mr. Hamilton (Qu'Appelle): Before recess the hon. member for Mackenzie River was asking about the report and I collected this information in the meantime. The northern service officers send monthly reports to the department in Ottawa, which are supplemented by interim reports at all times. There is no report from this particular northern service officer for the month of February, as he was absent on duty in Eskimo Point. There is however a report from this officer on file and in a moment I am going to ask the permission of the committee to read this report into the record, and then ask to table it tomorrow because it is the only copy we have. If the committee will accept this I think it will give as full information as we have in the department.

As to the cache which has been talked about it was located at Pelly lake near an abandoned air strip and an abandoned house. It was left there by Spartan Airways. The contents were some food left over after a Spartan Airways construction job and was left as a gift to the local Eskimos under our supervision.

Mr. Hardie: I wonder if the minister could tell the committee on what date that cache was left?

Mr. Hamilton (Qu'Appelle): I think the report will mention the date, within a day or so. In addition, we took in from the department 2,400 pounds in two trips and this, too, will show up in the report. There was an Eskimo placed in charge with explicit instructions as to what he should do with this food.

I should like to read this report into the record now, and, since it is the only copy, I should like to have permission to table it tomorrow.

The Chairman: I believe the hon. gentleman could actually read the report into the record. That would be sufficient. And if the Minister of Northern Affairs wishes to table the report tomorrow he can, of course,

do so, but I remind the committee that the report should be tabled when the Speaker is in the chair.

Mr. Hamilton (Qu'Appelle): I will read this report subject to the proviso that this is a privileged document, and it does not set a precedent for tabling a privileged document in future. But I understand it is the privilege of a minister to bring such a document into committee and read it if he so wishes.

The memorandum is dated Baker Lake, April 26, 1958, and it is addressed to the chief, arctic division.

Garry Lake Eskimos

On April 24 I sent the following mesage to your office:

Visited Garry and Pelly with Corporal Wilson April 24. Eskimos interviewed report food shortage throughout area all people one camp plus three others died starvation after building at Pelly containing relief supplies burned down February. R.C.M.P. Otter flying food supplies Pelly April 25 will accompany in my plane full report on return.

Since this message was sent the R.C.M.P. Otter has come from Churchill to Baker Lake. On April 25 it made an attempt to fly to Garry and Pelly lake but was forced to turn back because of poor visibility. As this memorandum is being written the plane is making a second attempt and probably will reach Pelly lake although flying conditions are far from ideal. The R.C.M.P. plane is taking in relief food supplies to be left at Pelly lake and, if possible, it will make a search of the area for Eskimo camps. Due to poor visibility on April 25 and high winds on April 25 I have been unable to leave Baker Lake in my plane. Corporal Wilson is with the R.C.A.F. plane. I have remained at Baker Lake in order to allow the R.C.M.P. aircraft to take my equivalent weight in aviation gas for my plane to Pelly lake. This will enable me to fly to Garry and Pelly and give me ample gas in that area if it becomes necessary to use my plane to search for camps. I expect the R.C.M.P. plane will return to Baker Lake this afternoon and take off for Churchill, I will send this preliminary report on the plane.

On February 20, in a memorandum to your office (File 205-4/159) I outlined the position of the Garry lake group of Eskimos as it was known to us at that time. Subsequent to this memorandum I discussed the situation of the group with Mr. Rudnicki and Mr. Stevenson while in Churchill at the end of February. So far as I can ascertain at this time the evaluation of the situation at Garry as outlined in my memorandum and in the conversations at Churchill was correct except for one unknown, and very important, fact. At the time I wrote the memorandum I did not know that the building at Pelly lake containing all the relief supplies as well as the trade goods for the Eskimo (which had been taken to Pelly lake by Corporal Wilson) had been burned to the ground early in February with the loss of everything inside. The loss of these goods changed what would have been a 'hard' winter into one of tragedy. The following is a chronological arrangement of events relating to the Garry lake group starting from the summer of 1957:

In midsummer, 1957, the northern service officer at Baker Lake received a wireless message from the Roman Catholic priest at Garry lake to the effect that the group of Eskimos in that area were in danger of starvation. Upon investigation by the Baker Lake R.C.M.P. detachment O.C. this report proved to be without foundation. The Eskimos were concentrated on one small island by the Roman Catholic mission and were unable to exist as a large group at that point. Immediate dispersal of the Eskimos into small groups on the land throughout the Garry lake area brought food in plenty to all camps. The R.C.M.P. N.C.O. arranged to fly in to Garry lake a large quantity of family allowance food and relief food supplies to be stored in the area in case of emergency. (At this time the northern service officer Baker Lake had departed for posting at Churchill). In mid August the R.C.M.P. N.C.O. Baker Lake spent a week at Garry lake visiting all the Eskimos at their camps. Caribou were being taken in small numbers and fishing was adequate. With Spartan Airways personnel at the Pelly lake airstrip he arranged for the use of an unheated building as a warehouse for the food supplies brought in by plane. The local Eskimos were instructed to use the relief supplies in the building in case of emergency. Under the direction of the Roman Catholic priest at Garry lake, one of the Garry lake Eskimos, Maneeralik W1-207 who had recently returned from hospital in southern Canada, was asked to supervise the distribution of the food supplies as required. The R.C.M.P. N.C.O. encourage the Eskimos to set traps during the coming winter and to bring the furs to Maneeralik who would issue goods to them in return. Arrangements would be made to transport trade goods from Baker Lake to Pelly lake in the R.C.M.P. plane. The R.C.M.P. N.C.O. also urged the people to put up good caches of fish before freeze up. Early in December the Roman Catholic priest from Garry lake, with the Eskimo Maneeralik, came to Baker Lake by sled. He reported to the R.C.M.P. N.C.O. (the northern service officer was in Ottawa) that food was in short supply throughout the Garry lake area. Few caribou had been seen and the people were existing on fish. The R.C.M.P. N.C.O. requested that the R.C.M.P. Otter come to Baker Lake in order to fly in additional food supplies to Garry lake. These supplies would be in the form of family allowance goods and trade goods. Maneeralik had reported that the Eskimos had a number of fox and wolf skins with which to trade for food and other supplies. These skins had been left in the building at the Pelly lake airstrip. (The airstrip is ten miles from the Roman Catholic mission at Garry lake) Maneeralik had kept records of the numbers of foxes brought to Pelly lake by the Eskimos and of the goods he had issued to them in return from the supplies on hand. The R.C.M.P. Otter came to Baker Lake and took the additional supplies to Pelly lake. I arrived back in Baker Lake just in time to accompany this flight. I reported on this trip to the effect that the additional supplies had been taken to Pelly lake and stored in the building. I also reported that a good portion of the goods and food taken in last fall was still in the building which indicated that no serious food problems existed at that time. The Baker Lake R.C.M.P. N.C.O. planned to make a dog sled patrol to Garry and Pelly lake in late February. I reported on this in my memo of February 20. At the time I was dubious that this patrol would actually take place and discussed this matter with Messrs. Rudnicki and Stevenson in Churchill. As a result of these discussions I sent a wire to the Baker Lake R.C.M.P. N.C.O. suggesting that, if he was unable to make this patrol Messrs. Stevenson and Rudnicki could come to Baker Lake from Eskimo Point in the R.C.M.P. Otter and then fly in to Garry lake in order to ascertain conditions. Following my

[The Chairman.]

departure from Churchill for Ottawa Mr. Stevenson received a wire from Corporal Wilson to the effect that the patrol to Garry lake would take place.

The patrol to Garry lake did not take place. The Eskimo guide from Garry lake, who was to have come to Baker Lake in February, did not show up. I do not know what happened to the plan to hire a Baker Lake Eskimo as a guide. In mid-March Corporal in charge Baker Lake R.C.M.P. detachment requested that a flight be made to Garry lake with additional food supplies for the Eskimos. This flight was made during the third week in March, shortly before the northern service officer arrived back at Baker Lake with his personal plane. The R.C.A.F. Otter aircraft made the flight to Garry and Pelly lake with the R.C.M.P. N.C.O. Baker Lake and an aircraft load of food supplies. At Pelly lake it was discovered that the building containing the food and other supplies had been burned down. Nothing remained of the building except the banked up snow walls which were completely drifted in with snow. There was no sign of any Eskimos in the vicinity of the airstrip. The food supplies from the plane were deposited on the airstrip and the plane returned to Baker Lake. It was experiencing some engine trouble and it returned to Churchill the next day.

The northern service officer returned to Baker Lake on March 23. He discussed the matter of the Garry lake group with the N.C.O. R.C.M.P. and it was decided that, after a few days flight practice at Baker Lake, he and the R.C.M.P. N.C.O. should make a trip to Garry lake to visit all the camps in the area. The R.C.M.P. N.C.O. expressed the opinion that the Garry lake Eskimos were not living well but were getting by on fish. Bad flying weather in early April kept flight practice to a minimum and prevented any trips away from Baker Lake. On April 11 the northern service officer received word to proceed to Rankin Inlet to attend the trial of Kikkik. The trip to Garry lake was postponed until his return from Rankin Inlet.

The northern service officer returned to Baker Lake from Rankin Inlet on April 17. Bad flying weather on the 18th and 19th prevented any flight to Garry lake. On April 20, he, and the R.C.M.P. N.C.O. flying in the N.S.O. personal plane, managed to get within ten miles of Garry lake before being forced to return to Baker by extremely bad weather. Bad weather kept the plane grounded on April 21, 22, 23. On April 24 the N.S.O. and N.C.O. R.C.M.P. managed to fly to Garry lake and Pelly lake without trouble. The plane circled the R.C. mission at Garry lake but as no sign of life was seen at that point it proceeded to the airstrip at Pelly lake. Because of bad drifts on the airstrip and the fact that a 20-mile an hour cross wind was blowing directly across the strip, the plane had to land on a small lake about two miles from the strip. From the air Eskimos could be observed near the buildings at the strip.

At Pelly lake airstrip were six Eskimos: E2-304 Teenak and his family of four, and Kukshow E2-302. Teenak and his family had been living in one of the Sparton buildings at the airstrip for almost a month. They were quite well off for the building was being heated by two oil space heaters and was equipped with beds. They were living on fish and the food supplies taken in on the R.C.A.F. Otter. Kukshow had just arrived at Pelly lake from his camp the day before we arrived. He was quite hungry. He had left his family at the camp, where they were living on fish plus a portion of the food supplies brought in by the R.C.A.F. Otter late in March, and had come to the airstrip for more supplies. From these men we obtained the story of events at Garry and Pelly lake during January, February and March. This story is not substantiated as yet and details may change slightly but it seems to be correct in most respects.

The Garry lake Eskimos got almost no caribou during the winter of 1957-58. They existed on fish and the food supplies brought in last fall. Until December they did not do too badly. They all had dogs, they were trapping and trading the furs for goods at Pelly lake. During January the fishing declined and they became more dependent on the food stored at Pelly lake, although they were still getting some fish. In late January or early February two Eskimos, Arnaguak E2-356 and Akeekunga E2-328 came to Pelly lake from their camps in order to get food from the supplies in the Sparton building. At Pelly lake they decided to stay in the building. We do not know how long they stayed but at some time during their stay, Arnaguak lit a Primus stove and it exploded, spreading flame throughout the interior of the building. Akeekunga was asleep at the time but both men managed to get out of the building. It appears that Akeekunga had his clothes on but Arnaguak had only trousers and underclothes. Akeekunga managed to make his way back to his camp, how we do not know. At his camp the people were depending on him to bring food from Pelly but, of course, he brought none. This entire camp of eight people died of starvation and exposure at some time in the next few weeks. After the explosion and fire Arnaguak, who was without adequate clothes, crawled into a small building on the airstrip and burrowed down into a pile of mattresses in the building. He never came out and his body is still there. His is the only body we have seen to date. As nearly as we can gather almost two-thirds of the food supplies taken to Garry lake and stored in the building at Pelly lake were lost in the fire. This completely destroyed the safety factor in the local food supply.

From Teenak and Kukshow we obtained a list of the people known to have died during the winter. A copy of this list is attached. As yet we have been unable to verify the deaths of any of these people except Arnaguak E2-356 whose body is in the building of the airstrip. A total of sixteen people died, twelve of these almost certainly as a result of food shortage, the remainder of other or related causes. We decided to return to Baker Lake and request an aircraft from Churchill to carry food supplies to Garry and Pelly lake and to search for all camps so as to ascertain that all remaining Eskimos were well. My plane had insufficient gas for searching in the area as we had been fighting strong head winds all the way up from Baker Lake. The aviation gas at Pelly lake is too high an octane rating for the plane. We arrived back at Baker Lake at 3 p.m. April 24 and sent messages to Ottawa and Churchill.

The plan for the immediate future is to make sure all Eskimos at Garry lake have sufficient food to last until fishing and hunting improves which it usually does in mid May. Once this is done we will evaluate the position of the group and submit recommendations. I will assist in the search for camps by using my plane so long as weather permits but the main work will be done by either the R.C.M.P. Otter or the R.C.A.F. Otter until all camps have been located. This should not be a difficult task as all camps are within fifty miles of Pelly lake.

It would be unreasonable to suppose that hon. members of the committee could have grapsed the full significance of this lengthy report in all its detail from one reading of it but what it boils down to is this. The department followed every bit of advice and practical policy it could adopt under the circumstances. As far as it was concerned it had provided this food cache as a safety factor. The Eskimos were not abusing it but came from their camps to get food only when

they felt they did not have sufficient fish. The tragedy of the food cache burning down destroyed the safety factor as the report pointed out and in effect its loss was the main contributory cause of the death of these 16 Eskimos.

I should like to point out something which I am sure the hon. member for Mackenzie River must know concerning the customs of these people. These people in the Keewatin district are caribou hunters. Their whole life is associated with the caribou. The northern service officers have been attempting to have them diversify and widen their efforts and rely more on fish. Stories are told in the department about officials having gone among the Eskimos with fishing equipment such as nets. After teaching the Eskimos how to use them the Eskimos used the nets as long as officials of the department were with them. But the instinct of these people is not to sit beside a hole in the ice. Their instinct is to go out and hunt caribou. They usually range between 200 and 300 miles from their bases when hunting. It would be almost impossible for any group to keep in touch with them.

In recent years because of the activity of this and other departments of government and construction groups in the area, all of whom have been very good about supplying food to the Eskimos, the Eskimos have come more and more to rely on the free food that is provided. That is the reason why they have limited their activities to within 40 or 50 miles of a camp. And, of course, this very thing destroys their ability to find food.

No one here would want to make this into a partisan issue between parties or groups because, as I think the record will show, in the last number of years the Department of Northern Affairs and National Resources has been moving as rapidly as the members of this house would vote them supply to get certain things done. I could quote the figures on what has been happening over the years, but I should like to point out to the hon. member for Mackenzie River that I have never taken credit away from anyone who did anything; I have never tried to pretend that the Department of Northern Affairs and National Resources did nothing before I became the minister. These are assumptions made mostly by those with guilty consciences.

I am going to ask the hon. member, when he attacks this department for doing nothing, who is he really attacking? He is really attacking the previous incumbent of this office because the caribou decline was first reported as a result of a survey by the wild life service of the department in 1952-53; but no one credited the report at the time. This report was further checked in 1954 and 1955. Let me remind the hon. member that in 1954 there was not one single northern service officer any place in the area. In 1955, after this report had been made in 1952, 1953, there was not one single northern service officer in the whole district of Keewatin, but there was one in Churchill. In 1956, which is four years after this report, there was one northern service officer in Churchill, one in Baker Lake, plus eight R.C.M.P. officers in all of Keewatin. This was three years after the caribou decline was thoroughly established. I ask the hon. member, in all fairness, who was in power then?

Mr. Hardie: And I ask the minister how many caribou more northern service officers are going to bring back?

Mr. Hamilton (Qu'Appelle): Mr. Chairman, the depth of the hon. member's wisdom in this case is well demonstrated. The northern service officers do not bring back caribou but what they are there for is to try to look after the Eskimo, to help them adapt to the new conditions. All I am saying here is that I am not going to be a party to making a political issue out of the unfortunate things that have happened to those Eskimo.

I think that what the hon. member did on Saturday was sufficient to bring them to the attention of the country, as they have been brought to the attention of the country by our deparment over the last few years. The department has done everything that it can think of. I asked the hon. member before recess what he suggested. One suggestion he made on Saturday we agreed with, namely that we should have to begin moving them into those settlements, and we are starting that. He said nothing beyond that. The assumption that was made—

Mr. Hardie: Provide them with an opportunity to work.

Mr. Hamilton (Qu'Appelle): That is it.

Mr. Hardie: To make a living.

Mr. Hamilton (Qu'Appelle): That is it, but we are trying to move them in the only way we can do that. But beyond that, all this business that was brought to light here this afternoon and the inferences that were made were that we deliberately just took a thousand pounds of food and made those people exist on one ounce and something a day; that statement was absolutely unfair to the men out in the field and to the men here in Ottawa in this department.

Mr. Hardie: It was nothing of the sort.

Mr. Hamilton (Qu'Appelle): I am sure that if the previous incumbent of this position

were here he would say the same thing. I do not know what the hon. member has against Mr. Jean Lesage; I do not know why he has such burning hatred of him that he would destroy him as he has done here tonight.

Remember this, Mr. Chairman. Every bit of money that was used in this program that we are talking about and that the hon. member is complaining about that was put in the estimates in 1957-58 was put there by the previous administration. The manpower that I have to use was put there by the previous administration and the organization was put there by the previous administration. I do not believe that this tragedy can be blamed on anyone. I believe the circumstances are so difficult in this area that they are almost impossible to cope with. The situation grieves every member of this house, as it must grieve every Canadian across this country. But if there is any blame, be careful where you put it.

The hon. member went on tonight with a new line of attack. He attacked the department and compared figures. I was very happy, Mr. Chairman, that you allowed him to quote those figures because what he quoted was the total spent in the department over the years. Let me quote tonight the figures for northern construction because this development under way cost in 1949-50 less than a a million dollars; in 1950-51, two-thirds of a million dollars; in 1951-52, a quarter of a million dollars; in 1952-53, a quarter of a million dollars; in 1953-54, a quarter of a million dollars; in 1954-55, a third of a million dollars; in 1955-56, less than $2 million; in 1956-57, $5.8 million; in 1957-58, this year's estimates, $12.1 million; plus the main estimates for 1958-59, which we are dealing with, $15.7 million, and supplementaries this year of $3.5 million, a total of $19.2 million. Now, last year's vote for which the previous administration was responsible for northern construction in the Northwest Territories amounted to $12.1 million. This year, I am asking for $19.2 million and the figures for the Yukon are even more impressive.

I think, Mr. Chairman, in view of the long discussion that we have had in committee, 25 to 28 hours, that this is a repetition of much that was said in committee. I do think that the issue has now developed, not into one of getting information from the department but of making political charges. If you want to go back and fight the last election and if you want to go back and ask the people of the Northwest Territories whether they want that $19 million, you should stand up and say so.

Not so very long ago the hon. member voted no confidence in this government because of our development policy. You heard your leader come out today and warn this country of the significance of the work that is going on in our northern areas and, in effect, telling us that we had to keep a very careful eye up there. He used the expression that we must have effective occupation of those northern areas. He has changed his mind since the election. He has learned from experience. He no longer talks about "igloo to igloo". He is talking now about maintaining the sovereignty of this country in the northern areas. But you are going in the opposite direction trying to tear down what we are doing and you are no friend of this northern development program.

Mr. Pearson: Mr. Chairman, I had a little doubt as to whether I would prolong this discussion or not but the minister's last words certainly resolved that doubt when he ventured to say that my remarks this afternoon on this matter meant that I had changed my mind, on the necessity to have effective occupation of the north. I could show the minister a good many statements that I have made over the years, including statements in the United States of America and articles in United States magazines, pointing out years ago that not only did Canada have a right to this Arctic territory but she was going to make that right stick through effective occupation. So for me, Mr. Chairman, there is no conversion represented in any observation I made this afternoon.

So far as the tragedy of the starving Eskimos is concerned, the minister has just read to us a heart-rending report in very simple but very eloquent terms of the tragedy of starvation and death descending on this little band of Canadians. We in this country often boast about our mechanistic, modern civilization as having given us the highest standard of living in the world, and yet this tragedy has driven home to us the fact that there are still Canadians whose problem is one of stark survival, and not whether to buy a second television set or not. Perhaps this discussion, Mr. Chairman, may help the government in doing something about it. I am not blaming the government for this particular tragedy. There was a combination of unhappy circumstances. But this discussion and the publicity that it has achieved may perhaps help to prevent that kind of tragedy occurring again. If it does, we will all be happy about the publicity that has been given in the house.

There are only two other matters which I feel I must mention—it will not take long—because the minister brought them up this

afternoon. He did say, and I am not quarrelling with the use of the word, that we over here scoffed about the vision of developing a great centre in Frobisher Bay. I did mention that this afternoon, and I read from a report of the minister's trip to this place. It may well be that Frobisher Bay, before long, will be an important centre of a great defence complex and a trade and economic complex. It may realize all the dreams that were portrayed in this particular report. What I asked the minister on this point was merely for information concerning, not the building of skyscrapers in Frobisher Bay because if that is the best way of providing Arctic housing, that is fine, but this particular report says, and this is what struck my imagination and I wondered whether there was any basis of fact for it:

> It involves the use of six-story skyscrapers of concrete ringing a mammonth central, roofed and heated hexagonal plaza containing stores and offices.

This leaves the impression that the population of this particular place would be living under cover in winter and summer, if they so desired, and that seemed to me to be a new idea in Arctic development.

I talked about the atomic power station, with which the minister did not deal except in a general way. I ask him if he can confirm the statement he made, and it is an important one, that we have now in this country package atomic power stations for this kind of use. If we have, we have made a great deal of progress in Canada in the last year, and progress of which we can all be very proud.

After I made that statement, and during the dinner recess, I happened to pick up the New York *Times*. Perhaps the minister has read this article. The report is from Chicago, dated August 13, and it says that the Argonne National Laboratory of the United States, which is the centre of atomic power development over there for civilian purposes, announced today—that is August 13—the development of a portable package atomic power plant designed for use on the Distant Early Warning line, that is in Canada. Apparently this is the first atomic power plant for this purpose that has been designed and brought into use, at least in prototype, in the United States. The report goes on:

> The unit is called the Argonne low power reactor.

It has a capacity, at full power, to produce 3,000 thermal kilowatts, enough energy to light 300 average homes or to heat 14 average homes. Presumably, you would need quite a few of these for the kind of development about which the minister was talking. As the United States has now announced this is a first, it is a prototype, I was naturally even more interested after dinner in the statement the minister made that we had already in Canada such a package atomic power plant.

The only other matter I wish to mention is the statement of the minister—I think it was an important statement and he should produce some evidence to support it—that Canadian cabinet ministers and officials had to go through certain formalities before they could visit United States military installations in the Arctic. He mentioned one Canadian official in particular who had been held up for months in doing his official work on Canadian soil because of these formalities. I suspected that the minister's statement would become headline news. If he looked at the seven o'clock news on television, he would realize it has already become so because the particular news which I saw at seven o'clock —probably it was an effort to compress what the minister said—indicated that both cabinet ministers and Canadian officials had considerable difficulty in visiting these stations on Canadian soil. I do not know whether or not the minister wishes to leave that impression.

I do know that when we were in office there was no difficulty of any kind for any Canadian cabinet minister who wished to visit any United States controlled station on Canadian soil, a United States station which was there with our approval and after formal agreement with Canada. All he had to do was indicate his desire to go there and he was cleared at once. It is not improper that Canadians, even Canadian cabinet ministers, should have to be cleared on occasions like that because if we had a top secret military installation in the United States, and we are entitled to have one there under agreement between the two countries, and any United States cabinet minister wished to visit it he would have to be cleared through the proper Canadian security authorities. I venture to say that if a German cabinet minister wanted to go to a top secret Canadian establishment on German soil, and we have some there, he would have to be cleared by the Canadian authorities. That is not improper procedure. But if it is being improperly exercised by the United States, we should hear about it. If Canadian officials are in fact being held up through the improper application of United States security procedure, we should have information about that. If that is being done there are remedies available to apply to that kind of thing to stop it.

It seems to me that if it gets out at this particular moment that United States authorities are improperly exercising their authority on Canadian soil in the way in which the

minister's statement was reported this afternoon, it would be unfortunate. It would be just another pin prick in the relations between the two countries at a time when we do not want that kind of thing. Therefore, I hope the minister, before we pass this particular item of his estimates, will clear up that point.

Mr. Hardie: In my opinion, the minister's statement has not added anything new to what has been said. Apparently, however, there is a new tactic on the government side. This afternoon I asked the minister a number of times if he had received reports from his officials in the field in regard to Garry lake. He said: "No, I have not received any reports." He had never heard of them. No official had reported to him. There was nothing in his department. They had no reports. Tonight, he brings in the hidden document.

Mr. Hamilton (Qu'Appelle): I shall have to take exception to that statement, Mr. Chairman. I said no such thing and the record will bear me out.

Mr. Hardie: I asked for this report all afternoon and got nothing. Then this evening the minister reads this report into the record and accuses me of blaming someone. I still say that the evidence he brought in tonight proves what I said before, that there was no contact between December 10 and March 22.

Then, in so far as the figures on construction are concerned that he put on the record, I want to say I went through the estimates yesterday, this very large sheet which is provided in the back of the book of estimates. I am going to quote from two of the items: Construction or acquisition of buildings; in 1954-55, $4,157,459; 1955-56, $9,473,946; 1956-57, $17,685,834; 1957-58, $27,342,007—it is $10 million more than the year before; this year, $30,971,179, which is $3 million over last year and last year was $10 million over the year before. Then, in the item of repairs and upkeep we find the same sort of story. The next item is equipment and construction and in 1954-55 the expenditure was $1,966,215; in 1955-56 it was down to $909,180, but in 1956-57 it was up to $1,544,515, an increase of $600,000. In 1957-58 there was another increase to $1,700,606 and this year the amount is $2,792,731. These are the figures I took from the estimates. These are the only figures available to me or to other members of the house. The figures I quoted this afternoon were based on what was shown in the main and supplementary estimates for each year.

Item agreed to.

268. To provide for contributions to the provinces, pursuant to agreements entered into or to be entered into, with the approval of the Governor in Council, by Canada with the provinces, of amounts equal to one-half of the amounts confirmed by the provinces as having been spent by them for camp ground and picnic area developments, $1,000,000.

Mr. Tucker: Mr. Chairman, last spring the Department of Northern Affairs and National Resources, with the co-operation of the department of mines and resources of the province of Newfoundland, established a few campground and picnic sites in the vicinity of Newfoundland highways. These sites have proved to be very successful and have had a double effect. In the first place, they have given badly needed employment. Secondly, they have provided badly needed campground and picnic sites which are becoming very important and necessary along our highways. I believe that this was the first time that such a development took place and on behalf of those concerned I wish to offer my sincere thanks to the Minister of Northern Affairs and National Resources for this work. I trust that this is only the beginning and I hope that the minister will see his way clear to extend this program.

Item agreed to.

National parks branch—

269. Branch administration, $143,105.

(Translation):

Mr. Pigeon: I shall be brief, Mr. Chairman. In the federal riding of Joliette-L'Assomption-Montcalm, there is an historic site of national importance, located in the town of St-Lin-des-Laurentides. This site is the direct responsibility of the Department of Northern Affairs and National Resources. As I said, it is at St-Lin-des-Laurentides, and meant as a tribute to Sir Wilfrid Laurier, our great autonomist prime minister who was born there. The monument was erected some years ago. At the entrance and exit of St-Lin, four signs had been put up which read: "Laurier's birthplace", in English only.

They had been there for several years. When I took up the matter with the Minister of Northern Affairs and National Resources (Mr. Hamilton), he personally went over to St-Lin-des-Laurentides to visit this historical site and to correct this omission. A few days later, his department informed me that the signs would be changed bearing new fully bilingual escutcheons.

Mr. Chairman, I wonder why the previous government refused to respect the memory of Sir Wilfrid Laurier—who was bilingual himself—and did not want to respect the

bilingual character of my constituency and of the province of Quebec. Yet, Mr. Chairman, Laurier was bilingual. And this happened under the previous government. And do you know who, Mr. Chairman, was minister of northern affairs and national resources at the time, and who failed in the full application of the principle of bilingualism? None other than Mr. Jean Lesage who, today, wants to extort the confidence of the province of Quebec. Thus was the principle of bilingualism trampled underfoot by that gentleman! Mr. Chairman I say that it is all to the credit of the province of Quebec and of the country that the minister has corrected that injustice to the memory of Sir Wilfrid Laurier and to the province of Quebec. It was a shameful thing, Mr. Chairman, for Mr. Jean Lesage to have trampled underfoot the principle of bilingualism in this manner.

I would also like the minister—if that is possible—to see that a commemorative plaque be placed on that part of the college of l'Assomption which is a hundred years old, in order to recall the fact that Sir Wilfrid Laurier was a graduate of that institution.

I wanted to make these few remarks to denounce publicly, in this house, Mr. Jean Lesage, who at this time is attempting to abuse the confidence of the province of Quebec, and who has trampled underfoot the principle of bilingualism in the province of Quebec.

Once again I thank the Minister of Northern Affairs and Natural Resources for having made the journey to St-Lin-des-Laurentides and having corrected that omission with respect to bilingualism.

Mr. Dupuis: Mr. Chairman, I am sure that Hon. Antonio Barrette will be very proud indeed of his little filly.

(Text):

Mr. Pickersgill: Mr. Chairman, I have one or two rather unexciting questions I should like to put to the minister about the administration of the national parks. I did not press the minister for an answer to my question about the employment policy in Terra Nova national park on the first item and I have no doubt whatever that the minister has every intention of carrying out the assurance he gave to the minister of mines and resources of Newfoundland about giving preference in employment to those people who formerly made their living in the park. Because there are no newspapers published in my riding my constituents do not read newspapers very much but they do read *Hansard* a good deal and I know that it would give them some comfort to see this assurance in *Hansard*. I hope the minister can give it.

My questions are not many and I will put them all at once. I should like to ask the minister if a start has yet been made on the road from the trans-Canada highway to link with the provincial road to Terra Nova station. As the minister knows, Terra Nova station is the nearest place on the railway to the park headquarters, and it would be of course—I think the minister knows this too—a great advantage for the administration of the park to have access to this settlement and the people in the settlement would like very much to be able to get out by road.

As the minister pointed out in his letter to the minister of mines and resources of Newfoundland, once this road is built it will open up the way to certain timbered areas outside which, as the minister pointed out, have more merchantable timber on them than the areas in the park and might ease the problem in the administration of the park itself. I am not going to take the minister's time this evening—

Mr. Broome: Good, good.

Mr. Pickersgill: I would suggest that if the exuberant hon. member for Vancouver South would show equal consideration for the minister the minister would get his estimates through a little bit faster. I am not going to take the minister's time to traverse the ground which was traversed in questions and notices on the order paper about employment policies in Terra Nova national park. I was sorry to hear, as most of my constituents who live in that area were, that the minister felt it necessary to seek the advice of a gentleman who came to live in that community after the national park was established as to the qualifications of people who had lived there all their lives. I hope the minister has abandoned this policy and that he is leaving it to his very competent official on the parks staff to engage people for work there. If he does that I am sure everyone in the community will be quite well satisfied.

I would like, however, since this does not appear to be the only case where there are some peculiar employment policies, to ask the minister if since yesterday he finds himself in a position to answer the starred question which has already been on the order paper for some time about certain employees in the national park at Cape Breton and if, at the same time, he would tell us whether or not the other three gentlemen who were referred to in the question that was answered did receive notice that their services were being dispensed with, and whether that notice was subsequently withdrawn. Would the

minister also tell us whether or not he himself received representations from those persons and whether a certain Mrs. Woodman of Jasper, Alberta, was employed on a part-time basis in the Jasper national park, and if her services were subsequently dispensed with? If so, why? Who succeeded her and what peculiar qualifications did that person have which Mrs. Woodman did not have?

Mr. Hamilton (Qu'Appelle): I am very pleased to have the remarks of the hon. member for Bonavista-Twillingate about the employment policies in Terra Nova. I would like to answer him in this way: It is the policy of the parks department to give, wherever possible, preference to people living near the park, and the hon. member knows that that is the policy we have followed.

As to the second question about the start on the road from the park to the railway—

Mr. Pickersgill: Perhaps the minister would not mind my interrupting him. He does intend to carry out the policy of giving special preference to those people who made their living previously by cutting in the park, as he told Mr. Keough he would?

Mr. Hamilton (Qu'Appelle): Yes. I believe that was satisfactorily stated this afternoon.

Mr. Pickersgill: Yes.

Mr. Hamilton (Qu'Appelle): On the question of the start of the road, this road was started about a week ago.

The third question was with respect to the starred question which I have not answered, but which was placed on the order paper. The information I requested came to me in an unsatisfactory fashion and I asked my department to write back for more details because I wanted to give the house a complete report on the employment practice in this park. I think the house will be happy to know that the fundamental principle we follow there is with respect to the need of the people and that the record of employment in the Cape Breton park, particularly during the winter unemployment works program last year, would bring credit to any government. The answer to the question I asked has not come to me as yet, but as soon as I receive the information I will place it before the house.

With respect to the second starred question, I am informed that the parks department have no information about these people having received notice. They have been employed continuously and I am assured by the head of the parks department who is now before me that we have no information on their having received notice to leave.

Mr. Pickersgill: Did the minister receive any communication himself from any of these persons?

Mr. Hamilton (Qu'Appelle): Personally, no.

Mr. Pickersgill: Personally or in any other way?

Mr. Hamilton (Qu'Appelle): My officials have no information on any such intimation.

The fifth question was with regard to Mrs. Woodman in Jasper, and this is a case where a motion to produce was met and I believe the paper has been tabled.

Mr. Pickersgill: I do not think it came to our notice.

Mr. Hamilton (Qu'Appelle): It may not be, of course—

Mr. Pickersgill: It was not in my name; I believe it was in the name of the hon. member for Ottawa West.

Mr. Hamilton (Qu'Appelle): I am now informed that information has come to my office in the last couple of days but I have not seen it as yet, or I have not signed it.

Mr. Pickersgill: Perhaps the minister could tell us about Mrs. Woodman.

Mr. Hamilton (Qu'Appelle): Yes, I have the facts. These are the general circumstances. This lady was employed in the information office last year. After she left the office she entered into some activity in support of one of the candidates in the area, and when it came time to employ people this year she was told she would not be needed. There was no recommendation by the member for the constituency in question about who should be hired in her place. The parks superintendent does that entirely on his own. When the hon. member gets the letter, which will be tabled, he will see the lady's own admission that she did take part in such activity. She is complaining that because she only took part in political activities in between work periods she should not be classified as an active political worker.

Mr. Pickersgill: Does the minister suggest that the lady was not dismissed? Am I correct in that understanding?

Mr. Hamilton (Qu'Appelle): She was a seasonal employee and she just was not hired again this year.

Mr. Pickersgill: Exactly. In other words, this lady was not employed at the time she took part in these political activities?

Mr. Hamilton (Qu'Appelle): That is right—

Mr. Pickersgill: In other words, the minister is saying that a civil servant of Canada—

Some hon. Members: Oh, oh.

Mr. Pickersgill: —who, while not employed by the Canadian government, has taken part in political activities in support of a candidate is ipso facto unemployable by his department? Is that what he is saying?

Mr. Hamilton (Qu'Appelle): Mr. Chairman, civil servants very properly do not take part in political activities and, as you know, they should not do so. A person who works for the government in a seasonal capacity, as did this lady, as a civil servant during periods of employment—

Some hon. Members: She was not employed.

Mr. Chevrier: Not by any stretch of the imagination.

Mr. Hamilton (Qu'Appelle): She engaged in these activities when she was no longer employed by the government, but to assume in the summertime that you are a civil servant and you do not take part in politics but that in the wintertime you go to work in the political field is, I think, stretching it a bit too far. I think the house should be made aware that this is a park which has a tremendous staff and that this is the only change that was made. If memories were allowed to go back to 1935, I do not think the hon. member would be complaining as to this.

Mr. Pickersgill: My active participation in politics, of course, does not go back to 1935, but I think—

An hon. Member: What about the ones Jimmy Gardiner fired?

Mr. Pickersgill: The hon. member can make his speech in his own time, but in my experience I, of course, have had nothing to do with anything of this kind because the situation has simply never arisen. It does seem to me that the minister is enunciating a rather dangerous principle, however, when he says that someone who in his own time takes part in politics, when he is not employed by the government—as the minister has said was the case with this lady—is for that reason and for that reason only considered to be incapacitated from receiving an appointment. I should like to ask the minister if he made the same detailed inquiries about the political activities of the person who succeeded this lady, and if he can stand up and give us a positive assurance that the person who succeeded her took no part in support of any of the candidates—

Mr. Hamilton (Qu'Appelle): I can answer that question very easily by saying we make no detailed investigation with regard to a person's politics in that way. I do not know that anyone in my department knew who this lady was. There was no recommendation made by the local member.

Mr. Pickersgill: The minister has said—and I am glad to hear it—that he makes no sort of inquiry about the political activities of the people employed in his department. But how, then, did he learn about the activities of Mrs. Woodman, and how did that have any effect in this one case, when the minister says they do not make any inquiries?

Mr. Hamilton (Qu'Appelle): My information on Mrs. Woodman came from the Liberal candidate in the constituency.

Some hon. Members: Oh, oh.

Mr. Hamilton (Qu'Appelle): They made it quite clear to me that they thought it was quite within the rules for a civil servant who was employed for five or six years to take time off in between and try to defeat the government which hired her. We do not discourage people from taking part in politics. We encourage them. But members of the civil service must take a proper attitude toward partisan politics, even if they are only hired for seven months a year.

Mr. Pickersgill: I want to pursue this a little further—

Some hon. Members: Oh.

Mr. Pickersgill: I know this is not very pleasant for hon. gentlemen opposite, but we used to hear a lot of very eloquent talk from this side of the house in times past about civil rights and about the rights of Canadian citizens, particularly from one very eminent gentleman who now occupies another position and who is promising to bring a bill of rights into this country. It does seem to me very strange that the followers of this eminent gentleman seem to have so little interest in a subject which he claimed over and over again was his prime concern.

However, there are some of us who are liberals on both sides, and it seems to me that the minister has been confusing two things. If this lady was a civil servant—which the minister said earlier she was not—and engaged in political activities then, of course, under the Civil Service Act she should be dismissed. Everybody recognizes that. But she was not a civil servant. She was a seasonal employee, as the minister says. She was not working at all at the time of the election, and somebody told the department. The minister has said, with his hand on his heart, that he never makes any inquiry into the political affiliations of these people and that this lady had worked for one of the candidates. That was considered in this case

to be good and sufficient reason not to give her the kind of employment by means of which she had made her living in the summer months for several years to the satisfaction of everyone, as far as I can understand. And it occurs to me to wonder who it was who first brought this information to the attention of the minister. The minister says it was the Liberal candidate, and under the rules I have to accept his word, but I will admit he is straining our credulity when he states that the Liberal candidate gave this information to him. Did the Liberal candidate say this lady was working to support the hon. gentleman who now sits for this constituency, or was she said to have supported the C.C.F. candidate? What did he say about it? How did the Liberal candidate come to bring this information to the minister? Perhaps he will tell us that.

Mr. Chevrier: Perhaps I might ask one question in order to elucidate this matter. There have been a number of variations reported to this house concerning the practice regarding dismissals in certain departments and what the minister has said does indicate a departure from what has been said by other ministers. The question I should like to ask is this: what is the policy followed in the department of northern affairs when there is a matter of political activity on which a report has been made. How is a person dismissed? Is it (a) by affidavit, or (b) by certificate of a member of parliament? On what basis or authority is this done?

Mr. Hamilton (Qu'Appelle): This lady was not dismissed. As I said before, she was not rehired. I am not quibbling over the phrase; I am simply saying that is the position. The Liberal candidate wrote me a letter and I answered it, and he wrote me another, and I think this correspondence is being tabled.

Mr. Chevrier: May I pursue this a bit further? I was not dealing with the case which my hon. friend has brought up. I was dealing with the policy, if there is one, which is followed in the department. What policy is followed by the minister in cases such as this, and how is a person dismissed? Is it done by affidavit? Or is it done by a certificate of a member of parliament?

Mr. Hamilton (Qu'Appelle): I do not mind trying to answer the hon. gentleman, but I think this is a matter of the general policy of the government. I suggest the question might be directed to the leader of the house.

Mr. Pearson: Perhaps we could put it this way. The minister has said, I think, that if an employee of this particular branch of his department, hired on a casual basis, not a civil servant, having been hired year after year for two or three months a year; if such an employee, in between times, as a Canadian citizen, not as an employee of the government, should take any part in political activity, he or she will not be hired again.

Mr. Hamilton (Qu'Appelle): I do not think you can lay down a general rule like that. There was an election, as hon. members know, in between the lay-off for the winter and this lady took a very active part, and I imagine that the superintendent would think it the better part of discretion not to ask her to come back again, and that is what he did.

Mr. Chevrier: Is there a distinction made between a civil servant and one who is not a civil servant, because I think the minister is under a misapprehension. This person was a seasonal worker, a public servant, entitled, it is true, to the benefits of the Civil Service Act, but there is a distinction. In the first case the provisions of the Civil Service Act apply but in the next case, which is the case of the person whom the hon. member for Bonavista-Twillingate has been discussing, she is a member of the outside or public service, and I am wondering if there is a distinction made in the department between these two.

Mr. Hamilton (Qu'Appelle): I do not think so far as I know. All I know is that this woman was laid off; she had no right to re-employment. You either hire a person or you do not. She was not hired.

Mr. Pickersgill: I should like to ask a further question. Is it true or not that this lady was accepted for summer employment in the information bureau and that she was subsequently given notification cancelling the first notice?

Mr. Hamilton (Qu'Appelle): I am informed that that is correct.

Mr. Pickersgill: In other words, what the minister is saying now is that this lady was given her job back, she was told to report for work, and then she was fired. Now that hardly accords with what the minister told us earlier, namely that she was not given her work back. It would appear that something happened to this lady between that first notice and that second notice. It seems to me we ought to be told what it was and where this information came from. It is one thing for the minister to say, "Oh, we did not hire her at all" but he has now told us that she was told to report to work and then that notice was cancelled. In other words you would have to consider that she was fired.

Mr. Hamilton (Qu'Appelle): Mr. Chairman, I hope this is the last word. In January she received a general notice to the effect that she would be reporting back. After January there was an election. She took part in the election. She was not asked to report and she did not report.

Mr. Pickersgill: How did the minister find out she took part in the election?

Some hon. Members: Oh, oh.

Mr. Pickersgill: Well, this is very important. An allegation has been made here.

Some hon. Members: Sit down. Question.

The Deputy Chairman: Order. The hon. member for Bonavista-Twillingate has the floor and I am sure we would all like to hear what he has to say.

Mr. Pickersgill: Mr. Chairman, I repeat that the minister has said this lady was told to report back to work and subsequently she was told that they did not want her. In other words, she was fired. The minister says she was fired for political activity. Surely it was not just something the minister dreamed up. He surely does not seriously expect us to believe that the Liberal candidate told him about it. How did the department learn that this lady had engaged in political activity? Who was the informer? Who laid the charges against her? What inquiry was carried out to find out if the charges were true?

Mr. Hamilton (Qu'Appelle): Mr. Chairman, in the letter which will be tabled will be found the frank admission of the Liberal candidate that she worked as a returning officer and that he did not know that if a civil servant took part in political activities it would mean that person could be fired. If the hon. member for Bonavista-Twillingate waits until he sees the letter he will find the candid admission of the woman herself and of the Liberal candidate that she engaged in political activity. In a small town like Jasper you do not keep things like that quiet.

Mr. Pickersgill: It may well be that in a small town like Jasper you do not keep those things quiet and we are not keeping this thing quiet either. I know that the minister received a letter and I will not pretend that I do not know what he received from the Liberal candidate because I am perfectly aware of what the Liberal candidate said. I am also very well aware of the fact that the Liberal candidate did not write to the minister until after this woman had been fired so it was not any information he received from the Liberal candidate that caused her to be fired. It was on the basis of information that came from somebody else that she was fired. Before we vote money for the minister to fire people and hire other people it seems to me we are entitled to be told what this is all about.

Mr. Cardiff: Who do you think you are?

Mr. Pickersgill: That is what an opposition exists for, after all, although I doubt if the hon. member would understand that. Before we vote money for the minister to fire people and hire others the minister should tell us on what ground he fired this individual. Was it mere caprice? On what ground was she fired?

Mr. Ricard: She was not fired. She was not asked to return to work.

Mr. Pickersgill: Yes, she was fired. The minister has admitted that the first notice was cancelled and the woman was not asked to report back to work. We should be informed where the department got its information and what investigation it carried out in order to ascertain the facts before this woman's livelihood for the summer was taken away from her. At least the Minister of Agriculture the other day when we were discussing an employee of his department who had been dismissed admitted that he had conducted a secret investigation without telling the employee what the charges against him were but the Minister of Northern Affairs and National Resources has told us nothing except that it was common knowledge in Jasper that this woman had engaged in political activity.

Mr. Hamilton (Qu'Appelle): Mr. Chairman, I repeat that I did not say she was fired. I said she was not asked to come back.

Mr. Chevrier: May I ask another question, Mr. Chairman. Can we assume from the discussion that has taken place thus far that there is no objection to a Canadian citizen hired by the government for casual or seasonal work, as this person was, exercising the ordinary political activities of a Canadian citizen when not in the employ of the government?

Some hon. Members: Order. Carried.

Mr. Pearson: That is a very good question.

Mr. Pickersgill: Mr. Chairman, I am not at all satisfied—

The Deputy Chairman: Order. The Chair recognizes the hon. member for Trinity-Conception. The hon. member for Bonavista-Twillingate may speak again.

Mr. Chevrier: Mr. Chairman, could I get a reply to my question?

The Deputy Chairman: The Chair cannot force any minister to make a reply. The hon. member may direct that question to the minister.

Mr. Chevrier: Would the minister reply to my question?

Mr. Drysdale: Hypothetical question.

Mr. Chevrier: It is not a hypothetical question.

Mr. Hamilton (Qu'Appelle): Mr. Chairman, that is the same question I replied to a moment ago.

Mr. Pearson: No, it is exactly the reverse.

The Deputy Chairman: The hon. member for Trinity-Conception.

Mr. Tucker: Mr. Chairman, in 1610 John Guy a merchant from Bristol started a colony at Cupids Conception bay, Newfoundland and his example was soon followed by many other Englishmen, and in a few years many colonies had been established along the shores of Conception bay.

The only reminder of these days were a flagpole placed on the rock where John Guy was supposed to have erected the standard of King James I and a bronze plate which commemorated his landing until a few years ago when I believe the historical sites committee and a group of public-minded citizens erected a monument.

During the month of March this year certain business brought me to Cupids and while there I talked with a group of men who were working around the grounds where the monument stands. They expressed grave concern about the surroundings and asked me if I would try and assist in obtaining financial assistance. And so, Mr. Chairman, I hope the opportunity has arrived, and I now ask the Minister of Northern Affairs and National Resources if he will give sympathetic consideration to my request on behalf of the residents of Cupids.

Mr. Nixon: Mr. Chairman, may I ask the minister if he would have another look at an old landmark in Sault Ste. Marie known as the old stone house which is, I believe, an historic site. It was constructed in 1814 and I understand it is possibly the oldest house now standing north of Toronto. I would urge the minister to have another look at this building with a view to preserving it as a national historic site.

Mr. Fisher: Mr. Chairman, before this vote carries I wanted to ask whether or not the house leader is going to answer the question referred to him by the Minister of Northern Affairs and National Resources?

The Deputy Chairman: Shall vote 269 carry?

Mr. Pickersgill: No, Mr. Chairman. Since the minister has invited the house leader to tell us what the policy is and in view of the fact the hon. member for Port Arthur has renewed that invitation I feel the house leader should let us know if he accepts it. We would all like to know what is the policy of the government in this regard.

An hon. Member: Wait until the next election.

Mr. Green: Mr. Chairman, my estimates are not under consideration and it would be highly inappropriate for me to interfere with the estimates of another department.

Mr. Pickersgill: Mr. Chairman, I was sure the Minister of Public Works would take the very sensible attitude he has taken and therefore I will return to the Minister of Northern Affairs and National Resources and ask him if he will take the committee into his confidence and tell us what charge was made against this lady, precisely what the nature of her activities was, by whom the charge was made and by whom investigated. Would he also at the same time tell us what he meant by saying this lady was a returning officer. I am sure he must have meant a deputy returning officer because my understanding of a returning officer is that he is an officer of the crown and I would have thought most of them were probably appointed by the hon. gentleman's friends last March. But in any case I am quite confused by the minister's reference.

The Deputy Chairman: Shall vote 269 carry?

Mr. Pickersgill: Mr. Chairman, surely we are going to have an answer from the minister.

The Deputy Chairman: Shall vote 269 carry?

Item agreed to.

271. Construction or acquisition of buildings, works, land and equipment, $14,399,925.

Mr. Morris: I should like to ask the minister a question concerning the Halifax Citadel. We are aware that a great deal of additional work has been done at the Halifax Citadel. It is a national historic site. Can the minister now comment on the intentions at the Halifax Citadel, particularly with respect to the moneys to be used at this site. Can he comment also on employment at the Halifax Citadel?

Mr. Hamilton (Qu'Appelle): The information I have for the hon. member is that the original appropriation for the Halifax Citadel

was $120,000. This was raised to $152,000, and again to $183,500 by transfer of certain allotments. Earlier in the session I made a statement in answer to the hon. member, which will be found in *Hansard*, that we were delaying the laying off of men at the Halifax Citadel and would keep them employed as long as the money would last. I am now informed that the money is about used up and by the end of this month we shall have to lay off the men who would ordinarily have been laid off before, plus the others who have now to be laid off because of the shortage of money.

Mr. Morris: Is it the intention to resume the work in the winter months, at least to the same extent as in previous winters? Is this a temporary re-arrangement of the labour force at the Halifax citadel, which we all understand because of the allotment that has been spent there? Is it the intention to resume an extensive program again in the winter?

Mr. Hamilton (Qu'Appelle): Mr. Chairman, as I have said, the funds for this year are almost all used up, and if there is a winter work policy decided on which will include the Halifax Citadel, it will be announced in due course because it is a matter of government policy.

Item agreed to.

Water Resources Branch—

276. Administration, operation and maintenance, including grant of $350 to the International Executive Council, World Power Conference and a grant of $35,000 to the Canadian National Committee of the World Power Conference to assist in defraying the cost of the conference's sectional meeting to be held in Canada in 1958, $1,257,459.

Mr. Chevrier: May I ask the minister a question? I understand that this is the division that has to do with water resources. Will the minister tell the committee how many international boards his department has representations on. While this is being looked up I will tell the minister what I have in mind. There is under the order of approval made by the international joint commission, having to do with the development of water resources in the international section of the St. Lawrence river, an international lake level control board. I was just wondering what the status of the plans for the work was at the present time, how it was proceeding and what success there has been with the plan known as 12-A-9?

Mr. Hamilton (Qu'Appelle): Mr. Chairman, I am informed that our department has representation on 23 boards. In regard to the plan that the hon. member is referring to, plan 19-58-A was adopted by the international joint commission a month ago.

[Mr. Hamilton (Qu'Appelle).]

Mr. Chevrier: It is 12-A-9.

Mr. Hamilton (Qu'Appelle): Just a minute. This is a replacement for 12-A-1 and several others. My staff suggests that the figure the hon. member used of 12-A-9 should be 12-9-1.

Mr. Chevrier: That is right, 12-A-9.

Mr. Hamilton (Qu'Appelle): It was replaced by 19-58-A a month ago.

Mr. Chevrier: What I was trying to find out was what is the status of the board upon which the minister's department has representation, and very able representation, I am happy to say. What is the status of the board and what is the status, particularly, of the plan as amended by the statement just made by the minister?

Mr. Hamilton (Qu'Appelle): Mr. Chairman, the board is now awaiting turnover from the joint board of engineers who are in charge of construction. That is the present status.

Mr. Chevrier: I am afraid there is some misunderstanding. Perhaps I can clear it up. There are two boards under this division in which the minister's department is interested. One is the international board of control which has jurisdiction after the works in the international section have been completed. I think there is a report in the minister's department on that board. I was not inquiring, for the moment at least, as to that, but I was inquiring about the matter that had to do with levels on lake Ontario. I think it was in 1951 that there was a great deal of complaint because of the fact that the water rose to extraordinary heights and caused serious damage. The international joint commission was charged with the responsibility of inquiring into the question and recommended a subcommittee of this board to deal with it and again the minister's department was represented on that international board. It is that international board which brought in the plan that was referred to earlier, namely 12-A-9, which has since been amended. What I am interested in now is, what is the position of the plan? Is it working in accordance with the recommendation made by the amended order of the international joint commission?

Mr. Hamilton (Qu'Appelle): Mr. Chairman, apparently what the hon. member is referring to is the lake Ontario reference. The board has reported on the levels between which the lake can operate and this report has gone before the international joint commission and has been accepted, and the two governments have accepted the recommendation of the commission. There is some matter still in doubt relating to the Gut dam.

Mr. Chevrier: What is the date of the report?

The Deputy Chairman: Shall vote 276 carry?

Mr. Chevrier: No.

Progress reported.

Resolutions adopted in committee of supply this day reported and concurred in.

BUSINESS OF THE HOUSE

Mr. Chevrier: May I ask the house leader what the business is for tomorrow?

Mr. Green: Tomorrow we shall continue with the estimates of the Department of Northern Affairs and National Resources; then take the estimates of the Department of Labour and the Department of Transport.

Mr. Pickersgill: Not fisheries?

Mr. Chevrier: No, transport. Can the minister say what we will do on Saturday and Monday?

Mr. Green: The other estimates which might be called on Saturday would be those of the Department of Mines and Technical Surveys, also health and welfare, and citizenship and immigration. On Monday, we intend to take legislation and that would be so also on Tuesday. On Monday, I expect to start with the first three items on today's order paper, which are under the Minister of Veterans Affairs. Then I think we would go on with the various resolutions preceding bills. I cannot say definitely in what order they would be called.

Mr. Chevrier: Definitely, we will not be taking the dumping legislation on Monday or Tuesday?

Mr. Green: No, not on Monday.

At ten o'clock the house adjourned, without question put, pursuant to standing order.

57071-3—226

Questions

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

U.S. OIL IMPORT QUOTAS

Question No. 24—**Mr. Martin (Essex East):**

1. Have representations been made by any provincial government, corporation or individual asking the federal goverment to make further representations to the President of the United States for the removal of import quotas on Canadian crude oil?

2. If so, has the government made such further representations, and of what nature?

3. Will the royal commission on energy resources make an interim report dealing with this situation?

Answer by: **Right Hon. J. G. Diefenbaker (Prime Minister):**

1. Yes. The premier of the province of Alberta and a number of organizations and individuals have made representations to the government of Canada to secure the exemption of Canadian crude oil from the application of the voluntary import control program. Reference has also been made to this matter in submissions to the royal commission on energy.

2. The government lodged formal representations with the state department on January 15, 1958 against the general principle of the application of such controls to Canadian crude oil moving into the west coast area of the United States. Similar representations were made on June 23, 1958 at a time when it was understood that consideration was being given to the imposition of further restrictions on oil imports moving into that area. Moreover the Canadian authorities have been in close and continuing touch with the competent United States authorities in this matter, including the time when the import controls applicable to the regions east of the Rocky mountains were reinforced on March 27. In these and other ways the views of the Canadian interests have been kept before the government of the United States.

3. An interim report will be made but will not deal particularly with this situation.

FEDERAL DISTRICT COMMISSION—LAND AND BUILDING ACQUISITIONS

Question No. 167—**Mr. Fisher:**

1. From the first day of March, 1956 to the thirtieth day of June, 1958, were any lands or buildings acquired by the federal district commission in (a) the city of Ottawa; (b) the county of Carleton; (c) the county of Russell; (d) the city of Hull; (e) the county of Hull; (f) the county of Gatineau?

2. If so, (a) from whom; (b) on what date; (c) what is the legal description and total acreage of the property in each case; (d) what was the total price paid to the vendor or any other persons in respect to the acquisition of each such property; (e) for what purpose, either present or future was each such property acquired, and to what use is each presently being put?

3. At the present time, has the federal district commission any agreements of sale or options for the acquisition of other property, or has it commenced expropriation proceedings for the acquisition of other property in any of the aforesaid cities or counties?

4. If so, (a) what is the legal description and total acreage of each such property; (b) from whom is each such property to be acquired; (c) what is the total price payable to the vendor or any other person under any such agreement of sale or option in respect of the acquisition of each such property; (d) what is the total price which has been offered to the owner of any such property in respect of which expropriation proceedings may have been commenced; (e) for what purpose, either present or future, is each such property to be acquired, and to what use will such property be put?

Answer by: **Right Hon. J. G. Diefenbaker (Prime Minister):**

Supply—Items Passed

[The following items were passed in committee of supply]:

DEPARTMENT OF NORTHERN AFFAIRS AND NATIONAL RESOURCES

266. Departmental administration, $731,410.

267. Northern research co-ordination centre, including a grant of $10,000 to the Arctic Institute of North America; and an amount of $10,000 for grants in aid of northern research subject to allocation by the Treasury Board, $89,302.

268. To provide for contributions to the provinces, pursuant to agreements entered into or to be entered into, with the approval of the Governor in Council, by Canada with the provinces, of amounts equal to one-half of the amounts confirmed by the provinces as having been spent by them for camp-ground and picnic area developments, $1,000,000.

National Parks Branch—

269. Branch administration, $143,105.

National parks and historic sites services—

270. Administration, operation and maintenance, $6,065,610.

271. Construction or acquisition of buildings, works, land and equipment, $14,399,925.

272. Grant to Jack Miner migratory bird foundation, $5,000.

273. Grant in aid of the development of the International Peace Garden in Manitoba, $10,000.

274. To authorize payment to the National Battlefields Commission for the purposes and subject to the provisions of an Act respecting the National Battlefields at Quebec (Chap. 57, Statutes of 1908, as amended), $158,475.

275. Canadian Wildlife Service—Wildlife resources conservation and development, including administration of the Migratory Birds Convention Act, $618,301.

HOUSE OF COMMONS

Friday, August 15, 1958

The house met at eleven o'clock.

STANDING ORDERS

CONCURRENCE IN THIRD REPORT OF STANDING COMMITTEE

Mr. J. W. Kucherepa (High Park) presented the third report of the standing committee on standing orders, and moved that the report be concurred in.

Motion agreed to.

ADMINISTRATION OF JUSTICE

BRITISH COLUMBIA—ANNOUNCEMENT RESPECTING EMIGRATION OF DOUKHOBORS

Hon. E. D. Fulton (Minister of Justice): Mr. Speaker, I desire to make a statement in connection with the Doukhobor situation in British Columbia.

The government of Canada has been following closely the developments in the Kootenay area of British Columbia where, for many years, acts of violence, damage to property and disorder have been occurring. These occurrences have recently spread to other parts of the interior of British Columbia. The dominion government has shared the concern felt by all, and especially the citizens of British Columbia, over this situation.

While maintaining the view that the constitutional responsibility for the maintenance of law and order continues to be that of the province, the government of Canada has felt that the most recent series of outbreaks, especially, have demanded a readiness on its part to give sympathetic consideration to co-operating with the province in any specific request or proposal put forward by the province which offers real possibility of a solution of the problem.

In accordance with this spirit, representatives of the dominion government have recently participated in extensive negotiations with representatives of the government of British Columbia in connection with a particular suggestion advanced by the latter as a solution to the problem. This involves the suggestion that members of the Doukhobor sect associated with the sons of freedom, who have for many years insisted that they are in conscience unable to accept and abide by the laws of this country, be assisted in their expressed desire to emigrate to Russia.

In the course of these discussions, and in keeping with the attitude outlined above, the dominion government indicated to the province its willingness to accept a generous share of the burden of implementing this proposal. As a result of these discussions, the following joint statement has been agreed to by the two governments. The text is as follows:

This statement is made by the governments of Canada and British Columbia jointly in the belief that certain members of the Doukhobor sect associated with the sons of freedom earnestly desire to leave Canada forever and is made for the purpose of establishing the intention of the two governments to co-operate so that those persons may carry out their desire.

Those desiring to take advantage of this offer will be required to declare their intention on or before the 30th day of September, 1958, and arrangements will be made to complete migration as soon as possible after this date. Those desiring to leave Canada should at once communicate with the office of the dominion director of citizenship and immigration in Vancouver or with the government agent at Grand Forks, Rossland or Nelson in the province of British Columbia.

The governments of Canada and British Columbia are agreed that upon being advised by the U.S.S.R. that the Soviet union will accept applying Doukhobors of that sect as immigrants into that country:

(1) the governments will assist and co-operate with individuals, families and groups desiring to migrate, in the furnishing and securing of all necessary documents, visas and passports required for the purpose;

(2) the government of British Columbia will assist in restoring to their parents custody of their children for whom parents make application for the purpose of emigration from Canada;

(3) reasonable financial assistance will be provided (a) by the government of Canada to cover the cost of transportation to the U.S.S.R.; and (b) by the government of British Columbia to assist in the establishing of settlers in that country in an amount not to exceed transportation assistance and for a period subsequently to be determined;
but upon the condition that all such financial assistance will be made available only to persons renouncing Canadian citizenship;

(4) the government of British Columbia will assist, if asked, in the orderly realization of assets real or personal of migrating persons and will credit moneys thereby secured as directed by them.

The government of Canada will co-operate in arranging for and facilitating discussions between representatives of the Doukhobors and of the Soviet government in Canada regarding the arrangements to be made for admission to Russia of those desiring to migrate.

Those who do not within the time specified accept this offer to assist in migrating from Canada will be understood to desire to remain in Canada subject

to all laws, municipal, provincial or federal, governing Canadian citizens and privileged as heretofore to enjoy the rights and liberties of such citizenship.

That is the end of the joint statement. I may say that the text of this joint statement is also released this morning in Victoria at this time by the government of British Columbia.

Hon. L. B. Pearson (Leader of the Opposition): I am sure the house will have listened with great interest to the statement of the minister on behalf of the federal government, and I can only say on behalf of the opposition that we hope this arrangement between the federal government and the government of British Columbia will work out satisfactorily and that these people will be able to find the tranquillity elsewhere which they apparently think they cannot find here in Canada.

Mr. H. W. Herridge (Kootenay West): As the member representing the constituency which is the focal point of the problem with which the minister has dealt, may I say that without a doubt the house has listened with great interest to the minister's unprecedented and unusual statement concerning the agreement between the federal government and the government of British Columbia to deal with an unusual situation and in response to a most unusual request. We in this group trust that co-operation between the federal government and the government of British Columbia will result in a final solution to this long-standing and most difficult problem to the satisfaction of all parties concerned.

We are glad the government of Canada has extended its co-operation to the government of British Columbia, and I compliment the minister for his patience, constructive approach and deep concern and interest in this question. I do urge both governments to enlist the co-operation of the district consultative committee, which is composed of representative citizens who have a great understanding of the situation, circumstances and other aspects of this problem.

[*Later:*]

INQUIRY AS TO POSITION OF MINOR CHILDREN

On the orders of the day:

Mr. Erhart Regier (Burnaby-Coquitlam): Mr. Speaker, I should like to direct a question to the Minister of Justice. In the light of his announcement, what is going to be the position of the minors? The people I have in mind are boys and girls aged 18, 19 and 20 who may desire to remain in Canada. Will the voluntary movement apply there? In other words, is there going to be any protection whereby those youngsters who wish to remain in Canada can remain, despite the wishes of their parents?

Hon. E. D. Fulton (Minister of Justice): Mr. Speaker, that is a matter that would have to be the subject of careful negotiation and consideration. The desire is to have this movement entirely voluntary, as hon. members will appreciate, and it will have to be the duty of those administering the movement to ensure that this feature is maintained. At this stage and from this distance I do not think it is possible to make any forecast as to what would be the situation if a problem of that nature arose. It would depend upon the good will and judgment of those who are taking the applications for registration for the movement, but due regard will be taken of that problem in the administration of any program that may develop.

(Translation):

QUEBEC—STATEMENT ON ESTABLISHMENT OF TRUSTEES IN BANKRUPTCY

On the orders of the day:

Hon. E. D. Fulton (Minister of Justice): Mr. Speaker, yesterday the hon. member for Richelieu-Vercheres (Mr. Cardin) asked me if I had received any request for the appointment of a registrar and the establishment of a bankruptcy court in the judicial districts of Richelieu, Beauharnois, Iberville and St. Hyacinthe.

I find that representations have already been made in this respect. In fact I had received a letter from the hon. member for St. Hyacinthe-Bagot (Mr. Ricard), inquiring whether the request in question would be favourably received. Those representations, and that letter, were referred to the officials of my department who now have the matter under advisement. Consequently, my answer today must be the same as the one I already gave the hon. member for St. Hyacinthe-Bagot, that is to say: the matter is under consideration.

(Text):

MARITIME COAL PRODUCTION ASSISTANCE ACT

AMENDMENTS VARYING TERMS OF REPAYMENT UNDER AGREEMENT

Hon. Paul Comtois (Minister of Mines and Technical Surveys) moved that the house go into committee at the next sitting to consider the following resolution, which has been recommended to the house by His Excellency:

That it is expedient to introduce a measure to authorize certain amendments to the agreement made under the Maritime Coal Production Assistance Act with the Dominion Coal Company Limited,

for the purpose of varying the terms of repayment of principal and interest as provided under section 4 of the act.

Motion agreed to.

DOMINION-PROVINCIAL RELATIONS

NEWFOUNDLAND—IMPLEMENTATION OF REPORT OF ROYAL COMMISSION ON REVISION OF TERMS OF UNION

On the orders of the day:

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, I should like to ask the Prime Minister a question. Having in mind Canada's formal obligation to Newfoundland under the terms of union, can the minister yet say whether the government proposes to take action at this session to implement the recommendations of the McNair commission report?

Right Hon. J. G. Diefenbaker (Prime Minister): Mr. Speaker, this royal commission was appointed by the last government, and apparently its recommendations are not acceptable to all. I have read criticisms of various leaders in Newfoundland respecting the amount recommended, and that being so the government must give the fullest consideration to the matter before announcing the course it will follow.

Hon. J. W. Pickersgill (Bonavista-Twillingate): By way of a supplementary question, Mr. Speaker, may I ask if we are to take it the government does not intend to act at this session?

Mr. Diefenbaker: Mr. Speaker, I have nothing to add to what I have already said. Certainly this government has a responsibility to look thoroughly into the recommendations made. Those recommendations apparently not having the support of the leaders in Newfoundland, this re-emphasizes the necessity of the fullest consideration being given by the government before taking action.

TRADE

SEED WHEAT—REPORTED RESTORATION OF U.S. TARIFF

On the orders of the day:

Mr. Hazen Argue (Assiniboia): Mr. Speaker, I have a question I should like to direct to the Minister of Trade and Commerce. Can the minister inform the house of the nature of the protest made to the United States government with regard to the restoration of the 10-cent tariff on Canadian seed wheat going to the United States? Can the minister say what has been the result of these protests, and whether the United States President is likely to veto this increase?

Inquiries of the Ministry

Hon. Gordon Churchill (Minister of Trade and Commerce): Mr. Speaker, I cannot forecast what may be done by the President of the United States. The matter is under careful observation by us, but it has not yet been made final. Our position is well known to our United States friends, and at the moment I think the situation is sufficiently under control. I cannot give any information in great detail along the line that my hon. friend is asking.

Mr. Argue: As a supplementary question, can the minister tell the house whether a protest has been launched? The minister has said that the matter is under observation. Is something more being done?

Mr. Churchill: Well, it is under observation and very active consideration. My hon. friend can rest assured that the government will take such steps as are necessary in this regard.

REPORTED REDUCTION IN PROHIBITED EXPORTS TO COMMUNIST COUNTRIES

On the orders of the day:

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, may I ask the Minister of Trade and Commerce whether he is aware that, according to the press, the president of the board of trade announced, presumably to the House of Commons in London yesterday, that agreement had been reached in Paris removing 63 types of goods from the prohibited list for sale to the communist world and giving the details with regard to that action? If so, will he inform the house what are the details of this arrangement, so that Canadian exporters may also know where they stand in this regard?

Hon. Gordon Churchill (Minister of Trade and Commerce): Mr. Speaker, I have seen the article appearing in the Montreal *Gazette* this morning which purports to be the report of a speech made by Sir David Eccles on this subject. I have had that article checked. It appears to be substantially correct in so far as the items therein listed are removed from the strategic control list. I propose announcing to the house within a day or two the situation in so far as Canada is concerned. For the benefit of our businessmen the control list, when approved, will appear in the *Canada Gazette*.

POST OFFICE DEPARTMENT

BRITISH COLUMBIA—INQUIRY AS TO EXTENT OF BOMB DAMAGE

On the orders of the day:

Mr. Stuart Fleming (Okanagan-Revelstoke): Mr. Speaker, I should like to ask the Postmaster General whether he can report to the

house the extent of damage to federal government property in the bombing incidents in the Okanagan yesterday.

Hon. W. M. Hamilton (Postmaster General): Mr. Speaker, I cannot report generally on federal government property, but I can say that two post offices in that area were bombed yesterday, one at Oliver and the other at Osoyoos, both by means of dropping bombs through the outside letter slot. In the front of the post offices glass was broken. There was minor internal damage but no loss of mail. There was some damage to the mail which happened to be in the letter boxes at that time, but no interruption whatsoever of service.

TRINITY BAY, NFLD.—REQUEST FOR SPECIAL STAMP ISSUE

On the orders of the day:

Mr. J. R. Tucker (Trinity-Conception): I should like to direct a question to the Postmaster General. Has the minister given consideration to commemorating by a special postage stamp the centenary of the landing of the first trans-Atlantic cable at Trinity bay, Newfoundland, in 1858?

Hon. W. M. Hamilton (Postmaster General): I thank the hon. member for giving me notice of this question. There are many important Canadian historical events which the Post Office Department would like to commemorate by means of a postage stamp, but there are only a limited number of stamps with which to do so. Unfortunately it was not possible to commemorate this particular event with the issue of a postage stamp this year. I might mention that early in October the Atlantic provinces area generally and particularly Halifax will find the 200th anniversary of the establishment of democratic government in Canada, which took place there, commemorated by the issuance of a special stamp.

COMMONWEALTH CONFERENCE

REPORTED AGENDA FOR FORTHCOMING MEETING

On the orders of the day:

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, would the Minister of Finance care to comment on the news report this morning, attributed to a government spokesman, that the forthcoming commonwealth economic conference would be more a discussion on monetary affairs than trade development?

Hon. Donald M. Fleming (Minister of Finance): Mr. Speaker, I have not seen the press article to which the Leader of the Opposition refers, but I may say to him and to the house that at the conference, as it is being prepared for and in accordance with the plans made, the agenda provides for a very wide range of discussion.

I have emphasized previously that it is not merely a trade conference but a trade and economic conference. The conference will embrace within its discussions almost every type of subject that pertains to economic relations within the commonwealth. It will include the matters to which my hon. friend has referred and a great many others.

I can only emphasize at this point that the agenda contemplates the widest kind of opportunity for discussion of matters of interest to the economies of the nations within the commonwealth.

FINANCE

RAW SUGAR—REQUEST FOR TARIFF REDUCTION ON IMPORTS

On the orders of the day:

Mr. G. R. McWilliam (Northumberland-Miramichi): I wish to direct a question to the Minister of Finance. Has the government received representations from the Atlantic provinces economic council requesting a reduction of the tariff on raw sugar imported from non-commonwealth countries to a level not exceeding 10 per cent above the rate applicable to raw sugar imported from commonwealth countries?

Hon. Donald M. Fleming (Minister of Finance): No, Mr. Speaker, I am not aware of any such representations having been made. I might say that the question of our sugar imports is a matter that is always under consideration.

RELEASE POLICY RESPECTING HUNGARIAN-POLISH-ROUMANIAN ASSETS

On the orders of the day:

Mr. L. D. Crestohl (Cartier): May I ask the Prime Minister when he will be good enough to deal with the problem I put to him on June 18, 1958.

Right Hon. J. G. Diefenbaker (Prime Minister): That matter is still receiving the active consideration of the Minister of Finance and the Secretary of State, but a decision has not yet been reached. I have the file before me. I can say to the hon. gentleman that I realize his interest in this question. It is one that deserves the earliest possible decision. However, there are divers matters to be considered before a final decision is made.

AIRPORTS

DORVAL—AIR CONDITIONING OF NEW TERMINAL

On the orders of the day:

Mr. Guy Rouleau (Dollard): Mr. Speaker, I should like to direct a question to the Minister of Transport. In view of the fact that since the start of construction of the new Dorval airport terminal conditions have changed due to the jet era, will the minister consider the recommendation made by both the international civil aviation organization and the international air transport association to the effect that air conditioning will be a must in air terminals in the jet age, according to a report which appeared on August 13 last in the Montreal *Star*?

Hon. George H. Hees (Minister of Transport): Mr. Speaker, I thank the hon. member for giving me notice of his intention to ask this question. When planning was under way in the 1954-55 period, air conditioning was considered but not included at that time since it has not been usual to include air conditioning in government buildings unless special reasons justify this. Air conditioning would have added about 10 per cent to the cost of the building, or about $1½ million.

Requirements relating to jet aircraft use were not known in 1954 to either the air lines or the planners, and it was only last year that the international aviation experts decided that there was good reason at terminals where commercial jets are parked close at hand for sealing the building completely against the noise and, therefore, for air conditioning at Dorval. The jets will park 500 feet away at an aeroquay.

To introduce air conditioning at this stage would require material delays in completion of construction, something I do not favour in view of the great need for the building. However, because we have provided adequate duct space in the public waiting room area, limited air conditioning could be added at a later stage if experience should make this necessary and desirable.

Hon. Lionel Chevrier (Laurier): May I ask a supplementary question arising out of the minister's statement. In view of the statement he has just made, does he not think it worth while that an investigation be made by the officers of his department to ascertain whether or not it would be advisable, even if there would be delay as he has said, to give consideration to the introduction of air conditioning?

Mr. Hees: Mr. Speaker, exhaustive examinations have been made into the matter, and the officials feel that the delay is not justified and that if it appears to be necessary later the ducts are there and the air conditioning can be added.

INCOME TAX

PREMIUM IRON ORES—CANADIAN REPRESENTATIONS TO U.S.

On the orders of the day:

Mr. D. M. Fisher (Port Arthur): I should like to direct a question to the Minister of National Revenue. Has the government had any indication of any United States action subsequent to the discussions held here with the President of the United States on the United States treasury department case against the Premium Iron Ore Company now before the United States appeal court?

Hon. George C. Nowlan (Minister of National Revenue): Mr. Speaker, I have had no advice of any change or of any development that has taken place following the discussions which were held here between the President of the United States and the Secretary of State and the Prime Minister of Canada and members of the government.

CANADIAN BROADCASTING CORPORATION

STATEMENT ON RESUMPTION OF PROGRAM "THE NATION'S BUSINESS"

On the orders of the day:

Hon. George C. Nowlan (Minister of National Revenue): While I am on my feet might I be permitted to answer a question which was asked me on August 2 by the hon. member for Bonavista-Twillingate with respect to "The Nation's Business" on radio and television.

I am advised by the Canadian Broadcasting Corporation that this program was suspended as it always is on the dissolution of a parliament. It is reinstated on the request of the political parties concerned, after consultations among the leaders of those parties and/or their representatives as to distribution of time and other details incidental thereto. The reply which was prepared the day before yesterday advised me that up to that moment no request had been received from any political party for the reinstatement of this program, but I was advised by telephone this morning that yesterday one of the political parties represented in this house had made application to the C.B.C. for the reinstatement of the program, and that they will be very happy to have conferences arranged among the representatives of the various political parties here.

STATEMENT ON TELEVISION PROGRAM "DEATH WEARS MANY FACES"

On the orders of the day:

Hon. George C. Nowlan (Minister of National Revenue): On August 6 the hon. member for Russell asked me with respect to a program to which he had taken offence, namely "Death Wears Many Faces", carried on the C.B.C. television network at 9 p.m. on July 30.

I am advised that this is one of the programs sponsored by the Kraft company and originates in New York and is part of a series which has been carried on the C.B.C. I am informed that as of August 8, 17 unfavourable telephone calls and 2 favourable calls had been received by the C.B.C. with respect to this program. Six of the unfavourable calls emanated from the city of Ottawa. There were three unfavourable letters and one favourable letter.

(Translation):

NATIONAL CAPITAL PLAN

HULL, QUE.—INQUIRY AS TO LETTER FROM CITY CLERK

On the orders of the day:

Mr. Georges Valade (St. Mary): Mr. Speaker, I would like to ask the Prime Minister a question, and I hope that the hon. member for Hull (Mr. Caron) will not take exception if I show some interest in his voters. It is quite normal that I should do so, as I am a member of the public accounts committee. I would like to ask the Prime Minister whether he has received, from the clerk of the city of Hull, a letter dated August 13, 1958, concerning the national capital improvement plan. I am ready to table this document for the information of the hon. member for Hull.

(Text):

SUPPLY

The house in committee of supply, Mr. Rea in the chair.

DEPARTMENT OF NORTHERN AFFAIRS AND NATIONAL RESOURCES

Water resources branch—

276. Administration, operation and maintenance, including grant of $350 to the international executive council, world power conference and a grant of $35,000 to the Canadian national committee of the world power conference to assist in defraying the costs of the conference's sectional meeting to be held in Canada in 1958, $1,257,459.

The Deputy Chairman: This item will be found at page 55 of the blue book, with the details at page 412. Shall vote 276 carry?

Mr. Chevrier: Last evening, Mr. Chairman, when this item was under consideration there were two questions that I directed to the minister. Perhaps I could follow them up. One had to do with the board of control upon which his department has representation.

The Deputy Chairman: Order. I wonder whether hon. members would please bring their voices down. There is so much mumbling going on here that I cannot hear the hon. member for Laurier.

Mr. Chevrier: I wonder whether, first of all, the minister would tell us what are the duties and responsibilities of this board of control.

Mr. Hamilton (Qu'Appelle): At the close of last night's sitting, Mr. Chairman, the hon. member for Laurier was directing some questions to me with respect to certain boards concerning the regulation of lake Ontario and the St. Lawrence river on which my department has representation. There was some confusion at the time as to which board the hon. member had reference. I think this statement will give the complete story.

At the present time the department, through the director of its water resources branch, has membership on two boards which were appointed by the international joint commission and which report to that body with respect to the regulation of the levels of lake Ontario and the St. Lawrence river.

With respect to the regulation of the levels of lake Ontario and the St. Lawrence river, the international lake Ontario board of engineers was appointed by the international joint commission in April of 1953 under terms of reference from the governments of Canada and the United States dated June 25, 1952. It is a two-man board upon which Canada has one member, an engineer of my department.

The international St. Lawrence river board of control was appointed by the international joint commission on November 16, 1953 under the terms of an order of approval of that body dated October 29, 1952 in connection with the application of the government of Canada to the international joint commission:

—for an order of approval for the construction of certain works for the development of power in the international rapids section of the St. Lawrence river.

—dated June 30, 1952. This is a six-man board upon which Canada has three representatives, one of whom is an engineer of this department, who is also a member of the previously mentioned board and who is chairman of the Canadian section of the board of control.

The international lake Ontario board of engineers submitted to the international

joint commission on May 5, 1955 a plan of regulation, No. 12-A-9, to which the hon. member referred last evening. This plan was designed to protect the interests located upstream and downstream from the power works in accordance with the range of levels and criteria tentatively adopted by the commission in March, 1955.

At this meeting representations were made on behalf of the province of Quebec to obtain greater assurance that the adopted plan of regulation would provide the downstream interests with adequate protection. The commission directed that the board incorporate such minor adjustments as might be necessary to best meet these requirements. This direction resulted in the development of a plan known as plan No. 12-A-9(M). Although plan 12-A-9(M) had not been presented to the commission or to the governments formally, the governments took into consideration the results of this plan, particularly in regard to its similarity to plan 12-A-9 with respect to its critical profiles for channel excavations, and the adjustments it contained to satisfy downstream interests. Accordingly, in the government's reply of December 3, 1955 to the commission's letter of May 9, 1955, plan 12-A-9 was approved for the purpose of calculating critical profiles and the design of channel excavations only. The commission's recommended range of stage of 244, navigation season, to 248 as nearly as may be, and the recommended criteria for the operation of regulatory works were approved.

In so far as the work of the international lake Ontario board of engineers in developing a plan of regulation was concerned, the commission considered that it had completed its assignment and it directed that the board should complete a documentation of its regulation studies in a form in which the commission could present the material to the international St. Lawrence board of control, the body charged with responsibility for the operation of the plan, for the study of further refinements of that plan. The board of control undertook these further studies and in June, 1958 presented to the commission plan of regulation No. 1958-A, which plan was adopted by the commission at a meeting in Montreal on July 14 last.

The present status of the international St. Lawrence board of engineers is that it is completing its studies with respect to factors affecting the levels of lake Ontario as requested in the terms of reference of June 25, 1952.

The international St. Lawrence river board of control is continuing its co-operation with the joint board of engineers, a body appointed by the governments of Canada and the United States to act for them in ensuring adequate construction programs, plans and specifications. With the completion of construction the board of control will assume the responsibility of carrying out all provisions of the orders of approval of October 29, 1952 and July 2, 1956 related to the water levels and regulations of discharge of water from lake Ontario.

Mr. Chevrier: I wish to thank the minister for that very comprehensive statement having to do with the two boards over which his department has control, which perhaps I could follow up with just a short question.

Plan 12-A-9, as he has stated, has been approved by the international joint commission by way of an amendment to the original order of approval. The minister then referred to plan 12-A-9(M), which was recommended in order to protect the downstream interests. Could I ask the minister if plan 12-A-9(M) has now been made an amendment to the original order of approval of the international joint commission?

Mr. Hamilton (Qu'Appelle): The answer to that question is no.

Mr. Chevrier: The minister went on to deal with a still further amendment adopted on July 14, 1958 in Montreal, known as plan 1958-A. Has that plan received the approval of the international joint commission by way of amendment to the original order of approval?

Mr. Hamilton (Qu'Appelle): It has been approved by the international joint commission, but the order of approval has not been amended.

Mr. Chevrier: I know that much of this is technical and I will not unduly pursue the matter. Perhaps I can wind up my remarks by this question. Returning to the board of control, the minister gave to the house a moment ago an outline of the duties and responsibilities of that board. Having regard to the present levels arising out of the development of power in the international section, those levels are to be held at 238 for the first ten years. I have been informed that there is a possibility that this will be changed and that the levels will not be held at 238 for that period but might well be increased to 242 before the end of the ten years. Is that matter under study by the board of control, and have they made any recommendation in that respect?

Mr. Hamilton (Qu'Appelle): I am informed that this matter is not under study by the

international board of control, and that no specific proposition has been made by that board.

Mr. Chevrier: It may not be under study, but one of their duties is to supervise for a period of ten years the operation of the levels, and may I have an answer from the minister or his advisers as to whether or not there is any change in the original idea of allowing the level to remain at 238 for ten years?

Mr. Hamilton (Qu'Appelle): I am informed that any change such as that suggested would have to come as a direction from the international joint commission.

Mr. Chevrier: Then going back to plan 12-A-9(M) and plan 1958-A, which I take it have been considered by the minister's officers in order to protect the downstream interests—that is to say, in order to protect the development of power at Beauharnois —so that nothing which is done upstream will in any way affect the power development at Beauharnois and so that nothing which is done upstream will affect the level in the port of Montreal, is the minister satisfied that these two plans will adequately protect the safety of the interests in these two areas?

In so far as this can be done, will it protect both these interests; first, power development at Beauharnois and second, the level of the water in the port of Montreal?

Mr. Hamilton (Qu'Appelle): The engineers are satisfied that these arrangements will do just those two things, but it should be pointed out that these plans are under continuous review in case anything else should be done to improve the situation.

Mr. Fisher: I think everyone in the constituencies around the great lakes is interested in this Illinois development which, I understand, a senate committee has approved, and it is quite likely that this diversion will go ahead, at least for a certain period of time. The Canadian Department of External Affairs sent an aide memoire in relation to this subject indicating that the Canadian position is that while Canadians are not in favour of this diversion it is completely within the right of the United States to go ahead with it.

I want to ask whether the Canadian Department of External Affairs received any advice from the water resources branch with regard to this; and second, if the diversion goes through, whether any studies are planned concerning any possible step that Canada might take, especially with regard to the lake Superior watershed, to compensate for the tremendous gallonage that is going to be taken out at Chicago.

[Mr. Hamilton (Qu'Appelle).]

Mr. Hamilton (Qu'Appelle): The department of northern affairs, through its water resources division, did advise the Department of External Affairs about the effects of the Chicago diversion. There is, Mr. Chairman, as you know a present diversion to the great lakes watershed from Longlac which more than compensates for the water taken by the Chicago diversion. As far as I know there is no plan for any further diversion from the great lakes watershed into the great lakes system.

Mr. Fisher: I may be dealing in fantasy, but I understand there has been a diversion from Lac St. Joseph westward in order to help the power set-up along the Manitoba border, and that there has also been a diversion of water which would originally have gone into the Hudson bay-James bay area, and I am just wondering whether there is any prospect of a more thorough study of the situation to determine whether we can afford to take still more water from the Hudson bay watershed and divert it into the lake Superior watershed or the Winnipeg river area?

Mr. Hamilton (Qu'Appelle): As a matter of fact the St. Joseph diversion is from the Hudson bay watershed into the lake Winnipeg or Nelson river watershed, and it does not affect the great lakes watershed. As to the question of diverting more water from the Hudson bay system into the great lakes system, I think that is purely a matter for the province of Ontario.

Mr. Pearson: May I ask the minister whether he is satisfied that this proposed diversion via Chicago, concerning which an aide memoire has been sent to the United States government, will not prejudicially affect Canadian interests in so far as upper lake levels are concerned?

Mr. Hamilton (Qu'Appelle): The facts are that such a diversion will prejudice the levels of the great lakes system and will reduce the power potential of that system.

Mr. Fisher: That is the point where I wondered about the study. There is more water up in that watershed, especially lying northeast of lake Nipigon, and I was just wondering whether the minister could not have some study conducted into ways and means of compensating for any diversion which might take place in the future. Even if the department does not go ahead with a concrete plan, would such a study not be worth while; or would the department already have the information necessary to know whether we could compensate for water taken out?

Mr. Hamilton (Qu'Appelle): I think two things should be cleared up. First of all, the proposed diversion has not gone through. As the Leader of the Opposition has said, we have made our view clear to the United States that taking more water would prejudicially affect both water levels and power production. As to the second point, dealing with the possible diversion of water from the Hudson bay watershed into the great lakes watershed, information is to some extent available but the view at the moment is that the possibilities would be limited by the economic factor, the cost.

Mr. Pearson: In view of the minister's answer, may I ask whether the United States is entitled under international agreements to make this diversion which prejudices our interests, and if not, how does that country justify the action which it is proposing to take?

Mr. Hamilton (Qu'Appelle): Yes, the United States is entitled to make the diversion, but there are certain factors prejudicial to both countries which we have been pointing out in the hope that they may see the weight of our arguments.

Item agreed to.

278. To provide for studies and surveys of the Columbia river watershed in Canada, $227,780.

Mr. Herridge: I want to say a few words because of the importance of this vote in connection with the diversion of the Columbia river watershed in Canada and because of the great interest taken in this most important question by the people whom I have the honour to represent.

I notice that the vote is $227,780 this year as compared with $245,437 last year, a reduction of $17,657, which I presume indicates that the endeavour to obtain information is coming to an end. This is very different from the estimates we have had in previous years in connection with these studies.

I wish to express my appreciation of the good work which has been done by the staff of this branch of the minister's department, because it is their work which has made it possible to assess this situation in Canada. I also wish to express our appreciation—and when I say "our" I am speaking for the great majority of my constituents—of the good work done by the international commission and particularly by General McNaughton, who is highly regarded in my constituency. Most of my constituents believe that his foresight, patience and firmness in years past have contributed in great measure to the respecting of Canada's right to the development of her own water works on the Columbia, and I think his position is now understood and appreciated to a much greater extent than it was a few years ago—to such a degree, indeed, that his arguments are now recognized as valid in the United States. And for the same reason that the United States authorities have the right to divert the waters which the Leader of the Opposition mentioned a few minutes ago, Canada has the right to divert the waters of the Columbia if Canada sees fit to do so.

I am one who hopes the government will be able to make an early arrangement which will be applied to all parties concerned for the commencement of the main dam on the Columbia river, wherever it may be located. I understand there is a possibility of shifting it a short distance upstream or downstream from the earlier projected Mica creek location. However, I have two questions to ask the minister.

Can the minister inform the committee what this money will be spent on? Are the surveys entirely completed? Will this money be spent just on details of the report and so on? I understand the report of the engineering board on the Columbia development is expected some time late this fall. I am sure that is the basic document upon which this government will formulate its plans and its policies.

My second question is this. I do not expect the minister to be a prophet or to venture into the unknown and unseen, but because of the great interest in this question could he tell the committee in general terms what steps the government proposes to take after it has studied the report of the engineering board and has the facts before it to further the development of the hydro resources of the Columbia in Canada?

Mr. Pearson: Mr. Chairman, perhaps before the minister replies I might make my observations on the same subject and he can deal with both of us at once. Before doing so may I join in the appreciation which has just been expressed for the work of the minister's officials in connection with this survey, which work has been as efficient as that of his officials in other branches of the department. I cannot give them any greater praise than that.

Perhaps the minister would indicate to the committee the progress which has been made in the survey in question, and perhaps also he would tell the committee whether pending the completion of this survey there have been any talks between the two governments on the diplomatic level to clear up some of the international legal principles involved, if

they need clearing up, and which perhaps could be done while the survey is going on, thereby saving time.

Mr. Hamilton (Qu'Appelle): Mr. Chairman, I should like to thank the hon. member for Kootenay West for his gracious words to a great Canadian. In answer to his question concerning what steps will be taken after the report is submitted to the government, I believe the obvious conclusion would be that it will be studied. I believe I have already indicated to the committee that an economic study is under way now, the report of which is just about ready for presentation to the government, as I understand it. With the new engineering study to review the findings of previous engineering studies and the economic study to which I have referred, it is a matter of the government making a decision on what is the best means of proceeding from that point.

In reply to the question asked by the Leader of the Opposition concerning what talks have taken place with respect to the legal principles at stake, the answer is that discussions have been taking place but there has not been an exchange of views on global positions. Rather, there occurred an exchange of general views on the positions of the two governments.

Mr. Pearson: Mr. Chairman, are these talks being held on the diplomatic level between representatives of the two governments or between officials of the minister's department and officials of the department concerned in Washington?

Mr. Hamilton (Qu'Appelle): This department does not carry out those discussions, but there have been discussions on the diplomatic level.

Item agreed to.

279. Fraser river—federal expenditures in connection with investigations to be carried out by Fraser river board, $95,000.

Mr. Regier: Mr. Chairman, I must admit frankly that I am confused, and I know it is because of my ignorance that I get a little mixed up. The Minister of Public Works has estimates relating to the Fraser river and the Minister of Transport has estimates relating thereto, and here I see that the Minister of Northern Affairs and National Resources is asking for the sum of $95,000 for what are described as federal expenditures in connection with investigations to be carried out by the Fraser river board.

I should like to ask the minister exactly what is the organization known as the Fraser river board. Is that a branch of his department? What exactly is it? What is the composition of the board? What is the investigation about? What is this board investigating? I notice that roughly $100,000 was voted under this item in each of the previous three years.

Mr. Hamilton (Qu'Appelle): Mr. Chairman, these investigations were authorized by an order in council, No. 655, dated May 5, 1955. In general they are to determine what developments for the control of the water and incidental resources of the Fraser river basin in the judgment of the board would be advisable, practical and in the public interest, with particular reference to flood control and hydroelectric power generation.

The terms of reference contain such items as the following. There is reference to the fact that Canada and British Columbia shall share equally the cost of the said survey and report and the board shall render a preliminary report of its findings not later than June 30, 1958. I understand this has been received. It also provides that the board shall be terminated within a period of three months from the submission of the preliminary report unless the two governments agree that the board continue until the submission of the final report. In this case the two governments provided funds to ensure the continuity of the board following receipt of the preliminary report.

I should like to make a correction. I have just been advised that the interim report has been received, and it is expected that the final report will be received at the end of October.

Mr. Regier: Have these investigations anything to do with those currently going on at the University of British Columbia in connection with the same subject? Also, would the minister answer the question I asked previously concerning how this board is constituted?

Mr. Hamilton (Qu'Appelle): Mr. Chairman, the board is composed of four members, two from the province of British Columbia and two from the federal government, and the chairmanship alternates back and forth each year. At the present time an appointee of the federal government holds the chairmanship.

Mr. Regier: Mr. Chairman, I do not know if the minister is aware of the investigations that have been going on for the past several years at the University of British Columbia. There is a pilot project there largely financed by donations from private corporations to the university. Is this board acting in connection with that investigation? Is this one and the

same investigation, or are two investigations going on simultaneously, each doing basically the same work?

Mr. Hamilton (Qu'Appelle): I have to be very careful in speaking on this point, Mr. Chairman, because my information is not from this department. We understand the investigation referred to by the hon. member is to reconcile the fish interests and the power interests on the Fraser, and has nothing to do with our department.

Mr. Regier: Mr. Chairman, this investigation is concerned not only with the problem of fish versus power, but the pilot project in particular also deals with the problem of flood control. I regret that there should be an expenditure of public moneys for two investigations that are really doing very much the same work.

I know in more recent years the university investigation has paid a lot of attention to fish versus power. However, the initial project was concerned primarily with finding ways and means of controlling the waters of this river, and it was for this purpose that a large model of the Fraser river was constructed. If the Minister of Public Works would like to help us out so that we might have the record ironed out I have no objection.

Mr. Hamilton (Qu'Appelle): I understand, Mr. Chairman, it is not in this department, and I cannot give any more authentic information than I have given.

Mr. Regier: Has the Fraser river board any offices out in British Columbia out of which their engineers conduct their operations? If so, would the minister be kind enough to advise where they are?

Mr. Hamilton (Qu'Appelle): Yes, the offices are in Victoria.

Mr. Regier: Has the minister any explanation as to why the offices would be in Victoria rather than in New Westminster or Vancouver? It seems rather strange. Victoria is far removed from the scene of operations.

Mr. Hamilton (Qu'Appelle): The capital city of British Columbia is Victoria. Since they have their offices there they can utilize the provincial staffs and information which is collected there.

Item agreed to.

289. To provide for contributions to the provinces to assist in the development of roads leading to resources in accordance with agreements that have been or may be entered into by Canada and the provinces, $9,000,000.

Mr. Dupuis: How will the minister proceed to make a suitable distribution of the $9 million among the 10 provinces?

Mr. Hamilton (Qu'Appelle): Mr. Chairman, as I said yesterday on the opening vote in answer to the Leader of the Opposition and several other members, this vote is to meet the program of the government which calls for expenditures in any province up to the amount of $1,500,000 a year. The total for the 10 provinces would be $15 million for which we would be responsible, but because the program has just been worked out with the provinces we have no accurate way of knowing what the total will come to. The amount of $9 million was put in, in the working out of the estimates, as our best estimate as to what the amount would come to. As to each individual province, they have put forward programs of roads and we have accepted those programs. When the agreement is signed we shall pay the proportionate amount on the work which has been done this year.

Mr. McWilliam: I think the minister said yesterday in regard to New Brunswick that it had not yet taken on the full amount. I take it that probably final arrangements have not been made. However, I would like to ask the minister whether in the agreement that is being drawn up or has already been concluded, the Renous-Plaster Rock highway in New Brunswick is included in the access-road program.

Mr. Hamilton (Qu'Appelle): Yes; in accordance with the policy that I have tried to follow, if a road has been accepted it is included in the program, and that road, I am informed, has been agreed upon.

Mr. Rouleau: Can the minister tell me whether there have been requests from the province of Quebec?

Mr. Hamilton (Qu'Appelle): No, Mr. Chairman.

Mr. Dupuis: Can the minister tell me, if there are no demands from the province of Quebec, whether he is going to put the money in a special fund until we have a government in Quebec that will likely ask for a share of those grants, as the previous government did with university grants?

Mr. Hamilton (Qu'Appelle): These are annual votes, and we will be very pleased to have Quebec come in.

Mr. Pearson: Is it from this vote that the cost of roadbuilding in the Northwest Territories is paid?

Mr. Hamilton (Qu'Appelle): No, Mr. Chairman.

Mr. Pearson: Which vote is it, then?

Mr. Hamilton (Qu'Appelle): Vote 287, which deals with the Northwest Territories and the Yukon, and vote 284.

Item agreed to.

295. To provide for contributions to the provinces for assistance in forest inventory, reforestation and forest fire protection in accordance with agreements that have been or may be entered into by Canada and the provinces, $1,650,000.

Mr. Roberge: Is the province of Quebec sharing in this one?

Mr. Hamilton (Qu'Appelle): No, Mr. Chairman.

Item agreed to.

296. To provide for contributions to the provinces pursuant to agreements entered into or to be entered into, with the approval of the governor in council, by Canada with the provinces, of amounts equal to one-half of the amounts confirmed by the provinces as having been spent by them in establishing forest access roads and trails for the attainment of adequate fire protection as well as other aspects of forest management, $1,000,000.

Mr. Roberge: May I ask the same question of the minister; is the province of Quebec taking part in this program?

Mr. Hamilton (Qu'Appelle): No, Mr. Chairman.

Mr. Tucker: Mr. Chairman, I would be grateful if the minister would give consideration to some access roads in my riding of Trinity-Conception. I refer now to the Clarenville, Georges Brook and Trouty access roads. I know the minister must have the co-operation of the provincial government in this connection. I think my request will meet with the approval of the provincial government. I shall write the minister in connection with my request.

Mr. Hamilton (Qu'Appelle): Mr. Chairman, I gathered the general import of the hon. member's question, but there were certain parts which I just did not hear. This is the winter work program that was carried out last winter. We offered to the provinces, as a means of providing work in the winter months, that if they proceeded with a program of opening up forest access roads we would pay 50 per cent of the cost. This program ended on June 10 in all provinces. In answer to another hon. member yesterday I said that if it is the decision of the government to continue this plan it will be announced in due course.

Mr. Tucker: Do I understand that similar projects will be continued?

Mr. Hamilton (Qu'Appelle): It is a question of policy and, as I said, if it is to be done it will be announced by the government in due course.

[Mr. Pearson.]

Mr. Tucker: Thank you very much.

Item agreed to.

297. To provide for a contribution to the province of New Brunswick for assistance in a program designed to combat the spruce budworm infestation, in accordance with an agreement entered into by Canada and the province, $600,000.

Mr. McWilliam: Can the minister tell me what amount has been spent to date on the spraying of the forest lands in New Brunswick? I know this vote is to provide for a contribution to the province of New Brunswick. I would like to know whether that money is paid directly to the province or to the forest protection association which is carrying out this work in conjunction with, I think, representatives of three or four of the major pulp and paper industries in the province of New Brunswick. I am wondering what are the mechanics in regard to payment, and whether the vote has been spent to date?

Mr. Hamilton (Qu'Appelle): The moneys are paid directly to the province. The total up to March 31, 1957, was $2,264,270.56.

The amount that it is estimated will have been spent up to March 31, 1958 is $3,250,000. That, of course, is an estimate.

Mr. McWilliam: Will the minister tell me if he has any information with regard to whether this operation is now approaching completion? Is it the case that the task will soon be accomplished, or will it be a continuing one? I am not sure whether the minister can answer that, but maybe he can give me some enlightenment on the matter.

Mr. Hamilton (Qu'Appelle): This matter concerns the forest biologists. They are not completely certain that the program will definitely be wound up this year, but will be advising us later. The general feeling is one of optimism that this is the last year the program will have to be carried out.

Item agreed to.

Canadian government travel bureau—

303. To assist in promoting the tourist business in Canada, including grant of $5,000 to the Canadian Tourist Association, $2,182,206.

Mr. Rouleau: What is the procedure followed in awarding advertising contracts to magazines and newspapers?

Mr. Hamilton (Qu'Appelle): The policy of the government has been to divide its advertising, and there are three firms with which we deal under this vote, Locke-Johnson and Co. Ltd., Harold F. Stanfield Limited and F. H. Hayhurst Co. Limited.

Item agreed to.

507. To provide for advances in accordance with agreements entered into or to be entered into pursuant to the Atlantic Provinces Power Development Act, $11,329,000.

Mr. Robichaud: I have a few questions to ask the minister, and all I want is short replies. I do not want him to take 15 pages of *Hansard* or 25 per cent of the time as he did yesterday. Can the minister tell the committee what portion of the vote of $3,410,000 for 1957-58 was spent last year?

Mr. Hamilton (Qu'Appelle): The shortest answer I can give is that this question was answered in the standing committee.

Mr. Robichaud: Mr. Chairman, we are in committee of supply and I think we have a right to an answer. I should like to know what part of last year's estimate was expended last year, and also how much of the $11,329,000 allotted for this year has been spent to date.

Mr. Hamilton (Qu'Appelle): It is taking some time to dig up the answer from the minutes of proceedings and evidence of the committee. If my memory serves me correctly, I think the answer given at that time was that nothing was spent last year but that it is revoted this year. Up to the present no money has been spent, but the work is proceeding.

Mr. Robichaud: The minister has just said that the work is proceeding. If work on the construction of thermal plants in New Brunswick is proceeding, can the minister now advise the committee if a specific agreement has been signed with the province of New Brunswick for the construction of the East Saint John plant?

Mr. Hamilton (Qu'Appelle): No, the contract is still under discussion.

Mr. Robichaud: In reply to a question which I asked the minister on Saturday, July 26, the house was informed and the minister admitted that tenders had been called for equipment for the East Saint John plant. I understand that tenders have already been awarded for equipment and machinery such as boilers, generators and so on. The main agreement signed with the province of New Brunswick on February 14, 1958 was tabled in the house as sessional paper No. 110, and in paragraph 5 under the heading "Construction" it states:

The assistance in respect of the construction and equipping of power projects will be given by Canada through the northern Canada power commission pursuant to agreements from time to time entered into between the northern Canada power commission and the New Brunswick electric power commission in respect of specific power projects only.

Paragraph 6 reads as follows:

The approval of the time, need for, location, use, type, design and specification of each power project by the northern Canada power commission, upon application by the New Brunswick electric power commission, shall be a condition precedent to the provision of assistance by Canada. Such approval shall not be unreasonably withheld.

According to the minister's statement work is now proceeding, tenders have been called and awarded, and no agreement has been signed between the government of Canada and the province of New Brunswick. Would the minister comment, please?

Mr. Hamilton (Qu'Appelle): The hon. member has read from the records that have been submitted to the house and they are quite accurate. At the present time the agreement is being negotiated, but every one of these tenders has been agreed to by the northern Canada power commission with the understanding that when the final agreement is signed payment will be retroactive. We did not want to hold up progress on this development. It is the same principle that we are using in connection with roads to resources. When we agree on a certain thing they go ahead on the understanding that it will be accepted as charged to us.

Mr. Robichaud: I am sure the minister is also aware of paragraph 8, subparagraph (c) of the main agreement, which reads in part as follows:

—whereupon the northern Canada power commission will at its own expense and in accordance with the design and specifications as approved construct and equip the power project.

Apparently construction and equipment of the project are being carried on by the province of New Brunswick. Could the minister advise the committee if the plans and specifications for this project have been entirely completed and if they have been approved by his department?

Mr. Hamilton (Qu'Appelle): The plans are not entirely completed, but all plans that are completed have been approved by the northern Canada power commission.

Mr. Robichaud: In other words this is a project in which the federal government is interested and the work is being carried on before the plans have been completed. This is something about which we have heard a lot in the last few days in the deliberations of a certain committee.

Item agreed to.

Northern administration and lands branch—

584. Branch administration—further amount required, $59,440.

Mr. Fisher: I have one question I want to ask the minister. I have heard about a fairly

new revolutionary instrument in surveying called the tellurometer. It is supposed to give a much more accurate control of mapping and surveying. I was wondering whether his department is doing any research with this particular instrument, or is planning on using it in its northern operations.

Mr. Hamilton (Qu'Appelle): Our department is very much interested in any new device for accurate mapping and surveying. As the hon. member knows, this is more properly a question for the Department of Mines and Technical Surveys. I have no specific information that the Department of Mines and Technical Surveys are dealing with this particular new development.

Mr. Fisher: Is not your forest survey branch doing some work in the northern part of the country in relation to surveys? What I mean is this. Is it the Department of Mines and Technical Surveys that is looking after this aspect?

Mr. Hamilton (Qu'Appelle): There is a little difference here. We are doing surveys in the north in relation to quantities of lumber under forest inventory. I thought the hon. member was referring to some development in connection with contour locating on maps. I understood that was what the hon. member was asking about.

Mr. Fisher: My understanding is that this is one of the most revolutionary advances that has ever been made in mapping and surveying. I was just curious as to whether the minister's department was on to that development and was trying to find out whether this particular instrument can be useful in this country.

Mr. Hamilton (Qu'Appelle): The information that my officials give me is that these base maps for the forest survey are made by the Department of Mines and Technical Surveys. As for the equipment in use there, we have no official information.

Item agreed to.

586. Construction or acquisition of buildings, works, land and equipment—further amount required, $3,500,000.

Mr. Pearson: I take it that this item, along with the parallel item in the main estimates, would cover roadbuilding in the Northwest Territories. I should like to ask the minister a question. It is not concerned with the importance of roadbuilding for development purposes, which we all recognize and which has never been denied by anybody. Under this item I should like to ask him whether he can inform the committee in at least general terms how much employment has been given under roadbuilding activities in the Northwest Territories since the beginning of the year.

Mr. Hamilton (Qu'Appelle): I had this information yesterday, Mr. Chairman, and then I lost my papers. But the total for our department and D.O.T. is approximately 2,000 on construction.

Item agreed to.

DEPARTMENT OF LABOUR

General administration—

170. Departmental administration, including grants as detailed in the estimates and the expenses of the international labour conferences (also includes the former Labour Gazette, Women's Bureau and manpower utilization votes), $1,067,166.

Hon. Michael Starr (Minister of Labour): Mr. Chairman, in rising to deal with the estimates of the Department of Labour and the unemployment insurance commission, I should first of all like to express my appreciation to the chairman and members of the committee on industrial relations. This committee has already considered these estimates and I would say, Mr. Chairman, that they have made some helpful and useful suggestions. However, on these estimates of the Department of Labour and the unemployment insurance commission I am sure members of this house in committee will have other questions to ask, and I shall try to be as helpful as I can in supplying the answers, with the advice and co-operation of my officials.

The total of these estimates, including the Department of Labour and the unemployment insurance commission, comes to $84,891,842, of which $71,359,500 relates to the unemployment insurance commission and $13,532,342 to the Department of Labour. The estimates of the Department of Labour exceed those of last year by $2,086,210, and those of the unemployment insurance commission are greater by $199,301 than last year.

Supplementary estimates totalling $1,547,435 are also being requested, bringing the total requirement to $86,439,277, an increase of $3,832,946 over last year for both departments. Of this amount, some $2 million is required to provide for expanded vocational training agreements with the provinces. There is also an increase of approximately $1 million in the government's contribution to the unemployment insurance fund.

Owing to greatly expanded activities, there is an increase of $676,000 in administration costs of the unemployment insurance commission. Hon. members will recall that an effort is being made to emphasize job-finding activities of the commission. This effort will be continued and augmented.

I should like briefly to touch on some of the programs in my department which are included in the estimates now before the house. In the field of industrial relations we are facing a situation where a number of one-year and two-year labour agreements have lately terminated or will terminate in the next few months. As a result of this fact, conciliation proceedings are under way in a number of different fields of industry. I might mention at this time that during the year a total of 117 disputes in industries under federal jurisdiction were dealt with by the officers of my department. Of these, 53 were settled by these officers and 22 by conciliation boards. The others were in various stages of conciliation as the year ended.

Coming to the Industrial Relations and Disputes Investigation Act, may I say that I have given notice of my readiness to consider amendments to this act and that a number of suggestions have been received and are being considered at the moment.

I am still waiting for three major national organizations which have been requested to submit their recommendations, but to date I have not received them. However, on checking into the matter I find that they are in the process of completing their recommendations, and that they should be within my hands within the next few weeks.

Another matter which has been of major concern to my department has been the elimination of discrimination, whether it is based on race, religion or colour, throughout the labour field. It is my intention to set up a consultative committee representing interested groups to advise upon the administration of the fair employment practices act as it relates to discriminatory practices in industry.

One of the most important programs of the department is that concerning the rehabilitation of persons disabled or inhibited in one way or another from following their normal pursuits and earning a living for themselves and their families. It is encouraging to note that in this connection we have particulars of 1,055 persons who have been returned to useful employment during the last fiscal year. Previously the majority of these people were supported by public assistance, though this figure does not, of course, include all those who were to a greater or lesser degree assisted under this program.

In the civilian rehabilitation branch, in order to carry on the services rendered we are making provision for two additional employees to assist in the placement of older workers. This has been an aspect of labour problems in which I have been very interested for quite a number of years. Because of the practice of certain industries of specifying certain ages, they have thereby eliminated many useful persons from employment. We are concentrating on this aspect of the matter by endeavouring to institute an educational program for employers, and by pointing out to them that the ability of a person is in no way diminished as the result of age but that in some respects the workmanship of an older person offers a great deal to a prospective employer.

As hon. members are well aware, my department carries on an extensive public information program relating to winter employment, and we have included in these estimates an amount of $150,000 for the continuation this year of this program. I might mention that in pursuance of this objective of alleviating and improving the winter employment situation I called a conference in Ottawa. This conference was attended by representatives of provincial labour departments, national organizations and others interested in finding a solution to this pressing problem. The recommendations of the conference are now being studied by my department and will shortly be submitted to the government for active consideration.

I think I can say however, that the conference did serve to heighten the realization of the extent of this problem and to place the problem squarely before a number of persons and groups in a position to take concerted action in order to deal with it. As a result of the conference I think there is a greater awareness of the whole situation, and that there will be the maximum degree of co-operation from provincial labour departments, labour and management groups and other interested bodies in order to evolve measures by which to deal with the situation.

Another matter with which my department is concerned is vocational training, and new agreements have been reached with the provinces which call for further federal expenditure in this field. I do not think I need to emphasize in this house the importance of programs to provide increased facilities for trade and technological training in this country. Hon. members are aware, as I am aware, of the need for adding to the pool of trained and skilled labour in Canada, and I do not think I go too far in describing this objective as a national necessity.

In respect of this field of vocational training I should like to bring to the attention of this house the fact that the existing agreements will make available a total of $40 million from the federal government to the provinces over the next five-year period. Of this amount $25 million will be allotted for buildings and

equipment and $15 million for operational expenses on a matching basis.

The Department of Labour is also continuing to study the effects upon industry of recent technological changes including automation, and I feel the results of these studies will have a useful application in determining the effects of such changes on manpower and training needs for the future.

Returning now to the unemployment insurance commission, I would like to point out that there were several extensions of seasonal benefits last year and this year, and that discriminatory regulations against married women were removed. Fishermen were brought under this act, and added administrative requirements in connection with these changes account in part for the increased costs relating to this department. In connection with the unemployment insurance fund, I tabled a report on July 10 which gives the current state of the fund, and the table relating to the fund can be found on page 2137 of *Hansard* for that date.

In order to emphasize the job-finding function of the national employment service I am asking this year for 150 new positions for placement personnel, and provision for this will be found in the supplementary estimates of the unemployment insurance commission. The purpose of this additional staff is of course so they will be able this winter to activate the job-finding program of the national employment service, which will mean that we will not be content merely to pay benefits but that a positive and energetic effort will be made to place people who are without jobs.

Mr. Pearson: The committee will have listened with interest to the statement the minister has just made on the first item of his estimates, which gave him an opportunity to discuss generally the work and the problems of his department. I think the committee will have been struck by the fact that although he spoke on a good many matters—not, of course, in detail—he did not deal at this time with what I consider to be the most pressing matter from his point of view and that of his department, namely the problem of employment and unemployment. Perhaps he intends to do this later after he has heard from us.

The minister mentioned the desirability of removing all discrimination and the further steps he is taking to ensure that this will be done. I am sure he will get general support from this house in the achievement of that most important and desirable objective. He also mentioned the work of his department in respect to rehabilitation of and work for the handicapped, which is also important and must commend all our support and sympathy. He also mentioned the problems of the older workers, which make an appeal to our sympathy, especially those of us who will soon be joining the ranks of the older workers. Then he just touched upon one of the most important of all labour problems, which is very much in the minds of labour at the present time in view of technological developments in our industrial society, the problem of automation. We in this party have already given an indication of our realization of the importance of this problem by certain concrete suggestions we have made as to the responsibility of government in meeting it. It is certainly something which will have to increasingly engage the attention of the Minister of Labour and the Department of Labour.

The minister also mentioned—he did not do much more than mention—one of the most basic problems of all, a problem very much in our minds at the present time, that of industrial relationships. He called attention to the fact that this problem is looming up at the present time in certain specific respects in the form of the renegotiating of contracts between employers and employees in some of the most important industries in this country. There is no doubt that problems in this field, dangers in this field, are looming up, and if these problems are not solved and these dangers are not averted they will certainly add to our economic difficulties at a time when we already have enough economic difficulties. As the Prime Minister has said, and as I think the Minister of Labour has also said, the solution of this problem of industrial relationships at this time will require a sense of responsibility and restraint, and the exercise of this responsibility and restraint on the part of all concerned.

It seems to me that the basic problem of labour relations is more and more becoming one of the confrontation of huge corporate structures representing a concentration of great power—power not always controlled entirely in Canada—by huge union structures representing also a concentration of great power also not always controlled entirely in Canada. In this situation, which is very different indeed from the unbalanced one of say 50 years ago, then so heavily weighted against labour, both sides must recognize that new circumstances have developed and a new situation has arisen because of the growth of our industrial structure and the concentration of industrial economic and financial power into fewer and fewer hands.

As long as this is the case, and it is inevitable that corporations should develop in this way, surely both sides must recognize

that this has created new problems. It emphasizes in our minds not only the necessity for conciliation and solution but also the priority of the public interest. Governments —in some cases in this field provincial governments, and in other cases the federal government—are the guardians of the public interest. In the discharge of that guardianship, that responsibility, governments I think have a duty to emphasize the necessity for social control, in certain circumstances, as a recognition of that public interest. Certainly, as I am sure the minister himself is very much aware, this situation has thrown new responsibilities on government as well as on workers and employers. Perhaps it necessitates a new approach to labour problems by government, one that will certainly preserve the rights of both sides, but subject always to the public interest.

I was glad to hear, and I am sure the committee was glad to hear, that recognition has been given to the seriousness of this problem; recognition of the desirability, perhaps, of a new approach to the problem of industrial relationships by the Department of Labour, and that ideas have been asked for by the department which would help them in the changes that may be required in the industrial relations act. Undoubtedly in view of this changing situation some changes are required to expedite and make more effective conciliation procedures, so that we may not be increasingly confronted with emergencies when those procedures have broken down, with the government having to step in and intervene by methods, at times, which no government desires to use or to be put into the position of having to use.

One could talk on this subject for a long time, and I have no doubt that some of my colleagues in my own party as well as members of the other opposition party will be discussing this aspect of the question. In the course of the remainder of my remarks, which will not be extensive, I propose to concentrate on unemployment. I hope to discuss the present situation in a way which may assist in steps which, perhaps, the Department of Labour can take toward meeting it. In view of the fact that I am now beginning a new subject, may I call it one o'clock?

At one o'clock the committee took recess.

AFTER RECESS

The committee resumed at 2.30 p.m.

Mr. Pearson: Mr. Chairman, at the luncheon recess I had reached the point of discussing a matter which, of course, is of primary importance to the country and of equal importance I know to the minister and the Department of Labour, perhaps our most serious domestic problem, that of unemployment. As a matter which so directly concerns the Department of Labour and these estimates, I propose to deal with the present position as I see it, to discuss it frankly, but neither to make statements which I believe are not accurate or distort those I do make.

It is quite true that in recent weeks our economy in the face of deflationary pressures has shown a strength and resilience in some sectors which must be encouraging to all Canadians. It has also, of course, shown weaknesses, and those weaknesses are perhaps best illustrated by the employment picture in this country at this time. The situation I admit, and I have always admitted, is difficult and confused and in some respects almost contradictory. We have before us, and it is being emphasized more and more when discussions related to it take place in the house, a real and perhaps even a growing danger of inflation. The latest indication of the importance of that danger to the south of us—and whatever happens down there in these matters certainly affects us—is that today the federal reserve system in the United States has increased its discount rate through the federal reserve bank in San Francisco—and that will be followed I am sure by other banks—from 1¾ per cent to 2 per cent. The continuing danger of recession in the midst of this inflationary danger is shown, as I said, by the unemployment figures.

The two dangers, then, face us at the same time. I know, as other hon. members know, that this has certainly made it difficult for a layman to understand what is going on and what should be done to meet it. It has also confused the experts and the economists. We should, in fact we must face up to both these trends and try to analyse them in the hope that by a sober and intelligent analysis we can do something about them. However, parliament or the government cannot do anything about this problem if the existence of the problem and the dangers inherent in it are not recognized.

In attempting to assist in that recognition by producing facts which bear on it, we on this side of the house are continually charged with being promoters of doom and gloom and of shedding crocodile tears. Well, Mr. Chairman, this does not worry us, and it is not going to deter us from doing our duty as an opposition as we see it. But because these charges are continually levelled at us when we talk about the employment picture it makes it necessary for us to continue to

expose the insincerity of those charges by recalling the attitude of hon. members of the present government when they were sitting on this side.

I recall that at a time when winter unemployment in this country was under 200,000 the present Minister of Public Works moved and the present Prime Minister seconded a resolution which demanded the immediate appointment of a select committee to examine and do something about the unemployment situation which, in the words of the present Prime Minister as found at page 2099 of *Hansard* of February 15, 1954, was comparable to that of the beginning of the great depression. If hon. members will refer to page 2085 of *Hansard* of February 15, 1954, they will find a record of the discussion relative to the resolution to which I have referred.

During the 1955 session the opposition of that day demanded that a dominion-provincial conference on unemployment be called. My hon. friends may recall that they demanded it in very strong terms, and vigorously condemned the government of the day for not calling it. They made this demand at a time when the unemployment problem was less than half as serious as it is in 1958, and when it was a problem which this country pretty quickly solved.

Furthermore we should not forget that in those debates on unemployment in previous sessions the opposition of that day never failed to use the higher national employment service figures to support and at times exaggerate their claims. My hon. friend the Minister of Labour used to use those figures regularly, but I suppose when he talks on this matter later in this debate he will probably use the lower figures published by the dominion bureau of statistics.

When I have talked about unemployment inside and outside the house I have always used the dominion bureau of statistics figures, and when I have used the national employment service figures it has never been by themselves. There are two sets of figures, and perhaps neither gives the exact picture of what is happening. One set may exaggerate in one direction and one set in the other, but if the figures we have before us now, from whatever source they may come, turn out to be exaggerated and the dangers which are inherent in those figures turn out to be dangers which will be met and removed, then everyone in this committee and in the country will rejoice at that development. Meanwhile it is our duty to warn the government of the possibility of these dangers and try to convince it that something effective must be done to meet them through wise government policies.

[Mr. Pearson.]

I suggest it cannot be denied by any unprejudiced observer that we have been going through the worst period of unemployment since the depression of the thirties. Hon. members of the government I know will surely admit that now, even if they did not admit it in the debates in this house during last session. The members on the treasury benches have certainly changed their attitude on this question, because in the autumn session last year they did not give this house any indication that they appreciated the dangers of mounting unemployment. When they had to admit an abnormal situation had developed they tried either to minimize the seriousness of our economic troubles or else they claimed that unemployment was decreasing.

It is very interesting also to quote in this connection what various ministers had to say about this issue during the election campaign. As we are discussing the estimates of the Department of Labour perhaps I should limit myself in this regard to three statements made by the Minister of Labour. On February 20 he is reported as having said in Woodstock, Ontario, on February 19, the day before, and I quote from the Ottawa *Journal* of February 20:

> "We believe unemployment is our responsibility and as long as one Canadian is unemployed we intend to do something about it."
>
> We also attacked the former government's "tight money" policy as contributing to unemployment.

That is a remark which inspires certain ironic reflections in the light of what has happened in the last month or two. Then he said:

> We gradually eased the tight money policy, dropping interest rates.

No doubt that was in the interests of creating employment. Well those interest rates have been increased by the present government since that statement was made. Then the Montreal *Gazette* of March 20 quotes the minister as saying:

> Federal labour minister Michael Starr predicted last night the present unemployment situation will end by mid-June.

I shall have something to say about that in a moment, based on the official statistics on the subject. Then on March 28 the minister is reported by the Toronto Daily *Star* as having said:

> Mr. Starr said that both he and the Conservative party had "great confidence in the future" and predicted that through various campaigns to be instigated this coming year, the problem of seasonal unemployment would be eliminated.

I hope the minister is right, but I suspect he will find it a little difficult to eliminate the problem of seasonal unemployment. While the Minister of Labour was saying during the

election campaign that unemployment would have disappeared by mid-June, the Minister of Finance in his budget speech, parts of which we have heard twice in this house, said as quoted on page 1233 of *Hansard*:

> Once again the latest figures are encouraging, showing a rapidly narrowing gap in the percentage of unemployed as compared with a year ago.

I suggest, Mr. Chairman, with all respect to the Minister of Finance, that that is a misleading statement in the light of the official statistics on this subject. To support what I have just said we should look at the current situation as described by those official statistics, in order to see if those optimistic statements made by ministers are justified. For the purpose of the comparison I would like to make, I intend using the dominion bureau of statistics figures which certainly do not exaggerate, to say the least, the unemployment problem. In order to prove the points I want to make I should like at this stage to ask permission to insert a series of official statistics from the bureau of statistics, *Canadian Statistical Review,* which show for the first six months of 1957 and 1958, the number of persons in Canada having jobs, the number of unemployed and seeking work and the percentage of the total labour force unemployed. The statistics follow:

EMPLOYMENT AND UNEMPLOYMENT IN CANADA FOR THE FIRST SIX MONTHS OF 1957 AND 1958

('000 omitted)

—	With jobs		Without jobs and seeking work		P.c. of total Labour force unemployed	
	1957	1958	1957	1958	1957	1958
January	5,393	5,371	303	520	5.3	8.8
February	5,362	5,314	323	555	5.7	9.5
March	5,373	5,317	343	590	6.0	9.9
April	5,442	5,453	306	516	5.3	8.6
May	5,687	5,665	194	366	3.3	6.1
June	5,834	5,794	162	320	2.7	5.2

These are official figures, Mr. Chairman, from the publications of the bureau about which I should like to make some observations. To begin with, let us look at the employment side. It can be seen from these figures from the bureau of statistics that the level of employment, not unemployment, has been lower in 1958 than it was in 1957 for all the months covered from January to June, except April. In January, 1958, there were 22,000 fewer people with jobs than in January, 1957. That figure was 48,000 in February and 56,000 in March. In April the trend was reversed and there were 11,000 more people with jobs than in April, 1957; but again in May, 1958—and this is significant—the figure was lower than in May, 1957, by 22,000, and in June it was lower by 40,000.

These figures, I think, lead to two conclusions. First, on the average for the first six months of this year, total employment has been lower than in 1957. This certainly must emphasize that we are in an abnormal situation, especially as you have to relate these employment figures to the increase in the labour force and the natural increase in population and the increase last year by immigration. With all that, our employment figures on the average for the six months of 1958 are lower. Second, since the month of April the employment gap, expressed in absolute terms as between 1958 and 1957, has been increasing. This means, I suggest, that the optimistic statements made by the Minister of Labour and the Minister of Finance are not supported by the facts and by the most recent information available to us.

Let us look at the unemployment situation, Mr. Chairman. Of course the number of unemployed, according to dominion bureau of statistics figures, has been decreasing steadily since March, 1958. That was to be expected with the seasonal pick-up, and we can all take satisfaction from that decrease. But perhaps it is more significant to consider

the gap in the percentage of unemployed this year as compared with last year. That gap is measured by dividing the percentage of the total labour force unemployed in 1958 by the same figure for each month in 1957.

If you apply that simple arithmetic you find that in January, 1958, the percentage of unemployed was 66 per cent higher than the year before; in February, 66 per cent; in March, 65 per cent; in April, 62 per cent. The figure went down a bit in April. In May it was 85 per cent higher and in June 92 per cent higher, and June is the last month for which figures are available. One cannot get very much comfort out of these facts. In other words, since April, 1958 the gap in the percentage of unemployed as compared with a year ago has been rising, and it has been rising significantly.

Now, surely this most important fact—and it is an important fact, and I am quite sure it worries the minister as much as it worries us—is in direct contradiction of what the Minister of Finance said in his budget speech at page 1233 of *Hansard,* which I have already mentioned and which was repeated in this house at page 3103 of *Hansard* as recently as August 5, when he quoted the unemployment figures for the month of June. On that last occasion in August he said, without, in my view, any regard for the facts:

> These figures indicating the decrease in unemployment are, I think, figures that fully bear out what I had to say in the budget speech when I said, as found on page 1233: "Once again the latest figures are encouraging, showing a rapidly narrowing gap in the percentage of unemployed as compared with a year ago."

The figures I have quoted, Mr. Chairman—and they are official figures—show that the gap is not narrowing; it is widening.

My observations up to now have been limited to the unemployment situation as it has developed over recent months, and have been based exclusively on the most conservative figures published by the dominion bureau of statistics. I suggest that these statistics emphasize that the situation is still serious and I hope I will not be accused of presenting a gloomy picture merely because I put these figures on the record.

Now, what can we expect in this regard for the rest of the year and the beginning of 1959? Well, Mr. Chairman, I am not going to make any forecast about the unemployment situation in the immediate future. The responsibility for doing that and for giving the unemployment outlook to the house is, of course, that of the minister. Perhaps he will give us as clear and frank a statement as he can on this very important matter and on the policies the government intends to initiate in order to cope with what I believe to be a continuing and serious situation.

Before the minister makes that statement I should like to give him some indications that might be of assistance to him in his presentation. In the first place I want to point out that according to our usual seasonal pattern in Canada—and this is, of course, to be expected—unemployment reaches its lowest levels in June, July, August and September. That has been the pattern over many years. But then it starts to rise again, even in periods of boom and prosperity, until the following April. In 1957, for instance, the percentage of the total labour force unemployed reached 2.7 per cent in June and remained at about that level for the following three or four months until it climbed to nearly 10 per cent, under the D.B.S. figures, in March, 1958. When the minister presents his employment outlook he will no doubt take into account the fact that in June of this year the percentage of unemployed was 5.2 and not 2.7 as it was last year.

In the second place, I am wondering whether or not the minister has studied the situation in the light of the conclusions of the famous hidden report, the "Canadian Economic Outlook for 1958". If he has he should then be in a position to answer some of the questions raised in excerpts from this report which have appeared and which have a very important bearing on the labour and employment situation in the country. One excerpt from the report reads:

> In view of the downward momentum now present in the economy it is questionable whether any firming trend in the latter part of the year would be sufficient to bring over-all production for 1958 as a whole up to the level of the preceding year.
>
> Meanwhile, available manpower, plant and other productive facilities will continue to increase. This means considerable slack is likely to persist in the economy throughout 1958 with unemployment remaining well above the level of any preceding post-war year.

Then another excerpt from the report:

> Since this was written a large number of returns from the July survey have been received. Eighty per cent of the industries have revised their employment forecasts downward over the past three months, with the downward revision of total employment being about 2 per cent.

The estimate of average unemployment for 1958 as forecast in the "Canadian Economic Outlook" was 425,000, an increase of 67 per cent over 1957. I ask the minister whether he thinks this figure is too high. If he does, undoubtedly he will tell us and it will be a reassuring statement from him. But does he really think this 67 per cent increase over 1957 is too high when for the first six months of 1958 the percentage of unemployed on the average has been 72.6 per cent higher than for the corresponding period of 1957? If the

minister feels that the figure of 67 per cent as an average over the year is not too high, it represents a serious situation which challenges all of us to do something about it, and which certainly challenges the government. Before this item is carried, perhaps the minister will tell us what the government proposes to do about it.

Before answering these questions, the minister might like to recall again what he and his colleagues used to say about unemployment when they were in opposition and during the election campaign. Before I sit down I should like to refer him to a statement attributed to him in the Winnipeg *Free Press* of March 5, 1958, in these words:

> It is our duty to see that no Canadian suffers a single loss of a job this year.

If the minister finds some difficulty in telling us how the government is going to meet this responsibility, and I can understand the difficulty for it is certainly not an easy problem, perhaps he might discuss this issue with his colleague the Secretary of State for External Affairs. I know he is engaged on important work in New York at the moment, but during the election campaign the Secretary of State for External Affairs had a very simple solution to the unemployment problem, because the Saskatchewan *Star-Phoenix* of March 15 reports him in this way:

> External affairs minister Sidney Smith told a Saskatoon audience Friday evening, jobs were the immediate solution to unemployment in Canada.

There is no doubt that is true. Jobs are certainly the answer to the jobless, but what are the policies of the government which it is hoped will provide these jobs in the months ahead? It is the answer to that question that we would like to get. We would at least like to hear from the minister on that question before this estimate is passed.

Mr. Crestohl: Mr. Chairman, I should like to address myself for a few moments to one phase of the minister's opening statement which over the years has not, in my humble opinion, received the attention from parliament that it deserves. I want to speak for a few moments about our vocational training program. In his opening statement the minister announced to the house, and I have also noted in the report of the director of vocational training, that $40 million is being set aside for vocational training in the coming year, but the strange thing is that of that amount $25 million is being devoted to capital assistance toward the building and equipment of schools and only $15 million for training and education.

I consider that for a country like Canada $15 million for training our youth in trades in technical schools is indeed a very paltry amount, and it is distributed amongst the provinces of Canada to such an extent that it cannot really make a serious impression in any province. To me it appears to be somewhat of an excuse for us to be able to say that we are doing something about vocational training. It is like going over a subject once very lightly.

In my opinion the problem is certainly deserving of much more serious attention. It is a national problem, and if the minister and his officials will really think deeply about it I believe they will come to the conclusion that we have sort of been glossing over it. I think we have been delinquent in training our people to keep abreast of technological improvements, automation and inventions in all industries, and unless our workers are trained to keep up with the progress of the times our industries will fall very far behind.

It is true that some contributions are made. I do not know why some provinces insist on thinking of this matter in terms of education and refuse certain subsidies, as some provinces have refused them. This matter too might fall under the heading of education. I would address myself to hon. gentlemen in the province of Quebec and ask them to consider seriously this matter of whether we are not delinquent in the province of Quebec in the matter of the training we are giving, realizing of course that education falls entirely within the jurisdiction of the province. However, this is something that falls under the heading of labour. Unless we are going to train our youth and give them facilities with which to keep abreast of the modern advances of science, certainly our skilled labour will be falling far behind.

I should like to suggest to the minister—and this is a humble suggestion—that the Department of Labour, under his guidance, create in Canada one central training institute where we will train not necessarily skilled labour but teachers. We should have a vocational teachers' training institute so that the very best teachers trained in the central school may go to the different provinces and the different institutes. There, with their training as skilled teachers, they may be able to do a much better job than is being done now.

What happens at the present time? The technical schools or the trade schools in the various provinces call in individuals who may be excellent craftsmen. They may be excellent in their own industry but they are not necessarily good pedagogues; they are not necessarily good teachers. I do not think they have the fullest ability to get across to pupils in the way a trained pedagogue can.

If the Department of Labour would take a proper view of vocational training in Canada much could be done. Of course, as I said before, I consider its present program merely an excuse for saying "We are doing something about it". Actually I think we would blush if we compared our efforts in the matter of vocational training with the effort of other countries. Very respectfully and seriously I suggest to the Minister of Labour that here is an opportunity to develop in Canada a program of vocational training, not only by going into the provinces with petty subsidies as we are doing now but by creating an institute for teachers.

I happen to know something about the matter because I am connected with a vocational training organization with schools in various countries in the world. I speak from some experience. That organization has a teacher training institute set up in Geneva. What they do there is train people. The graduates of that institute then travel to various countries and to the various schools. They are expert teachers in vocational training. I think this step would be welcomed by industry in Canada. I feel confident, and I think the minister will agree with me, that industry in Canada could benefit from more skilled labour. I do not know how many hundreds or how many thousands of these skilled technicians from other countries are now in Canada working on Canadian projects.

I do not deride this fact. I think they are necessary. I think they are doing a magnificent job for industry in Canada, but why should we not have our own people trained to do that work? Labour would welcome it. I feel certain that labour would subsidize such a central teachers institute. Labour certainly would create bursaries and scholarships and encourage it in every possible way, if approached, because it is to their benefit. Industry is seeking trained help. Shortly after the war there was a dearth of trained labour in the country and the minister will recall that we sent team after team—I refer to Canadian teams—over to Europe in order to seek out skilled labour there.

Whilst we have been following a program of vocational training in Canada, I direct my appeal again to the minister to think very seriously about this project of creating in Canada an institute for teachers of vocational training. We have, for example, schools or institutes in which we train teachers to go into the elementary schools to teach our children. They are trained teachers; they are trained pedagogues. We have institutes in which we train people to enter the universities in order to train our people in the higher fields of education. But in the field of vocational training or technical training we have been greatly delinquent.

I do not lay this fault at the feet of the present administration; past administrations must certainly assume some responsibility. But I really think now is the time, when Canada has grown up, to take this step. We need a great deal of skilled labour in Canada. We cannot get it, Mr. Chairman, to the extent that we shall require it unless we create an institute that will train the appropriate teachers to go back into our various provinces, since they control the vocational training schools, where they will qualify our people for that service.

Mr. Regier: Mr. Chairman, I am pleased to associate myself with what I understood to be the recommendation of the hon. member for Cartier. Having been connected with education for a number of years in Canada I have long realized the need for a training school for our technical teachers. The atmosphere that would prevail at such a training school varies so much from the regular academic normal schools that I think the proposal put forward by the hon. member, namely that we establish at least one national training school for vocational teachers, is worthy of the most serious consideration. I believe it would greatly assist in supplying those teachers which at the present time are in meagre numbers.

I should like to congratulate the minister —this is the first occasion on which I have had the opportunity to make any reference to him—on his attitude since becoming Minister of Labour. He has always been extremely modest. He is one cabinet minister that you can expect to find almost anywhere in Ottawa. He lives with the people whom he professes to serve. He makes a great effort to maintain contact with the ordinary taxpayers of Canada. I feel that his example might well be emulated by other cabinet ministers. With his approach to human beings and human problems, how in the world he finds himself in the ranks of the Conservative party is something I have never been quite able to figure out. However, he is there and I know that his presence will be an influence for good.

I hope the Minister of Labour will not look upon everything we say as his own personal and sole measure of responsibility. I have always regretted—and I said this previously when Hon. Milton Gregg was minister—that we seem to throw all the blame for unemployment on whoever happens to the Minister of Labour, whereas actually unemployment as such is more the major concern of the cabinet as a whole, including

such men as the Minister of Finance, the Minister of Trade and Commerce and the Minister of Agriculture. These men actually have more to do with the level of employment in the nation. Yet somehow or other the Minister of Labour is the minister whose estimates are before us when we talk about unemployment, and he always has to take it in the neck for whatever is wrong in the employment field.

Partly to refresh the minister's memory, I would like to refer to an article which appeared in the Montreal *Gazette* of October 17, 1957. As the minister will remember, that was shortly after the house opened and when he first became Minister of Labour. The headline was "Job Threat Met", and the article read as follows:

> Labour minister Starr was ready in the commons when Erhart Regier (C.C.F.—Burnaby-Coquitlam) asked what steps the government is taking to alleviate "a rapidly growing unemployment problem".
>
> In quick succession, Mr. Starr listed what the new Progressive Conservative government has done:
>
> 1. The government has started up its strive for a greater construction program.
>
> 2. National employment service offices have been ordered to step up the tempo of finding jobs for the unemployed.
>
> 3. Immigration for the rest of the year has been curtailed because of pressure on the national labour force caused by the heavy influx earlier this year.
>
> 4. The government has made available $150,000,000 for a housing loans fund.

I had the feeling at that time that this was not nearly adequate and that the newspaper reporter had been indeed optimistic when he analysed this as meeting the job threat. I am sure many other members in this house were afraid that this would not nearly meet the situation.

The government did make efforts to help by means of the winter construction program, and I suppose the government and the minister may argue that if this four-point program had not been pursued last winter unemployment in Canada would have been much worse. That, to me, is a very, very weak argument to use as an apology for the serious level of unemployment which even now exists in the middle of our summer, when we normally have next to no unemployment at all.

I know that the national employment service officers were ordered to bestir themselves and look for possible openings for our unemployed. However, both the first and second measures are very hard to analyse, and I do not think even the minister would be able to tell us with any accuracy how much employment was actually created by those policies.

With respect to the third policy, the curtailing of immigration for the rest of the year, I have never been exactly convinced that immigration adds to unemployment. I agree that the unplanned immigration which we had for many years did aggravate the situation in that such a very heavy percentage—sometimes as high as 65 per cent—of the immigrants were single men ready and willing to take employment. I notice, however, that even today the minister's colleague is still pursuing a policy of allowing able workers to come to the country provided they are sponsored by someone in Canada, while at the same time she denies entry to Canada of consumers and future citizens such as the type of people I have referred to as the orphans of the world. Canadians even today are not allowed to bring from other parts of the world, orphans whom they wish to adopt and who certainly would not be a threat to those presently employed in our country. I do not think that answer has met the situation, therefore.

I will agree, however, that the fourth policy has done very much to help the situation. The money this government has made available for housing and the further funds made available under this section I must admit have helped us very, very much.

We do get the impression that this government, by deliberate design, has decided to try to ride out the storm. No policies have yet been advanced, by this minister or indeed by any other minister or by the Prime Minister himself, whereby the government is consciously embarking upon a program to lick once and for all this problem of unemployment which seems to bedevil so many of the western nations. Even assuming that economic conditions were to take a turn for the better, and that thereby in one respect the government is able to ride out the storm, I submit, and we have long submitted in this party, that the problem caused by automation is going to prevent us from eliminating the recurring problem of unemployment, and that if we ride out this present economic recession automation will assume even greater proportions which will require measures to be adopted.

The Leader of the Opposition made some reference to governmental assurances in the past that the problem of unemployment had been largely overcome and that we had every reason to look forward to sunnier days ahead. I was looking through my notes over the lunch hour and, though I did not bring them with me, I found in them many references to occasions when the former minister of labour, for instance in 1954, was assuring the Canadian public that as far as unemployment insurance and unemployment generally were concerned we were over the

hump. That is rather old phraseology, and I wish responsible ministers would not use it so often; because it leads to a certain cynicism in the hearts of the unemployed in Canada when they read these statements.

I know the minister is not the first minister to place very great reliance upon statistics supplied to him by the officers of his department, but I would like to point out that those figures for last winter indicated some three-quarters of a million unemployed. Another set of figures showed a much lower total. I submit, and I have always submitted, that even the worst figures supplied to the minister are not adequate to show the situation, and in this regard I would like to place on record the problem which was brought forward by the Ontario welfare council in their submission to the then prime minister of Canada on January 28, 1955. Among other things they referred to approximately 20 per cent of the labour force not being covered by unemployment insurance, and they took the figure of 750,000 unemployed. When you add 20 per cent to that figure—because they have no reason to go to the offices of the unemployment insurance commission since they are not registered and are not eligible—you get an additional 150,000, and that figure of 750,00 becomes 900,000. Those people are unprotected against need arising out of unemployment, and number approximately one-quarter as many as are covered.

Then there is another class of persons, namely those whose benefits have expired. This group, I think, is particularly pertinent at this time when the minister supplies us with figures relating to the number of our unemployed. There are thousands of Canadians who no longer have any need to go near the offices of the unemployment insurance commission because they have nothing to gain. These are the people whose benefits have expired. It is apparent that at a time when the unemployment situation has worsened steadily many people have used up their right to benefit under the provisions of the Unemployment Insurance Act. Supplementary benefits in the winter months only partially meet the need.

Another class of people who are not really on record are those persons without sufficient credits to entitle them to claim insurance benefits; young people entering the labour market, newcomers to Canada and others who are unprotected because they have not worked long enough to become entitled to benefits. There is also the class of people whose benefits are not sufficient to enable them to support themselves and their families at even a minimum subsistence level. They would not add to the official figures, but the other categories would, and they should be borne in mind when we are considering the statistics on unemployment.

We were given the assurance—I do not recall its precise terms—that as long as the present government is in office, or as long as the present Prime Minister is in office, the Canadian people can be assured that no one will suffer as a result of unemployment. That was a very odd announcement at the time it was made. If we consider that the maximum that is payable to an unemployed person under the Unemployment Insurance Act is some $30 a week for a man with a family, and that in many cases he has payments to make on the first mortgage on his home and often on a second mortgage; or, failing that, in rent; and that he has payments to make on his furniture and possibly on an automobile, as well as his ordinary costs of upkeep such as the weekly food bill, clothing bills, medical bills and so on, I cannot accept the assurance that no one will suffer because of unemployment as long as the present government remains in office, if at the same time all this government has to offer the unemployed is this maximum of $30-odd a week.

I should like to ask the minister whether he does not think it is about time we should consider removing that ceiling, or raising it, with regard to the maximum amounts that are payable under the Unemployment Insurance Act. This becomes especially important when people are unemployed for any length of time. I suppose all of us, for a month or for two or three months, could manage to live somehow on $30 a week. However, there are many Canadians who have had to live on that small amount of money for six, seven or eight months, and others who are no longer able to get even this help.

The situation is much more serious than the announcements of the government like to make out, and unless some action is taken now I am making the prediction that next winter will see over one million unemployed in Canada. And quite apart from the human suffering that will be caused when this takes place, if we consider the loss to the nation of having a million men unemployed in our country for a period of a year, we find that it means a loss in production, a loss in the wealth of our people, of three billion dollars or in other words 10 per cent of our present gross national product. That 10 per cent is far more than enough to spell either prosperity or depression for our people.

We feel that the government is not paying enough attention to the seriousness of the

problem. I know that the minister himself is spending a great deal of time on it, and what I have to say deals with the minister's representations to the cabinet. I hope when he attends cabinet meetings he is not the mild and meek man we meet on the sidewalks or in the lobbies of the hotels in Ottawa, or wherever we meet him. I hope he is much more aggressive, and that he will become a front bench member of the cabinet. I could never understand why the Minister of Labour has to occupy a seat in the second row, because labour is the most important single element in our society and the Minister of Labour deserves a seat close to the Prime Minister himself.

I listened to the Leader of the Opposition, and I noticed that while he found some fault with the government's optimism he did not offer very many remedies as to how employment might be provided. Maybe this is not the time to go into details on that particular question, but I had been hoping he would go into somewhat more detail than he did. Of course the answer to unemployment is increased markets for Canadian goods. This involves greater international trade. We have to extend our program of economic aid abroad; we have to see that the people who make up the labour force receive a fair return so they are able to buy back what they make, and that agriculture is given a fair purchasing power in our economy.

It is amazing to me that wherever you have a planned economy—and I am not referring now to nations behind the iron curtain—wherever you have a government in the western world consciously embarking on a planned economy, you have licked the problem of unemployment. As long as there is conscious planning on the part of a government, unemployment is a relatively easy matter to deal with. If people insist on continuing the economic set-up which they are now perpetuating they will have to adopt the policy that if a man is unemployed he is entitled to unemployment insurance benefits until employment is found for him without any limitation in terms of weeks or months, and to this end supplementary benefits should be payable the year round.

I know this will mean payments out of consolidated revenue, because at the present rate of expenditure, according to the figures which were placed on record at page 2137 of *Hansard*, we find that at the rate of depletion as it obtained in January and February of this year the fund would only last for 16 months before it was exhausted. Thus, if we are going to extend either the size of the payment or the length of time during which payments may be made, the government will have to revise the financial set-up of the unemployment insurance fund.

I should also like to suggest to the minister that he recommend the setting up of many more offices in the urban parts of Canada. One of the cruelest things which apply to a man who is unemployed is the fact that he has to stand in this line-up sometimes two or three blocks long. In the wintertime he has to stand in the snow or rain to obtain his meal ticket, or to register, or to do whatever it is he needs to do, and I think the minister would earn our gratitude by telling the senior officials in his department, "look, we do not care to build for you a huge organization with a six or seven floor office building with hundreds of civil servants at your command. In the city of Vancouver we want 12 or 15 insurance offices so there may be a human touch, and so the unemployed may not become mere cogs in a machine." If that were done I think not only would more employment be found through these offices, but in addition the unemployed themselves would not have to suffer the terrible humiliation they now feel when they are almost like prisoners in a penitentiary, when in fact all they have is a number.

In fact, in some of these huge offices costing millions of dollars of the taxpayers' money they have become so arrogant that they keep locked the doors of the washrooms lest some unemployed throw a paper towel on the floor and whoever looks after the building would have to pick up that piece of waste paper. I think it is mean to insist that people stand for hours in line without having access to washroom facilities when such facilities are already available in the building and were installed for the purpose of handling the people who have business to do in the building.

I also wish the minister would use his influence to obtain far more money for the adult education program particularly as it applies to vocational training. I would appreciate it if the minister in his reply would indicate how much of the money is estimated for each of the ten provinces. I believe the hon. member for Cartier expressed regret over the fact that not all of the provinces were taking advantage of the aid available for technical education. If my memory serves me correctly his province takes a larger share of the available assistance than does any other province and I should like to congratulate the people of the province of Quebec on that attitude. With respect to retraining workers and providing technical education the people of that province have not hesitated to play their full role.

The problem of adult education is very important and with the development of automation it is going to become a much more serious problem. The department is expending $71 million this year through the unemployment insurance commission branch but only $7 million is being expended for vocational education. They are spending ten times as much to supply relief which in the long run is only a stop-gap action as they are spending to supply technical and vocational training that will assist workers to play a useful role in society. Making more money available for this kind of training and building more institutions for this purpose will assist in solving the problem.

We have reached the point where men of 35 and 40 years of age have to learn new trades because of automation. Many of these men are married and have family responsibilities. We cannot expect them to take a technical course for a six-month period and leave their families without means of sustenance. We will have to enhance our program of aid for those who take the courses and assume responsibility for the incomes of the families while the breadwinners are learning to equip themselves for new roles in life.

I hope the minister will also pay some attention to a growing problem in Canada. I know he did not like what he felt he had to do in the case of a public utility on the west coast but I believe the time has come when the federal government should take the leadership and begin to sit down with Canadian organized labour to see whether in the field of public utilities a solution cannot be found that will be acceptable both to those owning public utilities and to the workers involved. None of us wants compulsory arbitration I am sure and yet that is apparently what will come about because of the way we are allowing things to go on at the present time. As time goes on that situation will become worse. The minister with his kindly and conciliatory nature through his department would be able to supply a real service to the Canadian labour scene if he would offer leadership in that direction.

Mr. Houck: Mr. Chairman, in rising to take part in this debate on the first item of the estimates of the Department of Labour I must admit at the very outset I find myself in a very difficult position mainly because of my personal affection and high regard for the Minister of Labour. I believe the Dominion of Canada over the last years has been highly fortunate in its choice of those who have filled that very important portfolio. Certainly the life and accomplishments of the late Humphrey Mitchell will live in our memories for many years. The Hon. Milton F. Gregg performed a fine job in the capacity of minister of labour and although perhaps he has jumped from the frying pan into the fire we will not forget what he accomplished on behalf of the working class people of this country. And now we have the present genial Minister of Labour.

I must admit I admire the hon. gentleman for more than one reason. One of the main reasons for my admiration of him, and I think it was mentioned on other occasions, is that he is fair and square and when asked a question he does not give a political answer. I have always felt it was a pleasure to ask him questions in the house because he does not throw the question back to the Liberal party and attempt to place the blame on the previous administration for whatever condition is being discussed. He does not try to make us believe we are at fault for every situation that arises. When he is at fault he accepts the blame like a man and does not behave like some other ministers who attempt to throw the blame on the past Liberal regime.

The minister is to be congratulated, too, because he has a very fine group of officials in his department. If I may use the parlance of the baseball field, no manager can be successful unless he has a good bench. The minister is certainly fortunate because he has a good bench, a highly competent group of officials standing behind him. I have always felt that no minister of the crown could do a good job unless he had capable officials assisting him. I had an opportunity to observe the work of these officials when serving on the industrial relations committee and was greatly impressed when they presented their brief to the committee and answered questions concerning the operations of the department. I say to the minister that both he and his officials deserve a great deal of credit.

Another thing I like about the minister, and the previous speaker referred to it as well, is that he always wears a friendly smile. We always like to see him in the building because of his cheerful countenance although we did miss him during the six weeks when he was attending the labour conference in Geneva. Another thing about the minister that will stand out permanently in the minds of all hon. members is that when he was in opposition he was Mike to everybody and now that he has been elevated to the high position he holds he is still the same old Mike and we love him for the many fine personal qualities he has.

I have thrown orchids to the minister and as a member of Her Majesty's loyal opposition I presume I may now be allowed to

throw bean balls, to use another baseball expression. I am advised that there is a new rule in baseball. An umpire has the right to fine a pitcher $50 for throwing a bean ball. Mr. Chairman, if you feel I am throwing a bean ball, simply call it to my attention and I shall desist from doing so.

During the last election campaign, as was referred to by my leader and the hon. member for Burnaby-Coquitlam, the Prime Minister stated that should a Conservative government be returned on March 31—and it certainly was returned with an overwhelming majority—"no Canadian shall suffer through unemployment". Those were the words he used. This promise, reflecting as it did the great public concern over the deepening crisis in our economy was largely responsible for the unprecedented mandate the Conservative party received from the Canadian people. Many families suffering real hardship as a result of extended unemployment expect the Prime Minister to fulfil his promise. It is the opinion, based on experience and fortified by studies of Canadian and United States economists, that the present crisis is not of a seasonable nature but is beginning to take on the deep-going and all-embracing nature of that of the thirties.

The vast unemployed wealth of our country stands indeed in sharp contrast to the presence of over half a million workers who want desperately to be gainfully employed, but for whom no work is to be found. Similarly, vast surpluses in consumer goods piling up in warehouses from coast to coast stand in sharp contrast to real hardship experienced by hundreds of thousands of Canadian families who have been unwillingly removed as a market for these products by unemployment.

We feel that only by extraordinary measures on the part of the federal administration can these contradictions be corrected. And by "we" I mean the Liberal party. I refer to measures which will result in extensive public spending in projects of a nation-building character, measures which will open the markets of the world for our industrial and farm products, measures which will place more consumer purchasing power in the hands of the unemployed, thus achieving the two-fold purpose of increasing the home market for our surpluses while guaranteeing that no unemployed worker or his family shall suffer through unemployment.

Certainly, no feature of America's economic life—and when I say "America" I am including the United States and Canada—has been more at the heart of our rapidly rising and widely shared levels than the daring of this nation's businesses in pricing for volume and taking their chances on profit. It is no accident that this policy has characterized our most profitable industries. If we are to maintain the vigour and vitality of our free economy this drive for the widest possible markets must continue. A price policy designed to bring increasing volume should be nothing short of an article of faith for every businessman. The economic recovery and growth we bring about must take the form, not of higher costs and prices but of more production and more jobs.

We might just as well be realistic over this trouble. If we as earners obtain such large increases in our incomes each year that the cost of production moves always upward, then as customers we shall find only higher price tags on the goods in the stores.

The Canadian people believe in good wages, both in private and public employment. Good wages reward effort and build markets. But the Canadian people are going to be looking over the shoulders of those sitting at every bargaining table to see whether the wage settlement and subsequent price decisions are consistent with a stable dollar, or whether they mean another dismal sequence of ever-rising costs and prices. Inequities in the wage structure must, of course, be adjusted. But consumers are not going to be satisfied with less and less value per dollar of price, which is the inevitable result of less and less production per dollar of cost. If businessmen and labour union leaders forget these truths, the consumers will remind them in ways that are clear and painful and, in the process, the whole economy will suffer. These are not theoretical considerations; they have a direct bearing on specific industries today.

I was impressed—and the Minister of Labour spoke about it when he introduced his estimates this morning—about the older people and the lack of employment. Mr. Robert Scott, executive secretary of the Alberta federation of labour, said this, and I think it is very important:

> Age discrimination is one of the most serious unemployment problems in industry today. It has aggravated the general jobless situation across Canada.

He continued:

> Employers are considering workers over 40 years of age obsolete. In some cases persons who are 35 are too old to be employed.

He went on to say:

> These people are forgetting that in general workers are more efficient and dependable between the ages of 40 and 50.

Dr. F. W. Hanley of Calgary said this. He has studied the problem:

> Probably never before has the aging man so frequently been denied an opportunity to exchange his work for the essentials of living.

What are the results of this? These are the results he mentioned: Increased community costs to care for the old and unemployed; a lower standard of living because of a decrease in purchasing power. Use of the older worker in a full employment program means increased productivity, a higher standard of living and expansion, according to Dr. Hanley.

I want to give credit to this government, Mr. Chairman. I think their normal spending in this fiscal year will be in the neighbourhood of $26 to $28 million higher than a year ago, but I want to repeat, and repeat with emphasis, that normal public works are not going to provide jobs for the unemployed. If public works are to be the answer from Ottawa and the remedy, then Ottawa should be boldly pressing forward with a strong program of schools, hospitals, lower rental housing and other construction that will fill a real need in many communities and also help relieve the unemployment situation.

I would just recall to hon. members that Ontario last winter tried to do something concerning the winter unemployment program. The Frost government appropriated some $5 million, and with this sum undertook to pay 70 per cent of direct labour costs of municipal works programs between February 15 and May 31. The program was designed to promote jobs for unemployed men who were not eligible for unemployment insurance benefits. But a surprising number of municipalities reported only a handful of persons in this category. Although final results have not as yet been released on this program it is unlikely that more than half the appropriation will be taken up.

I certainly believe, Mr. Chairman, that all hon. members will agree with me when I say that one of the greatest catastrophes that can befall any person is the loss of employment or the means whereby he or she can provide for himself and his children. Certainly the instinct of self-expression is indeed very strong in the human being.

The unemployment problem in industries today is extremely serious. In most of our plants where there are collective bargaining contracts, employment is down by one-third or more from last year. The prospects for some time ahead indeed look very grim. In our major industry, for example, electrical manufacturing, employment is off in all sections, including the radio-television-electronics section which had been expanding for some years. I think I know whereof I speak, Mr. Chairman, because we have the majority of this sort of factory in the Niagara district, the Welland district, the St. Catharines district and the Hamilton district. Throughout the industry electrical goods markets have been falling off instead of expanding, as they need to do, when the heavy new investment coming into use and the rapidly increasing productivity resulting from this and from extensive modernization of older plants are making it possible to turn out ever larger quantities of goods with fewer workers.

In the very important heavy electrical apparatus section of the industry, in-plant work on the big hydro project orders that got under way in 1955, is coming to an end, and there has been nothing comparable with big orders following close behind to keep these plants busy. Yet this electrical manufacturing industry has always in the past been one of the industries that has contributed very substantially to providing expanding job opportunities in Canada for the growing labour force.

Taking the economy as a whole, it looks to us as if unemployment is going to be a very serious issue well into next year at the very least, even if recovery could be got under way soon. But so far there is no sign of this turn to recovery we are all looking for. So far it seems just as likely that the economy may bump along at a low level for quite a few months, or may drift further down, or even spiral down into a really deep depression. Recovery needs a stimulus to get under way, but the spark for recovery has not appeared yet. What we are asking the government to do is to supply that spark.

In our view it is the responsibility of the Ottawa government to play the leading role in getting recovery going again in Canada and in charting the path to progress for the future. What is needed is quick, decisive and nationally oriented action. For that type of program the Ottawa government must lead the way and they must be prepared to supply the over-all plan, much of the drive and, indeed, a considerable part of the money. Canada's jobless workers need jobs. There are unmet needs everywhere crying to be filled at home and abroad.

Within Canada there is much to be done to develop the resources of our country, to meet the needs of our people for the many kinds of social capital required in a modern industrial country like ours and to improve the living standards of all our people. We cannot afford to waste our precious human and capital resources by allowing recession to hold them idle.

I was very much interested this morning when the Minister of Labour spoke about the conference he called in July pertaining to employment for the winter months. It was in the middle of July when the Minister of Labour convened his conference to deal with

winter employment. As he said, the conference was attended by all leaders of industry, labour and government and when I asked the Minister of Labour a question about ministers of labour from the various provinces he told me that all but one of them attended and the one who did not was prevented by sickness from doing so. But I think it is worth while to point out that at the very time the Minister of Labour was in attendance at this conference dealing with winter employment the problem of summer employment was acute. At that very time about one in every twenty workers was without a job and total unemployment was double what it was in the previous year.

I mention this at this time to point out that the problem of unemployment caused by seasonal factors is only part of the problem confronting the government. In the middle of June seasonal factors should have the least influence and yet unemployment was at a high level showing that we are confronted with chronic unemployment. As my leader said when he spoke today, it is quite serious when 5.2 per cent of the labour force are without jobs and actively seeking work in the middle of June as they were at that time this year.

We believe that the calling of the conference on ways and means of maintaining high employment was a good idea and I congratulate the minister on calling the conference. But this course of action is, of course, in sharp contrast with the attitude of the government in the last two elections when they gave the impression to the people of Canada that they had all the answers. The calling of this conference showed pretty clearly that the government did not have the answers and is attempting to get them from other sources.

May I say to the Minister of Labour that we on this side of the house have been trying to elicit from him information on the action that is to be taken as a result of the conference. I know he will recall that on August 5 the hon. member for Essex East asked the Minister of Labour whether he was in a position to announce government policy regarding the recommendations of that conference. We were rather surprised to learn that the final report of the conference was not ready at that time and that it had not been presented to the cabinet. If I followed the minister correctly this morning, the report has not yet been presented to the cabinet. We would like to know from the minister whether such a report will soon be completed and whether copies of the recommendations of the conference will be available not only to the cabinet but for distribution to the members of the house.

The Minister of Labour was reported in the Ottawa *Journal* of July 16, I believe, as promising quick action on feasible suggestions coming from these sessions. There were certainly some worth-while suggestions made at the conference. I followed it rather closely, and when dealing with all the valuable suggestions that were made I should like to refer to a suggestion put forward by spokesmen of the Canadian Labour Congress that a survey should be undertaken with respect to seasonal unemployment. It would seem to be very sound to collect more information on the composition of the labour force affected by seasonal unemployment and, in particular, to gain further knowledge on what is the extent of hardship suffered by those affected in this way. Certainly there is much to be gained through knowing in complete detail the industries and skills in which this type of unemployment is most common.

In reading the reports coming out of the conference I noticed that a number of spokesmen pointed out the need of action now in order to overcome the unemployment situation next winter. Certainly the minister will not have the excuse next winter that he has not received plenty of warning that the country is likely to face serious unemployment at that time.

We hope that the deliberations of the conference have produced worth-while recommendations and that the government will be able to implement them quickly. There were some present at the conference who were not too pleased with the results, and I suppose that is the same at every conference. But the labour minister of British Columbia—if I am wrong the minister can correct me when he speaks—had a complaint, as reported in the Vancouver *Sun of* July 22, that the government of that province was given no opportunity to make its submissions. The vice-president of the Canadian and Catholic confederation of labour expressed the view that the recommendations from the conference were likely to prove as ineffective as those made in former years. At any rate, the committee is entitled to hear from the Minister of Labour a full report on the recommendations coming from the conference and what action the government is now taking to have them implemented.

I wish to be perfectly fair, Mr. Chairman, and I want to say that this or any other government cannot be expected to act on recommendations that mean nothing at all. Apparently the chief recommendation of the group was that the federal government should spend more money to create employment in the winter. That suggestion may provide some jobs but if the government spends too

much some of the proponents of the idea will groan if it causes an increase in their income tax. With the government engaged in a large public works program it is indeed reasonable that it should see that as much as possible is done in the winter. But it is also reasonable, and I am very emphatic about this, that industry should try to remain in production throughout the year instead of operating on the basis of six months of overtime and six months of lay-offs. It is not only the government but business that should start long range planning to prevent another great winter slump.

The years since the end of the second world war saw a constant increase in employment. The rising tide was not checked until the middle of 1957 and as the government changed at that time it was natural that many people should blame the Progressive Conservative party. Whether or not they are right I am not going to judge. It is a question for a master economist, but actually we had gone a long time without a recession of any considerable size.

During the warmer months employment has been gradually increasing but the fact remains that the situation is still bad for this season of the year. With the automobile industry in a great slump, many of the firms that supply mechanical parts, glass, tires and other materials and many that supply the tools and machinery for automotive construction are also under pressure. Indeed, many western farmers, as members from the west know, are looking out at barren and drought-parched land and are facing one of the poorest harvests. That will certainly not aid the employment situation next winter.

I should like to say a word or two about the dispute between the 15 unions representing the non-operating personnel and the Canadian railways. The settlement of this dispute is indeed of great national importance. Apart from the establishment of rates of pay and working conditions for this segment of the railway industry, the settlement will also have an impact on the wages and working conditions of all railway employees. We all know that the settlement of other union contracts within the railway industry depends upon the settlement which is reached in the dispute between the companies and the unions representing the non-operating personnel. The settlement will also have an impact upon the general economy of the country through the ultimate cost of rail service.

What has happened to date? Last November, almost ten months ago, the unions submitted their proposals and demands to form the basis of a new agreement to replace the contract which was to expire on December 31, 1957. The unions, representing approximately 127,000 employees of the two major railways alone, proposed that the wages of their members be increased as of January 1 of this year by 11 per cent plus 17 cents an hour. In addition, the unions proposed other revisions of the then existing contract, the most important of which had to do with the health and welfare plan, to which the railways were asked to double their contribution, and the request for a more generous vacation policy.

Since the unions tabled their demands last November the normal process of collective bargaining has been followed. The unions and the companies failed after a little more than three weeks to reach any basis for settlement. At the request of the unions the Minister of Labour established a conciliation board on December 2. Little progress was made until the board commenced its hearings on March 3 in Montreal. We know that the delay was due in part to a protest by the union over the appointment of the chairman of the board who, after a month, resigned. However, that delay was unfortunate, and perhaps unnecessary, as the Minister of Labour could have learned, before the appointment was made, whether either party had valid reservations about the nominee. This delay not only caused inconvenience to the parties to the dispute but also seriously retarded the ultimate settlement of the dispute upon which so much depends both within and without the industry.

The board has now submitted reports to the minister and to the parties. These reports are dated July 21 and were made public on the 30th of last month. Since then we have had no further word on what progress has been made or what steps have been taken to bring about a settlement.

We know that the chairman of the board and the representative of the union submitted a joint report which the minister has stated is to be considered the report of the board, in which an increase in wages was recommended. The increases are as follows: four cents an hour retroactive to January 1 of this year; an additional three per cent effective the first of next month; and a third increase of three per cent to be effective April 1, 1959. The representative of the companies in his minority report recommended no changes in the wage rates for the year of 1958. The members of the board also commented on the other issues in the dispute but I do not propose to mention them at this time. However, I propose to ask the minister what his department and the government proposes to do now with regard to this problem. The conciliation process has now been exhausted.

The parties may accept or reject the majority report of the board and they are free to follow whatever course they choose from that time onward.

We on this side of the house—and I say this to the Minister of Labour—know that it is not an easy task for the government to face, that it is not easy to bring about a settlement which provides for the employees rates of pay and working conditions comparable with those paid for similar work and which, at the same time, does not place an unreasonable strain on the resources of the companies. But if the dispute is to be solved, imaginative and bold action must be undertaken by the government right now. The dispute cannot be allowed to drift until the environment has become so muddied that a solution cannot be found without causing great inconvenience to the country and its economy or by other drastic measures.

I want to say this, Mr. Chairman. In opposition the minister—and the minister was not too pronounced in this matter—and his colleagues made daring and bold statements about how they, if they were in power, would deal with such disputes; how they would solve these disputes within the framework of collective bargaining and with a minimum of delay. The Prime Minister and other members of the present government were bitter in their comments about the slowness of the Liberal government in dealing with such disputes and they made sweeping charges about the government's ineffectiveness. I am going to ask the minister and the government what they are going to do about it.

I think the Minister of Labour is duty bound to tell this house and the nation what steps he is taking or proposes to take to bring about a settlement without a strike or a forced settlement by legislation. What is the government doing to prevent this dispute degenerating into a second British Columbia coastal steamship episode?

If I may, Mr. Chairman, I should just like to bring to the attention of the Minister of Labour a local problem and ask the indulgence of hon. members of the house for another few minutes. I have received a complaint—and I think it is one that is justified—concerning the fact that United States musicians are allowed to enter Canada for the purpose of playing musical engagements, whereas Canadians are stopped by United States immigration officers from taking performing jobs in the United States. Meetings have been held not only in Niagara Falls but in other places along the border by the various locals. Our own local union passed a resolution to write to the Minister of Labour protesting the ease with which United States musicians are allowed to enter Canada. A reply to this resolution was received from the deputy minister of labour, Mr. A. H. Brown, in which he states in the last paragraph of it:

> If you know of any cases of musicians who have entered Canada under section 7G for the purpose of giving specific performances and have remained in Canada to accept regular employment or persons who have entered Canada under permit to accept the position which could be filled by a resident in Canada.

We have a number of members in our local in Niagara Falls who have been out of work this past winter and spring and many of them have been working on short time. Their membership is quite excited to think that in all cases they could have very capably filled the requests for professional musicians that have been so frequently filled by men from across the border who seem to be lucky enough, according to their contracts, to be able to secure work in Canada at almost double the price which people pay for Canadian musicians. I have learned just recently that these musicians from the United States come over without even bonding their instruments. I am asking the minister to give the matter some attention. I know it is a question of customs. I hope he will take the matter up with the minister concerned and see whether something cannot be done. Each and every time one of our Canadian musicians attempts to go across with his instruments to engage in a playing job in Niagara Falls or Buffalo, he is always told by the United States immigration officers, "You can't come in for you would only take jobs away from United States musicians". Fair play is fair play. I know the minister will do something about that problem.

Might I sum up, Mr. Chairman, by saying this.

The Chairman: Order.

Mr. Starr: Let the hon. member finish.

Mr. Houck: I have only a little bit more and I shall be finished.

The Chairman: Is it the pleasure of the committee to permit the hon. member to continue?

Some hon. Members: Agreed.

Mr. Houck: Thank you. I can only sum up what I have been trying to say in this way. The government must do something and do it immediately. Certainly the Canadian people look to this government to take the lead first by creating new purchasing power, by drastically reducing income and sales tax immediately, raising income tax exemptions for single persons and in a much higher

bracket for married persons with dependent children. Second, in expanding employment by a new trade policy, by seeking increased trade on the basis of mutual advantage with other countries. Third, the economy could be primed by construction of thousands of new homes and extended public works should be brought forward to build needed schools, hospitals, highways, power and irrigation projects. Fourth, the needs of the unemployed must be met by an increase in unemployment benefits, these benefits to continue for a longer time of unemployment.

Might I say this, Mr. Chairman, and I do this seriously indeed. If the people of Canada had followed the Liberal platform in the last election and indeed the Pearson plan, namely a vacation on taxation, and placing the dollar back into circulation, certainly we would not be facing the serious unemployment situation we are facing at the present time.

Mr. Howard: In rising, Mr. Chairman, to participate in the discussion of this particular vote, I would like, as the hon. members have done, to make a comment or two with respect to the minister himself as an individual and with respect to the attitude that he has shown both in the house in dealing with questions, by correspondence and in personal discussions. I have the highest commendation for the minister for the sincerity that he shows, and for the humbleness that is apparent in his everyday dealings with the problems of his department. I know that it is not because of lack of sincerity or lack of desire on his part if the other cabinet ministers do not agree with him in some of the proposals that he may make from time to time. However, I would suggest that there are some other cabinet ministers, notably the Minister of Finance and the Minister of Agriculture, who would be well advised to follow the attitude and the example set by the Minister of Labour. If they would do so, I am sure that we would be able to conduct the discussions relating to their respective departments with the same degree of amicability and sensibility that we are able to discuss the questions relating to the department of the Minister of Labour.

I have listened with a great deal of interest to the opinions expressed by the Leader of the Opposition in his opening remarks on this vote, because I wondered whether the Liberal party was going to exhibit any different attitude today from that which they adopted while in office during the past years. All I could discover, however, was the same exhibition of verbal wandering into the question of labour-management relations, a subject with which he is not too familiar. However, the Leader of the Opposition ably and succinctly posed the problem in a nutshell when he dealt with the solution to unemployment. In posing that problem he included in his comments an observation of the Secretary of State for External Affairs in a speech made by that gentleman, I believe, at Saskatoon, when he said that the solution to unemployment is jobs. Of course I quite agree with both these hon. gentlemen in that connection and apparently there is at least one thing which one will learn if one spends some time in the Department of External Affairs; one can at least get to know what the problem is even if one has no idea of the solution to it. One of the first realizations one would have, apparently, would be the realization of the right questions to ask.

I know that in dealing with the estimates of the Department of Labour we could, and probably will, expand our discussions beyond the actual field covered by the department. We could get into the internal operations and attitudes of the unions and of management and the relationships between the two groups and the impact of those organizations upon society. It is not my intention to wander into any specific aspect of that field or to refer to specific elements of society, but even though I may have some pretty definite opinions on the attitude of management, I will confine my remarks to a few comments concerning the unions themselves. This is because I spent a number of years as an officer of unions and a certain period as an officer of one particular union, and as a result of this experience I came to know something of the day to day working within the unions.

Firstly I must say that in Canada we are in nowhere near the position in which the United States finds itself with respect to some of the unions south of the border. The situation in respect of those unions has been well publicized by certain United States senate investigation committees, and my personal opinion is that as a whole we have a much cleaner group of unions in Canada than exists in the United States.

Some hon. Members: Hear, hear.

Mr. Howard: I say that, knowing as I do many of the union officials in this country. There are, however, some Canadian unions whose policies and operations certainly do not fit within the expression of opinion I have just voiced. I have personal knowledge of some unions where the members are absolutely afraid of losing their membership cards and of losing their jobs as a result of expressing their opinions at union meetings. This is a most deplorable state of affairs in what is supposed to be a free society and

where people are supposed to be able to express their opinions, be they critical or in commendation. Because of the operations of some Canadian unions, however, such freedom of expression does not exist although these unions are in the minority.

Unless this situation is cleaned up with respect to particular unions there is a danger of such practices extending to other unions and, although I hope I will never live to see the day when this happens, the unions may fall into such disfavour among their own members and with the public in general that the Canadian people may decide some corrective legislative steps will have to be taken.

Mr. McGee: Would the hon. member permit a question? Would he care to mention the particular unions he has in mind?

Mr. Howard: No, I will not mention the particular unions I have in mind because, as I stated earlier, I do not think this falls within the jurisdiction of the Department of Labour. I merely express these views in a general way. It might be said that I am hiding behind the question, but I would rather not give the names of individual unions about which I have personal knowledge. I hope that will satisfy the questioner.

As I said earlier, however, only a small fraction of the total of millions of Canadian members are affected in this way. I do not think the inference should be drawn from my remarks, and I am sure it could not be drawn, that within the unions to which I have referred the same sort of thing exists as apparently exists in certain United States unions which have now come under the surveillance of the senate investigation committee. I refer to racketeering, thugs and gangsters who get control of the unions for their own immediate ends. I am certainly not implying that such is the situation here but, as I say, I have personal knowledge of some policies being followed in Canadian unions which have the effect of placing union members in fear of losing their jobs so that they will not express their opinions on union policies.

I wish to raise another point which comes more specifically within the ambit of the department's jurisdiction, and this has to do with the reference which has been made to the operative machinery used for negotiations, that is to say the process of direct bargaining, the use of conciliation officers and conciliation boards and, in some cases, what I believe are called industrial inquiry commissions. With respect to the legislative or operative machinery for negotiation, I wish to express some thoughts I outlined in discussing a particular bill a few weeks ago. We have in Canada a most ridiculous situation with respect to our labour laws applying to negotiations and relationships between union and management in collective bargaining. We have a federal act which embraces certain employees across the nation, but ten of our provinces are concerned with the field of labour legislation with respect to matters falling under the jurisdiction of the provinces themselves. All in all, we have or could have, eleven different types of legislation for the certification of unions, eleven different types of legislation for the granting of bargaining rights, eleven different types of legislation so far as conciliation procedures are concerned and eleven different types of legislation regarding the entire field of labour-management relations from the original moment of organizing to the final signing of the collective agreement.

It is neither sensible nor conducive to efficiency to have this diversity or this difference of legislation. In some cases the unions find themselves operating under one set of bargaining procedures as laid down by law, while just across the border in a neighbouring province the same union and the same employer might find themselves covered by a different set of laws. In the federal field the same thing is applicable. Some employers find themselves under federal legislation in one instance and under provincial legislation in another, and I suggest that in order to remedy this particular situation some distinct and concrete steps should be taken, steps similar to those taken in 1940 or 1941 when the Unemployment Insurance Act was introduced. Maybe I have got the wrong year there. But an undertaking was made at that time to amend the British North America Act in order that the Unemployment Insurance Act should apply universally across the nation. It was, in effect, an invasion, or the giving up, if you want to look at the other side of it, of provincial jurisdiction, and that, I think, must be done in this instance to ensure the uniformity of labour legislation with regard to certification, negotiation procedures and so on, in order that we may have one set of laws throughout the country and not have confusion in the minds of management, in the minds of unions and, especially, in the minds of individual members of unions who work in different industries in different provinces at different times and find themselves governed by different sets of laws.

This may entail some adjustment in our present industrial disputes act after discussions with the provinces. If we do not succeed in having a uniform set of labour laws across the nation, then at least in so far as the federal government is concerned we need

to overhaul our legislation completely. At the present time we have a system of attempting to assist labour and management in the conduct of their affairs in so far as their negotiations are concerned, a system of conciliation boards which in some cases may operate successfully but which in many cases does not—and this applies to the provincial field more particularly, probably, because I have had a little more interest in provincial labour legislation in years past than I have had in federal legislation.

The attitudes of the various chairmen of conciliation boards is one obstacle which must be overcome. Many conciliation board chairmen still use the approach of trying to be Cyrus Ching, the second; trying to get the two parties together in order to prevent a lockout or a strike. They will confer with the unions individually, and confer individually with management and with the other members of the board in an attempt to find the solution which would be mutually acceptable and will then recommend in their awards that this should be the basis of a contract. Other conciliation board chairmen do not take that attitude at all. They sit there as if they were self-appointed lords, listen to both sides of the argument, then lock themselves up in a room and without paying much attention to the contentions of one side or the other bring forth some preconceived idea of what they think the solution is and dump it into the laps of both parties who are then no better off than they were months earlier.

I submit that the operation of the conciliation boards is outdated at the present time. It promotes delays. The hon. member for Niagara Falls mentioned a period of many months spent on negotiations between the management and railway brotherhoods, and part of that delay has been occasioned by conciliation board procedures. I am suggesting we would be moving in the right direction and laying the foundation for finding adequate solutions to differences between labour and management if we were to scrap the conciliation board procedure and have an adequately trained, tactful staff of people who would enjoy the confidence of both unions and management. Such confidence would, no doubt, need to be generated over the years. These trained conciliators would have to be intelligent and capable people, tactful and diplomatic, and they would have to enjoy the confidence of both parties so that they could meet with them both separately and collectively to help work out solutions to their problems. I am not saying that our present conciliation officers are not competent or able, but they have not been able to effect a settlement by conciliation in many cases where strikes have taken place which in my opinion might have been avoided had we had a more sensible approach.

Further, I would suggest that any future labour legislation which is brought before this parliament, any legislation which comes under the minister's jurisdiction—and whether or not this has always been done in the past I do not know—should be referred to the committee on industrial relations, because, as we all know, it is not possible for an individual representing management or an employers' association, or for individual officers of unions, or individual citizens to come before the House of Commons or before the committee of the whole house and say: here is my thinking with respect to a particular piece of legislation. The only way in which we can offer the citizens of this nation an opportunity of expressing their views to parliament with regard to a specific piece of legislation is by referring such legislation to a standing committee so that the legislation, when it is finally developed, will reflect the attitude of the nation and, to every extent possible, of those people who will be operating the legislation and who will be affected by it. In fact, I would give this committee authority to initiate legislation, the authority to hear ideas.

In the province of British Columbia we have had for a number of years a standing committee on municipal affairs in the legislative assembly, and that committee has, in effect, authority to initiate legislation.

All that is referred to it is the general subject matter. Municipalities, unions, private corporations and individuals go to the committee every year and say, "Here are our ideas. We would like these in legislative form." Questions are asked, consultation with departmental officials occurs and legislation is initiated by that committee. I feel it would be wise to give our industrial relations committee authority to initiate legislation, to deal with legislation referred to it and recommend changes with respect to drafting. Between now and the next session I would suggest the committee on industrial relations be established as a permanent and continuing committee in order that it might sit during the period of recess and hear views and ideas and arguments and accept briefs presented to it concerning changes in our present legislation and at the next session be in a position to make some good, concrete recommendations with respect to our legislative program.

I wish to deal for a moment or two with the question of minimum wages and hours of work. That is a field which the federal government must enter with respect to employees coming under the jurisdiction of federal labour legislation. Various figures have been

suggested with respect to a minimum wage and minimum hours of work and although I have personal views on this subject I do not feel it is my duty to express them at this time although I certainly would if requested to do so. For the purposes of this context we could take the figure of $1 an hour and a 40-hour or 44-hour week. I have heard the argument expressed that there is absolutely no need for guaranteed wages with respect to employees coming under the jurisdiction of federal labour legislation, and there is no need for restrictions on hours of work or provisions for overtime. Everyone looks at the railways and says, "They are organized into unions. They do not need guaranteed wages. They are able to negotiate their own wages. They have overtime provisions. There is no need of the federal government making this a matter of legislation". I submit there is a need for this within the operations of the railways themselves.

I do not know if the condition exists today but a few years ago in British Columbia the Canadian National Railways was contracting some of the more menial jobs to outside contractors. The extra gangs, the people laying track, the spike drivers and others were not organized into unions. That work was contracted to an individual company. In fact, the possibility of organizing them appeared remote. Most of the employees on these jobs were new Canadians. There were a few from Spain but many from Italy, Portugal and other countries. They came directly from their native country to Canada, stepped off one train and on to another which took them to a location where they were immediately put to work by the contractor. They had no knowledge of the language and certainly no understanding of the wage rates or hours of work that should be in effect. They were exploited left, right and centre by the contractor. If you can imagine it in this day and age when we have laws in some provinces setting minimum wages and establishing minimum hours of work and providing for penalties for infractions of the law, these people were forced to work ten hours a day, six days a week, with no overtime provisions for 90 cents an hour. That is one group of employees that could benefit by the enactment of legislation guaranteeing a certain minimum wage and imposing a limit on the number of hours they can be required to work in a day. There are other groups, too, but I mention that one only because they worked indirectly for the railway company and were exploited by the contractors.

I notice in the estimates reference to an economics and research branch in the Department of Labour which has approximately 130 employees and involves an expenditure of approximately $600,000. I have wondered for some time just what this branch does. I also wondered whether there is not a duplication of effort between this branch of the Department of Labour and similar branches in other government departments, especially the Department of Trade and Commerce, which deal with the economy of our country. I do not know if there is duplication but I find it strange that in the field of research into economics we do not have one branch of government to deal with the entire question of the Canadian economy for all departments of government.

My friend the hon. member for Burnaby-Coquitlam dealt at some length with the question of unemployment and the Unemployment Insurance Act. It is not my intention to reiterate his remarks on that subject with which he dealt so effectively but I have one or two thoughts to express with respect to the Unemployment Insurance Act. I suggest it is time we began to look at the application of the act and payments of insurance benefits generally from the point of view of their being something in the nature of a guaranteed annual wage. Large industries, corporations and manufacturing units could certainly themselves bear the cost of a guaranteed annual wage covering their own employees but there are many companies in the nation that are far too small to assume the financial burden of paying a guaranteed annual wage to their employees. By establishing the policy of looking at our unemployment insurance legislation, not in terms of being a dole because a person is unemployed but in terms of a deferred payment of wages because of contributions the individual has made to the operation of an industry and/or to society we would be better off. It would spread the cost of providing additional payments while unemployed over a much broader base rather than confining it to individual industries.

Mr. Chairman, I realize that my time has nearly expired but as I have one or two additional points to make I wonder if the committee would extend to me the courtesy that was extended to the hon. member for Niagara Falls. I assure the committee I shall require just a minute or two in which to conclude my remarks.

The Chairman: Is it the pleasure of the committee to agree to permit the hon. member to finish his remarks?

Some hon. Members: Agreed.

Mr. Howard: In conjunction with the question of changing our philosophy with respect to the Unemployment Insurance Act and looking at it in the light of attempting to

provide a guaranteed annual wage, or a deferred payment of wages during periods when people are unemployed, if you wish to classify it that way, I believe we will also have to relate to that our attitude with respect to pensions. The same administrative machinery could be used to administer the pension schemes as is used to administer unemployment insurance.

We must, I think, establish in the nation a system of allowing a person who contributes to a pension the right to transport his pension contribution with him when he moves from one employer to another. Many industries in which persons are employed for 10 or 15 years go out of business, or a curtailment is made in production. The person who has contributed to a pension plan for 10 or 15 years finds that he can no longer contribute to that pension plan because he has practically no employment, and if he goes to work somewhere else where there is no pension plan, what position is he in, if he retires 10 or 15 years hence? I suggest we should have in Canada a contributory all-inclusive portable pension plan so that a workman can move from one job to another and carry his pension contributions with him. Then, when he reaches the age of retirement he will be in receipt of a pension, in addition to the basic old age pension, adequate to look after the needs of himself and his family in his later years.

Another reason for insisting on such a system is that we find many older workers, within two or three years of reaching pensionable age, are subjected to most severe attitudes by employers in order to make them leave their jobs and thus lose their pension rights. I might add that I know of the personal experience of my own father. He was subjected to this sort of attitude by his employer in the last few years of his working life. If he had been a younger man, if he had not been so near the pensionable age, I know he would not have put up with the degrading things he was forced to put up with. I know there are many other people who have the same problem. A portable pension scheme would certainly overcome this.

With respect to the Unemployment Insurance Act itself, I hope the government will undertake to remove the discriminatory approach used with respect to contributions by and benefits to fishermen. I know there is no need to remind the minister of the promises which his party made before the last election and the election of June 10, 1957, because they are in the back of his mind and I hope he keeps them there. I hope that when the time comes to change the Unemployment Insurance Act, which apparently is not going to be done this session, he will undertake to remember the promises which were made by the Conservative party and which I do not wish to reiterate at this time.

[Mr. Howard.]

Mr. Rouleau: Mr. Chairman, I would like to join with those who have already spoken and tell the minister that we appreciate the sincerity with which he has dealt with the many problems he has been confronted with since his appointment as Minister of Labour. We have not been able to agree with him all the time, or with the methods he and the cabinet have used to deal with those problems, but we admire his readiness and his willingness to deal with those problems.

On this vote, Mr. Chairman, I would like to deal with a particular problem. At the last session of the last parliament I introduced the following resolution:

> That, in the opinion of this house, the government should give consideration to the advisability of introducing legislation that would facilitate the employment in federal works, undertakings, businesses, as defined in section 2, of chapter 38 of the statutes of Canada 1956, or in any corporation set up to perform some function or duty on behalf of the government of Canada, of male or female persons over 45 years of age who, on account of their age, find it difficult to secure employment at the present time.

I know for a fact, Mr. Chairman, that hon. members from all sides of the house have encountered many instances of persons over 45 years of age who were unable to secure a job on account of their age. Some of the cases I have had to deal with were really pathetic. I have encountered during my five years as a member of parliament people over 45 years of age, able and capable of doing a good job in their particular field, but who were turned down by employers on account of their age. Thus, unable to earn their living and take care of the needs of their family, some became sick, depressed and almost a wreck. This situation creates a serious social problem in this country. This problem should be taken care of now by this government. It is our duty to put a curb on the ever-increasing tendency to discriminate against those over 45.

The problem I have just stated is an urgent one. In order to prove my assertion as to its gravity I would like to refer to the number of unemployed persons over 45 on May 24 of this year. On June 20 last, in answer to a question I had put to him on May 24, the Minister of Labour answered that in the week ended May 24, 1958 the estimated number of persons without jobs and seeking work, 45 years of age and over, was

approximately 90,000; 90,000 persons looking for jobs and almost unable to secure them on account of their age.

Compared with the social problem created by the discrimination I just mentioned, the reasons given by employers for not being too anxious to give a job to persons over 45 years old and over should not stand. All workers, no matter what their age may be, must share equally in the job opportunities. Canadians, including those over 40 and 45, should have equal opportunities in the labour market.

Some states in the United States of America, aware of the social problem I am dealing with, have enacted laws to prevent this kind of discrimination. For instance, the states of Massachusetts, Pennsylvania, Rhode Island and New York have adopted laws prohibiting discrimination against certain persons in employment on account of their age. In most of those laws the principal acts relating to age which are forbidden by law are the following:

1. To print notices or place advertisements indicating a preference based upon age.
2. To deny an equal opportunity to obtain employment solely because of age.
3. To discriminate against an individual because of his age in compensation, tenure or other conditions or privileges of employment.
4. To deny membership rights in any labour organization because of an individual's age.
5. To deny the chance of being referred for employment because of age.

Some might feel that such a law might be difficult to enforce. If we read the first annual report of the Pennsylvania fair employment practice commission, whose job it is to see that the law against discrimination is observed in that state, we see that it has achieved good results.

Since I know the great comprehension of the Minister of Labour of problems similar to the one I have just dealt briefly with I am sure he will study carefully the laws I have mentioned in my remarks and I sincerely hope that he will see fit to bring about similar legislation in Canada at the next session.

I remember very well giving my support to the resolution presented every session by the Minister of Citizenship and Immigration while she was in opposition to the effect that this house should enact a law to promote equal pay for female employees. At every session she introduced her resolution until the government of the day decided to bring it in as a government measure. I am seeking her support today as well as the support of the Minister of Labour. Again, I hope it will be part of government legislation at the next session. As far as I am concerned, I shall continue to press the necessity of solving this problem as long as it has not been dealt with in a satisfactory manner.

Mr. Broome: Mr. Chairman, I have heard all the verbal bouquets tossed at the minister and I know that the finest bouquet we could present to him would be to pass his estimates as quickly as possible. I should like him to know that several members who sit on the opposition side have told me that he is the best minister of labour they can recall. I know that he gives fair and equal treatment to all members of the house no matter where they sit.

I wish to refer to two or three matters, particularly one raised by the hon. member for Skeena. He said that generally speaking we have as fine a labour movement in Canada as anywhere in the world. I believe our labour leaders are outstanding and labour has built up a fine record of greater and greater participation in our democratic form of government and our culture. Unfortunately, there are a few labour unions that do not follow the general pattern. I should like to read to the house an excerpt from a letter I received which bears out some of the implications of the remarks of the hon. member for Skeena. This man is a sailor and he writes as follows on August 8:

I wish to ask, how long must we seamen suffer extortion, intimidation, beatings-up and being D.N.Sed (do not ship), a neat way of expelling us from the union on any kind of trumped up charge or without a charge by revoking our permit, for which we pay $69, or our book. This effectively prevents us from working in the industry. To fight action for reinstatement or reimbursement through the courts requires much money, which most of us do not have to pay out to high priced lawyers such as our union hires to fight us. Why doesn't the government ban or deport Hal Banks? This man has an established criminal record; even our citizenship courts refused to grant him citizenship.

Banks has been in Canada 10 years dictating in our union. He has never run on a ballot. He is in fact a dictator who was never ever elected. He was appointed in the U.S.A.—

Then he goes on to talk about this being an intolerable situation. Actually we know that Mr. Banks was brought in by the steamship companies in order to clear out what they called the communist influence in the union of that time operating on the great lakes. This is an example of what happens when you try to tamper in the affairs of a union. In this case it seems to me that the cure was worse than the disease.

I also have a clipping from the Vancouver *Province* of Thursday, August 7, in which there is an article by Doug Collins telling about a union man who had to pay a $200 fine imposed by the union. The article reads in part as follows:

A union man paid a $200 fine last week. It was levied on him by the seafarers international union

because he didn't turn up for picket duty during the recent C.P.R. strike. The man, Christoph Donins of Haney, earns $238 a month. In addition to the fine, he had to pay a $28 strike levy, leaving him $10 for his first month of work this summer. The case isn't an isolated one.

The article goes on to say that when Donins protested to the strike committee about the size of the fine he was told that he was lucky, that one person who missed three watches or three times on picket duty was fined $100 and another missed one and had to pay $25. He was also told that he was lucky because if he continued in that way he would be beaten up.

Two weeks ago at a union meeting another man complained about assessments and I am informed that a Mr. Heineki wanted to know if the man complaining would like to have happen to him again what happened in 1953 when he suffered a mauling and beating up. I know that when a strike vote was taken on the west coast something over 90 per cent of the seamen supposedly voted to strike. However, the strike vote was conducted under the auspices of the union whose idea of democracy is well illustrated by what I have already said.

The largest union on the west coast is the international woodworkers of America. It is a good union, a democratic union. It has helped to raise the standards of workers in the forest industries. It is a union which is tough in bargaining but is democratically run. That union took a strike vote and found that 80 per cent of its members were in favour of a strike. They proceeded with their negotiations and the time came when a supervised strike vote was taken under the provincial labour code. In that vote the number favouring a strike dropped to 65 per cent. There were 35 per cent opposed.

That clearly indicates the fact that even when a secret vote is held by a democratic, good union the results may change when a vote is taken under government supervision. I should like to suggest to the Minister of Labour that if a supervised strike vote had been taken in the case of the S.I.U. the number favouring a strike would not have been 90 per cent or anything like it.

The Chairman: Order. It being five o'clock it is my duty, pursuant to standing order 15 (3), to leave the chair in order that the house may proceed to the consideration of private and public bills.

Progress reported.

PRIVATE BILLS

Mr. Speaker: It being five o'clock the house will now proceed to the consideration of private and public bills, the former having precedence, pursuant to standing order 15 (3).

[Mr. Broome.]

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. S-8, to incorporate Canadian women's press club.—Miss Aitken.

On the order:

House in committee on Bill No. SD-219, an act for the relief of James Nelson LeBlond.—Mr. McCleave.

Mr. John B. Hamilton (York West): Before you leave the chair, Mr. Speaker, with the unanimous consent of the house I would move that all divorce items, whether at second reading stage or in committee, be given priority at this stage.

Mr. Speaker: Does the house give unanimous consent that all divorce items standing on the order paper be taken prior to other items on the order paper?

Some hon. Members: Agreed.

Mr. Speaker: Does the house agree that all divorce bills standing for consideration in committee be taken in one motion?

Some hon. Members: Agreed.

Mr. Speaker: It is moved by the hon. member for Halifax (Mr. McCleave), seconded by the hon. member for Marquette (Mr. Mandziuk), that the divorce bills standing for consideration in the committee as a whole be referred to the committee of the whole in one motion pursuant to standing order 54 (1). Is it the pleasure of the house to adopt the motion?

Motion agreed to and the house went into committee, Mr. Sevigny in the chair.

The Chairman: House in committee of the whole on certain divorce bills. Is it agreed that all the divorce bills be taken together?

Mr. Howard: Mr. Chairman, I just want to make one comment with respect to this entire group of divorce bills being taken in one lump and to say that I did not realize that we would ever get to the point when we would bring in automation in dealing with divorce.

The Chairman: Shall the bills carry?

Some hon. Members: On division.

Bill No. SD-219, for the relief of James Nelson LeBlond.—Mr. McCleave.

Bill No. SD-220, for the relief of Louise Auger Lecavalier.—Mr. McCleave.

Bill No. SD-221, for the relief of Marie Noella Therese Legault Lebel.—Mr. McCleave.

Bill No. SD-222, for the relief of Muriel Marguerite Elizabeth Ada Brant Yeaman.—Mr. McCleave.

Bill No. SD-223, for the relief of Marie Becherbleith Reicher.—Mr. McCleave.

Private Bills—Divorce

Bill No. SD-224, for the relief of John Charles Underhill.—Mr. McCleave.

Bill No. SD-225, for the relief of Patricia Wirth Usher.—Mr. McCleave.

Bill No. SD-226, for the relief of Jean Audrey Vickers Mastro.—Mr. McCleave.

Bill No. SD-227, for the relief of Mary Rebecca Lafontaine Johnson.—Mr. McCleave.

Bill No. SD-228, for the relief of Jetti Edelstein Popowski.—Mr. McCleave.

Bill No. SD-229, for the relief of Jean Philippon.—Mr. McCleave.

Bill No. SD-230, for the relief of Sidney Schwartz.—Mr. McCleave.

Bill No. SD-232, for the relief of Barbara Crawford Bucci.—Mr. McCleave.

Bill No. SD-233, for the relief of Holger Madsen.—Mr. McCleave.

Bill No. SD-234, for the relief of Miriam Astrof Hymovitch.—Mr. McCleave.

Bill No. SD-235, for the relief of Margaret Welsh Clark Gray Perego.—Mr. McCleave.

Bill No. SD-236, for the relief of Eunice Joyce Stone Berwick.—Mr. McCleave.

Bill No. SD-237, for the relief of Rita Elizabeth Edwards Bryant.—Mr. McCleave.

Bill No. SD-238, for the relief of Mary Farrelly Crane.—Mr. McCleave.

Bill No. SD-239, for the relief of Margaret Eileen McKenzie Beauchemin.—Mr. McCleave.

Bill No. SD-240, for the relief of Jeanette Josephine Cools Cox.—Mr. McCleave.

Bill No. SD-241, for the relief of Geraldine Marilyn Woods Spencer.—Mr. McCleave.

Bill No. SD-242, for the relief of Mariette Giselle Denise Pesant Forget.—Mr. McCleave.

Bill No. SD-243, for the relief of Joy Diedre Shelley New.—Mr. McCleave.

Bill No. SD-244, for the relief of Muriel Ethel Serchuk Rutenberg.—Mr. McCleave.

Bill No. SD-245, for the relief of Deborah Barash Dindzik, junior.—Mr. McCleave.

Bill No. SD-246, for the relief of Gladys Elsa Hannah Birnbaum Aston.—Mr. McCleave.

Bill No. SD-248, for the relief of Giulietta Marcogliese Iacurto.—Mr. McCleave.

Bill No. SD-249, for the relief of Herbert Budd, junior.—Mr. McCleave.

Bill No. SD-250, for the relief of Dorothy Mary Shrimpton Legault.—Mr. McCleave.

Bill No. SD-251, for the relief of Maria Giusseppa Di Nunno.—Mr. McCleave.

Bill No. SD-252, for the relief of Marie Jacqueline Fernande Belisle Wechselberger.—Mr. McCleave.

Bill No. SD-253, for the relief of Simonne Fournier Bergeron.—Mr. McCleave.

Bill No. SD-254, for the relief of Cecily Anne Maud Carter Bernard.—Mr. McCleave.

Bill No. SD-255, for the relief of Marie Henriette Andree Massue Prevost.—Mr. McCleave.

Bill No. SD-256, for the relief of Lovell Orville Woodard.—Mr. McCleave.

Bill No. SD-257, for the relief of Joseph Wing.—Mr. McCleave.

Bill No. SD-259, for the relief of Hilda Jamesie Hatfield Carter.—Mr. McCleave.

Bill No. SD-260, for the relief of Evelyn Mae Wood Snell.—Mr. McCleave.

Bill No. SD-261, for the relief of Robert Smith.—Mr. McCleave.

Bill No. SD-262, for the relief of Ethel Fisk Gwynne-Davies.—Mr. McCleave.

Bill No. SD-263, for the relief of Marie Reine Drouin Milliard.—Mr. McCleave.

Bill No. SD-264, for the relief of Joseph Leonidas Albert Paradis.—Mr. McCleave.

Bill No. SD-265, for the relief of Hyman Wexler.—Mr. McCleave.

Bill No. SD-266, for the relief of Natasha Harpf Crayter.—Mr. McCleave.

Bill No. SD-268, for the relief of Shirley Bertha Marietta Birrell Wilson.—Mr. McCleave.

Bill No. SD-269, for the relief of Norma Elizabeth Gammie Costigan.—Mr. McCleave.

Bill No. SD-270, for the relief of Merita Helen Gertrude Alarie Russell.—Mr. McCleave.

Bill No. SD-271, for the relief of Sydney Clarence Walker.—Mr. McCleave.

Bill No. SD-272, for the relief of Barbara Anne Young McFadden Pallett.—Mr. McCleave.

Bill No. SD-273, for the relief of Jean Mercidus Cecilia Steel MacDonald.—Mr. McCleave.

Bill No. SD-274, for the relief of Arthur Thomas Hazell.—Mr. McCleave.

Bill No. SD-276, for the relief of Iris Olive West Dion.—Mr. McCleave.

Bill No. SD-277, for the relief of Margaret Cox Lafortune.—Mr. McCleave.

Bill No. SD-278, for the relief of Gertrude Falkenstein Garfield.—Mr. McCleave.

Bill No. SD-280, for the relief of Angela Bertha May Cohen Weinstein.—Mr. McCleave.

Bill No. SD-282, for the relief of Rosanne Dolimont Ruelokke.—Mr. McCleave.

Private Bills—Divorce

Bill No. SD-283, for the relief of Jeannette Hatsedakis Haeck.—Mr. McCleave.

Bill No. SD-284, for the relief of Natan Grunstein.—Mr. McCleave.

Bill No. SD-290, for the relief of Hedwig Papp Witwitzki.—Mr. McCleave.

Bill No. SD-161, for the relief of James Ross MacLaren Paul.—Mr. McCleave.

Bill No. SD-162, for the relief of Barbara Golebiowski Lorens.—Mr. McCleave.

Bill No. SD-163, for the relief of Nicholas Vogel.—Mr. McCleave.

Bill No. SD-164, for the relief of Viola Mary White Witt.—Mr. McCleave.

Bill No. SD-165, for the relief of Joseph Lucien Roland Richer.—Mr. McCleave.

Bill No. SD-166, for the relief of Marc Baillargeon.—Mr. McCleave.

Bill No. SD-167, for the relief of Lucille Perrin Ballard.—Mr. McCleave.

Bill No. SD-168, for the relief of Barbara Rae Lynch Harding.—Mr. McCleave.

Bill No. SD-169, for the relief of Estelle Leblanc Hebert.—Mr. McCleave.

Bill No. SD-170, for the relief of Georgiu Panajtiotis Yarenis.—Mr. McCleave.

Bill No. SD-171, for the relief of Shirley Watson Pennoyer.—Mr. McCleave.

Bill No. SD-172, for the relief of Anastasia Gorshko Hruby, otherwise known as Ann Gorshko Hruby.—Mr. McCleave.

Bill No. SD-173, for the relief of Edwin Showler.—Mr. McCleave.

Bill No. SD-174, for the relief of Nikolaj Kurdiaszow.—Mr. McCleave.

Bill No. SD-175, for the relief of Johann Schneider.—Mr. McCleave.

Bill No. SD-176, for the relief of Lise Beaudry Livingston.—Mr. McCleave.

Bill No. SD-177, for the relief of Beverly Georgina Berry Turpin.—Mr. McCleave.

Bill No. SD-178, for the relief of Shirley Eileen Ferris MacTavish.—Mr. McCleave.

Bill No. SD-179, for the relief of Maurice Turcotte.—Mr. McCleave.

Bill No. SD-180, for the relief of Christina Maxwell Biggs Sanderson.—Mr. McCleave.

Bill No. SD-181, for the relief of Thomas Patrick Heavers.—Mr. McCleave.

Bill No. SD-182, for the relief of Josephine Gertrude Rice Thornhill.—Mr. McCleave.

Bill No. SD-183, for the relief of Ruth Gruber Sosnowsky.—Mr. McCleave.

Bill No. SD-184, for the relief of Samuel Wasserman.—Mr. McCleave.

Bill No. SD-185, for the relief of Celia Bernhaut Jamensky.—Mr. McCleave.

[The Chairman.]

Bill No. SD-186, for the relief of Mary Elizabeth Rainsborough Archer Rudner.—Mr. McCleave.

Bill No. SD-187, for the relief of Waldo John Brayton.—Mr. McCleave.

Bill No. SD-188, for the relief of Jean-Paul Camire.—Mr. McCleave.

Bill No. SD-189, for the relief of Evelyn Zigayer Sedawey.—Mr. McCleave.

Bill No. SD-190, for the relief of Eleanor Wanda Leshynska Ross.—Mr. McCleave.

Bill No. SD-191, for the relief of Irene Rondeau Desbiens.—Mr. McCleave.

Bill No. SD-192, for the relief of Victor Petrashevics.—Mr. McCleave.

Bill No. SD-193, for the relief of Joseph Adrien Octave Guillotte.—Mr. McCleave.

Bill No. SD-194, for the relief of Jeannette Jaslow Feifer.—Mr. McCleave.

Bill No. SD-195, for the relief of Edith Rosen Browman.—Mr. McCleave.

Bill No. SD-196, for the relief of Paul-Emile Papineau.—Mr. McCleave.

Bill No. SD-197, for the relief of Joan Patricia Gatien Juzenko.—Mr. McCleave.

Bill No. SD-198, for the relief of Myrto Mona Diane Chevrette Cadieux.—Mr. McCleave.

Bill No. SD-200, for the relief of Andrzej Skarzynski.—Mr. McCleave.

Bill No. SD-201, for the relief of Otto Zilkalns.—Mr. McCleave.

Bill No. SD-202, for the relief of Leo Milette.—Mr. McCleave.

Bill No. SD-203, for the relief of Angelina Di Battista Overland.—Mr. McCleave.

Bill No. SD-204, for the relief of Robert Herman Kashower.—Mr. McCleave.

Bill No. SD-205, for the relief of Evelyn Mills Miles.—Mr. McCleave.

Bill No. SD-206, for the relief of Margaret Alguire Kernaghan.—Mr. McCleave.

Bill No. SD-207, for the relief of Georges Albert Hetu.—Mr. McCleave.

Bill No. SD-208, for the relief of Francisca Catharina Sanders Simard.—Mr. McCleave.

Bill No. SD-209, for the relief of Yolande Robert LeBel.—Mr. McCleave.

Bill No. SD-210, for the relief of Joseph Anthime Roland Bock.—Mr. McCleave.

Bill No. SD-211, for the relief of Clarence Joseph Reilly.—Mr. McCleave.

Bill No. SD-212, for the relief of Elizabeth Christina Law MacNab.—Mr. McCleave.

Bill No. SD-213, for the relief of Frank Joo.—Mr. McCleave.

Bill No. SD-214, for the relief of Eileen Annie Elizabeth Stonebridge Hopkinson.—Mr. McCleave.

Bill No. SD-215, for the relief of Giuseppe Fusari.—Mr. McCleave.

Bill No. SD-216, for the relief of Jean Adolphe Abel Mathys.—Mr. McCleave.

Bill No. SD-217, for the relief of Catherine Regina Hearn Cullen.—Mr. McCleave.

Bill No. SD-218, for the relief of Richard Cloutier.—Mr. McCleave.

SENATE BILLS—SECOND READINGS

On the order:

Second reading of Bill No. SD-299, an act for the relief of Patricia Alleyn Burstall Corrigan.—Mr. McCleave.

Mr. Speaker: Is it the pleasure of the house that all the divorce bills standing for second reading, being items Nos. 103 to 123 inclusive on the order paper be taken in one motion?

Some hon. Members: Agreed.

Bill No. SD-299, for the relief of Patricia Alleyn Burstall Corrigan.—Mr. McCleave.

Bill No. SD-300, for the relief of Charles Athol Gordon.—Mr. McCleave.

Bill No. SD-301, for the relief of Margaret Canuel Fraser.—Mr. McCleave.

Bill No. SD-302, for the relief of Jean Dick Joslin—Mr. McCleave.

Bill No. SD-303, for the relief of Halbert James Haldane Kerr.—Mr. McCleave.

Bill No. SD-304, for the relief of Freda Levine Schubert.—Mr. McCleave.

Bill No. SD-305, for the relief of Mary Thelma Bourgeois Gaudet.—Mr. McCleave.

Bill No. SD-306, for the relief of Jacques Gerardin.—Mr. McCleave.

Bill No. SD-307, For the relief of Yolande Charron Fiorucci.—Mr. McCleave.

Bill No. SD-308, for the relief of Fernand Larouche.—Mr. McCleave.

Bill No. SD-309, for the relief of Mary Pelly Osborne.—Mr. McCleave.

Bill No. SD-310, for the relief of Leonard Lowrey.—Mr. McCleave.

Bill No. SD-311, for the relief of Josette Lacaille Johnston.—Mr. McCleave.

Bill No. SD-312, for the relief of Iona Gertrude Mary Adcock Dolphin.—Mr. McCleave.

Bill No. SD-313, for the relief of Maurice William Miller.—Mr. McCleave.

Bill No. SD-314, for the relief of Margit Szilagyi Rojzskies.—Mr. McCleave.

Bill No. SD-315, for the relief of Rita Jeanne Landry Benoit.—Mr. McCleave.

Bill No. SD-316, for the relief of Maria Eva Dorothe Deziel Lefebvre.—Mr. McCleave.

Bill No. SD-317, for the relief of Violet Mary Ward Gravel.—Mr. McCleave.

Bill No. SD-318, for the relief of Jean Phyllis Fensom Kell.—Mr. McCleave.

Bill No. SD-319, for the relief of Louise Giguere Boisvert.—Mr. McCleave.

Mr. John B. Hamilton (York West): Now that we have disposed of all the divorces, Mr. Speaker at this stage I should like to move that item No. 101 dealing with Trans Mountain Oil Pipe Line Company might be given priority over other items on the order paper.

Mr. Speaker: Is it the pleasure of the house that item No. 101 be now taken?

Some hon. Members: Agreed.

TRANS MOUNTAIN OIL PIPE LINE COMPANY

The house resumed, from Tuesday, August 12, consideration in committee of Bill No. S-6, respecting Trans Mountain Oil Pipe Line Company—Mr. Broome—Mr. Sevigny in the chair.

On clause 1—*Subdivision of shares.*

The Chairman: Shall clause 1 carry?

Mr. Howard: No, Mr. Chairman. In discussing this clause I should like to point out first that there appears to be, or has appeared to be until this moment anyway, as has been expressed to me on a number of occasions, the feeling that those of us in the C.C.F. have a certain strategy in mind with respect to this particular bill, as that strategy was evidenced in dealing with this bill and with other private bills. I should just like to say that the attitude and the thoughts that have been expressed to me—and, I am sure, to other hon. members—indicate merely a tendency to jump to conclusions. I would say that one should wait until the final decision is made before attempting to say what are the ideas of any particular individual member or any particular group element in the house.

In the standing committee on this bill an amount of evidence was given and a number of opinions and ideas were expressed. I would say that certainly the greater proportion of the time of the committee was taken up by Conservative members and that many of those members—and I certainly will not do them the discourtesy of mentioning names, but the evidence is there for all to see—expressed doubt about the necessity of approving this bill. Many of them expressed fears as to what the end result would be if this bill were allowed to pass. Some of them were in outright opposition to it. Then for one

reason or another their minds changed and when a subsequent vote was taken on whether the bill should be reported, the minutes will show that there was only one dissenting vote in the committee and that all those who had expressed doubts, fears, regrets and outright opposition had changed their minds and had voted for it. I do not know why they did that. I leave it to your imagination, Mr. Chairman.

Two reasons were given by the company officials who appeared before the committee for the endorsation of this bill which, as hon. members know, allows for a five to one split in the shares of the company. Those two reasons were, firstly, that it would allow a broader base of shareholders, in other words, for the expansion of the number of shareholders owning stock in the company and, secondly, that it would naturally reduce the price of the shares on the market by approximately one-fifth in order that those shares would be easier to sell.

Let us now look at those two reasons and see whether sufficient argument was given by the company to support them. What about the broadening of the base? What about more shareholders as a result of the split? Some evidence was produced before the committee that as a result of a study made by a number of companies which had entered into stock splitting arrangements in the past there was reason to believe that in the first year there would be a 10 per cent increase in the number of shareholders and that the increase might ultimately reach 15 per cent. I do not know offhand whether those two figures, 10 per cent and 15 per cent, were merely based on the splitting of outstanding stock or whether account was taken of what would happen if additional stock were issued out of the treasury, but there is some reference on page 193 of the evidence in that respect. This took the form of a lengthy document signed by McLeod, Young and Weir and by Wood and Company, two financial organizations, saying the following:

> In this connection we have been advised by a major trust company that it has been their experience that when a company subdivides its shares it can expect a 10 per cent increase in the number of shareholders in the year following such action and that ultimately the increase in numbers would run 15 per cent and higher.

So to this extent I think we can say there would be a broadening in the base of shareholders of 10 per cent, but coupled with that I think we must inquire if it is the intention of the company to issue any of the presently held shares in the treasury, totalling some $3.5 million. Evidence given by company officials was that there is no intention at present to issue any additional shares and one of the officials of the company, a Mr. Taylor, at page 195 has this to say:

> The company is not planning to sell any more shares. To come back to your first statement—

Referring to a statement of a member of the committee.

> —the purpose of the split is merely to subdivide the shares. There is no other purpose.

Again, at page 200, to emphasize that this is just not one mere indication, Mr. Taylor says:

> Out of the 5 million shares of stock the company has not sold 3,500,000.

The hon. member for Humber-St. George's, who was a member of the committee, asked:

> And it is not your intention to sell any of that 3,500,000?

Mr. Taylor replied:

> Not at the present time, no—whether it is split or not. There is no present intention to sell any.

I think, therefore, we can only assume that the reference to a 10 per cent broadening of the base of ownership of this company by the stock splitting arrangement will only be a broadening of the base with respect to the present shareholdings and to the present shareholders. There are quite a number of them, and probably the most important ones, as given in evidence, are the five oil companies, Imperial Oil Company, Shell Oil of Canada, Standard Oil of British Columbia, British-American Oil Company, each of which owns 130,000 shares and Richfield Oil Corporation, holding 50,000 shares. This gives to the five oil companies approximately a 30 per cent ownership of the company. That information was also given in evidence. What does this 30 per cent mean with respect to control of the company, because this is a factor which must be considered. If there is going to be a broadening of the base of the stock, what about this 30 per cent ownership in the hands of five major oil companies at the present time? With that 30 per cent control what have they been able to do? In this connection I would like to quote from a statement in a submission by Trans Mountain Oil Pipe Line Company to the royal commission on energy in April, 1958. In exhibit 2 of that submission we find the following:

> Five major oil companies owning 30 per cent of the stock of this company have been able to arrange for the election of six of the nine directors of Trans Mountain Oil Pipe Line Company. The directors as of March of this year are Mr. R. D. Baker, president of Standard Oil Company of British Columbia, Mr. D. E. Day, vice-president, Richfield Oil Corporation, J. W. Hamilton, Q.C., director of Imperial Oil Limited, Mr. J. K. Jamieson, vice-president of Imperial Oil Limited, Mr. E. D. Loughney senior vice-president of British-American Oil Company and Mr. D. B. Vale, executive vice-president, Shell Oil of Canada.

So we find that with an ownership of 30 per cent, these five major oil companies have 66⅔ per cent of the directorate. All that will happen if this stock split is allowed to go through and if, as we expect, there is a 10 per cent increase in the number of shareholders, is that these five oil companies will become that much more influential and that their 30 per cent ownership will mean more in relation to their control over the company. I suggested, as reported on page 227 of the proceedings of the committee that this would take place. I said:

> By splitting the shares five for one it will increase the total number of shares on the market, and multiply by five the 30 per cent owned by the four or five oil companies, giving more significance to that 30 per cent in relation to the total number of shares that are on the market. This will give those oil companies a more prominent position in regard to the decisions of the company than they now have.

Then, on page 228, is reported the remarks of Mr. Renwick, who was the counsel present on behalf of the company. I asked him the following question:

> Do you have reason to believe that these five companies that I have mentioned, having a 30 per cent controlling interest in the company, will dispose of any of their shares?

To which he replied:

> I have no reason to believe they will dispose of that interest. Again, they may; I cannot say. But certainly my conclusion would be that so long as they are on the guarantee, on the $100 million worth of bonds, that it is simply a matter of business judgment and wisdom that they would retain some interest, perhaps up to the point where they may have effective control.

Later he said, after a suggestion of mine with respect to that effective control:

> That would be completely my view on it. If they do now in fact control, and I think it is common to say anyone who holds 20 or 25 per cent probably does control it—

So he admits, therefore, that with 25 per cent ownership you can control a company, and therefore the only conclusion we can draw from the argument of this company that it is going to broaden the base of ownership is that there is no validity to that argument. It may effect, as it says, a 10 per cent increase in the number of shareholders or maybe more, but all that it will do is to give more effective control to these five major oil companies which I have named. They themselves have no intention of getting rid of their shares.

On the other hand it is said it will reduce stock prices on the market so that the stock will be easier to sell. At present the stock is selling at $55 or $56 or somewhere in that neighbourhood and the split of the stock will mean that the price will be about one-fifth of what it is at the present time. So if it is $55 now, the price of the stock on the market might presumably be $11, although I understand there are other factors which will enter into this such as the nature of the oil industry and matters outside the jurisdiction of this country, for example, conditions in Iraq or elsewhere which might affect the price. However, it would reduce the unit price of the shares and, as the company has said, this is one of the reasons why they wanted a stock split—so as to be in a better position to sell. But they have no intention of selling any shares, whether there is a stock split authorized at this time or not. This has been admitted by company officials.

They can give no guarantee—and this is natural because of the way in which the stock market operates—that the price will remain $10 or $11 or $12. They have no control over the market price whatsoever. They need the money, they say, only at some indeterminate time in the future when their need for expansion will require them to get this money to transport oil from Edmonton to the west coast. When do they want it? We do not know, and they do not know. Presumably they would want it when they are required to pump more barrels a day. I think the company's production capacity at the present time is in the neighbourhood of 60,000 or 70,000 barrels a day, maybe 80,000. It is quite obvious that the company will require this additional capital when the demand for oil gets heavier than it was at the time of the Suez crisis, and when this demand gets heavier, one thing is going to happen to the price of this stock—it is going to go up again, and the company is going to find itself in the position of attempting to sell shares at a price which is higher than it will be, probably, if and when this split goes through. I say this because the demand for the use of the company's line will have an effect upon the market, just as was the case during the Suez crisis. I think I can illustrate this point by referring to what Mr. Renwick, counsel for the company, had to say before the committee as reported on page 227 of the transcript. He said:

> The price this stock hits on the market has nothing to do with the company or its management from day to day. Just as an example, it is true that the price of the Trans Mountain stock went up and I think this was attributable in a large measure to the trouble in Iraq. When we were here a short time ago I think the price of stock was around $50 and it popped up to $70 on the Iraq situation. I think it is now around $59 or $60. Apparently all these people are prepared to take a plunge on that type of situation. We have the likelihood of the plunge. No one can stop it. But we think the likelihood of the wide fluctuations will be toned down if there are a larger number of shareholders who

are participating in this company as a means of investment rather than as a means of speculation.

I might add that I have discussed this with two or three stockbrokers since that time, and I am told Trans Mountain is not an investment stock, but purely a trading and speculative stock, and that is all it will be for some time.

I asked Mr. Renwick about the price, and the exchanges are reported as follows:

Mr. Howard: If this split takes place then I assume that the price of the shares will be $12 to $15 probably on the market—or $10.

Mr. Campbell (Stormont): Or $25 or $30 very shortly, especially if the situation becomes acute in the Middle East.

Mr. Howard: I was going to ask that question also. If this company is given permission and this bill is passed and the shares are divided five for one, the price on the market being $10 or $12, something in that neighbourhood, with no thought of issuing more of the additional shares out of the treasury and selling them on the market and some situation does develop in the Middle East, a situation similar to the Suez arises, then presumably the stocks will take another surge upwards regardless of this 10 per cent broadening and you might find yourself in the same position of trying to sell $50 or $60 shares out of the treasury. Would not your position be the same as it is now?

Mr. Renwick: I think my answer to that is yes, but perhaps Mr. Taylor would like to say a word here.

Then, Mr. Taylor, who is an official of the company said:

Yes, you would be in the same position.

And the report goes on:

Mr. Howard: Would you come back and ask for another stock splitting to get them down again?

Mr. Renwick: We would have to.

Thus, the reason was, first, that it broadened the base of ownership. Our answer to that is that it does not broaden the basis of ownership but that in effect it gives more control to the five oil companies concerned. The second reason was that it would allow the company to sell shares at a lower price than they are now quoted on the market, and the evidence throughout indicates that this is not so unless it is the intention of the company to issue those shares out of the treasury the day after this stock split takes place, if it does take place. So the answer to both these questions is in the negative.

I think we should also consider with respect to this matter all the interests which are affected by the operation of this company. We should consider what interests are affected by this request for a stock split. Some of these interests may be overlapping, but I am going to suggest that there are four. One is the interest of the company, another is the interest of shareholders, another is the interest of the general public and the fourth is the interest of the employees. Some individuals may be concerned in more than one of these categories, but I think I can say these are the four interests affected. We must ask ourselves whether any of these interests will be advanced or whether they will be adversely affected in the over-all picture should a stock split take place.

With respect to the interests of the company, I presume it would be advanced, because the company has spent I do not know how much time down here in an attempt to get this stock split through parliament. So I would imagine it is evident that the interest of the company would be served by this stock split.

What about the interest of the shareholders? Yes, the shareholders would be well served, but only five of those shareholders. The interests that would be advanced would be those of Imperial Oil, B.A. Oil, Richfield Oil, Standard Oil of British Columbia, and Shell Oil. These shareholders would be the only ones who would receive benefit from this stock split, because their control over the company would be that much more effective than it is at the present time. When we consider that a 30 per cent interest now enables these companies to exercise control over the board of directors amounting to 66⅔ per cent it is obvious that even a slight change in the effectiveness of that control would result in complete control over this board. The only interests that will be served will be those of the five major oil companies which have a record that is known throughout this country to be a little unsavoury.

There was absolutely no evidence given to the effect that the interest of the general public will be served. The splitting of stock five for one is not for the purpose of bringing benefit to the general public but for the purpose of broadening the base of control and reducing the price of the shares so they can sell more of them. The evidence indicates that these are not valid reasons. The arguments are not strong enough to support them. The interest of the general public will not be enhanced by the stock splitting.

With respect to the employees of the company as a part of the general public, I do not know what the position will be. Evidence was presented to the effect that the company's attitude toward its employees has been a good one and I do not wish to argue one way or the other in that respect except to say the stock splitting is not the thing that will have a beneficial effect upon the employees but the earning capacity of the company will because presumably the company will have

greater income and profits and accordingly should share these with the employees to a greater extent than at present.

I have endeavoured to make clear the reasons why we are opposed to this measure. I expressed opposition to this by voting against this clause and the preamble in the committee and I intend to express the same sort of opposition if and when it comes to a vote in this committee because, as we indicated, from all the evidence submitted it is clear that no good purpose can be served by the stock splitting. The evidence had a profound effect upon many Conservative members in the committee. I do not know whether their opinions have changed since then. It would be most enlightening if some of the hon. members who were most vociferous and who expressed the greatest amount of fear and regret in the committee would indicate to this committee why they changed their minds practically overnight.

I intend to express my opposition to the passage of this bill as I am sure will all hon. members of the C.C.F. because it will do nothing but give more effective control to five major oil companies and will do nothing beneficial for the general public.

The Chairman: Shall clause 1 carry?

Mr. Howard: Mr. Chairman, I thought surely the sponsor of the bill would make some comments contrary to those I have made. Otherwise I must feel that my arguments were valid and acceptable to him.

The Chairman: Any comments on the bill? Shall clause 1 carry?

Mr. Howard: On division. We want a standing vote.

Mr. Drysdale: Have you got five?

Clause agreed to: Yeas, 61; nays, 6.

Mr. Brunsden: Mr. Chairman, I should like to have my vote recorded.

The Chairman: Shall the preamble carry?

Mr. Argue: On division.

Title agreed to.

Bill reported.

Mr. E. J. Broome (Vancouver South) moved the third reading of Bill No. S-6, respecting Trans Mountain Oil Pipe Line Company.

Mr. Frank Howard (Skeena): Mr. Speaker, I have one or two comments on third reading. There were rumours circulating throughout the house and the corridors in recent days to the effect that we in the C.C.F. were nothing more than a bunch of deliberate obstructionists with respect to this bill.

Some hon. Members: Hear, hear.

Mr. Howard: I would just add that if the noise that just emanated from the other end of the house is meant to be derisive, I may point out to hon. members that the bill is not through third reading yet.

Mr. Argue: Tell those pipe-line boys to listen.

Mr. Howard: I believe it is clear now that the rumours about our being obstructionists are far from true. We in the C.C.F. feel it is our duty and function to express our opposition to certain measures in every way possible and depending on the degree of objection of an individual member or the group to a certain measure the opposition and objection may be expressed more strenuously in some cases and on more frequent occasions than with respect to others.

We have expressed our objection and opposition to this bill on second reading, in the standing committee and in the committee of the whole and by our votes as did one other hon. member who does not belong to the C.C.F. We believe we have no right as a group to attempt to frustrate the desire of the majority by preventing a measure of this nature coming to a vote. We know that in other instances of other bills, especially public bills introduced by private members, the game to be played is to talk them out time after time and to prevent parliament from having the opportunity of voting on those particular bills. I might add that this government policy of talking out other measures is adopted when individual members express support for those bills but hon. members are afraid to stand up and be counted as being in favour of or opposed to them. Therefore, they take the easy way out by talking them out. We of the C.C.F. do not do that; we do not talk these things out, Mr. Speaker. We express our opposition on many occasions. I would say further, Mr. Speaker, that that is the main reason why we feel we are setting an excellent example to other members opposite to treat other bills in the same way as we are treating this one.

We intend to oppose this bill, Mr. Speaker, as we have by voice all the way along and at its final stage we intend to vote against it. I would also say that it appears today there has been a bit of juggling in the private members' hour as to what business on the order paper is to come before other business with unanimous consent.

Mr. Speaker: I hope the hon. member is not questioning the judgment of the house. Everything has been done with the unanimous consent of the house.

Mr. Howard: I would not question the judgment of the house and certainly not your

own. I merely say that this juggling was necessary in order to move certain measures forward in order that they may be dealt with. The Minister of Public Works is not in his seat but I would merely say that if he had not been so anxious to eliminate private member's Monday this juggling would not have been necessary.

In conclusion, I say this is an example that I hope hon. members will follow in order to allow ideas and thoughts to come to a vote instead of talking them out continually.

Mr. Hazen Argue (Assiniboia): Mr. Speaker, although we are opposed to this measure we are prepared to have a vote taken within a few minutes. I do want to say that some practices that have been followed recently place me for one, and I think other members, in a very difficult position. I refer to the type of lobbying that has been going on in reference to this bill and other bills. I appreciate the fact that when a private company comes to this house to have a bill placed before it, in addition to the public discussion in parliament and the discussion before the committees they may feel that certain other representations of a private nature should be made.

I question really whether we should be having any private discussion with people who are involved either directly as shareholders or as hired officials of those companies. In this group, when we have had a formal request by sponsors of the bill or by the people involved in the company, we have been prepared to meet their representatives as a group; in other words, to have them meet our caucus. But since that time, Mr. Speaker, we have had people connected with this bill—and I am not referring to any member of parliament—and interested in having this measure passed in the house attempt to exert pressure on us and on me, and it makes my position at any time more and more difficult because when I get that kind of pressure, even if I should be in favour of the bill, my natural reaction is that if some private company is endeavouring to pressure me into supporting their bill, I would be most apt to vote against it.

As far as I am concerned, the sponsor of this bill has conducted himself in a parliamentary manner at all times. But I say publicly for the record that I would not extend those remarks to certain individuals who are not members of either house but who are interested in this company.

As far as other pipe lines bills are concerned, I would hope that people who are interested in getting them through the house would leave members of parliament alone and let them judge the bills without any type of private lobby being conducted within the walls of the House of Commons.

When the government has a public measure to put through the House of Commons they place it on the order paper. There is a public discussion, but there is no attempt to badger members of parliament in their offices, and this kind of practice I resent. I hope that the other companies which have bills on the order paper will not resort to that practice or in certain instances, continue that practice.

The house divided on the motion (Mr. Broome) which was agreed to on the following division:

YEAS

Messrs:

Aitken, Miss	Loiselle
Allard	Macdonald (Kings)
Allmark	MacEwan
Badanai	McBain

NAYS

Messrs:

Argue	Martin (Timmins)
Brunsden	Peters
Herridge	Regier—7.
Howard	

Mr. Speaker: I declare the motion carried.

Bill read the third time and passed.

Mr. Speaker: The hour for the consideration of private and public bills having expired, the house will resume the business which was interrupted at five o'clock.

SUPPLY

The house resumed in committee of supply, Mr. MacEwan in the chair.

At six o'clock the committee took recess.

AFTER RECESS

The committee resumed at eight o'clock.

DEPARTMENT OF LABOUR

General administration—

170. Departmental administration, including grants as detailed in the estimates and the expenses of the international labour conferences (also includes the former labour gazette, women's bureau and manpower utilization votes), $1,067,166.

Mr. Broome: Mr. Chairman, when the committee rose I had been trying to show that the strike vote taken by S.I.U. on the west coast was not a vote in which any credence or reliance could be placed as being a true reflection of the wishes of the members. My whole point is to suggest to the minister that he might find it to advantage to survey the various legislation in use under provincial labour codes with respect to the taking of supervised strike votes.

I quite realize that this particular union is not an example of what the other labour unions are like. The overwhelming majority of Canadian unions are good unions and their leaders are honest, conscientious and hard-working men, dedicated to the job of trying to alleviate working conditions for labour and to give labour a better share of the national income but that does not minimize the fact that several thousand Canadians, for their whole working future or as long as they want to be seamen, are placed in the hands of one man—namely Mr. Banks—and that he and his men control and dictate the policies of this union. These people live under a tyranny in regard to the earning of their livelihood which can only be compared with that existing behind the iron curtain. They are assessed according to the wishes of the executive of the union, and we know how long and how hard countries like Canada and the United States have fought for the principle of representation in regard to taxation. This right is denied to these men in respect of what is perhaps the most important field of all so far as it affects their daily life and that is the way they earn their living.

I do not have to go into detail about the background of Mr. Banks, because it is all in *Hansard;* it has been brought before this house on previous occasions by the present Postmaster General, the present Minister of Citizenship and Immigration and the present high commissioner at London, Mr. Drew, but I would like to quote one or two paragraphs from *Hansard* commencing at page 6801 for June 26, 1954, when Mr. Drew had this to say about Mr. Banks:

> This man had been convicted on different occasions in the United States. One of those convictions in 1930 carried with it a sentence of fourteen years in San Quentin prison.

Later on he said the following:

> But on December 5, 1947, at Richmond, California, he was charged as an ex-convict with being in possession of firearms.

And further down the page he says:

> Now, Mr. Chairman, there is an old rule, which should be firmly respected, that no man is guilty unless proved guilty and there must always be a presumption of innocence. But when you see facts such as this, and when you learn that this man came to Canada and was not only convicted under the Customs Act but also twice charged and acquitted here, one begins to inquire, and surely the pattern of charges should at least be a warning to the government. One cannot disregard the fact that this man was charged on June 28, 1942, with child stealing in the United States, though there is no evidence of conviction in that case. Later he was charged with murder and acquitted.

That is what Mr. Drew had to say, and on page 6538 of *Hansard* for July 21, 1955, the hon. member for Kootenay West had this to say:

> Quite a number of good labour people, men who have worked all their lives in the labour movement, are concerned about the damage this character is doing to the good name of labour in Canada. That is not the whole record. The government does not appear to have the whole record.

Here he was referring to the previous administration.

> As a matter of fact the hon. member who spoke before me mentioned some twelve charges for carrying concealed weapons. When a man is charged twelve times for carrying concealed weapons, even though acquitted it indicates that he is a pretty tough character. He was also charged with child stealing. Beyond that we will have to leave the matter until next session,—

During last session a group of us met together and heard from certain men who had formerly been members of the seafarers international union with respect to some of the things

which went on within the union. For instance, a bookman, or trusted henchman of the union executive, would be a voting member and would have the right to lift the ticket of anybody he chose with respect to the ship in which that man was sailing or the group with which he was working. When the ticket was lifted that man no longer could be shipped; he was on what they call "D.N.S." or "Do Not Ship" and his livelihood was taken away from him until he had squared himself with the union.

It is the job of the Canadian Congress of Labour to handle its own affairs and to clean its own house, and I suggest that the labour movement in Canada, which is 99 per cent pure, should take action against unions such as this one which negate the very principle of unionism, which is that of operating a union in the best interests of the workers. It is not only a question of what we might call dragooning workers. For instance, I have a clipping from a Toronto paper which talks about teamster union boss James Hoffa having fired his outspoken critic, William Mills. Mills was secretary treasurer and business agent of the Toronto general truckers union. He was also barred for life from holding office in the union. I also know of locals which have been arbitrarily placed under trusteeship.

The former officers of the union local were fired; they were allowed to keep their union cards but have been debarred from ever holding union office, and that local no longer has the right to run its own affairs. This was done by a directive of the international president.

It is necessary that these problems be cured by labour itself, but I do suggest that they are problems on which the minister should keep his eye. Perhaps a gentle nudge now and then might help.

We would not stand for one minute for the taking away of liberties with regard, say, to elections to this house but these practices are allowed with regard to the operation of one or two labour unions, and surely the livelihood and protection of Canadians who are members of these unions is something that we as a government and as members of parliament should consider to be within our purview.

Mr. Pickersgill: Mr. Chairman, I really want to confine myself exclusively to one topic this evening, and I am sure the minister knows already what that topic is, because I have had a good deal of correspondence about this subject with him since he became minister. I would like to say that in any correspondence I have had with the minister or with the officials of his department or the unemployment insurance commission I have received nothing but consideration and the promptest action, and I hope the minister will not think that anything I say is intended in any way to be censorious or even really critical, except of the kind of deficiencies which I think do exist, and did exist when we were in office because of inadequacies of staff which may, of course, have been increased because of the increased volume of work which has fallen upon the insurance commission in the past year.

It is not the general work of the commission that I want particularly to talk about, but the administration of unemployment insurance for fishermen. I have in my hand a letter which has been addressed to me, and I imagine a copy was also addressed to the minister, by the general secretary of the Newfoundland federation of fishermen. It sets out a resolution unanimously adopted at the annual convention held in St. John's on April 14, 15 and 16 which embodied the views of the federation after the first year's experience in which we all knew that because this was new, and because it was complicated and because it was being applied in respect of people many of whom had very little previous experience in dealing with forms and stamps, complications would be bound to arise and cause a great many administrative headaches. I should like to read this resolution into the record. It begins:

> Whereas the introduction of unemployment insurance to fishermen has been of untold benefit and assistance to our fishing population;

Perhaps even the minister would not object to my interjecting at this point that this was done by the previous administration.

> —and whereas a number of problems have arisen in its first year of introduction, which was as we expected unavoidable—

These are the points which are made in the brief.

> 1. The abolition of the 30 per cent cost of production. Contributions paid and benefits received on gross earnings as in all other types of employment.
>
> To enlarge on this suggestion it might be said that where fishermen know their operating expenses these may be accepted by the employer or buyer, but we find that during the past season the majority of buyers accepted the line of least resistance and invariably deducted 30 per cent. If this cannot be abolished we suggest that a 20 per cent deduction will amply cover operating expenses.
>
> 2. Fresh fish, salmon (fresh frozen, salted or tinned), mackerel, herring, lobsters, codoil and all other species of fish and fishery products to be treated as saltbulk or dried cod, and settlements made at the end of the fishing season and the divisor system used, as with salt cod.

I may say that personally, on the basis of such observations as I have made myself, I would very strongly endorse that view.

We would draw the attention of the commission to the position of our fishermen who can their own salmon, lobster and halibut, and who at the present time are not eligible for insurance benefits. We suggest that these be included and the divisor system used.

3. Skippers and sharemen—We feel that stamps should be equally divided so that sharemen may qualify for benefits. At the present time the skipper has far too many stamps and the sharemen insufficient. If the fish or fishery products which have been produced equally by both skipper and sharemen cannot be shared equally for insurance stamps purposes, then we suggest that the catch be divided into the number of shares plus one which would give the skipper two shares instead of half the voyage and his share of the remaining half; for example, a skipper has five sharemen in all, six men or seven shares.

I do not expect the minister to give an immediate reply to that. It is pretty technical, and it would perhaps tax me a little to give a reply myself.

4. Clearer defining of stamp contributions and receipts for types of work other than fishing. This will have to be done in an educational manner through the press, radio and visits by unemployment insurance office officials similar to those carried out by the St. John's office during the fall of 1957.

5. To encourage fishermen students who attend vocation or training schools during the off season period, and who had been fishing during the past year to qualify for benefits. At present students are automatically disqualified. This we consider wrong and discouraging to our ambitious young fishermen.

I am going to pause here for a moment and say that as the minister knows I feel very keenly about this question. While one can fully understand the provision in the act that anyone who on becoming unemployed goes to school is not strictly speaking unemployed, and should not therefore receive unemployment insurance, it does seem to me that in a period where there is a considerable amount of involuntary unemployment it is very discouraging indeed to these young fellows who would like to go to school to be prevented from doing so because if they do they will lose their unemployment insurance benefits. As the minister knows, I have brought several cases to his attention, and so have other hon. members from Newfoundland and, I believe, from some of the other provinces as well.

It would surely be an advantage from every point of view to have these young lads go to school when they cannot get a job. I do not think this would require an amendment to the act, but I may be wrong. I think it could be done by regulation. If the governor in council wants to stipulate that these young men should agree to accept a job if one turns up, but be allowed to go to school, I would not quarrel very much, though I think it would be better to give the jobs to someone who is not going to school and let them complete the term. I hope other hon. members who represent constituencies where many are engaged in the fishing industry will support me in this plea to the minister that he make this change in the regulations which could not have a very serious effect on the fund and which would in most cases increase the employability of these young people.

And then, if I may return to the document:

6. Fishermen penalized because of employers or buyers mistakes. When the employer or buyer of stamps placed wrongly in fishermen's unemployment insurance books or places stamps of incorrect denomination, fishermen should not be disqualified because of such mistakes, but in consultation with the employer the audit office should make the necessary adjustments and the fisherman should receive the full amount of his benefits.

I am sure the minister will say that is done and I agree with him it is done frequently after a lot of labour on the part of members of parliament as well as on the part of many of the officials of his department. I believe I can say that in the months of January, February, March and April I received more letters from my constituents about unemployment insurance than about all other subjects combined. I know the minister is conscious of this problem and I am sure he will do his best to make improvements in this regard. I continue:

7. We strongly recommend the plan inaugurated by the St. John's office last autumn to have representatives visit various localities and meet with the fishermen and assist them with their problem, and we would suggest that this be extended to all parts of the province during the coming summer and early fall months.

8. We strongly urge the necessity of opening regional offices for not more than two weeks at a number of the larger settlements, especially along the northeast coast, in the strait of Belle Isle and on the Labrador. These offices would expedite the registration of fishermen for benefits, accept their insurance books and forward same to the regional office concerned. We see no necessity for the continued expense of keeping regional offices open other than for the short period during November and December when all our fishermen and many other workers are registering for unemployment insurance benefits.

Dealing with that last point particularly I would suggest a variant. I have some doubt as to whether even opening offices, except in one or two of the bigger places, would be as useful as having a number of itinerant officers who were well trained visit all the settlements, the little ones and the big ones, each officer being given a region, and really settle these problems right there on the spot where he could go to the merchant and talk to the individual and find out where the difficulties arose. It is true, of course, that my friends the hon. member for Burin-Burgeo, the hon.

member for Trinity-Conception, the hon. member for Grand Falls-White Bay-Labrador, the hon. member for Humber-St. George's and the hon. members for St. John's East and St. John's West would not have as many letters to answer as they now have and perhaps we would not ingratiate ourselves with our constituents as we do now but the minister, of course, would greatly increase in popularity with our constituents and it would be for the benefit of these people.

The minister will recall that in the last parliament I described him on one occasion as a displaced Liberal and I do not withdraw that description of him. He is one of those people who strayed from the true faith.

Mr. Starr: I objected last time, too.

Mr. Pickersgill: However, I still think the minister's heart is in the right place and in the main I believe his head is screwed on pretty well.

Mr. Argue: Watch out, Mike.

Mr. Pickersgill: And what is just as important, in my opinion, he takes the view I believe every one in public office should take, the view that until they prove indubitably that they are wrong the citizens are right. When we stop to think that for many of these people whose incomes regrettably are not as large as we would like to see them, who depend for their livelihood on the prompt payment of these unemployment insurance claims, we realize it is not merely a matter of annoyance or inconvenience if there are delays. It is sometimes a matter of forcing these people to go on relief while waiting for unemployment insurance payments to be made.

I could cite a number of cases—I was going to say hundreds but certainly dozens—where that happened and where it caused a great deal of pain to the people. They feel they are entitled to the insurance and it frequently turns out they are not entitled to it and they must agree to pay back the relief and sometimes it is difficult to do that when the time comes and great inconvenience is caused for everyone. I hope the minister will be able to yield to my importunities and those which I am sure he will hear from other hon. members from Newfoundland and probably from the other provinces too, but at any rate from those who represent constituencies on the east coast where the fisheries are prosecuted. I hope he will find it possible to have itinerant officers who will go around in November, December and January and visit the various settlements and settle the questions on the spot, and I really mean settle them.

Of course, there may be occasional problems of such complexity they would have to be referred to St. John's but even then I would hope they could be settled in St. John's without their having to be referred to Moncton. There are two things about the reference of these matters to Moncton that are a source of humiliation to Newfoundlanders. One is the length of time it takes and the other is the fact that the average Newfoundlander feels things should be settled in St. John's. There is a certain humiliation attached to having these matters referred to Moncton, a feeling that it is not quite right, not quite in the spirit of confederation. I am sure the minister is sympathetic with that sentimental position which, although sentimental, is also practical because reference to Moncton takes that much more time.

I do not really think I should trespass more on the time of the minister or the committee. I wish to say again how grateful I am to the minister himself and to all the officials of his department with whom I have had to deal for the courtesy and consideration they have invariably shown. But I do think it is necessary to have more staff and for the staff to be in direct contact with the customers, if I may use that term in this context.

In that connection I wonder if the minister could also give some consideration to another proposal I wish to make. I do not know how feasible this is and I would not speak about this with the same confidence with which I spoke about the previous proposal. I am quite sure I am right about the proposal concerning itinerant officers but I appreciate that there may be difficulties attached to the proposal I am about to make.

It is very worrying to those of us who represent constituencies like mine where there is no large centre or central place for people to go and where they are a long way from the nearest employment office—and I emphasize that aspect of it to the minister—people in places like Bonavista, Twillingate, Wesleyville, Fogo and other places in my district and I could go on to mention others all along the coast of Newfoundland, and in remote ridings elsewhere that they get left out to some degree in the service given to the Canadian people by the national employment office, not consciously left out but unconsciously which perhaps hurts more. I wonder if there could not be some way in which the officers having some authority could make tours and visit these places from time to time and register people and find out what their qualifications were and see to it that when jobs do open up they are not given on a first come first served basis to those

in the big centres; but when there is a shortage of jobs ensure that they are divided up among people in the smaller places who certainly need them just as badly as do those in the bigger places. I merely put that forward to the minister as a proposal and, as I say, I can see there would be some serious difficulties involved in it but I would hope the commission and the minister would be open minded about it and give it study and consideration.

(Translation):

Mr. Pigeon: Mr. Chairman, I want to take this opportunity of congratulating labour unions in my riding, and the Catholic unions, on their invaluable services to workers. I must also point out the part played in Joliette by the local Labour Council.

I call upon the government:

(1) To appoint labour representatives on all councils or boards set up to consider matters of concern to workers;

(2) To consider the possibility of extending unemployment insurance benefits to farm workers;

(3) To continue to vote millions of dollars for housing developments and, if possible, to broaden the scope of the National Housing Act so that all workers may become home owners;

(4) To maintain restrictions on immigration;

(5) To permanently reject the proposal of free trade with the United Kingdom, as it would put 300,000 workers out of work;

(6) To diversify our trade;

(7) To avoid credit restrictions;

(8) To enact, if possible, at some time, legislation forbidding employers to refuse hiring of workers aged 45 or more.

(Text):

Mr. Caron: Mr. Chairman, I do not want to tax the patience of the minister, but since I represent a community where the big majority of the population is composed of trades and labour men, I think I ought to say something on the matter. As I was coming up the hill this afternoon I saw a man carrying a poster on which was written, "Who will give me work?" Thousands of people in this region and thousands more across the country could have asked the same question today, "Who will give me work?" It is not that I want to blame the government altogether for the present situation but we have to admit that unemployment is a major problem today. Some may think that we want to spread gloom and discouragement when we speak of this matter, but a fact is a fact. Unemployment exists at the present time and we are afraid that next winter it will be a lot worse than last winter. If we do not say anything about it, and if that comes about, we can be blamed for not telling the government that something should be done. Some may think that we are going too far. May I be permitted to cite a few remarks made by some of the ministers in 1955, when they were on this side of the house? I have in my hand remarks made by the present Prime Minister, as reported in *Hansard* of the session of 1955, volume II, at page 2035:

> The Minister of Labour mentioned how good conditions were six months ago. This reminded me of an old story on the prairies. A man had died in a blizzard and sympathy was given to the mourners by saying, "Just remember, six months ago yesterday was the hottest day of the year". What a hopeless picture! The government, faced for the first time with serious unemployment that has been mounting over the years, is unable to give any hope. We are unable to rouse them into placing before the people of Canada some of the picture.

At page 2036 of the same volume of the same year, the Prime Minister said:

> The municipalities are loaded down with unemployment relief. The residents of our urban communities cannot bear it any longer. What is to be done about the unemployed employables? What is the attitude of the government? Well, if I understand the press of this country, almost without exception the press says that constitutional matters are today being raised as a smokescreen to relieve this government of its responsibilities. You cannot feed 550,000 hungry stomachs by promising them that if the constitution permitted it something would be done. The government adopts that attitude.

At page 2037, he said:

> I repeat that we do not believe that inaction should be allowed to continue.

At page 3339 of *Hansard*, volume IV, of the session of 1955, the Prime Minister said:

> Even on the question of unemployment the government cannot agree with itself. One department says there are 630,000 unemployed up to April, and another department says 390,000.

This is exactly the situation we had last night when we took the figures of the bureau of statistics and the figures of the unemployment insurance commission. I continue:

> The minister has a revised version that does not even equal the lower figure of the two.

A little later, on page 3940, the Prime Minister said:

> Certainly, the degree to which chaos is present in labour matters in this country indicates that the Department of Labour lacks direction, lacks system and lacks, not authority but direction.

These things were said by the Prime Minister of today. At the time the lady who was the official spokesman for the opposition in

labour matters—she is now Minister of Citizenship and Immigration—said, at page 1601 of *Hansard* for the session of 1955:

Regardless of the number of people who are out of work, regardless of whether the number is 362,000 or 569,000, the question we have to ask ourselves is whether or not hon. members and the people of Canada are going to consider that a person is merely a statistic.

Each of these 569,000 persons reported by the Department of Labour and each of those reported by the dominion bureau of statistics is a human being. Many of them have persons dependent upon them for support. It is not only a matter of buoyancy or lack of buoyancy of the Canadian economy; it is a matter of frightened men and women with cold bodies and hungry stomachs. It is a matter of fear which grips the hearts of working people who are probably employed themselves but see their neighbours idle and who ask themselves: when is it going to happen to me? Certainly, they say, we expect Canada to go ahead. Certain it is that Canada will thrive, but in the meantime what do we eat?

At page 1602 of *Hansard* of the 1955 session, the same hon. lady said:

In the midst of wealth we have human misery. With all the faith in the world these people cannot wait 10 years or 15 years for a steady job and a weekly pay check.

At page 1606, the same hon. lady said:

A nation is prosperous only as its people are prosperous. I think that is an accepted fact.

Farther on, she said:

We cannot afford to wait. This is a time for action.

The Minister of Finance of today took part in the same debate on unemployment following something that the prime minister of the day had said. Mr. St. Laurent said, as reported at page 3396 of *Hansard* of that session:

We have a country where there should be work for everybody and if we are not smart enough to organize the economy of the nation to provide work for everybody we are incompetent.

Then the Minister of Finance of today said:

And we say to the Prime Minister, "Out of thine own mouth hast thou condemned thyself, and not only thyself, but condemned thy colleagues as well."

This is a problem that is national in scope. It is beyond local responsibility. What we want on the part of this government, and what we still look for, are employment measures, some constructive and some effective approach to meeting the deterioration in the economic condition and the unemployment situation in Canada today.

And on the same page there is the following:

The second problem which has been ignored by the government is the problem of unemployment. This problem has been discussed at length in this session, or I would seek to go into it at greater length today. But let me content myself, in this limited time, with making this limited observation on the subject, that the government throughout this session has observed a conspiracy of silence with regard to unemployment; and it has carried that conspiracy of silence into the budget. It is still running away from the problem of unemployment.

This budget does not meet, in fact it cannot even make the pretence of meeting or even assisting to meet, the problem of unemployment. The government is still running away from that problem; they hope to ignore it.

The present Minister of Labour had this to say in the 1955 session as found at page 78 of *Hansard*:

As an example, we in Oshawa found last year that when the rolls showed a decrease in the number of registered unemployed of something like 600 or 700 they were the people who on April 15 were cut off supplementary benefits, but work was still not available. Contracting work was not in progress and construction had not started. Therefore, those people were left stranded without any financial assistance whatever from April 15 to some time toward the end of May. I strongly urge that the Minister of Labour consider the extension of time for supplementary benefits beyond April 15; my suggestion would be to May 15.

The very same situation exists in the automobile industry today. There are many unemployed and at the present time not much is being done. The same minister had this to say in 1955 as found at page 3937 of *Hansard*:

I feel that the Department of Labour and this government should make strenuous efforts to alleviate the present condition of those who find themselves unemployed.

Mr. Chairman, we can take almost everything that was said in 1955 about the condition existing then, apply it to the present government today and the situation would be about the same, if not worse. Unemployment is a problem that we have to face. We have to face it in reality. We have to admit the fact that we are going through the summer with heavier unemployment than we had last year or the year before and that winter will soon be coming with a very grave problem falling upon our shoulders. The government will have to face up to it. The statistics furnished for the week ended June 21, 1958 show that those without jobs and seeking work numbered 320,000 compared with 162,000 in 1957 or a difference of 150,000 in those looking for work in June and not getting any unemployment benefits. These people were looking for work and were not able to get work. If things go on that way, if the numbers of unemployed increase as they have increased in the summer time then I am afraid of the winter which is coming.

Those with jobs and working less than 35 hours a week rose from 413,000 in 1957 to 501,000 in 1958, a difference of 88,000. These people are not working a full week but less than 35 hours a week and the number has increased anyway. In the case of those usually working less than 35 hours a week there is an increase of 72,000 in Canada. If we take

the pulpwood industry we see that in the province of Quebec in the first four months of 1957 there were 1,254,962 cords produced but that in the same period in 1958 the amount has fallen to 678,452 cords. If we take the figures for all of Canada we see that there has been a decrease from 3,499,390 to 2,277,753 cords.

That means that no wood is being cut because the pulp mills have resources sufficient for what they have to do next winter. We can see what is happening around here. In my constituency there are pulp mills in Hull, Gatineau, Masson and Buckingham. In each one of these pulp mills they have not reengaged those they laid off in the fall of 1957 because their warehouses were full to the roof. The trade has fallen. What is the reason for that? We must discover what is the reason. I know that we sold a lot more to the United States last year and the previous year but the warehouses are filled to the roof and they have let workers go. In Masson, Buckingham and Hull there are people only working three or four days a week in the summer. What will the situation be like in the winter if trade does not increase?

We are meeting great difficulty now in international trade. The Minister of Labour is not responsible for the decrease in international trade but as he is a member of the cabinet and has a responsibility to see that people who need work get work I think he should use his influence on his colleagues so that they will do something to help us to sell the goods we have to sell today and in the future.

A while ago we were visited by the electrical workers. We were also visited by the automobile workers. I think the pulp and paper workers and many others might have come here because they all have the same complaint. They are only working part time and they are really afraid of the coming winter. Unemployment benefits will not give much encouragement to them because those who are not working this summer will not have the proper stamps in order to draw benefits next winter. What will the government do about that? Will they let the load fall on the shoulders of the municipalities which have not got the means to take care of it? Will the government let it fall on the shoulders of the provincial governments? The provincial and municipal governments have not got the revenues to assume such a great responsibility and I think the federal government has got to do something now because there is a great problem.

With the increase in unemployment this year, with the increase in the cost of living, we get into a vicious circle. When the cost of living rises the unions try to get higher wages, which they deserve, and when they get higher wages the cost of living increases once more and the prices of our goods may be too high for us to compete in foreign markets. So something should be done anyway. If it is grants to those who cannot sell their goods, all right. We cannot expect to take winter as it will come in a very short time. When I think of winter I think at the same time of a little poem which I believe was written by Faure. He said in French:

(Translation):

Here is winter with her sad retinue,
Bitterly cruel to the poor—

(Text):

That is true. When winter comes, then comes the worst unhappiness. I see that the hon. member for Roberval smiles and laughs at that. That is one thing he does not understand. As I said the other day, his mind is so small as well as his head that he cannot catch very many of these things.

I say that when winter comes, whether the hon. member for Roberval laughs today, it is a problem with which we shall be confronted. This is a problem even if the government is not entirely responsible for the situation. But in accepting the responsibility of governing the country, the government has accepted the responsibility of seeing that everything goes well. I therefore expect that the minister will see that something is done to bring a little bit more happiness in Canada next winter.

There is one last thing I want to speak about. It has reference to the bureau of statistics. I know that it is not the responsibility of the Minister of Labour but labour problems are included in it. I said this to the Minister of Trade and Commerce and I want to repeat it today. When statistics are given with regard to the province of Quebec, the city of Hull is never mentioned. Mention is made of Sherbrooke and Three Rivers which are just about the same size as the city of Hull. But Hull, which has been recognized as the metropolis of western Quebec, is never mentioned at all.

Mr. Peters: It has been mentioned in connection with the printing bureau.

Mr. Caron: Oh, yes; it has been mentioned in connection with the printing bureau. I will come to that matter on some other occasion.

Mr. Argue: It is a very good town.

Mr. Caron: Yes; it is a very good town. I think that if Ottawa did not have the present situation in connection with beer, they would be very poor.

An hon. Member: And very dry.

Mr. Caron: Especially so. But the city of Hull, which is one of the most important

cities of the province of Quebec, should be classified apart from Ottawa. When we come to metropolitan figures, it is always included with the city of Ottawa. There is no sense in this at all. The city of Ottawa has nothing to compare with the city of Hull. It is a city of government employees. The manufacturers which we have in Ottawa are not at all the same as those we have on the other side. When we want to look for figures, what do we find? The other day I was looking for pulp and paper figures, and the only thing I could get was Ottawa-Hull, manufacturing, pulp and paper. There is just a small amount of pulp and paper made at Booth's but now it is E. B. Eddy, their Ottawa mill. I think the minister should ask that the city of Hull be recognized as being an important part of this country, an important part of the province of Quebec, and of the same importance as Three Rivers and Sherbrooke. Then when we want to get figures or statistics we would know where we stand. At the present time it is impossible to get real figures. When I have asked the officials of the Department of Labour, they have told me that the only thing they have is with regard to Ottawa-Hull. I do not blame them for that. They go according to the statistics. But I hope that the minister will see that his colleague the Minister of Trade and Commerce, when he asks his department to prepare statistics for the country and for the province of Quebec, will see to it that the city of Hull is considered as a special part of the province of Quebec and not as a part of the big Hull-Ottawa area.

Mr. Peters: Mr. Chairman, I should like to join those who have congratulated the minister on the manner in which he has handled the problems of the past year. I should also like to make some suggestions as to how those problems can be handled more efficiently in the year to come. We do not want to repeat the remarks that have been made by many others and the warnings that have been given in connection with the unemployment situation. I think that these are generally understood. I am quite sure that the minister has given consideration to some of the problems. I should like to endorse the remarks made where the minister was asked to make his voice heard to see that something more would be done in that regard.

I sat this year as a member of the industrial relations committee and I have very little to say on what that committee did. But in the next year, because it is a new government and because they should have a new outlook and because labour hopes to get something better than what was developed in 1948—certainly a number of years have gone by—we hope to see some new development take place in a federal labour code. We are in the unfortunate position federally of being able to look at some of the provinces of Canada and find that they have better labour legislation and better labour codes than has the federal government itself. Particularly because the federal government is in such a narrow and restricted labour field I think that they could quite easily set up a labour code that would be the envy of the nation and an example to the rest of the world.

In this labour code I would suggest that we set a national standard of wages, working conditions, minimum age of employment, vacations with pay; and that further we do something to assist the people across this nation in establishing equal pay for equal work. This problem has been recognized. Certainly the fair sex representatives of the government and in the cabinet have done their share to popularize this idea, as has the ladies throughout the years who have sat in the House of Commons. But still the problem exists where women who work on the same job, who have the same type of employment are not receiving equal pay. Under the federal labour code or in most of the provinces there are loopholes, particularly in the province from which I come, through which you could drive a truck. In most cases, where cases have been laid before the courts, this road through which you could drive a truck is sufficient for the able employer to duck down one of the by-ways. I therefore think the federal government could give leadership in this field. It is not a field in which it is impossible to work out a program which would be acceptable so that once women are doing the same type of work, they would receive equal pay for it.

There are other things that the labour code should protect. One of these is this. It should guarantee to labour the right to organize and to obtain union security in all public and as well as public enterprises. This matter, of course, became a problem federally in the last few months in connection with the civil service. We found that in the civil service there are several classes of employees. There are some that are civil servants and are protected by two associations which are doing a fair job in most respects. But there are classes of employees that are not covered by the civil service and therefore do not come under the jurisdiction of either one of those organizations. We have also heard of party politics being played in these particular fields. We think that the federal government should put them all into a class where they can be represented and protected and can be given the rights that workers should be entitled to

enjoy in all these matters, and this includes public as well as private enterprise.

Secondly, we should streamline conciliation procedures so as to expedite the peaceful settlement of disputes. I wish to state I am irrevocably opposed to compulsory arbitration for any reason whatsoever.

I think the Minister of Labour was very ingenious and should be complimented upon the solution he found for the recent dispute. I do not agree, and certainly none of the members of this group agree, however, that even as a last ditch resort should we accept compulsory arbitration. If it is necessary to set up an administrator in a particular field, then that administrator must be given the right to settle the problem before the problem is returned to the employer and the employees. Negotiations can be conducted on a third party basis but in no case should the employed or the employer be compelled to accept compulsory arbitration.

Thirdly, we should abolish company unions and provide effective sanctions against violations of the provisions of the act. Company unions in many cases have operated to the detriment of the employer as well as the employee and have been detrimental to the welfare of the national economy as well as to the companies concerned. When company unions grow and become federations they in all cases work out to the detriment of the people who set them up in the first place, and we feel they should be outlawed.

These are only some of the things which must be included in a federal labour code, and I am quite sure the minister has been giving these matters consideration and that probably in the next year or two we will develop a new national labour code which will be as good as, if not better than any of the codes in the provinces across the country.

I would like to mention a matter which was discussed in committee and that is the question of international unions which has become a problem in the last few years. They have been built up for various reasons and I think the time has come to say something good and something bad on this aspect of the labour situation. I belonged for a number of years to the steelworkers' union of America, which is an international union, and I was later employed by the international woodworkers of America union. I have had a considerable amount to do with both of these unions and I believe they are a credit to unionism and to the people of Canada. In a number of cases—and this is particularly true of the international woodworkers' union of America —the Canadian membership outnumbers and outranks the United States union membership but they have made no effort to change the structure in order to create a national union, which they could have done quite easily by a vote at any of their conventions. The Canadian union had a majority and could have seceded from the union and become a national union had they wished to do so, but there are many advantages to belonging to an international union.

The reason why these unions grew was because the companies involved also became international companies. I have dealt with companies which are controlled by and are, in many cases, only subsidiaries of United States companies, and in many cases these United States companies have not given consideration to the Canadian economy and the Canadian way of life, but only in a very few cases have they set up their subsidiary companies in such a way that the policies were different in Canada from those in the United States. The unions have found, when dealing with such companies as Johns-Mansville that the United States company has set up their negotiators to consider the Canadian situation from the United States point of view, and the unions would be in a very bad position if they did not have some official who could be called in and who could handle the situation as it related to the United States situation.

I believe, however, there are very few of these unions which have not turned over the majority of control to their local Canadian union, and I have personally sat on wage policy committees with respect to the steelworkers of America. I have also sat on a Canadian wage policy committee and I can assure the house that the decision of such a conference was not similar in any way to those in the United States. We were not concerned with the situation which had developed in the United States wage policy conferences, but were considering the conditions which existed in this country and which were not always similar to those in the states. Our conditions are usually much poorer from an economic point of view than those across the border, and I think I can say with some authority that the financial set-up of the union has been criticized because in many cases money flows from Canada to the United States. It is true that the international treasury is often in the United States, but this money is a book balance for the purpose of transferring dues to that country. The money is deposited in almost every case in Canadian banks and does not go to the United States.

Speaking for the unions to which I belonged, and I was active president for a number of years of a mining union, the money which was brought into Canada to

assist us with respect to very serious problems in the gold mining industry in 1953 will not be equalled in the next hundred years by the amount of money collected in dues from Canadian miners in that area. This United States money was sent for our assistance and does not take into consideration the money spent helping us to organize and to carry on the business of that union. So I think something should be said for these international unions, and I would also point out that their accounting systems in most cases, though very large and adaptable, do prevent problems which have developed in all unions with which I have had anything to do.

Mention has been made of one international union which is a bad one, but I would suggest that you do not just find unions which are bad and union officials who are bad without also finding bad employers. You do not find them separately. One particular case which affects the Canadian people is with respect to a certain gentleman who was brought to Canada to break a communist-dominated union. That might be good or it might be bad, but it is certainly no credit to the Canadian people that they should need co-operation from outside in order to do the job. The gentleman who was brought in had a record of which no labour man would be proud. I suggest that he came in in this instance with the co-operation of the federal government, which acted in its roundabout role as employer in the shipping industry in connection with a matter of which we have disposed. The government assisted in bringing him into Canada and allowing him to operate under the conditions necessary to perpetuate bad unions and bad union representation. If the representative of the union has no power to fire the men in his employ, to intimidate them or to keep them in subservience, then he cannot remain in that position because they will vote him out. But in this particular case the government assisted in keeping that particular gentleman in his position, and if hon. members check the records of the investigations in the United States with respect to the teamsters union they will find that in all cases where the union became corrupt there was also a great deal of corruption on the part of employers.

Check the record and you will find no union can fire employees. They have not that right. They always obtain this treatment by working out a deal with the employers. Where employers and unions are bad you will find these corrupt practices and I suggest that they are so limited in Canada and happen so rarely that they make headlines when they do. There are now over a million union members in this country and there are very few of them who are bad.

There is another problem which the minister could examine if he saw fit, and that is the matter of choosing a union. The minister was involved in the pipe line industry and in the affairs of the Northern Ontario Pipe Line Crown Corporation and in this particular case one of the things that should never happen in unionism happened. There were a number of companies given contracts and these companies had no employees. They went out and negotiated yellow dog contracts with unions who had no membership in that area and when the employees were hired in this case they were told they were going to pay dues to a particular union and that they would not have any choice in the matter. This problem has become acute because these employees on that line are still not represented. I have a letter from a man who paid $90 in dues in nine weeks and who wrote me to find out what unions he belonged to. These conditions exist because of these yellow dog contracts being signed and the government must bear some responsibility because this concerns a crown corporation.

Also, it is understood that at the end of the 11 or 12 months in a normal contract year the employee has the right to decide collectively whether or not he wants the same union to represent him in the coming year. In cases where the employer and the bargaining agent get together and make a deal they take away that right from the worker, because if there has been a contract signed in that period of time the two month period is no longer applicable because the contract is binding on both parties. This is done without holding a membership meeting; in some cases without there being any employee from that union present. The contracts are signed, and the members are away for another ride for another year with the same thing happening again.

The people who say that the unions have strayed from the job they are supposed to do had better take a look at the employer because he also had to do his share and they will find that the blame does not rest alone on either side. This is a field in which the minister could become involved for the benefit of all Canadian workers. There must be some policing of the gross negligence that sometimes takes place, and I think that labour itself would be very happy to have him put in an administrator when these conditions exist and hope he can straighten them out and put them back on the straight and narrow. In all cases when the employees know what the conditions are they are quite willing to take a stand and do something

about them themselves. I think this is a field that the government has already entered because of the conditions they have encountered on the pipe line, and I am sure they must exist in many other fields.

Another problem which has been mentioned in the committee and which I should like to comment on now is the situation where the courts of Ontario decided that the federal government was going to be involved in certification and in the handling of the problem of the uranium workers. I have in my riding hundreds and hundreds of people who are working in the uranium fields in Blind River and the Elliott lake area. They are mostly either Timmins or Kirkland Lake people who have gone there because of the wage structure and they are having a terrific problem in Blind River. This falls under the jurisdiction of the Minister of Labour. The minister was handling these certifications, but I understand they were turned back to the provincial government by the Ontario courts. The government of Ontario has failed for years and years to do very much for the safety of the mining people working in the mines. The rate of accidents in the mines is very heavy. The silicosis problem, which they could have ended many years ago with laws which would have ventilated the mines rather than putting aluminum dust into people's lungs has not been dealt with. In Blind River they are killing people off every day because they have not the time to implement the proper safety regulations.

I suggest that the minister should take these mines back under his jurisdiction and put in honest inspectors, inspectors who do not go to the mine and hang up their clothes and say to themselves: now that is not going to give the company very much notice. But the mining companies know full well that the inspector cannot go anywhere else until he has picked up his clothes, and that the inspection is going to happen there. It is the same thing as members of the House of Commons committee found when they walked over to the printing bureau. When they found that the Department of Public Works had supplied all the fans in town—

Some hon. Members: Order.

The Chairman: I must point out to the hon. member that the printing bureau and the Department of Labour have separate functions, and I would ask him to confine his remarks to the item under discussion.

Mr. Peters: I was only pointing out that the inspections made in the mines should be impromptu inspections not conducted tours, and that they should not give the people notice that they are going to go, because sometimes conditions can be changed or bettered by the time an inspector arrives. I know myself, because when I worked in the mines we were sometimes sent in to scale the bad places so that the loose rock was not so apparent to the inspector. It looked very nice for a while. It was known when the inspector brought his clothes on Friday, because he left them over Saturday and Sunday and that the inspection usually came on Monday, by which time things were usually in fairly good shape. If these inspections came under the minister, conditions would not be the same in these uranium mines.

I should be happy if the gold mines were placed under the jurisdiction of the Minister of Labour, because if such action is justified in the case of the uranium mines the same justification applies in the case of the gold mines inasmuch as the government buys the product and pays a subsidy with regard to its production. In these respects it is similar in nature to the uranium product. I should like to see something constructive done to bring this under the federal code, particularly when I am sure the minister is going to bring it up to the standard of the best province in Canada and probably a little higher. Certainly the people in the industry would appreciate it.

Another problem is the matter of a national pension plan. Certainly, in the field of mining, a national pension plan is a problem which is before the workers and their bargaining agents all the time. Such workers have a tendency to fluctuate from mine to mine and from area to area and that is a good thing. It is the only thing which made it possible for us to develop our resources in the mining field. But I think consideration should now be given to putting in a national pension plan for them. The pension would be supplementary to the basic national pension of $75. It would be contributory. It should be compulsory for a miner working today to pay a percentage of his wages to a pension plan and the employer should be compelled to pay an equal or a greater amount to the plan.

This would be administered by the government and be transferrable from mine to mine, from industry to industry and from field to field. A miner who worked a number of years in the gold mines and then transferred to the nickel mines could carry his pension with him and when he decided to go to Windsor and work in the automobile industry his pension would be transferred. At the end of 20 or 25 years during which he would have worked in various industries in different parts of the country he would have a decent

pension and could retire and live out his last days without asking for a handout. He would have contributed to the pension throughout his lifetime and it would bear a relationship to the wage he had earned throughout that working period.

I urge the minister to give consideration to this type of pension plan. The minister knows full well that most miners have a short working life and live in poverty for a number of years before they die. The wages in the mines have not been sufficient to permit them to buy government annuities implemented by the Department of Labour in years gone by for a similar reason. I feel confident the minister will take action in the field of pensions and thus benefit many people.

I have only one other matter to raise this evening and that is the question of statistics. The Department of Labour has a large research and statistical branch and the work it does is also done by similar branches in other departments of government. This indicates that we should either expand this branch in the Department of Labour and the Department of Trade and Commerce or else expand the work of the bureau of statistics.

Frankly, I am inclined to believe that the bulletin produced by the Department of Labour is superior to that produced by the dominion bureau of statistics because it contains more accurate, up to date and reliable figures. Perhaps it would be a good idea to dispose of the dominion bureau of statistics and enlarge this branch. We are in no position to finance this type of research work in a number of government departments and duplication could be avoided. The material compiled by the dominion bureau of statistics is not always completely accurate because unions and private firms do not like to make full disclosure of their statistics. I have sought on a number of occasions to use this information during negotiations but I have discovered there are other sources which provide more up to date information concerning wages in plants and industries. Some consideration must be given either to expanding or decreasing the work of the dominion bureau of statistics.

With respect to the duplication of effort we find that the results of the two bodies are not always the same. The figures released by the statistical branch of the Department of Labour sometimes bear little or no relationship or similarity to the figures released by the dominion bureau of statistics. I believe we should consider either increasing the work of this branch or amalgamating it with the dominion bureau of statistics.

[Mr. Peters.]

(Translation):

Mr. Loiselle: Mr. Chairman, although there are those who may not attach much importance to the department whose estimates we are being asked to vote, I consider it to be one of the most important government departments, considering that I represent a riding with a large labour population.

In my riding, where 75 to 90 per cent of the constituents are workers, the unemployment problem has been very acute for the past few months. Every week-end I am visited by scores of people who ask me to help them. They include people who are no longer drawing unemployment insurance benefits, yet who have three, four or five children and are without any means. Accordingly their only hope is to go to the St. Vincent de Paul society in their parish, but these charitable organizations ran out of funds last winter, leaving these poor souls with no choice but to walk the streets, cap in hand. Not a single section of the department does anything to help them.

It is all very well to give us these statistics, but they are inaccurate inasmuch as they ignore those who cannot draw benefits and those who are not registered in the unemployment insurance offices. There are all too many people who, while no longer drawing their benefits, are left out of government statistics. The latest statistics available, dated June 21st, show 320,000 persons seeking employment. This is acknowledged to be a record since the war, for the highest number so far was in 1954, I think, when there were 186,000. This makes today's figure a record for unemployment in Canada.

Speaking only of Montreal, there were as of June 19, 1958, 61,000 registered unemployed, whereas on June 20, 1957, there were only 29,900, which means that there are now twice as many. Last week, when I went to an unemployment insurance office with some citizens who thought they had a good chance to obtain something, a member of the staff of that office told me that this year they had paid out just double the amount of last year. It can therefore be said that in the city of Montreal, the government is now paying twice as much in benefits as last year, and that the number of unemployed has doubled, not counting those who are not registered.

You will remember that, during the conference called last July, federal and provincial ministers of labour studied the problem of seasonal unemployment. After the conference, the minister of labour of British Columbia complained that neither his colleagues nor himself had an opportunity to make any

suggestions in this matter. Moreover, it seems that no definite suggestion was made by the federal government on that occasion. It is also to be noted that no report to the house was made on the matter by the Minister of Labour. We can therefore blame the government for not having announced any project which might have been of assistance to those who are suffering from seasonal unemployment, or those who will suffer from it next winter, for their number will certainly be much greater.

According to the last statistics I just mentioned, it is obvious that there were 320,000 unemployed in Canada in the month of June, twice as many as last year. In spite of this serious situation, the government does not want to extend the period of unemployment insurance benefits during the summer months, and still considers that unemployment as seasonal. It is obvious that it is more than a seasonal situation and that the government should assume that responsibility for the whole year.

In that connection, Mr. Chairman, allow me to suggest to the Minister of Labour, in order that he may deal with the unemployment situation in Canada and particularly in Montreal, that a standard should be set so that as soon as unemployment exceeds a certain figure, the government may act at once. In my opinion, the Department of Labour should use the number of unemployed in 1957 as a basis for future years. It is known that, in 1957, there were from 160,000 to 170,000 unemployed and that, at the present time, there are about 320,000, or about twice as many. It means therefore that there is acute unemployment and that our Canadian citizens are in need. It is the responsibility of the government to help the unemployed as it must feel responsible for it.

This government seems to enjoy setting records. After a record deficit from the Minister of Finance, we are today witnessing a record number of unemployed, that is 320,000.

I repeat that, in my opinion, the government should, when a crisis is upon it, as it is this year, when all the funds provided are expended, assume year round responsibility for the unemployed and help them meet the needs of their families.

I suggest that the government should intervene to help the unemployed when the level of unemployment reaches a certain high mark, let us say that of 1957. The present unemployment situation is all the more serious because people who are unemployed at this moment will remain unemployed next winter. How can they obtain sufficient stamps to qualify for unemployment insurance next winter if they cannot work during the summer? As everyone knows, any worker who suddenly loses his job and who resumes work later, must accumulate a credit of 30 weeks of work to be entitled to his meagre pittance in the form of unemployment insurance. What will the present unemployed do now that they are drawing no benefits, and what will people do next winter who are about to cease getting their benefits? Can you imagine the untold number of unemployed and the misery that will prevail throughout the country next winter? I am not wishing that it will be so, Mr. Chairman, but I fear that next fall and next winter will be seasons of hardship for our Canadian workers. How does the government intend to ensure that these unemployed will not be without work indefinitely?

Since the Conservative government has been in power it has done nothing to help the Montreal unemployed to find jobs.

Mr. Parizeau: Are we going to carve out an eleventh province?

Mr. Loiselle: If that hon. member has something to say, he will kindly wait until I am finished, because he will find it perhaps harder to speak standing up than being seated.

It was content to carry on the big projects initiated by the Liberal government, such as the development of the harbour of Montreal and the works leading to the opening of the St. Lawrence seaway.

Moreover, this government did nothing to encourage the authorities of the city of Montreal to improve housing conditions in old districts. What has the government done to come to an agreement with his friend in the province of Quebec and with the city of Montreal with a view to undertaking new projects of town planning in districts such as the one which I represent here?

We have all read with interest recently the report of the committee charged with the study of the influence of the St. Lawrence seaway on the future development of the city of Montreal. It is essential to adapt the facilities of the city of Montreal to conditions which must be expected after the opening of the seaway. In that field, the federal government must accept its responsibilities. I wish the government would tell us what has been done and what action it is planning in this field. It is obvious that the much needed rehabilitation work would create many jobs for our workers, and that such an undertaking would, in the long run, benefit the whole country.

Mr. Chairman, it is deplorable that in the middle of the summer we should have 320,000

unemployed in Canada. I would not want to go back to the 30's, at the time of the dole, when the municipality of Montreal had to support the jobless, thus incurring debts which the taxpayers of that city are still paying off.

(Text):

Mr. Chairman, I should like to say a few words in English to confirm what I said in French and so that the minister may understand better what I just said in French. I am of the opinion that the unemployment problem should be handled on a different basis. In June, 1957 there were some 160,000 people unemployed in Canada. In June 1958 there were 320,000 people out of work in Canada. The government and the Minister of Labour should inaugurate some system by which we could take care of the unemployed.

We do not like to recall the depression years when whole families were on the dole. In many instances their only food was what they received on the bread line. Workers experienced a period of abject poverty. Life was not worth living. Parents and children were practically starving and dying of hunger and cold. Everybody remembers the 1930's in Montreal. I know something about it. I was living in the city of Montreal. Montreal is still paying off the debts that it incurred to support the out-of-work people in Montreal at that time.

I have a press clipping from the Vancouver *Sun* of July 25, 1958, and I should like to read the following extract:

> Provincial labour minister Lyle Wicks' diagnosis of Ottawa's attitude to unemployment confirms what the *Sun* has several times suggested.
>
> The Diefenbaker government is determined to ignore what properly ought to be called "recessional unemployment".
>
> At the recent municipal-provincial conference on the jobless problem, Mr. Wicks complains, Ottawa tried to restrict discussion to seasonal unemployment. It would limit discussion to what may be expected this winter.
>
> At that, Ottawa has a right to be concerned about the coming winter. As Alderman Halford Wilson said, unemployment is bad enough now and likely to be worse in the winter if preventive steps are not taken. The same day he said it, the local unemployment insurance office warned that "no significant improvement can be expected in the near future."
>
> How true this could be is shown in official figures this week disclosing 320,000 Canadians out of work in mid-June. This is a decline of 46,000 from May but double the figure of a year previous.

As to the suggestion I made a few minutes ago, I have a press clipping from the Toronto *Star* dated July 14, from which I should like to read the following extract:

> There are two ways the federal government can provide for those who will need help. It can change the Unemployment Insurance Act at this session of parliament, lower the requirement that six months steady work must take place between first and second claims for insurance. Or, if it feels that this would remove the insurance principle from the act, it can make special provision for those unemployed who will not qualify for aid. Either way, the government must be prepared to take care of men and women out of work through no fault of their own.

In conclusion, Mr. Chairman, I ask that the government and the Minister of Labour pay special attention to the unemployed people in Canada. I deplore unemployment myself because I represent a constituency consisting almost wholly of labouring people. I know what the unemployed suffer. I again ask that the government and the Minister of Labour enact some measure, if at all possible, so that in bad years like 1958 the unemployed people will be taken care of by the government 12 months in the year, if that is necessary. This will help the people of Canada, and we are here to protect them as far as we possibly can. I would like to see more people working next winter.

Mr. Martel: Mr. Chairman, I should like to say a few words on this subject. First, I should like to congratulate the Minister of Labour and the government for the action they took last year with regard to unemployment by increasing the amount of weekly benefits available to persons covered by unemployment insurance. I think this is clear proof that the government is discharging its responsibility and should a situation similar to that of last winter arise again I am confident that the government will do its best to come to the help of the unemployed. Something should be done, said the hon. members for Hull and St. Ann, but apparently they are unaware that something has already been done. A lot of things have been done by the government and if no action had been taken when the government took office we would have a much worse situation than last year. As proof of this one only has to look at what has happened across the border since then. However, it is most encouraging to note that the United States economy is on the recovery road and the results should be felt in Canada later this fall and throughout next year. One only has to look at today's newspapers to get an idea of the optimistic opinion now prevailing in the United States. The impact of their recovery will be felt in Canada all the more now that the new Progressive Conservative government has repaired our own economy in all sectors. It is reported in today's newspapers that the automobile industry is now staging a spectacular recovery across the border and United States businessmen are confident that 1959 will be a record year. For all these reasons

I believe that the attitude of the Minister of Finance when he presented his budget will be proved to be right and that we may well find that he was not optimistic enough with regard to the year 1958.

What has been done by the government speaks for itself. The record is there and the facts are known throughout the country. Of course, there are still a few clouds in the economic sky but the situation has improved steadily since the government took office. In all sectors of the economy, including employment prospects, official figures across the country clearly indicate that that is so. For the purpose of having it on record I should like to read some extracts from an article that appears in a paper published in my region. I am pretty sure that the hon. member for Hull can see the headline. It is headed, "Employment Prospects Looking Good; Improvement Says Local Commission." The article appeared in the Val d'Or *Star* of August 13 and reads in part as follows:

> Statistics issued for the months of July and August by the commission manager, Mr. M. Decarie, revealed Val d'Or and immediate district as now being placed in one of the best employment areas of the country. In some respects, employment conditions are ahead of those existing a year ago. Despite the fact that businessmen in town describe this summer as "poor" in connection with tourism, the commission states that more jobless have been taken on in this field than there were during the same period last year.
>
> In his report Mr. Decarie says that mine employment has shown a marked improvement in activities in all spheres. This, he comments, has been the best month for mine workers since last year. Operations in the bush are remaining steady, and so far there has been no suspension of work as there was last year.
>
> Construction too has shown a considerable upturn over the past eight weeks, and again employment prospects here are way ahead of a year ago. More building projects over a wide area of northwestern Quebec have accounted for the upsurge in employment among construction workers. In some areas, the *Star* learned this week, it is becoming difficult to obtain skilled building workers.
>
> Commerce and transport industries were also well to the fore during July and August, and a steady improvement was recorded in these two employment categories.

This shows, Mr. Chairman, that the public works program and the actions that have been taken by the government are being felt throughout the country because my area is a remote one and we are feeling the improvement right now. That is not all that is said in this article. I should like to read the last paragraph, which is as follows:

> Although many cities and towns throughout the country are anticipating the coming winter with grave apprehension in employment prospects, commission officials in Val d'Or are quietly optimistic that we shall not reach the depressing unemployment figures reached here last spring.

I wish to take this opportunity, Mr. Chairman, to renew my request to the Minister of Labour for employment offices in my riding of Chapleau. It covers an area of over 80,000 square miles and we have no such offices. There is a population of some 65,000 people and we need a few offices and sub-offices. With such offices I believe it would be easier for our workers to find jobs right in the riding whereas now they have to travel quite a distance to find work.

Mr. Carter: Mr. Chairman, there is one matter which I should like to bring to the minister's attention and I believe this is the only item on which it can be raised. However, before I deal with it I should like to associate myself with the pleas made this afternoon by the hon. member for Cartier and the hon. member for Burnaby-Coquitlam for the establishment of institutions to train teachers as vocational training instructors. I should also like to associate myself with the request made by the hon. member for Bonavista-Twillingate.

The matter which I wish to bring to the minister's attention has to do with the Merchant Seamen Compensation Act which I believe is administered by the Department of Labour. Perhaps I can save time and illustrate my point better by describing an actual case. One of my constituents lost his life at sea and left behind a wife and several children. The wife and children received an allowance under the Merchant Seamen Compensation Act. Susequently the mother died leaving the children as orphans.

The Chairman: Order. I regret to interrupt the hon. member but there is far too much noise in the house tonight. It would be appreciated if hon. members would use the smoking room to carry on their conversations.

Mr. Carter: Subsequently the mother died leaving the children alone in the world. These children were taken into the home of their married sister who acted as a foster mother and after a time the allowance under the Merchant Seamen Compensation Act was restored but because of the wording of this act it was impossible for the foster mother to receive the regular allowance. The reason for that was that the Merchant Seamen Compensation Act stipulates that in order to qualify for an allowance the foster mother must move into the house where the children originally lived. To me that seems to be a rather senseless requirement.

If you take into consideration the situation of a merchant seaman you will find that he is an ordinary person. He is not likely to have a very big bank account and the mother

who is obliged to exist on charity and allowances is going to find it difficult to keep that house in proper repair. In this case the children were taken out of the house in which they lived and were moved into the sister's house in the same community, only a few yards away from where they originally lived.

Surely we in this parliament with that legislation should be concerned about the welfare of the children and not about keeping establishments open. In this case the children have moved into a better home than they had previously. Yet their foster mother is deprived of the allowance because of the wording of the Merchant Seamen Compensation Act. I think that fact indicates that this legislation needs to be overhauled, and I would ask the minister to give the matter serious consideration.

Mr. Deschatelets: Representing as I do a riding which is mostly made up of members of the labouring forces, I think there is no doubt that I am as concerned as is any other member about the unemployment situation and as anxious to take part in this debate on the estimates of the Minister of Labour. Since we are dealing with the estimates I should like to take advantage of the opportunity to ask two questions of the minister in connection with the compilation of unemployment figures. From month to month we receive one set of figures compiled by the dominion bureau of statistics and another one compiled by the unemployment insurance commission. When the minister was sitting on this side of the house I well remember how dissatisfied he was with these two sets of figures. Since we have today more unemployment than we had a year ago, I submit that we should try to improve the system of compilation that we have. With the various offices of the national employment service covering almost every area of this country, I do not see why a more accurate system of compilation with regard to unemployed persons cannot be established. The more accurate such a system is, the easier it would be to bring relief to a specific area where unemployment is more serious than it is in another one.

This brings me, Mr. Chairman, to a question I should like the minister to answer. The Minister of Labour has reiterated many times that the reason why the figures of the national employment service were set aside was that the monthly report included a number of persons who already have a job and are applying for another one. If this is the only reason—and the minister has never given another one—for not using these figures, I should like now to quote the latest report issued by the national unemployment service. On the bottom of this report we read that the count excludes registrations from persons known to have a job and applying for another one. It therefore seems that we are entitled now to an explanation by the minister on this point, because the reason he has given many times in this house is contradicted by the latest report we have received from the national employment service.

I know that the dominion bureau of statistics does not fall under the jurisdiction of the Department of Labour but since the minister is using these figures I should like to have from him some explanation as to how these compilations are made. I hope that the minister in his remarks before the item is voted upon, will care to give us some comment on those two particular points that I have raised.

Some hon. Members: Ten o'clock.

Mr. Deschatelets: Since it is ten o'clock, Mr. Chairman, and as I have a few more remarks to make, may I call it ten o'clock?

Progress reported.

Resolutions adopted in committee of supply this day reported and concurred in.

BUSINESS OF THE HOUSE

Mr. Chevrier: May I inquire what the business will be for tomorrow? Perhaps when the house leader is replying, he might tell us what we will do on Monday and Tuesday as well.

Mr. Green: Tomorrow we shall continue with the estimates of the Department of Labour. Then we shall take those of the Department of Mines and Technical Surveys and of the Department of Transport. On Monday we shall commence with the three measures standing in the name of the Minister of Veterans Affairs.

Mr. Chevrier: In the order on the order paper?

Mr. Green: Numbers 1, 2 and 3 on today's order paper; also item No. 16, which is an amendment to one of the other three. Then we shall take item No. 7, second reading of an act respecting the development and improvement of the national capital region; then item No. 12, a resolution preceding a bill concerning the Railway Act; item No. 14, the emergency gold mining resolution; the item which appears under government notices

of motion today having to do with an agreement made under the Maritime Coal Production Assistance Act; then the radio resolution which is on the *Votes and Proceedings* today; then item No. 8, second reading of an act to provide conditional liberation of persons undergoing sentences of imprisonment; then item No. 9, an act to amend the Customs Tariff; then item No. 5, an act to amend the Income Tax Act. If we get all those through before ten o'clock we will have done very well.

Mr. Chevrier: That ought to keep us busy for Monday and Tuesday.

Mr. Green: I do not know about the items for Tuesday as yet.

Mr. Chevrier: It is nice to be optimistic.

Mr. Starr: It will keep you busy until October and he has plenty more.

At ten o'clock the house adjourned, without question put, pursuant to the order of the house passed on August 4.

Questions

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

CHARLES LYNCH

Question No. 92—**Mr. Fisher:**

1. Is Charles Lynch an employee of the Canadian Broadcasting Corporation?
2. If not, has he made any appearances for C.B.C. television at Ottawa since May 12, 1958?
3. If so, how many such appearances?
4. Have members of the press gallery made such appearances? If so, what are their names and on how many occasions, since the above date?

Answer by: **Hon. George C. Nowlan (Minister of National Revenue):**

The Canadian Broadcasting Corporation advises as follows:

1. No.
2. Yes.
3. Nine (up to the end of June).
4. The following members of the press gallery have made appearances for C.B.C. television at Ottawa up to the end of June:

Michael Barkway on two occasions
John Bird on two occasions
Arthur Blakely on one occasion
Bill Boss on two occasions
Clement Brown on one occasion
Grant Dexter on one occasion
Blair Fraser on two occasions
Marcel Gingras on one occasion
Jean Grand-Landeau on two occasions
Georges Langlois on two occasions
Robert McKeown on five occasions
Lorenzo Pare on one occasion
Frank Swanson on two occasions.

RADIO RELAY TRANSMITTERS, B.C.

Question No. 114—**Mr. Howard:**

1. In which communities in British Columbia, if any, do low power radio relay transmitters operate?
2. In each of the above mentioned communities what is the (a) population; (b) number of radio receiving sets served by each such transmitter?

Answer by: **Hon. George C. Nowlan (Minister of National Revenue):**

The Canadian Broadcasting Corporation advises as follows:

1.

Revelstoke
Burns Lake
Terrace
Field
Lytton
Fernie
Prince George
Osoyoos
Hope
Kitimat
Natal
New Hazelton
Grand Forks
Kimberley
Williams Lake
Creston
North Bend
Vanderhoof
Salmon Arm
Ocean Falls
Golden
Greenwood
Princeton
Quesnel
Cranbrook
Smithers
Ashcroft
Oliver
Castlegar
Kaslo
McBride

2.

Location	Population	Estimated No. radio receiving sets
Revelstoke	5,700	1,500
Burns Lake	3,100	800
Terrace	5,900	1,500
Field (1)	900	200

SECOND TRANS-CANADA HIGHWAY—REPRESENTATIONS FROM WESTERN PROVINCES

Question No. 139—**Mr. Howard:**

1. In addition to the present trans-Canada highway, have any representations or requests been made to the federal government for financial assistance in the construction of an east-west highway through, or in the provinces of British Columbia, Alberta, Saskatchewan and Manitoba?

2. If so, (a) from whom and upon what date was each representation received; (b) what financial arrangements were suggested in each case; (c) what disposition was made to each representation?

3. What action has the government taken with respect to the general suggestion for such highway?

Answer by: **Hon. Howard C. Green (Minister of Public Works):**

1.—Yes.

2.—

(*a*) Representations received	Date	(*b*) Financial and other arrangements suggested	(*c*) Disposition made
Merritt board of trade Merritt, B.C.	3-6-58	Endorses resolution of Edmonton chamber of commerce requesting federal aid in construction of Yellowhead route highway.	Acknowledged and noted for consideration.
Central North Thompson board of trade, Clearwater, B.C.	26-5-58	Urges agreement between federal government and the government of the province of British Columbia covering construction of proposed Yellowhead highway.	To be considered but advised that priority to be given to completion of present trans-Canada highway.
McBride district board of trade McBride, B.C.	24-5-58	Endorses resolution of McBride farmers' institute concerning Yellowhead highway and solicits effort be made to carry it out.	Advised priority to be given to completion of present trans-Canada highway.
Trans-Canada highway The Southern Route Association, Castlegar, B.C.	12-5-58	Inquires as to whether or not the government of the province of British Columbia has requested federal aid for completion of southern trans-provincial highway No. 3.	Advised that the government of the province of British Columbia has requested federal aid in the construction of highways, but no specific request for No. 3 highway.

(a) Representations received	Date	(b) Financial and other arrangements suggested	(c) Disposition made
McBride farmers' institute, McBride, B.C.	6-5-58	Urges federal government to offer the government of the province of British Columbia fifty per cent of cost of construction of Yellowhead highway between Yellowhead and Kamloops, B.C.	Acknowledged and noted for consideration.
Kamloops board of trade, Kamloops, B.C.	14-4-58	Requests action on construction of proposed Yellowhead route highway between Kamloops and Jasper.	Advised Yellowhead route would be considered in any overall program of federal aid to highways. Priority is being given to completion of present trans-Canada highway.
E. H. Hallock, Hope, B.C.	11-4-58	Urges construction of Yellowhead route in British Columbia.	Acknowledged and noted for consideration.
Mr. and Mrs. Chas. Cleaveley, Little Fort, B.C.	25-3-58	Requests Yellowhead highway through British Columbia be completed.	To be considered but advised priority to be given to completion of present trans-Canada highway.
Minister of Highways, Province of British Columbia, Victoria, B.C.	4-3-58	Requests agreement concerning construction of Yellowhead route highway from Kamloops to Jasper on 50-50 share basis.	Acknowledged and noted for consideration.
Yellowhead route association of British Columbia	28-2-58	Requests offer of federal aid to government of province of British Columbia for construction of Yellowhead route on same basis as trans-Canada highway agreement.	To be considered but advised priority to be given to completion of present trans-Canada highway.
C. H. Wright Trail, B.C.	30-1-58	Urges federal aid for construction of trans-Canada highway on southern Route, Salmon-Creston and Columbia river to Cascade.	Acknowledged and noted for consideration.
Yellowhead route Association of British Columbia, Clearwater, B.C.	27-1-58	Endorses resolution of Edmonton chamber of commerce requesting federal aid in construction of Yellowhead route highway.	Acknowledged and noted for consideration.
Trans-Canada highway the southern route association, Castlegar, B.C.	16-1-58	Urges federal aid for completion of trans-Canada highway No. 3 (southern route).	Acknowledged and noted for consideration.
Associated boards of trade and chambers of commerce of southeastern British Columbia, Castlegar, B.C.	15-1-58	Urges federal aid for early completion of trans-Canada highway No. 3 (southern route).	Acknowledged and noted for consideration.
Central North Thompson board of trade, Clearwater, B.C.	23-12-57	Urges federal government in co-operation with the provincial governments institute an overall policy aimed at creating an arterial highway system on the basis of the trans-Canada highway agreements.	Acknowledged and noted for consideration.
Mayor Wm. Hawrelak, the city of Edmonton, Edmonton, Alta.	28-5-58	Requests Canada's participation in construction of proposed Yellowhead highway.	Advised priority to be given to completion of present trans-Canada highway.
Hinton and district chamber of commerce, Hinton, Alta.	23-5-58	Requests offer of federal aid to government of province of British Columbia for construction of Yellowhead route.	To be considered but advised priority to be given to completion of present trans-Canada highway.
Vermilion board of trade, Vermilion, Alta.	9-5-58	Requests immediate construction of Yellowhead route highway by federal and provincial governments.	Advised priority to be given to completion of present trans-Canada highway.
Trans-Canada highway system (Yellowhead route) association, Edmonton, Alta.	25-11-57	Requests co-operation with provinces on same basis as for trans-Canada highway, to create an arterial highway system.	Acknowledged and noted for consideration.

Questions

(a) Representations received	Date	(b) Financial and other arrangements suggested	(c) Disposition Made
E. T. Love, Edmonton, Alta.	28-10-57	Requests action to construct Yellowhead route.	Advised priority to be given to completion of trans-Canada highway on present route.
North Battleford chamber of commerce, North Battleford, Sask.	6-6-58	Endorses resolution of Edmonton chamber of commerce requesting federal aid in construction of Yellowhead route highway.	Acknowledged and noted for consideration.
Lloydminster and district chamber of commerce Lloydminster, Sask.	5-6-58	Endorses resolution of Edmonton chamber of commerce requesting federal aid in construction of Yellowhead route highway.	Acknowledged and noted for consideration.
Saskatoon board of trade, Saskatoon, Sask.	5-6-58	Requests agreement between Canada and the provinces and early construction of Yellowhead route highway.	To be considered but advised priority to be given to completion of present trans-Canada highway.
Yorkton and district chamber of commerce, Yorkton, Sask.	12-5-58	Endorses resolution of Edmonton chamber of commerce and urges immediate construction of Yellowhead route highway by federal and provincial governments.	To be considered but advised priority to be given to completion of present trans-Canada highway.
Northern Trans-Canada route association, Prince Albert, Sask.	12-3-58	Urges construction of a second trans-Canada highway through Riding Mountain national park in Manitoba to Mafeking, through Tisdale, Melfort, Prince Albert, Shellbrook, Turtleford and Lloydminster in Saskatchewan.	Acknowledged and noted for consideration.
The Saskatchewan chamber of commerce, Regina, Sask.	27-12-57	Urges government of the province of Saskatchewan to complete its section of a second east-west highway and requests federal government assistance on same basis as for the trans-Canada highway.	Acknowledged and noted for consideration.
Saskatchewan No. 14 highway association, Wynyard, Sask.	6-11-57	Requests high priority be given to construction of proposed Yellowhead route.	Acknowledged and noted for consideration.
Town of Kamsack, Kamsack, Sask.	16-10-57	Requests federal government give serious consideration to commence second trans-Canada highway immediately.	Acknowledged, project under consideration by provincial and federal governments.

3. The matter of federal aid to the provinces for highways other than the trans-Canada and roads to resources, for which contributions are now being made, will receive consideration by the government. Priority is being given, however, to the completion of the present trans-Canada highway.

[The following items were passed in committee of supply]:

DEPARTMENT OF NORTHERN AFFAIRS AND NATIONAL RESOURCES

Water Resources Branch—

276. Administration, operation and maintenance, including grant of $350 to the international executive council, world power conference and a grant of $35,000 to the Canadian National Committee of the world power conference to assist in defraying the costs of the conference's sectional meeting to be held in Canada in 1958, $1,257,459.

277. Construction or acquisition of buildings. works, land and equipment, $123,500.

278. To provide for studies and surveys of the Columbia river watershed in Canada, $227,780.

279. Fraser river—federal expenditures in connection with investigations to be carried out by Fraser River Board, $95,000.

280. To provide for a contribution to the cost of constructing a dam on the Conestogo river near Glen Allan, Ontario, for the purposes of flood control and water conservation, in accordance with the terms of an agreement entered into between Canada and the province of Ontario, $500,000.

281. To provide for federal expenditures in connection with investigations to be carried out by the Lakes Winnipeg and Manitoba Board, $40,000.

Northern Administration and Lands Branch—

282. Branch administration, $1,209,353.

Yukon Territory—

283. Operation and maintenance, including $1,000 for grants to museums in the Yukon Territory, $820,897.

284. Construction or acquisition of buildings, works, land and equipment, $3,251,084.

285. To authorize payments to be made, in respect of each of the fiscal years in the period commencing on the 1st day of April, 1957, and ending on the 31st day of March, 1962, to the government of the Yukon Territory, in accordance with an agreement to be entered into by the Minister of Finance, with the approval of the Governor in Council, on behalf of the government of Canada, and the commissioner of the Yukon Territory, on behalf of the government of the Yukon Territory, such agreement to provide, on such terms and conditions as may be agreed upon, that the government of the Yukon Territory will not impose,

levy or collect individual income taxes, corporation income taxes, corporation taxes or succession duties, as defined in the agreement, for the five-year period specified therein; the payment of the total of amounts under the agreement to be calculated on the following bases:

(a) an annual subsidy to the government of the Yukon Territory of eighty cents per head in respect of a population of twelve thousand one hundred and ninety (12,190) persons, being the population of the territory for the year 1956 as determined by the census taken in that year, $9,752;

(b) a grant in aid of the government and council of the territory, $30,000; and

(c) for the fiscal year ending in 1958, the sum of four hundred and nineteen thousand dollars ($419,000) and for each of the four immediately following fiscal years the greater or

(A) the quotient obtained by dividing

1. four hundred and nineteen thousand dollars ($419,000) multiplied by the value of the gross national product per capita for the calendar year immediately preceding the calendar year in which the fiscal year for which the payment is made commenced,

by

2. the value of the gross national product per capita for the calendar year 1956,

or (B) ninety-five per cent of the sum paid under this subparagraph in the immediately preceding fiscal year;

the estimated total amount required for the fiscal year 1958-59 being, $478,752.

Northwest Territories and Other Field Services—

286. Operation and maintenance, including $1,000 for grants to museums in the Northwest Territories, $6,263,941.

287. Construction or acquisition of buildings, works, land and equipment, including costs arising out of the relocation of the town of Aklavik and payment of such compensation as the Governor in Council prescribes to persons affected by such relocation, $15,053,450.

288. To authorize payments to be made, in respect of each of the fiscal years in the period commencing on the 1st day of April, 1957, and ending on the 31st day of March, 1962, to the Northwest Territories Revenue Account, in accordance with an agreement to be entered into by the Minister of Finance, with the approval of the Governor in Council, on behalf of the government of Canada, and the commissioner of the Northwest Territories, with the approval of the Council of the Northwest Territories, on behalf of the government of the Northwest Territories, such agreement to provide, on such terms and conditions as may be agreed upon, that the government of the Northwest Territories will not impose, levy or collect individual income taxes, corporation income taxes, corporation taxes or succession duties, as defined in the agreement, for the five-year period specified therein; the payment of the total of amounts under the agreement to be calculated on the following bases:

(a) an anual subsidy to the government of the Northwest Territories of eighty cents per head in respect of a population of nineteen thousand three hundred and thirteen (19,313) persons; being the population of the Territories for the year 1956 as determined by the census taken in that year, $15,450.40;

(b) a grant in aid of the government and Council of the Territories, $30,000; and

(c) for the fiscal year ending in 1958, the sum of five hundred and twenty thousand dollars ($520,000) and for each of the four immediately following fiscal years the greater of

(A) the quotient obtained by dividing

1. five hundred and twenty thousand dollars ($520,000) multiplied by the value of the gross national product per capita for the calendar year immediately preceding the calendar year in which the fiscal year for which the payment is made commenced,

by

2. the value of the gross national product per capita for the calendar year 1956,

or

(B) ninety-five per cent of the sum paid under this subparagraph in the immediately preceding fiscal year;

the estimated total amount required for the fiscal year 1958-59 being $585,451.

289. To provide for contributions to the provinces to assist in the development of roads leading to resources in accordance with agreements that have been or may be entered into by Canada and the provinces, $9,000,000.

Forestry Branch—

290. Branch administration, $139,678.

Forest research division—

291. Operation and maintenance, $1,328,886.

292. Construction or acquisition of buildings, works, land and equipment, $164,283.

Forestry operations division—

293. Administration, operation and maintenance, $302,780.

294. Construction or acquisition of buildings, works, land and equipment, $19,230.

295. To provide for contributions to the provinces for assistance in forest inventory, reforestation and forest fire protection in accordance with agreements that have been or may be entered into by Canada and the provinces, $1,650,000.

296. To provide for contributions to the provinces pursuant to agreements entered into or to be entered into, with the approval of the governor in council, by Canada with the provinces, of amounts equal to one-half of the amounts confirmed by the provinces as having been spent by them in establishing forest access roads and trails for the attainment of adequate fire protection as well as other aspects of forest management, $1,000,000.

297. To provide for a contribution to the province of New Brunswick for assistance in a program designed to combat the spruce budworm infestation, in accordance with an agreement entered into by Canada and the province, $600,000.

Forest products laboratories division—

298. Operation and maintenance, $750,299.

299. Construction or acquisition of buildings, works, land and equipment, $259,260.

300. Grant to Canadian Forestry Association, $20,000.

301. Eastern Rockies Forest Conservation Board—remuneration and expenses of the federal member of the board, $5,575.

National Museum of Canada—

302. Administration, operation and maintenance, $603,292.

Canadian Government Travel Bureau—

303. To assist in promoting the tourist business in Canada, including grant of $5,000 to the Canadian Tourist Association, $2,182,206.

506. To authorize advances to the northern Canada power commission for the purpose of capital expenditures in accordance with subsection (1) of section 15 of the Northern Canada Power Commission Act, $7,910,000.

507. To provide for advances in accordance with agreements entered into or to be entered into pursuant to the Atlantic Provinces Power Development Act, $11,329,000.

508. To authorize the operation of a revolving fund, in accordance with section 58 of the Financial Administration Act, for the purpose of acquiring and managing stores required for the operation and maintenance of the national parks of Canada; the amount to be charged to the revolving fund at any time not to exceed, $1,000,000.

National parks branch—

National parks and historic sites services—

580. Construction or acquisition of buildings, works, land and equipment—further amount required, $500,000.

581. Grant in aid of the development of the International Peace Garden in Manitoba—further amount required, $5,000.

582. To authorize payment of the national battlefields commission for the purposes and subject to the provisions of an act respecting the national battlefields at Quebec (Chap. 57, Statutes of 1908, as amended)—further amount required; payments made or to be made for the erection of a monument to Sir George Garneau as ratified, $20,150.

583. Grant to the city of Orillia to assist in the commemoration of Stephen Leacock in accordance with an agreement between the government of Canada and the city, $15,000.

Northern administration and lands branch—

584. Branch administration—further amount required, $59,440.

Northwest Territories and other field services—

585. Operation and maintenance—further amount required, $69,604.

586. Construction or acquisition of buildings, works, land and equipment—further amount required, $3,500,000.

National Museum of Canada—

587. Administration, operation and maintenance—further amount required, $15,000.

Canadian government travel bureau—

588. To assist in promoting the tourist business in Canada—further amount required, $78,000.

659. To provide for advances in accordance with agreements entered into pursuant to the Atlantic Provinces Power Development Act—further amount required, $2,290,000.

HOUSE OF COMMONS

Saturday, August 16, 1958

The house met at eleven o'clock.

TRADE

ANNOUNCEMENT OF NEW EXPORT CONTROL LIST

Hon. Gordon Churchill (Minister of Trade and Commerce): Mr. Speaker, I have an announcement to make with regard to the Canadian export control list. By order in council P.C. 1958-1158 of August 15, 1958, a new export control list is established, effective from August 16. This will be published in an early issue of the *Canada Gazette*, perhaps the August 27 issue. I have here copies of the revised export control list which I will table for the information of hon. members.

In revising our export control list in conformity with the agreed new strategic list, it has been the objective wherever possible to narrow the range of commodities of all types which will require export permits. As a result, in many cases items which remain under control have had to be defined in greater detail. Although the effect at first glance at the list disguises the real extent to which the list has been narrowed, examination will show that there have been very significant changes in the content of the list as far as Canadian export trade is concerned. Such items as aluminum, copper, and many forms of nickel have been dropped from control, as have a number of items of metal-working machinery, general industrial equipment, electronic equipment, transportation equipment and chemical products. The revised list will include as new items certain electronic devices, jet fuels, containers for liquid gases, and certain chemicals.

Many of the items which have been dropped from the list in all likelihood will find no place in our exports to Soviet bloc destinations. The most significant effect of removal of control in these cases is that permits will no longer be required for exports to friendly countries. The export control list, moreover, serves an important function in indicating those items which are regarded as strategic, and an endeavour has been made to set forth the list in such form that traders may use it for this purpose. This means that if items are not on the export control list, permits will be readily available for export to any Soviet bloc destination on application. Permits for all exports to Soviet bloc destinations will still be required under our general area control of shipments to such destinations.

It is our purpose in administering export controls to reduce the paper work for all concerned to the essential minimum, and to eliminate misunderstanding. Our new export control list will serve as a clear lead as to strategic control policy. We are prepared to discuss with exporters ways and means by which we can still further simplify for them the procedure in complying with the remaining controls. Special permits can be used for regular shipments of items on the export control list to specified destinations, and further general permits for specified goods to destinations subject to area control. These possibilities will be given continuing attention in the department, and exporters are invited to indicate their interests. Our objective is a major reduction in the necessity for individual licences.

Hon. L. B. Pearson (Leader of the Opposition): In connection with a statement the minister has just made, may I ask whether when he uses the expression "Soviet bloc countries" he includes continental China in that group, and if not whether there is a special list for continental China?

Mr. Churchill: Continental China is included. There is no special list for that country now.

[*Later:*]

U.S.S.R.—REPORTED OPENING OF TRADE COMMISSIONER'S OFFICE

On the orders of the day:

Mr. Hazen Argue (Assiniboia): Mr. Speaker, would the Minister of Trade and Commerce care to comment on a press report this morning to the effect that Canada is considering the opening of a trade commissioner's office in Moscow this fall? Would the minister further say whether he is giving consideration to a personal tour of Soviet bloc countries in the interests of expanding trade?

Hon. Gordon Churchill (Minister of Trade and Commerce): Mr. Speaker, both these questions were raised when the estimates of trade and commerce were before the house and I commented on them on that occasion; this is simply a repetition. I said at that time

that we were seriously considering the question of posting a trade commissioner to Russia, but that at the moment no decision has been reached.

With regard to whether or not I was contemplating a trade mission, I said at that time that consideration was being given to active trade promotion but that I had not reached a decision as to what countries might be visited.

[*Later:*]

NAFEL—PROPOSED PROCEDURE FOLLOWING WITHDRAWAL OF SPECIAL PERMITS

On the orders of the day:

Mr. J. R. Tucker (Trinity-Conception): Mr. Speaker, I should like to direct a question to the Minister of Trade and Commerce. On August 1 the minister announced that the government had decided that the exclusive right of export held by the Newfoundland Associated Fish Exporters Limited would terminate next July. I should like to ask the minister if he will advise this house what the government proposes to substitute for NAFEL.

Hon. Gordon Churchill (Minister of Trade and Commerce): Mr. Speaker, this subject has been before the house by way of question and answer on several occasions. We received representations from interested parties engaged in the Atlantic fisheries, and I stated at the time the date was set for the conclusion of the exclusive right of NAFEL that we were quite prepared to continue negotiations with the interested parties in order to arrive at some solution to the problem. It has to be a joint undertaking, not one solely sponsored or proposed by the dominion government; there is a responsibility resting upon the provincial government of Newfoundland and upon the associations that are engaged in the fishing industry.

I can assure the hon. member that we are quite prepared to play our part in these negotiations and to provide some of the initiative required to arrange meetings of the interested parties, and I hope that before too many months have gone by a solution to this very important problem can be reached. We have made quite a study of the difficulties facing the Atlantic fisheries, and there is no question at all but that steps should be taken, perhaps jointly between the dominion government and the provincial government, to solve some of these difficulties.

EXTERNAL AFFAIRS

MIDDLE EAST—STATEMENT ON DEVELOPMENTS AT UN SPECIAL ASSEMBLY

Right Hon. J. G. Diefenbaker (Prime Minister): Mr. Speaker, a number of hon. members have asked me respecting the major developments which have taken place during the emergency special session of the general assembly up to the time of its adjournment yesterday.

President Eisenhower, in his statesmanlike speech, made a number of points which deserve the close attention of all members of the United Nations. Among those points was the emphasis which he placed on the need for the economic development of the area in the Middle East and the need to have the function of leadership invested in the Arab states themselves. Similarly, in the suggestions he made for a United Nations body to examine the question of the flow of heavy armament to the nations of the Middle East, he stressed that any arrangements made in this connection must reflect the views of the countries of the region.

The President made a number of other suggestions in which Canada has a continuing interest and which are now undergoing thorough study.

One of the suggestions made by the President, that for a stand-by United Nations peace force, is of course of particular importance and interest to Canada, because we have consistently advocated the need for flexible United Nations machinery which can be employed to prevent dangerous international situations from developing into international hostilities. We hope the present crisis in the Middle East will focus the attention of members of the United Nations on the necessity for taking steps so the United Nations can quickly and effectively deal with threats to any country's independence and integrity, not only to restore order once hostilities have broken out but to prevent armed conflict from breaking out at all.

The points made by the President that I have mentioned so far relate to long-term problems in the area which may require extensive consideration and detailed preparation, because they are essentially regional problems. There are, of course, more immediate problems in the area demanding early solution. President Eisenhower referred to these as well in his references to United Nations concern for Lebanon and to the need for United Nations measures to preserve peace in Jordan. The United Kingdom foreign secretary and others have also dealt in preliminary fashion with the issues involved. However, the statement of the Jordanian delegate on Thursday to the effect that Jordan did not wish to have either United Nations observers or a United Nations force on its territory has introduced a new and unexpected element, requiring careful examination in the light of further information that may become available. The Jordanian

authorities have not, however, ruled out some form of UN representation appropriate to the situation in their country.

The task now, as we see it, would be to attempt to develop solutions to these problems in an atmosphere of mutual co-operation and restraint. I am sure the house will agree that this process will not be facilitated by too many public utterances or the taking of firm positions. I would hope that all those countries directly concerned would exercise moderation and forethought in anything they may say or do in the circumstances.

I think it is only fair to say that Canadians as a whole will be very pleased that during the last few days at the United Nations it has been generally recognized that the Secretary of State for External Affairs (Mr. Smith) has played a full and important part in these important negotiations.

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, the house I know will have heard with great interest the Prime Minister's statement on the important developments taking place at the United Nations assembly in New York. I do not wish to add to any public statements that are being made, but I should like to state my agreement with what the Prime Minister has said to the effect that the original statement of the President of the United States was hopeful in the sense that it seemed to put forward ideas which might serve as a basis for a resolution providing for United Nations action in the Middle East which might help to solve some of these problems. This action, however, if it is to be effective will have to include the participation of all the leading members of the United Nations.

As the Prime Minister has said, the reaction of the representative of Jordan in his original statement was discouraging. I sincerely hope it will be possible for the Jordanian government to alter the position which it seems to have taken in this statement and which is very difficult to understand coming from a country whose stability is now being protected by the troops of the United Kingdom.

It is difficult to understand why a country in that position should hesitate to accept replacement by a kind of international intervention which would make possible the withdrawal of the United Kingdom troops. We must hope that that position can be altered.

I would like also to assure the Prime Minister that we all, without regard to party, are happy about the activities of the Canadian delegation. We know that under the leadership of the Secretary of State for External Affairs they will play a useful and constructive part in those developments.

Mr. Hazen Argue (Assiniboia): Mr. Speaker, we in the C.C.F. are pleased with the hopeful indications from the United Nations that this very grave problem may be solved. We feel that our stand in past weeks, when we said that United States and United Kingdom troops should not have gone into that area and should subsequently have been withdrawn, has proven to be correct.

We were pleased with the statement by the President of the United States. We hope it may be possible to establish United Nations forces or United Nations observer teams in that area which will replace the troops from outside nations who are now stationed there. We further hope that this will be accompanied by a large-scale economic development program, always bearing in mind the interests of the citizens of that area.

I have read with approval the press reports of the decision taken by the Canadian delegation at the United Nations. I agree with the Leader of the Opposition that the stand taken by Jordan is most disturbing. I have also read with concern reports of the position being taken by the United Kingdom and the great reluctance to withdraw her troops from Jordan. In spite of the position taken by the United Kingdom, I hope Canada will press forward on a middle course, designed to bring peace to that area. Since we are a very important and prominent member of the commonwealth, we may exert over the United Kingdom that influence necessary to bring the United Kingdom and the United States into agreement, together, we hope, with other major powers, so that peace will be restored and maintained in that area.

CUSTOMS ACT

AMENDMENTS RESPECTING VALUE FOR DUTY, APPEALS TO EXCHEQUER COURT, ETC.

Hon. George C. Nowlan (Minister of National Revenue) moved for leave to introduce Bill No. C-51, to amend the Customs Act.

Motion agreed to and bill read the first time.

BROADCASTING

ESTABLISHMENT OF BOARD OF GOVERNORS— CONTINUANCE OF C.B.C.

Hon. George C. Nowlan (Minister of National Revenue) moved that the house go into committee at the next sitting to consider the following resolution, which has been recommended to the house by His Excellency:

That it is expedient to establish a board of broadcast governors to regulate broadcasting in Canada; to provide that the expenditure of the board shall

be paid out of money appropriated by parliament therefor and also to provide for the continuance of a corporation known as the Canadian Broadcasting Corporation for the purpose of operating a national broadcasting service in Canada; and to provide further for the payment, remuneration, salaries and fees of the officers and employees thereof.

Motion agreed to.

NATIONAL DEFENCE

VISITS TO NORTHERN DEFENCE INSTALLATIONS

On the orders of the day:

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, I should like to ask a question of the Minister of National Defence. In view of the fact that a spokesman for the United States state department appears to have contradicted a statement made in this house by a minister on the subject, will the Minister of National Defence state what exactly are the procedures which must be observed by Canadians, whether members of the government, officials or non-officials, visiting United States or joint United States-Canadian defence installations in the Canadian Arctic?

Right Hon. J. G. Diefenbaker (Prime Minister): Mr. Speaker, possibly I could answer that question. Throughout the years I have felt that in the northern defences of Canada there were in existence situations that could conceivably derogate from Canada's sovereignty. When I became Prime Minister one of my first acts was to have this question looked into in detail, with a view to assuring that, while we co-operate in defence willingly and freely, in no way shall our sovereignty be impeded or interfered with; and further than that, that everything that could possibly be done should be done to assure that our sovereignty to the North pole be asserted, and continually asserted, by Canada. Following that viewpoint, as I said, negotiations have taken place. As was said by the Minister of Northern Affairs and National Resources, as appears at page 3542 of *Hansard*, a friendly and favourable response has been the result of the representations made.

The most recent outline of agreed procedures is contained in the agreement arrived at in respect of the distant early warning line and the co-ordinating committee in that behalf. This co-ordinating committee was established some years ago to provide for interdepartmental consultation on the technical problems arising from the construction and operation of the D.E.W. line. Procedures in effect are today visit reporting procedures and not clearance procedures, and in effect are arrangements that were required purely for administrative reasons.

[Mr. Nowlan.]

The facilities of the distant early warning line are relatively spartan. Advance knowledge of visitors is essential if food and lodging is to be made available. For that reason agreements have been reached by which in the planning and arrangement for the provision of accommodation at stations, account has to be taken of the indicated requirements for limited transient accommodation in order to look after the departmental personnel whose presence at the site is necessary in connection with the performance of their official duties. No provision has been made in the construction of the stations for the accommodation or feeding of personnel except those associated with the operation of the line or whose presence is necessary because of the construction and operation of the line. There are particular provisions in respect of civil air carriers which are not applicable to the question asked by the hon. gentleman.

Today the situation is that all that is required is that departmental personnel, government representatives and the like who desire to travel in the area shall make known their intentions, to the end that the D.E.W. line co-ordinator, Department of National Defence at Ottawa, may make the necessary representations to the areas in question to provide not only for stopovers, if stopovers are necessary, but also for refueling facilities.

I am glad to say that as a result of the representations we made changes have been effected. The other day the Leader of the Opposition made it quite clear that he realized that there had been regulations during the time he administered the department of the Secretary of State for External Affairs. These requirements have gradually, in the light of mutual discussions, been amended, and today there is nothing that requires to be done that in any way interferes with, impedes or diminishes our sovereignty.

Mr. Pearson: May I ask a supplementary question. Are we then to take it from what the Prime Minister has said that the present regulations between the two governments covering this matter are satisfactory and that there is nothing in their application about which Canadians need to be ashamed?

Mr. Diefenbaker: The regulations now in effect, and which came to their final determination on July 23, are such as to assure that Canadian sovereignty is maintained and that there is nothing that interferes in that direction.

Mr. Hazen Argue (Assiniboia): Can the Minister of Northern Affairs and National Resources say whether in the past the United States has used its authority to bring about very long delays in approval of applications

by Canadians to visit certain areas of the north? Can the minister further inform the house what official it was who was delayed for so many months, and whether the statement attributed to the minister in the press is correct, that in the house he had "goofed"?

Hon. Alvin Hamilton (Minister of Northern Affairs and National Resources): I think the statement of the Prime Minister this morning covered the subject very clearly, and I am one of those who do not believe in going back over the past at a time when we are making very favourable progress in our relationships as between two friendly, neighbourly countries.

Mr. Argue: Then does the minister stand by his statement that is in the *Hansard* record, or is the statement in the press correct, that "I goofed"? Which is it?

Mr. Hamilton (Qu'Appelle): I was just as amazed as the hon. member for Assiniboia was when I saw the report in the newspaper this morning.

Mr. Benidickson: He did not say he was amazed.

PUBLIC SERVICE

REPORTED GOVERNMENT REFUSAL TO INCREASE SALARIES

On the orders of the day:

Mr. Alexis Caron (Hull): Would the Prime Minister comment on an article which appeared in the Ottawa *Journal* today to the effect that civil servants have been refused a pay boost which they have demanded?

Right Hon. J. G. Diefenbaker (Prime Minister): Mr. Speaker, I have not seen the article in question, but as far as a refusal is concerned there has been no such refusal. I think on Monday or Tuesday next the president of the association will be calling on me, and I look forward to listening to the representations which will be made at that time.

INQUIRY AS TO REPORT OF CIVIL SERVICE COMMISSION

On the orders of the day:

Mr. Hazen Argue (Assiniboia): May I ask the Prime Minister whether the government has now received a report from the civil service commission regarding civil service salaries, and whether or not this report, either now or at a later date, will be made public?

Hon. Donald M. Fleming (Minister of Finance): Reports of that nature come to the Minister of Finance. I recently received a communication from the civil service commission on this subject, that is to say, a communication reporting on the study made by the salaries research bureau of the commission.

Mr. Argue: Would the minister care to indicate the nature of that report and whether there is any indication of a recommendation for an increase in salaries?

Mr. Fleming (Eglinton): The report I received from the commission indicated in general that the salaries research bureau, following its extended investigation into the scale of salaries, finds there is no case at present for a general increase, but that there are certain categories in the civil service into which there should be further investigation to determine from the facts whether a case for an increase exists.

Mr. Alexis Caron (Hull): As a supplementary question could the minister tell us if there will be a further study with respect to a boost in salaries for the lower salary brackets in the civil service?

Mr. Fleming (Eglinton): Mr. Speaker, one of the functions of the salaries research bureau established within the last year is to conduct a continuing survey of salary levels paid in all categories of the civil service. I referred earlier to a communication which I recently received on this subject and which is to the effect that the civil service commission has drawn the attention of the government to the fact that the salaries research bureau is continuing its investigation with respect to certain categories where there is some indication of a case for an increase in existing levels.

Mr. Caron: So there is no final report as yet on this question?

Mr. Fleming (Eglinton): No, not in the sense in which my hon. friend is using that phrase. There is never finality about any report; it is only a report as of the time of the study and taking into account the existing circumstances upon which the study is based because, naturally, conditions are changing all the time. With respect to those categories, however, where the civil service commission has noted the view expressed by the salaries research bureau to the effect that there may be a case for an increase, the commission has approved extended studies.

Mr. Caron: Will the report presently in the hands of the minister be tabled so that we may study it?

Inquiries of the Ministry

Mr. Fleming (Eglinton): I shall be glad to look into that subject and consider the nature of the communication which has been received.

IMMIGRATION

REPORTED ENTRY OF UNDESIRABLE PERSONS FROM UNITED STATES

On the orders of the day:

Mr. H. W. Herridge (Kootenay West): Mr. Speaker, in view of her known aversion to the entry into Canada of gangsters, thugs and racketeers from the United States, I wish to direct a question to the Minister of Citizenship and Immigration. In view of the fact that police authorities in Montreal are reported as saying that shady characters from the United States have a lot to do with the terrific rise in the crime level, and in view of the law in this respect, can the minister explain why these persons are permitted to enter Canada and, in view of the fact that the Canadian people are banking on departmental courage in facing this problem, would the minister inform the house what action is taken by the officials of her department to prevent the entry or the continued residence in Canada of these undesirable characters?

Hon. Ellen L. Fairclough (Minister of Citizenship and Immigration): Mr. Speaker, I read the article in this morning's press, and I am sure we all regret it if the statement is true. However, I inquired in my department, as well as I could on a Saturday morning, and I could find no trace of the department having been approached by the police of Montreal for assistance in this regard.

The United States-Canadian border is probably the most open border in the world. We are very proud to have a great many United States tourists visit Canada every year, and we are also glad that our people are very easily able to go into the United States. I may say we have no specific figures with regard to border crossings, but an estimate for 1957 was that some 53 million people crossed the border from the United States into Canada.

Obviously we could not examine every one of those persons. It is a matter for the local police to ascertain if they have in their community people who are objectionable, and I can assure the hon. member that upon application from any municipal authority which can supply us with the information required, my department will not hesitate to take such action as may be necessary to remove objectionable persons from this country.

[Mr. Caron.]

NATIONAL PARKS

GARIBALDI PARK, B.C.—INQUIRY AS TO TRANSFER OF RESPONSIBILITY

On the orders of the day:

Mr. Erhart Regier (Burnaby-Coquitlam): I would like to direct a question to the Minister of Northern Affairs and National Resources. Has the government of British Columbia made any offer to the Canadian government in regard to the federal government taking over responsibilities for Garibaldi park, or has the federal government made an offer to the British Columbia government, or are any negotiations taking place in this regard?

Hon. Alvin Hamilton (Minister of Northern Affairs and National Resources): Mr. Speaker, speaking from memory there have been discussions between the responsible minister in British Columbia and myself and there has been an exchange of letters between us, but I do not think that there has been anything in the form of a definite offer one way or the other. We have discussed the circumstances, but I do not think I can honestly say that any offer has been made by either side in those discussions.

Mr. Regier: As a supplementary question, would the minister inform the house what seems to be the major handicap or stumbling block in the way of obtaining a transfer of this park into the hands of the federal government?

Mr. Hamilton (Qu'Appelle): This is a very involved subject, and I do not know whether this is the proper time to make such an answer.

SUPPLY

The house in committee of supply, Mr. Sevigny in the chair.

DEPARTMENT OF LABOUR

General administration—

170. Departmental administration, including grants as detailed in the estimates and the expenses of the international labour conferences (also includes the former Labour Gazette, women's bureau and manpower utilization votes), $1,067,166.

Mr. Deschatelets: Mr. Chairman, last night before adjournment I was pointing out to the committee the very serious discrepancy between the statement made by the Minister of Labour and the report of the national employment service offices, and I was about to conclude that on various occasions the Minister of Labour has given us information which was not in accordance with the facts. I am now going to refer to page 2523 of

Hansard of July 22, 1958. Here is a question which was asked by the hon. member for Bonavista-Twillingate:

I should like to ask the Minister of Labour a question based on the discrepancy between the figures for registrations at national employment service offices, which were over 526,000 on June 19, and the dominion bureau of statistics figure of persons without jobs and seeking work which was 320,000 on June 21.

The question continued for a few lines, and here is the answer which was given by the Minister of Labour:

Mr. Speaker, I have explained the situation to the best of my ability on a number of occasions in answer to questions that have been asked of me. However, I can say this: this is the method being followed by our national employment service offices in registering people amongst whom are those presently employed but who are seeking other employment.

Mr. Chairman, I have in my hand the latest report of registrations with the national employment service offices dated July 21, 1958, which shows that on that date 526,648 persons were registered and were looking for work. At the bottom of this report there is an explanatory note, and a very important one, because it throws a very different light on this subject from the light that was thrown upon it by the Minister of Labour on several occasions. This contradicts fully and completely the statement made by the Minister of Labour that the number reported by the national employment service offices includes persons presently employed who are seeking other employment. I read the following sentence from this note:

The count excludes registrations from persons known to have a job and to be applying for another one.

Then at the end of this note another disturbing fact comes to light. It is stated very clearly that not all persons who are looking for work are mentioned in the count. I feel, therefore, that we are entitled to an explanation from the minister, and unless he can give a valid reason to the contrary it seems very clear now that these figures from the national employment service offices are not only reliable but that they are the only set of figures at our disposal which give an accurate picture of the present unemployment situation. If this is so it is about time something should be done about it, and done very quickly. The working man—

Mr. Starr: Perhaps I may intervene at this point; I feel I should. The hon. member is casting innuendoes to the effect that I have purposely misled the house by quoting figures that are wrong, and then he tries to prove that point by quoting figures issued by the employment offices.

I want to say that at all times any information I have given here has been supplied to me by offices of the national employment service to meet requests of hon. members of this house, and the figures I have quoted have been accurate figures according to employment service registrations. At no time have I changed those figures after they have been given to me for release here in this house.

The hon. member seems to place a great deal of stress on the word "known", but there are a great many people who are registered at these offices who are not known to have other jobs but who nevertheless do have other jobs. However, they did not report the fact that they were presently employed and were registering for the purpose of obtaining new jobs. The key word is the word "known", and the count excludes those who made that statement when they registered. But it does not exclude all those who have jobs and who are seeking better jobs but who failed to state they were in that category when they registered at our national employment service offices.

Mr. Deschatelets: Would the minister answer a question at this point. Is it not a fact that on several occasions, not only during this session but during the last session, the minister repeatedly said that he was not relying on these figures from the employment service offices because those figures included a number of persons who were seeking other jobs while they were actually working? Is that not a fact? How does the minister reconcile his stand with the fact that the report of the national employment service which I read mentions that the count excludes registrations of persons known to have jobs and who are applying for other jobs.

Mr. Starr: Mr. Chairman, I have endeavoured in the best way I know to explain the fact that the count excludes registrations of persons who are known to have jobs. By that I mean those people who come to the office and advise that they have a job but who wish to register for a better one. We feel sure there are others who register but who do not give that information.

Mr. Deschatelets: We will let the people of this country judge whether or not there is a contradiction in the minister's stand. I am going to conclude my remarks by saying this. It is significant that at this time of the year, when the situation should have been so much improved, we still have twice as many jobless as we had last year and more than we have ever had in any summer period since the last depression.

The workingmen of Canada have a right to be given an opportunity to work and earn

an honest living so they can provide their families with the necessities of life. The Canadian worker does not want charity or a dole. The Canadian worker simply wants employment. It is the duty of this government to provide him with an opportunity to work. We all remember very well a few months ago when hon. gentlemen opposite in the Conservative party were going all across the country and from both sides of their big mouths were promising that everyone in this country would have work. It is about time something was done about it.

Mr. Herridge: Mr. Chairman, as a member representing a large number of industrial workers I wish to take advantage of this opportunity to make a few brief comments on several matters that concern the working people of my constituency. I might explain before proceeding that as an honorary member of a trade union and as a small employer and as a farmer—

Mr. Ricard: As everything.

Mr. Herridge: —who has lived in complete independence all his life slightly above the parish relief level, I am able to take a strictly objective view of this question.

While we know that on the whole the labour movement in Canada is democratic in structure and controlled by the rank and file, there are a few blotches on the escutcheon that are causing serious concern to many of the rank and file members of the trade union movement in this country, to the public in general and to hon. members of this house. From my experience in interviews with trade unionists, from correspondence I have received from the Atlantic to the Pacific and from a large number of interior places, and from numerous affidavits I have received in recent months which for the first time have been forthcoming from union members, I am of the opinion, as are some other hon. members who have expressed themselves previously in this debate, that there is an unhealthy state of affairs in a few trade unions in this country.

To illustrate that point I mention the fact that just prior to dissolution last session two members of the seamen's union came to this house and spoke for nearly three hours to 25 members of parliament representing all parties. I can tell you that from their point of view it was a hair-raising experience.

Personally I have received many complaints from workers on pipe lines, and I investigate them to the best of my ability. Prior to coming to Ottawa last session I discovered that an American was in charge of one operation and was collecting union dues, and the poor beggars who were paying the dues did not know what union they belonged to. They never saw a business agent or attended a meeting, and often after paying $15 for dues they would be fired three days later and other chaps hired.

A good many hon. members of this house were concerned recently by newspaper reports stating that a Canadian union critic of Mr. Hoffa, who was secretary of one of the largest teamsters' unions in Toronto, was fired by Mr. Hoffa. These things are not being taken very well by the rank and file of labour, the Canadian people or a large number of members of parliament.

In every case brought to my attention these violators of the democratic rights of Canadian workers and the principles of union democracy were imports from the United States. Just as I resent any control of the Canadian economy by large United States firms, in the same way I resent any interference with Canadian union affairs on the part of people like Mr. Hoffa and his associates. I trust, Mr. Chairman, the day will not come when that type of person and others associated with him are able to control the organized labour that will be related to the operation of the St. Lawrence seaway.

I know it is the responsibility of the Canadian labour movement to deal effectively with those who violate the traditional principles, practices and procedures of the movement. I wish to say most emphatically, and I say it without any fear or hesitation, that the rank and file of labour in Canada, the Canadian people and this parliament expect the senior officials of the Canadian labour movement to accept their responsibility in this respect.

To illustrate a different state of affairs from the one or two isolated illustrations I have given that are causing concern, I mention the fact that just prior to coming to Ottawa this year I called a conference of all the trade unions in Kootenay East and Kootenay West, which was attended by representatives from the railroaders, carpenters, plumbers, electricians, I.W.A., mine-mill and all the rest. I wanted to find out what labour was thinking. I wanted to acquaint myself with the present opinions of labour with respect to federal legislation and the problems we have to face here. It was a most successful meeting indeed, the best labour conference we have ever had in the district.

The acting president of the Nelson and Trail district labour council was elected chairman of the meeting and the secretary of the largest local of mine-mill, No. 480 at Trail, was elected secretary. We had a discussion with the rank and file with various members getting up and fiercely expressing their criticism on certain matters, advancing their

opinions with respect to legislation and also expressing their attitude regarding local, national and international affairs. I am one of those who all through his life has had a great deal of confidence in the rank and file of any organization. It has always been a treat for me to meet with these union men. Those are the people I deal with, and I have found that whenever you deal with the rank and file and place the facts before them you need have no fear as to their acceptance of responsibility with respect to any decision they may make.

I just mention that to illustrate what can be done in a very small sphere. These unions, representative of all types of labour, repeatedly have taken part in local affairs on the municipal level or community level or on the regional level with respect to the hospital building, community planning and things of that kind, and they have made a most valuable, constructive and responsible contribution to the development of public affairs in my district. I look forward to the time when the rank and file of the labour movement in Canada will participate across this country in just as effective a way in expressing their opinions with respect to local, national and international problems.

I have said these few words on a matter about which I am seriously concerned and I am always given to speaking my mind, Mr. Chairman. Never in my whole life has anyone stopped me from saying what I thought to be right, proper and correct, on any question.

I listened to the minister's opening remarks with interest, and I must say that we all like the minister. You know, he has that common touch that removes the latent fear in the hearts of some members of parliament when they approach persons in the seats of the mighty. You can go to the minister's office and you can discuss any problem that concerns you. I want to say that as one member of this house I appreciate his approach to members and his willingness to discuss a problem, no matter how insignificant it may be from the national point of view. I think it is only fair to express my appreciation in that respect, and I know that other members in this group think of him in the same way.

I was glad that in his opening speech the minister suggested that amendments to the Industrial Relations and Disputes Investigation Act were being considered. I think it is a growing conviction that, in view of changing conditions, the development of large-scale industry, as mentioned by the Leader of the Opposition, and the consequent natural development of large-scale unions on the other side, a national labour code is required to indicate clearly the responsibility of the employers to the community as a whole and the responsibility of larger unions to the community as a whole and their responsibility to the rank and file of the working people of this country. I am sure, Mr. Chairman, that with the co-operation of the labour movement such an act can be drafted to meet the circumstances that exist today and protect the basic rights of the Canadian working people.

I was also pleased to hear the minister speak of a proposed consultative committee on employment practices. I trust this is another step forward toward the banishment of discrimination and unfairness in employment in this country. I am very happy to say, so far as my experience has been, that this is lessening very rapidly from day to day. It is a very different world we are living in today from the world of 1906. I remember the general election in 1906 when the slogan of the Tory party was, "A white B.C.; keep the oriental out." We have all learned a lot. Mind you, in fairness to them I might say that quite a number of labour organizations at the time had an identical attitude toward life. We have progressed a good way in that direction, and all that is required now is to remove those few little blemishes here and there where we find they exist.

I am glad the minister is taking further steps in that direction. I am pleased to hear of the addition to the staff of the civilian rehabilitation branch. This should in some measure increase the effectiveness of that branch, which is doing very good work indeed. Also, the minister's proposals to increase the employment of older persons are particularly welcomed by this group. I know this is a very difficult problem, because I meet it from day to day when I am in my constituency.

This is a problem of serious concern to the persons directly affected and to many other persons who have their welfare in mind. So many good Canadians are still able to make a worth-while and constructive contribution to the productivity of this country or to the services of this country but are denied the opportunity because of the difficulties that have developed as a result of automation and the development of our mechanized and industrial society. Anything the minister can do in that respect will be heartily welcomed by this group.

I was also pleased to see in the estimates and to hear the minister's statement that there will be an increased expenditure for vocational training. That is very necessary indeed. In fact I think it is an urgent matter, because while old chaps like me now on the slippery slope of life with their heels dug in hoping to avert the inevitable as long as

possible should not be worried too much, I do like to see opportunities provided for thousands and thousands of young Canadians who are possibly in some instances not suited for or do not prefer academic or professional life, but who provide a great pool of young, virile people who will in the future provide the artisans so badly required in Canada for the development of our natural resources, transportation, communications, and our industrial structure. I do hope that the increase in the estimate in this respect will continue from session to session.

While I am on that point may I say I am not given normally to speaking on the parochial level, but I must use this strictly as an illustration. There is great need of a vocational school to serve the southern interior of British Columbia, particularly the Kootenays, where we have had a very rapid expansion of the smelting, mining and lumbering industries. There we have, I know personally, hundreds of young people who are not going to university, are not going to take higher education, and who would love to have an opportunity to take vocational or trade training in vocational school at some reasonable distance from their homes, where they could undertake it without unnecessary cost and so on.

I understand those vocational training schools are established as the result of action by the provincial government, which makes application to the federal government for assistance in those expenditures in that respect. I do hope that when the minister replies to the comments made by members in this debate he will inform us a little more as to the procedure with respect to the application of this vocational training estimate, because I have a good number of people in my constituency in all walks of life who are very concerned with the fact that we have these young people leaving school. If they are taken at the right time and given vocational or trade training they can make a great contribution to Canada. If the vital two or three years are overlooked and missed, then they go on into blind-alley occupations and we fail to take advantage of those human resources as we should.

I do not want to detain the committee too long but I have one or two other remarks to make. I have often wondered why there was duplication of employment services with the Department of Citizenship and Immigration. For instance, I found an officer of the national employment service—and they are hard-working people in my constituency—trying to get jobs with the lumber companies for some applicants for employment. They happened to come to the company with which I am associated, and the next day an immigration officer turned up. He wanted us to employ some immigrant.

To me this seems a duplication, and I am of the opinion that it entails an unnecessary expense at times, and also there is certain irritation if an official of one department has been in and scoured around and done his best to find employment for those who are applying for employment, and then an official from another department arrives two or three days later on the same mission but on behalf of another branch. It seems rather odd to people in the community, especially the employers. I should like the minister to express his views on this and see whether something cannot be done to avoid what appears to me and to a good number of other people to be a somewhat unnecessary duplication.

I also want to mention very briefly something which came up at the conference where they discussed all these problems. I find the great bulk of the industrial workers are very concerned about the early establishment of a national pension scheme by this government in order to provide security so far as pension rights are concerned and mobility of employment, which I think is the right of every Canadian under present conditions. I do hope the minister will say a few words on this question and let us go away with a sort of hope in our hearts that something is going to happen in that respect at the next session of parliament.

I now come to my concluding remarks, and I have really evaporated most of the water out of what I had to say in order to save time. I find that unemployment is a major concern of a large number of people in my constituency, and I am sure it is a major concern all across the country, not only of those who are unemployed but of those who possibly fear unemployment. With so much to be done in this country with respect to national development, development of transportation, of highways, of parks and of things of that sort, it seems wasteful and sinful to let Canadians remain idle while this work has to be done.

I am not underestimating the difficulties. It is quite easy to rise on the opposition side and make all sorts of grand proposals. As the chairman knows, I always try to keep my feet on the ground. However, I suggest that there is here an opportunity for co-operation between the federal government and the provincial governments in some basic planning so that this winter we can utilize, as far as is humanly possible, this good investment even if we have to go into debt to do it. If we had gone into debt during the depression to build highways and to build

houses, we would have built them much more cheaply than we are building them today. That lack of foresight and fear of the future with respect to overexpenditure does not now exist because of our experience during the war and post-war periods.

I urge the minister to urge upon his associates the necessity for some approach to the provinces in order to see whether something cannot be done to plan this type of work across this country. I can think of dozens of places in my constituency where for years people have been driving around dangerous bluffs a thousand feet above a lake on a 16 foot road with no guard rail. That is the type of work that can be done in the winter economically and properly by persons who would otherwise be unemployed, such as miners, men who work in the woods at high levels who are laid off, and persons of that sort. I urge the minister to give consideration to this matter and to have a word or two to say on what he has in mind when he replies to the various members who have spoken.

My concluding point is this. The other day when I was speaking, I think it was on the agricultural estimates, I urged the Minister of Agriculture to do what he could to get the Minister of Labour to include in new amendments to the Unemployment Insurance Act farm workers or farm employees. The present circumstances are most unfair to the men and women who are willing to go and work on farms, usually at lesser wages; but they are persons of the type who, if the circumstances are at all right, would prefer to work on a farm rather than work in industry. Yet because they are willing to do that they are denied the protection which other workers get under the Unemployment Insurance Act. This situation is not fair to the workers concerned, and it is not fair to the farmers who are obliged to employ these people. I urge the minister to give consideration to that matter. I trust that the pleadings of the Minister of Agriculture will meet with a favourable response in the heart of the Minister of Labour.

Those are the few things I have to say at this time, Mr. Chairman. I shall anticipate with great pleasure, hope and confidence the reply the minister makes to the various comments hon. members have made in this debate.

Mr. Thomas: I shall be very brief, Mr. Chairman. There are one or two points which I think should be made at this time and which have not yet been made. I would urge the minister to give serious consideration to bringing farm labour under the benefits of the unemployment insurance legislation. Farmers are having difficulty in getting the help necessary to do their work. At the same time we know there is some unemployment in our towns and cities. However, there is little inducement for workers to take temporary jobs on farms when by so doing they will not add to the time they can use in applying for unemployment insurance benefits. There is a great deal of temporary work on our farms such as fruit picking, tobacco work, work in the beet fields. I feel that it would help both the farmers and the unemployed if these benefits can be extended to farm labour.

There is another point that I feel should be made at this time. In making it I should like to make clear first of all that I believe in organized labour. I believe that organized labour is doing a good job in this country. I believe that the aims, objectives and aspirations of organized labour should be protected in every reasonable way. But organized labour has become one of the most dominant forces if not the most dominant one in our economy. As such they must be prepared to accept their full share of responsibility for our national welfare.

The speech of the hon. member for Kootenay West this morning and that of the hon. member for Timiskaming yesterday are going to be of considerable value in making this point which I shall briefly mention. It has been suggested to the minister and to the government that they should use their influence to convince organized labour of three desirable policies. The first is that labour must not organize in such a way as to constitute a threat to the public control of our institutions. In that regard I took a Canadian Press clipping from the London *Free Press* dated August 13. It states:

> President Claude Jodoin of the Canadian Labor Congress plans to convene a meeting of unions representing about 100,000 workers to try to work out a formula for avoiding clashes or organizing jurisdictions on the St. Lawrence Seaway.

The last paragraph of that article reads as follows:

> The congress wants a wider representation, to take in unions covering all phases of seaway transportation.

I read that extract as an indication of the objectives of labour and in order to point out that the time has come when not only organized labour itself but all the people of this country should take a good look in order to see where organized labour is going. I can remember when in 1919 in the city of Winnipeg, in the course of the general strike there, organized labour were issuing permits for the delivery of milk. This procedure was

found to be a contravention of the civil authority and a number of people were sent to jail. I have been personally acquainted with some of those people, and I may say that they were very fine people. If organized labour and the people at that time had looked ahead and considered what were likely to be the results of some of the policies of labour in those days, that Winnipeg general strike and the unhappiness of those individuals could have been avoided. I think the time is ripe when the public of Canada and the government should take a new look at where the present policies of labour are likely to lead them.

The second policy is that labour must hold its share of the line against inflation. We know that there are strikes going on now. The steelworkers are asking for a 33 cents an hour increase, and even now they are getting almost double the wages that labour receives in the rural areas and the smaller towns of the constituency of Middlesex West. Labour must take its full share of the responsibility for what is likely to happen if these requests for large wage increases are enforced. We know what will happen; there will be another round of inflationary pressures in all respects, and nobody can win.

In the third place, I think the government should try to impress upon labour the fact that labour must not control the civil service, the police or other services vital to our national life. This is where the speeches by the hon. members for Kootenay West and Timiskaming were of great assistance. Those speeches pointed out in no uncertain terms that there are undesirable characteristics in some of the unions. In addition, there is a tendency on the part of unions in Canada to stay with their international affiliation. The hon. member for Timiskaming had this to say about the woodworkers' union of America, as reported at page 3633 of *Hansard* for August 15, 1958:

> —the Canadian membership outnumbers and outranks the United States union membership but they have made no effort to change the structure in order to create a national union, which they could have done quite easily by a vote at any of their conventions. The Canadian union had a majority and could have seceded from the union and become a national union had they wished to do so, but there are many advantages to belonging to an international union.

The point I wish to make and impress upon the minister and the government, Mr. Chairman, is this. Canada cannot afford to have services vital to our national existence under the control of foreign labour bosses.

Mr. Granger: I should like to associate myself with the remarks made by my friend the hon. member for Bonavista-Twillingate, when he spoke about unemployment insurance and particularly unemployment amongst fishermen in Newfoundland. In my own riding, based upon recent visits to any number of smaller outports and upon fairly extensive correspondence, it would appear that perhaps more than 50 per cent of the fishermen who are recipients or those who should be recipients of unemployment insurance suffer from extended delays, partial payments and in some cases a complete lack of benefits which they really deserve. The result is that in some cases there is direct want, and in all cases embarrassment and dissatisfaction.

Perhaps one of the worst features of this is that the purpose of providing unemployment insurance for fishermen has not been fulfilled, that is putting fishermen on the same basis as the men who work in the fish plants and encouraging those who prefer to make fishing their vocation to do so. Last night it was stated by the hon. member for Bonavista-Twillingate that probably the remedy lay in the appointment of officials who would travel from place to place and advise the fishermen as to how they should make out their returns. These officials would, in turn, see the unemployment insurance officials and advise them as to what these recipients were entitled to. As I think the minister knows, the trouble in many cases lies in the fact that the original applications are not made out properly. It seems to me that the spirit of the act is not being carried out if some allowance and some provision is not made to ensure that these people, whom the act is designed to help, can receive their proper benefits.

I should like to suggest also that field men be appointed who would travel from outport to outport advising the fishermen and generally acting as liaison officers between the department and the fishermen. This would enable the problems of the fishermen to be straightened out with a minimum of embarrassment to those people who should be helped.

I should like also to call to the minister's attention the fact that this year in Newfoundland we have had a very poor fishing season. It has been described as the worst in 25 years. Certainly it is the worst in recent years. The poor fishery, coupled with a cut back in woods operations because the paper companies are not cutting as much pulp this year, has made this a difficult period. Undoubtedly the coming winter in Newfoundland will be the worst in many years.

I would ask him, therefore, to use his influence with his colleagues to get some of the small works, such as wharves, breakwaters and so on—works which are already in the government's plans and for which surveys

have already been made—started. These works provide a considerable amount of local employment, and if he would endeavour to get them started they would be of considerable benefit. He might also consider having the federal government undertake the building of, say, a 100-mile section of the trans-Canada highway, which would provide additional employment. Certainly we are going to need that employment this year worse than we have for many years past, and worse, I hope, than we shall need it in the future.

In concluding these brief remarks I should like to pay tribute to the minister for the kind co-operation I have always received from him and his departmental officials. He has been able to infuse into the cold mechanics of official administration a kind of warmth which we appreciate.

Mr. Argue: I was not able to be in the house when the Minister of Labour made his opening statement, but I have read it carefully. The thing that seemed missing from his statement was any coming to grips with the present widespread unemployment in this country. I had hoped that by this time the government, which has now been in office for more than a year, would have enunciated and developed a program to deal with unemployment, the situation in respect of which is much worse than it was a year ago.

One would have expected that the government would be doing this because of the frequently repeated statements of the Minister of Labour, of his colleagues in the cabinet and of the Prime Minister himself that the Conservative party would lick the unemployment problem. They blamed the previous government last session and during both election campaigns for the conditions which then existed, but I do not think the government can now attribute the current widespread unemployment to the policies of the previous administration. Those policies may have been a contributing factor, but it is the policies of this government today which will decide whether or not we are to have anything approaching a state of full employment.

The feeling seems to be growing in Canada that labour has become irresponsible and that our great unions are acting in an irresponsible fashion by doing things which are against the general welfare of our country. I have not at any time changed my attitude toward labour; I have always felt and I have always said in this house that over the years Canadian labour has in general taken a highly responsible attitude, and that the policies followed by organized labour in Canada have not only contributed to an improvement in the welfare of labour itself but also to the economic well being of all Canadians.

Some hon. Members: Hear, hear.

Mr. Argue: It is easy to get up in this house and say, as has been said this morning by the hon. member for Middlesex West, that labour must be careful and must be cautious because it can add to the inflationary pressures in this country. It is easy to say that, but I think the government would be in a much stronger position when giving out this gratuitous advice to organized labour if it would put its own house in order. I ask to what extent is the government of this country presently adding to the costs—the real costs—of doing business and of living in Canada? Members on the government side of the house can say to labour "Don't rock the boat; don't ask for increases in wages", but how is labour going to pay the increased cost of buying a house, which situation has been directly brought about by the policy of this government in respect to increasing interest rates? This policy of increasing interest rates in its reconversion program is adding to the real cost of living of every Canadian family, because when interest rates go up, since they are a very important part of doing business, I think we all recognize that costs go up generally, because business will do its best to pass on those increased costs to the consumer.

Mr. Starr: Mr. Chairman, if I may interject, surely the hon. member for Assiniboia realizes that this government has not increased interest rates on homes? Surely he realizes furthermore that in order to help the ordinary citizen of Canada to purchase his own home we have gone so far as to decrease the amount of the down payment from 20 to 10 per cent? Surely he does not want to leave the impression that this government is taking steps which will make it more difficult for people to own their own homes, because after all the outstanding feature of the work of this government has been to increase home ownership in Canada.

Some hon. Members: Hear, hear.

Mr. Argue: I said that the government's action has increased the cost of homes for the ordinary citizen, and I stand by that. I completely accept the minister's statement with respect to the National Housing Act interest rates and so on. Those are statements of fact, but the average Canadian today who is buying a home is putting a second mortgage on that home, and this means that his interest rate is higher. The Minister of Labour is a very genial person, and we all like him; but if he were to start out today to buy a home, as an average

Canadian with perhaps $1,000 or $2,000 saved up for a down payment, and if he were to take a second mortgage, he would find my statement correct.

It is impossible for the government to increase interest rates on long-term debentures such as 25-year debentures to 4½ per cent without increasing interest rates generally across the country, for what investor is going to take a chance on some risky investment at 5 per cent or 6 per cent interest if he can get an iron-clad guarantee of 4½ per cent, as he can with government bonds? Since this government has taken office the cost of living has continued to rise, though there has been a drop in the last month. I know the minister is very touchy this morning.

Mr. Starr: Mr. Chairman, I want only to keep the hon. member straight so that he is able to give relevant and correct facts to this house.

Mr. Drysdale: You have quite a job there.

Mr. Ricard: He is talking through his hat.

Mr. Argue: Well, perhaps I can do with some help in that regard, but you know, charity begins at home, and if the minister will start talking to some of his colleagues I think he will find that what I say is true. What about the Minister of Northern Affairs and National Resources, who made such a boob the other day that the Prime Minister had to attempt to bail him out this morning—

Some hon. Members: Order.

Mr. Ricard: You are out of order.

Mr. Argue: Perhaps I am out of order but I suggest to the minister—

Mr. Ricard: You just like to hear yourself talk.

Mr. Cardiff: If you keep on talking you will talk yourself out.

The Chairman: Would the hon. member please try to be relevant.

Mr. Argue: Mr. Chairman, I was just comparing the very careful statements I have made in this debate to some statements which have been made by some of my hon. friend's colleagues in the cabinet in previous debates to show that it is hardly necessary for the Minister of Labour to stand up and try to correct my statements when they are not incorrect. As I said, the cost of living has been steadily going up, with one or two exceptions, since this government took office. Knowing this to be true, labour is taking an attitude which is quite understandable when it says that with the increased cost of living when its productivity goes up it should share in the benefits which come from such increased productivity.

We are all very concerned about the increase in the cost of living and further increases in the cost of production, but I do not think it is fair, right or sensible to say to organized labour on the one hand "You hold the line" and on the other hand to allow the great corporations in Canada to charge anything they wish for their products at any given time. The Minister of Labour as a member of the government has condoned a policy which has added to interest charges and which can do nothing but add to interest rates in Canada.

Mr. Starr: I think, Mr. Chairman, the hon. member is making hypothetical charges. He has no evidence that interest rates have gone up as a result of the conversion of the bonds to which he refers.

Mr. Argue: I see that the minister is no authority on interest rates.

An hon. Member: Neither are you.

Mr. Argue: He can read the statements—

Mr. Starr: The statements of whom?

Mr. Argue: I do not mind the minister interjecting, but I have the floor. I have sat down three times and I will sit down three more times, but I think it is only reasonable and fair that the minister should allow me to answer his interjection.

An hon. Member: Stick to the facts.

Mr. Ricard: He should stick to his seat.

Mr. Argue: The provincial treasurers have indicated that their costs have been increased, and by the reconversion policy it will mean to these provinces an increase in their budgets because of increased interest rates on long-term bonds.

There seems, in addition, to be a growing feeling that the government should take a very careful look at every strike or every threatened strike to see whether or not compulsory arbitration should be used.

An hon. Member: Just nonsense.

Mr. Starr: That is not true, and the hon. member for Assiniboia is making a lot of untrue statements in this committee.

Mr. Argue: The minister can answer me if he wishes. He can make a 30-minute speech in reply.

Mr. Starr: This is nothing but a political speech, with no facts.

Mr. Argue: I am not ashamed of making a political speech. I am a politician, and the

minister's remarks labelling this as a political speech do not insult me in any way, because the minister himself is in politics. He is a politician.

Mr. Starr: But I am trying to be honest about it.

The Chairman: Order. Will the hon. member for Assiniboia kindly try to limit his remarks to the item being discussed at the present time? It should also be appreciated by the committee that if members wish to interrupt the hon. member for Assiniboia while he has the floor they should first ask his permission.

Mr. Argue: I think I have the same right as every other member has to make a statement, and if the minister wishes to reply to me he may do so after I have sat down or, if other members wish to take part in this debate, at some later stage.

I was merely saying there seemed to be a growing feeling in certain quarters that strikes, when they occur in this country, should be looked at very carefully to see whether or not compulsory arbitration should be applied in their settlement. Without doubt, in certain industries if a strike should occur human lives might be endangered. The generation of electricity is one example, or the provision of gas in an area where people depend entirely on gas. If a strike were called, say, in the dead of winter, in temperatures of 20 or 30 degrees below zero, there is no question but that this would be the case, and in such circumstances any responsible government would have to consider taking steps toward settling such a strike as quickly as possible.

But I do think the record of this country as far as strikes is concerned is one that stands as an example to most of the nations of the world. We have in this country a labour movement which is responsible and which does not engage in long drawn out strikes which give Canada a bad name. That is not the situation at all. As a matter of fact the record of this country as far as time lost through strikes is concerned is excellent indeed.

I have in my hand a copy of the *Labour Gazette* dated July 31, 1958. These figures are given on a monthly basis, but for the months of January to May, 1957, the percentage of estimated working time lost through strikes was .05 to .08. In 1958, from January to May, the loss of time ranged from .07 to .18 per cent.

I have looked at the statistics back over the years, and generally speaking the amount of time lost through strikes and lockouts in this country amounts to approximately .1 per cent of the working time. If one assumes there are five million workers in this country and that .1 per cent is the regular amount of loss, this would mean that on any given working day 5,000 workers are out on strike or are idle because they have been locked out; and when one compares the number of 5,000 on strike because of action they have themselves, taken, deliberately, with the figure of over 300,000 who are unemployed through no fault of their own, one sees that the problem of strikes in this country is not a particularly serious one for our nation; it has been magnified out of all proportion.

It may seem to us that an easy way, a short cut, to deal with strike situations is by compulsory arbitration, but one of the freedoms which Canadians have enjoyed for many years is the freedom to organize collectively in their own unions, and if they believe they have a just cause, to withdraw their labour. If we do not want this kind of freedom maintained, if we should wish to substitute for that freedom compulsory arbitration by multiplying its use many times, we shall be taking away a fundamental right of the Canadian working man; we shall be taking away a fundamental democratic right; we shall be acting in an un-Canadian and an undemocratic way.

I think compulsory arbitration, if it is proceeded with as a normal instrument of government policy, will add to the number of days lost and multiply the number of strikes in this country. This has been the experience in Australia and other countries where compulsory arbitration has been used as a general policy.

I had hoped, as I said at the outset, that the Minister of Labour would inform the committee of the policies the government is adopting to provide full employment and to restore employment. The goverment's attitude was very firm in this regard. The Montreal *Gazette* of March 20 contains an article which is headed "Job Policy Paid Off—Starr". The article has this to say:

> Federal Labour Minister Michael Starr predicted last night the present unemployment situation will end by mid-June.
>
> He drew attention to the latest figures released by the dominion bureau of statistics showing a drop in the rate of unemployment.
>
> "These figures are dropping faster than anticipated" he said.
>
> Mr. Starr, here to address a foreign language meeting of the Monument Nationale last night, attributed the unemployment drop to the pump-priming policies of the Diefenbaker government.
>
> "We knew these policies would correct the situation, but we did not think the favourable results would be reflected so quickly", he said.

Does the minister feel now that he can take this kind of satisfaction that the unemployment situation has been corrected and

dealt with, in the light of the current situation? Does he think the pump-priming policies of the federal government, whatever that may mean, have been successful in dealing with this situation?

Of course the Minister of Labour is not the only one who has said that these policies were working. The Prime Minister, in a Canadian Press report which appeared in the Montreal *Gazette* of March 22, 1958, is reported as having said:

> I hope that by June or July the application of our policies will have met the problem, through loosening tight money—

That is a very pertinent statement at this time, "through loosening tight money".

> —and through public works, so that no one will be suffering from unemployment.

Seasonal benefits have been discontinued, unemployment is just as high now as it was a year ago, yet the Prime Minister said that by June or July the application of his policies would result in the situation being corrected.

I was present at a meeting held in the railway committee room toward the end of June attended by a delegation mainly of automobile workers from the city of Windsor and five or six cabinet ministers. Did these representatives feel at the end of June that the problem had been dealt with and the situation met? No; they said there was actual suffering in the city of Windsor because of unemployment.

It is easy to rise in this house and say labour is increasing the cost of production and the cost of living, that labour in the steel industry is receiving twice as much in the way of wages as labour in rural areas, but I believe the attitude of organized labour toward farmers is excellent. Canadian agricultural producers have today in the Canadian Labour Congress one of their very best friends.

Some hon. Members: Oh, oh.

Mr. Argue: Hon. members on the government side may snicker if they wish, but when the united automobile workers made their presentation at that meeting in June one of the points they emphasized in their brief was that it is necessary for the government to deal with agricultural income in such a way as to increase it. Organized labour participating in that meeting demonstrated something that we in this group have known to be correct for a long time; that you cannot have full employment in Canada when there is a depressed condition in agriculture. And so, far from attempting to drive a wedge between the farmer and labour, we feel both organizations and the membership of both are good loyal Canadians who work hard for a living and are entitled to receive a reasonable wage for a reasonable day's work.

Following that meeting a conference was held in Ottawa in the early part of July under the sponsorship of the federal government and the Minister of Labour. At that conference were people representing organized labour and people representing business and management. We had hoped at that conference to deal with the question of seasonal unemployment. We had hoped that from that conference would emerge a program and policy that would prevent winter unemployment. The Minister of Labour promised to cure the problem of summer unemployment. The Prime Minister said that by June or July summer unemployment would not be with us. Well, the government failed to alleviate summer unemployment. Is the government now going to fail in the same way to prevent winter unemployment, which is a much more difficult problem to meet?

As I indicated, we had hoped a program of winter employment would be forthcoming from that conference. Immediately following the conference I questioned the Minister of Labour in this house as to whether a program had been agreed upon, and since that time various questions along the same line have been asked of him. The most recent information we have received is that the report is now in the hands of the Department of Labour. I do not wish to misquote the minister and he may correct me if I misinterpret what he said, but I understand the report is now being processed to the point where it can be turned over to the federal cabinet for consideration.

Does that represent progressive action? Does that indicate any great degree of speed in meeting the problem? Parliament is in session, but it may not be in session very much longer. At the rate the government is going I wonder if it will introduce a policy concerning winter employment that will assist to alleviate the situation this year.

I would hope the government has so crystallized a program to deal with and prevent winter unemployment that it will have concrete legislation to present at this session, but if the delay continues one will be led to ask whether it will be possible to deal with winter unemployment this year in an effective manner.

The minister referred to certain measures the government was considering. The government had a public information program. It sought to talk itself out of a winter recession

by advertising and giving advice to the building trades. That program cost $150,000. Looking over the main estimates I find there is less provision for that kind of thing this year than there was last year. I hope this does not mean the program, which never has been adequate, is now being reduced. Rather I hope that this and other programs will be brought before parliament to deal with this situation.

According to one set of figures we have 300,000 unemployed. This is a serious matter for the Canadian economy. The number of unemployed at present is twice that of a year ago. Are we in a position either in the domestic field or internationally of being able to afford to have half a million unemployed in Canada again this winter? In all seriousness I ask the following question. How can we attract to the democratic world as supporters of our way of life the people of the uncommitted nations, people with a low standard of living, if they look to Canada and see all these idle resources?

The provision of full employment and full production is important to the economic standards of Canadians themselves, but it is also important in terms of Canada's stature in the world today. If we have solved the problem of unemployment and achieved full production we can say to the uncommitted nations of the world that our way of life is adequate; that we have been able to provide the man who wants a job and an income with a position and a wage. As I have said on another occasion in this house it is estimated that during the last 12 months Canada has lost production to the value of $1,500 million because of unemployment. That production could have been put to excellent use for the welfare of Canadians and as part of Canada's contribution to economic development in other parts of the world.

Mr. Chairman, may I call it one o'clock?

The Chairman: There are two minutes of the hon. member's time remaining. Is it the pleasure of the house to give him permission to continue?

Mr. Argue: Mr. Chairman, I will give the minister those two minutes at 2.30.

The Chairman: Shall I call it one o'clock?

Some hon. Members: Agreed.

At one o'clock the committee took recess.

AFTER RECESS

The committee resumed at 2.30 p.m.

Mr. Starr: Mr. Chairman, I expect that my remarks will be quite brief at this time. First of all, I want to thank all hon. members for participating in the debate on the first item of my estimates, and particularly for the worth-while suggestions that have been made as to how the functions of the department could be improved. To be fair in my remarks, I also wish to say I appreciate the criticisms that have been brought to our attention. Most certainly, a great many of those criticisms deserve to be looked at carefully to see where we can make some corrections that will bring about the kind of change in our department that will be of benefit to those who come under the laws and jurisdiction of the Department of Labour.

A number of questions have been asked regarding certain functions of our department and I would suggest that hon. members who have those questions in mind should ask them on the appropriate item of our estimates. However, I should like to make one or two observations, particularly to the hon. member for Dollard who advocated the introduction of legislation designed to abolish discrimination by employers against older workers in the matter of employment. He referred to the enactment of this type of legislation by a certain state legislature in the United States.

As I have said, Mr. Chairman, we are intensifying our work in relation to the employment problem of older workers because this has been a problem that has been foremost in my mind for a number of years now, since I have seen what is happening in the labour market as regards older workers. We propose to keep in touch with the operation of the United States legislation to which the hon. member has referred. This legislation is very recent and it will only be possible to determine its value and effectiveness by watching its operation. I believe, Mr. Chairman, that progress in meeting the problems of older workers will come mainly from the process of education, employment counselling, research and co-ordination of efforts of all agencies working in this field. I am quite willing to look at any proposal which will be effective in improving the lot of those older workers.

The Leader of the Opposition brought up the subject of automation and that, too, is a very important subject now and will be more so in the future. Automation, more properly referred to as technological changes of all kinds, is having an important effect on manpower requirements in industry. Many of the comments about those changes, however, are merely opinions or general impressions. The kind of technical changes occurring in industry and the ways in which those are altering requirements for different skills and training courses are a very complex matter. In this difficult area we need facts rather

than opinions and speculative suggestions. This is why our approach to this problem has been, first of all, to find the facts. For the last year or so the Department of Labour has been carrying forward a number of research studies to learn more about those technological changes and their manpower and training implications. To help ensure that this research is keeping its feet on the ground, as it were, we have established an advisory committee composed of the representatives of organized labour, of industry and of our universities to advise and to comment on the work we are doing.

I do not want to leave the impression that the only action taken so far is research. The vocational training agreements now in existence with the provinces put special emphasis on the extension of training facilities for the type of workers so often referred to as technicians. We know that there is a growing need for workers with advanced technical training and we are therefore encouraging the provinces to expand those kinds of facilities.

As far as unemployment is concerned, I should like to leave my remarks on that aspect of the matter until we reach the item relating to unemployment insurance. With respect to the matters that were brought to my attention regarding unemployment insurance as it affects fishermen and various other aspects of these matters, I would prefer to make my remarks when we reach that item.

Mr. Argue: Mr. Chairman, this morning I asked whether the minister could give us some indication of the program he intends to initiate to remove the present widespread unemployment. While we know the government has failed to remove summer unemployment, we would hope the government would be more successful in dealing with the question of winter unemployment. I did make reference this morning to the conference that was held in Ottawa and the report that is being processed in the minister's department at this time to be laid before the cabinet at a later date. I am wondering whether the government will have a program to place before parliament that will require legislation at this session. Certainly, widespread unemployment throughout our nation at this time is a very important economic problem; it is a crisis as far as the unemployed are concerned. I think on item No. 1 of the minister's estimates it would be in keeping with the practices of this house to have the minister give us the benefit of his knowledge on this question and the program that the government will be adopting and whether he feels that the government can deal successfully with this very urgent question.

[Mr. Starr.]

The Chairman: Shall item 170 carry?

Mr. Argue: Mr. Chairman, I asked the minister a question. I would hope that he would answer it at this time.

Mr. Starr: In my remarks I said that I would make a statement on that aspect of the matter on the item on unemployment insurance.

Mr. Pickersgill: I wonder whether the hon. member for Assiniboia would permit me to intervene. He asked whether the minister or any other member of the government contemplated any legislation of which we have not yet been given notice to provide additional employment. I think that is a question that should not be left until we come to one of the later items where we are restricted in our discussion. That is why we should like to have an answer on the first item.

Mr. Starr: You mean additional legislation?

Mr. Pickersgill: I mean any legislation of which we have not been given notice. We know what is on the order paper and we know that there are one or two things that we have been told are going to come on the order paper.

Mr. Argue: With great respect to the minister, Mr. Chairman, may I say that I do not think you can discuss on the item on unemployment insurance the whole question of providing employment for the unemployed in this country. It would seem to me that this is an act which provides some income when there are no jobs. Although we have great interest in seeing that we have incomes for people who are unemployed, we think it is a fair request to make of the minister when we ask that he give us an outline at this time of whether or not there will be any legislation and of what the government is intending to do not merely by amendments to the Unemployment Insurance Act or changes in administration but about the question of providing jobs for unemployed people.

The Chairman: Shall item 170 carry?

Some hon. Members: Carried.

Mr. Argue: Mr. Chairman, this is a strange way in which to discuss the estimates of the department. We have repeated questions and do not get so much as an answer. If the minister wants to give us the silent treatment, of course there is nothing we can do about it.

Mr. Starr: No, Mr. Chairman.

Mr. Argue: I am glad to note that the minister is now in a mood, as I would hope, to answer some of the questions I have

raised. I had said this morning also that there had been some substantial increases in the cost of living since this government took office. In view of these increases in the cost of living, it is understandable that the working people of this country are anxious that their real incomes should not be reduced by a continuing rise in the cost of living. The minister pointed out that there had been some levelling off in recent months. But I would point out to him that when the government took office in June, 1957 the consumer price index stood at 121.6 and that in June, 1958 the index stood at 125.1, an increase of 3.5. If the minister will check on the matter, I think he will find that that is the largest increase from June to June in many years. The previous June also saw a very substantial increase in the cost of living index but it was slightly less than 3.5, being 3.3. But the increase for a number of years was small in relation to this large increase that has taken place from June of 1957 to June of 1958.

A few moments ago, in speaking on the general subject of automation or technological change, as I believe he called it, the minister pointed out that this matter provides a certain real problem. Workers who are engaged in industry where technological improvement is going on at a very rapid rate and where therefore the workers' productivity is being increased at a rapid rate naturally feel that they should share in this increased productivity. I think that feeling applies to working people generally. I think it applies to the civil service of this country. When they see certain improvements by way of business machines being introduced or automation in the Post Office Department and so on, they naturally feel that they are entitled to an increase in their real incomes because of increased productivity.

Statistics show that an increase in the real productivity of this country can be or should be expected at the rate of 3 per cent per year. When one considers the increase in productivity and the large increase in the cost of living in the last year, he cannot help but have great sympathy for the civil service association of this country and the civil servants generally in asking that these two extremely important factors be considered by the government. As the minister has made reference to increased productivity, I think it is in order to make a reference to the position of civil servants.

Mr. Green: Mr. Chairman, I rise on a point of order. I submit that the hon. member is quite out of order in trying now to discuss civil service salaries under this item in the estimates of the Department of Labour. There are other items under which he can discuss the matter in the future. To get on to this civil service question now is to stretch the rules much further than is allowable.

The Chairman: I believe the Minister of Public Works is quite right in his remarks. This is not the time to discuss the civil service commission nor the details pertinent to it. Consequently I believe that the hon. member for Assiniboia is out of order in his present comments on the civil service commission. Furthermore, the hon. member for Assiniboia had 28 minutes—and he had an additional two minutes which were reserved to him—prior to our adjournment at one o'clock in which to voice his opinions and to ask questions of the minister. The minister expressed certain views at the opening of this afternoon's sitting and clearly stated that when we come to the unemployment insurance item he would answer the hon. member for Assiniboia. I believe that when this particular item is discussed we could then give the minister the privilege of answering the questions which were asked—

Mr. Pickersgill: Mr. Chairman, could I make a point—

Some hon. Members: Order.

Mr. Ricard: The chairman is not yet finished speaking.

The Chairman: —and also give the minister sufficient latitude to carry on his remarks. I believe that, at the present time if the minister wishes to answer the questions that were asked by the hon. member for Assiniboia, he should have the opportunity to do so. However, if he prefers to answer them later on, on the item on unemployment insurance, I think that should be sufficient.

Mr. Pickersgill: I am rising on a point of order, Mr. Chairman. It seems to me that under the rules of this house a member may speak as often as he wishes for 30 minutes at a time in committee. I believe that is the position so long as the hon. member for Assiniboia or any other hon. member on either side of the house is dealing with the matter before the house; and particularly and above all is it the situation in the committee of supply where Her Majesty's ministers are asking the rest of us who were elected for the purpose to vote supply. Any attempt upon the part of anyone to restrict the full scope of the inquiry would be a most unprecedented innovation in our parliamentary proceedings.

Mr. Argue: Mr. Chairman, may I say this as to the statement you have made. On reflection I think you would not want to consider it as a ruling. As has been pointed

out by the hon. member for Bonavista-Twillingate, under the rules of the house it is clear that in committee of supply, a committee of the whole, while a member is limited at one time to 30 minutes, if another hon. member follows him in the debate then the hon. member who has spoken for 30 minutes, if the chair recognizes him, is entitled to the floor again. Since I have come nowhere near exhausting my second 30 minutes I would suggest, Mr. Chairman that it is in order for me to speak at this time, assuming that what I say does not contravene the rules in any other way.

The Minister of Public Works has made a very interesting interjection in the debate. Since he is in a rather expansive mood this afternoon, I take it, and let us hope in a good mood, he might tell us at what other time during this session we may have an opportunity to discuss the very important proposals that are reported in today's *Journal*.

Mr. Ricard: You are out of order.

An hon. Member: Oh, we have two chairmen.

Mr. Green: May I point out that I am not attempting in any way to stop the hon. member debating the item which is under discussion. However, the chairman has ruled that he should not discuss this question of the civil service under this item, and the hon. member should not go on to discuss it in spite of that ruling.

Mr. Argue: I was about to ask the Minister of Public Works a question. If he does not want to say when we can discuss this very important question in the house, then I think it is very much in order on item 1 of the Department of Labour estimates to discuss the general labour situation in this country.

Mr. Green: I have no objection to the hon. member discussing the general labour situation, but he was discussing the pay of civil servants. Now, this question comes under the civil service commission item or under those of the Department of Finance. There are probably several other items under which it could be discussed, but to try to open a discussion on this question on this particular item is entirely out of order and the chairman has so ruled. The hon. member should abide by that ruling.

The Chairman: I have indeed ruled that a discussion of the civil service commission is out of order at the moment. A discussion of the civil service commission should be carried on under the item concerning the civil service commission. I am quite in agreement with the statement made by the hon. member for Bonavista-Twillingate and the hon. member for Assiniboia, that they can speak for 30 minutes on repeated occasions during the same debate. However, I only pointed out, if the hon. member for Bonavista-Twillingate will recall, that the Minister of Labour had said he would prefer to answer the questions on the item which dealt with unemployment insurance. I then stated that perhaps we should give him the required latitude to answer those questions.

It is quite important, especially at this time, that we try to be as relevant as possible to the items under discussion. It would be highly appreciated by the chair if all members tried to avoid repetition and tried to be as relevant to the item under discussion as could be managed. This is said with all due respect for the privileges of the members of this house.

Mr. Pickersgill: I should like to raise another point of order. It is a very brief one and I do not think we will disagree on it. Your honour had said that a discussion of the civil service commission should be conducted on the item concerned with the civil service commission, and with that I agree. However, the item of civil service salaries would properly be discussed on the item of the Minister of Finance because the Minister of Finance told us this morning he was the minister responsible in that field, and I am sure the house leader would agree.

Mr. Argue: I tried to be as helpful as possible and I think the Minister of Public Works, instead of getting up so quickly, should make some comment as to when we might discuss the report to which I have referred. However, if he does not wish to do so at this time we shall look forward to a discussion of that question at the earliest opportunity. Personally, I do not see how a reference to the economic position of the civil servants of this country could not properly be made under an item of the Minister of Labour, because certainly they are a very important part of the labour force of this country. If we are to discuss that particular aspect at some other stage of the proceedings, then that is what we shall do.

I do want to reiterate that I think all the working people of this country, when they have experienced the most rapid increase in the cost of living in many years while this government has been in office since June, and when they understand very well that automation has increased their production, have quite a legitimate case when they ask to share in the benefits from that increased production. When the appropriate time comes we shall have further remarks to make on this whole question. I shall be waiting with great interest for the minister's

very important statement which he said he will make as to how this government is going to solve the unemployment problem of this country.

Mr. Starr: I did not say that. I said I would make a statement on the unemployment situation.

Mr. Pickersgill: There is one question I should like to ask the minister. I apologize to the minister in advance if, while I was detained out of the house, he has already answered this question. While we are on item 1 I should like the minister to give us some account of his recent meeting with the provincial ministers of labour and other persons about winter employment. We on this side of the house are just as much concerned about winter employment as the hon. gentleman opposite. It does seem to me this is a matter we ought to have an opportunity of debating in an unrestricted way, so I am asking the minister if he would do that at this stage.

Mr. Starr: I shall be glad to do that, even though I had intended to do it on the item concerning the unemployment insurance commission. As I mentioned, that was the item upon which I was going to say something about unemployment. However, it is quite obvious that this winter unemployment question has been of deep concern to the government. I took it upon myself, with the consent of the government, to initiate the conference in order that we would have the benefit of the ideas or suggestions of the people concerned with the problem such as leaders in industry, labour, the provinces and municipalities and the other national organizations.

This conference was greeted with a great deal of enthusiasm by those who were invited and who were present. I might say, and I say this with pleasure, that all those who were invited were present, with one or two exceptions. They did have a very frank discussion. I made no attempt at that time, as chairman, to give any direction, because I felt we needed a fresh viewpoint from those concerned. The recommendations have been made, and those recommendations are being compiled by the department for study. I have not yet had an opportunity of presenting them to cabinet. I am going to do this because I consider this problem is very important. These matters will certainly be brought to the attention of the government for consideration.

It is quite improper, I submit, for the hon. member for Assiniboia to ask me to forecast at this time what sort of legislation the government is going to introduce as a result of a study of these recommendations. At this time I cannot forecast what legislation will be introduced, and I leave it at that. However, I do want to say that a study will be made of the recommendations and action will be taken because this government has the confidence of the people of Canada, and we want to introduce measures that will be beneficial to the people of Canada in so far as the alleviation of this serious problem is concerned.

Mr. Pickersgill: I quite agree with the minister that we should not press him to anticipate the decisions of the cabinet. I have held a position such as the minister now holds and I know it is a bad practice under our constitution to anticipate cabinet decisions, and whatever else I may be accused of, nobody can ever accuse me of trying to destroy responsible government in this country and that is more than can be said of many members on the other side of the house.

Some hon. Members: Oh, oh.

Mr. Pickersgill: I refer in particular to the hon. member for Rosedale whose disgraceful conduct in this building—

Some hon. Members: Order.

Mr. Pickersgill: —of which there has been much evidence—

Some hon. Members: Withdraw.

The Chairman: May I ask the hon. member to please keep to the question of labour.

Mr. Pickersgill: That is what I intend to do Mr. Chairman but I have a practical suggestion to make to the leader of the house. The minister said, and I quite agree with him, that at the present time the government has the confidence of the country. We do not question the overwhelming victory of the government and we have never done so. Every member of this house, however, has the confidence of his constituents and we all have equal rights in this house.

As I said earlier, we have just as much interest in this winter works program as has any member on the treasury benches. This session is going to last certainly for another two weeks at the very least—

Some hon. Members: Oh?

Mr. Pickersgill: —and probably more if we are going to do the work which the people of Canada has entrusted to us. I think it will probably take a good deal longer than that.

We will take all the time that is needed to do the business of the people and what I suggest is that we allow item one to stand and go on to the other items of the minister's department until the cabinet has had a chance

to reach its conclusions at which time the minister will be free to report to us. In that way every member will have an opportunity of expressing his views and it seems to me that that is a practical suggestion. If the government is not willing to do this and if it is going to use its overwhelming majority to ram this item through—

Some hon. Members: Oh, oh.

Mr. Pickersgill: —it is quite obvious that is because they do not dare to face a debate on this subject.

Mr. Ricard: Who has been preventing you from talking? No one has been preventing you from talking.

Mr. Pickersgill: When the loquatious and noisy hon. member for St. Hyacinthe-Bagot has finished I will continue sir.

The Chairman: Would the hon. member kindly take his seat. I must ask hon. members of this house to please be silent while the hon. member for Bonavista-Twillingate finishes his remarks.

Mr. Pickersgill: Mr. Chairman, as I was saying, it seems to me that the government, if this winter work program is to be in any way effective, will have to reach its conclusions very quickly and it will certainly want to do this before the prorogation of parliament in case any action should be required of parliament. Therefore it will not in any way impede the business of the house or the progress of the session if we simply stand this item now and go on to deal with the other items of the Department of Labour, after which time we can take the estimates of the Minister of Transport who is so eagerly waiting to bring them before the house. This item could stand until the minister has consulted with his colleagues and is in a position to give us the report which we are all so anxious to have.

Mr. Argue: In regard to the proposal of the hon. member for Bonavista-Twillingate, so that it may be possible at some later stage in this debate to have a full-scale and comprehensive debate on the very important question of the unemployment crisis in this country, I suggest that the government should accede to his suggestion. We have been discussing these estimates for a considerable length of time, after all, and the minister, quite properly in the circumstances, has said that the government has no program to offer the house at this time. We are very much aware that while the government has the confidence of the country on the basis of the March 31 election, confidence was given partly because of the categorical promise of the Minister of Labour and other members of the government that the unemployment problem would be solved, and would be solved in June or July. It has not been solved and we are in a worse mess as far as unemployment is concerned than that in which we were a year ago. There is no program developed to any stage where it could be placed before this house in order to deal with unemployment in the months ahead.

More than that, there has not yet been a statement that any program finalized by the government will be placed before this house during this session. I think the request made by the hon. member for Bonavista-Twillingate should receive sympathetic consideration by the government and that this problem should have a full and complete airing after we have learned what action, if any, the government is going to take to solve it.

Mr. Howard: I do not wish to go around on the same theme once more—

Some hon. Members: Oh, oh.

Mr. Howard: From the moans and groans opposite they apparently do not believe me but I do not intend to do so.

Mr. Cardiff: Go on talking; don't waste the time of the house by standing up.

Mr. Howard: Even that is more than some people attempt to do but in view of the rude interjection of the hon. member I would say that in view of the movement you made, Mr. Chairman, I anticipated you were going to make some comment to me and I was awaiting your remarks.

A number of suggestions were made in the formal remarks preceding the minister's remarks with respect to changes of attitude and changes in policies. I made two or three suggestions myself and I wonder whether I might inquire of the minister at this time as to what is his general attitude or as to what is the attitude of the government with respect to the suggestions I made; firstly, that we should have a standing committee on industrial relations to meet between now and the next session in order to hear representations from any interested parties so that such committee would be in a position to recommend to the minister certain legislation. Could I first ask the minister for his comments on that point?

Mr. Starr: I explained this whole thing in my opening remarks and if the hon. member had read them he would have known what I said on this matter. A little over a year ago I asked all the national organizations in this country, representing both management and labour, to submit to me their suggestions on

possible revision to the Industrial Relations and Disputes Investigation Act. Three of the larger bodies have not yet submitted their replies but have advised me that they are in the process of preparing recommendations. As soon as I receive them we will proceed to sort out the various suggestions so that we will be able to consider the possibilities in this regard.

Mr. Howard: I appreciate that and I did read the remarks of the minister although I was not personally present when he made them. One suggestion I made in this debate tied in with the thought that the legislation, particularly labour legislation and that with respect to industrial disputes investigation, if and when amended, should be referred to the committee on industrial relations during the next session. That, as a matter of fact, was the second part of the suggestion I made yesterday and it was my thought that the operation of the committee in the two fields should be connected, firstly of listening to the representations made by all interested parties, and this should not be confined to national labour organizations or national employers' organizations but should include independent unions, independent employers who do not belong to the C.M.A. or provincial groups and also include individual citizens who may be interested and concerned about this matter, and, secondly, that there should be a continuation of the understanding in the committee that it should hear all the representations and thereafter, being able to properly assess the legislation, should make recommendations to the minister regarding that legislation.

So my thoughts were not confined to the committee meeting between now and the next session, but were directed also to the question of continuing during the session when legislation was presented. I wonder whether the minister could indicate whether it is the policy of the government to channel all legislation through the committee on industrial relations.

Mr. Starr: I cannot say whether that would be the policy of the government, but it will be my policy to suggest to the government that this legislation should be channelled through the standing committee on industrial relations.

Mr. Howard: I have another thought on which I should like to make some comment. I wonder if the minister could give us a breakdown or an analysis of the operation of the women's bureau in the Department of Labour and tell us how it is functioning, or if it is functioning, and what it has accomplished?

Mr. Starr: Perhaps the hon. member would allow that question to stand until we reach the item.

Mr. Howard: Would the minister care to indicate which item it would come under? I should be pleased to do as the minister suggests but I note it is under item 170.

Mr. Starr: I apologize to the hon. member. I am unable to give details as to the functioning of this section of the department at the moment, but I would be very glad to get the information later.

Mr. Howard: When I was in the provincial legislature I had the thought that the provincial government should institute the same thing. I believe this was in 1953 or 1954, when this bureau was established under the federal Department of Labour. While the aesthetic aims and other objects of the bureau may have been worth while at that time, I doubt very much whether anything worth while is being accomplished by the operation at the present time. I say I doubt this, but I do not know. Not being a woman this matter does not come to my attention as much as it would probably engage the attention of the hon. lady the Minister of Immigration and Citizenship, who would probably have a close interest in the work of this bureau. As far as my own knowledge goes, I say that I doubt whether it is really making a contribution to Canada.

Mr. Argue: Mr. Chairman, I am very disappointed that the government has not given the committee some indication that it will deal in an effective manner with the very grave unemployment situation.

Mr. Starr: I said that we were concerned about this situation and the reason for calling this conference on winter unemployment was to deal with this serious matter. The hon. member keeps repeating himself and twisting words, and he is unable to say anything that is reasonable in any way at all. It is just plain playing politics with regard to the very serious unemployment situation.

Mr. Argue: Irresponsible remarks of that kind from the Minister of Labour—

Mr. Starr: We have been listening to this all day.

Mr. Argue: The minister knows that he should not interrupt an hon. member who has the floor. Such remarks by the minister are a very poor and inadequate substitute—

Some hon. Members: Oh, oh.

The Chairman: When the hon. member for Assiniboia has the floor it would be appreciated if members of the committee would permit him to continue his remarks.

Mr. Argue: I was saying that the irresponsible attitude of the Minister of Labour means that the government does not take this situation nearly as seriously as it did—

An hon. Member: Sit down.

Mr. Argue: The government does not take the unemployment situation to heart in nearly the same way as it did during the election campaign, when the pledge was given that this problem would be dealt with and that at mid-summer unemployment would be solved. What have we heard this afternoon?

Some hon. Members: You.

Mr. Argue: We have had an exhibition—

Mr. Starr: "Exhibition" is right.

Mr. Argue: —an exhibition from the government which indicates that it has no policy. The minister can pop up now and tell me the government has a policy if he likes, but there is no indication that the government has a policy to deal with this matter. Something is being processed, he says, in his department that will be turned over to the cabinet at some later date. What have we asked? We have asked that this item should stand so that this committee might have the chance to debate whatever statement the government may make later this session, so that we may be able to deal with the grave unemployment situation in this country. I suggest that the government and the minister are showing contempt for the unemployed of this country.

Some hon. Members: Shame.

Mr. Argue: I suggest he is showing a callous disregard of their position by refusing not only to say whether or not he has a program, or will have a program, but also whether or not legislation will be placed before parliament during this session in order to meet the situation. The government will not even allow us to debate the subject on item 1 by allowing it to be postponed to a future date. In order to show how we believe the government should deal with this situation, and as a method of protesting this cavalier attitude toward the committee, I should now like to move that the chairman do now leave the chair and that we rise and report progress.

Mr. Starr: Mr. Chairman—

Mr. Pickersgill: That motion, I believe, is undebatable.

[Mr. Argue.]

The Chairman: Since the motion is undebatable I must ask the hon. member for Assiniboia to let me have his motion in writing.

Mr. Argue: I move:

That the Chairman do now leave the chair and that the committee rise and report progress.

Motion (Mr. Argue) negatived: Yeas, 21; nays, 58.

The Chairman: I declare the motion lost. Shall the item carry?

Mr. Pickersgill: Mr. Chairman, I wish to repeat again my appeal to the house leader to accede to that very reasonable request.

Some hon. Members: Order.

Mr. Pickersgill: May I remind hon. gentlemen that we were not voting on this question at all. Recalling some of those scenes in another parliament when the Minister of Public Works sat on this side of the house I believe the minister would be extremely reluctant to use his majority to extinguish the opportunity for debate and that is what will be done if this request is not acceded to. My friend the hon. member for Hull who I believe wishes to say a word on this subject will doubtless add to what I have said.

Mr. Green: Mr. Chairman, the hon. member for Bonavista-Twillingate has again placed one of those seductive suggestions before the government. He says that if we do not consent to his suggestion, if we do not let him run the house, then we will be stifling debate.

Mr. Pickersgill: Not at all.

Mr. Green: Let us just analyse what has been taking place. The estimates of the Department of Labour for the first time in the history of parliament—

Mr. Pickersgill: And the last.

Mr. Green: —were sent to the standing committee on industrial relations in order that they might be—

Mr. Pickersgill: Kept out of the house.

Mr. Green: —thoroughly considered. That was done in the standing committee. Every single item which is now before us in these estimates was passed in that committee. I heard not one word of complaint about the proceedings in that committee. I believe a good job was done and all parties share in the credit for that good work. The estimates have now come back to the house. There has already been a lengthy discussion on the first item. It has been the practice of the house to have a general discussion on the first item

although there has always been some doubt as to just what right there was to such a discussion.

Mr. Argue: Only when you moved over there.

Mr. Green: The government has not made the slightest move to shut off discussion on this item where it was in order. An attempt was made by the hon. member for Assiniboia to drag in by the tail the question of the payment of the salaries of civil servants and that, of course, was ruled out of order by the chairman. Now we have this alluring suggestion on the part of the hon. member for Bonavista-Twillingate that if we do not stand this first item indefinitely—

Mr. Pickersgill: Not indefinitely.

Mr. Green: —then we are stopping debate, bringing in a type of closure. Mr. Chairman, there could be no submission more ridiculous. This is a submission which the hon. member for Assiniboia and his fellow members in the C.C.F. would never raise because they know it is entirely contrary to what is taking place here.

Mr. Howard: Do not be too sure about what we would do.

Mr. Green: There is no reason why the discussion on the first item should not be carried on in the ordinary way. There are various other departmental estimates to come up on which employment can be discussed. It is not as though this whole field had to be covered on this one item or it would never be covered at all. There will be 25 different ways it could be brought up between now and the end of the session and I have not the slightest doubt that the C.C.F. will find 24 of them. Of course, the hon. member for Bonavista-Twillingate will never find them because he always comes in at the tail end of the C.C.F. on any issue. He is doing his party more harm than anybody else in that party.

An hon. Member: And that is saying something.

Mr. Green: When these eight men in the C.C.F. who are working under difficulties in having such a small number do bring up a point the hon. member for Bonavista-Twillingate has to run along and jump on the bandwagon and start talking. I am perfectly aware of what I just witnessed during the last half hour. I saw the call come from the C.C.F. who went over to the hon. member for Bonavista-Twillingate and sat beside him and gave their marching orders as to what was to be done next.

Mr. Denis: That is his business.

Mr. Green: At one time the hon. member for Bonavista-Twillingate held a very responsible position in the civil service, that of clerk of the privy council. That is really the very centre of the civil service. Of course, prior to that the hon. gentleman was the private secretary of the late Right Hon. William Lyon Mackenzie King and he acquired many bad habits while serving in that capacity.

The Chairman: I believe we are straying from the discussion we should be conducting at this time and perhaps we should return to a discussion of item No. 170.

Mr. Pickersgill: Mr. Chairman, I have no desire to reply to the flattering things that were said about me by the Minister of Public Works. I appreciate them. However, I wish to remind the Minister of Public Works of something which he appears to have forgotten.

I point out to hon. gentlemen that I am talking about this item and strictly on the item. I did not ask the minister to stand this item for a general debate on unemployment; I asked for nothing of the kind. I said that for our part we would be prepared to go ahead in an orderly manner with a discussion of the other items of the department. I made a request for a specific and limited purpose. The Minister of Labour rose in his place and said he could not report on the conference which he described as important because he had not yet reported to the cabinet. I promptly accepted that position and said that, in order to give the minister an opportunity to report to the cabinet and in order to give the government an opportunity to take action, we should stand the first item of these estimates. I did not say it should be stood for an indefinite period although of course it seems to require an indefinite period for this government to reach a conclusion about anything. But that was not my idea. My thought was that the government, for once, might make up its mind quickly about this matter and report to the house. We would be very glad to go on with a discussion of these estimates, and if the government would make up its mind in the meantime we could proceed on the first day the government did not have to make a motion to go into supply. In the interval the minister could make his report to the cabinet and then to the house on the occasion to which I have referred. The report on the winter employment program is what we want to debate and a discussion of it would not, I believe, be in order on any item of the estimates other than item No. 1 of the estimates of the Minister of Labour. It was in order to respect the desire of the

Minister of Labour to preserve the confidence that he is entitled to preserve until he has reported to his colleagues in order to let this government make up its mind, if it is capable of making up its mind, and to report to the house, that I made this very reasonable request, and I make it again.

The Chairman: Order. The Chairman must insist once again on asking hon. members to respect standing order 59, subparagraph 2, which states clearly:

> Speeches in committee of the whole house must be strictly relevant to the item or clause under consideration.

We are considering item No. 170 and we must confine our remarks to this item. Shall item 170 carry?

Mr. Caron: Mr. Chairman, a while ago I listened to the Minister of Public Works. He said that in the industrial relations committee nothing was said to indicate that any opposition came from there. I know that I for one accepted the report on division so that we could have a chance to study the matter in the house. Furthermore, the minister seems to think that the request of the hon. member for Bonavista-Twillingate is something extraordinary when he asks that item 170 stand and that we go ahead with the other items and come back to item 170 later on in order to give the minister a chance to report to the cabinet and be in a position to say whether there is really some legislation in mind to alleviate the hardship of unemployment.

When I was a member of the Quebec legislature—I do not know whether it is still the same today; there have been many changes since I left—item 1 of every department was allowed to stand until later in the session so that we could come back to it to deal with events that may have taken place during the session. It has been the common practice to follow that procedure in the Quebec legislature, and I do not see anything in the standing order, or in any of the practices of this house, which would prevent us from standing the first item and passing the remainder of the items and then coming back to the first item later after the minister has had a chance to discuss the matter with the cabinet to see whether any legislation really is in preparation to help in the unemployment problem of the coming winter. That is what we want and I do not think the Minister of Public Works has any right to make the remarks he made because I really believe they were the cheapest remarks ever made in this house.

Mr. Starr: Earlier this afternoon the hon. member for Bonavista-Twillingate said that he did not wish to anticipate government legislation and he was right. He has been the clerk of the privy council and he knows very well that by this action in asking that this item stand he is using a form of blackmail.

Mr. Pickersgill: Mr. Chairman, I have very rarely raised a question of personal privilege in this house but I believe blackmail is a crime and I believe it is contrary to the rules for one hon. member, even in jest, to suggest that another hon. member has committed a crime or is attempting to commit a crime. As a good lawyer I am sure the Minister of Public Works would be the first to agree with me in this. I must say that personally I could not care less about this charge because, as the Minister of Public Works has said, my life is an open book and I do not think anyone thinks I have ever indulged in the crime of blackmail. But I am speaking, sir, on a question of privilege. I do feel—

Some hon. Members: Sit down; the Chairman is on his feet.

The Chairman: Possibly the minister's language was a bit strong and I am sure he will withdraw his remark.

Mr. Starr: I will withdraw it, Mr. Chairman.

In answer to the hon. member for Skeena regarding the women's bureau, this bureau has the responsibility for examining existing data and studies concerning conditions of employment of women workers and stimulating additional research by the appropriate branches of the department or other research bodies. They also have the responsibility of assembling information of interest to women, and, through speeches and published material, making it available in such a way as to foster an intelligent approach to women's problems; thirdly, they develop regular channels between the departments and other public and private agencies, including women's groups and employer and labour organizations, in order to ensure a continuing interchange of information concerning women in employment; advising the department on any of its program affecting women workers and being available for consultation with provincial government agencies or other bodies concerned that employ women, as requested.

Now, the allotment of estimates in the year 1957-1958 for this board was $32,100. The expenses in that period were $26,164.74. The allotment in the estimates for this fiscal year is $31,285.

Mr. Howard: Where may we find that in the details?

Mr. Starr: It is embodied in the details; it is not set out as a separate item.

Mr. Howard: Can the minister indicate whether he thinks this women's bureau makes a worth-while contribution?

Mr. Starr: My advice from the officials is that it does.

Mr. Howard: I would like to take advantage of the invitation of the Minister of Public Works to search for one of those 25 ways. I have been trying to track down what the 25 ways may be. I have found one way that I think is the legal way of raising this question. In the details on page 253 there is a listing, and I find the following: "Approximate requirement for increases in rates of pay". The figure of $28,527 is shown for last year, but nothing for this year. Can the minister indicate whether he intends to keep that at nothing throughout the remainder of the fiscal year, or whether there is any thought of arranging for increases in the rates of pay for public employees working under his jurisdiction?

Mr. Starr: The amount last year was for the provision of increases in wages which were not provided for this year.

Mr. Denis: Can the minister tell me whether those increased wages were voted by the former government?

Mr. Starr: It was under the general salary revision which came into effect in the fiscal year 1957-58.

Mr. Denis: Were the increased wages voted by the Liberal government before the new government came into power?

Mr. Starr: No, it was not voted by the former government. It was in the 1957-58 estimates.

Mr. Chevrier: Mr. Chairman, I hope the minister will not think that I am attempting to hold up his estimates because that is the last thing I would want to do. I held a position similar to his and I know how much I became annoyed when, just at the time the item was about to pass, someone rose and made a speech which I thought was embarrassing. I did not like it. Therefore, I am going to do my best not to make an embarrassing speech and not to try in any way to hold up the minister's estimates; but I am prompted to rise because of the discussion that was originated earlier and because of a remark made by my genial friend across the way, the leader of the house. The fact is that he made a statement here which was quite at variance with one he made earlier in the session.

During the discussion of the motion to send many of these estimates to standing committees for consideration, the point was made that such procedure would not affect in any way the discussion in the house. What is happening now is that after the estimates of this particular department, namely the Department of Labour, have gone to the standing committee and have now been reported to the house for discussion, we are told: "Oh, well, those estimates have been discussed at great length and you are holding up item No. 1".

Mr. Green: I did not say that, Mr. Chairman.

Mr. Chevrier: With all due respect to my genial friend across the way, I say that he cannot have it both ways.

Mr. Green: On a point of order, Mr. Chairman, or a question of privilege, may I say that I did not say that at all. I said that you could have the widest discussion on the item here. What I said was that this charge that we are trying to stop discussion was ridiculous because not only is the matter being discussed here but it was also discussed in the committee.

Mr. Chevrier: The charge is not so ridiculous as the house leader would lead us to believe, Mr. Chairman. The minister said a moment ago that it is not the practice to hold up item No. 1. I say to him now that the former administration on more than one occasion held up item No. 1, not indefinitely but in order to give consideration to the matter which was submitted to the house; that matter was that the minister should hold up this item of his estimates until the government could report on winter work, until he could discuss with his colleagues in the government what the position was with reference to this extremely important matter of winter work which is of interest to all of us on this side of the house.

What I am saying now is that there should be no objection to telling the house what the position is. What harm could there be if item No. 1 were allowed to stand? In so far as I am personally concerned—and I can speak only for myself—I am prepared to state that if item No. 1 stood I am almost willing to wager that the other items would go through very quickly. Then if anything were to take place between the time this item was allowed to stand and the time it was passed there would be an opportunity for discussion of matters concerning the important department over which the minister presides. My only purpose in rising was to draw to the attention of the committee and of the minister the fact that on more than one occasion item No. 1 has been allowed to stand in the past. It would strike me that it should stand again on this occasion.

Mr. Regier: I think it is obvious now, Mr. Chairman, that the Minister of Public Works regrets the fact that he extended the hours of the house sittings to include Saturdays. However, this is what has impressed me more than anything. Here we have in office a government which has assured the Canadian people that from the month of June, come the month of July we would overcome the problem of unemployment; that we were past the peak; that we were over the hump. Those assurances were broadcast across the nation. We are now in the month of August and all we can read in the reports emanating from the Department of Labour is the age-old phraseology that there has been a decrease in the rate of increase as it affects our number of unemployed. The minister tells us that no legislation is to be introduced. He says in effect that we cannot before the end of the session expect that there will be introduced into this house any legislation that has any specific design—

Mr. Starr: I did not say that.

Mr. Regier: —or bearing of any major consequence on the subject of unemployment.

Mr. Starr: I did not say that.

Mr. Regier: Oh, yes; the minister has said that. The minister was unwilling, only a few minutes ago, to have item No. 1 held over.

Mr. Starr: I did not say that.

Mr. Regier: The minister voted against the motion that the committee now rise. The minister insists that this house now ought to complete discussion of his department in its over-all phases; in other words, he insists that a discussion of the basic principle ought now to end. He says that he is unwilling to go to the cabinet and unwilling to say to the cabinet: My colleagues, the House of Commons is not satisfied; the House of Commons wants more definite assurance that aggressive measures are being taken to meet the situation of unemployment.

This attitude bears out what I said yesterday, namely that this government seems to have made up its mind that it is going to attempt to ride out the storm. That is a cruel position to take when we consider human values. I feel that it is a dangerous position to take when we consider economic values. This air of uncertainty that obtains in the whole economic field throughout Canada, from Newfoundland to Vancouver island, must be cleared.

The people of Canada must have an assurance that we have in office a government that is master of the situation. We have not that assurance yet. The workers of Canada, the investors of Canada and the commercial interests of Canada are faced with this feeling of uncertainty and that is our major handicap now. That is the major cause of unemployment today. This government feels that it can with platitudes restore prosperity. It feels that it is unnecessary to meet the situation head on with an air of aggressiveness which would involve legislation and which would involve this parliament. We are asked to accept these assurances. We had those assurances six months ago, Mr. Chairman. The statistics of the minister's department now show that the assurances of this government mean nothing. As far as the unemployed of Canada are concerned, these assurances are worthless. The unemployed last winter voted Conservative—let us make no mistake about it—because they had a certain confidence in this new regime.

Mr. Ricard: They still have.

Mr. Regier: I remember, Mr. Chairman, that the former hon. member for Winnipeg North, Mr. Alistair Stewart, when the last parliament was in session, went home and lived with the unemployed in Winnipeg for one whole week. Then he came back to Ottawa and he brought back a report that worried me a little bit. He reported that half of the men in the line-up at the unemployment insurance offices were C.C.F. and the other half were Conservative. I failed to understand it. He said, "They are optimistic; they have a blind faith in this government". Those people today, six months later, no longer have that blind faith. Today they are filled with disillusionment.

An hon. Member: That's what you say.

Mr. Regier: They now realize the truth about this government. They are not taking the minister at his word today. The minister is assuring us that the government need not introduce any legislation. In effect that is what he is doing. He is saying that the cabinet need not ask parliament to consider deliberate moves to solve this problem of unemployment. The minister has asked us today to accept in blind faith the assurances that were given six months ago and which have since been proven to be a hollow mockery to those who are unemployed; that is cruel indeed.

I have only one other remark to make and that concerns what the Minister of Public Works had to say when he attempted to tell us we ought to end our discussion now because this subject has been dealt with adequately.

Mr. Green: I did no such thing. The hon. member must not put words in my mouth like that.

Mr. Regier: I realize I must accept the statement of the minister. However, may I recall to the minister that only a few minutes ago he expressed a doubt as to the right of a lengthy discussion on item No. 1. If that is not an attempt to limit the debate on the subject of unemployment on this first item of the estimates of the Minister of Labour, then I do not know what he meant by that remark. That is today the most important subject facing the House of Commons of Canada, how to resolve this problem, and I am most amazed indeed that the Minister of Public Works, of all people, feels that a day and a half is overdoing things.

I believe the Minister of Labour will agree that this is the major problem facing his government now. I do not believe the minister can cite one other problem that haunts him and his colleagues in the cabinet as much as does the worry about unemployment. I am willing to give him credit, at least to that extent. However, I feel they are accepting advice from the wrong places. I feel they are accepting advice from those in Canada who believe a fairly heavy measure of unemployment is healthy for the Canadian economy. A large number of unemployed, it is believed, is one way in which you can keep organized labour in line—"in line" meaning as they see the line.

There are many people in Canada today who do not view with regret a fairly heavy dose of unemployment. We feel that these are the people who are advising the government to attempt to ride out the storm. May I remind the government that if they accept this advice their fate will be the same as was the fate of one other Conservative government, and they will be swept out in the holocaust that will occur on the Canadian economic scene.

Mr. Robichaud: In reply to a question asked by the hon. member for St. Denis, if I recall correctly, the minister stated that the increase in the estimates for 1957-58 was voted by the present government. He could have added also that it was recommended and accepted by the previous administration.

In introducing his estimates yesterday, Mr. Chairman, the minister stated that he had tabled a report on the unemployment insurance fund on July 10 which gave an accurate description of the fund, and this could be found on page 2137 of *Hansard* for July 10. This report shows that as of May 31, 1958, there was a balance of $662,056,-156.77. Since two months have elapsed from the date of that report, could the minister advise this committee as to the present standing of the unemployment insurance fund, say at the end of July?

Mr. Starr: In reply to the question asked by the hon. member for Gloucester concerning the matter of the increases which have been brought about, may I say that the civil service commission made a recommendation that these increases be put into effect. The former government deferred any action on it, and when this government took office we put it into effect.

Mr. Pickersgill: I am sure the minister would not want to misrepresent the facts. I attended the last meeting of the treasury board of the old government, at which this matter was considered and in which we indicated our approval of these increases but left the implementation to the incoming government.

Mr. Starr: I have been advised by the officials of the labour department that what I said is so. Now, the balance—

Mr. Pickersgill: On a question of privilege, sir, is the minister questioning my word as a member of parliament?

Mr. Starr: I am taking the word of my officials.

Mr. Pickersgill: I really have a question of privilege now, Mr. Chairman. Since when has it become the rule in this parliament that one member of parliament can go to strangers, who happen by tolerance to be in the house, to question the word of another member? It does seem to me this is one of the most extraordinary things that has ever happened in parliament in my experience. I made a statement on my responsibility as a member of parliament, and the minister got up and said my statement was untrue, and that he confirmed the untruth of it by reference to some strangers who happen to be here by tolerance. It does seem to me this is something that cannot be tolerated by parliament.

Mr. Starr: In order to straighten this out—

Mr. Pickersgill: I am serious about this question of privilege.

Mr. Starr: I am always serious about these questions. In order to straighten the matter out, I may say that it was not the former government which gave sanction to it. It was the treasury board.

Mr. Pickersgill: The hon. gentleman does accept my statement as accurate?

Mr. Starr: Yes, that the treasury board gave approval and the former government did not.

Mr. Pickersgill: The treasury board was composed of members of the former government.

Mr. Starr: I want to keep the facts straight. The hon. gentleman was the clerk of the privy council—

Mr. Pickersgill: No, he was a member of the cabinet as minister of citizenship and immigration.

Mr. Starr: But he was the clerk of the privy council before that and he knows that government policy is not set by action of the treasury board but by action of the cabinet.

Mr. Pickersgill: I do not want to get into a quarrel with the minister for whom I have the greatest possible esteem. I think we really do understand one another. I will repeat what I said. I said that this matter was considered by the treasury board of the old government at its last meeting and was recommended, but that final approval was left to the incoming government. That is what I said, and if that is what the minister agrees with, then we are in complete agreement.

Mr. Starr: That is right.

Mr. Pickersgill: I still feel, sir, it was a rather—I expect it was a slip by the minister —serious suggestion that he was referring to strangers in the house to question the word of another hon. member.

Mr. Starr: I said, Mr. Chairman, what I know now to be the fact and I think it has been substantiated by the hon. member for Bonavista-Twillingate, that action on this matter was deferred by the former government even though it was approved by the treasury board.

Mr. Pickersgill: It was not deferred by the previous government because the meeting of the treasury board took place one day or two days before we resigned.

The Chairman: Order, please. It was decided, and there was a ruling made, that we could not discuss the civil service commission under this item 170. I hope that this pleasant discussion between the Minister of Labour and the hon. member for Bonavista-Twillingate has now come to its conclusion. It would be appreciated if we came back to resolution 170 and discussed that. Shall the resolution carry?

Mr. Starr: Mr. Chairman, I would like to answer the hon. member's question. He wanted to know what was the balance of the fund at the end of June which was the last figure we have available. It was $644,520,634.54.

Mr. Robichaud: It is quite evident from the figures just given by the minister, and from the report he tabled in the house on July 10, that during the last seven months the unemployment insurance fund has been considerably reduced; in fact, that the unemployment insurance commission has in that period paid out $346 million. The fund which was close to $900 million over a year and a half ago is now reduced to something in the vicinity of $600 million and at this rate it is evident that within the next 12 to 18 months the fund will be depleted by at least 60 per cent.

In view of the serious situation, is the minister or is the government as a whole giving consideration to increasing the government's contribution to this fund which is regarded as security for the labour force of this country? It is evident that at the rate the fund has been depleted in the last year more substantial contributions by the federal government will be required.

If the minister does not want to answer that question, could he answer this simple one: Is it the intention of the government to introduce an amendment to the Unemployment Insurance Act to increase the government's contribution to the fund?

Mr. Starr: This government in a short space of time has gained the reputation in this country of giving consideration to all problems which are of importance to our people and certainly this is one such problem.

Mr. Howard: I wonder if the minister, in view of the fact that he has just stated this government will give consideration to such a measure, could indicate whether there is any difference in his mind between giving consideration, giving active consideration and giving all sorts of other types of consideration, and whether he would indicate to the house what plans the government of which he is a member has for any kind of fulfilment of their primary objective which was said to be the maintenance of full employment. Has he any possible idea of how he is going to do it?

Mr. Starr: In answer to that question and in answer to a lot of other suggestions made in this debate I will say we have our own methods with respect to actions which have been taken and which will be taken. We have made recommendations on winter employment and most certainly we have not received any suggestion from any member of the opposition as to how that problem should be solved.

Mr. Howard: Would the minister indicate what are his solutions? He is one of those who were elected on false pretences as a result of that type of promise.

Mr. Pickersgill: If the minister wants some suggestions, Mr. Chairman—he says he has not received any from this side of the house—I can assure him we have plenty of suggestions to make but we would prefer to make them in the proper constitutional fashion after the government has brought down its program. It seems to me that when we were elected, in my opinion unhappily for Canada, to oppose the government and the hon. gentlemen were, as I believe it will also turn out unhappily for the country, to conduct the government of this country, they were expected as a responsible government to bring in suggestions to deal with our problems and not to say "We have not heard any suggestions from the other side of the house and so we have no program". That is a preposterous attitude to take and I therefore renew my request to the house leader to have this item stand until the government has made up its mind and can bring down its program before this parliament so that all the elected representatives of the people can debate it.

Mr. Caron: I see that we do not get many answers to that question but could the minister give us one good reason why he does not want item one to stand? This government should try to do something to increase employment in Canada and what we want is not the dole; what we want is work for our unemployed.

If nothing is at present being done to prepare for next winter the load will once again be carried by the municipal and provincial authorities. Thousands and thousands of unemployed are being carried today who are not receiving any benefits because the municipalities have to give them food and they have to pay their rents and, after all, the provincial governments reimburse the municipalities for part of their expenditures in that connection. If we keep on this way many thousands of people will not work during this summer and so they will have no stamps for next winter and will again have to be carried by municipalities which have no means with which to look after them.

The only thing we want to know is whether the government has a policy. We want to know if the Minister of Labour has done something to create work for next winter. I know the Minister of Public Works has a public works program but it is not extensive enough to take care of all the unemployed. What is the Minister of Labour going to do because he is the one responsible for the situation? It is too bad that it happens to be he who is in charge at the present time but it is his responsibility and he and the other members of the cabinet must find the means to solve the problem.

We are asking why will the minister not stand item No. 1. We will pass the rest today and when he has had a chance to discuss the matter with the other members of the cabinet and can come before the house during this session with a program for next winter, then we can deal with item No. 1. Up to now we know nothing; in fact I really think the minister does not know himself what he intends to do and that is not a proper way in which to administer a country, especially in a crisis such as that through which we are passing at the present time.

Mr. McIntosh: I wonder if I might ask the minister two questions? Could he tell the house of the number of unemployed in 1956 and the number of new Canadians who have come to Canada since that time?

Mr. Caron: That does not solve the problem.

Mr. Starr: I do not have those figures available.

Mr. Regier: I cannot allow those questions to pass unnoticed. Their indication is very very clear and it is that immigration is responsible for the level of unemployment. The member ought to know if he does not know—

Mr. McIntosh: Mr. Chairman, I can talk for myself.

Mr. Regier: —that the economic policies of the Canadian government are responsible for unemployment. Several years ago the Canadian Congress of Labour undertook a research program to find out to what extent immigration was responsible for our levels of unemployment and the report indicated very clearly that there was as much for as against the proposition of blaming immigration for unemployment. I hope that this is not an old Tory reaction coming to the fore which we thought had—as in fact the hon. member for Kootenay West said this morning—disappeared from Canada many many long years ago. I refer, of course, to the idea that the newcomers to our country are responsible for the ills which appear on the Canadian scene.

I am not yet convinced that immigration as such is responsible for unemployment and it is very wrong for this government to attempt, even through the mouth of a backbencher, to wash its hands of its responsibilities and to say it is the immigrants the Liberals let in who are responsible for our unemployment difficulties in Canada. I feel we are very right in our demand at the present time that the government should let

the Canadian people know what are its plans to meet the problems of the unemployment in Canada not only winter unemployment but summer unemployment as well. We cannot afford to allow this item to go through and the government go off on its holidays several weeks hence, and let nature take its course and, maybe, end up by having a disaster happen in Canada next winter.

The Acting Chairman (Mr. Chown): Shall the item carry?

Mr. Pickersgill: No, I do not think I can let the aspersion made by the hon. member for Swift Current-Maple Creek pass in the way it has passed up to now, because I had the primary responsibility under the previous administration for quite some time for the immigration program, and I was accused by many members of the present government—and I am not talking now about their supporters—of having too small an immigration program. If they now think they are going to get away with blaming unemployment on the immigration program of the previous government, they have another think coming. I recall that many hon. members spoke on this matter, not least the present Prime Minister, who, speaking to the ethnic press association a few days before the election in June 1957, said we could have a 4 per cent increase per year if we had his government in office. The first thing they did after they came into office was to stop immigration. If they think they can get away with blaming unemployment on immigration they are mistaken, and I ask the minister: does he blame the present unemployment situation on immigration?

Mr. Starr: No, Mr. Chairman, I certainly do not, and I want to say that the last two speeches are purely partizan speeches and an attempt to make a difference between hon. members of this committee, as regards immigration—

Mr. Pickersgill: I cannot let that pass, either. I did not bring up this subject.

An hon. Member: Who did?

Mr. Pickersgill: It was brought up by a supporter of the minister who was attempting, by innuendo, to cast aspersions—

Mr. Ricard: He never drew conclusions.

Mr. Pickersgill: The hon. and noisy member for St. Hyacinthe-Bagot had better go to the public accounts committee if he wants to find out how to ask questions which contain more than the answers.

The Acting Chairman (Mr. Chown): Order. I think the hon. member for Bonavista-Twillingate has got off the subject, which deals with general administration. It is true the hon. member for Swift Current-Maple Creek brought the question into the ring, but I think we should defer any further comments on it.

Mr. Pickersgill: I quite agree, Mr. Chairman.

Mr. McIntosh: I think I am quite capable of answering for myself. I brought this question up for a reason, because I think you would find that the figures are very much the same as they were. If you add the unemployment figure in 1956 to the immigration figure since that date I would say the figure would be very much the same as the total unemployment today, and I say that this government has done a fine job in keeping employment to that level. I do not think the government is denying that unemployment has increased and that it will present a problem, but I have confidence, and so have the people of Canada, that our government has this problem under consideration and will do all that possibly can be done to remedy it.

Canada is not the only country which is facing this problem, and nothing is to be gained by members of the committee on my right repeating themselves time after time in order to make a political issue out of it. I think the people of Canada will realize what they are doing. This is a problem which the government appreciates, and the government intends to do something about it.

Mr. Howard: The hon. member talks about political issues. He did not have much thought of political issues when the Conservative party was trying to oust the Liberal party from office and when they dragged not only the poor unemployed, but every other political issue in the country into it. He does not have much thought now as to all the promises they gave, promises which they had no intention of keeping. The main promise was that there would be full employment for the working classes. There was no intention of keeping that because the government does not know how to keep that sort of promise. The hon. member who says we are talking politics with regard to this kind of thing has only to look back, not too long ago, to the election before last and see who dragged politics into everything and degraded the word politics in this country by making irresponsible promises which they had no intention of keeping.

The Acting Chairman (Mr. Chown): Shall the item carry?

Mr. Caron: Mr. Chairman, coming back to the question which was put forward by the hon. member who spoke a while ago—

Some hon. Members: Order.

The Acting Chairman (Mr. Chown): I think a certain amount of latitude was allowed on that occasion which should not have been allowed. The hon. member for Bonavista-Twillingate was allowed to make a comment on it, but I think I will now rule that any further discussion on immigration as related to this item is out of order.

Mr. Caron: I find that very funny, Mr. Chairman, because you cannot read my thoughts, and I did not wish to speak on immigration at all, but on unemployment, which is part of this vote. When the hon. member who has spoken from my left tells us that we are making politics out of unemployment he is trying to say that members of this committee have no right to say here what they think to be right.

An hon. Member: No such thing.

Mr. Caron: I do not think that any member of this committee has the right to tell another member what he should say or what he should not say, and the hon. member will have to learn in time that every member has an equal right here to say whatever he thinks fit. If the hon. member had been here at that time he would have heard the Minister of Labour in 1955 criticizing the government with regard to unemployment, and he was one of the harshest critics at that time.

The present Prime Minister also in 1955 used to criticize the government continually in a very severe fashion. The same thing is true with regard to the hon. member for Hamilton West who, I believe, was the opposition's official critic at the time. She, also, was very harsh in her criticisms of the government of that day. Now they want to stop us from criticizing government which has no policy whatever and which cannot even advise the committee what it intends to do with regard to next winter. I think that is out of place, and if I had been prevented from saying this I would have raised a question of privilege because we have the right to say what we think on these matters as well as any other members of this committee.

Mr. Regier: I notice that the minister has many excellent advisers with him. They are some of the most highly educated men in the country in the field of economics and in other related fields, and I know that the minister pays very close attention to any advice he receives from them. Is the minister able to inform the house as to what reasons his advisers gave him as to why we have this exceptionally high level of ununemployment in Canada at the present time, and what measures they are recommending to him to overcome this problem. Why do we have this high level of unemployment?

Mr. Starr: In answer to that, I have been advised by the officials of my department in comparing last year's conditions with the conditions this year, that last year the economy was declining to a marked degree. In comparison, this year the economy is on the upswing at this time.

Mr. Regier: Mr. Chairman, I wish to thank the minister for that revealing statement of his to the effect that last year the economy was on the downgrade and this year it is on the upgrade, although this year we have twice as many unemployed as last year. Would the minister elucidate a bit on that point?

Mr. Starr: I must frankly admit that at the beginning of last year there were fewer people unemployed than there were at the beginning of this year.

Mr. Denis: Mr. Chairman, does the minister have unemployment figures for 1954?

Mr. Starr: I do not have them with me, Mr. Chairman.

Mr. Denis: At any rate it is safe to assume that the figure would be three or four times less than the present figure. I should like to place on the record some suggestions made in 1954 by the present Minister of National Defence which in light of the present attitude of the government can only be considered as strange. I refer to the French edition of *Hansard*, volume II, for the first session 1953-54, February 17, 1954, as found at page 2319 and following pages. I have the French translation of the remarks made on that occasion by the present Minister of National Defence who was then the private hon. member for Esquimalt-Saanich at a time when unemployment was far below the level it has reached today and I invite hon. members to listen to what he said at that time:

(Translation):

"Press reports of the last few days indicated that two battalions will be coming back from Korea very shortly. Approximately 50 per cent of the time-expired men take their discharge. They have done their period of service. Some feel they would like to take on army service as a permanent career. Others feel that they have done their duty by serving for the period of their contract, and they take their discharge.

"I should like to throw out the suggestion that some arrangement should be made whereby men are not released during these periods when there is the greatest seasonal unemployment".

The minister even went so far as to ask the government not to respect its obligation of

discharging the soldiers in Korea, even though they were entitled to discharge.

To continue the quotation:

"It seems to me it would not be very difficult for the services to provide some system of, shall we say, vocational training, to tide over that period when a man upon release will go out only to find that, owing to this seasonal unemployment, there is no prospect of finding a job".

Mr. Parizeau: What's wrong with that?

Mr. Denis: If it's our friends from Quebec who want to know what's wrong with it, just let them listen to the rest of the quotation:

"Earlier this session I called attention to the fact that there was a shortage of reserves for our armed forces. In my speech last December I quoted at some length statements made by General Gruenther, supreme commander of NATO forces. I am not going to repeat his statements again except to quote a few lines from a speech made by General Gruenther at Copenhagen, when he was addressing United Nations commanders. He said:

> The creation of adequate reserve forces means that a large proportion of NATO manpower will have to devote a considerable time each year to reserve training. That is inconvenient for the individual concerned and of course it tends to create economic strains.

"It is inconvenient to the individual concerned if he has to do his reserve army or naval training at a time when he is fully employed, but it is not such a great inconvenience to him if his reserve training can take place at a time when he is not employed, owing to the seasonal nature of his employment.

"I would suggest . . . "

Remember it is the Minister of National Defence who is speaking.

"—that those men who are periodically laid off because of the seasonal nature of their employment . . . might be provided with army and navy training at that time".

Let this not go unheeded by my good friends from the province of Quebec.

Mr. Tremblay: What does that mean?

Mr. Denis:

"—and who have not become established with the security of their own homes to which they can go when unemployed".

I would like the members from the province of Quebec to listen carefully to what follows:

"I would suggest that the extension of reserve naval training for fishermen is a line which might well be investigated by the Minister of Labour or by the committee on industrial relations when they consider this question of seasonal unemployment".

I ask my friends from Quebec to bear in mind that utterance of the Minister of National Defence, and to say here and now whether they endorse what he said at a time when he was a private member, and when unemployment was almost unknown in Canada.

Mr. Tremblay: Ignoramus!

[Mr. Denis.]

Mr. Denis:

"The same sort of thing applies with regard to young men who are employed in the logging camps".

Now, if any members from Quebec have such young men in their ridings and if they are prepared to accept the statement made by the minister when he was a private member, let them rise and say so.

Either he was not in earnest, or else he was trying to get votes from the advocates of compulsory military service. Considering that we now have three or four times more unemployed, the minister's statement in 1954 ought to be all the more valid today.

I would ask the Minister of Labour (Mr. Starr) if he has the intention—and I would call it an ill-advised intention—of following the advice of the Minister of National Defence.

(Text):

Mr. Regier: Mr. Chairman, I am far from happy yet with this bland assurance of the minister about the advice he received from his senior officials. A few moments ago he said that last year the economy was on the downgrade and this year it is on the upgrade. I should like the minister to inform us what evidence he has to support an assurance of that kind. The reports I have seen as to net profits of Canadian corporations, total Canadian production, total income of agriculture and net and real income of labour do not lead me to take an optimistic view of the present condition of our economy and on the basis of those reports I fail to see on what the minister's statement could be founded. I agree that in the field of housing there has been an upturn and an expansion but I should like the minister to indicate what is the basis of the assurance that the economy is on the upgrade this year which leads one by implication to the conclusion that we might hope to see some relief from the problem of unemployment.

On June 17 the Minister of Finance forecast optimistically an increase of 2 per cent but we have since learned that his assumption was based on no solid foundation. The Minister of Labour now tells us that his advisers inform him that our economy is on the upgrade and therefore, by implication, unemployment will cease to be a serious problem. Exactly what is the basis of the minister's assurance?

The Deputy Chairman: Shall the item carry?

Mr. Regier: No, Mr. Chairman. I do not believe the minister can get away with a bland statement to the effect that the economy is on the upgrade without producing evidence concerning the foundation of that assurance.

Mr. Cardiff: Just keep right on talking.

Mr. Regier: All these men sitting in the gallery are costing the taxpayers a lot of money.

Mr. Cardiff: Who is costing the taxpayers money?

Mr. Regier: Mr. Chairman, on the problem of unemployment—

Mr. Cardiff: You will talk yourself out of the place.

Mr. Regier: May I assure the whip of the government that on the problem of unemployment I will keep talking until the snow comes. If this government thinks that having half a million or a million unemployed is something funny; that their summer holidays are more important than attending to the grocery bills and the mortgage bills of the unemployed, they have another guess coming and four years hence organized labour is going to throw them out. I repeat in all seriousness, Mr. Chairman, that the minister ought to account for his statement that the economy this year is on the upgrade. We cannot accept it simply as a statement.

Mr. Starr: One of the best indicators is the fact that registrations at our national employment service offices were on the increase as of August last year, but we have shown that there is a steady decline week by week in the registrations at our national employment services offices in recent weeks and although the dominion bureau of statistics figure for mid-July is not available yet—it has not been issued—I venture to predict that on the basis of the national employment service figure of 365,440 on August 7, there will be a very appreciable decrease in the D.B.S. figure for mid-July and even more so in the figure which will come out for mid-August.

Mr. Regier: If the minister should be wrong in that statement of his it would be simply disastrous because, after all, there is nothing new about unemployment figures declining in the month of May and a little less unemployment in June, a little less in July and even less in August. The minister knows that in the summer months the berries have to be picked, the potatoes have to be planted and harvested, the tobacco has to be reaped and so on from one end of Canada to the other. There always is a decline in unemployment in the summer months. I am not very impressed either with this fantastic phrase, as I said before, that there is a decrease in the rate of the increase. I do believe honestly that a medal ought to be awarded to whatever civil servant first invented that phrase in reporting on the state of unemployment in Canada.

The minister's reply meant absolutely nothing, Mr. Chairman. The fact remains that in August we had twice as many unemployed as we had a year ago. The minister says that a year ago our economy was on the downgrade. He says that this year it is on the upgrade. We have twice as many unemployed. The minister has a bit of reconciliation to do. I believe that when he says the economy is on the upgrade he ought to have something more substantial to back up the statement than simply saying, well we are in the summertime and there is less unemployment than there was in the middle of winter.

Mr. Chevrier: Mr. Chairman, I see the Prime Minister has come into the house. This is the second time that I have risen to speak on item No. 1, and to speak not at length but as briefly as I can. When I saw him come in I thought I should say briefly to him what has been taking place in his absence. Perhaps he has been listening.

Mr. Howard: He knows.

Mr. Chevrier: But, in any event, I would like to make an appeal to him. The point is this, Mr. Chairman. In the discussion of item No. 1 there has been a demand from this side of the house as well as from the C.C.F. corner that this item be allowed to stand until some statement is made by the minister concerning the problem of unemployment during the winter months. The minister quite properly has said that the matter is one which is to receive the consideration of the government because of the representations which have been made by the various municipalities. He felt that he could not make a statement until he had an opportunity to discuss the matter with his cabinet colleagues and, as I said, there is no fault to be found with that statement. But I am wondering—and I am appealing to the Prime Minister on this basis—whether this item should not be allowed to stand until some consideration be given to those representations and a statement made in the house.

I am informed, and I believe that such was the case on former occasions. I do know of

more than one instance when the first item of the minister's estimates stood until some further consideration could be given to certain matters. I appealed earlier to the leader of the house and suggested to him that if the item were allowed to stand I was sure there would be no difficulty in so far as the remaining items were concerned.

My only reason in rising when I saw the Prime Minister come in was that I felt—as did many hon. members on this side of the house—that it would be taking the house in its confidence if the government was to stand this item so that at a later date it might report on those representations and say what ones, if any of them, could be implemented during the time that parliament will be in recess. I am sure the Prime Minister would not want to do otherwise than to give this suggestion, which is made in all sincerity, due consideration.

Mr. Diefenbaker: Mr. Chairman, I can understand the sincerity with which the contribution has been made, but I fail to see that there is any necessity to hold up this item. The minister intends to make further statements and in particular when the unemployment insurance item is before the committee. If, in the circumstances, the hon. gentlemen opposite do not feel that the minister's statement is what they want, I am not going to alter in any way, or suggest an alteration in, the stand that has been taken.

The minister is prepared to answer any question. If the presentations are of such benefit as indicated—and I am sure they are—the minister will naturally want to take them under advisement and consideration. That, however, does not mean that item No. 1 needs to be held up indefinitely.

I must say that as long as hon. gentlemen opposite have a contribution to make I am sure they will continue to discuss item No. 1; but to say to the minister and to the government that we will not pass item No. 1 unless certain statements are made and consideration given to the representations that we have to offer is a perfectly proper stand for the opposition to take; but the taking of that stand is not completely conducive to that spirit that one would expect would prevail in a matter as important as this.

I am always anxious to see the opposition given every opportunity. I must say that throughout this session, as I listen to the contributions that are made, I think of other days when we used to be cut off most peremptorily if we endeavoured to secure information. But that is far from our attitude. As long as questions are asked they will be answered no matter how long it takes. I want to see this debated to the limit. If hon. gentlemen opposite feel that they have representations that are helpful I am sure the longer we are on this particular item the more beneficial it will be to give our consideration to those questions in order to meet the problem particularly of winter employment which, I think, is the reason for the request that this item be held up.

There are many more items upon which hon. gentlemen can speak. I for one would not want to enter into any arrangement by which an item would be held conditional upon certain eventualities taking place. Hon. gentlemen have their representations to make continually. Nothing is more helpful than any additional suggestions they have, even though they did not bring them into effect when they had the power to do so. Nonetheless, in the retrospect of solitude, beneficial results often follow. No doubt they have suggestions and I welcome them. This is a troublesome problem. If the item under which a general discussion could take place is now before the committee, I am sure the hon. member for Laurier would not expect me to suggest, as long as beneficial ideas are forthcoming, that this item should in any way be set aside and removed from the field of immediate discussion. I say that with great respect for his suggestion. I know that the suggestion was made with a sincere desire to be helpful. My answer to him is in the same spirit.

Mr. Chevrier: May I thank the Prime Minister for his sincerity of approach to the suggestion I made. I should not like him to be under a misapprehension as to what I had suggested. I am afraid that in his reply he indicated that he was under a misapprehension. I did not ask that the item be held up indefinitely.

Mr. Diefenbaker: Oh, no.

Mr. Chevrier: In his reply the Prime Minister created the impression that the item be held up indefinitely. That was not my suggestion; far from it. I do not think a request of that nature would be a proper one and I tell the Prime Minister that immediately. That is not my request and I am sure it is not the request of those of us who sit on this side of the house. The only request made was that it be held up so that we might be given the opportunity of hearing the minister with reference to the program for winter employment. The Prime Minister has said, "What suggestions have you to offer? If you have any suggestions, here we are and we will listen to them". The opposition has been saying—and I simply repeat and reiterate

it—that is the responsibility of the government and that it is not the responsibility of the opposition.

Some hon. Members: Oh, oh.

Mr. Diefenbaker: That statement fairly well answers the earlier request.

Mr. Chevrier: That is exactly the attitude which the former leader of the opposition took when he sat on this side of the house, namely that the responsibility lay over there on the government side and not on this side of the house. That is why we say to him, with all due respect, that it seems to us that we should be entitled to know before we rise what is the program that is envisaged during the next few months and what is the program envisaged for winter employment. The Prime Minister seemed also to be of the opinion that an attempt was being made to dictate to the government. From what I said previously and from what I am saying now surely there is not the slightest intention of any such attempt. On the contrary, I am making a request and it seems to me to be a reasonable request. If the Prime Minister feels that it is not a reasonable request or if the government feels that it is not a reasonable request, that is all right. I have made the request; they have considered it; they have turned it down. That is fine. But the request is made in that light and in the circumstances that I have stated.

I do not know whether or not I understood the Prime Minister properly but I thought I heard him say that there would be an opportunity for further discussion of this matter under item 179, at which time the minister would make a statement. Was my understanding correct and is it the intention of the minister on item 179 to make a statement about the winter employment program?

Mr. Starr: At the outset, Mr. Chairman, I said that I would make a statement on unemployment on item 179 but evidently that procedure was not acceptable to the members of the opposition. Since then we have not been able to get down to that item so that I could make that statement.

Mr. Pickersgill: May I just say a word, Mr. Chairman, since I was the one—the hon. member for Laurier was not in the committee at the time—who made the first request to the house leader. I should just like to recall what the circumstances were. I had asked the minister—and I think I had done so with great consideration—whether he could give us a report on the conference on winter employment which was held some three or four weeks ago. The minister replied—and I at once agreed quite readily —that he had not had an opportunity of discussing the results of the conference with his colleagues and it would not be proper for him to give a statement to the house on that conference until he had discussed it with his colleagues. We in our party on this side of the house accepted that position at once as a proper one and did not quarrel with the minister at all. Then I rose and, in as considerate terms as I could, asked the house leader whether in those circumstances he would not allow item No. 1 to stand until the government had had a chance to consider its position and the minister could give this report to us with the weight of the government behind it. That is all we have asked for at any time. The request was made in order that we should have the government's position stated to us so that it could be debated.

I recall that on many occasions, when we were sitting on the treasury benches, situations of that kind arose when members of the opposition, for one reason or another, asked for information that was not immediately available and items were held up by ministers until the information could be obtained and other items were gone on with. That is all that our request was, namely that instead of dealing with this item we go on and deal with the rest of the items of the department, and that it be allowed to stand until the government had had an opportunity to consider the results of this conference and report to us.

Mr. Regier: All I want to say before we pass this item is this, Mr. Chairman; and I can assure the house that we are now prepared to end our part in the discussion on this item. We attempted to find out from the minister what, in the opinion of the government, was the cause of the seriously high number of unemployed in Canada. The minister in effect said that last year the economy was on the downgrade and that this year the economy is on the upgrade. That is the only explanation he had to offer as to why this year in the month of August we had twice as many unemployed as we had a year ago. That statement is entirely unacceptable as an explanation from a responsible minister of labour.

Then we further asked what are the intentions of the government not only in relation to a winter employment program but with regard to solving the problem. How does this government propose to obtain the objective of full employment which, I am sure, all members of this government share. We received no reply whatsoever on that score, except an indication of a reply in the comments of the Prime Minister, when he

assured us that this matter was a responsibility of the government. As we pointed out earlier, we had that assurance six months ago from one end of Canada to another. The statistics now show that that assurance did not mean a thing in that unemployment is at an exceptionally high level for this season of the year. We expressed our dissatisfaction at this time that this parliament is again willing to shelve its responsibility and to place its faith completely and blindly in the government, thinking that the government is going to solve this problem and that consultation and action on the part of parliament will not be necessary.

We maintain that this problem is not going to be met without the advice and action of the House of Commons of Canada. We feel that it is playing with human lives, it is playing with the welfare of the Canadian economy, to put such blind confidence in the members of the government in connection with this serious problem.

Mr. Robichaud: I am sure that the Prime Minister recalls those words which he addressed to the previous administration when he said that, day after day, week after week, they were determined not to supply the opposition with information. Just a while ago he stated that the Minister of Labour was prepared to answer any questions addressed to him. I have a simple question. Can the Minister of Labour advise this committee if positive recommendations have been offered to him by the provincial-federal conference which took place in Ottawa a few weeks ago in connection with winter unemployment?

Mr. Starr: Yes, Mr. Chairman. It was not entirely a provincial-federal conference. It was a conference in which many organizations participated and gave their thoughts and ideas to us. There are some very good suggestions in that report, some suggestions that can be put into effect immediately and others on a long-term basis. As I said, it will be submitted for action, so that the government can segregate those that can be put into effect immediately for immediate results, and those that can be brought into effect to give results on a long-term basis.

Item agreed to.

172. Annuities Act—administration, $1,178,839.

Mr. Regier: Might I ask the minister if he can report on the progress that has been made in connection with a certain matter concerning employees who change from one employer to another? What I have in mind is that, in effect, the annuities branch may become the means of establishing a transferable pension plan. Are more pension plans entering the annuities branch? We know there are many industrial enterprises in Canada who, upon setting up pension plans, have agreed with the unions that those pension funds shall be invested in the annuities branch of the federal government. If an employee moves and can find a new employer who also has his pension plan under the annuities branch, then in effect that employee has a transferable pension plan or what is sometimes called a portable pension plan. Are more pension funds being invested in the annuities branch of the Department of Labour or has the number become less?

Mr. Starr: The government administers its own pensions, and so far as other pensions are concerned or the act of transferring from one to the other, that matter has been given study but to date no action has been taken and no changes have been made.

Mr. Regier: I do not think the minister realized what I was saying. I will use an example of which I am aware. The Brackman-Ker Milling Company in New Westminster has a pension plan. These funds, to which the employer and the employee contribute, are invested and there is purchased for the individual concerned an annuity with the federal government annuities branch of the Department of Labour. Now, an employee leaving the employment of Brackman-Ker Milling Company and entering the employ of another industry anywhere else in Canada could, in effect, have what is often described in Canada as a portable pension plan if he could find another enterprise whose pension funds were also invested in the annuities branch of the Department of Labour.

I was asking the minister if he was aware of either an increase in the number of industrial enterprises who have invested their pension funds in the annuities branch, or a decrease?

Mr. Starr: As I understand the hon. member's question, it is this: If a person works for one firm which has a group plan in which he participates, and leaves the employment of this particular company to find employment with another one which has also a government annuity plan, then can a transfer be made? I am advised that it is not transferable but remains as an annuity in the firm for which he has worked up to $120 a year. It is not redeemable until the age of retirement.

Mr. Regier: Is the minister now able to advise whether there are more companies using the facilities of the annuities branch than there were a year ago?

Mr. Starr: The total number of individual contracts issued is 182,147. In 1957, there were 5,937 individual contracts issued and in 1958, 6,701, or an increase of approximately 800.

Mr. Regier: I am sure the minister agrees that a transferable pension plan for the workers of Canada is a desirable thing, and that it would be of immense advantage not only to Canadian employees but also to Canadian employers in that it would enable the discrimination that presently exists against older workers to be eliminated. Does the minister not consider that the annuities branch might well explore this field, and might profitably devote a little of its publicity to the possibilities that exist in the annuities branch for the working people of Canada? I realize that today there are some very high priced insurance men in Canada going from one industrial enterprise to another and spending a lot of their time in one union office after another. They do their best to persuade the union offices and the executives of Canadian enterprises to invest their pension plan funds in company A, B, C or whatever else it may be. However, these people who work in the interests of these insurance companies will never bother to inform either the union officials or the corporation executives of the existence of the annuities branch of the Department of Labour.

Does the minister not agree that a very useful service might be performed for the welfare of the working people if the annuities branch made both employers and union organizations aware of the possibilities of establishing a transferable pension plan through advantage being taken by investing pension funds in the annuities branch?

Mr. Starr: There is a problem of investment where the employer and the employed contribute and there seems to be a difficulty in bringing about any such change. However, I will look into the situation and see what are the possibilities.

Item agreed to.

173. Industrial relations activities, including the administration of the Industrial Relations and Disputes Investigation Act, the Canada Fair Employment Practices Act, the Female Employees Equal Pay Act, the Fair Wages and Hours of Labour Act, and regulations, and the promotion of labour-management co-operation, $593,133.

Mr. Carter: I wish to bring to the attention of the minister some anomalies which have resulted from the method by which prevailing rates are determined by his officials.

I understand that the Department of Labour has officials in certain branches whose duty it is to take samplings of prevailing rates in certain areas and that these rates are used as a basis for the wages paid to people employed by the federal government as casual labourers, people who are employed seasonally and in some cases as full-time workers. In 1939 when the United States government decided to build bases in Newfoundland we came up against this problem. The wage scale for various crafts paid by the United States government were far in excess, sometimes even double those paid locally and while the U.S. government was quite willing to pay the same rates to Newfoundland employees, the commission of government at that time stepped in and set up an arbitrary scale of wages to be paid to Newfoundlanders working at the U.S. bases. We therefore had the situation where Newfoundlanders and United States citizens would be working on the same job, side by side, doing exactly the same work, with the United States citizen getting twice and three times as much as the local labourer.

After confederation we thought we had got rid of this sort of thing but it has only recently come to our attention that this same thing is still being practised as a result of the policy of the fixing of local rates by the Department of Labour. As a result we get a situation such as the one with respect to the hydrographic service which for the past two or three years has conducted surveys for the Department of Mines and Technical Surveys. In this case two small boats of about 40 feet in size have been working in my own riding and it has come to my attention that these two boats, of exactly the same size and doing exactly the same work, are being paid different rates because the crew of one was recruited in Nova Scotia while the crew of the other was recruited in Newfoundland. The difference in the rates is fairly substantial and I think that is a very serious inequity which should be corrected.

As a result of this practice officials employed by the Department of Transport such as assistant lighthouse keepers, and assistant foglamp keepers are suffering from very tremendous inequities as a result of this policy. So much so that the assistant keeper who has exactly the same duties as the man in charge and who has exactly the same hours of work —the only difference in their responsibilities being the sending in of a monthly report— gets sometimes even less than half the salary of the keeper. In addition to this the keeper gets two or three weeks' holiday with pay and has other advantages, such as the provision of his coal, which are not available to the assistant keepers. This is a very serious matter which should be corrected. I do not know the full answer but personally I believe

this government should adhere to the policy laid down by the parliament several years ago when we agreed to the principle of equal pay for equal work in respect of women. I do not see why the same principle should not apply to men, particularly when government employees are involved. People employed by the federal government on identical jobs are certainly entitled to get exactly the same pay. The federal government is a very peculiar employer if it puts into effect one set of rates for Canadians in one part of the country and another set of rates into effect for Canadians in another part of the country even though they do exactly the same work.

The same policy is also in effect outside of Canada for in our embassies we employ local labour subject to the conditions I have outlined above. I happened to be in South America and I found that we had stenographers and secretaries in our embassies who had gone down there from Canada and were being paid wonderful salaries, in addition to which they received cost of living allowances because they were away from home which were up in the thousands while in the same embassies South American citizens were employed at much lower rates who were even more capable than our own people, people who could speak three or four languages. I know of one girl in particular who was a competent stenographer and who was fluent in four languages yet, simply because she was a citizen of that country, she was getting less than a quarter of what we were paying our own people. I think this gives Canada a very bad name and certainly does not enhance our prestige in foreign countries. I hope the minister will take an interest in this question and will do something to straighten it out as quickly as possible.

I think part of the trouble is that too small a sample is taken and that if we must have this sampling procedure, and if we cannot go the whole-hog, then we should at least set up one set of prevailing rates for the maritimes, another for central Canada and another for the west. There certainly should not be such a wide discrepancy in the rates for Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick as obtains at the present time.

Item agreed to.

174. Civilian rehabilitation branch, including payments to the provinces to implement a program for the rehabilitation of disabled persons, in accordance with terms and conditions approved by the Governor in Council, $197,035.

Mr. Caron: Would the minister tell the house if the province of Quebec is participating in this program for the rehabilitation of disabled persons?

Mr. Starr: No, Mr. Chairman it is not.

Mr. Caron: Was the province of Quebec participating before this year?

Mr. Starr: No it has never participated.

Item agreed to.

Item 175 agreed to.

Vocational Training Co-ordination—
176. Administration, $109,040.

Mr. Herridge: When I spoke on the first item that was discussed, I dealt with this matter briefly. I would now ask the minister if he would explain to us how this vocational training is administered; what are the procedures followed, and who has the responsibility for making applications? I should be glad to have information along those lines.

Mr. Starr: Under this program the provinces take the initiative. In other words, they make up the programs that they want to launch and then they approach the federal government for its participation. This is done on the basis of 50 per cent.

Mr. Regier: Is the minister able to answer the question I put to him on item 1? Can he give us a breakdown of the amounts paid to each of the provinces in the past fiscal year under the vocational training plan so that we may know which provinces are participating and to what extent?

Mr. Starr: Here is a list of the payments made under the vocational training plan to each of the provinces during the fiscal year 1957-1958:

Newfoundland, $158,093.58
Prince Edward Island, $62,555.54
Nova Scotia, $445,935.78
New Brunswick, $277,254.99
Quebec, $2,848.84

Mr. Pickersgill: Would the minister give that figure again?

Mr. Starr: It is $2,848.84. That was just for training affecting members of the armed forces for which a request was made. There is nothing there under vocational and technical assistance.

Mr. Pickersgill: Does that mean that the government of Quebec did not participate in that program?

Mr. Starr: That is right.

The list continues:

Ontario, $536,725.19
Manitoba, $347,022.68
Saskatchewan, $337,739.56
Alberta, $1,370,164.51

British Columbia, $673,646.14
Northwest Territories, $2,544.68

The Yukon did not participate.

Mr. Caron: Has the province of Quebec ever participated otherwise than in the military program?

Mr. Starr: I am told that the province of Quebec participated in the vocational schools assistance program from 1945 to 1957, but they have not as yet signed any new agreement.

Mr. Caron: Could the minister tell us the reasons given by the province of Quebec for not participating further?

Mr. Starr: They have not given any reasons, but we have offered to enter into a new agreement with them and they have not as yet responded.

Mr. Caron: Can the minister tell me what would have been the amount for the province of Quebec if that province had accepted?

Mr. Starr: It would depend upon what program the province was prepared to launch on its own. It is hard to say what their plans might have been.

Mr. Caron: What was the amount which the province of Quebec received in the last year it participated in this program?

Mr. Carter: I did not quite get the figure for Newfoundland. I wonder if it could be repeated.

Mr. Starr: I can give the hon. member for Hull the total figure from April 1, 1945 to March 31, 1957 for the province of Quebec. From 1945 to 1957 the total was $3,139,400. These are the capital payments.

Mr. Caron: There is no breakdown for the last year in which they received any payment?

Mr. Starr: No. The assistance in school construction for the same period for the province of Quebec amounted to $7,460,262.44.

Mr. Caron: That is for school construction. That is from 1945 to 1957, is it?

Mr. Starr: The first figure I gave was school construction and the second was vocational schools payments.

Mr. Caron: I want to make it quite clear. What are the figures from 1945 to 1957 for school construction?

Mr. Starr: $3,139,400.

Mr. Caron: And $7,460,262 was for vocational training?

Mr. Starr: Assistance in training costs.

Mr. Caron: And it was for the same period, from 1945 to 1957?

Mr. Starr: That is right.

Mr. Caron: That is about $550,000 a year.

Mr. Pickersgill: I think my hon. friend from Burin-Burgeo asked a question about the figure for Newfoundland.

Mr. Starr: Oh yes, I did give it, but I have to repeat it. It was a total of $158,093.58.

Item agreed to.

Government Employees Compensation—

178. Administration of the Government Employees Compensation Act, $98,413.

Mr. Robichaud: On this item I have a few questions which I believe the minister is prepared to answer. On what date did this act become operative and how many claims have been made under the act to date? Could the minister supply this information?

Mr. Starr: The act came into being in 1918, 40 years ago, and since that time we have had 263,000 accident claims.

Mr. Robichaud: Of those claims what number were fatal accidents and how many were classed as claims relating to total and permanent disability?

Mr. Starr: There were 357 fatal accidents in the 40 years. Although the average has been higher in the last 12 years, 70 per cent are minor accidents involving no lost time and about 100 a year are permanent disabilities mostly of the permanent-partial type.

Mr. Robichaud: What was the total amount paid out under the act since it became effective?

Mr. Starr: Twenty three million dollars.

Item agreed to.

B—Unemployment Insurance Commission—

179. Administration of the Unemployment Insurance Act, including expenditures incurred in connection with other duties and responsibilities assumed and carried out as required by the Governor in Council on the recommendation of the Minister of Labour in accordance with section 4 of the Act, $31,784,500.

Mr. McGrath: Mr. Chairman, I should like to direct the attention of the minister for a few minutes to the current dissatisfaction that exists in the province of Newfoundland concerning the administration of the Unemployment Insurance Act. His attention has already been called to this question by other hon. members from that province who have participated in this debate and also indeed this was accomplished in discussions I have held with the minister on previous occasions.

The dissatisfaction arises from two sources. The first is that claims requiring processing have to be sent from Newfoundland to Moncton, New Brunswick. This sometimes results

in delays which are caused by weather conditions involving slowness of delivery of mail and so on. The other factor relates to the general geographic conditions that obtain in the province of Newfoundland. I would point out, for instance, that the total area of Newfoundland is approximately 153,000 square miles and a population of 425,000 people is sparsely scattered over this vast area. This creates difficulties when one takes into consideration the fact that the unemployment insurance commission has only three offices in the entire province.

It has been suggested that the office in St. John's is the largest in the Atlantic region. I urge the minister and his officials to give consideration to effecting a change in the administration of the act under which it would be possible for claims to be finalized in St. John's without having to be referred to Moncton. This would considerably speed up the processing of claims.

Another question raised by hon. members from Newfoundland concerned a request that consideration be given to sending more men into the field to process claims all over Newfoundland and indeed on the coast of Labrador in order that fishermen and loggers will not have to suffer undue delay in receiving unemployment insurance payments. This is of considerable importance to a province that has a serious seasonal unemployment problem. I would remind the minister that many large national companies including banks, insurance companies and even the Canadian National Railways have seen the wisdom of setting up a special Newfoundland region because the problems of the province are not directly related to those of the maritime provinces and in fact are quite different from the point of view of geography, the economy and so forth.

In closing I would also ask the minister and his officials to give consideration to the erection of a new building in St. John's to house the huge staff of the unemployment insurance office. As the officials are probably aware the staff is presently housed in a temporary building erected by the Canadian navy during world war II. I submit that these quarters are most unsatisfactory and not conducive to the proper processing of claims. I ask the minister and his officials to give serious consideration to these recommendations.

Mr. McBain: Mr. Chairman, as an hon. member who represents a tobacco producing area I wish to bring to the attention of the minister and the committee what appears to be a tobacco job racket that flourishes at this time of year. I regret to have to say this racket appears to operate from certain centres in the province of Quebec. Apparently these operators advertise that they can furnish jobs in the tobacco areas of Ontario for the harvesting of the tobacco crop. Prospective workers are required to pay a certain sum of money for transportation to the area. Unfortunately upon their arrival in the tobacco-producing areas of Ontario those individuals who have sought employment find jobs are not available and they are among the many hundreds of people seeking work. If they are lucky they may have sufficient money to get back home but if they have insufficient funds they are left stranded in those areas.

What I wish to suggest is that the national employment offices in Montreal and other areas of Quebec give wider publicity to this kind of labour racket which is carried on by a very few individuals. May I also suggest that persons seeking work in the harvesting of tobacco in Ontario should consult their unemployment insurance offices to ascertain if any jobs are available before going to the tobacco producing areas of that province.

Mr. Carter: Mr. Chairman, I also wish to say a few words about the unsatisfactory way in which the claims of Newfoundlanders for unemployment insurance are processed and administered. I wish to make it clear I am not criticizing the personnel of the department but in Newfoundland we have certain conditions that do not obtain in other parts of Canada and I think the Department of Labour should adjust itself to those conditions because certainly they have existed for thousands of years and are not going to adjust themselves to the Department of Labour.

There are many things that could be done to speed up the processing of unemployment insurance claims in Newfoundland. As I have travelled throughout the province I have had occasion to fill out forms for people not able to do it for themselves. While on the surface the forms appear fairly simple yet there is some confusion created by the fine print. In my experience in filling in forms I have been uncertain just how much information I should fill in on the form. I believe the forms could be simplified still more.

Another matter which considerably aggravates the situation relates to the date on which the form must be filled in. I believe for the purposes of the administration of the act the week begins on Monday and ends on Sunday. In many areas of Newfoundland there is slow mail service. In some areas delivery is only once a week, or ten days, and in winter it frequently is two weeks or even longer. A man filling in the form knows that the mail is coming at a certain date and

he will put the date on. The inherent honesty of those people compels them to put down that date. They could put a false date and everything would be all right, but because they put down the exact date when they make out the form, and that date does not conform to the date required by the department, when it gets in, after travelling eight or 10 days, to the unemployment office the clerk looks at the date and immediately says that the date is wrong and sends it all the way back to him again to be corrected. It takes perhaps another three or four weeks before it gets back to him and he has to wait for another mail and send it back again, and all because he was honest enough to put the right date on it.

Our people in the local office should be familiar enough with the conditions to know that in those outports when a fisherman particularly fills in one of those forms he is not going to work the day after and continue working for any lengthy period. I think the practice of returning forms to claimants for such a trivial cause is unnecessary and causes a lot of unnecessary annoyance.

Something more could be done to facilitate those claims if the clerks in the office would watch when the mail closes, because the mails for certain parts of Newfoundland close on a certain date and the claims that are being adjusted for that period should be in the mail on that date. If they are posted the day after, then they just lie in the post office for another week or 10 days until the mail comes again, and that is an unnecessary delay which could be corrected if the clerks were watching the closing of the mails.

I have often thought that the office in St. John's should be organized on a sort of district basis so that certain clerks would be dealing with claims coming from a certain part of the island and would have the responsibility of seeing that those claims got in the mail at the proper time in order that there would be no unnecessary delay.

Another cause of great annoyance—and again unnecessary annoyance—is the refusal or the failure of the office to reply to correspondence. Almost every letter I get complaining about delay in adjustment of claims states that the writer has written to the unemployment office two or three times. Sometimes they telegraph two or three times and have not had the courtesy of receiving a reply. That not only causes a great deal of annoyance but undermines confidence in the department itself. These things are unnecessary, Mr. Chairman, and I do hope the minister will take whatever steps are possible to have them corrected.

Mr. Starr: Mr. Chairman, I just want to make some remarks because of the representations which were made by the hon. member for St. John's East and yesterday by the hon. member for Bonavista-Twillingate and last night also in respect of the Unemployment Insurance Act and by the hon. member for Burin-Burgeo. I must say that after all there has been a handicap in the operation of the unemployment insurance this year simply because it was our first experience with fishermen coming under the Unemployment Insurance Act. Most certainly it was expected that there would be some anomalies that through experience would have to be corrected as they were brought forward. I think that with one year's experience in this matter we shall see that some of these things are cleared up to the satisfaction of those who are the recipients of unemployment insurance.

Last night the hon. member for Bonavista-Twillingate said that I would have no objection to the fact that it was the previous government that brought the fishermen under the act. I agree readily that that is so. I have no objection to that, but it was this government which brought forward legislation to give them an additional two months on a permanent basis and also an additional six weeks after that period for this year.

I have noted the representations made in this regard and most certainly we shall look into the situation to see how some of those anomalies can be rectified.

As to the Unemployment Insurance Act itself, I want to say to the committee that I have submitted certain suggestions to the unemployment insurance commission and suggestions, I might say, which reflect a major change in unemployment insurance, necessitating a great deal of study. Some of those recommendations were studied in the unemployment insurance advisory committee in the early part of July. They are convening again on August 19 to study the remainder of the suggestions, and I hope that when the recommendations are received from them I shall have the opportunity of getting the approval of the government and bringing them before parliament next session. I had hoped it might be this session but it certainly does not look as though that may be possible. I should like to see those amendments given thorough study and be referred to the industrial relations committee.

I said at the outset that I would make a statement on unemployment. Because of the continued debate we have had this afternoon I must admit at once that I have already given considerable information regarding the winter employment conference, which relates to this, and I have also

covered other aspects that have been raised as the debate progressed this afternoon. Generally speaking, I think the committee will agree that since becoming Minister of Labour I have dealt fully and frankly with the problem of unemployment. Possibly in doing so I have dealt with it in some instances with restrained optimism—

Mr. Benidickson: What does that mean?

Mr. Starr: It is optimism with some restraint. I have never made any attempt—

Mr. Chevrier: It means frankly but not fully.

Mr. Starr: I have never made any attempt at any time, I think, to lull this house as to the fullest extent of the problem which we have faced and we did face it last winter, and I think there is every likelihood that we are facing it now. But I would also say that this is a problem which this government faced in the past and faced firmly, and will face it as it comes before us again in the future.

I want to say at once, Mr. Chairman, that the government's firm and quick action last year in dealing with this unemployment last winter, resulted in keeping our economy much more firmly in balance than was the case in some other countries and perhaps much more so than was expected. I think the steps that were taken by the government, and above all the knowledge that the government was prepared to take steps, had a profound psychological effect in building up public confidence last winter. I found that as I travelled across this country, particularly last spring, and had the opportunity of visiting our offices and seeing what effect it did have, and I was heartened by what was being done.

What is the present situation? From the information at my disposal I would say that in the last couple of months there has been a considerable improvement in our general situation. This improvement has reffected itself in the fact that where a year ago unemployment was rising at a faster than seasonal rate, it is now declining at a faster than seasonal rate, and this is borne out by the economists of our department who did not, I must admit frankly, anticipate that this trend would take place at this time of the year.

In recent months we have seen the effects of the action taken by the government last fall. There was a tremendous upswing in domestic housing construction and a steady rise in retail sales. This may be traced directly to government action in pumping money into housing and in keeping up purchasing power with extended social security payments, assistance to municipalities, in dealing with unemployment assistance to farmers and fishermen. These too have had their effect. Then there was the announcement by the government of its readiness to undertake large capital expansion projects such as Saskatchewan irrigation and maritime power. I think all of these things have been reflected in increased public confidence.

In regard to my own department, may I say that I was most pleased that the Leader of the Opposition was good enough yesterday to register interest in what we were doing about the situation. The extension of benefits during the winter and spring, of course, is familiar to all members of this house. The continuing emphasis on placement by the national employment service I have already mentioned. This will continue at an accelerated pace and has, I might say, begun to show an effect in recent months. Our winter employment campaign last winter was the most ambitious one ever undertaken by the department. This year we are asking for $150 thousand again. I would suggest to hon. members that the results of this campaign do not linger entirely in the realm of academic conjecture. I myself have seen evidence, as I mentioned earlier, of how this campaign was working out.

There is no need for me to refer to the winter employment conference because I think I have dealt with it to the fullest possible extent. The recommendations will be put before the cabinet for their consideration and action. We are taking this action. We propose to take more action as it becomes necessary. I can assure this house that we recognize our responsibility and that we will face up to it. We have done so in the past and we will do so in the future.

I just want to illustrate what I meant by the fact that there is a decline where there was an increase in our employment which is more than seasonal. The figure for registrations on July 10 this year stood at 83 per cent higher than for the same date last year. The figure for July 17 was 60 per cent higher than last year; and the figure for July 31 was only 45 per cent higher than last year. Since then we have noticed a continual drop in our registrations, a fact which indicates that there is a downward trend in unemployment whereas last year at the same period there was an upward trend. On the basis of these figures I say that there will be a considerable drop in the D.B.S. figures in mid-July. There is bound to be because the N.E.S. figures indicate that. Most certainly there will be a decrease in the D.B.S. figures for mid-August. That is all I wanted to say, Mr. Chairman.

Mr. Carter: There is just one question which I omitted to ask when I was on my feet earlier. Last night in his opening remarks the minister referred to the table appearing on page 2137 of *Hansard* with respect to the unemployment insurance fund. I think that table was placed there in reply to a question which I put on the order paper. I wonder whether the minister could bring us up to date by giving us the corresponding figures of contributions or payments for June and also for July, if they are available.

Mr. Starr: The last figures we have are for the month of June. I do not know what was shown on the table that was placed on *Hansard*. Was it for the end of May?

Mr. Carter: Yes.

Mr. Starr: The only additional group of figures we have is for the month of June. The contributions of employers and employees for June were $14,885,735.42; government, $2,972,973.64. Do you want the figures right across the page?

Mr. Carter: Yes.

Mr. Starr: Fines and penalties, $4,193.82; interest on investment and profit on sale of securities—

Mr. Carter: No. I do not think we need those figures. I should just like to have the contributions and the withdrawals or benefit payments.

Mr. Starr: The figure for ordinary benefit payments was $26,021,851.26; supplementary and seasonal, $10,941,005.65; or a total of $36,962,856.91.

Mr. Carter: I thank the minister.

Mr. Spencer: Before this item passes there is one matter on which I should like to speak for just a moment and concerning which I should like to ask the minister a question. It has to do with the administration of the Unemployment Insurance Act, particularly as it affects workers in the community of greater Windsor and in fact all the ridings in Essex county. For that matter, I think it also applies to many other ridings in which there is a fair percentage of workers engaged in the automobile industry. It is my understanding that this is a matter which the government inherited in that it concerns the administration of regulations which were in effect at the time this government came into office. It is a matter which I have discussed with the minister and for the benefit of our community I should like to have some assurance that it is receiving consideration from the government. I think it is of particular importance because of the fact that the automobile industry in this present recession has suffered a great deal more than has any other manufacturing industry. It is of particular concern to the people of my riding in that the greater percentage of the workers in the industrial area of Windsor are engaged in the automobile industry.

At the present time, as I understand it, benefits are derived under the act based upon the contributions made by the worker during the last immediately preceding 30 weeks of employment. We all know that because of the depressed condition of the automobile market the workers hours of employment were reduced during each working week. Their contributions, of course, have been reduced accordingly. Their benefits are reduced where their contributions have been thus reduced. That condition continued for a substantial period of time until finally in many instances lay-offs took place in the industry and the workers then, of course, applied for benefits under the act. The suggestion has been made that instead of benefits being based upon the contributions made during the last immediately preceding 30 weeks of a period of some 104 weeks, they be based upon an average over the period of 104 weeks. I should like to know whether the minister is giving that matter consideration and whether we may look for some relief.

Mr. Starr: I have had this matter referred to me by others who are interested, and I thank the hon. member for bringing it again to my attention. When the unemployment insurance advisory committee meets on August 19, that will be one of the problems with which they will be dealing at that time.

Mr. Badanai: May I ask the hon. member for Essex West why he did not vote for the amendment to reduce the excise tax on automobiles when it was introduced a few weeks ago?

The Acting Chairman (Mr. Chown): I am afraid I have to rule that question out of order.

Mr. Benidickson: I have my eye on the clock, as I see the minister has, too. I do not want to hold up his estimates. We have had some correspondence about the matter of decentralization where, in my opinion and perhaps the minister's opinion, it is justified, having regard to some of the views of the unemployment insurance commission that centralization is a very desirable thing in its administration. I have in mind the need, particularly in these times, of service at

Dryden and Atikokan. I do not want to pursue it. I do not even want the minister to reply at the moment, because he did write me about two weeks ago in a very informative way. However, I am serious about this, as he knows. I had some association with the treasury board and I am conscious of the desire to reduce administrative costs wherever it is possible. I believe the minister has been up in our territory and he knows that we have a very big area to cover, particularly in a winter such as the one we have gone through. The distance to be travelled can be from 150 miles to 300 miles for these individuals who have to deal with the unemployment insurance office. I think that is important. I feel that perhaps we are a little overstaffed at Fort William, and perhaps we could take one or two men from Kenora in order to serve Atikokan and Dryden. I am not asking for an increase in overhead, but I am asking for greater service to the individual who may be concerned.

Item agreed to.

Annuities Act—

571. Administration—further amount required, $58,000.

Mr. Caron: I do not want to take very long, but I have a question to ask of the minister. I have been informed that when the amount does not exceed $10 per month the person concerned can get his money back. I was told this in the committee. If the amount exceeds $10 per month a man has to wait until he is sixty-five to get it. I have met people who because of ill health were unable to continue in their employment and were unable to find work for which they were fit. They could not get their contributions, which were around $12 a month, returned. I am wondering if the law could not be changed so that people could get their money returned up to a higher amount, especially at this time when there is hardship in Canada. Sometimes they want to start a small restaurant or other commercial enterprise, buy a truck to earn their living, and the only money on which they could lay their hands would be the money which is in these annuities. Would it be possible for the minister to study the matter to see if the amount could not be increased to $20 or $25 a month, so that these fellows could get their money back and start some new enterprise with this money?

Item agreed to.

573. Administration of the Unemployment Insurance Act, including expenditures incurred in connection with other duties and responsibilities assumed and carried out as required by the governor in council on the recommendation of the Minister of Labour in accordance with section 4 of the act—further amount required, $1,489,434.

[Mr. Benidickson.]

Mr. Regier: I am sure this will only take a minute. Is the minister able to say whether or not he has considered opening more offices of the unemployment insurance commission in the urban areas or is his policy also one of centralization?

Mr. Starr: My policy is not one of centralization. Personally, I feel we should give as great a service as it is possible to give to those who need to use our offices. I am continually asking the commission to consider the establishment of offices, providing it is economical to establish them. In other words, there would have to be a sufficient number of people making use of that office. Most certainly we do not want an office in an isolated area where there is no business for it, so to speak. I believe that we should have as many offices as is necessary in order to give as good a service as we possibly can to the people of Canada.

Mr. Benidickson: I just ask the minister to look at the statistics, as I have done. I do not blame him, because I have had arguments with his predecessors about this very same problem. If he will look at the percentage of time spent by the staff of the Fort William office with reference to people from Atikokan, which is almost 100 miles away, I am sure he will feel that there could be some division of staff without any increase in public expenditure.

Item agreed to.

Progress reported.

Resolutions adopted in committee of supply this day reported and concurred in.

BUSINESS OF THE HOUSE

Mr. Chevrier: I take it that the business on Monday is as announced last night?

Mr. Green: There is one change in the order. We are inclined to take order No. 8 on today's order after item No. 7 on today's order paper.

Mr. Chevrier: In view of the change, would the minister mind outlining the program again for Monday?

Mr. Green: Well, the first three items will be those standing in the name of the Minister of Veterans Affairs; then, item No. 7, having to do with the national capital plan; item No. 8, having to do with the setting up of a national parole board; item No. 12, the resolution preceding an amendment to the Railway Act; item No. 14, emergency gold mining resolution; item No. 17, the resolution preceeding the bill in connection with maritime coal; then, the resolution standing in the name of the Minister of National

Revenue under government notices of motions which has to do with broadcasting; then, item No. 6, second reading of a bill to amend the Financial Administration Act; item No. 9, second reading of a bill to amend the Customs Tariff; item No. 5, second reading of a bill to amend the Income Tax Act.

Mr. Chevrier: Will we continue with that business on Tuesday?

Mr. Green: I am not sure of that. The house would have to be prepared to take any of those on Tuesday and also possibly the second reading of the act to amend the Customs Act and the act to amend the trust companies and loan companies acts, both of which have been referred to the standing committee on banking and commerce. We might also take on Tuesday the resolution which is No. 13 on today's order paper.

Mr. Chevrier: Can the minister give any indication as to when the Radio Act will come up.

Mr. Green: I have already listed the resolution which precedes the act having to do with broadcasting.

At six o'clock the house adjourned, without question put, pursuant to the order of the house passed on August 4.

57071-3—234½

Question

ANSWER TO QUESTION

The following answer, deposited with the Clerk of the house, is printed in the official report of debates pursuant to standing order 39:

NATIONAL HEALTH PROGRAM GRANTS, QUEBEC

Question No. 175—**Mr. Meunier:**

What grants were made to the hospitals of the province of Quebec under the national health program from 1948 to the 1st of June, 1957, for (a) construction; (b) hygiene, health services; (c) other hospital services?

Answer by: **Hon. J. W. Monteith (Minister of National Health and Welfare):**

(a) $22,798,003; (b) and (c) $26,178,303.

[The following items were passed in committee of supply]:

DEPARTMENT OF LABOUR

A—Department—

General administration—

170. Departmental administration, including grants as detailed in the estimates and the expenses of the international labour conferences (also includes the former labour Gazette, women's bureau and manpower utilization votes), $1,067,166.

171. To provide for expenses of the economics and research branch, including research grants and related expenses, $663,198.

172. Annuities act—administration, $1,178,839.

173. Industrial relations activities, including the administration of the Industrial Relations and Disputes Investigation Act, the Canada Fair Employment Practices Act, the Female Employees Equal Pay Act, the Fair Wages and Hours of Labour Act, and regulations, and the promotion of labour-management co-operation, $593,133.

174. Civilian rehabilitation branch, including payments to the provinces to implement a program for the rehabilitation of disabled persons, in accordance with terms and conditions approved by the governor in council, $197,035.

Special services—

175. To provide for expenses of the special services branch including expenses for the promotion of a program for combatting seasonal unemployment, the organization and use of workers for farming and related industries and assistance to the provinces under agreements entered into with the provinces by the Minister of Labour with the approval of the governor in council, and the movement, reception, supervision and welfare of workers from outside Canada to work on farms and other essential employment where Canadian labour is not available to meet the need, $602,618.

Vocational Training Co-ordination—

176. Administration, $109,040.

177. To provide for carrying out the purposes of the Vocational Training Co-ordination Act and agreements made thereunder; to authorize the Minister of Labour to enter into agreements with any province on terms approved by the governor in council to provide financial assistance to vocational schools, and training under youth training projects and to provide for the expenditures thereunder and under vocational training agreements entered into in previous years, including authority, notwithstanding section 30 of the Financial Administration Act, to make commitments for the current year not to exceed a total amount of $7,655,900—payments to the provinces, $7,355,900.

Government Employees Compensation—

178. Administration of the Government Employees Compensation Act, $98,413.

B—Unemployment Insurance Commission—

179. Administration of the Unemployment Insurance Act, including expenditures incurred in connection with other duties and responsibilities assumed and carried out as required by the governor in council on the recommendation of the Minister of Labour in accordance with section 4 of the act, $31,784,500.

180. To provide for the transfer of labour to and from places where employment is available and expenses incidental thereto, in accordance with regulations of the governor in council, $75,000.

A—Department—

General administration—

Annuities Act—

571. Administration—further amount required, $58,000.

572. To authorize the payment of interest, in the current and subsequent fiscal years, out of the government annuities account, at a rate determined from time to time by the governor in council, on premiums being refunded that were paid under a contract entered into with Her Majesty pursuant to subsection (3) of section 6 of the Government Annuities Act where such premiums are in excess of the amount required to purchase the maximum annuity payable under that act to an employee of the purchaser because the retirement of the employee has been postponed beyond his normal retirement date; the said interest to be payable for the period from the day on which the excess premiums were received by Her Majesty to the day on which the refund is made, $1.

B—Unemployment Insurance Commission—

573. Administration of the Unemployment Insurance Act, including expenditures incurred in connection with other duties and responsibilities assumed and carried out as required by the governor in council on the recommendation of the Minister of Labour in accordance with section 4 of the act—further amount required, $1,489,434.

HOUSE OF COMMONS

Monday, August 18, 1958

The house met at eleven o'clock.

ADMINISTRATION OF JUSTICE

COLLINS BAY PENITENTIARY—STATEMENT ON RIOT

Hon. E. D. Fulton (Minister of Justice): Mr. Speaker, I should like to make a brief statement to the house on the riot which took place yesterday morning at Collins Bay penitentiary, where 441 inmates are held.

The disturbance started at 10.30 while the majority of the inmates were having their morning recreational period in the yard within the prison walls. There had been no advance warning either by rumour, as is usually the case in disturbances of this sort, or by any indication whatsoever. The breakout was sudden, and a number of the prisoners proceeded to set fire to buildings, smash windows, throw pop bottles, etc.

By 10.50 sufficient extra guards had been assembled so that an armed shock troop could be sent in equipped with rifles, tear gas, nauseating gas, and other appliances. Within ten minutes thereafter the riot was under control, and by 11.30 the inmates had been sufficiently secured so that the vehicles of the Kingston fire department and the township fire department could enter the gates and fight the fires. City, provincial and Royal Canadian Mounted Police also assisted in quelling the outbreak.

One hundred and thirteen inmates were actually segregated as those being involved in the riot. During the course of the riot two men were injured. A guard suffered scalp lacerations, presumably from flying glass or a flying pop bottle. One inmate suffered a leg wound which is a flesh wound only. He was wounded when a number of inmates attempted to storm the kitchen and, when ordered to stop, refused to do so. Approximately 12 shots were fired in the air as warning shots, but when the immates still refused to stop a low shot was fired and one inmate was wounded. This immediately stopped the attack on the kitchen and undoubtedly saved an enormous amount of property damage.

An estimate of the damage to the buildings based on information at present available is $52,500. This is exclusive of machinery, which could not be properly assessed until power was turned on and the machines of various types tested. The buildings damaged were two dormitories, the carpenter shop, paint shop, dissociation cells and minor damage to several other shops. An investigation is under way to ascertain, if possible, the cause of the disturbance and what, if any, further steps may be taken to prevent similar action in the future.

I would like to compliment very sincerely the staff at the penitentiary for their prompt action. Within half an hour after the riot had broken out the inmates were contained. The promptness of the action beyond a shadow of doubt saved many thousands of dollars of property damage and, as it was, for a riot of this size the property damage was small in comparison with other such occurrences. I would also like to acknowledge the prompt assistance rendered to the staff by members of the Royal Canadian Mounted Police, the Ontario provincial police, the Kingston police and the local fire-fighting forces, to whom we are extremely grateful.

IRRIGATION

SOUTH SASKATCHEWAN RIVER—APPROVAL OF DOMINION-PROVINCIAL AGREEMENT

On the order: Government notices of motions:

The following proposed resolution:—Resolved, that it is expedient that the houses of parliament approve the agreement between the government of Canada and the government of Saskatchewan respecting the South Saskatchewan river project, signed on the 25th day of July, 1958, and that this house do approve the same.

Mr. Speaker: Pursuant to standing order 21(2) this government notice of motion stands transferred to and ordered for consideration under government orders at the next sitting of the house.

MOTIONS FOR PAPERS

SHIPPING FEDERATION OF CANADA

Motion No. 32—**Mr. Fisher:**

For a copy of all correspondence since September 1, 1957, between the Minister of Transport and the shipping federation of Canada on pilotage and associated matters.

Motion agreed to.

Motions for Papers

DOMINION MARINE ASSOCIATION

Motion No. 33—**Mr. Fisher:**

For a copy of all correspondence since September 1, 1957, between the Minister of Transport and the dominion marine association, on pilotage and associated matters.

Motion agreed to.

GREAT LAKES PILOTAGE—CORRESPONDENCE WITH U.S.

Motion No. 34—**Mr. Fisher:**

For a copy of all communications between the government and United States authorities on the question of pilotage on the great lakes since January 1, 1958.

Right Hon. J. G. Diefenbaker (Prime Minister): Mr. Speaker, I wonder whether the hon. gentleman would want to pursue this motion, in view of the fact that the only relevant communication is an aide memoire dated March 20 which was delivered by our embassy in Washington to the state department, and in which are expressed Canada's views on legislation before congress. A copy of this aide memoire was tabled by the Secretary of State for External Affairs (Mr. Smith) on June 24.

Mr. Fisher: I ask that the motion be dropped.

Mr. Speaker: Motion dropped.

Order discharged and motion withdrawn.

SALE OF CANADIAN NATIONAL STEAMSHIPS WEST INDIES FLEET

Motion No. 36—**Mr. McWilliam:**

For a copy of all correspondence relating to the sale of the Canadian National Steamships West Indies fleet, received by the Canadian National Steamships Company, Canadian National Railways or the Minister of Transport, along with a copy of all tenders received by the Canadian National Steamships Company for the purchase of this fleet.

Hon. George H. Hees (Minister of Transport): Mr. Speaker, the management of the Canadian National has always regarded as privileged correspondence between the company and those having business dealings with it. Parliament has always supported this position in the past and for this reason the government feels that the motion should not be passed.

Hon. Lionel Chevrier (Laurier): Mr. Speaker, if I may, the other day when there was a discussion on this matter I understood from the minister that there would be no objection to tabling the correspondence that had taken place between the Toronto firm and others, as indicated in this motion.

Mr. Hees: Mr. Speaker, if I might clear up the misunderstanding which the hon. member obviously has about this, I should like to remind the house that when I was asked on Wednesday last by the hon. member for Laurier whether I would table the correspondence between Canadian National Steamships and those tendering for the West Indies fleet, I replied as follows, as reported at page 3452 of *Hansard*:

I do not know about the ethical procedure in this regard, whether all correspondence between a company such as the Canadian National and all those tendering should be made public. I will discuss the matter with Mr. Donald Gordon, and if they are willing and it is possible I shall be glad to do so.

I have spoken to the president of Canadian National Railways and he advises me that the correspondence between Canadian National Railways and those having business dealings with the company has always been regarded as privileged, and on no occasion has the railway been required to produce such correspondence. Mr. Gordon feels strongly that any other position would be most prejudicial to the business interests of the railway.

On various occasions the point has been discussed during the proceedings of the sessional committee on railways, air lines and shipping, and the position of the railway has always been supported. In the circumstances the government feels that the motion should not be passed, and I trust the mover will be disposed to ask that it be withdrawn.

Mr. Chevrier: May I add another word, Mr. Speaker, and it is this. In view of the statement which was allegedly made by the minister that he had had no correspondence with, or had no correspondence from, the Toronto firm, and the letter which later appeared in the Toronto and other papers indicating that there had been correspondence, I had thought it would surely move the minister to consent to the production of those documents.

Mr. Hees: Mr. Speaker, the letter I received was written by Mr. Rashkis on the letterhead of the Aurora Leasing Corporation, and when I was asked about this matter on the telephone as to whether or not I was familiar with the bid made by the Aura Shipping Company I said I was unfamiliar with any bid by any company of that name.

The house divided on the motion (Mr. McWilliam) which was negatived on the following division:

NATIONAL DEFENCE

VISITS TO NORTHERN DEFENCE INSTALLATIONS—REQUEST FOR TABLING OF AGREEMENT

On the orders of the day:

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, I should like to ask the Prime Minister if he will be good enough, in accordance with the custom of the house, to table the agreement which he mentioned on Saturday morning, as reported at page 3652 of *Hansard*, in respect of arrangements concerning northern defence installations and the agreement reached, apparently, on July 23 between the governments of Canada and the United States.

Right Hon. J. G. Diefenbaker (Prime Minister): As far as an agreement, as such, is concerned, there is no agreement. What I said was that agreement had been arrived at with respect to agreed procedures as provided in the agreement on the distant early warning line and by the co-ordinating committee in that behalf.

Later on I said that the regulations now in effect and which came to their final determination on July 23 are such as to ensure that Canadian sovereignty is maintained, and that there is nothing which interferes in that direction. In other words, a series of discussions brought about the achievement of regulations, and I will be glad to table those regulations as they represent the consensus of the agreement arrived at between the two countries as the result of a series of discussions and consideration over a period of time.

Mr. Pearson: I wonder whether the Prime Minister when tabling these regulations would also include those made previously under the agreement which was signed between Canada and the United States on May 5, 1955, which has been tabled in this house and which does provide not only for the protection of Canadian sovereignty but for administrative regulations to be issued. What I am asking for is the tabling of all supplementary arrangements and administrative agreements made under this master governmental agreement.

Mr. Diefenbaker: The hon. gentleman has, of course, answered his own question. He has before him a document which has already been tabled. Then following negotiations, as I have stated, general regulations were issued on July 23 by the authorities. I will comply at an early date with the suggestion which has been made.

LABOUR CONDITIONS

NON-OPERATING RAILWAY UNIONS—INQUIRY AS TO CONCILIATION BOARD REPORT

On the orders of the day:

Hon. Lionel Chevrier (Laurier): May I direct a question to the Minister of Labour, or in his absence to the acting minister. Would the minister tell the house whether the 15 unions representing the non-operating employees of

the Canadian National Railways, or the company, have accepted or rejected the reports of the conciliation board which were made public on July 30?

Hon. Ellen L. Fairclough (Minister of Citizenship and Immigration): I will take the question as notice and bring it to the attention of the minister.

FRUIT

NIAGARA PENINSULA—STATEMENT ON DISPOSAL OF SURPLUS CHERRIES

On the orders of the day:

Hon. D. S. Harkness (Minister of Agriculture): Mr. Speaker, on Thursday last during my absence the hon. member for Welland asked the following question, as reported at page 3505 of *Hansard*:

> Today the Toronto *Globe and Mail* reports that the Niagara peninsula growers have 1,000 tons of surplus cherries as a result, according to the secretary of the marketing board, of a recent large volume of imports at low prices. Does the government intend to give any help to these fruit growers?

The answer is as follows. No formal request has been received for assistance for sour cherry producers in the province of Ontario, but the Ontario pear, plum and cherry growers' marketing board has an appointment with the stabilization board for Wednesday, August 20, and the cherry situation will presumably be discussed at this time.

I think perhaps I should add the following information with respect to the situation, having regard to the article from which the hon. member quoted. The Ontario sour cherry crop for 1958 is estimated at 16,900,000 pounds, or 8 per cent below the 1957 production of 18,300,000 pounds and below the five-year average (1953-1957) production of 18,700,000 pounds. Sour cherry production in the United States for 1958 is now estimated at about 40 per cent below the 1957 production.

The article referred to makes reference to increased volume of imports at low prices. During 1957, 3,728,628 pounds of sour cherries were imported from the United States at an average value of 14.4 cents per pound. To date imports during 1958 total 2,783,000 pounds, at an average value of 13.5 cents per pound.

RETURNED SOLDIERS' INSURANCE ACT

AMENDMENTS TO INCREASE AMOUNT PAID TO BENEFICIARY AS ANNUITY, REMOVE RESTRICTIONS, ETC.

The house in committee on Bill No. C-33, to amend the Returned Soldiers' Insurance Act—Mr. Brooks—Mr. Chown in the chair.

[Mr. Chevrier.]

On clause 1—*Where remainder of an annuity is $1,000 or less.*

Mr. Carter: Does the minister intend to speak?

Mr. Brooks: This is a bill to amend the Returned Soldiers' Insurance Act. The general principles contained in the measure were discussed in the house when the resolution was before it some time ago, and on second reading the bill was referred to the parliamentary committee on veterans affairs. It was very thoroughly considered in that committee and was unanimously endorsed. It has now been returned to the committee of the whole for consideration, and if there is any information desired by any hon. member on the different sections I shall be very pleased to give it when we come to those clauses.

Mr. Carter: Mr. Chairman, we have already given our support to this bill at the resolution stage, and we support it again now in committee. As the minister has pointed out, the bill has been before the committee on veterans affairs and has been very thoroughly discussed. There are, however, a few brief observations which might be made at this time.

The original act, which was passed in 1920, was designed to give insurance coverage to veterans of the first world war and to the widows of those who had been killed in action or who had died of wounds. It was a cheap form of insurance requiring very low medical standards, and it was non-participating; it did not pay any dividends and, of course, it was not negotiable. It was merely intended as protection, not for the veterans but for the veterans' families and dependents.

I wish to bring to the attention of hon. gentlemen some interesting facts brought to light in the committee. The first was that veterans were very slow in taking advantage of this insurance. That is understandable, because at the time they were occupied with getting established and were faced with more pressing problems. In many cases they were saddled with debts and could not afford the premium, but they did become aware of the insurance and took advantage of it when they began building homes and raising families.

The committee was informed that 48,319 of these policies were issued with a value of $109,299,500, and at June 30 of this year 10,570 policies were still in force with a value of $22,362,060. Approximately 12,000 of these policies had been terminated by death, 16,000 had been surrendered, and the balance had lapsed or been converted to different forms of policies.

I think the most interesting fact that came before the committee is that after 40 years the fund is still solvent with a balance of $17 million, and while the government has made contributions from time to time this has been more or less in lieu of interest which has not been charged on the money because this has not been handled in the same way as it would be handled by an ordinary commercial company. Looking into the future we can see that at no time will this insurance be expected to cost the government more than $5 million, since no new policies have been issued since August of 1933.

The changes in this bill are very simple, because they have to do with the payment of claims. The first change merely extends the discretion of the minister to determine the form of payments and the remainder of annuities when they are $1,000 or less; at the present time this discretion extends only to $500.

The other change has to do with substituting the word "contingent" for the word "alternative" as it applies to beneficiaries within the meaning of section 5. Apparently beneficiaries under this legislation were divided into two classes. The original group protected by this insurance were members of the veteran's immediate family, his spouse and children. It sometimes happened that there was no spouse or children living who could benefit; therefore the legislation made provision for a second group of beneficiaries such as parents, brothers and sisters and other relatives who formerly had been described as alternative beneficiaries. Under the amendment the term has now been changed to "contingent". Needless to say we are in favour of these changes and wholeheartedly support this bill.

Mr. Herridge: Mr. Chairman, on behalf of this group I want to say a few words in support of this bill, and at the same time to reprove the inaccurate approach of the editor of the *Globe and Mail* to this little group over here. If he carries on in this fashion I shall be forced to term his paper the "Job and Wail". We are glad to see that the minister has introduced this bill, in that it meets the wishes of the veterans organizations in this country. I want to quote from the brief of the Canadian Legion presented to the standing committee on veterans affairs, and of course the minister will understand that I am laying the foundation now for discussion on a later bill that will come before the house. In its brief dated July 17, 1958 the Canadian Legion said:

> We are in complete agreement with this bill and wish especially to commend the government for the introduction of clause 3. The amendment is one that the legion has been pressing for over a long period and we believe that the repeal of section 10 of the act will remedy a situation that has been both unjust and unfair, resulting in many pensioners' families being without the protection that the pensioner thought he was providing.

I give the government credit for introducing these amendments at this time. The passage of this measure will not be very much of a drain on the public exchequer and will affect only a relatively few people, but it has removed from the point of view of the Legion and hon. members of this house a certain minor injustice that has existed throughout the years. On that account this group gives wholehearted support to this measure.

Clause agreed to.

Bill reported, read the third time and passed.

VETERANS INSURANCE ACT

AMENDMENTS TO INCREASE AMOUNT PAID TO BENEFICIARY AS ANNUITY, REMOVE RESTRICTIONS, ETC.

Hon. A. J. Brooks (Minister of Veterans Affairs) moved that the house go into committee to consider the following resolution:

> That it is expedient, in the proposed measure to amend the Veterans Insurance Act, Bill C-34, now before the house, that clause 1 be deleted and that the following be substituted therefor:
>
> 1. (1) Paragraphs (a) and (b) of subsection (1) of section 3 of the Veterans Insurance Act are repealed and the following substituted therefor:
>
> "(a) with a veteran, at any time on or before the 30th day of September, 1962; or
>
> (b) with any of the following persons, at any time on or before the 30th day of September, 1962,
>
> (i) the widow or widower of a veteran, if the minister has not entered into a contract of insurance with the veteran,
>
> (ii) the widow or widower of a person who died on service during the war,
>
> (iii) a member of the regular forces who has not been released from such forces and who was engaged in service during the war,
>
> (iv) a merchant seaman who received or was eligible to receive a bonus pursuant to The Merchant Seamen Special Bonus Order, or a seaman who received or was eligible to receive a War Service Bonus pursuant to The Merchant Seamen War Service Bonus Order, 1944,
>
> and
>
> (v) any other person who is, under the Pension Act, in receipt of a disability pension relating to the war."

Motion agreed to and the house went into committee, Mr. Sevigny in the chair.

Mr. Brooks: Mr. Chairman, the first paragraph of this resolution incorporates amendments to clause 1 of the bill that is now before the house to amend the Veterans Insurance Act, and contains other recommendations which were made at the time the bill was introduced. I might say that it was on the recommendation of the committee that the

ideas expressed in the resolution were incorporated in the bill. It simply extends the cut-off date for veterans' insurance for world war II veterans to September of 1962. This has had the unanimous approval of the standing committee on veterans' affairs and the approval of the government. I commend its acceptance to this committee.

Mr. Carter: Mr. Chairman, we of course support this resolution and particularly want to commend the minister and the government on the changes which have been brought about by substituting a new clause 1 in accordance with the wishes expressed both in the house and in the standing committee on veterans affairs.

Bill C-34, of course, is a counterpart of Bill C-33, which we have just passed, and was designed to extend to veterans of world war II the same type of insurance coverage that was extended to veterans of world war I. In fact it went a little further than Bill C-33, because it provided coverage not only for the veterans and for the widows of those who were killed in action or died of wounds, but it included other categories such as merchant seamen, fire-fighters, nursing services and other groups. This legislation became effective on February 20, 1945, and the first policy was issued in April of 1945. Later this same coverage was extended to veterans of the Korean war.

In the committee it was brought to light that up to June 30, 42,508 of those policies had been issued with a contract value of $133,870,000. Of those, 25,523 were still in force on June 20. The maximum coverage under this act is $10,000 as compared with $5,000 under the Returned Soldiers' Insurance Act, and the average policy issued was $3,000 as compared with $2,000 for veterans of world war II. One of the changes in this legislation parallels the change we made in Bill C-33 just passed, in that it expresses the discretion of the minister on how payments should be made on annuities when the remainder is $1,000 or less.

But unlike Bill C-33 this bill has to do with other changes connected with the issuance of policies and, as the minister has described, the most important of these is the cut-off date with respect to eligibility. Originally eligibility ceased three years after discharge. It was later extended to six years and then to 10 years after discharge; but in 1950 the Department of National Defence amended the National Defence Act by placing on active service not only those who served in the Korean war but the regular forces as well, and this created a problem in that members of the regular forces would, under the legislation as it now stands, be eligible for 10 years after discharge, which would make them eligible to around the age of 60 or 65 when they would, of course, constitute a very great drain on the fund in relation to premiums received and much beyond what the original legislation was intended to cover. This was discussed both in the house and at considerable length in the committee, and a brief was also heard from the Canadian Legion suggesting certain amendments.

I think everybody is in complete agreement that the cut-off date of September, 1962, would be satisfactory, and that it perhaps might tend to hurry up the members of the regular forces who might wish to take advantage of this legislation because experience with this, as with the former returned soldiers' insurance, proves that veterans are inclined to be slow in taking advantage of it and probably for the very same reason. Furthermore, it was felt that people who returned to civilian life should have the same treatment as those who elected to remain in the forces, because actually the people who returned to civilian life would have a much more difficult time getting established and would perhaps have greater difficulty in being able to take advantage of this legislation.

Therefore we are particularly happy to see the changes which have been incorporated in the new clause 1, which extends this legislation to all veterans and, as I understand it, makes all veterans eligible who would formerly have been eligible, up to September 20, 1963.

The other change brought about by this bill will delete section 10, which makes the policy under this legislation much more favourable than under the Returned Soldiers' Insurance Act. Formerly, with section 10, the payment was reduced if the widow of the pensioner happened to be awarded a pension and that, of course, limited the protection afforded by the policy. With section 10 deleted now this will give full coverage up to the face value of the policy.

We are entirely in support of this legislation and taken all together it constitutes what members of parliament and the government have very much in mind, namely the matters which would be of the deepest concern to members of our armed services on their return to civilian life. This was instituted when the original insurance act was passed in 1920, and the tradition is still being maintained, regardless of party, regardless of government, and I am sure that must be a great assurance to all veterans of Canada.

Mr. Herridge: Mr. Chairman, without apologies to the editor of the *Globe and Mail* I

rise for a second time this morning, and I trust he will not consider that my brief remarks on this most important piece of legislation which is to the advantage of the veterans of Canada are repetitious, unnecessary or inconsequential.

We in this group are very pleased indeed that the minister and the government have seen fit to accept the recommendations of the parliamentary committee on veterans affairs with respect to further amendments to the Veterans Insurance Act. The committee heard representations from the senior officers of the Canadian Legion. After hearing those representations, which I think all members will agree were given with good effect and to advantage before the committee, we had a very thorough and most informative discussion on this whole question. We also received further valuable information from the departmental officials as to the administration of this act. On hearing representations from the Legion and information from the departmental officials the committee, after considerable discussion, made certain recommendations in its report to the house.

Once again I say we are very pleased to see that the government has seen fit to accept those recommendations, which do bring about a considerable improvement to this act. I think these amendments have come at a most appropriate time. As was mentioned here recently, experience with this act somewhat repeats the experience with the Returned Soldiers' Insurance Act. As the years go by and the date of end of the war recedes, an increasing number of veterans with families growing up have become conscious of the value of this legislation to them. Therefore on that account I think it is most appropriate that the bill has been introduced and a larger number of veterans have been given the advantages that can be obtained under this legislation.

Finally, I would urge all veterans who served in the second world war to give consideration to the value of this legislation and the protection it provides, and on that account to make certain that they all know the details. I suggest to the minister that through some simply drawn pamphlet, memorandum or something of that sort, every effort should be made to inform all branches of the Legion very fully concerning these amendments and when they are to be given effect.

Mr. Brooks: That is under consideration.

Resolution reported and concurred in, and referred to the committee of the whole on Bill No. C-34, to amend the Veterans Insurance Act.

Veterans Insurance Act

Hon. A. J. Brooks (Minister of Veterans Affairs) moved that the house go into committee to consider Bill No. C-34, to amend the Veterans Insurance Act.

Motion agreed to and the house went into committee, Mr. Sevigny in the chair.

On clause 1—*Repeal.*

Mr. Herridge: Mr. Chairman, I hesitated thinking the hon. member for Bonavista-Twillingate or someone else was going to get up. However, once again I rise without any apology to the *Globe and Mail* to discuss this legislation for a few moments, as it is of great importance to the veterans of the country. This amendment to the educational assistance act—

Mr. Brooks: I think there is some misunderstanding. The hon. member for Burin-Burgeo discussed the bill having to do with the Veterans Insurance Act when the resolution was under consideration. We have not yet passed the Veterans Insurance Act. I might say that the hon. member for Kootenay West also discussed the Veterans Insurance Act very thoroughly. Therefore I presume they do not intend to discuss it further, and that we can go right along with the clauses of the bill.

Mr. Herridge: Excuse me, Mr. Chairman. I misheard the order number, and I wondered why we were switching. That is my error. It is very seldom that I am in error.

Mr. Benidickson: Am I right in thinking that except for the resolution we have just discussed, the right to purchase veterans insurance for most veterans of world war II who took their discharge shortly after the cessation of hostilities would have expired in 1954 or 1955, and that the resolution renews their right to purchase such insurance until 1962?

Mr. Brooks: That is the intention.

Mr. Benidickson: What advertising is the minister proposing to do to let veterans know about this?

Mr. Brooks: We advertise, of course in *The Legionary* and other periodicals of the different veterans organizations. We also send out notices to Legion branches and so on. I will guarantee that it will be well advertised.

Clause 1 as amended agreed to.

Clauses 2 to 4 inclusive agreed to.

Title agreed to.

Bill reported.

Mr. Speaker: When shall this bill be read the third time? Now, by leave?

Some hon. Members: Agreed.

Mr. Brooks moved the third reading of the bill.

Motion agreed to and bill read the third time and passed.

CHILDREN OF WAR DEAD ACT

AMENDMENT TO INCREASE ALLOWANCE AND EXTEND BENEFITS

Hon. A. J. Brooks (Minister of Veterans Affairs) moved that the house go into committee to consider Bill No. C-45, to amend the Children of War Dead (Education Assistance) Act.

Motion agreed to and the house went into committee, Mr. Sevigny in the chair.

On clause 1—

Mr. Brooks: Mr. Chairman, the same statement I made regarding the other bills applies to this bill. When the resolution was before the house it was discussed and the different principles were explained. After second reading the bill was referred to the veterans affairs committee. A very thorough study was made of the bill by that committee, and it has now been returned to the house with the committee's recommendation that the bill pass as we now have it before us. If there are any further questions I will be very pleased to answer them when the different clauses are called.

Mr. Carter: Mr. Chairman, as in the two previous cases, we support this bill wholeheartedly, particularly as it is designed to increase the coverage by including children who were inadvertently omitted through a technicality in the wording of the original act, and also because it increases the amount of the payments. When the bill was discussed in the committee we learned that 1,125 children are benefiting from the legislation, and that the cost as of June 30 last was $885,939.

The committee received a brief from the Canadian Legion suggesting that the legislation should be extended to cover the children of other classes of veterans, particularly those who have died from causes other than their disability, and also even to disabled veterans. It was felt that the legislation was not serving as good a purpose as it might by restricting the benefits only to the children of veterans who have died of causes resulting from their war service.

The committee discussed the matter and the members felt there was possibly a change in principle involved which deserved further study before any recommendation could be made. We hope that study will be carried on by the minister's department as well as by veterans organizations and other interested parties. I think most of us in this house believe there is a great deal of merit in the suggestion put forward by the Canadian Legion, particularly in so far as disabled veterans are concerned who, because of their handicaps, have not been able to provide as good an education for their children as they might otherwise have been able to do.

We consider this a fairly strong argument, and we do hope this matter will be thoroughly studied. Perhaps at some future date it might be possible to extend the coverage to the children of other classes of veterans.

Mr. Herridge: Once again without any apologies to the *Globe and Mail* for repetition, Mr. Chairman, we in this group support the amendments proposed in this bill. We are glad the government has agreed to introduce these amendments. Possibly there was a lengthier discussion in connection with this bill than in connection with the other two bills in the veterans affairs committee. The representatives of the Legion presented a very complete brief. They had a particular interest in this bill, because I understand it was the Legion who originally proposed this measure. They said on that account they took a keener interest in the operation of the act since it was enacted in 1953. They were particularly glad, therefore, of the opportunity to express their views before the committee and make further recommendations.

After hearing the recommendations of the Canadian Legion, which I thought were very well put indeed with respect to the further amendments they thought were necessary to make this act as effective as it should be, the majority of the members of the committee came to the conclusion that further study was required. I quite willingly admit that these recommendations do introduce certain new features into this legislation, and I quite well understand that members of the committee might honestly come to the opinion that further study is required by the committee, by the Legion and by the government itself.

Personally I gave strong support to the proposals of the Legion, and members of the committee were very sympathetic to those proposals on the whole but were hesitant, generally speaking, about accepting the recommendations without further study. I can well understand that, because while we had an excellent committee a large number of the members had not had prior experience with this legislation, so I can well understand their hesitancy at embarking on something which they did not fully understand. I think

that was the basis of their decision to recommend further study of the suggestions for further amendments put forward by the Canadian Legion.

However, before concluding I do want to say that we were all impressed by the amount of good that is done through this legislation with a relatively small expenditure. I am sure all members of the committee, and all members of this house, recognize the fact that we certainly have a very definite responsibility to the children of those men who gave their lives in the defence of this country. Once again before I sit down, I say that when this or any other government of this country can afford to spend millions of dollars in some cases—I am not objecting to it—to assist in the education or care of people who were on the other side in the second world war and who have since come to Canada because they learned it was a land of opportunity and freedom, we can certainly afford this relatively small sum of money that is required to give effect to the recommendations of the Canadian Legion with respect to this act.

I do hope that as a result of further study of the representations of the Canadian Legion by the government, by members of the committee and by interested people across Canada, next session we will see the minister introducing some further amendments to this act. The amount of good that is done, I think, is remarkable. Therefore particularly in view of that fact we should be beginning to lay the base for wider opportunities for more young Canadians to get a higher education. What better way could money be spent for laying the foundation for wider educational opportunities in Canada for young Canadians than in this type of legislation? I am certain that as the result of an understanding of the results that flow from this legislation, in the near future the government will see fit to extend some similar type of legislation to a wider group of young Canadians.

Clause agreed to.

Clauses 2 to 4, inclusive, agreed to.

Title agreed to.

Bill reported, read the third time and passed.

NATIONAL CAPITAL COMMISSION

CONSTITUTION OF COMMISSION—REPEAL OF PRESENT LEGISLATION

Right Hon. J. G. Diefenbaker (Prime Minister) moved the second reading of Bill No. C-48, respecting the development and improvement of the national capital region.

He said: Mr. Speaker, I have little to add to that which I expressed on the occasion of the introduction of the resolution, except to say that as a result of the suggestions made by hon. members in all parts of the house there was an obvious dedication of the members of this house supporting a capital city worthy of Canada's destiny and of the nation as a whole.

On this occasion, of course, in moving second reading I shall not make any reference to the sections of the bill, except to say that when the original bill was introduced by Right Hon. Mr. St. Laurent he simply placed it before the house with a view to having it considered, and also having changes made therein which would be in keeping with the general purposes of the bill and which might be beneficial to those purposes.

As far as the discussion that has taken place is concerned, there was general agreement on the need for improvement of the federal district act, and also a general desire on the part of members to assure that the necessary expenditure will be made in the years ahead to achieve the greatness of a city beautiful. Some mention was made of the plan respecting the city of Washington as an example in that direction. As well, of course, there is the example within the commonwealth of the capital city of Australia, the city of Canberra, where after the area had been determined as the capital of the commonwealth of Australia there have been achieved a planning and a purpose that command the respect of people who visit that great city.

To achieve what we have in mind, of course, will require not only the planning of the commission but the co-operation of the citizens of Ottawa and Hull and the adjoining municipalities, and as well the consideration of the governments of the provinces of Ontario and Quebec.

I think there is no more for me to say on this occasion except that I believe that out of this bill will come a further expansion and development of the concept of a capital city that was dreamed of by successive prime ministers of this country, one of whom, namely Right Hon. Mackenzie King, gave to the planning a sense of national purpose and dedication which this bill will carry on. All the prime ministers from Sir Wilfrid Laurier down looked forward in prospect to a capital city that would be in keeping with Canada's people, with the contribution of the two major races. All have made their contribution to that end. My hope is that in the years ahead we shall be able to continue the work already under way in making those changes which changing years make necessary while maintaining the general objective that is dear to all of us.

When I look forward a matter of nine years to the one-hundredth celebration of Canada's

confederation, my hope is that in those intervening years there will be an advance in planning and in the architectural beauty of the city in particular, and that the areas surrounding the city of Ottawa and the city of Hull will see such vast changes that in that year of the centenary celebration we shall have achieved in the main the major objectives and shall have laid the final foundations for this capital city.

Any questions that may arise I shall endeavour to answer, in particular those asked by the hon. member for Ottawa West (Mr. McIlraith), when we are in committee. In the meantime I shall rest by saying that I ask for the support of hon. members in all parts of the house with respect to this resolution, which I believe is a major step forward and a milestone toward the achievement of that objective which is the aim and purpose of us all.

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, I do not propose to delay the second reading of this bill because our views on the matter were expressed on the resolution—that is, our views on the general question—and at that time I mentioned that the resolution introduced by this government was exactly the same as the resolution introduced by the previous government sometime ago. The bill before us now is based on that resolution. We naturally support the purposes of this bill and the ideas and the ideals that have inspired it.

As has been pointed out by the Prime Minister, there is no disagreement in this place with regard to the objective of this bill, namely that our national capital should be one in which all Canadians can take pride. That requires planning. This bill is designed to make that planning more effective than perhaps it had been in earlier days, when I suppose the necessity for planning to make this city a worthy national capital was not as obvious as it has been in recent years.

The Prime Minister mentioned Canberra, the capital of a sister nation in the commonwealth, and what has been done there in the way of planning. Of course the problem there was very different, and perhaps much easier to solve from the point of view of planning, because Canberra was a capital carved out of unoccupied territory and made into a federal district for the purpose of developing a federal capital. That fact must have made it easier for those who were charged with the responsibility of planning that capital, although I know it has also caused some discontent in some quarters of Australia because the capital was divorced to a great extent, by the nature of its location, its development and its planning, from the life of the nation.

It seems to me that Ottawa is particularly fortunate in this regard. It is the national capital, but it is also a Canadian city taking part in the life of Canada, not merely in the life of the government of Canada. We are fortunate in that respect and fortunate also, as so many hon. members have said, in the beauty of its location, which provides the planners with something on which to work; beauty unsurpassed by any capital in the world. This planning which is required and which will be facilitated by this act is one thing, but if it is to be successful, government buildings in the national capital must be worthy of the plan. This means that even the most functional government buildings will have to reflect those aesthetic qualities which the Prime Minister so rightly mentioned as being desirable in the development of a national capital. This applies to government buildings on both sides of the provincial boundary. It would certainly be unfortunate if we concentrated on building good and beautiful government buildings on one side only and ignored, to some extent at least, the same requirements on the other side of the provincial boundary in Quebec.

There is a great deal that needs to be done before this city can be made into a worthy capital, and we are all conscious of projects that need to be carried out. There are many corrections to be made which could have been made so much more easily if the work of planning had been begun 25, 30 or 40 years ago. However, this bill is now before us. It is one with which I think we can all agree. It means that we are approaching another stage in the development of a national city which will be worthy of our great country.

It is well when we consider these matters and talk about planning to look a long distance ahead and not be too much influenced by short-range considerations. We have suffered from that in the past in this country and in this capital. The Prime Minister will recall, as a student of history, that when the east block and west block were originally constructed some of the public men of that time deplored the extravagance, and I remember one famous Canadian saying that the day would never arrive when we would have enough government business in this country to necessitate the occupation of those two monstrous palaces, the east block and the west block.

That was not so long ago, less than 100 years. So it is well to remember that when we plan for the future we should plan for the day after tomorrow, not for tomorrow. As we do that I think we will be able to look back on this bill, as I have said, as another stage of this plan to make Ottawa the kind of capital that Canadians would like to see.

Mr. Erhart Regier (Burnaby-Coquitlam): I wish to assure the Prime Minister from the outset that we welcome this bill most heartily. We see it as an attempt to strengthen the hands of those who are devoting their interest to the development of a truly national capital of which all Canadians can be proud.

We have looked over the bill, and in the main we feel that the provisions of this measure will do exactly what they are intended to do, namely strengthen the hands of those who will be charged with this responsibility. I notice that toward its end this bill repeals a previous act, and I hope the Prime Minister can assure the house that after the passage of the bill now before us there will not be any undue delay before making the declaration that is necessary, because sometimes, with the demise of one corporation there is a considerable lapse of time before the new corporation begins its activities.

The need for national development is so urgent that I hope the present act will not remain in existence very long, but that all haste will be undertaken to proceed at once with the new arrangements. Those presently responsible will naturally hesitate to undertake many necessary measures if they do not know exactly how long they are going to be in charge of their responsibilities. For this reason I hope the proclamation will not be long delayed.

I should like the Prime Minister when he replies to indicate the reason for the omission of section 20, as it was in the old act, calling for an annual report to parliament. I notice nothing in the new bill which calls for an annual report. I know full well that parliament will have an opportunity to discuss the work of the new national capital commission whenever it is asked to vote funds. However, there may well be a period of a year, or possibly of several years, when no additional moneys are being asked for and in that case there might be no convenient way of parliament taking under advisement the activities of the commission for a particular year. I feel there should be something in the bill which would enable parliament to discuss each year what has taken place.

In the main, though we support the principle of the bill, we wish the measure had gone a little further in some respects. I will possibly have a little more to say on that when we come to discuss the various clauses. There seems to be spelled out rather severe limitations on the actions which the commission may undertake; the limitations on real estate dealings are somewhat severe. Very far-reaching authority is exercised by the governor in council, in some ways possibly greater authority than obtained under the old act. I hope this is a safety measure only, and that the cabinet has no intention of regarding itself as, in effect, the new national capital commission. As I say, I notice that very little which is of major consequence can be done without the approval of the governor in council.

I regret that the commission is not being given a little more authority to aid the municipal corporations. These municipalities within the federal district, especially as now defined, have heavy responsibilities. If, as the Prime Minister indicated, nine years hence on our one hundredth anniversary as a nation we are to have in the federal district cities of which we can be truly proud, a terrific responsibility is imposed on our municipalities, and I am not sure that the act as it now stands will enable the commission to give the financial assistance which a city such as Hull, for instance, would need if it is to make the progress which I am sure it would like to make within the period of the next nine years. I should like to have seen a little more authority given to the commission to aid the city councils financially in order that they might make their cities into the type of cities we would all like to see.

I also hope the Department of Public Works will work in very close co-operation with the new commission, and that when the department undertakes any project within the federal district it will take into consideration whatever representations the national capital commission will have to make. I refer particularly to the type of buildings and the location of buildings undertaken by the department. I hope the Department of Public Works will not operate as an autonomous and independent organ in putting up buildings in the new federal district.

Mr. Alexis Caron (Hull): Mr. Speaker, I should like to say just a few words on this matter. Everyone seems to be satisfied with the changes referred to in the house today, because the old act was really no longer sufficient to meet the needs of the national capital in the development of the general appearance of the region. Recently many hon. members and possibly the Prime Minister as well have received communications from two bodies on the Quebec side of the national capital.

One of those concerned recommendations about the name of the governing body. In the old days people were not happy about the word "district" appearing in the name, because it created the impression that it was the intention to make of this area a district similar to the district of Columbia in the United States, which has proved an unsatisfactory arrangement from the point of

view of those living there because that commission decides on the development which is needed and the expense and then undertakes it. The United States government pays a certain part of the cost and the balance is said by the local population through the imposition of taxes. The people there are attempting to persuade the United States government to change the present arrangement that obtains in the district of Columbia.

I know it was never the intention of the government to have obtain here the situation that obtains in the United States capital, but I also know that a minority of Canadians feared that result because they did not understand the intention of the government, and of course we cannot prevent people from being afraid.

The official name of the measure before us is the national capital act, so there is no connotation of a region or a metropolitan section. It looks to the people outside the city of Ottawa and to others as though the act refers just to the city of Ottawa itself. I know this is not the intention of the government and never has been its intention, but because of the representations recently made to the Prime Minister and to some if not all hon. members I know some associations would be more at ease if the name could be changed by adding the word "region" or "metropolitan".

This would tend to lengthen the name, but it is fashionable today to refer to organizations by their initials instead of their full name, and this would not represent too great a change. It would serve to give the people living outside the limits of the city of Ottawa a feeling that they are really included in the national capital development plan, and that all improvements made under the plan would serve to benefit them as well as the residents of the city of Ottawa.

I am pleased that under the present bill the moneys to be spent by the commission will be voted by the house. With the limited amount the commission had to spend in the past it was restricted to a certain amount of work, and we could expect it would have taken a very long time, perhaps even a hundred years, to complete the plan which was prepared under the supervision of Mr. Greber. The moneys will now be voted by parliament, and a good start has been made.

The government has voted $20 million for the green belt around the city of Ottawa; and because buildings and bridges come under the purview of the national capital commission I wish to take advantage of that situation to ask the government when voting money under the new act to include a sum for a new bridge to replace the present atrocity between Ottawa and Hull known as the Alexandra bridge. If we delay until agreement is reached among the federal government and the two provincial governments it will be a long time before the bridge is replaced.

Mr. Speaker: I trust the hon. member does not intend to pursue that matter, because it is not strictly on the principle of the bill.

Mr. Caron: No, Mr. Speaker, I simply wanted to refer to the improvement in the appearance of the area the replacement of this bridge would achieve. I hope the government will see that money is voted to enable the commission to correct this situation.

A matter of concern to residents of the city of Hull that has been discussed at length in the past is any attempt that might be made to do away with the E. B. Eddy Company. Some people seem to think that a factory of that kind is an eyesore. The company has considerably improved the surroundings of the mills, and it is really not unattractive. It serves to show visitors to Canada that industry can exist in close proximity to the national capital without detracting from the beauty of the locale and it is an example to visitors of one of our most important industries.

Not long ago I was speaking to the wife of the ambassador of France to Canada. She told me that she considered the plant a beauty spot because it demonstrated the possibilities and potentialities of our country, and I share that view. I hope the new commission will make no attempt to remove from the city of Hull its main industry. We are all in favour of aesthetics, beautiful parks and scenic roadways, but we should also be in favour of industry which continues to help people earning a livelihood.

As the E. B. Eddy Company is the most important industry in the city of Hull we want it to remain where it is. We can continue to effect changes and improvements in the surroundings such as have been taking place in the last ten years. I have from Mr. Weston the promise that he will continue to make the surroundings more attractive to those visiting the city. I express the earnest hope that the commission will be requested by the government to make no attempt to remove this company from the city of Hull.

Mr. G. J. McIlraith (Ottawa West): Mr. Speaker, before the Prime Minister speaks in closing this debate I should like to raise one matter very briefly, and that is the omission of any requirement in the bill for an annual report to parliament by the corporation. I should like to ask him, since we have almost reached the luncheon adjournment, if

he would examine this question and, unless there is some very good reason for the omission from the bill of such a provision, to consider the matter with a view to having such a clause added to the bill so we could have it for consideration in committee this afternoon.

Right Hon. J. G. Diefenbaker (Prime Minister): Mr. Speaker—

Mr. Speaker: I must inform the house that if the Prime Minister speaks now he will close the debate.

Mr. Diefenbaker: I have just a very few words. I thank hon. members for their contributions. I do not intend to deal with the several matters raised by them at this time, except the question raised by one hon. member to the effect that government buildings in this city should be in keeping with the national capital plan. I am informed by the Minister of Public Works that all government buildings receive the approval of the federal district commission as to architecture and the like, and also the extent to which the buildings will fit in with the planning of the federal district commission.

When my hon. friend the Leader of the Opposition referred to the beauty of Ottawa I could not refrain from mentioning how often I go over to Hull and when there look across to the city of Ottawa, for there is no more noble or inspiring silhouette anywhere in the world than the parliament buildings and the buildings associated with government administration as seen from that city.

Two hon. members mentioned the question of an annual report and asked why this had been omitted from the present bill. The reason is that under this bill the commission is an incorporation under the Financial Administration Act, and under section 85 of that act an annual statement is required to be made to parliament. Therefore any fears that any member may have that an annual statement will not be placed before parliament are entirely met by the provisions of the act to which I have made reference.

As to the other questions that have been raised may I say this. All of them are worthy of consideration and all of them will receive the attention of the new commission, but I do offer a word of advice. It would be somewhat out of keeping with the responsibilities that rest upon that commission if the government endeavoured to dictate to it in any way as to the manner in which, within the ambit of its powers, it will carry out those responsibilities under the act.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Sevigny in the chair.

On clause 1—*Short title.*

The Chairman: Shall clause 1 carry?

Mr. McIlraith: No, Mr. Chairman.

Mr. Diefenbaker: Mr. Chairman, the other day the hon. member for Ottawa West asked a number of questions, and I shall deal with those questions in the order in which they were asked. Some reference was made to the financing of the new commission, and at page 3363 of *Hansard* the hon. member asked the following question:

> Will the Prime Minister say something at this stage about the method of providing the financing; that is, the necessity for funds which will be in the nature of capital and which will not lapse at the end of a financial year and the provision of the operating funds for the annual maintenance work.

Section 16 of the new act provides for the new financial arrangements. Operating expenses of the commission, including maintenance of parks and parkways and of grounds of government buildings, will be financed by an annual vote of parliament.

Capital expenditures will be financed by payment into the national capital fund each year of amounts appropriated by parliament. The fund will provide for construction and other projects undertaken by the commission and also for the commission's share of approved projects which may be undertaken in conjunction with municipalities and other public authorities. Expenditures for lands not immediately required for projects will be financed by loans. Amounts credited to the national capital fund each year will not lapse but will be carried over from year to year.

The hon. member's next question was:

> Then I should like to ask him about the commission itself. He will notice that when the previous bill was introduced by the former prime minister, Mr. St. Laurent, in 1957, a good deal was said about the operations of the commission itself; that is, how it was proposed to be set up. I wonder whether the Prime Minister would feel free to tell the committee just what he envisages in that respect?

My answer to that question in general is that the composition of the commission and of its committees is dealt with in clause 3 of the bill. Then there was a question regarding Ottawa river pollution, as follows:

> If the Prime Minister is in a position today to tell us—I do not know whether he is or not—I would ask him to tell us what he can about the participation of the federal government in that scheme.

The answer is the mayor of Ottawa is asking, through the federal district commission, for financial assistance from the government. That matter is under consideration. As the hon. member knows, the report of the joint committee of the Senate and the House of

Commons in 1956 drew attention to the need for cleaning up the Ottawa river, and indicated that the problem is essentially one for the two provinces and the municipalities concerned, but further suggested that because of the national capital interest the federal government should give a measure of assistance.

Pollution is caused by a number of Ottawa sewers which empty directly into the river, and to a lesser extent by sewers of Quebec municipalities. The Ontario water resources commission has recently directed the city of Ottawa to take steps to construct a disposal plant to handle sewage from Ottawa, Rockcliffe and Eastview. Following this, the city engaged two firms of consultants to design a disposal plant and also an intercepting sewer system. These reports were received in June, 1958.

The recommended plan is the same in principle as that contained in the Gore and Storrie report of 1949. It includes a disposal plant at the mouth of Green's creek, several miles east of the city, and an interceptor sewer 7¼ miles long extending west from the plant to a point near the Chaudiere falls. The cost of this interceptor, which will connect the various existing sewers which now discharge into the Ottawa river, is estimated at $11,800,000.

The hon. member went on to say:

> When this work was carried on by the Ottawa improvement commission, at one stage it was thought that the south boundary of the city was in what is now the centre town section and the driveway system, which we are all proud of now, extended along what is now Clemow avenue and Monkland—

—and so on.

My answer to the hon. gentleman's rather lengthy remarks, which appear at page 3364 of *Hansard*, is that if something can be carried out along the lines indicated as between the commission and the city with regard to Clemow avenue and Monkland avenue the government will be glad to make the necessary, suitable approaches to the province in that connection.

Then the hon. gentleman referred to parking meters on Wellington street. Wellington street, of course, as the hon. gentleman knows, is a city street and the installation of parking meters is a matter for the city. I would suggest that he direct any views he has in that regard to the city authorities.

The hon. member also asked what main projects were in mind that would require a substantial expenditure of money in the immediate future. The main projects which the commission has undertaken in recent years and which are still being continued are the railway relocation scheme, shared projects with municipalities, for example the Queensway, park and parkway development and the green belt. The details of proposed expenditures on capital projects in 1958-59 will be found in the commission's capital budget as tabled in the house. The long-term forecast of possible expenditures over a period of years on various projects is contained in the brief submitted by the federal district commission to the parliamentary committee in 1956 and is printed in the proceedings of that committee.

The final questions of the hon. member were based on these statements by him as found at pages 3364 and 3365 of *Hansard* of August 11:

> In 1947 expropriation proceedings were started with regard to properties along the Ottawa river with a view to completing the driveway system along the river in a westerly direction from the centre of the city . . . Work also required to be done to develop the driveway system along the south and southeast shore of the Rideau river.

I may say that I feel sure the commission will desire to give sympathetic consideration to the representations regarding the initiation of parkway construction along the Ottawa and Rideau rivers and also the continued development of Sussex drive; but expenditures for this purpose will, of course, have to be considered in the light of the very substantial amounts required in the next few years for the railway relocation and other construction projects.

At one o'clock the committee took recess.

AFTER RECESS

The committee resumed at 2.30 p.m.

Mr. McIlraith: There are just one or two more questions I should like to ask. First of all I should like to thank the Prime Minister for the answers he gave to the questions I asked when this legislation was at the resolution stage. I wanted to add one or two remarks about the questions and answers.

On rereading the questions I think I might not have made clear the point I had in mind concerning Clemow avenue and Monkland avenue. At the time the commission preceding the federal district commission was active, that is the Ottawa improvement commission, they had undertaken certain restrictions and certain provisions in connection with the area now covered by these two city streets, Clemow avenue and Monkland avenue. With the passage of time these streets have become regular city streets, but the federal distict commission is still burdened with their care and maintenance. There is some legal difficulty about having the city take over these streets.

I believe anyone examining the matter would consider it desirable that these streets

be given back to the city for care and responsibility. The only legal way in which that end could be accomplished, as I see it, is through the provincial legislature. My question was merely directed to asking the Prime Minister, if and when the matter came up with the federal district commission or the new national capital commission, to use his good offices to have the province take the necessary legislative action to vest the appropriate parts of that land in the city.

The second subject matter, I believe, had to do with parking meters on Wellington street. I was referring, as I think the Prime Minister will see, only to that part of Wellington street immediately in front of the parliament buildings. While I very much appreciate the Prime Minister's answer on the point, I am going to ask him to pursue the question a bit further. I think he will find in old agreements and records that work was done by the public works department on this street. I hope the Minister of Public Works will not mind if I give him some research work to do, but I believe it will be found the federal government does have some responsibility for work on the north side of Wellington street, mainly in front of the parliament buildings. I think he will find also that part of the land close to the Chateau Laurier is the responsibility of the Department of Transport.

I should like to be a little persistent and ask the Prime Minister to pursue this matter further and settle, once and for all, the question of title to that land with a view to having that part of the north side of Wellington street properly maintained. I for one cannot easily reconcile myself to having this beautiful site on which these buildings are located spoiled by car parking. Indeed, I could say a great deal more about car parking on the hill itself, but I am going to leave that part aside for the moment.

I believe it is important that we not let anything be done now by the city that would tend to mar the beauty of the site of the main parliament buildings. I recognize that with the Prime Minister as busy as he is it is not always possible for him to concern himself with things that may, in themselves, appear like small matters. I do feel quite strongly on this matter, however, and I would ask him to have the appropriate officers look into the matter and do what they can to prevent this further step being taken that would mar the beauty of parliament hill itself.

Then the third matter I want to raise has to do with the annual report. I listened to the Prime Minister's answer to my request earlier this morning that he consider putting a provision in the legislation requiring the commission to make an annual report to parliament. As I understood it, his answer was that there is a provision in the Financial Administration Act requiring crown corporations to make a report to parliament on their finances. I am aware of that provision, but what I have in mind is something quite different. I have in my office copies of annual reports of the federal district commission for quite a number of years. These are very fine reports. They contain a great deal of information that does not concern financial administration at all.

If the Prime Minister will look at these reports I believe he will be impressed with their excellence, and I think he will be impressed with the important information they contain describing developments in the national capital, the beautification of the area and the development of the national capital area throughout the years, as well as the projects pending for the coming year. These reports usually contain some maps and pictures, and altogether the reports are very commendable.

I feel quite sure, Mr. Chairman, that hon. members would wish to have copies of such reports in future. I would ask the Prime Minister, notwithstanding the answer he gave to this same point this morning, to reconsider this matter and put a provision in the legislation requiring an annual report.

Mr. Diefenbaker: I thank my hon. friend for his suggestion, Mr. Chairman. As I said this morning, the commission being a corporation under the Financial Administration Act, an annual statement is required. I believe his request is reasonable. Each year the report has been a compendium of much useful information, and I shall suggest to the commission that the annual report made under the provisions of the act include the type of information that has now become characteristic of those reports. As a matter of fact, under the bill prepared by the former prime minister this section had been omitted for the reason I gave. However, I shall see to it that the purpose the hon. member has in mind will continue to be before the new district commission in the making of annual reports.

Mr. Caron: Before one o'clock the Prime Minister said that whenever there was a building to be erected in the capital region, the plans were submitted for the approval of the commission. This has been the practice for years, and I feel it is a very good thing to do. If I were to go to the commission and ask them to do something about the Hull side, somebody might say I was interfering with the business of the commission.

I should like to ask the Prime Minister, therefore, that the new commission consider spreading the money around a little more so we would have some buildings on the Quebec side. At the moment the plans call for buildings being erected miles away from this House of Commons. There are some beautiful sites on the other side of the river, and these buildings would then be much closer. I know we have one building there now which has been criticized quite a lot, and I will come back to that on another occasion. This was recommended in 1949 by the commission to the government; the recommendation was accepted and they started to buy the land to build the printing bureau, which has been a great improvement. As is stated in the report:

> The plans had been prepared for this new imposing building, the construction of which will commence the gradual rehabilitation of a part of the city of Hull, which is now blighted. The building will be accessible from all sides by direct arteries—

And so on. So they found a place which was quite suitable for a building, one of the important ones. If they can find—and I know they can—other suitable places in Hull or in the surrounding area much nearer to the parliament buildings than some of the new buildings which are being built at the other end, I think it would be to the advantage of those working there; it would be advantageous to distribute more adequately the circulation around the city of Ottawa. It would be advantageous also for the park area, and it would also help to change parts of the city of Hull which are very old.

The city of Hull was built as time went by, and some of the houses which are there were built by people working at Booth's, Eddy's and other places where they could get wood very cheaply. They built those houses at night in order to get dwellings in which to house their families. Those buildings are old, and in certain areas they could be bought at a certain price. If this were done it would help to improve the surroundings of the city of Ottawa, and it is still in the national capital plan.

So I hope the commission will accept the suggestions I am making today through the Prime Minister and have a little bit more sympathy for the city of Hull and the Quebec side of the national capital surroundings. I hope if they happen to need the money for that purpose, the government will be large enough to vote the money. Parliament will be large enough, but I hope the government will be satisfied to recommend the expenditures which might be asked for by the commission. As they were saying, the printing bureau building will be accessible from all sides by direct arteries.

I hope we will come to the decision that for the betterment of the national capital another bridge will be built to permit traffic to circulate. At the present time many of the population want to go to Gatineau, that beautiful national park beyond compare with any other in the world. If they want to go there they need to cross the river. In order to cross the river they need a bridge. The bridge situation is really bad. The only way it can be done is through the national capital commission. I hope they will recommend to the government the building of a new bridge, and I hope the government will recommend the expenditure of the money.

Mr. Diefenbaker: In connection with the reference just made by the hon. member for Hull, may I say this. In the bill that was tabled by the former prime minister, Right Hon. Mr. St. Laurent, he will find that section 9 provided as follows:

> There shall be an executive committee of the commission consisting of the chairman, the vice-chairman and three other members to be appointed by the commission—

I felt that did not cover the situation properly having regard to the representations that should be made on the part of the people of the province of Quebec and the city of Hull. It was with that end in view that the bill before us has these additional words:

> —of whom one at least shall be from the province of Quebec.

That was an additional change that was made by this government in order to assure that proper representation would be made in connection with the executive committee.

Mr. Caron: On this question I shall have to tell the Prime Minister that there was always a member from the province of Quebec.

Mr. Diefenbaker: Oh, no.

Mr. Caron: It was Mr. Amyot from Quebec who was the member representing the province. We had Mrs. Fontaine representing our side, and we had the mayor of Hull at that time.

Mr. Diefenbaker: This is the executive committee. There were no representatives on the executive committee.

Mr. Caron: I will admit they were not members of the executive committee, but they were members of the commission.

Mr. Diefenbaker: Oh, yes.

Mr. Caron: Under the bill there is one person representing the city of Hull, where we had two, and there is one representing the outside of the city, which is an improvement on what we had. I think that makes 16 altogether. There are still four who can be

nominated at any time. I hope when those four are nominated, another one will be nominated for the area surrounding Hull or the city of Hull.

Mr. McIlraith: I am curious about the Prime Minister's answer. I do not understand why he should single out the province of Quebec? Why should he not have provided that the province of Ontario should at least have one, or the city of Ottawa? I just want to point out that the principle being followed in legislation, in designating one particular area, is sometimes a difficult one to administer and is not perhaps as attractive in principle as it sounds. Perhaps he should have put in a provision that at least one shall be from the province of Ontario, or two or three or four or twelve, as the case may be. That is a very doubtful principle to follow, though I can appreciate the hon. gentleman's motives in putting it in.

Mr. Diefenbaker: Does the hon. gentleman want that change withdrawn?

Mr. McIlraith: I do not know why the Prime Minister would want to put me in a spot like that, but I am sure the people of Hull would not mind if it were withdrawn. I do not think this really adds anything at all—

Mr. Diefenbaker: They asked for it.

Mr. McIlraith: —one way or another to this bill. Anyway, the point I want to make is that this is a doubtful precedent to set, because once you start that kind of thing there may be provision for at least one representative from Rockcliffe Park, or the province of Ontario, or the Gatineau area, and so on; and I am sure the hon. member for Carleton would wish there to be a representative from the county of Carleton and that the hon. member for Russell would wish a similar provision to be made for Russell. So we would go on.

Mr. Gour: Mr. Chairman, I think more expropriation could be done on this green belt. All your railways and what you call the station and everything else will be in the Russell riding. Alta Vista drive and Elmvale Acres are among the nicest parts of the capital of Ottawa, and they are near where the station will be. Therefore it has to be something to go with this nice part in my riding.

However, I am not afraid, because I am sure there will be some intelligent people representing the city of Ottawa on this commission; it will be easy to get good ladies and good men to become representatives on the board. And I point out to the Prime Minister, when he is talking about the beauty of Ottawa, that it is hard to compete with the beauty of the district of Russell. When members talk about Ottawa and talk about Hull let us not forget that there is no better area than Eastview, with 23,000 people and some of the best buildings that anyone could wish to see.

I am quite certain that the good wishes of all hon. members here will go with this board, and that it will be prepared to continue the good job which has been done up to now. I hope that in carrying out this task it will soon be able to improve the approaches to this city by building a bridge starting from the north in Hull to the south on Sussex street in Ottawa, and also one further down, which would be another link between the provinces and enable the Quebec people to come to Ottawa and the people of Ontario to go to Quebec.

Mr. Bell (Carleton): Does the hon. gentleman for Ottawa East agree with that?

Mr. Gour: The hon. gentleman from Ottawa East always agrees when it is a good thing. He is a bright fellow.

Mr. Richard (Ottawa East): I guess I would agree to anything which would improve the Ottawa East portion of the national capital area. I am not expecting the Prime Minister to make an announcement at this time about the program of building along Sussex street, or to tell us when the tracks are to be removed. I think I have been in this game long enough to know that the Prime Minister will require some time to become acquainted with all the problems of the capital area before he can tell us.

However, this would have been a wonderful occasion to have announced that the bridge from the end of Sussex street to Hull was going to be built by the federal government. I think everyone would be happy to hear that, and I think if we keep on repeating it, within a short time we will hear an announcement made by the Prime Minister on the subject. I believe that when he does so he will receive the plaudits of all hon. members here.

Another question I should like to raise concerns transportation in this city. I should like to know if negotiations have been held between the federal government and the city of Ottawa on this question, and whether the Prime Minister is aware of any such negotiations. I should also like to ask whether any proposals have been agreed upon, because everyone knows that the displacement or removal of federal buildings from the central part of the city—the greatest offender being, of course, the Minister of Public Works and his predecessor—into the lovely riding of Russell has disturbed the living habits of the people of the city of Ottawa and made transportation very difficult.

As a result the city is now facing a transportation crisis, and I think the only solution lies in an agreement with the federal government so that in the future the city may be advised in advance of the government's plans regarding buildings, knowing that if it does provide transportation in such cases it will receive compensation and that the city and the citizens of Ottawa shall not be the losers.

As I said the other day, it is not always an easy problem for people to live in the city of Ottawa. It is an expensive process, and the taxpayers of Ottawa have paid their share toward the beautification and improvement of the city. I hope this transportation problem will be one of the matters which the government will attend to as quickly as possible in an effort to reach a suitable solution.

Clause agreed to.

On clause 2—*Definitions.*

Mr. McIlraith: Mr. Chairman, under 2(i) the following definition is given:

"Minister" means the Prime Minister of Canada or such other member of the Queen's privy council for Canada as is designated by the governor in council.

Now the commission is answerable to the Prime Minister of Canada, and I merely want to ask the Prime Minister if he proposes any change by the definition given in this section.

Mr. Diefenbaker: As the hon. gentleman knows, in the bill that was presented by Mr. St. Laurent the minister was defined as the president of the Queen's privy council for Canada, or such other member of the Queen's privy council for Canada as was designated by the governor in council. There is no change in this regard, and there is no change contemplated. As a matter of fact, though I am Prime Minister I have never been sworn in as president of the Queen's privy council, and I presume that is one of the reasons why this was phrased in its present form.

Mr. Pickersgill: Mr. Chairman, I wonder if the Prime Minister would permit a question purely for information. Did I understand him to say he had not been sworn as a member of the privy council?

Mr. McIlraith: No; as president.

Mr. Pickersgill: Oh, he meant he was not sworn as president; I see.

Clause agreed to.

On clause 3—*National capital commission.*

Mr. Caron: Mr. Chairman, this morning I referred to the communications which had been received by hon. members of this house and the Prime Minister from various organizations on the other side of the river in the province of Quebec concerning the name of the commission. The official name is the national capital commission, and I wonder if there would be any serious objection to naming it the national capital region commission or the national capital metropolitan commission. This involves just the addition of one word to the title, and would satisfy many people who fear the name is restrictive and bears reference only to the city of Ottawa. It should be easy to change the name along the lines I have suggested without detracting in any way from the project involved.

Mr. Diefenbaker: Mr. Chairman, that matter, of course, received consideration at the time the committee sat in 1956. I do not think any one would read a sinister meaning into the expression "national capital commission". The fullest consideration was given to that matter. This is, indeed, the national capital. For that reason the commission received that name. There may be a time when further consideration could be given to it, but at the moment I believe it will be generally agreed that the name is one that actually covers the connotation intended.

Mr. Regier: Mr. Chairman, I wish to say how much I welcome subclause 5 of clause 3 which places a limit on the length of time any member may serve; a maximum of eight years, as I understand it, unless it be the chairman. This will automatically provide new blood in the membership of the commission every once in a while, which I think is a good improvement.

I notice in subclause 3, however, a change from the previous provision. The corporation of the city of Ottawa and the corporation of the city of Hull used to have the right to appoint a member of the commission. I regarded that as being of some value in establishing a liaison between the two city councils and the commission. Has the Prime Minister any explanation to offer as to why that provision has been eliminated; why all members of the commission are appointed by the governor in council and none are to be direct appointees of the city councils?

Mr. Diefenbaker: When this matter was being considered it was felt that the previous provision served as a handicap to the commission. Under the Federal District Commission Act one member was appointed by the city of Ottawa and one by the city of Hull. These have usually been the mayors of the respective cities. It was felt in consideration of this problem that in view of the frequent negotiations with the cities it is a handicap to the commission to have representatives of the cities at its meetings. The new act provides for the appointment by the governor in council of at least two members

of the city of Ottawa and one from the city of Hull, and one from a municipality in Ontario other than the city of Ottawa and one from a municipality in Quebec other than the city of Hull. That was the consideration that prompted the inclusion of this particular subclause.

Mr. Regier: I wish to ask the Prime Minister if he has any explanation to offer as to how proper liaison will be maintained between the city councils and the commission if there is no direct tie-up between them. I know he said the commission was perhaps handicapped in having direct representation —as he said, the mayor—however, I fail to appreciate how one man could embarrass the opinions of the other 19 members of the commission. I am afraid we may have developed as a result of this move a lack of that understanding which is so vital if the work of the commission is to be at all successful. How does the Prime Minister propose to maintain the necessary liaison?

Mr. Diefenbaker: There are frequent meetings of the chairman and general manager with the mayor, and between the staff of the commission and the staff of the city. I am sure there will be no lack of liaison or of representation to achieve a proper relationship and to assure that the views of the city will at all times be given full consideration by the commission.

Clause agreed to.

Clauses 4 to 8 inclusive agreed to.

On clause 9—*Executive committee.*

Mr. McIlraith: Mr. Chairman, I fear I did not make myself clear previously when speaking about subclause 1 of clause 9. I should perhaps read this subclause. It reads as follows:

> 9. (1) There shall be an executive committee of the commission consisting of the chairman, the vice chairman and three other members to be appointed by the commission, of whom one at least shall be from the province of Quebec.

I am concerned about the last part of that sentence containing the words "of whom at least one shall be from the province of Quebec". Those words were not included in the bill that was introduced by the former government. The Prime Minister has offered an explanation as to why he caused those words to be added, but I would point out to him that it is a doubtful principle he is following in putting in this special reference to one province and not the other, because it is now quite possible to have this executive committee without any protection for the national capital.

Under the British North America Act Ottawa is the capital of Canada. That is a statutory provision, although there are occasions when I feel some may have forgotten it. This started out as an Ottawa improvement commission. It grew to a federal district commission and now to a national capital commission, a move which I think all persons welcome as an indication of progress which we all commend.

Approximately 12 years ago we provided that on the federal district commission there should be representation from each province in Canada, which was evidence of the growth of the country and an increased appreciation of this program. Now, because of the difficulties inherent in having meetings attended by members of the commission from each province in Canada, it has been found necessary to create an executive committee.

I wish to be clear that I am perfectly agreeable to having a representative from the province of Quebec on the committee. I hope there will be no misunderstanding on that point. I believe it is a requirement any sensible person would have in mind in setting up the executive committee, and I am wholeheartedly agreeable to the idea. But if we are going to legislate on this question, then surely we must also include a provision to the effect that of the three other members to be appointed by the commission, one at least shall be from the city of Ottawa or one at least shall be from the province of Ontario.

We should not have discriminatory legislation in this form on the statute books, and I am sure the Prime Minister would be the first to agree to that principle. I suggest to him that he add the words "and one at least shall be from the province of Ontario". It is a principle that is worthy of the attention of the committee and of the Prime Minister.

Mr. Pearson: Mr. Chairman, I would just like to support what my hon. friend from Ottawa West has said. The national capital region, of course, is in two provinces, namely Quebec and Ontario. It would be normal—indeed it would be desirable, perhaps essential—that on any executive committee there should be members residing in those two provinces. I assume that normally would happen, but in this legislation provision has been made to ensure that it will happen in the case of only one province. We all agree that it should be so for that province, but should not exactly the same action be taken in respect of the other province, as suggested in the amendment that my hon. friend from Ottawa West has ventured to put forward?

Mr. Caron: May I differ a little with the proposal made by the hon. member for Ottawa West. The idea of the bill as it stands is to have a representative from the Quebec region. I agree with the hon. member for

Ottawa West that it looks a little discriminatory when we say that one shall be from Quebec and we do not mention the other nine provinces. It can be freely admitted that if it were changed to read that one at least should be from the Quebec side of the national capital region there would be no misunderstanding. As it reads now somebody could be taken from the city of Quebec or from any other part of the province, and he would be too far away to attend meetings of the executive committee.

What the Prime Minister wants, I believe, is to have somebody on the spot to be there when they need him at executive committee meetings. The bill as it stands provides for a member from every province. We find that in clause 3. If the idea is to have a representative from the Quebec side on the spot it would be much better to have it read "from the Quebec side of the national capital region".

Mr. Diefenbaker: Mr. Chairman, a little while ago the member for Ottawa West, possibly speaking without that care which he might have exercised, placed this section giving the province of Quebec representation on the executive committee in a position similar to that of the various municipalities. He said, if the province of Quebec is to have a representative why should not municipality A, B, or C have one? There has been no request whatever from Ontario for any specific representation on the executive committee; there was from the western Quebec boards of trade, which asked that in the setting up of this executive committee provision should be made for a representative from the province of Quebec.

I felt that was a reasonable view because of the inclusion in the national capital region of those areas that are administered by the commission. It was to cover that point that this specific reference was made. I must say that I felt that was proper and fitting, and I still do. I feel there should be representation from the province of Quebec. When the hon. member for Hull says that representation on the executive committee should be from the region in question, I can assure him that this is the area from which the representation will be taken.

Mr. McIlraith: Mr. Chairman, may I make myself clear. I think everybody in the house agrees that there must be representation on the executive committee from the province of Quebec. Certainly I did not intend to create any other impression. I for one cannot see any possibility of an appropriate executive committee which did not have representation from the province of Quebec; but what I am pointing out is that in doing so we are creating a situation where there might not be any representation from the province of Ontario, and the national capital happens to be in the province of Ontario. I think we should keep our sights on the main objective of this legislation, namely the creation of a national capital commission.

I do not want to delay the proceedings unduly, but I would again request the Prime Minister to add wording which would provide also that there be at least one member from the province of Ontario. I think it would be found on examination that this is a reasonable request; it is sound in principal and it is practicable and possible. Without being too persistent, I would like to ask him to consider the matter again and also to consider adding the appropriate words at the end of clause 9, subclause 1, which will provide that at least one member must be from the province of Ontario as well as one from the province of Quebec.

Mr. Diefenbaker: Mr. Chairman, the national capital executive committee would naturally have representation from Ontario. We are not going to set up an executive committee and then appoint the members from various other parts of Canada. This executive committee will be an operative committee. It is natural, in the nature of things, that it will be largely composed of those immediately in the area or environment. Having that in mind we felt as well, because of the extension of the district into the province of Quebec, that we should assure that on the executive committee there should be a representative from the province of Quebec.

The Leader of the Opposition says it is discriminatory. That observation surprises me. I see nothing discriminatory in providing that on an executive committee which deals with the national capital we provide for a representative from the province of Quebec. There is nothing in the nature of discrimination there.

Mr. Pearson: Just so there will be no doubt as to where I stand on this matter, I think the Prime Minister has already said in his last few remarks that there cannot in fact be discrimination because there will always be a member of the executive committee from Ontario. If that is so, and undoubtedly it is so, why not put it in the law? It also is the case that on an executive committee of this kind there will be representation from Quebec. We all understand that, and we all approve it. That has been made clear in the legislation by including the words "of whom one at least shall be from the province of Quebec". Then, as long as those words are included in the legislation and no reference

is made to the province of Ontario, whatever the situation may be in fact—and there will undoubtedly be no discrimination in fact—there is the possibility of discrimination in law, and it is merely to remove that possibility, so there will be no misunderstanding in the future, that my hon. friend has suggested that this very useful and simple amendment might be made to this particular clause.

Clause agreed to.

Clause 10 agreed to.

On clause 11—*Co-ordination of development.*

Mr. Regier: I should like to refer to subclause 5, but to make my point I must read subclause 4, which is in these words:

> No person shall erect, alter or extend a building or other work on public lands in the national capital region unless the site, location and plans thereof have first been approved by the commission.

I think subclause 4 is very necessary. However, then we come to subclause 5, which reads as follows:

> In any case where the commission does not give its approval under this section the governor in council may give such approval.

What I am a little afraid of is that this provision may lead to undue influence being exerted on members of the government. I believe the commission should have the final authority. If the work of the commission is not satisfactory then, if the charge is serious enough, the commissioners can be removed from office. After all, they hold office only at the pleasure of the governor in council.

I do not like to see a situation where a person who is refused permission to undertake the construction of a building on national capital region land can then exert political pressure in order to reverse the decision of the commission. In my opinion this is a weakness in the clause, and I should like to hear what the Prime Minister has to say.

Mr. Diefenbaker: Mr. Chairman, I must say that I see no reason for the suggestion that in the exercise of this power political pressure would be exerted against the governor in council. As a matter of fact, my hon. friend's solicitude in this regard would indicate to me that he has in mind examples of political pressure having been applied. If he has not, then I would point out to him that this particular subsection has been in effect since 1946.

Mr. Regier: I realize that it has been in effect, but I do not believe that members of the cabinet should have to be bothered with people appealing to them to do what they can to reverse a decision of the commission. I feel that the commission members should have the authority to carry out their work, and that if anybody has received an adverse decision he should not have the right to appeal to the government to upset the decision of the commission.

Mr. McIlraith: I must say that is a somewhat new doctrine. I have always held the view that when money is appropriated by parliament the government must assume the responsibility for the expenditure of that money, and I would think the government cannot escape that responsibility under our legislation.

I rose to bring up this point. Ever since 1946 it has been the law under the Federal District Commission Act, in wording almost identical to that of the new bill, that when any public building is to be constructed in the national capital area the site, location and plans thereof must first be approved by the federal district commission, now to be known as the national capital commission. That has been a very useful provision. It has done a great deal to co-ordinate the development of the whole national capital area. It has meant that the exterior design of public buildings has had to be co-ordinated and made compatible with the characteristics of the general site and location of the buildings.

I should like to be assured by the Prime Minister, as I have no doubt is the case, that no change is contemplated and that it is the intention to follow the same practice that has been followed in the past of insisting that the section be meticulously observed with regard to all public works undertaken in this area. I must say that this sometimes carries with it decisions that are not always happy for some of us, but I would point out to hon. members that as far back as April 30, 1949, at the time the national capital committee documents were tabled in the house, a full page story appeared in the Ottawa *Citizen* in which there is reference in item 14 to the construction of a new government printing bureau to be located in Hull.

I do not want to get off on that subject, but I would point out to hon. members what is involved in these things. It means that the site of these buildings are chosen with a view to the development of the whole national capital area, and we must bear that in mind. Further reference to that subject will be found in the national capital general report of 1950, page 210.

The government is also involved in another way. Because of the aesthetic requirements of exterior design, many of these government buildings may be more expensive than they would otherwise be. I think it is desirable to place that fact on record now

so that hon. members will understand exactly what they are legislating when they approve this clause. I think it is a wholly appropriate provision, but one that is not widely understood by hon. members, and I should like them to know and appreciate just what it involves. I hope that decades from now there will be many people in this chamber who will thank us for having put this provision in the legislation initially in 1946, and for having carried it forward in the 1958 legislation.

Mr. Caron: Mr. Chairman, clause 11 reads in part as follows:

(1) The commission shall, in accordance with general plans prepared under this act, co-ordinate the development of public lands in the national capital region.

(2) Proposals for the location, erection, alteration or extension of a building or other work by any person on public lands, or by or on behalf of a department, in the national capital region shall be referred to the commission prior to the commencement of the work.

I do not want to go back to what I said a while ago, but I hope the commission will consider very favourably the Quebec side, which is much nearer the main buildings of the government, when dealing with proposed buildings to be erected for the benefit of different departments.

Mr. Regier: Mr. Chairman, I cannot agree that it is necessary for responsible government that subclause 5 should remain, even though it has been in the old act; because there are many crown corporations as to which the cabinet would not entertain for a moment any representations concerning their internal operations. The Prime Minister mentioned the possibility of the old subsection 6, now subclause 5, having been used. I see he has an adviser in front of him, and I am wondering whether the Prime Minister can inform us how often subsection 6 of section 9 of the old act was used in years gone by. I am not asking for the exact number, but has much use been made of the right to appeal to the governor in council in past years? I should like to have an indication of how much use has been made of the provision.

Mr. Diefenbaker: I can only speak of the period since I became Prime Minister. No use has been made of that subsection during that period, nor has there been any application for its use.

Mr. Richard (Ottawa East): I notice that throughout this bill there is mention of plans. I should like to repeat what I have said before in this house, that I believe everyone would welcome the day when we have a definite plan. At the moment there is no plan approved by the municipalities involved or the provinces of Ontario and Quebec. I feel that that is what is lacking in our approach towards this national capital development. We have not got an approved plan, something which shows what the commission intends to do. A person may settle 20 or 25 miles from here and within a few years find that he is involved in expropriation proceedings because a new plan has been made. I believe that, as soon as possible, we should have a plan approved by all concerned which would be made public so that the people who live in this region would know what to expect so far as their property is concerned.

Clause agreed to.

Clause 12 agreed to.

On clause 13—*Expropriation.*

Mr. Richard (Ottawa East): I have some remarks to make about expropriation. My good friend the Prime Minister will appreciate the point of view I have always taken that there should be a review of the Expropriation Act by the Minister of Justice. This is a very severe act. The purpose of this act, when it was put on the statutes, was to acquire property on behalf of the crown for public works, works of necessity such as wharves, post offices, defence projects and so on. At the moment the same strict regulations or sections which were applied for this purpose in the past are being used under such statutes as this one. I have always felt that there should be some amendments made to the Expropriation Act for use in such cases as the national capital plan.

Some people do not appreciate what is the procedure. It only requires a plan to be signed by the national capital commission and filed at the registry office, without any notice to the owner of the property, for property to become vested in the federal district commission. The rules in connection with compensation are those that existed in the past for ordinary expropriation purposes such as the public works I mentioned. These procedures are very lengthy and slow. The people of Ottawa have suffered from these procedures in the past. I know that in recent years the commission has not been using the Expropriation Act to the same extent, and hardly at all on the Quebec side. I know that in Ontario this act was used to acquire almost all the property along the Ottawa river and a great deal in Russell county. I believe this is the time to revise the Expropriation Act, and I hope the Prime Minister will give some consideration to discussing this matter with the Minister of Justice.

Mr. Diefenbaker: In practice, Mr. Chairman, the commission follows the course of endeavouring to purchase the property by

agreement rather than by expropriation. What the hon. gentleman says is a fact, that the power of expropriation being an extraordinary one deserves to be reconsidered in the light of present circumstances. I can tell him that the Department of Justice is reviewing the Expropriation Act in detail with the operative departments to the end that anything in the nature of enforced injustice cannot occur.

In saying that, I do not admit that there has been such in the past. Nonetheless, the power being so extraordinary, it certainly should be limited so far as possible. I should like to point out this to him. I do not believe most powers of expropriation—I am speaking now from memory of the law after not having practised for two or three years—have the limitation that is present here. Here, the commission may, with the approval of the governor in council, take or acquire lands for the purpose of this act without the consent of the owner. In other words, if expropriation takes place within the national capital region, it can only take place if the governor in council has directed that it should take place.

Mr. McIlraith: All the authorities for expropriation are that way.

Mr. Caron: I have to admit that the claim of the hon. member for Ottawa East is correct to some extent. I remember one case where an old man was expropriated—

Some hon. Members: Oh, oh.

Mr. Caron: The hon. member may laugh, but if he had to struggle in French as I have to struggle in English he would not dare laugh at me that way; that is very cheap.

This man was over 65 years of age, and they wanted to expropriate his property. He was living on a small pension, and they gave him the exact value of the house. This man had no money to rebuild and the cost of construction had increased to such an extent that he could not do anything. He could not even buy a lot. It is quite important that the Expropriation Act be revised so that these poor people would not be disturbed for the balance of their lives.

Clause agreed to.

On clause 14—*Restrictions on transactions.*

Mr. McIlraith: I notice a change in clause 14. Where the terminology "at a price" was used in the former bill there is a change to "for a consideration". Is there any special significance in that change in the new bill?

Mr. Diefenbaker: One can imagine a situation whereby a trade would take place, whereby a certain piece of property in possession of the commission might be exchanged for another property of equal value. It was in order to cover that situation, as I understand it, that the word "consideration" was inserted.

Mr. Regier: I looked at this clause, Mr. Chairman, and I was wondering why the figures were so low or limitations were so severe. It seems to me that very little can be done by this commission without an order in council. They cannot dispose of any real property if the value is in excess of $10,000, nor may they buy any real property if the value is in excess of $25,000. That means that the greater number of transactions will require orders in council. Does the Prime Minister have any explanation to offer as to exactly why $10,000 and $25,000 were the figures used, as to why the provision was not made a little bit more liberal or why a little bit more leeway was not given to the commission to act on their own, as for example up to $25,000 for disposal and $50,000 for purchase? In these days it does not take much of a home to be worth $25,000. Surely we do not want an order in council for each and every house.

Mr. Diefenbaker: It is apparent, Mr. Chairman, that the hon. member has not read the Federal District Commission Act. The old section 16 reads as follows:

> 16. (1) No separate parcel of real property shall be purchased or acquired by the commission at a cost in excess of five thousand dollars except with the previous consent of the Governor in Council; and if the commission is unable to agree with the owner of real property as to the price to be paid therefor, the commission shall, with the consent of the governor in council, have the right to acquire the same without the consent of the owner and the provisions of the Expropriation Act are, mutatis mutandis, applicable to the acquisition of such real property by the commission.

There was that provision in the past respecting $5,000 in the acquirement of property. It was felt that provision constituted too great a limitation on the average transaction. The change that has been made is this. Under the Federal District Commission Act the commission cannot dispose of any real property without the approval of the governor in council. Under the new bill the governor in council approval will not be needed unless the consideration involved exceeds $10,000. Under the Federal District Commission Act to which I have just made reference the commission cannot acquire a parcel of property in excess of $5,000. Under the new bill governor in council approval will not be needed unless the consideration involved exceeds $25,000. It was just to cover the point raised by the hon. member that this alteration was made.

Mr. Regier: I want to assure the Prime Minister that I have read the old act.

Mr. Diefenbaker: Then I apologize to the hon. member.

Mr. Regier: The point I was making in my opening remarks is that I feel that all around the commission is being limited a little bit too much, that it is not being given enough freedom of action to do the effective job that the Prime Minister wants it to do in the nine-year period.

I must say that the first time in my life that I ever heard the Prime Minister make a public speech was in the little village of Craik, Saskatchewan in the year 1941, I believe it was. One of the most telling arguments that he had against the government of the day was the vast number of orders in council that were being issued. Knowing that he has so little love for government by order in council I should have liked to see in this clause and in other clauses evidence that the new commission about to be appointed would have a little bit more liberty of action.

Mr. Diefenbaker: The effect of the alteration will be to reduce the number of orders in council, that desirable objective to which the hon. gentleman gives his adherence now.

Clause agreed to.

Clause 15 agreed to.

On clause 16—*National capital fund.*

Mr. McIlraith: Would the Prime Minister care to tell us what supplementary estimates he proposes to bring before the house this year dealing with this subject? I have in mind particularly the question of whether or not he proposes bringing before the house provision for funds for acquisition of part of the green belt.

Mr. Diefenbaker: Authority will be asked for a $4½ million loan on behalf of the commission for green belt purchases. In addition to that, of course, there will be these other estimates to which reference can be made when the estimates are before the house.

Mr. McIlraith: What I want to point out is this. The expropriation legislation provides that payments shall be made at the value at the date of expropriation. Once the expropriation plan is filed the persons concerned have by that time had the valuations of their property fixed. If you are in a period of rising prices, great hardship is suffered by those persons because the crown does not have the money with which to pay them the value of their property. If they have no other assets, they cannot buy other property and they are left in a rather hopeless position. They know they are being put out of the existing property, if it is property that is being taken for use. The price is fixed as of the date of filing of the planned expropriation. The crown cannot pay them; and if the values go up, of course real hardship is suffered. There has been a great deal of hardship on that score. The hardship has been quite severe. All too many persons are suffering in this area because they have had their property expropriated. They have had no payment made by the crown. The value is fixed as of the date of expropriation. The situation can work a real hardship. Now that the green belt is announced and the delineations of the border fixed by the publicity given in the last few weeks, I would ask the Prime Minister if he would consider providing funds so that these expropriations can be completed as quickly as it is mechanically possible to do so.

Mr. Regier: I wonder whether the Prime Minister could indicate to the committee what has been the cost to the taxpayers of Canada of the development of our national capital so far? I know that for many years certain amounts have been voted annually. I wonder whether we might have the figure of what has been spent so far?

Mr. Diefenbaker: According to the report as of March 31, 1957, which is the only one I have before me at the moment, the funds advanced to the commission have amounted to $21,540,000 and the total expenditures have been $21,054,991. There have been further expenditures, of course, during the period 1957 to 1958 but I have not those figures before me at the moment. I will have them when the estimates are before the house.

Clause agreed to.

Clauses 17 and 18 agreed to.

On clause 19—*Regulations.*

Mr. McIlraith: There is a small legal point that I should like to draw to the attention of the Prime Minister. Clause 19 (1) provides for the making of regulations for the protection of the property of the commission and for preserving order or preventing accidents. Then the remaining subsections of the clause have to do with a vehicle being operated or parked and so on and provision for penalties. What I want to point out to the Prime Minister is this. I want to ask him whether he is satisfied with the wording of clause 19 (1) in its breadth, from the point of view of giving authority to make regulations controlling traffic. The authority is quite clear for preserving order and for preventing accidents; but there can be control of traffic that is not protection of property and that is not preventing accidents. I do not want to delay the passage of the clause now in order to discuss the point further, other than to draw the

matter to the attention of the Prime Minister and to ask him to have the appropriate law officers look at the clause and, if they find anything in the points raised, have an appropriate amendment put in possibly in the other place or at some other convenient time.

Mr. Diefenbaker: At first glance, Mr. Chairman, I am inclined to think that there is something in what my hon. friend has said. However, I wish to point out that this clause was drafted in its present form by the Department of Justice after receiving full information respecting the requirements of the R.C.M.P. relative to these matters which come under the jurisdiction of that body. The purpose is that which the hon. gentleman has in mind—infractions of that nature, in addition to other provisions—the protection of property and the like. If it were not for the fact that the law officers of the crown concluded that this would be sufficient, I should be inclined to agree completely with the hon. gentleman, and I am not going to disagree with him now, even having regard to the authority of those who have prepared this. If he has any suggestion as to an additional word which would correct the situation, I would certainly be glad to accept an amendment in this regard.

Mr. McIlraith: I am not going to set myself up as a legal authority in a committee such as this, but the Department of Justice has been known to overlook points of law on occasions—I say that without any undue reflection on that department—and it seems to me that authority to the governor in council to make regulations concerning the control of traffic is not given by this section, although regulations are obviously intended on this subject, because subclause (a) of (2) deals with regulations concerning the operation and parking of cars. Perhaps we could let it go at this point, and the Prime Minister will have them take another look at it.

Clause agreed to.

Clauses 20-26 inclusive agreed to.

On clause 27—*One and same corporation.*

Mr. McIlraith: I wish to draw the attention of the committee to the fact that in the bill introduced in April, 1957 by the former government there was a provision that the corporation referred to in section 3 as the corporation established by the Federal District Commission Act was hereby declared for all purposes to be one and the same corporation. This was followed by a somewhat lengthy subclause which provided that the persons who held offices as chairman, members, officers or employees of the federal district commission immediately before the coming into force of the act shall be taken to have been appointed or employed to be chairman, members, officers or employees of the commission respectively under the new act for the unexpired portion of their respective terms to which they were appointed or for which they were employed. And then there is further provision for carrying this out.

That provision has been totally eliminated from the new bill now before the committee and the effect of it is that if the bill passes in its present form the members of the commission, the officers and the employees of the federal district commission are immediately out. They would require to be reappointed or rehired and by the mere passage of this bill and the bringing of it into operation that is the consequence. It means that the men who maintain the grounds around the city—indeed, those who maintain parliament hill and do all this excellent work—are left in a position of total insecurity of tenure of their employment although their work may have been such as to bring about the commendation of all of us. I should therefore like to ask the Prime Minister if he would explain just why this subclause 2 was omitted in the new legislation, and precisely what he has in mind.

Mr. Diefenbaker: As the hon. member has stated, Mr. Chairman, this was in the draft bill which was introduced by Mr. St. Laurent. It was unusual, I thought, for such a provision as that to be made in this type of legislation. No one wants any person to be left in a position of total insecurity. Provision has been made in the bill that it shall come into effect on proclamation, and I can certainly assure the committee that the omission to include this provision was based on the fact that in the past a section such as that had been significantly omitted from legislation passed by the former government, and the reasons given were simply that in order to assure that the act should be most effective, while accepting in general the provisions of the draft act, we do not feel that positions should be filled by inheritance or by statute.

There is plenty of support for that stand in legislation passed by the former government.

Mr. McIlraith: I wonder if I might pursue this matter a bit further. Would the Prime Minister give us an example of some of the legislation of the previous government where the name of a statutory body was changed and some changes were made in its powers, and when this provision or a corresponding one was omitted? I cannot recall any.

Mr. Diefenbaker: I would have no difficulty in that connection. Let us take 1936, when the

department of mines and resources was reconstituted by the statutes of Canada, chapter 33. That was passed on June 23, 1936. That is one example. The hon. gentleman must have forgotten that the Federal District Commission Act took the place of the Ottawa improvement commission in 1926-27. This change was brought about by the Federal District Commission Act, the act for which the present bill is being substituted. That act is reported in chapter 55 of the statutes of Canada, 1927, the act cited as the Federal District Commission Act. Section 21 of the act constituting the Ottawa improvement commission—chapter 10 of the statutes of 1899—and the act continuing the said improvement commission—chapter 62 of the statutes of 1919—were repealed and the provisions of the later act substituted for that act and the amendments thereto. Now, that was a pretty good example but there is still another one, the Canadian broadcasting commission.

Mr. Pickersgill: Corporation.

Mr. Diefenbaker: This act succeeded the Canadian Radio Broadcasting Commission Act. It appears as chapter 24 of the Revised Statutes of Canada 1936. I believe the Canadian Broadcasting Act covers the situation very completely. Section 25 of that act reads as follows:

> The corporation shall, from the date of the coming into force of this act, take possession of all property and assets and assume all the obligations and liabilities of the Canadian Radio Broadcasting Commission.

Section 27 provides:

> The Canadian Radio Broadcasting Act, 1932, chapter 51 of the statutes of 1932, is repealed.

Section 28 reads:

> This act in whole or in part shall come into force on a date or dates to be fixed by proclamation of the governor in council.

And then there is the act respecting national parks, chapter 33 of the Revised Statutes of Canada, 1930, passed on May 30 of that year, and there are similar provisions although, as far as this act is concerned, one might say there is a distinction because like the first mentioned, those were acts respecting departments of government. The government felt it would prefer to follow those outstanding examples introduced by the previous government rather than the drafting prepared by the last government.

Mr. McIlraith: Mr. Chairman, there are one or two comments I feel I should make about the answer. First of all I would point out that the Prime Minister was obviously prepared for this.

Mr. Diefenbaker: I read about it in the Ottawa *Citizen*.

[Mr. Diefenbaker.]

Mr. McIlraith: I congratulate the Prime Minister on that but I am just wondering what caused him to be so prepared on the point. What has he in mind? He must have been thinking about this subject. I would also point out there are employees who worry about this in a very real way and have every reason for doing so.

I should also indicate that two of the four pieces of legislation to which the hon. gentleman referred dealt with civil servants and have no relevance whatever to the discussion before the committee today and for that reason should not have been referred to at all. One referred to the Canadian broadcasting commission—

Mr. Pickersgill: Corporation.

Mr. McIlraith: —and one referred to the Ottawa improvement commission. I am not familiar with the former. I must point out the substantial nature of the changes being made with reference to the Ottawa improvement commission. There was no change of government at the time the legislation was put through. It was being continued under the same government. I wish to draw that to the attention of the committee.

I wish to point out to the committee that the subclause that is omitted deals with the officers of the commission. That is one group of persons. But then it also deals with employees of the federal district commission. I think it should be impressed on hon. members that some of these employees of the federal district commission hold humble jobs but they have been there over the years. These were not patronage appointments and they do not benefit through the civil service commission.

This is a proper occasion on which to ask the Prime Minister whether he proposes to make any changes in the commission itself. If so, is he in a position to tell us what the changes are? Secondly, when he deals with that part of the section, will he then tell us about the employees and include some provision in the bill that will protect those employees as well as the officials and members of the commission? In other words, there are two groups of persons referred to in the subclause that has been omitted. I feel it is quite an important thing. The commission has developed in a highly successful way over the years. I cannot help but be impressed with the attitude of all hon. members of the house toward the commission. If you read the debates on the subject for the last decade that will become extremely apparent. We heard what was said on August 11 at the resolution stage and we have heard the fine words spoken from all sides of the house today. I for one am not content to see

a somewhat glaring omission like this in the new legislation that will create the suspicion that there are going to be mass dismissals of employees and mass rehirings. I believe the Prime Minister ought to consider making a firm and definite commitment on this subject.

Mr. Diefenbaker: Mr. Chairman, I would point out that when the C.B.C. was set up under the new act in 1936 no provision was made similar to that which Mr. St. Laurent in this case thought should be included, a rather unsual provision and one that naturally must have won his appreciation and support. As far as the commission is concerned, there are certain terms expiring December 31, 1958. There are six members whose appointments—and those six include the mayor of the city of Ottawa—terminate at that time. Then in 1959 there are a further six commissioners' appointments expiring on December 31. One expires December 31, 1960.

In so far as the employees are concerned, no employee or official who is discharging his responsibilities in a way befitting the position he has occupied will ever have anything to fear whatsoever. I wish to make that very clear and very definite.

When the hon. gentleman speaks about the glaring absence in this section, I must say that in so far as two of the cases to which I referred are concerned, the course followed there represents the course followed generally. After all, when a new body is set up naturally those who are doing their work in a proper, fitting and efficient way will have no cause for concern.

Mr. Pearson: In view of what has happened I am not sure that my hon. friend deserves the congratulations of my hon. friend from Ottawa West for having done his preparatory work so skilfully. He produced four illustrations to support his position, two of which dealt with civil servants and are completely irrelevant, one of which my hon. friend dealt with. He was able to show the difference between that particular operation and this one. The fourth is relevant. It deals with the Canadian Broadcasting Corporation, but it goes back to 1936. My hon. friend says that the provision which Mr. St. Laurent would have included in his bill, and which has been cited, was an unusual one and that the government now proposes to follow the normal and usual course in this matter.

I would suggest to the Prime Minister that perhaps the reason he did not cite any examples to support his case from the end of world war II was that he was not able to find any relevant examples. I suggest also—he will correct me if I am wrong—

Mr. Diefenbaker: Have any changes been made?

Mr. Pearson: —that what the Prime Minister considered to be the unusual provision, the one that Mr. St. Laurent put in, was not unusual and was in fact the one that was followed since world war II when changes of this kind were made.

However, perhaps we can bring this matter to a head and get from the Prime Minister the kind of assurance that we would like to have by asking him to state, if he cares to do so, that the position of the members and employees of the new commission in regard to their security of tenure will be exactly the same as if the section quoted by my hon. friend from Ottawa West, which would have been included in any bill from this side, had been included in this bill. In other words, their position will not be affected in any way by the fact that that provision is not included in the bill and they will be treated in that way notwithstanding its omission. I suggest again, Mr. Chairman, that the inclusion of such a provision would not have been unusual. If the Prime Minister does some more homework he might find that it has been included in more than one bill since world war II.

Mr. Gour: I ask the Prime Minister not to put himself in a position where he may be tempted, but to put something in the bill which will help him to resist the temptation of some of his members who may try to play politics. I suggest that he have some kind of regulation that will isolate him against temptation of some of his members to have some of the employees released because they were appointed by another party. It will save him a lot of trouble and a lot of temptation.

I might also remind the Prime Minister, if he does not remind himself, that he has found his desk very handy. Two weeks ago he spoke of removing desks. If he did not have his desk in front of him he would not find it so convenient to have all those books in front of him. I ask him to forget about the desks because they are handy for everybody.

Mr. Diefenbaker: The books were under the desk.

Mr. Gour: I ask my good friends to include a provision so that there will not be a temptation to put some of the employees out of jobs because they were hired by the Liberals. I think it would help to have a regulation along that line and it would prevent the Prime Minister from running into a lot of trouble.

Mr. McIlraith: Mr. Chairman, of the two acts referred to by the Prime Minister one

was passed 32 years ago and the other 22 years ago. The bill that he proposes not to follow is one that was introduced one year and four months ago. I wonder why he selects the one passed 32 years ago and omits the one introduced 16 months ago. It does not make a very good case. I would point out also that while he tells us about the date of the expiry of office of many members of the commission he does not go any farther in discussing the clause with which we are dealing, nor did he deal with the unexpired period of the duration of their appointments. May I ask him directly now to deal with that omission? Is it the intention to reappoint the members of the commission when the new act is passed for the unexpired term on the dates he indicated in his statement a few moments ago?

Mr. Diefenbaker: That matter has not yet received consideration, but in the appointment of the commission under this new act the only consideration will be the efficiency and the effectiveness of those to be appointed.

Mr. McIlraith: But we have had some rather extraordinary tests of efficiency given to us in the house. We had one the other day by the Minister of Transport in dealing with the auditors of the C.N.R. It was a shocking definition of efficiency, and I would like the Prime Minister to be a little more clear on what he means by that. I would hope he would use the same test of efficiency that some of us would use, and if he does we will be satisfied. I would be much happier if it was in the legislation, but if it is not in the legislation dealing with the commission would he consider, in view of what he has said, putting in a clause dealing with the employees only, similar to the former clause 2?

Mr. Diefenbaker: Mr. Chairman, the form in which the presentation has been made and the removal of this subsection—and also the change in at least half a dozen or more other subsections and sections of the draft act that was tabled by Mr. St. Laurent—represent the stand of this government on this particular question.

Mr. Pickersgill: Mr. Chairman, I have been listening very carefully to what the Prime Minister said, and it has occurred to me to wonder whether there was ever in any legislation as early as 1936 any provision of the character suggested by Mr. St. Laurent in this bill. I suggest the reason that there was nothing that the Prime Minister found at that early date is that this kind of situation at that time was, to say the very least, abnormal.

My recollection is—and I am speaking from recollection; I may turn out to be mistaken; I know I am taking a very great risk in speaking from recollection—that when the national film board was established during the war and it took over the employees of the motion picture bureau of the Department of Trade and Commerce, some special provision was made for the security of the employees who previously had been in the civil service and who were then being transferred to this new crown corporation. I do know of my certain knowledge that since the war when, for example, the department of reconstruction and supply was first being set up and taking over the employees of the department of munitions and supply, and again when the department of reconstruction and supply was wound up and its employees were taken into certain departments that were taking over, provision was made for the continuity of employment of the employees.

I know from experience I have had that there have been many, many cases in which similar provisions were made in so far as employees were concerned, and here I am only referring to the second point raised by the hon. member for Ottawa West.

So far as the members of the commission are concerned, if the government wishes to drop that provision in the previous bill I would have no criticism at all. It would seem to me that the government was perfectly justified in doing that if it wanted to. But with respect to the employees there are many precedents going back in my recollection to the establishment of the film board where, when a new name or new constitution was given to some agency and functions were transferred from a department to a crown company or vice versa, legislative provision was made to safeguard the position of the employees.

It would take me some time to look up and verify the references but I have very distinct recollections of having dealt with these matters myself and I know that there were such provisions. I would not like to say, of course, that they were in the precise language to be found in the bill Mr. St. Laurent introduced but I do know that it has been habitual and normal since the war to do so. Therefore, while I would not urge the government for one moment to do it with respect to the members of the commission, so far as the employees are concerned I would urge them to do what has now become and has been for some 15 years the normal practice in these matters.

Mr. McIlraith: Mr. Chairman, I would point out again the whole history of this legislation. We have had a national capital development authority operating in this city and area since the late 1890's. It has gradually developed over the years and has come to be a very fine body whose work is recognized and appreciated throughout the country. As a logical consequence of all their work a joint committee of parliament was set up in 1956 to deal with this whole subject. Resulting from the work of that committee legislation was drafted and brought in but was not proceeded with in 1957 because of the dissolution of the house and the calling of a general election.

Similar legislation has now been presented by the present government. During that time not only has the work of this body come to be appreciated throughout Canada but the house itself has come to recognize this subject as a non-partisan one and the commission as a non-partisan commission in all its works, with all the implications of the word "non-partisan". Today we have this splendid piece of legislation spoiled by the omission of the one clause providing for continuity of employment for the employees. That is something that should not be done. A clause providing continuity for the employees should be included in the bill. From anything the Prime Minister has said I cannot understand why such a clause should not be included at least so far as the employees are concerned. I would regret it very much if the committee were to pass this clause in its present form and by that one act undo so much of the splendid work done over the years, work that has been recognized in all parts of Canada. Notwithstanding the firm position the Prime Minister took a moment ago, I would ask him to consider putting such a clause back in the bill at least so far as the employees are concerned.

Mr. Diefenbaker: Mr. Chairman, during the interval I have read the section of the Canadian Broadcasting Act which brought about the change in 1936. I know that the hon. member for Bonavista-Twillingate would say that Mr. Mackenzie King was always meticulously careful about these things. This section provides an example for the hon. gentleman as to the proper course to be followed. The intervening years amount to 22 but great principles stand and the hon. member, having that intimate relationship with the late Mr. King, would certainly be the first to say that anything that had been done by him would establish the proper course to follow. What provision did Mr. King make? Section 13 reads as follows:

> (1) Notwithstanding anything in the Civil Service Act . . . the Civil Service Superannuation Act—
>
> I am not reading all of it.
>
> —a civil servant who, at the time of his appointment to the staff of the corporation under authority in that behalf . . . is a contributor under the provision of the Civil Service Superannuation Act, shall continue to be a contributor under the said act; his service on the staff of the corporation, in virtue of an appointment as aforesaid, shall be counted as service in the civil service for the purposes of the Civil Service Superannuation Act—
>
> And so forth.
>
> (2) Any employee of the corporation, who at the time of his appointment or employment under or pursuant to the provisions of this act, holds a position in the "civil service," or is an "employee" within the meaning of the Civil Service Act, shall continue or retain and be eligible to receive all the benefits, except salary as a civil servant, that he would have been eligible to receive had he remained under that act.

As far as the work done by members of the staff is concerned, it is not for me to disagree with what the hon. member for Ottawa West said. I am not here for that purpose. Any commission appointments that are made will certainly have regard to the efficiency and effectiveness of the work that has been done by those who have been employees of the federal district commission. I say that clearly and unequivocally. With respect to including this section, which is an abnormal one having regard to what has taken place in the past, the course we have followed is one that is based on precedent—and, indeed, that precedent above all others, the manner in which Mr. King operated—which I am sure my hon. friends opposite would be the first to approve and applaud.

Mr. Pickersgill: Mr. Chairman, since the Prime Minister has suggested what attitude I should take to a precedent established by Mr. Mackenzie King, I say here and now that I yield to no person in the house in my admiration for Mr. King, but if I were seeking a lawyer I would certainly ask the Right Hon. Mr. St. Laurent for legal advice before I would ask Mr. King, and so would Mr. King. I say that the statutory precedents, the numerous precedents, the dozens of precedents, for protecting public servants in legislation brought into the house by Mr. St. Laurent impress me far more than something that happened 22 years ago when the situation was quite different at the very beginning of the Liberal regime of Mr. King. I think that the Prime Minister should reconsider, and give this group of public servants the same protection as was given to the employees of the motion picture bureau when they went to the film board, the same protection that was given to employees of the Department of Finance who went to Central Mortgage and Housing Corporation, the same protection that

has been given as a normal procedure when these transfers have been made because of changes of this character ever since the war and, indeed, over the last 15 years. That is all we on this side of the house are urging. That is what Mr. St. Laurent intended to do and that is what the government is proposing not to do.

Mr. Pearson: I asked the Prime Minister a few moments ago, because I thought this might clarify the discussion, if he would give the committee an assurance that the security of the positions of the employees of the commission will be the same as if this section, which had been proposed by Hon. Mr. St. Laurent, were included in this legislation. If he could give us that assurance, it would certainly go a long way towards settling our doubts.

Mr. Diefenbaker: I thought I covered the situation completely, and I am surprised the hon. member did not follow what I said. I said positions are not filled by inheritance or by statute. What I want to assure above everything else is that the efficiency and effectiveness of this body shall be completely unimpaired.

Clause agreed to.

Clause 28 agreed to.

On clause 29—*Commencement.*

Mr. Regier: I wonder if the Prime Minister could give any indication as to the commencement of this act? After listening to the interchange which has just taken place, I think it is obvious that possibly not all the members of the commission under the former act will be members under the new act. There may be, therefore, some hesitancy about doing anything about the development of the national capital pending the proclamation of the new act. I think all of us would regret six months of inactivity or perhaps a year might elapse before the act is proclaimed.

Mr. Diefenbaker: My hon. friend must have been thinking about the past when he uttered those concluding words. The purpose is that at the earliest possible date the proclamation will be made. This date, of course, must be fixed with due regard to the necessary preparations that have to be made to bring the act into effect. I have no hesitation in saying, however, that I believe there should be no delay beyond that which is necessary to assure, as I said a moment ago, efficient and effective service.

Clause agreed to.

[Mr. Pickersgill.]

On the schedule.

Mr. McIlraith: We have now a new definition of the national capital region set out in this bill. We have a new green belt. A map has been published and a description of the area. However, I am wondering if the Prime Minister would consider having the mapping section of the Department of Mines and Technical Surveys prepare a comprehensive map showing the national capital region, the green belt and all the other relevant data pertaining to this legislation. There is a need for it. While the federal district commission did some excellent map work, they were of necessity limited in this work. We have this outstanding branch of the government service that could do the work, and I would ask the Prime Minister to consider having that branch prepare a comprehensive map with all the relevant data on it.

Mr. Diefenbaker: I think that suggestion is a very good and appropriate one. As a matter of fact, I have found difficulty myself in trying to follow the actual areas in detail of these various entities. While I have no authority to direct, I shall certainly bring to the attention of the department of mines the need for the preparation of such a map. I think it is necessary. As the hon. member said, there is bound to be confusion without it.

Schedule agreed to.

Title agreed to.

Bill reported.

Mr. Speaker: When shall this bill be read a third time? Now, by leave?

Mr. Diefenbaker moved the third reading of the bill.

Motion agreed to and bill read the third time and passed.

NATIONAL PAROLE BOARD

REPEAL OF TICKET OF LEAVE ACT, ESTABLISHMENT OF BOARD, ETC.

Hon. E. D. Fulton (Minister of Justice) moved the second reading of Bill No. C-49, to provide for the conditional liberation of persons undergoing sentences of imprisonment.

He said: I should just say a word or two on the second reading of the bill. I will not go into any detail because I think I gave a sufficiently comprehensive outline of the general principles and purposes of the bill when the resolution was before us, as reported on page 3372 of *Hansard* for August 11, 1958. I should just say, in addition, the following: This bill which is now in the hands of members deals with a system of parole under

which persons undergoing sentences of imprisonment may be conditionally released to serve the balance of their sentences at large in society. In considering a bill of this nature, therefore, some consideration must be given also to the purposes of imprisonment.

The purposes of imprisonment are generally regarded as being twofold: firstly, the punishment of the offender and secondly, the rehabilitation and reform of the offender. In so far as the first part, namely the punishment of the offender is concerned, we are not immediately concerned with that here except to the extent that no one having overall responsibility for penitentiaries could altogether overlook the punitive aspect of imprisonment. But apart from that indirect concern, we are not here concerned with the punitive aspect of imprisonment but are concerned with the design and implementation of a program of rehabilitation and reform of those who have been sentenced to penitentiary.

While those who administer the parole system which will be set up as a result of the passage of this bill will be primarily concerned with the question of whether a prisoner is qualified to be released on parole, nevertheless it will be their responsibility also to concern themselves indirectly with questions of the rehabilitation and reform training programs in penitentiaries as well as with provision for assistance of those who are released on parole. The purpose of this bill is to provide for the setting up of a system which we believe is generally in accord with the recommendations and findings of the Fauteux committee, and which will assist in a sensible, constructive and valuable program of rehabilitation and reform of prisoners, and their return to society as useful members of society in the shortest possible time consonant with the overall responsibility of those in charge of the penitentiary system for the protection of society. This is the purpose of the bill, and I believe that as hon. members study the bill in detail, they will see that we will be in a better position to discharge and perform this purpose under the new bill than we were under the Ticket of Leave Act which this bill repeals and replaces.

Mr. Lucien Cardin (Richelieu-Vercheres): Mr. Speaker, I feel quite sure it is not necessary for me to make any lengthy speech on the second reading of this bill to indicate to the minister that we on this side of the house will support the measure. Of course we shall have the opportunity of asking questions and perhaps voicing minor divergences of opinion as to the details of the bill. Generally speaking, however, we are in agreement with and concur in the general principles involved in this particular bill.

As a matter of fact, Mr. Speaker, all the suggestions to be found in the Fauteux report of 1953 are indeed timely and to the point. We feel that they are well worth reviewing and studying from time to time. One of the important recommendations of the Fauteux report, of course, deals with the parole system in Canada. I understand this recommendation will be implemented in great part by the passing of this bill. I feel sure that there is not a member in the house who has not, at one time or another, been faced with representations from mothers or wives in respect of the imprisonment of their loved ones. There are times when the circumstances under which the imprisonment has taken place, the state of mind of the imprisoned persons and also the deplorable conditions of the family, the wives and children, would argue very strongly for the conditional liberation of certain prisoners. Although we are warranted in commending and can very well commend the remission service of the Department of Justice and while we can also commend highly the present Solicitor General (Mr. Balcer) and the former solicitor general, we feel that this whole system was working under a very heavy handicap. It is hoped that this new bill—and I think it will do so—will bring about conditions where it will be far easier to deal with parole.

The Ticket of Leave Act passed in 1899 is, of course, completely inadequate and out of date, and it cannot cope with circumstances and conditions which have been brought about by our modern society and by our social psychology, if you wish to call it that, which inmates carry with them into the remotest corners of our penal institutions. We feel that in many instances it would be perhaps to the great advantage of the prisoners as well as of society to be in a position to offer rehabilitation to many of the prisoners rather than to have them serve their full sentences or their full terms. I think this is particularly true of the younger inmates, young men and women who are just a little bit older than those whom we consider to be juvenile delinquents. I feel that they perhaps need rehabilitation more than they need punishment. I sometimes believe that their plight is due to the way of life that we have chosen to live, with its very materialistic philosophy. I sometimes feel that somehow we may be responsible for creating in the lives of our young men and women psychoses of many sorts. I believe that we should, particularly at this time, try to rehabilitate to a greater extent in many cases rather than to punish.

For this reason I think that the creation of the national parole board in the form of a quasi judicial body could make possible a far more competent and complete examination of the circumstances and conditions surrounding the imprisonment of an inmate. I also think this body would certainly be in a better position to judge of the effectiveness of granting parole to certain prisoners. For this reason, Mr. Speaker, we on this side of the house propose to vote in favour of this bill.

There is, however, a question that arises in my mind as I read the bill. If the present legislation, namely the Ticket of Leave Act, is to be repealed and to be replaced by the parole act, are we to understand that the Solicitor General will join the ranks of the unemployed in this country?

Mr. H. W. Herridge (Kootenay West): Mr. Speaker, I want to speak for a very few minutes on this measure. I again say that the members of this group are pleased indeed that the minister has given effect to the recommendation of the Fauteux report with respect to parole by the introduction of this bill. I think there is no question that it is a definite forward step in the administration of justice in the humane sense and in the rehabilitation of persons who have transgressed the law. I am particularly interested in this matter because during my experience in this house it has been brought clearly to my attention what could be done to rehabilitate persons who, through unfortunate background—home life in some cases and associations—have committed serious crimes.

Since I have been here I have always found that those responsible for the administration of the Ticket of Leave Act have done the best they could under the provisions of that act. I remember on one occasion a man wrote to me. He had lived in Trail during the war. I never met the man. He asked for remission of sentence. In his letter to me he said that he had been an ardent supporter of mine and that he believed in the C.C.F. policy, particularly on the question of the socialization of the banks. I went to see Mr. Ilsley about the matter, when he was minister of justice, and he very kindly agreed to look into the matter thoroughly. About two weeks later he called me into his office and he showed me the record. He said to me, "Mr. Herridge, I think there is no doubt about it; this man does believe in the socialization of the banks. He has been going ahead with that work quite extensively in recent years". It was his third bank robbery. Therefore on that occasion I did not proceed any further with my representations on behalf of this to me unknown person. However, I mention that as one little humorous incident in a number of what, over the years, have been tragic incidents for the persons concerned.

In recent years throughout Canada there have been a good number of people and groups who have taken an increasing interest in the rehabilitation of persons who have transgressed the law. I am sure that those who take an interest in persons of this class do so for purely unselfish purposes. It is one of those aspects of society in which persons are interested because they have some sense of brotherhood so far as their fellow man is concerned and some sympathy for those who have fallen by the wayside.

I want to make one point before sitting down because I am a great believer in getting support for the law and for its administration. I am quite sure the minister would agree with me that sometimes his officials have not been able to do all they would like to do because they lacked the normal public support in the performance of their duties to meet certain serious problems.

I suggest, therefore, that if this measure is to be fully successful it must receive the co-operation and understanding of each section of the public in this country, and in this connection I should like to read one paragraph from the report of the committee which was appointed to inquire into the principles and procedures followed in the remission service of the Department of Justice of Canada. This paragraph struck me very forcibly. It appears on page 54 of the report, and it reads as follows:

> Finally, it is clear to us that education of the public is essential in order that proper parole principles and procedure may become better understood. Unfortunately one parolee who violates the conditions of his parole often receives such widespread publicity that the whole system appears to be defective.

I am sure that many members of the house would agree with this from their own experience.

> Usually overlooked, of course, at that time, are a substantial number of parole successes in the same community. The decision to grant parole involves the taking of calculated risks and this should be more widely appreciated. Like probation, the success of parole requires public understanding and support.

I am very interested in that aspect of this question and I urge that the minister's department do all it can to enlist the sympathetic support and understanding of representative groups in Canada. I suggest that women's organizations would be very interested in the work of helping to develop a public understanding of this type of legislation. To that end I suggest there should be some sort of pamphlet or news release or at least some sort of information given by the

minister's department to the public and, certainly, to certain representative organizations bringing to their attention the principles involved in this legislation and giving them some education as to the administration of the act, and seeking public co-operation.

Mr. Frank Howard (Skeena): Mr. Speaker, I have just a remark or two to make on this subject, and without reiterating what others have said, may I say I was pleased to see that legislative effect is to be given to the report of the Fauteux committee. I know the committee also made recommendations with respect to other matters under the jurisdiction of the minister in one way or another which are connected with the question of parole, and we hope that those things will be given an equal amount of consideration and will lead to a type of approach similar to that expressed in this bill.

There is one important factor arising out of the bill, and that is the selection of members to constitute the parole authority or the parole board. I know the minister himself would be the first to say that the attitudes, the education background and the philosophy of these individuals must be given paramount consideration, for certainly the parole authority could make or break what is an excellent piece of legislation.

There is one recommendation which the Fauteux committee made which I have not been able to come across in the bill, and I must add that I have not had a great deal of time to look into it and compare it with the report. That was the authority of the parole board to consider, in the first instance, the legality of a particular sentence and to make a comment, if they consider that the sentence was illegal, to the attorney general of a particular province. This matter may be dealt with in the regulations which are to be made following the passage of this bill. Another is adequate preliminary studies and interviews by the board before the normal time that a person might be eligible for a parole.

There are one or two other matters that were dealt with by the Fauteux committee which have been in effect for some time, having to do with the rules with respect to considering whether an inmate in an institution should receive parole or not, and apparently one of the restrictions is that inmates who are in penal institutions because of infractions of the drugs act are not eligible for parole. I hope that the minister, when his ideas and plans for a new approach to the problem of drug addiction and the rehabilitation of addicts are in effect, will also give consideration to relaxing the rigidity of this rule which provides that no parole may be given to these people. If there is to be some scheme for the rehabilitation of drug addicts they should be allowed the same privileges as other inmates are allowed with respect to parole. Other factors may, of course, affect this situation such as people being habitual criminals or having committed other offences in connection with the offence of possessing drugs.

Another very important part of the parole system is that which follows after the parole is granted, or after a person is released on parole, and that is rehabilitative care—the supervision that has to take place after an inmate is released in order that everything possible may be done to ensure that an individual may take a better place in society and make a better contribution to society and not fall back into the ways he followed before he was placed in prison.

These are two or three thoughts, Mr. Speaker, and I hope the minister will take cognizance of them. Possibly further provision is going to be made in the regulations, and I think that if they are, that will be fine and dandy. I hope that after its passage through here and the other place it will not be long before the bill actually becomes law, and that this new system, this new approach with respect to granting parole, may come speedily into effect.

Mr. Arnold Peters (Timiskaming): Mr. Speaker, I should like to add just a few words to this discussion as we do not want to prolong it. One of the problems we have come across with regard to parole—and I am happy it is called that now, rather than "ticket of leave" because that may be more in keeping with what we want to accomplish with regard to getting people back into normal society than "ticket of leave" would indicate—one of the problems the federal parliament is going to have to face is the ununiformity of sentences for particular offences.

We probably all know of cases where an armed bank robbery netted the accused 20 years, though in another case very similar, with a different judge and a different court, the same prisoner would have received probably four or five years. I think that one of the considerations which must be taken into consideration is this matter of sentences. There is no uniformity in sentences and that, probably, is as it should be, because we do not recommend that an armed bank robber should have a penalty of 20 years and that one where the accused is not armed should be good for five years or something like that. However, this must be taken into account in granting a parole.

It has been an almost definite rule in the past that half the sentence has to be served and this is not necessarily in keeping with the nature of the crime. Uniformity must be established with respect to penalties and extenuating circumstances must be taken into consideration. It would be well for the parole board to give more consideration to the record of the individual while in prison, his home environment, the kind of family he has and circumstances of that nature rather than considering only the length of sentence first granted. Grave consideration should also be given to the regional problems that develop with respect to sentencing prisoners. We all know if there are 15 robberies in a locality—

Mr. Speaker: Order. I allowed the hon. member to proceed to discuss in general the problem of the inequity of sentences but it does not really arise under this bill and I ask him not to pursue it.

Mr. Peters: I referred to it, Mr. Speaker, only to indicate that in the past the parole was related to the sentence and the sentences had no degree of uniformity.

There are some archaic provisions attached to tickets of leave to which some consideration should be given. A parolee or person on ticket of leave is told he cannot drink alcoholic beverages, enter public houses or associate with women of easy virtue. A number of conditions they are asked to observe are not really conducive to rehabilitation. I urge that some thought be given to changing the archaic language of the regulations under which these people operate when on ticket of leave.

The Minister of Justice (Mr. Fulton) a few weeks ago in the house referred to a particular appeal. With respect to parolees or people on tickets of leave there is a tendency to expect nothing good from them and the vilest rumour about them is accepted as a fact. This attitude and malicious gossip frequently results in the reincarceration of the individual and before he is recommitted he should be given the right of an appeal or hearing before a magistrate. I am not convinced that the Minister of Justice would want recommitted prisoners to serve the full length of their original sentences. After all, the purpose of penal institutions should be to equip people to return to a useful, constructive life in society. The present method of recommitting prisoners militates against the accomplishment of that constructive end.

Hon. J. M. Macdonnell (Minister without Portfolio): Mr. Speaker, as one who when in opposition, in season and perhaps sometimes out of season, used to press for legislation of this kind, I should like to take just a moment of the time of the house to say what satisfaction I have in seeing it introduced now. I should also like to point out that this is not the first time the Minister of Justice (Mr. Fulton) has been responsible for legislation in aid of our criminal laws. When he had been in opposition for only one year he had the distinction of sponsoring and seeing carried a bill in connection with crime comics. I am sure it is a great satisfaction to the Minister of Justice now to be in a position to be able to give wider effect to the qualities of humanity and constructive capacity which I am sure are embodied in this measure.

Mr. Speaker: I must inform the house that if the minister speaks now he will close the debate.

Hon. E. D. Fulton (Minister of Justice): Mr. Speaker, I thank hon. members for their assistance and thoughtful comments made on second reading. With regard to the great majority of the points raised I believe they can be better covered under the appropriate clauses. I have made a note of them and will endeavour to discuss them when we reach the appropriate clauses.

I wish to point out that I am guilty of an omission when I made my remarks on second reading and I wish to take advantage of this opportunity of rectifying it. The omission is that I neglected to say anything about the role of the after care agencies and the prisoners' aid societies. I mentioned the things with which the parole service must concern itself after the bill is passed as the remission service does now, and it was there I should have said that a very great deal of the success of the efforts to rehabilitate and restore, return to a useful life, prisoners who have been sentenced to penitentiaries, will continue to depend, as it has in the past, on the co-operation of these voluntary agencies.

The hon. member for Kootenay West (Mr. Herridge) mentioned the desirability, indeed the necessity, of instilling an understanding and co-operative attitude on the part of the public toward the problems of the welfare of a parolee. I quite agree with him. In this connection the after care agencies and voluntary agencies can play and have played an extremely important part. There is one area in which I know the officials of the parole board will be able to count on the continued support and co-operation of the public, and that is the area served and represented by these men and women who give so much of their time voluntarily to assist in this work.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Sevigny in the chair.

Clauses 1 to 5 agreed to.

On clause 6—*Review of cases.*

Mr. Fulton: Mr. Chairman, I undertook to answer some of the comments made on second reading and this would be the appropriate moment at which to do so.

The hon. member for Skeena asked a question as to whether the board would review sentences from the point of view of eligibility for parole apart from a rigid formula which requires that half a sentence must be served and the hon. member for Timiskaming also raised a related point. I should direct their attention to clause 6 of the bill which directs the board that it must, at the times prescribed by the regulations, undertake a review of every sentence of imprisonment of two years or more whether or not an application for parole has been made.

It is the thought that in the regulations it will be provided that there will be a preliminary review of every case as soon as possible after sentence for the purpose of what I might describe as classification. As a result of that preliminary review, any outstanding, exceptional or mitigating features in connection with the sentence will, of course, be noted and the case will be classified and noted for parole review accordingly, so that there is flexibility now to be written into the times at which review for parole will be undertaken.

Clause agreed to.

Clauses 7 to 15, inclusive, agreed to.

On clause 16—*Place of recommitment.*

Mr. Peters: Is any consideration being given to the matter of appeals from recommittal warrants which I mentioned?

Mr. Fulton: Yes, Mr. Chairman. I am sorry I missed that. Perhaps I should have mentioned it in connection with clause 12. Recommittal will generally take place under one of two circumstances; first, on conviction for an indictable offence, where parole will be automatically revoked and the parolee will then, of course, have to undergo imprisonment in connection with the new sentence as well as being liable to serve the rest of the sentence for which he was on parole. I do not imagine that my hon. friend had that in mind when he spoke of appeal or review. Probably what he had in mind was the second circumstance under which the man will go back to the institution, and that is where there has been a suspension where, by reason of some activity not amounting to the commission of an indictable offence, but perhaps amounting to a breach of the condition on which he was under parole, a report is received and recommendation made that parole be forfeited. In that case he may also be recommitted. In every such case, on receipt of a report, the parole will be suspended pending an investigation, and the board will then automatically undertake a review to see whether the suspension is justified and the parole in fact should be forfeited or whether on the other hand the suspension is not justified and the parole should be reinstituted. So that, in that type of case it is provided now that there shall always be a review by the board before there is a recommittal to the penal institution itself.

Mr. Peters: Take the case of an individual who is on parole after being sentenced to a 5-year term. He is out for say two and one-half years and he is recommitted for the number of things that are in the present ticket of leave requirement, namely that he cannot associate with certain people, he cannot do certain things. Would he still be required to serve the five years that he originally received?

Mr. Fulton: No, he would not be liable in any case to serve more than that portion of the sentence which remained unexpired at the time he was released on parole. One of the objects of recommittal in such a case would be to prevent the man from committing a further crime, or an indictable offence, to give him, as it were, a fresh chance for parole. The theory is that it is preferable to get him back in time to prevent him from actually committing the new offence, back into an institution where the reformation and rehabilitation program and training may be recommenced with a view toward a further release on parole. So the mere fact that he has been recommitted in such a case does not necessarily mean that he has to serve the full remainder of the unexpired portion of his sentence. That is the maximum that he can serve; but it is quite possible, and indeed it would be the desire of the parole authorities and the prison authorities—to recommence the training and rehabilitation program so that he might, if possible, be released on parole again before the expiration of the full sentence.

Clause agreed to.

Clauses 17 to 23, inclusive, agreed to.

On clause 24—*Repeal.*

Mr. Cardin: Mr. Chairman, I wonder whether it would be a fair question to ask the minister what will become of the personnel of the Department of Justice who are now employed in the remission service?

Mr. Fulton: The hon. member will see that under clause 23 there is provision for the transfer of staff from the Department of Justice to the staff of the new parole board. In actual fact, our present plans contemplate the transfer of virtually all of the staff of the remission service to the staff of the new parole board. There will be some personnel left but since the bulk of the work of this service is now devoted to work under the Ticket of Leave Act it is logical that the majority of them should be transferred to the new service.

Mr. Cardin: What will happen to the Solicitor General?

Mr. Fulton: The Solicitor General is a busy man and I can assure the hon. gentleman he has much more to do than merely administering the Ticket of Leave Act at the present time. His services are valuable and important services and will still be essential to the government and to the Department of Justice in other capacities.

Bill reported, read the third time and passed.

RAILWAY ACT

AMENDMENTS RESPECTING GRADE CROSSING FUND

Hon. George H. Hees (Minister of Transport) moved that the house go into committee to consider the following resolution:

That it is expedient to introduce a measure to amend the Railway Act to permit certain grants to be made from the railway grade crossing fund; to credit to the railway grade crossing fund in each fiscal year the sum of $5 million to aid actual construction work for the protection, safety and convenience of the public in respect of crossings; and for certain changes in connection with the administration of the fund.

Motion agreed to and the house went into committee, Mr. Sevigny in the chair.

Mr. Chevrier: Will the minister make a statement.

Mr. Hees: Mr. Chairman, I am sure that hon. members will wish me to indicate briefly and in a general way what is being proposed in the legislation that will be introduced following the adoption of this resolution.

As hon. members know, there is a fund known as the railway grade crossing fund from which contributions are made to assist work for the protection, safety and convenience of the public in respect of railway-highway crossings. Section 265 of the Railway Act sets forth the work toward which contributions will be made and the maximum amounts that may be contributed to each project.

One of the purposes of the proposed legislation is to increase, during a period of three years, the maximum contributions that may be made from the fund. The main estimates of the Department of Transport for this fiscal year contain a credit of $10 million to the fund in addition to the normal annual credit of $5 million. It is the intention of the government to provide a similar additional sum of $10 million next year and the following year. These additional credits and the proposed increases in the permissible contributions will, I am confident, serve a double purpose of encouraging the initiation of additional projects to make crossings safer and affording a greater measure of financial assistance than is now available to municipalities and other parties who have to bear the cost of such work.

The present maximum contribution from the fund towards work in respect of a crossing at rail level is 60 per cent of the cost of the work or $300,000, whichever is the lesser. The proposed legislation, and I trust that hon. members will permit me to mention some details, would increase for three years the 60 per cent to 80 per cent and the $300,000 to $500,000. These contributions are available towards automatic protection at level crossings and also, for example, where a grade separation is ordered to eliminate an existing level crossing.

In the case of reconstruction and improvement of existing grade separations, such as a dangerous subway, the present maximum contribution is 30 per cent or $150,000, whichever is the lesser. The amendment will increase the 30 per cent to 50 per cent and the $150,000 to $250,000.

Provision will also be made to permit contributions towards the cost of placing reflective markings on the sides of railways cars. Such markings serve to warn motorists when a train is at a crossing which they are approaching at night.

There is also an amendment to subsection 5 of section 265 to ensure that there will be statutory annual credit of $5 million to the fund. There is a limitation in the present subsection which makes it possible for the annual credit to be less than $5 million if at the start of the fiscal year there happens to be more than $2 million uncommitted in the fund at that time. This limitation is being removed. This, of course, is a statutory annual credit and, as I have already stated, it is being supplemented by an additional $10 million this year and will also be so supplemented in each of the next two years.

Another provision will give the board of transport commissioners power to order that the words "railway crossing" on level crossing signboards be made reflective at crossings where the board so orders. The present section 270 of the Railway Act requires that the words be only painted on the signboards.

The legislation is comparatively brief and I have outlined its principal provisions. I may add that when the bill is given second reading it is my intention to move that it be referred to the standing committee on railways, canals and telegraph lines.

Mr. Chevrier: Mr. Chairman, the legislation announced by the minister in introducing the resolution is of extreme importance not only to parliament but I am sure to all those who are interested in this problem. At first blush the legislation is not only welcomed by this side of the house but will receive our support as it is discussed in its various stages, subject, of course, to any constructive criticism we may have to make as we go along.

As I read the resolution which the minister has brought before the house it is divided into three parts. The first is that a measure should be introduced to amend the Railway Act to permit certain grants to be made from the railway grade crossing fund. The second is to credit to the railway grade crossing fund in each fiscal year the sum of $5 million to aid actual construction work for protection at crossings. The third is to cover certain changes in connection with the administration of the fund, as the minister has explained in greater detail in his submission to the house.

Before I go on with my main remarks I should like to say that I have some difficulty in understanding the second portion of the resolution, namely, that crediting to the railway grade crossing fund in each fiscal year the sum of $5 million. That has already been done, as I understand it and as I will explain later, by the amendment to the Railway Act passed in 1955 found in 3-4 Elizabeth II, chapter 41. I will come back to that in a moment.

At this stage I should like to say that this problem was of such importance that the former administration determined to ask the board of transport commissioners to make a very careful study and investigation of the whole grade crossing problem. An order in council was passed on January 14, 1953 covering the investigation to which I have referred, an investigation was to be made into all phases of the problem of railway-highway crossings under the jurisdiction of the parliament of Canada.

In order not to labour the matter unduly but so that the committee may gather an idea of what the then administration had in mind, perhaps I may be allowed to put on the record the governing parts of the order in council. The board was asked to do three things, first, conduct a survey and report upon methods considered by the board to be practicable, under all pertinent circumstances, to eliminate the hazards and improve the public convenience and the protection and safety of the public at such crossings; second, review and report on the adequacy of the railway grade crossing fund to provide for the construction of works for the protection, safety and convenience of the public in respect of railway-highway crossings; and, finally, to make such recommendations as the board might deem advisable in the premises.

I hold in my hand the report made by the Board of Transport Commissioners for Canada on May 10, 1954 containing a review of the hearings that the board held from one end of the country to the other and a detailed statement of its recommendations. Any one who is interested in the problem of railway grade crossings and the railway grade crossing fund will find in this document interesting reading covering all phases of the problem. The board sat for many months. This investigation was the first of its kind undertaken since the creation of the railway grade crossing fund in 1909 and the board gathered a great volume of data and statistics over a period of 12 months.

I should like to state briefly now what the recommendations were that the board made to the government on May 10, 1954, because they lead up to the discussion now before the house. The recommendations made by the board were eight in number.

The first of these was that an appropriation of $5 million instead of the then $1 million, which was payable into the fund, be made beginning April 1 in any such year. The second was that the contribution provided out of the grade crossing fund be increased from 40 per cent to 60 per cent, with a maximum of $150,000 in respect of any one crossing at rail levels. The third had to do with construction and improvement of grade operations in existence and recommended that the contribution in any one case should not exceed 30 per cent of the cost of reconstruction and improvement, nor exceed $150,000. The fourth, which is interesting and about which I shall have something to say at a later period, states that a contribution should be directed towards the annual cost of maintenance and operation of automatic signals installed at crossings after this amendment recommended goes into force, and that the contribution in respect of any one crossing shall not exceed in any year the actual cost for that year.

The fifth recommendation dealt with cases that came up after 1909. There had been at that time a great deal of complaint with reference to accidents that were happening at crossings that had been in existence after 1909, and the board was powerless, because of the provision in the Railway Act, to deal with them. This recommendation covered that situation. The sixth recommendation was that the board should be empowered to make contributions where it saw fit towards the cost of highway projects which involved the construction of grade separations and the closing of existing crossings. The seventh recommendation was that section 263 of the Railway Act be repealed. Finally, it was recommended that the Railway Act be amended to give effect to the foregoing recommendations.

My predecessor, the Hon. Mr. Marler, introduced into the House of Commons in June, 1955, and prior thereto, legislation which implemented all these recommendations save one. The law as it stands today, therefore, can be found in 3-4 Elizabeth II, chapter 41, which, as I say, implemented all the recommendations that were then made by the board of transport commissioners with the exception of recommendation No. 4 which had to do with the annual cost of maintenance and operation of automatic signals. I do not know whether the legislation which will follow this resolution covers that recommendation made by the board. I was not able to follow, from what the minister said, whether or not it did and I am not aware that it does. I hope it does, because it seems to me that is a recommendation that should be implemented.

May I come now to the problem of grade separation itself? I need not tell this house that the problem is a serious one. There is not one member whose constituency is not, in some way, affected by fatal accidents that happen each year at railway crossings that are unprotected, that are partially protected, or that are even fully protected. The mounting number of casualties at grade crossings is astounding. The statistics show a considerable increase from year to year, but particularly an upward trend since 1938. This is due, in large part, to the steady increase in motorcars. In fact, the increase in motorcars with regard to this problem has now assumed serious proportions. Motor vehicle registrations have more than doubled since 1945 and since 1947 the number of crossing accidents in each year has exceeded 400. There is one motor vehicle for every four persons in Ontario and the western provinces, and about half this density in the eastern provinces of Canada.

Considerable progress has been made in the protection of crossings. However, a greater advancement has been made in the United States than in Canada. In the United States 15.8 per cent of the crossings are protected as against 9.9 per cent in Canada. This may be accounted for by the fact that there is a greater railway mileage per capita in Canada and also a greater number of grade crossings per capita in this country than in the United States.

The next point that comes to my mind is this: what is the most practical and efficient means of easing the problem? First, the problem is, I believe, one which is entirely non-controversial. It is for this reason I believe this legislation will be well received by the house. It is non-controversial because there is no one, as I tried to say earlier, who is not anxious to contribute in any way he can towards reducing the mounting number of these terrible tragedies. No one, particularly if he be a legislator, is going to stand idly by and not approve of legislation that is likely to assist in the reduction of these casualties.

When I say that the problem is non-controversial, such is not the case when you come to a discussion of the methods of assistance and the amount of assistance that should be provided by the federal government. In this field, there has always been a great deal of controversy. There has always been a great many diverging views. In other words, the parties involved feel that the greater part of the cost should not fall on them. The parties involved in this case are, the federal government which is interested because of the railway aspect; the provinces and municipalities who, most of the time, own the highways; and, the railways. The railways are having difficulty, particularly the Canadian National, because of the decreasing volume of freight and because of the increase in the amount of its deficit. The controversy arises, therefore, when it comes to the question of who should foot the bill, and that is a question which we have not only with respect to the grade crossing fund, but which we have in many other fields of governmental activity.

Here, I believe the federal government should keep in mind what I believe it has always kept in mind over the last few years, that it perhaps has a greater responsibility in this field than the other two parties. There is also the question of how these crossings shall be protected. Crossings may be protected in two different ways. They may be protected by grade separation and they may be protected on the same level, by that I mean by means of wigwag signals, gates or partial gates. It goes without saying that the crossing protection is not nearly as expensive as is the separation of the grade.

While there is difficulty with reference to the first form of protection, the greater difficulty arises unquestionably with reference to the second form of protection because that is the one which is so expensive. With the mounting costs of construction today, the difficulty is that much more enhanced. The formula which has been used by the board up until now in dealing with protection at crossings has been the 60-25-15 formula; that is, that 60 per cent of the cost of protection should come from the fund, 25 per cent from the highway authority and 15 per cent from the railways. On the grade separation the formula is somewhat different; it is 60 per cent from the fund and the balance is to be apportioned on the merits of each case between the parties having regard to the circumstances.

I do not want to get myself into a discussion of the terms of the bill, although the minister has been good enough to anticipate that by giving the house some idea of what we may expect in the bill. Still, on the face of it, it does appear that this legislation will certainly assist greatly in the prevention of accidents. However, it seems to me that there is a great deal more that can be done; and this is not said by way of criticism of what has been advanced. I welcome the decision in this legislation to increase the contribution in the grade crossing fund from 60 per cent to 80 per cent. I understood that was going to be the case. I think that is a step in the right direction. What we must not forget is that if there is one of the parties that is in difficulty with reference to this problem, it is perhaps the municipalities. There are some municipalities which are most anxious to have separations where separations should exist and where separations should be constructed without delay, but which have not the funds with which to do it. I believe this legislation will assist them; by increasing the contribution from the grade crossing fund it will decrease their contribution in any one project.

If I may do so, I should like to make some suggestions to the committee dealing with this question. Unfortunately I do not want to take the time to deal with each one of these suggestions but perhaps I could just say one word as I go along in order to explain what the suggestions are. I believe that the first thing the government should keep in mind is to give greater assistance to municipalities (1) with reference to the protection at grade crossings and (2) with reference to grade separations. In so far as this presumed legislation goes, it is welcomed and I hope it will assist in that direction.

The next suggestion I have to make is that the railways, it seems to me, should be pressed into dealing more quickly with the applications that come before the board. I do not say this critically of the railways. However, I think the position is that when an application has been made by a highway authority, be it the municipality or the province, involving a railway—either one of the two great railways of Canada or other railways—it is only normal and natural that the tendency should be to make a prolonged study of the whole project which is submitted to the board for consideration, a study which is sometimes so prolonged that it renders the applicant impatient. It seems to me that some way should be found whereby the railways could be pressed into moving more quickly to deal with the problem.

Again I do not say this in any critical way but at the sittings of the committee on railways and shipping the main witness for the Canadian National Railways indicated what sum of money had been allocated for this problem during the calendar year for which the accounts of the railway were under consideration and I believe that amount was less than $1 million. I questioned it because I thought it was not sufficient. I thought it was not sufficient having regard to the amount of $5 million that comes out of the grade crossing fund each year as well as the additional amount of $10 million now in the estimates. Having regard to the over-all picture of the railway, it seemed to me that that amount was not sufficient. It may be that because of the growing reduction in freight volume and the increase in the deficit of the Canadian National Railways the railways are sometimes tempted not to deal as quickly as they otherwise would with these applications.

The third suggestion I should like to make is that there should be established an advisory committee. I do not claim any paternity for this idea. It was discussed at some length by the parties who submitted briefs and representations to the board of transport commissioners in 1954. At page 67 of the report there can be found a comprehensive statement of the plan that was submitted. I think here I should commend the Canadian National Railways for the plan which they submitted to the board at that time. That plan seemed to me to have a great deal of merit. Unfortunately, because of other considerations set out in the report, the board of transport commissioners gave the reasons why they did not think that it should be put into effect at that time. Nonetheless I believe that an advisory committee should be established of all of the parties concerned; that is there

should be an advisory committee representing the railways, the provinces, the municipalities and the board of transport commissioners. I believe that such an advisory committee should meet once a year or twice a year, if need be, to consider all the applications across Canada, including all the applications coming from the provinces. To me this would be an excellent thing because here would be construction projects which could be used for all-year employment and particularly for winter employment. The consideration of that proposal is to be found in the report. I believe it is worth studying.

Then I recommend that there be established a sub-committee of the board of transport commissioners to deal with these cases. Here again, I am not suggesting in any way that the board of transport commissioners cannot deal effectively, as it is now constituted, with the applications that come before it. What I am saying is that the board of transport commissioners in this day and age has very many other responsibilities having to do with freight rates, pipe lines, water rates and many other important activities. So it would seem to me that the board would be well advised to set up a subcommittee of itself composed of three members or even fewer to go about the country and deal with the applications as rapidly and effectively as may be.

Finally, it seems to me that there should be greater co-ordination between the parties interested in this problem. After all, instead of three parties concerned getting away from each other it seems to me that they should be brought closer and closer together. This is not exclusively a federal problem. Because of the constitution it falls also within the jurisdiction of the provinces and the municipalities, and since this matter is becoming more and more acute it seems to me that the parties should be co-ordinated and brought closer together by means of consultations once a year, twice a year or even more often so that the problem might be dealt with more efficiently and so that the protection which all of us want can be given to the public faster as the applications develop.

These are the five suggestions which I make to the minister, and I am sure he will realize at once that they are not made in any destructive manner but for the sole purpose of being helpful with reference to this all-important problem. I do not want to resume my seat without pointing out to the committee that this is not the first time that the problem has received the attention of the government. I cannot remember one occasion during the nine years when I sat on the other side of the house as the minister of transport when it did not occupy a great deal of the time of hon. members, either by way of discussion on the estimates or by way of discussion under the legislation which was brought down from time to time. The most comprehensive and the best report on this whole question is, as I said, to be found in the report on the railroad-highway crossing problem in Canada which was published on May 10, 1954, pursuant to an order in council.

To the extent that this resolution and the bill which will follow will not only implement the recommendations contained in that report and will go beyond the legislation brought down by my predecessor, it is welcome, and I can assure the minister and the house that it will receive the wholehearted support of the members who sit on this side.

Mr. McGee: Mr. Chairman, I should like to take just a moment before six o'clock to congratulate the minister on this legislation which will be of such obvious advantage to the constituency which I represent.

I should like to refer just for a moment to another aspect of this announced legislation which concerns the marking of the freight cars to which the minister referred in his opening remarks. This is a matter which has come to my attention over the years from a number of sources and from no source better qualified than Bert Long of the Willowdale *Enterprise* who for some years through his editorial columns has urged some action in this regard.

I wish again to congratulate the minister for the progressive step he has taken in the direction of marking freight cars adequately so as to prevent the recurrence of so many accidents which have occurred at level crossings at night.

Mr. Peters: Mr. Chairman, may I call it six o'clock?

At six o'clock the committee took recess.

AFTER RECESS

The committee resumed at eight o'clock.

Mr. Peters: Mr. Chairman, we in this group welcome the proposed amendments to the Railway Act particularly in view of the fact that the increased number of cars on the highways today has made the incidence of accidents much higher. It has been reported that in 1909 there were less than 5,000 automobiles in Canada and in 1958 there are approximately four million motor vehicles on our highways. This indicates something of the scope of the problem concerning grade crossings many of which are in rural areas.

I have a personal interest in the present amendments because it was only four years ago that my uncle, aunt and four of their children met their death when the motor vehicle in which they were travelling struck a diesel engine as they were driving to church one Sunday morning. I am sure all hon. members know of accidents that have occurred at crossings where no accident should have occurred. My aunt and uncle were survived by several children who even today suffer as a result of the untimely death of their parents. My uncle had lived in the area where the accident occurred all his life and had frequently travelled the road and passed the crossing. He knew exactly when the trains came and could anticipate their time of arrival. The visibility was not too good on the day of the accident and my uncle's car and the diesel engine arrived at the crossing simultaneously. Here was a person who knew the area well and was familiar with the schedules of the trains. He was a cautious driver, was always on the lookout for trains and it was reported that he was driving at a speed of 20 miles an hour at the time of the accident. This type of thing leads one to wonder how accidents of this kind can occur.

I am pleased to welcome the amendments to the act which will assist in meeting the problem. The railway with which we are concerned in my area is the Ontario Northland railway. We discussed the accident with the commissioners and made several recommendations to them. It was pointed out that when the railways switched from the use of steam engines to diesel engines the latter had a different sounding whistle. The warning whistle on steam engines could be heard for a considerable distance but it has been borne out by investigations that the warning whistle on diesel engines tends to funnel the sound forward and it is not heard to any extent on either side. We recommended the adoption of whistles like those used on steam engines with which people are familiar and which are loud enough to provide adequate warning of the approaching engine.

Another recommendation that was made was that strips of Scotch light tape be used at the front of engines and cars and along the sides and I am pleased to observe that a provision to this effect is included in the amendments before us.

The solution to the number of motor accidents at grade crossings will not be entirely met by the construction of over-passes and under-passes because many people and particularly young men have been killed on them. These appear to exert a fascination over youths. When going through an underpass in an old car the exhaust makes a lusty noise which I suppose encourages the young drivers to travel faster. There is also the danger created by snow, ice and sleet conditions particularly in under-passes. I am convinced that no one solution will be arrived at to meet the problem. One measure that would contribute to safety at crossings would be the erection of signs bearing print outlined with Scotch light tape similar to that used on highway signs. It is visible at night and more effective than the cross-arm signs the railways now use. This could be adapted for railway use and I am sure it would result in saving many lives.

We cannot emphasize too strongly the need for improving grade crossings. One night last winter during the election campaign I was travelling in a rural area with which I am not completely familiar. I had taken a shortcut and as I drove along the side road I was startled to see the headlight of an approaching train a few hundred feet down the track. Prior to that moment I had not been aware of a railway crossing because I had seen no signs. Any moneys spent in improving the safety at railway crossings are spent for the benefit of all Canadians and the minister is to be congratulated for the amendments he is now introducing.

It must be borne in mind that it is easier for the federal government to pay its share of projects of this kind than it is for the municipal and provincial governments to pay their shares.

Speaking in this house on April 18, 1955, when the Railway Act was being revised the present Minister of Finance cited some figures which I believe should be placed on the record again. After speaking of the number of accidents that occurred at crossings and outlining the need for increased protection the hon. member said, as reported at page 2905 of *Hansard* of that date:

> What has been the contribution to the solution of this problem by various types of crossing protection? A further glance at these figures indicates that over three-quarters of these accidents which have occurred at public highway crossings on railways have occurred at unprotected crossings.

Later in the same debate he said:

> Then in the case of accidents that took the form of motor vehicles running into the side of trains—and there are many of these accidents—last year there were 140 of them, of which 46 occurred in daylight hours and 94 during the night hours.

The provision in the amendments before us for illuminating the fronts and sides of engines and of boxcars with fluorescent tape will eliminate to some extent the large preponderance of accidents that occur after dark. A friend of mine was driving along a road in Porcupine a year or so ago under bad conditions. There was a slight amount of

rain and some fog. Although he knew the area quite well visibility was bad and he was driving at dusk. He drove into the side of a slow-moving freight train and broke his leg and sustained other injuries. In this particular case if there had been any kind of warning on the sides of the box cars this accident would not have happened because he would have been able to see the train long before he did. Further development is necessary to protect the Canadian public on open railway crossings.

I would ask the minister to give some consideration to the matter of changing the type of horns the diesels use because I know myself that it was much easier to hear the old steam whistle than it is to hear the modern diesel whistles. I am also aware of the fact that the government of Ontario has done some development work in this field. They realize the problem but to date they have not seen fit to complete the development so that it can be made available to the industry. I would ask the minister to give some attention to that form of protection.

Mr. Small: Mr. Chairman, the matter of railway grade level crossings is one in which I have taken an active part for the last four or five years. The question has been before the house continuously. It goes back to the beginning of the century and the cry that we have always heard is that the work was not being accomplished fast enough and sufficient funds were not appropriated to cover the situation. In fact, we have been told that the problem of grade level crossings was getting beyond the power of the board of transport commissioners to cope with because of cost. The last time the figure was given it was in the neighbourhood of 33,000 grade level crossings of one kind or another. In the neighbourhood of 2,000 to 2,500 were classified as grade separations.

During the last three years a request came from all sides of the house, irrespective of party, that the amount of $1 million a year which was appropriated to take care of the situation should be increased. It was also said that the decrease in the percentages that the board of transport commissioners required the municipalities and the railways to pay was even beyond their ability. An appeal was made that the matter be looked into again and that the board of transport commissioners undertake a review of the situation. In 1954 the board brought down a very comprehensive report. They covered the problem very well, but the sum and substance of their report was that the problem was of such magnitude that it was practically beyond the capacity of the government to solve the problem.

[Mr. Peters.]

At that time we appealed to the government for an increase in the funds and the government increased the contribution to the fund from $1 million to $5 million. They increased the percentage which the board of transport commissioners would pay to 60 per cent, 25 per cent by the municipalities and 15 per cent by the railways. But that was also too low. At that time we asked the government to increase the amount to $15 million and also increase the percentage that the board of transport commissioners should pay to relieve the municipalities and the railways themselves of as much of the burden as possible. As I said, we asked for $15 million. Of course, the government of the day could not see its way clear to appropriate that amount, but this government in its wisdom increased it last year to $15 million for the time being on a make-work basis. I am pleased to hear that they have also increased the maximum amount that the board should pay, but it has not yet been determined what the railways or the municipalities will be asked to contribute. I appeal to the minister to make representations to the government for a larger amount.

If hon. members take the trouble to read the 1954 report of the board they will see that they outlined a hypothetical program that would cost $30 million a year. Spread over 25 years it would amount to $750 million to inaugurate a program from coast to coast which would attempt to do something about this problem which is causing great concern to the people of Canada. But after stating that, the sum and substance of the report was that it would take care of only some 1,400 grade level separations of a major nature. Grade separated crossings generally cost from $1 million to $2,350,000. Inflation has raised that cost to a greater amount. These are the crossings where the most accidents happen.

The hon. member mentioned the rate of accidents. I do not think the percentage has changed to any great extent. Every three days two people are killed somewhere in Canada on grade level crossings. About a year ago the government did inaugurate a program that was started by what was called a national safety council, which is similar to the Ontario safety league. This was to be a national safety league. The president of the Shell Oil Company was the chairman. He succeeded Mr. Claxton, who was at one time minister of national defence. Mr. Claxton took charge in the first year and then he was succeeded by Mr. Ash of the Shell Oil Company. They were to inaugurate a safety system throughout the Dominion of Canada to try to co-ordinate safety regulations from

one end of Canada to the other and endeavour to keep them uniform. Signs at the crossings were to be put far enough from the crossings to give sufficient warning to motorists. The difficulty was that they ran into trouble with the municipalities with respect to the maintenance of those signs and for permission to encroach and the responsibility for enforcement. These are the things that came up in the discussion about grade level crossings the last three or four years.

I would suggest to the government that they give careful consideration to the hypothetical program outlined by the board of transport commissioners and consider it carefully on a make-work basis, particularly when unemployment is prevalent.

The board of transport commissioners have plans for grade separations. They take a long time to construct and they cost plenty but a start should soon be made on them. The sum of $30 million a year would be a great help and it would spark the program to make work in Canada at this time. As the situation is today we are not keeping up with the number of new grade level crossings created throughout the year. This program would not only reduce the hazards of grade level crossings but it would also serve the purpose of making work. I would certainly suggest that the minister take another look at it to see if he cannot increase the amount put into the fund and also go into the situation more thoroughly because the railways are in the position where they cannot pay. The municipalities are finding it almost impossible to meet the burden of cost and they cannot raise any more money by taxes. Probably, in the circumstances, and for an interim period, the government should take on the whole cost of constructing grade level crossings and try to solve the problem and this is the only way it can be done.

I could give details on how many grade level crossings need to be protected, how many wig-wags there are, the number of people being killed, and so on. The fact is that the situation is getting beyond us and the board of transport commissioners admits that is so. They claim that $30 million a year would only begin to scratch the surface. Therefore, if the government would reconsider the percentage basis on which the municipalities and railways have to contribute and allot more money to take care of the problem I know this would be a progressive improvement. Before the resolution carries I should like to ask the minister when the municipalities and railways will be able to take advantage of the new arrangements under this legislation.

Mr. Hees: Any project authorized by the board of transport commissioners after January 31 of this year becomes eligible for the increase in percentages and the increase in grants.

Resolution reported and concurred in.

Mr. Hees thereupon moved for leave to introduce Bill No. C-52, to amend the Railway Act.

Motion agreed to and bill read the first time.

Mr. Speaker: When shall this bill be read the second time? Now, by leave?

Some hon. Members: Agreed.

Mr. Hees moved the second reading of the bill.

Motion agreed to and bill read the second time.

Mr. Hees moved that the said bill be referred to the standing committee on railways, canals and telegraph lines.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

Mr. Hees: Mr. Speaker, the chairman of the committee on railways, canals and telegraph lines has asked me to announce to the house that the committee will meet to discuss the bill at two o'clock tomorrow afternoon in the railway committee room.

Motion agreed to and bill referred to the standing committee on railways, canals and telegraph lines.

EMERGENCY GOLD MINING ASSISTANCE ACT

AMENDMENTS TO EXTEND APPLICATION AND INCREASE AMOUNT

The house resumed, from Monday, August 11, consideration in committee of the following resolution—Mr. Comtois—Mr. Sevigny in the chair:

That it is expedient to introduce a measure to amend the Emergency Gold Mining Assistance Act to extend its application to the years 1959 and 1960 and to provide for a 25 per cent increase in the amount of assistance for the years 1958, 1959 and 1960.

Mr. Peters: Mr. Chairman, when this resolution was under discussion last Monday I was saying something about the problems some of the mines have and I was pointing out that the subsidization of the Hollinger mine, for instance, amounted to something over half a million dollars and they paid a dividend on a profit of something over a million dollars. The payment of that subsidy has certainly had some effect on the profits that particular mine has been able to make

in the last few years. While that subsidy has been advantageous for Hollinger, on the other hand the largest gold mine on this continent, Kerr-Addison in the Larder Lake group, has never been able to qualify at any time for emergency gold mining assistance. They still sell their gold on the open market and therefore if any impetus is going to be given to that particular mine it has to be done in a different manner.

This problem has been discussed at great length by numerous people. In the past commissioners have been set up by provincial and federal governments to discuss the problems of the gold mining industry. A number of suggestions have been made and it is accepted that the problem is one concerning which the federal government is going to have to do something. In "A Social Approach to Economics" published in 1939, pages 506 and 507, Professors H. A. Logan and M. K. Inman have pointed out that the economic philosophy of our society has accepted the concept that every commodity should sell for enough to cover all of its legitimate costs in its price.

In the case of gold, if prices are not sufficient to cover the cost of producing the quantities of gold which our country may require, there are two alternative public policies which can be adopted. The first one is to raise the price of gold. This, however, the nation cannot do independently of other nations. I suggest that it can be done if the government will make the necessary changes so that it can buy gold and store it in the same way that the United States does. If we raised the price of gold to $45 or $50 an ounce or even $70 an ounce, as suggested by some in the gold mining industry, this would have a great influence on the amount of money that would be available in Canada and the expansion that could take place because of the gold being held in reserve in this country. It would also be advantageous to mines like Kerr-Addison that have not been able to receive any federal subsidy.

The second policy is for the nation to absorb or reduce some of the production costs of the marginal firms in the industry through various forms of subsidization. This the nation has done through cost-aid grants, taxation concessions and in other ways. Cost-aid grants have gone largely to firms operating at a cost well below the $35 margin. They have resulted in lower employment, wages and output than would have been obtained if the same amount of subsidies had been distributed directly to labour. In the case of the mines in the Porcupine camp, the 1951-52 cost-aid grants were equivalent to about $450 per year per worker. You can see that the increase of 25 per cent now being made will amount to less than $150 and thus it can be seen that even if all this money were given to these particular mines the situation would not be a great deal different from what it has been.

Looking at the situation on a long term basis, I think that the first thing that will have to be done is to remove the word "emergency" from the federal government's cost-aid program. Conditions have not changed for the better in the years that the legislation has been in force but have worsened. The costs of all requirements of the mines have risen rapidly while at the same time the price of the product has been pegged at the world market price, with the mines at times receiving less than that amount because of the premium on the Canadian dollar. Therefore we are going to have to continue this form of subsidy on a long term basis.

Second and more important, I think we have to give more consideration to the establishment of new secondary industries in northern Ontario. We are going to have to have diversification of industries. In my opinion the federal government has an obligation to see that the towns of Timmins, Kirkland Lake and Larder Lake do not disappear even when there is no more gold. When speaking the other day on the northern affairs estimates I suggested that the problem probably could be solved in part by the establishment of a new trade route through northern Ontario and James bay and Hudson bay as an alternative to the St. Lawrence seaway. Such a long term program will need assistance and I think that the government could quite easily divert a percentage of the assistance it is now giving under the Emergency Gold Mining Assistance Act toward developing this new trade route. Secondly, some of this aid that we are now giving to the gold mines could be advanced to other industries.

There are a number of other things, in addition to the emergency gold mining assistance, which are done for the gold mining industry. When a new mine comes into production, it pays no taxes for the first three years. If we were willing to extend that type of concession to secondary industries it would provide an inducement for them to come into northern Ontario. We also have a railway there, and I am quite sure that consideration could be given to an inducement to secondary industries in the form of lower freight rates on certain commodities that they use.

This problem has become apparent not only to the chambers of commerce, the miners who work in these areas, the citizens of the area, but it has become apparent to the municipalities. I referred to this booklet entitled "The Gold Mining Community", published by the municipalities. I should like, in closing, to read the last paragraph in which reference

is made to this need for secondary industries, as well as the need for a long term program so that development will move forward rather than become stagnant waiting for the mines to die or get a little better price for their products. They point out what it takes to start a secondary industry and the basic requirements needed for the development of secondary industries as well as some of the problems we have in northern Ontario in that regard. They end up with this statement:

> The drive for economic diversification is strong in the gold mining communities, whose residents and leaders are well aware of their position. What is required is something more than hard work, optimistic talk, and detailed planning. That something consists essentially of potential markets, for without them productive potential means nothing. The southern front of progress comes to mind first. But if the northland is to rescue the gold mining communities, they will have to survive until northern promise comes to fruition. As in the case of underwriting gold, then, the subsidizing of economic diversification is essentially a play for time.

I would suggest to the Minister of Mines and Technical Surveys that he could do a great deal for the communities of northern Ontario that are now totally dependent upon gold mining if he would give consideration to some of the requests that these municipalities have made. He, first, should remove the word "emergency" from the Emergency Gold Mining Assistance Act, and make it the gold mining assistance act so the mines would know this assistance would be continued year after year. Secondly, he should have an amendment written into this act that would require the mines, when they receive this subsidy, to turn at least part of it over to the miners in the form of higher wages, a pension plan and better fringe benefits. The municipalities have now realized, for the first time, in the presentation of this brief, that the miners themselves are the people who keep the mining communities alive. If the miner gets more money he will spend it in the community, and that will result in better conditions for everybody. If mines like the Hollinger are to turn this subsidy over to their coupon clippers, many of whom do not even live in Canada, then these mining areas are not going to receive much benefit from this legislation.

Resolution reported and concurred in.

Mr. Comtois thereupon moved for leave to introduce Bill No. C-53, to amend the Emergency Gold Mining Assistance Act.

Motion agreed to and bill read the first time.

Mr. Speaker: When shall this bill be read a second time? Now, by leave?

Mr. Comtois moved the second reading of the bill.

Mr. Peters: I should like to ask the minister if he will give consideration to amending the bill to ensure that some of this gold mining subsidy is put into a form that will directly benefit the miners and the mining communities?

Mr. Speaker: Does the house consent to the second reading of this bill now?

Some hon. Members: Agreed.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Sevigny in the chair.

On clause 1—*Application of act to years 1955 to 1960.*

Mr. Dumas: Before we pass clause 1, I should like to ask one question of the minister. Does the minister propose that the amount of aid which will be due to the gold mines will be paid in one lump sum immediately after the act is proclaimed?

(Translation):

Mr. Chairman, I might address my question to the hon. minister in French. I wonder if, owing to the retroactive nature of the act, the minister could tell us if the government intends to pay in a lump sum, as soon as the legislation is passed, the subsidies that will become due as from January 1, 1958?

Mr. Comtois: Mr. Chairman, if the applications reach us so that we can proceed in this fashion, we shall be pleased to do so. We can pay them in a lump sum up to the date of the application, provided applications have been received from the companies.

(Text):

Mr. Peters: I would again like to ask if the minister will amend this bill so that part of this subsidy will be returned to the workers in the form of wages. As it is now, in a good many cases this money will be used for the payment of dividends, and none of it will be returned to the municipalities. As I understand it, the reason for this emergency gold mining assistance is that the mines are in desperate straits. This is caused by several factors, one of which is that they are not able to get the proper type of employee because the wages paid are too low. The municipalities have pointed this out very clearly on a number of occasions when they have communicated with the minister.

If the money goes into the form of wages, that money returns to the municipalities and assists those municipalities. Before this resolution passes I think some consideration must be given to the dire need in which the municipalities find themselves and in which

the workers in these municipalities find themselves. I do not think that the minister intended to pay these moneys in the form of dividends to the mines. I think he is interested in seeing the continuation of the communities. If that is so, I think there should be some amendment which would allow this to take place.

Mr. Comtois: I think we cannot agree on that matter. This would mean that the government would control the salaries and wages. I do not think that is the purpose of the act or of the amendment to the act. It is a matter of collective bargaining between the employees and the employers. It is also a provincial concern. I am sorry, but we cannot agree on that point. In addition, may I read a letter which I have just received today. It is from the secretary of the Timmins industrial commission. With the permission of the house I will read it.

Some hon. Members: Agreed.

Mr. Comtois: It reads as follows:

Honourable Sir:

On behalf of all gold mining communities of Canada may we at this time extend to you our appreciation and gratitude on the recent announcements pertaining to the Emergency Gold Mining Assistance Act.

The following is a resolution passed at a recent meeting of the town of Timmins industrial commission and we quote:

Proposed by H. Brunette

Seconded by W. Brewer

"That a letter of thanks and appreciation be sent to the Honourable Donald M. Fleming, Minister of Finance, and that this commission go on record on behalf of all gold mining communities of Canada in supporting the announcement of a 25 per cent increase in the Emergency Gold Mining Assistance Act, and that this commission is vitally interested in the longevity and continued extension of the said act on a longer term basis, so that gold mining communities may have a better opportunity for long range planning."

Carried.

Again, Honourable sir, we thank you and your colleagues, the federal government for your kind interest in alleviating in some way the problem facing the citizens of gold mining communities.

All of which is respectfully submitted.

Gordon J. Ogilvie.

Mr. Regier: Mr. Chairman, I heard the minister's argument and I cannot see how his argument is a valid one. After all, the federal government is paying a great deal of money to Canadian enterprise or to other levels of government and is attaching conditions to such payments. I fail to see why in this case the government cannot, in agreeing to increase the subsidy by 25 per cent, attach a condition to such payment. For example, the federal government will pay a portion of the cost of a bridge on the trans-Canada highway provided the bridge is a toll-free bridge. There is a condition there which the provincial government is obliged to meet. Even in the payment of the subsidy itself, the mines must meet certain conditions.

I fail to see why one of those conditions could not well be that part of this federal subsidy be payable to the employees; that a company must be able to convince the minister that the employees concerned have shared in the benefits or will share in the benefits; and that unless the company concerned is able to satisfy the minister that the workers actually will share in this subsidy then the subsidy shall not be payable in such cases. I believe that if the government wanted to do so it could easily insert such a condition for the payment of the subsidy.

After all, we are not primarily concerned with the welfare of the companies. We are taking this money from the taxpayers of this country. The taxpayers are paying this money in order to keep the employees employed and they would like to see these employees employed at normal wage rates. The minister knows full well that those wage rates for that type of mining in these gold mining communities are not normal; they are less than normal. The favourite complaint for many long years now—and I have heard the complaint for five years now—has been that these companies have not shared the subsidy with their workers that they have taken the subsidy and have regarded it as their own and that thus the intent of the subsidy has been lost in a goodly number of cases.

The letter read by the minister from the town of Timmins expresses, of course, the attitude that all of us have. We are glad that assistance is being given. However, that letter has nothing whatsoever to do with the request that was made the other day by the hon. member for Timmins and is now being repeated by the hon. member for Timiskaming. We feel that day is past when we can continue to subsidize the dividends of corporations with taxpayers' money without having some regard for the welfare of those employed in the mining industry.

Mr. Peters: Mr. Chairman,—

An hon. Member: Oh no; not again.

Mr. Peters: Oh, yes. Mr. Chairman, some of the concern of the minister I think is quite unfounded when he continues to pay this subsidy only to the mines. I worked in those mines for a number of years. The conditions in those mines are substandard by all considerations. Yes; in those days when the mines were well off, when we heard about the high wages the miners got in depression days, even then the conditions in the mines were substandard. You will have

to understand that there are people working underground today in my area who are getting less than $1.10 an hour. Those men are working underground eight hours. They have no pension plan. Some of the mines are poorly ventilated. The conditions are very poor. They are having to meet a standard of living that costs them more than it costs you and I in the city of Ottawa in regard to groceries and other food commodities. Our transportation costs have raised the price beyond that in many of the southern cities. With regard to medical attention the situation is the same. Their costs of living, with the one exception of housing, are higher than those in any part of southern Ontario. Those people have no pension plan to fall back on. They have very few fringe benefits. They fought very hard to get their conditions reduced to the 44-hour week. They do not get the benefit of the 40-hour week as is the case in other industries. They have not many of the considerations that others get. When they want to establish a union in that area, they go on strike for six or eight months to fight for basic union security and are unable to accomplish even that.

I have not too much sympathy for many of these companies. The minister knows of another problem that has arisen in mining and that is this low grading of the mine. He can hide his head if he wishes through his inspectors or he can admit it if he likes, but I can tell you that there is low grading going on in the mines in the Porcupine area. I know of people who have gone into those stopes that are closed year after year and have taken one carload or two carloads of muck out—four or five tons, ten tons at most —so as to build up their millheads to bring the price of the product up to where they want to keep it. They are operating at the lowest possible amount so that they can get the highest possible subsidy. That is not true of many of the mines that are what are called marginal mines. But it is true of McIntyre, Hollinger and Broulan and Porcupine reef and it is true of Big Dome. These mines have ores which could have been mined a long time ago, but the companies are not mining them because they have been living on this subsidy. If the government continues this type of assistance the moneys are only going into the pockets of the shareholders and are doing very little to keep these communities alive.

I know personally the people who wrote that letter, and none of them are connected with the mining industry, and none of them are connected with the workers. They have a community to look after, and they appreciate another 25 per cent being paid to the gold mining industry, but a lot more good could be done if this money was getting into the pockets of the workers so that they in turn could put some into the pockets of the municipalities, the small businessmen and others who make up the backbone of communities of this type.

The mines have been carrying on practices of bad housekeeping for many years. They would not have done this had the price of gold been high enough. If the price of their commodity had been high, they would have done all they could to get out as much ore as possible before the price fell again. If the government is going to carry on with this system of subsidization I think the minister has an obligation to see that the people who work in this industry have an adequate standard of living, and I should therefore like to move the following amendment:

That the said increase of 25 per cent shall be paid by this government only to companies who agree to extend a substantial part of the increase to their employees by way of increased wages and other benefits.

Mr. Argue: Mr. Chairman, before you make a ruling on this amendment I wonder if I may have a word to say on it? I suggest that the amendment comes within the scope of the terms of the resolution. The resolution provides for an increase of up to 25 per cent in the subsidy under the Emergency Gold Mining Assistance Act. This amendment is merely a detail, though an important detail, which would direct that the subsidy should be paid to those companies on certain conditions being met, and I think that is very definitely within the scope of the resolution. It does not alter the principle of the bill but it merely directs a company to provide certain working conditions if they are to receive a subsidy. I think that at any time when the federal government is making a subsidy of this kind it has the right to lay down certain rules, and this is one rule that we suggest should be made in this bill.

The Chairman: After reading carefully the amendment proposed by the hon. member for Timiskaming the Chair comes to the conclusion that it cannot accept it because it is contrary to the bill now before the committee. In order to accept such an amendment permission would have to be obtained from the governor general, and it is quite impossible at present to accept this amendment in its present form. Therefore the Chair declares this amendment out of order.

Clause 1 agreed to.

Title agreed to.

Bill reported.

Mr. Speaker: When shall the bill be read the third time?

Some hon. Members: Now.

An hon. Member: No.

Mr. Speaker: Next sitting of the house.

MARITIME COAL PRODUCTION ASSISTANCE ACT

AMENDMENTS VARYING TERMS OF REPAYMENT UNDER AGREEMENT

Hon. Paul Comtois (Minister of Mines and Technical Surveys) moved that the house go into committee to consider the following resolution:

That it is expedient to introduce a measure to authorize certain amendments to the agreement made under the Maritime Coal Production Assistance Act with the Dominion Coal Company Limited, for the purpose of varying the terms of repayment of principal and interest as provided under section four of the act.

Motion agreed to and the house went into committee, Mr. Sevigny in the chair.

Mr. Robichaud: Would the minister give us an explanation of this, please?

Mr. Comtois: Mr. Chairman, on March 14, 1950, an agreement was entered into to cover a loan of $7,500,000 for the purpose of mechanization of the company's mines in Cape Breton, Nova Scotia.

The amount to be loaned was two thirds of the cost of the entire mechanization project. Interest was to be 3½ per cent per annum payable every six months at 30th June and 31st December. Repayment of the principal was to commence on the 30th June, 1955, at the rate of 30 cents per ton of coal produced in the preceding six months and similarly on the 31st day of December and 30th June in each succeeding year. The first payment was made on 30th June, 1955, but was based on the tonnage produced only by the equipment purchased under the loan agreement.

The Department of Justice ruled that the payments of principal should be calculated on the basis of the tonnage produced by all of the mines. The company felt that this was greater than they could pay at that time as the project was still two to three years behind time and all of the $7,500,000 had not been drawn by the company.

By authority of P.C. 1956-327 the loan agreement was changed so that the company could pay, up until 30th June, 1960, by calculating at 30 cents per net ton on the tonnage produced by the equipment purchased under the loan agreement.

[The Chairman.]

After 30th June, 1950, payments were to be based at 30 cents per net ton on the coal produced from all of the mines. Early in May, 1957 the company requested postponement of further capital repayments until 30th June, 1963, due to the fact that the program of mechanization was several years behind schedule and they still had over $1 million to draw of the $7,500,000 approved loan. To date, of the $6,476,524.92 advanced as loan, $1,278,278.70 has been repaid at an interest of 3½ per cent yielding $921,345.62. Of the original loan agreed upon, there remains a balance to be loaned of $1,023,475.08. The new amendment to the agreement would mean that an amount of $6,221,721.30 would have to be paid at an interest of 4 per cent per annum.

No payments on account of principal have been made for 31st December, 1957 and 30th June, 1958, pending negotiations. The amount in default is approximately $750,000. No funds have been advanced to the company since they have been in default of payment of principal.

Mr. Robichaud: Mr. Chairman, as explained by the minister the resolution now before the committee has to do with amendments to the Maritime Coal Production Assistance Act concerning an agreement with the Dominion Coal Company for the purpose of the repayment of principal and interest as provided under the terms of section 4 of the act. According to the statement made by the minister the company has been in default on two payments, the first on December 31, 1957, and the second on June 30, 1958. These have occurred after this government took over the administration of this country and are due to the change in the economy of Canada.

I realize this company has no alternative but to accept the present offer which is being made under this act. Hon. members of this committee know that the 1946 royal commission on coal which was known as the Carroll commission had been assigned the task of making a complete and extensive study of the coal industry including, as the minister just said, its mechanization, productivity and labour-management relations. The Carroll commission recommended proper action by the federal government in order to meet the needs of the industry on all levels. Following this recommendation and as a result of this study the Maritime Coal Production Assistance Act was enacted. Its purpose was to meet the main problem of the coal industry, rising costs, and to allow the industry of the maritime provinces to compete with other sources of power or fuel.

According to the terms of this act loans were made available to meet the cost of the

mechanization program. As the minister indicated, two-thirds of the cost was met by government loans and one-third by the company. There is no question but that a coal company could not borrow money from any other source on conditions as favourable as those that obtained with respect to this loan. The federal government made the loan at 3½ per cent interest.

The present amendments do not alter the main concept of the act in any way. This act was introduced by the previous administration in 1950. It was found at the time to be sound and as the present government is today amending the act by extending the repayment period the present government recognizes that the act is still sound. It may be that the cost of the production of coal in the mines has not been reduced in the way which was expected but we hope when the program is completed the full benefits of the mechanization will be realized. It is clear, however, that this mechanization program has resulted in increasing the production or the per diem output of the coal mines concerned. In fact, by 1955 the productivity increased 45 per cent above the level of ten years earlier. In 1955 production was 2.33 tons per man day as against 1.58 tons per man day in 1945. This was due to the assistance given under this act.

It is also clear that the present minister has not changed in any way the general outlines of the coal policy established by the previous government. In his statement he mentioned certain changes in subventions but those rates have been changed to meet new problems. That was a practice well established in the past as increases have been introduced at various intervals by the previous administration.

It may be a good idea to extend the life of loans but the increase in interest might be considered a further instalment of the tight money policy of the present government, or perhaps a totally new concept. We were told a few weeks ago there would be a bond conversion in this country. The commission alone on this conversion will amount to $70 million or $80 million. Today this company under difficult circumstances is being forced to accept a loan on which it will have to pay an increase of one-half per cent in interest, not only on the balance of the loan but on the original amount of $6,231,721.

I should like the minister to tell the committee if the balance to which he referred of approximately $1,200,000 of the money not used to date by the company is sufficient to complete the program recommended by the Carroll commission? I should also like him to tell us if such assistance has been provided to other coal companies in the maritimes and, if so, what is the standing of the loans made to these companies?

Mr. Argue: Mr. Chairman, we in the C.C.F. support this resolution. I believe the bill which will follow the resolution is necessary because of the peculiar circumstances surrounding the loan that was made some years ago to the Dominion Coal Company. We all realize the very difficult position of the coal industry in this country particularly in the maritime provinces. We are aware the benefits under this act will not restore the coal industry to a healthy state but much like the Emergency Gold Mining Assistance Act in relation to that industry will merely keep the coal industry in a state of operation.

There seems to have been some dispute as to the method of repayment of the loan made in 1950, the government believing that the Dominion Coal Company should repay the loan by paying 30 cents on each ton of coal that was mined and the company taking the position that it was liable to pay 30 cents per ton only on the output which came as a result of the installation of the new equipment. These amendments will correct this misunderstanding and provide for repayment after June 30, 1963.

One of the most important changes that will be made is the increase in interest rates. This demonstrates once again that the announced policy of this government, as it affects the reconversion of Canadian governments bonds, is having its repercussions in every government action and will be felt throughout the Canadian economy. At this time we are going through a period of rising interest rates brought about by deliberate government policy to increase interest rates. The interest rates in this case will be increased from 3½ per cent, as provided in the loan agreement of 1950, to 4 per cent. We feel that increase in interest rates is unnecessary. It will have an adverse effect on the economy generally, but because this government is also raising most of the loan in question, because the company agrees to the terms of this legislation, I take it, and because the coal mining industry is in need of this type of assistance, we intend to support the resolution and the bill which will be based on the resolution.

The Chairman: Shall the resolution carry?

Mr. Robichaud: Just before the resolution carries, can the minister answer the two questions I asked or would he rather wait until we are in committee on the bill?

Mr. Comtois: I would rather wait until we are in committee because at that time I will have the officials here and will be able to give

all the answers. I could answer a part of the question now but to give the complete answers I would rather wait until the bill has second reading.

Mr. Pickersgill: Mr. Chairman, I have one question I should like to ask the minister. In recommending this amendment I assume the minister agrees that the original scheme was a good one.

Some hon. Members: Oh, oh.

Mr. Pickersgill: I am asking the minister the question.

Mr. Cardiff: It is a childish question.

Mr. Comtois: I never said it was a bad one.

Resolution reported and concurred in.

Mr. Comtois thereupon moved for leave to introduce Bill No. C-54, to authorize certain amendments to the agreement made under the Maritime Coal Production Assistance Act with the Dominion Coal Company Limited.

Motion agreed to and bill read the first time.

Mr. Speaker: When shall the bill be read the second time? By leave, now?

Mr. Comtois moved the second reading of the bill.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Sevigny in the chair.

On clause 1.

The Chairman: Shall clause 1 carry?

Mr. Robichaud: Can the minister now answer my question?

Mr. Comtois: Mr. Chairman, as far as the first part of the question asked by the hon. member for Gloucester is concerned I am informed that the balance of the disbursement of that loan will not be sufficient to complete the whole mechanization program.

As to the other questions, this matter has been dealt with by the standing committee. We gave the whole list of the loans granted up to the present time to the committee. If the hon. member wishes to refer to the proceedings of the standing committee he will find everything there, I can get the information in a few minutes or I can send the information to him. I consider that the loans are all in good standing at the present time, every one of them. I think we have about seven or eight loans on the way or disbursed and recently granted. They are all in good order.

Mr. Robichaud: I will accept this information from the minister. Can the minister tell the committee if there are any particular reasons why the Dominion Coal Company should not be in a position to meet its regular payments while the other companies, as the minister said, are in good standing?

Mr. Comtois: Of course, the trouble is they did not have enough money to proceed with their mechanizing and they could not borrow any money anywhere else.

Mr. Robichaud: In other words, will the stock pile of 1,400,000 tons of coal which they have at the present time have any effect on the financial situation of the company? Is it on account of this stock pile that they cannot meet their obligations?

Mr. Comtois: Certainly.

Mr. Robichaud: Has the minister any reports as to the possibility of the company being in a position to meet further payments, or has he any definite reports that this coal will be disposed of in the near future? As I recall it, the minister made certain statements, I think on two occasions, that the stock pile of 1,400,000 tons of coal was sold and awaiting transportation to its destination.

Mr. Comtois: That much coal was sold but it cannot be shipped right away in a single sale. It takes months before the stock pile is distributed between the purchasers.

Mr. Robichaud: What are the present prospects of the stock pile being reduced by December 31? Has the minister any information that it will be reduced substantially, or will it be about the same?

Mr. Comtois: According to the information we have from the officials of the company we can establish that about a million tons, or a million and a quarter tons, will be on the stock pile at the end of December.

Mr. Robichaud: In other words, according to the information given by the minister, this stock pile will be reduced by about 150,000 tons between now and the end of December.

Mr. Comtois: Obviously, because they are continually extracting coal and adding to the stock pile.

Mr. Robichaud: Notwithstanding the five weeks lay-off?

Mr. Comtois: Yes, of course.

Mr. Dumas: I wonder whether the minister can tell us what will be the percentage of efficiency when the mechanization of the mines of the Dominion Coal Company is completed? I understand that two-thirds of the mechanization program has been completed already and of course efficiency has been increased by a certain percentage. With

the completion of the last third of the mechanization program what will be the increase in efficiency?

Mr. Comtois: The increase in efficiency now is about 50 to 60 per cent and when the mechanization project is completed it will be about 90 per cent. That is the best we can say at this time.

Mr. Robichaud: When mechanization is completed will production be increased to approximately 7 million tons per year and, if so, has the minister any information as to the prospects for the disposal of such a volume of production?

Mr. Comtois: We are told that the officials of the company under the new management expect to increase their sales to quite a large extent. That is what we are told.

Mr. Benidickson: I notice that section 4, subsection 1, of the present act reads as follows:

(1) A loan shall bear interest at a rate fixed by the governor in council based on the average rate of interest return that the Minister of Finance determines is yielded by bonds of the government of Canada of a term comparable with that of the loan, or if there are no such bonds outstanding, that would in the opinion of the Minister of Finance be yielded by such bonds—

I notice that under subclause (b) of clause 1 of the bill the rate of interest is to be 4 per cent. What has been the rate of interest on this loan hitherto?

Mr. Comtois: The rate of interest has been fixed by the Department of Finance and is the rate of interest charged crown corporations.

Mr. Benidickson: What has been the most recent rate that you have felt obliged to charge under that practice?

Mr. Comtois: Four per cent.

Mr. Benidickson: On the last loan was the rate 4 per cent?

Mr. Comtois: It was 3½ per cent.

Mr. Benidickson: In other words, there is an increase of half of one per cent?

Mr. Comtois: Yes.

Mr. Dumas: Mr. Chairman, when the agreement was entered into between the government and the Dominion Coal Company I understand that the estimated cost of mechanization of the mines of the company was $13 million. Approximately two-thirds of the mechanization program has been completed and we learn that actual expenditures amount to $9,583,497.92. In the case of some of the items, of course, the cost was more than the amount estimated. In the case of the last item, a wash plant, I notice that the estimated cost was $3,100,000 and the actual expenditure is only $228,516.65. In the one-third of the mechanization program that remains to be completed does the company intend to spend $3 million on a wash plant?

Mr. Comtois: The company has not built the wash plant yet. The cost will be $6 million.

Mr. Dumas: In sessional paper No. 87 tabled on Thursday, June 5, 1958, the different items are listed on which expenditures were supposed to be made by the Dominion Coal Company. There is an estimated amount of $3,100,000 for a wash plant and we see that the actual expenditure on this item has been $228,516.65.

Mr. Comtois: Three million dollars was the amount estimated at that time.

Mr. Dumas: But approximately $228,000 has actually been spent.

Mr. Comtois: The company ordered some steel for the erection of the wash plant and had to pay for it.

Mr. Dumas: And the estimated cost now is $6 million?

Mr. Comtois: Yes.

Mr. Dumas: Has the company submitted an estimate of the cost of mechanizing the last one-third of their mines?

Mr. Comtois: No, not yet.

Mr. Robichaud: Will the increased interest rate which will be charged the Dominion Coal Company from the time this legislation comes into force also apply to the other companies which have loans under this act?

Mr. Comtois: No, Mr. Chairman. The rate is changed only on this loan and exclusive of other loans already in existence. I may add that the rates on the other loans range from 3½ to 3¾ and 4 per cent.

Clause agreed to.

Title agreed to.

Bill reported.

Mr. Speaker: When shall this bill be read the third time? By leave, now?

Some hon. Members: Agreed.

Mr. Comtois moved the third reading of the bill.

Motion agreed to and bill read the third time and passed.

Broadcasting

BROADCASTING

ESTABLISHMENT OF BOARD OF GOVERNORS—CONTINUANCE OF C.B.C.

Hon. George C. Nowlan (Minister of National Revenue) moved that the house go into committee to consider the following resolution:

That it is expedient to establish a board of broadcast governors to regulate broadcasting in Canada; to provide that the expenditure of the board shall be paid out of money appropriated by parliament therefor and also to provide for the continuance of a corporation known as the Canadian Broadcasting Corporation for the purpose of operating a national broadcasting service in Canada; and to provide further for the payment, remuneration, salaries and fees of the officers and employees thereof.

Motion agreed to and the house went into committee, Mr. Sevigny in the chair.

The Chairman: Shall the resolution carry? Carried. Shall I report the resolution?

Mr. Nowlan: I would be very happy, Mr. Chairman, if the committee would accept your suggestion that this resolution carry, then I would dispense with any remarks I might make. I shall speak for a few minutes on this since it is one of the most important matters with which the Canadian public and this parliament are concerned. I think perhaps the committee will expect me to say a few words on the resolution itself. I have spoken, as some hon. members recall, in this committee on two occasions this session on the matter of the Canadian Broadcasting Corporation itself and broadcasting generally. I certainly do not intend to repeat tonight anything I might have said on those occasions.

I want to refer specifically to the resolution which is before the committee. This party, of which the government is now constituted, in days past has urged that there should be a Canadian regulatory body which would be in control of broadcasting in this country, both privately owned and publicly owned. Hon. members know that up to the present time the Canadian Broadcasting Corporation, the publicly owned corporation, has exercised this regulatory function over the whole industry as well as acting as operator of the publicly owned system. In order to determine this issue and many others concerning broadcasting, the preceding government in 1955 appointed a royal commission to study and report upon the problems of broadcasting. I think it was December 2, 1955, that the order in council was passed appointing a royal commission. This royal commission reported on March 15, 1957, but because of divers and sundry events, which are well known to all members of this house, interruptions took place and there was no particular time in which this matter could be considered up until now.

[Mr. Comtois.]

This commission was headed by Mr. Robert Fowler of Montreal, and the report, which is well known I think to all hon. members, is popularly called the Fowler report. Other members of the commission were Mr. Edmond Turcotte, who at that time was our ambassador to Colombia, and the third member was Mr. Stewart, who at that time was president of the Canadian Bank of Commerce and is now chairman of the board. The commission spent a great deal of time in studying this matter, travelled across Canada and had many hearings, and although their views in the report may not be acceptable to all, and perhaps the report as a whole could not be accepted by any one person, yet I think whatever may be said about the report itself, it is certainly one of the most interestingly written reports that has ever been written by any royal commission. If hon. members have not read it, I think they will find the reading of it will repay them, both because of the content and because of the style in which the report is written.

I stated the position which some of us had taken in the past with respect to regulation, and I should like for a minute or two to refer to the report to see what it had to say because it deals specifically with the resolution before us. On page 90 of the royal commission report, we find this:

We think there have in fact been two public elements involved in radio and television broadcasting. This factual separation of powers should be more precisely defined in law. One of these elements should be an operating agency, engaged in the operation of publicly owned stations and national networks and in the production and distribution of a national program service throughout Canada.

Then, on page 91, the report says:

The other public agency in the Canadian broadcasting field should be a board created and authorized to act for parliament, and responsible to parliament, for the direction and supervision of the Canadian broadcasting system. This board should have responsibility for all elements in Canadian broadcasting. It should not, we suggest, be part of the Canadian Broadcasting Corporation and its members should not, as in the present statute, comprise the corporation.

Then, farther along on that same page we find this:

This board is not part of the C.B.C. and should not be referred to as "the board of governors of C.B.C." We suggest that a new board, differently named, should be created by statute. The name we use in speaking of this agency is "the board of broadcast governors".

If hon. members look at the resolution before them, they will find that the first clause says:

—it is expedient to establish a board of broadcast governors to regulate broadcasting in Canada;

This is the name recommended by the royal commission and the object also was suggested by the royal commission.

The second part of the resolution provides for the continuance of the Canadian Broadcasting Corporation. I am told that in some quarters at some time there were some fears and some doubts expressed as to the attitude that this government might take towards the publicly owned broadcasting system in Canada. If these fears were expressed at any time, Mr. Chairman, I am sure they have been dissipated before this. The other day that distinguished Canadian scholar and historian, Dr. Creighton, headed a very large delegation which appeared before the Prime Minister and myself in connection with this problem of broadcasting. I think some of the words used by him on that occasion could well be reproduced in *Hansard*. Speaking of broadcasting in Canada, Dr. Creighton said:

> Canadian strength and Canadian unity ultimately depend upon Canada's maintenance of her autonomy and spiritual independence on the North American continent. Throughout our history we have persistently followed national policies devised to strengthen our unity from ocean to ocean and to maintain our separateness in North America. Our defences against the "continentalism", which has so often threatened us from the south, have been based on the east-west axis provided by nature, the strong line of the St. Lawrence-Great Lakes and the Saskatchewan. Confederation gave us our transcontinental political union. Sir John Macdonald's national policy provided the framework for an integrated transcontinental economy. A national broadcasting system can do for us, in the realm of the mind and the spirit, precisely what these old and tested national policies have done in the political and economic sphere. A steady flow of live programs along the east-west lifeline will express Canadian ideas and ideals, employ Canadian talent, and help unite our people from sea to sea and from the river unto the ends of the earth.

I believe, Mr. Chairman, that represents the views of this government with respect to the functions, maintenance and strengthening of the Canadian Broadcasting Corporation. Provision is made for this in the second clause of the resolution which is before you, of course with the concomitant factors of the provision of funds by parliament for this purpose. It is not necessary for me to speak longer on this matter at the moment. Obviously, the removing of the regulatory powers from the Canadian Broadcasting Corporation and providing a separate board have created certain administrative difficulties and certain problems in connection with the drafting of this legislation which could be dealt with much better when the bill is before the house. I trust, Mr. Chairman, that the committee will see fit to pass this resolution at as early a date as possible, so that the bill can be brought down and the details of the legislation considered by hon. members. Then, on second reading, the whole matter can be given careful and full consideration.

Mr. Pearson: I think the minister can be assured, Mr. Chairman, that the hope he has just expressed will be realized, namely, that the committee will pass this resolution as soon as it sees fit. This is a very important resolution, as the minister has pointed out, dealing with a very important subject. I think it does require discussion, although I agree that perhaps that discussion can be focused more directly on the problem of broadcasting when we have the bill before us. Nevertheless, it is such an important matter, as the minister has indicated, that some observations even on the resolution are required.

My first reaction to the introduction of this resolution, Mr. Chairman, is that it is unfortunate—for reasons which the minister perhaps knows more about than I do—whatever the reasons may be, that a resolution dealing with such a fundamental matter as this should be introduced in what we hope are the dying days of this session. Whether or not that expression will prove to be accurate, I am not sure. The house will recall that some weeks ago we moved an amendment, on going into supply which precipitated a discussion of this whole question of broadcasting; and in that amendment we expressed the hope that this matter could be dealt with early in the session. The reason for that, as the minister will understand, is obvious. This is such an important matter that it deserves careful and adequate consideration. There is nothing much more important, as the minister has pointed out on more than one occasion and even tonight, in maintaining and strengthening Canadian nationalism, pride and national identity than maintaining and strengthening a strong Canadian broadcasting system operated in the national interest.

This resolution is no doubt based on the speech from the throne or at least derives from the speech from the throne in which the government, through His Excellency the Governor General, tells us that there would be placed before the house a proposal to establish a new agency to regulate broadcasting in Canada and to ensure that the Canadian Broadcasting Corporation and the privately owned broadcasting stations work effectively together to constitute a national system to provide satisfactory television and radio services to all Canadians within reach. The speech from the throne contains the expression "to constitute a national system", an expression which is not used in this resolution. Then the paragraph in the speech from the throne goes on to say as follows:

> Related amendments to the Radio Act will also be proposed.

I do not know what are the intentions of the the government in that regard. The last paragraph in the speech from the throne also bears on this matter because it states categorically:

> You will be asked to set up a select committee on broadcasting—

Mr. Chairman, this matter is so important that I hope that the statement of the government in that respect in the speech from the throne will be carried out and that this bill, when it comes before the house, can be given first reading and then be submitted to a select committee on broadcasting for that kind of consideration which it should get, dealing as it does with a matter of such great importance. Surely legislation of this type and of this national significance should not be rushed through the house in the closing days of a session. It should go to a committee where it can get the consideration to which it is entitled.

In this connection perhaps I might be permitted to put on the record a paragraph of an editoral appearing in the Montreal *Star* of August 16 which expresses this idea very clearly. This paragraph reads as follows:

> Granted that everything which has leaked out so far concerning the government's intentions toward broadcasting indicates a much more reasoned approach than party firebrands were hinting a few years ago. It looks as though recommendations of the Fowler commission still provide the guiding line.

We had some confirmation of that this evening. I was glad to get it.

> But the select committee, which the government promised, should be allowed to study the bill before it comes up for second and third reading. For the sake of the future of broadcasting, this legislation should also be allowed to stand over.

That is the opinion of the editor of that newspaper and there is a great deal to be said for that careful, constructive course being followed in this matter. Certainly, Mr. Chairman, the Canadian broadcasting system is such a complex and delicately balanced one that any changes to it, even changes which may appear to be minor, might destroy that balance, against the public interest and perhaps in favour of the private element of the system, an element which I agree is indispensable to the working of the system but which from the national point of view cannot be as important in our minds as is the public interest. I therefore suggest, Mr. Chairman, that we in this house have a duty to give this bill the most careful consideration possible, and I do not see how that can be done in the circumstances in which we find ourselves at the present time unless it is sent to a committee where it can be considered without haste, without prejudice and without partiality.

The resolution itself is before us on which a bill will be submitted; and we will have a chance, whatever happens, to examine that bill whether it goes to a committee or not, with the care which it deserves. The resolution says this:

> Resolved, that it is expedient to establish a board of broadcast governors to regulate broadcasting in Canada;

In his remarks a few moments ago the minister indicated that the government intends to follow the recommendations of the Fowler commission in this respect because that is the designation given to the body recommended by the Fowler commission. He thought that this might serve to remove any fears and suspicions that we had on this side that some fundamental change with regard to the regulatory system would be introduced. If we had any such fears or anxieties as to the attitude of the government towards the Canadian Broadcasting Corporation, perhaps this resolution does help to remove or to minimize those fears. But I would suggest to the minister that if we had them, they were based on statements previously made and views held by hon. members opposite on the treasury benches when they were on this side of the house. We remember some of the statements made at that time. That perhaps will explain to the minister the nature of our suspicions and our fears. That is one reason why we are scrutinizing this resolution very carefully indeed, as we will scrutinize the bill.

In this connection, the first thing that occurs to me is the wording of the first line of the resolution.

> Resolved, that it is expedient to establish a board of broadcast governors to regulate broadcasting in Canada.

Normally the phraseology in a resolution of this kind—and I do not know what the significance of the omission is in this case—would be as follows:

> Resolved, that it is expedient to introduce a measure to establish a board of broadcast governors to regulate broadcasting in Canada.

Indeed, in the resolution on the order paper immediately preceding the one with which we are dealing, namely item No. 18 on the order paper, that is the phraseology used.

Mr. Chevrier: And in item No. 17 on the order paper.

Mr. Pearson: And in item No. 17 also and others. The one immediately preceding item No. 19 reads as follows:

> That it is expedient to introduce a measure—

And so on. Perhaps the minister will explain to us why this resolution dealing with such a very important matter omits those words "to introduce a measure".

Then the resolution goes on:

—to provide that the expenditure of the board shall be paid out of money appropriated by parliament therefor and also to provide for the continuance of a corporation known as the Canadian Broadcasting Corporation for the purpose of operating a national broadcasting service in Canada; and to provide further for the payment, remuneration, salaries and fees of the officers and employees thereof.

Note, this is not to provide for the expenses of the Canadian Broadcasting Corporation as such; not to provide for the money which will be needed to carry on the work of the Canadian Broadcasting Corporation, but to provide for the payment, remuneration and salaries and fees of the officers and employees thereof. And that is all. No doubt the minister will have something to say about this. And then, of course, as I said earlier, there is nothing said in this resolution as to maintaining and strengthening the Canadian broadcasting system. We have here only a reference to a national broadcasting service, that is, the Canadian Broadcasting Corporation.

One of the most important things in this resolution is the kind of board of broadcast governors to be set up to regulate broadcasting in Canada; how its regulations are to be made effective, and particularly what effect they will have in regard to the control of private broadcasting in this country. There could be various kinds of boards of broadcast governors, some of which we on this side would certainly not be able to support. But the kind of board of broadcast governors recommended by the Fowler commission is something else.

There are other principles in this report to which the minister has referred which we would certainly like to see included in any legislation based on this resolution. While I am not going into this matter in detail at this time I am going to outline in a very general way our position with regard to what we think should be included in any bill based on this resolution. We feel strongly—and we will make our feelings known when this bill is produced—that any legislation based on this resolution should make provision for the following things:

1. The continued existence, with the Canadian Broadcasting Corporation as its operating part, as now constituted, of a single system in which both public and private stations are all integral parts and which is regulated and controlled by a single board representing the public interest.

From what the minister has said tonight and from what he has said in this house previously this session, I hope he would not quarrel with this principle and that he would perhaps see that it is embodied in the bill.

We think the legislation should also provide:

2. Regulations to be enforced by any board of broadcast governors to ensure that the services provided by both public and private stations should meet the needs and desires of the people as a whole and not be used primarily as an industry to be exploited for commercial ends.

We accept, of course, the fact that private stations must operate in such a way as to make a profit. If they do not do that, they go out of business. That is a legitimate aim on their part, and I am not minimizing in any way the necessity or importance of commercial ends in a broadcasting system which must include private stations as well as public stations. But the system as a whole must be used not for commerical purposes entirely, but in the national interest.

And then there is a third requirement as far as we are concerned for any legislation which would be satisfactory to us. It is:

3. That any regulatory board shall be accountable to and report directly to parliament. In our view it should not be a small official board of the nature of the board of transport commissioners. There should not be the kind of control over broadcasting which one sees exercised in Washington; the kind of official board which would be responsible to the government and which would have control over the regulating of both the private and the public elements of the system.

What we think should be in the legislation is a larger board, not composed of full time members. I have gone into this in some detail in debates on this matter previously in the house. The board, we think, should be one which would owe its responsibility directly to parliament and which would not be the agency of the government but an instrument of parliament. Then our fourth principle which we would like to see embodied in the legislation, is this:

4. The retention of the existing system by which a few publicly-owned radio and television stations distribute through the facilities of a much larger number of private stations at least some of the C.B.C. produced "Canadian" programs. This means, of course, that the C.B.C. must be given power to own and operate at least some national networks and power to control the management of such networks.

Then also—and this is surely an essential principle in legislation of this kind—there must also be control over the private station. Without that control exercised in the public

interest, because they are private stations operating for a profit—and I do not criticize them for that; they cannot go on without a profit—the temptation for them to affiliate with United States networks would be almost irresistible. If there were not that type of control over their activities exercised by a public board it would not be long before they were carrying exclusively and entirely United States programs. The reason for that is obvious. They could get those programs so much more cheaply than they could get a Canadian program. If it costs, say, $10,000 to produce a Canadian program, it might cost $30,000 or $40,000 to produce a similar type of program in the United States. But whereas a private station in Canada would have to pay a good deal to the C.B.C. for a Canadian program it might get a United States program for a fraction of that cost, because the cost of that program would in any case have been met in the large United States advertising market. Therefore the temptation for a private broadcaster to tie up with a United States network would be almost irresistible and that might represent an almost fatal blow to the Canadian national broadcasting system.

An hon. Member: Ten o'clock.

Mr. Pearson: I can finish in one minute. The fifth principle, Mr. Chairman, is this:

5. There must be enforceable regulations by which any private network and any private station affiliated to such a private network shall be required to maintain programming standards which shall not be very different from those of the private stations affiliated to C.B.C. networks. This relates to what I have just been saying.

Then, finally, and this relates to the omission in the resolution to which I have already drawn attention:

6. The necessary financial support for the C.B.C. should be provided from public moneys on a long term basis so that in addition to its earnings from commercial operations which are essential the C.B.C. shall be assured of the necessary funds with which to provide satisfactory national programming services. And that, of course, must be in addition to its income from commercial operations. Without the assurance of a minimum of income—and perhaps there should also be a maximum placed on the income—it would be difficult to see how they could effectively plan ahead. There is no suggestion in the resolution that this is going to be done.

I leave this thought with the minister in closing my remarks on this matter at the resolution stage. Would it not be better at this stage to introduce a supplementary estimate covering C.B.C. operations to ensure that the work could be continued in the coming year and then introduce this bill? After first reading it could be submitted to a committee where it could be given the kind of examination to which it is entitled and thus ensure that we do not rush it through without careful consideration and without giving the house an opportunity to fully discuss a measure of such far-reaching importance to national development as this is. I am sure no hon. member of this committee wants to see the matter treated in that way but I am afraid that in the closing days of this session this very important question will not be given the consideration to which it is entitled if we are not extremely careful.

Progress reported.

[Mr. Pearson.]

BUSINESS OF THE HOUSE

INCOME TAX ACT—PLACING OF AMENDMENTS ON "VOTES AND PROCEEDINGS"

Hon. Donald M. Fleming (Minister of Finance): Mr. Speaker, may I ask leave of the house to place on today's *Votes and Proceedings* those amendments which the government proposes to introduce to Bill No. C-39, an act to amend the Income Tax Act? It is hoped that having these half dozen amendments on *Votes and Proceedings* will be of assistance to the house in dealing with the bill in committee of the whole when we reach it.

Mr. Speaker: Has the minister leave to place these amendments on today's *Votes and Proceedings*?

Some hon. Members: Agreed.

Mr. Chevrier: Mr. Speaker, may I inquire of the house leader what the business is for tomorrow and Wednesday?

Mr. Green: Mr. Speaker, tomorrow we shall commence with third reading of the measure to amend the Emergency Gold Mining Assistance Act; then we shall take item No. 19 on today's order paper which is a continuation of the debate on the resolution preceding the introduction of the broadcasting bill; then item No. 6 on today's order paper, the bill to amend the Financial Administration Act; then item No. 9, the bill to amend the Customs Tariff, and then, if the bills amending the Loan Companies Act and the Trust Companies Act are back from the standing committee on banking and commerce, we shall take them at that stage; then item No. 5 on

today's order paper, the act to amend the Income Tax Act; then item No. 14 standing in the name of the Minister of Finance, which is a resolution preceding a bill; then item No. 10, the bill to amend the Customs Act.

On Wednesday it may be necessary to take some of this legislation but if we do take estimates we shall take those of the departments of mines and technical surveys, fisheries and national health and welfare.

Mr. Chevrier: May I remind the minister that we proceeded with dispatch today and perhaps unknown to him we have already given third reading to item No. 15.

Some hon. Members: No.

Mr. Green: I may be wrong, but I think the hon. member for Laurier is wrong. Perhaps His Honour could let us know.

Mr. Chevrier: When we got to it I said, "third reading; agreed".

Mr. Argue: And I said, "Disagreed".

Mr. Speaker: There was a dissenting voice in the house and it had to stand.

Mr. Chevrier: I apologize to the house leader. I was mistaken.

It being seven minutes after ten o'clock the house adjourned, without question put, pursuant to the order of the house passed on August 4.

Question

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

NEWFOUNDLAND—INDUSTRIAL DEVELOPMENT BANK LOANS

Question No. 143—**Mr. Carter:**

1. How many loans have been granted to persons, companies or firms, in Newfoundland, from the industrial development bank, each year since 1950?
2. What is the amount of each loan?

Answer by: **Hon. Donald M. Fleming (Minister of Finance):**

1. 1950, 1; 1951, 1; 1952, 1; 1953, nil; 1954, 1; 1955, 1; 1956, 1; 1957, 2; 1958, 2.

2. It is not in the public interest to disclose this information, which is a matter of customer and bank relationship.

HOUSE OF COMMONS

Tuesday, August 19, 1958

The house met at eleven o'clock.

BANKING AND COMMERCE

Fourth report of standing committee on banking and commerce.—Mr. Cathers.

BUSINESS OF THE HOUSE

MOTION FOR CONSIDERATION OF CERTAIN BILLS LATER THIS DAY

Hon. Howard C. Green (Minister of Public Works): Mr. Speaker, by unanimous consent I move:

That Bill No. S-10, an act to amend the Loan Companies Act, and Bill No. S-11, an act to amend the Trust Companies Act, be considered in committee of the whole later this day and that standing order 20(1) be suspended in relation thereto.

These are the bills which have just been reported back from the committee.

Motion agreed to.

FINANCE

TABLING OF SUPPLY REPORT FOR FISCAL YEAR ENDED MARCH 31, 1958

Hon. Donald M. Fleming (Minister of Finance): Mr. Speaker, I beg leave to table, in English and in French, copies of a report on supply for the fiscal year ended March 31, 1958.

May I say, Mr. Speaker, that in relation to the resolution which stands on the order paper as No. 9, this report on supply will furnish the house with the complete information it requires as to the supply for the fiscal year that ended March 31 last, indicating the estimates and the way in which the amount appropriated was provided, whether by appropriation acts or governor general's warrants. It will be seen on examination that this report, I think, supplies the house with all the information that is required in its approach to resolution No. 9.

Copies of this report on supply will be available to hon. members forthwith at the distribution office, Mr. Speaker.

ADMINISTRATION OF JUSTICE

COLLINS BAY PENITENTIARY—STATEMENT RESPECTING SEGREGATION OF RIOTERS

On the orders of the day:

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, I should like to ask the Minister of Justice if he has any comment to make on a statement reported to have been made by the warden of Collins Bay penitentiary in connection with the riot last Sunday to the effect that he, Mr. Richmond, the warden, denied that any prisoners had been segregated and said he had no idea where justice minister Fulton got the idea that 113 prisoners had been isolated as reported to the house yesterday morning by the Minister of Justice, when he said that 113 inmates were actually segregated as those being involved in the riot.

Hon. E. D. Fulton (Minister of Justice): Yes, Mr. Speaker. The explanation is, I think, that when my remarks of yesterday were quoted to the warden it was implied to him that I had used the word "segregated" in the sense of prisoners who were segregated as punishment. In my statement yesterday I did say that 113 inmates were actually segregated as being involved in the riot. This however referred to the physical separation of those participating in the riot from the rest of the prison population, at the time of the riot. The figure of 113 is the number of inmates who were separated when the shock force entered the grounds of the institution and contained the rioting inmates in one corner of the walled area.

The article in this morning's *Globe and Mail,* however, implies that segregation was used in the sense of continuing segregation. This is not the case. The degree of participation of those involved, and who were segregated in the sense I have just mentioned, will be determined in the investigation that is expected to start tomorrow. Segregation as punishment will be carried out only after the investigation is completed and the guilt of those participating has been determined.

FREIGHT RATES

PROGRESS OF FREIGHT EQUALIZATION INQUIRY

On the orders of the day:

Mr. Hazen Argue (Assiniboia): Can the Minister of Transport say what progress is being made by the board of transport commissioners in its program toward equalization of freight rates in general, and in particular the progress toward equalization of commodity rates? I ask this question because the royal commission made its report as long ago as 1951, and we are anxiously awaiting some further progress.

Inquiries of the Ministry

Hon. George H. Hees (Minister of Transport): I wish to thank the hon. member for Assiniboia for giving me notice of his intention to ask this question. Since the beginning of 1958 the transport board has held hearings on certain commodity rate scales and further hearings are scheduled for this fall. The railways have been required by the board to file certain additional information, and the board is hopeful that substantial progress will be made in the equalization of commodity rates before the end of this year.

Hon. Lionel Chevrier (Laurier): May I ask a supplementary question. When that report is made, will there be other classifications of freight rates to be equalized under the authority of the order in council?

Mr. Hees: I shall speak to the chairman of the board of transport commissioners, Mr. Speaker, and get an exact report for the hon. member.

Mr. Argue: I wonder if the minister could say whether the hearings to which he refers will be held at various places across the country or whether they will be held in Ottawa.

Mr. Hees: I believe the hearings will be held, as usual, across the country, but again I shall speak to the chairman of the board of transport commissioners and get an exact answer for the hon. member tomorrow.

LABOUR CONDITIONS

NON-OPERATING RAILWAY UNIONS—INQUIRY AS TO CONCILIATION BOARD REPORT

On the orders of the day:

Hon. Lionel Chevrier (Laurier): May I ask the Minister of Labour if he can reply to the question I asked yesterday in his absence, and which had to do with whether or not the non-operating unions of the railways or the railways themselves had indicated any acceptance or rejection of the conciliation board report?

Hon. Michael Starr (Minister of Labour): I have had no correspondence or any indication whatever, Mr. Speaker, from either party to the dispute.

POST OFFICE DEPARTMENT

PHILATELIC SOCIETY MEETING—ATTENDANCE OF DEPARTMENTAL OFFICIALS

On the orders of the day:

Mr. H. W. Herridge (Kootenay West): I wish to address a question to the minister responsible for the renaissance of official philatelic art in Canada, the Postmaster General. As the society of philatelic Americans is holding its sixty-fourth annual convention in Montreal on September 18, this being the first convention of this society to be held outside the United States, and in view of the minister's announced policy of philatelic rejuvenation in Canada and search for ideas and inspiration to this end, would the minister inform the house if representatives of his department will be attending this gathering of philatelists?

Hon. W. M. Hamilton (Postmaster General): I want to thank the hon. member for giving me notice of his question. We are happy that recent developments and improvements in our Canadian postal service have caused this organization to come to Canada. I will be opening their meeting myself and will be in contact with them. In addition, one of my senior officials will be present throughout the meetings.

CANADIAN PACIFIC STEAMSHIPS

BRITISH COLUMBIA—SUGGESTED ARBITRATION OF STRIKE

On the orders of the day:

Mr. Frank Howard (Skeena): I have a question which I should like to direct to the Minister of Labour. Could the minister indicate what action has been taken by the three unions on the west coast with respect to the suggestion of the Canadian Pacific that the dispute between its B.C. coast shipping service and the three unions be referred to arbitration?

Hon. Michael Starr (Minister of Labour): I read the article in the newspaper, Mr. Speaker, but I have received no reaction from the unions to that suggestion.

ST. LAWRENCE SEAWAY

WELLAND CANAL—TRANSFER OF CONTROL AND OPERATION TO SEAWAY AUTHORITY

On the orders of the day:

Mr. W. H. McMillan (Welland): I should like to direct a question to the Minister of Transport. I should like to know whether the government has decided to turn over to the St. Lawrence seaway authority control and operation of the Welland ship canal.

Hon. George H. Hees (Minister of Transport): The Welland ship canal will come under the authority of the St. Lawrence seaway authority later this year.

Mr. McMillan: I have a supplementary question. Will that apply to the lands owned by the federal government and held in connection with the canal?

Mr. Hees: I would think so, Mr. Speaker, but I will check with the officials concerned and let the hon. member know.

HOUSE OF COMMONS

STATEMENT ON AVAILABILITY OF NEW "PARLIAMENTARY GUIDE"

On the orders of the day:

Hon. Henri Courtemanche (Secretary of State): In regard to the question asked by the hon. member for Bonavista-Twillingate in the House of Commons on August 13, in connection with the publication of the Parliamentary Guide, may I say that I was in touch with the publisher and was informed that the Parliamentary Guide is issued yearly and that the 1958 copy was issued in February, 1958. This copy does not contain the list of members elected in March, 1958. The 1959 issue of the guide is expected to be printed and issued in December, 1958.

EMERGENCY GOLD MINING ASSISTANCE ACT

AMENDMENTS TO EXTEND APPLICATION AND INCREASE AMOUNT

Hon. Paul Comtois (Minister of Mines and Technical Surveys) moved the third reading of Bill No. C-53, to amend the Emergency Gold Mining Assistance Act.

Motion agreed to and bill read the third time and passed.

BROADCASTING

ESTABLISHMENT OF BOARD OF GOVERNORS—CONTINUANCE OF C.B.C.

The house resumed, from Monday, August 18, consideration in committee of the following resolution—Mr. Nowlan—Mr. Sevigny in the chair:

That it is expedient to introduce a measure to establish a board of broadcast governors to regulate broadcasting in Canada; to provide that the expenditure of the board shall be paid out of money appropriated by parliament therefor and also to provide for the continuance of a corporation known as the Canadian Broadcasting Corporation for the purpose of operating a national broadcasting service in Canada; and to provide further for the payment, remuneration, salaries and fees of the officers and employees thereof.

Mr. Fisher: Mr. Chairman, it was most pleasant to hear the introduction of this resolution by the minister, especially when he used that quotation from what I like to call the professor patron of the Conservative party in Canada, namely Professor Creighton. The group here welcome the legislation, and we are looking forward to the actual bill itself in order to see what its substance will be.

After referring a number of times to the bill as being extremely important, the Leader of the Opposition made the point that his party would like the bill to go to a select committee of the house before being moved through its final stages, to have an examination made there. We are not convinced that that is the right point of view at this particular time. Broadcasting in all its aspects has been very well covered by parliamentary committees and by royal commissions.

We have had a very thorough outline set up for us in this royal commission. One of the key points is that the powers of the board of broadcast governors and the kind of regulation framework that is to be allowed them would need to be known before we really know whether committee work would be useful. Rather than having the bill referred to the committee at this time I think it might be much better to have the bill passed, the board of broadcast governors set up and the board given some opportunity to introduce the regulations that are going to come into effect, because I think the regulations are the key.

Speaking for those in this group, we have been concerned about the war of propaganda carried on for some years against the C.B.C. and for the private interests. I believe all members have received some of the latest proofs of this propaganda war in the form of communications from radio station CHWO at Oakville, Ontario, and the private broadcasters who are at their old game of maligning certain people. I notice here, for instance, a reference to the cabinet secretary, Mr. Bryce, which I can only describe as unfortunate.

This particular kind of propaganda on the part of private broadcasters seems to have been caused by the reactivation of the Canadian radio league or, as it is now known, the Canadian broadcasting league, which has already been sending out literature in connection with what they consider the future Canadian broadcasting set-up should be.

The conclusion I draw from the criticisms of the Oakville station is that it is wrong to have a lobby to protect the C.B.C. but it seems to be all right to have a lobby to protect the private stations. I often wonder whether many people realize how powerful a lobby the private stations have had in this Canada of ours. This is clearly illustrated when one thinks of the Sifton newspaper interests, the Thomson newspaper interests and the daily newspaper interests with all their ramifications. The complaints of the private broadcasters have been brought home very firmly for many years but what happened when the royal commission on broadcasting began to look into the matter? Those who have read any of the publications of Mr. Fowler, the head of that royal commission, will be perfectly aware that this

man is not out to socialize for the sake of socialism; he is not out to keep any national organization going at all. Those who have any doubt as to his devotion to free enterprise should look at what he has written in the past on the combines investigation legislation and its effect on companies.

This gentleman, however, undertook this chore and came up with a report. At the time of his appointment the members of this group vigorously protested, because we thought he was so completely in what we would tend to call the other camp that his conclusions would almost certainly be against the C.B.C. and perhaps for altogether ending the C.B.C.'s existence. Instead we have this report in which we note some very interesting recommendations, and I would like to read one recommendation which I imagine some members will have missed in connection with the private radio stations. This appears at page 144 of the report, and reads as follows:

> —once a licence was granted to a private station operator there was little effective control over the manner in which he used the licence. At all events, there is no record of any licence ever being suspended, revoked or unrenewed on the grounds of a poor performance by the licensee. Since, in human affairs, the continuation of such perfection is unlikely, we recommend that in future the standards of performance of private stations should be more effectively checked, that those who give inadequate public service or shabby performances under their franchises should be warned, and that the licences of those who fail to make substantial improvements after such warnings should be cancelled. To put the matter briefly, we think that the presence of private elements in our broadcasting system should be clearly accepted as valuable and permanent; but that the performance level of private stations should be a high one to justify the grant to them of valuable public rights—higher in fact than it has been, with some notable exceptions, in the past.

I think that puts the point very clearly about which we and many others were so concerned, namely the feeling that the fetters would be completely taken off, where they existed, for the private stations, and that the national network and the national programming of the C.B.C. would go into limbo. It has certainly been a complete and pleasant surprise to many of us to see indications of the way in which the government is moving.

I remember that last year during the election campaign one member of the government was in a certain community, and after his departure radio and television interests in the area were rubbing their hands and saying, "Well, we won't have to worry about the C.B.C. any more. We got the tip that it is going to get the axe." I believe that explains the general reaction of surprise and pleasure on the part of both the official opposition and ourselves at the direction in which the government is moving.

One criticism of the Fowler report which contained some accurate observations was that written by Mr. I. Norman Smith in the Ottawa *Journal* of July 8, 1958. He dealt with the C.B.C. leadership and pointed out that the recommended board of broadcast governors would set up a chairman who would not have continuing experience; that is to say, the longest term he would probably have would be three years. Mr. Smith also raised very strongly another significant question. It is recommended he would work two days a week, and Mr. Smith questioned whether a part-time chairman would be really able to carry out the duties of supervising such a sprawling and many-faceted operation as broadcasting in Canada. Mr. Smith went on to draw the moral that probably this was the very question which led to the resignation of Mr. Dunton. He was speculating, of course, and there is no reason to believe that is so, but in this editorial he went on to say:

> —it seems to me the uncertainty facing C.B.C. probably was a factor in his resignation. And I am certain that that uncertainty will stand in the way of finding the best possible man as his successor.
>
> The Fowler report was full of good analysis and suggestion, but it came up with an utterly cockeyed recommendation as to the leadership of Canadian radio. The Conservative government should lose no time in disowning that particular recommendation of a commission established by its Liberal predecessors.

Well, we will wait and see if the government is going to disown that recommendation, but it does raise a point. We need perhaps more continuity in the board of broadcast governors and more full time leadership, let us say, from the chairman of that board than is indicated in the sample act that has been presented by the commission. I hope the government is giving serious consideration to this question.

One phase of the matter our group is hoping will be cleared up in the future is the question of political broadcasts. I should simply like to review the situation at the present time as far as the C.B.C. is concerned. To me the national aspect of the C.B.C. and its political broadcasts are among the more important educational features and functions carried out by broadcasting. It is my contention that the C.B.C. has not shown a great deal of leadership in this field. Its impartiality has led it to become much more dull and dreary than is necessary. I should like to read a paragraph from an interesting article which sets out some comments on the matter:

> To begin with, during election periods, free political time is divided between the parties, and programs which at other times bring together

opposing points of view are eliminated. Normally the C.B.C. discussion programs, press conferences, etc., are very effective, and often they reveal real differences between party points of view. Certainly they are by far the most interesting type of political broadcast and frequently the discussion they stir up continues long after particular shows. But not only does the C.B.C. cancel its most effective political education programs during election time, it also takes special pains to ensure that the single-party election broadcasts will be as uninspiring as possible. It prohibits, specifically, "all political broadcasts incorporating any device which would be considered theatrical, such as dramatic skits."

I do not know, but I thought we did have a little bit of theatre and drama in the last election campaign which the C.B.C. did not control, but perhaps that may all have been to the good. The article goes on to say:

Furthermore, the use of the following is also prohibited: film clips, slides, music, animation, cartoons and still photographs (unless they show only "individual persons" who are "members of the party sponsoring the broadcast"). If these restrictions were imposed on public affairs broadcasts between elections there would probably be a mass suicide of C.B.C. talks producers within a month.

Mr. Pickersgill: Mr. Chairman, I wonder if the hon. gentleman would identify the article for the record. He may have done so but I failed to catch it.

Mr. Fisher: The article is by Professor Kenneth McNaught. It is entitled "The Failure of Television in Politics" and appeared in the August 1958 issue of the *Canadian Forum*. This may appear to be unrelated to the resolution but I bring it up for the following reason. The C.B.C. has carried out its function in this respect but many have been critical of its political broadcasts. I certainly have been critical of it as far as its regulatory functions and political broadcasts are concerned. As the Fowler report pointed out, the corporation has never revoked a licence and has never put its foot down with respect to regulations concerning private stations.

We hope two things will come out of the new organization. We hope the C.B.C. will be given encouragement, being one step further removed from popular political criticism in the sense that it is now to be a bit more free in its programming. We also hope the board of broadcast governors will really fill the regulatory role the C.B.C. failed to fill in going after private stations for their level of performance and the amount of commercials they carry in relation to program time. If these two things develop from this new establishment I believe this government will merit the very strong approval of the Canadian people.

One of the keys to the future will be how the regulations will apply to the private stations with respect to their requirement to take network programs, and how much they will be allowed to import from other countries. The Leader of the Opposition made reference to this last night. If you have followed the proposals of the C.A.R.T.B. through the years you will know that in essence that is what they are after. They are seeking freedom from anything that prohibits them from making more money.

The Leader of the Opposition said there is nothing wrong with that. I suggest there could be something very much wrong with this if outright commercialism and a materialistic approach in this regard leads to an abuse or almost a sabotage of a valuable public service. If the board of governors in its regulations which will be developed under this legislation can bring about a degree of real control and a certain amount of inspiration, I believe this rather nasty and puling controversy that has gone on for 15 or 20 years between private broadcasting interests on the one side and the C.B.C. on the other will just disappear. In that regard I hope the C.A.R.T.B. can give some kind of leadership to the private stations.

Those of us who have listened to radio across this country know that in some areas you get a concentration of excellent radio and television service. I think of how fortunate Winnipeg is as far as its radio reception is concerned. I doubt if you could find a place in the country where radio covers events more thoroughly or in a more stimulating fashion; yet in other places devoid of the stimulation of competition radio seems to vegetate and produce nothing but programs featuring the fifty-ninth and sixtieth most popular records on the hit parade and a succession of rather jazzy commercials.

The focus of our discussion is not really before us at present, however, and we will be better able to refer to these matters when we have seen the bill and what it spells out. After the bill comes down, if it proves to be as satisfactory as we think it is going to be we will be eager to learn who will be the personnel of the board of broadcast governors, and we trust they will establish regulations that will really mean something and will carry out most of the recommendations of the Fowler commission.

The one point that has not been mentioned to any great extent is the question of the financing of the C.B.C. We know that is perhaps the toughest of all the problems, because it is the place where the corporation has seemed to be most vulnerable to every person. The news that a certain program cost $15,000 or $50,000 to produce always seems staggering; but when you see in the Fowler commission how this is related to

an estimated program based upon $15 a year for a television set, or you see it in terms of 4 cents per family, it does not seem nearly so bad. When you see the concentration of criticism—and we have had those enemies of the C.B.C. firing at it in all its aspects—it makes one conscious of how tough it is going to be to build up a financing system for the corporation and for the board of broadcast governors that will have general approval and not be sniped at all the time.

It was very noticeable that when the last mimeographed report of the C.B.C. came out newspapers across the country were throwing darts at the corporation for its lavishness and tremendous expenditures. Well, the Fowler commission, and I hope this government, recognize that you cannot have good television programming unless you do spend money. In essence, I do not think Canadians are as cheap as some of the public comments or some of the public men and the newpapermen in the country. I think we are prepared to pay for good programming, and we trust that the financing set-up will be a long-term one. We hope the minister does what he promised earlier, namely get rid of the excise tax on tubes. We do not know what to suggest in connection with the question of licence fees, but licence fees do not seem feasible at the present time. We shall look very closely at the particular point of financing.

The Chairman: Shall the resolution carry?

Mr. Fraser: I would like to say one word. Every Saturday evening the C.B.C. puts on a wrestling program from Maple Leaf Gardens and from other places. I like to watch these matches and I know thousands across Canada like to watch them because clean wrestling is really worth while. In many instances when a winner is declared you see the winner go up and kick the man who is down, or the loser will kick the winner. I think some of this rough stuff should be eliminated from television. I do not think it is good for our young people. I know of one instance where a boy in high school was kicking another boy, and he was upbraided by the teacher. He said, "I saw it on television".

The Chairman: I regret to interrupt the hon. member, but I do not think his comments are relevant to the resolution now under discussion. The hon. member is discussing the content of the programs of the C.B.C. which has nothing to do with the present resolution. I must inform the hon. member that his comments are out of order.

Mr. Fraser: I quite agree with you, Mr. Chairman, but I wanted to make them.

[Mr. Fisher.]

Mr. Godin: Mr. Chairman, if I rise it is only for a moment to speak more on a point of order than on the subject matter of the resolution itself. For two days we have been discussing a certain resolution placed before the house. Certain members have made reference to further study of a bill which so far has only been indicated by the Minister of National Revenue. Nowhere do we find that the government is under the obligation to present a bill to implement what is contained in the resolution. Yesterday the Minister of National Revenue made reference to the fact that a bill would be presented. He said, as reported at page 3749 of *Hansard*:

> I trust, Mr. Chairman, that the committee will see fit to pass this resolution at as early a date as possible, so that the bill can be brought down and the details of the legislation considered by hon. members.

Other hon. members have made reference to a future bill, but I feel that the matter of legislation concerning broadcasting in Canada is so important that it should be introduced properly in the house. Possibly everyone in the house should rely on the words of the Minister of National Revenue, but on other occasions in the house we have seen contradictions as to what was the obligation of the government under certain circumstances. It comes to mind that a short while ago certain members of the cabinet felt that the government should not be in a position to decide on the NORAD agreement, and a day later we found that the government—

Mr. Fleming (Eglinton): Order.

Mr. McIlraith: He is in order.

The Chairman: I must ask the hon. member to relate his remarks to the present resolution.

Mr. Godin: Mr. Chairman, on the point of order raised by the Minister of Finance, I feel I am now discussing the propriety of amending the resolution so it will take care of a problem. At times we are informed that the house will have something to say about certain things, and at other times that the consent of the house will not be required. That is why I feel it is pertinent to recall those instances when that problem arose. It was only for that purpose that I referred to the NORAD agreement which was dealt with in this house some time ago. It relates to the importance of this measure.

I further realize that it is essential today for the present government and the Minister of National Revenue to have the benefit of the work done in the past by the previous government, and especially the Fowler report. It seems to me everyone should agree

that this resolution should refer to legislation to be placed before the house. For my part, I intend to rely on the bill which will be presented so that I may further study this very important Canadian problem. Therefore, Mr. Chairman, I would like to move an amendment to the resolution as follows:

That the resolution be amended by inserting the words: "to introduce a measure" after the word "expedient" and before the word "to" where they appear in the first line thereof.

The Chairman: Is it the pleasure of the house to adopt the motion?

Mr. Nowlan: Of course, Mr. Chairman, if they want to waste time by moving an amendment such as this, I am perfectly happy to accept it because it is obvious—

Mr. McIlraith: Mr. Chairman, I want to address myself to the minister's remarks. The minister has come before this house asking it to pass a resolution to give the government leave to introduce a bill on one of the very important subjects affecting our Canadian life. Through an error or an oversight he has in fact worded his resolution so that it approves the action he proposes to take without obligating himself in any way to disclose to the house what that action is. His own speech shows the truth of what I am saying now.

When an hon. member follows the rules and procedure of the house and moves a proper motion in the manner in which it has been done today, the minister has no right to make the kind of remarks he has made. The amendment is wholly in order. It is a proper motion, and when the omission was drawn to the minister's attention last night I was surprised that he did not undertake immediately to introduce an amendment himself to deal with the matter properly. You will see, Mr. Chairman, that if the resolution is passed as it is now worded the house will be approving the establishment of a board of broadcast governors, and if you read the minister's speech that is not what he asked for at all. He asked for a bill to establish a board of broadcast governors.

Mr. Nowlan: How would you do it without a bill? Can the hon. member tell me that?

Mr. McIlraith: Yes, I can tell the minister, but I do not know that I should take the time to do so. The minister should have followed the precedents of the House of Commons and not lost his temper and made the nasty remarks he has made about a member who has acted properly in moving the amendment.

Mr. Fleming (Eglinton): He did not lose his temper at all.

Mr. Pearson: If the minister feels that this is of no importance at all I suggest that he look at *Routine Proceedings and Orders of the Day* for this day. He will find that there are three other resolutions there and that in every case they begin with the words, "resolved, that it is expedient to introduce a measure." All we are asking the minister to do is to follow the normal procedure. Obviously this is an oversight resulting from some sloppy work on somebody's part, and the minister might well make the correction graciously, as he so often does.

Mr. Nowlan: The resolution was drafted by the Department of Justice and is perfectly in order and in keeping with many other resolutions which have been brought before the house. It is true that on the order paper there are other resolutions with the words "to introduce a measure" but in those cases the purpose is to amend something. Here the purpose is to create something and the preliminary words, "to introduce a measure", are not necessary according to the best legal advice available to the government.

However, it is obviously a question of tweedledee and tweedledum, and I do not propose to debate it longer. If I showed any temper I apologize to the committee, but the matter involved something that I felt was so utterly wasteful of time that it was hardly worth mentioning, because obviously we are going to introduce a bill as soon as the resolution is passed. I am very happy to accept the amendment if the committee thinks it advisable.

Mr. Pickersgill: The minister has said that this resolution was drafted by the Department of Justice. Can the minister tell me when the Department of Justice began drafting these resolutions? In my rather long experience they were not drafted by the Department of Justice.

Mr. Nowlan: I could not answer that question correctly, but I know that in this instance it was drafted there.

The Chairman: Is it the pleasure of the house to adopt the motion?

Mr. Pickersgill: The amendment.

The Chairman: Is it the pleasure of the house to adopt the amendment to the resolution?

Amendment agreed to.

The Chairman: Shall the resolution as amended carry?

Mr. Pickersgill: Mr. Chairman, if I did not know the hon. member for Mackenzie River so well my feelings might have been hurt by his getting up to leave at the very moment I rose to make a few observations on this resolution. However, the hon. member for Mackenzie River and I understand each other

and I can understand, as he knows very well what I intend to say, why he does not feel it necessary to remain.

About a month ago when the Leader of the Opposition drew the attention of parliament in a forceful manner to the delay which had taken place in bringing down this very important legislative proposal which we at last have before us, he indicated that this was a matter which should not be rushed through the house at the end of the session. It is true, as the hon. member for Port Arthur has pointed out, that this matter was very carefully considered by a royal commission which made what we on this side of the house regard as an excellent report, but from the indications in the resolution before us the government intends to deviate from the recommendations of that report in one very important particular, and that with respect to the financing of the C.B.C. I intend to address myself particularly to that point.

Before I do so I should like to recall to the committee the two suggestions made by the Leader of the Opposition last evening with respect to dealing with this matter. The first suggestion was that the bill should be given first reading, allowed to stand on the order paper, and then be reintroduced at the next session of parliament so the hundreds of thousands of Canadians who are actively interested in what legislation of this kind will effect will have an opportunity to see what is proposed and study the matter and so that we, the elected representatives of the people, and the members of the other place who also have a responsibility in this matter, will have an adequate opportunity to see that all important points of view on a subject of such great interest to so many Canadians are adequately expressed in parliament.

Even if the most pessimistic views as to the length of the session should turn out to be right, I do not believe that even in that case there will be the kind of opportunity and atmosphere in which such legislation should be considered by parliament; because I think all of us from my observation—perhaps I should speak only for myself—are getting a bit weary, and there are many other urgent matters coming before parliament toward the end of the session. Having in mind the hours we sit in the house, I cannot imagine that it would be possible to have committee meetings that would not conflict with the meetings of the house, and that would put some members who are greatly interested in this matter under the embarrassment of having to choose between two duties that we consider equally urgent.

While the rest of the speech of the hon. member for Port Arthur was admirable, I certainly do not feel I could agree with his suggestion that there is no need to have the proposed bill go to a select committee both here and in the other place, if the ladies and gentlemen of the other place want to have such a committee. What the government is proposing is to alter in a very fundamental respect—there is one respect, at any rate, with which I think we agree—the whole structure of broadcasting in this country. This is a very important decision we are being asked to make.

My own preference would be for the first suggestion made by the Leader of the Opposition, that we should have first reading of the bill so the public will have a chance to see precisely what is in the government's mind, that the Minister of Finance should then bring in a supplementary estimate covering a period of one more year, as was done by his predecessor in 1957, and that at the next session of parliament the government, having its legislation ready, could introduce it almost at the beginning of the session and the committee could be set up and start to meet in the early stages of the session so it would not conflict with other matters. There would then be a better opportunity for really orderly consideration of this very important measure.

On the other hand, if the government are quite determined to proceed with this measure at this session I recognize, of course, that that is their right. While I would prefer they would not do it I think, so far as the official opposition is concerned, as the Leader of the Opposition indicated last night we would want to insist that the government do what they promised in the speech from the throne, that is set up a select committee and send this measure to that select committee. However, if this were done we would have to make sure the meetings of that committee were so arranged that it would be possible for those of us who want to attend to be present at those meetings without neglecting what we regard as the urgent business of our constituents here in this place.

Having said that, sir, I should like to make one or two observations about what I hope will be in the bill. I agree with the hon. member for Port Arthur that something should be done about political broadcasting. I have had quite a lot of experience in the negotiations that have gone on in recent years, and I have thought for a long time that it was a very disagreeable and very unfortunate duty that was imposed upon the Canadian Broadcasting Corporation by the existing legislation.

In so far as I am a member of the Liberal party and I have to take responsibility for it being there,—of course it was put there long before my time—I am quite willing to take that responsibility. However, I think it is unfortunate that the law as it now stands puts

the responsibility on the Canadian Broadcasting Corporation for apportioning the time for political broadcasting. I can well understand why the responsibility was put on the corporation in 1936, but I think events have shown that this is not a proper function of the broadcasting corporation.

I would hope the government, in drafting this legislation, would not impose this obligation on the board of broadcast governors, because of course, it will not be a function of the corporation in any event in the future. I would hope that we would follow in this parliament the precedent of Westminster, which we do when we have no other in connection with other matters, and that this matter will, in future, be settled by parliament itself. It does seem to me it is putting this organization, which ought to be completely independent, in a very invidious position to ask it to make decisions on this matter. No political party is ever going to be satisfied with the decisions that are made.

It seems to me it is just subjecting this body to unnecessary feeling and criticism. It is a duty for which, if they are chosen for the other function for which we want them to be chosen, they are not apt to be particularly qualified.

Now, that brings me to the next point I want to make. These points are to some extent, I admit, a repetition though in quite different language of some of the things I said on the amendment to the motion to go into supply, so I shall make them very briefly. I do say that the most important of all considerations which should be borne in mind by the government in connection with this legislation is to put every safeguard which it is possible to conceive into this legislation to make sure that the board of broadcast governors will be completely independent of the government and also of the opposition. In other words, we should ensure that this body has control of broadcasting.

It seems to me that the analogy I made the other day is a sound one, the analogy with the courts. We want this body of broadcast governors which is to control the exercise of the right of freedom of speech in this country, in what is the most important and influential of all media for the exercise of that right, to be free from any control by the occupants of the treasury benches, whoever they may be, or of any other political party. The only way we can do that, of course, is to make quite sure we appoint people with sufficient independence of character that they will not yield to any kind of pressure.

It was maintained by the Prime Minister in another debate and in another parliament that one way of achieving this was by denying to the government and to members of the government, even in a private capacity, the right to make any representations about this matter. I feel that is the wrong way of going about this. We do not deny the government access to the courts, and I do not think the government should be denied the opportunity to make representations about broadcasting any more than the members of the opposition should be. I believe any citizen should be quite free to make representations. We should have the kind of board and the kind of set-up which will make it possible for the Prime Minister, if he does not like a program, to say so publicly without anyone suspecting that he is trying improperly to influence the course of action of that board. It does happen that we have prime ministers from time to time who have good taste and good judgment and who, like the rest of us who are citizens of the country, should be free in a matter of this kind to express their views.

Now, that is a very different thing from exercising any kind of pressure, proper or improper. I am going to put forward what is not a new idea with me, and it is not one I am putting forward on behalf of the Liberal party. Here I am speaking as a private member of parliament putting forward an idea of my own. I put this idea forward to some of my former colleagues, but I did not succeed in persuading them.

Mr. Fleming (Eglinton): It must be a good one.

Mr. Pickersgill: It is a very good one, and perhaps I will be more successful in persuading the hon. gentlemen opposite who, as we all know, are so open-minded and who have so notably changed so many of their ideas since they were on this side of the house. It did seem to me that one way in which it might be possible to get a balance on this board of broadcast governors, a continuity which would go on regardless of changes in government, would be to provide that a substantial majority of them would be nominated by the prime minister, and that a minority of them, but a sufficient number to have some influence, would be nominated by the leader of the opposition of the day.

Since the purpose is, as the minister so well stated, to make this body responsible directly to parliament and not to the government, and to remove any suggestion that there might be any political pressure from anywhere, I put this idea forward. Frankly, sir, I do not expect that it will be accepted, but I put it forward as an honest contribution to the solution of what is a very difficult problem. I know the minister appreciates that it is a very difficult problem.

I do not believe I would be breaking any confidences if I said there are times when ministers, and I suppose this is true of the present occupants of the treasury benches as it was of others, get very indignant about what is done by the broadcasting corporation. They want to do something about it. The minister who reports to parliament is sometimes under some pressure from his colleagues to do something about it. Some of them are quite indignant when he is not able to soothe their ruffled dignity in certain instances.

As I say, this is something that is sufficiently well known that it does not need any underlining. The problem, however, is a very serious one. I am very glad that the present minister is in the position he is now because I am quite confident that he, like his predecessor, is not easily pushed around. I think the present minister has a conception of the importance—partly because he belongs to the profession to which he belongs, and partly because of his temperament—of having this body independent of the government and of any possibility of pressure from the government.

All of us who are in parliament have lived in a world in which we have seen what has happened to countries where broadcasting is the instrument of government. It is almost 20 years since the free world engaged in what up to that time was the worst and most terrible conflict in history against a country the majority of whose people, I am convinced, did not want to have a war but who had been subject to propaganda by a government that had complete control of the radio and the other facilities for the expression of views in that country. Much more than half of the world we live in is controlled by governments that also control these powerful means of influencing public opinion.

The Americans, of course, approach this matter in a different way. They say the government must not own any of these stations and must not have anything to do with broadcasting, that it must be left entirely to private enterprise. In that way they feel they will be protected from any governmental propaganda through radio. We cannot use that method in Canada or at least no government has thought that was possible since the days when the Aird commission was appointed. I am glad to see—as I said, this is one of the cases where I think Mr. Bennett was right—that the present administration seems to be following that line. However, I think the government should and will want to seize every possible method ensuring that this important board is given the degree of independence that it must have

It seems to me that degree of independence will depend upon two things. It will depend upon the character and upon the tenure of the appointees.

I am inclined to agree with the criticism by Mr. I. Norman Smith to which the hon. member for Port Arthur referred. I must say it was one of the few things in the Fowler report about which I had grave reservations. I refer to the proposed shortness of tenure of the chairman of the board. I know there is a problem there. I know that it is not easy of solution. However, it is a problem that perhaps we should not discuss very much until we see what conclusion the government has reached, because otherwise we are merely being rather speculative. Nevertheless, it is a problem of the greatest possible magnitude. As everyone who has commented on Mr. Dunton's retirement has pointed out, upon the chairman will rest the prime responsibility for ensuring in the future what we have had in the past under the Canadian Broadcasting Corporation under Mr. Dunton, namely a board that could not be pushed around by anybody. That is what we want.

But there is another thing that is equally important. We do not want a board of broadcast governors who have nothing to govern except the private stations. The way in which the Canadian Broadcasting Corporation will be financed is just as important to the assurance of this independent and effective national system as is the independence of the broadcast governors. That consideration is what disturbs me greatly over the resolution introduced by the minister. I refer to the fact that it makes no provision, and indicates that no provision will be made in the legislation, for anything except the salaries and other remuneration of the officers and employees of the Canadian Broadcasting Corporation. The scheme for financing the activities of the corporation is something else again, of which up until now we have been told nothing precise.

Before the minister asks us to agree to this resolution I feel that he should indicate the scheme of financing the government is proposing to carry out. In doing so I hope he will make it very clear that it is not to be based upon annual appropriations. Of all the methods by which a government may exercise control—and in most cases we expect the government to exercise control; it is its duty; that is what it is elected for in most cases—the best way and most effective way of controlling the operations of a government department is through the financial control. But that is precisely what we do not want in this field if we are going to ensure for the corporation that independence of the

government which I have suggested is fundamental and which we all want.

I say that for this reason. If the Canadian Broadcasting Corporation is obliged to go, as government departments do, almost on bended knee to the Minister of Finance once a year in order to justify everything they have done propriation should be increased or should be and attempt to persuade him that their apchanged, insensibly and insidiously there will be an almost irresistible temptation—I do not say that it will be yielded to—to try to please the Minister of Finance.

In view particularly of some of the views expressed by the Minister of Finance when he enjoyed the same kind of freedom to express his own views as I am enjoying at the moment, I do not think we on this side of the house would have the same confidence in having the broadcasting of this country subject to the Minister of Finance that we would in having as its trustee, as its spokesman here in this house, the Minister of National Revenue.

I say that without meaning any disrespect whatsoever for the Minister of Finance. As I say, he is perfectly entitled to his opinions; but those opinions which he expressed in the house in the past were highly unfavourable to the national system of broadcasting. It is possible, of course, that Saul has been turned into Paul and that the minister has seen the light on the road to Damascus. As a matter of fact the minister seems to have seen a great many lights since he moved over to the government side. I think he has learned a few things. However, some of us are bound to remain sceptical.

As I said the other day, Mr. Chairman, and I repeat it, I feel that in some fashion some other financial provision should be made for national broadcasting for a period of years of fixed duration on a formula that cannot be changed by the government from year to year, and that a minimum budget should be assured to the C.B.C. so they will know what they can count on.

I thought the Leader of the Opposition made a very constructive suggestion last night when he suggested there also ought to be a maximum beyond which they would know they could not go. I know what I found in my experience as the minister in charge of the film board, if I dare to use an analogy in order to illustrate my point. When I was in charge of the film board an upper limit was put upon their appropriation and they were told not to expect any more for a period of years. That procedure had a most salutary effect on the board, which was already very well run. Having an upper limit as well as a lower limit imposes or forces a sense of financial responsibility upon any organization. They are obliged to make choices. Naturally if we have good people in the C.B.C.—and good and zealous people we have —they are going to want to put on good programs. They are going to want to do everything in the best possible way. We do not want any other kind of people.

But there is a limit beyond which I do not think the taxpayers want to go, and it seems to me that it would be very desirable to follow the suggestion of the Leader of the Opposition and have both a minimum and a maximum. The great thing is that there should be certainty, and that the corporation should not have to operate in the fear that if it displeased the majority in this house or, even more serious, if it displeased the government, it might have part of its income lopped off. What would be still more serious would be that if it pleased the government it might get an extra allotment, because that is perhaps the most insidious of all the dangers.

There are many other things I would like to say on the subject, but I believe those are the salient points. I do not intend to repeat my remarks of the other night to the effect that the functions of this board of broadcast governors will be most difficult ones, especially in so far as they have to do with the issuing of private licences. That aspect of the matter was dealt with by the hon. member for Port Arthur. I think the two points I raised are of even greater importance, namely the assurance of the complete independence of the board and the assurance to the C.B.C. of a financial basis upon which it can count and with which it can plan over the years, which will make certain that it will not be subject to any kind of insidious pressure with respect to the getting of appropriations.

The Chairman: Shall the resolution carry?

Mr. Pickersgill: Surely, Mr. Chairman—has the minister nothing to say?

Mr. Nowlan: Since the hon. member for Bonavista-Twillingate has asked me whether I am going to speak, I will say that he has been most helpful and that I certainly appreciate the tone of the comments made in this debate. I do not think there is anything I can say or do at this time which would in any way assist the hon. member for Bonavista-Twillingate.

He has raised two main problems, one as to the personnel, the integrity and the independence of the board of broadcast governors. Obviously this cannot be spelled out in legislation. You could have the most drastically worded legislation in the world, but if the government wants to appoint weak men or if it makes a mistake and thinks it is appointing strong men but it turns out that

they are weak, there is nothing in legislation which can prevent that. You have to leave that to experience and to the best judgment and the best intention of the government or from whatever source the recommendations may come. That source might perchance be the Leader of the Opposition, and even he might make a mistake in making a recommendation as to the personnel of this board, as might the Minister of National Revenue or the Prime Minister.

In so far as the financing is concerned, I do not think it is advisable for me to go into the details of the bill at this time. The bill is available; I am not sure that we have 265 copies at the moment, but I know 100 copies were provided this morning for immediate distribution and the rest will be distributed within an hour or two if this has not already been done. It will be much easier to deal with this matter when hon. members have seen the bill. I can tell the hon. member however, in fairness to him, that there is no long-term financial program set out in the bill, yet I think there is a very reasonable approach thereto. It is not entirely a part-time or catch as catch can method of obtaining appropriations from parliament, and I think the best way to get these questions answered is to wait for the bill to be distributed so that all hon. members of the house may study it and then raise their questions.

A question was raised last night about sending this bill to committee, and there is no doubt that we gave an undertaking that this matter should go to the committee. If the house desires it, therefore, it shall go to committee; the commitment was made. On the other hand, I would like to have the reactions of hon. members to the bill after they have seen it and considered all its aspects so that the bill may be discussed informally, and again formally, whenever it is taken up, which may possibly be tomorrow if consent is given or, if not, next week. In any event, I hope the committee is now willing to pass the resolution. The bill will be made available immediately thereafter.

Mr. Pickersgill: There is one question of a purely factual nature which I would like to raise. Does the bill include a financial scheme?

Mr. Nowlan: Mr. Chairman, I do not know how you spell out a scheme, but it includes a plan of financing, yes.

Mr. Pickersgill: Thanks.

Mr. Nowlan: The bill includes practically every matter to which reference has been made during this debate. Perhaps these matters have not in all respects been dealt with in a way satisfactory to some members or in a way with which every member will be in complete agreement, but all the various problems and matters raised so far during this debate have been covered, or at least an attempt has been made to cover them, in the bill which is ready for distribution.

Resolution reported and concurred in.

Mr. Nowlan thereupon moved for leave to introduce Bill No. C-55, respecting broadcasting.

Motion agreed to and bill read the first time.

FINANCIAL ADMINISTRATION ACT

AMENDMENTS TO AUTHORIZE DELETION OF CERTAIN ACCOUNTS, CLARIFY ISSUE OF GOVERNOR GENERAL'S WARRANTS, ETC.

Hon. Donald M. Fleming (Minister of Finance) moved the second reading of Bill No. C-43, to amend the Financial Administration Act.

Mr. Benidickson: Is the minister going to make a statement?

Mr. Fleming (Eglinton): No, Mr. Chairman, I had not intended to make a statement on this motion for second reading of the bill. At the resolution stage preceding the bill I made an extended statement on the nature and scope of the bill. That statement is to be found in *Hansard* for July 29 last, beginning at page 2823, and I think I can add nothing useful to that statement at the present time. The bill is quite short, and its objects were clearly set forth in the statement I made on July 29. Any questions which arise could, I think, be more usefully dealt with at the committee stage.

Mr. W. M. Benidickson (Kenora-Rainy River): Mr. Speaker, as the minister has stated, the details with respect to the purposes of this bill were given by him on July 29. On that occasion I also had some remarks to make with respect to the bill and as I said before it is quite obvious to me, as I am sure it is obvious to a great number of the members of this house, that this bill, coming to us at this stage of the session, is a very remarkable retreat from the position taken by the Minister of Finance in the last session of the former parliament.

In fact, I find that he has even changed his language with respect to his views on section 28 of the bill, because when we discussed the question of the necessity of bringing before parliament a discussion of governor general's warrants on January 30, January 31 and February 1 of last session, the minister and his colleague the Minister of Justice asserted with great vehemence and

conviction that this was not necessary. They even suggested it was not desirable and when the opposition pointed out that this was quite a departure from previous practice they merely indicated that they were simply bound to report to parliament that an order in council had been passed, as they said had been done, and that there would be no chance whatsoever of debating the item in committee of supply.

We know that parliament was dissolved that day and the argument was not pursued. If parliament had continued I am quite sure the two ministers who in the past had so much to say about parliamentary rights certainly would not have been allowed by the opposition to continue in that stand. I think it is quite obvious that the public themselves were not going to allow them to take that position.

Over the years invariably governor general's warrants had been brought forward subsequently for parliamentary debate. We found it extremely shocking at the time to learn that the Minister of Finance in particular, and also the Minister of Justice, who as I said had so much to say about parliamentary rights, would take that adamant stand and suggest that because the money had been spent there would be no proper opportunity given to discuss the item in committee of supply.

Just to illustrate the kind of somersaulting that has taken place, as the hon. member for Bonavista-Twillingate said in the previous debate and to underscore the difference between the views of my hon. friends when they sat on this side of the house and the views they espouse today, and which can be determined from their actions now that they sit on the government benches, I wish to refer to some statements made by some hon. gentlemen on previous occasions when they sat on this side of the house.

I first wish to refer to the strong language used by the present Minister of Justice in 1949 when referring to the rights of parliament to discuss any item that involved expenditure. We were discussing the Canadian Commercial Corporation on March 23, 1949, and as reported at page 1905 of *Hansard* of that date the hon. gentleman had this to say:

> If contracts can be financed and deliveries obtained merely by descending on the consolidated revenue fund without the specific authority of this house, then certainly such operations could be continued, as long as there was money in the fund, without coming to parliament. This is one more stage in the progressive loss by this house of its control over the expenditures made by the executive.

I also remind hon. gentlemen opposite that when some direction was proposed to be placed in the hands of the Postmaster General in 1947, the present Prime Minister with his usual eloquence used some extremely stark language in describing his views on the subject. I shall not read the lengthy speech he made, but he concluded with the following words that may be found at page 357 of *Hansard* of February 12, 1947:

> I should like to hear the Postmaster General, with his penchant for criticism, on this side of the house if any one of us should ask for power to expend three or four hundred thousand dollars, uncontrolled by parliament. It is a dangerous principle and one which I am sure on consideration he will realize places too great power in the hands of any minister.

In April 1949 when the present Minister of Finance was sitting in opposition he was concerned about the possible dissolution of this house and a forthcoming election. He expressed concern about the government of that day exercising certain rights as are provided by the Financial Administration Act to make expenditures by governor general's warrants. He argued that the house should remain in session until the estimates of that day were passed and, as reported at page 2697 of *Hansard* of April 28, 1949, he said:

> I submit that there is one responsibility, perhaps paramount to all others, which a free parliament cannot lightly reject. The control of parliament over the raising of money and over the expenditure of money has been historically the means by which parliament has exercised its control over the executive branch of the government. It was when parliament in days gone by acquired the exclusive right to decide how money should be raised and how money shall be spent that parliament won its conflict with monarchical power; and finally when parliament won that exclusive right, it established our present constitutional, parliamentary form of government on a secure foundation. Any departure from that principle of responsibility is a departure that will be taken with grave risk to our whole basis of government.

What a difference there is in the attitude revealed by those words and the attitude adopted by the minister last session, when he indicated that as the money had been spent there was no purpose in presenting the item to parliament. He suggested that simply advertising the matter in the *Canada Gazette* and tabling the report at the opening of parliament was adequate and parliamentary debate would be stifled, notwithstanding the fact that over the years an item had always been placed in the estimates in subsequent sessions to enable hon. members of this house to debate it in committee of supply.

I realize there were no governor general's warrants asked for by the previous administration after the time the Financial Administration Act was amended in 1951. The precedents that exist of course existed prior to the enactment of section 28 in the form in which we have it today. However, I looked up the debates of the public accounts

committee of 1951, because it is that committee that is chiefly and zealously concerned about our rights in committee of supply. So there will be no doubt that this was under consideration at that time I want to draw the attention of hon. members of the house to pages 70 and 71 of the minutes of proceedings of the public accounts committee. The witness before the committee on that occasion was the then deputy minister of finance, Dr. Clark. He was being questioned by the then financial critic of the official opposition of that day, the then private hon. member for Greenwood, the present Minister without Portfolio (Mr. Macdonnell). This is the only questioning I could find recorded in those minutes with respect to section 28 but it leaves no doubt whatever that there was no thought that the passage of this new statute would in any way alter the historical practice of bringing to the committee of supply and drawing its attention to, with an opportunity for debate, items relating to governor general's warrants. The following exchange occurred:

Mr. Macdonnell: This is in the terms of the old section, is it?

Mr. Clark: No, there are three or four sections which have been added. I called attention yesterday to them. No. 3 will require the governor in council to publish the warrant in the *Canada Gazette* within thirty days after the issue of a warrant.

That was new. The present minister of Justice then asked the following question:

Mr. Fulton: Are they automatically reported upon in the public accounts?

Mr. Clark: In the estimates too each year they are brought before parliament—added at the end of the supplementary estimates.

The chairman then inquired if section 28 would carry. The opposition was satisfied that these would come before parliament; that was the extent of the debate on the amendment to section 28 at that time, and it was carried without further discussion.

The Minister of Finance, as he indicated in the debate that took place on February 1, the day the last parliament was dissolved, suggested that this change concerning the matter of publication in the *Canada Gazette* was going to be the extent of his responsibility with respect to governor general's warrants. Hon. members who were not in the house at that time may not be familiar with the fact that there were two governor general's warrants issued after the election of 1957. As I have indicated, this did not please hon. members of this house who were familiar with the practice of this parliament, nor was it satisfactory to people across the country who felt this was indeed a new and drastic departure and something for which the government should be rebuked.

The following is typical of some of the editorial comment that resulted from the decision of the two ministers at that time. The Victoria *Daily Times* on March 6, 1958, had this to say:

It seems incredible, but when the Diefenbaker government was asked, in the closing hours of the last parliament, whether it would submit its warrants to the next parliament it replied that it would not.

This official announcement was made on February 1 by Mr. Davie Fulton, Minister of Justice, and Mr. Donald Fleming, Minister of Finance.

They said the government would adhere strictly and narrowly to the letter of the law. The law does not require the government to do more than publish its warrants in the *Canada Gazette* and this the present government intended to do.

As I say, this was typical of the comment made. I am not going to read other comment in a similar vein, but an election campaign was on. I wonder now whether we would have this legislation if the government had been elected with the present majority in the election of 1957. In any event, an election campaign was on, and the Prime Minister was sensitive to the impropriety of this stand that had been taken by the minister. He announced that if he were prime minister in the new parliament he would reverse this decision, and any warrants that were issued by the existing administration would be submitted to the subsequent session of parliament. This, of course, received a fair amount of favourable comment as the original decision received unfavourable comment. The Halifax *Chronicle-Herald* of April 30 had this to say regarding the Prime Minister's decision:

This is good. The expenditure of public funds through governor general's warrant without subsequent parliamentary approval, as was done early this year, was unprecedented and, for many Canadians who jealously guard parliament's rights, it must have been a bit disturbing. They will now feel better with the knowledge that the manner in which these funds were spent is to be given special scrutiny.

Therefore I say we have this amendment to the Financial Administration Act because the Minister of Finance has retreated from the position he took last session, and because of the commitment of the Prime Minister and the necessity of the Prime Minister to reverse his ministers during the election campaign.

In introducing the resolution the minister is reported at page 2823 of *Hansard* as saying that he felt this amendment had to come forward because the wording of the act, that has remained virtually unchanged since provision for the use of special warrants was made shortly after confederation, has been found in some respects to be lacking in clarity. How different is that face-saving statement made in introducing this legislation from the stand he took on February 1, 1958, as reported at page 4185 of *Hansard*,

when he said this when we were criticizing him for departing from the practice of giving an opportunity in supply for debate on governor general's warrants:

> It is crystal clear that when that governor general's warrant was issued by order in council last summer it had, by the force of a statute, the Financial Administration Act, the quality of an appropriation, an appropriation in that respect having the same legal effect as an appropriation by an item in the appropriation bill passed by this parliament.

I remind the house of the debate in the public accounts committee when the Financial Administration Act was last amended, and the assurance of the deputy minister of finance that there was no intention of changing the practice of bringing those items into the book of estimates.

When we assembled this morning, Mr. Speaker, and before the orders of the day were called, the Minister of Finance tabled a very comprehensive document consisting of 69 pages, with respect to the resolution that also appears on the order paper dealing with the governor general's warrants of 1957-58. This document contains the type of detail that we usually find in our book of estimates. Presumably, probably this afternoon, we are going to be called upon to debate the resolution to which this extensive document relates. I protest, Mr. Speaker, at the lack of consideration of the Minister of Finance in providing this detail at such a late stage in the session.

Mr. Speaker: I thought when the hon. member went on that perhaps he was confusing two debates. We do have the item on the order paper to which he has just referred, and part of what he has already said relates to that item. I would ask him to try to confine himself to the principle of the bill now before us for second reading. He will have an opportunity to deal with the other matter later.

Mr. Benidickson: I shall endeavour to do that. I simply wanted quickly to draw attention to the relationship of the resolution which is to be discussed later and the bill which is before us at the moment. This bill is establishing, in the words of the Minister of Finance, a clear-cut practice with respect to governor general's warrants. As a result, after the passage of this bill there will be presented to us, as authorized in this bill, a resolution with respect to the warrants of 1957.

I simply say that in the previous debate at the resolution stage of this bill, in previous debates this session on the appropriation acts, we have made it very clear that we would not only insist on getting the details of the governor general's warrants and having an opportunity to debate them, but that we felt the minister should indicate to us in detail the breakdown of the $73.6 million which is the difference between the unappropriated items appearing in the book of estimates for 1957-58 and the governor general's warrant of February 7, 1958.

Mr. Fleming (Eglinton): Mr. Speaker, I do not wish to interrupt my hon. friend. I hope we are going to make headway with this bill. But surely his remarks now are remarks which pertain to resolution No. 9 on the order paper today and not to the bill which is before the house now. There will be ample opportunity for my hon. friend to say whatever he wishes, that may be in order, on that resolution, but surely that is the place for such remarks as he is now making.

Mr. Benidickson: I am anticipating. Of course this item is going to be called, and I am indicating to hon. members what a difficult job they are all going to have, as the result of this legislation, in dealing with the resolution that is consequent upon the passage of this bill that is now up for second reading.

Mr. Fleming (Eglinton): It is not consequent upon the present bill at all.

Mr. Benidickson: Mr. Speaker, in view of the importance of this particular legislation I indicated at the resolution stage that I felt it should be considered by the public accounts committee. The previous amendment to the Financial Administration Act was submitted to the public accounts committee as I have indicated. Since the resolution debate of July 29 we have had meetings of the public accounts committee. We had the Auditor General present, and he outlined to us the importance of the historic parliamentary practice of examining expenditures in supply. We discussed to some extent the subject of governor general's warrants and how much more convenient it would have been if this particular statute had been officially before the public accounts committee. There would have been no hold-up in connection with the passage of this bill because, as I say, the debate on the resolution stage took place on July 29, 1958.

The public accounts committee is still sitting. This is August 19 and we are on second reading. The bill should have been studied by the public accounts committee. It could have been reported back to the house within a matter of a few days, but even that opportunity was denied us.

I have no quarrel with respect to the other sections of the bill before us. I simply point out that the chief interest is with

respect to the minister's statement that this amendment is needed to clarify the procedure under which we, in previous years and even this session, have dealt with governor general's warrants. I repeat that the minister did not think there was any need for clarification some time ago. Certainly if one examines the precedents for many years past there was an invariable practice in the house under the previous administration of presenting their warrants for discussion and debate by members of the house, and that could have been done last session.

With respect to those of August, 1957 there was every indication when we passed the Financial Administration Act in 1951 that that practice would not be departed from, and I say that fortunately we are being given this opportunity, which was denied last session, because an election campaign intervened and the present administration was not returned the last time with a substantial majority that would have eliminated the necessity of another election.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. McGee in the chair.

Clause 1 agreed to.

On clause 2—*Payments urgently required.*

Mr. Herridge: Would the minister mind giving the house an illustration of what type of circumstances would require the application of this clause?

Mr. Fleming (Eglinton): Clause 2 has been proposed with a view to modernizing the language of section 28 of the Financial Administration Act. Section 28 has persisted in its present form virtually since confederation. One change that was made when the act was reviewed some five years ago was to provide for the publication in the *Canada Gazette* of the governor general's warrants, "special warrants" as they are called in the section.

The language of section 28, dating back as I have indicated almost to confederation, contemplated that resort would be had to the issue of special warrants in cases where an accident happened to a public work or building when parliament is not in session and an expenditure for the repair or renewal thereof is urgently required, or where any other matter arises when parliament is not in session in respect of which an expenditure not foreseen or provided for by parliament is urgently required for the public good. The section goes on to provide with respect to the second case for the steps that may be taken in such a case where no appropriation has been made by parliament for the situation which has arisen.

In the amendment that is now before the house it is proposed that the language be modernized. Obviously the case that appears in second place in the language of the present act is very much more important and very much more likely to happen than the first one. Nowadays the happening of an accident to a public work or building is not the kind of situation that is most likely to give rise to the need for issuance of governor general's warrants. That dates back to the sort of circumstances that were no doubt in the minds of our predecessors in parliament nearly 90 years ago.

What is proposed now in the amendment is that we put the situation in which governor general's warrants should be used in these terms, "where a payment is urgently required for the public good when parliament is not in session" and no other appropriation is available. In other words, that is the proper ground. It is already provided for in the section, and it is felt that if we put the case in that form we do not need any longer the opening words of the present section 28 in relation to an accident.

My hon. friend asks about the circumstances under which resort might be had to the issuance of a special warrant. I think I can best answer his question by referring to the situation in which the governor in council found himself last August when two warrants were issued. Parliament had made an appropriation in the previous spring, that was exhausted by the beginning of the summer, to provide for the maintenance of Hungarian refugees. We were confronted with a situation in the middle of the summer of 1957 where either we had to recommend to His Excellency the issuance of a special warrant or there just would not have been any money at all to provide food and shelter for these refugees coming into the country. As parliament had not made that provision, and as we felt it our duty to do so, we recommended the issuance of a special warrant and that step was taken.

I do not think I need to go further than that into the history of the issuance of warrants. There have been many warrants issued over the years, but I think I can best answer my hon. friend's question by that concrete example in recent times.

Mr. Pickersgill: I should like to ask the minister one question. The change in this wording will never be used by the present government as an excuse not to repair wharves?

Mr. Fleming (Eglinton): I hope the present government will always exercise sufficient foresight to make adequate provision for the repair of wharves in the normal way in the estimates.

Mr. Pickersgill: That is just what I am afraid of. Wharves sometimes happen to get destroyed when parliament is not in session, and I hope there is no thought that in those circumstances the government would not act.

Clause agreed to.

Clauses 3 and 4 agreed to.

Title agreed to.

Bill reported.

Mr. Speaker: When shall this bill be read the third time? Now, by leave?

Some hon. Members: Agreed.

Mr. Fleming (Eglinton) moved the third reading of the bill.

Motion agreed to and bill read the third time and passed.

At one o'clock the house took recess.

AFTER RECESS

The house resumed at 2.30 p.m.

CUSTOMS TARIFF

Hon. Donald M. Fleming (Minister of Finance) moved the second reading of Bill No. C-50, to amend the Customs Tariff.

Mr. Benidickson: Is the minister going to make any comments about the amendments?

Mr. Fleming (Eglinton): No, that was not my intention. The bill simply follows the resolutions which were before the committee of ways and means on three occasions, and before the committee at some length on August 12 and 13. The bill simply follows verbatim the amendments that were set forth in the resolutions that were reported upon favourably by the committee of ways and means.

Mr. W. M. Benidickson (Kenora-Rainy River): The minister referred to a favourable report from the committee on the resolutions, Mr. Speaker. He, of course, remembers that there was a division in the committee. I am one who does not believe in too much repetition in matters of this kind. The minister and I sat together on the rules committee, and we were somewhat concerned about this kind of thing.

However, at the resolution stage there is an opportunity for general probing, shall I say, on behalf of the opposition, who have not the full information that is naturally available to the administration with respect to legislation for which they have planned and with which they have dealt for some period of time.

I do not want to repeat some of the general assertions I made at the resolution stage. There are some of us who feel very keenly that in the bills that follow budget resolutions there is a tendency which we deplore and which we feel will reduce our general volume of trade by reason of the restrictions and so on that are proposed therein. I was not fully satisfied during the committee stage with the minister's explanation or what I thought was a lack of frankness in describing some of the developments that result from negotiations because of our membership in GATT. I pointed out to the minister, and I do not want to repeat it, that in 1955 and 1956 a very substantial and comprehensive statement was given by the former minister of trade and commerce with respect to the negotiations of consequence relating to Canada that had taken place as a result of the annual conference of countries who belong to this trade association.

I felt the minister gave the impression to the committee during the last stage of this debate that there was nothing obligatory—perhaps there is not anything obligatory—at any stage, but certainly he indicated that it was not even the practice to report anything that was not a new negotiation in relation to our association with these many nations in GATT.

Mr. Fleming (Eglinton): I do not think my hon. friend is correctly stating what I sought to convey to the committee of ways and means. He was asking why a long list had not been set forth in the manner of 1955—

Mr. Benidickson: And 1956.

Mr. Fleming (Eglinton): —and I indicated the reason. I made quite clear also, Mr. Speaker, what were the results of the negotiations that preceded the introduction of the various resolutions respecting the Customs Tariff that were before the committee of ways and means. I stated there had been no change in the United States tariff, but I indicated the numerous changes proposed in the Canadian tariff as the result of our negotiations with the United States on the recommendations that had been made by the tariff board in its various reports. These were fully before the committee of ways and means on August 12 and 13.

Mr. Benidickson: I do not in any way object to the intervention of the minister, although we are on second reading of the bill. If I am inaccurate in any way at any time I want to be corrected. The point I was endeavouring to make was that we did have, in 1955 and in 1956, a general and comprehensive statement from the then minister of trade and commerce, Mr. Howe, with respect not only to the original negotiations, which I thought

were overly emphasized in the committee in our last discussion, but the renegotiations. I have, since that debate, reread *Hansard* for June 14, 1955, page 4751, when Mr. Howe tabled, for the benefit of the house, those documents which I think were very informative and very important to the country at large.

I said in referring to that point when we last discussed this matter, I think on August 13, that I thought the Minister of Finance overly emphasized the necessity of informing parliament about the year's activities with respect to this important trade relationship when he referred to the matter of new negotiations.

In 1955, as found at page 4750 of *Hansard,* the then minister of trade and commerce said he was reporting not only upon the entrance of a new trade partner in the GATT agreement, which was at that time Japan, but that he was in the second place reporting upon the giving of effect to the desire of some other countries to renegotiate certain increases in tariff rates bound under the general agreement; and third, to renegotiate increases in certain Canadian tariff rates which are bound to other countries under the agreement.

The point I want to put before the minister is this. This is a method of operation that I think should be followed by the government. The minister is equally responsible with the Minister of Trade and Commerce for matters of this kind. He indicated that in 1957 he had no report, but he suggested that this was owing to the fact that there were no new negotiations. I believe there were some renegotiations in 1957. I suggest to him that this is a practice he might very properly follow, because there was great value to the businessmen of the country in knowing what its administrators were doing in this important field of trade.

I remind my hon. friend that we heard from some of his colleagues that they intended to be very frank with parliament if they assumed the responsibilities of administration. I recall a very vivid headline in connection with a speech by his colleague the Minister of Transport when he said "We will not be high and mighty like the Liberals; we will inform parliament about everything that goes on". I suggest to him that a pattern was introduced that very well could be followed, namely the pattern introduced by Mr. Howe in 1955 and 1956 after the Geneva conferences, of reporting very fully to the House of Commons. That in turn permits general information to be obtained by the businessmen concerned relating to our important negotiations in this particular field.

In order to indicate, particularly to new members of the house, just how widespread are some of these things, I wish to refer to a newspaper editorial. I confess that this particular reference impressed me because, although I come originally from western Canada and now reside in Ontario, I had not completely realized just how much some trade concession in one place in its quid pro quo affects another part of our very vast land. On August 6, just a few days ago, a most interesting editorial in the Halifax *Chronicle-Herald* commented upon our trade situation. The minister had given an indication that he felt obliged, perhaps owing to some commitments made by the Prime Minister in the election campaign, to revise our commitments under GATT with respect to fruit and vegetable importations, largely those from the United States. May I just very briefly quote from this editorial in the Halifax *Chronicle-Herald* to this effect:

> An agreement made under GATT in 1947 provides Canada with a market quota of 400,000 cattle a year in the United States. It has been a boon to the beef industry of this country. But in that same agreement we had to reciprocate with concessions which included a fixed low tariff on American fresh fruits and vegetables.

Mr. Fleming (Eglinton): Mr. Speaker, I do not know how my hon. friend can use this editorial by way of illustration. There is nothing in this bill that affects the tariff on fresh fruits and vegetables at all. My hon. friend is referring to pending negotiations which were mentioned in the budget speech, but there is nothing in the bill before us that touches that subject whatsoever.

Mr. Benidickson: Mr. Speaker, you will recall that when we were at the resolution stage on the three or four resolutions—I think it was three—that resulted from the budget announcements, we had a division in this house as to relevancy in committee of the whole. There were precedents for and against the decision which was taken by a majority at that time. But I suggest to my hon. friend that he will not likely find precedents for the discussion of an amendment to a budget bill as restrictive as that under discussion at the resolution stage in committee of the whole.

I assure my hon. friend that at this stage of debate in this session I am only going to use this reference as an analogy in order to indicate the importance of the House of Commons getting full information with respect to trade treaty matters that come into the legislation subsequently, as they are coming before us at this stage.

Mr. Speaker: Order. The hon. member who has the floor of course appreciates the fact that this debate is on the second reading of Bill No. C-50 which, when second reading has been disposed of, will go to committee

where an opportunity will be provided to discuss the many details of the bill. So far as there is any principle involved in this amendment to the customs tariff, it should be the subject of our debate at this stage rather than specific items in the bill or matters extraneous to the bill. It perhaps is not easy to define the principle of a bill which is made up of a great many individual items, but I trust that the hon. member who has the floor will bear in mind what I have said in proceeding with his argument.

Mr. Benidickson: Yes, Mr. Speaker. I am simply pointing out the fact that when we come to the detail stage we shall find that some of the points which we must resolve at that time in committee are points that result from our position under the GATT arrangement. The minister, of course, indicated that when we were at the resolution stage. My point in a general principle discussion was that I myself had been somewhat surprised as to the ramifications of some of the decisions that are made in these trading negotiations.

I think after just a very few words more all members of the committee will realize what I have in mind. I indicated that I have a background in western Canada. I am quoting from a maritime paper. I am indicating that when an administration proposes to change some of the trading relationships that it has entered into under this extremely important trade agreement, namely GATT, some of the results are not obvious. That observation of course, would apply to many of the customs tariff items that are part of the bill that is before us at the present time. I was going to continue to quote from this editorial which says that under the same agreement, namely GATT, we had to reciprocate with concessions which included a fixed low tariff agreement for United States fruits and vegetables. It says:

> There is a clamor in Canada now to have this duty raised and, in return, U.S. cattlemen are demanding at Washington that the tariff on Canadian livestock be increased. There is no way for Canada to win. In fact, in negotiating tariff boosts it stands to become the biggest loser—and in this case, Nova Scotia—

This is what surprised me, Mr. Speaker.

> —Nova Scotia would suffer again quite heavily. If sales to the U.S. were cut down, the Canadian market would be flooded with beef raised on the vast ranges of the western provinces and this at a time when farmers of this province are being encouraged . . . Ottawa should make sure that, in trying to satisfy one group now demanding more tariff protection for its product, it does not bring harm, and possibly even greater harm, to another.

I have introduced that statement to illustrate to members of the house how interlocking are some of these tariff changes such as are provided in this bill. I have the feeling that the minister has not yet given adequate consideration to making Canadians as fully informed as they should be even after negotiating, of the negotiations which have taken place.

I might say to the minister in all frankness that I have never been to Geneva; I have never been a participant in one of these trade discussions over there, even though I was associated with the minister of finance as a parliamentary assistant for a while. I should perhaps be better informed if I had been able to attend such discussions, but I do realize that in the administration there are people who believe that even after negotiation we as Canadians should get our information from the annual report of GATT itself.

Since the debate at the resolution stage I have made some inquiries, and we did discuss at the resolution stage the information available to United States citizens. As a result of my inquiries I have some information as to the type of details which are given to all those who are interested in these trade items in the United States. For instance, I have in my hand the foreign commerce weekly which is an official document issued by the United States department of commerce dated July 21, 1958, and in this document there is full and complete information for the public of that country with respect to the concluded negotiations under our GATT trading arrangements. They have even duplicated that type of effort in that the state department seemingly does the same thing. The other document in my hand is entitled, "Department of State Bulletin" and is dated August 4, 1958. On the frontispiece it says it is the official weekly record of United States foreign policy, and on page 215—

Mr. Speaker: Order. I must say I have very grave doubts that the line followed by the hon. member has anything to do with the question before the house.

Mr. Benidickson: On the contrary—

Mr. Speaker: I took him to be relating the bill to our obligations under GATT, and that is well and good; but his line seems to be at this moment a criticism of the government for its actions in not giving information or something of that kind, which appears to be a little off course.

Mr. Benidickson: If I may say so, Mr. Speaker, I think it is right on course in that we are being asked to adjudicate and resolve a question with respect to trade negotiations which have taken place, and which modify or alter our trading agreements under GATT.

I am saying that in other legislatures more information is available to those who have anything to do with a decision such as that which we are very shortly to be called upon to make. I indicated that in 1955 and 1956 the former minister of trade and commerce made a very full statement as an appendix to *Hansard* before we came to this stage in debate. I am also saying that this information is made known not only to the legislators in the country to our south but is also made known to everybody as the result of wide distribution of a public document. The second document to which I referred was the department of state bulletin and on page 215 it says:

Renegotiations under GATT Concluded with Five Countries

I am not going to pursue that because Canada is not named as one of those five countries, but I am saying that the policy which was available to either the Minister of Trade and Commerce or the Minister of Finance, as laid down by Mr. Howe in 1955 and 1956, was a good one and should be followed here. We should have annually a report from either of these ministers indicating the negotiations which have been concluded and then, when we are asked at this stage to bring down judgment on the legislation presented to us, we would have the information which seems to have been lacking from 1957 to the present date in 1958.

Mr. Speaker: Are we ready for the question?

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, I am sorry the minister has not seen fit to deal with the point raised by my hon. friend from Kenora-Rainy River.

Mr. Fleming (Eglinton): How could I do that without closing the debate?

Mr. Pearson: The question was put, and that is why I got up; Mr. Speaker said, "Are you ready for the question?", so obviously the Minister of Finance was not going to speak.

Mr. Fleming (Eglinton): We discussed this ad nauseam last week.

An hon. Member: Ad nauseam to whom?

Mr. Benidickson: Only to the minister.

Mr. Pearson: We now have evidence which confirms the view we held and which certainly makes our previous discussion ad nauseam. The minister at that time said, with respect to these negotiations under GATT for the amendment of our Customs Tariff, that he could not give the house or the committee detailed information as to the concessions which were given and received. In other words we would not be able to ascertain—

[Mr. Benidickson.]

Mr. Fleming (Eglinton): That is not what I said.

Mr. Pearson: —what we gave and what we received. It was all lumped together in the schedules. The minister said the difficulty in giving this information was that it would be giving the details of the negotiations. Of course no one has the right to ask for such details. But when the negotiations are completed, even if there are negotiations under GATT all the information should be made available to the house. The minister agreed that if there were new negotiations they should be revealed to the house but that if they were merely annual renegotiations, that was something else. He went on to say—I think he will agree that this is an accurate statement of what he said—that the course he proposed had been followed by the previous government.

It is quite clear from what my hon. friend the member for Kenora-Rainy River said and from the evidence he adduced, that in 1955 and 1956 this information was given to the house even when it concerned not a new negotiation but a renegotiation. The house at that time was able to ascertain before it voted on a bill of this kind exactly what we had given under GATT and what we had received as a result of these negotiations. That is not only the course which was followed in this parliament by the previous government but it is the course followed in the United States. As my hon. friend pointed out, they have gone to great pains in the United States to announce negotiations which are about to take place and to give information on all of the results of those negotiations when they have been concluded.

This matter is of extreme importance for the reason I shall mention in a moment. If my hon. friend maintains the position he has taken we may well find that when we are negotiating with the United States that the information to which we are entitled arising out of that negotiation—the detail of what we gave and get—can be obtained only from the United States, and not in the form in which we are entitled to receive it from our own government. That is the point, and it is an important one.

When the minister took the stand he did the other night that information on this matter can be given to this house only if it is a new negotiation under GATT, I think we on this side of the house are entitled to say that in doing so the minister was following a course that has not been followed in the past and was withholding from us information to which we are entitled.

Mr. Fleming (Eglinton): Mr. Speaker—

Mr. Speaker: I must inform the house that if the minister speaks now he will close the debate.

Hon. Donald M. Fleming (Minister of Finance): Mr. Speaker, the Leader of the Opposition apparently has set about distorting the remarks I made in this house last week. I cannot imagine anything more unprofitable than to start in today, at this stage of the proceedings, with a repetition of the discussion which was carried on last week at great length in the committee of ways and means when the resolution was before the house.

My remarks on this subject are all on record, and I cannot see that any sensible purpose would be served by reviewing the whole subject again. But let this be clear for my hon. friends to understand if they will. The negotiations with the United States under the terms of GATT with respect to all the items that were bound under GATT and included in the bill now under discussion were all carried on with a view simply to freeing Canada's hands to make such changes as would be required to give effect to the recommendations of the tariff board, or such of them as it might be proposed to put into effect. This was not a negotiation in which we were asking for some concessions on the part of the United States with respect to its tariff in return for changes in the Canadian tariff. This was a negotiation in all cases—and when I say all cases I mean zinc, iron and steel, and pipes and tubes; all three of those—carried on simply with a view to freeing Canada's hands. We were not seeking concessions on the part of the United States with respect to tariff changes on their part. We were simply seeking on their part that they should concede to us the right to make such changes as were proposed, and what is laid before parliament in the series of resolutions now embodied in this bill is simply the result of these negotiations involving on the part of the United States no change whatever in their tariff, involving no more on their part than agreeing to untie Canada's hands with respect to such of those items as were bound on Canada's part—

Mr. Benidickson: Mr. Speaker, would the minister permit a question?

Mr. Fleming (Eglinton): —and involving on Canada's part an attempt to negotiate a package deal. I have used the expression "package deal" with regard to some of these negotiations. The house has been given the fullest information as to the changes that Canada acquired the right to make as a result of these negotiations, the unbinding of items. It is all before parliament. It could not be reported sooner because, as I said days and days ago, these negotiations were completed just before the budget was brought down, and the house has had all this information since June 17.

Now, I hope what I have said will put the matter in its true light and true focus. The house has all the information. The information is all before the house. There is nothing to report as far as action on the part of the United States with respect to its tariff is concerned because there is no change in its tariff.

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Rea in the chair.

On clause 1—*Definitions.*

Mr. Benidickson: Mr. Chairman, I should like to make a few additional comments on clause 1. Hon. gentlemen know that at the second reading stage I was entitled to make some remarks and the minister was entitled to reply. I could not, of course, make an additional speech at that stage. I did ask the minister if he would permit me to ask a question, but he either did not hear me or did not feel it was a proper time to permit an interruption.

In any event I wish to point out on this important matter involving several of the items we will subsequently discuss that on August 13, 1958, as reported at page 3480 of *Hansard,* the House of Commons may have obtained some information from the minister with respect to these negotiations that were concluded, but the house received it only after several hon. members asked for it and after some probing on the part of hon. members of the opposition. The point I wish to make is that in 1955 and 1956 there seemed to be a co-operative attitude and an established pattern of reporting to this house in a comprehensive way about all our negotiations under these important trade treaty arrangements. The minister did give us some information about the negotiations that took place with the United States as reported at page 3480, but it came only as the result of probing by the opposition.

In his major remarks in reply at the second reading stage the minister said these negotiations did not involve a change in the United States tariff and then, of course, he indicated the reason to be that Canadian changes in tariff had both increases and decreases that affected the United States. I say those are negotiations of consequence to Canadian industry. I say that after they had been concluded and prior to a debate in this house, unlike the practice followed in 1955 and 1956, we should not find it necessary to have to probe for this information. I suggest

that as an annual event it should be included in a report from the Minister of Trade and Commerce or, in the case of bilateral trading largely conducted by the Minister of Finance and his officials and their opposite numbers in the United States, either he or the Secretary of State for External Affairs should make this information available.

Such information as we do have was not voluntarily given and was obtained only as a result of questioning. In 1955 and 1956 we had a comprehensive report, and I suggest that is a good practice for the future. We know nothing about the things we have not asked about. Those of us who sit over here are busy watching this, that and the other thing, and we have no day to day contact with the negotiations. The Minister of Finance or his colleague the Minister of Trade and Commerce should give this kind of information to the house as a routine proposition. I suggest he give consideration to that for the future.

The Chairman: Shall clause 1 carry?

Mr. Pearson: Just before it carries, since the minister seemed to think I misunderstood completely what he said the other night and may have misled the house in connection with the remarks he made on page 3480 of *Hansard*, I again quote exactly what he had to say in regard to those negotiations and concessions which were made. The minister said:

> But with respect to the items of the Canadian tariff we have obtained a concession on the part of the United States that gave us liberty to make the changes in our tariff that are embodied in the resolutions now before the committee, so far as those items had previously been bound, and have undertaken to make certain changes in our tariff as the quid pro quo to the United States; so what we bring before the committee now is a complete package, and the results of those negotiations are fully embodied in the terms of the resolutions.

Therefore we did receive concessions and we made concessions. It is our contention that when this is done under GATT, even though it may not have meant a change in the United States tariff itself, there were concessions given and concessions received as the result of this bargaining, that we should be told in advance of the bill what those concessions are. That is the point we are trying to make.

Clause agreed to.

On clause 2—*Schedule A amended.*

Mr. Pickersgill: Mr. Chairman, paragraph (d) of clause 2 is the paragraph that relates to the wool tariff, and I would like once again to express the opposition of this party to the increase. If I am mistaken in this I would ask the minister to correct me. I do not want to take up the time of the committee or prolong the proceedings by repeating the arguments that I have had two opportunities to make, once on the budget and once on the resolution, about this matter. Therefore, in order to register the opposition that my hon. friends and I take to this increase in the wool tariff, sir, I move that clause 2 be amended by striking out paragraph (d) and relettering paragraph (e) as paragraph (d).

Amendment negatived: Yeas, 17; nays, 44.

The Chairman: I declare the amendment lost.

Clause agreed to.

Clauses 3 and 4 agreed to.

On the schedule.

Mr. Benidickson: We did have some discussion on some of those items, and I do not propose to repeat that discussion. But the Minister of Finance indicated there was one item that involves the import of automobile parts that was the subject of recent negotiations with the United States as a result of our relationship with that country under GATT. We had some discussion on August 13 about the remarks of the Minister of National Revenue to a delegation of unemployed members of the united auto workers' association which indicated that this government was actually attempting, by tariff increases, to improve the opportunity for manufacturing in Canada rather than the reverse. Now, these were concessions. These items permit the import of certain items into Canada at lower rates of duty. Has my hon. friend consulted with his colleagues since that time? The Minister of National Revenue is not in his seat.

Mr. Fleming (Eglinton): Mr. Chairman, that is not the normal form of question. This is a government measure.

Mr. Benidickson: No. I meant that it seemed to be contrary to the information that had been given out publicly on that occasion by another member of the government.

Mr. Fleming (Eglinton): No, Mr. Chairman; I think there is no conflict here at all. The Minister of National Revenue is perfectly well aware of this item, as indeed are all members of the government. It is a government measure. I pointed out in a previous lengthy discussion of this matter that the Canadian automotive chamber of commerce and the Canadian automotive parts association had both signified that they favoured the change that was being made in the tariff in this respect.

Mr. Benidickson: Of course at that stage, Mr. Chairman, I pointed out that the associations referred to by the Minister of Finance are largely subsidiaries of United States companies, and I have no doubt that as a result of suggestions that would be made to them by their principals in the United States they might want to facilitate the import of some of those items at lower tariff rates.

Mr. Fleming (Eglinton): Does my hon. friend suggest seriously that Canadian manufacturers of automobiles have at any time in the past sought reductions in the tariff against imports of automobiles or parts from abroad? If so, I think he is the first one who has ever suggested that.

Mr. Benidickson: For convenience of manufacture I think some of the principals, because of the fact that they are owned by United States corporations, might very well make that suggestion. But apprehension about this general policy was indicated at the conference of the unemployed from Windsor, Oakville and other places, as I mentioned previously in the debate, and since the Minister of National Revenue spoke for the government I wondered whether or not the Minister of Finance had any further comment to make.

Schedule A agreed to.

Schedule B agreed to.

Title agreed to.

Bill reported.

Mr. Speaker: When shall this bill be read the third time?

Mr. Argue: Next sitting of the house.

LOAN COMPANIES ACT

AMENDMENTS RESPECTING INCORPORATION, ANNUAL STATEMENT, ETC.

Hon. Donald M. Fleming (Minister of Finance) moved that the house go into committee to consider Bill No. S-10, to amend the Loan Companies Act.

Motion agreed to and the house went into committee, Mr. Sevigny in the chair.

On clause 1—*Department.*

Mr. Benidickson: Mr. Chairman, the banking and commerce committee discussed not only this bill but Bill No. S-11 respecting trust companies. The bills are similar in form. I think we all concluded there were two main changes involved in the amendments. One would permit these companies to borrow 12½ times the amount of their paid up capital stock and reserve, compared with a limitation of 10 times that amount under the present legislation. The second point in the amending bill which I regard as of importance is that henceforth it will be open to these companies in making their annual reports to the Department of Insurance to use amortized value instead of market value with respect to their holdings of federal and provincial bonds.

To deal first with the latter point, the utilization of amortized value, toward the end of our committee discussion this morning I think the superintendent of insurance expressed himself as being rather a market value man. May I say that I share his view. As a depositor, shareholder or under any other circumstances I should like to think that under ordinary circumstances the legislation provided for a report based on market value. As a layman in this field I think I could understand such a report better than one based on amortized value. However, we had evidence that the insurance act permits insurance companies to use amortized value. We know that when the Bank of Canada and the commercial banks prepare their reports they use amortized value.

I was particularly impressed by the fact that in the case of the majority of our large trust companies, which are not incorporated under federal statute but obtain the right to do business under provincial legislation, no such restriction exists as has been provided in our legislation. As a result, it seems difficult to deny the proposed amendment although personally I should like to see market value used as the basis in these annual reports.

Mr. Fleming (Eglinton): I am sure my hon. friend appreciates that the market value will still be included in the annual report.

Mr. Benidickson: I was just going to say that the superintendent of insurance indicated that, as he was a market value man, he and his department would be very concerned about market values in such reports. Not only the amortized value but also the market value will be reported annually. While the amortized value will be the effective value with relation to the amount of borrowing permitted in proportion to capital and reserve, the superintendent of insurance as an efficient government administrator will be receiving reports including market values and will be concerned about them from the point of view of the public interest with respect to the administration of these companies.

As far as the other item is concerned, we do not propose to oppose the bill because we feel that so many other institutions engaged in business analogous to that of a trust or loan company and operating under provincial or federal jurisdiction are already

free in respect of the relationship of their borrowings to their capital and reserves. The superintendent of insurance said that he felt for the present, and I would judge for the immediate future, it would be very unwise to make the opportunity to borrow any greater by further increasing the ratio between borrowings and shareholders' interests in such corporations.

But he did indicate he approved of the present bill, and so far as I know those associated with me are prepared to support the proposed recommendations.

Mr. Regier: On second reading of these bills we expressed some serious reservations about them. However, after looking very carefully over what happened in the other place in connection with these bills, and after the very careful explanations that were given by the superintendent of insurance in the committee this morning, in the main we intend to support this amendment that is now requested. I should like to point out that it is my opinion that as Canada has grown in population and as our economy has expanded, there has not been an equal growth in the financial structure of Canadian trust companies or Canadian loan companies. Their capitalization has not developed along with the growth of the country and therefore has inevitably led, over the process of time, to repeated requests on the part of these companies for permission to increase the multiplying factor.

I think that since we have in Canada only a limited number of these institutions, and they have developed to the stage where they occupy a very responsible place in the economic well-being of Canadians, those men who are responsible in these corporations may well pay a little bit of attention to the future. If we are not going to have new trust and loan companies functioning on the Canadian scene, then they ought to give serious consideration to a broadening of their base and the issuance of more shares so that there will be more risk capital involved on which to build the superstructure that circumstances and events inevitably will call for building. Had we financial houses such as they have south of the border, we could never support an amendment of this kind because it would be harmful to do so. There would be a risk involved. However, since we have in Canada evolved a system of a relatively limited number of chartered banks, trust companies, loan companies and the like and since it therefore behooves us to do whatever we can to help these organizations to perform their proper functions, we will support this bill.

[Mr. Benidickson.]

Our quarrel certainly is not with the stability of these organizations. I believe this amendment will provide protection for the people of Canada in its overall effect. The only point I wish to make is that I do not believe the basic pattern has developed as rapidly as the needs of the Canadian nation should have made it develop. I hope some attention is going to be paid to that.

Clause agreed to.

Clauses 2 to 15, inclusive, agreed to.

Schedule agreed to.

Title agreed to.

Bill reported.

The Acting Speaker (Mr. Rea): When shall this bill be read a third time? Now, by leave?

Some hon. Members: Agreed.

Mr. Fleming (Eglinton) moved the third reading of the bill.

Motion agreed to and bill read the third time and passed.

TRUST COMPANIES ACT

AMENDMENTS RESPECTING INCORPORATION, ANNUAL STATEMENT, ETC.

Hon. Donald M. Fleming (Minister of Finance) moved that the house go into committee to consider Bill No. S-11, to amend the Trust Companies Act.

Motion agreed to and the house went into committee, Mr. Sevigny in the chair.

On clause 1—*Department.*

Mr. Benidickson: In discussion in the banking and commerce committee this morning, Mr. Chairman, when we had available the superintendent of insurance who supervises and reports on this type of corporation on behalf of the public, we concluded that the principle of the bill and the major consequences were identical with those in the bill that we have just passed. With the object of avoiding repetition, I certainly would have no further remarks to make. I think that anything I said relating to this bill could equally be applied to the bill that has just been up for consideration in this committee.

Title agreed to.

Bill reported.

The Acting Speaker (Mr. Rea): When shall this bill be read a third time? Now, by leave?

Mr. Fleming (Eglinton) moved the third reading of the bill.

Motion agreed to and bill read the third time and passed.

INCOME TAX ACT

Hon. Donald M. Fleming (Minister of Finance) moved the second reading of Bill No. C-39, to amend the Income Tax Act.

Mr. Benidickson: Is the minister going to make a statement? It is a very large bill. There are a number of amendments of which we did not have notification in the budget resolution.

Mr. Fleming (Eglinton): Mr. Speaker, I do not think there is any statement that I can usefully make at this time. Several weeks ago in committee of ways and means the house had an opportunity of debating, and did debate at some length, the resolution which was the forerunner of the present bill. As the house is aware, in that connection the practice of the house calls for resolutions on the important matters affecting the balance of ways and means. The annual bill to amend the Income Tax Act, of course, always includes a great number of amendments that are not foreshadowed in the formal resolution that is introduced with the budget and is reviewed in committee of ways and means.

In the budget speech I indicated that the bill this year would be a lengthy one and would embrace a large number of amendments. The bill is a large one, Mr. Speaker, but while the amendments are many in number, they are all of an individual or particular nature, with the several exceptions that we debated fully in the committee of ways and means. I therefore think that anything I might have to say could be more usefully reserved for the committee stage of the bill if there are questions to be asked or points to be raised on the clauses of the bill when we are in committee of the whole.

Mr. L. D. Crestohl (Cartier): Under the rules of the house, Mr. Speaker, this perhaps will afford me my last opportunity of again appealing to the minister to think in the general terms of the gift of $10,000 which is proposed as not benefiting husbands or wives in the provinces of Quebec. We have discussed this matter several times and I wish that I could have been convinced, either by the minister or by anyone else in the house, that the provision proposed would extend the same benefits to husbands and wives in the province of Quebec as it extends to husbands and wives throughout the rest of Canada. I had hoped that since we last discussed the matter the minister might have submitted it to the Department of Justice for a legal opinion, which I certainly would have been delighted to accept, that the measure benefits the people of the province of Quebec.

The minister may have been under a misapprehension with respect to the question of community as to property in the province of Quebec. I should like to point out to the minister than even when husbands and wives are not common as to property in the province of Quebec, they cannot benefit by this provision. I should like the minister again to look at article 1265 of the civil code of the province of Quebec. Husbands and wives, whether separate or whether common as to property, cannot confer benefits upon each other *inter vivos*. They cannot make any gifts to each other.

Under the legislation before the house it is intended that a husband or wife should have the right to make a gift of $10,000 to each other under the conditions which the law provides. That is possible—and I repeat —in every other province except the province of Quebec. I have mentioned this matter several times previously but since this is the last opportunity that I have of appealing to the minister I ask him to consider carefully the suggestion that he is, perhaps quite unintentionally, discriminating against husbands and wives in the province of Quebec. Since I come from that province I am deeply concerned about the matter. I therefore again urge the minister not to discriminate, even unintentionally, against husbands and wives in the province of Quebec who are just as deserving as are husbands and wives throughout the rest of Canada.

Mr. W. M. Benidickson (Kenora-Rainy River): Mr. Speaker, this is also a bill that was preceded by a resolution. It also was preceded by some announcements in the budget speech of the minister when he introduced the budget resolution. In consequence, we have had some opportunity to discuss his intentions and, may I say, also some of his omissions in the legislation that is now brought before us. However, much and all as we are trying to facilitate passage of some of this legislation that has had a fair amount of previous debate and discussion, I do not think he would expect us to overlook some of the omissions in the bill that is before us.

It is a very large bill. We were given information to that effect and to the effect only that it was going to be large in wordage. I think most of us realize that a great deal of it is simply a matter of administrative requirement and legal language. We are all a bit surprised at some of the things that are not in this bill. When the new administration was given the overwhelming mandate for which they asked the people in several of the election campaigns in the past, notably the last one, I think we expected more from the present minister. He has always taken an

interest in this particular statute. I cannot recall that when he was sitting in opposition he ever failed to make some remarks, usually lengthy ones, when this particular statute was up for amendment in a budget bill. Most notably, of course, we remember the last time that the Minister of Finance (Mr. Fleming) when he was sitting as an independent member expressed his personal views.

Mr. Fleming (Eglinton): Not as an independent member.

Mr. Benidickson: As a private member. I used the word "independent" because I realize that today my hon. friend must associate himself with approximately 20 colleagues and that they must speak with one concerted voice. I do not know whether that is what is limiting the minister in this particular bill which is not particularly noteworthy in its changes or whether he has just not been able to sell his propositions to his colleagues. With the vast number of private members who are behind him and who would give him such assurance today of ready support for any of the propositions that he would advance in legislation of this kind I would have thought that the bill would not be so nondescript as it is.

The tax foundation had this to say about the present amendments to the Income Tax Act in an article by their director contained in the last issue of their bulletin, which was most helpful and was provided to the people across the country who subscribe to this authoritative magazine:

> The 1958 income tax bill is an oddly assorted collection of bits and pieces, most of them minor changes which are to the advantage of the taxpayer. Many of the larger matters on which briefs had requested revisions remain untouched. However some of the changes give substantial relief in limited situations, a good many of those in the latter class of course implementing proposals put forward in the budget speech.

I do not want to unnecessarily refer to the items we discussed previously, which were referred to in the budget speech and were subsequently adopted at the resolution stage, but if my hon. friend the minister, when he sat on this side of the house, was ever consistent and vehement and often very comprehensive in his analysis of the reasons for his views, it was with respect to the necessity of increasing the personal exemptions under this act.

I find from examination of this bill nothing which is related to that aspect of the matter, and I believe perhaps the last time the minister spoke, as always with great clarity and, I think, conviction—and there is no doubt that he was not one who left back doors open for the possibility of changing his mind

—was on January 24, 1956. The public had great expectations from the minister when he assumed office, as a result of the views he had expressed, and at page 474 of *Hansard* the minister is reported, and in fact I recall listening to him at this time, as having said the following:

> —the present exemptions from income tax, $1,000 for single persons and $2,000 for married persons, are entirely inadequate and should be increased.

He had a great deal to say beyond those words in an explanatory vein and he gave advice to this house with respect to this point but, for the sake of brevity, I will not repeat his words at this time. However, this is a notable omission from the first budget of this minister when he has had an opportunity to fulfil some of the very clear and obvious indications from his speeches in the past. I am sure that the public expected the fulfilment of some of these policies if the minister ever assumed the role he now has.

There are other notable omissions from the bill presently before us. We can find nothing here about faster write-offs of new plants. I would have thought—although this was advocated by such influential colleagues of the minister as the Minister of Transport (Mr. Hees)—that this would have been something which would have particularly appealed to the minister at a time when our economy was in the doldrums. I would have thought it would have had an exceptional appeal for him and for his advisers, particularly when such enactments were being provided in some important countries suffering from a similar economic decline as that suffered in Canada today. I have previously mentioned that the United Kingdom felt this would be a useful fillip to their declining capital investment and to their economy as a whole in 1958, but since making those remarks I have found that in a desire to give a stimulus and a shot in the arm to the small business community of the United States, the country to the south of us has approved tax cuts confined to small business. In particular such measure relates to the encouragement of business investment in the year 1958, when things have been slow, by the intensive acceleration of depreciation.

In the New York *Times* of July 22 last it was indicated that such legislation was being introduced in the house of representatives and although I do not have the clipping with me, in the Sunday issue of the New York *Times* of last week it was stated that this particular tax proposal had received the approval of the United States Congress. As I have indicated, this related to small business, but in brief fashion I would like to indicate that the proposal was that the allowance would apply only to the first

$10,000 invested. It was intended that it would apply particularly to investment in the current year and would provide for a 20 per cent depreciation of capital investment allowance in addition to the regular ones at a time when the economy was moving at a slow pace.

In the case of taxpayers who provided a joint return, the opportunity would go from $10,000 to $20,000 and this was something which I thought had worked out before when the economy was following a down turn and which would have commended itself to the Minister of Finance when bringing down his budget in 1958. There is, however, nothing along these lines in the bill before us.

I also found that the tax foundation had reviewed our situation with respect to this downturn in general business activity and had circularized a great number of businessmen in Canada asking them what in their opinion would be most likely, tax-wise, to encourage them to do the things in 1958 which would be prone to stimulate our economy. It was said in reply, of course, that in the first instance a general tax reduction would probably leave for them some funds which in turn could be introduced into the capital investment and development streams and would stimulate the economy but secondly, they suggested an increase in depreciation allowances.

As a further criticism of what is not in this bill, I would say we were rather surprised that we were not at this time amending, and it is not proposed that we should amend, the sections of the Income Tax Act which refer to our tax abatement in respect of the provinces. I can think of nothing which has been done, no other measure with proper regard to the economic situation which might have stimulated capital investment to such a degree as if the new administration had carried out its announced intention of calling the provinces together to give them a better deal—

Mr. Fleming (Eglinton): Mr. Speaker, my friend is obviously discussing something completely foreign to this bill. My friend is talking about an entirely different act, namely, the Federal-Provincial Tax-Sharing Arrangements Act, which has nothing to do with the Income Tax Act. Surely my hon. friend is completely out of order in discussing dominion-provincial conferences on this measure and at this stage.

Mr. Benidickson: On the contrary, Mr. Speaker, I suggest my hon. friend the Minister of Finance knows the premier of Ontario exceedingly well, and one of the approaches of the premier of Ontario has been to get a greater share of tax abatement in the income tax field. I introduced this subject for that reason because I suggest that if the private investment of the country has slackened as we all know it has and if the provinces—

Mr. Fleming (Eglinton): Mr. Speaker, I must register my objection to my hon. friend going on in this way. This is not the budget debate but a debate on the principle of the bill to amend the Income Tax Act. It has nothing to do with dominion-provincial relations or with the Federal-Provincial Tax-Sharing Arrangements Act.

The Acting Speaker (Mr. Rea): I was listening to the remarks being made by the hon. member for Kenora-Rainy River and I am inclined to agree with the Minister of Finance that he is straying away from this particular bill. I should also like to have him bear in mind that this is second reading of this bill in which we are discussing the principle and we do not wish to become engaged in a discussion of individual clauses.

Mr. Benidickson: Mr. Speaker, I am not referring to individual clauses. I recall very well that you were in the chair in committee when we were discussing the resolution that preceded the introduction of this bill. I know you have given careful consideration to the debates that have taken place before you came to the house and since your coming here including those that took place on second reading of bills of this kind amending the Income Tax Act. Attention was drawn at all stages by my hon. friends who sit opposite from me today and without protest when we were on the other side when something was omitted from a bill that properly could be included in the bill providing it was relevant to the bill itself. I suggest tax relationships with the provinces are related to this bill. I do not wish to pursue it unduly although I would at a normal stage of the session but I do want to say that in addition to private business this is an area where there could have been accelerated depreciation for capital investment. This is another area which could have been taken advantage of by the administration if it really wanted to do more than sit out the period of—yes, I shall use the word "depression"—we are now suffering under.

Mr. Fleming (Eglinton): Mr. Speaker, with respect, surely my hon. friend can adhere to the principle of this bill. This bill is simply one to amend the Income Tax Act. It has nothing to do with the broad question of dominion-provincial relations or the provisions of an entirely different act, the Federal-Provincial Tax-Sharing Arrangements Act.

The Acting Speaker (Mr. Rea): I will have to ask the hon. member for Kenora-Rainy River to speak to this bill more closely. We must not wander into a discussion of other subjects covered by other acts.

Mr. Benidickson: Mr. Speaker, if you examine the Income Tax Act I believe you will find the close relationship between tax abatement with respect to income that might be collected by the federal government and the relationship of the federal government with the provinces. However, I indicated that that was to be dealt with in a brief way and I have said all that I intend to say.

You will agree, Mr. Speaker, that the Income Tax Act has reference to opportunities under our tax laws for facilitating a larger degree of equity ownership in certain of our Canadian corporations by reason of tax encouragement vis-à-vis those companies that might be controlled in the United States. Contrary to much that we have heard from my hon. friends opposite in the past I find nothing in this bill to deal with this particular subject. I find there is nothing to encourage processing in Canada of some of our primary products. Having regard to the recommendations of the Gordon commission which suggested one line to be followed would be tax concessions I would have felt that particularly in a year when our economy was not strong we might have found something in this bill along those lines.

I wish to return to a discussion of the attitude of the present Minister of Finance. One of the items he always criticized and invariably deplored at this very stage in debate, second reading, in the past when an amendment came forward with respect to the Income Tax Act was that our provisions in this statute permitted the Department of National Revenue, the tax collecting organization, to withdraw at source from salaried taxpayers what he thought was an unnecessary amount of tax in consequence of which he always pointed to the fact that after the tax year was over it was necessary to make refunds to a rather impressive percentage of the total number of persons who had paid tax at source. I find nothing in this bill to fulfil the aspirations of my hon. friend the minister in this respect.

I have heard in the past complaints from a great number of hon. members who are still in the House of Commons and who in former days were representing particularly farming communities, and largely from Ontario, to the effect that some of the provisions of the Income Tax Act were unduly harsh with respect to taxpayers. I think of the hon. member for Huron (Mr. Cardiff) who was with us a moment ago, the hon. member for Middlesex East (Mr. White) and the hon. member for Brant-Haldimand (Mr. Charlton) who represent farming communities. Over a period of years in this house they said we had provisions in the income tax law that were unduly favouring the administration not giving the proper benefit of the doubt to the taxpayer. I see nothing in this amending bill which indicates either that they have approached the minister with respect to these matters once the Conservative party took over the administration of this country or, if they have, that the minister himself has shown a warm response to the representations they may have made.

In the relatively recent past I believe greater attention is being paid by members of the public generally to the possibility of giving a tax break to women who are working outside their homes for a normal business day but who could not do so unless they were hiring someone to assume some of their domestic responsibilities at home. This subject is increasing in importance. I realize it has complications but I am sure the minister will admit that more attention has been focussed on this question in recent months than in recent years. It does involve difficulties but I know that representations were recently made in a forceful way by the Canadian federation of business and professional women's clubs. I would hope before another budget is presented to the house the minister would give this matter most careful consideration.

Mr. J. P. Deschatelets (Maisonneuve-Rosemont): Mr. Speaker, I have followed with the greatest interest the expose made by the hon. member for Cartier (Mr. Crestohl). This is not the first time the hon. member has raised in this house the question of the status of husbands and wives in the province of Quebec. Liberal hon. members representing constituencies in that province share the same views. If I remember correctly, and I think the Minister of Finance will recall that, on a previous occasion when we discussed this matter we suggested to him that he should get a legal opinion from the Miniser of Justice as to whether a husband and wife in the province of Quebec would benefit under section 41. The Minister of Finance has failed to follow our advice. It seems to us, Mr. Speaker, that the Minister of Finance would like to discriminate against husbands and wives in the province of Quebec.

Mr. Fleming (Eglinton): Shame on you!

Mr. Deschatelets: Otherwise he would have sought legal advice; he would have arranged matters so that husbands and wives in the province of Quebec would obtain the

same privileges as husbands and wives in other provinces of this country.

There is no reason, Mr. Speaker, why we should let this matter stand as it is because, if we did we would not be doing our duty to the husbands and wives in the province of Quebec.

The Minister of Finance is learned in the law. He knows very well that according to article 1265 of the civil code of the province of Quebec husbands and wives of that province will not benefit under this section. I shall now read article 1265 of the civil code in French. It reads as follows:

Après le mariage, il ne peut être fait aux conventions matrimoniales contenues au contrat, aucun changement (pas même par don mutuel d'usufruit, lequel est aboli).

Les époux ne peuvent non plus s'avantager entre vifs si ce n'est conformément aux dispositions de la loi qui permettent au mari, sous certaines restrictions et conditions, d'assurer sa vie pour le bénéfice de sa femme et de ses enfants.

For the benefit of the Minister of Finance, I am going to read the article in English:

After marriage, the marriage covenants contained in the contract cannot be altered, (even by the donation of usufruct, which is abolished), nor can the consorts in any other manner confer benefits *inter vivos* upon each other, except in conformity with the provisions of the law, under which a husband may, subject to certain conditions and restrictions, insure his life for his wife and children.

We have told the Minister of Finance repeatedly that husbands and wives in the province of Quebec were not covered by section 41. He failed to follow the advice and suggestions that we have given to him in good faith to go to the Minister of Justice and try to find a way to ensure that husbands and wives in the province of Quebec would receive the same privileges from section 41 as husbands and wives in the other provinces will receive. We do not like discrimination. We like to be treated the same as other people are treated and, therefore, Mr. Speaker, I would like to move, seconded by the hon. member for Cartier (Mr. Crestohl):

That this bill be not read a second time until further consideration is given to the possibility of making the tax-free gifts from husband to wife effective in the province of Quebec to the same extent as in the rest of Canada.

Mr. Speaker: Before reading the amendment may I say that after looking it over I have some doubts as to its propriety. However, as it has reached this point I certainly do not intend to make any ruling. I simply wish to leave this caveat on the record in case this amendment is cited to me some time later as a precedent.

The house divided on the amendment (Mr. Deschatelets) which was negatived on the following division:

Mr. Speaker: The question is on the main motion; is it the pleasure of the house to adopt the motion?

Motion agreed to, bill read the second time and the house went into committee thereon, Mr. Rea in the chair.

On clause 1—*Maintenance where recipient living apart from spouse.*

Mr. Benidickson: I was simply going to speak about procedure, Mr. Chairman. I hope you will give the committee your usual consideration. This is a long bill with a lot of involved paragraphs. I do not believe it should take a great deal of time in going through the committee, but would you do as we have often done with these bills with long sections and endeavour to call the subsections?

The Deputy Chairman: Does the committee agree that we will break these clauses down into smaller sections?

Mr. Fleming (Eglinton): I suggest that that be done where it is requested. I think that in many cases it will not be necessary, but if there is a request for it on any clause I am sure there would be no objection taken.

The Deputy Chairman: Shall clause 1 carry?

Mr. Godin: I should like to avail myself of the opportunity to address the house at this time as we are about to discuss this bill on second reading. I should like to be as brief as possible, although I realize the importance and significance of this bill in the eyes of the Canadian public. On behalf of those people whom I represent, I would be pleased to make remarks concerning two problems which have come to my attention.

Mr. Fleming (Eglinton): By his words, Mr. Chairman, the hon. member indicates that he considers he is speaking on second reading of the bill.

[Mr. Speaker.]

Some hon. Members: Oh, oh.

Mr. Fleming (Eglinton): This is what he said. The house has given second reading to the bill. On the motion for second reading, we had a discussion on various matters pertaining to the bill. Now we are in committee. Could we not proceed with the clauses of the bill?

The Deputy Chairman: Discussion in committee must pertain to the clauses as we come to them; it is not a general discussion.

Mr. Godin: I realize, Mr. Chairman, the remarks of the Minister of Finance may have been a little premature because it is my intention to refer to certain principles in the bill because it is my understanding that we can have a general discussion of the principles—

The Deputy Chairman: Order; they are discussed on second reading, not in committee of the whole. In committee of the whole, the clauses are discussed, not the principle of the bill. If the hon. member has certain things he desires to bring up, he can discuss them when we come to those clauses.

Mr. Godin: The matters which I wish to discuss are definitely treated in the specific sections, and therefore I shall reserve my remarks for those occasions.

Clause agreed to.

Clause 2 agreed to.

On clause 3—*Repayment of loan by shareholder.*

Mr. Benidickson: Has this any relationship to section 8 (2) which I think says that a loan is deemed to be a dividend under certain circumstances? Will this section also be revised? What about the dividend tax credits?

Mr. Fleming (Eglinton): There is no amendment to section 8, subsection 2 of the act. I think my hon. friend may have in mind a point that is dealt with later in the bill.

Mr. Benidickson: On subsection 2 of clause 3, may I say this. In front of the minister I see some officials who will recall some past correspondence with which I am now only hazily familiar. I am thinking particularly of some correspondence from Consolidated Mining and Smelting Company. Does this clause correct the objection or at least respond to the appeal that was made by them from time to time?

Mr. Fleming (Eglinton): Does my hon. friend mean Hudson Bay Mining and Smelting Company?

Mr. Benidickson: No. I am sure it originated from Consolidated Mining and Smelting Company because I recall that the former hon. member for Kootenay East was very much interested in this subject.

Mr. Fleming (Eglinton): I am told that the company to which my hon. friend has referred does not strike the chord of memory.

Mr. Benidickson: In other words, this subsection will be helpful to the extent that the deduction is for current services but does not exceed $1,500?

Mr. Fleming (Eglinton): That is correct.

Clause agreed to.

Clauses 4 and 5 agreed to.

On clause 6—

Mr. Benidickson: I have a question to ask on clause 6. This is just a matter of drafting and I do not profess to have any special knowledge of this matter. However, as I was looking through the basic act I wondered what happens when, as provided under clause 6, subsection (1) of section 15 is repealed. Do we then start out with section 14 (2) or is there some general drafting provision that provides that section 14 (2) would automatically become section 14 (1) without our so stating in this clause?

Mr. Fleming (Eglinton): Section 14, subsection 2 of the act will simply remain in its present form. Subsection (1) is being repealed here really because the section, in the light of recent jurisprudence, has virtually no effect.

Mr. Benidickson: Quite so. But what I meant was this. When we utilize, as we do, the annual consolidation, will the section 14 in the new consolidation simply start with subsection (2)?

Mr. Fleming (Eglinton): As has been done in other consolidations, it will show section 14 (1) as repealed.

Mr. Benidickson: Oh, it will be shown as repealed; I understand.

Clause agreed to.

Clause 7 agreed to.

On clause 8—*Lease-option, hire-purchase agreement.*

Mr. Benidickson: Would the minister give us some examples of the expansion that is possible under this amendment?

Mr. Fleming (Eglinton): I shall be glad to say a word about this matter, Mr. Chairman. As hon. members will see, clause 8 of the bill extends over several pages. It is concerned with the rules to be applied in relation to lease-option and hire-purchase agreements. Clause 8 provides for a complete revision of section 18 of the act which deals with lease-option and hire-purchase agreements. In some agreements the lessee is required to pay substantial amounts designated as rental payments and is given the option to purchase the property for a nominal sum at the end of the designated period. It is frequently obvious that the so-called rental payments are really instalments of the purchase price. Section 18 of the act provides that these agreements are to be regarded as purchase agreements. On some points the present legislation has been found to be obscure if not ambiguous. The proposed new section 8 is somewhat longer because it spells out in greater detail what is to be done in a variety of circumstances.

I can assure the house that it is the opinion of the government that these elaborations contained in clause 8 do not change the accepted interpretations of the present law. I believe that those taxpayers who are affected by the section will be pleased to have the rules specified more clearly.

The proposed revision includes two substantive changes. It contains special provision for cases where the lessor and the lessee are not dealing at arm's length, thus bringing the section in line with the other rules in the act covering other purchases and sales that are not at arm's length and blocking a possible loophole.

The second and more significant change is a provision that section 18 of the act will not apply at all in many cases. The specific provisions in this regard contained in the proposed new subsection 4 should remove from the application of this section all those cases where it is reasonably clear that the rent being paid is really rent and that no part of it is paid on account of the purchase price.

Mr. Benidickson: Mr. Chairman, in relation to these clauses we sometimes have a recommendation or at least a proposition that it would be applicable to either the current taxation year or an earlier year. I notice that this provision is to be applicable to 1957. Generally it is the current year to which such a provision is applied. Is there some reason for dating it back a year?

Mr. Fleming (Eglinton): In this respect I think my hon. friend has misconceived the purport. If he will look at page 7 he will find that subsection (2) of section 8 provides that this section is applicable in computing income for the 1958 or any subsequent taxation year. If he is looking at the last line of page 6, he will see that the expression used is "leasing or hiring of property entered

into after 1957". It is therefore quite clear that it applies to the current taxation year.

Mr. Benidickson: I may say frankly that it is a few days since I made my examination of the bill, and things have been proceeding rather fast. I apologize to my hon. friend. I am just speaking now from a note that I made. But if he will look at the right hand page on which appears the explanatory note with respect to page 3, he will find that it states as follows:

It also provides that certain new lease-option, hire-purchase or other leasing or hiring arrangements entered into after 1957 will not be subject to these rules.

That is what prompted me to ask the question.

Mr. Fleming (Eglinton): The wording is "entered into after 1957"; that is to say, anything from and after January 1, 1958.

Mr. Benidickson: I understand.

Clause agreed to.

Clauses 9 and 10 agreed to.

On clause 11—*Charitable donations.*

Mr. Benidickson: I made some remarks on the resolution stage with respect to this matter of charitable donations deductions. A change is being made which will have the effect of widening the percentage amount of the deduction of taxable income applicable for a corporation. I continue to think that further consideration should be given to the position of an individual and, in particular, the averaging over a longer period of time to encourage individuals to make contributions of certain large capital investments in such things as universities. Universities frequently require large donations; they would like to go ahead with their capital programs and they appeal to an individual, who says, "Well, I must consider the income tax benefit related to this donation. If I tell you right now that I can give you in the coming year what you probably expect from me, I might find that all of it would not be subject to charitable donation deduction." I believe the averaging is for only two years, but certain contributions are expected from individuals for education generally, and I particularly have in mind that these capital requirements are often of a very large nature although they may not always be recurring donations. On the other hand, the individual also has the annual, continuing and repetitive types of donations.

In view of my remarks, therefore, it seems to me that some consideration should be given to perhaps extending the period over which individuals might average their donations.

[Mr. Fleming (Eglinton).]

Mr. Fleming (Eglinton): I believe the problem cannot be an acute one because in connection with most of the campaigns by charities for building purposes the custom is now well established whereby they invite contributions payable over a three-year period so that funds are available during the course of construction. I am sure my hon. friend will agree that that is now the well established procedure.

Mr. Godin: I trust I am in order at this stage in discussing certain items with respect to exemptions. I do not wish to be forced to repeat my remarks paragraph by paragraph as called in the house, because this would be very laborious and the house would not have the benefit of my full remarks on clause 11. These remarks pertain to the various paragraphs of the clause—

Mr. Fleming (Eglinton): Mr. Chairman, I think we are all bound by the rules of procedure in committee. If my hon. friend's remarks are relevant to the clauses he can break them up and deal with each clause as it is called.

The Deputy Chairman: The hon. member will have to stay within the clauses.

Mr. Godin: It may be relevant to know that if it is desired to discuss a problem pertaining to subsection (1) it also relates to the clause from which it derives as well as to the title, etc. I think the remarks I have to make perhaps should be deferred until we reach subsection (2).

Mr. Fleming (Eglinton): My friend may not understand that the original section is not brought within the scope of the relevant discussion on a measure of this kind except to the extent to which the bill proposes an amendment thereto.

Mr. Caron: Are we not discussing clause 11? If I understand the remarks of the hon. member for Nickel Belt they are covered by clause 11. He wishes to discuss them at the start, not only on subsection (1) or subsection (2) but also as they affect the whole clause 11. As I understand the rules, he is within his rights to do so.

Mr. Godin: Mr. Chairman, I shall be very brief, but I wish to discuss a matter pertaining to exemptions which are beneficial to certain citizens of Canada. I have in mind the amendment whereby the exemption is increased to 10 per cent in the case of corporations wishing to make donations to certain enumerated persons in Canada. We in the Liberal group of course appreciate the intention here but I am amazed to note that this government is prepared to increase

exemptions for a person prepared to make a donation to a municipality but, on the other hand, it does not see fit to exempt those Canadians who wish to become home owners. I feel they should be recognized to some degree by the alleviation of the heavy taxes which they pay to the municipalities.

Mr. Fleming (Eglinton): There is nothing in the clause with respect to that matter.

The Deputy Chairman: No, that is not referred to in the clause; there is nothing with respect to municipal taxes.

Mr. Godin: It may be that the act does not provide specifically for that measure. It does, however, grant to people in Canada certain exemptions if they give money to municipalities. Those corporations wishing to make donations to their municipalities would have their exemptions increased up to 10 per cent of their revenue, and if the minister will refer to line 15 on page 8 he will see that this is so. Since that amendment has been made to the act, I am entitled to discuss the matters which refer to those citizens who pay money yearly to municipalities but who are not included in this exemption contained in the amendment now presented to the house.

Mr. Fleming (Eglinton): There is no amendment here in that respect. The only amendment before the house in this bill under clause 11, subsection (1) is to increase from 5 to 10 per cent the income of corporate taxpayers which may be deducted if given to charities.

Mr. Benidickson: Including a municipality.

Mr. Fleming (Eglinton): That is the only change made in this clause. My hon. friend referred to the language which has been used in the act and he is seeking to mount thereon an argument in relation to payment of taxes to municipalities by municipal taxpayers. That is an entirely different subject, and is completely foreign to the matter under discussion.

Mr. Benidickson: Mr. Chairman, I wish to say a few words on the point of order in support of the hon. member for Nickel Belt. My remarks will not take more than a moment but I see it is five o'clock and there is another matter to be discussed.

The Deputy Chairman: Order. It being five o'clock, it is my duty, pursuant to standing order 15 (3), to leave the chair in order that the house may proceed to the consideration of private and public bills.

Progress reported.

Private Bills

PRIVATE BILLS

BURRARD INLET TUNNEL AND BRIDGE COMPANY

The house in committee on Bill No. S-4, respecting the Burrard Inlet Tunnel and Bridge Company—Mr. Taylor—Mr. Rea in the chair.

On clause 1—*Remuneration to directors.*

The Chairman: Hon. members may find the amendments made to this bill on page 437 of *Votes and Proceedings* of Thursday, August 14, 1958, as reported by the standing committee on railways, canals and telegraph lines. Shall clause 1 as amended carry?

Mr. Howard: Mr. Chairman, as hon. members of the committee will appreciate, the ownership of this company with one slight exception rests in the hands of four municipal councils, that is the corporation of the district of North Vancouver, the corporation of the city of North Vancouver, the corporation of the district of West Vancouver and the city of Vancouver. In the standing committee it was requested that an attempt be made to ascertain the views of the four municipalities which in effect own the company with respect to the proposal in the bill. I wonder whether the sponsor of the bill could indicate what answers have been received individually from the four municipalities, what were the opinions expressed and whether there was any division of opinion in each respective municipal council with respect to the proposal in the bill?

Mr. Taylor: Mr. Chairman, when this bill reached the committee a resolution was passed in the following terms:

> That this committee do not proceed with the bill at this time but that Mr. Taylor, sponsor of the bill be asked to communicate with the corporation of the district of North Vancouver, the corporation of the city of North Vancouver, the corporation of the district of West Vancouver and the city of Vancouver to ascertain the views of these municipal councils with respect to the bill.

Pursuant to that resolution I wrote to each of the bodies mentioned. My letter dated July 26, 1958, reads as follows:

> Dear Sirs:
>
> Re: Bill S-4—An act respecting the Burrard Inlet Tunnel and Bridge Company.
>
> A resolution was passed by the railway committee of the House of Commons, relating to the above company. The resolution requested that I communicate with each of you to ascertain the views of each council with respect to this bill.

I went on to say:

> When I was requested to assist with this matter, it was my understanding that the board of directors of the company had unanimously requested amendment to the charter of the company, enabling the shareholders in general meeting to make provision

for payment to directors. The directors are all known to me and many of them have had long experience in municipal affairs.

Even if the bill is passed, it would not necessarily mean that directors' fees were to be paid. Whether or not they are to be paid is a matter for the shareholders to decide. It might well be that councils this year will be in favour of payment of such fees, while next year's councils may be opposed. In such event, directors' fees would not be paid in any year the shareholders were opposed to payment. Complete control over the situation lies with the local councils, who are the shareholders.

I understand that no director is a shareholder and the directors might not necessarily be holders of proxies at any annual meeting. The bill is so drafted that the directors cannot as directors vote themselves a fee.

Mr. Halford Wilson informs me that the Vancouver city council has considered this matter and that no one has opposed passage of the bill. It matters little to me whether the bill is passed or not, but I only hope that local politics will not be drawn into the federal arena. The bill has passed the Senate and has passed second reading here. I can only presume that the bill will not meet any further objection in the event that each council approves the bill in principle.

Pursuant to the request of the committee I trust that you will communicate with me as early as possible respecting your council's views.

In reply to my letter I received a communication from the district of West Vancouver dated August 7, 1958, to which was attached a certified copy of the actual resolution passed in council which reads as follows:

Resolved that: The council of the corporation of the district of West Vancouver which is a shareholder in the capital stock of the Burrard Inlet Tunnel and Bridge Company hereby approves of Bill S-4, respecting the Burrard Inlet Tunnel and Bridge Company and respecting the payment to the directors of remuneration and certain expenses as therein provided and hereby directs that a duly certified copy of their resolution passed on this 28th day of July, 1958, be given to the standing committee of the House of Commons on railways, canals and telegraph lines.

The resolution is certified by the acting municipal clerk of the district of West Vancouver and is dated July 28, 1958.

I also received a telegram from Reeve Richards of the West Vancouver council bearing date July 29, 1958, which reads as follows:

West Vancouver Council Monday evening unanimously passed resolution approving of Bill S-4 re Burrard Inlet and Bridge Company. Certified copy of resolution being air mailed to secretary of railway committee.

I have just read to the committee the text of the resolution herein referred to. I also received a telegram from the solicitor and counsel for the company. That telegram is dated August 5, 1958, and reads as follows:

Bridge company bill approved yesterday—

That would be August 4. I continue:

—by North Vancouver city council.

[Mr. Taylor.]

I received a further telegram from counsel for the company dated July 29, 1958, in which he stated:

Resolution was adopted July twenty-ninth by council of city of Vancouver approving Bill S-4 respecting payment remuneration and certain expenses to directors of Burrard Inlet Tunnel and Bridge Company. Certified copy sent to secretary of standing committee—

I understand that each council has reported to the chairman of the standing committee and each has approved the bill with the exception of the council of the district of North Vancouver. That is the best answer I can give at the moment. The hon. member for Peterborough is not in the house at the moment. I attempted earlier to obtain copies of the actual resolutions passed by the other councils but I have been unsuccessful in this endeavour. I may state, however, that I have personally seen these copies.

Mr. Drysdale: Mr. Chairman, when I originally spoke on this bill I opposed it as sponsored by my friend the hon. member for Vancouver-Burrard. I did so at that time because the purpose of the bill as set forth was to provide for the payment of remuneration to directors whereas, according to the shareholdings outlined by the hon. member for Vancouver-Burrard, the actual objective of the bill was to establish payment for municipal councillors who were in effect doing jobs beyond the usual scope and call of their work. In my opinion, Mr. Chairman, they were merely acting in the function of councillors operating in a committee.

When the hon. member spoke on July 4 he made one or two statements which left a certain amount of doubt in my mind. For example, at page 1943 of *Hansard* he said:

No director is a shareholder, and thus a director is not entitled to vote unless he acts as proxy.

There was no indication at that particular time as to whether or not the respective shareholders in the company, which are the various communities surrounding Vancouver, gave a blanket proxy, or what type of proxy they gave to the members serving as directors. The directors, as pointed out by the hon. members, are members of the various municipal councils, one councillor coming from the city of Vancouver, one from West Vancouver, two from the city of North Vancouver and two from the district of North Vancouver. Since they were acting by proxy, I had a certain amount of doubt as to the authority of the particular directors and whether or not the respective councils had approved the matter or the bill, as suggested by the hon. member. To a certain extent my suspicions were confirmed at page 1943 of *Hansard*

in the statement of the hon. member for Vancouver-Burrard where he said:

> I feel that the directors have been most fair in considering the welfare of the shareholders. The directors could have drafted the bill in such a way as to have provided that they alone could have set the amount to be paid to them by way of remuneration but if hon. members will peruse the draft bill they will see that it is the shareholders and the shareholders only who have the power to determine the amount to be paid.

As the hon. member said in committee, a reference was made to the respective municipalities and municipal councils in order to ascertain that they were aware of this amendment to the bridge company bill which would in effect have given an additional stipend to municipal councils. This was particularly important to me because the municipal act of British Columbia forbids the payment of such extra amounts. When the matter was referred to the councils it was revealed that payments had been made for three previous years and in fact I believe the mayor of the city of North Vancouver questioned the legality of the payments. Therefore, upon receiving the reports from the various municipal councils, we were able to interrogate the solicitor acting in this particular matter, as well as the sponsor of the bill, and my change in attitude occurred at that time when I was assured that the municipal councils had been aware of the particular alterations and in fact three of the councils had approved the proposed change. Also, as the hon. member mentioned, the compulsory aspect of the bill itself, saying that the directors shall be paid a certain amount, was altered so that the word "may" which gave a certain discretion to the municipal council, was inserted.

Again, I must say in all fairness to the sponsor and the solicitor representing the directors of this particular company, that it was pointed out that the payments which had allegedly been illegally made were merely a matter of expenses as far as the commission and the board of directors were concerned and, in the opinion of the solicitor, were legally made.

Accordingly, Mr. Chairman, since there is every indication in this bill and in the attendant newspaper publicity that the particular municipalities are now aware and will be made aware of the fact that when they are granting proxies for this particular company they are in effect authorizing payments of certain amounts of money to the directors, I feel that this will provide the necessary warning as far as the respective councillors are concerned to enable them to decide whether or not they wish to grant this extra amount of money to the council members. Accordingly, Mr. Chairman, I feel that I can now support the principle of this bill since I feel that the notice has been brought to the respective councillors and it is within their discretion, as the hon. member for Vancouver-Burrard said, whether or not they wish to grant any or what amount of remuneration.

Mr. Browne (Vancouver-Kingsway): Mr. Chairman, I am sure we all agree that this bill has received very careful consideration. I was pleased to note the amendment which was made in the committee which certainly removes any doubt that when we were directing that any fee should be paid to the directors of this company we were only empowering the shareholders to pay the directors if they so wished. I certainly think this is a recognized principle and there should be no argument about it.

I personally have not been able to find out any reason why this house should be concerned about it because we are not, as I say, directing payment to the directors; we are only authorizing the shareholders to pay them as they see fit. That, as I pointed out on second reading of this bill, is done by every tunnel and bridge company in Canada. I looked through most of those companies which have been incorporated since confederation and I have found that there has not been any instance where there is no provision for the payment of directors. Therefore, for those reasons I feel that we can certainly pass this bill at the present time.

Mr. Broome: I supported this bill on second reading and I still support it more firmly owing to the changes which were made by the committee on railways, canals and telegraph lines. They are good amendments. They provide that the municipalities concerned may pay the directors. By the elimination of the word "shall" the bill has been made a much better bill. I think the committee is to be congratulated on having brought in this amendment.

As hon. members know, the bill has been tossed about in municipal politics and there are divergent views but I have taken the stand that it is not our right to tell the municipalities that they shall or shall not pay directors when they come to us to ask for permission to pay them.

The directors of this bridge company have done an outstanding job since they took it over, I believe, in 1951. At that time it was practically bankrupt. They have paid off all of their indebtedness and I believe last year passed on to the municipalities dividends of some $250,000.

The operation of the bridge and the company does take a lot of their time, and it has been the policy of other boards to pay

municipal representatives, at least boards connected with the city of Vancouver, so that this does not vary in any way from the previous policy as carried out by the municipality of Vancouver.

I agree with the hon. member for Vancouver-Kingsway who supported that policy on second reading, and I would agree with my hon. friends from Burnaby-Richmond and Coast-Capilano who wanted further information in regard to this bill to make sure that the provision for payment would be fully under the control of the municipalities concerned. They were in agreement, and the hon. member for Skeena was also concerned in that regard. Mr. Chairman, there is really no reason why this bill cannot be passed by the committee now and the privilege given to the municipalities concerned to handle their affairs in regard to this enterprise in the way they deem best in their own interests.

Title agreed to.

Bill reported.

Mr. Speaker: When shall this bill be read the third time? By leave, now?

Some hon. Members: Agreed.

Mr. Taylor moved the third reading of the bill.

Motion agreed to and bill read the third time and passed.

STANMOUNT PIPE LINE COMPANY

Mr. M. D. Morton (Davenport) moved the second reading of Bill No. S-14, respecting Stanmount Pipe Line Company.

He said: Mr. Speaker, perhaps the house would be interested in some information outlining the purposes of the bill. Stanmount Pipe Line Company is now a wholly owned subsidiary of Imperial Oil Company Limited. It was incorporated by special act of the parliament of Canada on June 28, 1955, being chapter 78 of the statutes of that year, with the power to construct interprovincial and/or international pipe lines for the transportation of oil in the provinces of Ontario, Manitoba, Saskatchewan and outside Canada.

The object of the amendment is to extend the powers of the company in order to construct interprovincial pipe lines for the transmission of gas and also to extend the area in which the company may construct interprovincial pipe lines for the transportation of both oil and gas to anywhere in Canada. Although the company has no specific area in mind, it has carried on substantial explorations recently, as the company has stated to me in letters of June 27 and July 18 of this year, and it desires to have this power or capacity in reserve. The company has stated it has recently drilled and abandoned a well in Prince Edward Island and is now drilling a second well there in search of crude oil. In New Brunswick surveys are now being conducted and the company plans to drill in that province in 1958. In the province of Quebec it has drilled and abandoned five wells in the search for crude oil. In the northwest part of British Columbia new oil discoveries are being explored and they give encouragement to a further search for oil there and also in the Northwest Territories and the Yukon.

The company feels that it would like to have the capacity to develop interprovincial pipe lines in areas in which it has not got the capacity to do so now. I should point out that the granting of this capacity at the present time does not give the company the power to go ahead and build pipe lines. It must appear before the board of transport commissioners and secure permission to build any particular pipe line it has in mind. This amendment really gives the company the capacity to do that.

The company feels that at the present time reserves of oil in Canada are well in excess of production but the limiting factor is markets which would indicate also the need of a pipe line. It might be of interest to know that in the last 11 years the Canadian oil industry has grown to a greater extent than any other oil industry in any other area in the world. Since world war II capital investment in the oil industry has totalled some $4,600 million.

It might also be interesting to note, in comparing our production with that of other countries, that although our industry is growing we still only produce three per cent of the crude oil in the world and we only have one per cent of known reserves. In 1957 the free world used some 15 million barrels of crude oil daily and petroleum has become the largest commodity of world trade.

I bring these facts to the attention of the house in order to show the importance of the oil industry in Canada compared with the same industry in other countries and to point out the necessity of this industry having regard to the development of our country. Stanmount Pipe Line Company is one of the companies that intends to extend the industry in Canada by investing further money in the industry which will aid the development of our country and assist in providing employment for our people, something we are all hoping to encourage. For these reasons I strongly urge that we give favourable consideration to the passing of this amendment.

If there are any questions for which I do not have the answers today I can inform hon. members that they will be answered by officials of the company who will be appearing before the standing committee on railways, canals and telegraph lines to which the bill will be referred.

Mr. Hazen Argue (Assiniboia): Mr. Speaker, second reading of this bill is being moved in the dying days of this session and I would submit that there is little chance at this time for members to give adequate consideration to the measure. The sponsor has said that the Stanmount Pipe Line Company is now wholly owned by Imperial Oil Limited. This is another instance of what often happens to what is ostensibly an independent company at the time of incorporation. After it is incorporated it is bought out step by step by one of the big oil companies. I think hon. members should be very careful before they extend to Imperial Oil Limited a further monopoly of and vested interest in the oil resources of Canada. Imperial Oil is one of those companies that is not basically Canadian. It is part of an international cartel and I suggest that parliament should not give Imperial Oil this further control over the oil resources of Canada.

The sponsor of the bill has told us that there is no immediate need for it to be passed, that parliament is being asked to pass the measure on the basis of the speculation that oil may be discovered in Prince Edward Island, New Brunswick or Quebec. There is no certainty that if the bill is passed a pipe line will be built in the near future. I think we would be wise to wait until the next session of parliament to deal with this measure, at which time we could deal with it more adequately.

The Borden royal commission on energy, so the Prime Minister (Mr. Diefenbaker) informed the house, is making an interim report to parliament on the oil and gas resources of Canada. I think it would be wise for the members of parliament to look at this interim report before passing on a measure such as this. The interim report has not yet been made public, and I do not know whether or not it is in the hands of the government. It would seem sensible, before we provide for the incorporation of a pipe line to carry either gas or oil anywhere within Canada or to export gas and oil, that we should have the advantage of seeing the interim report of the Borden commission because it is likely to provide a valuable guide to members of this house.

There is a war on in Canada between Imperial Oil Limited and the so-called independent companies. The independent oil companies which are developing the oil resources of the prairie provinces are most anxious to extend their markets into either the United States or eastward to the Montreal area. The independent oil companies, the smaller oil companies, are the companies that are today developing the oil resources of this nation, but Imperial Oil Limited, which is part of an international cartel, is opposing the bringing of independent oil to the Montreal area. I am afraid that once the powers of this company are extended Imperial Oil may be able to use those powers or any charters which may be given, not really to develop the resources of this country but to further impede the development of the independent companies.

As I have said before, I see no reason why parliament should be asked to pass on this measure at this time, in the light of the pending report from the Borden commission; in view of the fact that this is a further extension of the oil cartel and because of the action of Imperial Oil in blocking oil development and the extension of the market for Canadian oil. I would think that in the best interests of the development of our national resources in an orderly way, this measure should be opposed at this time.

Mr. E. L. Morris (Halifax): The sponsor of this bill now before us, Mr. Speaker, has made reference to Stanmount's oil exploratory activities in the province of Prince Edward Island and, as expected this year, in the province of New Brunswick. I think that before this session of parliament concludes those of us who are concerned with the future of alternative sources to oil in the production of energy in Canada should make some statement in the house concerning the alternative methods of fuel use and of energy production in Canada. While on balance we will in most cases, I think, support this bill, I believe this is particularly necessary for those of us who come from areas whose economic livelihood is based at this time not preeminently on oil exploration but upon the future prospects of coal.

It is true, Mr. Speaker, that one out of every seven dollars which is now being spent in the creation of new physical assets in this country comes from the expenditure of firms which are engaged in either the discovery, production, transportation or processing and marketing of energy in any of its forms. Some economists have estimated that this amount spent in the creation of new physical assets by these firms will rise to one dollar in every four dollars within the next generation. Those of us who are concerned more particularly with coal and generally with the other alternative means of energy production such as oil and natural

gas, feel that we should record why it is we can support a bill of this kind looking towards the extension of Stanmount's capacity to carry on the exploratory work with an even mind and without too much preoccupation by the government of this country with the extension of these alternative sources of energy. With all this expenditure, one dollar in every seven, Canada has never been and is not today self-sufficient in usable energy. Some economists measure a nation's national growth by the amount of usable energy which it possesses.

In 1950, eight years ago, we were then importing nearly two-thirds of all our fuel needs in this country. In 1955, the last year for which all the relevant statistics are available, I believe we spent $438 million on foreign exchange for the purchase of various fuels, including oil. If we were to account fully for our balance of payments on account of energy we should, I suggest, have to allow for the purchase of machinery and equipment used in energy import and also for payment to non-residents for such things as interest and dividends. We are, therefore, spending in this country today a large sum of money to import energy in some of its forms. We can measure our national growth, not only by the customary criteria of the gross national product, the growth of population, average wages, the increasing standard of living, but by the increasing use of energy, the use of coal, oil and natural gas, wood and water on Canada's farms, in her factories, in her homes, in her stores and in her mines. Those of us who are sent to this house to protect, defend and champion the cause of coal production do not want to be narrow-minded in our vision on this matter. We want to see the country prosper, and with it the people whom we represent and whose livelihoods depend in a larger part upon coal than they do at this time upon oil or natural gas.

A farmer in Canada can harvest today with power-driven equipment 30 times the acreage he could harvest by the use of hand tools at the time of confederation. A farmer in Canada today can harvest 30 acres for every acre he harvested in 1867. Paper mill operators turn out 10 times as much today as they did in the same period of time in 1900 as a result of the use of energy. To raise a ton of ore took two hours as recently as 1930; it now takes less than 50 minutes.

Mr. Speaker, some of us in the house are concerned with oil and natural gas but it would be understandable that in passing, at what we believe to be a late date in this session, or in giving support to a bill such as one asking for an extension of legislative capacity for Stanmount Oil, we are naturally concerned with coal. If I may be permitted to enliven the declining hours of this afternoon's sitting, may I say that we are of a mind that there is no fuel like an old fuel.

Some hon. Members: Oh, oh.

Mr. Morris: It was the extensive possession of coal reserves which gave the first preeminence to the Ruhr valley. We do not need to go this far afield—

Mr. Speaker: I was just about to remind the hon. member that he was getting a little bit away from the Stanmount Pipe Line Company.

Mr. Morris: Very well, Mr. Speaker. If I may therefore speak only for one moment on the relative percentages of the production of total energy occupied by coal and petroleum, I should like to remind the house that a splendid report prepared by John Davis for the royal commission on Canada's energy prospects envisages that by 1980, 45 per cent of the total energy in Canada will result from the use of petroleum whereas the figure today is 42 per cent, and that for natural gas it will be 25 per cent as compared with the present figure of 4 per cent. Yet for quantitative purposes there are broad indications why it is that coal constituency members can support the extension of oil exploration and research in this country, for the prospects for the use of all forms of energy including coal are excellent. We therefore look forward to a growth in that area of energy production that especially animates us, along with the increase in the use of oil and natural gas.

Mr. Speaker: Is the house ready for the question?

Mr. John Pallett (Peel): In rising to speak on the bill, Mr. Speaker, I should like to express my appreciation to the hon. member for Halifax (Mr. Morris) for his little bit of leaven in the loaf. I think that is something that we shall perhaps be using on many platforms in the weeks to come. At the moment I would think that we might get back to the bill in question.

As was indicated by the sponsor, when this company was originally incorporated it was for the purpose of building a line which would originate south of the Canada-United States border and then come up into Canada and for the purpose at that time of developing what were hoped to be reserves.

As the sponsor has said, the company never went into operation but it desires to reorganize. This is something of which I think the house might well take cognizance. It is an indication of faith in the future of the country that this company wishes to reorganize, no matter who owns or controls

it. In order to keep pace with the development of the country they suggest that gas might now be added to the commodities they can carry. This is a recognition of the fact that gas is now attaining a position of importance in the energy picture in this country. But more than that, as was pointed out by the hon. member for Assiniboia (Mr. Argue) when he indicated to the house the ownership of this company, it is an indication by a large company of faith in the development of the future of this country. He will probably say "Yes, to the shareholders' profit". However, I point out to him that without people of vision in this country there would be no jobs in this country; and without people who reorganize companies and who go ahead and develop the country, there would be no work for the people in the country.

In my riding I have a large labour element and there is not one of those who are responsible who will not be the first to admit that fact. For that reason they support the free enterprise system very radically and strongly in my riding, I may say. I might point out to the hon. member for Assiniboia that he cannot becloud the issue on any bill or any matter before this house simply by saying that it is for the profit of a company. These people do these things for profit, certainly. But along with that motive they also create jobs for workers whom the hon. member professes to represent. You know, Mr. Speaker, many of the arguments of the C.C.F. group remind one of what Bassanio said in the Merchant of Venice:

> Gratiano speaks an infinite deal of nothing, more than any man in all Venice. His reasons are as two grains of wheat hid in two bushels of chaff; you shall seek all day ere you find them, and when you have them, they are not worth the search.

Mr. Argue: That is your contribution for the whole session.

Mr. Pallett: Perhaps it is a great deal more worth while than any I have heard from that group and perhaps more lasting also.

Mr. Argue: I have heard that for years.

Mr. Pallett: On the bill in question, Mr. Speaker, may I say this. It is a step that a company wishes to take. They have assessed the situation and they come to us, because they were incorporated originally under an act of this parliament, to assist them not in any pecuniary fashion but merely in an administrative fashion, by adding this commodity. It is for that reason, Mr. Speaker, that I stand in my place and suggest that we give to this bill the measure of support that it deserves.

Some hon. Members: Question.

Mr. Speaker: Is it the pleasure of the house to adopt the motion?

An hon. Member: On division.

Motion agreed to on division, bill read the second time and referred to the standing committee on railways, canals and telegraph lines.

MID-CONTINENT PIPELINES LIMITED

Mr. P. B. Rynard (Simcoe East) moved the second reading of Bill No. S-15, respecting Mid-Continent Pipelines Limited.

He said: This is a very simple bill respecting Mid-Continent Pipelines Limited which was incorporated in this house in 1953. When it was incorporated it was to carry gas and oil anywhere in Canada. The company now seeks permission to build a 30-inch pipeline from Edmonton down to just southwest of Chicago.

This pipe line will pass through Edmonton down through Camrose and across the Alberta border into Saskatchewan, will go along by Moose Jaw and Regina and will cross into North Dakota in the area of Northgate; it will cross from North Dakota into the state of Minnesota near the twin cities of St. Paul and Minneapolis, close to Rochester, and will then cross the Mississippi river just below the city of La Crosse and into the state of Wisconsin. It will then cross the state of Wisconsin and will go into the state of Illinois and will end at or near Joliet, which is southwest of Chicago.

It will be a 30-inch pipe line with storage facilities at both ends, and will have four pumping stations. The Canadian section will be built, owned and operated by Mid-Continent Pipelines Limited and the United States section will be built, owned and operated by a United States company which is a wholly owned subsidiary of Mid-Continent Pipelines and the majority of whose directors will have to be residents of Canada.

The complete control of this pipe line will therefore rest with Mid-Continent; the pipe line will be a carrier pipe line only, carrying oil from western Canada where we have a large exportable surplus of approximately twice the amount of oil we can use today and where, according to all forecasts, in the next ten years we will still have twice the amount of oil we can use. Detailed economic and geological studies of this area point out that last year the United States reserves for the first time dropped below their reserves in the previous year, 1956. Over the last ten years there has been a gradual decline in the ratio of United States reserves to increased consumption. Studies of the greater Chicago area show that the area uses approximately

an increase of 5.5 per cent per year as compared with the level across the United States of 4.5 per cent.

All the factors point to the fact that it is getting harder for the United States to find oil. Not only is it getting more expensive to pump but oil surveys show that the Mid-Continent Pipelines feel this is a great field for our exportable surplus of oil, particularly in Alberta and the other western provinces.

The initial output will be approximately 150,000 barrels per day and will gradually increase to 300,000 barrels per day. On the present schedule that will amount to $250 million in terms of United States dollars per year, and I am sure every member of this house will be very proud and glad to know that this would approximately equal one-quarter of our adverse trade balance.

In order to facilitate this project Mid-Continent Pipelines seeks certain amendments. Firstly, under clause 1 they have an authorized 5 million shares of no par value; they have issued 200,000 shares of paid up capital at 50 cents a share, amounting to $100,000. It is their purpose to further finance the project and further shares are to be issued for this purpose at not less than $1 per share.

To avoid preferred treatment for present shareholders, one out of every two issued shares is to be cancelled so that $100,000 of paid up capital of 100,000 shares is to have an average price of $1 per share. The unissued increase of 100,000 shares is so that the authorized capital will be restored to the usual 5 million shares.

We ask for three changes so that we can operate in order to sell this oil across the border: Firstly, the capacity to operate within and without Canada—21 of the 23 pipe line companies have already been granted this facility. Secondly, the addition of the words "extraprovincial and/or international" which are common to pipe line acts. Only two of the 23 pipe line companies are limited to interprovincial operation. Thirdly, we ask for the deletion of the proviso reading, "Provided that all pipe lines for transmission and transportation of oil and gas shall be located entirely within Canada". This has been looked after in chapter 37 of the 1957 and 1958 statutes on petition of Alaska-Yukon Pipelines and Mid-Continent seeks to have this proviso similarly deleted so that it may have complete control of this international oil line.

Before construction can start, however, permission must be obtained after an exhaustive and detailed public investigation by the board of transport commissioners. The licence to export the oil must also be obtained from the Minister of Trade and Commerce (Mr. Churchill).

I am accordingly pleased to move that this bill be now read a second time and referred to the committee on railways, canals and telegraph lines for examination and report.

Mr. H. W. Herridge (Kootenay West): Mr. Speaker, as an old enemy of this legislation I wish to say a few words at this time. This bill has appeared under various names and on each occasion it has had a different sponsor. In 1952 it was introduced as Boundary Pipelines and in 1957 when it was introduced it was renamed or rechristened—in any event it was converted in the meantime—to Mid-Continent Pipelines Limited. At that time it was very strongly opposed by all members of the group with which I have the honour to be associated.

Mr. Speaker: I regret to have to interrupt the hon. member, but the hour for consideration of public and private bills having now expired, the house will now revert to the business which was interrupted at five o'clock.

INCOME TAX ACT

The house resumed consideration in committee of Bill No. C-39, to amend the Income Tax Act—Mr. Fleming (Eglinton)—Mr. Rea in the chair.

At six o'clock the committee took recess.

AFTER RECESS

The committee resumed at eight o'clock.

On clause 11—*Charitable donations.*

Mr. Godin: Mr. Chairman, when this discussion was interrupted at five o'clock I was referring to the amazement on the part of the people of Canada concerning the provisions of this clause which increases to 10 per cent the exemption in the case of corporations wishing to make donations to municipalities. This will undoubtedly assist some municipalities. It is the source of equal amazement that individuals who give moneys to municipalities will receive no additional relief whatsoever. In the face of certain references to meetings with municipal organizations the government appears to be suggesting that our municipalities should make every effort possible now to live off the charity they may be able to obtain from certain people who may be in a position to make substantial donations.

I ask hon. gentlemen of this committee in what way this can assist the ordinary citizen in our many municipalities who owns a home and requires services for which he is willing to pay? There must be equality of treatment in taxation. Costs differ as

between municipalities and in the case of mining municipalities such as my own costs are high because of the terrain. I submit it will be with surprise that the Canadian people will realize that some wealthy corporations will be able to obtain greater tax relief through making donations in the form of charitable gifts to municipalities whereas the ordinary people of Canada will receive no additional benefit.

In closing my remarks I wish to refer to the exemption to be granted for payments made for ambulance fees to a licensed private hospital. This is relevant to the clause—

Mr. Fleming (Eglinton): Mr. Chairman, can we not deal with that when the next clause is called?

Mr. Godin: I shall be pleased to do that, sir.

Mr. Fleming (Eglinton): Mr. Chairman, I wish to make a comment on what has been said. The hon. member for Nickel Belt has quite misconceived the effect of the clause with which we are dealing. There is no change made in the definition of the word "charity" by this bill. All that this clause does is to enlarge from 5 to 10 per cent the proportion of the income of corporations which when contributed to charities may be deducted from income for tax purposes. The existing section in the act has long made provision for gifts to charities, and among permissible gifts to charities are gifts that may be made to the crown in the right of the province or to a municipality. These are voluntary gifts to municipalities, the kind of gifts that people sometimes make as memorials; for instance, memorial parks, memorial gardens, memorial fountains and memorial recreation facilities. That is the sort of thing with which the clause deals and all the amendment does is simply to enlarge from 5 to 10 per cent the proportion of income which when given by a corporation to charities may be deducted from income for tax purposes. It does not touch the definition of charity at all.

Mr. Benidickson: Mr. Chairman, when we last discussed this item just before the rules put us on another subject at five o'clock we were for the first time considering an amendment to section 27 of the Income Tax Act. I indicated at that time I wanted to rise in defence of the rights of the hon. member for Nickel Belt under the rules to discuss at this time something that was not proposed before with respect to an amendment to section 27.

First of all I would point out to the Minister of Finance that with respect to this and other bills which he has recently sponsored in this chamber we have been reasonably lenient. I hope we have recognized at all times that at previous stages consideration has been given to some of the objections that might obtain among the public. But in objecting at this stage to the right of the hon. member for Nickel Belt to discuss a possible amendment to section 27 of the Income Tax Act I feel the Minister of Finance was adopting an unwise procedure. I should like to remind the hon. gentleman that I cannot recall in recent years as I have watched him very carefully in discussions on this type of legislation that either on the introduction of the first clause or on the introduction of an amending clause that referred to an important section of the act was the minister himself or any hon. member of his group denied an opportunity to discuss this kind of measure fairly thoroughly.

But he cannot have it both ways. If we are fairly lenient to the minister in restraining our debate when the Speaker is in the chair, as I think we have been in connection with this bill, surely when we come to a discussion of the individual clauses of the bill the minister will not want us to be particularly restrained if there is a real semblance of relevance with respect to the amendment of any section we are concerned with.

The minister was always very vocal when he was on this side of the house. I want the minister to try to return the consideration that we have shown toward him in the last couple of days in discussing some of his legislation. I think we have been reasonably expeditious in our consideration of it. I just want to relate this little story that I recall about one of New York's taxi drivers. A passenger looked at the meter and he saw the exact amount that he was supposed to pay and he paid it. He saw that the taxi driver's chin dropped quite a bit and he asked, "Is that not correct?" The taxi driver said, "Yes, it is correct but it is not right". I want the minister to look at past debates and I want the new members of the house to look at past debates with respect to budget matters and I think they will find there has not been very much abuse with respect to relevancy in regard to items in committee of the whole after second reading. Certainly, he should not have been so stringent in objecting to the remarks that the hon. member for Nickel Belt intended to make at five o'clock because he proved to the minister that his remarks were brief and very much to the point in connection with section 27 of the bill.

Mr. Godin: Mr. Chairman, in view of the remarks of the Minister of Finance may I ask him a question? I recall that in the budget

speech he emphasized the fact that the donations made by corporations in Canada which would qualify for the exemption would go in some cases to municipalities. The minister stated that the donations to municipalities should be for monuments and parks only. Is that so, or if a corporation feels that it would like to dispose of certain extra funds and it gave moneys to a municipality can it obtain an exemption by sending the receipt to the proper department? Where in this law can the minister indicate that those donations are only for monuments and parks?

Mr. Fleming (Eglinton): Mr. Chairman, I did not say they were only for monuments and parks. That is the common case of a charitable gift to a municipality. The clause makes provision for gifts by any taxpayer.

Mr. Benidickson: Because of the new form of solicitation for charitable funds which might be destined to a municipal source, would not this provision basically require that they should involve a housing proposition that is to be sponsored by municipality?

Mr. Fleming (Eglinton): It is not confined to that at all. There is reference to housing corporations in line 11.

Mr. Pearson: I should like to ask the minister a question on this clause. If the question was asked before five o'clock when I was not here I apologize. I take it the purpose of this amendment is to encourage charitable donations from corporations, and that the minister may have had in mind that this would even encourage special donations from corporations for educational purposes, foundations, scholarships and that kind of thing. In assessing the possible effectiveness of this amendment it would be interesting if the minister could give us some information as to the percentage of corporation earnings, in the last year for which figures are available, which have been deducted as directed to charity.

Mr. Benidickson: A little over one per cent.

Mr. Fleming (Eglinton): I gave that information when we were in committee of ways and means on the budget resolutions respecting the Income Tax Act amendments. I shall be glad to give the figure to the Leader of the Opposition. In 1954 the total charitable donations by corporations indicated in their income tax returns amounted in round figures to $25 million, or 1.2 per cent of the income of those corporate taxpayers; in 1955, $27,600,000, or 1.1 per cent of their income; in 1956, $32 million, or one per cent of their income. As the Leader of the Opposition indicated at the outset of his remarks, on June 17, I laid some emphasis, in announcing this particular resolution, on the encouragement that I hoped it would give to corporations in particular to support universities.

There are certain charitable causes that naturally have more appeal to philanthropy of the individual than to corporate philanthropy; support of churches I gave as one example. I did make a very strong appeal on that occasion to the corporations to give active support, and much enlarged support, to the universities.

Mr. Pearson: Mr. Chairman, corporate contributions to education in some countries have gone farther than they have in Canada. I am thinking of the United Kingdom and the United States. Perhaps this amendment —though it may not have any immediate effect because it is quite a jump from under two per cent to 10 per cent—will achieve the objective the minister and the government have in mind in making the change to encourage corporations to assist education in this country, higher education especially, as they are gaining so much themselves from the results of higher education. As we all know, if there is any activity in this country which needs financial help at the moment, it is higher education. I am sure we all hope that this amendment, though it may not have any immediate practical effect, will be an encouragement to corporations to make progress. If they cannot reach 10 per cent, perhaps they can reach five per cent before long.

Mr. Fleming (Eglinton): I think it is well to bear in mind that although the average is much below the existing five per cent, undoubtedly some corporations have been contributing up to the full five per cent, and they no doubt will be prepared to go beyond five per cent. Indeed, we have had indications to that effect, and we hope that their example will be followed by some others that have not been quite so generous in their charitable donations.

Mr. Benidickson: I cannot readily recall but if in a past year corporations have overspent the five per cent opportunity can they average it under the Income Tax Act?

Mr. Fleming (Eglinton): They can to the extent they exceed the maximum. They can apply it in the next year.

Mr. Benidickson: But hitherto, if in the taxing year they had given more in the way of charitable donations than five per cent of their taxable income there was no opportunity to transfer the balance forward to the next taxing year?

Mr. Fleming (Eglinton): Yes, they have the right to do that, to carry the excess forward into the next succeeding year.

Subclause agreed to.

On subclause (2).

Mr. Godin: Mr. Chairman, it may be of some assistance if I inform the minister as to the value or lack of value of this amendment in paragraph (vi) in certain areas of northern Ontario, and especially in the riding of Nickel Belt. It will be very difficult for the taxpayer to realize why exemptions for certain types of transportation to hospitals should be limited to ambulance services or an ambulance.

In my riding there are no ambulance services and no hospitals except private clinics operated by certain companies. Furthermore, if you were to use an ambulance to travel from certain parts of my riding to the hospitals in the adjacent riding of Sudbury it would be necessary to travel for two days. The people who live in the lumbering communities in my riding and who are not receiving large salaries periodically, on the occasion of grave illness, must be rushed by plane or train to the nearest hospitals in Sudbury which would take roughly four to five hours. This is very costly compared with what people have to pay who live in well organized municipalities where there are hospital and ambulance services.

My people will be very disappointed to realize that this exemption is primarily meant to benefit the people in the metropolitan area of Sudbury rather than those people who live some distance away and to whom the cost of transportation to hospital means something. An ambulance account may be $5 or $10 at the very most but poor people living in remote areas must travel by train or plane to hospital and the heavy expense they incur is not covered by this clause.

For these reasons I feel that it will be a great surprise to the people of my riding when they realize that the amendment is meant to benefit only some of the taxpayers of the country.

Mr. Benidickson: Mr. Chairman, there was considerable discussion of this matter at the resolution stage and I thought the hon. member for Burin-Burgeo made a very important contribution to the debate at that time as has the hon. member for Nickel Belt now. I confess that when I looked at the resolution and certainly when I looked at the proposed amendment in the bill I felt, without meaning any offence to the Minister of Finance, that there was an undue Toronto complex in the design of this amendment. I see that the Prime Minister is in the house. I know that he represents a remote and vast northern area like I do and as does the hon. member for Nickel Belt. The Prime Minister will know that in our sections of the country we have not got ambulances and that our people on occasion find themselves faced with an emergency where they have to engage the most available type of transportation. Transportation is not by ambulances such as the Minister of Finance would be familiar with in Toronto. It might very well be a taxi.

From my experience in the past I have found that taxi companies assume a great risk in transporting sick persons. There may be some chance of damage to the vehicle caused by the sickness but they always provide a car. I find that the air transport companies do the same thing. There is never any hesitation in making this type of ambulatory service available. It is always made available as soon as possible after the call is received.

I think the clause is unduly restrictive. I know that the availability of formal ambulances is increasing not by reason of the fact that there is any profit in buying an ambulance and making the service available to people in a certain community but largely by reason of the fact that funds have been made available by service clubs which realize that in small communities an ambulance service would not be commercially sound as a business venture. Service clubs have made ambulances available in such communities in the same way as they have sometimes made fire protection services available.

I am worried about the wording of this clause and I am a little worried about the experience of the Minister of Finance. I see he is discussing the matter with the Prime Minister and I think he will get some good counsel from him because he is well acquainted with some of the remote sections of northern Canada. I think we could readily provide an amendment to cover those who live in remote areas and, when they require immediate ambulatory service, are faced with an excessive charge. I know the worries of the officials of the department. They fear that people in urban areas will want to travel back and forth to a hospital by taxi and claim entitlement for a tax deduction. But in giving consideration to that element I think they have overlooked the very oppressive financial cost imposed upon people in remote areas who on occasion require this essential service. I think we could very readily amend the clause so that people who live in remote areas may claim exemption once, twice or more often in a year for the cost of what we know in cities as an ambulance but which in their case involves the

use of an airplane, boat or taxi because the ambulances we see on the streets of our cities are not available to them.

Mr. Herridge: I wish to support the remarks of the hon. member for Kenora-Rainy River and his suggestion to the minister that meaning of the word "ambulance" should be widened. At the present time it is far too restrictive. I am sure the hon. member has spoken from experience very similar to mine. My constituency is isolated and there is a lot of logging and mining. On occasion I have helped to bring out an injured man 9 or 10 miles on a pack horse. On another occasion I had to hire four men to carry an injured man a distance of 9 or 10 miles on a stretcher. On other occasions we have had to use launches over a considerable distance and in other cases logging trucks in order to transport people some 20 or 30 miles to hospital. On all these occasions there is an excessive cost. The purpose of the use of horses or individuals or vehicles is to get the man injured in the woods or mines to a hospital. There are a good number of locations in my constituency where there are no road facilities but only trails. These accidents occur in the course of timber cruising, prospecting and on some occasions trapping.

I cannot see why persons who live in urban areas should have a preference over those people who live in the backwoods. In the majority of cases they can hire a licensed ambulance. In the northern end of my constituency, injured lumbermen, injured miners, trappers or prospectors, are taken to hospital in what would be, from the point of view of this bill, quite unconventional ways. However, the expenditure in connection with that transportation is quite often treble the cost of taking a person to a hospital in a licensed ambulance over paved highways.

I do urge the minister to give some consideration to the representations made at the resolution stage, and again now, by the hon. member for Kenora-Rainy River with respect to giving those persons who live in the isolated and more or less undeveloped areas of Canada the same rights and opportunities under the law as those who live under different circumstances and who have an opportunity to use the vehicles mentioned in this bill.

Mr. Benidickson: When I made reference to the Prime Minister, I failed to mention that there is some form of free service to the sick in his province of Saskatchewan in so far as air ambulance service is concerned. However, I am sure he will be equally sympathetic to those in other provinces who are situated in a remote area and have not the advantage of a similar government scheme. I feel this is very serious. I do not like to see in legislation anything that might in a transitory way appear to be a bit of window dressing, and ambulance service being included among the things that would be available for tax deduction in certain cases.

The hon. member for Kootenay West knows some of these vast areas as I do, and the situations are different with individual taxpayers. I have respect for the tax officials who have to examine the type of tax items that come before them. I think they have as generous a heart as any of us in this chamber. On the other hand, when a tax claim comes in they are inclined to define very rigidly what is an ambulance. This is what I fear. I think an ambulance is a vehicle that is clearly definable in large urban centres, but it certainly is not the kind of vehicle that, in many parts of my riding, would be used to bring sick persons down to the infrequent hospitals that exist in the area. I think the minister should reply to this.

Mr. Caron: I want to say a word on this subject. As this clause is written, there is no limit fixed in so far as transportation by ambulance is concerned. It may be five miles, 10 miles, 50 miles or 200 miles, and so long as the person is being transported to a hospital the cost of the ambulance is deductible for income tax purposes. Suppose a man has been hurt in the woods above Maniwaki. When he arrives at the hospital in Maniwaki it may be claimed he needs the attention of a neurologist. The nearest one is in Montreal, so they take the man to Montreal at a cost of $50 or $60. This amount will be deductible for income tax purposes, but the department will refuse to allow deduction of the cost of transportation from the more remote areas by train, by boat or by any other kind of vehicle. I think there is something which is not quite right about this clause. The department will allow the cost of transportation if the person is moved by ambulance, but if it is not an ambulance the department will not allow the amount even though it may be less than the cost of an ambulance.

Mr. Benidickson: Would it be possible for the minister to indicate whether or not in his opinion he believes the officials of the Department of National Revenue would be satisfied, provided this section is not abused by the taxpayer, that "ambulances" as defined in this section means such conveyance under emergency medical situations as have arisen, as conveyance by airplane, by boat or even by commercial vehicle?

Mr. Godin: The minister may appreciate it if I relate to him the fact that "ambulance" undoubtedly does not include a taxicab. However, because of the long distances in my riding, which I mentioned earlier, it has been known on occasion that childbirth has occurred in taxicabs. Possibly this is a case where the mode of transportation became at once the ambulance and the hospital.

Mr. Denis: It would be all right it if were made to read "by ambulance which is used for transportation".

Mr. Fleming (Eglinton): There was a full discussion of this matter a month ago when the resolution was before the committee of ways and means. I would say this was one of the matters discussed until it was threadbare.

I remind the committee, without repeating all the things that were said on that occasion, that this is the first time in the history of federal legislation that any expenditures for transporting ill persons to hospitals have been permitted to be included within the scope of medical expenses which are deductible from income within the rules laid down by the Income Tax Act. This is the first time and I could at least, I think, ask my hon. friend from Kenora-Rainy River why he did not show, in the earlier days when he was helping to shape the policy of this department, the same concern that he is exhibiting tonight? It would have been helpful in those days to have some assistance from him in seeking to bring about measures of this kind, as some of us then on the other side of the house were endeavouring to do.

I indicated a month ago when this was under discussion that this is the first step into this field. Transportation is limited to an ambulance because it is relatively easy for officers of the department to verify. I indicated at that time in reply to questions that air ambulances, of course, were included. The definition is not confined to surface ambulance at all. This matter will be studied in the light of experience, and there is no intention on the part of the department to give the new clause a hard or rigid interpretation. The matter will be under review, and experience will guide those responsible for shaping policy in this respect.

Mr. Benidickson: I wonder if the minister would not consent to a very slight amendment to this section. Would there be anything wrong in suggesting perhaps the words "ambulatory vehicle" instead of "ambulance", because I assure him that ambulance, as we understand it in the urban areas is not available in some of these vast areas. I would even consent if the minister had some limitations as to the frequency of use of these vehicles for such a purpose. I was wondering about the wording, "for transportation by ambulatory vehicle to or from a public or licensed private hospital"; would the minister consent to that?

Mr. Fleming (Eglinton): I believe that would be more restrictive than the present wording.

Mr. Godin: In view of the remarks of the minister, Mr. Chairman, may I suggest that possibly this clause could be amended to satisfy all circumstances just by striking out the word "ambulance" and adding the words "proven necessary transportation to a licensed hospital." That is what is no doubt meant by the legislation, unless the minister is now prepared to admit to this house that if this government brings in any new legislation, it will only do so in a form that is half right.

Mr. Habel: I want to ask the minister a question. What would be the situation in a case where an ambulance would be hired? For instance, suppose that the new section is in effect and a man hired an ambulance in some distant place, or rather hired an ambulance for a sick person to be taken to Toronto from a northern point. The cost of the ambulance might be anywhere from $100 to $200 or $250. Would he be allowed to deduct that amount?

Mr. Fleming (Eglinton): Obviously a case like that would be examined very closely in order to make sure that there was not an attempt to abuse the section. If a man in urgent need of hospital attention chose to drive past seven or eight hospitals on the way and to take himself off on a long trip, I would think that the department might be disposed to question whether part of the bill would qualify within the terms of the section.

Mr. Habel: On that very point, Mr. Chairman, may I say that I have in mind a case where a man was taken to a hospital on a Sunday night. The doctor in charge of the hospital called the specialist in Toronto and was told that the patient had to be taken to Toronto by the first possible conveyance. He had to be taken by T.C.A. It cost two fares, as the patient had to be transported on a stretcher, plus the fare of a nurse. In other words, it cost less to send him by plane than it would have cost to send him by ambulance. Still the minister does not want to include transportation other than by ambulance.

Mr. Fleming (Eglinton): This clause fixes no limit on the permissible amount. In the

case that my hon. friend was putting to me, it is a question of what is bona fide in a particular case.

Mr. Habel: What I am trying to point out is the fact that, even with a nurse, it costs less to send the person by plane than it does to send him by ambulance. Yet the minister does not want to include transportation by plane.

Mr. Fleming (Eglinton): In such a case there has never been any right in the past to make any deduction whatever, no matter what type of vehicle a man might use.

Mr. Habel: That does not justify the situation.

Mr. Benidickson: My hon. friend referred to the past and said that he is proposing an improvement. But surely after the lengthy discussion that takes place before these amendments are advanced he would want the best possible improvement. I am thinking in terms of an injury that might take place in one of the forests of the country, as often happens, in a region that is rather remote. If the injury is serious, medical attention would be absolutely necessary under the circumstances. In advancing this proposal I do not think the minister has approached the matter with his usual open mind with a view to getting the best possible improvement in the existing statute. I wonder whether the minister has given his final word on this matter. I know he is a good draftsman himself and he has in front of him some officials who I think could improve on this amendment and give effect to what he had in mind. I think he does not want a little bit of window dressing that would apply to some of our big cities and big towns with respect to this amendment. I think he would want something that was generally applicable across the country; and I do not think this amendment is so applicable.

Mr. Caron: Has a definition been given to the department as to what an ambulance is according to this law? There is the ordinary definition of the word "ambulance", but will there be a wider definition of the word "ambulance" for the purpose of the law?

Mr. Benidickson: What is an ambulance likely to be?

Mr. Fleming (Eglinton): The act does not define "ambulance". I think the hon. member was not in the house a short time ago when I said that the department would not be giving a hard interpretation to this provision. It is the sort of problem that we shall have under examination and as to which we shall be guided in the future in the light of the experience we have with this clause.

The Deputy Chairman: Shall subsection (2) carry?

Mr. Benidickson: We are discussing subsection (2) of this clause 11 of the amending bill. It deals in a general way with deductions possible on health grounds. We have opposed vigorously the restrictions that seem to relate to this item of ambulance cost. I should like to refer the committee to a discussion which we had earlier and which was originated, I think, by the hon. member for Welland when he pointed out that, particularly among the poorer people of the land, those whose income does not make it necessary for them to pay income tax, possibly the best fiscal change which could be made by the administration for them in the matter of expenditures for drugs would be the elimination of the sales tax on drugs. I am sure that the minister and those in front of him associated with this responsibility will give this matter consideration. But in the present year we are finding that several provinces are taking advantage of the hospital insurance proposition which was introduced by the previous administration and followed up by the present administration, and which has been acceded to by a number of provinces. I know that Manitoba, with which I am closely associated by reason of residence slightly to the east of the provincial boundary, from July 1 has participated in and taken advantage of the availability of the offer of the federal government hospital insurance scheme originally made possible by the previous administration.

When we discuss this item with respect to deductions from income tax I am concerned as to the position of taxpayers in that province in relation to those in other provinces such as British Columbia, Saskatchewan and Alberta with regard to either expenditures for insurance or fees for insurance vis-à-vis expenditures for hospital costs when they arise. What changes, if any, are likely to be necessary in administration with respect to hospital costs, say, in Manitoba for persons who could have had, prior to July 1, an assessment against them for per diem costs but which I understand for basic services would no longer be assessed against them by reason of the federal-provincial operation of our hospitalization plan?

Mr. Fleming (Eglinton): We went over this subject at very great length a month ago in committee of ways and means. There is nothing in this clause which touches upon hospital costs at all. The words "hospital costs" do not appear in it. That will continue to be covered by the law as it is.

Mr. Benidickson: This is the only opportunity on which I can ask the minister questions as to his intentions with regard to the administration of this clause. Would the minister say whether or not after July, 1958, those persons in Manitoba who from that time on may abandon Blue Cross for the Manitoba medical scheme and who may decide to pay such premium as the province assesses against them so that they may be recorded as members of the scheme, will continue to be able to go to the hospital if necessary and to get from the hospital an assessment of the amount of the bill which they would have been asked to pay had they not been hospitalized under the new scheme? Would the minister answer the question?

Mr. Fleming (Eglinton): Mr. Chairman, I dealt with that question at very great length when the matter was before the committee of ways and means a month ago. I must repeat that there is nothing in this clause which affects the question in the slightest. If my hon. friend is interested in following up the matter he will see that I dealt with it at very considerable length in the committee of ways and means.

Mr. Horner (Jasper-Edson): I would like to take a moment of the committee's time to commend the Minister of Finance upon this whole subclause (2) and particularly on subparagraph (vi). I think he is to be commended for the wording used.

I have practised medicine in the bush country and in my particular area it is necessary to service a district covering 70 miles. I have personally made trips over such distances and ambulances have had to be sent up to outlying areas. This is going to be of tremendous benefit to those people who, until now, have had to pay out substantial sums without being able to deduct the cost from their incomes.

With respect to the arguments put forward by several members on the definition of an ambulance and as to whether they should have wheels on them or not, that is trying to define something too finely. I am very happy with the minister's explanation that the department is going to leave it open so that there might be a little room for adjustment if necessary. It is certainly a great thing for the people of my constituency; they will be greatly benefited thereby and that goes for the other paragraphs in this subclause. In these days of increased costs of drugs, artificial limbs and other services, this amendment is really going to help those people who need help most, people who are not in the high income brackets and who usually have to put out substantial amounts of money. I am sure they will be very appreciative of this relief from income tax.

Mr. Crestohl: I would like to address myself to the words appearing at the top of page 9 with respect to subclause (2), paragraph (viid), which reads as follows:

—for laboratory, radiological or other diagnostic procedures or services together with necessary interpretations, for maintaining health—

Could the minister tell us what he means by "necessary interpretations"? Would that include therapeutic treatment or massages? Does the wording "for the purposes of maintaining health" cover these items? What is the intention? Would the minister give us some interpretation of the word "interpretations"?

Mr. Fleming (Eglinton): I should be glad to endeavour to interpret the word "interpretations". We have in mind here such things as radiological services where they involve the taking of X-rays which would necessarily include the interpretation of or the reading of the X-ray plates.

Mr. Benidickson: I have one observation to make, and I think this applies to subclause (3) but I judge, Mr. Chairman, that you are allowing a fairly wide debate on this clause and are not calling the subclauses.

I see that the application of deduction for medical expenses applies only to expenses of this nature after June 17, 1958, which was the date of the budget. The minister was more lenient with respect to charitable donations from corporations and I wonder how he justifies drawing the line at June 17, 1958 for individuals who may have had medical expenses such as those now being allowed for deduction. I think he probably should have allowed them for the taxation year, and as I say I find that with respect to charitable donations from corporations the date was set at an earlier time. How does the minister reconcile the two?

Mr. Fleming (Eglinton): Are we on subclause (2) or subclause (3)?

Mr. Benidickson: Subclause (2); I was ahead of the game.

Mr. Godin: Mr. Chairman, I would like at this time to move an amendment to clause 11, subclause (2), paragraph (vi) as follows:

That clause 11, subclause (2), paragraph (vi) be amended by striking out the words "by ambulance" therefrom.

Mr. Fleming (Eglinton): I submit to you, Mr. Chairman, that the amendment is out of order. If the argument of the hon. member who has introduced this motion is tenable it means that the effect would be to subtract something from the revenues of the crown and to disturb to that extent the balance

of ways and means. It is on that basis that I submit the amendment is clearly out of order.

Mr. Godin: I submit on the point of order that if this amendment does anything it creates revenue for the government and in no way decreases government revenue.

The Deputy Chairman: I feel that this amendment would very much widen the scope of the clause and I therefore feel it is out of order.

Shall subclause (3) carry?

Mr. Fleming (Eglinton): On subclause (3) I was asked a question by the hon. member for Kenora-Rainy River.

The reason for selecting the date June 17, 1958, is very obvious, Mr. Chairman, because we are introducing here a number of new elements that enter into the definition of medical expenses. In order to qualify the taxpayers must be able to produce their receipts and it would not be possible or reasonable to expect receipts to be provided prior to that date.

Clause agreed to.

Clause 12 agreed to.

On clause 13—*Dividends received by corporations.*

Mr. Benidickson: Mr. Chairman, on this clause as a whole, has the administration formed any opinion as to the estimated tax forsaking involved? The explanatory not says it makes less restrictive the conditions. Is the tax loss under this clause of any consequence?

Mr. Fleming (Eglinton): No, Mr. Chairman, this amendment is not a revenue matter.

Clause agreed to.

Clauses 14 and 15 agreed to.

On clause 16.

Mr. Fleming (Eglinton): Mr. Chairman, there is an amendment to clause 16. All the amendments are reproduced in yesterday's *Votes and Proceedings,* on pages 1 and 2 of the appendix thereto. The amendment I now put forward is to be found on page 1 and I would ask my colleague the Minister of National Health and Welfare to move this amendment.

Mr. Monteith (Perth): I move:

That Bill No. C-39, an act to amend the Income Tax Act, be amended by striking out lines 17 and 18 on page 11 thereof and substituting therefor the following:

"subsection (3) of section 8 and section 81, deemed to have received from such corporation in the year, to the extent that the dividends so"

Mr. Benidickson: Mr. Chairman, I thought perhaps the minister would make an explanation as to the reason for the amendment.

[Mr. Fleming (Eglinton).]

Some hon. Members: Why?

Mr. Benidickson: If you listen you will find out.

Mr. Fleming (Eglinton): Mr. Chairman, the effect of this amendment is to insert the words "subsection (3) of section 8 and" in line 17 of clause 16 of the bill. Paragraph (a) in which these words are being inserted in this amendment deals with the 20 per cent dividend tax credit allowed on dividends received by individuals from Canadian corporations. As explained in the explanatory note opposite clause 16, the purpose of the clause is to delete a reference to section 8 of the act so that certain loans which are deemed to be dividends will not qualify for the 20 per cent dividend tax credit. However, this deletion of the reference to the entire section 8 does more than was intended. This amendment will reinstate a reference to subsection 3 of section 8.

Subsection 3 of section 8 deals with amounts paid by a corporation in respect of an income bond or income debenture that is deemed to have been received by a taxpayer as a dividend. Since these payments are deemed to be dividends the taxpayer receiving them has been entitled to a 20 per cent dividend tax credit in respect of them. The amendment to the bill that is now proposed will permit this to continue.

Mr. Benidickson: I am sure the hon. member for Wentworth and the hon. member for Durham, like myself, were very pleased to have that explanation, Mr. Chairman.

Clause as amended agreed to.

On clause 17.

Mr. Benidickson: On this clause, Mr. Chairman, I am a little concerned about the relationship between the reference to January 1, 1957, and August 14, 1956. Would the minister explain?

Mr. Fleming (Eglinton): Mr. Chairman, I believe the explanatory note is quite clear on this point. The amendment to the 1956 act carries out the announcement that I made on December 6 last that corporations carrying on business in Ontario whose fiscal year ended in 1957 would not be allowed a 7 percentage points tax abatement on that portion of their profits earned before January 1, 1957. I pointed out at that time that unless this step were taken corporations whose fiscal year did not coincide with the calendar year and whose fiscal year began before and ended after January 1, 1957, would receive a windfall but for this provision.

Clause agreed to.

On clause 18—*Deduction where income from business carried on in foreign country.*

Mr. Fleming (Eglinton): Mr. Chairman, there is an amendment to subclause 6 of clause 18. It is simply to change "1958" to "1957" in line 15 on page 13. I would ask my colleague the Minister of National Health and Welfare to move it.

Mr. Monteith (Perth): I move:

That Bill No. C-39, an act to amend the Income Tax Act, be amended by striking out line 15 on page 13 thereof and substituting therefor the following:

"(6) This section is applicable to the 1957 and subsequent".

Mr. Benidickson: Mr. Chairman, could the minister explain why this is in the public interest?

Mr. Fleming (Eglinton): Mr. Chairman, this amendment merely substitutes the year 1957 for the year 1958. This provides that the new optional formula for computing foreign tax credits made available by clause 18 will be applicable commencing in 1957 instead of 1958. This is being proposed because the shortcomings of the old formula first began to affect corporations seriously in 1957 when Ontario re-entered the corporation income tax field and Quebec first extended its corporation income tax to banks and insurance companies.

Mr. Benidickson: Mr. Chairman, I frankly do not understand the effect of this amendment. I have every confidence that the minister is advancing it in all good taste. We have not had too much notice of it and I simply want to indicate that when we are confronted on the floor of the house with these amendments some of us are not too well informed about them.

There was just a little suggestion across the house that we were delaying this bill. For a bill consisting of some 30-odd pages I think we are giving it rather expeditious passage. I am sure that some of the answers that are provided by the minister are of as much interest to hon. members opposite as they are to us and to the public, as well.

Clause as amended agreed to.

Clauses 19, 20 and 21 agreed to.

On clause 22:

Mr. Benidickson: On clause 22, Mr. Chairman, has there been much change with which I and other hon. members of the committee are not familiar with respect to the composition of the income tax appeal board? How many members are on the board? Are there any vacancies? What is the situation in this respect?

Mr. Fleming (Eglinton): The only change that has occurred in the personnel and composition of the income tax appeal board since my hon. friend went out of office arose from the lamented death of the chairman the late Fabio Monet, Q.C.

Mr. Benidickson: Has he been replaced?

Mr. Caron: Does this change mean that they will have to deal with other kinds of taxation besides income tax?

Mr. Fleming (Eglinton): Yes. The occasion for this is the fact that under the Estate Tax Act, when it comes into effect, appeals under its terms will go to this board. Therefore, since its functions are being enlarged to include appeals in estate tax questions, it will hereafter be known, on the adoption of this clause, as the tax appeal board.

Mr. Benidickson: But the number of persons on the board is not being increased by this bill; is that right?

Mr. Fleming (Eglinton): Not by this bill.

Clause agreed to.

Clauses 23 and 24 agreed to.

On clause 25.

Mr. Fleming (Eglinton): Here again there is an amendment which reads as follows:

That Bill C-39, an act to amend the Income Tax Act, be amended by striking out line 10 on page 16 thereof and substituting therefor the following:

"of subsection (3) of section 8 and section 81"

I ask my colleague, the Solicitor General, to move this amendment.

Mr. Balcer: I so move.

Mr. Caron: What is the amendment?

Mr. Fleming (Eglinton): The amendments are all to be found in yesterday's *Votes and Proceedings.*

Mr. Caron: I have it, but it does not seem very clear to me.

Mr. Fleming (Eglinton): This amendment is the same as that moved in connection with clause 16 on page 11. It reinstates the reference to subsection 3 of section 8 so that payments on income bonds or income debentures that are deemed to be dividends will continue to qualify for the 20 per cent dividend tax credit.

Mr. Benidickson: Will the minister explain the difference between the bill as presented to us and the amendment? What was overlooked when the bill was drawn?

Mr. Fleming (Eglinton): Mr. Chairman, I would not say anything was overlooked. I have just given the explanation. It is the same explanation as I gave for the previous

amendment. Instead of leaving out all reference to section 8 of the act, it reinstates the reference to subsection 3 of section 8 of the act.

Clause as amended agreed to.

On clause 26—*Employer's payment to pension plan.*

Mr. Fleming (Eglinton): Mr. Chairman, again there is an amendment to clause 26, line 21, as follows:

That Bill C-39, an act to amend the Income Tax Act, be amended by striking out line 21 on page 16 thereof and substituting therefor the following: "an amount not less than the amount of the special payment to ensure that all the"

I ask my colleague to move this amendment.

Mr. Balcer: I so move.

Mr. Benidickson: I think, Mr. Chairman, we all realize the circumstances. The bill is introduced in the house; it is printed and made available to the public. Between the time of the publication of the bill and its discussion in this committee it has had consideration by the public at large and the administration decided that certain amendments were desirable. I think it should be explained.

Mr. Fleming (Eglinton): I shall be glad to explain any of those amendments.

Mr. Benidickson: Thank you.

Mr. Fleming (Eglinton): This particular amendment to clause 26 is introduced for greater certainty. As will be seen from the explanatory note, clause 26 deals with special payments made on the recommendation of an actuary to augment an employees' pension fund. There is the possibility that the wording, without this amendment, might be interpreted to mean that any payment into the fund of an amount less than the special payment recommended by the actuary would not qualify as a deduction. This amendment will make it clear that while the employer may not deduct more than the amount recommended by the actuary, he may nevertheless deduct payments which are for a lesser amount than that recommended by the actuary.

Mr. Herridge: I should like to ask the minister a question on this clause. Can the minister inform the committee when this long-awaited blue book on pension plans is going to be issued to which the Department of National Revenue has given consideration for some years.

Mr. Fleming (Eglinton): I am afraid I will have to ask my hon. friend to direct his question to my colleague, the Minister of National Revenue. It comes under his department.

Mr. Benidickson: On that point, I do not know whether the hon. member for Kootenay West wishes to press his question. I realize that the regulations do become the responsibility of the Minister of National Revenue. Have we a new set of regulations yet?

As I recall it, the previous administration discussed for some time the desirability of a new codification of those amendments in the little blue pamphlet that was available. Is it available yet to those who are affected by it?

Mr. Fleming (Eglinton): I think the two hon. members are discussing two different things. The blue book that the hon. member for Kootenay West was asking for is to be a sort of manual or book of instructions.

Mr. Herridge: That is right.

Mr. Fleming (Eglinton): The hon. member for Kenora-Rainy River is asking about regulations.

Mr. Herridge: The book I am speaking of was conceived by the former minister of national revenue and his officials and it has been disowned as illegitimate.

Clause 26 as amended agreed to.

On clause 27.—*Payments to widow, etc. of contributor.*

Mr. Caron: Mr. Chairman, may we have an explanation of what subclause 2 means. I do not quite understand the section.

Mr. Fleming (Eglinton): Mr. Chairman, the explanatory note here is quite ample; indeed, the explanatory notes which have been written on this bill are much fuller than is usually the case. I direct my hon. friend's attention to the explanatory note. He will see that the act at present provides that a portion of the proceeds of certain pension plans shall be free of tax but this exemption applies only when the pension is received by the retired employee himself. The new subsection provides that this exemption for a portion of the proceeds shall also apply where the pension continues to be paid to the widow or other dependant of the deceased employee. It is definitely a provision that widens the benefits that the act permits.

Mr. Caron: Will it affect those pensioners who are not contributing to a pension fund? For instance, will it affect judges who are receiving pensions from the government but were not contributors to a pension fund?

Mr. Fleming (Eglinton): Mr. Chairman, the answer is that it does not apply. I am referring now to section 77, subsection 2 of the act, which reads:

> This section has no application in respect of a payment received by a taxpayer out of or under a superannuation or pension fund or plan if the taxpayer made no payment into or under the fund or plan.

Mr. Caron: Section 77?

Mr. Fleming (Eglinton): Yes, of the act.

Clause agreed to.

Clause 28 agreed to.

On Clause 29.

Mr. Caron: What is meant by provision for deduction at the source of the tax imposed on a refund of premiums under a registered retirements savings plan? Does that refer to government plans established throughout the country?

Mr. Fleming (Eglinton): The act provides for a 15 per cent tax on a refund of premiums under a registered retirement savings plan and this proposed new subsection simply provides for deduction of that tax at the source.

Mr. Caron: If the premiums have been refunded?

Mr. Fleming (Eglinton): The tax applies only where there has been a refund of the premiums.

Mr. Pickersgill: Does this clause have reference to the change made in Mr. Harris' last budget to provide for individuals' savings plans?

Mr. Fleming (Eglinton): Yes. The tax was imposed in that legislation but there was no provision made for deduction at the source and that is the occasion now for the proposed amendment.

Mr. Benidickson: My hon. friend referred to the tax. I am sure he meant the tax deduction opportunity.

Mr. Fleming (Eglinton): No, I meant the tax.

Clause agreed to.

Clause 30 agreed to.

On clause 31—*Bonus payments.*

Mr. Benidickson: I wonder whether the minister would make a statement about the views that I know that he has expressed, as well as the hon. member for Greenwood when he was chief financial critic of the Conservative party in opposition, and also the former member for Calgary South. I also refer to the 1956 convention of the Conservative party. Certain views were expressed about what should be done with respect to depletion allowances. Would the minister comment on what progress has been made? Is the whole thing stalled by reason of the appointment of the Borden commission? When may we expect the act to be amended in the light of the views that my hon. friend and his party have always expressed?

Mr. Fleming (Eglinton): There is nothing in this clause dealing with the subject about which my hon. friend is asking me.

The Deputy Chairman: Subclause 2.

Mr. Herridge: I want to repeat remarks I have made on the same or similar sections in recent years. I understand that this clause and the section in the present act provide exemptions for mining development and the development of gas and oil properties and that the purpose is to promote and stimulate production. I have never been able to understand why the application of this principle is limited to mining development and the development of gas and oil production. If the principle is sound I cannot see why it should not be applied to farmers and to those who are interested in the conservation of timber and increasing Canada's forestry production. I know that the matter has certain complications but if a farmer spends his capital to clear land of timber, to drain land and bring it into production or to irrigate land to bring it into production I think that farmer should receive exactly the same consideration for increasing the production of the country as is extended to mining companies and companies developing oil and gas.

The same consideration should apply to those who are conserving timber holdings, who have to build roads for the development of those holdings and who also build roads, trails and fire guards for forest fire protection. Such expenditure is a long term expenditure which in most cases does not bring about an immediate profit or return to the operator. It is an investment in the future in the same way as the investment in clearing, draining or irrigating land. The investment in forest roads, in building roads, trails and fire guards is an investment in the conservation of timber having in view the continuous and permanent production of a forest crop.

I have mentioned this matter before on a number of occasions. I am not suggesting that we can expect to have an amendment inserted in the bill tonight but I do ask the minister to give consideration to the extension of the principle applied in this clause to farming development and forest development and conservation. These people are increasing the production of the country just as production is increased by the mining

companies and oil and gas companies that take advantage of the legislation. I should like the minister to give me his opinion of my suggestion and to tell me whether consideration is being given to a sound application of the principle under proper safeguards to the farming and forestry industries.

Mr. Fleming (Eglinton): I have taken due note of my hon. friend's remarks, as I have of his remarks to the same effect in earlier sessions. Perhaps he will permit me to point out that section 83A of the Income Tax Act which is being amended here has nothing to do with anything except mining companies or companies engaged in exploration for or refining of oil or gas.

Mr. Herridge: I could not get my remarks in anywhere else.

Clause agreed to.

Clause 32 agreed to.

On clause 33—*"Cash method" of computing income.*

Mr. Benidickson: What grievances does this correct? What complaints have been made about the legislation hitherto that will be avoided by the passing of this clause?

Mr. Fleming (Eglinton): I think the explanatory note to this clause is quite clear. Taxpayers who compute their income on the cash basis may not deduct certain reserves allowed to taxpayers who compute their income on an accrual basis. It is simply carrying through the difference between the accrual basis and the cash basis.

Clause agreed to.

On clause 34.

Mr. Benidickson: Would the minister similarly answer my question with respect to clause 34? What grievance or inconvenience or impropriety does this correct?

Mr. Fleming (Eglinton): I cannot do better than the explanatory note. I think it is very clear and ample.

Clause agreed to.

On clause 35—*Amalgamation defined.*

Mr. Benidickson: Under clause 35 we have 6 or 7 pages of statute law that involves the amalgamation of corporations. In view of the prolixity in the statute that is going to be provided, and in view of the fact that in the past the minister has always been one who wanted to reduce the content of our Income Tax Act, I think probably a little explanation is due to the committee.

Mr. Fleming (Eglinton): Clause 35 of the bill, Mr. Chairman, introduces new legislation with respect to amalgamations. It is desirable that there should be clear and ample legislation governing the various features affecting income tax liability that arise when corporations amalgamate. The provisions here set forth in some detail are the clear statutory enactments that will govern these various questions that are bound to arise when corporations amalgamate.

The proposed new section 85I codifies the practice that has been followed in dealing with cases where there have been mergers of the type defined therein as amalgamations. This type of merger is possible under Ontario and Manitoba laws governing corporations and from time to time the taxation division has been required to deal with tax consequences of such amalgamations. It is desirable to state specifically the rules so that those who are contemplating an amalgamation may have more certainty in advance concerning their position.

The proposed section also provides four rules beneficial to the new corporations that are contrary to the practice previously followed. These are: first, the proposed subsection 3 permits a new corporation, under certain circumstances, to deduct drilling, exploration and development expenses incurred by its predecessors; second, any tax-paid undistributed income of a predecessor corporation at the time of amalgamation is carried forward as tax-paid undistributed income of the new corporation; third, where the predecessor corporations had undistributed income on hand at the end of 1949, but did not avail themselves of the opportunity to pay the 15 per cent tax thereon permitted by section 105, subsection 1, the new corporation will be given the right to pay the 15 per cent tax as though it had had a 1949 surplus of the same amount; fourth, where a predecessor corporation did not take advantage of section 105, subsection 2, which permits paying the 15 per cent tax on amounts matching its dividends, the new corporation will be allowed to regard those dividends as though it had paid them if it wishes to pay 15 per cent tax.

Clause agreed to.

Clauses 36 to 38, inclusive, agreed to.

On clause 39.

Mr. Benidickson: Could the minister explain the reason for this amendment beyond the explanatory note to clause 39?

Mr. Fleming (Eglinton): Mr. Chairman, my hon. friend is quite familiar with the provisions dealing with the tax on undistributed income on hand at the end of 1949. The new subsection permits a corporation which now has less undistributed income on hand than

it had at the end of 1949 to elect to pay the 15 per cent tax on the undistributed income now on hand.

Mr. Benidickson: Is there an amendment to this clause?

Mr. Fleming (Eglinton): It is to subsection 4. There is an amendment here which I shall ask my colleague the Solicitor General to move.

Mr. Balcer: I move that clause 39 be amended:

(a) by adding thereto, immediately after line 28 on page 29 thereof, the following:

'(5) Paragraphs (a) and (b) of subsection (3) of section 105 of the said Act are repealed and the following substituted therefor:

"(a) if the election was made under subsection (1) or (1a), the amount of the tax as estimated by the corporation in the election, and

(b) if the election was made under subsection (2), (2a), or (2b), the amount of the tax that the corporation elected to pay."'

(b) by striking out line 29 on page 29 thereof and substituting therefor the following:

'(6) Subsections (4) and (5) of section 105 of the said Act are'; and (c) by adding thereto, immediately after line 42 on page 29 thereof, the following:

'"(5) Where the estimated amount of tax under subsection (1) or (1a) that was paid with an election was in excess of or less than the amount payable under that subsection, tax shall be deemed to have been paid under this part on an amount equal to the lesser of

(a) 100/15 of the estimated amount of tax so paid, or

(b) the amount on which the corporation was entitled, at the time the election was made, to elect under subsection (1) or (1a), as the case may be, to be assessed and to pay tax."'

'(7) Subsections (7) and (8) of section 105 of the said Act are repealed and the following substituted therefor:

Payment of deficiency.

"(7) Where an election was made under subsection (1) or (1a), the corporation shall, within 30 days from the day of mailing of the notice of assessment, pay to the Receiver General of Canada an amount equal to the amount by which the tax payable exceeds the tax as estimated in the election, whether or not an objection to or an appeal from the assessment is outstanding, and shall, in addition, pay interest on that amount at 6 per cent per annum from the day of the election until the day of payment whether or not it was paid within the period of 30 days.

Time tax deemed to have been paid.

(8) Where the balance of the tax payable under subsection (1) or (1a) has been paid within 30 days of the day of mailing of the notice of assessment and interest, if any, payable under subsection (7) has also been paid within that time, the whole amount of the tax payable shall be deemed to have been paid under this part on the day of the election."'

Amendment agreed to.

Clause as amended agreed to.

On clause 40.

Mr. Fleming (Eglinton): There is an amendment to subsection 1. The amendment is to change the word "declaration" in line 6 to the word "payment". I ask my colleague the Solicitor General to move it.

Mr. Balcer: I so move.

Amendment agreed to.

Clause as amended agreed to.

On clause 41.

The Deputy Chairman: Shall subclause 1 of clause 41 carry?

Mr. Caron: On division.

Mr. Benidickson: I think someone has properly said "on division". There was considerable discussion of this subject at the resolution stage, and on another aspect of it we had a division in the house today. We, in the opposition group, feel very strongly about this. I feel that the Minister of National Revenue perhaps explained very well the reason for this amendment to the Income Tax Act. On page 2136 of *Hansard* for July 10, 1958, the Minister of National Revenue said this:

From what I have seen in my limited practice—

I assume he was speaking as a lawyer.

—and I am sure others in English-speaking provinces have seen it too, a husband will deed a property to his wife as joint tenant. Perhaps they build a home when the husband retires and they create a joint tenancy. Then the husband dies and in the course of events it is suddenly found that there is a gift tax because the property is owned by the husband and the wife had not put any money into it. Time and time again complications have arisen because of the gift tax and gift tax assessments. It is to avoid cases such as that that this section is designed. It refers to the home of the husband and wife.

We did debate this question fairly thoroughly at the resolution stage, and in deference to the committee I do not want to repeat what I said at that time. However, I feel that there is much lacking in the section as it is designed. This is indeed a very general practice with respect to home ownership. This proposes that only when a land title transaction has taken place in the 1958 taxation year or subsequently will anyone get any benefit from this provision. Because of the very thorough review that was given to this particular proposition on July 10 and July 11 in our debate, while I felt that not very many members of the government party, although it is very large, actually spoke formally here in this chamber. I must say frankly that I had hopes that in caucus or by the utilization of other means they would have impressed upon the Minister of Finance the desire to amend this particular section. I felt that the hon. member for Medicine Hat spoke in a clear way, as reported at page 2157 of *Hansard*, when he described the land titles holdings of this

nature with which most of us in Ontario and in western Canada are familiar. As to his part of the country he said:

> We have . . . adopted the practice of joint tenancies in that part of the country and we have found that the principle of joint tenancy is becoming more and more popular.

He went on to say that with respect to joint tenancy in Alberta, should the husband die within a few years after the establishment of a joint tenancy, if the widow had not contributed or could not prove that she had contributed in a direct monetary way to the acquisition of this joint property, she would be subject to an income tax claim because of the gift tax provision. The Minister of National Revenue, who knows about these things, indicated that this matter was being raised steadily in his department. He indicated to the house that he felt that this provision would avoid all that difficulty. With the limitation that the clause applies only to joint tenancies in 1958 and onward, I suggest to the committee that we are not correcting the situation which was described by the Minister of National Revenue.

I raised the question on the resolution stage first of all as to whether our taxpayers across the land are likely to know about this situation before they die. Then I raised the question as to whether those who do know something about it are going to be obliged to go through all the legal rigmarole to transfer the existing joint titles back to the ownership of the person who could prove that he alone had contributed to the acquisition of the property and then the further rigmarole of bringing that property back into joint ownership in order to take advantage of the provision of this act.

I am disappointed that among the amendments that are presented to us tonight and as they appear in *Votes and Proceedings* of yesterday there is not one that relates to this particular section. I think that those members who have spoken recognize the problem. I am disappointed particularly that the private members on the government side who are familiar with this situation, such as the hon. member for Medicine Hat and I think the hon. member for Bow River, who also spoke about the growing tendency of this form of ownership of the home residence between husbands and wives, have not been able to persuade the minister to change this provision.

The Deputy Chairman: Shall clause 41 carry?

An hon. Member: On division.

Clause agreed to on division.

Clauses 42 and 43 agreed to.

[Mr. Benidickson.]

Title agreed to.

Bill reported.

Mr. Speaker: When shall the said bill be read a third time? By leave, now?

Mr. Chevrier: Next sitting of the house.

FINANCE

MOTION TO APPROVE EXPENDITURES AUTHORIZED BY SPECIAL WARRANTS

Hon. Donald M. Fleming (Minister of Finance) moved that the house go into committee to consider the following resolution:

> That it is expedient to introduce a measure to approve certain expenditures authorized in respect of the fiscal year ended on March 31, 1958, including those provided for by the special warrants issued by the governor general pursuant to orders of the governor in council of August 16, 1957 (P.C. 1957-1111), August 19, 1957 (P.C. 1957-1134) and February 7, 1958 (P.C. 1958-222), but not including the expenditures authorized by appropriation acts for that fiscal year; and to authorize the application of certain amounts in the accounts of the said fiscal year.

Motion agreed to and the house went into committee, Mr. Rea in the chair.

Mr. Fleming (Eglinton): Mr. Chairman, this resolution contemplates the introduction of a bill which will be the final appropriation act for the fiscal year 1957-58. Today I tabled the report on supply for the fiscal year ended March 31, 1958. In that document we have set forth in great detail the position with respect to supply for the fiscal year ended March 31, 1958. If hon. members will have regard to that document, perhaps I can briefly use it as the basis for my remarks now.

Hon. members will see in the summary on the inside of the cover of the document that the total amount of all items which required to be voted—that is to say, excluding the items that we call the statutory items—amounted to $3,650,734,476. That is the amount left that required to be voted. It leaves out the statutory items in the estimates, the supplementary estimates and the further supplementary estimates (1) and (2), and also omits five items introduced by the former government in the spring of 1957 which were given continuing effect for the balance of the fiscal year. They are items 663, 664, 665, 666 and 667, and they are the ones which related to an increase in social security payments. By the form in which they were submitted in the supplementary estimates they were given effect, when adopted, for the full fiscal year.

Then there were two governor general's warrants to which reference was made earlier today which were passed in August, 1957,

one pertaining to assistance for the Hungarian refugees and the other to increased payments to veterans.

We also have to take into account the fact that both parliaments which sat in the fiscal year 1957-58 passed a number of interim supply measures. They are referred to in the same summary under the six appropriation acts which are enumerated.

What we have done in preparing this report on supply is therefore to take the estimates as tabled in the house, excluding statutory items, that is to say, all other estimates whether in the original estimates or the supplementary estimates or the further supplementary estimates No. 1 or the further supplementary estimates No. 2, and those are shown running through the entire document in the aggregate sum of $3,650,734,476.

In the next four columns we have shown how the supply was provided to meet each of these items. In the first of the four columns we show the amounts which were authorized in the various appropriation acts of which I have indicated there were six. The second column indicates the amount authorized by governor general's warrants with respect to each of these items. The third column lists eleven items which are of what is known as a transfer nature. These are items which represent moneys expended for which it is now necessary to provide, by transfer, for charging to another account. In the fourth column we have the total. There is a final column at the right-hand side of the page which accounts for the difference. In other words, it indicates the reductions made by the governor general in council except where indicated.

That brings me back, Mr. Chairman, to a comment upon the figures. Hon. members will see in the summary a figure of $114,065,172, which is the total of two reductions. They are composed in the first place of items 180, 184 and 399, and in the second place, of reductions effected by the governor general in council prior to the issuance of special warrants on February 7 by which supply was provided for the balance of the fiscal year to March 31, after the dissolution which occurred on February 1.

Those who sat in the last parliament will recall that reductions were made on three items in the estimates of the Minister of Justice, namely 180, 184 and 399 in the committee of supply.

As to the item aggregating $112,795,172, representing reductions effected by the governor general in council, I would like the committee to have this explanation. The final column of the report shows in its aggregate form on page 69 a figure of $109,420,117. The difference between that figure and the figure of $114,065,172 represents the aggregate of the two figures—

Mr. Benidickson: Would the minister permit a question?

Mr. Fleming (Eglinton): May I finish—the decreases of $2,728,000 which appears in the summary and $1,917,055, which also appears in the summary. If hon. members have had a little difficulty in following these figures, I think if they look at the record in the morning they will be quite clear.

What the house is asked to do is to approve the supply which was released, whether in the form of appropriations made by the house or appropriations made by governor general's warrants. In the second place, the house is asked to approve eleven transfer items aggregating $110,042,595. The house is not asked to approve the actual expenditure as such.

The public accounts committee at the 1959 session of parliament will have its full rights with respect to all expenditures made in the fiscal year 1957-58 as audited by the Auditor General as they have with respect to expenditures made in any fiscal year. There will be the full right of review of all expenditures.

This statement, with the assistance of the report on supply which I have given will, I think, give complete information as to the three governor general's warrants and as to how the money appropriated by those three warrants was applied. This gives the government an opportunity to fulfil the undertakings which were given to the house by the Prime Minister and also by myself at the opening of the present session and also by the Prime Minister during the election campaign that a full accounting would be made to the house with respect to those appropriations made by governor general's warrants and that the house would have a full opportunity of reviewing all sums released to the government by way of supply, whether by appropriation bill or by governor general's warrant.

Mr. Benidickson: Mr. Chairman, I realize we are approaching the time for adjournment, but I just want to say, as I said this morning, that this very extensive document of some 69 pages was made available to us only after the opening of today's session. In summary, it indicates something which I do not think had been previously drawn to our attention, namely that there were items of supply not yet authorized amounting to $110 million-odd. Then there is a column of the difference relating to reductions by the governor general in council, except where indicated, which—as the minister has outlined—amounts to $109 million. The previous item—

Mr. Fleming (Eglinton): Will my hon. friend permit me to interrupt? He is taking a wrong figure there. The reductions that were made aggregate the figure of $114,065,172.

Mr. Benidickson: Where is that produced in our summary?

Mr. Fleming (Eglinton): That is composed of two figures. One is the figure of $73.6 million which represents savings effected in budget items and the other is an amount of $40.5 million represented by savings from loans. If my hon. friend will follow the statement I made he will see how the figure of $114,065,172 which represents reductions made by the governor in council is reconciled with the total in the final column of $109,420,117.

Mr. Benidickson: I simply want to say that I quite understand that the item of $114,065,172 appears on page 2 of the summary. The figures I referred to in my remarks before I was interrupted were the final totals on page 69 of this long document that became available only this morning. With respect to supply I referred to items not yet authorized of $110,042,599 and then in the final column to the right of the document that all hon. members now have available to them, but as I said rather late, there is a figure $109 million.

Some hon. Members: Ten o'clock.

Mr. Benidickson: I realize it is ten o'clock and I appreciate the indulgence of the committee. May I move the adjournment of the debate now simply by saying this. On page 69 of the document which reached us only this morning many figures are to be found. As everybody knows I was personally engaged in debate all day today and have not had an adequate opportunity to study the details of the report. I feel it is adequate in its detail but I do complain now as I did this morning that its delivery was rather late.

Progress reported.

BUSINESS OF THE HOUSE

Mr. Chevrier: Mr. Speaker, may I inquire what the business is for tomorrow and Thursday?

Mr. Green: Mr. Speaker, tomorrow we shall commence with two third readings, one the act to amend the Customs Tariff and the other the act to amend the Income Tax Act; then we shall continue with this debate which was under way at ten o'clock and then take supply, the departments of mines and technical surveys, fisheries and national health and welfare.

On Thursday we plan to commence with the estimates which are described as privy council. That includes the federal district commission, I believe. Hon. members should also be prepared to take citizenship and immigration, national revenue and finance.

Mr. Chevrier: Mr. Speaker, I wonder if I could get some indication from the house leader concerning what we likely would be considering on Monday?

Mr. Monteith (Perth): We won't be here.

Mr. Pickersgill: Another dissolution?

Mr. Argue: That is quite possible.

Mr. Green: We will be taking legislation on Monday but at the moment I cannot say what particular items will be called.

It being seven minutes after ten o'clock the house adjourned, without question put, pursuant to the order of the house passed on August 4.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

L'ANSE-AUX-CANARDS WHARF, GASPE COUNTY, QUEBEC

Question No. 185—**Mr. Cardin:**

1. From January 1, 1958 to date, were repairs made to the wharf on the rivière de L'Anse-aux-Canards at Newport Point in the county of Gaspe? If so, of what nature?
2. What was the cost of the repairs?
3. Who was the foreman in charge?
4. What are the names of the persons employed on this work and the amount paid to each?

Answer by: **Hon. Howard C. Green (Minister of Public Works):**

1. Yes. Reballasting and renewing flooring and stringers over a 30 foot section of a crib-work structure.
2. Estimated total expenditure—$1,418.11.
3. Vital Blais, Newport Point.
4.

Names of persons employed	Amount paid to Aug. 13, 1958
Vital Blais	$129.20
Joseph E. Albert	111.32
Raoul Gionet	48.60
Albert Blais	76.84
Alfred Blais	76.84
Isidore Blais	48.60
Joseph Chouinard	48.60
Harry Blais	76.84
Albert Duguay	32.48
Georges Giroux	32.48
Rheal Cyr	32.48

Questions

HOUSING PROJECTS, NORTHERN ONTARIO

Question No. 187—**Mr. Fisher:**

1. How many homes have been built, or the building arranged for, under the National Housing Act, since June, 1957, in Fort William, Port Arthur, Nipigon, Beardmore, Geraldton, Longlac, Nakina, Hornepayne, Schreiber, White River, Manitouwadge, Pickle Crow, Cameron Falls, and Marathon?
2. What is the total value of the housing for each place in this period, and what is the amount of the loans for each place approved by Central Mortgage and Housing Corporation, and provided by either Central Mortgage and Housing Corporation or private institutions?

Answer by: **Hon. Howard C. Green (Minister of Public Works):**

1 and 2:

N.H.A. LENDING ACTIVITY, JUNE 1957 TO JUNE 1958 INCLUSIVE

Locality	Units	Total value	Amount of loan
Beardmore	...	.....	.....
Cameron Falls	...	.....	.....
Fort William	427	4,639,874.	4,119,493.
Geraldton	...	.....	.....
Hornepayne	...	.....	.....
Longlac	...	.....	.....
Manitouwadge	1	12,000.	11,016.
Marathon	1	11,100.	10,150.
Nakina	...	.....	.....
Nipigon	2	25,000.	21,879.
Pickle Crow	...	.....	.....
Port Arthur	165	2,199,386.	1,876,413.
Schreiber	...	.....	.....
White River	...	.....	.....
	596	$6,887,360.	$6,038,951.

HOUSE OF COMMONS

Wednesday, August 20, 1958

The house met at eleven o'clock.

COMMITTEES OF THE HOUSE

Tenth report of standing committee on railways, canals and telegraph lines.—Mr. Fraser.

EXTERNAL AFFAIRS—SECOND REPORT OF STANDING COMMITTEE

Mr. H. O. White (Middlesex East): Mr. Speaker, I have the honour to present the second report of the standing committee on external affairs. I regret the apparent shortage of blue ribbon.

Mr. Winch: It is a very good colour you have there.

BRIDGES

NEW BRUNSWICK-MAINE—AUTHORITY TO CONSTRUCT

Hon. Howard C. Green (Minister of Public Works) moved for leave to introduce Bill No. C-56, to authorize the construction of a bridge across Lubec channel between the province of New Brunswick and the state of Maine.

Motion agreed to and bill read the first time.

STARRED QUESTIONS

GEORGE P. LEBLANC-ALEX P. BOUDREAU

Question No. 33—**Mr. Pickersgill:**

1. Were George P. LeBlanc and Alex P. Boudreau dismissed from the Cape Breton Highlands national park effective June 10, 1958?
2. How long had each of these employees been employed by the national park?
3. What was the reason for dismissal in each case?

Hon. D. S. Harkness (Minister of Agriculture): Stand.

Hon. J. W. Pickersgill (Bonavista-Twillingate): Mr. Speaker, I wonder whether there is any hope of getting this question answered this session.

Mr. Harkness: Mr. Speaker, I have not got the answer to the question, and in the absence of the Minister of Northern Affairs and National Resources I do not think there is anything we can do except have it stand.

Question stands.

QUESTIONS PASSED AS ORDERS FOR RETURNS

R. K. SMITH

Question No. 173—**Mr. Robichaud:**

1. Has Mr. R. K. Smith, since retiring from the chairmanship of the national harbours board, been employed by any government department?
2. If so, (a) what departments; (b) in what capacity; (c) for how long; (d) at what remuneration?
3. Is he presently employed by the government? If so, in what capacity and at what remuneration?
4. On what date did he retire from the national harbours board, and what is the amount of his pension?

HANGARS AND AIRPORT BUILDINGS, MONT JOLI, QUEBEC

Question No. 190—**Mr. Bourget:**

1. Did the crown assets corporation invite tenders for the demolition or purchase of hangars and airport buildings at the Mont Joli airport?
2. If so, who submitted tenders and what was the amount of each tender?
3. Was a contract awarded? If so, to whom, and what are the terms and conditions?
4. Were any employees of the department dismissed as a result of this action? If so, how many?
5. Were these facilities being used by civilian aviation companies or the Royal Canadian Air Force?
6. What provisions have been made to service civilian aircraft at the Mont Joli airport?

MOTIONS FOR PAPERS

RESOURCE ROADS PROGRAM, ONTARIO

Motion No. 15—**Mr. Benidickson:**

For a copy of all correspondence since September 1, 1957, between the federal government and the province of Ontario respecting cost sharing of a roads to resources program.

Hon. D. S. Harkness (Minister of Agriculture): I wonder whether, in the absence of the minister, this motion could stand.

Mr. Benidickson: Stand.

Motion stands.

CENTRAL MORTGAGE AND HOUSING—SMALL HOUSE PLANS

Motion No. 35—**Mr. Fisher:**

For a copy of plans and specifications of the houses within the $5,000-$8,000 range approved by Central Mortgage and Housing Corporation for building in rural areas and small communities.

He said: Mr. Speaker, I should like to withdraw this motion. The information is not available, and I have been given the

assurance that I can have it when it does become available.

Order discharged and motion withdrawn.

ST. LAWRENCE SEAWAY

INQUIRY AS TO NAMING OF NEW LAKE

On the orders of the day:

Mr. H. W. Herridge (Kootenay West): Mr. Speaker, I wish to address a question to the genial Minister of Mines and Technical Surveys. In view of the press dispatch in this morning's *Globe and Mail* headed "Ottawa Puzzled As U.S. Names Seaway Lake", would the minister inform the house as to what action our puzzled government intends to take with respect to this puzzling, premature and provocative announcement by the United States board of geographical names?

Hon. Paul Comtois (Minister of Mines and Technical Surveys): Mr. Speaker, may I say right away that there is no puzzlement on the part of the government. I thank the hon. member for Kootenay West for giving me notice of this question. The name "St. Lawrence lake" was chosen by the Canadian board of geographical names at its meeting on June 5 last. Then the Canadian board wrote to its United States counterpart, the United States board of geographical names, to seek its concurrence in this appellation. A letter dated August 14 has just been received by our Canadian board of geographical names indicating the United States board's concurrence in Canada's suggestion of "lake St. Lawrence".

VETERANS AFFAIRS

ANNOUNCEMENT OF INCREASE IN COMFORTS ALLOWANCE

On the orders of the day:

Mr. E. L. Morris (Halifax): I should like to ask the Minister of Veterans Affairs whether he is now in a position to make an announcement about the comforts allowance for veterans in veterans hospitals, and especially domiciliary care?

Hon. A. J. Brooks (Minister of Veterans Affairs): I thank the hon. member for Halifax for giving me notice of this question. I am pleased to inform my hon. friend that the comforts allowance has been increased from $7 to $10 a month, effective from August 1, 1958. This was authorized by order in council 1958-1157 amending section 37 of the veterans treatment regulations.

[Mr. Fisher.]

PRIVILEGE

MR. MACLEAN, WINNIPEG NORTH CENTRE—STATEMENT ON ELECTION EXPENSES

On the orders of the day:

Mr. John MacLean (Winnipeg North Centre): I rise on a question of privilege, Mr. Speaker. On August 12 the under secretary of state, in accordance with an order of this house, tabled the total election expenses on behalf of each candidate by constituency in the general election of March 31, 1958. With regard to the constituency of Winnipeg North Centre, which I represent, my total election expenses were shown in the amount of $10,680. Subsequent to the tabling of this information in the house a Canadian Press report appeared in many of the newspapers in this country carrying this information, and in particular it was published in the Winnipeg *Tribune* on Thursday, August 14, under the headline "$10,680 to defeat Knowles".

This figure is totally incorrect. My official agent informs me that in accordance with section 63 of the Canada Elections Act he filed a summary of the return of election expenses on behalf of myself with the returning officer for Winnipeg North Centre, which summary of election expenses was published in accordance with subsection 5 of section 63 of the Canada Elections Act, and which shows the total amount of my election expenses for the March 31 general election to be in the amount of $5,409.42. I have informed the under secretary of state of this error, and he is looking into the matter.

CUSTOMS TARIFF

Hon. Donald M. Fleming (Minister of Finance) moved the third reading of Bill No. C-50, to amend the Customs Tariff.

Mr. Erhart Regier (Burnaby-Coquitlam): We do not like certain aspects of this bill, Mr. Speaker. It is for this reason I propose to move an amendment to third reading. We realize that today some countries, notably the United States, appear to have surpluses as we do in Canada. We have noted that the western world has gone through similar situations in years gone by. We consistently have in mind the years beginning with 1928, 1929 and all the 1930's. We note that at that time the wealthier, more self-sufficient countries of the world such as the United States and Canada thought the answer to their problem was to raise and to continue raising tariff walls, thereby hoping to provide employment within the borders of their own countries.

Mr. Speaker, we saw how disastrous at that time that policy was. We saw that higher tariffs led to retaliation and to a limitation of world trade. We feel that for the solution to our economic difficulties and in order to provide full employment in Canada we need more and not less international trade. This bill in certain aspects calls for the raising of tariff walls. We feel that the Canadian people at this time should definitely turn their backs on the old and discredited remedy of tariffs. It is for that purpose that I now move, seconded by the hon. member for Vancouver East (Mr. Winch):

That Bill No. C-50 be not now read a third time but that it be referred back to the committee of the whole with instruction that they reconsider tariff item 554b of part IV of schedule A.

That particular part of the act which we feel should be reconsidered by the committee of the whole, or that particular section, calls for a higher tariff on imports of wool into Canada. We feel that the expressions of opinion the Conservative party gave to the Canadian people at election time, namely that it was in favour of increased trade with the commonwealth, could best be exemplified by lowering tariffs on goods coming to us from the United Kingdom. We feel that this is a reversal of the policy enunciated by the Conservative party in raising tariffs against imports from our best customer for many of our important products. We feel that raising tariff on any imports from the United Kingdom at this time will do a great deal of harm to the negotiations that are supposed to take place in Canada this fall—next month, I believe—among the commonwealth nations.

Mr. W. M. Benidickson (Kenora-Rainy River): Mr. Speaker, I do not want to speak at any length with respect to this amendment. It deals with only one item of the many in the tariff schedule. Our position was very clearly stated in previous stages of the debate. We had a division in the house on this matter at one of the earlier stages. This group is in favour of the amendment.

Mr. Fleming (Eglinton): Mr. Speaker, this subject has already been discussed on several occasions, and I am sure there is no reason now for an extended debate upon it. I simply rise to deal very briefly with the assertions made by the mover of this amendment, which continue to misrepresent the nature of Bill No. C-50 which is now presented to the house for third reading.

He has said that this bill represents a policy of high tariffs. That statement has no foundation, and to make it is to misrepresent the facts. The house has already been given the facts on several occasions during the course of this session, first on June 17 in the budget speech, next when the resolution upon which the present bill is founded was before the committee of ways and means, and again in the earlier stages of the bill itself. The fact is that with respect to numerous items of the tariff, those with respect to zinc and zinc products, iron and steel and pipes and tubes, what is submitted to the house is a series of items many of which involve increases and many of which involve decreases in the existing tariff rates.

What has been submitted to the house in that respect represents the results of studies conducted by the tariff board on references directed to it by the former administration and recommendations which have the effect of reviewing items which have been in the tariff for many years, some of which have not been reviewed or studied for something like 30 years and which were badly in need of modernization. In the result, the tariff board has made recommendations which modernize the tariff and which rewrite sections and consolidate other sections. Therefore to say that the result of these items now submitted to the house is a return to high tariffs is to misrepresent the facts.

In the second place, this is pictured by the mover of this amendment as a policy of opposition to extended world trade, which is also a misrepresentation of the facts. This government has indicated its deep concern over the enlargement of world trade, and the policies which have been followed by the government and which have been offered to the house have been policies designed to increase Canada's trade. Canada's export trade has in fact increased since this government came to office.

Some hon. Members: Hear, hear.

Mr. Fleming (Eglinton): The measure through which most of the world trade in which Canada is engaged today is carried out is the general agreement on tariffs and trade, and with respect to these items I have mentioned, of which there are a great many in the bill now before us, we have followed to the letter the procedures laid down by GATT. What has been submitted to this house is the result of following the procedures laid down under GATT—

Mr. Pickersgill: Mr. Speaker, I am rising on a point of order. It appears to me from my reading of the amendment that it refers to the reconsideration of a single clause in the bill of which third reading has now been moved. It therefore seems to me that this general speech on GATT and other matters such as the increase in our exports which is now being given by the Minister of Finance is wholly out of order.

Mr. Speaker: I had the same thought myself, but the fact that the mover of the amendment dealt with these broader matters before he moved this amendment rather opened the door, and I thought the most expeditious way of dealing with the matter was to allow the minister to speak now rather than to wait until the amendment had been disposed of.

However, it is quite true that we have a specific amendment before us and perhaps it should be disposed of on its own merits.

Mr. Fleming (Eglinton): It was the fact that the mover sought to make some general assertions before he introduced his amendment that led me to make the remarks I did, because his general assertions were a misrepresentation of the facts.

I have pointed out that we have followed strictly the provisions of GATT, and I have pointed out on earlier occasions that in our negotiations with the United States we came back with a package deal and that no increase in United States tariffs, no change in United States tariffs, is involved. The only change is in the Canadian tariffs, some by way of increase and some by way of decrease. As I have pointed out with respect to the recommendations of the tariff board itself, in submitting to the house resolutions based upon them, we have recommended more decreases than increases.

Mr. Speaker: I hope the minister will not persist in this line, because it is only relevant after the amendment has been disposed of. He will be able to deal again on third reading with the matters he is now discussing.

Mr. Fleming (Eglinton): Mr. Speaker, the final observation made by the hon. member for Burnaby-Coquitlam was that this was going to prejudice the forthcoming commonwealth trade and economic conference. There is no foundation whatever for that statement, none whatever. Preparations for that conference are going forward now, and we will certainly do everything that can be done to make that conference effective for its purpose.

Finally, as to the specific item referred to in the amendment, we have discussed that on various occasions already and I am sure nothing useful can be added. We had an extended debate on that specific matter in the committee of ways and means at the resolution stage, and I do not think I can add anything useful to what I said on that occasion. I trust that this amendment, based upon entirely false premises, based upon a misrepresentation of the facts and of the policy of the government, will be soundly defeated.

[Mr. Pickersgill.]

Hon. L. B. Pearson (Leader of the Opposition): Mr. Speaker, I had not intended to say anything on this matter, but the speech made by the minister which deals with so many important matters not relevant to this particular amendment makes it necessary for me to say a few words on the amendment. If I attempted to discuss generally the action the government has taken on tariffs I would, of course, be out of order as the Minister of Finance was out of order.

I will merely refer to page 1247 of *Hansard,* when in his own budget speech, mentioning the iron and steel duties which are very important elements in the tariff structure, the minister himself said:

> A major result of these changes will be to make more effective the protection which it affords to Canadian producers.

Those words speak for themselves.

The minister said that as far as this particular item is concerned it will not prejudice in any way the forthcoming economic conference. I do not know how the minister can tell us that; I do not know on what evidence he can base a statement of that kind in connection with a conference which has not yet taken place and whose agenda we do not know. But if he has taken that position it is diametrically opposed to that taken by the wool exporters of the United Kingdom who, I submit, should be the best judges of their own interest and the best spokesmen with regard to the influence of this action on the forthcoming conference. I have already cited evidence to show that they have strongly objected to this increase in the wool duty and are worried about the effect it will have on the forthcoming conference. If the minister is not worried, they are.

We have opposed this item because it will not do anything effective, as the minister himself has admitted, to help the wool industry of this country.

Mr. Fleming (Eglinton): That is not true.

Mr. Pearson: It possibly will give them a fighting chance. I believe those are the words used. That is all. But while it is not designed to give the wool industry an assurance of a profitable life in this country, it is designed to create indignation and uncertainty in the United Kingdom on the eve of this conference.

It is also an item designed to increase the duties against British woollens but not to touch the duties on woollens from countries, apart from the United Kingdom, whose exports of this product to this country are increasing.

As I have said before, Mr. Speaker, this item will not accomplish any good purpose. It will do some harm; it will do little if any

good, and for that reason we have opposed it in previous discussions of the subject, and also for that reason, as my hon. friend from Kenora-Rainy River has pointed out, we will support this amendment.

Mr. Hazen Argue (Assiniboia): Mr. Speaker, any move by any government generally to increase trade barriers is one that should be opposed. Without question, in spite of the comments of the Minister of Finance, the fact remains that this is a serious increase in tariffs against woollen goods coming to Canada from commonwealth countries.

In taking part in any debate in this house the minister seems to use words which are not very often used by many members in the house, particularly when he himself is short of any real substance for his arguments. He says the speeches that have been delivered, or the speech that was delivered by the hon. member for Burnaby-Coquitlam was based on false premises, was a misrepresentation of the facts and so on. It would have been much more in keeping with sound argument for the minister to have dealt with this particular item itself.

This is an increase in the barriers against British woollen goods coming to Canada; this is a return to the policy of former Tory governments of increasing tariffs generally. This move is ill-timed; and for the minister to say that it is without foundation to contend that it will have a damaging effect on the commonwealth conference is to show that the minister has not followed the reaction in the United Kingdom, which was a very strong and very definite reaction against what Canada was doing. It expressed keen disappointment and concern that this would make positive results from the forthcoming economic conference more and more difficult.

While there has not been the kind of progress that we would like to see toward removal of trade barriers over the years, nevertheless since the end of the war there has been a very gradual whittling down of tariff barriers. That has gone on until the present action of this government, and we now see that trend being reversed. We see it being reversed in a very disturbing manner as far as this item is concerned. This is not a general increase in tariffs against every country in the world; it is an anti-commonwealth move. This is a move directed against the United Kingdom; and it ill-behooves the Conservative party of all parties, I would suggest, to make any such change in tariffs.

This is the true line of the Conservative party; it is the historic line. It means that the Conservative party is reverting to its historic policies and its historic role. But I would suggest that the majority of members of the Conservative party in this house, as well as the members on the opposition side of the house, did not campaign on a policy to increase tariffs, much less to increase tariffs against British goods. I express the hope at this time, Mr. Speaker, that we shall have some independence amongst the Conservative members; that we shall see evidence indicating that at least a few members, perhaps just a handful but at least a handful, will stand up and vote in the interest of lower trade barriers and against a move to increase trade barriers.

If there was one major thing that happened to the Liberal party to bring about its defeat it was the general practice that no matter what the government did, no matter how bad any move the government might make might be, their members always supported the government; there was no independent voice or independent action in their ranks. I express the hope this morning that in the ranks of the Conservative party we shall see some votes in the interest of freer trade and against this return to Tory protection.

The house divided on the amendment (Mr. Regier) which was negatived on the following division:

Mr. Speaker: The question is on the main motion. Shall the main motion carry?

Motion agreed to and bill read the third time and passed.

INCOME TAX ACT

Hon. Donald M. Fleming (Minister of Finance) moved the third reading of Bill No. C-39, to amend the Income Tax Act.

(Translation):

Mr. Alexis Caron (Hull): Mr. Speaker, while the amendments which have been brought forward admittedly contain some excellent features which we can readily approve, I nevertheless wish to rise at this time to say that we are sorry that clause 41 does not allow married women in Quebec to benefit from the proposed legislation.

The matter has been rather thoroughly dealt with during the debate. In fact, an amendment has been made. However, when it is claimed that our Quebec civil code makes it impossible for the matter to be settled, I must express reservations on that score. I know that, if we were to examine our statutes, we would see that they make provision for a great many exceptions. In fact this is the case of approximately half our laws. As we have found, this is a pretty general situation. That is why I claim that, at least in this instance, an exception could have been made in respect of gifts made under the provisions of a marriage contract so that, in so far as Quebec is concerned, such gifts could have been considered for the purposes of the act, as gifts made subsequent to the solemnization of the marriage. However, as the minister objects, and because we sincerely regret that this legislation will be of no advantage whatever to the married women of Quebec—if not to all, at least to the great majority of them—may I merely be allowed, without further elaboration, to go on record once again as opposing the passage of this bill, at least on division.

Mr. Noel Dorion (Bellechasse): Mr. Speaker, it is, to my mind, impossible even for a moment to question the convictions of the hon. members from the province of Quebec and the motives behind their attitude. The problem just raised by the hon. member for Hull (Mr. Caron) came up previously at the resolution stage. And if one refers to the official record, it will be seen that hon. members—and in particular, the hon. member for Hull, who today is opposed to the bill because section 41 would put the province of Quebec in a deplorable position—all admitted, some implicitly and others explicitly,—that any change of the provision as drafted might be construed as an intrusion upon the powers specifically attributed to the provinces and especially to the province of Quebec.

Indeed, when the time came for these people to find a legal and constitutional way of by-passing the provisions of the civil code of the province of Quebec, none of them was able to suggest the phraseology for such an amendment.

Mr. Speaker, I said at the resolution stage and I now repeat that the section in its present form does not constitute in any way an injustice for the province of Quebec. It is not discriminatory. Moreover, we are here,

in this parliament of Canada, to legislate for the whole country and we have no mandate to legislate solely for one particular area.

I apologize for repeating what I have already said, but there is nothing, absolutely nothing, to prevent the province of Quebec from taking advantage, as early as next fall, of the provision now under discussion, if it wishes to do so. To that end, the government of the province of Quebec, whose exclusive right it is to amend its own civil code, merely has to act in such a way that advantage may be taken of the provision which has been recognized by all our friends of the opposition as eminently social and capable of safeguarding the security of our homes.

May I be permitted, Mr. Speaker, simply to quote here...

Mr. Caron: Would the hon. member allow me a question?

Mr. Dorion: Certainly.

Mr. Caron: Is it not a fact that, in the province of Quebec, lawyers are quite reluctant to tamper with the civil code?

Mr. Dorion: That is correct. In fact, the question raised by the hon. member for Hull provides me with a new argument. While lawyers in the province of Quebec are reluctant to amend the civil code, it is suggested that we, the parliament of Canada, be called upon to do so. What inconsistency! It is an inconsistency dictated by the urges to turn into a purely political question a matter which should remain above politics!

Everyone agrees in the province of Quebec that the civil code has been for us a means of survival; it has been a most vital structure, one within whose framework our racial group has been able to develop.

Well, it is now suggested that the parliament of Canada should tamper with it, in spite of the fact that our lawyers, and in this regard our people themselves, are unanimous in their claim that it comes within the exclusive jurisdiction of the province of Quebec, that we alone can amend it whenever we see it, according to our needs and in the sense and spirit which so far have guaranteed its survival.

Mr. Speaker, I would merely like to recall a few remarks made during the discussion of the budget resolutions on July 11. I would refer hon. members more particularly to those made by the hon. member for Cartier (Mr. Crestohl) who said:

(Text):

I do not think there is any issue between the opposition and the government on the principle which they are attempting to establish.

(Translation):

While this was what was being said with regard to a discussion of budget resolutions, it was suggested yesterday that this bill be given a six months' hoist.

(Text):

We are only concerned as to whether or not this principle covers the province of Quebec as clearly and as adequately as it covers the rest of the country.

The presentation by the hon. member for Bellechasse is quite clear. But even so he suggests, and I say this with great respect, that if the legislature of Quebec would amend article 1265 of the civil code the problem would be solved. Since we do not know what the Quebec legislature will do now, when we are debating this legislation, we might not be giving the benefits which are intended by this legislation to the province of Quebec. I was wondering whether we could not suggest an amendment in some form which would cover the situation.

(Translation):

Consequently, it is clear that the hon. member readily recognized that this problem was one whose solution rested with the province of Quebec. Now, it is precisely because we are here to ensure respect for this spirit of the constitution, and maintenance of provincial responsibilities, that we have refused to play into the hands of hon. gentlemen opposite, whose purpose is counter to the spirit or the letter of the constitution.

Mr. Caron: Would the hon. member permit another question.

Mr. Dorion: Certainly.

Mr. Caron: Does the hon. member feel that if my suggestion had been accepted that an exception be made in the case of gifts made under a marriage contract, that if those gifts had been considered at the time as gifts made between husband and wife, it would have affected the constitutional aspect of the problem?

Mr. Dorion: Mr. Speaker, I am sorry, but I do not quite understand what the hon. member means.

Mr. Caron: If you will allow me Mr. Speaker, I will repeat my question. We are now discussing about gifts as between spouses. When a gift is made through a marriage contract before the marriage takes place, the parties are not spouses under the law. If gifts conveyed by marriage contract were considered as gifts between spouses, would the exemption I have suggested constitute any encroachment upon the constitutional rights of the province of Quebec?

An hon. Member: This is already recognized.

Mr. Dorion: Mr. Speaker I am sorry but I am not in the habit of giving off-hand answers to questions of such potential importance as this one. However, on the face of it, I believe it is outside our scope to qualify actions which do not lie within our jurisdiction or consider them under a different legal aspect than the one they actually cover. It would be an intrusion in a field outside our jurisdiction. Anyway, I confess that I do not fully understand the position taken by my good friend from Hull.

If an amendment had been moved we would have been able to consider it, to weigh its intrinsic value and perhaps deal with it but no such amendment was moved. I presume and I have reason to believe that no amendment was moved because it was felt that in venturing to move one, it meant doing something which went beyond the powers of the parliament of Canada.

Mr. Speaker, I would now like to quote the words of the hon. member for Megantic (Mr. Roberge), as taken from page 3 of the translation of the French original in *Hansard* of July 11, 1958:

> Mr. Chairman, I have followed with much interest the statement made by the hon. member for Bellechasse (Mr. Dorion). I agree with him that the easiest way to reach the desired objective would be to amend the civil code. I also recognize that it is not within the powers of this government to amend the civil code or to ask the government of the province of Quebec to do so.
>
> However, I wonder if there is any other way open to us. I would not like the Minister of Finance (Mr. Fleming) or the government to take my remarks or those of my colleagues as criticisms. We are just endeavouring together to find a compromise so that spouses living in the province of Quebec can also benefit from that $10,000 exemption.

At that time, there was no opposition to the bill but it was proposed yesterday to give it the six months' hoist. At that time, at the resolution stage, our friends opposite were quite ready to approve of the principles of the bill, but yesterday they attempted to delay its adoption.

It is clear that, in the meantime, they told themselves "That might be a good way to embarrass people in the province of Quebec. Why not try it?" And that is what they tried to do. What they were concerned about yesterday was not the interest of the French-Canadian family, or those of the province of Quebec, but what they fancied to be the interests of the Liberal party.

[Mr. Caron.]

Well, Mr. Speaker, we will soon have an opportunity to meet them in the constituency of Montmagny-L'Islet and to thrash this out. We will then see what people think of this dragging down of sacred principles to the level of political considerations. I am convinced—

(Text):

Mr. Speaker: Order. I do not want to limit the hon. member unnecessarily but it seems to me that he is straying a bit from the confines of this bill. We are debating the third reading of the bill and it is relevant only to discuss matters within the bill.

(Translation):

Mr. Adrien Meunier (Papineau): Mr. Speaker, I should like to reply—

Mr. Dorion: Mr. Speaker, I just wish to sum up.

Firstly, the principle has been definitely and clearly accepted by the opposition.

Secondly, it has been definitely and clearly established that if the province of Quebec wants to benefit from this bill, it is up to her to amend certain provisions of the civil code.

Thirdly, the mere wish to change the meaning of a section of the civil code, directly or indirectly, would actually constitute an infringement upon a field which does not come under the jurisdiction of the federal parliament, upon a field where the province of Quebec is rightly jealous of her rights.

That is why we favour the bill in its present form; in our opinion, section 41 should be adopted in its present form.

Let our hon. friends opposite have no fear; before long, I am fully convinced that the province of Quebec, like all the others, will take advantage of this bill. Besides is it not urgent that we adopt the bill as is? Indeed, it is not only the matter of donation from husband to wife that is involved. There is the donation of the farm from father to son, a time-honoured practice in the province of Quebec, whereby the head of the family, while still in good health, bequeaths the ancestral farm to his son.

In my opinion, delaying the passing of this provision would mean that tomorrow, in most farm homes of the province of Quebec, heads of families and their sons could not take advantage of a measure for which we are indebted today to the present government and for which I also wish to commend and thank the government.

Mr. Adrien Meunier (Papineau): Mr. Speaker, I have followed with a great deal of interest the points made by the hon. member for Bellechasse (Mr. Dorion).

I must say to him, at the outset, that we are by no means opposing the legislation in so far as it provides for an exemption in regard to the setting up of the son on the family acres. Indeed, we all recognize that this measure brought forward at this time by the government is extremely sound and we are all for it.

Now, when the hon. member for Bellechasse (Mr. Dorion) enphasized that parliament had no right to amend the Quebec civil code, we share his views and the federal government cannot legislate in the matter. However, until the situation was clarified, the hon. member for Hull (Mr. Caron) wanted to submit that payment made by a husband to his wife under their marriage contract when the husband wants his wife to benefit, be considered as a gift. That is what the hon. member for Hull meant.

Mr. Dorion: Will the hon. member allow me to ask him a question?

Mr. Meunier: Yes.

Mr. Dorion: Does the hon. member know that any donation under a marriage contract may be sometimes considered as a gift in case of death? It all depends on the way the gift is made. Precisely because of the complicated phraseology of a marriage contract, could not the house possibly find some solution in this matter?

Mr. Meunier: I shall answer my hon. friend right away. I recognize that, in the province of Quebec, a sale or gift between husband and wife is prohibited. But there are exceptions. When, for instance, the husband makes a matrimonial gift to, or confers some benefit upon his wife under the contract, he has the right to draw up a written instrument explaining his motive. There is also the case when the husband pays his wife for reserved assets; if he lists in the contract the reasons for the sale, he is entitled to do so. Those are the three exceptions included in the act and confirmed by jurisprudence.

There ought to have been some amendment under which section 41 would provide that, in the province of Quebec, any gift to the wife in payment of matrimonial advantages or of reserved assets, be exempt.

We all know very well that the federal government has no jurisdiction as far as amendments to the civil code of Quebec are concerned. Along with my hon. friends I feel that the Quebec civil code has ensured the survival of the province of Quebec. We are proud of that body of legislation which protects the citizens of our province.

What the hon. member for Hull had in mind was that clause 41 should have been amended to ensure that payments made by a husband to his wife under the terms of a marriage contract, as well as whatever is owed in respect of reserved property, be considered as gifts for the purposes of this act.

(Text):

Mr. L. D. Crestohl (Cartier): Mr. Speaker, there is actually no fine line of demarcation between the two points of view expressed, but I would like to address myself to the point raised by the hon. member for Bellechasse, whose legal opinions I, and all those who live in the province of Quebec, have come to respect. He is perfectly right when he says this is a matter which could be remedied by the legislature of the province of Quebec; that is perfectly clear. There is however, one clear fact, a brutal fact if you like, and that is that we are enacting legislation which does create a prejudice, a prejudice which might be remedied but which might not be remedied. That is the point we are making.

We realize that only the province of Quebec can amend the civil code and rectify what I consider to be and what I have argued is a prejudice. Whether the legislature of Quebec will or will not amend the civil code is something which is not known to us. It is quite possible that the debate which has taken place in this house may draw the attention of the Quebec legislature to this issue and may, as a consequence, provide the remedy. If we had not raised this question it may not have been drawn to the attention of that legislature, which is the authority which can bring about a change in the code. I feel, as a member coming from the province of Quebec, that it was our duty to raise this issue. It is perfectly true that in principle we approve legislation to make possible gifts of this nature, but we felt that unless this step was taken to encourage the finding of a remedy, then a prejudice might remain.

I feel that the hon. members from the province of Quebec have done their duty in raising the issue, and in so doing they have laid their fingers on a prejudice now being created by legislation of the parliament of Canada. That is all we did. Whether a remedy will be found we do not know, but I repeat it was our duty to bring this matter to the attention of the house. I still think if the Minister of Finance had accepted the suggestion which was made, namely that he should address himself to the Supreme Court

of Canada or to the Department of Justice in order to endeavour to obtain their support of his opinion, then we might have been convinced. He has failed to do this, and we feel that prejudice has been caused, a prejudice which might or might not be remedied.

I appreciate the argument made by the hon. member for Bellechasse, and I hope that perhaps with the help of his colleagues on the other side of the house the matter may be drawn to the attention of the legislative assembly of Quebec in order that the prejudice which the parliament of Canada is now causing to the people of Quebec may be remedied.

Motion agreed to and bill read the third time and passed.

FINANCE

MOTION TO APPROVE EXPENDITURES AUTHORIZED BY SPECIAL WARRANTS

The house resumed, from Tuesday, August 19, consideration in committee of the following resolution—Mr. Fleming (Eglinton)—Mr. Rea in the chair:

That it is expedient to introduce a measure to approve certain expenditures authorized in respect of the fiscal year ended on March 31, 1958, including those provided for by the special warrants issued by the governor general pursuant to orders of the governor in council of August 16, 1957 (P.C. 1957-1111), August 19, 1957 (P.C. 1957-1134) and February 7, 1958 (P.C. 1958-222), but not including the expenditures authorized by appropriation acts for that fiscal year; and to authorize the application of certain amounts in the accounts of the said fiscal year.

Mr. Benidickson: Mr. Chairman, when we were discussing this resolution yesterday I indicated that I felt most hon. members would have the difficulty which I anticipated I would have in making very much of this very long though informative document which was only made available to us within a few hours prior to the presentation of this important resolution. I myself have not had an opportunity to appreciate many of the items that are included in this document, and I feel that the questions which would normally be asked of the minister at this time will probably have to be deferred until we are in committee of the whole on the bill.

I do wish to point out, however, that in the short time in which I have been able to look over the document I have not found much to support the claim which has been made during previous appropriation bills this session, and particularly on December 6, when the Minister of Finance gave the impression that certain reductions along lines which would involve economies and eliminations of extravagance and so on were involved.

I think such an interpretation might be placed upon the minister's remarks last night. He made reference to the fact that certain reductions had been effected in the amounts originally contained in the book of estimates for 1957, and pointed out that $1,270,000 were reductions made in committee of supply last session and that $112,795,000 were reductions effected by order in council.

I just want to indicate to the committee that we cannot anticipate that these reductions are giving effect to economies. I have looked over this document very quickly, as I say, in the short time available to me, with attention to some of the items indicated as involving reductions, and I think every member of this committee will realize that most of these items represent merely deferment of expenditures and that no cancellation or elimination is proposed.

For example, item 797 is one of the largest items. It refers to a reduction of $10 million in respect to wheat and flour being provided to India and Pakistan. I think the committee will realize that there is no cancellation involved here; there is simply a deferment, and the expenditure will occur in a subsequent year. There are other items where the reduction concerns statutory obligations.

I think of item 465; 668 which refers to maritime freight rates, a subsidy given to the railways. If the railways carry a certain quota of freight they are given this public subsidy, and a reduction is claimed there of $1,200,000. Hon. members will realize that this reduction took place simply because the traffic on the railroad was less than was anticipated. Had the traffic equalled the original forecast the amount mentioned in the item would have been expended.

Another item, 197, involves $4,500,000 with respect to our contribution to the provinces in connection with vocational training. I do not think the minister or anyone else would claim there would not have been a desire to make this expenditure if certain provinces had taken advantage of the legislation we have enacted, or that we would not have been happy to have made this expenditure for this purpose.

The big item, is, of course, item 240, a reduction of $32 million with respect to defence. I hope that during the committee stage after second reading of the bill either the Minister of Finance or the Minister of National Defence will at long last give us the details with respect to the items in the large "basket" item which accounts for this claimed reduction. This information was sought when the defence expenditures were considered in part on December 5, but we have not yet been able to get the details

connected with this very large item. I hope we will be able to get a breakdown during the committee stage.

Then we find another large item here, $9 million with respect to the St. Lawrence seaway. This is item 532. I think hon. members will realize that this does not represent the elimination of any expenditure; it is simply a deferment, and when construction proceeds in a subsequent year the item will be picked up. I am not sure what the situation is with respect to item 525, a $7 million reduction with respect to capital advances to the atomic energy commission, but I assume that here again the situation is the same; that construction did not proceed as quickly as was anticipated in the fiscal year and that the amount will be spent in a subsequent fiscal year.

Let us take another large item, $10 million with respect to the Colombo plan. This is item No. 872. I think all members of the committee will remember that there was some pride taken in the fact that there was to be an increase in the amount to be spent in connection with the Colombo plan work, and I ask the minister if it is not a fact that if this $10 million was not spent in the last fiscal year, cheques will be issued in the current fiscal year which will pick up this item of $10 million.

As I say, I have looked at this matter hurriedly, but this appears to be the situation. The minister said on December 6 that certain reductions were taking place, but that none would be in the field of construction or would affect employment. However, when we see the details here we find that a very substantial amount which had been appropriated for the construction of airports was not in fact spent. We find that there was an underexpenditure of some $3 million in public works. The Minister of Public Works is here and he may be able to tell us whether or not this involves deferment or whether these represent cancelled items. In any event they are construction items.

Then we have another item of $2,200,000 with respect to the Veterans Land Act. Again, no one will think for a moment that there was any cancellation of our standing offer to veterans who wish to acquire property. This simply means that toward the end of the year it was realized that applications were not being approved in the number that was anticipated at the beginning of the year, and there was an underspending of $2.2 million. I do not believe the government would really want to have that particular saving. I think they would have been pleased if satisfactory applications had been received in such numbers that this particular item could have been spent, which would have assisted our veterans.

Similarly we have reductions claimed for hospital construction for veterans; we have $750,000 with respect to war veterans allowances. I do not think the Minister of Veterans Affairs was trying to be difficult or unjust to veterans in any way, and I do not think he deliberately set out to save $750,000 with respect to veterans allowances. This simply means that toward the end of the year it was realized by him and his officials that, even carrying on with the usual consideration of applications that came in, this particular item would not be spent. Similarly I do not think the Minister of Veterans Affairs would be doing any boasting about the claimed savings of $150,000 with respect to pensions for disabled veterans.

These are the kind of things that are illustrated in this document. From time to time the claim has been made that these savings and deductions in expenditures have been made, and the impression has been created that these amounts would not be subsequently expended in a later year and were in fact cancellations of intended expenditures. I suggest that from these illustrations one will see that a great number were simply deferred items, or items that toward the end of the year anyone could see were going to lapse, and they were simply put in this package of $114 million which is referred to.

I would ask the minister whether he would just make a little clearer to me the meaning of his statement last night which appears at page 3809 of *Hansard*. He said:

> The house is asked to approve 11 transfer items aggregating $110,042,595. The house is not asked to approve the actual expenditure as such.

I have been able to find some of these. I confess I have not been able to find all the items in the document; I have no doubt they are there, but I have not been able to find them. The big item, of course, is old age security.

Mr. Fleming (Eglinton): I can give my hon. friend the list if he wishes.

Mr. Benidickson: Will my hon. friend give us the 11 items?

Mr. Fleming (Eglinton): Yes.

Mr. Benidickson: I have found seven.

Mr. Fleming (Eglinton): I shall be glad to direct my hon. friend's attention to them in the report on supply: on page 7, item 785; on page 11, item 92; on page 16, item 800; on page 17, item 690; on page 22, item 803; on page 24, item 700; on page 35, item 820; on page 43, item 340; on page 56, item 856; on page 58, item 480; on page 64, item 526.

These are all the items which involve legislative action, Mr. Chairman, at this point,

apart from the general approval of the supply which has been appropriated. In all eleven cases these are items which simply involve authorization in a bookkeeping or accounting sense. Five of the items, namely Nos. 92, 690, 340, 480 and 526, are $1 items.

Mr. Benidickson: I think those are the ones I missed; I was looking for larger amounts.

Mr. Fleming (Eglinton): Yes, they are the five $1 items. All other items involve other specific amounts. The three special ones are Nos. 785, 803, and 820. With respect to those three, Mr. Chairman, may I point out that they cover respectively the deficits in the agricultural commodities stabilization account, the lobster trap indemnity account and the old age security fund. In those three cases the amount of the item has been adjusted to correspond with the precise amount expended. In other words the house is being asked now to approve the transfer of the precise amount because, with the end of the fiscal year, it was possible to put in the specific amount of those three transfers. The others stand in the position of estimates approved in the ordinary form.

Mr. Benidickson: I have no doubt that in the bill there will be a clause that will refer to those 11 items.

Mr. Argue: Mr. Chairman, I want to express approval of what is being done at this time and the method by which the government is asking parliament to approve of certain governor general's warrants. Although this money has been approved and spent, although this is being placed before parliament after the act has taken place, we nevertheless feel that it is an excellent practice that parliament have the right to discuss and approve or disapprove, if that should be the case, of the particular governor general's warrants that were necessary.

We recall the main discussion that took place in this house in the dying days of the last parliament when this whole question was raised by the then member for Winnipeg North Centre, who outlined the C.C.F.'s position and asked that the items be placed before us at a later date for approval. That practice should be followed. I am not going to endeavour to follow the hon. member for Kenora-Rainy River in discussing a particular item. If we have something more to say in that regard we can do so when the bill is before the house in committee, but we do approve of this practice. We think the right thing is being done, and we think it establishes a type of practice that parliament could adopt and follow in the years ahead.

[Mr. Fleming (Eglinton).]

Mr. Herridge: Mr. Chairman, just before this resolution carries I wish to endorse what has been said, and to say that we are very pleased to see the government adopting this procedure, which I trust will be the recognized method of procedure in the future. I think one realizes fully that owing to the changing conditions under which we are living today, and the great expansion that is taking place in this country, problems arise suddenly which are not foreseen when parliament is sitting. Therefore there is some reason for those unexpected expenditures and there is necessity for the use of governor general's warrants on occasion.

In this respect I wish to bring to the minister's attention a news item which I noticed in the London *Times* this morning, dated August 19, which I think, indicates that other governments as well as ours are having problems because of changed circumstances and conditions in modern society. I want to read it and ask for the minister's opinion on the suggestion contained in this news item. It reads as follows:

> The appointment of a small independent committee to report on the theory and practice of treasury control of expenditure is recommended by the select committee on estimates in their sixth report.
>
> The committee, bearing in mind the handicaps they met in a limited examination of treasury control over expenditures, say that the proposed committee should have access to cabinet papers.
>
> They consider that supplementary estimates, "which can destroy effective budgetary control both of the nation's economy and of government expenditure," have become in recent years far too willingly accepted by the treasury as a natural feature of government finance.
>
> They say they find it difficult, without access to cabinet papers, to assess how frequently the costs of policies and major projects are underestimated, but the little evidence they have is disquieting.

I bring that to the attention of the minister, and I should like to ask him whether he has noticed it and whether any consideration has been given by the government to a study along similar lines.

Mr. Fleming (Eglinton): I have not seen the article to which my hon. friend refers, but I shall be glad to have a look at it.

Resolution reported and concurred in.

Mr. Fleming (Eglinton) thereupon moved for leave to introduce Bill No. C-57, for approving certain expenditures authorized for the public service, and the application of certain amounts in the accounts, of the financial year ended the 31st March, 1958.

Motion agreed to and bill read the first time.

SUPPLY

The house in committee of supply, Mr. Rea in the chair.

DEPARTMENT OF MINES AND TECHNICAL SURVEYS

Administration services—

193. Departmental administration, $623,942.

(Translation):

Mr. Dumas: Mr. Chairman, is the hon. minister about to review the activities of his department?

(Text):

Mr. Comtois: Yes, Mr. Chairman. As hon. members are aware, my department was before the standing committee on mines, forests and waters a few weeks ago. Members of that committee were given the opportunity of reviewing all aspects of my department, including particularly the 1958-59 estimates.

The report of the standing committee has now been made available to all members of the house. It is pleasant for me to note in the report that the committee feels that my department is doing a good job, but the committee also feels that more should be done in order that the "normal national development be not delayed".

With this recommendation in mind I do feel that the minor increase requested for my department for the present fiscal year will meet with the full approval of all members of the house.

I should now like to review for the house the main activities of the five branches of the Department of Mines and Technical Surveys, namely the surveys and mapping branch, the geological survey of Canada, the mines branch, the dominion observatories and the geographical branch. The department also has a mineral resources division which is concerned with all matters of an economic nature pertaining to the development, utilization and conservation of Canada's mineral resources. In addition, the department administers the Emergency Gold Mining Assistance Act and the Explosives Act.

The department continues to experience a heavy demand for base maps for resources development, defence, transportation, engineering and such purposes. Moreover, the department must meet the growing need for research and investigational work into the development of new scientific tools and new methods to assist industry in the search for and development of our mineral resources.

For some time my department has been handicapped in coping with the increased demand for its services by cramped quarters in scattered parts of the city. A few years ago a building program was started to provide the modern facilities necessary to carry out efficiently the department's primary function of assisting Canada's mineral industry to grow and develop. This program is progressing favourably and is expected to be completed late in 1961.

To enable the department to continue to carry out its function of assisting resources development we are asking for $29,742,151. This is exclusive of the dominion coal board estimates, and represents an increase of $1,762,761 over the previous year's estimates.

The main items accounting for this increase are: (1) salaries and wages, reflecting the general increase in salary and wage rates; (2) the cost of buildings and land, some of which is now reflected in the estimates of each department rather than in the public works estimates; and (3) the cost of scientific equipment required for expanded programs and the additional laboratory space which we shall have in our new buildings on Booth street. I shall explain the other increases over the previous year's estimates as I proceed.

The department, through its surveys and mapping branch, carries out the two functions of establishing a network of surveys over the length and breadth of Canada, including the Arctic islands, and of providing base maps for use in the development of Canada's natural resources.

The surveys and mapping branch is divided into five divisions, the geodetic survey of Canada, the topographical survey, the Canadian hydrographic service, the legal surveys and aeronautical charts division, and the map compilation and reproduction division. In addition, the Canadian section of the international boundary commission reports for administrative purposes through the branch director.

This year the house will be asked to vote the sum of $8,743,130 to provide for the continuation of the branch's mapping and charting program. This represents an increase of $363,184 which I shall account for in my remarks on the appropriations for each division of this branch.

The geodetic survey provides the original surveys that form the framework or basic control for mapping throughout Canada, and for engineering and surveying projects related to natural resources development. We are asking for $690,761 for the survey's 1958-59 program, an increase of $113,503 over last year. This increase is due mainly to the higher cost of air transport as the survey extends its operations farther northward.

The topographical survey is responsible for the medium and large scale mapping of Canada. It has a twofold objective, to complete the mapping of the whole of Canada at the scale of 1 to 250,000, and to provide topographical maps at the scale of 1 to 50,000,

or approximately one inch to the mile, for areas which are of immediate or potential importance in resources or other development.

For the topographical survey we are asking $1,929,769, an increase of $107,895 over last year. This is mainly accounted for by higher operating costs in more northerly areas.

The Canadian hydrographic service charts Canada's coastal and inland waters. It operates, this year ten ships, seven on the Atlantic coast and three on the Pacific, and seven shore-based parties using large launches equipped with echo sounders.

A number of recent developments have made it necessary for the service to extend its charting program considerably. The construction of the St. Lawrence seaway, for instance, has resulted in a demand for up to date charts of the St. Lawrence-great lakes waterway. The exploration and development of mineral deposits in northern areas, particularly in Ungava and the Northwest Territories, have made it necessary to chart adjacent waters to provide safe ore-shipping routes. The potential development of Canada's Arctic regions, the entry of Newfoundland into confederation, and the withdrawal of admiralty charts of Canada's Atlantic and Pacific coast all mean expanded charting operations to meet the need for charts of these areas.

Though the program of work is on the increase, there are certain non-recurring items, and the amount of $3,898,092 required in this year's estimates represents a slight increase only over the previous year.

The legal surveys and aeronautical charts division carries out original and subdivision surveys in Yukon and the Northwest Territories and in Indian reserves, national parks and other federally controlled lands. It also produces electoral maps, aeronautical charts, and the *Canada Air Pilot* the last two of which are used by airplane pilots over Canada. The appropriation for this division is $754,674, an increase of $49,867 over last year, reflecting the general increase in salary and wage rates and increased travelling expenses for field parties.

This division also works with provincial agencies through appointed commissions in the demarcation of boundaries. This year work is being continued on the British Columbia-Yukon-Northwest Territories boundary, on the Manitoba-Northwest Territories boundary, and on the Saskatchewan-Northwest Territories boundary.

The map compilation and reproduction division compiles, drafts, and reproduces maps and charts, and has charge of map distribution. The division's main problem is to keep its map publication abreast of the greatly speeded up surveying, mapping and other field operations. For this fiscal year we are asking for $1,261,432, an over-all increase of $24,171.

There is a separate vote in my department's estimates to take care of all aerial photography needed by the several departments of our government. The main use for this aerial photography is necessarily for topographic mapping. We have practically completed the coverage of the Canadian mainland by vertical aerial photography and because of the growing importance of the far north in the scheme of things today, we are starting this year to expand this aerial photographic coverage into the Arctic archipelago. For the coming fiscal year the department is asking for an appropriation of $1,050,000 to cover the photography of the archipelago.

We turn now to the geological survey of Canada. It studies, maps, interprets and reports on the geology of Canada. The geological survey's work is needed to make known areas of potential sources of minerals and to assess the nation's mineral potential. The activities of the branch are based primarily on field investigations. The survey supplements these investigations by essential and specialized research in all phases of the geological sciences including geophysics, geochemistry and mineralogy.

For the fiscal year the geological survey requires an estimated $3,114,720, an increase of $444,854 over last year. Part of this increase covers a moderate expansion in the survey's field program for 1958. It is placing 77 parties in the field this year compared with 69 last year. The increase also covers an expansion in its airborne magnetometer and reconnaissance surveys, and in its laboratory facilities for research. Such facilities are vital to a scientific organization such as the geological survey.

Now that the branch hopes to occupy its new quarters and laboratories on Booth street next year, the estimated expansion of laboratory and related equipment is much greater than in recent years. An appropriation to cover this new equipment is required during the current fiscal year so the full potential of the new quarters may be realized as soon as possible.

The geological survey is giving top priority, first, to completing the preliminary reconnaissance mapping of Canada at the earliest practicable date and second to the development of more rapid, economical and efficient field techniques.

To this end the survey turned to aerial reconnaissance by helicopter in 1952. Since then it has carried out seven major helicopter projects in which it has mapped nearly half

a million square miles of territory. In general the helicopter technique has proved to be the most economical in terms of dollars per square mile. This year the geological survey will carry out the second part of the helicopter operation which it began last year in northwestern Quebec in a 120,000 square mile area lying between James bay and Hudson bay and the Labrador trough. This is the largest unmapped portion of the Canadian shield.

The survey has resumed airborne magnetometer work in the maritime provinces this year to complete the unfinished sections of New Brunswick, Nova Scotia and Prince Edward Island. It is also making an aeromagnetic survey of the continental shelf in the bay of Fundy, Northumberland strait, and the gulf of St. Lawrence to gain information on the geological features of the shelf.

Our mines branch has several projects in hand. Its chief function is to promote the economic development and conservation of Canada's mineral resources by means of metallurgical, chemical and mechanical research. The mines branch is divided into five divisions; mineral dressing and process metallurgy, radioactive minerals, industrial minerals, fuels, and physical metallurgy. We are asking for an appropriation of $3,536,390 for the mines branch for the fiscal year. The increase of $158,609 over last year reflects the continued expansion in branch activities to keep pace with the expansion in our mineral industry.

An hon. Member: One o'clock.

The Deputy Chairman: Has the minister much more?

Mr. Comtois: It will take five or six minutes.

The Deputy Chairman: Does the committee give unanimous consent for the minister to continue?

Some hon. Members: Agreed.

Mr. Comtois: I thank you, Mr. Chairman.

The mineral dressing and process metallurgy division assists the industry through investigation on the primary beneficiation of ores, on metal extraction from the concentrates, and on final metal refining. Most mineral discoveries today contain complex and refractory ores. Special research is needed on these ores to develop economical processing methods. The industry has, for instance, asked for assistance in working out treatment methods for complex columbium ores and low-grade manganese ores.

Canada's present front rank position as a major world producer of uranium is a direct result of much painstaking work and research in the radioactivity division on the processing of radioactive ores. Every uranium mine in Canada has received technical assistance from this division. Now that most uranium companies in Canada are in production, the division is turning its attention to the recovery of other values from radioactive ores, and to the improvement of present recovery processes.

The industrial minerals division is concerned with the economic development, treatment and utilization of Canada's resources of nonmetallic minerals, sands, clays, rocks, and industrial waters. These make up, in large part, the raw materials of the chemical and construction industries.

Canada's output of these minerals has expanded greatly in the past ten years along with our country's rapid industrial growth, and the wide variety of projects under way in the division's laboratories indicates the importance of these minerals to our country's continued industrial growth. In a recent project, for instance, branch engineers did valuable work on methods of upgrading poor quality sand and gravel and processing crushed stone to make new sources of these much needed materials available for the construction of the St. Lawrence seaway and power project.

The main goal of the research and investigative work of the fuels division is the economic utilization of Canada's fuel resources. It is working, for example, on improving the quality and making saleable products of the low-grade oils and bitumen of high sulphur content which occur in large quantities in western Canada. To assist the coal industry it is working on the development of methods to reduce the hazards of mining at increasing depths, and on the development of cleaning and beneficiation methods to improve coal products and reduce wastage. It is also doing research on the blending of coals to provide high-quality cokes for foundry and blast furnace use.

The physical metallurgy division assists the Canadian mining and metal industries, the defence services, and the atomic energy project by carrying out fundamental and applied research on metals and alloys. It investigates the causes of failure of metal parts. It does applied research on the production of new alloys and the improvement of existing alloys, and fundamental research to explore some of the laws governing the behaviour of metals. It does much of its work in co-operation with industry.

At the dominion observatories, the course of world scientific events has greatly increased the work in astronomy and geophysics. The observatory's major participation in the international geophysical year, for instance, has

meant a greatly increased program of observations and measurements of geophysical phenomena. It has also meant the establishment of two new magnetic observatories, one in Victoria, British Columbia, and one in Yellowknife, Northwest Territories.

For the dominion observatories we are asking for an appropriation of $1,769,036, an increase of $833,872 over the previous year. Of this increase $562,750 is to be used to permit the branch to expand its astronomical research to include radio astronomy. It will cover the purchase of a radio telescope, the acquisition of land, and the construction of buildings and works for the establishment of a complete radio observatory this year near Penticton, British Columbia. Radio astronomy has proved to be the most spectacular development in astronomy in the past 20 years. When completed, the new telescope will be one of the largest radio telescopes in North America. We expect to have it in operation in 1959.

The increase in the observatories appropriation also includes the purchase of a new 48-inch telescope by the dominion astrophysical observatory at Victoria, British Columbia. The building to house the new telescope is expected to be finished during the present year, but the telescope itself will take two more years to complete. The addition of the 48-inch telescope will permit the observatory to make fuller use of its 73-inch telescope for long-term programs of observations.

Our geographical branch carries out surveys of various parts of Canada, and collects and organizes geographical data on Canada and on foreign areas of importance to Canada. The work of the branch will be similar in scope this year to that of 1957-58. The appropriation is estimated at $315,728 for the fiscal year, an increase of $21,685 over last year, mainly because of the increasing remoteness of field operations. A major project of our geographical branch is the making of land-use surveys and terrain-analysis studies. Such land-use mapping is proving particularly valuable in southern Canada for purposes of planning and development. The special Senate committee on land use visited the branch in November, 1957 to learn about this work.

The preparation of the atlas of Canada by the branch has been under way for a number of years, and I am pleased to inform the house that the publication of the English edition is scheduled definitely for December of this year and possibly earlier, and that the French edition should follow next year. The atlas illustrates the broad range and great wealth of Canada's known natural resources—agricultural, forest, mineral, fishery and water—a wealth from which we in this country produced a gross national product valued at over $31 billion last year.

The atlas, however, does not illustrate the vast potential of our resources still to be discovered or developed. Nowhere in Canada is this potential greater than in the mineral industry. The evergrowing richness of our country's mineral potential is most evident in the continued discovery of tremendous reserves of iron ore, particularly in Quebec; of base metal wealth in the various provinces; of oil and gas in western Canada; while in the territories, exploratory activity and the large scale reconnaissance mapping being carried out by our geological survey are steadily confirming the same rich potential in these great northern regions. In view of this, there can be little doubt that our mineral industry will long continue to contribute a major share to our national prosperity.

In closing, Mr. Chairman, I should like to pay a tribute to the very excellent and efficient service being rendered by the employees of my department. They are making a valuable contribution to the impressive growth of our mineral industry.

At one o'clock the committee took recess.

AFTER RECESS

The committee resumed at 2.30 p.m.

Mr. Dumas: The first item in the estimates of this department gives the members of this committee an opportunity to review the activities of the Department of Mines and Technical Surveys. We also have a chance to comment on the industry most directly concerned with the department.

I was very much interested in the statement made by the minister this morning. It is true, as he said, that the estimates of his department have been studied by the standing committee on mines, forests and waters and many of the hon. members in this chamber had an opportunity on that committee not only to question the minister but also to question the officers and the directors of each branch of the department. The minister, of course, made a lengthy statement in committee regarding his department, which was very much appreciated by all the members in attendance. At the same time we had the opportunity to review the activities of the dominion coal board and there were lengthy discussions on that subject.

I noticed that this morning the minister did not say anything about the dominion

coal board, but I presume that in view of the fact that this board practically constitutes a department of its own, of course under the minister, that he will let us have a separate statement later on with respect to the activities of the dominion coal board.

With respect to the work of the Department of Mines and Technical Surveys, we all realize that the tremendous expansion which has taken place during the last 20 years in the development of our natural resources, and the intensity of the mining activities in practically every part of this country has of course caused an extraordinary large demand for geological information in the form of reports and mapping services, research work and tests on Canadian ores and minerals and other services provided by the five principal branches of the department, so much so that the ability to supply the necessary information has been taxed to the maximum.

We are often inclined to think that the department is not keeping abreast of the developments which have taken place. However, those who are engaged in the search for new mineral deposits, those who are directly engaged in the installation of new mining developments and those who are trying to improve mining operations and extractive methods in mines, have only praise and compliments for our federal department and this is due in great measure to the efficiency of the personnel of the Department of Mines and Technical Surveys. I have said before and I would now like to repeat that we are most fortunate in having excellent mining engineers, scientists and other experts who are highly qualified, each in his own sphere. I wish to congratulate them upon the work they have done and I am sure that if this department is voted the necessary funds to permit an increase in personnel and an expansion in the activities of the department, hon. members can rest assured that the net result will justify such an increase in moneys voted by this house.

Some very important work has been carried out by the department and we have only to read the annual reports which are published to see the excellent work which has been done in the past. I repeat that it is unfortunate that, as members of this committee, we do not receive the report on past activities before we consider the estimates for the coming year. The department at one time published a summary report which was most helpful because we received it soon enough so that we might consider it before the estimates came before the committee. This method of procedure has been dropped and I understand that the annual report is not now ready in time for us to consider it in this way—and this applies to the reports of other departments of government. However, we have been told in committee that next year efforts will be made to produce such a report before we are asked to study the estimate and I hope that if it is not possible for the queen's printer to produce the normal annual report we will receive at least a preliminary report as we did in the past.

Regarding the different branches of the department, I will have quite a few questions to ask the minister as we proceed to discuss the estimates but at this moment I would like to extend my remarks to the mining industry in general.

We are aware at the present time that the situation in the Canadian mining industry is not as we would like it to be. We have, however, every reason to be optimistic and to believe that in the long term it will fulfil its great promise. In recent years the industry has played an outstanding role in the development of the Canadian economy and at the present time it is a very vital factor in our economy; its future is almost unlimited. The general softening in the price of base metals on world markets during the last 16 to 18 months has been reflected in the Canadian mining industry. The demand for most mineral products has diminished and of course prices have dropped. This trend was much accentuated in respect of copper, lead and zinc, but fortunately the price of copper tends to increase at the present time. The prices of the two other metals are, however, extremely low.

For instance, the price of lead and zinc dropped by approximately 20 per cent and 25 per cent respectively, during the period 1956 and 1957 and, of course, the price of copper had declined by 40 per cent until lately when we saw a small rise in price. In Canada these adverse conditions in the prices of copper, lead and zinc have had serious repercussions. Several mines have suspended or closed their operations, and others have cut back production. The outlook for the mining industry in the immediate future is not too good. The three major base metals, copper, lead and zinc, are experiencing some serious trouble. Copper stocks in the United States are not very high at the present time, but there is an incentive by way of a bill which has been passed, or which will be passed, to enable the government of the United States to pay subsidies not only to copper producers but to producers of lead, zinc and other metals. This will certainly produce an effect in this country; though I am told it may not be as severe as the tariffs which were supposed to be imposed on these different metals being exported to the United States.

Nevertheless, I think the future of the mining industry is bright. It may take some time before the price of metals goes up again, but we know that consumption will increase. Often we are asked by people who are not familiar with the metal trade why we believe consumption will increase. The increasing use of minerals is partly the result of a growing world population, partly the result of wartime demands and partly because of the improvement in the per capita wealth of the population. By and large, people are better off today than ever they were, and generally speaking the higher the standard of living the more metal is used. In addition, if we look through the different reports which are published we will soon realize that the consumption of metal will be increasing in the future to a very large degree.

First of all, we have the opportunity to read the Paley report which was published in the United States, and this report stated in part that from 1950 to 1975 the overall demands for minerals would probably be 90 per cent higher in the latter year despite the fact that today in only two metals, magnesium and molybdenum, is the United States self sufficient. The reserves have been depleted and they are actually importing large quantities of these metals, and in the near future this importation of foreign metal into the United States will be increasing all the time.

By 1975, the report states, the increased needs in the United States will be greater by the following amounts. Then the report goes on to give a table of the estimated increases. The figures have been public for quite a long time, but they do show the great opportunity which our minerals industry has to supply an important part of the metals which will be imported by the United States in the future. Here is a partial list: ferro-alloys, 75 per cent, nickel 100 per cent, tungsten 150 per cent, cobalt 344 per cent, manganese 50 per cent, molybdenum 170 per cent, copper 43 per cent, lead 53 per cent, zinc 39 per cent, titanium and cadmium 324 per cent.

Canada has many of these metals in exportable quantities, and production has been on the increase. In the case of some of the others there has been a sharp deficiency. However, I see by reading the report on the economic prospect prepared by the Gordon Commission that the following appears on page 215:

> The basic influences which have operated to increase Canadian mining and mineral processing production in the past will in all probability continue to be felt with undiminished force in the future. The population and standards of living of all of the main industrial countries of the world are continuing to rise, with expenditures on durable goods tending everywhere to increase even more rapidly. Defence requirements may decline relatively from their present level, but competition and technological change will combine to put heavy emphasis on investment in machinery and equipment, while the economic development of the less industrialized countries will add still further to the demand for minerals. One must, of course, make allowance for the increased absolute amount of scrap metal which will be available—

This has always been a factor. However, on reading these reports we must realize that the future of the base metal industry in this country is very bright.

This brings me to the activities of the department itself. I have always stated, when I have had a chance to speak on occasions such as this during the discussions of the estimates of the department, that we in this country should make more money available to the Department of Mines and Technical Surveys. I know it was mentioned by the minister this morning that the estimates for this year amount to $29,545,451, while in 1957-58 they were $27,979,390. In other words, there has been a very small increase. But the minister said this morning that this increase is mostly brought about by increases in salaries and wages and in the extra cost of building. I understand that building costs were probably carried by some other department in the past but are now being carried in the estimates of the Department of Mines and Technical Surveys. The minister also stated that increased cost was involved in the purchase of scientific instruments and other installations. Thus, even if the estimate for 1958-59 does show an increase of over $1 million as compared with the estimates of 1957-58 the increase is not such as to permit an extension in the research, mapping, geological surveys and other works which is supposed to be done by this department. If you look at the estimates for 1956-57 and 1955-56 you can see that they have been practically the same for the last four fiscal years; there has been a small increase, but that increase has not been sufficient to permit the department to do the job that it was designed to do or to give an opportunity to its officers and staff to do the job they would like to do.

I do not want to repeat myself, but we have experts in this department. They are able to do a job, but the department has to be voted the money necessary to do the job. I will go so far as to say that the minister is anxious to do a good job in his department. Since he has taken over the department he has shown that he is very much interested. Every member of the House of Commons should insist that the estimates of this department be increased. We have a job to do.

Let me cite only one example. We were told in committee that only about 30 per cent of this country has been mapped for geological purposes. We were told that last year we added 3 per cent to that. That makes 33 per cent, which means that we still have a big job to do. I realize that from now on the work will probably proceed more quickly. We are using methods today which are facilitating this work. For instance, in 1952, in the geological surveys of this country, we initiated a program of helicopter operations. In the magazine *Precambrian*, largely prepared by officers of the Department of Mines and Technical Surveys, there appears a report of the operations. Because the report has been prepared by those officers I think we can quote it without question. In 1952 we had one helicopter operation. This was the first one. It was called the Keewatin. In 1954 we had three operations, the Baker operation, the Pitt lake operation and the northern Cape Breton operation; in 1955, we had two; in 1956, we had one; and in 1957, we had two. I understood from what the minister said before recess today that we have another operation in Quebec this year which is called the Fort George operation. It started in 1957, but we were told in committee that the department expects to complete this operation this year. I understand also that next year the department contemplates the possibility of having other operations such as those I have mentioned. In the same article in the magazine to which I referred there is a report on an operation called Mackenzie. These helicopter operations are really the thing. Probably we can do more work in these operations than we could do with the usual method of making geological surveys across the country.

In saying that the department has completed only 33 per cent of the program of mapping this country in so far as geology is concerned, I am not trying to belittle the work of the department. They have done good work. We have to remember that 25 or 30 years ago those who were making the surveys had to travel by canoe and they could not do very much in one season because it is easy to understand that this work cannot be carried out during the winter. We should try to do more geological survey work. This is very important. I was told not very long ago by some mining people that the reason why the federal department of mines should do more work is that their work is tops, their work is first-class and is of great help to prospectors when they go looking for new metal discoveries. They say that they get more information from the federal department of mines than they can get from the different provincial departments of mines.

We had a good example of that in one instance in Quebec last year. In Quebec we have a section over which a geographical survey was carried out by a private company a few years ago. Since 1949 I have insisted that the work which was done by that company should be compiled and published. Finally, in 1954 or 1955, we succeeded in having the department start compiling those maps. When the maps came out a year or two years ago the first map which gave information regarding the survey in that part of Quebec was compiled by the department of mines in Ottawa, and the department was given permission to publish the information. After a certain number of years those maps were published. What happened? Immediately after they were distributed prospectors used them and mining companies used them and the result is that in the province of Quebec we have about the biggest discovery which has been made in the last 25, 30 or 50 years. Ninety miles north of Senneterre they discovered a deposit of zinc, lead, copper, silver and gold, and we have there what looks like the biggest deposit discovered in this country up to now. They have proven over 30 million tons of ore and I am sure the work which will continue will double this amount. I may be optimistic, but it looks like a big mine for the future.

Those who are not familiar with the situation may say, "We do not need lead and zinc right now; we have an over-supply of those metals". Mr. Chairman, the time will soon come when we shall be glad to mine this deposit of which I have spoken, and we shall soon be glad to open up Pine Point in the Northwest Territories and develop those other big Canadian mining prospects.

To show how important is the work of the Department of Mines and Technical Surveys, the total estimates of this department, as I mentioned before, are close to $30 million. I will agree it is a substantial amount, but when you compare those estimates with the estimates of other departments and when you take into consideration the great need for exploration across this large country of ours you realize that those estimates could very well be doubled and they would not be too large.

I have spoken only about the geological survey branch. I could say the same things about the survey and mapping branch and about the mines branch. They are all important branches of the department. Given the proper amount of money those sections of the Department of Mines and Technical Surveys could double their work. It was mentioned by the minister in the committee that it was difficult at times to organize parties to make surveys during the summer

and early fall because of not having a sufficient number of leaders for such parties. I suggest to the department that they should secure a greater number of surveyors and geologists and train these men. If the department does not train such men, how can we expect the department to have a sufficient number of leaders to take charge of these parties during the summer seasons? It is very important that we try to enlist in the Department of Mines and Technical Surveys a sufficient number of technicians and experts so that when we want to carry out a certain amount of work, whether surveying or geological surveying, we will be able to do it.

I have just one word in conclusion. I know my time has almost elapsed. I congratulate the officers and personnel of the Department of Mines and Technical Surveys but I should like to go a little further and congratulate a man who is ready to retire from one of the branches of the department. I am thinking of the director of the surveys and mapping branch. This man has done a lot for the Department of Mines and Technical Surveys and in so doing has done a lot for his country. Although I am sorry to see him leave the department because he has to retire I am also proud that he will be replaced by a man who has lived in my constituency. Sometimes we are disappointed to see a man go but are proud of the man who fills the vacancy and in this case I am very proud that the man who will replace the director of surveys and mapping is a man who has lived for some time in the constituency of Villeneuve. I will have questions to put when we come to the individual items and I will also have something to say about the dominion coal board after the minister has made a statement.

Mr. Herridge: Mr. Chairman, the minister's disarming smile plus the technical nature of the work undertaken by the department are not components likely to engender political turbulence in the chamber this afternoon so I trust that we are going to have a very good natured, objective discussion of the minister's estimates.

I must say that I read with some interest the proceedings of the committee that considered the estimates of the department and I noticed that the good work of the department and the staff was recognized by the committee as I think it is recognized generally. A good many Canadians do not realize the excellence of the personnel of this technical department, of the men who are willing to serve Canada in their present positions when in a number of cases they could obtain higher salaries in private industry and possibly very much higher salaries if they left Canada and went to the country to the south of us. I think that fact should be recognized more by Canadians generally.

The second conclusion I draw from reading the proceedings of the committee, having in mind the good work being done by the department and the excellence of the staff, is that there is a necessity for more funds to expand the good work being done and give this excellent staff the opportunity to do things that are waiting to be done in the technical field in which they work. I believe it is correct to say that this department has rendered service to the country for 51 years. I do not intend to make extended remarks at this time because I have to leave to record a radio broadcast and I must not disappoint the many people who listen to me every week as the fount of all wisdom with respect to what is happening in parliament.

However, the surveys and mapping branch, in which I have been particularly interested, is of great importance to the country at this time especially in view of the development of our natural resources, water resources, forest resources and so on. I have three suggestions to make to the minister. The first is that I hope every possible opportunity is given to students from universities and technical schools to secure employment with the field parties of this branch during the summer months. I also hope that every opportunity is given to graduates to secure positions within the department.

With respect to students particularly, the experience gained in field work is of great value and I think it is very worth while to get these young men started as undergraduates and interested in the work of the department, which means so much to the country. I hope every consideration is given to that because I have had representations from a number of organizations urging that, especially in the light of present circumstances, every effort be made by the government and particularly this department to find employment for as many of these persons as can be fitted into the appropriations voted by parliament.

My second suggestion has to do with the markers that are placed by the branch in various parts of the country and which are of great value in determining levels, locations and things of that sort. They are usually bronze plates with a number and possibly some reference to the fact that they are the property of the government of Canada. They are of great interest to many people and I suggest to the minister that consideration be

given to placing a little more information on these markers. They are placed there as the result of considerable expense involving surveys, levels and things of that sort, and in addition to having the reference number and the fact that the marker was established by the government of Canada I think it would be advisable to consider putting more information on them relating them to the surveys of the district, their purposes and so on. I make the suggestion because of the number of people who are interested in these things and the marker, of course, means nothing to them until they write for the information related to the number on the monument.

My third suggestion is that the branch is in need of more publicity. Field parties go into a district and the local residents know there is a field party there because some people are living in a few tents by the side of a lake who go to the nearest store and buy a few groceries. They know there is somebody there working for the government of Canada and doing something. I think the opportunity is being lost to acquaint our young people with the value of the work and its purpose and I suggest that there should be more publicity generally, possibly by press releases to the local papers, informing the people of the district that there is a party from this branch of the department doing survey work in the district. I also think that, using the right personnel, local organizations and school children could be informed of what is going on through short talks. I am sure that could be worked into the department's agenda without any great inconvenience. I suggest that it would be of great advantage to the local people and particularly the younger people from the point of view of getting them interested in the surveys and their purpose and helping them to realize in that way the value of the natural resources in their own district and developments in Canada generally. I think we should do everything possible to spread knowledge about the purpose of the work of the branch in its relation to the development of our natural resources.

I want to say a few words about the Canadian board of geographical names, an organization in which I have always been interested. In that connection, I want to ask the minister if there is close liaison between the officers of his department and the corresponding branches of the provincial governments with respect to the accuracy of names or the inclusion of names on maps. In recent years I have noticed two or three instances where a recent provincial map, say of the province of British Columbia, contained names that you could not find on a map published by the Dominion of Canada. I was just wondering if there were any continuing relationships to make certain that these changes in names or these additional names are included in the latest map produced by this department.

With respect to the Canadian board on geographical names, I want to deal particularly with one matter on behalf of a good number of the pioneer residents of the district which I have the honour to represent. I should like to express their appreciation to the minister for certain action on his part in recognizing the good work of Dr. L. E. Borden, who was on the cruise of the *Neptune* in 1903 as medical officer and botanist. In that connection, I am going to put two letters on the record because I have been asked to do this by persons interested in this question. The first letter is dated Ottawa, February 12, 1958, and reads:

Mr. G. M. Munroe, Secretary,
Canadian Board on Geographical Names,
Department of Mines and Technical Surveys,
No. 8 Temporary Building,
Ottawa, Ontario.

Dear Mr. Munroe:

I would like to draw your attention to the name of Dr. L. E. Borden after whom it has been suggested a physical feature in the Kootenay be named.

Doctor Borden has been a resident of the Kootenay for over 50 years and has made considerable contribution to Arctic exploration.

Doctor Borden's record was brought to the attention of the house on the estimates of the Minister of Mines and Technical Surveys on July 5, 1956 (*Hansard* 5692-95)—

That was the occasion on which I brought to the attention of the house his good work on the cruise of the *Neptune*.

—and later presented the proclamation to the house on August 11, 1956 (*Hansard* 7433).

That was when I presented this, as far as is known, only existing copy of the proclamation whereby the Arctic islands were taken possession of in the name of Canada.

May this request be investigated at your earliest convenience and a report forwarded to me accordingly.

Yours sincerely,

(sgd.) Paul Comtois

I am very glad to read that letter into the record. I am more than pleased, as a good number of the people in our district are, over a later letter written by the minister. It reads:

Ottawa, June 26, 1958.

Mr. T. Eric Jones,
2998 Seaview Road,
Ten Mile Point,
Victoria, B.C.

Dear Mr. Jones:

I wish to refer to our exchange of correspondence regarding the naming of a geographical feature after Dr. L. E. Borden.

The Canadian board on geographical names has now advised me that approval has been given to apply the name of Borden river to a feature which flows into Roes Welcome sound between Cape Fullerton and Whale Point to commemorate Dr. Borden.

The feature is in the area visited by the *Neptune* and is identified on the enclosed map for your convenience.

Yours sincerely,

(sgd.) Paul Comtois

I want to thank the minister on behalf of the many friends of Dr. Borden who was a pioneer resident of our district, was a medical officer of the 54th Kootenay battalion in which I had the honour to serve as did the Minister of Public Works, was the Conservative member of the legislature for a number of years representing the Nelson district, and during all these years since his return after the cruise of the *Neptune* has rendered great service to his district.

Mr. Comtois: No more than my hon. friend.

Mr. Herridge: The minister was well informed of the circumstances. I am one of those who believe in pioneers being recognized in the naming of these geographical features. Some years ago I was horrified to find, after a certain crew had returned from surveying a certain area in western Canada, that they were so lacking in names that they had named the various points, things such as lakes, rivers and physical features, after the camp cook and so on. I am not objecting to these people getting places named after them, but these places should not be named after someone who comes from eastern Canada to spend six weeks in the area. I am all in favour of those pioneers who wandered into the woods having their names commemorated in the naming of these geographical features. I may say that is C.C.F. policy, Mr. Chairman. In any event, I know the minister's action in this respect is appreciated by a good many pioneer citizens in the Kootenay district, in fact in British Columbia, because they believe the good work of Dr. L. E. Borden should be recognized.

I have one other matter I should like to mention under this heading of the Canadian board on geographical names. I asked the minister a question this morning about this press report which is headed "Ottawa Puzzled as U.S. Names Seaway Lake". I was very pleased with the minister's reply so far as the action of Canada was concerned. The report, you see, reads in part as follows:

Although Canada has taken no official action—and did not seem aware today that the United States had—the Canadian board of geographical names is expected to follow the U.S. lead at a meeting in early September.

Residents on the U.S. side of the lake behind the giant international powerhouse have been notified that the U.S. board of geographic names approved the name Lake St. Lawrence July 24.

—Officials of the Canadian geographical board said today they had been in contact with their U.S. opposite numbers regarding the naming of the lake but did not know that the United States had already acted.

Now, my point is this: I am somewhat mollified by the fact that Canada suggested the name lake St. Lawrence. I do think it is somewhat discourteous of the geographical board of the United States to make this announcement instead of waiting until there could be agreement so that there would be a joint announcement made by both countries. I am sure that all members of this house realize that is the proper way to do things. If you extend the courtesy to another country, then you expect proper procedure and protocol. That is all I am going to say because the minister's explanation this morning gave me some comfort. I can go and tell people that, as a matter of fact, we named it and they announced it.

I want to say a few words generally with respect to the administration of the Explosives Act. I do not usually deal with explosive matters, but this is a serious matter because of the peculiar circumstances that have existed in the Kootenay district for a number of years. I have discussed this with the Minister of Justice and with other officials, and I have discussed it with the local people in my constituency. We feel there are good reasons why there should be a rather more rigid administration of the Explosives Act by the minister's officials. In that connection, I want to read briefly from a letter from a man who travels a lot around the district. He writes me as follows:

I would like to point out that there has been no proper control over the handling of blasting powder and dynamite, and regulations are very lax in the direction and use of powder by most of the large companies in this area. As you will have noticed recently in the paper, a case of blasting powder was found in the near proximity of slashing for the gas line and I suppose you have also heard of powder being left loose along the side of roadways on government projects.

I have had occasion to investigate and found that most of the logging companies could not tell me how much powder was used on a particular project and there have been no actual checks by any authority of the amount of powder used. This resolution is to attempt to get a stricter enforcement of all such use of powder and proper inspection at all times to prevent further misuse of same.

I would like to point out also that there is nothing to prevent me from going to the C.I.L. and buying blasting powder without too much restriction. Further to this, I feel that when the gas line was put through the Nelson area there was no proper control as to who was handling the powder all during this project and a lot of powder could actually have been stolen, even a stick at a time.

Then in addition to that, I have a resolution from the Nelson-Trail and district labour council. This resolution was adopted at a general meeting of the council after prolonged and detailed discussion of this problem as it related to the Kootenay district in general. The resolution reads as follows:

Whereas,

The blasting of power poles, Canadian Pacific railroads and now with the bombing of bus transportation public waiting rooms and restaurants, causing much distress to our workers;

Therefore be it resolved that:

(1) That blasting powder be charged as the responsibility of one man in any company, or others, and that he be held responsible for the distribution, checking and the correct reports and tallies of all such explosives being used.

(2) The inspection of all such store houses—arsenals, powder houses where explosives shall be stored in the West Kootenay shall be inspected at least once a week.

(3) The inspections—tallies—records of explosives, etc. shall be under the control of a federal government official.

Of course, in passing that resolution I suppose the members realized that the matter is in a theoretical sense under the control of the federal government officials. But you cannot expect the officials to be visiting all these places continuously. I suggest that under the circumstances there is need for a much stricter enforcement of the Explosives Act. I have gone through logging operations and have seen two or three cases of dynamite left by the men building roads, just under a log or something of that sort over the weekend. I have been on road building operations and over a weekend there would be left powder and dynamite just possibly covered up with canvas or put under a large machine or something of that sort. In addition to that, dynamite and powder can be purchased by farmers legally and properly through the local farmers' institute which buys it, I think, at a somewhat lower rate from the C.I.L.

I think the great majority of persons using powder are careful to store it and lock it up over the weekend and things of that sort. However, I myself have observed some slackness in this direction. In view of the particular circumstances I urge that the minister give some consideration to the matter. Our circumstances are somewhat unusual. I am not going into that matter now. The minister knows the circumstances. I suggest that he discuss the matter with the Minister of Justice and see whether, at least under present conditions, we could not have a somewhat stricter and, shall I say, abnormal supervision and administration of the Explosives Act in our district. That is all I am going to say in that respect. That is about the only suggestion with a tinge of complaint that I am going to make this afternoon.

I just want to say a word or two about the geological surveys which are of such great value in this country in the search for minerals. I should like to ask the minister, when he replies, whether he would tell us what parties will be operating or are operating in British Columbia this year and whether there are any parties of the geological surveys branch working in the southern interior of British Columbia. Again I suggest that there should be some publicity with respect to the work of the geological surveys branch. It is doing a most interesting and valuable work. I think there should be more publicity through the press and local organizations, and that there should be some opportunity for even our high school students to know what is happening with respect to this most important work which may have some considerable effect on the Canada they will inherit and have to administer in later years.

I should now like to say a word or two about the mines branch and it will be very brief indeed. I represent a constituency in which mining is an extremely important part of the economy. I simply want to say that the good work of this branch and the service it renders to private industry are recognized by all persons who are engaged in the mining industry in my constituency.

Before leaving that point, in view of the fact that the matter was raised by the hon. member who spoke previously—to whose speech I listened with great interest and who is a member who knows what he is talking about when he speaks on this question; and by the way, I am not suggesting that I do not—I want to deal for a moment with the question of the market for lead and zinc. The minister knows, as do his officials, that owing to the present price for lead and zinc a good number of small producers are having a very difficult time. On the orders of the day some time ago I asked the minister, or possibly it was his *alter ego* on that day—I am not quite sure which it was—whether he had any knowledge of the global plan that was to be handled by the government in each metal-producing country to control distribution and export of lead and zinc according to the market demand after taking into account the prescribed domestic production level.

This proposal was made in the United States by senators representing mining states. I do not know whether or not the minister has any further information on that matter but from the information I have received this suggestion offers some opportunity for international planning of the markets for lead and zinc and, shall I say, the division of those markets on a fair basis

related to the normal productive capacity of the countries that would enter into what is called in this report a global plan. When the minister replies I should like him to inform the house whether his department has any information with respect to this plan.

My concluding topic—those words, of course, will bring a smile to everyone's face —has to do with a matter which comes under dominion observatories whose work everyone recognizes. I raised this matter previously. I mentioned it to the minister I think on one or two occasions. I think the last time I mentioned it I suggested that it be brought to the attention of the dominion-provincial conference as a matter that could be properly discussed there and one that should not create much difficulty in order to give effect to it. While I know, as do we all, that in peacetime the question of daylight saving time comes under provincial jurisdiction, I think we are somewhat silly in that respect. I suggest that we should work towards a national daylight saving time. If we are going to have daylight saving time, let us have it apply on a national basis. I again suggest to the minister that he bring this matter to the attention of the next dominion-provincial conference or of the provincial governments individually, whichever course he thinks to be more appropriate, in order to see whether something cannot be done to establish national daylight saving time as a result of agreement between the federal government and all the provinces.

I think we are absolutely silly to go on in this way and have various times established at various times with all the inconvenience involved. I think the suggestion is only common sense and will be to the great convenience of the Canadian people. Then, if we had that sort of arrangement, as to the timetables of the railroads, all we would have to do is to say generally that they are an hour later or an hour earlier across Canada. At the present time we have the railroads running on standard time, some buses running on daylight saving time and some buses on standard time. Then there is a difference between the daylight saving time in various provinces. I think we are causing ourselves a great deal of unnecessary inconvenience because we have not common sense enough to get together and work out a solution to overcome what appears to me, and to the members of the group which I represent, to be a totally unnecessary inconvenience which is causing us unnecessary difficulty in travelling and things of that sort and at the same time in some cases unnecessary expense. I urge the minister to give consideration to our representations in that respect. If he is successful in bringing this about before his estimates come before the house at the next session of parliament we shall rise up once again and say his name is blessed.

Mr. Chevrier: There are two matters which I should like to bring to the minister's attention. I hope the two hon. members who have just taken their seat will excuse me if I do not follow them in their remarks. I refer particularly to the speech made by my colleague the hon. member for Villeneuve who always speaks with such authority on matters affecting the Department of Mines and Technical Surveys.

I always listen with interest to the speeches made by my hon. friend the member for Kootenay West because he succeeds in making anything he has to say interesting. He did cover the waterfront pretty well, but I want to dwell upon one matter which he brought to the attention of the minister, which is the names announced by the minister for the new international lake now formed by the pool resulting from the power development in the international section of the St. Lawrence river. If I understand the situation correctly, the name that has been suggested by the geographical board on names and which has received the concurrence of a similar board in the United States, is that of St. Lawrence lake. Of course I would have no fault to find with that name as it is a name which has behind it a great deal of history. However, I do have a name to suggest to the minister which I think is more appropriate and which I believe, not only meets the historic aspirations of those who live in the area in which this work is taking place but which I believe also meets the national and international viewpoints with equal, if not more, suitability than the name chosen. Of course my submission to the minister is made with great deference, but it is made without hesitation. Although the name has been chosen, I know full well that on other occasions when a name of greater significance has been brought to the attention of the geographical board on names that board has not hesitated to reconsider and to change decisions already made.

The name I have to suggest is one to which I submit serious consideration should be given, because it would serve to preserve the historical associations of the area in which this development is taking place. As the house knows, some of the most important historical episodes in the history of our country relate to this section of the St. Lawrence river; the exploration of the west, the Indian wars under the French regime, the coming of the united empire loyalists, the war of 1812 and the development of the Canadian

canals. This particular development with which we are now concerned is perhaps not the final stage, and it seems to me that the name I am about to suggest is more in keeping with the facts surrounding the area than the name selected.

Before these developments took place there existed in this area what was known as the Long Sault rapids. Those rapids have disappeared, having been destroyed by the power works constructed by both Canada and the United States. To those who live alongside the international boundary line and to those who have ever lived in the area, the Long Sault rapids were a sight which can never be forgotten, not only because of their beauty but because of their galloping wildness. The rapids carried many ships, first bearing the early settlers, and then many inhabitants of our country from one end of Canada to the other. The name I suggest, therefore, is the name of Long Sault lake, and the reason I do so is that the lake is on the international boundary line and the rapids themselves were partly in Canada and partly in the United States. It therefore seems to me that it is a name which should appeal to the United States as well as to Canada.

Furthermore, there is an island which bears the name Long Sault which is entirely on the United States side of the boundary line and upon which some works in connection with the project have been constructed and which, until the development of the seaway, had been practically unknown. There were two communities on the Canadian side of the line which have entirely disappeared because of the flooding, namely Mille Roches and Moulinette. These communities have now been replaced by a new community which has arisen on the Canadian side of the line and which also bears the name Long Sault. It would strike me, therefore, that the name of lake Long Sault or Long Sault lake would carry with it not only local support with respect to the early history but would also be national and international in character. So far as I am personally concerned it has far more significance and appeal than the other name because we already have the gulf of St. Lawrence, river St. Lawrence and St. Lawrence county, which is just opposite the works now under construction on the United States side of the line, and which county is in the state of New York. We have on the other hand very little in the way of commemoration of the name of Long Sault in this country. I therefore ask the minister if he would not be good enough to bring this name, which I submit with deference, to the attention of the officers who form the geographical board on names so that they might consider it and discuss it with their counterpart members in the United States geographical section who have decided upon the name St. Lawrence lake.

Were the minister to accede to my request I am prompted to say that the name would receive universal acclaim.

The next subject which I would like to discuss is one which I am sure the minister is aware, is of concern to me because I have brought this matter forward previously in the course of the discussions on his estimates. This is the fact, the strange fact, that the boundary line separating Ontario and Quebec on lake St. Francis has not yet been determined. After many, many years it seems an anomaly, as it were, that this boundary line should still be in suspense, and I will continue to bring it to the attention of the minister every time I have an opportunity to do so. I do not need to do this because I know the minister is sympathetic in respect of this problem. I also realize that the minister does not have direct jurisdiction over a matter of this kind, which must be determined by the two provinces concerned. On the other hand he has a very great interest in this question in that islands owned by the federal government lie in this area. A good deal of work is being done in the river in respect of the development of the St. Lawrence and it is not known whether the men are working in the province of Ontario or the province of Quebec. Lastly, from the tourist standpoint, a man who fishes, traps or shoots in the area never knows from one moment to the next whether he will be apprehended by the law officers of one or the other province. All these problems arise because it has not been determined where the boundary line lies.

It is an old problem and a vexatious problem, one which should have been determined a long time ago. I am one who sat on the other side of the house for a long time and perhaps I should take some responsibility with respect to this matter but, on the other hand, I must immediately add that I lost no opportunity to bring this very problem to the attention of the minister's predecessor.

Fortunately a survey has been made of the area, a survey which was agreed upon between the surveyor general of the province of Ontario and the surveyor general of the province of Quebec many years ago. Those two surveyors agreed upon a portion of the southern boundary of Ontario and Quebec. That which begins at Coteau and ends at a point 500 feet west of what is known as Cameron's island or Thompson's island in lake St. Francis. But beyond that to the west, for a distance of almost ten miles, in an area

which is heavily inhabited on the Ontario side and which is certainly inhabited to a large extent by summer residents on the Quebec side, though possibly not as heavily, the boundary line has never been delineated, and it seems strange that in this day and age it should not be possible to find a solution.

I brought this question to the attention of the premier of the province of Quebec when I was the president of the St. Lawrence seaway authority, and I brought it to the attention of the premier of the province of Ontario and I was assured by both the gentlemen that it would be given their consideration. I know there are difficulties in the way. But the difficulties are small. They are that the islands lie, in the opinion of the province of Ontario, entirely within the confines of that province, while in the opinion of the province of Quebec, they lie entirely within the confines of Quebec. But the islands, it seems to me, are not of such importance that it could not be found possible to draw the line which separates Ontario from Quebec in this area.

The Ottawa *Journal*—unfortunately I do not have the date before me, but I have a copy of the article which, I believe, appeared in November of 1957—drew attention to the fact that this 10-mile boundary dispute should have been settled a long time ago, and it states that the present situation has proved very awkward for workers and contractors developing the lake St. Francis section of the St. Lawrence seaway and that it has been equally annoying for summer cottagers, anglers, hunters and trappers who have seen game wardens of both provinces converging on them with summonses at the ready.

I do not know whether the situation is as bad today as is suggested in that editorial but it is one which, it seems to me, should not be allowed to continue much longer. May I make a suggestion to the minister? I know he has very convincing powers. I know, too, that he is the kind of person who would not wish to be offensive in any way. May I suggest that he should first approach the premier of his province and that, perhaps, he might then have his officials communicate with the premier of Ontario in an endeavour to ascertain if the boundary line cannot be drawn. It would be a good thing for the federal government and it would be a good thing for the provinces of Ontario and Quebec. If a bill confirming an agreement between the two provinces were brought into this house I am sure it would receive the ready approval of parliament, because this is a good thing and a thing that should be done. I therefore appeal to the minister with regard to these two points and, knowing him as I do, I am sure he will wish to give them earnest and sympathetic consideration.

Mr. Martel: Mr. Chairman, I should like to say a few words in view of the point which has been raised by the hon. member for Villeneuve concerning base metal discoveries to the north of Senneterre which happens to be in my riding. I do not wish to delay the passing of these estimates in any way, but I rise merely to say that I agree with the hon. member with regard to what he has said, and that I support the observations of the hon. member for Kootenay West regarding the geological surveys branch, which is doing a great job and whose work is of high value to the development of Canada's rich mineral resources.

I mentioned this discovery at Mattagami lake in the middle of my riding during my maiden speech here last May. I am glad to say that my constituents were most happy that I said a few words about it. The only reproach they made to me was that I mentioned at that time that the discovery would compare with that at Pine Point. They thought I should have said it was much bigger than Pine Point. The hon. member for Villeneuve has made that point clear. Not only one ore body has been discovered but, so far, it seems there may have been three base metal discoveries. I have also been informed recently by a reliable source that a gold discovery has also been made in that area. I agree with other hon. members who have spoken this afternoon that the work which has been done by the geological branch of the department of mines has been most significant in bringing about not only these discoveries but many others across Canada.

Before closing, I should like to make a suggestion to the minister concerning the distribution of geological maps and reports. In past years these maps and reports were distributed free to prospectors upon request. I understand that some people and, maybe some companies, abused this privilege and that as a result the prospectors and the companies are now being charged for any such reports and maps they may require. I should like to suggest that in order to encourage prospecting all over Canada at least one set of maps and reports should be made available every year to prospectors who intend to do some exploration work in a particular area.

Finally, may I congratulate the minister upon the help he has extended to the gold mining industry through the subsidy which we discussed a few days ago and also express our gratitude to the officials of his

department who, I believe, are doing a really good job. I hope they continue this good work because if we want to open up the north country we need more surveys and we need their help.

Mr. Fisher: I suppose it is partly to the credit of the minister that for the first time in many years his estimates went to the committee, and having read the committee report I realize they got through a considerable amount of questioning in relation to the department. I must apologize that some of the questions I am going to ask arise from the fact that I was not able to be on the committee at the time the estimates of the department were before it.

I want to make one key point at this time and to do it I should like to start with a quotation from the report which the minister read to the standing committee on mines, forests and waters. I think it is an important point because the evidence I want to present in a sense tends to contradict the minister's statement. On page 102 he said, referring to co-operation with provincial and private interests:

> Nor is there any duplication of our work with that of the provincial government departments and agencies. A main reason for this is that our work and theirs though it may be in the same general field of endeavour, differs in nature and purpose. The work of the provinces stems from their responsibilities in administering resources development within their borders, whereas our work arises mostly from the need for research on the technological problems of the mining and metallurgical industries. Our officials and those of the provinces are in frequent consultation and the possibility of duplication of effort is reduced to a minimum.

I wonder whether the minister's attention has been drawn to a report which appeared in the Toronto *Globe and Mail* on June 3. It is datelined from Edmonton and it is headed:

> Co-operation Urged in Geological Survey

I would like to read part of this report because it is in contradiction of the statement made by the minister here, or at least I think it requires some further explanation on the part of the minister. It begins:

> More rapid completion of Canada's geological map could be expected from a clear-cut arrangement between the federal and provincial survey agencies, Dr. H. C. Rickaby of the Ontario mines department said today.
>
> Dr. Rickaby, in his presidential address to the geological section of the royal society of Canada, noted that less than one-third of Canada has been mapped, and even a smaller portion surveyed, on a scale adequate for mineral exploitation.
>
> A statement of the aims and policy of both federal and provincial survey would serve to clarify their respective fields of responsibility, he said.
>
> In Ontario, Dr. Rickaby said, the policy is to make geological work as practical as possible, with commercial considerations uppermost as it attempts to aid in promoting the mining interests of the province.
>
> If other provinces have about the same policy, Dr. Rickaby said, theoretically the field of broad fundamental geological studies—both field and laboratory—would be left largely to the federal government's geological survey of Canada.
>
> "Adequate funds for fundamental research in all branches of geology and geophysics should thus be made available to them for this purpose", Dr. Rickaby said.
>
> "However, because there is really no sharp dividing line between the scientific and the practical, it would be unwise to lay down specific regulations. Nevertheless, an understanding agreement will always be necessary between the different governmental surveys."

He goes on to talk about the work of the geological survey of Canada and the number of people employed and he said:

> Although the number sounds impressive when viewed in the light of the amount of field work still to be done it seems regrettably small.
>
> One large oil company and one base metal company operating in Canada employ 80 and 75 geologists, respectively, on a full-time basis, he said.
>
> The federal survey attempts to spread its operation uniformly across Canada, but now is obliged to spend much of its effort on field work in the Yukon and Northwest Territories as the only government geological agency. In Newfoundland and British Columbia, the survey has special obligations under the terms of confederation.
>
> Mr. Rickaby said that in some parts of Canada the private exploration and operating companies are gathering, collectively, more geological information than the government surveys.
>
> "Much of this information is naturally not available to the public," he said, "but in any scheme of national planning for co-ordinated geological studies the place and contribution of the private companies should be taken into consideration."

It seems to me that the gist of these remarks raises very serious questions about the operations of the surveys branch, both in mapping and geology. I would also like the minister to note something that I raised on the estimates of the Department of Northern Affairs and National Resources, namely the point raised by W. E. G. Brown, who is now with Spartan Air Services, who was a survey specialist with the Department of Northern Affairs and National Resources. His point was that he got out of the government service because of a lack of co-operation between the various agencies and the private interests. He went on in his statement before the Senate committee on land use to state that the whole survey problem in Canada is not being attacked—that is the way I interpret what he said—on a rational basis. We are far behind the Russians in our approach and there is overlapping, with no real co-ordination to prevent this and to direct us along the line.

These are not the kinds of criticisms that have great political weight in comparison, say, with a hassle over whether we have a Canadian economic outlook or not; but

they are so fundamental and important that I think we need further statements and explanations than we have had. Then I would like to see the case prepared and presented to the house. It will take some time, but it will give us an excellent picture of how this co-ordination is worked out and the planning stages of the future of how geological surveys and mapping surveys are going to move ahead and cover the entire problem, and how it relates to the number of employees that the department is planning to add. We would like to know about the workload upon those employees. I think this is one of the most important questions we face in all kinds of economic development in the country. If Dr. Rickaby's remarks, or Dr. Brown's remarks, have any substance at all, then there is an implicit criticism of the Department of Mines and Technical Surveys.

I would like to tell the minister that later on I hope to ask him some questions in connection with what his mines section is doing with regard to safety work in connection with uranium slugs and that sort of material, and just what co-relation is being carried out with the Department of National Health and Welfare and with other groups making studies throughout this world on the whole question of the effect of radiation and how the department in its meteorological studies is working on this particular aspect.

I also intend to ask him some questions in relation to scholarships and grants. I appreciate receiving from the deputy minister recently a report on the national advisory committee on research into geological sciences, but this report does not give any indication of the number of applications for research grants. The committee on scholarships and grants concludes, after a review of all the inadequacies of support for both undergraduate and graduate work and for post graduates, with this paragraph:

> The above sums on top of what will be the overburdened budgets of the universities raise a serious problem. Where is all this money to come from? If it is not found it will dangerously curtail the much-needed increase in key personnel required by the mineral industry.

At the back of this report we have some interesting statistics on the number of students and the number of degrees granted in various industries in relation to the subject fields of geology, mineralogy and metallurgy. The figures are very disappointing when you consider that only 124 degrees were granted in 1956. This raises the whole issue of the contribution the federal government, through this department, plans to make in this specific field, and whether it is planned to do anything, as the committee suggests, along the line of considering getting into the field of undergraduate work, and how this department in relation to this particular problem is working with the other departments to assist the universities in some way.

Those of us who have anything to do with university affairs feel that the students in the sciences and in the engineering subjects have much better opportunities for scholarships on the graduate level than in the arts subjects, even though we may feel that it may only indicate that arts are not moving and the sciences and engineering fields are rolling. When we come to that particular phase I have a number of questions I want to raise on the statistics, the number of people applying for grants, the number of students affected and the plans of the department in this regard.

One of the other points we raised last year is the question in relation to the Emergency Gold Mining Assistance Act and the inspections that are carried out. Last year the minister asked us to provide him with specific cases so that he could work on them. I have been trying to get specific cases, but I have to repeat I am in the state I was last year. There is nothing more than the ordinary gossip you get from the miners going around the mining communities, but with all due respect to the miners they are not experts in terms of the ore values existing in these various mines. Therefore I should like a statement from the minister this afternoon as to how often his inspectors visit these mines and just what procedures they follow in order to determine that the mines are not low-grading their properties in order to take advantage of this assistance. If some publicity could be given to the techniques that are used and if it could be generally recognized that they are adequate and that there is no low-grading going on I think you would create a much better relationship between the managements of the mines and some of the people in the areas where the mines are being operated.

Another point I should like to touch on which has not been referred to is the whole question of the publications of the department in relation to popular usage. As the minister and his deputy minister no doubt are aware, prospecting is becoming more and more a big company proposition. It is very interesting to look at the summary contained in a reference paper put out by the Department of External Affairs entitled "Iron Ore in Canada, 1957". This was prepared by W. Keith Buck of the Department of Mines and Technical Surveys and the indication throughout is that almost all discovery and exploration work is being carried on by very large organizations.

I think the minister must be aware that in most communities, especially in the Laurentian shield, there is a large number of what we might call small people who are anxious to get out and do better and more intensive prospecting. We have that situation in my riding. There is an active prospectors' association which is carrying on an adult education program. They are trying to improve their own standards. I have spent some time discussing with the members of the executive of this association what they might expect from the federal government in this regard. One of the main things they say is that the material available from the geological survey and the mines branch is excellent, as has been mentioned several times today, but how does the novitiate, let us say, in this particular field find out about it?

At the lakehead several large mining companies have their geological headquarters. Anyone who visits them will find that almost without exception they have practically a complete file of all geological survey and provincial mines branch material. They have it all arranged. They have men who know how to go into it. But the fact remains that the ordinary person operating with nothing more than the dominion government's annual catalogue or the consolidation issued by the department is not going to get very far in discovering what maps, memoires or reports he really wants to see.

I can give examples to the minister and deputy minister from my own area. There have been a number of reports on the Thunder bay region. The most valuable ones to the prospectors were those produced largely in the 1920's by a man by the name of Tanton. There was also a valuable reprint last year of the Thunder bay region which we appreciated. But there is no way that the ordinary prospector, not the big mining company, can go to the bulk of the geological survey material and find an adequate index. Why do you not have a consolidated listing of what you publish? Up to 1927 you had a very adequate index so that one can get right into old reports going back to the 1860's, but for all your most recent reports you do not have adequate indexing.

I know it is an expensive and difficult matter but if the department would do it in the same way as it did with its old indexes and as the provincial government used to do with the indexes to its bureau of mines reports you would open up much more information for the ordinary prospector than is available at the present time. As a matter of fact, I suggest to the minister that at the present time the publications of his department, especially the geological surveys, are so complicated in the various forms in which they have been issued and the publicity on them is so hit and miss as far as the average person is concerned that it is really only the experts in the field who can take advantage of them. That is fine. We expect that perhaps the most fruitful results from these publications will come from the larger organizations but it seems to me that the department is not doing enough to bring its publications, especially those of the past, and all they contain to the average prospector or person interested in mining. Whether it is too expensive a job or whether it is even worth considering I do not know, but I should like to have a statement from the minister on how the department looks at the problem. I suggest to him that at the present time there is too large a gap between the ordinary person interested in mining and prospecting and the publications of the department.

As I am sure the minister and the deputy minister are aware, even the old geological survey and bureau of mines reports do not become completely outdated. There is always valuable information in them. I know this is true from the fact that so many prospectors have made use of geological survey files of which I have been in charge. They keep coming in and they are willing to go back to reports in the 1870's and 1880's in order to get the lay of the land and certain tips as to what these early geologists saw in the area. Possibly I have overemphasized the point but I wanted to put it as clearly as possible because I think there is room for the department to do more.

There is another point I want to mention. I should like to know whether it would be possible to make arrangements with some of the private companies that are doing aeromagnetic surveys on a fairly large scale so that some of the maps produced could reach the hands of the ordinary subscriber, shall we say, across the country. I might give an example of how that could work. Largely as a result of aeromagnetic surveys a very large iron ore body has been marked out lying north of the Canadian National Railways line between Nakina and Hearst. Anaconda and several other companies are interested in it, especially Anaconda, and are doing some work. I have been up in the region and have talked with a number of the oldtimers. They tell me that they have been aware for many years of the popping up of these iron formations but that they were never considered important enough. Aerial surveys have now revealed the magnitude of these deposits and the only thing

that the small man can now do is to go into these various areas and perhaps pick up a few claims that are allowed to lapse by the big companies.

The big companies have the great advantage of being able to carry out these surveys on their own and they are also the first ones to take advantage of provincial and federal surveys. How can the department carry out some sort of program to bring the advantages of that type of survey to the ordinary prospector who lives in a particular region and whose prospecting role is becoming more and more minor than it has been in the past? I should like to leave that topic with the minister and I hope that he can give us some information on it later.

(Translation):

Mr. Godin: Mr. Chairman, I wish to address a few observations to the minister. As we do not yet have simultaneous interpretation, I will speak in French—which, incidentally, the minister understands very well.

We all appreciated the praiseworthy action of the Minister of Mines and Technical Surveys (Mr. Comtois) the other day when he sent hon. members a map of Canada, on which he had taken the trouble of showing the various members' constituencies. We in the opposition were particularly pleased that he believes this map will help members for quite some time in the future, for he had the markings made with red ink.

Mr. Chairman, I am very much interested in the Department of Mines and Technical Surveys, especially in the matter of grants to universities because my riding will soon have the privilege of having Canada's youngest university, the University of Sudbury which will very shortly be built in the riding of Nickel Belt. I wonder if the minister could tell me if this new university, and others, will receive grants for which provision is made in the estimates we are about to consider?

I mention this mainly because Sudbury university will be in northern Ontario, a mining area where geology necessarily will have more significance for those who seek outlets for their talents as executives in the mining industry. I would therefore greatly appreciate it if the minister would consider the University of Sudbury as being eligible for the annual grants shown in his department's estimates.

In addition, could the minister tell me the precise location of the universities receiving grants, the provinces where they are located, and whether the universities in the province of Quebec are covered by grants of the Department of Mines and Technical Surveys?

I am sure the Minister of Mines and Technical Surveys, because of his lively interest in geological developments in Canada, as referred to by previous speakers, will direct increasing attention to education in this field, and will doubtless find a way to increase the present grants.

(Text):

Mr. Comtois: I shall start by answering the hon. member for Villeneuve, Mr. Chairman. My hon. friend made some comments and suggestions for which I am very thankful. He is an engineer and he knows something about mines. I wish I knew as much as he does, and perhaps I would be a better minister. In any event, I shall certainly take advantage of his suggestions, and I hope they will prove to be of benefit to the department. My hon. friend mentioned the summary report of our activities. I think something could be done in that regard. I shall see if it is possible to go back to the former practice, so that the first report is produced in order to give all the information required by members or any other persons interested in the mineral industry.

The hon. member for Kootenay West, in his witty remarks, mentioned that opportunities should be given to students and undergraduates. We did something about that this year. We are preparing now our estimates for next year, and if the Minister of Finance follows the suggestions made by the hon. member for Villeneuve, no doubt our budget for next year will be increased and at that time we could appoint more students and undergraduates for the next summer.

The hon. member for Kootenay West also mentioned that more information should be given on surveys. Well, it would be quite an undertaking to remedy the omissions from the monuments already erected. However, I shall see if when any new monuments are erected more information can be given so that the public will know why these monuments have been established and the historical data connected with them.

In so far as geographical names are concerned, the hon. member for Kootenay West mentioned co-operation with the provinces. I might say there is already a very close relationship between the dominion government and the provinces. In fact, every province has its representative on the board. I do not know what could be done to improve the situation.

The hon. member also made reference to explosives. I might say that we are studying the whole situation with the Department of Justice with a view to improving the regulations.

The hon. member for Port Arthur made some suggestions also, for which I am thankful. He mentioned an article in the newspaper concerning Dr. Rickaby's statement. As a result of the comments that were made at the royal society meeting a committee of non-governmental geologists was named to look into the matter and make a general recommendation to both the federal and provincial geologists, so we are awaiting the report of this committee to see what can be done.

Mr. Fisher: Could the minister indicate just who these geologists are, how big the committee is and what are its terms of reference?

Mr. Comtois: We do not know.

Mr. Fisher: The committee, then, was an outgrowth of the geological section of the royal society of Canada, and it is going to make recommendations?

Mr. Comtois: The hon. member for Port Arthur also mentioned the question of inspection of mines. Unless it is proved to us that there is low grading or high grading in gold mines, we do not think it is our responsibility to investigate. This is something that has not been proven yet. As long as it is not proven, as long as we do not have any proof, we do not think it is our responsibility to investigate. I repeat that the matter of low grading and high grading is not the responsibility of my department.

Mr. Fisher: I wonder whether I could just ask the minister a question there. I know that high grading is not a responsibility of your department; it is a criminal offence under the law. I was using low grading in the sense that certain mines are receiving subsidies through the Emergency Gold Mining Assistance Act. It is quite obvious that if in their explorations they hit a very high grade deposit and if they mine that deposit the amount of subsidy they get will be smaller. It is quite possible for the mine, as the minister knows, to adjust its mill run in terms of value from the figures they have on the various bases. I insist that in every gold mining community which I have visited—I know it is so in such places as Beardmore and Geraldton in my own particular area and in the Timmins area I heard it from every side—there is this feeling that the mines are doing what the miners call low grading in order to get that assistance. This suggests, in other words, that these mines are milking the federal government for more assistance money than they really need in terms of their ore deposits. I know that the mines can come back and say that as far as any inspection is concerned they are maybe running a lower grade than usual but that it is just done in order to stretch out their reserves in line perhaps with their exploration program. I should like to know what standards of inspection you have to check in this particular regard.

Mr. Comtois: I must tell the hon. member that we have no proof of any practice of low grading. If we have such a report or if we hear about it I am ready to give orders to make an inspection and investigation. Up to the present time however, the proof has not been produced by the department.

Mr. Fisher: It will be a difficult job to carry out such inspections. But surely occasional checks would be worthwhile. For example, we have other legislation under which the government hands out subsidies to certain people in certain areas and there are checks upon it. From visiting out on the prairies recently I know that under the Prairie Farm Assistance Act there is a fairly close check made to see that no farmer is going to get away with anything crooked or that there is no skulduggery. There are inspectors posted throughout the areas. The various pools operate in a sense as inspectors.

I should not like to take from the minister's remarks that these subsidies are handed out without there ever being an inspection by experts of the mines branch and that statistics in relation to milling values and in relation to what they have in their ore reserves, are not just accepted out of hand. What I mean is this. I have a great deal of faith in certain businesses but I feel that that is leaving far too much temptation available to mine managers. I should like to know what are the inspection procedures. How often do your inspectors visit these mines? Do they just look at the books or do they actually go down and try to get some sort of picture of the mines operations in the light of its ore reserves?

Mr. Comtois: I might say to the hon. member that our inspectors not only look at the books but also go underground and they make their inspections according to the facts that are referred to them. If some good reasons are brought to my attention for thinking that something wrong is going on, I will see that the whole matter is studied and looked into very carefully. That is all I can say at the present time.

Mr. Fisher: I wish the minister would do so, because I have had several letters recently, especially from shareholders in some of the

mines who are quite disturbed over the activities of one particular group. I do not mind mentioning it in public. It is Little Long Lac mines which was a relatively small operation in comparison with McIntyre, Hollinger and so on. Recently as a result of various mergers and stock operations, Little Long Lac has become one of the biggest gold mines in Canada. The accusations that are sent to me are to the effect that Little Long Lac is going around doing two things: (1) Buying, through share purchases, control of mining companies that have good reserves built up, and (2) getting companies that are getting a proportionately large share of their income through the gold mining subsidies.

These people all complain to me that this is the kind of operation that should be investigated. I do not know how it could be investigated under anything to do with the federal government unless it was by some stretch of the imagination the combines investigation branch. But it is this kind of suspicion about the operations of this sort of integration that is taking place in the Canadian mining field, especially in gold, by which whole groups of mines are being brought under the control of what amounts to holding companies, that will continue and I think increase the suspicion in people's minds unless they have a fairly good assurance that the mines branch knows exactly what the situation is in these mines and that no one can pull the wool over their eyes and that the subsidy is a direct reflection of an honest operation and an honest reserve policy. I am still not completely satisfied with the minister's answer. I realize the difficulties in which he is involved. I should just like to tell him that I hope to return to this topic in the future and I hope to have more information that I myself have been able to pick up.

Mr. Comtois: In any event, I will see that our officers are very careful and are very attentive to the remarks that have been made. Of course, as the hon. member said, there is little we can do at the present time. However, I am grateful to him for having brought this matter to my attention. I will see what we can do. There are also many other points which have been raised.

Mr. Dumas: Mr. Chairman, if the minister would excuse me for interrupting him—

Mr. Comtois: Certainly.

Mr. Dumas: —there are a few remarks that I should like to make on the same subject. I can understand the remarks of the hon. member for Port Arthur but I am aware of this situation. I am always surprised when I hear mention in this place that the mines are low grading because in the past we have been complaining very much that gold mines were high grading, that they were taking the cream of a deposit in order to pay higher dividends. I am not surprised to hear the hon. member for Port Arthur say that he has letters from shareholders. Some of the shareholders of Little Long Lac, for instance, may not be satisfied that some of their operations are not paying dividends now and they may say that it is because they are low grading these mines. On that subject I will say this. If the Emergency Gold Mining Assistance Act has done nothing more than to extend the life of these mines, it will have done a great deal. In my own constituency in the past we had a spectacular and rich gold mine. This mine was mined out in a short period of time because, in my opinion, they were high grading the mine in order to pay big dividends every year.

Today the tendency is the other way and the work in the mines is planned. We are trying to conserve our ore as much as we can, but even with the subsidies, sometimes we cannot succeed in mining low grades. We have a good example in the Malartic gold fields where the grades were fairly high a few years ago, but because the price of gold has been going down every year and the cost of production has been increasing—the subsidy has certainly not been increased over the last three or four years, in fact it has decreased—they are today having to bypass some of these ore beds because the grade is too low. They would like to get at this ore but it is not possible. I feel sure we appreciate the fact that the mines are doing everything they can to take out all the ore possible, without of course making deficits, but unfortunately—and maybe some shareholders do not appreciate this fact—if the mines, for instance East Malartic, were to go ahead and mine out high grade ores which would bring large dividends for three or four years, these beds might be mined out in about ten years. However, the operations are now planned and we know that this mine in 25 years from now will probably still be in operation if the price of gold does not go down.

The minister perhaps should have mentioned that every gold mine receiving the subsidy from the department must file with the department plans showing its underground workings. It is quite easy for the engineers in the Department of Mines and Technical Surveys to check those plans. It is not that easy to bypass, let us say, an ore bed which is of high grade ore today and to go back to it later, because there is a question of refill underground and so forth. We know for a fact that some of the low-grade ore beds would not be mined later even if the price

of gold were higher. We would not be able to mine them because at this time we have to bypass them. If there is a tendency, therefore, to mine the lowest grade possible today, it is a good thing for the communities in the vicinity of those mines and it is a good thing for the industry. I do not think we should worry about this question of the mines attempting to mine as much of the ore as they have in the ground, even if they have to mine some low grade ore.

Mr. Fisher: I think some of the remarks just made by my hon. friend put my own comments a little bit out of context. The point I was trying to make was that in those mining communities which I know in Ontario there is a certain hostility which has been latent but which has bubbled to the surface between the men who work in the mines and the management of the mines. This may not be the case in Quebec but in Ontario there is a mutual suspicion existing between these two groups. I am sure the minister knows that in some of these mining communities the wages paid by the gold mines do not compare with those paid by the base metal mines and there is a certain bitterness on the part of the miners. They wonder if the government is giving subsidies to the mines why more is not coming to them, and they think perhaps one of the reasons is because the companies are using these moneys to pay large dividends. You can see how the suspicion grows amongst the miners that because the companies pocket a large part of these subsidies they do not get their share. There is much talk about the stopes which are cemented off in which there is supposed to be all kinds of high grade. The hon. member may laugh, but I would like him to go to Timmins and spend an evening in conversation with some of the miners there. They will tell him stories about the stopes in the McIntyre and Hollinger mines.

One of the points which the hon. member just made, as the minister knows, is something of which we are well aware in my riding. We inspected the operations of the McLeod Cockshutt mines and they have done a wonderful job in lowering production costs so that they might handle low grade ore. We hope they will be able to continue to do so.

I did not want my remark to be extended to cover cases of which I know where the mines operate on fairly low grade and to be understood to mean that because of these subsidies they should be shoved right out of the picture. I think it is simply a case of restoring the confidence of the mining communities with respect to the fact that the mines are getting a subsidy on a completely honest basis.

Mr. Comtois: With respect to the points raised by the hon. member for Port Arthur, I take it that he does not expect me to answer them all at this time. I can assure him that his suggestions will be considered and that I plan to discuss them with him personally at the first opportunity.

I see that the hon. member for Kootenay West has now returned to the chamber, and I am pleased to give him the information for which he asked with respect to what was going on in British Columbia this year so far as our geological surveys are concerned.

We have nine parties this summer in British Columbia, firstly, one in the Cry lake area and another in the northwestern part of the province, which latter party will endeavour to resolve the critical geological problems which arose following operation Stikine. Another one is in the Iskut river area and another in the Quesnel area; there is another in the Kettle river area and one in the Squamish area; another in the area of the east coast of Vancouver island and another commencing a detailed study of the granitic rocks of Passmore and Burton areas of southern British Columbia; and, lastly, a party in the Testa river area. In addition four parties are operating jointly in British Columbia and Alberta.

(Translation):

Mr. Chairman, I believe I should answer the hon. member for Laurier (Mr. Chevrier) in French. The hon. gentleman raised the same point this year as last year.

However, I will begin by answering the first point he has raised, regarding the name of the new lake formed by the construction of the St. Lawrence seaway. The hon. member asked me to give further consideration to the decision taken by the Canadian board on geographical names, and suggested that this new lake be called lake Long Sault to commemorate the historic exploits of Dollard and other heroes.

I must say that two little towns, Mille Roches and Moulinette have disappeared by reason of the flooding made necessary by the construction of the St. Lawrence seaway and that the new town which has replaced them has already been called Long Sault. I wonder why this new lake should be called Long Sault since the town which is situated next to it already bears that name.

In the province of Quebec we have the city of Three Rivers. This does not prevent the St. Lawrence river which passes by this

city to be called St. Lawrence and not Three Rivers. I do not think anybody has ever raised any objections in this respect.

Since the new town has already been called Long Sault, it does seem to me that the name suggested by the Canadian board on geographical names and also adopted by a similar body in the United States, that is lake St. Lawrence, should be agreeable to everybody and that no further objection should be raised to this name being given to the new lake.

In any event, I am not opposed to giving further consideration to the matter and to discussing it with my officials.

The hon. member for Laurier also dealt with a matter which is close to his heart, that is the limitation of the border between the provinces of Ontario and Quebec in lake St. Francis. This is a matter he did not succeed in settling when he was a member of the cabinet. Yet, I know he took many steps in this direction. As a matter of fact, I met him personally on several occasions, and we often spoke about settling that matter. I am still dealing with it, as I have the privilege of being on excellent terms not only with the premier of Ontario, but also with the premier of Quebec. I hope that if I succeed in solving the problem, my hon. friends opposite will not begrudge me my acquaintance with Mr. Duplessis, for it would be a boon for the hon. member for Laurier. In any case I can assure him that the matter is still under advisement, and that I may point it out from time to time to other provincial premiers, because it must be admitted that the problem is entirely under provincial jurisdiction. As we cannot impose any decision on the provinces, I believe that the best way to settle the situation is to mention it frequently, and to bring up the matter at every meeting with these gentlemen, so as to lead, perhaps, to an opportunity of starting a discussion in which many other problems may be solved. Also I hope to be able to say one day to the hon. member that the matter is settled at last. That would make me one up on him. At all events, it is essential to settle the matter, for everybody would benefit from such settlement.

Mr. Dumas: Mr. Chairman, I only want to say a few words on the matter of interprovincial borders. The Minister of Mines and Technical Surveys must admit that the hon. member for Laurier certainly did not want to imply that he was responsible for the fact that the boundaries were not delimited. Indeed, I think this situation is of interest to all Canadian citizens, and more particularly those of the provinces of Ontario and Quebec, and it would be desirable to define, once for all, this sector of the boundary line between the provinces of Ontario and Quebec.

I am quite familiar with the situation, for the great distinction befell me to establish the demarcation line between Quebec and Ontario, beginning at the centre of lake Timiskaming and going up to James bay. That was several years ago, and when I talked with the Quebec government surveyor he expressed his desire at the time for a very early settlement of this demarcation question between Quebec and Ontario, which we have been discussing this afternoon.

I think the member for Laurier merely wanted to make a timely suggestion to the Minister of Mines and Technical Surveys.

Mr. Godin: Mr. Chairman, I certainly lay no claim to any special significance in my remarks, but I would like to hear the comments of the Minister of Mines and Technical Surveys on the problem I mentioned to him. Indeed, I went so far as to make my remarks in French. Now, I wonder if the minister is prepared to answer my questions.

Mr. Comtois: Mr. Chairman, I apologize to the member for Nickel Belt (Mr. Godin). It was not for lack of good intentions that I did not answer his questions; unfortunately I was distracted by other matters. I do apologize.

In the matter of grants for geological research, I am happy to say that if Sudbury university submits its application to my department, it will be accepted on the same basis as those of other universities.

I can now supply the member with a list of the universities presently receiving grants from my department. In connection with the same question, there are universities in Quebec which obtain grants from the department. *(Text)*:

Item agreed to.

195. Mineral Resources Division—Administration, Operation and Maintenance, $230,700.

Mr. Dumas: On this item, Mr. Chairman, I am aware that this division is responsible for the publication of a large number of reports and publications. Although all of them are very interesting there is one in particular which was published last winter

and which must have entailed a great deal of work. I should like to mention, in particular, this publication which is called "Minerals, Canada and the World". This is an excellent publication and it is one about which I should like to say a word at the present time. I should like the minister to tell me whether this publication, which is a graphic presentation of the Canadian minerals industry in relation to the world minerals industry, has been distributed to high schools and universities. I think the deputy minister mentioned, either in the course of a committee meeting or earlier, that it had been distributed, and that the Canadian Metal Mining Association had been given a number of copies to distribute to its members. I should be very interested to find out whether this publication has been distributed to high schools and universities and, if it has not, whether it would be possible to distribute it at least to schools of mines and universities across the country.

Mr. Comtois: Some copies have been distributed to a few high schools, but our supply is almost exhausted. University libraries have some copies. I do not know how many are still in store, but the hon. member may have some suggestions to make as to how we could distribute the balance we have in hand. I do not think it is the intention to have larger numbers printed.

Mr. Dumas: Possibly if the minister has some copies left they could be distributed. I understand, of course, that in a year or two the publication will be out of date. Nevertheless, it is an excellent publication and those copies which are left could be sent to the schools of mines. We have a few schools of mines across the country and I am thinking particularly of the one in Haileybury. The schools could in turn distribute them to their students. I think that in the next few years we should revise this publication and bring it up to date.

Mr. Comtois: I will see what we can do about that.

Item agreed to.

Surveys and Mapping Branch—

196. Surveys and mapping branch administration, $79,110.

Mr. Fisher: I noticed that when the committee was considering the question of aerial maps there were some suggestions made that this service, and the availability of it, and the type of things that could be got from the aerial photographs, would have a much wider response in the country if more was known about it. I just wondered whether the department had taken this point into consideration; whether they had ever considered publishing, for example, a pocket guide to the aerial photographs available from this particular branch. I just wondered whether the requests the department gets for aerial photographs indicate that there is a fairly wide recognition of this service across the country. Can people who have a summer camp in a particular area get an aerial photograph covering that particular region?

Mr. Comtois: We have an aerial photo library and the prints are all there. As far as a pocket map is concerned, I do not think it would be very practical because in six months or a year it would be outmoded, out of date.

Mr. Fisher: The difficulty with most people who are interested in this information and are not professionals in any sense is that they bungle because they do not exactly know how to inquire for some things, how to define exactly the picture that they want. What sort of arrangements has the minister's department so that their questions or requests have some sort of pertinence or relevance? It is just a question of public relations in essence and the possibility of extending this service. Many people do not know about it, or if they do know about it they have only a vague idea of it.

Mr. Comtois: I will take note of the suggestion made by the hon. member.

Mr. Chambers: I would like to say one word. The minister might take into consideration maps prepared by the department and make them more easily available to the public. They are excellent maps but I know in the city of Montreal there is only one store in which you can get them. The majority of people do not know where they can get them.

Item agreed to.

Geodetic survey of Canada—

197. Administration, operation and maintenance, $690,761.

Mr. Fisher: I have been told by an expert in the field that at the present time Canada is not producing annually a single expert who can be called a geodesist in the sense that the United States is producing them, and I understand the United States is producing only a handful; whereas the Russians are producing them in several hundreds. I wondered whether the branch was aware of this problem and whether there is any kind of in-training scheme within the department?

Mr. Comtois: In our department we have an in-training school or scheme and we have a certain examination which applicants can pass and qualify for the position.

Mr. Fisher: There is no shortage of personnel?

Mr. Comtois: They are really not easy to get; we have to train them.

Mr. Fisher: I understand that there is more formal education of such people carried on in Russia and in the United States. I just wondered whether any consideration had been given to encourage universities to set up certain training, or is it practical?

Mr. Comtois: It has been studied recently. We have discussed these matters many times during the current year and we are discussing the matter with some of the universities at the present time.

Mr. Dumas: I have a very simple question on this item. I notice that during the fiscal year 1956-57 we had 16 parties in the field, seven on triangulation, one on shoran, four on precise levelling and four on astronomy and base line. Can the minister tell how many field parties we have this year, and can he tells us if we have any on shoran?

Mr. Comtois: I can answer the hon. member. This summer we have 170 university students who will assist permanent departmental officials in a total of 83 field parties, who will conduct topographical, geodetic and hydrographic surveys.

Mr. Dumas: I am most interested in geodetics. How many are on the geodetic survey, triangulation and so on?

Mr. Comtois: Fourteen.

Mr. Dumas: Are there any on shoran?

Mr. Comtois: No.

Mr. Dumas: There are none because I understand most of the mainland in the north has been covered by shoran.

Mr. Comtois: And the islands.

Mr. Dumas: And the islands also?

Mr. Comtois: Yes.

Item agreed to.

Topographical Surveys, including expenses of the Canadian Board on Geographical Names—

199. Administration, Operation and Maintenance, $1,829,769.

Mr. Dumas: I understand that during the fiscal year 1956-57 we issued 280 topographical maps. Some of them were conversions and reprints. Can the minister tell how many were issued in 1957-58 and how many were reprints and conversions, if those figures are available?

Mr. Comtois: I cannot tell right away but I will get the information and tell the hon. member later on.

Mr. Dumas: How many topographical survey field parties are in the field this summer?

Mr. Comtois: Thirty.

Item agreed to.

200. Construction or acquisition of equipment, $100,000.

Mr. Dumas: Can the minister tell how many hydrographical ships the department owns at the present time and how many do we rent every summer, or how many ships are rented this summer?

Mr. Comtois: This year we have seven ships and three chartered ships.

Mr. Dumas: Is the *Baffin* the newest ship we have?

Mr. Comtois: Yes.

Mr. Dumas: Is the department planning to build more ships?

Mr. Comtois: We are planning.

Mr. Dumas: I hope the necessary money will be voted so that the department can build more ships because this service is really doing a good job and more has to be done. Perhaps some of the ships that have been used for many years could be replaced and we could build some new ships to replace those which are outmoded or not very useful now.

Mr. Comtois: Some of the ships cannot be repaired and it is my intention to discuss the matter with the officials of my department who will recommend the planning, the acquisition or the building of new ships in the coming years.

Mr. Fisher: I just wonder whether the minister could bring us up to date on the cost of getting the *Baffin* back into service?

I would also be interested in knowing whether there have been any changes in personnel on the *Baffin* as a result of the accident. I should also like to know the steps that have been taken to ensure that control of the ship is such that we do not have a repetition of that accident.

Mr. Comtois: As a round figure, the cost of repairing the *Baffin* and putting her into service again is about half a million dollars.

Mr. Fisher: How much of that is for actual repairs to the ship and how much for damaged equipment which is actually used in carrying out the *Baffin's* purpose?

Mr. Comtois: This amount accounts only for repairs and salvage.

Mr. Fisher: Have there been any changes in the personnel as a result of the accident or are the same people carrying out the work?

Mr. Comtois: I have a note that certain personnel changes have been made as well as certain changes to improve communications between the chart room and the navigating deck. Additional instruments have also been installed in both the chart room and the navigating deck to assist in observance and to detect any dangerous areas or obstacles.

Mr. Fisher: I do not know whether I should ask it on this item or the next one, but what is the practice with regard to hiring the ordinary personnel for such survey ships? Where does the department get the people? Does it submit a request to the national employment service or is there some other list that is used in order to fill out the crews on these boats?

Mr. Comtois: The national employment service, the newspapers and the best means a good minister can find.

Item agreed to.

203. Legal surveys and aeronautical charts, including a grant of $500 to the Canadian institute of surveying and photogrammetry, $754,674.

Mr. Dumas: I see that this item includes a grant of $500 to the Canadian institute of surveying and photogrammetry. This institute has done a lot to promote surveying and photogrammetry. In view of the fact that the grant is now very small and also in view of the fact that in the committee the minister said he was very sympathetic to the idea of doubling or tripling the grant, I should like to ask him if he has given more thought to the matter and if we can expect that next year the grant will be increased.

Mr. Comtois: This matter will be studied in the next month or two.

Item agreed to.

204. Provincial and territorial boundary surveys, $54,200.

Mr. Dumas: I understand that during 1956-57 part of the British Columbia-Yukon-Northwest Territories boundary was resurveyed for a distance of 70 miles. Is any work being conducted this year? At the same time possibly the minister can tell me what progress has been made on the Saskatchewan-Northwest Territories boundary and when the department intends to start on the Manitoba-Northwest Territories boundary.

Mr. Comtois: This year we are working on the British Columbia-Yukon-Northwest Territories boundary. The expenditure for that survey is $29,900. There is also an amount of $19,000 for survey work on the Manitoba-Northwest Territories boundary and an item of $17,000 for survey work on the Saskatchewan-Northwest Territories boundary.

Mr. Dumas: Can the minister tell me the average cost per mile of these surveys?

Mr. Comtois: No. It depends on the circumstances, the weather, the site, the obstacles and so forth.

Mr. Dumas: I presume that when a seasonal job is finished the department is eventually in a position to know what the cost per mile is.

Mr. Comtois: Yes. I can obtain that information for the hon. member.

Item agreed to.

Geological survey of Canada

Geological surveys—

207. Administration, operation and maintenance, including the expenses of the national advisory committee on research in the geological sciences, an amount of $1,500 for Canada's share of the cost of the geological liaison office, British commonwealth scientific conference, London, England, and an amount of $40,000 for grants in aid of geological research in Canadian universities, $2,695,905.

Mr. Dumas: The hon. member for Nickel Belt asked the minister a question in French and the minister answered but I think he could have been more precise. I do not wish to ask for the names of all the universities in Canada which are receiving grants in aid of geological research. However, in Quebec we do not have very many universities and I think the minister should be able to tell us the names of the universities in that province receiving grants, whether the grants are given directly to the universities and whether they have always been accepted by them.

Mr. Comtois: I can give some information. Last year McGill University received a grant. This year McGill University and Ecole Polytechnique are receiving grants.

Mr. Dumas: That is the University of Montreal.

Mr. Comtois: Yes.

Mr. Dumas: Have there been any grants to Laval University in the past or is there any at present?

Mr. Comtois: In 1952.

Mr. Dumas: Only in 1952?

Mr. Comtois: For the year 1952-53, $2,000.

Mr. Dumas: I suppose these grants are paid directly to the universities concerned?

Mr. Comtois: Through the registrar of the university.

Mr. Dumas: Through the registrar of each university.

Mr. Fisher: In connection with the matter raised by the member preceding me, can the minister give us some indication of the liaison that the department has with the universities with respect to the possibilities of extending these grants? I gathered from the paper supplied me by the deputy minister that one of the problems in extending the grants is that there is a shortage of facilities and staff. The suggestion is made several times in that report that if some of this money went towards a certain kind of teaching fellowship and the emphasis was not too much on research but on teaching it would be a great aid to some of these departments.

One of the other points that is made is that quite often these amounts are given in aid of research to schools that are short of laboratory equipment facilities. It seems that $40,000 is a very small sum for supplying equipment to some of these geological departments. Is the department considering doing more in that particular line in order that more benefit will be derived from these particular grants?

Mr. Comtois: We have $10,000 more in the supplementary estimates for this year, and that makes $50,000. We are contemplating an increase in that item in next year's estimates which are already under preparation.

Mr. Fisher: Last year the minister was kind enough to give us the figures on the turnover in geologists in the geological survey. The figures were rather grim, and I wondered if he could give us the figures for this year on the number of new people taken on by the geological survey and the number of geologists who have left the department? I am speaking of permanent appointments rather than those doing part-time work during the summer.

Mr. Comtois: We cannot give that information offhand, but we can prepare the information and send it to the hon. member.

Mr. Fisher: In so far as the representations of the geological association of Canada are concerned, the minister made a point several times, both in the house and in the committee, of the fact that there was an extension of the field services in order to take care of postgraduate and senior undergraduate students. Now, this promises to be a continuing problem. Are there any plans beyond this year's estimates which indicate there is going to be a further step-up or a sort of long term program to take care of the point indicated here.

I think it was the hon. member for Villeneuve who made the point that in a buoyant economy, with more opportunities for geologists, we will once again have difficulty in hiring geologists for our surveys. When the economy is not so buoyant, it will not be so difficult to hire geologists. Is the department planning from a sort of pessimistic point of view to take care of more and more students? If that is not done, Mr. Chairman, I suggest there will be a squeezing off of the supply at the undergraduate level. Students will hesitate to go into these fields.

Mr. Comtois: We are actually attempting to find out what we can do. We are planning to increase this amount for next year's estimates, 1959-60, but we do not know by how much as yet. The problem has to be discussed between our offices and many other persons. It is not easy to say right now that our program will be a 5-year program or a 10-year program; we must proceed by degrees.

Mr. Fisher: As a final point, I should like to make this suggestion: I feel, and I am sure the minister feels and some of the people in this geological survey feel that they have one of the least noted departments in government, despite its great importance and the tremendous contribution it has made in the past. I should like to suggest to the department that they make approaches to the Canadian Broadcasting Corporation and its television service in order to have presented sometime during the coming winter a couple of fairly long programs which would cover this geological survey work. This work is tied in with our whole historical development and has a certain romance about it, right from the days of Logan and the early pioneers right up to the present time. The very early material could be presented in a sort of photomontage form and that would tie in with some of the documentary material which would bring the program up to the present. The program could develop the tremendous contribution that this survey has made, for example, to the oil development in the prairies or the gold developments in fields such as Red Lake and the whole development of the Noranda area.

I think this would make a wonderful television program and would be a great means of advertising this oft-forgotten part of the government service. It might be a means of stimulating a greater interest, especially amongst the young people, in choosing geology and associated fields of endeavour as a

career. I should like the minister to consider this suggestion and see whether he could take an aggressive part in going after something like that, to sell the C.B.C. on the idea that here is one of the best possible television subjects they could get.

Item agreed to.

Mines branch (including the former mineral resources investigation)—

209. Administration, operation and maintenance, $3,266,265.

Mr. Dumas: I wonder if the minister could tell the committee whether or not some research has been conducted on the industrial uses of gold. This research may lead to great benefits to our gold mining operators if an intensive program were undertaken to find some industrial uses for gold. I can think of one and that is gold which is used as gloss for glare reduction. We also use gold as a pigment in paints and in lining of atomic reactor cores. They probably use small quantities. I am wondering if the results would not justify extensive research into this question, and whether or not the department might initiate such a program, perhaps jointly with industry. In this way, perhaps we could find more industrial uses for gold than there are at the present time. There are many uses for platinum and platinum is a rare metal. I am wondering if we should not pay more attention to this research on industrial uses for gold.

Mr. Comtois: We are exploring, with the Canadian metal mining association, possible research projects to be undertaken in connection with industrial uses of gold. We are actually doing that now.

Mr. Fisher: A very important conference was held last week in the northern United States in connection with the effects of radiation upon human beings, in all its aspects, both industrial and defence. I wondered how many representatives the department sent to this particular conference, and whether or not they are preparing a report for the minister.

Mr. Comtois: I am informed that we had no representatives there. Perhaps there were some representatives from the research council or from some other department.

Mr. Fisher: I should like to suggest to the minister that it is regrettable there was not a representative from his department because, from reading some of the proceedings, I gather that the whole question of the industrial uses of materials which give off radiation was gone into in all their aspects. I am sure his department must be involved through this particular branch in connection with the whole field of uranium production and the metallurgical aspects of uranium after it moves from the ore stage to something that could be used for sludge for charging these various reactors that we are going to have. I just wondered what research is going on within the department on the various kinds of shielding that may be necessary in the milling and production of uranium ores. This matter, of course, ties in with the work that must be done by the Department of National Health and Welfare and probably by the research council and by Atomic Energy of Canada Limited. But I should like to suggest that surely there is some responsibility upon this particular branch. I should like to know just in what direction this work is going.

Mr. Comtois: I think this matter would come under the estimates of the Department of National Health and Welfare and the hon. member might discuss the matter at that time.

Mr. Fisher: It is not a question of discussing it at that time or any other time, Mr. Chairman. The point is this. Is it not a fact that the mines branch is interested in uranium ores?

Mr. Comtois: Yes; it is a fact.

Mr. Fisher: Arising out of that and your research, you will be able to advise people who are working on these ores and on the uranium itself in the various metal processing stages, if you call it that, as to safety measures and the various controls that are necessary. I know you can say that it may be a Department of Labour problem or that it may be a problem for the unions that are involved. But is there any concern in your particular branch over this point, this handling of materials that have radiation in them? I gather from what I have been able to read that there is research going on in other countries and that other countries in the mining field are taking some responsibility in this regard.

Mr. Rynard: I wonder, Mr. Chairman, whether I could say a word on this matter. A great deal of this work must be done on animals. I do not think very much research could be done in any of these uranium plants. It must be done in laboratories where the experiments are properly conducted and where they can be screened and the amount of radiation picked up. That is being done. Not so very long ago a conference was held down at Johns Hopkins University on that very point. I think that work is going ahead. I wonder whether that answers the question of the hon. member who has just spoken. I do not believe it can ever be carried on

at any mine because they have not the proper facilities. Then the outside radiation would all have to be shielded because there is radiation in the atmosphere. There is radiation even in this room.

Mr. Fisher: I am grateful to the hon. member for giving me that information. But as I understand it the mines branch is interested in basic research in metallurgy and in various milling work. One of the greatest problems in connection with anything having to do with uranium is that there is radiation danger. It is much more serious there than it is in various other fields. What I mean is that it has genetical significance. It also has significance in connection with the blood and nervous systems. We know that research from the medical point of view has to be carried out by medical men. But surely the matter of shielding of the various devices that will be necessary for the protection of the people working with that metal must come to a certain extent under this particular branch, and there must be some co-operation with the people who are carrying on the biochemical and various other kinds of research on radiation effects. What I wanted to be assured of was that the mines branch was conscious of this problem and was interested in it.

Mr. Rynard: Mr. Chairman, I wonder if that matter does not come under provincial regulation. I furthermore think that those suggestions have to come after this experimental work has been carried out in order to be of any value to the mines at all. That is my concept from a reading of the material that has come to hand on experiments made in the research laboratories of the United States particularly, where they are quite extensive.

Mr. Fisher: Some of the states in the United States have gone to the trouble of banning the use of a particular little gadget used to X-ray feet in shoe stores. That fact indicates that there is a growing concern about this matter. I also know that amongst the people who mine, mill and handle uranium there is concern. I should just like to know that somewhere in Canada somebody is conscious of this problem. Since it falls to a certain extent upon any organization dealing in basic research in mining metallurgy, this is something for the minister to consider. I should hate to think that we had to wait until all the biological research was in —and I doubt if all the answers will ever be in in that particular field—before we get in our industrial plants some shielding of various kinds that is adequate. I should just like to let the matter drop with an assurance from the minister that the mines branch is interested or will take an interest in this particular field to see whether safety measures and advice in handling these particular metals are being worked on.

Mr. Comtois: We will take that matter into consideration.

Item agreed to.

Geographical Branch—

211. Geographical branch—administration, operation and maintenance, including a grant of $250 to the Canadian Association of Geographers and a grant of $3,500 to the University of British Columbia in aid of research in foreign geography, $315,728.

Mr. Dumas: I am sure that all members were pleased to hear that the English edition of the Atlas of Canada will be ready for distribution in December. We were told in the committee that the purchase price of this atlas will be $25. This is certainly a very moderate price. In the committee we had an opportunity to see this very extensive book. I understand that the department has spent a good deal of time in preparing the atlas. The work was started in 1952, I believe, and it is now on the way to distribution. The minister also mentioned that the French edition will be available next year. I understand that in connection with a project like that it is impossible to have both the English and the French editions available at the same time. People will be greatly surprised to see this new atlas. It is really something of which the Department of Mines and Technical Surveys may be justly proud. Of course we are always anxious to have the French edition available. The minister said that all possible speed will be made so that this French edition may be ready for distribution to the public. I wonder whether the price will be the same as that of the English edition?

Mr. Comtois: I think so.

Mr. Dumas: The minister is not sure?

Mr. Comtois: I am quite sure.

Mr. Dumas: Thank you.

Mr. Herridge: I rise once again to bring to the attention of the house under this item the excellent work being undertaken by the royal Canadian geographical society and to urge members of this house to join and to get their friends to join this society for two reasons, namely the excellent work it is doing in spreading a knowledge of the geography of Canada and, second, for their own information having regard to the responsibilities they have in this house.

Mr. Fisher: In connection with the atlas I just wanted to ask this question. The estimated price is $25. I gather that this price

bears no relation to the actual cost. I gathered that when we were in the committee. I should like to know what is the estimated cost per issue of this particular atlas.

Mr. Comtois: The cost of the materials for the atlas is about $25.

Mr. Fisher: Here is the point I want to make in connection with that matter.

Mr. Comtois: Or slightly more.

Mr. Fisher: There are a number of people entitled to free copies of this particular atlas. Each library which has full selective depository privileges will, unless something unusual is introduced, be able to put in a claim. I believe this amounts to at least 400 or 500 copies. If all libraries make this claim, and I know certainly that my library will put in a claim for a free copy, there are about 500 free copies plus those copies required for members and senators, each at $25 per copy. With respect to the schools, especially the high schools, which may want to use this book, are they going to be burdened with part of the charges for what we freeloaders are getting? If we are very substantially subsidizing this thing would the minister consider setting a lower price in order to get a wider circulation?

The second thing I would really like to know is what the printing run is going to be on this book and whether there will be quite an over-printing in relation to the anticipated demand.

Mr. Comtois: Mr. Chairman, I must point out that this atlas is not considered as an ordinary distribution. I do not think there will be any free distribution.

Mr. Fisher: If the minister will check the regulations upon which the daily check list is based he will find that there are all sorts of institutions in Canada which have full depository rights. I understand that the only documents they do not get are documents considered as secret and confidential. This would not come into that particular category, so how is the minister going to deny them this particular book?

Mr. Comtois: What the member says is partly true, but the minister in charge has full authority to decide upon what distribution should be considered as free.

Mr. Fisher: In this particular case is the minister going to cut off the free distribution of this book?

Mr. Comtois: That is actually what we intend to do.

Mr. Fisher: I would like to suggest that that will be a blow to a lot of institutions in this country at both the university and lower levels. Such institutions find the right to pick up such publications extremely valuable and it is really the universities which will provide the best use of this atlas rather than sales through private means. Such institutions as schools are going to hesitate to order this book because of its price and I wonder if consideration could not be given to the whole problem with respect to price in this particular case.

We have never really had an excellent atlas in this country and this promises to be the answer. I still insist that from what I know of the distribution and purchase of books, as a librarian, that $25 will be a very large barrier in the way of wide distribution. I would welcome the freeloaders being cut off if the price could be brought down to something in the neighbourhood of $15 or $16. This, I think, would be much more within the grasp of the people. I do not want it to be suggested that I do not welcome this atlas. I think it will provide the best reference sources and the most thorough coverage we have in Canada but it is a fairly important matter and I would like to know how big a printing the minister is planning in respect of this work.

Mr. Comtois: Five thousand for the first edition.

Mr. Fisher: And is it planned to follow the edition and to correct any mistakes which may be noted by revised editions and more up to date editions? I am thinking particularly of 1962 and the new maps which will then be ready. Will there be a redistribution of new issues and is the minister prepared to have new maps inserted for follow-up purposes?

Mr. Comtois: Yes. Each sheet can be checked and changes made on every new issue prepared.

Item agreed to.

Mr. Herridge: I would like to ask one question because owing to other responsibilities I had to leave the chamber for half an hour. Is it possible to discuss the question of standard daylight saving time, as a result of an agreement between the provinces for the convenience of the Canadian people?

Mr. Comtois: I do not think this is a matter for which I alone am responsible. I will discuss the matter with my colleagues or raise the question at a cabinet meeting, but I do not feel I can take responsibility for it at this time.

Mr. Herridge: Would the minister bring the matter to the attention of his colleagues

to see if something can be done, because I have received numbers of suggestions that it should be considered.

Mr. Comtois: I certainly will, with pleasure. May I ask the Chairman to pass items 575, 576 and 577 of the supplementary estimates before we proceed to item 217.

The Chairman: Is it the pleasure of the house that we proceed in accordance with the request of the minister?

Some hon. Members: Agreed.

Dominion Coal Board—

217. Administration and investigations of the dominion coal board, $120,395.

Mr. Comtois: Mr. Chairman, since the early stages of confederation, the coal industry in Canada has always been a matter of concern to the government of the time, so much so that I sincerely feel it is free of any and all political interests. From time to time various bodies have been set up by both major parties to examine the Canadian coal situation and to establish policies on subsidies where and when needed. Many forecasts and outlines have been published and, for the benefit of some members, I have no hesitation in referring to the outline of the trade as presented by my predecessor in 1955 and recorded in *Hansard* on Monday, July 5 of that year, wherein the picture of the future was presented. Because of the increased interest in Canadian coal such bodies as mentioned above have invariably concluded that financial assistance should be provided by parliament to promote the movement of coal from the mines of eastern and western Canada to the markets of Ontario and Quebec, both as a measure of self-sufficiency and for a more equitable financial treatment.

After a period of trial and investigation as to cost, a policy was established whereby the government would assist towards the cost of transporting Canadian coal. This would permit the consumer in specific areas in central Canada to purchase coal at the same price as he would have to pay for imported coal. It should be noted however, that as these conditions changed so did the rates of assistance so that the widest area within reasonable limits could be provided with the Canadian product. However, in two cases, assistance has already been provided outside the areas of competition, but only where there was assurance of substantial business.

The Canadian product is not subsidized to sell for less than other coals, nor is it subsidized as against any other form of energy. The assistance granted only permits the consumer in central Canada to choose between Canadian and imported coal at the same price level. It became apparent earlier this spring that the demand for coal during the year could be expected to decline because of continuing dieselization of railways, the increasing competition from other fuels, the comparatively mild winter and the increasing amount of secondary hydroelectric power from high water conditions, plus new hydro plants.

Faced with these conditions, the competitive area was widened, potential market areas received an increase of the maximum payments set out in orders, and the existing preference in favour of Canadian coal was doubled to 20 per cent where purchases by government departments were concerned. This resulted in a substantial expansion for Canadian coal in Ontario outlets.

In spite of this assistance, Canadian coal production in the first six months of this year was 714,000 tons or 11 per cent below that of last year, and imports of coal during the same period were down by 4,731,000 tons or 51 per cent, clearly showing a great reduction due to the causes noted earlier. The question, therefore, is how much more can be justifiably provided to benefit this one particular industry and to protect it fully against general changes in the national economy. In the case of Nova Scotia coal the maximum subvention provided is $5.25 per ton plus a further protection of 50 cents duty per ton on imported competitive coal or a total of $5.75 to move one ton to the present limit of the subvention area. In 1957, to provide one day's work per man meant the movement of 2.6 tons at a cost of $5.75 per ton or a total of $14.95. This is the present limit only, and further extension to provide more employment would mean a higher cost per day's work provided.

Turning to western Canada, the present maximum assistance is $4 per ton with the same duty of 50 cents on imported coal or $4.50 in total cost of assistance or again a cost of $18 per man for his output of four tons. To find any new outlet for western coal, would mean moving the coal to Ontario at a subvention of about $9 per ton or more, bringing the cost per man per day to $36. New outlets for reasonable tonnage are being investigated but this demands both time and care if the future trade is to be built up on a firm and lasting basis. Keeping the above in mind, the report of the royal commission on coal concluded that there must be some limit to the assistance provided and the subvention should be in relation to the cost of imported coal. Though we agree, it is the feeling of this government that present

conditions have justified assistance at rates somewhat higher than those contemplated by the commission.

Since Sir John A. Macdonald provided the first measure of assistance in 1879, the Conservative party and the Liberal party have both maintained and extended the policy of assistance to our Canadian mines, and I can safely affirm that this assistance to the basic industry is a measure that will receive our continuing support. The present picture is not a pretty one and the causes of the industry's deterioration are not easily set aside by any government action since they are the natural interaction of developing forces. Free competition could be replaced by a policy of control and dictation and there might be some improvement, but even then, who can guarantee that the prospective dictator would not use his authority to favour gas or oil?

I have tried to show that the subvention policy as applied by this government as well as by our predecessors, has been of assistance to the industry. The amount of money the committee is being asked to vote, however, may not be sufficient to maintain the present scale of assistance, since there have been changes in the economics of the industry in the last few months.

May I say that the administration of government assistance has been in the hands of the dominion coal board which has also the even more important duty of maintaining a constant study of the coal situation and of recommending to the government such measures as, in their opinion, would be of benefit to the industry. The administration vote presently before you is, I submit, a modest sum to pay for the services and work done by this board.

Mr. Dumas: Mr. Chairman, my remarks will be very brief because we had an opportunity in the committee to review extensively the activities of the dominion coal board. We had a report presented and read by the chairman—a very enlightening report—and we were able to question the officers of the department, because the board is considered as a department.

I wish at this time to congratulate the officers and the staff of the coal board for the excellent job they have done since the board was organized and, as the minister, stated I think the board has been very useful not only to the industry itself but to all those who depend on this industry.

Unfortunately, at the present time the prospects of the coal industry are not so bright. The prospect in the future may be brighter, that is, let us say, in 10, 15 or 20 years, but in the meantime, bearing in mind that we shall need this coal in the future, we have to try to keep the mines we now have in operation. I understand that in western Canada many mines have closed in the past few years, but this is due mainly to the fact that the railways have discontinued using coal. The dieselization program has had a very adverse effect on the sales of coal in that part of the country. In the maritimes, the situation is a little different, because most of the coal finds markets in the province of Quebec and in eastern Ontario. Of course, probably 50 per cent of the coal produced is used in the maritime provinces themselves.

There is a chance that the coal industry may come through these difficult years, particularly if we can increase the consumption of coal in the maritime provinces themselves, and I am thinking now of the thermal electric power plants. I was pleased to hear the minister once again virtually guarantee that coal will be used in the thermal plant at Saint John, and we certainly hope that the government will insist on this. We do not want to hear next year that oil is being used in this plant at Saint John instead of coal, because it is recognized that oil and gas are the biggest competitors to coal. This competition from oil and gas is one of the problems which the industry faces today. I read a very interesting article in the *Financial Post* which appeared on August 2, 1958. When the minister of mines of Nova Scotia appeared before the Borden energy commission he had a few interesting remarks to make. He said:

> Unless the province's coal industry—

And he was talking about Nova Scotia.

> —can be maintained in the next 10 years either by government assistance or legislation, the industry will not be able to take its place in the supply of energy by 1980.

In 1980 the demand for coal may be much greater, and I understand the idea now is to try to keep our coal mines in operation. I hope this government will do its best to help the coal mines because we of the Liberal party are proud of what our government did to help the coal mines, not only in the maritimes but also in the west. The minister of mines of Nova Scotia also, according to this article:

> Suggested some form of assistance to submarine mines to maintain coal in a competitive position with natural gas.
>
> Urged sufficient freight subventions to make coal competitive with imported residual oils. This includes residual oils made from imported crudes.

The minister of mines of Nova Scotia recommended that the dominion coal board should maintain its entity and that the board should not be merged with any other organization that this government may think

of organizing in the future with regard to energy. We were not told that in the committee but we were given to understand that even if this government organizes a board to look after energy in this country, it is important that we keep our dominion coal board. I insist on that. I think that all members, not only members from the maritime provinces but from the west, should insist on this, even if the production of coal is low in that part of the country. Later on we hope that thermal electric plants in the west will use more coal, so there may be a revival of the industry in that part of the country. Those members who are interested in the coal mining industry should insist that if ever a board is formed to take over the control of energy in this country the dominion coal board should not be touched but left apart so that it can continue to render the service to the coal industry of this country that it has rendered in the past.

Mr. Robichaud: I do not want to delay the committee because it is six o'clock, but in the course of his remarks I understood the minister to say in quoting from the Gordon report that there should be a limit to government assistance to the industry. In saying this was the minister also expressing government policy? Is it the understanding of the present government that there should be some limit to the assistance given to the industry?

Mr. Comtois: I did not quote the Gordon report.

Mr. Robichaud: Does the minister agree that there should be some limit to the assistance given, or has he in mind further assistance to the industry?

Mr. Comtois: Well, in the past year we have demonstrated on several occasions that, according to the circumstances, assistance could be and should be increased.

Item agreed to.

219. To provide for subventions in respect of eastern coal under agreements entered into, or to be entered into, pursuant to the Atlantic Provinces Power Development Act, $1,700,000.

Mr. Robichaud: I notice in the 1957-58 estimates there was an item of $250,000. What portion of this estimate has been paid out or spent in the past year?

Mr. Comtois: None has been paid yet because the provincial claims have not been received.

Mr. Robichaud: What about the $1,700,000 for 1958-59? Do I understand also that none of this money has been paid out?

Mr. Comtois: That is right.

Item agreed to.

The Chairman: This completes the estimates of the Department of Mines and Technical Surveys. Shall we call it six o'clock? The next items to be studied are the estimates of the Department of Fisheries, but we have only about two minutes ahead of us.

Some hon. Members: Six o'clock.

Resolutions adopted in committee of supply this day reported and concurred in.

BUSINESS OF THE HOUSE

Mr. Chevrier: Mr. Speaker, may I inquire what the business is for Thursday and perhaps the minister might tell me what it is for Friday and Saturday as well.

Mr. Green: Mr. Speaker, tomorrow we commence with the estimates of the federal district commission and the privy council; then those of the Department of Fisheries, followed by the Department of National Health and Welfare, the Department of Citizenship and Immigration and the Department of National Revenue. I am not sure about Friday, but hon. members should be prepared to take transport and finance in addition to the ones I have mentioned.

Mr. Chevrier: If that be the case, has the government made up its mind as to what legislation will be dealt with on Monday?

Mr. Green: No, I cannot give the order.

At six o'clock the house adjourned, without question put, pursuant to the order of the house passed on August 4.

ANSWERS TO QUESTIONS

The following answers, deposited with the Clerk of the house, are printed in the official report of debates pursuant to standing order 39:

RURAL MAIL TENDERS, GLOUCESTER COUNTY, N.B.

Question No. 120—**Mr. Robichaud:**

1. Have public tenders been called for the following rural mail routes in Gloucester county, New Brunswick: (a) Robertville, R.R. No. 1; (b) Clifton, R.R. No. 1?

2. If so, who submitted tenders and what were the respective amounts?

Answer by: **Hon. W. M. Hamilton (Postmaster General):**

1. (a) No; (b) Yes.

2. John Richard Peters, Clifton, $2,200; George Raymond Glendenning, Clifton R.R. No. 1, $2,300; Thomas E. Early, Clifton, $2,500.

ARMOURY BUILDINGS, GRANBY, QUE.

Question No. 180—**Mr. Boivin:**

1. What building or buildings are being used in connection with the armoury in the city of Granby, Quebec?

2. Who are the owners of such properties and what rental is paid by the department for such buildings?

3. Have ground tests been made and plans prepared for a new armoury?

4. If so, in what location?

Questions

5. What steps have been taken to construct a new armoury in the city of Granby?

Answer by: **Hon. G. R. Pearkes (Minister of National Defence):**

1. The armoury building in the exhibition grounds in the city of Granby.

2. The city of Granby, the owner of the building, receives an annual rental of $1,500.

3. Ground tests were made on a parcel of land offered to the department by the city of Granby in 1955. No action was taken to acquire the site and plans have not been prepared for a new armoury in that city.

4. Denison avenue, Granby, Quebec.

5. Answered by No. 3.

TEXTILE INDUSTRY STATISTICS

Question No. 189—**Mr. Cardin:**

1. What was the number of employees engaged in textile industry in Canada during the fiscal years 1955-56, 1956-57, 1957-58?

2. What was the number of employees engaged in textile industry in the province of Quebec during the same period?

3. What was the yearly production of textile in Canada for the same period?

4. What was the yearly production of textile in Quebec for the same period?

Answer by: **Hon. Gordon Churchill (Minister of Trade and Commerce):**

1 and 2. Note: figures shown are on a calendar year basis.

NUMBER OF EMPLOYEES IN TEXTILE INDUSTRY

Industrial group	1955		1956		1957*	
	Canada	Quebec	Canada	Quebec	Canada	Quebec
Textiles, except clothing	69,144	39,496	70,873	39,760	—	—
Knitting mills	21,658	10,193	21,913	10,490	—	—
Clothing	89,686	56,508	89,799	56,497	—	—
Total	180,488	106,197	182,585	106,747	—	—

*Data collected in the census of industry are not yet available for 1957. However, the employment index which includes firms with 15 or more employees (for the textile industry this includes over 75 per cent of all firms) shows the following trend based on 1949=100—Canada, textiles except clothing 1956: 86.8, 1957: 85.1; knitting mills and clothing (combined) 1956: 94.2, 1957: 94.4. Quebec, textiles except clothing 1956: 86.1, 1957: 85.1; knitting mills and clothing (combined) 1956: 100.8, 1957: 101.1.

3 and 4. Data on production are not collected by the dominion bureau of statistics. Figures shown are for value of factory shipments.

Industrial group	1955		1956		1957	
	Canada	Quebec	Canada	Quebec	Canada*	Quebec**
	$	$	$	$	$	$
Textiles, except clothing	734,515,445	396,695,292	766,977,127	412,018,417	755,118,000	—
Knitting mills	155,186,763	70,112,820	165,149,727	77,757,340	905,457,000	—
Clothing	684,361,902	436,026,753	733,769,962	469,088,037		
Total	1,574,064,110	902,834,865	1,665,896,816	958,863,794	1,660,575,000	—

*Estimated
Estimates not yet available on a provincial basis.

Supply—Items Passed

[The following items were passed in committee of supply]:

DEPARTMENT OF MINES AND TECHNICAL SURVEYS

A—Department—

Administration services—

193. Departmental administration, $623,942.

194. Explosives Act—administration, operation and maintenance, $113,055.

195. Mineral resources division—administration, operation and maintenance, $230,700.

Surveys and mapping branch—

196. Surveys and mapping branch administration, $79,110.

197. Geodetic survey of Canada—administration, operation and maintenance, $690,761.

198. International boundary commission, $75,092.

Topographical surveys, including expenses of the Canadian board on geographical names—

199. Administration, operation and maintenance, $1,829,769.

200. Construction or acquisition of equipment, $100,000.

Canadian hydrographic service—

201. Administration, operation and maintenance, including Canada's annual contribution of $4,100 to the International Hydrographic Bureau, $3,352,378.

202. Construction or acquisition of buildings, works, land and equipment, $545,714.

203. Legal surveys and aeronautical charts including a grant of $500 to the Canadian Institute of Surveying and Photogrammetry, $754,674.

204. Provincial and territorial boundary surveys, $54,200.

Map compilation and reproduction—

205. Administration, operation and maintenance, $1,242,932.

206. Construction or acquisition of equipment, $18,500.

Geological surveys—

207. Administration, operation and maintenance, including the expenses of the national advisory committee on research in the geological sciences, an amount of $1,500 for Canada's share of the cost of the geological liaison office, British commonwealth scientific conference, London, England, and an amount of $40,000 for grants in aid of geological research in Canadian universities, $2,695,905.

208. Construction or acquisition of equipment, $300,565.

Mines branch—

Mines branch (including the former mineral resources investigations)—

209. Administration, operation and maintenance, $3,266,265.

210. Construction or acquisition of equipment, $270,125.

Geographical branch—

211. Geographical branch—administration, operation and maintenance, including a grant of $250 to the Canadian Association of Geographers and a grant of $3,500 to the University of British Columbia in aid of research in foreign geography, $315,728.

Dominion observatories—

Dominion Observatory, Ottawa and field stations—

212. Administration, operation and maintenance, including the expenses of the national committee for Canada of the International Astronomical Union, a membership fee of $500 to the International Astronomical Union and a grant of $3,500 to the Royal Astronomical Society of Canada, $777,571.

213. Construction or acquisition of buildings, works, land and equipment, $695,075.

Dominion Astrophysical Observatory, Victoria, B.C.—

214. Administration, operation and maintenance, $140,240.

215. Construction or acquisition of buildings, works, land and equipment, $156,150.

General—

216. To provide for purchases of air photography and the expenses of the Interdepartmental Committee on Air Surveys, including purchases of equipment, $1,900,000.

B—Dominion coal board—

217. Administration and Investigations of the dominion coal board, $120,395.

218. Payments in connection with the movements of coal under conditions prescribed by the governor in council, $8,580,250.

219. To provide for subventions in respect of eastern coal under agreements entered into, or to be entered into, pursuant to the Atlantic Provinces Power Development Act, $1,700,000.

A—Department—

General—

575. Polar continental shelf project, $78,450.

Geological Survey of Canada—

Geological surveys—

576. Administration, operation and maintenance—further amount required, including an amount of $1,000 for Canada's share of the cost of the geological liaison office, British commonwealth scientific conference, London, England, and an amount of $10,000 for grants in aid of geological research in Canadian universities, $103,250.

577. Construction or acquisition of equipment—further amount required, $15,000.

HOUSE OF COMMONS

Thursday, August 21, 1958

The house met at eleven o'clock.

COMMITTEES OF THE HOUSE

Thirteenth report of standing committee on miscellaneous private bills.—Mr. McCleave.

Eleventh report of standing committee on railways, canals and telegraph lines.—Mr. Fraser.

ATOMIC ENERGY

NUCLEAR EXPLOSIONS—REPORTED AGREEMENT ON MEANS OF DETECTION

On the orders of the day:

Hon. L. B. Pearson (Leader of the Opposition): I should like to ask the Prime Minister whether he can inform the house if reports are accurate that the conference of atomic scientists at Geneva has reached agreement on practicable international machinery for the detection of nuclear explosions, thereby making possible effective international arrangements prohibiting such explosions for the testing of nuclear weapons, something which I think we all agree is both desirable and urgent.

Right Hon. J. G. Diefenbaker (Prime Minister): The scientific experts in Geneva, Mr. Speaker, as has been reported in the press and as is known to the Leader of the Opposition, have arrived at agreed conclusions. However, these decisions have not yet become part of the public domain and will not until the experts agree upon their final report. Dr. Solandt, the representative for Canada, will be returning in the next day or so and he will then report to the government. For that reason I would prefer not to deal with this matter at the present time, except to say that having regard to the general situation and the considerations that have been determined by the experts, my hope is that there will be an eventual international agreement on the suspension of nuclear tests. I couple with that the hope that it will be at a reasonably early date.

Mr. Hazen Argue (Assiniboia): I have a supplementary question I should like to ask the Prime Minister arising out of the very welcome report of agreement among scientists as to how atomic explosions can be detected and prevented. Is the Prime Minister able to comment on the news report that the United States is about to announce or has announced a temporary suspension of its own nuclear tests? This report was on television last night.

Mr. Diefenbaker: Of course the hon. gentleman will realize that such announcements could not be made by way of anticipation in the House of Commons.

ST. LAWRENCE SEAWAY

INQUIRY AS TO LOCATION OF HEADQUARTERS

On the orders of the day:

Mr. Grant Campbell (Stormont): Would the Minister of Transport care to comment on an article which appeared in last night's Ottawa *Journal* to the effect that the St. Lawrence seaway headquarters will remain in Ottawa?

Hon. George H. Hees (Minister of Transport): Yes, Mr. Speaker. I wish to thank the hon. member for indicating his intention to ask this question. I got in touch with the president of the authority and he has advised me as follows. The St. Lawrence Seaway Authority Act provides that the head office of the authority shall be at Ottawa or in such other place in Canada as the governor in council may designate. On inception of the authority, head office was set up at Ottawa and so-called "headquarters" at Montreal.

In reply to a recent inquiry from the press, the president of the authority indicated that approximately 125 employees would be moved to Cornwall as circumstances permit and as the construction phase ends and the operating stage is reached. The staff at Montreal consists of the engineering personnel and the administrative employees recruited for the construction period. The authority has determined that it would be disruptive and uneconomical to move the engineering and allied staffs until construction is practically completed.

The number of employees mentioned, namely about 125, is a preliminary figure based upon proposed establishments. It is considerably less than the 200 to 300 mentioned some years ago, but that figure was not based upon a detailed study of the organization required.

From inquiries which have been made, particularly by employees who have in view moving to Cornwall, it appears doubtful that

there is satisfactory housing available at Cornwall at present for the influx of a large number of employees.

Hon. Lionel Chevrier (Laurier): Mr. Speaker, may I ask a supplementary question. Is it not a fact that during the course of the election campaign the minister made a statement that the headquarters building would be at Cornwall, and that it would house from 250 to 300 men?

Mr. Hees: Mr. Speaker, I have here a copy of the telegram I sent during the election campaign, and it reads as follows:

> A decision was made several years ago to establish the headquarters of the St. Lawrence seaway at Cornwall and over $1 million has been spent to provide office accommodation. There has been no change in this policy and I know of no reason why there should be.

Mr. Chevrier: I thank the minister for making that statement, but would he answer my questions, which were two in number? Did he not state during the election campaign, first, that the headquarters of this authority would be at Cornwall, and second that the number of employees would be 250 to 300?

Mr. Hees: As I stated, Mr. Speaker—

Mr. Speaker: Order. I think that is not the type of question to be asked on the orders of the day.

WELLAND CANAL—STATEMENT ON TRANSFER OF CONTROL AND OPERATION TO SEAWAY AUTHORITY

On the orders of the day:

Hon. George H. Hees (Minister of Transport): Mr. Speaker, on Tuesday I stated in reply to a question by the hon. member for Welland that the Welland ship canal would come under the authority of the St. Lawrence seaway authority, and in a supplementary question the hon. member asked if this also applied to land. I said it was my impression that it did but would make further inquiries.

I have now confirmed that the Welland canal lands will be transferred to the seaway authority.

Mr. W. H. McMillan (Welland): I wonder if I could ask the minister a question arising out of his answer. Will the employees on the Welland ship canal continue as civil servants with their present rights?

Mr. Hees: I know of no plans for any change.

[Mr. Hees.]

OLD AGE SECURITY

INQUIRY AS TO REPORT OF DR. ROBERT CLARK

On the orders of the day:

Mr. W. H. McMillan (Welland): I should like to direct a question to the Prime Minister. In view of the fact that some months ago, on January 24, 1958, the Prime Minister indicated that Professor Huson's resignation was accepted because it was most urgent to have the report on the United States old age pension system in three or four months, would he table Professor Robert M. Clark's report on this matter before we consider the estimates of the Department of National Health and Welfare?

Right Hon. J. G. Diefenbaker (Prime Minister): Mr. Speaker, I can understand the interest of the hon. gentleman in this prospective report. I have been in communication with Dr. Clark with respect to this matter. He has worked very hard and diligently and is doing his best to achieve a report at the earliest possible date. He has given intensive study to this question and indicates to me that, as far as he can foresee, there is no prospect of that report being available before early in October at the soonest. He has done everything possible to bring in a report within the period which I believed would be sufficient, but I am sure we would expect him to bring in that kind of report which will be as complete and comprehensive as are the terms upon which he was appointed.

Hon. J. W. Pickersgill (Bonavista-Twillingate): I would like to ask a supplementary question. Does the Prime Minister feel this report, which was considered on January 24 as being very urgent, has within the last three or four months lost its urgency?

Mr. Diefenbaker: I can understand the feeling of urgency on the part of the hon. gentleman, but I seem to remember that the party to which he belongs promised health insurance back as far as 1919.

Some hon. Members: Hear, hear.

EXTERNAL AFFAIRS

UNITED STATES—SUGGESTED CANADIAN PLEA ON BEHALF OF ALABAMA CITIZEN

On the orders of the day:

Mr. Erhart Regier (Burnaby-Coquitlam): Mr. Speaker, I would like to ask a question of the Prime Minister. In view of the government's recent commendable action in protesting the execution of the former Hungarian premier, will the government consider sending a plea to either the President of the United States or the governor of Alabama

to spare the life of Jimmy Wilson, who has been sentenced to die on September 5 for robbing a white woman of $1.95.

Mr. Speaker: I think the hon. member is trying to extend the jurisdiction of the ministry a little beyond what is warranted. I understand his question relates to something which has taken place in the United States.

Mr. Regier: What I am asking is whether the government intends to register a plea on behalf of this man.

Mr. Speaker: I must advise the hon. member that it is not any part of the public duty of the government to administer the criminal law of the United States.

FREIGHT RATES

STATEMENT ON PROGRESS OF FREIGHT EQUALIZATION INQUIRY

On the orders of the day:

Hon George H. Hees (Minister of Transport): Mr. Speaker, on Tuesday last I replied to a question by the hon. member for Assiniboia regarding the progress being made in the equalization of freight rates. By way of a supplementary question the hon. member for Laurier asked if other classifications of rates will be equalized. As the house knows, equalization of class rates, which is the basic structure of freight rates in Canada, was accomplished with effect from March 1, 1955 by the transport board after extensive hearings and study.

On September 18, 1957, after further hearings and study, the board issued a judgment disposing of the equalization of the following commodity mileage scales to be effective January 1, 1958: Brick and tile; sand, gravel, crushed stone; clay, field stone, fuel wood; scrap iron or steel; fertilizer; ice; sawdust and shavings; horses; cattle; and potatoes.

In the months March to June of 1958 the board held hearings in Ottawa and in western Canada on commodity mileage rates covering coal and lumber and rates on fruits and vegetables. The board is now preparing its decisions in these cases. Further hearings are scheduled to commence in Ottawa on September 29 on cement, paper and paper articles, wood pulp and pulpwood, and on October 6 on 76 scales covering a variety of commodities, half of which are applicable in western Canada only and half in eastern Canada only.

It is hoped that the work following these hearings will be concluded by the board by or near the end of 1958. When this work has been completed the board considers that, except for individual cases arising by complaint, its work on equalization under order in council P.C. 1487 and pursuant to section 336 of the Railway Act will have been completed subject to further examination of rates on domestic grain, on which proceedings are necessarily in abeyance because of an appeal pending to the Supreme Court of Canada.

At the same time, the hon. member for Assiniboia asked if the hearings mentioned in my reply to his question would be held at various places or in Ottawa. The board advises me that the hearings scheduled for this fall on equalization are to be held in Ottawa. Hearings outside of Ottawa have already taken place in connection with the equalization of class rates and earlier in 1958 on certain commodity rates. No application has been received by the board for further hearings outside of Ottawa. Should the necessity for such hearings arise the board will, of course, arrange to hold them.

FINANCE

GOLD—REQUEST FOR STATEMENT ON GOVERNMENT POLICY

On the orders of the day:

Mr. M. W. Martin (Timmins): Mr. Speaker, I should like to direct a question to the Minister of Finance. The question arises out of an article in this morning's *Gazette* by the financial editor, John Meyer, entitled "Higher Gold Price Empty Hope". The question is, in view of the vital interest of the gold mining communities at the present time in this question, could the minister inform the house if he favours the broader use of existing world monetary agencies rather than a higher price for gold as a solution to the problems of the gold mining industry?

Mr. Speaker: I am afraid the hon. member's question lies entirely within the realm of policy. I leave it to the minister to decide whether he feels it is one to be answered, but in my view it is not a proper question to ask.

HEALTH INSURANCE

QUEBEC—INQUIRY AS TO INTENTION TO PARTICIPATE

On the orders of the day:

Mr. J. P. Deschatelets (Maisonneuve-Rosemont): Mr. Speaker, I should like to address a question to the Minister of National Health and Welfare before we reach his estimates. Would the minister tell us if he has received recently an indication from the government of the province of Quebec as to their intention to join in the hospitalization insurance scheme?

Hon. J. W. Monteith (Minister of National Health and Welfare): No, Mr. Speaker.

Mr. Deschatelets: Would the minister tell us if he has lately contacted the authorities of the province of Quebec, whether by telephone or telegram, to that effect?

Mr. Monteith (Perth): No, Mr. Speaker.

ARTS, LETTERS AND SCIENCES

CANADA COUNCIL—CAPITAL GRANTS TO UNIVERSITIES

On the orders of the day:

Mr. D. M. Fisher (Port Arthur): Mr. Speaker, I should like to direct a question to the Prime Minister relating to the Canada Council. In view of comments made by the Auditor General in the report tabled yesterday on the division of Canada Council money for university residences, could the Prime Minister advise the house whether consideration is being given to setting out possible limitations on capital grants for this specific aspect of university expenditure?

Right Hon. J. G. Diefenbaker (Prime Minister): I do not want to give an answer to that question offhand. There has certainly been no consideration given as yet to the question raised by the hon. member.

BUSINESS OF THE HOUSE

REQUEST FOR ANSWER TO QUESTION ON ORDER PAPER

On the orders of the day:

Mr. C. W. Carter (Burin-Burgeo): Mr. Speaker, may I direct a question to the Minister of National Health and Welfare or to the Minister of Finance, whoever is the appropriate minister in this case. Would it be possible to have an answer to question No. 145, which has been standing in my name since July 1, before the estimates of the Department of National Health and Welfare are brought before the committee of supply?

Hon. J. W. Monteith (Minister of National Health and Welfare): I shall be glad to look into this and see if I can get this information immediately.

SUPPLY

The house in committee of supply, Mr. Rea in the chair.

PRIVY COUNCIL

Federal District Commission—

314. To provide a supplement to the sum of $300,000 granted by chapter 112, R.S., for construction, improvements and operation of the parks, parkway system and other works under the control of the federal district commission and to authorize the payment of an honorarium at the rate of $10,000 per annum to the chairman of the federal district commission notwithstanding section 8 of the Federal District Commission Act, $600,000.

[Mr. Monteith (Perth).]

The Deputy Chairman: Shall item 314 carry?

Mr. Diefenbaker: Mr. Chairman, I wish to make a short general statement in regard to these estimates, and I believe the general statement would also cover pretty well the various points in connection with the several estimates in respect to the federal district commission. In point of fact we covered a great portion of this during a recent discussion in this house, and for that reason I am just going into a general outline which I feel will explain the estimates as they are presented.

The amounts required by the federal district commission for its regular administration and operations as distinct from its construction program and acquisition of properties are provided from three sources. One of these is a statutory grant of $300,000 provided under the present Federal District Commission Act. We are proposing to discontinue this grant under the new legislation. That, of course, has already been before the house and is presently before the other place.

The second source of moneys for operations and administration is the revenue earned by the commission from the rental of properties under its administration or from other operations such as the sale of nursery products to government departments and the provision of services to government departments for which payment is made to the commission. A nominal vote is included in the estimates to ensure that there is adequate statutory authority to use this revenue, as there is some doubt as to whether the present statute authorizes it. It is intended that this should be made clear in the revised statute.

The third source of moneys for operations and administration is items 314 and 316. As hon. gentlemen know, under the new statute these two items will be consolidated in one. Vote No. 314 for $600,000 is to enable the commission to carry out its statutory duties in the maintenance of operations and administration of the parks and parkways system and other works under its control, to enable it to carry on the maintenance and improvement of grounds surrounding government buildings in the capital area, and to meet the expenses of the national capital planning committee. These go beyond the purpose for which the commission was originally established and are responsibilities that extend beyond its own properties. In future it is proposed that these two votes may be grouped together as one for the purpose of simplifying the accounting and the work of control in connection with the appropriations.

As to construction programs, the acquisition of property and certain grants to municipalities under agreements to assist them in construction projects are met out of the national capital fund and more recently out of loans obtained from the crown for the acquisition of properties in advance of the time they are used by the commission for works of the commission. The national capital fund was established by vote No. 809 in the estimates of 1947-48. Since that time the sum of $2,500,000 has been included in the estimates each year to be put into the fund in accordance with the intention as stated by Right Hon. Mr. King at the time the fund was set up.

Last year that amount was included in the estimates but only $2,083,334 was actually paid into the fund. The reason the full amount was not paid in was that in the payment of moneys into this fund it was questionable whether it could properly be undertaken, in the circumstances, by governor general's warrants. Consequently parliament is being asked this year to revote this difference of $416,666 in the supplementary estimate, vote No. 590, together with an additional $400,000 which is being included to permit the acceleration of the construction program of the commission as an employment measure this year and particularly during the coming winter.

The main estimates, vote No. 317, provide for the eleventh instalment of $2,500,000 to be paid into the national capital fund. When the new legislation has been passed and the national capital commission has reviewed the program with the government, consideration should be given to deciding what future instalments should be paid into the national capital fund.

Another source of funds for the acquisition of properties by the commission consists of loans made from the crown under the authority of appropriations included in the category of loans, investments and advances in the estimates. Vote 509 in the main estimates this year proposes the granting of authority for the advancing of some $3 million to the commission for this purpose. These loans are designed to be used for acquiring property to be held by the commission which is not immediately needed by the commission for its projects; and when so used, for example in the creation of parks or the building of parkways or projects of that nature, the cost of the property must be charged to the national capital fund or other account for expenditures and the loans repaid.

With regard to the amounts of the votes requested this year and the nature of the programs for which they provide, questions were asked in this regard by the hon. member for Ottawa West. The main request, as found in vote 314, is for $600,000 to supplement the statutory grant of the commission, and this amount compares with some $307,648 last year. The reason for the increase is not the increase in expenditures of the commission for administration and the maintenance of parks and parkways; rather the chief cause of the increase is that there is not available for these expenditures this year much in the way of rental revenues from properties administered by the commission. As the committee knows, in the past this was an important source of funds for expenditures of the commission, but the accumulation made in earlier years has largely been used up and the revenues expected this year are only about the amount required to meet interest on the loans incurred by the commission to which we feel these rental revenues should be applied. This change in the revenue available for operating expenses accounts for some $215,000 of the increase in vote 314 over last year.

Of the actual increase in expenditures on operation and maintenance of parks and parkways, the increase is chiefly due to the increase in basic wages for the men working on the grounds maintained by the commission as well as additional areas under the control of the commission, including notably such things as the park at Hog's Back.

It will be noted that the vote for maintenance of government grounds adjoining public buildings is increased by some $42,000 over last year. The reasons for the increase here are similar to those to which I have already referred, namely the increase in wage rates of seasonal labourers in the area and also the additional amount of government property being looked after by the commission. Among these there are the grounds around the new government buildings in Hull, the post office and the printing bureau.

I should like to say a word now about the construction and property program of the commission. In that connection it is convenient to consider the expenditures from the national capital fund, including those made possible by the supplementary estimate as well as by vote 317. We are budgeting this year for a total expenditure from the national capital fund of some $4,045,000. This compares with budgeted expenditures from the fund last year of $3,053,000 and actual expenditures of $2,722,451.

I am not going into details with regard to the building program. The largest item, however, is the expenditure on the Gatineau parkway for which $1,400,000 is budgeted

this year compared with $800,000 last year. This program has been accelerated for employment reasons particularly in the winter time, as some of the work is suited to that period of the year. The work planned for this year on this project is to continue the development of a new stretch of the main parkway from Gamelin boulevard to join the Fortune lake parkway, to grade a section of the parkway from Old Chelsea to the Fortune lake parkway, to provide access to the latter and to survey and grade stretches of the road beyond the Fortune lake parkway as a continuation of the western arm of the Gatineau parkway system.

The next largest item of expenditure is that for the relocation of railway facilities in Ottawa and vicinity. It had been hoped to achieve agreement by this time with the railway companies for the joint operation of railway facilities in and around the city of Ottawa. Negotiations for this purpose have not yet been completed, as the committee knows. The $500,000 included for a limited program is about all that is possible this year pending the main agreement. Most of the other items in this year's budget are continuations of projects that have been in process for the last year or several years, and for that reason I do not intend to refer to them.

However, there are two new projects which I think I should bring to the attention of the committee. The first is a contribution to the city of Ottawa toward the cost of the Bronson avenue bridge across the Rideau canal and the F.D.C. driveways along that canal. Agreement has been reached with the city under which the F.D.C. will contribute 40 per cent of the total cost of this project, or approximately $640,000 of the total estimated cost of $1,600,000. I think the committee will agree that this is a fair division of costs bearing in mind the responsibilities of the federal government both in relation to the driveways and the canal over which the bridge must pass.

There is a further new project involving an amount of $75,000 for the first section of the eastern parkway. This is a major project, most of which will not be constructed for some years but the property for which has already been largely acquired. The commission has decided that it would be wise to construct as soon as possible the section between the Montreal road and the Ogilvy road to assist in solving the serious traffic problems in that general neighbourhood which have arisen partly as a result of the development of federal buildings in the area. It will also enable effective use to be made of the eastern end of the Queensway now under construction.

[Mr. Diefenbaker.]

Another item of construction involving an amount of $100,000 is for water and sewer facilities for lands owned by the commission in the industrial areas near Hurdman's bridge. Eventually some $500,000 will be invested in facilities for these industrial lands, and when they have been serviced the lands will be sold for industrial purposes or exchanged for lands owned by industries or businesses relocated in pursuance of the national capital plan.

Finally, there is an item involving funds to be loaned to the commission under the authority of vote 509 to acquire lands for parks, parkways and industrial sites in and around Ottawa and Hull, these lands being required to carry out the agreement reached among the commission and the federal government and the province of Ontario and the city of Ottawa for the construction of the Queensway, as well as for lands to be purchased in the green belt.

When the new legislation has been proclaimed, if passed by the other place, and the acquisition of property in the green belt proceeds in accordance with the policy which I placed before the house on June 18, it may be expected that the expenditures for such land will increase substantially. Additional lending authority is being asked by a further supplementary estimate to which I made reference when questioned the other day on this matter. The additional amount is $4.5 million in supplementary vote No. 509 for the purchase of property, and the additional appropriation is to provide for interest during the current year on these loans pending the determination of the rentals to be received by the commission from the leasing of these properties.

I have made this rather complete statement on the items with which I have dealt so the committee will have reasonably full information, the fullest I have been able to give, respecting those items which in particular are different from other years.

Mr. McIlraith: In view of the discussion on August 14 when the legislation dealing with the establishment of a new national capital commission was before the house, I do not have a great deal more to say today. There are one or two small points on which I desire some information, and I think it would be as well if I asked the questions I had in mind on item 314, which is the one now before us.

I wanted to be clear, first of all, about the latter part of the Prime Minister's statement this morning when he referred to item 509. As I understand it, that further supplementary estimate to which he made reference, but which is not yet before the committee,

makes the total amount available for the acquisition of properties, particularly with reference to the Queensway and the green belt, $7.5 million in this fiscal year?

Mr. Diefenbaker: That is right.

Mr. McIlraith: Then I wanted to clarify one other point about the Bronson avenue bridge. The Prime Minister made reference to the contribution of the federal district commission being 40 per cent of the cost of the bridge and approaches. Was I correct in that understanding?

Mr. Diefenbaker: It is 40 per cent of the total cost of the bridge.

Mr. McIlraith: And the approaches, too? They are rather lengthy and costly approaches.

Mr. Diefenbaker: As the hon. gentleman says, the commission shall pay to the city 40 per cent of the cost of the Bronson bridge and of the cost of its approaches thereto.

Mr. McIlraith: Now, then, is the federal government, through the Department of Transport, making a contribution as well? I understand it is?

Mr. Diefenbaker: Yes.

Mr. McIlraith: Then I wanted to address myself to one other problem. The green belt area, as announced by the Prime Minister on June 18 and to which reference was made in the debate on the legislation, is now clearly defined by a plan revised as of June, 1958 and printed. What I want to know from the Prime Minister at the moment is, has that plan been registered and expropriation proceedings commenced covering the green belt area?

Mr. Diefenbaker: No.

Mr. McIlraith: Then that brings me to the elaboration of a point I raised at the legislation stage. I shall try not to repeat the same point, but there is something more I want to say on the subject. I want to point out that with all the publicity given to the green belt and this announcement by the Prime Minister on June 18, 1958, it has become impossible for most persons residing in the green belt area, other than farmers, to use their land. The owners of these lands have been effectively stopped from using them, particularly those persons who are using their lands for subdivision developments. It will be recalled that this whole problem resulted from the unsupervised development of housing in that area.

I was going to ask the Prime Minister, now that a decision has been taken with respect to the filing of a plan, to proceed with the settlement of claims as quickly as it is possible to do so because the financial hardship suffered from what is in effect, from the point of view of the owners, an expropriation that has taken place without any settlement is quite severe. This is particularly true if the price of land continues to rise and these people are left without compensation for the lands taken from them. It simply means that those who do not have other financial resources cannot relocate and continue their business activities, thereby suffering heavy financial loss that is not contemplated or provided for by the expropriation legislation, and for which compensation cannot be made under the expropriation law. I should like to have some assurance from the Prime Minister that this point will be borne in mind, and that whatever action can be taken to prevent this occurrence will be taken in the immediate future.

Mr. Diefenbaker: I can certainly say to the hon. gentleman, Mr. Chairman, that with reasonable dispatch his views will receive support.

Mr. McIlraith: Then there are two particular questions about which I want some information. In his statement the Prime Minister referred to the decrease in rentals in this fiscal year. Would he tell the committee just what caused the decrease in rentals?

Mr. Diefenbaker: The reason is that the accumulated surplus in earlier years has been used up.

Mr. McIlraith: What I am getting at is this. Is the annual revenue from rentals decreasing, or is it that the fund which has been accumulated is decreasing?

Mr. Diefenbaker: It is the latter.

Mr. McIlraith: So there is no substantial decrease in the annual rentals. Then the next question has to do with the wording of item 314. If the Prime Minister will look at it, he will see that the last part of the item reads:

> —to authorize the payment of an honorarium at the rate of $10,000 per annum to the chairman of the federal district commission notwithstanding section 8 of the Federal District Commission Act.

Could the Prime Minister tell us today what he has in mind with reference to continuing the chairman of the federal district commission, so long as the act is in force, and what he contemplates as to the office of chairman when the new commission is set up; that is by way of permanency, salary and so on?

Mr. Diefenbaker: I hope, at the earliest possible date we shall be able to proclaim and proceed under the new act. In so far as the chairman of the commission is concerned, no consideration has been given to that matter.

General Kennedy, throughout the period of his service, has given well to the city of Ottawa and this country.

The question, however, as to the position of chairman has not received final attention as yet.

Mr. McIlraith: Has the question as to whether or not it will be a full time position received attention, or is that matter still unsettled?

Mr. Diefenbaker: That matter is still uncertain. But expressing my own view on the subject, having regard to a visit that I made to various parts of this area and the widening sphere of activity in connection with the commission, my own opinion at the moment—and I am not going to be bound by this in the future—is that it should be a full time job.

Mr. McIlraith: Mr. Chairman, I have just one more remark that I want to make on these items. It has to do, of course, with the employees. I will not repeat the remarks I made at the legislation stage when the national capital commission bill was before the house and the committee, other than to say that I regret very much that the government did not see fit to retain the legislative provision which would have provided for the new commission taking over the employees of the federal district commission.

Item agreed to.

Loans, Investments and Advances—Federal District Commision—

509. To provide for loans to the federal district commission (hereinafter called "the commission"), for the purpose of acquiring property in the national capital district that is not immediately required for the purposes of the commission; the loans to be made in such amounts and on such terms and conditions as the governor in council prescribes, except that when a property so acquired has been commenced to be used for a purpose of the commission, an amount equal to the cost of acquisition of the property shall be repaid from the national capital fund or other fund or account from which expenditures may be made for the purposes of the commission, $3,000,000.

Mr. Regier: I wonder whether the Prime Minister could inform the house how much has been lent to the federal district commission and how much is owing by the federal district commission at the present time to the federal government?

Mr. Diefenbaker: I have not those particulars at hand, Mr. Chairman. I will have to communicate with the officials. Toward the end of the consideration of these estimates I will have them. In the meantime we might proceed to other items.

Item agreed to.

[Mr. Diefenbaker.]

Federal District Commission—

590. To authorize further payment to the special account in the consolidated revenue fund, known as the national capital fund, established under vote 809, Appropriation Act No. 4, 1947-48, $816,666.

Mr. McIlraith: As I understand this item, it merely carries out the provisions of last year's estimates because of the legal doubt as to the authority of the governor general's warrant to provide that $2½ million. Is that correct?

Mr. Diefenbaker: That is correct; and the acceleration of the construction program.

Mr. McIlraith: How much of it is for acceleration?

Mr. Diefenbaker: $400,000.

Item agreed to.

303. To provide hereby, notwithstanding the Financial Administration Act or the provisions of the Senate and House of Commons Act respecting the independence of parliament, for the payment out of the consolidated revenue fund to each member of the Queen's privy council for Canada who is a minister for whom no salary or allowance in addition to the allowances under section 33 and section 44 of the Senate and House of Commons Act is provided (the acceptance of which shall not render such member ineligible or disqualify him as a member of the House of Commons) of a salary of $7,500 per annum and pro rata for any period less than a year, $15,000.

Mr. Pickersgill: Mr. Chairman, on item 308 I have some questions I should like to raise. I do not know whether or not the Prime Minister wanted to make a statement on this item. If he wanted to do so I would of course yield to him at once.

Mr. Diefenbaker: I do not want to postpone the pleasure that I anticipate from the questions and observations of the hon. member, Mr. Chairman, but there was one announcement I wanted to make. It has to do with vote 313, which connected with the emergency defence measures organization. I commence by saying this. What we have done in this connection and what we are suggesting should be done does not in any way—and I emphasize this—indicate our greater fears of the possibility of war. But the responsibility rests with the government to assure that should that dread possibility take place, the organization of government has been planned for and assured in advance.

On May 13 last, when the estimates were tabled in the house, I made a brief statement on the work being done within the privy council office on measures to ensure the continuity of government and to meet the needs of the civilian population in the event of hostilities. I said then that if a major war occurred this continent would likely be under heavy attack, the war would reach maximum intensity almost immediately and in the civilian field as in the military there

would not be time then to prepare the defence measures needed. It is only prudent that we should make plans in peacetime for carrying on government should war come, and prepare the measures which will be necessary under such circumstances in order to supply our people with the necessities of life and to keep the nation together as an economic and political entity.

The vote provides $150,000 for preparatory work, not within the fields of particular departments, on emergency defence measures. At the time the estimates were tabled I undertook, within the limits dictated by considerations of security, to give the house further particulars about this item when it came up for consideration. Our main planning effort is at present concentrated on making plans to ensure the continuity of effective civil government in time of war, since the nature of specific measures to deal with the consequences of an attack on this country depends essentially on arrangements for necessary governmental organization to carry them out.

There are a number of functions of government that would be particularly essential in the early, intense period of nuclear war: general direction of the defence forces; conduct of foreign relations concerning the war; general direction of civil defence activities; preservation of law and order; provision and allocation of housing accommodation; provision and distribution of food, fuel, power and other essential supplies; provision and control of essential medical and public health services; maintenance and control of transport and communications facilities; basic management of public finances and whatever emergency financial measures are necessary to maintain the population and a workable economic system; direction and control of the production and distribution of various essential materials and services, including control of prices; and reemployment of manpower in accordance with emergency priorities.

In that connection I might say that the division of responsibilities among the various departments may be summarized in this way. The Department of National Defence would be concerned with the employment of the defence forces in aid of the civil authorities, particularly aid to the civil power; assistance to civil defence and assistance to the R.C.M. Police; bomb location, radiation monitoring, fall-out forecasts, and generally communications for these purposes.

The Department of External Affairs would be, of course, concerned with the conduct of foreign relations in war; wartime arrangements for foreign diplomats accredited to Canada, and in all cases communications for these purposes.

The Department of National Health and Welfare would be concerned with emergency health services including medical manpower and supplies; and under civil defence there are, of course, various headings which I am not going to place on the record unless asked to do so.

The Department of Justice would be concerned with legal action, legislative or executive, required for the preparation of emergency measures in peacetime and their implementation in war, as well as the necessary defence of Canada regulations. The Royal Canadian Mounted Police has as its responsibility the usual preservation of law and order, the prevention of sabotage and the apprehension of subversives.

The Department of Transport, of course, covers those matters peculiarly coming within the requirements of rail, air and water transportation, fuel requirements and procurement, the allocation and control of radio frequencies, and technical advice to other departments and to the emergency organization with respect to emergency communications generally.

The Department of Trade and Commerce will be concerned with the supply and distribution of those commodities which are of the essence; the Department of Defence Production, of course, with the procurement action to meet supply requirements. The Department of Agriculture will be concerned with agricultural production and the movement of food from farms into commercial channels and the protection of farms, crops and livestock against wartime hazards such as radiation; the Department of Finance with the general financing in wartime as between federal, provincial and municipal governments and moratoria problems and foreign exchange transactions; the Department of Labour with manpower, excluding medical personnel, and its allocation and movement; the Department of Public Works with emergency accommodation for government purposes, which matter is now receiving consideration by a committee set up for that purpose.

That in general summarizes some of the problems which will have to be met in connection with emergency planning at the present time. Then there is a further question which requires consideration, and that is the matter of censorship. An advisory committee of press and radio representatives was set up, I believe about 18 months ago, and plans will have to be made for censorship in a national emergency. Preparations

in respect of these plans have been under way in the privy council office for the period mentioned. The basic plan is intended to provide for the control of mail and telecommunications entering and leaving Canada in the event of war so as to assure security with respect to information likely to be of value to the enemy in obtaining intelligence for wartime purposes, in connection with matters coming within the purview of the censors. In the field of press and broadcasting the basic plan provides for voluntary censorship at the outset on much the same lines that were followed during world war II, but flexible enough to meet new conditions.

As this is basically a security and intelligence function involving contacts with similar planning groups in the United Kingdom and the United States, all I have been able to give at this time is a very limited account of this aspect of our planning. If such a war should end shortly after this early shock period, then there would have to be a period of rehabilitation and reconstruction during which the functions of government would be more varied and complex as the immediate tasks gave way to those with longer term aspects. If war continued, however, the problem of government would be very difficult, particularly having regard to the necessity of allocating our surviving resources, if I may use that expression, among competing civilian and military demands.

To permit the government to adapt itself to the variety of contingencies which might arise in another major war, it is also necessary to develop organizational arrangements which, as I said a moment ago, must be flexible. Considering the possibility that there would be little or no warning of attack and having regard to the vulnerability of our communication and transportation facilities, the normal peacetime arrangements for government would be inadequate in the event of a major war. There is therefore a need, in our opinion, for the development of a decentralized federal system of emergency government with central, regional and some zonal elements. We intend to provide for a suitable central authority and to establish provincial, regional and zonal organizations through which a large amount of the work of the federal government could be carried on in time of war by the necessary delegation of authority to federal officers. We recognize, of course, that the assistance and co-operation of provincial and municipal governments will be necessary in the development of the regional and zonal organizations, and I expect very shortly to approach the provincial authorities and provincial governments in this connection.

In so far as the central authority is concerned—and the plans are still in a flexible state—that authority would be based on a nucleus of ministers, officials, military officers and others at Ottawa and would operate, if necessary, with provision being made for such necessity through a number of dispersed locations outside of Ottawa.

As to the regional and zonal elements of organization, I think all hon. members will appreciate that it would be inappropriate, before discussions have been held with the provincial authorities, to say more than I have said in so far as the details are concerned.

The intention generally, however, is to have the federal regions correspond with the provincial boundaries as far as that is possible and practicable, and to recruit for each region on a stand-by basis a small staff of federal officers, mainly from the field organizations of the various federal departments who, in the event of war, would work in close co-operation with the essential elements of the provincial governments.

The zonal organizations may not be required everywhere in the country, but in the larger provinces at least there is a need for a level of wartime government to cover smaller areas than provinces but larger than the limits of one municipality. The zonal organization would require a mixed staff of federal and provincial officials as well as some representatives of elements of municipal governments within the zone.

Finally I would say that this concept of a decentralized federal system of emergency government, in which the provincial and municipal governments would be closely associated, will be sufficiently broad to accommodate considerable variation in its application to the differing situations across the country. It would also permit adjustment to whatever changes in civil defence policy arrangements might be considered desirable following the survey by General Graham as to civil defence requirements, announced to this house on June 11 last by the Minister of National Health and Welfare.

I think that in general represents a rather particular statement concerning a matter of which I gave the barest outline earlier this session. I dislike to repeat what I said at the beginning, but I feel that when announcements such as these are made there are some who might regard them as conveying potentialities which are not present. At the same time, the course of reality demands on the part of government the assurance to the people that should nuclear war come, government can be carried on.

Mr. Pearson: The Prime Minister has introduced into the quiet atmosphere of this committee a matter of—what shall I call it—almost cosmic importance. He has faced us

with a problem unprecedented in the sense that we have never had to face it before, and unprecedented also in the horrible possibilities involved in it. It is well, I think, that he should have done this in order that we may in this house and in the country be aware of the realities of the situation which faces us at the present time.

He has not only indicated the necessity of planning against this horrible eventuality, but he has also indicated that such planning is taking place. I have had some association with that planning in other years. Nothing could be much more important in the realm of government than to carry it forward; and while we all shrink from the possibility that these plans might have to be used, it is well that we should know about them in general terms—and that is the only way we should know about them, because no one in this committee wants to ask questions with regard to details which would contravene security.

The fact is that the plans with which some of us on this side were associated until a short time ago must be considered now, as in some respects at least, out of date. I presume the government and its advisers are aware of the developments which have made them out of date.

The Prime Minister has divided them into broad categories; plans for carrying on civil government in the emergency of nuclear war and—perhaps this is an aspect of the first category and not something to be repeated separately—plans for such things as the control and censorship of the press, radio and communications in time of war or war emergency. As far as these latter matters are concerned, those plans were drawn up a good many years ago after the second world war, and I suppose they have been kept up to date. All arrangements were made so they could be put into effect in those days, and I am sure that is true now, at a moment's notice. All details had been worked out so far as possible.

But the other plan, the far more important plan, for carrying on civil government itself in a time of nuclear warfare must, I am sure, have been altered in recent years because of the great increase in the capacity for destruction of weapons that could be launched against us. I have no doubt that the increase in this vote is for the purpose of altering, elaborating, and perhaps in some respects changing the nature of these plans, and as such I think this item should receive our support.

When I talk about an increase in destructive capacity in the last year or two which may have necessitated changes in plans, I need only say to the committee—and this shows what we should be up against were it to happen—that it would be possible now to drop one bomb or to launch one missile carrying as much destructive capacity as all the bombs or missiles dropped in the second world war by all the armies of both sides. If half a dozen of them were dropped on Canadian soil it makes one almost despair of the possibility of carrying on any form of government. We should not, of course, yield to that kind of despair, and for this reason plans are being made to deal with even that kind of emergency.

The Prime Minister has also mentioned plans for the restoration and rehabilitation of our country after that kind of attack. It is also wise to plan for that. Here again one almost falls into despair at contemplating the work of rehabilitation and restoration that would be required if this should ever happen. Nevertheless, as I have said, we have to plan for these things, and it is well that we should know what we are facing. I think the Prime Minister's remarks this morning are—perhaps "welcome" is not the right word—but perhaps it is as well that we should have had the opportunity of hearing them.

I should like also to suggest that those who are engaged on this essential work should keep in close touch with other governments, such as those of the United Kingdom and the United States, who are facing this problem and who have done perhaps as much as, if not more work than we have been able to do and who have greater resources for that purpose, so that we may benefit from their planning and from their experience. So far as experience is concerned, the United Kingdom had more of this, unhappily, than any other government on our side during the last war and they learned a great deal during that war.

When I was exposed to some of these bombing situations in world war II—and at times I was more uncomfortable than I was in the first world war—I learned to appreciate and admire not only the fortitude of the people of London but the way in which the government there had planned against that kind of emergency and were able to put those plans into effect. Of course that is all changed now, but I know they are changing their plans, too, and I am sure we are keeping in close touch with them.

Of course it is possible to make even the best plans which do not always work out in practice. Members of the committee will forgive me if I cite a personal illustration of this. At the beginning of the last war I was stationed in London when war was declared that fine September Sunday morning and the world changed. All arrangements had been

made in advance for the evacuation of the civil departments from London and for the evacuation of certain offices such as Canada House to the country. Two men in each office, the high commissioner and his secretary, had been given information as to what to do when the emergency occurred. However, we were given it in very guarded terms, and we were only told that when we got a signal we were to send an advance party to a certain spot on a map and they would get further instructions then where to go.

Our advance party was ready within a couple of hours of the declaration of war. We received a telephone call and sent the advance party to point X on the map, where they were to get further instructions; but the ordnance map was of 1921 vintage, and the pinpoint for further instructions had been made on that map. When our advance party got to this particular position the pinpoint, which was a house, was not there. It had disappeared some years before.

So there can be hitches even in the best of plans. That was a simple operation compared to that with which we will be faced if this dread emergency ever occurs now. It is well that we should be planning for it, but it is more important that we should be working in our respective ways to prevent a situation that will ever require these plans to be put into effect.

Mr. Fisher: These plans are certainly worthy of the comments made about them by the Leader of the Opposition. One point which I think is worth bringing to the attention of the Prime Minister at this time is that last week there was a meeting in the United States, I believe in Vermont, to go into all the effects of atomic radiation. I know that the meetings of scientists at Geneva in connection with detecting the testing of nuclear explosions were very important, but it was most disappointing to me to learn that Canada had no official representatives in attendance at the meeting considering the effects of atomic radiation. I understand there were only two government observers in attendance, but their role was that of observer.

In plans for the future concerning how civil government will continue one assumes that a major aspect of the problem will be instruction with regard to radiation and the effect of fall-out. The failure of the government to have an official representative at the Vermont meeting seemed to me an indication that in this area the government was not following things perhaps as closely as one might wish.

I wish to bring up a point which at first glance may appear to be rather petty and ticklish. It was noticed last year when statements were made in the United States that reflected on the political tenets and loyalty of the secretary of the privy council there were very sharp replies forthcoming from the Canadian government, which were quite appreciated, dismissing the whole idea and protesting against the views that were expressed.

Mr. Pickersgill: Mr. Chairman, if the hon. member is embarking on another subject I wonder if we cannot dispose of this subject on which I yielded to the Prime Minister, in order to dispose of it. I am not seeking to interrupt the hon. member for Port Arthur, but I had the floor first in committee and yielded to the Prime Minister to make a statement on this particular subject.

Mr. Fisher: On the particular subject about which I am speaking?

Mr. Pickersgill: Are you still speaking about the subject of future planning?

Mr. Fisher: No.

Mr. Pickersgill: That was my point.

Mr. Fisher: I will yield the floor.

Mr. Diefenbaker: Mr. Chairman, what has been said by the hon. member for Bonavista-Twillingate is correct. I want to hear the hon. member for Port Arthur as he explains his views in this connection at the conclusion of the discussion of this matter.

I wish to say to the Leader of the Opposition I appreciate the benefit of his ideas and the recital of his experiences. He suggested there should be very close co-operation and communication with the United States and United Kingdom, and I may say in reply that we are in close touch not only with the United Nations, the United States and the United Kingdom but with NATO as well. Canadian officials concerned with these matters visit London, Washington and Paris on these questions, and United States officials have come to Ottawa at our invitation to discuss relations between their plans and ours. In consideration of the suggestion of the Leader of the Opposition I thought I should point out that action in this regard is being taken.

Mr. Pickersgill: Mr. Chairman, I wonder if I may make a suggestion to the Prime Minister. I thought the item called was item No. 308. That is the item on which I wish to speak. But if the Prime Minister would wish you to call item No. 313 first in order that it might be passed that would be quite agreeable to me.

Mr. Diefenbaker: Yes, 313 could be called and passed.

The Chairman: Is the committee agreeable to taking item No. 313 before discussing item No. 308?

Some hon. Members: Agreed.

Item stands.

313. To provide for preparatory work, not within the fields of particular departments, on emergency defence measures, $150,000.

Mr. Regier: Mr. Chairman, before we pass item 313 may I say I share completely the views expressed by the Leader of the Opposition to the effect that he hopes, as we all hope, that everything possible will be done to avoid the need for putting into effect the planning that has been done. My question deals with powers. We have to realize that if an emergency of the type to which reference has been made occurs, there may be no one available to grant any authority. There may not be a governor in council or a privy council in existence, and there may not be any senior officials of any of our armed forces. That possibility exists. I therefore feel it is safe to say that in order to have any comprehensive value the plan requires that authority be granted in advance in peacetime in order to proceed with the plan under certain conditions. I should like the Prime Minister to tell us what legislation exists at this time under which such authority could be granted.

Mr. Diefenbaker: Mr. Chairman, I am sure the hon. gentleman realizes that powers cannot be granted in anticipation of an emergency. There is, of course, the War Measures Act which is still on the statute books of this country, under which provision is made in time of insurrection, war or the like for the necessary declaration; and naturally the effectuality of any assignment of jurisdiction would be subject to the declaration of that act or similar legislation.

Following the war there were successive statutes passed including the transitional powers act, the emergency powers act and the like which contained certain emergency powers during the period of reconstruction following the last war. But all action being taken by those concerned with the matter of providing in advance the necessary organization to assure a maximum degree of preparation would naturally be predicated on the declaration or proclamation of the War Measures Act.

Item agreed to.

The Chairman: Shall item 154 carry?

Mr. Pickersgill: Mr. Chairman, I thought it was understood that after item 313 you were going to call item 308.

308. To provide hereby, notwithstanding the Financial Administration Act or the provisions of the Senate and House of Commons Act respecting the independence of parliament, for the payment out of the consolidated revenue fund to each member of the Queen's privy council for Canada who is a minister for whom no salary or allowance in addition to the allowances under section 33 and section 44 of the Senate and House of Commons Act is provided (the acceptance of which shall not render such member ineligible or disqualify him as a member of the House of Commons) of a salary of $7,500 per annum and pro rata for any period less than a year, $15,000.

The Chairman: Shall item 308 carry, then?

Mr. Pickersgill: Mr. Chairman, there are one or two questions I should like to put to the Prime Minister. This item seems to correspond with an item that appeared in the further supplementary estimates, No. 2, that were presented in the only session of the last parliament, which item was never called during the course of that parliament. However, since the estimates for this year show an amount of $11,668 I assume that some expenditure was made by virtue of the interim supply bills or the appropriation acts based on them. To put the three questions at once, I wonder whether the Prime Minister can tell us when those expenditures started, whether they have been carried on continuously since that time, and at what intervals payments are made.

Mr. Diefenbaker: Payments started following the passage of interim supply.

Mr. Pickersgill: That would be on October 17.

The Deputy Chairman: Shall vote 308 carry?

Mr. Pickersgill: No, there were two other questions. Have they been made continuously since that time, and at what intervals are they made?

Mr. Diefenbaker: The payments were continued so long as supply was available, and thereafter they were continued under governor general's warrants.

Mr. Pickersgill: So there has been continuous payment out of the vote last year, governor general's warrants, interim supply voted, speaking from recollection, on the fourth day of the last session and, since this session began, once more under an appropriation act. I thought that would be the correct information, but before making any observations I wanted to be quite sure that was the actual, factual state of affairs.

I have looked at the statement made by the Minister of Finance on October 17 in introducing the first interim supply motion in the last parliament. I cannot say that I have gone through it with a fine-tooth comb,

but I have gone pretty carefully through *Hansard* and I cannot find that the minister drew our attention to this item at any point. In other words, it was to be found in the estimates by those of us who were alert enough to see it, but anyone who was not alert enough did not have his attention drawn to this item by the Minister of Finance.

It is true, of course, that once the Appropriation Act was passed and this item was included the government had a perfectly valid, legal warrant for paying this money to these two gentlemen who had already been sworn of the privy council. There can be no question but that was the fact, even if one were not alert enough to notice the item. I draw attention to the fact that this is the kind of legislation to which one former member, who was considered distinguished enough to be offered the speakership by the Prime Minister, took exception over the years in other parliaments.

Mr. Diefenbaker: If the hon. gentleman is speaking about me, I at no time ever offered the speakership to anyone.

Mr. Pickersgill: Not to Mr. Knowles? I was referring, of course, to Mr. Knowles. In any case, this is really beside the point.

Mr. Diefenbaker: It is also beside the fact.

Mr. Pickersgill: I am not in the least concerned about getting into any controversy with the Prime Minister on that point, but I think it is an undoubted fact that over the years Mr. Knowles took exception to legislating by this particular means. I always thought his concern about the matter was exaggerated, but I have some grave misgivings about whether such concern is exaggerated in this particular instance, because here we are asked to do something which has always been done in the past by statute. When successive governments have sought to provide for additional members of the cabinet and their remuneration it has always been done in a very formal way by amendment to statutes or to the Salaries Act, though in the case of the Department of Defence Production my recollection is that it is done in that act and that the minister's salary does not appear in the Salaries Act.

But here a provision was made which is not and, of course, could not be of continuing effect because it lapsed when the interim supply lapsed and the legislative authority for making these payments lapsed. Therefore on January 31 when, if I am not mistaken, the supply voted by parliament lapsed, there was no further authority to pay salaries to the hon. member for Greenwood or the hon. member for St. John's West. Parliament had made no provision for paying salaries to these two ministers of the crown. The Prime Minister has told us that their salaries were subsequently continued through the use of governor general's warrants.

It seems to me, sir, that that in itself is a very extraordinary provision. We amended the Financial Administration Act the other day, and that time our attention was drawn rather particularly to the clause therein which states the reasons and circumstances under which these warrants can be used. We took out a rather antiquated reference to accidents to public works and so on, and I am not going to make anything of that because I thought the amendment was a perfectly sensible one. I am not seeking to debate this point, but merely to point out that under the amended section governor general's warrants may be used in these circumstances:

> Where a payment is urgently required for the public good when parliament is not in session and there is no other appropriation pursuant to which the payment may be made, the governor in council, upon the report of the minister that there is no appropriation for the payment and the report of the appropriate minister that the payment is urgently required for the public good, may by order direct the preparation of a special warrant to be signed by the governor general authorizing the payment to be made out of the consolidated revenue fund.

I do not think by any stretch of the imagination it can be argued that this was an unforeseen situation. These gentlemen were already ministers. They were already drawing these allowances, and I suggest that there is very grave doubt that this was a proper use of governor general's warrants. In fact, sir, I would go so far as to say that it seems quite evident to me that it was a highly improper use of governor general's warrants.

The Prime Minister told us this morning how scrupulous he was about payments into the national capital fund, that he hesitated to use governor general's warrants for that purpose although in fact there was a statutory provision of a continuing nature that had been on the statutes for some considerable time. But, sir, that is not all. We have a payment not authorized in any way by parliament being made to two gentlemen who subsequently became candidates in a general election.

I would draw your attention, sir, to the provisions of the Canada Elections Act setting out the conditions of eligibility for parliament. Of course, as everyone knows one of the provisions respecting ineligibility as a candidate embraces the following persons:

> Every person accepting or holding any office, commission or employment, permanent or temporary, in the service of the government of Canada at the nomination of the crown or at the nomination of

any of the officers of the government of Canada, to which any salary, fee, wages, allowance, emolument or profit of any kind is attached—during the time he is so holding any such office, commission or employment.

Of course there is an exception. The exception is:

—a member of the Queen's privy council for Canada holding the recognized position of first minister, any person holding the office of president of the Queen's privy council for Canada or of Solicitor General, or any member of the Queen's privy council for Canada holding the office of a minister of the crown.

Then, of course, the specified offices are included in the Salaries Act. Of course this proposed provision in the appropriation act would not appear to me to have been necessary if these other provisions had been made.

Then, sir, this would appear to be not only an infringement of the Canada Elections Act, but it would also appear to be an infringement of the independence of parliament for those gentlemen to be sworn as members to sit in this parliament while receiving emoluments which were not provided by statute, and a statute which explicitly stated that they were exempt from the general provision. The general provision is contained in section 10 of the Senate and House of Commons Act, which reads:

(a) no person accepting or holding any office, commission or employment, permanent or temporary, in the service of the government of Canada, at the nomination of the crown or at the nomination of any of the officers of the government of Canada, to which any salary, fee, wages, allowance, emolument, or profit of any kind is attached—

Then some of the exceptions are spelled out, and in section 14 of the Senate and House of Commons Act it is provided also that anyone specially qualified by law to do so may hold such office. It seems to me, sir, that unless there is some statutory provision of which I am not aware—of course there might be, because I do not profess to have the learning of the Prime Minister or of the leader of the house in these matters—the provision by governor general's warrants of emoluments to a candidate for parliament, even though he was sworn of the privy council and perhaps even more so because he was sworn in as a privy councillor, disqualifies him from being a candidate at a general election according to the Canada Elections Act. I think if there might be any faint doubt about that there would not be the least doubt about the disqualification to sit in this parliament which is provided in the Senate and House of Commons Act.

I should like to say, before I continue with this matter, that I am not seeking to unseat the hon. member for Greenwood or the hon. member for St. John's West. I am not seeking to do anything other than point out what a dangerous thing it is to depart from the accepted precedents in these matters. As everyone knows, in King William's time and the early years of Queen Anne's reign this was the accepted way by which the king himself and later on the queen and her ministers could control parliament; that is, appoint as many members as possible to places of profit under the crown. It was in order to ensure the independence of parliament and to ensure that parliament could not be influenced in this fashion that the famous statute of Queen Anne was passed which made it necessary even for a minister of the crown to seek re-election after he had accepted a place of profit if he was already a member of parliament.

It will be recalled that in 1925 Mr. Mackenzie King was defeated in North York and was unable to take his seat. He subsequently got a seat in Prince Albert. He was, of course, the prime minister at that time. Later in that year, when Mr. Meighen accepted the governor general's request to form a government, he vacated his seat and was out of parliament at the time his government was defeated.

Since the amendment that was made at the instance of Mr. Bennett in 1931 it has not been necessary for a member of this house, who has been duly elected, to go back and be re-elected by his constituents after accepting a place of profit provided by law. I do not believe that is the kind of legislation that would likely have been introduced by a Liberal government, but it has not been repealed. It is the law.

Again, I am not seeking to divert the argument from the main point. In my experience, and it goes back now for quite a long time, on every occasion on which there has been any change in the ministry involving the provision of any kind of emolument that has been done by following the proper procedure. It is quite true that members of this house may become ministers without portfolio, and there were many cases in which that happened under previous administrations, but such a minister would not vacate his seat because he received no emolument. It is the receipt of the emolument that is the disqualifying feature.

I am not aware that there was ever any provision made whereby any emolument of this character could be paid unless there was a statutory provision therefor. I admit at once that there was a statutory provision of a very questionable character, and I mean questionable not in law but constitutionally questionable. If there has been any negligence,

then I have to take some share of the responsibility, and I do. If by passing these successive interim supply bills and making them into statutes we were giving any countenance to this kind of practice, then we have to accept responsibility. I do not question the legality of the payments that were made between October 17 and January 31. I do not think there is any question about the complete legality of those payments. I do very seriously question the constitutionality of that form of procedure.

I remember, sir, the great care with which Mr. St. Laurent and Mr. Mackenzie King introduced legislation into parliament covering any changes in the ministry. I recall how amendments were made to the Salaries Act and everything was kept regular and proper so there would be no doubt about who was receiving emoluments under the crown. In the light of that earlier practice I believe this was a very questionable procedure to have followed. As I say, I have to take some share of the responsibility for not having noticed it, not having brought it to parliament's attention last October. To the extent I am to blame, I accept that blame. I must say, sir, that it was only very recently, in looking over this item that it suddenly occurred to me to wonder what could be the foundation for the continuation of these payments.

It is one thing to ask parliament, even in this manner, to approve of a procedure which really does not tell us what is being done. The government can say that at least it was in the estimates; we were shown it. It is one thing to tell parliament that these things are going to be done and get some kind of limited sanction from parliament for doing them, but it is another thing to provide additional emoluments, for the governor in council to provide additional emoluments to two of its members by governor general's warrant after parliament has been dissolved in a summary fashion, and when there was no supply whatever for carrying on Her Majesty's business.

The financing of all Her Majesty's business in the months of February and March was being carried on by governor general's warrants, by order in council. Every dollar that was spent in the months of February and March was spent by a government which at that time did not even have a majority nor parliamentary backing. Of course it is very easy for the Prime Minister to say that they got away with it and that they obtained a huge majority; that is true. For three and a half months they carried on the business of this country by order in council and spent the people's money by order in council.

[Mr. Pickersgill.]

For these gentlemen to hand out money to two of themselves, to two members of the council by order in council, without any legislative sanction whatsoever, without any statutory foundation for it that I have been able to find, seems to me in itself to be an extremely serious abuse. But for those two gentlemen in receipt of those amounts to become parliamentary candidates in apparent defiance of the law is a matter for comment; and I say "apparent" because I do not want to be unfair; if there is something I have neglected my face may be a bit red and I shall have to take the consequences. For those two gentlemen to be accepting emoluments which they handed out themselves by order in council at a time when there was no parliament in this country, and then to become parliamentary candidates while they were in receipt of emoluments from the crown in defiance of the Canada Elections Act seems to me an extraordinary procedure.

I do not suppose for a minute that the hon. member for Greenwood ever thought of this situation. I am perfectly certain that if he had ever thought of it, it would have worried him very much indeed. I am sure the same is true of the hon. member for St. John's West. It may be—and I say it again—that there is some legal explanation of this matter of which I am unaware. However, I have tried very hard and have been unble to find any.

But then, Mr. Chairman, it is not only that matter to which I direct attention. These gentlemen were elected to parliament by, I believe, substantial majorities. I am not seeking to upset those elections at all. Those gentlemen are here now. However, they came into this house and they took their oath as members of the house in apparent—and again I say "apparent" because there may conceivably be something about which I do not know—disregard of the Senate and House of Commons Act.

Mr. Chairman, in these circumstances and in view of what has happened in this case, even if there is some obscure provision somewhere in the law that somebody has dug up in an attempt to justify this rather underhand method of procedure, this rather extraordinary way of carrying on; even if some kind of obscure sanction or apparent sanction for it can be found, it seems to me that it is still highly objectionable from a constitutional point of view.

It seems to me that if there is to be that responsibility to the legislature which is the foundation of our system of responsible government, and which differentiates our system of government from that of other countries except those who have copied our system,

even if there is some obscure justification for this procedure it is still very bad indeed constitutionally.

If the government at the beginning of the session last October had come in and introduced a bill to provide salaries under the Salaries Act for two ministers without portfolio, there might have been a few days' debate about the matter and some question might have been raised as to whether this unprecedented increase in the number of cabinet ministers was really justified. I also think some of us from the province of Newfoundland would perhaps have wondered why the minister from that province should not have a portfolio, something which I think he should have and which I think he is well qualified to hold. I do not think there is much doubt that if that had been done the government would have been successful in getting parliamentary approval for such an amendment to the Salaries Act which would have made this whole procedure regular both then and in the future.

But it seems to me that, in the first place, it was an extraordinary thing. As he always does, the Minister of Finance, when he spoke on October 16, made a great deal of how he was not hiding anything, of how everything was being brought out into the open and all our rights were being safeguarded. I should like to draw attention to two references. One is to be found at pages 65 and 66 of *Hansard*. I have the unrevised edition but I imagine that the pages are the same in both editions. The Minister of Finance said:

> We intend to be jealous to preserve the rights of the house with respect to the control of public expenditure. I assure the committee that it is not, by the measure to be introduced today, being asked to give final and complete approval to any item.

I stress that language:

> —is not . . . being asked to give final and complete approval to any item.

He continued:

> In this respect I would remind the committee that there were a few items which were finally approved by the old parliament.

That is not of significance. He continued:

> Those, of course, are law today and they will not be reopened. But with respect to all the other items the house is not being asked to give final approval to the total amount involved in any item—

I do not think I need go beyond that; I would just be trespassing on the time of the committee. Then as found on page 84 of *Hansard*, when he was replying to something that had been said by Mr. Sinclair, he said:

> I simply make this observation in passing, that no item is being passed finally today. If the measure the government has introduced passes there is no final decision on any item.

Hence by no stretch of the imagination can it be argued that any parliamentary approval was given to this practice except in the very limited sense that in the former parliament there were repeated supply bills the financial provisions of which all expired on January 31. As I say, I do not make too much of that matter. What I really think is objectionable is this: first, the use of governor general's warrants, of payment by order in council; second, the gentlemen being candidates when they were receiving emoluments under the crown; and third, becoming members of parliament when they were receiving emoluments under the crown which do not appear to be founded in law.

At one o'clock the committee took recess.

AFTER RECESS

The committee resumed at 2.30 p.m.

Mr. Diefenbaker: Mr. Chairman, the hon. member for Bonavista-Twillingate has raised an interesting argument, though he did not do so with the certainty which ordinarily characterizes his speeches. As I listened to him I was reminded of the prime minister in respect of whom he is about to write a biography, a prime minister he served so faithfully and well for so long and who upon occasion raised these constitutional arguments, once with tremendous success, namely at the time of the Byng incident.

It was interesting to follow the hon. member as he surrounded his statements with an aura of disclaimers and qualifiers. He loaded his argument with escape clauses, but he was not quite as certain of the stand he took as he would lead us to believe. Indeed, he was in the position of having himself belonged to a government which approved a similar provision to that contained in item 308, and this necessitated a rather apologetic attitude when he raised this constitutional issue.

I will have to go back quite a long way because the hon. member has invariably spoken in the highest terms of the legal capacity and attainments of Mr. St. Laurent, in which respect I agree with him. I have here the estimates for the fiscal year ending March 31, 1956, and have particular reference to item 199 thereof. Hon. members will have noted that one of his arguments was that the item in question today, item 308, is wrong in principle. It reads—

Mr. Pickersgill: I might save the Prime Minister a lot of time by saying that I attach no great importance to that argument.

Mr. Diefenbaker: I am glad to hear that.

An hon. Member: He attaches no importance to any principle.

Mr. Diefenbaker: Then we begin to realize exactly what is his position. He attaches no importance to that—

Mr. Pickersgill: My position is that a statute is a statute.

Mr. Diefenbaker: He attaches no importance to anything in respect of which he finds himself in the position of having been a major offender, if indeed there is any wrongdoing involved.

Some hon. Members: Hear, hear.

Mr. Diefenbaker: Item 308 reads:

To provide hereby, notwithstanding the Financial Administration Act or the provisions of the Senate and House of Commons Act respecting the independence of parliament, for the payment out of the consolidated revenue fund to each member of the Queen's privy council for Canada who is a minister for whom no salary or allowance in addition to the allowances under section 33 and section 44 of the Senate and House of Commons Act is provided (the acceptance of which shall not render such member ineligible or disqualify him as a member of the House of Commons) of a salary of $7,500 per annum and pro rata for any period less than a year.

He says that is wrong, and to do it that way is unconstitutional, but when he was a member of the former government that is exactly what they did. As a matter of fact I ask hon. members to look at item 199 in the estimates of 1956, which apparently the hon. member overlooked—

Mr. Pickersgill: Is that for the year 1956 or 1957?

Mr. Diefenbaker: The year 1956.

Mr. Pickersgill: I would point out that the fiscal year is either for 1955-56 or 1956-57.

Mr. Diefenbaker: The estimates for the fiscal year ending March 31, 1956.

Mr. Pickersgill: That is 1955-56.

Mr. Diefenbaker: Yes. I am glad my hon. friend is becoming more careful about these finer details. Item 199 reads:

To provide, notwithstanding anything in the Senate and House of Commons Act, the Financial Administration Act or any other act, for payment of indemnity during the present and subsequent fiscal years, on the recommendation of the board of internal economy and in such amount as the treasury board may direct, to or in respect of a member of the House of Commons for each day on which that member did not attend a sitting of the House of Commons because of public or official business—

And so on. Then it goes on to say that the person concerned shall now receive his payment, and the total amount of the estimate was $2,120,000. So when the hon. member complains about this item in its present form

—and I followed his constitutional argument with interest—I have but to turn to the item in question for 1955-56 to find that exactly the same course was followed as that which we are now following.

Mr. Pickersgill: Not at all.

Mr. Diefenbaker: Let us pass on to the next point. I listened with interest when the hon. member spoke with real feeling about the maintaining of parliamentary traditions. He says we must not depart from parliamentary traditions, but if ever a member belonged to a government which did much in that direction, that member is the hon. member for Bonavista-Twillingate. As he spoke I thought of Mary I, who said that when she passed away, Calais would be written on her heart. Parliament and the derogation of the rights of parliament will certainly be written on the heart of the hon. member, because with his constitutional knowledge he knew better, when over and over again he allowed the traducement of parliament.

In what we have done we have followed the accepted practice, and if there is any question as to regularity then there is a simple way in which to determine the answer, and that is through the courts of the land. No one can finally determine, without recourse to the courts, the meaning of these expressions in the Senate and House of Commons Act. I have in my hand the provision in question which was read into the record by the hon. member today, namely section 14, which reads as follows:

Nothing in this act renders ineligible, as aforesaid, any person, member of the Queen's privy council, holding the recognized position of first minister, president of the Queen's privy council for Canada, minister of finance, minister of justice—

And so on.

—or solicitor general, or any office that is hereafter created—

Mr. Chairman, it has never been defined that one who holds the position of minister without portfolio, under circumstances similar to the case under discussion, does not come within the meaning of those words. The courts of the land can determine the answer finally and absolutely, and I therefore say that in connection with the provision of salaries for ministers without portfolio the payments under this item in the estimates represent the course which was previously followed and, to a large extent, the wording used in the case of parliamentary assistants, whose legal position is somewhat analogous to that of ministers. The practice of providing for such officers of the state was initiated, as I recall, by Right Hon. Mr. King by means of an item in the estimates.

That is my recollection. There seems no doubt about the legality of providing for these salaries by means of estimates. For many years parliament has passed items having legal effect as well as having a purely appropriating effect. To what extent this practice should be carried is a matter of judgment and what I might call parliamentary good taste. We felt that past practice had sanctioned the judgment we exercised in this case, as similar action had been exercised in the past by others who were then in power. If I had had any doubt as to the constitutional situation I certainly would have ensured an examination by the law offices of the crown.

I think the hon. gentleman in raising this argument realized that there are two sides to it. I believe that in fairness to him it can be said that he realizes that this course had been taken in the past and that it had not been challenged in any way. The effect is that of a pathway which in the intervening years has become a regular highway. But if there is any weakness in this regard I am sure none of us would wish parliament to follow a course taken in the past unless it is correct. It could be very simply ascertained, then, and the necessary statute could be brought into being to cover the situation.

If the hon. gentleman's stand is correct, then for a period of several years 13 or 14 members of this house holding positions as parliamentary assistants during those years and in each of those years automatically place themselves in the position of being unable to establish their eligibility as members of the House of Commons and, indeed, would have forfeited their seats in the house.

That is why the hon. gentleman was so careful, and why he had good reason to say, "Remember, my face may be red if there is anything that can be brought up which will cast doubt on the formula I am advancing." I simply say that I would expect his face to be red, because we have only followed the course which his government followed over the years without any challenge heretofore, particularly by anyone like the hon. gentleman who is such constitutional authority and who for so many years was associated with Right Hon. Mr. King, whose constitutional knowledge was, indeed, one of those things of which he was most proud.

It will be noted that the wording of the item includes specifically a safeguard to ensure that the payment shall in no way render a member ineligible or disqualify him as a member of the House of Commons. While there may be some doubt as to whether this exact wording is strictly necessary in the light of section 14 of the Senate and House of Commons Act to which I have already referred, none the less out of an abundance of caution this insertion was included with regard to this item in the estimates.

Of course, having gone that far in his argument the hon. gentleman had to go the full limit. He then raised the question of the position of these ministers as candidates under the provisions of the Canada Elections Act. He pointed out that if they had accepted payments after the dissolution of the house on February 1 and if they had received payments under the provision of governor general's warrants, they would find themselves in a difficult position. I am not going to argue that, because of the fact that they were not paid under governor general's warrants in the months of February and March. No payments under governor general's warrants were made to them because of the very point he has suggested with regard to their eligibility being subject to challenge.

Mr. Pickersgill: Would the Prime Minister permit a question?

Mr. Diefenbaker: In just a moment. No payments were made until after supply was passed in due course in the month of May.

Mr. Pickersgill: The Prime Minister will perhaps recall that I asked that very specific question before I embarked on my argument, because I did not feel it would have been proper to have trespassed on the time of the committee before doing so. If the Prime Minister had told me what I asked him at the beginning it would have been a different matter, but the Prime Minister told me, I think, that these ministers were paid under governor general's warrant. If he had told me they were not I will admit there would not have been much to my argument.

Mr. Diefenbaker: I correct that to this extent, because of the answer I gave the hon. gentleman a few moments ago. Payments were not made in April and May. I am glad the hon. member brought this to my attention, because I had the wrong two months when he spoke a moment or two ago, and I am glad of that question because he cleared it up in accordance with the point he now makes and the answer which I gave him this morning.

Going further, the hon. gentleman has raised the question of the position of these ministers as candidates under the Canada Elections Act. Why did he not challenge that position? He has the courts. If this argument is other than a debating argument, very simple action can be taken with regard to it.

I am not here for the purpose of saying whether or not the controverted elections

act does cover a situation such as this, or whether it is within the actual time limit, but it is for the courts to determine the question of eligibility in this situation. Eligibility cannot be determined on the basis of arguments in the House of Commons, and I suggest to the hon. gentleman that while payments were made in February and March there would be no contravention whatsoever of the Senate and House of Commons Act because during that period they were no longer members and, therefore, any payments which were made would in no way effect their eligibility. They became members following the election of March 31, and after that date, as I said a moment ago, payments were made following the vote of supply.

In February and March there could be no contravention, since those concerned were not members. I say this to the hon. gentleman. On the basis of the experience of the past, certainly the records indicate that a similar course was followed. Where is there any basis whatsoever for statements such as he made in the course of his argument? I think he had been working on this. He said it was underhand. There is nothing much underhand when you set it out in detail giving full particulars. Nothing was concealed. I have never known of underhand conduct where the fact is advertised in full detail in the estimates, as it is on this occasion.

I suggest to the hon. gentleman that he made a very good speech. He loudly vociferously upheld the prerogatives of this parliament. I want them upheld. I was interested in his argument. It is a matter for the law officers of the crown. Now it is a matter, of course, for the courts of the land. If there is any foundation, the hon. gentleman has his recourse.

But, you see, he will not take that course. He says it is wrong. He says he is shocked. His finer sensibilities are acerbated at such conduct, but he says, "Remember, I want the hon. member for Greenwood to remain. I do not want him put out. I do not want the hon. member for St. John's West put out. It is all wrong. Parliament has been travestied. All I want to do is make an argument. I do not want to act, either through the courts or through parliament."

The reason for that attitude and that stand was simply this. The hon. gentleman either knew that the same course was followed in the past by the government of which he was so distinguished a member, or he had forgotten. I care not which of the two stands he takes. If he forgot, I am sure that having had this brought to his attention—and apparently he did not know about it because he wanted it particularized—he will agree he is answered by what he himself did as a member of the government in the past. I know him well enough to say that.

He is an hon. member whose parliamentary capacity I value highly. His presence here is something which I must say is always most helpful and beneficial in discussions of these intricate matters. That being so and the hon. gentleman now realizing what was done in the past, I am sure he will not press unnecessarily the expression of the viewpoint he voiced this morning; because, after all, he realizes that his argument was a little weak in view of the fact that every paragraph has within it an escape hatch through which he can find his way provided this side of the house should be able to produce the experience of the past as an answer to the practice of the present.

Mr. Pickersgill: Mr. Chairman, I have listened with even more than my usual admiration to the Prime Minister's effort this afternoon. I can easily see, sir, why I can never hope to emulate the Prime Minister because I am one of those simple, plain people who seems to be rooted to the facts and who in pursuing an argument sticks to the argument. It seemed to me that as the Prime Minister moved from one irrelevancy to another, from one diversion to another, he realized he had no argument at all.

I gave the Prime Minister an opportunity when he first started to speak by saying I attached no particular importance to this question of legislating in supply bills. That will be found in *Hansard*. I said there was no doubt that what was done in the last parliament was legal—and this, too, will be found in *Hansard*—and that up until January 31 there was no doubt that these hon. gentlemen were legally paid by a means of legislation, and I apologize for the word, sir, if it is not parliamentary and if it is I will substitute something for it—which I repeat I think was put over us in a rather—underhand fashion. I think the Prime Minister or the Minister of Finance should have drawn particular attention to this item last October. I know that Mr. St. Laurent introduced provisions for salaries for ministers who had never been provided for before on several occasions, and I also know Mr. King did it, but they never did it by bringing in a supplementary estimate and saying nothing about it and throwing on the opposition as the Prime Minister has done in his speech the responsibility to find that out for themselves or, if they could not, to have it overlooked.

I took my share of the blame for overlooking it, but it seems to me the first responsibility of any prime minister, and particularly of one who has made the professions the present Prime Minister has of devotion

to parliament and to our parliamentary institutions, is surely to draw attention to any change in the emoluments of the ministers. Ministers are not like parliamentary assistants. It is the ministers who advise the crown, who determine these matters and who decide what they will recommend to parliament as what they shall get themselves. What they were doing here was recommending that they be paid an additional salary which was never drawn to the attention of parliament except by being printed in the further supplementary estimates No. 2 last year.

Mr. Diefenbaker: What were the terms that were so underhanded? Does the hon. gentleman have it?

Mr. Pickersgill: If the Prime Minister is objecting to the word "underhand" I shall withdraw it.

Mr. Diefenbaker: No, I do not, but I am interested in knowing how the terms failed in setting out full particulars.

Mr. Pickersgill: I believe I have the item.

Mr. Diefenbaker: Would the hon. gentleman read the terms and tell us how they concealed the facts?

Mr. Pickersgill: Yes, Mr. Chairman, I shall be happy to read it. I believe the terms are precisely the same as in the item before us. I do not appear to be able to locate it on my desk, but in any event I believe it is in the same terms as the present item, and I admit the perfect legality of it. On that point there is no disagreement between the Prime Minister and me.

Mr. Diefenbaker: Mr. Chairman, may I ask the hon. gentleman this question. He admits the legality of it. Does he not also admit that in the supplementary estimate last fall it was stated that the additional amount was for salaries for ministers without portfolio?

Mr. Pickersgill: Oh, quite.

Mr. Diefenbaker: Pardon?

Mr. Pickersgill: There is no quarrel on that between us, Mr. Chairman.

Mr. Diefenbaker: Then what did we conceal from you?

Mr. Pickersgill: Perhaps the Prime Minister would let me proceed to explain.

Mr. Diefenbaker: Yes, surely.

Mr. Pickersgill: I am sure the Prime Minister will agree that this is not a simple matter.

Mr. Diefenbaker: No.

Mr. Pickersgill: I am sure he will agree this is not an easy matter and it is not easy for a novice like me—

Mr. Ricard: Hear, hear.

Mr. Pickersgill: —to have to argue against so eminent a counsel as the Prime Minister.

Mr. Harkness: We know something of your simplicity, but don't emphasize the fact.

Mr. Pickersgill: As a matter of fact, sir, I believe there are more interesting things to talk about than me.

Mr. Harkness: I agree.

Mr. Pickersgill: I said and I repeat, sir, that I think this was an undesirable way of legislating, but it was a legal way of legislating and I never questioned that. I did say that Mr. Knowles had questioned this kind of legislation and I thought he had gone much too far. I also said I thought that in respect of remuneration for a minister of the crown it should not be handled in this fashion. Moreover, this committee or the committee of the previous parliament never discussed this item. The Prime Minister knows that. There was never any discussion of it. There was never a vote for the whole year. There were only fractions until January 31.

I objected to several things in principle. On one of these the Prime Minister has completely satisfied me; that is the point about the second governor general's warrant after April 1. If there was no payment after April 1 then my case on that point falls to the ground. I endeavoured to find that out from the Prime Minister before I began my speech, because I did not wish to waste the time of the committee on something that was not relevant, and his assurance since then satisfies me completely on that point.

But what was the most serious thing of all in my opinion was that on February 1 the previous parliament was dissolved without this item ever having been passed. Fractions of it were passed but the whole item was never passed. There was no legal basis for paying ministers without portfolio from February 1 on. There was no legal warrant, and parliament had done nothing to justify paying them after midnight on January 31. We had parliament dissolved, of course, in a fashion that might have been more difficult if Mr. King had not taken the stand he did in 1926. Since the Prime Minister referred to it, I refer to it. But in any case, as I say, I do not want—

Mr. Diefenbaker: I wish the hon. gentleman would—

Mr. Pickersgill: Oh, I am sure the Prime Minister does, and I am not going to respond

to his invitation. The Prime Minister would much prefer me to talk about something else than about this matter. Here is the situation, and I am going to use, as nearly as I can, the same terms that I used before lunch. On February 1 and from then until March 31 these gentlemen who had dissolved parliament, who were spending billions of dollars of the taxpayers' money by order in council, also dished out by order in council a further sum for two of their members when there was no statutory basis of any description for such action.

The Prime Minister did not say anything about it, but I also read the passage from the Financial Administration Act justifying governor general's warrants. Under that provision a minister has to certify that the payment is urgently required for the public good. There might have been some difference of opinion whether it was urgently required for the public good that we should have ministers without portfolio at all, but I suggest that is really a matter for parliament. There was no appropriation for payment, and the Prime Minister certainly would not have asked for a governor general's warrant if there had been any. There must be a report from the appropriate minister that the payment is urgently required for the public good.

Well, sir, if the Prime Minister did not think it was urgently required for the public good—he told us earlier today that he thought there was some question about it—to make payments into the national capital fund when parliament was not in session, even though the fund had been in operation for a number of years in a statutory way under the same kind of statute as this, it does not seem to me that there was any kind of excuse under the law for these payments under governor general's warrant to two members of the government.

The Prime Minister has produced an analogy, of course, on which I am not going to waste any time because it is not an analogy at all. The item he dug up in the estimates for 1955-56 has no more relevance to the subject before the house than the phony precedents we had the other day when the hon. member for Ottawa West brought up the question of the F.D.C. employees. I do not accept it at all.

There is perhaps a little argument in the Prime Minister's reference to the provision for parliamentary assistants. I should like to recall to the Prime Minister's mind in that context that when parliamentary assistants were first provided for, Mr. Mackenzie King did not appoint them on the basis of voting one-twelfth of the amount. They were not appointed until the full estimate had been debated and approved in parliament, and was a statute for one year.

It is quite true that the remuneration was voted from year to year and that there is no continuing statutory provision for parliamentary assistants. I am speaking from memory now, but I think that has always been true. However, I may say that neither Mr. St. Laurent nor Mr. Mackenzie King ever asked parliament to vote sums of money as we were asked to do the other day when we were ineffectual in our attempt to reduce the amount, that could not properly be spent in this field.

What I am saying is that it is the use in the first place of governor general's warrants to pay ministers, with no statutory foundation for it whatsoever, as the Prime Minister admitted was done, that is perhaps the most serious of all the objections I have. Second, I am still of the opinion—and the fact that the Prime Minister skated all around this point makes me more confident than I was right before lunch—that the hon. member for Greenwood and the hon. member for St. John's West were probably—I say "probably" because I do not like to pretend to be certain of things about which I am not certain—in contravention of the Canada Elections Act because they were receiving emoluments from the crown under governor general's warrants at the time they were candidates.

I say "probably", and I welcome the Prime Minister's offer to get an opinion from the law officers of the crown on this point; because while I have no intention and the Prime Minister knows I have no intention of taking this into the courts—I do not really think that argument was quite worthy of the Prime Minister—

Mr. Diefenbaker: Is that not the place?

Mr. Pickersgill: No, that is not the place. Here we are in what the Prime Minister's predecessor as leader of his party used to describe over and over again as the highest court in the land. Personally I know that the parliament of Canada is not a court. The parliament of England is a court but the parliament of Canada, particularly this house, is not a court. The Prime Minister knows that, and I do not think he has ever used the words of his predecessor that the parliament of Canada is the highest court in the land. However, certainly it is the highest assembly in the land and the historic basis of this assembly, the reason its ancestor in Britain was called together in the first place, was the desire of the crown to get funds from the subjects to carry on the government.

The crown today is represented in this house by the crown's first minister, and he is now craving our support for an item of $15,000 as remuneration for two members of his government who have no statutory basis for their remuneration. That is what we are being asked to do in this item. We are being asked to provide funds until March 31, when there will again be no statutory basis. We, the elected representatives of the people, are being asked to vote this money.

Mr. Diefenbaker: Could I ask the hon. gentleman a question? I do not know the answer to this myself. Did he not say a while ago that there was a statute creating parliamentary assistants?

Mr. Pickersgill: Oh, no, not at all, except to this extent; that there was an appropriation act, which is a statute, but I did not make the statement to begin with. I said that the appropriation for the full year had been passed, not just a fraction of it as happened last fall in this case, and it was done after a full debate in the house, which I remember personally though I was not in the house. Therefore there is no analogy there.

I come back again to the fact that we are being asked at this time to vote $15,000 to pay these two very estimable gentlemen who are members of the government and for whom the previous parliament had made no continuing provision. That is what we are being asked to do. That is what the Prime Minister has us here to do at this moment. What I am saying is this. The government anticipated two things. They anticipated that they would want to continue to pay these ministers and they anticipated correctly that they were going to win a victory at the polls. Therefore they paid these two gentlemen by governor general's warrants.

I say that was something no government should have done, that the last thing a government should do without parliamentary authority is to make payments to its own members. That is what was done by these governor general's warrants. That is the last thing a government should do. To make payment to their friends would be bad enough but to make payment to themselves is much worse, and that is what they were doing. They sat there in cabinet meeting some time between February 1 and March 31 and said, "Well, we will give these fellows a little dividend to help them out until the election." That is what happened. Perhaps I have put it rather crudely, as some of our constituents might have put it, but that is what happened and there is no getting around it.

On the point of whether this disqualified the hon. member for Greenwood from being a candidate, it is my opinion on reading the statute that it would appear to have done so. But I welcome the Prime Minister's offer to get us a formal opinion on the subject from the law officers of the crown. I will not say anything more about it until we have that opinion, because I certainly would not wish to set up my opinion against theirs.

Now, sir, if the hon. gentlemen were improperly elected because they were unqualified to be elected, and if at the time they were elected they were receiving an emolument from the crown, as has been admitted they were, it would appear to me that there would still be a pretty strong argument that, even if they did not receive any further emolument between the date of their election and the date of the passing of the first interim supply bill, they were nevertheless improperly elected and should not have been here. There again I am not going to pit my opinion against the opinion of the law officers of the crown. I would very much welcome, because I think this is a very interesting and important constitutional point, having that opinion.

One thing upon which nobody needs an opinion, one thing that is within the jurisdiction of this house, is the question of whether or not we are going to condone the practice of the members of the government handing out sums of money to themselves by the use of governor general's warrants at a time when there is no parliament. As the Prime Minister has told us, that is what did happen in this case. I think it casts very grave doubt upon the position of both hon. gentlemen in the house. About this one point there seems to be no controversy whatever. It does seem to me that the sooner the government introduces proper legislation to regularize this situation and bring any remuneration that is paid to ministers without portfolio under the Salaries Act, as is done in the case of other ministers, the sooner we will remove any chance—

Mr. Diefenbaker: What about parliamentary assistants?

Mr. Pickersgill: I think if we are going to continue having parliamentary assistants we can say that the experimental phase, from 1942 to 1958, is over and that we might now take the risk of having permanent legislation on this subject. Since the Prime Minister has mentioned the subject, I might say that it appears the experimental phase is not over. We have the absolutely preposterous situation, and I am glad the Prime Minister reminded me of it, of $56,000 having been voted by this committee to pay parliamentary assistants who do not exist and who cannot possibly receive a good part of that sum. However, the government insisted on ramming that through over our objections. On the

other hand we have two ministers receiving money that has never been voted by parliament. It seems to me this is really worthy of Alice in Wonderland or Through the Looking Glass.

Mr. Pearson: Before we leave this particular point, I think it has been made quite clear, in view of what has been said and the argument that has been developed, that there is some doubt as to the legality of the procedure adopted for the payment of these ministers without portfolio. The Prime Minister himself has indicated that there is doubt as to the proper application of the act in this connection.

Surely, Mr. Chairman, if that is true the best way of removing that doubt is not to follow the suggestion he made—he could not have made it very seriously—that we take a case before the courts. Surely the best way to do that is for the government itself to get the views of the law officers of the crown on this matter. If that legal opinion justifies the position we have taken—and it is an important and serious matter affecting the privileges of parliament about which the Prime Minister has talked so often over so many years—then it is incumbent upon the Prime Minister to regularize what has happened and prevent it from happening again by taking the necessary legislative action.

Mr. Diefenbaker: If it had not been for the intervention of the Leader of the Opposition I would have said nothing further, because the hon. member for Bonavista-Twillingate pretty well covered the entire situation. By the time he concluded I thought he had pretty well proven everything he had set out not to prove. In other words he had established the validity of the stand taken by the government in this connection.

So far as the regularity of what has taken place is concerned, there has been nothing said here that in any way would lead anyone looking at the matter objectively to conclude that what was done was in any way a derogation of parliament, and with that I rest.

Mr. Chevrier: The matter I should like to take up with the Prime Minister is not along the same lines as the one which has just been discussed. Strictly speaking, Mr. Chairman, I am perhaps not in order, but in view of its importance and in view of the fact that it concerns the Prime Minister I hope he will allow me to bring it to his attention at this time.

This matter has to do with a suggestion the Prime Minister has made, I believe, on more than one occasion concerning the census and the fact that an individual should not be required to state his ethnic origin. I thought perhaps I might say just one word in connection with it today. I should like, as objectively as possible, to state the reasons why I should like to bring it to the Prime Minister's attention. The matter is one which has been of particular interest to my compatriots in Quebec, and also in other provinces in Canada.

It has seemed to them that if that suggestion were put into effect it might well work not only a hardship but great difficulties. I know the Prime Minister's attention has been drawn to this subject by a number of organizations across Canada. For instance, I believe that la fédération des associations de parents et d'instituteurs de langue française d'Ontario have written the Prime Minister, as have l'association canadienne-française d'éducation d'Ontario, and the point they made and the point which I should like to reiterate on their behalf is that it is not felt by them that the leaving in of the ethnic origin is a matter which will be conducive to disunity. On the contrary, they feel that it will be conducive to unity. They say, and have so asserted, that they are quite favourable to union and unity of all Canadians of all origins, but always in diversity. They say that what makes the strength, grandeur and originality of our country is the respect for the diversity of origins and various cultures which develop loyalty to the country and to the crown.

They also make the point that the slightest attempt or the slightest infringement of the spirit of the constitution and of the program they have set out for their people would be, in their opinion, a source of difficulty. They go on and state that they have in the past relied a great deal upon information of the ethnical origins of their people from one end of the country to the other. There are, as the Prime Minister knows, associations like the ones I have mentioned in practically every province of Canada save perhaps one or two.

While I am not speaking for all of them, I think I speak for the group that brought this matter to my attention. They state that the information they get from the national census has been of tremendous assistance and importance to them in the development of our traditions, our customs, our culture, and in a comparison of these things with other groups across Canada.

Then I should like to state that in a letter which was addressed to the Prime Minister by l'association canadienne-française d'éducation d'Ontario they point with particular emphasis to a paragraph contained in the report of the royal commission on arts, letters and sciences, which can be found at page 4. It is difficult for me to translate it without more

time so if the Prime Minister will allow me to do so I should like to read it as it is. It is as follows:

(Translation):

That it is desirable that the Canadian people should know as much as possible about their country, its history and traditions; and about their national life and common achievements; that it is in the national interest to give encouragement to institutions which express national feeling, promote common understanding and add to the variety and richness of Canadian life, rural as well as urban.

(Text):

From those two statements, the one which I took from la fédération des associations de parents et d'instituteurs de langue française d'Ontario and the other from the royal commission on the arts, letters and sciences in Canada, it would appear that valuable information would be taken away from these groups if in the future it were not possible to obtain the ethnic origin of the citizens who are registered under the act. In making that statement I speak, I am sure, not only for many of the members of the opposition but equally for many of the members of my hon. friend's party. I know I have had the opportunity to speak not to all of them, of course, but to some of them, and I think they feel as strongly as I do and as strongly as these associations on the matter.

I do not want to overstate the case, because the Prime Minister has been good enough to listen to what I have had to say notwithstanding the fact that perhaps I am not strictly in order. All I want to do is state that while this matter may not be determined for some years, nevertheless I appeal to the Prime Minister to give consideration to what I have said and to the representations that have been made by these associations. I feel that he will do so.

Mr. Diefenbaker: Mr. Chairman, I do not know the basis for this discussion, and the hon. gentleman quite frankly admitted that he was out of order. However, I am one of those who like to hear things discussed in parliament. Particularly when the opposition has anything to advance, I would be the last one to rise and object to discussion, even if it was irrelevant.

As far as any references to myself may be concerned, may I say that I do not know the basis upon which they were determined. There has never been any discussion of the matter. That is a matter for the Secretary of State. There has never been anything whatsoever done or said which would indicate any basis for this discussion at this time. I am glad the hon. member, speaking with obvious conviction, placed his viewpoint before the committee. I am sure the manner in which it was presented would certainly be such as to commend itself to the listeners as it did to me.

Item agreed to.

Privy Council Office—

309. General administration, $470,046.

Mr. Fisher: When I yielded the floor three hours ago, Mr. Chairman, I did not think that is was going to take so long to get it back, but it was a very pleasant diversion. I am sure we all enjoyed the exercise in parliamentary wit or brilliance. The point I was making, Mr. Chairman, to the Prime Minister was in connection with the quick reply of the government to United States allegations that might have called in question the position and attitude of the secretary to the privy council. What I want to raise has something to do with a domestic matter, but I think it is just as important because it is along the very same line. I have in my hand something which was circulated to all members of parliament and which is entitled.

Comments by CHWO on "This is Your World Today", 6.40 P.M.—Wednesday, August 6, 1958.

This is an attack upon the so-called lobbying activities of the Canadian broadcasting league in its attempts, I suppose, to put forward its position to the government. This attack is by a radio broadcaster, and I suppose it is from the point of view of the broadcasting people. There are a number of statements in this document which are in very bad taste in the matter of the Queen's first representative in this country, and the fact that it is hinted—

Mr. Diefenbaker: May I ask the hon. gentleman who produced this document? I do not know what the document is.

Mr. Fisher: It has been produced by radio station CHWO at Oakville, and copies have been sent to all members of parliament. The references to the Queen's first representative indicate that he has supposedly financed this radio league. There are inferences here or implications, as I take it, that he seems to be still exerting an influence. But we can leave that matter aside. On page 2 this attack against the Canadian broadcasting league gets down to this:

Meantime, two other names are often used by people in reference to radio league influence in high places. One is cabinet secretary J. R. Bryce. The other is Mr. Dunton himself—

And it goes on to rail against them. Then the concluding part of this particular broadcast that has been circulated states:

The remarkable thing about the radio league—the broadcasting league—call it what you will—is that party labels have held no special terror for it.

The organization has worked as assiduously to influence Conservatives as Liberals. It is doing so today.

Perhaps this thing should have been allowed to lie or to be forgotten, but the suggestion has been introduced by this propaganda that somehow through the secretary to the cabinet there is a means of influencing the government with regard to radio policy in the interests of this particular lobby. It seems to me that makes upon the holder of the position and the link he has with the cabinet a reflection that needs a denial, that needs some statement by the government that this is nonsense. It seems to me that as long as this particular legislation is before parliament and until the new set-up gets going, there will be a continued campaign by the private interests against some of the aspects of it.

If this is a part of their campaign it is a part that calls in question, I would say, the loyalty of and suggests bias on the part of the cabinet secretary. That is most unfortunate. I do not know what anyone can do about the way in which it comments upon the first representative of the crown in this country, but I certainly think the Prime Minister should be in a position to deny completely any suggestion or implication that the cabinet secretary has been influential in giving the Canadian broadcasting league any special "in" with respect to influencing the cabinet.

Mr. Diefenbaker: I think the whole thing answers itself, Mr. Chairman.

Mr. Pearson: It certainly does.

Mr. Diefenbaker: I am really not in a position to police the thinking—and I hope we never arrive at the point where we do so—of people within the civil service of this country. I cannot follow this at all; I do not understand what is the essence of the document or of the representation made. I feel that more attention has been given to it—and I am sure the hon. gentleman agrees with me—than is merited by the article in question, or the representation that was made in some document produced here.

Mr. Fisher: Mr. Chairman, I do not mind being brought up short by a sort of suggestion that it is almost useless to raise this matter. I say that there has been a comment about a man who is very close to the cabinet. When we are considering these estimates I just thought the point ought to be made—and I am just making the point that it is wrong for this kind of statement of propaganda to stand; not that you can stop it, but surely trying is worth while.

[Mr. Fisher.]

Mr. Herridge: I would like to ask the Prime Minister a rather delicate question. I hope he will not misunderstand my attempt to be helpful as he misunderstood me on a recent occasion. Would the Prime Minister tell the house the date when the details of the arrangements for Her Royal Highness Princess Margaret's visit to Canada were made?

Mr. Diefenbaker: I do not have that information, Mr. Chairman, but I must say if I were in the position of having such information I would be possessed of something far and beyond my memory's capacity. I have no records in that connection.

Mr. Herridge: Just on that point, might I ask a second question. In view of the fact that Her Royal Highness, during her farewell address, expressed regret that she had not had the opportunity of visiting the provinces of Manitoba, Prince Edward Island and Newfoundland, and in view of the fact that information given to me indicates that these arrangements were made some time ago, could the Prime Minister tell the house the reason why arrangements were not made for her to visit those three particular provinces?

Mr. Diefenbaker: I am unable to answer that question. A hospitality committee was set up and the arrangements were made based upon the desire to ensure Her Royal Highness of a suitable and satisfactory visit to Canada. The fact is that not only were three provinces omitted but many urban centres which would very much have liked a visit from Her Royal Highness were also omitted. The hon. gentleman will recall that in the latter part of her remarks when she spoke to Canada the Princess said that she would look forward to coming back and to visiting these three provinces. At that time, I am sure, every opportunity will be given to her to see those parts of Canada which on this occasion, because of the limitation of time, she was unable to visit.

Mr. Fisher: There is one point which I previously tried to bring to the attention of the Prime Minister in an attempt to find out something about the possibility of a discussion or any other sort of debate at some time with respect to the Canada Council and its activities. As the Prime Minister knows, we cannot really even ask questions about the council—it is rather out of order—but I do know that one of the main reasons for the way in which the Canada Council was set up was that it should be removed from all political interference.

There are, however, a number of interesting points which have arisen—at least in my mind—in connection with the council. I am thinking specifically of the institutions which

the council recognizes as being eligible for grants and I wonder whether the Prime Minister could give us any information on this point.

Mr. Diefenbaker: I cannot see any opportunity to discuss this question on the item under consideration. The hon. gentleman was very fair in his presentation of the situation, which he seems to fully realize.

I have been thinking this matter over since the occasion some time ago when it was raised by the hon. member, and while there is every endeavour to maintain the council, under all circumstances, free from any considerations which might imply political interference of any kind whatsoever, I suggest that at the next session an opportunity might be given for such a discussion. I say this because I am sure that the hon. member is not anxious to start an investigation of this matter at this time although, if he is, I am sure hon. members would immediately fall into line and would say they would be very much in favour of so doing. However, at the next session I would suggest that the annual report be submitted to a committee of the house.

I feel that the viewpoint of the hon. gentleman is one which deserves consideration and I, for one, would be willing to agree, if the house consents, to the setting up of a committee to consider the annual report of the council, which I think would be beneficial to all.

Mr. Fisher: I would like to thank the Prime Minister for his remarks. This is a matter which may not be of great importance to many members, but I do think this would give an opportunity to those of us who are interested to find out more about the council.

Item agreed to.

Special—

311. To provide for the expenses of the royal commission on energy policies including the payment, notwithstanding the Civil Service Act, of honoraria or allowances as may be authorized by the treasury board to officers, clerks or employees permanently employed in the civil service for services rendered by them to the commission, $250,000.

Mr. Pearson: I wonder if I could ask the Prime Minister, although I know he has dealt with this matter previously, if he could give us any more recent indication of the date when this royal commission on energy policies is likely to make its interim report and how long he thinks the work of the commission will extend beyond the date of that particular report? I am quite sure that the chairman of the commission is anxious to bring his work to a conclusion at as early a date as possible.

Mr. Diefenbaker: I regret that I cannot furnish the Leader of the Opposition with any information in addition to that already given. As the committee knows, the public hearings began in Calgary in February and subsequent hearings were held in Victoria, Regina, Calgary, Winnipeg, Toronto and Montreal. In view of the urgency attaching to the current problems of the petroleum industry, including natural gas, the commission decided it would concentrate in the first instance on those sections of its terms of reference dealing with these subjects.

The public hearings terminated in Montreal on July 23. Further hearings of the commission, as I have already said, I believe, on one occasion in answer to the hon. gentleman, will begin in the early fall of this year, or the beginning of the new year. I am not saying that this is when the resumption will take place, but in the meantime it is hoped that a report on the above mentioned subjects will be ready by this fall.

Very intensive study is being given to the problem, which is one which has brought about a very large number of submissions by representative bodies across the country, including oil and gas conservation boards, petroleum companies, oil companies and others. In general, in those provinces where the commission has met, a very great many representations have been made because of the intricate nature of the problem and the need for representations to be made in order to provide a sound basis for the expansion and development of the oil industry, which has become one of the major producing industries in Canada.

I can only say to the Leader of the Opposition that the fullest consideration will be given to the interim report. Once that report is furnished, then parliament will be in a position to give that consideration to the problems which the basic information and the recommendations of the commission will make possible.

Mr. Pearson: May I just ask the Prime Minister whether I understood him correctly to say that when the interim report has been completed there would be an opportunity for parliament to discuss it even though the final report might not be ready?

Mr. Diefenbaker: At the moment I can see no reason why there should not be discussion of that, because in securing an interim report the desire of the government is to have solid research information available to the end that problems of immediate incidence and importance may receive the earliest attention on the part of parliament.

Mr. Herridge: I just want to bring one matter to the attention of the Prime Minister

under this estimate pertaining to the expenses of the royal commission on energy, and it applies to other royal commission reports. Under the present system we are supposed to check off on the daily check list those publications we would like to receive, and, strictly speaking, if we fail to do this within 10 days we are required to pay for them. But hon. members are very busy indeed, and it is quite easy to overlook some of these important reports. I find that in some cases members do, in fact, receive them without making application while in other cases there is an extension of the 10 days period, and so on. I suggest that when it comes to questions such as reports of royal commissions, these reports should automatically go to every member of parliament.

Mr. Diefenbaker: I cannot disagree with the hon. gentleman. Indeed, I was under the impression, having regard to the number of reports which came to my office when I was a private member, that reports of royal commissions were made available as a matter of course. Certainly, such reports should be made available to all members, for unless they are studied by hon. members they become worthless in so far as intelligent discussion in the house is concerned.

Mr. Herridge: I find I have made a slip. The reports are received by members, but not the studies, unless application is made.

Mr. Diefenbaker: I am not going to take the same position with regard to studies because there is a vast amount of material and, I presume, I am one of those who does not like to study all the evidence upon which the reports are based. I take it that on the submissions presented, a royal commission makes recommendations supported either by a preponderance of evidence or the circumstances peculiarly available to the commission. It has never been my understanding that the representations as such, and the preliminary studies, were made available to hon. members. I am sure that if any hon. member desires to have them he may do so, but most members—and I belong to that class—do not possess that desire to be overwhelmed with detail such as would be the case if a complete study were to be made, comprehensively, of all the bases upon which royal commission reports are furnished.

Item agreed to.

312. To provide for the expenses of the royal commission on price spreads in food products including the payment, notwithstanding the Civil Service Act, of honoraria or allowances as may be authorized by the treasury board to officers, clerks, or employees permanently employed in the civil service for services rendered by them to the commission, $150,000.

[Mr. Herridge.]

Mr. Pearson: Mr. Chairman, I should like to ask a similar question on the royal commission covered by this particular item, the royal commission on price spreads in food products. I should like to know how it is getting on and when it is likely to report. I know that once a commission gets into this particular subject of price spreads it can go on and on and on. I realize that the members of this commission are men of intelligence and industry, and that they are doing admirable work, but I was wondering what limitation the government is putting on this study and when it is likely to be brought to a conclusion. I recall in the thirties starting off as secretary of a parliamentary committee on price spreads. Incidentally, that committee was a parliamentary committee which began its work in an atmosphere of excitement and partisanship and which was transformed into a royal commission when it worked more constructively—an interesting precedent. I know that when this committee began its work it felt it could be completed within a few months, but it went on for two years.

Mr. Diefenbaker: As the hon. Leader of the Opposition says, this is a very difficult assignment which has been given to this royal commission, and the Leader of the Opposition speaks with authority beyond that possessed by any other member of the committee, for when Mr. Bennett set up the royal commission on price spreads the hon. gentleman was the secretary of that body and he has full knowledge of the difficulties of investigation and the ramifications of the problems.

The research program conducted by the staff of the commission, with assistance from government departments, began along three lines:

(a) Analysis of price data and measurement of over-all aspects of the commission's problem, including changes in consumer expenditures on food, changes in receipts of primary producers from the sale of food products, and changes in the over-all cost of processing and distributing food products over the period from 1949 to 1958.

(b) Studies of particular aspects of the marketing of food products in relation to price spreads, including transportation, storage, packaging, advertising, wages and productivity, the effects of co-operatives and marketing boards, and the nature of competition and profitability of firms engaged in food marketing.

(c) Commodity studies, covering those that make up a large part of the consumers' expenditures on food and those that are most important in the incomes of producers.

I know of no commission which is more important than this one so far as agriculture and fisheries are concerned for, after all, the primary producer, the farmer and the fisherman, has certain costs which are basic, and the larger the share of the consumer dollar

expended for the particular commodities which becomes available to the primary producer the better the return to the farmer and the fisherman. This is one of the major facets in agricultural policy; in other words, that within the limits of a fair and reasonable return for the intermediary, the wholesaler and the retailer, assurance should be given that the producer shall not suffer as a result of improvident and excessive advantage to intermediaries between the producer and the ultimate consumer.

So important is this that I feel that the members of this commission have a most responsible and exacting task. Over the years this type of investigation has been requested by the Canadian Federation of Agriculture, by the farmer's union and also by fish producers. I cannot say when the report will be available. The commission is applying itself very diligently but I am unable to give the hon. gentleman even an approximate date. In this case I was of the opinion that a matter of three or four months would pretty well cover the responsibility. I was assured by the chairman that my views in that regard were too optimistic because of the ramifications of the problem and the various facets that are faced from day to day. I can only say they will make a report at the earliest possible date.

Mr. Argue: Mr. Chairman, it is certain that the problem to which the Prime Minister has referred, namely of reducing the spread between the prices paid to the primary producer and those charged to the retailer, is a very important one. Agricultural producers are looking to this royal commission in the hope that following its report and the subsequent action flowing out of the report the trend which has been prevalent for some years will be reversed. The trend to which I refer is that which has meant the producer has received a decreasing part of the consumer dollar spent on food. There is no doubt that the whole field into which this commission is inquiring is of great importance but the inquiry is of importance itself only if it leads to some concrete action. We shall look with interest to the report that is made and we shall look with even more interest to the action taken following the report.

I do not believe it is necessary to wait for the report to do something in the interests of the agricultural producers of this country. I refer, of course, to the necessity of improving the prices that are paid to producers. Following the report that may be made by the royal commission I believe the government should consider the whole question of price controls. While the government does not provide a system of price controls at the retail level, nevertheless every positive action it may take by way of price legislation to help producers is by way of management or control or in other ways influencing the prices paid to the producers. I refer, of course, to the Agricultural Stabilization Act, to initial payments that are made by the Canadian wheat board and to other measures that are adopted from time to time.

We shall await the report of the royal commission with interest and shall press the government for whatever action the commission may recommend that may bring about this very desirable result. Important as the report will be it will require subsequent action to meet the important problem that farmers face of receiving year after year a constantly diminishing share of the consumer dollar.

Mr. Diefenbaker: Mr. Chairman, I do not wish to stop my own estimates going through but I do believe that the actions taken by this government have indicated its desire to assure agriculture of a fair share of the national income. The steps taken so far have been progressive steps. The first was to provide financial assistance through cash advances and that has worked out exceptionally well with little or no loss to the state. The second step was the broad plan of a price stabilization establishment in respect of various agricultural products. I am not exhausting what has been done when I mention as a third step the setting up of this royal commission which was established because of the general request through the years on the part of farm organizations for this investigation. We do not set up royal commissions for the purpose of making findings upon which no action will in any way be taken.

I would not have said that were it not for the fact the hon. gentleman talked about price controls. I do not wish to leave any misapprehension in his mind on that question. I am one of those who believe that the price controls effective in time of war because of the mobilization of all the people in the state would be less than successful in times of a reasonably free economy. I know the hon. gentleman will not misunderstand me when I bring to his attention the fact that the government of Saskatchewan in 1946 brought in legislation which was to be established upon proclamation whereby the prices of various products would be fixed by the state and any one failing to adhere to the prices fixed by the board set up for that purpose would find himself subject to a penalty or in the alternative subject to a jail

sentence. But that legislation was never proclaimed within Saskatchewan because if it had been, as I said on one previous occasion, there would have been only two classes of people in the province, those in jail and those waiting to get in after the others got out.

I know the hon. gentleman did not have that in mind when he spoke about fixing prices because what the state can do is to provide the means through fair and reasonable legislation whereby the farmer and other primary producers shall be placed in a position in which they will not be subject to unjust and unfair competition and that their prices shall bear a fair relationship to their costs.

I am not going to argue the case of the stabilization legislation but that was the basis of that legislation. I can tell the hon. member that in so far as this royal commission is concerned I hope that out of a multiplicity of representations will come reasonable and fair conclusions upon which parliament can act. I give him that assurance. I was hoping those recommendations might come earlier. As a matter of fact it was the farm organizations that brought to my attention the fact it would take much longer than the comparatively short period I had in mind to secure a full and accurate summary of the situation to the end that legislative enactment might be based thereon.

Mr. Argue: Mr. Chairman, the Prime Minister has outlined some of the things the government has done by way of an agricultural program. The program of cash advances is one I advocated for many years along with other hon. members of this group. I take second place to no one, not even the Prime Minister, as an advocate of that type of policy. I share with him the general satisfaction he felt that the program of cash advances within the conception of the act has worked out reasonably well and that the excuses given by the former administration as to why this could not be done through the existing machinery, namely the Canadian wheat board, were not in fact valid and that the wheat board has been able to handle this legislation.

However, I think we should all keep cash advances in perspective as to what they really do. During the fall months they enable farmers to get an advance on expected sales of grain over the 12-month period but apart from the saving in the interest rate generally speaking they do not add to the economic position of the farmer. They do not increase his real income over a one-year period except to the extent that he is able to make a saving with respect to interest on the money obtained through cash advances.

[Mr. Diefenbaker.]

The Prime Minister referred to the government's price stabilization policy. As far as I am concerned the price stabilization policy and the floors established thereunder have not been such as to give the farmer a fair and reasonable return or provide him with adequate parity prices as promised by the government in two election campaigns. I have said that in order to protect the producer there must be a system of price controls by way of supports for those products that the producer is engaged in producing and marketing. I certainly stand by that statement. The Prime Minister has said that he is not in favour of the type of price controls used during the war but it is certainly a form of price control to establish a floor price for butter. It is certainly a measure of price control to say that a deficiency payment will be paid on soybeans in order to bring about a certain result. Every action that the government takes to stabilize agricultural prices is in itself a measure of control over those prices.

I have said that the government's agricultural price stabilization policy has been a disappointment to me and members of the C.C.F. and farmers generally. Although I do not have the quotation on my desk, I can bring as my witness Mr. Turnbull, second vice-president of the Saskatchewan farmers union and a member of the advisory committee under the Agricultural Stabilization Act. He has said that the act has not increased the economic welfare of the average farmer as he would like to see it improved. He has gone much further and has said that in the main what the act has done is to help the very large farmers. These are the comments of this farm union official.

We shall await with interest the report of the royal commission and any subsequent action the government may take but as far as I am concerned I want to make it crystal clear that since June 21, 1957, no adequate improvement has taken place in the position of the agricultural industry. In particular I refer to the final payments made on wheat a few weeks ago which were the smallest made for many years. I know that the Prime Minister has often said that he has under active consideration further measures to aid the grain producers of western Canada.

The Chairman: Order. I regret to interrupt the hon. member but I believe he is straying quite a bit from resolution 312 which deals strictly with the salaries of officers, clerks or employees permanently employed in the civil service commission for services rendered to the royal commission on energy. It would be appreciated

by the chair if the hon. member would try to stay as close as possible to the resolution under study at present.

Mr. Argue: I appreciate, Mr. Chairman, the very fine way that you have governed the affairs of the committee when you have been in the chair in recent weeks and the fact that you have made it clear that you will extend to every member of the house the same latitude that you have extended to others. It was the Prime Minister who referred to cash advances, the agricultural price stabilization policy and the general conception of price control. He even referred to Saskatchewan and spent some time on a certain act that had been placed on the statute books in 1946. I was about ready to conclude my remarks on this subject. The grain producers of western Canada are awaiting with great interest and expectation the long delayed announcement on the very important and controversial question of deficiency payments. They are hoping that adequate action may yet be taken in this regard which, I suggest, will provide another measure of price control based on the concept that the grain producers, together with people in other sections of the agricultural industry, are entitled to adequate parity and a fair and reasonable return on their production.

Item agreed to.

154. Office of the secretary to the Governor General, $202,521.

Mr. Regier: This morning the Prime Minister stated that he would be able to supply me with the information as to the total amount of the loans made to the F.D.C. and how much is still to be repaid. Would the Prime Minister like to give me that information now?

Mr. Diefenbaker: Up to date $2½ million has been borrowed for the purchase of land, and $2,300,000 has been spent.

Item agreed to.

The Chairman: That completes the estimates of the Prime Minister.

DEPARTMENT OF FISHERIES

General services—

130. Departmental administration, $371,750.

Hon. J. A. MacLean (Minister of Fisheries): Mr. Chairman, in introducing to the committee the estimates of the Department of Fisheries I first want to point out that the estimates have been very carefully and thoroughly considered by the standing committee on marine and fisheries. I wish to take this opportunity to congratulate the members of that committee on their very fine, constructive attitude towards the problems of the Department of Fisheries and for the contribution they made in the consideration of the estimates of the department. I may say that they showed complete knowledge of the fishing industry in the whole of Canada. That is not surprising because the committee had on it members of parliament representing all the major fishing areas of the country and many of them at one time or another have been directly engaged in that industry. Therefore I can say without reservation that all parties in the house were extremely well represented on that committee by members who contributed a great deal to its proceedings. For that reason my remarks will be brief but there are a few points I should like to mention which I feel would be of interest to the membership of this committee.

To begin with, I should like to say a word about the economic situation of the industry at the present time. So far as the economic situation of the fishery generally is concerned, the three major factors are production, price to the fisherman and export markets. Although the fisheries are carried out in all areas at all times during the year, the months of greatest production are July, August and September. It is, therefore, too early to state definitively how production will stand this year. But the figures we have indicate that across the country catches will be up to those of recent years. In so far as individual species are concerned, of course, the catch in some cases will be higher, while in others it will be lower.

One of our greatest worries arose out of the very disappointing cod trap fishery in Newfoundland this year and now because of a failure of the squid fishery it is a difficult problem to secure adequate supplies of bait to keep the cod fishery going throughout the fall. I am happy to be able to announce we have found a source of herring bait at Yarmouth, Nova Scotia, which should help materially to meet this need. While herring is not as desirable as the local squid bait, it has always been used extensively throughout the maritime provinces. We hope it will be a reasonably satisfactory substitute for any shortage of squid which there may be in Newfoundland.

On the Pacific coast, we are just now entering the main salmon season. All indications point to an exceptionally large pack, particularly of the valuable sockeye species. The catch in most of the other major fisheries has been well up to average in all areas. Prices to fishermen are, of course, related to the supply situation and to the demand, both at home and abroad. In Canada, while we are still

relatively light fish eaters in comparison with other countries, there has been a slow but gradual upward trend in per capita consumption. The department is continuing its efforts through its consumer service, and by other means, to keep this movement going. Demand in the United States, our principal market of fresh and frozen fish, has also been strong. The current market position for these forms of fish is one example of low stocks and gradually increasing prices. For example, the price of frozen cod fillets is three cents per pound higher and that for frozen haddock fillets five cents per pound higher than a year ago in the major wholesale market at Boston.

The expected high salmon pack this year will coincide with a higher allocation of dollars by the United Kingdom, our principal market. However, it may well be that some of the expected large 1958 production will have to be carried over into the 1959 marketing year when supplies are expected to be much shorter.

Mention has been made on several occasions of the salt fish market problem. As I have indicated, there has been a very disappointing production in Newfoundland this year. Thus, while supplies will be lower there should be no great difficulty in marketing the reduced output. The large and valuable lobster fishery of the Atlantic coast provinces again gives every promise of a satisfactory year.

I do not wish to leave the impression that I am fully satisfied with all aspects of the fishery, and to suggest that there are not many old and new problems confronting the industry and the department. One of our major problems is that of ensuring good quality of all types of fish at all times. This is a very complex problem when we consider the diversity of the industry across the country and the perishability of the product. The government role in this field is essentially one of education and inspection, and we are stepping up our activities in both these fields. The inspection service is expanding its scope so that the consumer may be able to obtain fresh and frozen fish products inspected to conform to high quality specifications being prepared by this department in consultation with other government services and the fishing industry. The governments of the provinces have indicated their co-operation and approval of our entry into this field, so that this additional service will be truly national in extent. The government of the province of Quebec has requested that this department administer the inspection of fish and fish products for that province and steps are presently being taken to comply with this request.

[Mr. MacLean (Queens).]

Industrial development is another service of the department which has been expanding its activities in the past year. This service is designed to work with all branches of the industry in bringing new techniques into operation. The government's role here is one of testing, experimenting and demonstrating as well as giving encouragement to fishermen and the industry generally. In this field, we co-operate also with the provincial departments concerned and an Atlantic coast federal-provincial fisheries committee has been set up to provide for close liaison and full co-ordination in this field. This committee will also deal with other problems of mutual concern.

In the field of research, the fisheries research board is the operating agency and its expenditures are included in the estimates now before this committee. The activities of this organization cover not only biological, technological and oceanographic research but also there is a special unit based in Montreal concerned with developments in the Arctic area. This unit is endeavouring to learn more about the availability and life habits of fish and other marine animals in our vast northern waters.

One of the special fields of research which has become more and more urgent is that associated with hydroelectric developments in our major fish rivers. Engineering and biological studies in this field are being carried out, not only by the Department of Fisheries research board but also by such organizations as the international Pacific salmon fisheries commission. In addition, close liaison is maintained with the technical staffs of the United States fisheries agencies regarding progress and development in this important field. It should be of interest to note that expenditures for these studies by Canadian agencies in the Pacific area in the current year will be in excess of $700,000. The expenditures by both Canadian and United States agencies will total over $2 million. These totals refer only to expenditures for experimental devices and research and do not include capital expenditures for fish protective devices.

The problems under investigation range from laboratory studies of the basic behaviour patterns of juvenile salmon to large-scale field tests of devices for deflecting seaward migrating salmon into by-passes which will provide a safe passage around power dams.

Earlier I mentioned the difficulty we are having in securing adequate supplies of bait in Newfoundland arising out of the failure of the squid fishery in that province this year. I should like to point out that the Newfoundland bait service, which was taken over by

the federal department at the time of union, was designed to meet fishing conditions in Newfoundland as they existed prior to the last war. Since that time, and particularly since union, there have been many changes not only in the types of fishing being carried on in that province but also in the areas where fishing activities are of major importance. It, therefore, became necessary to reorganize the service to meet present-day conditions. Included in this year's estimates, particularly in the supplementary estimates, is provision for strengthening not only our freezing and storing facilities but also our distribution facilities so that as bait is secured we will be able to more adequately meet the needs of the fishermen in all parts of Newfoundland.

There are several other fields of activity where the Department of Fisheries and the research board are changing the emphasis to meet changing conditions in the fishery.

For example, we are undertaking to assist and expand the oyster fishery of the Atlantic coast through the development of better methods of providing seed oysters. On the Pacific coast and in the salmon producing areas of the Atlantic coast we are also undertaking major experiments in the improvement of spawning and rearing conditions, not only in the natural rivers but also in the provision of artificial spawning areas.

I have touched on only a few of the problems and plans of the department and the fisheries research board but, as I indicated in my opening remarks, we have already in the marine and fisheries committee given these estimates very thorough consideration and I trust that the committee, for the most part, will realize that that has been the case. In the committee on marine and fisheries I was delighted to find that there were no serious criticisms of the activities of my department. For this situation I take no personal credit but I should like at this time to pay a passing tribute to a very fine and dedicated group of public servants who are giving their full time and attention to the problems of the fishing industry as employees of my department. To them belongs the credit.

Mr. Robichaud: Mr. Chairman, I want to take this opportunity publicly to congratulate the minister in the name of the members on this side of the house of the official opposition on the honour which was bestowed upon him by Mount Allison University on Saturday last. In introducing his estimates the minister stated that the fisheries estimates were considered by the standing committee on marine and fisheries. I agree with the minister that the members of this committee took a constructive attitude in discussing the problems affecting the fishing industry. In dealing with the economic situation of the industry the minister stated that so far this year the catches are well up to those of previous years. At this point I must mention the fact that especially on the Atlantic coast the number of fishermen engaged this year in fishing operations is much larger than that in previous years. If present economic conditions are to prevail in the future it is expected that this number will increase in future years. In passing I wish to remark that this situation might be contrary to a part of the report of the Gordon commission which asserted that the number of fishermen would decrease year after year.

We were also pleased to hear from the minister that the prices of fish were satisfactory. He mentioned the prices of cod fillets and haddock fillets which were much higher on the United States market than they were at this time last year. We are also pleased to realize that at least some of the benefits of this increase in price have been passed along to the fishermen as the primary producers.

The members of this committee, Mr. Chairman, realize the importance of the fishing industry to the economy of our country. In the brief remarks which I intend to make at this time it is not my intention to criticize the Department of Fisheries but rather, if possible, to offer constructive suggestions directed toward improving the situation of our Canadian fishermen. We all know that the fishing industry is one of the oldest industries of our country. It has been part of Canada's pattern for over 400 years. The prolific fishing grounds of the North Atlantic led to the discovery of the North American continent. It is also of importance to realize that last year the total catch amounted to over 2 billion pounds having a commercial value of $200 million. It affected over 80,000 Canadian fishermen and a large number of workers in fish processing plants.

I also want to take advantage of the opportunity offered at this time to express my appreciation for the co-operation which we receive from the officers and staff of the department and of the fisheries research board. We understand the difficulties which are encountered by some of the officials in the field, especially those in the protection service. At this point I should like to repeat what I said when I first spoke in this house in 1953, namely that I should like to see the protective officers of the fisheries department giving more time and attention to the education of the fishermen. The protective officer could be more effective if he were to spend

more time at the end of the fishing wharf talking to fishermen when they return from the fishing grounds, explaining to them how to take care of their fish and showing them that it is to their own interest to protect the fisheries.

I was also pleased to hear the minister mention the fact that the inspection service of his department was expanding year after year and that the inspection of fresh fish, which this year will be on a voluntary basis, will be applied on a national scale.

I have made the suggestion that the protective officers should spend more time in educating the fishermen. At this point I want to say a few words about an education program which has been in existence in the department for some years but which should be extended. We realize that the ordinary elementary schools have not personnel qualified or trained to be practical and to give to the fishermen the education which they need in order to carry on with their fishing operations. The modernization of the fishing fleet in recent years make it much more urgent for a new concept of this major problem.

The extensive research which has been carried on by scientists of the fisheries research board has led to the introduction of new fishing methods and new techniques resulting in greater output and greater production. However, I repeat that more emphasis should be given to the practical application on a commercial basis of the findings of the research board. This can be done only by actual and on the spot demonstrations so that the fishermen can see for themselves and be convinced of the advantages offered by those new methods or techniques.

During the deliberations in the standing committee on marine and fisheries we were pleased to hear from the minister that a federal-provincial Atlantic fisheries committee had been formed. We welcome this new committee which we understand will have as its main duty that of showing to the fishermen in a practical way the findings of the research board.

If I recall correctly, during the period 1937 to 1947 a study was carried out by the fisheries research board of the federal department in co-operation with the Atlantic provinces, and the province of Newfoundland. Notwithstanding this lengthy experiment, in many areas of the Atlantic coast our herring fishermen are still using the same outmoded methods used by their great-grandfathers. I hope the fisheries research board will make the new methods if any known to the fishermen.

I understand that this summer in my own constituency at Caraquet, for instance, they are trying to prove the advantages and the possibility of the mid-water trawl for fishing herring, and I wish to say to the minister that if an experiment of this kind is to be truly effective it should be carried out during the entire fishing season. It should commence on April 15 and the fishermen with this new gear should look and fish for herring all through a whole season up to at least October 15. I was in my constituency about ten days ago and up to that time I understand that nothing has been done to establish whether or not it was possible to introduce a system of mid-water trawling for herring in the bay of Chaleur.

We have in Canada many schools, colleges and universities for agriculture; we have such institutions in probably all our provinces. We have, however, only two schools for fisheries, the school for fisheries at Ste. Anne-de-la-Pocatiere and the fishery school at Grande Riviere which is operated by the government of Quebec. I would again ask the minister, and through him his department, to give serious consideration to providing further and more effective assistance to our universities, especially to colleges or universities in the provinces in which fishing is one of the main industries, in order to train our fishermen to use and take full advantage of modern methods of fishing.

At this point I would like to deal with a problem which is of great concern to east coast fishermen. I refer to a support price or floor price for fish. At this very moment I realize our fishermen on the Atlantic coast may be receiving prices which are perhaps more attractive than those which they received at this time last year, but they have no guarantee that such prices will be maintained in the years to come. During the federal election campaign the Prime Minister himself made statements which I think should be placed on the record. In addressing a meeting in Charlottetown on February 27 the Prime Minister made certain statements which were reported in the Toronto *Star* of February 28 as follows:

> He told the audience of more than 1,100 which crammed the hall above the Roloway bowling club that the government was now considering providing the same kind of price support legislation for the fishing industry as it had for the farmers, although he acknowledged there were "difficulties in the way".

The Halifax *Chronicle-Herald* of March 25, 1958 contained a report of statements said to have been made by the Prime Minister on March 24 as follows:

> This government, he told the audience, was moving to stabilize prices for farm produce, and consideration is now being given to bring about "the application", on a similar basis, of this measure as it affects fish products.

The Halifax *Chronicle-Herald* of March 26 reported the following statement made at Yarmouth on March 25:

> Prime Minister Diefenbaker today promised federal price supports under fish and a firm stand on protection of Canadian inshore fisheries against foreign trawlers.

And further on it says:

> The Prime Minister said "We want to do that if you want it."

I wish the Prime Minister were now in his seat, because I would ask him what he meant by those words, "We want to do that if you want it."

The same article quotes the Prime Minister as saying that the Conservative government is taking the first strong step in the matter. The Prime Minister was at that time proposing that the national jurisdiction be extended 12 miles offshore in regard to fisheries, but I will deal with that particular point in a few moments.

I have in my hand a 1957 report on primary industry studies undertaken by the Department of Fisheries economic service, concerning the operations of modern long liners and draggers on the Atlantic seaboard. It is said that these operations have been going on during the past seven years and this service has given the industry and the department most valuable information. I wish to congratulate the department upon its initiative in this regard. In order to arrive at the figures, the official of the department in charge took 125 boats, divided among the different Atlantic provinces, in order to get an average of the landings, the returns and the cost of operation for these fishermen in the year 1957.

The report shows that in Nova Scotia the 50-foot to 60-foot dragger had a deficit of $2,059; the same type of dragger in New Brunswick had a deficit of $495; in Prince Edward Island the deficit was $1,070; and in Quebec $1,767. The same report shows that in order to break even the fishermen in the different provinces should have had a minimum price for their fish and this price varied from 2.7 for a 45-foot to 50-foot dragger in Nova Scotia; 2.5 for a 50-foot to 60-foot dragger in New Brunswick; 3.074 for a 50-foot to 60-foot dragger in Prince Edward Island; and 2.0 for a 50-foot to 60-foot dragger in the province of Quebec. I also have a report for 1956, and there is very little difference in the deficit encountered by the fishermen and the average price received by them for their fish.

I have, in addition, a statement made by Mr. C. E. Desourdy, general manager of the Quebec united fishermen, and I would like to quote from the review published by the fisheries school at Ste. Anne-de-la-Pocatiere with respect to what he had to say on a floor price for fish:

(Translation):

> The federal government must find some means of enforcing that legislation which provides for a support price on fish. Some hopes may be held in this regard although no definite decision has been reached as yet.

(Text):

The federal government must find means to introduce legislation to establish price support for fish. On this subject we may have certain hopes, but nothing definite has been decided to date. The cod fishery of the Atlantic provinces and of the Atlantic coast is very important. It represents practically 45 per cent of the total catch and it is valued at between $30 and $35 million a year. Part of this catch is processed into salt cod for the Mediterranean and Caribbean market and a small percentage goes to the United States market. A large percentage of the catch is filleted and shipped fresh or frozen either to the domestic market or to the United States. We have been told at different times that 70 per cent of our total catch is exported and that 65 per cent of these exports go to the United States market. Unless our fishermen are guaranteed a minimum price of three cents a pound for fresh cod landed it is impossible for them to carry on. They cannot operate at a deficit year after year. This is a responsibility of the government. It has been promised to them that ways and means will be found to protect them by a guaranteed price of at least three cents a pound.

At this point I should like to say a few words about the information and educational service branch of the department. The duty of this branch is to bring to the attention of the Canadian public the importance of the fisheries to our Canadian economy and, also, to supply fishermen with information relating to new developments and new techniques introduced through research by the fisheries research board. These researches are of great value to our fishermen and to the fishing industry as a whole.

Closely related to this information and educational service is the consumer branch of the special services of the department. We all approve the work that is being done by this branch of the department. Considerable work has been done in the test kitchens here in Ottawa. Recipe booklets have been distributed throughout the country; home economists and dieticians have been stationed at various points; pamphlets have been distributed, and advertising has been done through radio, television, newspapers and magazines. This work is very important because our fishing industry must not rely

entirely on its export market. Good advertising, a better product, better quality and attractive packaging are required if we are to increase our home consumption.

The minister mentioned in the course of his remarks that the domestic consumption of fish showed an upward trend but I would ask that more effort be directed toward increasing the consumption of fish in Canada. In 1948, Canadians were consuming between 11 and 12 pounds of fish per person. Ten years later, in 1958, notwithstanding the hard work which had been done by the department, consumption had increased to only 13½ pounds. Let us try to realize, Mr. Chairman, what it would mean if this increase could go up to, say, 15 or 16 pounds. It would mean that an additional 40 to 50 million pounds of fish would be consumed yearly in our country. In Japan, for instance, the consumption of fish is a high as 65 or 70 pounds per person per year.

I should also like to say a few words about the 12 mile limit and the privileges granted to foreign trawlers which may come as close as three miles to our shores. I remember the attitude taken by certain members of this house now sitting on the government side, and I recall the remarks which were made by the present Minister of National Revenue and others. The Prime Minister, addressing a meeting in Yarmouth said, as I mentioned a few moments ago, that his government was taking the first firm stand toward protecting our Canadian fishermen. We all know that the meeting which was held last year in Geneva was organized not by the present government but by the previous administration and that it was announced in this house almost two years ago by the former minister of fisheries, the Hon. James Sinclair. We regret that no favourable or final decision has been reached at that conference.

Speaking about the rights of our fishermen I should like once again to bring to the attention of the minister the situation of our small fishermen, inshore fishermen particularly, in the bay of Chaleur area on both sides of the bay, on the Gaspe coast and on the New Brunswick side, where fishermen operating with small boats and using trawls are being interfered with by dragger operations. I would suggest to the minister that a conference be called between the federal government and officials of the provincial governments of New Brunswick and Quebec to discuss this important situation. This is a matter which has been brought to the attention of the department on many occasions and I would suggest again that a line be drawn from Maisonnette on the New Brunswick side to Paspebiac on the Quebec side, and that no draggers be allowed to fish inside of that line until at least November 1 of each year. This would give a chance to fishermen operating in small boats and using trawls to save their equipment and their nets.

I mentioned earlier that good work was done by the department in protection services, and one of the main fisheries which requires great activity by the department in this respect is the lobster fishery. I now ask the minister if any further consideration has been given to the suggestion which was made by certain members of the standing committee on fisheries that the department follow the example of the state of Maine in purchasing from the fishermen berried lobsters, that is female lobsters bearing eggs. In this connection I am sure the department will realize that bearing in mind our thousands of miles of shore and the fact that there are probably over 20,000 lobster fishermen, such a system would be impracticable and almost impossible to operate.

I would also ask the minister to give serious consideration, if he has not already done so, to the hour of opening of the lobster season. The present regulations provide that no fisherman shall leave for the fishing ground with lobster traps or gear before 12 noon on the day preceding the opening of the lobster fishing season. In some districts, including Westmorland, Kent county and parts of Prince Edward Island and Nova Scotia, permission was given this year to the fishermen to leave for the fishing grounds two hours earlier. I suggest that this present regulation is unfair to certain fishermen. We have areas where there are no landing facilities available and where fishermen can only sail at high tide. In other areas there are small wharves which can only be used at high tide. And so, the fishermen in adjoining fishing communities have the advantage of being able to get to the fishing grounds hours before those to whom these facilities have not been provided. I suggest to the minister that a change be made and that lobster fishermen be given permission to leave for the fishing grounds at 9.00 a.m. of the day preceding the opening of the fishing season.

Another matter that is of concern to vessel owners on the Atlantic coast is the provision made for subsidies on certain types of long liners or draggers. During world war II, in order to increase the production of food, a subsidy program was introduced as an endeavour to modernize the east coast fishing fleet. Following the war period this subsidy program was further extended to modernize the methods of fishing especially for ground fish and to make it possible for individual fishermen or groups of fishermen to acquire larger and more efficient vessels, and to produce fish at a cost competitive

with other countries fishing on the Atlantic coast area. This program has now reached the point where substantial changes should be made in order to meet new requirements and additional costs of construction.

In 1946, for example, a 55 to 60-foot dragger could be built in New Brunswick for $23,000; in 1953, $39,000; in 1955, $46,000; and in 1957, although the vessels were four or five feet longer they cost $53,000 in New Brunswick and as much as $65,000 in Nova Scotia.

From 1946 to 1948, a subsidy of $165 per gross ton amounted to 25 per cent of the cost of a dragger. In 1955 it covered only 18 per cent and in 1957 it represented only 14 per cent or 15 per cent of the total cost. I realize that my time has expired, Mr. Chairman, but I could finish in three or four minutes if I had the unanimous consent of the committee.

The Deputy Chairman: Is it the pleasure of the committee to give unanimous consent to the hon. member in order for him to finish his remarks?

Some hon. Members: Agreed.

Mr. Robichaud: The figures I have given refer to New Brunswick. In Nova Scotia in 1957 the subsidy represented only between 10 and 12 per cent of the cost of the boat. As those figures will show, the cost of building a dragger equipped with modern facilities has practically doubled in the last ten or 12 years. If this program is to meet the present requirements and if it is to serve the purpose for which it was introduced it should be increased from $165 to $265 per gross ton and this at very little additional cost to the federal treasury. I urge the minister to give serious consideration to this request.

The members of the committee on marine and fisheries were pleased to hear from Dr. Kask, chairman of the fisheries research board, that a great deal of information had been developed on the use of the so-called waste or by-products from the fishery. We all recognize the high natural vitamin potency which is contained in the liver of certain types of fish such as cod. Dr. Kask informed the committee that the scientists had found what they called a liver residue or special food in these cod livers. They have also found an accessory food element in the residue which can add to the speedy growth of cattle and chickens, thus giving an additional food value to such livers. We understand that in order to be practical and economical, sufficient supply of raw material is required for such production. In most fishing districts processing plants are scattered over long areas of coastlines and although the amount of waste material is quite substantial, it is in most cases rather difficult to transport and accumulate it in a central area without adding further cost to the raw material.

We all know that animal protein comprises today a big food requirement throughout the world, and while such protein has been developed on an experimental scale by the fisheries research board, further economic studies are required to ascertain if it can be made up in sufficient quantities in order that the large food firms could rely on a continuing source of supply.

We have in my constituency of Gloucester one of the largest concentrations of landings of fresh cod and related species on the Atlantic coast, a fact I drew to the attention of the committee on marine and fisheries. The 60 to 70 draggers operating during a period of five months land at three different landing points within a distance of 20 miles during that period from 50 to 60 million pounds of fresh fish. The quantity of waste from these fresh fish is one of the largest in any area on the Atlantic coast. This area would be an ideal location for a pilot plant to take care of waste products and I urge the minister and his officials to give serious consideration to such an establishment in Gloucester county.

In closing, Mr. Chairman, I would urge the minister to have his department conduct more research which is needed if some sectors of the fishing industry and particularly the salt fish industry are to continue to exist. Such research is too costly to be undertaken by the industry alone and it requires co-operation from the government. As I have said, this co-operation is essential to the maintenance of the fishing industry.

At this time we must seriously examine what is going on in the United States. I wish to quote at this point, and these will be my last words, a portion of an article entitled "Now Our Fisheries Are Threatened" which appeared in the *Financial Post* of July 26, 1958:

> There is fresh trouble brewing for the Canadian fishing industry which is the mainstay of about 96,000 Canadians. Our catch is worth around $200 million a year.
>
> The Americans, having been thoroughly debauched by elaborate schemes for artificial aid to the American farmers (mainly the rich ones, as it turns out) may now be going in for similar schemes to aid their commercial fishermen.
>
> A bill for this purpose is now in congress and has strong support, not just because the fishermen want to get in on the great Washington give-aways, but because they have been angered and frustrated by two Eisenhower vetoes on their schemes to impose import restrictions.
>
> The plan is dangerous for Canada—and not only because it would spread the handout poison and tend to encourage other pressure groups to stage their own raid on the public treasury.

Therefore, Mr. Chairman, I ask the minister to give extremely earnest consideration to taking measures to assist the Canadian fishing industry.

Mr. Keays: Mr. Chairman, I should be very remiss if I did not at this time address the committee on the estimates which are now under study. The fishing industry is the one and only industry in my riding and as such 100 per cent of its population depend on this industry as a means of survival. The sea has always been the *alma nutrix* of life and its fish produce plays a very substantial part in the economy of Canada.

I should like to take a few minutes in which to pay tribute to the fishermen of this country whom I regard as the hardiest, most fearless and most persistent of workers. They are the hardiest because they know of no limit to the hours they put into the pursuit of their trade. I suggest they are the most fearless because nature with all its whims and fancies does not deter them from pursuing their occupation. They are rocked and rolled not to the music of a Presley or an Anka but by the fury of the sea and wind. Now rising heavenwards, now diving to the depths, they courageously persist in a trade which has not given them a fair return for their labour. Their courage equals that of a Cartier, a Champlain or a Raleigh.

I was glad to note in the speech from the throne that agriculture would be assisted to realize fair returns for its labour and investment, and rightly so. In fact, I have searched for arguments in favour of aid to agriculture which would not apply to fisheries and I must admit that I cannot differentiate the need of the one from the other so far as the cod fisherman is concerned.

The general problem is definitely one of cost of production and a low return for their produce but I am pleased to note that after a request was made by the hon. member for Queens-Lunenburg, the hon. member for Gaspe and the hon. member for Gloucester during the last session for an investigation into price spreads, being the difference between the price paid to the producer and that paid by the consumer, the government has taken action and is now having a study made of the problem.

The major problem, however, seems to be concentrated on the Magdalen islands where the catch of cod has fallen off very seriously and the possibility of an economic crisis exists. Although these hardy people slave at their occupation they are not catching any quantity of cod. As a result, their income is limited and they are not benefiting from the credits of unemployment insurance stamps and will not receive any benefits during the coming winter.

I can see no alternative to this problem except, as in the case of agriculture, that a method of making deficiency payments be set up to alleviate circumstances such as these. I admit that many problems will be encountered in trying to institute such a policy but I feel confident that the present government, which is so concerned about the people in low income brackets, will find a formula suitable to the cod fishermen of the Magdalen islands, the Gaspe coast and the whole eastern seaboard.

I also wish to commend the spirit of co-operation which exists between the Department of Fisheries and the department of fisheries of the province of Quebec and their recent combined effort which resulted in locating herring to be used as bait in the vicinity of the Magdalen islands.

Mr. Tucker: Mr. Chairman, first of all I wish to extend to the Minister of Fisheries and his officials my sincere congratulations and thanks for their co-operation in assisting me whenever I require their services. The organization of the Newfoundland fishing industry has deep, historical roots. This industry developed during the period from 1750 to 1900, its mainstay or principal product from the beginning being the production of dry salted fish for export.

The market for the product of the industry has been the Mediterranean and Caribbean countries, low income areas of primary production also and subject to periodic business depressions. Because of the absence of alternative employment in Newfoundland the effects of such depressions have generally been borne by the fishermen. Since the 1870's the principal instruments of production have been the cod trap, the hook and line and trawls utilizing the inshore runs of codfish in early summer and fall. Settlement has been determined largely by the location of trap berths and adjacent offshore fishing locations along the coast. At the present time there are about 15,000 fishermen in Newfoundland and about 1,000 fishing settlements scattered over some 6,000 miles of coastline. Most of these fishermen are still dependent on the traditional industry.

I feel that at this time I am forced to speak about a campaign promise to provide floor prices for Newfoundland fishery products. This promise was said to have been made by no less a personage than the Prime Minister. It was widely circulated in my riding as well as elsewhere in Newfoundland and became a catch-cry for many candidates. Floor prices for fish, it was claimed, would be one

of the first acts of the new Progressive Conservative administration. I had expected a reference to this matter in the speech from the throne and I am still waiting. Another season of activity has just about ended. Floor prices for fish made a good election promise but as of now there is nothing to show that the plan will ever be anything but a promise.

It is not my intention to take up the time of the committee with the recounting of such incidents as can be drawn from Newfoundland's experience with the present administration. When I speak to this house about the need of a floor price for fishery products it may sound to most of you like just one more demand from one more region of Canada. Perhaps, however, you will tend to be more sympathetic to the over-all problem of the Newfoundland fishery when I tell you that in this modern era there are still fishermen in Newfoundland, many of them in my riding, who make from their calling substantially less than $1,000 a year. Often they are not fortunate enough to find alternative employment in the off-season and this year is no exception because with the apparent recession we are going through in the newsprint industry work is not going to be very easily found.

Some of the great centres of the Newfoundland fishery are to be found along the coast of my riding, and the marks of a proud history are visible to this day in the character and personality of the fine people whom I am honoured to represent. In my riding of Trinity-Conception ancient fish drying flakes exist in the very shadow of modern fish processing plants, providing a near perfect example of the ancient and the modern that is Newfoundland today. Sleek new draggers steam past the cockleshell punts and skiffs of the inshore fishermen, at places like Bay de Verde, Port-de-Grave, Little Catalina and Southport, but always the calling is the same, to reap the incredible harvest of an enormously bountiful ocean, for in more than 450 years one thing has not changed—Newfoundland's waters continue to abound with fish in a hundred varieties.

Here is a challenge to federal planners. In a hungry world, surely methods can be found to convert this teeming natural wealth into food for the undernourished millions and into a way of life for Newfoundlanders that comes reasonably close to the concept of confederation that all of us share. We hear a great deal about the untapped resources Canada possesses. Those who make such statements are referring to minerals, water power or timber. But, Mr. Chairman, it is not at all inconceivable, in fact it is quite probable that the wealth to be found in the waters of Newfoundland may well turn out to be of even greater value than some of the other more readily recognized resources of a growing nation. I should like to see this government embark on a program of exploration of the great fisheries of Canada, and to pursue that avenue of development. I hope most sincerely that the fisheries will not be forgotten or relegated to a back seat in the overall planning of Canada's big and more rewarding tomorrow.

In view of the announcement of the withdrawal of the exclusive right of export of the salt cod by the Newfoundland Fish Exporters Limited, it is hoped, and I urgently impress this upon the responsible ministers, that measures will be taken with the least possible delay to set up an improved system to protect the marketing of salt codfish in the best interests of the Newfoundland fisherman and the industry generally.

The shortage of bait in Newfoundland is so serious that at this time the Department of Fisheries has arranged for a supply from the maritimes. I refer you to page 3505 of *Hansard* for August 14, 1958 where I asked the Minister of Fisheries if his department had taken steps to relieve the shortage, and the minister replied as follows:

> This is something of which my department is very much aware, and the difficulty arises because of the failure of the squid fishery this year. I might say that during last winter the department's bait service froze more herring bait than ever before, but these stocks are now almost exhausted and a fairly critical situation has arisen.
>
> The department, however, has embarked on a serious attempt to relieve the situation. For example, we have two helicopters under charter to the department scouting for squid. I am happy to say that a certain amount of squid has just now been obtained about 30,000 pounds, and it will be delivered very shortly to the areas where it is most urgently needed. We hope to augment this supply. In addition we have obtained 150,000 pounds of herring in the Yarmouth area, which will be delivered to the bait depots in Newfoundland as quickly as we can get suitable transportation for it.

I should like to commend the Minister of Fisheries for this action, although at the same time I should like to impress upon him that steps should be taken to ensure that in the future the Newfoundland bait depots will be always fully stocked with emergency supplies to guard against a possible shortage. It must be stressed that any shortage such as that experienced at the present time means a severe loss of much needed employment to our hard-working fishermen. As a matter of fact, the bait situation was so serious that the minister temporarily suspended the sale of bait to foreign fishing vessels. Again, I am glad that our fishermen got priority, but of course this is as it should be.

It is very encouraging to know that the Department of Fisheries has developed a small mobile refrigerated holding unit which should be of untold value in serving the many fishing communities throughout Newfoundland. Even though this will not prove to be a cure-all, it is sincerely hoped that it will go a long way towards meeting the bait servicing problems. I should like once more to commend the minister and his officials for this realistic approach to a very important problem.

The former administration, as well as the provincial government of Newfoundland, put a great deal of thought and effort into the artificial drying of salted codfish, and it is good to know that the present administration is actively continuing this important work. It is hoped that continued study will prove beneficial to our fishermen, as I am convinced it will.

As the committee is aware, the former administration saw fit to subsidize the price of salt, a commodity which is vital to our salt cod industry. This measure has proven to be very helpful, and I would urge the present administration to not only continue this helpful form of assistance but improve upon it if possible.

I mentioned earlier the serious shortage of bait in Newfoundland. This applies to squid, herring and caplin. I understand the shortage of squid because I am led to believe that they have not appeared in Newfoundland waters this year in the usual large numbers. Of course, this does not explain why the caplin were not frozen and stored, because these small fish appeared in Newfoundland waters in tremendous quantities this year. In so far as herring are concerned, there has been great concern throughout Newfoundland for many years because of their failure to appear in large schools as they have in the past. Surely, in such an important branch of the fishing industry as herring, as well as squid, the fishery research board should put a great deal of effort into research work and exploratory fishing in an attempt to find the cause of the failure of these fish to appear or to locate the schools wherever they may be.

Newfoundland's fisheries rank among the richest and most important in the world, and many Newfoundlanders, directly or indirectly, gain their livelihood from fisheries or trades allied thereto. Many fishing craft of all sorts and sizes are engaged in the shore and bank fishery. Salted codfish is not an unwanted article of food. As a matter of fact, world consumption has increased and the departments of fisheries and trade and commerce must see that we maintain our present markets as well as obtain new ones, and make sure that our fishermen get a proper return for their efforts.

Our fresh fish industry has witnessed a remarkable development. In 1938, we exported approximately 500,000 pounds of fresh fish and in 1957 we exported approximately 53 million pounds. A great deal of the by-products of this industry have been utilized as offal. We hope to see our fresh fish industry continue to grow and expand and to maintain its high standard in the export field.

(Translation):

Mr. English: Mr. Chairman, I am happy to associate myself with the hon. member for Gloucester (Mr. Robichaud) in tendering, on behalf of all representatives of Quebec, my most sincere congratulations to the hon. Minister of Fisheries (Mr. MacLean) on the honour just conferred upon him by the University of Mount Allison, where he has received the honourary degree of Doctor of Laws.

As representative of the riding of Gaspe Mr. Chairman, a district where fishing is one of the main industries, I feel it is my duty to make the voice of our fishermen heard in this house.

I listened with the greatest interest to the speeches of hon. members for Gloucester and for Iles-de-laMadeleine (Mr. Keays). They clearly set out the position of the fisheries in their respective ridings and made very appropriate suggestions to correct the present situation. Mr. Chairman, I do not want to repeat what hon. members said, because I fully agree with them, and I am confident that their suggestions will soon be acted upon.

The fisheries problem in my riding, Mr. Chairman, is very similar to that of New Brunswick and Prince Edward Island, and even of Newfoundland. If I may, I shall point out those similarities. First of all, fishing operations in my province are carried only five or six months a year, and the same is true for New Brunswick and Prince Edward Island. Fishing methods in New Brunswick are the same as in Quebec. Fishing craft are similar. In fact, they are all small boats. In those provinces, they fish mainly for cod; for haddock is getting quite scarce. Prices paid to fishermen are similar: 2½ cents, 2¾ cents and 3 cents a pound. At the beginning of each season, our fishermen start worrying about one thing—always the same—"What price are we going to get this year for our fish?" Some of them, more

worried than others, give up the job and go out to swell the ranks of the unemployed in our cities. Our young people are showing a growing lack of interest in professional fishing. The case as presented, Mr. Chairman, should make us consider the situation and do something to remedy those conditions.

Let us now see, Mr. Chairman, if our fishermen have good reason to complain, if they have actual cause to ask members of parliament for help and to claim, not only some attention, but immediate action on the part of the government.

As I said a moment ago, in my riding fishing operations take place only five or six months a year. In other provinces, they are a year round proposition. Consequently, it is impossible for the province of Quebec, the province of New Brunswick and particularly my own riding, to have the same influence as others on our Canadian and American markets, more especially with regard to fresh cod fillets. Distributors are rather more inclined to favour producers who can supply fresh fish twelve months a year. Fish prices are about the same in Quebec as in Nova Scotia, especially in the summer, but in the wintertime, when there is no fishing at all in Quebec and New Brunswick, when therefore there is no longer any competition and buyers have to take what's available, prices of fresh fish go up in provinces where there is year around fishing, which means that the average price of fish over the twelve months is much higher than the amount received by our fishermen during those five or six months.

Yet, Mr. Chairman, our fishermen have to spend as much for five or six months' operations as do those who operate twelve months running. And you know how much the price of fishing gear has gone up. The hon. member for Gloucester spoke about fishing craft, and you were able to see that their cost has gone up almost 100 per cent. So has the cost of fishing nets. Seven or eight years ago, they could be got for $35.00 and $40.00, while now they cost from $85.00 to $90.00. Everything has gone up—except the price of fish! That has stood pat. How then can you expect those people to feel encouraged to keep up this splendid trade, fishing, one of the oldest in Quebec and in New Brunswick?

Well, Mr. Chairman, as I said before, our fishermen are desperate and they are giving up fishing.

They are worried and I do not blame them, for when the fishing season comes around, they have to borrow thousands of dollars without even knowing what price they will be getting the next day for their fish.

Well, Mr. Chairman, I know that the Minister of Fisheries and his officials are now doing an efficient job, and I congratulate them. I know it is no easy problem to solve; I know it cannot be done in a matter of days, but at least let us make a start at considering it, and try to save our fisheries.

What should the government do? The first thing to do is to find markets. I myself, have gone to much effort to increase fish consumption in the province of Quebec. In the course of my inquiry, I had to visit all the Quebec institutions. I went in every constituency; unfortunately, it must be admitted that fish consumption in the province of Quebec itself —I should say all over the country—is not what it should be. I tried to find out the cause. I questioned the various directors of those institutions and always obtained the same answer: "It is too expensive!"

It is true, Mr. Chairman, that cod fillets are selling at 35 to 40 cents a pound on the American and Canadian markets. This is rather an expensive dish to serve to children and to boarders in our schools and institutions. If the management of boarding schools or institutions are advised to buy round cod, which is excellent and cheaper, we are told: "We are afraid to serve that fish; it has a lot of bones; we are afraid to serve that kind of fish to children and boarders."

Mr. Chairman, cod fillets that sell for 35 to 40 cents a pound on our markets only bring in 2¼ cents or 2½ cents to our fishermen. This is quite a spread, and I would like to know the reasons for it. I was pleased therefore to learn that a royal commission had been appointed to investigate price spreads. I look forward to its findings as I shall be particularly interested in what they will have to say about the causes of this situation.

I also believe, Mr. Chairman, that what has been done for the western farmers could be done for fishermen. I was glad to hear that western wheat is being sent to underdeveloped countries under the Colombo plan. In fact, I was very glad to hear about this, especially as this will help out those who are confronted with serious problems in their respective constituencies or provinces. Would it not be possible to send fish, also, to those countries?

I have made only a few suggestions, Mr. Chairman. I will probably have opportunities to deal again with these problems in which

I am especially interested. I have always been interested in the Gaspe population which is made up mostly of fishermen. I myself come from a family of fishermen. I have carried out an on-the-spot survey of fisheries organization in the province of Nova Scotia. I attended St. Francis Xavier University for a year in order to study co-operative organization. I was the founder of the very first fisheries co-operative in my constituency. All this indicates that I am concerned with this problem.

Mr. Chairman, many requests are made to the government for a solution to unemployment. To my mind, a good way of doing so would be to help fishermen. In this way the number of unemployed in the cities would be reduced. Many people have been leaving the fishing industry, of late, because it is no longer a paying proposition, and have gone out to cities to try to make a living there.

Mr. Chairman, I see that I have been speaking longer than I had meant to. I did feel however I should make these few remarks in the house. I thank the Minister of Fisheries and his staff. I am convinced that they will continue the splendid work they have been doing so far and that eventually they will find a satisfactory solution to the problem that face not only the fishermen of my constituency, but those of all other parts of this country.

(Text):

Mr. Howard: I would like to join other members who have spoken in this debate in expressing appreciation for the helpfulness and the general attitude shown by the minister and his officials when they appeared before the standing committee on marine and fisheries. I am sure this committee gave some of us an opportunity to learn more of the details of the complexities in the fisheries industries of our country and to better assess the effect of the actions of the department on fisheries in all parts of Canada, not from a provincial or parochial point of view but from the point of view of the effect upon Canada as a whole. I have but one or two comments to make at this time and one or two questions to pose because I think the bulk of the work was done in committee, undoubtedly in a very excellent way. The answers given were complete and detailed.

The population of Canada, as in many other nations, is slowly increasing in size, and history has shown that generally speaking when countries increase their population beyond a certain point there is a greater tendency to use the products of the sea as foodstuffs. Some nations do so perhaps because of a decline in the richness of the arable land and others because their arable land may be insufficient to provide the per capita requirements of food. They consequently look to the sea for a supplement to their diets. We know that fish is a high quality and high protein food. I personally am more partial to fish than to other protein foods, although this partiality may not be shared by many people. In the years to come I am sure, however, that we in Canada will be in the same position as that of other countries in the past, having to look to the ocean for additional foodstuffs, not only for domestic use but also for use as exports to other nations.

We must make sure that our present fisheries are maintained and must also enhance them and attempt to guarantee that other industries and interests do not enter in a detrimental way into the fisheries of our nation. I am thinking particularly of the hydroelectric interests in so far as the province of British Columbia is concerned, where we have had a fish versus power controversy for some time. So far as I know, not too much damage has been done to the fisheries as yet, but there is a possibility that in the future, if the power interests are allowed to have their way and are given the right to develop fish rivers for hydroelectric purposes, this will have a detrimental effect upon the fisheries of British Columbia, particularly the salmon fisheries. I know that the attitude of the minister and his departmental officials as expressed in the standing committee is one which will ensure to the greatest possible extent that our fish rivers are protected and that our migrating fish, particularly the salmon, are not interfered with by the development of these rivers for hydroelectric purposes.

We must do everything we possibly can to ensure that none of our fish rivers is harmfully developed for hydroelectric purposes although our power requirements are met. Within the next decade or thereabouts we will in fact probably have protected our present fish rivers and to the greatest possible degree will have met the demands for power for it is to be hoped that by that time sufficient research and engineering work will have been done with respect to nuclear energy that we may channel nuclear power into the generation of electric power.

We have in British Columbia very large potential hydroelectric sites which in no way will affect the fisheries of the Pacific coast. I refer particularly to the Columbia river also to the so-called Wenner-Gren project in the northern part of the province, and I hope the department will be able to maintain the position it has held over the years of protecting our fish rivers, and also that other parts of government, the federal government and the provincial government in British Columbia, will be able to co-operate in such a way that these potential hydroelectric sites may be developed so that the fullest possible service can be given to the general public. I am sure that if we operate in that light we will be meeting the hydroelectric requirements and doing so in such a way as to guarantee that the operation of these sites and the distribution of electrical power will serve the interest of the public to the greatest possible extent. We will also be laying the ground work for the possibility of using nuclear power in the years to come, and we will have the best of both worlds, as it were, arising out of that sort of action.

I should like to mention also to the minister a matter which comes under the Department of Agriculture. If it has not already been drawn to the attention of the Minister of Fisheries, if he would look at *Hansard* for August 1, beginning on page 2964 he would find on that page and on a number of pages following a discussion between the Minister of Agriculture and myself with respect to the granting of subsidies under the Cold Storage Act. I think that a few months ago the policy of the government was that they would make a grant of one-third of the cost toward building public cold storage facilities. Recently, the regulations have changed so that a maximum of $50,000 was placed on this one-third of the total cost, and the information we were able to get from the Minister of Agriculture in this regard, very briefly, was that the reason behind the imposition of this $50,000 limit was, apparently, that there were sufficient cold storage facilities in some areas as not to warrant additional subsidies on the part of the government and that these cold storage facilities were, in the main being used only to the extent of 50 per cent of their capacity. If the minister would read *Hansard* of August 1 he would be able to get a far more complete picture than I am able to give at this time and one which can only be obtained after reading all the questions and answers as they developed.

I directed some questions to the Minister of Agriculture on that occasion, asking if he could give me some statistical information about the number of cold storage facilities which handled fish products, the number which handled agricultural products and the number which handled foodstuffs of a mixed nature, but the minister did not have those facts available in detail on that occasion. Subsequently he sent me a letter and I should like to draw it to the attention of the Minister of Fisheries. It amplifies the information which was given me on August 1 and it says, in part:

> My department informs me that there are 249 warehouses in Canada which store exclusively, or in the main, fish or fisheries products and 1,969 which store in the main agricultural products and, in addition, 849 warehouses which are classified as general, i.e. storing a variety of products.

The view we think should be taken with regard to the operation of the Cold Storage Act is this: there are approximately, as shown in this letter, eight times as many agricultural products cold storage warehouses as there are fisheries products cold storage warehouses, and I think it would be more advantageous to meeting the need that exists at least in some parts of the country—and in one case with which I am particularly concerned—if we could divide the consideration of the application of this subsidy as between fisheries products cold storage needs and agricultural products cold storage needs. If we do that I am sure the fishery requirements would not then be affected by the conditions which exist in the agricultural products field.

I hope the minister will undertake to consult with the Minister of Agriculture from the point of view of attempting to consider separately the requirements of fish cold storage facilities as opposed to agricultural cold storage facilities. If the minister does that and has, correspondingly, more say in the granting of such subsidies I am sure we will be able to reverse the decision of the Department of Agriculture which, I think, is not justified as it applies to fish cold storage facilities, and revert to the provision which existed previously, namely a one-third subsidy having a $50,000 limit.

I have one or two other questions to ask, and it may well be I could pose them now since I have a few minutes left before six o'clock. Perhaps the minister could get additional information, if it is required, during the supper hour and answer them at eight o'clock.

One relates to a specific vote concerning the operation of the international Pacific salmon fisheries commission. I understand there is a meeting, which may still be in progress, of a committee of the Pacific salmon fisheries commission which is being held in

Hawaii. I wonder whether the minister is able to impart to this committee any information as to the conclusions or recommendations which have been made arising out of the meeting in Hawaii of this tripartite committee.

In addition, I again wish to raise the question of the conflict which exists with respect to this research work which is being done in the north Pacific about salmon—who gets them, where they intermingle and so on. There has been quite a bit of controversy over this in years past, and in this regard I directed a question to the minister on May 21, and the answer which he gave, if I may quote it in part, was this:

> The Canadian part of the co-ordinated research program in 1958 consists of having two large vessels make two cruises each, one in March and one in August, north of latitude 45 degrees north just east of longitude 175 degrees west.

I wonder if the minister is in a position to indicate what information this cruise that was made in March has produced, or whether it is more desirous to wait until the research program of August is completed and until the spot fishing tests which were to be made from mid-May to mid-September are completed so we will have a complete look at the information those vessels are able to procure.

The attitude of the department with respect to previous research trips into the north Pacific area based on the data they were able to compile was that no Canadian fish had been caught by Japanese fisheries in that area. There are two reasons for the conflict concerning whether or not Japanese fisheries are catching Canadian fish in the high seas in the mid-Pacific and one reason is this. In the past Canadian research vessels did not travel beyond the 155th degree of west longitude which is 20 degrees of longitude or roughly 750 miles west of this line. The other reason is that we in Canada have relied upon information collected by United States research vessels that were supposed to have been in the area between 155 degrees west and 175 degrees west. The contention is that by relying on the information collected by the United States vessels we did not have an opportunity to see in full detail the statistical information that was compiled but rather we relied only on the interpretation placed on that information by the United States officials involved. Also, the studies of the United States research vessels were primarily directed toward gathering evidence for the protection of the Bristol Bay sockeye and other Alaska salmon and not toward gathering information with respect to our own Canadian salmon.

[Mr. Howard.]

The Alaska Sportsman of April 1958 carried an interesting article on this question. Whether or not the conclusions drawn in the article are based on scientific studies is beyond my knowledge but the fact is that publicity has been given by an Alaskan magazine to the question of research conducted in the north Pacific. The article states in part:

> —American salmon mingle with salmon of Asiatic origin. At 175 degrees west longitude, stocks are 90 per cent American and 10 per cent Asian. Even at 170 degrees east the ratio is 40 per cent American and 60 per cent Asiatic salmon.

The article then goes on to make reference to catches and other matters but the point is that the United States research vessels as indicated in this article have conducted their research with relation to American or Alaskan salmon and not to Canadian salmon as indicated by the references to the ratio of the catch.

I have not seen all the statistical information gathered by Canadian, United States and Japanese research vessels and indeed even if I had I would not be able to interpret it or know precisely what it means. But there is this difference of opinion as to whether or not the Japanese are catching our salmon on the high seas. For that reason I was interested to learn what the minister said on May 21 to the effect that our research vessels this year are to move out in the area up to 175 degrees where we had not ventured before. I hope as a result of this move and the information collected from the studies made we will be able to state as a definite scientific fact whether or not the Japanese are catching our salmon or, as a result of that, we will be able to agree with the members of the tripartite commission that a certain non-fishing area should be declared there. I believe it is a proven fact that to catch salmon on the high seas means catching them before they are fully grown. In effect this does not allow the salmon to mature and has a detrimental effect on our entire fisheries interests.

In making these remarks I had to digress to a certain degree and deal with a matter that perhaps more properly could have been dealt with when the specific vote is called but I thought it necessary to include that topic in my general remarks. I hope the minister will be able to deal with the questions I raised when he rises to reply on this vote but if he desires to hold over some aspects of the questions and answer them on specific votes that will be perfectly satisfactory.

At six o'clock the committee took recess.

AFTER RECESS

The committee resumed at eight o'clock.

Mr. Granger: Mr. Chairman, the fishery is the oldest industry in Canada and probably ever since there was a fishery there have been problems connected with it. But no one can say the fisheries did not get off to a good start. When John Cabot discovered the new world he made his voyage of discovery looking for gold, silver and precious stones. Instead he found codfish but over the years the fisheries he discovered have brought in more wealth than his backers could have ever hoped to find in the form of gold mines or diamonds. But since its inception this ancient industry has run into peculiar and serious problems from time to time. These problems are not peculiar to modern times alone. A great Canadian statesman revered by all, perhaps particularly so by a large section of this house, and who at one time, I believe, occupied the offices now occupied by the Minister of Fisheries, Sir John A. Macdonald, had this to say in writing on May 1, 1878 to Sir Stafford Northcote with respect to confederation with Newfoundland:

> Lastly, it is of importance to imperial interests that Newfoundland should be added to the dominion. It would complete the great scheme of British North American confederation begun in 1867—it would relieve the colonial office from the trouble and responsibility of the direct government of the island, and it would throw upon Canada the burthen of its defence. And that defence would necessitate the creation of something like a naval force by our government. But more than all, in any future negotiations with the United States on the troublesome question of the fisheries, the subject could be dealt with as a whole.

Later in 1890 he again referred to the fisheries when he said with respect to Newfoundland and the Dominion of Canada:

> At present the policies of the two governments on commercial, fishing and other questions are often divergent.

I think that even today the problems which Newfoundland has and those of the rest of Canada are sometimes divergent. But it is not for want of constant reminder that we have not yet solved the problems of the fisheries of the east coast. I would be the last one to say that nothing has been done because a great deal has been done to improve the fisheries in my native province. The provincial government, with its policy of assisting industry, has helped to bring about what may well be described as a revolution in the fisheries, particularly in its assistance in the industrialization of the fisheries; while on the other hand the impact of confederation on Newfoundland was perhaps nowhere more marked than in the fishing industry because the government of Canada, through its Department of Fisheries, has been giving excellent service to the province of Newfoundland.

But the whole problem, although bit by bit it is being attended to, has never been completely solved nor has a way yet been found to place the fisheries upon the same basis as the other great industries of Canada. The fisheries of this country are without doubt one of our great national resources. We talk of spending huge sums of money on the development of various parts of our great nation but I do not think that relatively we are spending either enough effort or enough money on the development of our fisheries. I might use a scriptural phrase in describing all the laudable attempts being made to develop and exploit our industries and resources—"these ought ye to have done but not to have left the other undone".

It is no longer a secret that the ships of at least 10 nations are fishing off our shores. While those concerned with the defence of the country are somewhat worried over the presence of large trawlers in our waters, I do not think that comparable worry is evinced over the trade which fishing fleets of foreign nations are taking away from us. Instead of being the foremost fishing country in the world we are being pushed back from that position and we shall soon lose our lead completely.

For years I have heard scientists and economists tell us that the greatest fishery ever known, the trap fishery of Newfoundland, was doing the fisheries more harm than good. I cannot subscribe to that opinion. It is true that vast quantities of fish come in during the short season and are trapped. They must be caught and processed quickly and it has been difficult to find a way to do that other than by the old methods used since John Cabot discovered Newfoundland. But if the great canning plants of this continent can deal with fruits and vegetables which have short seasons I see no reason why the scientific ingenuity available in this modern age cannot look after the surplus fish that come to Canadian waters during what we call the trap fishery.

Again, while large fleets of ships are in Newfoundland waters comparatively few of them are Canadian ships. We have three large trawlers, the largest being approximately 400 tons. Then we have a total of 50 other trawlers and 13 draggers above 100 tons and five between 75 and 100 tons. Perhaps more than anyone else I am aware of the need to extend help to the small fishermen, the need for small harbours, dredging work, navigational aids, salt assistance and loans

to these fishermen, but at the same time I do not think we should overlook the need for a large deep sea fleet.

There appears to be nothing we can do to prevent our competitors from fishing off our shores on the Newfoundland banks but certainly there is something we can do to compete with them by bringing about greater and cheaper production and better markets. While the fresh fish industry is growing and thriving the salt fish industry, which is really the basis of Newfoundland economy, is dwindling. But the salt fish business is still the basic industry of the country. Of a total of 16,000 to 17,000 people in the fisheries about 12,000 are employed in the salt codfish business.

The salt cod fishery is really the foundation of our economy and is a sort of buffer industry which takes up the slack when other employment fails. This is particularly noticeable this year when there has been a falling off of construction work and woods employment and perhaps nearly 2,000 more men have returned to the fishery.

However, the time is going to come when they will not be able to do that. A farmer can become a miner and a miner can become a woods operator, but a deep-sea fisherman has to be bred to the sea. Let the young men who normally prosecute the fisheries get away from them or not go into the fisheries in the first place and it is doubtful if they would be able, even if they were willing, to return to the salt codfish industry or the deep-sea fishery later in life. There are many men, to my own personal knowledge, who would rather be fishermen if they could make the same living as fishermen as they can as mechanics. However, the return from the salt cod fishery is so low that they choose other work, although as a vocation they would much prefer to be fishermen.

One thing that would help the fisheries considerably would be a direct shipping line to the West Indies. Since Newfoundland is an island she cannot exploit the mainland markets and should be given assistance in getting fish to the market at the same cost as her sister Atlantic provinces. Again this year there seems to be a shortage of bait and a shortage of salt and both of these factors adversely affect codfishing. Then, too, we have to compete with subsidies. For instance, the Icelandic government subsidizes its fishermen sometimes paying as much as $360 per fishing boat per day. The French subsidize their fishermen. I believe the Portuguese government pays a subsidy as well. It is true that Portugal does not compete with us in foreign markets. At one time, Portugal was a market for our fish, but as she produced more and more herself we could not sell any more there. The payment of these subsidies makes it extremely difficult for Canadian fishermen to make a living and still sell their fish cheaply enough to compete with these other nations.

All in all, the present position is that there seems to be a steady decline in the amount of salt codfish produced. I am not sure that the contention that we produce a product expensively to sell to poor markets is altogether true. Where is there stronger buying power, except in the United States, than in Puerto Rico, Cuba, Jamaica, Brazil and such countries?

A few minutes ago I mentioned that there were the fleets of ten nations operating on the grand banks. I, myself, have seen fleets of white-painted ships standing out of the harbour of St. John's in all their magnificence, but they were not Canadian ships. I have seen throngs of fishermen on the streets of St. John's, but they were not Canadian nationals. The fruits of the sea which these sailors were harvesting represent a loss of trade to us. Earlier I referred to the fact that Iceland subsidizes its fishermen. It is interesting to note that Newfoundland lost the Jamaican market to Iceland recently. It is interesting also to note that yesterday it was announced that Russia is lending Iceland $3.5 million for the construction of fishing boats. It is worth noting that the Canadian trade with Jamaica is as much as 2½ to 3 times in our favour, and that sugar from the West Indies is coming in under a protective tariff which will possibly put the New Brunswick refineries out of business. I rather think that is turning the other cheek a little bit too often.

The removal of the exclusive right of NAFEL to export fish is something which I should like the Department of Fisheries to consider very carefully. It is true that there should be free trade between our own provinces, but I should like to point out that the fish produced in Newfoundland is produced by virtue of the plants that already exist there, the stores, the wharves and so on, all of which cost a lot of money and represent capital invested in Newfoundland by the local fish trade. If the product which that investment makes possible is to be processed by a sister province which has no risk capital involved, it places the whole structure of the local industry in jeopardy.

The oldest industry in Canada, Mr. Chairman, can I am sure become even at this late date a profitable one. We pride ourselves on the size of our nation. We are proud of the fact that it extends from sea to sea. We are proud of the motto that the wholesome sea is at the eastern and western gates of Canada. But if we confine our efforts to the

exploitation of the land and stop at the seashore, there is really little reason for us to take pride in the rolling billows. The proper development and exploitation of our great and wealthy country should not stop at the seashore but should extend into the waters which surround us, waters which are ours, waters which have in them the wealth which for hundreds of years has provided a livelihood for many of our best citizens and supplied Canada with an export trade of great value.

Certainly, it is to the interest of all to develop the whole of Canada, including the wealth that is in the sea. With the capacities we have today, natural and acquired, with our native ingenuity, scientific skill and commercial force, we can inject into this ancient industry the virility which is the hallmark of Canadian enterprise.

Mr. Crouse: Mr. Chairman—

Mr. Legere: Mr. Chairman, it gives me a great deal of pleasure and I deem it an honour—

The Chairman: Order. I regret to interrupt the hon. member but the hon. member for Queens-Lunenberg has the floor.

Mr. Crouse: —representing Queens-Lunenberg and living in the town of Lunenberg, the home of the largest deep-sea fishing fleet in North America, I feel it is only proper that I should make a few remarks on the estimates of the Department of Fisheries.

First, I should like to congratulate the minister on the high honour that was bestowed upon him by Mount Allison University last Saturday. I shall try to make my remarks as brief as possible, but there are a few points that I should like to bring to the attention of the minister. Many of my constituents are directly concerned with the fishing industry and any changes that affect this industry have a direct bearing on their earnings.

In recent years there has been a gradual change taking place within the fishing industry and this change is quite evident when you travel the south shore of Nova Scotia. You will see along the coast small wharves and fish sheds, and long rows of fish flakes which are deteriorating in the sun. Formerly fish were landed at these small wharves and were washed there by the fishermen and their wives. But today as we have progressed in the industry, modern fish dryers have been installed in the larger plants, and also automatic fish washing machines, thus eliminating the need for the old fashioned method of drying fish in the sun. However, there are many who will argue that sun dried fish are of higher quality; and as a matter of interest I may say that the Gaspe cure does have a preference in certain markets throughout the world. However, those within the industry are today mostly concerned with the marketing and catching of fish.

For the benefit of those who are not familiar with the fishing industry I should like to point out that it is divided into two sections. There is the salt fishing industry and there is the fresh fishing industry. Of late, we have heard a good deal about the salt fishing industry owing to the loss of one of its most important markets in Jamaica. The control of fish imports in this British West Indies island rests with trade minister the Hon. Wills O. Isaacs. We have recently seen this island of Jamaica buying some 3,000 tons of salt cod from Iceland on the grounds that the price is about one half cent a pound below that quoted by the Canadian trade.

Trade should be a two-way street. We buy a good deal of sugar from the island of Jamaica. In fact, in 1956 Canadian refineries bought 36 per cent of Jamaica's 1956 sugar production or 132,000 tons. If this sugar had been bought from a non-commonwealth producing country the Canadian treasury would have collected additional import duties of approximately $2,900,000. In that same year the total value of all the salt and pickled fish that Canada sold to Jamaica was approximately $3,255,000. In other words, by virtue of this sugar preference the Jamaican sugar industry obtained from Canadian refineries between $2½ million and $3 million more for the sugar sold to Canada in 1956 than would have been realized if this $1 per one hundred pounds preference did not exist. To reduce this situation to a point of being ridiculous, may I say that the Canadian government would have lost out financially only to the extent of $355,000 if we had donated all the salt and pickled fish that Jamaica purchased from Canada in 1956 instead of giving the sugar preference.

In spite of these facts, and in spite of a public statement by the Jamaican minister Mr. Isaacs that the Canadian sugar market is vital to Jamaica's existence, no consideration was given this country by Jamaica when purchasing this 3,000 tons of dried salt codfish. I believe the time has arrived for the Canadian government to speak plainly to the Jamaican government. I do not feel that it would be at all unreasonable to point out to Jamaica that if they want to continue to enjoy the Canadian sugar preference along with tariff preferences on liquor, et cetera, they must decontrol the price of salt cod and let supply, demand and competition prevail. Only in this way can our Canadian salt fish exporters be given the assistance in marketing their product which is so urgently required by this basic industry.

Assistance to our fresh fish industry is also required. This assistance should take into consideration the increased cost of boats and equipment today as compared with costs say ten years ago. At the present time fishermen receive practically the same prices for their catch as they received ten years ago, this despite the fact that it takes $2 today to purchase what $1 would buy in 1947. The effect of all the scientific advances with regard to refrigeration of fish and improved marketing facilities which have increased sales of this product have not brought an increase of one per cent pound to the fishermen themselves in the last ten years.

The reason that this condition exists is sometimes attributed to larger catches by more mechanized boats, but the truth of the matter is that, regardless of catches, or rates of United States exchange, or shortage of fish, there is no improvement in price to the fishermen. Dominion bureau of statistics figures show a drastic drop in the stocks of fresh and frozen fish in reserve. There is a terrific shortage of ground fish on the banks—I refer to certain types of ground fish such as cod and haddock—and the new regulations with regard to mesh size imposes further hardship on our east coast fishermen who must catch fish each trip to sea or starve. They have no big reserve of capital built up when prices were high, for prices have never been high for this basic food commodity to the primary producer. They have no guaranteed salary and work only in anticipation of their share of the catch.

It is true that they are living and existing but only by working exhausting hours. In fact, men have been known to stand on the deck of a ship dressing fish for some 24 hours at a time, stopping only long enough to eat. They must do this at times in order to clear the deck of fish. But whether the catches are fair or poor, the price remains almost static over the years. This does not apply only to fresh fish but also to the salt fish industry. I believe that some form of assistance must be considered in order to encourage men to continue in this industry.

The department is contemplating further research. I should like to suggest to the minister that further consideration be given to investigating the scallop beds. I have been looking at the new Canadian fishing vessel the *A. T. Cameron* built for the fisheries research board of Canada. It looks like a very capable ship of a size that will be a credit to Canada and a credit to the men in the department who had a hand in designing this ship. It is a draggers style ship which should certainly be seaworthy.

[Mr. Crouse.]

I should like to suggest that some consideration be given to investigating the scallop beds. This shell-fish now provides a most important source of income to the Atlantic coast fishermen. In fact the 1956 production in the maritime provinces was in excess of $1 million, and production has been growing rapidly. The tremendous improvement in this fishery can be realized when we consider the fact that the catch was valued at less than one-quarter of a million dollars in 1951. The scallop fishery, prior to 1953, was carried out principally by small boats fishing inshore banks close to port. The only exception to this was in the Digby and Northumberland strait area where these fisheries are relatively stable and somewhat larger boats are used, ranging up to 65 feet in length. However, in recent years much larger boats have been used in this fishery, ranging from 90 feet to 95 feet in length, and these boats fish far from their home ports on George's bank close to the coast of the United States and also on the offshore banks of Nova Scotia and Newfoundland.

It is, however, agreed among these fishermen in my riding that continuous research is necessary in the scallop industry to assist them in locating new beds which, so far as the offshore fishery is concerned, have a tendency to shift with changing water temperatures. I would like to suggest that this information regarding new scallop bed locations be widely advertised by the fisheries department so that all those in the industry may avail themselves of the opportunity to make use of the findings of the department as new beds are discovered. The scallop is highly nutritious and can be conveniently stored, and I would like to suggest that the government further assist this industry by increased advertising and promotion and suggested uses for this fish on Canadian trains and in government institutions.

From information supplied to me by sea captains on the east coast who fish out of my home port of Lunenburg, it is my understanding that stocks of shrimp are on the increase on the offshore banks of Nova Scotia. We are all aware that this shellfish is a delicacy and is what we in the industry call a high priced fish, bringing a return to the fisherman which is comparable to that from lobsters, scallops, halibut and swordfish. In my opinion the fisheries research board should give immediate consideration to investigating the supplies of shrimp which are available in the hope that the quantity of the shrimp on the Nova Scotia cost should be determined and so that the fishermen may be advised whether this fishery could be economically established.

To further greater participation by the fresh fish industry, I would like to suggest that the government increase the present subsidy payment on ships built up to a length of 100 feet. Those who live in the Atlantic provinces realize that in the sea, we have at our front door a great natural resource. This fact is also recognized by France, Portugal, Italy, Spain, the United States and Iceland, to name but a few of the countries and, as the population of the world grows and the amount of arable land diminishes, we must turn to the sea for our food supplies. The encouragement of the construction of draggers up to 100 feet in length would, I believe, be of great importance not only to the fish industry but, having in mind that we no longer have a large merchant fleet, these ships in time of war could be an invaluable asset to the nation.

I would suggest that this government, through the Department of Fisheries, should give serious consideration to extending the present subsidy of $165 per ton, which is limited to ships of up to 65 feet in length, to ships up to 100 feet in length. Further assistance which could be provided to the fresh fishing industry would be the paying of the cost of the ice used by these fishermen. We do assist the salt fish industry at the present time by paying a proportion of the price of the salt used by that industry, and I believe that in keeping with the department's views with respect to having the fish landed in prime condition this assistance could be extended in respect of fresh fish in the manner I have just outlined.

The United States government has, as stated by the hon. member for Gloucester, planned some assistance for their fishing industry, and I believe the time has arrived when consideration must be given to our basic industry in Canada and I hope in this regard that the proposals I have made will be carefully studied for the benefit of the Canadian fishermen.

Mr. Legere: Mr. Chairman, it gives me a great deal of pleasure, and I deem it an honour to rise to speak in this house for the first time. I wish to tender my congratulations to Mr. Speaker upon his re-election to the high office of Speaker of this House of Commons, and may I also congratulate the hon. member chosen as the Deputy Speaker.

On this occasion, with your kind permission, Mr. Chairman, I would like to express my deepest appreciation to the electorate of Shelburne-Yarmouth-Clare for having bestowed upon me the high honour of representing them in this House of Commons. May I be able to represent them with honour, integrity and devotion throughout my tenure of office as a member of this house.

I would like to point out that I do not wish to criticize the political tactics of the opposition, for I know that March 31 was sufficient punishment for their political sins. They and they alone must live with their guilty political consciences.

The constituency I have the honour to represent is located on the southwestern coast of Nova Scotia, where its scenic beauty is a household word—

Mr. Robichaud: What kind of fish is this?

An hon. Member: Red herring.

Mr. Legere: —and where tourist attractions are many and varied. This area was considered by the rest of Canada as a depressed area for many years. The phrase "We never had it so good" could certainly never have been said of Nova Scotia, particularly the constituency of Shelburne-Yarmouth-Clare. However, after the election of June 10 better things were in the offing and before long we were promised that we would at last be recognized as part of this great country of ours. We in the maritimes greeted this change with open arms and we have already felt the beneficial effects of the theme of our Prime Minister, namely, justice and equality for all.

(Translation):

Mr. Chairman, it gives me a great deal of pleasure, and I deem it an honour to rise to speak in the house for the first time. I wish to tender my congratulations to Mr. Speaker upon his re-election to the high office of Speaker of this House of Commons, and may I also congratulate the hon. member chosen as the Deputy Speaker.

On this occasion, with your kind permission, Mr. Chairman, I would like to express my deepest appreciation to the electorate of Shelburne-Yarmouth-Clare for having bestowed upon me the high honour of representing them in this House of Commons. I hope I may be able to represent them with honour, integrity and devotion throughout my tenure of office as a member of this house.

I would like to point out that I do not wish to criticize the political tactics of the opposition, for I know that March 31 was sufficient punishment for their political sins. They and they alone must live with their guilty political consciences.

The constituency I have the honour to represent is located on the southwestern coast of Nova Scotia, where scenic beauty is a household word and where tourist attractions

are many and varied. This area was for many years considered by the rest of Canada as a depressed area.

The phrase "We never had it so good" could certainly never have been said of Nova Scotia, particularly the constituency of Shelburne-Yarmouth-Clare. However, after the election of June 10 better things were in the offing and, before long we were promised that we would at last be recognized as part of this great country of ours. We, in the maritimes, greeted this change with open arms and we have already felt the beneficial effects of the theme of our Prime Minister, namely, justice and equality for all.

(Text):

When the first white men came to Nova Scotia it was for one main purpose, to fish. They found that the waters which surrounded the Nova Scotia peninsula were swarming with fish, and year after year they continued to return filling their ships from the bounty of the sea.

Now, four centuries later, fishing is still the main attraction and essential industry, the sole means of livelihood for many, many of my constituents. Fishing is a major and essential industry in my constituency. Therein lies, in my estimation, the Liberal's Waterloo. They were unaware of the necessity for the furtherance of the economy of my constituents. They encouraged them to fish, but neglected to better their lot by providing them with the necessities that are part and parcel of every endeavour. Just drive down from Weymouth, Nova Scotia to the end of Shelburne county and you will be amazed at the scenery, the neat rows of wooden lobster traps, the picturesque Cape Island type boat; but you will also see, in vast numbers, wharves in disrepair, no docking facilities where they should be, inadequate harbour facilities for those who go down to the sea in search of a livelihood. There, in my estimation, lie the relics of Liberal neglect, mute testimonials of their good will, perhaps, but also of their laissez-faire attitude. It is one of the cross-currents that shipwrecked them on the 31st of March.

Already, we of the maritimes are feeling the beneficial effects of the public works program, and I wish to commend the government for its encouraging attitude toward better harbour facilities, a step which, as time goes on, will lengthen its stride, thereby giving the toilers of the deep a means of disposing of their fishery products more quickly and more efficiently, and resulting in better quality.

However, along with the necessity of better harbour and dock facilities to ensure a high quality of fishery products, I would like, Mr. Chairman, to add a plea that additional transportation means be provided to maintain the renowned high standard of my constituency's lobster and fresh and salt fish, for after this summer we of the town known as the gateway to the maritimes are not assured of the services of the S. S. *Yarmouth Castle*. In order to fill the breach caused by her departure for other ports, I would urge that the government take under consideration the building of a new ferry to handle the ever-increasing shipments and the mounting tourist trade for, indeed, the latter has increased by leaps and bounds since our friends, the Americans, have become aware of the attractions many and varied offered by this province known as the ocean's playground where one may dip contentedly in the briny deep, and enjoy restful breeze-kissed evenings which ensure peaceful and pleasant slumbers.

Motels and private homes dot the highways where once bushes and alders grew. The national housing loan board, through its ever-increasing expansion and government foresight, makes it possible to meet the growing needs of tourist trade. May I, Mr. Chairman, commend the government for its awareness of the people's problems along this line. We all know that the construction of federal buildings and of private homes means more pay cheques and better trade.

Security for the home-owners and their families naturally springs from the ability of each and every one to earn a decent living wage. However, this does not mean that unemployment—although it is decreasing—does not exist in my riding. It would be foolhardy to deny it. At this moment, nevertheless, I appreciate what the Conservative government has done and is doing to ameliorate the situation, to step in and supplement seasonal lay-offs and lack of work with not only one but two extensions of benefit periods, which in many areas throughout my constituency are a godsend. I know that this is not a cure-all for unemployment ills, but I am sure the hon. members of this committee will agree with me that it is a step in the right direction, and led on by many more steps of this nature, we will, eventually, come to the promised land of peace, prosperity and contentment.

Mr. Chairman, with your kind permission and begging the indulgence of the house, I wish to illustrate the dire need for fishery protection craft, adequately manned and strategically located to assist fishermen in distress. Twenty years ago a near tragedy occurred which forcefully illustrates the lack of adequate search and rescue vessels, and if

hon. members will bear with me, I shall endeavour to substantiate my assertion with a story.

On the 15th of December, 1938, after three days of wintery weather, the sun greeted the village of Pinkney's Point with the promise of a perfect fishing day. The turbulent and angry sea of previous days lazily and reposingly invited the fishermen to venture out and retrieve the lobsters which had crawled into their unmolested traps. As they gladly left the wharf on this eventful morning, no one thought that before another day dawned nerve-wracking tension and heart-rending anxiety would disturb the serenity of this village. For throughout this day, so calm and peaceful, the boats flitted about on the vast expanse, and there the men happily hauled their traps, all the while speculating on the good catch that was theirs. And as the sun slowly sank in the west one by one they returned to the safety of their home port.

However, due to the large quantity of traps, one lagged behind unaware of the impending storm gathering on the horizon, unmindful of the snow that began falling; the men thinking only of the many needed items that their bountiful catch would provide for their beloved ones, thinking, as they worked on, of the rejoicing there would be in their homes that evening as they handed to their wives the day's pay cheque. So absorbed were they that they noticed not the wind's mournful tone and its increasing intensity. Finally the last trap was hauled, and then they compass-pointed the prow of their boat homeward.

However, fate dealt them a cruel hand. The shafting had broken. Hastily, preparations were made to ensure safety while waiting for rescue, but in an hour's time the storm had so intensified that it was impossible for the fleet to venture out. The men of the village remained on the wharf and spoke in hushed tones, knowing that if rescue was not imminent, chances of survival were small. I will not attempt, Mr. Chairman, to describe the gamut of emotions that were part and parcel of that night. The beloved ones lingeringly thought that their morning's kiss would be the last one they would ever have from their beloved husbands.

And on the storm-lashed sea two men fought valiantly for their lives. Their frail craft, tossed about by mountainous seas, happily weathered the storm, and next morning to the rejoicing of all they were towed back to the haven of their home port. The harrowing experience remains indelibly etched on their minds. Thankful that they had been spared, and promise-bound, the next Sunday they came to the village church, garbed in their fishing clothes of black rubber, and as they kneeled at the foot of the altar and offered prayers of thanks for having been saved, the congregation also prayed. All eyes bedimmed by tears lifted toward heaven, imploringly pleading for the establishment of rescue service made possible through specially built and crew-manned coast guard vessels.

May I at this point say that in past years many village churches have witnessed such scenes; however, with a slight change in scenery. The congregation and relatives have gathered to pray, yes, but also to mourn and pay their last respects to a loved one lying in a watery grave. For 19 years this plea has fallen on deaf ears and nothing has been done to allay the fears of those who daily pit their skill and daring against the whims of mother nature.

Mr. Chairman, I have endeavoured to present before this committee the wish of every fisherman along the entire sea coast of Nova Scotia. I have also, though perhaps awkwardly, endeavoured to present the wish of every widow and child of those who found a watery grave as their final resting place and on their behalf I respectfully and humbly urge that provision be made for the building of adequate coast guard cutters for the protection of a vast fishing fleet that is part and parcel of Nova Scotia's primary industry.

Mr. Carter: Mr. Chairman, it is usual to congratulate an hon. member on his maiden speech and I wish to convey my congratulations to the hon. member for Shelburne-Yarmouth-Clare who has just taken his seat although I must confess I was somewhat concerned when I noticed the huge string of red herrings with which he started out. Once he disposed of these, however, he did very well and I am sure he deserves our congratulations.

These estimates have already been very thoroughly discussed in the standing committee on fisheries and I should like at this time to pay tribute to the hon. member for Gaspe who acted as chairman of that committee, and who conducted the discussions with such great harmony and, I think, with great profit to all of us. I hope that all hon. members will make a point of reading the minutes and reported evidence of that committee because it is very enlightening, particularly for those hon. members who may not be familiar with the fishing industry.

I should also like to thank the minister and his home economics branch for the very fine luncheon which he tendered to that committee. The only thing that concerned me was that I noticed Newfoundland salt fish was relegated to a rather minor role on the menu. I believe this was the third time I have enjoyed a luncheon under the sponsorship of the Department of Fisheries and if my memory serves me correctly on

each occasion we have started out with salt fish chowder. I do hope when the next fisheries luncheon comes around Newfoundland salt cod will enjoy a much more prominent place on the menu. I would suggest to the minister that it might be worth while to have luncheons organized on a provincial basis. We could put up a very nice luncheon of Newfoundland fish products alone and I am sure the same could be done by Nova Scotia and the other maritime provinces. This would give us a chance to learn something about the fisheries not only of the east coast but of the west coast and even of the central provinces. We could have 10 luncheons a year with samples of the fisheries products from one province at each luncheon.

The hon. member for Grand Falls-White Bay-Labrador has already referred to the traditional importance of the Newfoundland fisheries. Historically the fishing industry has been the mainstay of the economy of Newfoundland. In the old days Newfoundland had a single crop economy based entirely on the production of salt cod. In rather recent years, as late as 1914 when world war I started, we got another basket for our eggs when we began to develop the fresh fish industry. And then, of course, as time went on the products of our forests and mines began to have more dollar value than did our fisheries but even then the fishing industry was still of major importance because it gave employment to the greatest number of people. Now that we in Newfoundland are experiencing a bit of depression, with unemployment more than double what it normally is, more and more people have been forced to return to the fisheries and so the industry is once more assuming its prominent historic importance as a major source of employment.

My friend the hon. member for Shelburne-Yarmouth-Clare tried to make out that nothing had ever been done for the fishing industry. I would be the last to say that enough has been done for the fisheries or that as much has been done for the fisheries as for the farming industry and yet I would point out to my hon. friend that nevertheless a great deal has been done for the fishing industry. I refer him to our price supports, to the salt rebate, to fisheries loans, to insurance on lobster traps, to bounties on fishing vessels, to unemployment insurance for fishermen and, in Newfoundland, to the bait service. All of these things were done by the Liberal government. When you total them all up they constitute a substantial amount of assistance to the fishing industry although, as I said, I believe still more is required. But the tragedy of it all from my point of view is that substantial as the assistance has been very little of it has been able to trickle down to the fisherman who is the person we really wish to help. With the exception of insurance on lobster traps and unemployment insurance practically none of this assistance has been of any material benefit to the ordinary fisherman.

I have in my hand a publication put out by the economics service of the Department of Fisheries entitled, "Operations of Modern Longliners and Draggers—Atlantic Seaboard —1957" which has been compiled by John Proskie. This is a veritable gold mine of statistical information with respect to the fishing industry. If we look through the report we find that as far as Newfoundland longliners are concerned the break-even prices for codfish are as follows: For longliners 30 to 40 feet in length the break-even point is 1.66 cents per pound; for longliners 40 to 50 feet long the break-even point is 2.087 cents per pound; and for longliners 50 to 60 feet in length the break-even point is 2.489 cents per pound. Therefore a Newfoundland fisherman must get well over 2 cents a pound to break even on his fish.

If we look at the average fish prices for 1957 we find that the Newfoundland fisherman fishing out of a 30 to 40 foot boat received 2.08 cents per pound for codfish, which is by far the largest production of the Newfoundland fisheries. He broke even by less than half a cent a pound. The operator of a 40 to 50 foot boat did not break even. He only got 2.03 cents a pound whereas he required 2.08 cents to break even. The operator of a 50 to 60 foot boat had an even bigger deficit because he received only 2.01 cents a pound for codfish whereas he required 2.89 cents to break even.

Three days ago fish prices in Newfoundland were published in the St. John's press and looking over the *Daily News* of August 18 I find that the price for cod varied from 1¾ cents a pound to 2¼ cents a pound in the different localities throughout the island. In Englee, which is in the riding of the hon. member for Grand Falls-White Bay-Labrador, they only got 1¾ cents a pound for large fish while in the first instance the 1¾ cents was for small fish. The going price for haddock three days ago was 2 cents a pound for small to 2½ cents a pound for large. For rosefish, which is quite a delicacy, the price was 1¾ cents a pound for small and 2½ cents a pound for large. For flounder the price varied from 2½ cents to 3 cents a pound. For halibut, which is a high-priced fish when you buy it in a store, the price varied from 10 to 12 to 15 cents a pound. These are the fish prices that were being paid in Newfoundland just three days ago.

I might point out that these prices are lower than are being paid in Norway by the fish processing plants there which I understand are not subsidized by the government. In any event, when we compare the fishing industry of Canada with that of other countries we find that the Canadian fisherman, whether he is in Newfoundland or Nova Scotia—I cannot speak about British Columbia; I believe the fishermen are all wealthy on the west coast—is worse off than his counterpart in Norway, Great Britain or the United States. In my opinion this chaotic condition is going to continue until the fishermen themselves do something about it in the same way the fishermen of Norway did. I do not think it will be sufficient for the fishermen to organize in any one province or part of a province. They will have to organize on a nationwide scale, certainly on a scale large enough to embrace all the Atlantic provinces if they are going to be able to organize their sales and get the benefit of a decent price for their fish.

The price of salt fish is always based on the price of fresh fish and is usually a little lower than that of fresh fish, particularly when you take into consideration the extra expense of buying salt and the additional work in handling the fish. We are all happy to learn that a commission is inquiring into the price spreads on fish and we hope that when their report is made it will contain concrete recommendations to show how the fisherman can get a little better price for his fish. Whether it is on the production end or on the marketing end does not matter because if the fisherman can get one cent more per pound for his fish he will be substantially better off.

Lord Bacon once said that the fisheries of Newfoundland contained more wealth than all the mines of Peru. He was probably right because the mines of Peru can be worked out but our fish resources are self-perpetuating. What we want is a little more of that wealth to trickle down to the ordinary fisherman because today he is not getting the share of that wealth to which he is entitled.

An hon. Member: Carried.

Mr. Carter: Not yet. Before I sit down I want to say a few words about the bait service. This service applies only to Newfoundland because it was one of the obligations which the federal government assumed as part of the terms of union between Newfoundland and Canada. We all recognize that the bait service is a very difficult service to administer and we were delighted to learn in the committee that a new portable bait freezing depot is going to be tried out, one which we understand can be built for approximately $5,500, which can be added to one unit after another and which can even be moved from one place to another. That is the type of unit we need for our particular requirements in Newfoundland where the fishing industry is changing very rapidly.

Our present bait service was instituted by the Newfoundland government many years before confederation and was started as a form of insurance for the fishermen. It cost money and never paid its way but nevertheless it yielded dividends because it enabled the fisherman to produce wealth that benefited the whole province and which could never have been produced without that service. There is no use in having a bait depot unless we have bait to put in it and that is where we need a much more flexible policy than we have at the present time. The appearance of bait in Newfoundland waters is a seasonal phenomenon and it does not always come with uniform regularity. The people on the spot must have the authority to take advantage of the squid and other types of bait when they appear because the run may only last a week and then they are gone. If we do not do it they do not return and we are left without bait.

Some hon. members have referred to the fact that a great deal of our bait is sold to foreign trawlers which produce fish to compete with us in our salt fish markets. While we are anxious to co-operate as much as we possibly can with the other nations of the world, yet I think charity begins at home. We must look after the requirements of our own fishermen before we permit bait to be sold to the fishermen from other countries. I think that is fair and reasonable. I think that is what other countries would do. I am sure we would find it very difficult if we had to go to another country to buy bait for our fishermen when they did not have enough to supply their own requirements. I urge the government to look at this problem and take whatever steps are necessary to ensure that the bait requirements of our Newfoundland fishermen will be met before bait is sold to our competitors.

The bait service is important, not only for bait to catch cod, haddock and other ground fish, but it is important also to our lobster fishery. The lobster fishery is a very important fishery and one that is subject to management with resultant improved returns to the fishermen. Very often in the early part of the year our lobster fishermen are handicapped because they cannot get bait. We may not, at all times, have sufficient bait on hand to provide for that industry. Not only must we have bait, but we also must have refrigerated boats to take the bait from one large depot to another. At the moment we have only one

small boat which is antiquated and will soon have to be scrapped. What we need are three new ships specially built for the bait service. In the winter season particularly, when these boats cannot be used along the north shore because of ice conditions, they could very well be employed in the rescue service along the southwest coast. As the hon. member for Shelburne-Yarmouth-Clare pointed out they are urgently needed in New Brunswick, and the need is no less urgent in Newfoundland.

With respect to the administration of the bait service, I would hope the government would give consideration to the cancellation of these leases to private interests. To my knowledge, the private firms who have leased these depots have not lived up to the terms of their agreement, and I know that a certain amount of discrimination has resulted. Fishermen in one area have an advantage which is denied to those in other areas. Furthermore, certain fishermen have not been permitted to get bait from these depots at the regular price unless they agreed to sell their fish to the person who owned the lease. This is all contrary to the original terms of the lease and I think these things would justify the cancellation of these leases which are really becoming a source of great annoyance.

The best way, in my opinion, to administer these bait depots is to put them under the local authorities. Our time in Newfoundland is about an hour and a half ahead of that of Ottawa. At 3.00 p.m. on Friday in Newfoundland it is 4.30 p.m. in Ottawa and should a problem arise by the time we get in touch with the department in Ottawa by telephone most of the officials have gone for the weekend. Then, we cannot do anything about it until Monday. If it is a long weekend, we might not be able to get in touch with them until Tuesday. During that time a lot of things could happen.

I want to give you one illustration. Last year, like this year, there was no bait late in the fall. In one particular place there did appear a school of what we call whitefish which fishermen do use as bait in an emergency. However, it happened that these whitefish were in a little arm of the bay and there was a regulation somewhere on the federal statute books which prevented the fishermen from taking those whitefish on that date because they were in that particular spot. What we wanted to do was to get permission from Ottawa to get these whitefish which were so urgently needed for bait and which are not taken for any other purpose. Ottawa was closed down for the weekend, as it was a Friday afternoon, so we could not get permission. On Tuesday the whitefish had gone and the fishermen were still without bait. This is only one illustration. There are hundreds that could be given to emphasize the need for leaving more discretion in the hands of the people who are on the spot.

I hope that if these new bait freezers prove successful the fishermen themselves will be encouraged to own them, either on a co-operative basis or on a community basis —even by private industry. The more the fisherman can control the administration of the bait service the better for the fishermen and the better for the department because they will have less headaches with which to contend.

Before I sit down I want to mention briefly two other topics. The first topic is the continued exploration for the main school of herring. We know that the department has been carrying on this investigation for a number of years and that it is a long term operation which may last as long as 10 years. However, it is vital to the economy of Newfoundland that we discover this source of wealth as quickly as we possibly can. I urge the minister to spare no effort in intensifying this investigation as much as possible.

Then, I want to deal with the appearance of international fishing ships on our inshore fishing grounds. I believe this point was mentioned by my colleague the hon. member for Grand Falls-White Bay-Labrador or by one of my other colleagues who spoke this evening. The bulk of our fishermen in Newfoundland are what we call inshore fishermen, which means they fish from tiny settlements in tiny boats. They go to small fishing grounds which are from 10 miles to 20 miles offshore. These fishing grounds, of course, being 20 miles off our shores are in international waters, they are outside of our territorial limits. They are small grounds, perhaps 20 miles long by 10 miles wide. The fishermen are absolutely dependent upon these grounds for their livelihood. If they cannot fish there with their equipment, they cannot fish anywhere else. If a foreign dragger comes and scrapes over the bottom three or four times, the fish are driven away or caught and it takes a long time before they return, perhaps three or four weeks or months. As a result of this, our fishermen are deprived of their livelihood. They suffer tremendous hardships.

The objection is not to these fishermen in these international waters. We recognize they have a right there as well as we have. However, we want them to recognize that these grounds are vital to our fishermen. What we object to is the particular kind of fishing operation they conduct, I mean dragger fishing. If these foreign fishermen would fish with a hook and line they would not

destroy the ground. They might catch some of the fish, but they would not drive the fish away. There is no reason why our fishermen could not fish there as well as the Spaniard or Portuguese, if they would use a hook and line. This is a matter for international negotiation.

I hope the minister will use every available opportunity to explore what can be done to get some kind of a gentleman's agreement or some kind of understanding whereby we recognize their right to fish there and they recognize how vital these grounds are to our fishermen, and work out a sort of "live and let live" proposition whereby the grounds can be used to the mutual advantage of both foreign ships and our own.

Mr. Macdonald (Kings): Along with previous speakers, Mr. Chairman, I should like to make a few brief remarks on the fisheries estimates in general, also as they pertain to our province, and in particular as they apply to the county of Kings which I have the honour to represent. First of all, I should like to pay a high tribute to the excellence of the work done by the minister and his department. I reflect his view expressed in speaking on the estimates in the last parliament that there is a great future for the fisheries industry. I might say that the amount of $17½ million which is proposed to be expended in this department will no doubt be put to the very best possible use by the minister and his officials towards the further development of this very important industry.

Our island province is almost completely surrounded by good fishing grounds which can still stand a good deal of expansion. The heaviest catches landed in nearly all varieties are in Kings county, and it might be noted that almost 70 per cent of the landed value is in lobsters. To the fisherman of Prince Edward Island lobsters are what potatoes are to the farmer. They both provide a speculative high cash return.

In that regard I might mention a few considerations which have been brought to my attention by those engaged in that branch of the industry. First, inquiries have been made with regard to the possibility of establishing a lobster hatchery in our province. Second, our fishermen are very much interested in the experiments being carried out with aluminum traps and other more durable metal traps than the wooden ones more commonly used today. Third, fishermen in some of our areas are becoming more and more interested in programs of trap limitation and in several localities have expressed the wish that such a program be instituted. I realize that this must be an almost unanimous voluntary move on the part of the fishermen in the area, and trust that the government would provide assistance where any group wished to proceed along these lines. I wish to bring these points to the attention of the department and I know we can expect their assistance in the satisfactory solution of the many problems related to them.

In addition to the some 2,500 fishermen using about 1,400 small-type boats, we have the dragger fleet which operates out of Souris at the eastern end of my riding and supplies the two large fish plants which operate there. The smaller-type draggers in use there have been quite successful, and it is now felt that a larger and more powerful type of dragger, which can go farther and operate in deeper waters, could also fish from this area and be a big asset in the extension and expansion of the fisheries of the northeastern section of Prince Edward Island. In this program the provincial government assists very materially, and it is hoped that there will be mutual co-operation with the federal government in doing everything possible to help in this field.

I could mention, too, the great usefulness of the public works program in our county which touches practically every fishing harbour this year. I should like to thank the Minister of Public Works and his most efficient deputy, Major General Young, for the co-operation and consideration shown to our fishermen in the planning and execution of the large public works program for our county.

(Translation):

Mr. Chairman, at this stage I would like to say a few words in French. Unfortunately I have lost my onetime facility for expressing myself in this beautiful language, for I have hardly spoken it since I left college twenty years ago. At that time, I was fluent in both official languages owing to my contacts with students from the province of Quebec and because of extra studies. I hope my effort will be received in the same spirit in which I make it.

I think there now prevails in our great country a feeling of national unity even stronger than that inspired by my great namesake, Sir John A. Macdonald, at the time when the principles of unity so necessary to the merging of two great peoples into one and the same nation, were originally laid down and firmly established. While there will always be, on both sides, extremists and all-out nationalists, the happy balance will always be struck by the many who are tolerant, realistic, fair and generous in their relationships with individuals regardless of

race, colour, religion or other factors. I am by no means alone in deriving pleasure from the fact that whereas the first group is dwindling, the second is expanding very noticeably.

The blending of two great cultures and two fine sets of old-world traditions can give rise, in the new world, to a society which should eventually achieve a higher standard than could be hoped for with one culture and one set of traditions.

There can be no doubt that we all love our country, and want to see it prosperous. This can only come about if we have a strong feeling of national unity which we, members of the House of Commons can, I am sure, do much to foster and develop. During the second world war, many of us fought beside French Canadian regiments; I am thinking in particular of the Régiment de la Chaudière, which formed part of the division I served in, and in which I counted many friends. Splendid soldiers they were, and fine comrades in arms.

We believe that under the leadership of the Prime Minister (Mr. Diefenbaker), national unity has made much headway. Mr. Diefenbaker has said he has a single policy for all of Canada, and Canadians in general, and Quebecers in particular, have shown their faith in him, and have associated themselves with his sincere hope for the tightening of the links between all parts of the country so as to make Canada a greater and mightier force in all respects. Let us again do all within our power, as members of parliament, to foster and develop a deeper and stronger spirit of national unity throughout our beloved country.

Fishing was one of the first industries in the province of Quebec, and was introduced by the maritime Acadians at the very dawn of our history. Let it then be said, in all fairness, that our French-speaking fellow citizens were the joint pioneers of the fishing industry. Nor do I hesitate to say that they still play a decisive role in that industry, and will continue to work with us in co-operation and harmony, with all the zeal and skill they have shown in the past, for the expansion of this important sector of our economy.

(Text):

I feel quite safe in saying that our island fisherman is an efficient producer, yet sometimes prices are not as good as they should be, especially during the peak landing season. This makes it difficult for some fishermen to recover their costs unless they have continuously high catches. In this regard more than one packing firm has requested that additional financial allowances be provided so that more working capital would be available, thus allowing them to hold the pack until market conditions improve. This is probably a matter for the Department of Finance, but I know the minister and his department will give consideration to the difficult marketing problems which sometimes arise in this industry and I would further suggest that a study be made in this regard.

The department now carries out more extensive work along that line than most people realize and in closing I would strongly urge that special attention be focused during the coming year on this all-important phase of the fishing industry—namely that of assisting the fishermen to obtain better market prices for their product.

Mr. McWilliam: The international aspects of the fisheries industry have been covered by previous speakers, as has also the groundfish phase of the industry. I will not, therefore, take up the time of the committee by repeating what has already been said on these two very important matters. My remarks will be centred around the inshore fisheries in the Miramichi waters. May I broaden the scope of the rules and the terms of reference at this moment by offering my congratulations to the Minister of Fisheries on being conferred with a doctorate degree by his alma mater, Mount Allison University, on Saturday last.

I wish to express my thanks to the minister for his statement covering the activities of his department and to express the thanks of the Miramichi fishermen to the minister and to his departmental officials, both here in Ottawa and in the field, who are engaged in the administration, research, protection and marketing of fish, for their efforts in trying to solve the many problems with which the industry is faced. Not all the problems have been completely solved, but many improvements have been brought about as a result of the research and experience gained by the department and by the industry itself. This has gone a very long way toward improving the lot of the prime producer and assisting the distributors and processors.

Our fisheries are of prime importance. The opinion has been expressed that this department of government has not been given recognition in accordance with its importance to our economy and that the allotment of the public funds for the fisheries industry is insufficient to carry out services to the desired degree.

The constituency which I represent, Northumberland-Miramichi, produces many species of fish, most of which are in the delicacy class,
