THE HOSPITAL TRAIN.

Equipped by the Central Branch of British Red Cross Committee. In war times it is sometimes nece

to transfer sick and wounded soldiers from one point to another, and cars are often converted into improvised hos-

orden converten into improvised nog-pitals for this purpose. Ordinary coaches and even box cars have been transformed into rolling hos-pitals for the reception, care and medi-cal treatment of the sick and wounded, but these methods are far from ideal, and have never proved satisfactory. To obviate these untoward conditions

during the Boer war the Central British Red Cross committee decided to raise sufficient funds for building, and equipping a complete hospital train. This un

dertaking was made all the more difficult since the railways in South Africa are narrow gauge, with heavy grades and single tracks, and where it was desirable to have a train of at least ten cars the number was limited by these conditions to seven.

The cars were designed by Sir John Furley, of the Central British Red Cross committee, and the contract for their construction was given to the Militar Equipment Company of London, and the cars were built by the Birmingham Railroad Wagon Company; under ordinary circumstances the work of building and equipping the complete train would have required eight or ten months, but the anthusiasm ran so high, not only among the officers of the wagon company, but the employes as well, that the seven cars were finished complete in every de-tail in just to work

tail in just ten weeks. The train completed was made up of seven bogie, corridor cars—that is to say, cars which were of the vestibule type, as we call them in this country, were mount ed on trucks having four or more wheels by which the rounding of curves is fa cilitated. Each car measured thirty-six

feet long and eight feet wide. The first car contained three compartments, the first being used for linen and stores, the second for two hospital officers, and thet

third for two nurses. The second car contained the same tirely disappeared. Desiccation has been going on for many years, but the last stages in the process were very rapid. This lake used to be shown on the mapt number of similarly arranged rooms, one for two medical officers, the middle serving as a dining room, and the third as a dispensary. The next four cars were ar-ranged for the invalid soldiers, and each as an oval-shaped body of water had a capacity for eighteen men and one hospital orderly. The last car was arranged for the trainmen, and contain-ed a neatly appointed kitchen, a pantry, and berths for the cock. and berths for the cooks. Every car had a closet, a lavatory, lockers for stores and a cistern for water.

The lifting and moving of the invalids is not an easy matter, and as an aid to this difficult operation and delicate task an arrangement comprising a series of sliding pulleys is placed in the roof so that an assistant may easily raise the bed with the patient on it to the proper height and swing it in or out of the car

or move it about at pleasure. Portable steps and an awning are provided so that invalids may be sheltered while being transferred from stretchers or beds to the train. These cars are fully equipped with every essential for the maintenance of the full complement of ninety-seven persons for two or three weeks

The cars are handsomely finished in and out. In the centre panel on either side of every car there is an emllished Red Cr back ound encircled by the words "Princess Christian Hospital Train" in royal blue and gold; the train was named in honor of her Royal Highness, who had evinced a keen and active interest in all that apertained to the work of providing succor to the sick and wounded soldiers in South Africa.—New York Times.
