at the Draw Bar

Power at Lowest Cost

NOT only is the first cost of the Happy Farmer Tractor lower than that of any other tractor of equal power, but this tractor will save you money year after year in lowest cost of operation. Over and over again Happy Farmer has proven its superior value in competition with the next-bests all over America.

When you remember that a Happy Farmer Tractor coming to your farm will enable you to sell your stationary engine and three horses—that it saves you the feed cost of the horses—you see that it is not a difficult matter financially to own now the

Happy Farmer TRACTOR

Though it weighs only 3,700 pounds, it gets 2,000 pounds drawbar pull, and easily pulls 3 bottoms at depth of 8 inches. In other words, it does the work of big, cumbersome tractors by means of simple design and fewest parts. Thus its first cost to you can be kept down to the lowest point.

Low Maintenance Cost—Having fewest parts, it has fewest repairs. Every part is quickly accessible. This means time costs saved. You get "three wears" out of your oil. The oil is automatically distributed throughout the machine and is used over and over again.

Its kerosene motor is without doubt the most economical fuel burner ever invented. Its low fuel cost has been proven again and again in

plowing competitions with rivals. For instance,—

After the official fuel consumption tests at the Marion County Ohio Tractor demonstration, Oct. 2-3, 1918, a statement of results was issued, signed by the Dept. of Agricultural Engineering, Ohio State University, Columbus, Ohio. With three 14-inch plows the Happy Farmer Tractor defeated 18 competitors. Its nearest opponent's record was 21% higher, and the others ranged up to 250% higher. This performance was duplicated Nov. 22, 1918, at Jersey Shore, Pa. Happy Farmer Tractor has frequently beaten this record.

Long Life means lowest cost per year for operation and maintenance. Though light in weight the design is such that strains are reduced to the minimum. For instance, 88% of the total weight is on the big rear wheels. Every part is built of the strongest material obtainable. Power is saved by clever designing. How this is accomplished is a story of real interest well worth reading. We want you to have full details of the Happy Farmer's low cost of operation.
