Iron Mask Will Double the Original Size of Its Compressor.

TO WORK AGAIN

Crosscutting Will Be Commenced in the Bottom of the Shaft-Work Under Way in the Old Tunnel on the Novelty to Cut a Near-By Ledge.

(From Friday's Daily.)

The Iron Mask company, which originally planned to install a compressor of a capacity of five drills, has decided to double that size, and the Mask's new electrical compressor plant will be of the 10-drill type. The change will be easily Three teams are at work hauling from made, as the compressor originally the Second Relief, and about five tons ordered was of the duplex type. The per day is being shipped. order for half of it alone was first placed, and now the corresponding second half has been ordered. The addition to the size of the plant was partly made on account of the recent gratifying results in the sinking of the winze, where a fine body of ore has been met.

The foundations for the new electrical compressor are complete, and it will be but a matter of a few days after the machinery gets here before the electrical works will be in operation.

W. J. Shelton, mining superintendent for the Canadian-American Gold Mining few miles west of Lake Okanagan. Mr. Shelton reports that on the Silver King, one of the properties of the Alma Mater group, which is owned by the Canadianhas been made.
