

A Series Alternating Street System

WHICH IS SUCCESSFUL

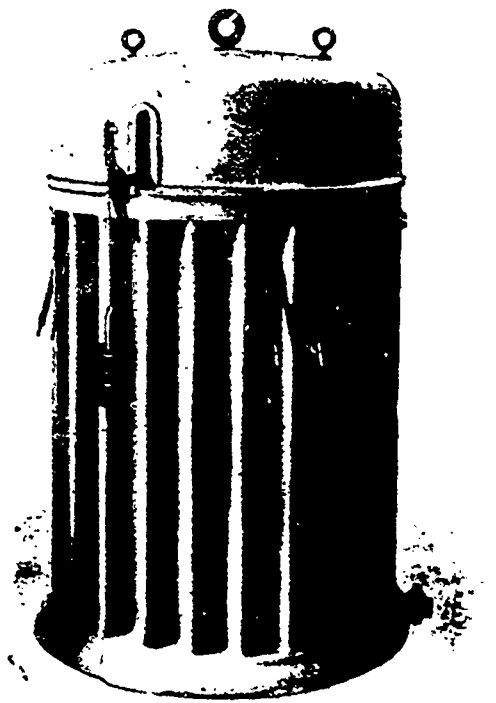

Our Constant Current Transformer can be operated on any Potential, or any periodicity, and on one, two or three circuits without additional constant Potential Transformer as required when so called "regulator" is used.

Power factor and efficiency highest attainable.

No destructive grounds or short circuits with other lines where our Transformer is used.

If you contemplate a change we can show you results which **HAVE NOT** and **CANNOT** be attained with any other system.
