Pte. A. H. Lewis, Bugler wise Almost Worthless. Blueberries thrive best on soils

which are so acid that they are usually considered almost worthless for ordinary agricultural purposes. Blueberry culture, therefore, offers possiberry culture, therefore, oners possi-bilities of profit to individual land-owners in 'istricts in which the gen-eral conditions are especially hard and unpromising. Blueberries can-not be grown in ordinary fertile soils. Although frequently confused, especially in the south and in the middle west, blueberries and huckle-berries are public distingt. In some middle west, blueberries and huckle-berries are quite distinct. In some districts the name "huckleberry" is restricted to berries which contain ten large seeds, with bony coverings like minute peach pits which crackle between the teeth, while the name "blueberry" is applied to various species of berries containing many,

PRATTATION OF THREE-YEAR-OLD BLUE-BERRY HYBRIDS.

Mothers cal easily know then children are right to the total they lose no while in applying the best of remedies — Mother Graves Worm Rates but very small, seeds. It is the latter, not the large seeded huckle-berry, which offers possibilities, for profitable culture. At the present stage of the blue-

berry industry it is best to begin by viransplanting the most promising wild bushes, selecting them for the size, flavor, color, and earliness of the berry as well as for the vigor and productiveness of the bush. These plants can be propagated in various ways. The aim of the cultivator should be to secure bushes which will ways. The aim of the cultivator should be to secure bushes which will produce large berries. These cost less to pick than small ones and

bring a higher price on the market.
The three fundamental requirements for successful blueberry culture are: First, an acid soil, especially one composed of peat and sand; second, good drainage and thorough aeration of the surface soil, and, third, permanent but moderate and, third, permanent but moderate soil moisture. Next in importance to these essentials is a location such that the berries may reach the market without delay. The best prices are obtained about the beginning of the wild blueberry season. The main crop of wild blueberries comes from northern New England Canada and northern New England, Canada and northern Michigan. A location to the south of these areas where the berries will mature earlier is, there-fore, to be desired for the commer-cial cultivator.

Another important factor to be

Another important factor to be considered in selecting a location for a blueberry patch is the possibility of late spring freezes. For this reason the bottoms of valleys should be avoided. Freezing seldom injures the blueberry plant itself, but the fruit crop is often destroyed in this way. From past observations if anway. From past observations it appears that wild blueberries growing in or around bodies of water frequently escape the injurious effects of late spring freezes, and it seems, therefore, that a flooding equipment for blueberry plantations similar to those used for cranberry bogs may,

those used for cranberry bogs may, under certain circunstances, prove commercially advantageous.

At the present time, however, only a beginning har been made in blueberry culture. The yield and profits in field plantations from improved bushes have not as yet been ascertained. There is, however, one small plantation where complete records have been maintained for the past six years. This plantation was started in 1889 in a natural blueberry bog which was first drained and then set with wild blueberry hushes transplanted without selection for individual productiveness or size of berries. On this plantation the yield per acre has averaged 1,741 quarts for the past six years. This average would parts averaged 1,741 quarts for the parts in years. This average would have been somewhat higher except for the almost total failure of the cron_11 1910, due to late spring treates.

SHOES, BOOTS AND SLIPPERS.

Winter Fads In Footgear Mostly Call For Matching Colors. Shoes match or blend with the cos-tume. For sport or practical wear high buttoned boots, with common sense beels and heavy soles, are worn. For street wear there are boots cut very high, with Cuban heels, and with afternoon and evening costumes the dain-

tiest of footwear is worn.

With tailor made costumes very high laced boots are worn. Sometimes they are laced up the front, sometimes up the side. Skirts of tailor made suits being extremely short, the shoes are shown off to great advantage. With a dark brown suit brown suede boots are worn, with a dregs of wine suit bronze kid and with a simple morning suit Russian calf. Dressy high boots are worn with afternoon costumes. For instance, a pair of bronze kid has straps up the front, each strap being embroidered with beads in a matching shade. Another smart high shoe is of patent leather. With a very light gray costume shoes of light gray suede are worn. With a yellow and black costume shoes with vamps of patent leather and uppers of suede in yellow are worn to match the scheme. With an afternoon or dinner gown in black are worn low shoes in patent leather, ornamented with handsome buckles of cut steel, black enamel or beads.

Satin slippers of matching shade are worn with evening dresses. There are also smart slippers of cloth of silver or cloth of gold, finished with small rhinestone buckles. Some of the black and colored slippers worn with evening dresses are handsomely beaded. Black velvet slippers are seen embroidered in cut steel beads. With a skating suit of white, trimmed with fur, the boots are of white kid, and with a suit of brown the shoes are of brown kid.

THE EVER USEFUL

Velours Hats Still Hold Their Own For Sports and Style.

These velour sport hats in all the popular shades are still modish, despite the vogue for worsted sport caps.

ROAST TURKEY.

A ten pound turkey is a good size

Directions For Preparing the Seasonable Bird, Home Style.

for any but the smallest family. Burn off the hairs and use a brush for washing outside. Wash inside with cold salted water. Stuff, truss and place on its side on a rack in the baking pan after rubbing entire surface with salt and black pepper; also rub breast, wings and legs with a little butter mixed in flour, the two blended together until creamy. Dredge bottom of pan with a little flour, adding half a cupful of cold water to this. Put in hot oven, and when flour on the surface begins to brown reduce heat, basting every fifteen minutes with fat in pan. If this cooks away add boiling water as needed. During the cooking turn the turkey so it may brown evenly. If it cooks too fast cover with buttered paper to prevent scorching of the skin. It must be basted frequently and thoroughly to be juicy. Rémove the string and skewers before serving and garnish with celery tips and rings and disks of carrots, boiled and strung on a fine wire.

A plain filling is made with dry stale breadcrumbs mixed with a table-spoonful of minced onion, the same of butter, and salt and black pepper to taste. Drop the butter in tiny nuts through the filling, letting the two blend as they will. This produces a "dry" filling.

An Easy Pill to Take.—Some persons have repugnance to pills because of their nauseating taste. Parmelee's Vegetable Pills are so prepared asy to make them agreeable to the most fastidious. The most delicate can take them without feeling the revulsion that follows the taking of ordinary pills. This is one reason for the popularity of these celebrated pills, but the main reason is their high tonical quality as a medicine for the
