## HYPODERMATIC TABLETS FOR

# Local Anæsthesia DENTAL

Formula of N. L. HOFF, D.D.S.

Our Hypodermatic Tablet No. 81, "Local Anæsthetic (Dental)," is made, as stated above, after the formula of Dr. Hoff, and we beg to quote from his paper upon the subject, published in the *Ohio Dental Journal*, as follows.

"The combination I am now using as a local obtundent yields good results. I use sterilized water to make the solution, and, to prevent possible decomposition, make daily or as needed for use. The formula I use is as follows:

℞ Cocaine.....	gr. 1-2
Sulphate of Morphine.....	gr. 1-8
Sulphate of Atropine.....	gr. 1-200
Sterilized water.....	gtts. xxx
Mix and inject hypoder. gtts. v to xv.	

"For convenience I have had the Cocaine, Morphine and Atropine made into soluble tablets by Parke, Davis & Co., of Detroit, and in this way solutions of any strength desired may be quickly and accurately made with little or no inconvenience. As a solvent I use distilled water containing from 8 to 10 per cent. Euthymol to keep it sterile. If desired to make a 2-per-cent. solution all that is necessary is to dissolve one tablet in 25 minims of water; a 1-per-cent solution can be made by dissolving one tablet in twice this quantity of water, or 50 minims. A 4-per-cent solution can be made either by reducing the water one-half or adding another tablet to the 25 minims, etc."

In Tubes of 25, 45 cents per tube \* or four tubes (100 tablets), \$1.65 \* or, in bottles of 100 tablets, \$1.55 per bottle \* but these tablets particularly being made very friable in order to be quickly soluble, are best kept in tubes of 25 \* \* \* \*

Our Descriptive Price List of Pharmaceuticals of Especial Interest to Dentists will be promptly forwarded upon request. Just drop us a postal card.
