The manufacturers of Listerine are proud of Listerine—because, it has proved one of the most successful formulæ of modern pharmacy.

This measure of success has been largely due to the happy thought or securing a two-fold antiseptic effect in the one preparation, i. e., the antiseptic effect of the ozoniferous oils and ethers, and that of the mild, non-irritating boric acid radical of Listerine.

Pharmacal elegance, strict uniformity in constituents and methods of manufacture, together with a certain superiority in production of the most important volatile components, enable Listerine to easily excel all that legion of preparations said to be "something like Listerine."

The success of Listerine is based upon merit
