

	PAGE
Silicified and feldspathized varieties.....	102
Amphibolites.....	102
Garnet-diopside-epidote varieties.....	103
Hybrid rocks.....	104
Sutton formation.....	105
Distribution.....	105
Lithological characters.....	106
Unmetamorphosed limestones.....	106
Limestone-andesite breccia.....	107
Metamorphism.....	108
Diopside-bearing marbles.....	108
Garnet-diopside-epidote rocks.....	109
Quartzose and feldspathic varieties.....	110
Amphibolites.....	110
Mineralization.....	111
Structural relations of Vancouver volcanics and Sutton limestones.....	111
Internal.....	111
Deformation.....	112
External.....	112
Relations to older formations.....	114
Relations to the Sicker series.....	114
Relations to younger formations.....	115
Mode of origin of Vancouver volcanics and Sutton limestones.....	116
Limestone-andesite breccia.....	116
Slaty and cherty tuffs.....	117
Metamorphic varieties.....	118
Age and correlation of Vancouver volcanics and Sutton limestones.....	119
Sicker series and associated porphyrites, by H. C. Cooke....	123
Introduction.....	125
Distribution.....	125
Table of formations.....	125
Summary description of formations.....	126
Detailed description of formations.....	126
Porphyritic andesites.....	127
Ladysmith type.....	127
Common type.....	128
Met. morphism.....	130
Dykes.....	133
Summary.....	134
Sedimentary rocks.....	134
Basal tuffs.....	136
Hard cherty tuffs.....	136
