BROWN'S NURSERIES

ONTARIO

"STANDARD" mounted outfit. Both these and the "DUPLEX" can be mounted low, if so desired.

"My Wallace Power Sprayer (a "Duplex") has always worked well; also maintained abundant pressure for grapes, etc. I use only one pump and find it ample."

Yours sincerely,

HENRY L. ROBERTS,
Grimsby.

14th Dec., 1905

"We only use one pump for power and have to keep that shut off about half of the time. We have power enough to drive the spray right through a large apple tree while driving past."

COL. W. H. PTOLEMY,
Stony Creek.

Wallace Power Sprayers

ARE STRICTLY COMPRESSED AIR MACHINES

Power Costs Absolutely Nothing

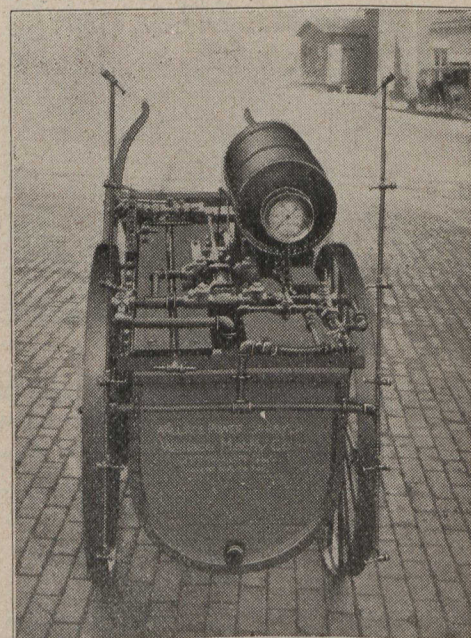

No hand pumping whatever. Are run by 15 and 17 year old Indians; you should be their equal, surely.

Save their cost in a very short time. \$10 to \$20 per day saved on each full day's work.

Sprays thoroughly the largest trees or smallest fruits, potatoes, mustard, etc. Abundant volume to work while standing at a tree. A number are now in use here in Canada.

The Wallace Machines prove their superiority when given the opportunity.

Don't delay your order—hustle it in NOW. We have a heavy demand to supply, yet desire to accommodate all comers. It is possible to be too late to get a machine when wanted.

"JUNIOR" arranged for nursery. It will develop equal pressure with the larger machines. Built to 6 foot track when wanted.
