speciality, its essential composition being known to most European practitioners.

Many of the Chlorodynes of commerce are not of uniform strength, and vary in their effect, which has induced Morsov & Son to compound this preparation to remedy these defects.

The dose for an adult is from 10 to 39 drops (and 1 minim is equal to 2 drops); the dose may, however, be increased in especial cases to 25 or even 39 minims, but it is best to commence with the lesser dose. It may be administered in almost any fluid or on sugar.
