And here we may with a curious critic, at least to us it is, on the opinion of the famous Abernethy, that dyspepsia was a primary disease.

This was his idea, and his practice conformed to it. The complicated symptoms attending the malady, were by him attributed to a sympathetic action of the parts of the body affected, with the stomach.

Dyspepsia, we are told, has for its proximate cause diminished respiration, circulation, secretion, and, as a natural consequence, the invalid complaints of cold feet and hands, numb or less fever, pains in the head, back and limbs, giddiness, stupor and general debility.

Dr. Metcalf argues that these symptoms require the warm bath, moderate exercise, warm clothing, nourishing food, agreeable society, and interesting pursuits.

It is assumed it is also a fair deduction, from the late experiments which have been made in the relation to the subject by eminent physiologists, such as Sir Benjamin Brodie and others, that the influence of the brain in exerting its various functions, through the medium of the lungs, Let respiration be suspended, and the power of the lungs to circulate the blood is lost.

Intense and long continued study is also productive of dyspepsia, and is widely circulated. Dr. Metcalf says that no enlightened medical man can read the life and correspondence of Sir Isaac Newton, without being convinced that for two years he laboured under a similar complaint.

A most interesting subject here naturally opens itself to the reflecting mind, and a long array of great names, martyrs to science, and to the human genius, presents itself for investigation.

Some reasons which are appended to the circular of Messrs. Trevelyan, in looking at the "manufacturing" trade of the country, describe very truly a state of things which is not only a disgrace to the pride of our country, but which has produced a loss of life and property.

With respect to the mercantile trade of the country, it has been rather an adverse year than the year of our country, and the loss of life and property is not only a disgrace to the pride of our country, but which has produced a loss of life and property.

The woolen trade has been greatly improved in condition, and may be pronounced to be busily and advantageously employed.

and in 1845, to 1,210,000. The number of temples had likewise increased but there are still 111 in France a Protestant population of about 4,000,000.

CHRISTIANITY.—The following is a beautiful extract from a report, in one of the New York papers, of Mr. Webster's late splendid arguments in the case of Girard's will.

When an intellectual being finds himself on this earth, as soon as the faculties of reason appear, one of the first inquiries of his mind is, "Shall I live here forever?" And those writers who have been celebrated for their essays on the dignity of human reason, say that of all sentient beings, man only is competent of knowing that he is to die.

And that question nothing but God, and the religion of God, can answer. Religion does not answer that question, but it teaches every man that the duties of his life have reference to the life which is to come—that moral conduct, founded on this great religious truth, as the end and object of his destiny.

And hence, since the introduction of Christianity, it has been the duty, as it has been the effect of the great and the good, to sanctify human knowledge—to bring it, as it were, to the baptismal font—to baptize letters with the sacred influence of the Christian religion—to bring all the early and the late, to the same sacred font, and to receive them for the use and blessing of the human race.

Ceylon, the Eden of our Day.—It is singular, that while our colonists fly to the soil of Australia, or seek the snow clad plains and gloomy pine-woods of Canada, they think not of the palm-trees and cinnamon groves of Ceylon, an island which, if it be not, as it is pretended to be, the paradise of the past, is certainly the Eden of our day; whose fragrance is scented into leagues, and whose fruits are laden with the golden harvest of the future.

The wonderful invention of Morse, the lightning-rod, will doubtless ever long be remembered, as the greatest of our age, and will ever be followed by the course of every railway in the country, for there is nothing in its nature which compels the use of it, and it is a great blessing to the human race.
