# All Tubes Are Not Alike

There is as much difference in tubes as there is in tires. True, a tube is only to hold air. The casing bears the pressure and wear. But the work of the casing depends on the work of the tube. Too little air pressure quickly ruins tires. And slow leaks in poor tubes cause inconspicuous and doubly dangerous under-inflation.

To combat this expensive inefficiency use good tubes—honest tubes—loyal tubes—Goodyear Tubes.

For by lamination, the quality-giving Goodyear way, is the right way to build good tubes.

Tiny flaws that spoil tubes can only be detected in sheets of transparent thinness. So we roll high quality rubber into tissue-thin sheets for inspection. Then we build up the tube, layer on layer, using extra layers for extra thickness.

So Goodyear Laminated Tubes are extra good—good for long service, great satisfaction, saving tires. —we even vulcanize the valve patch in instead of sticking it on.

If an inspection of your equipment suggests new tubes—get Goodyears.
