Hon. Jno. Anderson's Letter.

The letter from the Hon. John Anderson, describing so fully the inner workings of the Pay and Record Office in London, will be perused with interest by all our readers. It should serve to refute the many and baseless criticisms that have been made of these officials, to which it is as final and complete an answer as we could imagine. We cannot think, however, that the general Newfoundland public is much concerned with the personal aspect of this regrettable controversy, unless it be in the extent to which it affects fair-play and justice; but all must be interested to know exactly how the work of this very important office is performed and in what it consists, and in this respect Mr. Anderson's letter is of the utmost value. It is an account of work of great magnitude and complexity very well organized and efficiently carried out, so much so in fact that it would be hard for the most exacting critic to suggest improvements.

As far as we can remember, the most common and serious complaints that have been made have had reference to alleged irregularities in pay, delays in the delivery of mails and loss of or damage to parcels. Mr. Anderson answers each charge fully. "From the many hundreds of soldiers I spoke to there was not a single complaint regarding their pay." Concerning the mails, "They are not and never have been delayed more than a few hours—which is necessary for the proper sorting of the mails." And finally the important point is emphasized that the "Comforts" for the Regiment are handled, not by the Pay and Record Office, but by the War Contingent Association.

We have no wish, however, to analyze Mr. Anderson's letter, which is itself an able and condensed analysis. We recommend its perusal to all who have relatives and friends in the Regiment or are interested in its welfare. It should not merely clear up some disputed points, but may be in many ways a help and guidance in the future.

MANY SHARKS AT CHANNEL.—Hundreds of sharks are now infesting the waters of the West Coast and at Channel several big fellows have been seen close to the shore. A few days ago a monster of the man-eating type got caught on the beach at the place mentioned and was estimated to weigh about 600 lbs. A large quantity of oil was secured from the liver, while the remains were cut up and converted into fertilizer. Fishermen say they are the same fish that terrorized the bathers in the vicinity of Long Island and Massachusetts Bay, carrying off several victims, which are now coming north in search of food.

EARLY WILLIAMS.

Those are the red all-over Apples which are such good sellers, and we have a shipment of them due on "Stephano" Thursday. We expect a big run on them, and would advise customers to get in their orders early to save disappointment. We will have Gravensteins as soon as they are fit to ship.

GOOD WAGES AT GLACE BAY.—We learn from parties just returned from Glace Bay and the Sydneys that the highest of wages are being paid the workers on the D. L. S. Co. smelting plants and that there is a great shortage of men. Five blast furnaces operated by the company mentioned are working night and day; the output per week almost exceeds the average per month for the year 1914. It is expected that after the war the Sydneys will be one great hive of industry.

London Millions See Zeppelin Fall

THROUGH OF 100,00 VIEWS WRECK.

Night Crowds Rush Into Streets, Cheer and Sing the National Anthem, as Raider Bursts, Battered by Shells from Enfield Gun Factory—Thirteen Craft in Raid—Two Persons Killed.

London, Sept. 3.—Thirteen Zeppelins constituted the raiding squadron that visited England last night, but only three of them got near the outskirts of London, and one of these was shot down about fifteen miles north of the city.

The casualties officially reported are two dead and eleven persons injured by the many bombs dropped by the raiders.

The following account by an eyewitness of the bringing down of the Zeppelin was given to The New York Times correspondent by Sir Charles Inigo Thomas, former Secretary to the Admiralty.

"I was awakened about 2:30 o'clock by the information that gunfire was going on. Looking from my windows I saw the flashes of the guns in all directions. In a certain direction particularly there was a great display of searchlights, but the weather was foggy and nothing was very distinct. Suddenly about 2:45 o'clock there appeared a glow in the sky which gradually increased in intensity until it became something like a great star. This rapidly increased in size until it clearly assumed the shape of a Zeppelin. The whole looked like a mass of molten metal such as one seen falling out of a furnace pipe. The outline which at first was horizontal, gradually turned and became almost perpendicular, at the same time falling earthward. As it fell it seemed to shrink in size, until the last I saw of it was a sort of stream of deep-red fire. The first appearance of flame was noticeably a yellow tint. I have said gradually, but of course the whole descent from the time the starlike centre appeared took no more than a minute or perhaps a minute and a half."

Like a Mar of Steel in Sky.

Another eyewitness of the destruction of the Zeppelin writes: "When the guns opened fire, the Zeppelin already had been centred in a ball of light created by the myriad arms of pale light which shot up suddenly from the darkness. The Zeppelin was at a great height, so great, indeed, that it seemed just like a bar of polished piston rod. There it remained apparently motionless and undecided which way to go while the guns peeped it without cessation.

"Shells burst around it, in front and behind, above and below, and it made a turn as if to go in the direction of the coast, but a shell burst ominously near its nose and caused it to swing around in the opposite direction. Its tail dipped and it made a move to ascend still higher, when a shell burst directly over it. Another descent was necessary, and three shells burst simultaneously below, behind, and in front of it. It seemed impossible for it to go north, south, east, or west, and there it remained for a second or two helpless, with shells bursting all around it.

"Then away up there in the centre of the ball of light something happened. It seemed as if a black shadow passed between our vision and the brilliant light. In the sky when we looked again the airship had gone. Firing ceased and the searchlights spluttering their focussed rays, shot backward and forward across the firmament, but the Zeppelin was gone. Under cover of a cloud of smoke she had made a wild dash upward beyond the ray of light and through the ring of bursting shells.

"Suddenly, away further to the north, a ball of fire in the sky riveted our attention. The ball spread in size and there was a great explosion. The whole of London, north, south, east, and west, was illuminated by the one flash. The dome of St. Paul's and the towers of Westminster, hitherto obscured, stood out with remarkable clearness, and for a brief second it looked as if a panorama of the whole of London had been thrown upon a screen in a darkened hall.

"There was no need now to speculate as to the fate of the invader. Persons who came out into the streets raised cheer after cheer and sang the national anthem. The burning Zeppelin could now be seen falling nose downward to the earth like a huge blazing cauldron from which poured a spray of sparks."

The Inner Work

OF THE PAY AND RECORD OFFICE IN LONDON.

A STRIKING VINDICATION

Editor Evening Telegram:—My attention was called to an article which appeared in the "Daily News" of June 21st, headed "Clock" by Yorick. In this article reference is made to the connection with the Pay and Record Office in London, and particularly to the attack on the Pay and Record Office in London. The people are curious enough to read the account of the work of the office who were misled and have it would get a very true impression of the working of the office and in justice to him and Yorick's ill-chosen comments be refuted.

I visited the office when in London, as do the founders, and I was struck with the splendour which everything was run in a thorough manner in which Timewell had organized that had to be created.

There was the Pay Book which looks after the detail work of the expenditure. It is a member of that every soldier's Contingent has a separate account in which his pay is drawn and charged. When a soldier in active service he does not draw much pay, for obvious reasons. This accumulates and is not paid until he returns to his home in London, or is sent to the front. The Company Clerk looks after the detail work of the expenditure. It is a member of that every soldier's Contingent has a separate account in which his pay is drawn and charged.
