

# **ENERGY**

## **What We Got**

- The FTA gives us secure and guaranteed American markets for Canadian oil, gas, coal, electricity or uranium.
- It eliminates tariffs on crude oil and refinery products.
- It puts in place special consultation so that the U.S. does not discriminate against Canadian energy products.
- The U.S. and Canada have agreed in times of shortage to treat each other fairly.

## **Here's What We Kept**

- We keep full power to monitor energy exports, to ensure we have enough for our own needs.
- We retain the right to decide in Canada if we need to conserve our supplies, and by what means.
- Canadian energy will be sold at made-in-Canada prices negotiated by Canadian producers.
- Current investment policies remain intact.

## **How Do You Benefit?**

- With secure, huge markets in the U.S. our energy resources will be developed sooner, providing jobs and energy security.
- All regions will benefit — British Columbia from electricity exports, Alberta from oil and gas, Saskatchewan from oil and uranium, Manitoba from electricity, Ontario from electricity and uranium, Quebec and New Brunswick from electricity, and Nova Scotia and Newfoundland from oil and gas development.
- Canada's energy security lies not in locking resources in the ground but in developing them to the benefit of all regions.
