Mr. Valdemar Larsen
Executive Director

Key products/services:
Education/training resources

ACIE is a not-for-profit association dedicated to facilitating the international promotion and marketing of education and training resources of its members. ACIE supports international marketing initiatives, identifies international projects and sponsors professional development and internationalization activities on behalf of its member institutions. ACIE was incorporated on May 23, 1997.

ACIE activities complement the economic efforts of the private sector and the local, provincial and national governments by facilitating trade and commerce within the international marketplace. The Centre also prepares Alberta graduates to work effectively in a global community.

Representatives from participating institutions constitute the voluntary membership of ACIE which consists of universities, university colleges, technical institutes, colleges, continuing education centres, and school districts in the Province of Alberta. Governed by a Board of Directors, ACIE is funded by member institutions and Alberta Learning, the provincial government ministry responsible for education.

Support Marketing

Key products/services:
Computer-aided design

Our company ACT, is a computer-aided design, manufacturing and engineering consulting company, based in Montreal. We are a CATIA® Excellence Centre. CATIA® is a Dassault Système computer aided design software. It is used by such companies as Daimler Chrysler, Boeing, Honda and Black and Decker. Because of our expertise on the software, we offer support, training and design work on the software.

We also do consulting work for companies that do not have 3D modeling expertise. We allow those companies to save significant time and money in the concept of their products.

The range of our services goes from installation, administration, user support and training programming, CATIA V5, migration of application and maintenance, training, outsourcing, maintenance of application, modeling and design, conversion of 2D data to 3D mocking, powertrain and BIW design.

We have been working with Honda for two years now, and we would like to offer the same successful expertise to Japanese companies.
