THE CANADA BRICK MACHINE.

Patented 1868.

MEAL and DIPLOMA awarded at the Provincial Exhibition, Montreal, 1868.

THIS Machine will mould 15,000 Bricks PER DAY, with the attendance of one man to put in the Clay, one man or smart boy to attend to the Moulds, three strong boys to wheel off the Bricks and back them up, and a small boy to sand the pallets.

To make SLOP BRICKS, less attendance than the above will be required.

By an alteration in the relative speed of the pinions and crown wheel, it will mould

30,000 BRICKS PER DAY.

The Clay can be moulded stiffer than by ordinary Machines, and the great pressure applied gives more solidity and strength to the Bricks. They also retain their shape, and dry much quicker.

This Machine is inexpensive and simple, and is adapted for either steam or horse power.

If a stone or other obstruction prevents the Moulds from moving forward, the Machine will not get out of order, but regulates itself.

Provision is made for giving pressure required for soft or for stiff Clay.

The corners are always worked, and the Bricks turned out will all be fit for front work.

It is undoubtedly the most perfect and suitable Machine for making Bricks yet introduced into use.

NINE of these Machines worked by steam, and TWO by horse power can be seen in actual operation at the Steam Brick Manufacturing Establishment of the undersigned, head of Fullam Street, Montreal.

The CANADA AUTOMATIC BRICK MAKING MACHINE is manufactured and for sale (with the right of using it) by the Patentees.
