

TO GROW A GOOD GARDEN

good cultivation is absolutely necessary, but it can't be done with poor tools. Here's an Iron Age Tool especially made for garden work. It not only does good work, but it is easy to operate. The boys and girls can do the gardening and produce big crops, if you'll equip them with Iron Age Tools. Send to-day for our Free catalog.

years in this small town, and she home in the leafy town in Illinois from which they came. Her father, an unsuccessful farmer, had proved an unsuccessful miner, leaving them with only an indifferent house in the junction. Mrs. Gilman took to keeping borders—the refuge of widows—and had grown to the dignity of the Eagle Hotel. This was an achievement both in her eyes and in the estimation of her daughter and son, and the people of the town were democratic enough to draw no social distinctions between one business and another. Mrs. Gilman was well-considered and her daughter was popular with the young people of the church. There were a few, of course — health-seekers — who drew lines against any one not of their way of thinking and doing, but they formed only a small group and were not really a part of the town.

Haney came back an hour later, but read in the cold, serious look she gave him a warning, therefore he spoke but on commonplace subjects, and soon went out and took a seat on the walk.

Some way, this meekness on the part of this powerful man moved the girl, and a little later she went to the doorway and said to the crowd generally: "It's a wonder you fellows wouldn't open a melon or something."

Haney put his finger to his mouth and whistled to the grocer opposite. He came on the run, for he knew Haney.

"Roll up a couple of big melon," said Haney largely. "We're all drying to cinders over here."

The loafers cheered, but the girl said in a lower voice: "I was only joking."

"What you say goes," he replied with significance.

She did not stay to see the melons cut, but went back to her desk, and he brought a choice slice to her.

She took it, but she said: "You mustn't think you own me—not yet." Her tone was resentful. "I don't want you to say things like that."

"Like what?" he asked.

She did not answer. It was really his tone of intimacy which she disliked. It assumed too much.

He went on: "I don't mean to assume anything. God knows, I'm only waitin' and hopin'. I'll go away if you want me to and let you think it over alone."

"I wish you would," she said, not realizing how much this committed her.

He held out his hand. "Good-by—till next Saturday."

She put her small brown hand in his. He crushed it hard and his bold eyes softened. "I want you, my girl. Sure I do!" And with that he was gone.

Amatite ROOFING

A Frank Statement

HOW many manufacturers of ready roofing will tell you frankly how their goods are made? Mightily few. They will talk about "secret formulas," "special waterproofing compounds," etc.—all nonsense. They don't tell you what the goods are made of because they don't dare. From the start we have never hesitated to tell the buying public just what Amatite is made of and just what it will do.

How Amatite is Made

Amatite is made of two layers of Cool Tar Pitch—the greatest waterproofing material known. Alternating with these two layers of pitch are two layers of coal-tar-saturated wood felt to give it tensile strength. On top of these four layers is a real mineral surface—five layers of protection. The mineral surface is permanent, fireproof, and absolutely requires no painting.

It Needs No Painting

Roofings that require painting are a worry and an expense. Every year or two you have to climb up and give them a coating with some special compound sold by the manufacturers, or you are pretty sure to have a leaky roof.

Amatite is Making Good

We are constantly receiving letters from customers telling us how satisfied they are with Amatite—how much better it is than the old-fashioned roofing. Year after year, in all weather, Amatite will give perfect service without any painting or attention of any kind. Surely this is the kind of service that wins and keeps customers.

Free Sample

Before you go to your dealer and buy a roofing, we should be very glad to send you a sample, so that you can see for yourself just what we are talking about—what a solid, substantial, reliable roofing we are offering to the public.

Something Back of it

Remember, in this connection, that Amatite is made by the largest manufacturers of roofing materials in the world, and that when you buy this roofing there is something behind it. We stand back of every roll. We know we are offering the best and the most economical ready roofing on the market.

Cheap twine is not good economy

WE want every farmer in this country who uses our twines to go through the entire harvest season without one break in the field. We have set out to make that the standard test of all twines, and we believe that I H C twine comes nearer being such a grade than any other twine.

We have taken this matter the more seriously because we have stood back of the Sisal and Standard Sisal twines and the better grades of Manila ever since twine was made.

85 to 90 per cent of all the twine used is Sisal. It comes in a larger strand than the Manila twine; and as all binders are adjusted to use this twine, the result has been that the bigger, stronger twine has proved more satisfactory in actual mechanical binding. Its only equal is the higher grade, higher priced Manila, which also bears the I H C trade-mark.

These two twines represent the highest point of excellence thus far attained in binder twine. You get the best when you ask your dealer for an

I H C Brand of Sisal—Standard Sisal—Manila or Pure Manila

You get a twine that has made its record in millions of wheat fields. One that is guaranteed of standard length and standard strength. One that is smooth-running; that works at a steady tension, without kinking or tangling in the twine box, and consequently without any loss.

One that has the smallest percentage of breaks and that works well in the binder knotter. Good binder twine is as important to you during harvest as good weather. You cannot regulate the weather, but you can pick your twine. If you want to be positive that you will have no twine delays, choose your twine—Sisal 500-ft.; Standard (which is made from pure Sisal) 500-ft.; Manila 600-ft., or Pure Manila 650-ft.—from any of the following I H C brands:

Deering McCormick International

These brands mean time-insurance for you during harvest. Let your local dealer know well in advance what your needs will be. The mills are working now. And if you want more interesting facts on binder twine, write the International Harvester Company of America, at nearest branch house for particulars.
