

Be Sure
That It's a **“WAUGH”**
When you buy
an Air Feed
Stoper

No matter what your ground or pressure is, the best drill for your work will prove to be a “Waugh”.

WHY?

Because the “Waugh” designs cover greatly varying conditions, and there is sure to be one suited to your requirements.

The first successful air feed stoper was a “Waugh”, and experienced mining men acknowledge the superiority of the “Waugh” productions.

The men prefer them because they are properly balanced and easy to rotate.

Can you do better than to refer your problems to experts representing a concern that specializes in the manufacture of rock drills?

By doing so you will be sure to get a drill that will give the greatest footage on the least air upkeep. One that will neither burn the steel nor break it, and will help to keep down the cost of your production.
