NOTICE OF SALE.
To Nathaniel Underhill, of the Parish of Blackville in the County of Northumberland and Province of New Brunswick. By virtue of a power of sale contained in an indenture of mortgage dated the 15th day of November in the year of our Lord, one thousand eight hundred and seventy five, made between Nathaniel Underhill of the Parish of Blackville, in the County of Northumberland, trustee of the one part and the honorable Wm. Muirhead of Chatham in the County aforesaid, merchant of the other part duly registered in the Registry Office of the County of Northumberland, in volume 16th day of November A.D. 1875, in volume 37 of the County records, pages 18, 19 and 20, and is numbered 16 in said volume. There will for the purpose of satisfying the money secured by the said mortgage, default having been made in payment of the first instalment thereof with interest thereon, be sold at Public Auction in town of "Letson's Weigh Scales" in the town of Chatham in the County of Northumberland on Tuesday, the first day of November next, at 12 o'clock noon. All that certain piece or parcel of land, situate lying and being in the Parish of Blackville, in the County aforesaid, bounded on the westerly side by lands owned by John Underhill, in front by the Miramichi river, and in rear by wilderness land, being one half lot and contains seventy-five acres more or less, with all the buildings and improvements thereon and the appurtenances thereto. Dated this twenty-fifth day of July, A.D. 1881 L. J. TWEEDIE, W. MUIRHEAD, Solicitor for Mortgagee. Mortgagee, Chatham, 27th Aug. '81.

AUGUST 8.

Rheumatism of the Blood and Debility.
HAYWARD, Miss, March 17, 1881.
Gentlemen,—Thirteen years ago I was troubled with rheumatism of the blood. My blood was in such a poor condition that when I retired my arms would become so paralyzed that I could not move the clothes to cover me. At last PERUVIAN STRAP was recommended, and on taking two small bottles I was completely restored to health, and I had no occasion to use it again for ten years. About three years ago I was taken with kidney complaint, and had dreadful pains in my back and side. At times, when in the street, I would have such severe attacks that I would be obliged to sit down on a newspaper, and I would cry like a child. After suffering for some time I remembered that the PERUVIAN STRAP had formerly done for me, and the use of one large bottle entirely cured me. A few years since my sisters health completely broke down, and I was so weak that she could do no work. She consulted Dr. Burke, of Roxbury, who recommended PERUVIAN STRAP. He said it was just the remedy to meet her case, and the way on he knew of. The result proved the correctness of his opinion, for the use of one bottle completely cured her. You're very truly,
MRS. CAROLINE A. DAVIS, No 5 Nichols St.

LOCAL MATTERS.
NOTICE.
The public are hereby cautioned against paying subscriptions or amounts for advertisements to any person on behalf of the STAR, unless said person hold written authority from me to collect and receive the same.
J. E. O'CLLINS,
Ed. "Star."

In Terrorism.
A Hardwick magistrate was put in the lock up last night.
Local Government.
There will be a meeting of the Local Government this week.
Closed.
The salmon fishing season elapsed yesterday. This may be true de jure but it is certainly not de facto.

Excursion.
A large number went down in the "Andover" today to be present at Confirmation in Bay du Vin.
Off Fishing.
The schooner "Wall Briar" left here Saturday on a fishing excursion to Magdalen Islands.
Destroyed by fire.
The wool factory lately erected in Jaquet river, Restigouche, was destroyed by fire on the 10th inst. There was a light insurance, and the loss is said to be heavy.

The Quickest Passage.
McLeod's new barque the "Dunraven" made the passage from the Miramichi home to Cardiff in 18 days. This is the quickest passage made this season.
Carrier Pigeons
Monday last a gentleman from Newcastle put up three St. John pigeons. One of the three reached St. John yesterday, but the other two are tarrying by the way.
New Vessel.
A fine new barque belonging to Mr. Richards of Malpique, P. E. I., arrived last week in charge of pilot Frank Martin and is now loading deals for Hon. Wm. Muirhead.

Light Exhibition.
Mr. H. P. Marquis agent for the "vapor gas lights" gave an exhibition of the illuminating qualities of the article opposite his business establishment on Canard street Monday night. The effect was a very brilliant light which attracted several to the spot.
Bazaar at Bathurst.
As will be seen by advertisement in another column the ladies of the Catholic congregation at Bathurst intend holding a Bazaar in the new church, now in course of erection in the village on the 23d 24th and 25th instants. Everything possible has been done to make the Bazaar a success.

Episcopal Church.
His Lordship Metropolitan Medley arrived at Chatham on Saturday afternoon. Judge Wilkinson and Mr. Justice Blair met him at the station. He held services in Chatham Sunday morning and evening, and left us here today for Bay du Vin where he is to hold confirmation. His Lordship stayed at Bushville.
Railway Accident
The *News* gives an account of a railway accident with fatal results, in yesterday evening's issue. Yesterday morning an up-special train collided with a down rail train at Fairville, wounding two or three and killing one man a driver, Wellington Reckers. The damages the *News* puts down at \$10,000.

Appointment, etc.
We understand that Dr. Baxter has consented to act as a member of the Board of Health and that he will be gazetted today as a member of that body.
Speaking of this Board of Health we have only to say that we are quite sure the public have the deepest sympathy with the Board in their anxiety that the snow will be here before they will be able to "do anything."

Sudden Death on Shipboard.
The body of Peter Barr mate of the ship "Queen of Beauty," loading at Morrisons, was found dead on Sunday morning on the deck. The body was quite warm. A considerable quantity of blood was found about him and on the deck also round his face. It appeared from the evidence that he was subject to attacks of bleeding, as he had one some six weeks ago from which he recovered in two or three days. Judging from the position in which he was found it would appear that he had gone on deck for a drink when bleeding again commenced and he died before he could call for help.
Gone to Toronto.
Mr. M. McDade so long connected with the *News* passed up by the Intercolonial Monday on his way for Toronto. Mr. McDade will take the editorial management of a new sporting paper, which has just been issued by a competent Toronto correspondent, which will after a short time with Mr. McDade's energy and ability—and bette all his critic's and wide knowledge of the history and details of boat racing, etc.—invigilate the *New York Clipper*. We congratulate Mr. McDade on his new position, and we most certainly do congratulate the company in having secured the services of so competent and so worthy a young gentleman.

STAR BRIEFS.
Messrs. A. & R. Loggie of Black Brook, lost a fine horse by colic on Saturday last.
See the advertisement of Mr. H. P. Marquis today in another column.
Another Meeting of the Blake reception committee will be held tomorrow evening.
"Temper is everything", and in the pens of the Eastbrook Steel pen Company the temper will be found all that is to be desired.
SAINT JOHN NOTES.
We do not propose entering into a controversy with our Editor "whom we highly esteem" as to the respective merits of the Grit and Tory parties who occupy places in the arena of our Canadian politics. So far politics have seemed to us but the magic circle through which you must pass if your ambition would lead you to look for fame or position. In this we may seem a little unpatriotic but we nevertheless believe in no relinquishing country, and if we could better our position under the free flag of the United Republic we would go hence immediately and the Conservative cry of "Canada for Canadians" or the Grit wall of "The Exodus" would not deter us in the least.
We have therefore only to reiterate the statement made by us in the account given of the Blake meeting, that we viewed the campaign speeches rather from a literary than a political standpoint. But since the *Star* has asked for some explanation from us it is only fair that we should give it which we do irrespectively of what the *Telegraph*, the *Sun* or even the *Globe* may think or say.
When we said that "Sir Charles was sent for, information sworn on the spot and the prisoners removed to goal. Possession having been obtained, seven emergency men were put in fully armed and with rations, to prevent the house being taken by the old tenants. If all the crops of landlords and gentleman farmers were to be gathered in this way next month there are likely to be some disturbances between the idle laborers sent by the Emergency committee, which is a purely Orange organization, and all armed with big English ball-dog revolvers, are drilled and officered, and are at all times ready to defend themselves, so that should they be attacked at any time there would be a desperate fight."

The Crops Spoiling.
An evil time has fallen upon some of the farmers crops, in many of the districts we have heard from. Some farmers up to date have lost over half their hay crops, and the prospect for the salvation of the remainder seem anything but promising. It is not alone the hay cut down that has been spoiled by the continuous rain and drizzly weather, but hundreds of acres of that not cut down have turned black, and is not worth cutting. We have seen several farmers from the surrounding districts, and they seem quite despondent. They think if a change of weather does not soon come that a great many of the farmers will be obliged to sell their cattle before the winter sets in; that hay will be too expensive to buy, while it is doubtful if at any price it would be obtainable. We trust, however, the case is not so bad as some of the farmers regard it—and that when the change comes we shall have plenty of fresh breezes and bright sunshine.

Personal.
Mr. R. B. Adams, Attorney-at-Law has returned home after a fortnights absence in New York.
Sir Leonard Tilley goes to P. E. I. tomorrow to tell the people "the other side of the story."
The Princess Louise will leave for Canada about the last of September. The Marquis of Lorne will go over to accompany her home.
Samuel Adams, Esq., will reach Bathurst next week, from Leadville, Colorado, but whether to remain permanently or only for a few days we do not know.

SERIOUS EVICTIONS IN IRELAND.
Dublin, August 10.—With the approach of the harvest great apprehension is felt as to the outcome of the general strike against landlords who have not arranged with their tenants. No laborer can now be got by Boycotted landlords except through the Emergency Committee, and it is doubtful if that organization can supply all the men necessary at a time when the northern farmers will need all the help they can get to gather their own crops. A number of the Emergency men went to New Ross on Tuesday to assist Mr. Boyd, whose son was so foully murdered. There was an exciting encounter on his estate yesterday, the unfortunate tenant being Mrs. Holden, sister of the two Phelans acquitted of the assassination. A large body of police and soldiers went to assist the Sheriff, and when they arrived the authorities found the door barricaded with masonry and defended within by six women with unlimited quantities of boiling water and by several men with pitchforks. It took two hours to break in the doors, and then the loft was found occupied by the defenders, who poured buckets of hot water down from the head of the stairs. It was then necessary to clear the house, and Sub-Inspector Webb, with four men, proceeded to mount the steps. The police were ordered to load, and Webb advanced with drawn sword saying, "Now then, the moment you see me stabbed, fire." A man made a thrust at him with a pitchfork, but Webb made a cut at him with his sword, nearly cutting the handle in two, and, rushing ahead amid showers of hot water and missiles from above, captured the man and dragged him down. The other police took the remainder of the defending party. A testament was sent for, information sworn on the spot and the prisoners removed to goal. Possession having been obtained, seven emergency men were put in fully armed and with rations, to prevent the house being taken by the old tenants. If all the crops of landlords and gentleman farmers were to be gathered in this way next month there are likely to be some disturbances between the idle laborers sent by the Emergency committee, which is a purely Orange organization, and all armed with big English ball-dog revolvers, are drilled and officered, and are at all times ready to defend themselves, so that should they be attacked at any time there would be a desperate fight."

THE UTILIZATION OF WORN OUT HORSES.
The utilization of horses not fit to eat and too old to be of working service in France, is quite interesting. It is first shown of their hair, which serves to stuff cushions and saddles; then it is slaughtered and skinned; the hoofs serve to make combs. Next the carcass is placed in a cylinder and cooked by steam at a pressure of three atmospheres; a cock is opened, which allows the steam to be run off; then the remains are cut up, the leg bones are sold to make knife handles, etc., and the coarser, the ribs, the head, &c., are converted into animal black and glue. The first are calcined in cylinders, and the vapors when condensed from the chief source of carbonate of ammonia, which constitutes the base of nearly all ammoniacal salts. There is an animal oil yielded which makes a capital insecticide and a vermifuge. To make glue, the bones are dissolved in muriatic acid, which takes away the phosphate of lime; the soft residue, retaining the shape of the bone, is dissolved in boiling water, cast into squares, and dried on nets. The phosphate of lime, acted upon by sulphuric acid and calcined with carbon, produces phosphorus for lucifer matches. The remaining flesh is distilled to obtain the carbonate of ammonia, the resulting mass is pounded up with potash, then mixed with old nails and iron of every description; the whole is calcined and yields magnificent yellow crystals—prussiate of potash, with which tissues are dyed a Prussian blue, and iron transferred into steel; it also forms the basis of cyanide of potassium and prussic acid, the two most terrible poisons known in chemistry.

THE UTILIZATION OF WORN OUT HORSES.
The utilization of horses not fit to eat and too old to be of working service in France, is quite interesting. It is first shown of their hair, which serves to stuff cushions and saddles; then it is slaughtered and skinned; the hoofs serve to make combs. Next the carcass is placed in a cylinder and cooked by steam at a pressure of three atmospheres; a cock is opened, which allows the steam to be run off; then the remains are cut up, the leg bones are sold to make knife handles, etc., and the coarser, the ribs, the head, &c., are converted into animal black and glue. The first are calcined in cylinders, and the vapors when condensed from the chief source of carbonate of ammonia, which constitutes the base of nearly all ammoniacal salts. There is an animal oil yielded which makes a capital insecticide and a vermifuge. To make glue, the bones are dissolved in muriatic acid, which takes away the phosphate of lime; the soft residue, retaining the shape of the bone, is dissolved in boiling water, cast into squares, and dried on nets. The phosphate of lime, acted upon by sulphuric acid and calcined with carbon, produces phosphorus for lucifer matches. The remaining flesh is distilled to obtain the carbonate of ammonia, the resulting mass is pounded up with potash, then mixed with old nails and iron of every description; the whole is calcined and yields magnificent yellow crystals—prussiate of potash, with which tissues are dyed a Prussian blue, and iron transferred into steel; it also forms the basis of cyanide of potassium and prussic acid, the two most terrible poisons known in chemistry.
