ng-places. Bats. for instance the beams and dark corners of harns or the towers o fchurches pernate in companies and hans wnwards from the chosen spot are quite unconscious, and give ign even if gently thrown down from nerches. But, strangely enough. se the time when insects will wing, and waken according

rel is in 'a somewhat dif ass. He chooses a nice hole of a tree, having first well with nuts. He goes to if he feels that the sir is awakens, eats of his store s out to investigate.

ood for the winter, but never to eat it. Indeed, he is per the heaviest sleeper of all. e is obviously no food for the g in winter, for his diet conefly of insects. He finds a hole at the foot of some sheldge and decides to winter make himself as comfortable ble, he goes away to a slope here is a carpet of fallen He rolls down this slope once thus covering his prickles ves. Then he creeps into his

seek holes near ponds in pass the winter. Their beds of mud! In the spring they to mate and lay their eggs. use their remarkably quick with skill to gain their food. course, many of our little nators never see the sun again. ther they die naturally or are found devoured by some prowling, sh-eating animal, driven by hunger

Deceived London

How many people know that St Paul's Cathedral nearly had a spire, stead of a dome? The original model, made by Sin hristopher Wren, which is to be seen t the South Kensington Museum iffers in several essentials from the impleted cathedral. The authorities not approve it, and asked Wren esign another, in which a spire inof a dome was to be the prinfeature
