

TO READERS.

THE publishers of "WOMAN MAN'S EQUAL" conscientiously feel that they are placing before the public the discussion of one of the most important topics of the day; and they indulge the strong conviction that the author of this little volume presents this important topic in a manner at once attractive and convincing. The teachings of nature, history, and the Word of God are freely drafted, and skillfully arranged to show what nature designed, what God has taught, and what woman has proved herself capable of being and doing in the world. The abuses to which the sex has been subject from the physically stronger "lords of creation," in heathen nations and in brute ages, are ably and fully set forth.

The lessons of the past are the teachings of the future. Christianity has enlarged woman's area, and multiplied her duties and responsibilities.
