NOTES TO THE ABOVE ILLUSTRATION.

TAMES TYTLER was the son of a clergyman of the Scottish church, residing at Brechin, in the county of Angus, and brother to the cele-brated Dr. Tytler (translator of "Callimachus.")

brated Dr. Tytler (translator of "Callimachus.")

Young Tytler derived his principal instruction from his father, who was a good classical scholar; added to this, the boy became well grounded in biblical literature and scholastic theology—but the study of medicine seemed to be the one most in accordance with his tastes, and he was therefore apprenticed for some time to a surgeon in Forfar, and afterwards settled as an apothecary at Leith. In spite of his employment (which brought him in a tolerable income) he was one of those unfortunate persons who could not keep away want from his door, and in 172 he was obliged to take sanctuary within the precincts of Holyrood-house (where debtors are safe from arrest). Whilst in the "precincts of the sanctuary," he met with a severe trial, for his wife, doubtless tired of her unhappy lot, and the troubles she had undergone, left him, taking with her their five children, and returned to her relatives.

Being unsuccessfu, in everything that he had

undergone, left him, taking with her their five children, and returned to her relatives.

Being unsuccessfu m everything that he had hitherto put his hand to, and for which there was no doubt an assignable cause, Tytler next turned his attention to literature, and began his career by a work entitled "Essus on the most important subjects of Natural and Revealed Religion." This publication was issued from the debtors 'prison—and what was most singular about it was, that having by some means or other learnt the art and mystery of printing, he was enabled to place the type together, and he not only did that, but he composed the matter entirely from his own constituents of the subject of the

* Robert Burns, who was contemporary with Tytler, in a remark in one of the Scotch songs, mentions him as an "obscure, impelling, but extraordinary body, commonly known by the name of 'Balloon Tytler,' from his having projected a balloon. A mortal who, though he trudges about Edinburgh as a common printer, with leaky shows a sky-lighted hat, and linen breeches, an unlike George-by-the-Grace-of-God, and Solomon-the-sen-of-David, yet the same drunken mortal is author and compiler of three-fourths of Elliot's pompous *Encelopedia Britannica*, which he composed at half-a guinea a week."
