

When this project was first undertaken, there were not lacking confident predictions of its future. It was assumed that warm winters, although the enterprise had warm friends, and its stock and bonds were widely sold, owing to the personal exertions chiefly of Jay Cooke, the panic seemed to practically end the undertaking. Time has, however, demonstrated that the building of this road was not a visionary scheme, and that it is practicable, but will also be exceedingly profitable.

The road was intended to begin at Duluth and extend to Kalama, a distance of 1,000 miles, with a branch from Duluth on the main line to St. Paul, the total length of the main line being 1,347 miles. The company now operates about 900 miles of track, and by December 1st the line from the East will be completed to the Yellowstone River. There is about 150 miles of track in position east from Kalama in operation, and some 410 miles more under construction.

The practical results of the enterprise are greater than expected by the most sanguine. Passing through a belt of territory which is destined to be the great wheat country of the world, and everywhere the land fertile in every resource, the prospects are that the immense land grants owned by the company will be disposed of in a comparatively short time, and that the business of the road will almost double itself every year for some time to come.
