Respectfully yours,

Kendall's Spavin Cure. NEW HAMBURG, ONT., Dec. 28th, 188 NEW HAMBURG, ONT., Dec. 28th, 1881.

R. F. H. MCCALLUM, Dear Sir:—The bottle or. Kendall's Spavin Cure bought of you last mer gave me the utmost satisfaction, and formed a wonderful cure upon a mare ninear years old belonging to me, which was lay spawined for ten years. She was so lame t I could hardly get her to move. The lames is entirely gone after using half a bottle of cure, and she is like a young horse again.

Yours truly, J. F. ROTH. Kendall's Spavin Cure. ts sure in its effects, mild in its action as it does not blister, yet it is penetrating and powerful oreach every deep seated pain or to remove any bony growth or other enlargements, spayins, splints, curbs, callous sprains, swellings and any ismeness and enlargement of the joints or limbs, or rheumatism in man, and for any purpose for which a limiment is used for man or beast. It is known to be the best limiment for man ever used, acting mild and yet certain in its effects. its effects. Send address for illustrated circular which we think gives positive proof of its virtues. No remedy has ever met with such unqualified success to our knowledge, for beast as well as man. Price \$1.00 per bottle, or six bottles for \$5.00, All druggits, have it or can get it for you, or it will be sent to any address on receipt of price, by the proprietors, B. J. Kendall & Co., Enosburgh Falls, Vt.

SOLD BY ALL DRUGGISTS.

House for Sale.

on.

Celery is a crop which can only be grown to advantage on very highly manured land, and on land which it is desirable to keep in high culture, for a series of years; it is not easy to make poor land rich and fine enough in one year to grow it to perfection; the manure should be applied in the autumn if possible, and ploughed under. Celery has one great advantage over all other garden crops, in demanding frequent working of the soil late in the season when the weeds are ripening their seeds; and therefore ripening their seeds; and therefore land that has been cropped with cel-

Seeding Down With and Upon Root-Crops.

NO. 7

Farmers so habitually follow in the imehonored ruts of their fathers, that harvest time for roots, apples and pears. Do not put these things off too long; the men will do twice as much work, and more comfertably, too, in topping roots or picking apples on a fine October day, as they can accomplish in the cold and disagreeable weather of November.

The fine weather of October is the harvest time for roots of the sum of any sort. Seeding to grass with root-crops, however new to our old-fashioned round-about practice, is nevertheless a very good plan. Sowing grass seed with grain of any kind is unphilosphical, inasmuch as grass and grain, being plants of the same natural family, make similar drafts. they do not take kindly to innovations weather of November.

The Greenhouse should also receive a thorough repairing of the glass and paint, and the heating apparatus needs

paint, and the heating apparatus needs to be overhauled so as to be ready for the cold weather of Nevember. The frosts of October usually put a stop to the growth of lettuce in the open air, but it will grow well under the shelter of glass in a cold frame; on cold nights, however, it will need the additional shelter of materials. For this, as is well known, the soil should abound in in widely different proportions-so

The Annual Exhibition of the Kingsclear Agricultural Society was held on Wednesday last in the Hall, Lower Kingsclear. The weather was most favouable, and the number of exhibits, though not so large in some classes as in former years, made a good display. The show of cattle was somewhat smaller than usual, accounted for largely that the Messrs, Murray were unable to exhibit their fine stock, but in domestic manufacting fine stock, but in dome

Digging Swamp Muok.

The present month is a good time to got out a supply of swamp muok.
It is impossible to answer the question as to the exact value of this material as applied to land. The quality of muck varies greatly, some of it not being worth the expense of removing it from the beds, even when this can be done with ease. The fertilizing value of most mucks depends largely upon the nitrogen they contain, and ill, that this element may be available, the muck needs to undergo a process at, at, the nitrogen must be different may be available of decompositien. The nitrogen must be followed by the character of the animal and the food which they receive. In case of a full grown animal, that is neither crops. It would be well if every particle of dung, liquid manure, straw, litter, leaves, weeds, etc., could be worked together into uniform fine compost, and there is really no substantial reason why this should not be done. The gardener would plead for certain special composts. It might for the animal is like a machine for the conversion of the principal fertilizing value of most mucks depends largely upon the nitrogen they contain, and ill, that this element may be available, the muck needs to undergo a process of decompositien. The nitrogen must be liberated from its insoluble organic be liberated from its insoluble orga Farm Yard Manure

gathered for the growing compost heap, and the harvesting of the man eases hitherto known.
