'Oh, drop that.' But with a young woman sister how to keep these mattresses in good companion he must acquiesce in her gush-Once a year-in midsummer-the mat-Sometimes she gushes about him, and

tress is renewed. The hair is taken out says; 'I should think your work would be and carefully picked and put in new casterribly hard. Do you really like it ? You ings. The art tickings, as they are called, must be awfully bright. I'm sure I never and which come in all the delicate tints and could do it P' combinations, make durable and hand-Atter a few remarks of this sort the man some coverings and have quite superseded

feels like a clown or has an almost uncontrollable desire to be rude and answer in like extravagant conversation.

The women do not confine this hyster-ical mode of expression to conversation with men, but they gush over one another. They say a friend 'looks too sweet for anything' in such a gown, or that another friend is 'simply horrible.'

Picture any one being 'simply horrible.' I have heard a woman in the prime of life say that an acquaintance was a 'perfectly sweet little woman.' However, it is masculine society that brings out these expressions in all their ripeness, and the young women never seem to think that they are making themselves ridiculous and losing favor where they would gain it. They pile it on, until the

meat of the remark is lost in a mound of adjuctives and adverbs. It might be rather rough treatment, but

it certainly would have a very good result il a man would brave a girl's wrath once in a while and say: 'Oh, quit that and talk sense, won't you?' for she certainly would never be guilty again of gushing in that man's society. However, a better plan would be for

women to carefully think over what they have said, and they will realise how silly they have been. A few quiet times of thinking it over ought certainly to put an end to this disagreeable practice.

in the ruins of a temple of the city of Ni-For Storm Wear. pur, and cannot be less than 3 700 years The fashionable storm coat is the box old. It contains the names of 92 vestraglan, and it is worn alike by men and ments given to the temple by the king of women, for the mackintosh is quite out of date. Some ladies prefer the silk circular garment, with the quaint finish of little Boer women's education does not intiers of capes, but the waterproof quality clude a great variety of subjects. As a of any silk is more or less a myth, and for rule the wife can read the Dutch Bible, real wear the cloth coat of this popular cut repeat the Heidel Catechism and a few is all the fashion. It is medium weight hymns and pealms. She brings up her and, therefore, is not a burden, so if worn children to assist in the household duties for protection at any time by both wome and the daughters are entirely under her

and men, and the latter prefor it in the light tans to wear with their dress suits, care. They learn to sew and make their own clothes. Naturally these are not re. and, of course, the girls think it is very markable for fit or style. They wear smart to wear a ragian over their evening shoes of untanned leather made from the hides of the animals killed for food, and gowns, The stuff of which the real storm coat in made is a cloth which has been treated The household duties are very primitive. medically in order to render it waterproof, The house consists of a cottage of unhewn and the popular colors are Oxfords and stones plastered with mud and a thatched

corded crown which goes by an outlandish name invented by the English makers. The only trimming is a soft silk scarf, knotted at the side, and a pompem of coque's fea her may be added, though the lawyer. imported hats are quite fist. Dark colors seems to prevail, and the black felt is taking the place of the light gray. Dark gray is newer, and that and the black may be trimmed with the scarf of 'auto' red, or Harvard crimson, as the wearer may choose to style it. There is a brown color also

in fashion in the soft hat and that has a darker shade of heavy corded silk on a plain trimming of panne velvet laid in fold. Silk Petticoats.

Black and red, that Mephistophelean combination are the popular colors of the silk petticoat for street wear, even though the red be ever so slight; a piping, a tiny niche, or best of all, a facing to the scallops of the wide flounce.

The fashion of the petticoat this year in to have two ruffl :s, and sometimes three, in order to give the desired flare, and these ruffl is are generally of even width, though

they are still to be found with increased width at the back. The finish is frequently the hemstitch

and a new feature is to have the tucked piece for the bottom, and a tiny pinked niche, sometimes two of them, makes the finish of the ruffles, especially the wide ac-cordion plaiting. This has not gone by, but there is also among the new ones a flounce set in tucks and finished with a smaller ruffl , which is tucked, and with all the finest petticoats there is the scalloped edge, which is finished with piping and

stitching and spreads out over a smaller ruffl ; underneath. For the foundation skirts to be worn

with the thin cloth gowns, the colored silk is trimmed with ruffles of black point d'esprit, and all sorts of black trimmings are in vogue, lace frills, applique, and on a pettitcoat of a cern yellow, which is also a favorite, there is hand embroidery in black above the wide frill.

The pretty little plaid silk skirts are a novelty for girls' street wear, but the quaintest of all are the satin "golf petticoats" which are short for field wear, and

just as bright as they can be in the golf colors. The plaid-faced cloth which was in fashion for the golf suit is now out of date, and the merry glint of red or green satin which shows now and then under dark cloth is fetching indeed.

SIBBRIA'S GEBAT WEALTH. Its Vast Resources When Developed Will Surprise the World.

The world has now to deal with a new factor. Ten years ago the name 'Siberia' called up a picture of wastes of snow and ice, boundless steppes and coast white with icebergs. To-day the same Siberia

is a land filled with thriving villages and peasant farmers, producing grain and various vegetables. That great compeller of civilization, the railway, has broken down the bars between the world and Siberia.

Besides its countless resources of the soil, besides its rivers filled with valuable fish, and its forests inhabited by fur-bearing animals. Siberia is beginning to show to the world its resources of gold, iron, copper, manganese quick-silver, platinum and coal, the yearly output of which is but a feeble index of what it will be when the deposits are developed.

In the past three years several American mining engineers have traversed various parts of Siberia and Central Asia. The testimony of these gentleman is corroborated by that of other foreign engineers who tans, with preference for the dark gray cloth for hard wear. Automobile red has a how issted the country—that the lack of exploitation of such evident mineral wealth as is found here is unparalleled in other. Klaatsch has couvinced himself that this parts of the civilized world. Of these resources gold is by far the most important. as it is, curiously enough, the least developed. Taking the product of the Russian empire approximately at \$25,000,000 in gold per year, it seems comparatively nsignificant. It places Russia fifth among the gold producers and is but little more than the present annual gold output of Colorado.

The Fount OF Life.

IS THE PURE RED BLOOD THAT COURSE

THROUGH THE BODY.

If the Blood Is Impure and "tagnant, Disease Holds way.

Paine's Celery Compound.

PURIFIES, ENRICHES AND VIT-ALIZES EVERY DROP OF BLOOD

The majority of intelligent people know that rich, pure and highly vitalized blood alone can give health and build up the tis-sues that have been worn out. New and fresh blood carries all the materials for restoring wasted and worn-out parts of the body, and gives to the brain other materi als for making nerve matter.

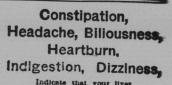

Bis for making nerve matter. Paine's Celery Compound cleanses and purifies the blood and furnishes appropri-ate food for every part of the system. It increases the appetite, perfect digestion, gives nervous energy and increased streneth.

gives nervous energy and increased strength. If your blood is impure, if the skin has spots and eruptions, if you have an un-healthy pallor or yellow sppearance, and if the eyes are showing yellowish whites, you should use Paine's Celery Compound without delay to cleanse the blood and regulate the liver and kidneys of the stain that is brought upon them whenever im-pure blood pours through their substance. Mr. M. D. Arthur, Clemsford, Ont., writes as follows:

Mr. M. D. Arthur, Clemsford, Ont., writes as follows: 'I was laid up with scars all over my face and neck, the result of blood poison-ing. While in that condition, I could not alcep stright, had no appetite, and could not attend to my work. The doctors in my district and their medicines did not benefit me. My aunt advised me to use Paine's Celery Compound. In two weeks I was so much better that I could go out, and in three weeks I was able to work again. I bless the day I commenced with Paine's Celery Compound.'

confronted with their poor relations may find comfort in the theory advanced by Professor Klastsch of Heidelberg University, and summarized today by our Berlin correspondent, says the London Standard. We are no longer bound to believe that man is descended from apes. The mystery of evolution has been clear el up, the search for the missing link is rendered futile by the learned doctor's discovery of the proper significance of a muscle in the upper part of the thigh. The short strand, as one part of this is called, is attached to the fibula, and is

isting apes are for the most part degenerate forms. Are we, then, to reverse line of pedigree, and declare that an oldtime self-indulgent race of men have degen rated into apes, as little Tom was taught, according to the 'Water Bables!" But to check any human conceit which be may seem to have encouraged. Herr Klaatsch informs us that it is quite wrong to consider man, as a mammal, the most perfectly developed in every way. That is not true of his teeth and limbs; only in the matter of brain is the facile princeps. Well, it is a relief to get this admitted. and as for the others organs we concede much to animals which have to get their living by cracking nuts or gnawing bones; we do not profess to leap like tigers, run like deer, or climb like gibbons. In all these we grant the advantage to the savage and are aware that an nedentalous or nearly toothless being is to be the ultimate result of civilization. But, we suggest, is not the professor building up a very large super-structure on a rather small base ? His argument, though it comes to a different conclusion, reminds us of the famous con-troversy in which Huxley and Owen once figured, as to whether the spe did or did not possess a small structure called a hippocampus in its brain, for on that depended whether or not the spe was the 'long. lost brother' of man. It is doubtful, indeed, whether the protessor has proved more than the most thorough going evolutionist is ready grant. The latter does not assert, so far as we know, that man is descended from a gorilla, or a chimpanzee, or an orangoutang. He holds rather that, as som things happens in the great social scale, one branch of a family has greatly risen, while all the others have remained children of Gibeon. Charles Durwin stated this quite clearly in " The Descent of Man," evolutionist he admitted a kinship between

Joan Died With Her Feet Warm. There lives at Lynn, Mass., a noted lawyer who is extremely fond of a joke,

"short strand" is a rudimentary form of a muscle common to a considerable number of mammals, such as marsupials, carnivores and many rodents. In fact, it is very frequently present; but only an-thropoid apes and prehensile-tailed American monkeys possess it in the same modified condition as man. Some climbing creatures indeed bave entirely lost it, such as the lemurs of the old world. That indicates that the muscle cannot be service able for life on trees, its modification being the result of disuse when the progress sive creature began to walk upright. Thus it is an inheritance, common indeed to man and apes, but derived from some remote mammalian ancestor. So far from proving the ape to be father of the man, it suggests the contrary view. Both can claim a common ancestry in some long extinct mamalian form, but that is all Though the servants may be right in interring, from the fragmenta remains of the Javan Pithe iragmental can thropus, that it was either the most man-like of apes or the most ape like of men, the creature does not supply the
