

THE
WHITESIDE PATENT SPRING-BED.

Its Peculiar Advantages over all others.

1st—It is remarkably **Clean**. There is no place for the secretion of dirt, dust, or insect-life; and a large quantity of leather is used in its construction, previously prepared to destroy all kinds of vermin.

2nd—It is **Comfortable**, having a hinge on each slat between the first and second row of springs; a self-adjustable bolster is formed for the head.

No springs are placed at the feet, presuming that none are needed where there is no pressure exerted, the body thus assumes an easy, horizontal position. The mode of fastening the springs causes a pressure exerted on any part of the Bed to be universal and even over the whole of it, and enables the occupant to move about with very little self-exertion.

3rd—It is **Durable**. The springs are firmly secured both at the top and bottom, and the slats being connected to the ends of the Bed by means of tough belting leather, prevents the springs being pressed out of place or shape.

4th—It is **Healthy**, being light, airy and clean, possessing the advantages afforded by the Self-adjustable Bolster, and having the feet on a level plane with the body.

5th—It is **Cheap**. The slats being smoothly polished, very much of the wear and tear of mattresses is saved; and since **no under Mattress** is needed, an immense deal is saved in the cost of these. It has the advantage also of being lower in price than any in the market.

6th—It is **simple in Construction, Portable, Easily Handled**, and therefore readily shipped from place to place.

Sole Manufacturers for the Dominion:

H. WHITESIDE & CO.

SPRING-BED DEPOT,

156 Great St. James Street.

PATENT RIGHTS FOR SALE.
