

Nearly fifty thousand Americans took up land either in Manitoba or the Territories during the past year, and as fully as great a number is expected during the season of 1904. It is only a matter of computation how much the area which will be placed under cultivation will exceed the 4,687,583 acres of 1903. Besides the Americans spoken of, fully as large a number of British people became settlers. In addition to these the continentals added largely to the population.

**Ranching** is an important factor in the prosperity of Western Canada and the very best results follow. Leases may be had from the Government or lands may be purchased from Railways and Land Companies.

**Wheat Districts.** The wheat districts are located in a less elevated country than the ranching section, and where the snow lies on the ground during the winter months and where there is sufficient rainfall in summer to grow wheat. Generally speaking, the wheat districts now opened up comprise the greater part of Assiniboia lying east of Moose Jaw, where the Red River Valley extends its productive soil, renowned the world over as a famous wheat belt.

Over 240,000,000 acres of land in the above-mentioned districts are suitable for raising wheat. The wheat belts, although colder than the ranching country, are ideal countries for wheat-growing. The cool nights during the ripening period favour the production of firm grains, thus making the wheat grade high in the market. Wherever wheat is grown, oats and barley grow, producing large yields. Government statistics covering a period of twenty years show that the yield of wheat runs about 20 bushels to the acre, barley over 40, oats also yield splendidly.

In most cases the yields are regulated largely by the system of farming practised. The best farmers summer fallow a portion of their farms. Usually one-third of the acreage is worked as a summer fallow. On the large wheat farms the grain is threshed and run into small granaries having a capacity of 1,000 bushels. These are left in the field until time to haul the grain to market. The wheat zone of Canada is spreading farther north, and we doubt not that wheat will be grown much farther north than at present.

**Mixed Farming.** To-day mixed farming is adapted to the greater part of Manitoba, taking in all of Assiniboia not included in the wheat belt, the Saskatchewan Valley and southwestern Saskatchewan, extending into northern Alberta. In many districts stock raising, dairying and general farming crops go hand in hand. The pastures are good. Aside from the wild grasses, brome grass and western rye grass furnish good hay crops and are grown not only where mixed farming is in vogue, but in the wheat districts as well. Dairying is one of the growing industries. In many sections creameries have been started which are paying good profits to their patrons. Hog and poultry raising are profitable industries. Roots and vegetables thrive well. Wild fruits of many kinds testify to the possibilities in fruit-growing for home consumption at least.

**Large Tracts Open for Settlement.** New lines of railroads are being built into the new districts just opening up. The country may be said to have never had a "boom" familiar to many of our readers. The growth of Western Canada up to the present time has been slow, but we believe sure. The soil varies in different sections of the country, still it is more uniform than in many of the States. The general character of the soil is a dark loam underlaid with a clay subsoil. Good water abounds everywhere.

A letter addressed to the undersigned will secure a copy of the new Canadian Geography and all other information necessary.

W. T. R. PRESTON,

Canadian Commissioner of Emigration,  
11-12 Charing Cross, LONDON W.C., ENGLAND.
